In January 1994, Senegal and the 13 other members of the CFA franc zone devalued their common currency by 50 percent. The CFA franc's value had been fixed relative to the French franc since 1948. During restructuring, new opportunities have been created but some economic power centers have had to face competition for the first time. Urban real incomes are down as the government cuts spending and subsidies. Urban unemployment is up as government employment is reduced and inefficient businesses are closed. Senegal's major foreign exchange earners are fish, phosphates, peanut oil and tourism. A precarious agricultural resource endowment and a relatively limited manufacturing base make trading and commerce a way of life in Senegal. Senegal is a nation of traders, and France is its leading trading partner. A common language, a currency tied to the French franc, a substantial French commercial presence, and large flows of French financial aid have enhanced the bond. Senegal's trade with the U.S. is limited; but has begun to increase. Senegal imports food, capital equipment, and used clothing from the U.S., and exports to the U.S. live birds, seafood, and artisanal products. Senegal is a member of the West African Economic and Monetary Union which along with its central African counterpart and the Comoros islands forms the CFA franc zone, (the 3-country Senegal River Basin Development Organization, the 4-country Gambia River Basin Development Organization, and the 16-country Economic Community of West African States, ECOWAS). Senegal participates actively and effectively in international affairs as a member of the United Nations Committee on Trade and Development

(UNCTAD), in negotiations on the General Agreement of Tariff and Trade (GATT), and as a member of the International Telecommunications Union (ITU). Sonatel, Senegal's telephone company, is extending and improving telephone service in the Dakar region as well as in the eastern part of the country. Water and waste disposal systems have improved in Dakar. Many residential and commercial areas now receive daily trash pickup. Following is a brief listing of the major commercial and economic centers outside of Dakar: Kaolack, 192 kilometers south of Dakar, economic capital of the Sine-Saloum River basin, is the commercial and shipping center of the richest peanut area in Senegal. It has developed since the 1920s into a city second only to Dakar in size and importance. A plant that makes salt from evaporated seawater and a peanut oil refinery are nearby.

Rufisque, only 28 kilometers south of Dakar, a city of over 100,000 people, antedates Dakar by several centuries. It was once the main commercial center and shipping point for the Cap Vert area, regaining considerable importance as an industrial and residential suburb after World War II. Well served by rail and highway, the city has textile factories, a pharmaceutical plant, and other enterprises. Nearby, in Bargny, a large Portland cement plant is operational. Rufisque is now administratively a part of the Dakar metropolitan area.

Thiès, 70 kilometers east of Dakar is a commercial, communications, and industrial center with over 176,000 residents. This regional capital is an important market for peanuts, Senegal's principal agricultural export. The railroad from Dakar branches at Thiès, forming Senegal's two main lines north to Saint-Louis and east to the Mali border. Saint-Louis, 264 kilometers north of Dakar, at the mouth of the Senegal River, has a population of 115,372 people. First settled by the French in 1659, the city was the colonial capital of Senegal and Mauritania. For many years it was the

Local fishermen display their catch in Dakar, Senegal

maritime outlet for waterborne commerce of the Senegal River Basin. In 1885, when the Saint-Louis/Dakar Railroad was completed, the city declined as a seaport and commercial center. Today, it remains important as the capital of the Fleuve Region. Ziguinchor, 454 kilometers south of Dakar, is the economic capital of the Casamance Region with a seaport and commercial center for a well-populated area of farms, timberlands, and fisheries. It has over 125,000 people, compared to some 6,000 in 1937. Located on the south bank of the Casamance River, 65 kilometers above its mouth, the city is 260 kilometers by road (through The Gambia) from Kaolack. A fairly good road runs 24 kilometers south to San Domingos, Guinea-Bissau. Ziguinchor has a small number of industries, including several sawmills, an ice factory, and a peanut processing plant. The airfield serves scheduled flights to Dakar, Bissau, and Cap Skirring, an important seaside resort which boasts a Club Med and Savannah Hotel as well as locally run hotels and pensions.

Transportation

Good roads make a variety of excellent resorts around the perimeter of the city easily accessible by car.

Driving is on the right side of the road and international road symbols are used. Priority to the right is the rule governing most intersections not controlled by traffic lights or police.

Dakar has an extensive public transportation system, but buses are often overcrowded and off schedule. Most American personnel prefer to use their own cars or to take taxis. Taxi fares are not set; metered taxis are rarely available throughout the city. Passengers usually must negotiate fares before taking a taxi. However, fares are reasonable.

Dakar has excellent and frequent worldwide airline connections. Air Afrique has two flights per week to and from New York. European airlines servicing Dakar provide excellent connections to other areas of Africa and Europe. Dakar's international airport is usually busy since it is the connecting point for many flights terminating elsewhere in Africa. Make reservations as far in advance as possible for travel to Dakar or cities requiring onward air travel from Dakar. Trains are available from Dakar to some major cities in Senegal as well as to Bamako, Mali at very reasonable prices.

Accommodations are very simple and delays often occur.

Communications

Telephone and Telegraph

Direct-dial telephone service between Dakar and the U.S. is available via satellite. Fax service is also available. Direct-dial rates from the U.S. to Dakar are significantly lower than those originating from Dakar. Some localities do not have lines available. Telegrams and Telefax are sent from Sonatel, Senegal's telephone company. Costs depend on destination. Service is generally reliable; however, telegrams occasionally fail to reach their destination.

Radio and TV

A good shortwave radio is useful for intercepting Voice of America (VOA) and British Broadcasting Company (BBC) programs. The international network, Radio Senegal, broadcasts mainly in French, and the national network transmits more than 40 hours weekly in the five national languages. Excellent music is often played on French broadcasts with some tapes furnished by the U.S. Information Service (USIS). A state-owned TV station broadcasts 3–4 hours per evening, including a 30-minute news program. Up to 13 other stations can be received if a locally purchased antenna is obtained. Only multi-system TVs (SECAM) can be used for reception of these channels.

Newspapers, Magazines, and Technical Journals

Some English-language newspapers, including the *International Herald Tribune*, are available a day late from local newsstands. International editions of *Newsweek*, *Time*, and *People* are sold weekly. Regular delivery of papers and magazines must be arranged with local vendors or via subscriptions from Europe. Readily available are French newspapers including *Le Monde* and other popular periodicals. Dakar has three daily newspapers, published in French, and several weekly papers. When sub-

scribing to periodicals from the U.S., consider the 3- to-4 week transit time to Dakar. Dakar's good bookstores stock mostly French books, at double French or U.S. prices.

Health and Medicine

The community in Dakar relies upon a few small multispecialist clinics and a large French military-administered general hospital (Hospital Principal).

Medical Facilities

Several local dentists do satisfactory work, but their services are expensive. Therefore, it is best to have all dental work done before arrival.

Community Health

Maintaining good health in Dakar means taking appropriate preventive measures. Anywhere in Senegal, amoebic dysentery, giardiasis, hepatitis, typhoid fever, and many worm infestations may be acquired from food or water. Therefore, all water for drinking and making ice cubes should be boiled and filtered. Cook all meat until well done and avoid raw seafood. Wash all raw, unpeeled fruit and vegetables in an iodine solution before cooking. Proper food handling is an essential measure of preventive medicine.

Malaria is endemic in Senegal, and all Americans should take malaria suppressants. Hepatitis is prevalent, and Americans should receive gamma globulin shots every 4 months. Tuberculosis, leprosy, meningitis, polio, influenza, and measles are also found in Senegal. All Americans must possess a current medical clearance, and a valid yellow fever immunization, and should have completed all required and recommended immunizations. Rodent and insect control is satisfactory.

Preventive Measures

The likelihood of contracting tropical diseases or infections is minimal if normal precautions are taken. Persons in good physical condition and adaptable by nature suffer no serious problems in Dakar. The dan-

ger of infections is minimal if small cuts and wounds are treated properly. The possibility of schistosomiasis should deter wading and swimming in all freshwater areas. Swimming is safe at designated beaches and swimming pools. For protection from Acquired Immune Deficiency (AIDS), avoid contaminated blood products, unsterilized needles, and take recommended precautions for avoiding sexual transmission.

NOTES FOR TRAVELERS

American citizens entering Senegal must possess a valid passport, a Senegalese visa and an international inoculation certificate bearing evidence of inoculation against yellow fever.

Rabies is endemic in Senegal. Rabies shots should be renewed annually. Although no quarantine period is required, dogs and cats must have a valid health certificate and rabies certification before entering the country. Contact airlines for shipping details and secure reservations well in advance. Several veterinarians practice in Dakar, including an English-speaking doctor who makes house calls.

Exchange rates fluctuate based on the dollar exchange rate to the French franc. CFA and French francs are readily interchangeable in Dakar. CFA cannot be obtained or exchanged outside of CFA countries, except in France. The rate of exchange as of January 2001 was \$1=699 CFA francs. Travelers checks are available at local banks. The metric system of weights and measures is used in Senegal.

Several commercial banks offer banking and exchange facilities. Major credit cards are accepted by most major hotels, restaurants, airlines, and some shops.

Victoria, Seychelles

SEYCHELLES

Republic of Seychelles

Major City:
Victoria

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated May 1993. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The 115 lush, tropical islands which comprise the Republic of **SEYCHELLES** are considered the jewels of the Indian Ocean. Untouched for centuries, and settled only in 1744, the archipelago rises from the sea in colorful, majestic panoramas. It is so unique in its beauty, "a thousand miles from the rest of the world," that romanticists have suggested that it may have been the original Garden of Eden.

In Seychelles, people of various ethnic and cultural backgrounds have come together to forge their future. The Seychellois are united by their Roman Catholic religion and Creole language, with few of the animosi-

ties which have divided other nations.

MAJOR CITY

Victoria

Victoria, the capital and principal town, is the seat of government. It is situated on Mahé Island. For many years, it was only a small village but, today, it is becoming an attractive city with privately owned buildings, a new town area, a harbor, and banking facilities. Its area population is about 23,000—a number swelled considerably each year by throngs of tourists. The international airport, served by carriers from Europe, Africa, and Asia, is located eight miles from the center of the city.

Victoria has several banks, supermarkets, a cinema, a number of shops, several excellent restaurants, a service station, and an open-air market. Hotels (seven of international standard) and numerous guest houses are situated around the island.

Mahé is the largest of the islands in the Seychelles. Its beaches are famous for their water-sports facilities and resort comforts. Beau Val-

lon, on the western coast, is the most famous.

Schools for Foreigners

The International School of Victoria, based on the British system, provides an education for non-Seychelles students up to grade five. French is taught as a foreign language. In addition to a standard curriculum, students can participate in extracurricular activities. These include drama, gymnastics, field trips, squash, basketball, sailing and canoeing.

Recreation

Because of the pleasant climate, Seychelles offers a wide assortment of outdoor sports. Victoria has one nine-hole golf course, a tennis club, a yacht club, several squash courts, and a flying club with its own light aircraft and instructor. Golf and tennis competitions are organized frequently. Scuba diving, wind-surfing, snorkeling, water-skiing, and sailing are all offered at the bigger hotels.

Soccer is the national sport, but basketball, track and field, volleyball, boxing, and weight lifting are increasing in popularity. A small but active rugby club is composed mostly of expatriates.

Susan Rock. Reproduced by permission.

Cityscape of Victoria, Seychelles

Entertainment

Movies, cocktail and dinner parties, and hotel and club dancing provide most of Victoria's opportunities for entertainment. The civil and social organizations consist of Rotary Club, Round Table, and youth groups who meet in town centers. The American community has no organized activities as such, but the Satellite Club at the tracking station on Mahé frequently hosts dances or picnics on American holidays. Considerable informal entertaining is done at home.

Personal relations with host country nationals are excellent, and it is relatively easy to develop associations and friendships. The diplomatic missions in Victoria, other than that of the U.S., are the British, French, Chinese, Russian, and Indian. The largest component of the 2,000 foreign residents is comprised of South Asian expatriates employed by the Seychelles Government, parastatals, and multinational corporations.

It should be noted that, for all its charm, Seychelles is small and isolated. Since the distance to the mainland is about 1,000 miles, it is prohibitively expensive to leave the island periodically. The result is that some people suffer from "island fever," although it is usually only an

especially long stay that produces such an effect.

COUNTRY PROFILE

Geography and Climate

Situated in the western Indian Ocean, just south of the equator, The Republic of Seychelles consists of a nucleus of several granitic islands, with a large number of outlying coralline islands. It is an aggregate of more than 171 square miles of land, and about 600,000 square miles of territorial sea and exclusive economic zone. The 115 islands in the archipelago are divided into two distinct groups: the Mahé, 40 granite islands with high hills and mountains; and the coralline group, which are, for the most part, only a few feet above sea level, and generally uninhabited except for plantation workers collecting coconuts for copra. The main group of islands is of rugged formation and lies on the center of a bank which covers about 16,000 square miles.

The granitic group is fairly compact, with no island being more than 35 miles from Mahé. Its total land area is 87 square miles, of which Mahé

(the largest and most important island) claims 55.6 miles. These islands are rocky in formation, with an extremely narrow littoral, from which a central range of hills and mountains rises steeply to almost 3,000 feet. The vegetation is lush and tropical, and the sea gentle and beautiful, owing to the surrounding coral reefs.

Mahé lies between 4° and 5° south latitude. It is 17 miles long and four to seven miles wide, rising abruptly from the sea to a maximum altitude of 2,969 feet at the top of Morne Seychellois National Park. The only other islands of importance in terms of size and permanent population are Praslin, 21 miles from Mahé, and La Digue, 30 miles away.

The coralline islands lie between 60 and 612 miles from Mahé. No permanent population resides on most of them; indeed, some are waterless and uninhabitable.

The daily temperature is about 80°F, and varies little throughout the year. The hot, humid season runs from December to May. March and April are the hottest, but temperatures seldom exceed 88°F. During the coolest months, July and August, temperatures drop as low as 70°F. Southeast trade winds blow regularly from May to November and this period, corresponding to winter elsewhere in southern latitudes, is the coolest, driest, and most pleasant part of the year. At higher altitude levels, on the inhabited part of the rocky hills, temperatures are cooler and the air fresher.

Rainfall varies considerably from island to island and from year to year. The rainfall recorded at Victoria, the capital, has averaged 94 inches for the past 25 years. The greater part falls in the hot months when the northwest trade winds blow. During the rainy months, the climate is enervating because of high humidity and constant heat. The islands are outside the hurricane zone, and thunderstorms are rare and mild when they do occur. By contrast, rainfall in the outlying coralline group is far less, ranging

from 50 inches in the more easterly islands to 20 inches on southernmost Aldabra, which is considered the world's largest atoll.

Population

The people of the Seychelles are non-indigenous. The islands were completely uninhabited until the middle of the 18th century when French settlers arrived, bringing with them African slaves. Since then, an influx of Chinese and Indian traders has formed today's main mercantile class. Inter-marriage has been widespread, resulting in a great diversity of people. It is difficult to delineate ethnic groups accurately.

The total population of Seychelles is about 80,000, with nearly 90 percent living on Mahé. Victoria's population is approximately 40,000; some of these are expatriates, including French, British, Italians, and other continental Europeans. The predominant group remains the British, and includes business representatives, technical assistance workers, and many retirees. Since 1963, when the U.S. Air Force satellite tracking station was constructed on the Mahé mountain range of La Misere, the expatriate population has included many Americans.

Seychelles' islanders are charming and hospitable. Their official language is now Creole, but English is a second official tongue, and the study of French is compulsory in schools. Some 90 percent of the population is Roman Catholic, and the remainder Anglican, Seventh-Day Adventist, Baha'i, Hindu, and Muslim. About 58 percent of the adult population is literate.

Civic and social groups consist of the Rotary Club, the Round Table, and youth groups which meet in social centers. Neighborhood athletic leagues participate in soccer, boxing, field hockey, basketball, and volleyball.

Street in Victoria, Seychelles

Government

Seychelles achieved independence from Great Britain on June 29, 1976. Following a coup on June 5, 1977, the existing constitution was suspended, and the legislature dismissed. A new constitution took effect on the same date two years later.

The 1993 constitution permits multiparty elections. The Seychelles had been governed as a one-party state since 1978, controlled by the Seychelles People's Progressive Front. Provision is for a National Assembly to be comprised of 34 members (25 directly elected and 9 assigned on a proportional basis). Under current terms, the president

(who serves as both chief of state and head of government) is elected for a five-year term. France Albert René, who assumed power in the 1977 coup, was elected to the presidency two years later, and reelected in 1984, 1989, 1993, and 1998. After the multiparty elections in 1998, there were four opposition members in the National Assembly.

The civil service is based on the British system. Principal secretaries are charged with day-to-day operation of the ministries, under the guidance of presidentially appointed ministers.

Seychelles follows a policy of non-alignment in international affairs,

and (in theory) requires a guarantee that all naval warships docking in the islands are without nuclear weapons.

Since 1996, the flag of Seychelles has consisted of five oblique bands of blue, yellow, red, white and green.

Arts, Science, Education

In 1981, a structured educational system was implemented, requiring attendance in grades one through ten. After completing the tenth grade, students who wish to continue their education may attend a one-year National Youth Service (NYS) Program. While living at the NYS village, students receive academic instruction as well as training in gardening, cooking, housekeeping, the care of livestock, etc. Those finishing NYS are then eligible to attend Seychelles Polytechnic (not a university-level institution) for pre-university training, or go to one of the technical training schools.

The initial language of instruction is Creole. English is introduced as a teaching language for certain subjects, beginning in grade three, and French in grade six.

No institutions of higher education operate in the islands. University entrance and higher professional training are available through the United Kingdom's technical assistance program, Commonwealth scholarships, U.S. African Manpower Development Program, French Government scholarships, and other programs.

The main library is the National Library in Victoria, with a branch on Praslin. The Seychelles National Archives and Museum are located just outside of Victoria at "La Bastille."

The handicrafts industry consists of tortoise shells and seashell items and basketry.

Commerce and Industry

Seychelles' primary problems are demographic and economic. The birth rate is still high, and poverty exists, although it is reduced in severity by the benign climate. Efficient production of plantation crops has required less labor in recent years. Increasing population, however, creates considerable development expenditures. Although government policies emphasize increased food production by small holders, agricultural production for export is still mainly based on the plantation system. Copra and cinnamon production is predominantly for export, and many foodstuffs are imported despite soil and climatic conditions that could produce a wide variety of agricultural products.

Vegetables are grown on the island along with many tropical fruits; however, importation is necessary. The land, though fertile, is limited in quantity and additional room is not available to expand production. Agricultural production has not kept up with the increased demand for food. Modern methods have not taken hold because of the high cost of imported materials.

The two most important crops are copra and cinnamon. Pakistan receives virtually all copra exports. Other important exports are canned tuna, fresh and frozen fish, oil (used in the manufacture of soap and perfume), fresh coconut, and guano.

The main industries prepare copra and vanilla pods and extract essential oils for export. Coconut oil for cooking, coconut for stock feed, soap, *coir* (coconut fiber) rope, mattress fiber, beer, soft drinks, tobacco, and cement are produced in small quantities for local consumption.

Seychelles has a small handicrafts industry. Locally made handicrafts include tortoise shell, coral jewelry, black coral, sea shells, batik, shark spine walking sticks, baskets, dolls, and the famous *coco-de-mer* or sea coconut, found only in the Sey-

chelles. Ceramics and pottery are available at a local Potters Cooperative and a variety of African jewels and curios are on the local market.

Tourism provides more than 70 percent of foreign exchange earnings, over 20 percent of the gross domestic product (GDP), and 30 percent of formal employment. This growth was made possible by the opening of the islands' first commercial airport on Mahé in December 1971.

A hotel building boom began in the 1970s. The number of tourists steadily increased. As a result, employment in tourism escalated rapidly, and foreign exchange earnings from this source rose to record levels. However, stiff international competition for tourist dollars and a dramatic drop in tourist receipts because of the 1991 Persian Gulf War caused the government to take steps to broaden its economic base. Over 120,000 tourists visit the Seychelles annually, generating over \$100 million in revenue.

During the 1970s, considerable effort and money was devoted to improving infrastructure, primarily on Mahé, but also on the nearby islands of Praslin and La Digue. Roads, water and electricity supplies, a new deep water pier, urban land reclamation from the sea, improvement in telecommunications, education, and health projects are capital developments carried out during the past few years.

The main objectives of the Seychelles government are: diversification of the economy, particularly in agriculture and fisheries; expansion of home ownership; steady, controlled growth which can be sustained; increased employment; greater Seychellois participation in the economy; inclusion of the outer islands in economic development; more equitable distribution of the benefits of economic development; and a slower population growth rate.

Seychelles has traditionally incurred a trade deficit, offset by

aid, private capital investment, and tourism earnings.

Seychelles is a member of the U.N. and several of its specialized agencies, the Organization of African Unity, the Commonwealth of Nations, and the International Monetary Fund.

There is no official Chamber of Commerce in the Republic of Seychelles.

Transportation

Mahé is served by several international air carriers. Flights operate most days a week to Africa, Europe, and Asia. A few cruise ships call at Port Victoria each year.

Interisland travel is provided by Air Seychelles, ferryboat service, and private launches.

Mahé's public transportation is sporadic. Small buses operate to all parts of the island during the day. Taxis are in service on Mahé and Praslin. Rates are high and service after midnight is limited. Car rentals are readily available.

Roads are steep and narrow with dangerous hairpin turns and few guardrails. A single traffic lane moves on the left, and maximum speed is 65 kilometers (40 miles) per hour. There are few traffic signals, and no traffic signs posted.

For any extended stay in Seychelles, a personal car is a necessity. Only compacts or subcompacts are advisable; the steep, narrow roads have no shoulders or sidewalks, and cars often are parked on the sides. Good brakes are essential.

Spare parts for American cars are unavailable, and U.S.-manufactured automobiles are difficult to repair, especially those with automatic transmissions. The types of cars available locally are Toyota, Mazda, Honda, Nissan, Suzuki, Peugeot, and English Ford; all can be easily serviced and repaired. Wear and tear on vehicles, particularly on tires and brakes, is pro-

Independence monument in the Seychelles

Courtesy of Barbara Beach

nounced because of driving and road conditions.

Vehicle insurance rates are comparable to those in the U.S., but include full comprehensive, collision, and third-party coverage in the initial protection purchase.

Communications

Telephone and telegraph service is excellent. International calls and cables are carried by satellite, with a call to the U.S. rarely requiring more than three minutes for contact. Airmail arrives from the U.S. in approximately 10 days; surface mail is en route from three to six months.

Radio Seychelles broadcasts in French, English, and Creole. Television broadcasting is in the PAL-B format. Programming is limited to two or three programs per week of general interest, including feature films, sitcoms, and newscasts.

A wide range of magazines and newspapers is available in Seychelles. It is possible to obtain the *International Herald Tribune*, weekly editions of *Time* and *Newsweek*, and a variety of other publications in French and German, as well as in English. The American Cultural Center displays more than 25 different periodicals. Bookstores carry a good selection of fiction and nonfiction paperbacks. Some home

and fashion books or magazines are available.

Health

Local facilities on Mahé are adequate for most routine medical needs, and the major hospital on the island is suitable for emergency medical and surgical care. The hospital is staffed by expatriate doctors, a few of whom have received their training in the U.K.

Although there is a dental clinic, most specialized medical care is unobtainable. For example, no optometrist or optician practices in the country, and U.S. residents find it necessary to travel to Nairobi (Kenya) for routine eye examinations.

Health problems on Mahé include intestinal parasites (hookworm, amebiasis, whipworm, and tapeworm). Venereal diseases are widespread, with no active health programs for their control. However, infectious hepatitis is uncommon, and tropical diseases such as malaria and yellow fever are unknown. Dengue fever epidemics occurred in 1976, 1978, and 1986; some cases were also reported in 1992. While it is not fatal, this disease causes high fever and severe discomfort for up to a week, followed by unpleasant aftereffects. Government-supplied water is potable.

All raw fruits and vegetables should be washed before eating. Most meats come from abroad and can be eaten rare. Persons assigned to Seychelles (or visiting) are advised to receive, as well as thorough medical and dental checkups, inoculations against typhoid, measles, and DPT (diphtheria, pertussis, tetanus), and gamma globulin shots.

Most drugs, including antibiotics, can be obtained either locally or at the tracking station, but an adequate supply of nonprescription medicines (including vitamins), insect repellent, familiar brands of cosmetics, and other drugstore items should be kept on hand. Wash

raw vegetables and fruits before eating.

Clothing and Services

American-style summer clothing is both appropriate and comfortable in Seychelles. Men find that safari suits, casual slacks, and short-sleeved shirts are acceptable everywhere. Women wear either cotton or cotton-blend fabrics (synthetics are too warm) in long and short styles. Sundresses are most comfortable during the day; pantsuits are rarely worn. Shorts are suitable only at home or at the beach. Coats and ties (for men) and formal or expensive clothing (women) are needed only for such occasions as weddings or funerals. Simple, lightweight fabrics are best for children.

Because of the humidity, mold, and mildew, clothes and shoes do not last as long as in the U.S. Shoes are of good quality in Seychelles, but tend to be overpriced.

Umbrellas, light raincoats, sunglasses, lightweight sweaters, and shawls are needed. Winter clothing is inappropriate for island living, but one should keep in mind the possibility of travel to cooler climates.

Adequate shoe-repair service can be found in Victoria. No dry cleaners are available on the island. Major hotels have beauty/barber salons, and hairdressers are located in various places throughout the city. Good dressmakers and tailors are also available. Radio and appliance repair is virtually nonexistent. Hardware stores carry a good supply of tools and repair materials. Auto repairs (for standard-transmission vehicles) are excellent when spare parts are available. Film developing is available but expensive.

A good selection of toiletries and cosmetics is easily obtained at local shops, but at prices higher than in the U.S. Stores carry brands from

South Africa and Europe. A family planning an extended stay in Seychelles should have a supply of paper products, candles, art materials, sports equipment, sewing needs (including fabrics), toys, and craft/hobby items. All manufactured goods are more expensive in Victoria than in the U.S.

Most foodstuffs are imported from New Zealand, India, Kenya, France, South Africa, Singapore, and Australia. Because of the uncertainty of shipping schedules, Victoria experiences occasional shortages of particular items.

Beef, lamb, and shellfish are imported. Pork, chicken, duck, and various fish can be purchased locally and are of excellent quality. Canned meats and luncheon meats are not always available. Local bacon and sausage have a high fat content. Frozen vegetables are limited and expensive. Some seasonal fresh tropical fruit and vegetables are available locally; quality varies from good to excellent. The following vegetables and fruits are imported periodically and are expensive; celery, oranges, strawberries, apples, cauliflower, potatoes, grapes, pears, cabbage, and squash.

Canned, powdered, reconstituted, and sterilized milk are available, as are eggs and butter. Cheese is imported and when available the selection is good. A modest selection of cooking spices is always available.

Domestic Help

Domestic help is available, and most domestics have some experience and speak English. Salaries are somewhat high. Local government regulations strictly enforce minimum wages and social security benefits. While all salaries are negotiable above the minimum, the Seychelles Labor Board sets recommended wages for domestic workers, based on each person's requirement.

LOCAL HOLIDAYS

Jan.1	New Year's Day
Jan. 2 & 3	Bank Holiday
Mar. (2nd Mon)	Commonwealth Day

NOTES FOR TRAVELERS

The most direct route from the U.S. to the Seychelles is from New York to Nairobi (Kenya), and from there to Victoria via Kenya Airways. Some people prefer to travel to Europe (London, Frankfurt, Paris), and then to Seychelles on a direct flight.

No special problems should be encountered for entry into Seychelles. Americans do not need visas (only passports), but should have a transit visa for Kenya.

Travelers arriving from the U.S. or Europe are not required to have immunizations; those arriving from endemic areas must show evidence of current cholera and yellow fever inoculations. Cars entering Seychelles must have third-party liability coverage, and drivers are required to have valid U.S. or international licenses.

Pets must be quarantined in the United Kingdom for six months before entering Seychelles. No exceptions are considered.

No firearms or ammunition may be brought into the country.

The Anglicans and Roman Catholics each maintain a cathedral in Victoria, and the Seventh-Day Adventists have a church. A Sunday interdenominational service is conducted each week by the Far East Broadcasting Agency (FEBA), a Christian missionary group. A non-sectarian mosque opened in Victoria in 1982. No facilities exist here for most other Protestant denominations or for the Jewish faith.

The time in Seychelles is Greenwich Mean Time plus four hours.

Local currency is the Seychelles rupee (SR). Amendments to foreign exchange laws require that visitors pay for their hotel stays via a credit card. If they wish to make payment in Seychelles rupees, they are required to show proof of acquisition. If the rupees were won at a casino, a casino receipt should be shown as proof.

In 1981, Seychelles converted to metric weights and measures. However, many commodities entering the country are marked in accordance with British or American standards.

Freetown, Sierra Leone

SIERRA LEONE

Republic of Sierra Leone

Major City:

Freetown

Other Cities:

Bo, Kenema, Makeni

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report for Sierra Leone. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

SIERRA LEONE means "The Lion Mountains," translated from the Portuguese. The name was given by Portuguese navigator Pedro da Cintra in 1462 to describe the spectacular mountain crests rising 3,000 feet from the sea on the peninsula where Freetown was later established.

The colony at Freetown was founded in 1787 by British philanthropists as a haven for about 400 freed slaves. These settlers were later joined by blacks from the New World; many were American slaves who fought with the British during the Revolutionary War. Other settlers were Africans freed by the British Navy from slave ships captured on the open seas. These

"recaptives" came from nearly every ethnic group on or near the Atlantic coast of the African continent, and occasionally from beyond. Thus, the colony was a major melting pot in which European, North American, and West Indian influences mixed with those of various African cultures. This mixture eventually amalgamated into a single society collectively known as Creole.

The settlement became a British crown colony in 1808. Four years before the turn of the 20th century, the British Government declared a protectorate over the hinterland area, and defined the frontiers with Guinea and Liberia. During the 1950s people from all over the country rushed to diamond-producing areas to look for wealth. These efforts helped to spread the wealth throughout the country as never before.

Sierra Leone became independent in 1961, and a republic in 1971. Today it is a nation where modern Western features blend with historic Creole and tribal cultures. This aggregation of Western, African and Victorian English cultures results in a society that is comfortably familiar yet delightfully foreign to the Westerner, while the vibrancy and conviviality of the people make a stay here stimulating and enjoyable.

MAJOR CITY

Freetown

Historic Freetown, with its busy port and unspoiled beaches, is a picturesque city. It is situated on the slopes of wooded hills—unusual on the west coast of Africa—and overlooks one of the world's most magnificent harbors. From 1808 to 1874, Freetown was the capital of British West Africa.

The city's architecture is a combination of modern buildings and those of 19th-century style, typified in small, wood-gabled and latticed houses. At the hub of the city is the great Cotton Tree, already a landmark when the first Creole settlers arrived in 1787. Freetown is located at the northern tip of the country's Western Province, four miles from the mouth of the Sierra Leone River. It has a population of approximately 1 million.

For a city of its size in Africa, Freetown is unexpectedly Western in character. There are several good hotels, an international airport offering a variety of services, a university, a sports stadium, churches, six large grocery stores, car-rental facilities, several banks, and 15 foreign embassies.

Education

An American school was opened in September 1986 to serve the needs of Freetown's international community. The American International School of Freetown (AISF) is a private, coeducational, day school offering an educational program from pre-kindergarten through grade eight to students of all nationalities. It is housed in a modern, air conditioned building of eight classrooms, a 6,000-volume library, and two administrative offices.

A.I.S.F. follows a modified American curriculum stressing the mastery of basic skills, art and science, and the fostering of basic creativity. Critical thinking is emphasized, and the small classroom size allows the school to respond flexibly to individual needs. Although the school serves a diverse international student body, the curriculum is essentially U.S. based, and most of the texts and materials are published in the U.S. Extracurricular activities include gymnastics, swimming, school newspaper, and various field trips. The school year is divided into two semesters. It begins in early September and ends in mid-June. Holidays are scheduled at Christmas and Easter. Space is limited, particularly in the two nursery classes, which accept students once they have reached their third birthday. Prospective parents are advised to contact the school in advance. The mailing address of the American International School is c/o U.S. Embassy, Walpole Street, Freetown, Sierra Leone. U.S. mail may be addressed in care of U.S. Embassy—Freetown, Sierra Leone, Department of State, Washington, DC 20521-2160.

There is no adequate provision for education of children beyond grade eight. Expatriates generally send their children to boarding schools for secondary education, either in Europe or the U.S. No schools are equipped to meet special educational needs. Tutors have been found in the past among the missionary of American community to assist children with reading prob-

lems or to give limited outside instruction.

Several American families send their children to the French School, which has grades kindergarten through six. This small school, run by a local board of parents and teachers, follows the French national curriculum. Children under the age of seven may enter the school with no French language ability; older children are required to have some prior knowledge of the language.

Additionally, there is the small primary school located at the Fourah Bay College, offering somewhat comparable standards of education to those of the British primary system, and the large Lebanese-supported school which, while primarily focused on the Lebanese community's educational requirements, maintains a curriculum which follows the U.K. standard of primary and secondary education. Both schools are multinational in character, with the Lebanese school more formally structured.

These schools often have waiting lists. Tentative reservations can be made for incoming children, but it is usually more satisfactory to wait until after arrival to make final placement decisions. The caliber of schools fluctuates with staff changes, and the "best" school varies according to the individual child and family.

Few foreign children attend Freetown secondary (high) schools. Those who do find the experience more valid cross-culturally than academically. Admission to secondary school (usually at age 11, but sometimes as early as 10) is based on results of the Selective Entrance Examination given every March to all students in primary classes six and seven. However, foreign students who have not taken the exam can apply for direct admission. Most secondary schools have five forms (through the British Ordinary Level Examination), although a few offer

the sixth form (Advanced Level Examination).

Some junior and senior high school expatriates have used correspondence work from the Calvert School (grades seven and eight) and the University of Nebraska (grades nine and above). This has been satisfactory academically, but of mixed benefit socially. The expatriate peer group is always small, and sometimes nonexistent, and it is difficult to make friends with local teenagers outside of a classroom situation. Boarding schools are strongly advised for this age group.

Piano teachers are available in Freetown although pianos are scarce. Because of the climate, it is best not to bring a piano or string instrument to Sierra Leone; if shipped, it should be tropicalized beforehand. Ballet lessons for young girls are given at the International School, and karate lessons are given for boys. French lessons are offered at the Alliance Française; adults can also take courses at Fourah Bay College, either on a special or full-time basis.

The Kabala Rupp Memorial School, a coeducational, boarding, church-related institution, is located in the northern town of Kabala. Founded in 1957, the school is sponsored by the American Wesleyan Mission, the Missionary Church, Inc., and United Brethren in Christ. The U.S. curriculum for grades one through nine is taught by a staff of American teachers to a student body comprised mostly of Americans. Facilities include four buildings, three classrooms, an auditorium, covered play area, playing field, cafeteria, dormitory, and a 3,000-volume library. The mailing address of the Kabala Rupp Memorial School is Box 28, Kabala, Sierra Leone, West Africa. U.S. mail may be addressed in care of The Missionary Church, 3901 South Wayne Avenue, Fort Wayne, IN, 46807, U.S.A.

Recreation

Freetown offers increasingly better recreational opportunities as new

facilities are added. The Siaka Stevens Stadium, named for the country's former president, is one of Africa's largest sports complexes, and is a center for a variety of activities. Tennis, squash, and golf all are popular in the area. The Freetown Golf Club has a 12-hole course with sand greens (playable most of the year), squash and tennis courts, and a modest clubhouse. The Hill Station Club has tennis courts, and an active social program. At the Aqua Sports Club, there is a marina, a saltwater pool, squash courts, and a clubhouse and bar. Membership is required at these clubs, but fees are reasonable.

Some hunting is done in Sierra Leone. Bush fowl and guinea fowl, plentiful within 30 miles of Freetown, are usually hunted during the rainy season. Duck and geese are abundant in swamps about 80 miles from the city, and are usually taken by jump shooting from dugouts. Very little big game is found in the immediate Freetown area, but 150 or 200 miles up-country several varieties of African antelope, wild pig, bush cows (West African water buffalo) and, occasionally, hippos and elephants can be found. However, most big game is protected by law. Field clothing in camouflage patterns is prohibited by regulation. Bird hunters should bring briar-resistant clothing and snake-proof boots.

Fishing is available in and near Freetown. Saltwater species include barracuda, cobia, red snapper, Atlantic jack, Spanish mackerel, and grouper. The freshwater angler may find tigerfish, catfish, and several subspecies of tilapia. Most saltwater fish are taken by trolling lures. This necessitates the use of a boat; however, no charter boat facilities are offered in Sierra Leone. The experienced surf-caster should do well on the coast. Catches, however, have declined somewhat in recent years because of heavy fishing of coastal waters by international groups.

The Tiwai Island Wildlife Sanctuary, developed with the assistance of Peace Corps volunteers, offers an opportunity to view a wide variety of primates and other tropical rain-forest wildlife in their native habitat. Located seven hours from Freetown, it provides accommodations and an educational and relaxing break. The Outamba Kilimi National Park at Koto, far in the northern part of Sierra Leone, has hippos, numerous tropical birds, elephant sightings, and monkeys. It is a one-day trip from Freetown and has tent accommodations for visitors.

Sierra Leone's picturesque and uncrowded beaches offer the greatest recreational diversion. Many are within easy driving distance of Freetown. Since occasional strong currents and undertow occur, precautions should be taken while swimming. Sharks and barracuda are seldom seen. The rivers in Sierra Leone are unsafe for swimming because of parasitic organisms. A few sites exist for interested deep-sea divers and snorklers. Waterskiing is also popular.

The beaches, tropical vegetation, and varied tribal groupings provide an unending supply of colorful subjects for those interested in photography, painting, or sketching. Discretion should be used, however, since some tribes still maintain taboos against being photographed. Both color and black-and-white film, although expensive, are available for most cameras, including Polaroid. Black-and-white film is developed locally, but color film must be sent to the U.S. or England.

A number of places of interest outside Freetown are accessible by car. The 60-mile trip around the peninsula is a pleasant drive, fringed by some of the world's most picturesque and unspoiled beaches. The drive passes through several colorful Creole villages with British names, as well as typical fishing villages at Baw Baw and Tokeh. Two tourist resorts, catering primarily to European tourists are located

within an hour's drive from Freetown and provide a relaxing change of pace for a weekend stay or Sunday luncheon.

Bunce Island, an 18th century English slave fort with remarkably intact ruins, is located 20 miles from Freetown, a 90-minute boat trip up the Sierra Leone River. This fort, is gaining interest in the U.S. since researchers have discovered that many Americans along the South Carolina and Georgia coasts had origins in Sierra Leone. Other boat trips of longer duration, to the Bananas Islands and Turtle Islands, are available through local travel agencies.

Roads from Freetown to the up-country towns of Makeni, Yengema, Bo, and Kenema are generally good, although not always properly maintained. The Port Loko district, about 80 miles northeast, is a scenic, forested area, higher in elevation than Freetown, and affords a refreshing change in climate. Woodworking is done in the Kenema district, another heavily forested area about 200 miles from Freetown. Makeni, in the northern district, is a center for crafts.

The diamond mines at Yengema in the Eastern Province may be visited by invitation of the National Diamond Mining Company; a government permit is needed. Most of the alluvial mines are located along small streams in the scrub forest.

Although none of these areas provide a radical scenic or climatic change, they are interesting and readily accessible. Other inviting sights, such as the Bintumani Mountains, the Bumbuna and Bikongo Falls, and the Kabala area, are not comfortably reached by car. Travel on unpaved roads is easier at the beginning of the rainy season, when the dust has settled; it is most difficult at the height of the rainy season. Government-operated ferries, not always in service, transport vehicles across up-country rivers.

Adequate hotel accommodations are practically nonexistent, so upcountry travelers should arrange to stay with government officers, missionaries, or Peace Corps volunteers. At Sierra Leone government rest camps, such as the one at Shenge, an old port and pirate hideaway about a six-hour drive from Freetown, one must be completely self-sufficient. This includes carrying boiled, filtered water, food, a kerosene lamp and stove, mosquito nets, a cot, bedding, dishes, and utensils.

Driving time from Freetown to Monrovia, Liberia, is about 10 hours in the dry season. Flying time to Monrovia is only 45 minutes, but transport to and from the airports at either end increases the total travel time to six hours. It is possible to drive to Conakry, Guinea, in six hours during the dry season.

Entertainment

Air-conditioned movie theaters in Freetown feature some American films, although they may be three or more years old. Videocassette recorders are popular in the foreign community. There are several video clubs in Freetown that rent tapes in both VHS and Beta formats. Many Americans receive tapes from family and friends in the U.S. Spectator events are limited to soccer games and native dancing fests. The Sierra Leone Military Forces also occasionally present colorful ceremonies.

The Paramount, Cape Sierra, Bintumani, and Mammy Yoko hotel restaurants are regularly patronized by Americans. Three other restaurants at Lumley Beach—the Atlantic, the Lighthouse, and the Palm Beach—offer good food and dancing to live or recorded music. Two casinos at Lumley feature roulette, blackjack, and slot machines. A small Chinese restaurant, located between the city and Lumley Beach, is popular, as is the Provilac Restaurant which has weekly buffets featuring Sierra Leonean dishes.

Social life in Freetown is generally relaxed and informal, and usually centers on home entertainment.

Newcomers quickly meet the community through business contacts, membership in clubs, and social functions in homes. Protocol is taken seriously by some diplomats or older Creoles, whose social framework is traditional British, and it is advisable to familiarize oneself with patterns of handshaking, verbal greeting, and deference. Americans are often seen as too abrupt by Sierra Leoneans. Business is conducted only after a short exchange of greetings and talk of a more relaxed nature has preceded it.

Freetown has branches of the International Rotary and Lions Clubs.

OTHER CITIES

BO, just over 100 miles southeast of the capital, is the commercial center of the interior, with a population of about 81,000. The trading of ginger, palm oil and kernels, coffee, cocoa, and rice is important to the economy; goods are transported to Freetown mostly by road. The city has a number of educational centers, including teacher-training colleges, as well as the largest hospital outside of Freetown.

Located in southeastern Sierra Leone, **KENEMA** is home to the country's timber industry and an important market town for the Mende people. Alluvial diamond mining is an important industry. Kenema produce coffee, cocoa, and palm kernels and oil. Kenema is the site of a government library, schools, and several private hospitals. The city's estimated population is 71,000.

MAKENI is situated in central Sierra Leone, less than 100 miles north of the capital. It is a trade center for the Temne people. The main crops sent to Freetown are rice, palm oil, and kernels. Known for its Gara tie-dyeing, Makeni has a church, government schools, a teacher's college, and a hospital. The population is about 106,000.

COUNTRY PROFILE

Geography and Climate

Sierra Leone is nearly circular in shape, and has an area of 27,925 square miles (about the size of South Carolina). It is located on the southwestern part of the great bulge of West Africa, between the seventh and 10th parallels north of the equator. It is bordered on the north and east by the Republic of Guinea, on the south by the Republic of Liberia, and on the west by the Atlantic Ocean.

Three main topographical regions run northwest to southeast, roughly parallel with the coast: a belt of mangrove swamps and beaches; an area of low plains covered with secondary forest and cultivated crops; and an easternmost region of high plateaus and mountains, some rising as high as 6,000 feet. The mountainous peninsula on which Freetown, the capital, is located comprises a fourth, distinct geographical region. It is the only place on the West African coast where mountains rise near the sea and where the beaches are both exceptionally beautiful and generally safe for swimming.

The climate is tropical, with both rainy and dry seasons, constantly high temperatures, and almost constant high humidity. The rainy season extends from May to November, but is heaviest between July and September, when over half of the annual rainfall occurs. In Freetown, rainfall is as much as 150 inches; inland areas receive less. The beginning and end of the rainy season is marked by frequent strong electrical storms, similar to those occurring during the hot summer months of the eastern United States. Coastal temperatures during the rainy season range from a daily high of about 80°F to a nightly low of about 76°F. Most Westerners reside in the hills above the city, where a constant breeze makes for

comfortable living and encourages outdoor entertaining.

Relative humidity in Freetown rarely falls below 80 percent, except when the *harmattan* reaches the coast. This current of dry, dusty air flows from the Sahara Desert toward the south and west, usually reaching Sierra Leone in December. The *harmattan* brings Freetown its best weather; during this season, temperatures reach about 90°F during the day and fall to about 74°F at night.

Because of the climate, insects abound and mildew can be a problem. Flies, ants, and cockroaches are occasional nuisances, but lizards are also plentiful and help to keep the others in check. Numerous snakes exist, some of them poisonous. Precautions must be taken against mildew and corrosion and, during the dry season, against the bothersome red laterite dust.

Population

Sierra Leone's population is estimated at 5.4 million, with an increase of 3.6 percent per annum. Density averages about 121 per square mile; the highest densities of several hundred per square mile are in the western area of the country; the lowest, of about 25 per square mile, are in the remote northern and eastern sections. Life expectancy in Sierra Leone in 2001 was 43 years for males, 49 years for females. Freetown, with 1 million people, is the capital, the commercial and educational center, and the only large city.

The African population consists of 20 ethnic groups, each with its own language and customs. The two largest groups (the Mende in the south and the Temne in the north) are about equal in number and make up approximately 60 percent of the country's population. The 54,000 descendants of the original settlers make up the Creole society, mostly settled in the Freetown area. Their language, Krio, is the lingua franca of Sierra Leone, although the Mende and Temne tongues are also

widely spoken. English is the official language.

Followed by 60 percent of the population, Islam is the predominant religion of the country, with animism and Christianity (both Protestant and Roman Catholic) following. Both Islam and Christianity retain perceptible overtones of indigenous animist beliefs. Islam is strongest in the Northern Province; Christianity, even though numerically small, is influential in southern regions and the Freetown area, where missions have been active for over 100 years.

Many Creole customs, which derive from Victorian England, are easily identifiable with those of Western cultures. Tribal customs, however, differ greatly from cultural patterns encountered in the U.S. Secret organizations, such as the women's Bundu or Sande and the men's Poro societies, still play a dominant role in tribal life.

Women in rural areas often wear only a cloth or *lappa* tied around their waists; children are commonly scantily clothed and occasionally naked. Strong extended family structures are frequently comprised of several wives and their relations.

The Lebanese and the Indian communities are mainly merchants. European and American residents are scattered throughout the country.

Government

After World War II, self-government was gradually established in Sierra Leone, leading to complete independence on April 27, 1961. The following September, Sierra Leone became the 100th member of the United Nations. The first general elections with universal franchise were held in May 1962.

Under the constitution brought into effect on Independence Day, Sierra Leone adopted a parliamentary form of government. Executive authority was vested in Her Britannic Majesty, Elizabeth II, who was

queen of Sierra Leone and represented by a governor-general.

In April 1971, the country adopted a republican constitution with an executive president, but retained membership in the British Commonwealth. Executive authority is exercised by the president. The unicameral parliament consists of 127 authorized seats, 105 of which are filled by elected representatives of constituencies and 22 by paramount chiefs elected by fellow paramount chiefs in each district. The president is authorized to appoint up to seven members.

A separate judiciary system includes a Court of Appeals, Supreme Court, High Court, magistrates' courts, and local courts having jurisdiction in certain customary (tribal) law cases.

The Freetown peninsula, which together with Sherbro Island comprised the former colony, is now called the Western Province. Freetown has one of the oldest civic governments in Western form in all of Africa south of the Sahara. The rest of the country, formerly known as the Protectorate, is divided into three provinces, the Northern, Southern, and Eastern. These provinces are made up of 12 districts comprising 146 chiefdoms, where paramount chiefs and a council of elders constitute the basic unit of government.

Major Gen. Joseph Saidu Momoh was elected president in January 1986. In May 1992, mutinous army troops staged a military coup. Momoh was overthrown and fled to neighboring Guinea. Captain Valentine Strasser took control of the government, promising a return to civilian rule.

In 1996 Strasser was overthrown by Julius Maada Brio. Elections in February 1996 resulted in the installation of Ahmad Tejan Kabbah as president following a runoff vote. However, his government was overthrown in a coup led by Major Johnny Paul Koromah in May 1997.

The president was reinstated in 1998 and was reelected in 2002.

The flag of Sierra Leone is made up of green, white, and blue horizontal bands.

Arts, Science, Education

The country's intellectual life centers around the University of Sierra Leone. The university's Fourah Bay College, founded in 1827 by Anglican missionaries and situated on Mount Aureol high above Freetown, is the oldest English-language college in West Africa, and still attracts students from Ghana, Nigeria, Zimbabwe, and other countries to study alongside students from the growing number of Sierra Leonean secondary schools. The curriculum includes liberal arts, education, theology, law, economics, engineering, and pure and applied sciences. The university includes three institutes—the Institute of African Studies, the Institute of Public Administration and Management, and the Institute of Library Science.

Njala University College is the second part of the University of Sierra Leone. It is an agricultural and educational institution formed on the U.S. land-grant college principle, and is located 130 miles from Freetown at Njala. In addition, Sierra Leone has several teacher training colleges, the most notable of which is Milton Margai Teachers College, just outside of Freetown.

Choral, drama, and music groups in Freetown produce occasional plays (both in English and in Krio) and give recitals. A National Dance Troupe presents high-quality traditional dancing performances. The small National Museum displays local artifacts, and the Sierra Leone Artists Association promotes the sale and exhibition of local art work. Weaving, carving, and *gara* cloth (tie-dyed fabric) are the principal artistic media of the people.

Commerce and Industry

Sierra Leone's economic and social infrastructure is not well developed. The economy remains primarily agricultural although minerals, particularly diamonds, account for roughly 70 percent of all exports. In recent years, serious balance-of-payments and budget deficits have stifled economic growth. The Sierra Leonean economy has been saddled with high unemployment, large trade deficits, and a growing dependence on foreign aid. The value of the national currency has declined and wages are extremely low.

Agriculture accounts for over 40 percent of Gross Domestic Product (GDP) and employs over 70 percent of the labor force. Most agricultural production is of a subsistence nature. Rice is the staple food crop, but a significant percentage is imported. Other important food crops are cassava, bananas, sweet potatoes, sorghum, and corn. Palm kernels and oil, coffee, and cocoa are Sierra Leone's primary cash crops and major sources of export earnings.

Because of the value and quality of Sierra Leone's diamond resources, the mining sector has traditionally played a central role in the economy. The profitability of the country's diamond resources is hampered by the depletion of reserves and illegal smuggling. Sierra Leone also has the world's largest deposits of rutile, a mineral used to manufacture paints and alloys. Most reserves of rutile are located in the southwestern part of the country. Large bauxite reserves are also known to exist in the northeast.

Sierra Leone's industrial sector is small and underdeveloped. Industrial capacity is limited mainly to the manufacturing of cigarettes, paint, beverages, plastic footwear, and textiles.

Minerals, such as diamonds, rutile, and bauxite, make up the bulk of Sierra Leone's exports. Coffee and cocoa are also valuable export com-

modities. The Netherlands, Great Britain, the United States, Germany, and other European Community (EC) countries are the primary recipients of Sierra Leone's exports. Sierra Leone imports capital goods, foodstuffs, petroleum and related products, transport equipment, machinery, and light industrial goods. These imports are provided by the United States, EC countries, Japan, China, and Nigeria.

Sierra Leone is a member of the Economic Community of West African States (ECOWAS). The country receives foreign financial assistance from China, Germany, the World Bank, the International Monetary Fund, the European Community, the United States, and Great Britain.

The Chamber of Commerce of Sierra Leone is located in Freetown; the address is P.O. Box 502.

Transportation

International air service to Europe is provided by British Airways, KLM, and UTA. As of May 1990, British Airways flew to London twice a week, KLM to Amsterdam once a week, and UTA to Paris twice a week. Provincial Air Services provide charter helicopter services to many parts of the country, but rates are high. In-country travel is by road, as railroad and airline carrier service is no longer available.

The Road Transport Corporation operates bus service within the capital city, although it is not often used by official Americans or U.S. visitors because of overcrowding. Many taxis also operate in Freetown, but they are hard to get since they cannot be summoned by telephone; because cabs are unmetered, fares should be agreed upon beforehand. Fares outside the city are high. Taxis invariably pick up several passengers on any given trip and are, therefore, always crowded. Taxis are seldom used at night by expatriates (for safety reasons).

A car is a necessity for those living in Freetown, but American-made

vehicles are not recommended. Acceptable servicing exists for most British cars and some other makes, such as Peugeot, Renault, Fiat, Volkswagen, Mercedes, Honda, and Nissan. Spare parts, however, are often scarce and always expensive. Mobil, Texaco, Shell, and British Petroleum gasolines are sold at American-style stations.

In the capital, the streets are narrow and congested with pedestrians; there are no sidewalks. Driving is on the right.

Communications

Facilities for telephone communications in Sierra Leone are adequate. A computerized central system has been installed which should improve telecommunications considerably. International calls to the U.S. can be made at the Sierra Leone External

Telecommunications but take time, since the number of overseas lines is limited.

Local liability insurance can be arranged and is required for personally owned vehicles. It is not expensive, but coverage is very limited. Comprehensive insurance is also available but costly. Telegraphic communications are usually reliable, although the delivery of telegrams is sometimes delayed. Airmail from the U.S. takes from five days to two weeks to reach Freetown, and occasional delays are experienced.

Sierra Leone has the oldest radio broadcasting service in English-speaking West Africa. The government-owned Sierra Leone Broadcasting Service operates a number of radio stations broadcasting in English, Krio, Limba, Mende, and Tenme. However, these stations are on the air infrequently due to power failures and the lack of spare parts for broadcasting equipment. A shortwave radio is necessary to receive international broadcasts. Radio reception in Freetown is generally good.

Commercial television service is limited. Sierra Leone uses the European system for its television broadcasts. American television sets receive the visual, but not the audio portion of the signal. However, with a small radio having a TV audio band, the voice signal comes in. This is cheaper than conversion in the European system. Many American expatriates bring a VCR and a supply of videotapes with them to Sierra Leone.

The government-owned *Daily Mail* is the main newspaper. It is published daily, but gives very little coverage to international news events. The Paris edition of the *International Herald Tribune* is available by subscription and usually arrives a month late. Current copies of the international edition of *Newsweek* are sold locally.

Books, especially paperbacks, the majority of which are published in the U.K., are available in quantity from a number of sources. Several libraries (USIS, British Council, and the Freetown city libraries) have reasonable collections.

Health

Freetown's four large hospitals—Connaught General, Princess Christian Maternity, Children's, and Hill Station—as well as several small private hospitals and nursing homes, offer minimum facilities. None is satisfactory in size, equipment, hygienic standards, or staff. The level of nursing care is below that of institutions in the U.S. Many medical problems require evacuation to Europe or the U.S. for treatment. Several well-qualified physicians and dentists practice in Freetown, although the absence of basic diagnostic and treatment facilities presents a considerable handicap for them.

Water shortages sometimes occur in Freetown. During the dry season, water supply and pressure may be irregular if the level in local reservoirs drops below normal. Although the water is treated with chlorine, it should be boiled about 20 minutes

before using; all drinking water must also be filtered.

For most of Freetown, the sewage disposal system is below standard. Open drainage ditches running throughout town are breeding places for insects, and cause unsightly flooding when outlets are plugged or covered by debris. Many residences have septic tanks, but most of the population use pit latrines.

Irregular garbage collection and disposal; inadequate laws governing inspection, storage, and sale of food; and the lack of health and sanitation consciousness by most cooks and stewards are health hazards to Westerners. Vigilance and constant attention to good hygiene practices are strongly advised.

Major communicable diseases are malaria, measles, typhoid, hepatitis, intestinal diseases, influenza, pneumonia, tuberculosis, meningitis, cholera, and lassa fever. During the rainy season, children may be particularly susceptible to fungus or other skin disorders. Intestinal upsets are common.

Those moving to Sierra Leone should begin taking malaria suppressants three weeks prior to arrival, and continue taking them weekly for the duration of the stay. One should also obtain a gamma globulin injection against hepatitis as well as inoculations against cholera, yellow fever, typhoid fever, tetanus, polio, and rabies. Because rabies is prevalent in Sierra Leone, pets should also be vaccinated against the disease.

All locally purchased vegetables should be either cooked or disinfected, if they cannot be peeled. Taking vitamin tablets as a daily supplement is a common practice. All clothes, bedding, and towels must be machine dried or ironed to avoid tumba-fly infestation. Mosquito netting for homes, especially where young children reside. Not only is malaria a concern, but bites that are scratched become infected easily in the tropical climate.

Clothing and Services

Being neatly, smartly, and appropriately dressed is important to Sierra Leoneans, and they expect it of others. Ready-made clothing sold locally is European in style; limited in selection, size, and quality; and also very expensive. Local tailoring is good and generally moderate in cost. Shoe repair is crude but functional.

In selecting a wardrobe, one should remember that the temperature range is narrow, and seasonal change minimal. Offices, however, are air-conditioned and can be cool. Clothing appropriate for Washington, DC summers is generally right for Freetown. Washable fabrics are preferable. Local dry-cleaning is not recommended. Garments that cannot be washed or that require special handling should be kept to a minimum. Laundry is done at home. Cotton or predominantly cotton blends are more absorbent and not as hot as synthetics. Knits are good for traveling and office wear, but are generally too warm for regular street wear.

The hot weather requires frequent changes and consequent laundering of clothes. This, plus the lack of seasonal variation and a fairly limited social orbit, makes a variety of clothes important. Some warm clothing will be needed for travel out of the area in cold months. A light sweater or shawl is handy for cool evenings, and some rain gear is also useful. Umbrellas can be bought locally.

Men wear wash-and-wear clothing throughout the year. Short-sleeved shirts are generally worn in the office. Social life is informal (often no coat or tie is necessary), but official affairs require a dark suit and long-sleeved shirt.

Women need a variety of cotton dresses for daytime, and washable long dresses for the numerous social activities in Freetown. Because evenings can be cool, and home and res-

taurants air-conditioned, some dresses should have sleeves, jackets, or stoles. Shorts and slacks are worn for sports activities and at home, but less often downtown or in the office. Gala African dresses are purchased locally and are popular for evening wear, but should only be relied on to augment an evening wardrobe. Sierra Leonean women wear hats and hosiery for formal daytime occasions, including church, but Western women normally do not wear hats. Hosiery is a matter of personal choice. Maternity clothes are not available in Freetown.

Children usually wear shorts or jeans, but party clothes are sometimes needed. School uniforms are made locally. Clothing for babies and young children is extremely limited here, and the items are more expensive than in the U.S. Shoes must be worn at all times when outdoors to protect feet from worms and bacteria that can enter the body through small cuts or abrasions. Children generally wear tennis shoes and sandals.

Tomatoes, sweet peppers, green beans, cabbages, green squash, pumpkins, radishes, parsley, cucumber, eggplant, lettuce, potatoes, and onions are seasonally available. A variety of greens (spinach substitutes), okra, sweet potatoes, and small tomatoes are sold year round in outdoor markets. Imported vegetables are available, but at very high prices. Good local tropical fruits such as bananas, oranges, pineapples, limes, grapefruit, avocados, mangoes, and papaya are seasonally available in abundance. Purchasing fruits and vegetables from street vendors involves considerable bargaining.

Local beef, lamb, and pork are sometimes used by Americans. Beef is not aged and most of it is tough, but the fillet is tender and reasonably priced. Lamb is both expensive and fatty. Pork is better tasting than in the U.S. and trichinosis is not known in Sierra Leone. However, pork should be cooked well as a pre-

caution. Local poultry is acceptable, but expensive. Fresh and locally frozen fish are perhaps the best bargains in Freetown. Fresh and frozen shrimp and lobster are also good. Lobster, squid, barracuda, sole, and snapper are among the local favorites. Eggs, although more expensive than in the U.S., can be bought most of the year. Fresh milk or cream is not available, but good powdered or canned milk is. Imported sterilized milk sealed in cartons (three-month shelf life without refrigeration) is also available.

Freetown's supermarkets stock a surprising variety of canned goods, cereals, nuts, and pastas, all of which are imported. However, these products are several times the U.S. price, availability is never certain, and the length of time that they have been sitting on grocers shelves in tropical heat is unknown.

Tailoring, shoe repair, and dry cleaning are below American standards, although of acceptable quality. Freetown has a few barbers and beauty salons that give acceptable haircuts, permanents, manicures, and facials. Some local electricians work on radios and stereos, but spare parts for American-made items are not readily obtainable.

Domestic Help

As in most places in Africa, household servants are usually male. Most families hire one person to serve as a steward, with responsibility to clean and perhaps help with cooking. Families with small children may hire a nanny. Generally, household help do not live in the home, but live-in nannies can be found.

Most domestics require close supervision. Uniforms are provided by the employer. Each servant should have a physical examination and X-ray when hired; periodic checkups are advisable. Salaries are generally low.

NOTES FOR TRAVELERS

The Department of State warns against travel to Sierra Leone and advises all U.S. citizens to exercise caution when traveling to Sierra Leone, particularly in the areas south and east of Bo and Kenema, and to defer all travel to the area along the border between Sierra Leone and Liberia. There are reports in these areas of banditry and incursions by rebels from Liberia, and there have been clashes between these rebels and the Sierra Leonean military. Travel at night should be avoided, and travelers to the affected areas can expect to encounter road-blocks and vehicle searches by Sierra Leonean security forces. Travel outside the capital is dangerous because of armed military groups.

Several African and international airlines provide service to and from Europe, the Middle East, and Africa.

Persons arriving in Sierra Leone must have valid passports, visas, and current health certificates with records of inoculations against yellow fever and cholera. Injections to prevent hepatitis, typhoid, tetanus, and polio also are strongly recommended, as are malaria suppressants.

Pets may be brought into the country with an international certificate of good health, obtained from a veterinarian. Proof of rabies vaccination and proper health certificates are required. There is no quarantine period.

The Government of Sierra Leone will permit importation of 50 rounds of ammunition for each registered firearm, with no limitation on the number of firearms. More than what is considered a reasonable quantity, however (one pistol, one rifle, one shotgun), must be approved. Only guns designated as suitable for sporting purposes are allowed; no military or police models can be imported.

The following denominations have places of worship in Sierra Leone: Anglican, Church of Christ, Evangelical United Brethren, Pentecostal, Bahai Faith, Methodist, Muslim, Roman Catholic, Samaria West African Methodist, and Seventh-Day Adventist. Non-denominational Protestant services are held weekly at St. Augustine's Anglican Chapel, Hill Station. Freetown has no synagogue. Most services are conducted in English.

The time in Sierra Leone is Greenwich Mean Time.

The monetary unit is the *Leone*, which is divided into 100 cents. The symbols used are "Le" for *Leone*, and "c" for cents. The Bank of Sierra Leone, a central bank with no commercial facilities, manages the currency. There are several commercial institutions, including the Standard

Bank of Sierra Leone, Ltd; Barclay's Bank Sierra Leone, Ltd; and the Sierra Leone Commercial Bank, Ltd.

All weights and measures conform to British standards.

The U.S. Embassy in Sierra Leone is located at the corner of Siaka Stevens and Walpole Streets, Freetown (across from the city's historic Cotton Tree); telephone: 232 (22) 226-481; FAX: 232 (22) 225-471.

Mogadishu, Somalia

SOMALIA

Republic of Somalia

Major City:

Mogadishu

Other Cities:

Berbera, Hargeisa, Kismayu, Marka

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report for Somalia. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Editors Note: From 1989 to press time a brutal civil war rages in Somalia leaving the country with no national government. The capital city of Mogadishu is badly damaged. Since 1992, the U.S. State Department has considered the situation in Somalia to be extremely dangerous. Rival factions continue to fight for control of the country, causing widespread destruction, famine, and death. On December 9, 1992, former President George Bush announced that U.S. troops would be sent to Somalia as part of Operation Restore Hope, an international effort designed to insure that food supplies would be able to reach Somalia's starving population. US forces were reduced in May 1993

and reconstruction work was assumed by the United Nations. UN-sponsored peace talks failed to stop the warring factions. In 1994 the UN redefined its role in Somalia to be less assertive. The United Nations completed its troop withdrawal in March 1995. With the departure of the UN, the country split into zones controlled by the various warlord factions. Most sections of this entry reflect the conditions in Somalia prior to the outbreak of hostilities.

Once known as the Land of Punt, **SOMALIA** has a rich and ancient history. Famed for its frankincense and myrrh (which it still exports), Somalia today is better known for its pastoral economy, its nomadic population, and its important place in the strategic Horn of Africa.

Somalia possesses beautiful white sand beaches bathed by the waters of the Indian Ocean. Traveling along the coast, one is struck by the stark beauty of the countryside, and the harsh but picturesque desert landscapes.

The coastal cities, in particular, reveal a long contact with foreign influences. Travelers from the Arabian Peninsula, Pakistan, India, and even China, called at the capital city hundreds of years before the Portuguese arrived early in the 16th

century. Many old mosques, houses, and intricately carved doors and windows reflect the various cultures which have touched this country.

Before the outbreak of hostilities a favorable social climate existed toward Americans. It was possible to meet and socialize with Somalis and to travel, within limits, within the country.

MAJOR CITY

Mogadishu

Mogadishu is Somalia's capital and largest city. It lies on the Indian Ocean about two degrees north of the equator. It extends approximately four miles along the sea and a mile inland on a line of dunes 100 to 200 feet high. Beyond the city limits, the countryside is flat and barren, with vegetation consisting of bushes and thorn trees, and occasional seasonal grassy areas. The prevailing tone of the countryside is a desert gray much of the year, but it turns green during the two to five months of the rainy season.

Mogadishu's rapidly expanding population is estimated to be about 1.2 million. This figure includes a large

Street in Mogadishu, Somalia

Yemeni community, and smaller groups of Italians, Indians, and Pakistanis. The largest diplomatic missions in the city are those of Italy, the U.S., and the People's Republic of China. There is also a large United Nations Development Program (UNDP) mission in the city, in addition to several volunteer agencies working under the U.N. High Commissioner for Refugees (UNHCR). Among other foreign agencies engaged in developmental work or assistance in Mogadishu are Africare, OXFAM (Oxford Committee for Famine Relief), Finnish Medical Aid, and the University of Saskatchewan.

New visitors to the city can visit a camel's milk market or the Lido Market where meerscham craftsmen and straw weavers ply their trades. Hamarweyn is the core of the old city and the location of the Bendair weavers. The National Museum displays past and present items of Somali folk culture.

From the time of its founding by Arab colonists in the eighth century, Mogadishu was an independent town until its occupation in 1871 by the Sultan of Zanzibar. Italy leased its port late in that century, and in 1905, purchased the town and made it the capital of what was then Ital-

ian Somaliland. The influence of the Italians remains to this day, and is noticed especially in the use of that language in all walks of official, business, and domestic life.

Education

The American School of Mogadishu was organized as a cooperative venture in 1959, and has a student body in kindergarten through grade eight. The campus is located on the western edge of the city on Afgoi Road, and the buildings include classroom wings, a gymnasium, a 6,000-volume library, and offices. Extensive playing fields surround the school and often are used by community organizations as well as by the students. The present building was started in 1965, and was completed with the help of Agency for International Development (AID) and U.S. State Department grants.

American School offers a fine opportunity to study with an international student body in small and personalized classes; average class size is 20 for grades one through four, and 15 for grades five through eight. Subjects are departmentalized in grades seven and eight. American textbooks and materials are used, and the curriculum is comparable to that offered by schools in

the U.S. The school's sports program includes swimming instruction for about eight weeks a year at the nearby International Golf and Tennis Club. Information on the academic program can be obtained by writing to the American Embassy in Mogadishu.

The director and deputy director, both with teaching spouses, are recruited from the U.S., as are two other teaching couples. Other teachers are recruited locally. Most of the present staff is American. The school has been able to provide qualified teachers in every grade and academic standards are high. Students with special learning needs are not accepted due to the lack of trained staff. Accreditation was granted by the Middle States Association of Colleges and Schools in March 1985.

Emphasis is placed on training the staff in U.S. educational methods and practices. Grades one through eight meet from 7:30 a.m. to 1 p.m., five days a week, Sunday through Thursday. Kindergarten and preschool hours are 7:30 to 11:30 a.m.

Kindergarten pupils must be four years and nine months old by September, while preschoolers must be three years and nine months old by September of the year of admission. A record of immunization and a birth certificate are required for admission to all grades.

There is no provision for students at the secondary level, and they must attend boarding schools in Europe or the U.S., although limited possibilities for high school exist in Kenya.

Recreation

The principal outdoor activities in Somalia are swimming, sunbathing, snorkeling, jogging, fishing, tennis, golf, volleyball, badminton, softball, boating, and camping. Spectator sports include soccer and basketball. The Mogadishu Hash House Harriers hold a cross-country run every Sunday afternoon. The Golf and Tennis Club, located in the American Embassy compound and

managed by the Recreation and Welfare Association, has a nine-hole sand golf course, four cement-surface tennis courts, a large swimming pool with adjacent children's wading pool, and a snack bar.

Mogadishu has good beaches and an abundance of sunshine. Lido, the main city beach, is not used by Americans for swimming because of the shark hazard; The beaches south of town are used mainly for picnics and camping. During much of the year, snorkeling and spearfishing are popular activities. The best snorkeling is at Gezira, a beach area about 10 miles southwest of Mogadishu. A few small sailboats and windsurfers are seen there inside the reef during the quiet season.

The Anglo-American Beach Club and the U.N. Beach Club at Lido Beach are open to the international community. Each clubhouse contains a social room, bar, restaurant, changing and shower rooms, and a sun deck. Circolo Italiano, also at Lido, is a private club offering recreational and cultural activities to its members, mainly from the Italian community.

Besides Lido and Gezira beaches, many other beaches and coves are found up and down the coast. These areas are pleasant for picnicking and camping, but are accessible only by four-wheel-drive vehicles.

Although an environmental or climatic change in or near Mogadishu is impossible, short and interesting side trips may be taken to the sugar plantation and refinery at Johar; the ancient port of Marka; the nearby beaches at Gezira, Warsheikh, and Shark's Bay; the birding area beyond Balad; and the hippo pools between Shalambod and Janale. The nearest place offering a change is Nairobi (Kenya) and its surrounding countryside. There, all the amenities of a modern city can be found, and the environs offer a lush countryside and exciting game reserves.

Outside of Mogadishu, Kismayu, Shalambod, and Hargeisa, few hotels and restaurants exist. When traveling to outlying towns and villages, it is necessary to take food, water, and camping equipment, unless arrangements can be made to stay with someone. Travel overland is restricted during the rainy season, as roads become impassable even for four-wheel-drive vehicles.

Somalia has a wealth of big game and smaller wild animals, although numbers and ranges have been greatly reduced in the last 50 years. Monkeys, hippopotami, elephants, giraffes, rhinoceri, buffaloes, and zebras are found in the southwestern part of the country. Hippos and crocodiles can be found along the Juba and Shabelli Rivers. Antelope, gazelle, kudu, and oryx range throughout the country. Dik-dik and waterbuck are limited to the southwest, and the hartebeest inhabits the Haud in the northeast. Warthogs, dik-dik, monkeys, hippos, and Speakes gazelles (limited to Somalia) can be seen near Mogadishu.

Bird life is profuse and spectacular throughout the country. Waterbirds, including ducks, geese, pelicans, flamingos, cormorants, storks, and osprey, are particularly numerous. Migratory birds from Asia Minor, Europe, and the eastern Mediterranean have winter quarters in Somalia. The ostrich is common in the open plain.

Entertainment

Theater, concerts, opera, and television are not a part of life in Mogadishu. Several local outdoor movie houses show dated films in Italian, Hindi, or Arabic, but most Americans do not frequent these theaters. The French and Italian cultural centers offer regular programs of their films, often with English subtitles.

Social activities among Americans and other expatriates in Mogadishu are relaxed and informal. The American School, its Parent-Teacher Association, the Recreation and Welfare Club, and various

other clubs make important contributions to the community's social life. Governed by elected boards, each of these organizations welcomes willing workers and leadership. An amateur dramatics society meets regularly to read plays and give productions. Opportunities for volunteer work are few, but do exist. A sewing group meets weekly to make clothing for a local orphanage. Girl Guide and Boy Scout troops have been formed.

OTHER CITIES

Rich in history, **BERBERA** was once the Muslim settlement of the state of Adal. Later it was ruled by the Portuguese in 1518, the sharifs of Mocha in the 17th century, and the Egyptians from 1875 until the British took control in 1884. It was the British Somaliland capital until 1941. Due to improved ports, Berbera now exports sheep, hides and skins, gum arabic, myrrh, and frankincense. Some of its 213,000 residents migrate during the hot season to the Ogo Highlands. Berbera is the site of a naval and missile base that was built by the former Soviet Union. The city is situated in northwestern Somalia on the Gulf of Aden.

HARGEISA, with a population of about 231,000 (2002 est.), is a major watering and trading center for nomadic stock herders. The city exports skins, meat, and livestock via Berbera. There is an international airport and a public library in Hargeisa. Hargeisa sustained heavy damage during the civil war. Most of the town was reduced to rubble, and most of the population fled.

Located in southern Somalia near the mouth of the Juba River, **KISMAYU** is an important seaport. The city was founded in 1872 by the sultan of Zanzibar and taken over by the British in 1887. The city has a large meat-processing plant. Kismayu's estimated population in 2002 was 201,000.

MARKA (also spelled Merca and Merka) is located in southern Somalia on the Indian Ocean. It is nearly 50 miles southwest of Mogadishu. The city was founded by either Arab or Persian traders in the 10th century. The major export is bananas; during the 17th century, trade included slaves, cattle, and ivory. The population is estimated at 173,000.

COUNTRY PROFILE

Geography and Climate

The Republic of Somalia comprises the perimeter of the Horn of Africa, the easternmost point of the continent. It is bounded on the north by the Republic of Djibouti and the Gulf of Aden; on the east and southeast by the Indian Ocean; on the south and southwest by Kenya; and on the west by Ethiopia. The country extends about 1,000 miles along the Indian Ocean, 600 miles along the Gulf of Aden, and about 200 miles inland. The total area is about 246,300 square miles—roughly the size of Texas. It is generally flat country in the south, with few areas rising over 1,000 feet. Much of the northern region is plateau, with altitudes reaching 3,000 to 4,000 feet, and occasionally rising to peaks of almost 8,000 feet. Southern Somalia is traversed by two rivers which flow toward the sea from Ethiopia. The Juba flows into the Indian Ocean near the port of Kismayu, and the Shebelli disappears into a marshland near the sea about 200 miles southwest of Mogadishu.

Located two degrees north of the equator, Somalia's climate is tropical, but arid. The year is divided into four seasons: two wet and two dry. The major rainy season, called the *Gu*, is from late April to late June. It is followed by a dry season, the *Haggai*, which lasts until late August or early September. The minor rainy season, the *Der*, generally begins at that time and contin-

ues until early December. It is followed by the major dry season, the *Jilal*, which lasts until the onset of the major rains. Annual rainfall in Mogadishu averages 15 inches. Shade temperatures in Mogadishu seldom exceed 90°F, and generally drop to the mid-70s at night throughout the year. Alternating northwest and southwest monsoon winds blow for most of the year, creating a moderating effect. From mid-December to mid-February, strong wind blows the fine sands about freely. Humidity in Mogadishu averages 80 percent year round. In the interior, the winds are warmer, temperatures higher, and humidity lower. Daylight is usually from about 6 a.m. to 6:30 p.m. throughout the year.

Population

Somalia's population was estimated at 7.5 million (2001). In addition, hundreds of thousands of ethnic Somalis live outside the country, mainly in the Ogaden and Hararghe areas of Ethiopia, but also in the Republic of Djibouti, and in northeastern Kenya. Somalia's annual growth rate is 3.48 percent (2001 est.).

The origin of the Somalis is unknown, but some ethnologists have speculated that they are a mixture of Arabic and African peoples. Their language, which is Cushitic, belongs to the large African-Asian group which includes the Hamitic and Semitic languages. The Somalis settled in what is now Somalia in the relatively recent past, having replaced the Oromo, who had driven out the Bantu peoples. Vestiges of the Oromo and Bantu can still be found in the country. Somalia is a rarity in the African continent, with its common ethnic heritage, culture, religion, and language.

The Somali are generally classified in six major-clan families: the Dir, Hawiya, Darod, Digil, Issak, and Rahanwein. The Digil and Rahanwein are usually found only between the Juba and Shebelli Rivers; those of the other major groups

live throughout the country, and in Ethiopia, Djibouti, and Kenya.

Somalis are generally tall and slender, with fine features. They are known for their intense pride, quick minds, and good sense of humor. The men usually wear either Western dress or the colorful sarong-type garment called a *ma'awis*. The women, who have considerably more freedom than those in many other Muslim countries, wear long, colorful dresses; sometimes young teenagers in town wear slacks. The nomadic Somali wears a two-piece cloth garment that resembles a toga.

The Muslim faith is the state religion, and most Somalis (99 percent) are members of the Sunni sect of Islam.

Traditionally, the majority of Somalis (70 percent or higher) are nomadic or semi-nomadic pastoralists. About 30 percent are settled agriculturalists. There are very few skilled laborers in a work force that numbers nearly 3.7 million.

Government

Until January 1991, Somalia was ruled by Mohammed Siad Barre. Barre, who seized control of Somalia after a 1969 military coup, ruled the country as a dictator. All political parties, except Barre's Somali Revolutionary Socialist Party (SRSP) were banned, political opponents was arrested, and the press tightly controlled. According to several international human-rights organizations, the Barre dictatorship was one of the cruelest regimes on the African continent.

In 1989, a rebel group known as the Somali National Movement (SNM) launched an offensive against government forces in northwestern areas of the country. At roughly the same time two other rebel groups, the United Somali Congress (USC) and the Somali Patriotic Movement (SPM) launched attacks against Barre's troops in central and southern parts of the country respectively. Fighting between the rebel

groups and government forces continued throughout Somalia, with the rebels steadily gaining the upper hand. By late December 1990, the rebel groups had completely surrounded Mogadishu. Barre, however, refused to give up his hold on power. In early January 1991, the rebel groups entered Mogadishu. For nearly four weeks, the rebel forces and troops loyal to Barre waged a vicious battle for control of the capital. Much of the city sustained very heavy damage and thousands of civilians were killed. On January 27, Barre fled the city in a tank convoy. The next day a member of the United Somali Congress (USC), Ali Mahdi Mohammed, was named interim president. Mahdi quickly promised that a democratic system of government would be formed and multi-party elections held at a later date.

Despite the removal of Siad Barre, peace did not return to Somalia. The two rebel groups who had fought alongside the USC, the Somali National Movement and Somali Patriotic Movement, refused to accept Mahdi's authority. Both groups were angry that the USC would form an interim government without first consulting them. Bloody battles quickly erupted between the three rebel groups in Mogadishu. The violence between these rival factions soon spread to other parts of Somalia.

Somalia has virtually no working government, police force, or army that can restore order and control the countries warring factions. Mogadishu, the scene of bloody clan fighting, was divided between two rival warlords. Northern portions of Mogadishu were controlled by force loyal to Ali Mahdi. Mogadishu's southern regions were in the hands of supporters of Gen. Mohammed Aidid. Several United Nations-brokered cease-fire attempts in 1992 failed to hold. The break down in law and order and the wealth of available weapons led to a proliferation of heavily armed groups of bandits. These gangs roamed Mogadishu and the country at will, robbing and killing innocent people

Jason Laure. Reproduced by permission.

Three men sitting near the seashore in Brava, Somalia

and ambushing convoys of international food relief destined for Somalia's starving people. As a result, the number of Somalis dying from hunger and disease increased dramatically.

On December 9, 1992, former President George Bush announced that American troops would join an international relief effort to feed Somalia's people. The American troops arrived in Somalia and were warmly received by the Somalis. The troops provided protection for convoys of food and medical relief and established law and order in Mogadishu and several other cities. Food relief convoys were soon able to reach famine relief centers set up by international relief organizations. The number of Somalis dying from hunger and disease decreased after the arrival of American and international troops. American and international troops also captured large amounts of weaponry and disarmed many bandits.

In early 1993, representatives from all of Somalia's warring factions met in Ethiopia. After much discussion, a cease-fire agreement was signed. However, 23 Pakistani soldiers were killed in an ambush in June 1993 and 18 US Army Rangers were killed in October 1993. Subsequent UN-sponsored peace talks

failed. In 1994 the UN redefined its role in Somalia to be less assertive. The United Nations completed its troop withdrawal in March 1995. With the departure of the UN, the country split into zones controlled by the various warlord factions.

A transitional government was established in October 2000. Abdiqasim Salad Hassan was appointed president by the interim parliament. A new constitution is to be created and elections are to be held before 2004.

The Somali flag is light blue, with a five-pointed white star in the center.

Arts, Science, Education

A rich oral literature and poetry has traditionally been the most important means of artistic expression among the Somalis. A Latin script adopted for the language in 1972 has made it possible for much of this literature to be preserved, and has encouraged new forms of literary expression. Unfortunately, few new literary works are being published in Somalia.

All private schools were nationalized in 1972 and education is now tuition-free. Formal education is

being geared to the country's technical and economic needs. Plans are underway to create comprehensive training centers in 10 regions for nomads. United Nations Educational, Scientific, and Cultural Organization (UNESCO) is assisting with the development of a national library system.

Local handicrafts are limited, although wood, ivory, and meerscham carvings, attractive basketry, and a great variety of beautiful shells are available. Tie-dyed cotton cloth is locally made, inexpensive, and useful. Handmade gold and silver jewelry is also for sale, but is not the bargain it once was.

Somalia has an ancient weaving tradition. Some 450 weavers in five major communities along the Benadir coast from Hamarweyn to Brava still produce intricate patterns in narrow cotton fabric. At one time, the coast supported as many as 2,000 weavers who carried on a lively barter trade up and down the east coast of Africa and inland as far as Sudan. The industry was dealt a severe blow in the mid-1800s by the arrival of cheaply produced cloth from America.

In 1972, Somali became the country's sole official language. Nevertheless, English is used predominantly in diplomatic circles and, in Mogadishu, Italian is still the second language. Often, the Italian spelling of the city's name, Mogadiscio, is seen. Arabic, the second official language, is spoken by many Somalis and is taught in the schools from early grades through high school.

In 1990, an estimated 24 percent (male 36%, female 14%) of Somalis age 15 and over could read and write.

Commerce and Industry

Somalia is one of the world's poorest and least-developed countries. Since 1990, the economy has been in

shambles, the consequence of drought and protracted civil war. Continued fighting and lack of central authority prevent significant improvements in economic conditions. The country's economy is heavily dependent on agriculture, which accounts for roughly 65 percent of export earnings. Subsistence agriculture predominates in Somalia, with corn, sorghum, and sugarcane grown for domestic consumption. Bananas are the primary export crop. Livestock such as camels, cattle, sheep, and goats are an important economic commodity. Most of the livestock is raised by nomads or semi-nomads, which comprise more than half of the population. The major agricultural region is in the south, particularly in the area between the Juba and Shebelli Rivers. A considerable amount of irrigation occurs along the two rivers, although the Shebelli dries up during the longer of two dry seasons.

Somalia's industrial sector is extremely small and contributes less than 10 percent of GDP. Most industries are involved in meat and fish processing, sugar refining, textiles and leather goods, and fruit and vegetable canning. Many factories have closed down due to the ongoing civil strife.

Gypsum, feldspar, columbite, iron, sepiolite, and salt deposits exist. Except for salt and gypsum, much of Somalia's mineral resources remain unexploited. Potential oil and gas reserves have been located in northern parts of the country and near Mogadishu. However, these sources are currently untapped.

Livestock, hides and skins, bananas, and fish are Somalia's primary export products. Most of these products are imported by Saudi Arabia, Italy, and Yemen. Somalia imports large quantities of textiles, petroleum products, foodstuffs, transport equipment, and construction materials. Major suppliers of these products are Saudi Arabia, Italy, the United States, Germany, France, and Great Britain.

Somalia's economy is devastated as a result of the 1991 civil war. As of July 1992, the situation in the country was extremely bleak. Because of drought and widespread destruction in agricultural areas, millions of Somalis face starvation. International relief efforts have been severely hampered by continued fighting among various armed factions and banditry.

The Chamber of Commerce in Somalia is at P.O. Box 27, Mogadishu.

Transportation

All travelers to Somalia arrive by air; the most commonly used routes are the two flights a week via Frankfurt and two via Nairobi. Somali Airlines flies to Rome, Frankfurt, Nairobi, Cairo, Jeddah, Abu Dhabi, Doha, Djibouti, and Moroni. Saudi Airlines flies to Jeddah; Kenya flies to Nairobi; Djibouti Airlines flies to Djibouti. The most reliable connecting flights to major European cities are available through Nairobi or Frankfurt. Flight schedules are subject to immediate changes.

No regularly scheduled passenger ship service is available to Mogadishu. Hard-surfaced roads within the country are limited to a major north-south system, and a few others to larger towns.

The capital city swarms with red and yellow Fiat taxis, which have neither meters nor fixed rates. Bargaining for a rate must be done at the outset. Mogadishu's public bus system is unsatisfactory for regular use.

Most persons find a car essential. Only occasionally can a good used car be found for purchase from another American, or from a member of the international community. A small European vehicle is the most practical for city use, but for driving outside of Mogadishu other than on main roads or to the beaches south and north of town, a four-wheel-drive is preferable. Service is spotty, and parts are in short

supply for almost any vehicle, American or foreign, so it is necessary to assemble a supply of spare parts before moving to Somalia.

No unleaded gasoline is available and the overall quality of gasoline is poor. Due to the poor condition of roads and the presence of potholes, a car with a heavy duty suspension system is essential. The main streets in Mogadishu itself are paved, but side streets are a combination of loose sand and rock.

A valid U.S. or international driver's license is needed to obtain a Somali license. Only those 18 and older are eligible under Somali law.

Communications

Mogadishu has an automatic, but capricious, telephone system. Service is generally limited to the city proper. Long-distance calls may be placed at any time to Europe or the U.S. by booking them at the Ministry of Posts and Telegraphs. These calls are much more expensive than if booked in the reverse direction. Since all existing internal lines are in use, obtaining a residential telephone is nearly impossible.

The Ministry of Posts and Telegraphs also provides a wireless telegraph service daily to Europe and the U.S., via Rome, from 7 p.m. to 11 a.m. Telex service is available in Mogadishu at the Croce del Sud Hotel and at the American Embassy.

International postal service is limited. Airmail to or from the U.S. takes a minimum of 10 days to two weeks.

Somalia has two radio stations, Radio Mogadishu and Radio Hargeisa, both run by the Ministry of Information and National Guidance. Radio Mogadishu broadcasts 18 hours daily in Somali and Arabic. Thirty-minute foreign-language broadcasts, on the 49 SW band, include English, French, Swahili, Italian, Amharic, Afar, and Oromo. English broadcasts can be heard from 3 to 3:30 p.m. Somali TV, inau-

gured in 1983, transmits daily in Somali and Arabic from 8 to 10 p.m., using the European PAL signal. Shortwave radio reception ranges from poor to good. Voice of America (VOA) and British Broadcasting Corporation (BBC) are usually strong during early morning and evening. A good shortwave radio is the best source of current news.

The principal locally printed news source for expatriates is the Somali National News Agency (SONNA) bulletin, which offers local and international news summaries in English. *Time* and *Newsweek*, a few other English-language periodicals, and a variety of Italian publications are usually available about five to seven days late. Newsstand prices are high, however. Several expatriates subscribe to the *International Herald Tribune*, which arrives anywhere from two to 20 days late. Only a few local bookstores, which sell mostly used books, operate in Mogadishu.

Health

For illnesses requiring hospitalization, surgery, complicated diagnostic facilities, or drugs, most Westerners go to Nairobi; serious cases are sent to Europe.

Dental care is virtually nonexistent. All dental programs should be taken care of before leaving home.

As a general rule, local pharmacies cannot be depended on to provide adequate service. Patent medicines and current prescriptions should be kept in three-month supply. A copy of one's eyeglass prescription is a must, since replacing glasses in Somalia is difficult, expensive, and time-consuming. Glasses can be made in Nairobi at a price and quality comparable to those in the U.S.

Generally, most Westerners staying in Mogadishu enjoy good health. However, many diseases affect the local population, and the incidence of tuberculosis, syphilis, bilharzia, dengue fever, measles, polio, and malaria is high. With proper health precautions, few resident foreigners

are affected by serious diseases; intestinal upsets (diarrhea, amoebic dysentery, or other parasitic infections) are the greatest risk. Fungus and skin infections, including boils and prickly heat, are quite common, particularly during the hot seasons. High humidity also can cause discomfort to those susceptible to sinus ailments or to neuromuscular complaints, such as rheumatism and neuralgia.

Public sanitation practices are not up to U.S. standards, but the hazards are lessened to some degree by the hot African sun and the porous desert sand. Since no sewage disposal system exists, septic tanks are used in most Western-style homes. Flies, ants, mosquitoes, and cockroaches are numerous, especially during the rainy season. While the great numbers of lizards in all households may help to reduce the insect population, householders still need an ample supply of bug sprays in Somalia. In public eating places, food handling and serving standards are poor, and dishes and utensils are usually washed in cold water.

The required immunizations for Americans are those for yellow fever and cholera. Tetanus, polio, and typhoid immunizations should be up-to-date; gamma globulin is recommended every four months. Although Mogadishu is generally malaria free, some nearby areas have malaria cases. Therefore, it is necessary to take suppressants at least one to two weeks before arriving in Mogadishu, during the entire stay, and for at least six weeks after leaving.

Bilharzia (schistosomiasis) is an endemic disease contracted from fresh water where disease-carrying snails breed. Swimming in rivers or lakes is not safe.

The almost constant wind and fine-blowing sand may cause some difficulty for contact lens wearers.

Clothing and Services

Wash-and-wear fabrics are popular among Westerners because of the ease of care, but many are now finding that pure cotton is more comfortable in the heat and humidity. A good supply of all clothing should be included in one's initial wardrobe, since frequent laundering and drying in the sun causes garments to wear out quickly. Sandals are practical for everyday wear, and thong-type sandals manufactured locally are attractive and inexpensive. Some warmer clothing may be needed for trips to Kenya, northern Somalia, or (in the case of a long business assignment in the country) to Europe.

Summer clothing is suitable year round. Standard dress for the office (for men) is lightweight slacks with open-neck, short-sleeved shirts or bush shirts. Sport shirts are worn for most informal evening gatherings; lightweight suits are needed occasionally for special functions. Dinner jackets or tuxedos are never required. Shorts are not worn as street attire, but may be worn jogging, on the beach or tennis courts, or at home.

Women wear dresses of lightweight fabrics, either sleeveless or with short sleeves, for business or other daytime activities. In the evening, either long or short dresses are acceptable. Shorts are not worn as street attire, but are suitable for the beach or tennis courts. Bare sundresses often are worn to functions where Somalis are not present. A hat is never needed, except for protection from the sun; scarves are useful in the strong wind. Sometimes the evenings are cool enough for a sweater or a stole. Most women find slacks and hosiery too warm for the climate.

Children spend much of their time outdoors. Their play clothes should be of lightweight material, and they will need several extra bathing suits and beach towels. Sneakers or sandals are usually worn. Jeans, of

course, are a favorite with older children.

A variety of local food is available, although with seasonal limitations. Local meats include fair-to-good quality beef, camel, goat, and lamb. Local chickens and small birds are little and tough, but, properly cooked, can be tasty. Pork products are unavailable locally. A variety of fish is sold throughout the year at reasonable prices. Many local species are delicious. Lobster is a seasonal delicacy, obtainable according to biological cycles and the weather, but it can be frozen and is one of the pleasures of life in Mogadishu. Good smoked fish is also available seasonally.

Bananas, limes, grapefruit, and papayas are excellent and sold year round. Good mangos and watermelon are available seasonally. Locally grown vegetables include tomatoes, spinach, lettuce, radishes, potatoes, green beans, peppers, eggplant, zucchini, and parsley. Some are seasonal.

Some pasta is produced locally, but most other foods on the local market, including rice, cheese, processed meats, and canned foods, are imported at high prices from Italy, Kenya, China, and Eastern Europe. Mogadishu has a local dairy, but health standards are questionable, and all fresh milk must be boiled. Powdered whole milk for infants is sold in local shops, but is expensive and may have spent considerable time on the shelf.

Mogadishu has shoe repair shops, a dry cleaner/laundry, and radio and auto repair shops. The quality of dry cleaning is mediocre and prices are high. Washable clothing is more practical, since laundry usually is done by household servants. Appliance repairs and service on American cars are often unsatisfactory. Adequate automobile service facilities (and authorized dealers for American vehicle parts) do not exist. Fiat, Toyota, and Land Rover parts are sometimes available, and always expensive.

Tailoring services are mediocre because tailors lack quality material; most men use tailors only for alterations, but one or two tailors in Mogadishu do adequate work on women's clothing. Some can make copies of dresses in simple patterns. Fabrics, designs, and cuts do not compare with American ready-to-wear clothing. Tailors can also make simple drapes and slipcovers, but notions (drapery hooks, curtain rings, and bindings) are usually not available and, if available, are expensive.

Beauty and barber services are found in town.

NOTES FOR TRAVELERS

As of January 1991, the Department of State was advising all U.S. citizens to avoid all travel to Somalia indefinitely. Hostilities can break out at any time. All U.S. government employees and dependents were evacuated from Somalia and our Embassy there was closed on January 5, 1991. Under the circumstances, the United States Government is unable to offer American citizens in Somalia any type of assistance and protection.

Authorized air routes from the U.S. are London/Nairobi/Mogadishu, Frankfurt/Mogadishu, Rome/Mogadishu, and Frankfurt/Nairobi/Mogadishu. Somali and Kenya Airways each fly from Nairobi to Mogadishu once a week.

A visa, valid passport, and a record of inoculations against cholera and yellow fever are required to enter Somalia. If a visa has not been obtained beforehand in the U.S., it can be applied for at the Somali Embassy either in Rome or Nairobi. The Kenyans also issue visas at Nairobi Airport for incoming tourists. At least 24 photos are needed for the various local forms and visa applications.

Household pets may be imported to Somalia but, because of cargo limitations, it is better to take the animal as accompanied baggage. Dogs and cats must have rabies inoculation certificates signed by a licensed veterinarian, and stamped by the municipality or state, confirming that the animal is free from infectious disease, and that the area of origin has been rabies-free for at least six months. Satisfactory kenneling is available at Nairobi for transiting animals. Mogadishu is a reasonably healthy place for pets; however, during certain seasons, ticks and fleas are endemic. Owners are advised to have an ample supply of appropriate medications, as veterinary service and supplies are limited.

Special note: Muslim doctrine prohibits contact with dogs, and Somalis are generally unfriendly to them. Dogs must be restrained in public places, or when Somali guests are present. Servants working in the American community usually tolerate dogs, although they do not particularly like them.

As a general rule, no weapons should be taken to Somalia. Rare exceptions are made.

Mogadishu has Roman Catholic churches but, except for two English-language masses a week, all masses are in Italian. A service is held on Saturday at 6:15 p.m. at the Sacred Heart Church (at Fiat Circle) and on Sunday at 5:15 p.m. at the Cathedral. An interdenominational Protestant service is held once a week on Saturday evening in one of the Catholic churches.

The time in Somalia is Greenwich Mean Time plus three.

The currency is the Somali *shilling*, written So.Shs. The units are *shillings* and *centesimi*: 100 *centesimi* equal one *shilling*. All banks in the country are nationalized. The Somali Commercial and Savings Bank currently has five branches in Mogadishu, one in Hargeisa, and others in smaller cities; these branches, however, do not accept personal dollar checks unless an account is maintained with the bank.

Somalia uses the metric system of weights and measures.

The U.S. Embassy in Somalia is located on Corso Primo Luglio, Mogadishu. **Note: The American Embassy in Somalia was closed on January 5, 1991, due to deteriorating conditions in the country. The embassy has not been reopened.**

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for South Africa. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

South Africa, a country of stark beauty and diverse cultures, provides an exciting and dynamic work environment. With the end of apartheid, South Africa's new government has embarked on a historic effort to build a multi-racial, sustainable, market-oriented democracy. The success or failure of this effort will have enormous implications for the rest of Africa and for the world. Our official objectives are concentrated on support for a successful South African transition.

South Africa is a large country, about twice the size of Texas, and consists of an extensive interior plateau (altitudes range from 3,000 to 6,000 feet) with a narrow coastal

plain. The climate is moderate with sunny days and cool nights. Latest estimates put South Africa's population at 44.6 million, including non-documented immigrants. The country has eleven official languages, including English, Afrikaans, Zulu, Xhosa, Sotho, and Tswana. English is widely understood even by those who do not speak it as a native language.

With the most sophisticated economy on the continent, South Africa has a highly developed financial and physical infrastructure. Much of the country's wealth originally came from gold and diamond mines, but today South Africa exports a wide variety of manufactured products. Despite South Africa's impressive economic achievement, gross inequities exist along racial lines in the distribution of wealth and job opportunities. These disparities reflect the South African government's previous policy of apartheid - a system of legally mandated racial segregation favoring the white community. Although the present government has dismantled the legal basis for such racial discrimination, apartheid's legacy of widespread black poverty will take years to eliminate completely.

Besides a challenging work environment, South Africa offers a host of unique vacation experiences. The

vineyards of the Cape, wildlife of Kruger National Park, and beaches of Durban are just some of the country's tourist attractions. Travel is easy, and people are helpful wherever you go. South Africa's combination of physical beauty and a changing society will make your stay rewarding.

MAJOR CITIES

Pretoria

Pretoria is the administrative capital of South Africa. Greater Pretoria has about 1,081,187 people (Source: Central Statistical Service, 1991 Census). It is located in Gauteng Province, 35 miles Northeast of Johannesburg, 30 miles from Johannesburg International Airport, and 437 miles from Durban, the nearest port city in South Africa.

Founded in 1855, Pretoria is the seat of executive government for South Africa. It lies in a long valley edged by several ridges. The rural surrounding area consists of undulating veld with low trees scattered over the landscape. Aside from the Iscor Steelworks and automobile assembly plants located outside the city, and a few small industrial establishments, Pretoria is mainly a

government town with enough shops and department stores to cater to its population. Schools, hospitals, doctors and dentists are in adequate supply.

Pretoria is a quiet, modern city offering current movies, plays, operas, ballets, and concerts. Two universities, the Transvaal Museum and the Transvaal Province Library, an excellent zoo, sports grounds, including several golf courses, and many beautiful parks provide cultural enjoyment and relaxation. Those seeking a brighter nightlife generally go to Johannesburg, though Pretoria has many good restaurants, some with dancing and/or live entertainment. Sundays in Pretoria are spent visiting friends, participating in sports, or indulging in the national pastime of the "braai vleis" (barbecue). In the city, flea markets and open-air art and craft markets are often held as well. Aside from the U.S. Embassy staff and their families, 250 other Americans live in Pretoria, including church and missionary representatives and American spouses of South Africans. Most American business representatives live in the Johannesburg suburbs. Diplomatic representatives of the U.S. and other countries form the nucleus of the growing foreign community.

Atteridgeville, Mamelodi, Soshanguve are the historically black townships surrounding Pretoria where the majority of the black citizens of the Greater Pretoria Metropolitan area still live. Atteridgeville is 7 miles, Mamelodi is 15 miles, Soshanguve, Ga-Rankuwa, Winterveldt and Temba are all about 25 miles away. Nearly all residents work in Pretoria, traveling by bus, train, or taxi. A few drive personal vehicles. Lenasia, about 10 miles south of Pretoria, is home to many of the area's citizens of Asian descent. Each of these communities has its own town council and civic association and participates in the regional "super government," the Greater Pretoria Metropolitan Council. Unemployment is high in the townships and standards of living significantly lower than in Pre-

toria proper. There is also a serious shortage of housing in the townships, which has given rise to large informal settlements or "squatter camps" on the periphery of established areas. Township councils resisted squatting initially, but because they did not have houses for the squatters, they began to provide water and toilets for them.

Food

Basic foods, locally produced baby foods and infant formulas are all available. Baby food is widely available, however all dried cereals contain sugars. Fresh fruit and vegetables of all kinds are available most of the year. Dairy products, including butter, cheeses, eggs and whole, low fat and skim milk are all readily available. Several good quality South African and British brands are available in the major metropolitan cities. South African, as well as imported, coffees and teas are excellent and comparable in price to those sold in the U.S. Iced teas and ice tea mixes are rarely available.

Soft drinks (Coca-Cola, Sprite, Fanta and other Coke products) are widely available.

Ice cream lovers will satisfy their taste buds with higher quality brands, however, sorbets and sherbets are seldom available.

Most spices are available, however, the gourmet chef may wish to bring familiar brands and varieties with them. Extracts are not available.

White and brown sugars are both coarse, with the exception of powdered sugar, which is equivalent to that sold in the States.

Pancake syrups are limited in variety, and the quality is not the same as that available in the States. Corn syrup is not available.

Chocolate and other baking chips are either not available or of a lesser quality than that available in the States. Other baking items (cake mixes, bread mixes, pancake mixes,

pie crusts and crumbs) are not available.

Graham crackers are not available, but saltines are available from local grocery stores.

Meats (beef, pork, lamb, chicken) are plentiful and reasonably priced. Seafood is widely available in coastal cities and is shipped (fresh or frozen) into inland areas. Turkeys (small fresh or frozen medium or large) are available primarily in November and December.

Solid shortening (Crisco), stuffing mixes, pumpkin pie filling, and certain ethnic foods are not available on the open market.

Breakfast cereal varieties are very limited, and many of the brands sold in the States are not available.

Liquors, beers, and wines, (domestic and international brands) are widely available and reasonably priced. South Africa is increasingly becoming known for its wide variety of great wines.

For those U.S. products you must have, several on-line shopping services will ship most items via diplomatic pouch, provided they are not prohibited.

Clothing

South African men and women dress similarly to Americans and Europeans. Imported stylish European shoes are available although at a much higher cost. American shoe widths, especially narrow, are limited. Persons with small or very large feet may have difficulty finding shoes that fit. Although a winter coat is usually not necessary, some southern areas are colder in winter, often having frost and snow. Jackets, all-weather coats or wraps would be a good investment for use in winter months in any area of South Africa. Shoe and clothing sizes differ from those in the States.

Men's styles follow current trends. Wool and lightweight business suits are common. Winter wear is needed about four months a year, except for

the southernmost and eastern area of the country, where the weather is colder for about three months a year. For business, most men wear suits or sports jackets and slacks. Dress shirts are available, however, better short sleeved shirts are seldom sold. Although you may purchase or rent tuxedos and dinner jackets, it is recommended that you bring your own formal wear.

Generally, women's clothing is similar to that worn in western U.S. cities. Hosiery is of a lesser quality than that available in the States. The sizes are different and much more costly. It is advisable for ladies to bring an ample supply of hosiery. There are few occasions when evening gowns are needed; cocktail dresses and/or pantsuits are more commonly worn. Accessories and undergarments are available at a higher price, but may vary in sizes and the quality may not compare to that of the States.

Children's clothing is available, however it is expensive. It is suggested that you bring needed clothing items with you or purchase them through U.S. catalogues.

Supplies and Services

Toiletries, household supplies, medicines, prescription drugs, etc. are in good supply, however some familiar U.S. brands may not be available. Cosmetics and perfumes (mostly imported) are expensive. It is recommended that you bring a supply of your favorite brands. Paper and plastic products (tissue, napkins, foil, freezer bags, etc.) are of a lower quality than that sold in the U.S. Many brands of disposable diapers are available, with quality comparable to those sold in the U.S. Disposable baby bottle liners are not available. Locally made toys are expensive. However, many Americans shop through catalogues. For on-time delivery, it is recommended that you shop early, especially during the busy holiday season. There is a "Toys 'R.' Us" store in the suburbs of Pretoria.

Many American and British brands of cigarettes are manufactured and

sold in South Africa. Tobacco is readily available at a cheaper price than in the U.S.

It is recommended that you purchase a supply of postage stamps prior to arrival or order them from the U.S. Postal Service's 1-800-STAMPS Service Center.

Domestic Help

Many domestics are experienced and proficient. Some speak limited English and require specific instructions and directions. The best well-trained cooks command good wages and are rarely available. Less experienced cooks require considerable instruction and demonstration in preparing and serving food.

Some domestics are accustomed to performing only the tasks for which they are hired. A cook would not be expected to perform cleaning and laundry tasks. Most people employ domestics who are not specialists, but workers who can perform various chores.

Religious Activities

Various religious denominations are represented in South Africa. The Dutch Reformed Church, whose members include most of the Afrikaans-speaking white population, conducts services in Afrikaans. Catholic churches offer Mass in English, Afrikaans, and many African languages. Protestant churches other than the Dutch Reformed include Anglican, Baptist, Methodist, Presbyterian, and Congregational. The Zion Christian Church, Christian Science, Church of Jesus Christ of Latter-day Saints, Seventh-day Adventist, Greek Orthodox, and Jewish synagogues also conduct services. There are also Hindu temples and Muslim mosques.

Education

The American International School of Johannesburg (AISJ) is located midway between Johannesburg and Pretoria. It is situated on 67 acres of rolling hills. The school was established in 1982 and is a non-profit institution. It is the only school in this area, which offers a U.S. curricu-

ulum and school calendar (school year from August to June) for kindergarten through 12th grade. AISJ has an outstanding student-teacher ratio of one teacher to ten students. A limited program of physical education and sports activities is offered.

The South African school system follows the United Kingdom Standard form of schooling. Some are co-educational, most are single sex. The South African school year begins in mid-January and ends in early December. Students transferring from a U.S. curriculum based school need to be cognizant of the difference in school year start times.

There are several universities in the Pretoria-Johannesburg area for adult family members interested in pursuing studies while in South Africa.

Special Educational Opportunities

The Pretoria Preparatory School for children (ages 5-13), UNICA, Prins-hof School for the Blind, Sonitus, and The New Hope School are among the schools available for children with special needs in Pretoria. Bellavista, Casa Do Sol, Cedarwood, Crosswoods, and Delta Park are among schools in the Johannesburg area serving children with special needs. Within Cape Town, Bel Porto, The Glendale School and Tafelberg are schools available to serve special needs students. The Browne School, The Golden Hours School and The Kenmont School are Durban area schools serving special needs children.

Sports

South Africa is one of the finest areas of the world for participant sports. Golf and tennis are played year round.

Weekend hunting, fishing, mountain climbing and water-rafting trips are available seasonally. Along the coastal areas, you may surf, scuba dive and sail. Many mineral baths are located in the surrounding areas, offering families a nice retreat with various pools. A popu-

lar participant sport, particularly with senior members of the local community, is lawn bowling. Ten pin bowling is available (limited) in the larger metropolitan areas. The most popular spectator sports are soccer, cricket, rugby and horse racing.

Excellent country clubs are within short drives of the city centers. Each has golf courses varying from good to excellent. Golfers may want to bring golf clubs from the U.S. although clubs and equipment are available locally at competitive prices. Golf clothing is more conservative than that worn in the U.S. Squash facilities are available at several country clubs and other local clubs. There are also many health clubs in the metropolitan areas with reasonable priced individual and family membership available.

Public tennis courts do not exist. Many tennis clubs are available in and around the metropolitan cities and have no or minimal membership fees. Standard tennis clothing is worn; colored attire is acceptable. Tennis rackets and balls are available at higher than U.S. prices. Restringing services are also available. Because of its inexpensive cost, many take private lessons. Once a year, there is a diplomatic tennis tournament in Pretoria.

Several horseback riding facilities are located in the area. Lessons are available for all ages, and costs are considerably lower than the U.S.

Touring and Outdoor Activities

South Africa has many national parks, including the famous Kruger National Park. Several game reserves, including Pilanesberg National Park which is the third largest in South Africa, are close to the city and can be enjoyed as day tours. Short holidays to the game reserves are a favorite form of entertainment for South Africans as well as visitors to the country. Additionally, Pretoria and Johannesburg both have excellent zoos.

South Africa has many hunting farms. Hunting in the national parks is forbidden, but private hunting safaris will be able to help the serious hunter, offering a wide variety of game. Hunting migratory waterfowl is prohibited. Permits are necessary to hunt in South Africa, and can most times be arranged through the hunting safaris. Rifle and shotgun ammunition is available at prices similar to those in the U.S.

Camping (Carlovingian, as it is known in South Africa) is a popular activity with many South Africans, and equipment is readily available everywhere. Excellent terrain for hiking and mountain climbing is found in parks throughout the country; both are extremely popular sports. Almost all resorts offer walking and hiking trails. The Mpumalanga and Kwa-Zulu Natal areas of the country have excellent freshwater fishing in the numerous streams and reservoirs scattered throughout the areas. Trout fishing farms are abundant. Saltwater fishing is also popular and available at various points along South Africa's eastern and southern coasts. Many spots provide surf or rock fishing, and charter trips may be arranged for big game fishing. Fishing equipment is available locally and is priced comparably to similar equipment in the U.S.

Scuba diving is also very popular in South Africa, with diving shops available everywhere. This sport is increasingly popular with expatriates wishing to take advantage of the reasonably priced lessons offered by most shops, and the wide variety of diving sites available along South Africa's coastline.

Golf and tennis are, by far, the most enjoyed sports, with exceptional facilities for tennis and championship golf courses available throughout the country. Top quality equipment is readily available but somewhat more expensive than in the U.S. You should include an ample supply of golf balls in your shipment since these are about 3

times the price you normally pay in the U.S.

Only a very limited opportunity exists for snow skiing. Skiing is offered in the southern Drakensberg Mountains. The slopes are not challenging for those beyond the beginner, low intermediate stages. A rope tow and a poma lift are used. The terrain leading to the area is extremely difficult and can only be traversed with 4-wheel drive vehicles.

Entertainment

Professional theater, ballet, concerts and opera are all available at prices much cheaper than the U.S. Art exhibits and craft shows are held almost each weekend in various venues throughout the major metropolitan areas. Movie theaters and several drive-ins show first run American movies.

South African television is government owned and offers three channels. CNN World News and BBC News are broadcast at various times throughout the day. Some American produced syndicated series are shown. Met Cable System offers four additional channels showing movies, sports and sitcoms. Investing in a satellite television system is another option if you desire a larger selection of news, entertainment and sports programming. Digital Satellite TV (MultiChoice) offers 44 channels featuring the entire range of programs as well as 40 music stations. This is very good value and relatively inexpensive to install, with a monthly fee similar to what you will pay for a cable subscription in the U.S.

In order to view American videos, you must have an NTSC VCR or a multi-system VCR. The local TV system is PAL-I. If you have a European PAL (CCIR) system television, a qualified TV repair shop can convert your set to PAL-I. American TV sets (NTSC) cannot receive South African television broadcasts. Video rental stores are located in most major metropolitan areas and are well stocked. VHS is the standard tape format in South Africa; how-

View of Cape Town, South Africa

Courtesy of Edmund Decker

ever, rental videos are recorded on the PAL system and will not operate in an American VCR.

Radio in the area is varied, with many stations playing American music. The Voice of America (VOA) and BBC Radio are easily heard at night on an AM station and several short-wave bands.

Social Activities

Social activities are primarily family oriented with outings, braais (barbecues), and informal dinner parties being preferred. Children's birthday parties are festive occasions among the South Africans, with swimming parties, jumping castles, and visits to children's playlands as favorite forms of celebration. Adults usually enjoy casual, at-home entertainment or dining out with friends. There are numerous fine restaurants in the area.

Three active American-oriented social clubs exist in the area-The American International Women's Club of Pretoria, the American International Women's Club of Johannesburg, and the American Society of South Africa. The latter is open to both men and women. All three enjoy a large membership and offer many activities for their members.

Cape Town

Cape Town easily qualifies as one of the most beautifully situated cities in the world. The sea and the mountains come together to create "The Fairest Cape in the Whole Circumference of the Earth," as Sir Francis Drake described it in the 16th century. Today Cape Town is a busy city with many of the advantages of a first-world infrastructure and economy. The outskirts of Cape Town, however, include many typical aspects of a large developing city.

Cape Town has a Mediterranean climate with warm, dry summers (December, January and February) and cool, wet winters (June, July and August). The weather is seldom extreme, except for frequent very strong winds. Sweaters and jackets are needed in the winter when temperatures can fall to the 40s. The lack of central heating in most homes intensifies the effects of the damp winters. Snow occasionally falls on the mountain peaks just north of Cape Town. Spring brings a riot of wild flowers to the area, while in autumn the numerous orchards and vineyards in the region turn red-orange.

Khoi-Khoi and San peoples ("Hot-tentots" and Bushmen in colonial-

era parlance) lived in the Cape Town area for millennia prior to the arrival of Dutch settlers in 1652. The Dutch East Indies Company developed Cape Town as a "seaward looking caravansary on the periphery of the global spice trade." Many old buildings and farmhouses, built in the Cape Dutch style of architecture, link modern Cape Town with its historic past. The British controlled the Cape off and on from 1795 until 1910, when Cape Town became seat of parliament for the Union of South Africa. From colonial times through the 1948-94 apartheid era, Robben Island, located in Cape Town's Table Bay, was an infamous penal colony housing many political prisoners, including President Nelson Mandela.

Some three million people live in Cape Town, which serves as South Africa's parliamentary capital as well as the capital of the Western Cape Province. About half of the city's population is "colored," about a quarter is black, and a quarter is white. English predominates, but Afrikaans and Xhosa are also widely spoken. Approximately 1,900 Americans live in the consular district, with some 1,000 in the greater Cape Town area. Cape Town's economy is based on financial services such as banking and insurance, light industry (textiles, food processing), the harbor, fisheries, and tourism.

Cape Town is fast becoming a major tourist destination. Opportunities for active visitors include mountain climbing, hiking, fishing, golf, bird- and whale watching, horseback riding, bicycling, surfing and swimming (although the ocean is quite cold). Cape Town offers a wide variety of cultural events, including theater, concerts, art exhibitions, and first-run movies. World-class botanical gardens and national parks complement the scenic wine country near the city. The Victoria and Alfred Waterfront, somewhat akin to Baltimore's Inner Harbor, boasts more than 200 upscale retail outlets and restaurants.

Education

Nursery school, kindergarten, elementary school, preparatory, and university education are available in Cape Town. Unless otherwise desired, instruction is in English. Anglican, Roman Catholic, and other religious denominations sponsor many private schools in Cape Town. Public schools are available. The educational system approximates that in Great Britain. Vacancies in most schools are very limited.

The school year is divided into 4 terms and runs from mid-January through mid-December, each term lasting 10 weeks.

Afrikaans language study is required in all government and most private schools in the Western Cape, but exceptions are given to temporary residents (consular children) in most private schools. Language instruction other than Afrikaans usually begins in grade 5.

Most schools (except nursery schools) require students to wear a uniform. This usually includes, but is not limited to blazers, dresses or shirts and trousers, hats, sweater, stockings, shoes, gym suits, and in many cases underclothing. Purchase these items locally.

Special Educational Opportunities

Many adult classes at institutions such as the University of Cape Town (UCT), The University of Western Cape (UWC) and University of Stellenbosch offer instruction in the normal range of university studies, including various degree courses. Compared with American universities, the full-time annual tuition at these universities is inexpensive for a university of fairly high academic standards.

The Cape Technikon (Technical College) offers a wide selection of homemaking courses. A nominal fee is charged.

Sports

As mentioned above Cape Town offers excellent facilities for outdoor activities and sports, such as hiking, mountain climbing, bird and whale watching, tennis, golf, horseback riding, bicycling, surfing, swimming. There are several country clubs where expatriates might obtain membership. Initial fees for these clubs are substantial. Cape Town has two yacht clubs, and the peninsula boasts hundreds of small boat enthusiasts. One yacht club has headquarters in the port basin, the other is on a 600-acre freshwater lake 13 miles from Cape Town.

The Cape is unique in providing opportunities for both cold and warm water fishing. The wide range of fish around the reefs and beaches of the peninsula coastline provides excellent sport for anglers. Reasonably good freshwater fishing is also available.

Durban

Durban once famed as the "last outpost of the British Empire," today is the commercial, transport and vacation center of the Kwa-Zulu Natal (KZN) region. The city is in the heart of one of the nine provinces created after the historic general election in 1994. Out of a total of 7.7 million KZN population, the city proper has about 775,000 people and the entire metropolitan 2.5 million people.

Durban is located 437 miles Southeast of Pretoria, (5 hours by road or 1 hour by air) and 1,108 miles Northeast of Cape Town. It is the second largest city after Johannesburg and also the fastest growing in South Africa. Its expanding rates are similar to those of Mexico City and Lima.

Renowned as a tourist resort center, Durban is equally important as the largest international port in Africa, as an industrial commercial center and as a center of a thriving agricultural area. Although sometimes hot and humid, the year round subtropical and long stretch of beaches com-

bine to make the coast of Kwa-Zulu Natal a popular resort area.

Numerous cultures and subcultures co-exist in the city also known by its Zulu name Thekwini. The three major groupings totaling 2.5 million include 13.7% whites, 3% coloreds, 27% Indians and 57.3% Africans. The Zulus comprise the predominant cultural group.

Many people of British origin live in Durban, though in recent years more Afrikaans-speaking people have settled there, attracted down from the "reef" by the warmer weather and the low prices. As with major South African cities, former racial barriers remain evident in housing and in schooling but access to public facilities is fully open.

Americans in the Durban area number 3,200 persons of whom one-third live in Durban. Americans in Durban are mainly retired or American children of South African citizens, academics, and businessmen. Americans residing elsewhere in KZN are largely engaged in missionary work.

Education

The division of Durban schooling into standards parallels the British system. South Africa's school year starts in January, but children are accepted at any time. School uniforms are compulsory for boys and girls. South African education, with its rigid curriculum requirements and often rigid rules governing behavior and appearance, is different from American education. Adjustment, particularly in the upper grades, may be difficult for American students.

Only two co-ed schools are located in Durban, but many excellent private schools for girls or boys (ages 8-18) are available. Several outstanding English-model boarding schools are located in the cool hill areas within an hour of Durban. A day and boarding school in Tongatt is about 25 minutes from the city, and this school extends from grade 7 to grade 12 (Standard V to matriculation). This school has a more relaxed atmosphere but high aca-

Street in Durban, South Africa

demic standards. The private schools are expensive, but standards are high.

Government schools average 30 students per classroom. Primary schools, up to and including Standard V (7th grade), charge minimal fees. At the high school level, some nominal fees are charged in government schools.

High schools offer a 5-year course culminating in the matriculation examination. Passing this examination qualifies a student for admission to a university. New students will have difficulty with instruction in Afrikaans, as it is part of the required curriculum as a second

language in English-medium schools. Athletics, including cricket, rugby, swimming, and track, are usually included as part of the curriculum for boys. Girls participate in tennis, swimming, hockey, and basketball. Sports are a big interest for students and adults as well.

Three government high schools (one for boys and two for girls) are located in Durban North. Other high schools, private and government owned, are located in the city and may be reached by bus. Primary schools through grade 7 are distributed throughout the residential areas and are usually co-educational. On the average, not more

than three or four American children attend any one school.

The University of Natal, with branches in both Durban and Pietermaritzburg, offers a wide variety of courses leading to degrees in liberal arts, science, engineering, and law. The University of Durban Westville also offers courses in these areas. In addition, many technical schools called "technikons" offer a range of courses in arts, design, dress making, commercial cookery, engineering, etc.

Some private nursery schools catering to 3- and 5-year-old children are available.

Special Educational Opportunities

Both the Universities of Natal and Durban Westville, as well as the technikons, offer adult part-time courses for academic credit. Actual degree programs are not offered part time. UNISA has offices in Durban that offer course work (including master's and doctoral) in various fields.

Private tutoring in music, ballet, and art is available to adults and children. Business courses and instruction in driving, flying, popular dance, fishing, diving, golf, tennis, swimming, riding, and ice skating, etc., are available. The cost of flight school is reasonable, and the instruction is excellent.

Sports

Durban offers recreational facilities of all types, with emphasis on outdoor sports for both spectators and participants. The many parks and playgrounds for children and the beaches are among the finest in South Africa. Sports, including yachting, fishing, golf, tennis, swimming, and bowls, may be enjoyed throughout the year, but access to some sports requires membership in a private club. Durban also has an ice dome for skating. Other popular sports include rugby, cricket, tennis, horseracing, baseball, and squash.

Four first-class, 18-hole golf courses are within Durban proper and four or five more are within a radius of 15 miles. Local courses are not designed to accommodate golf carts. At most courses, nonmembers can play for a nominal green fee.

Excellent asphalt and concrete all-weather tennis courts, most of which are operated by private clubs, are available, but admission is by availability. Inexpensive aqua-cise classes and well-equipped health studios, which provide aerobics and individual training programs, are close to homes in Durban and in the central business district.

All types of sporting equipment can be purchased locally, though costs are slightly higher than in the U.S.

Touring and Outdoor Activities

Durban is blessed with a wide range of outdoor recreational facilities. KZN offers hunting, fishing, camping, boating, mountain climbing, hiking, lake swimming, and sight-seeing. Ocean swimming and surfing are major attractions, but Durban must contend with shark dangers. The city has instituted a system of shark netting to protect most of its public beaches.

The city maintains several museums, a botanical garden, library, aquarium, and an aviary. Game reserves are within a few hours' drive from Durban, as are extensive parks and nature reserves.

Entertainment

American, English, and other films are shown at reasonable prices. Visiting professional repertory companies present plays and musicals, and several university and amateur companies perform regularly.

The city boasts many excellent restaurants and many nightclubs, ranging from sailors' dives to plush discos.

Photography is popular in Durban, and all equipment, including developing and printing services, is available at higher than U.S. prices.

Many colorful and interesting local festivals, including fire-walking ceremonies in the Indian community and Zulu dancing, especially the Zulu King's Reed Dance, are popular attractions.

Johannesburg

Johannesburg is a city of skyscrapers but is often called the Golden City for the gold mines in the surrounding area. It is the industrial, commercial, and financial capital of South Africa. Hotels, restaurants, theaters, shops, homes, and apartment buildings are similar to those in modern European and American cities.

Johannesburg is South Africa's largest city. Located 35 miles south of Pretoria, it is 300 square miles with an official population of 1.6 million. PWV area (Pretoria, Witwatersrand, Vereeniging) has about 7.4 million people. This figure includes the black township of Soweto, which is an integral part of the Johannesburg metropolitan area. Estimates of Soweto's population exceed 2 million. Johannesburg, Pretoria and the Southern Transvaal have an American community of about 7,000.

Education

Most American children attend local, private, or public schools, or the American International School serving the Johannesburg/Pretoria area. Attendance is daily, but limited boarding facilities are available.

Popular schools for boys include: Marist Brothers St. David's College (private, Catholic); King Edward (public); St. John's (private, Anglican); St. Stithian's (private, Methodist); Woodmead (private); and King David (private, Jewish). Most private schools are oversubscribed and have long waiting lists for admission.

Girls' schools include: Roedeana (private); Kingsmead (private); Parktown Convent School (private, Catholic); St. Andrews (private, Anglican); and St. Mary's School for Girls (Anglican). Redhill is a private coeducational school. Parents are responsible for transportation to private schools.

Johannesburg also has a large number of private preschools (including Montessori) in the suburban areas.

Special Educational Opportunities

The University of the Witwatersrand in Johannesburg is South Africa's largest English-language university. Its eight faculties include arts, science, medicine, engineering, commerce, law, dentistry, and architecture. The university confers degrees in arts (including education, fine arts,

View of Johannesburg, South Africa

EPD Photos/Woodfin Camp. Reproduced by permission.

music, public administration, and social work); science, medicine, physiotherapy, engineering (chemical, civil, electrical, land surveying, mechanical, mining, and mining geology); commerce, law, dentistry, architecture, town and regional planning, and quantity surveying. It also grants post-graduate and undergraduate diplomas and certificates. Classes are during the day only.

Other educational opportunities are provided by several vocational schools, technical colleges, and colleges of education. These institutions serve as professional training centers for whites and nonwhites.

Sports

Facilities for all sports are available and enjoyed throughout the year. See also Sports—Pretoria.

Entertainment

Johannesburg is larger and more cosmopolitan than Pretoria and offers considerably more by way of restaurants, theaters, museums, art galleries, and night life. For general information, see also Entertainment—Pretoria.

Social Activities

The American Society of South Africa holds several large annual

dinners, dances, and outings. The American International Women's Club has numerous activities, including talks and outings. Many opportunities for volunteer work are available.

Bloemfontein

Bloemfontein, the republic's judicial capital, is also the capital of the Free State. It is a bright and modern Afrikaner city, about 295 miles west of Durban, and close to the border of Lesotho, the "enclave country" which lies within the boundaries of South Africa. Bloemfontein is noted for its beautiful parks and gardens and for the many buildings which date back to the founding of the city in the middle of the 19th century. On Naval Hill, overlooking Bloemfontein, is a large game reserve featuring eland, springbok, and blesbok, animals indigenous to the area. The Lamont-Hussey Observatory, established on Naval Hill in cooperation with the University of Michigan, now serves as a theater.

The Appeal Court, the highest judicial authority in South Africa, is located here, as are the Supreme Court and the official residences of the Free State president, the state administrator, and the chief justice

of the republic. Among the newer attractions is Sand du Plessis Theatre, which is the venue for opera, ballet, and conferences. Bloemfontein's Zoological Garden in King's Park is the home of the famous "liger," a cross between an African lion and a Bengal tigress; a large collection of apes is also featured.

The University of the Orange Free State, formerly a constituent college of the University of South Africa, was founded here as an independent institution in 1950. There are currently nine faculties and a student body of close to 9,000. Bloemfontein is also the home of the noted Boyden Station Observatory. The metropolitan population is about 400,000.

OTHER CITIES

Situated 20 miles east of Johannesburg at an altitude of 5,600 feet is **BENONI**, home to such industries as iron and steelworks and a brass foundry. It has a metropolitan population of 406,000. Benoni began as a mining camp in 1887, and today is an important mining center with some of the richest gold mines in the world.

BOKSBURG is the principal gold-producing city of the region just east of Johannesburg, with a population of about 290,000. Electric motors, cranes, soap, and ceramics are among its products. The town is surrounded by residential suburbs and is the focal point of a number of major roads.

South Africa's largest railway junction is at **GERMISTON**, immediately southeast of Johannesburg. This city of some 284,000 residents is the site of the Rand Refinery, the largest gold refinery in the world. Gold bullion from all over the country is recovered here. Germiston also has smelting, cotton-ginning, and other industries.

KIMBERLEY, an industrial city of close to 190,000 people, is the capital of the Northern Cape province

and lies about 90 miles west of Bloemfontein. It was founded in 1871 following the discovery of diamonds in the region. Kimberley is the world's diamond center (DeBeers and Kimberley are among the mines in operation), but it is known also as a commercial center and rail hub. To the south of the city are several Boer War battlefields. Kimberley's scenery is marked by large pits and mounds of earth, the aftermath of mining operations. Today, diamond mining and cutting remain prominent industries. Kimberley is also a marketing and service center for a prosperous irrigated-farming and cattle-raising area. Iron, salt, and gypsum are also mined near Kimberley.

KRUGERSDORP, in the northeast 20 miles west of Johannesburg, is the site of the Paardekraal Monument, commemorating the victory of the Boers over the Zulu chieftain Dingaan on December 16, 1838. It is the object of an annual pilgrimage. The city is a mining and industrial center. Gold deposits have declined steadily in recent years. Manganese, asbestos, and limestone are also mined near Krugersdorp. The Sterkfontein Caves and archaeological sites are near the town, which was founded in 1887 and has a population of about 225,000.

LADYSMITH, located in northwestern KwaZulu-Natal province, was founded by the British in 1850. The town was the sight of a 115-day siege during the Boer War. The Boers besieged the town from November 2, 1899 until February 28, 1900 cutting off all supplies. Many people died during the siege and subsequent British operation to rescue the town. Today, Ladysmith has almost 100,000 residents. The city serves as an important rail junction and industry is based on food processing and the nearby KwaZulu-Natal coal fields.

PAARL, 30 miles east of Cape Town, is known for its agricultural products. Wine-making has been a part of the city's life since the Huguenots introduced viticulture in the 17th century. Citrus fruits,

tobacco, and olives are also important products. Cigarettes, processed foods, and textiles are manufactured here. Paarl is a center of education, with a population of about 156,000.

PIETERMARITZBURG, a city of 420,000, lies in the eastern part of the country in KwaZulu-Natal. There is currently uncertainty whether the provincial capital will be in Pietermaritzburg or Ulundi. Its name, unfamiliar to most foreigners (except those acquainted with South Africa's history and geography), is derived from the names of two Boer War leaders, Pieter Retief and Gert Maritz. The city has several industries, producing rubber and aluminum products, furniture, footwear, and rice. One of the University of Natal's campuses is here (the other is at Durban). The Queen Elizabeth Nature Reserve, Union Park, Municipal Game Reserve, Bakone Malapa Open-Air Museum, and the Scottsville Race Course are among the city's many attractions.

PORT ELIZABETH, located in southeastern Cape Province 400 miles east of Cape Town, is a major seaport for South Africa, and the center of the automobile industry. Although it was settled in 1799, there was no real development until the completion of the Kimberley Railroad 75 years later. The current metropolitan population is about 834,000. A notable seaside resort, Port Elizabeth is also known for its Snake Park, which features more than 2,000 reptiles. In addition, Addo Elephant Park is nearby. Excellent communications, cheap power, and water combine to create one of the country's busiest manufacturing centers. Tourists are attracted by Port Elizabeth's beautiful beaches and excellent surfing.

ROODEPOORT, 12 miles west of Johannesburg, is an industrial and residential. It was founded with the discovery of gold in 1885 and has since expanded through the annexation of nearby areas. It was here that the noted colonial administrator, Leander Starr Jameson, was

captured in 1895 after leading an unauthorized and premature raid into Boer territory. The venture became famous as Jameson's Raid. Roodepoort's eastern section is an industrial and manufacturing district. Most of the city's residents live in the western portion of Roodepoort.

SOWETO is a residential community adjacent to Johannesburg, with its name taken from the South-Western Townships. Soweto has a population of over one million people, primarily Zulus and Xhosas. Homes in Soweto range from stately mansions to makeshift shantytowns. The township was the scene of the Soweto Rebellion, the 1976 uprising that focused international attention on apartheid. A Community Council authorizes the development of roads, transport, water supply, housing, and electricity. Other municipal services include schools, libraries, sports facilities, playgrounds, and hospital. Since Soweto has very little industrial development, most of Soweto's residents commute to Johannesburg for employment.

SPRINGS, a manufacturing town of almost 180,000 residents, 29 miles east of Johannesburg, was the world's most productive gold-producing area in the 1950s. It began as a coal-mining camp in 1885. Glass, machine tools, bicycles, foodstuffs, cosmetics, and paper are manufactured in Springs today.

VEREENIGING, 35 miles south of Johannesburg on the Vaal River, was the site of peace negotiations that ended the South African (or Boer) War in 1902. It is one of the country's major industrial communities, manufacturing iron and steel products, bricks, glass, and tiles. Large local thermal power stations transmit electricity through the national grid. Demonstrations in 1960 denouncing pass laws at the nearby township of Sharpville led to the shooting deaths of 69 blacks. The population is about 385,000.

WELKOM, located southwest of Johannesburg, was founded in 1947

amid goldfields. The booming gold industry helped Welkom to become Free State's second largest city. Welkom, with a population of 226,000, continues to grow quickly. It is a wealthy industrial city whose inhabitants boast the highest per capita income in the country. The city has numerous citizens, drive-in theaters, a variety of restaurants, a library, and numerous modern sports facilities.

COUNTRY PROFILE

Geography and Climate

South Africa lies at the southern tip of the African continent. To the west, south and east, South Africa borders on the Atlantic and Indian Oceans with a coastline of 1,836 miles. To the north, South Africa shares common borders with Namibia, Botswana, Zimbabwe, Mozambique and Swaziland. The independent kingdom of Lesotho is completely enclosed by South Africa.

South Africa has a narrow coastal zone and an extensive interior plateau with altitudes ranging from 3,000 to 6,000 feet above sea level. Lacking arterial rivers or lakes of significance, extensive water conservation and controls are necessary. South Africa's 472,494 square mile area is about twice the size of Texas. South Africa has nine provinces, starting from the south they are the Western Cape, Eastern Cape, Northern Cape, Kwa-Zulu Natal, Free State, Mpumalanga, Gauteng, Northwest and Northern Provinces.

South Africa has a moderate climate with sunny days and cool nights. The most southerly point has a mean yearly temperature of 61.8 degrees Fahrenheit, while Johannesburg about 1,000 miles to the northeast and 5,700 feet higher, has an annual mean of 60.8 degrees Fahrenheit. Pretoria is 4,452 feet

above sea level and has a mean annual temperature of 63.5 degrees Fahrenheit. The temperatures can be deceiving because of the very bright and dangerous high sun during most of the year, especially in the high yield areas.

Pretoria and Johannesburg in Gauteng Province are on the high plateau. The surrounding countryside is characterized by treeless, rolling hills. The Magaliesberg Mountain Range is thirty miles northwest of Johannesburg and about the same distance west of Pretoria. The large Hardebeestport Dam is located in this area. The more picturesque Drakensberg Mountain Range (located in Mpumalanga and Kwa-Zulu Natal) extends north and south 200 miles to the east. Its beautiful peaks rise to 11,000 feet in Lesotho. The lower range of the Lebombo Mountains form the eastern boundary of the Johannesburg Consular District in the Mpumalanga Province.

The Free State offers a geographic variety of high plateaus spotted with barren but picturesque hills on the East and characterized by flat country to the west and south. The Vaal River separates the Free State from Gauteng Province. Bloemfontein is the provincial capital of the Free State as well as the Judicial Capital of South Africa.

Durban, located on the eastern seaboard of the Indian Ocean, is the principal city in Kwa-Zulu Natal Province and the largest seaport in Africa. Its shoreline extends north and south, along the Indian Ocean. Topographically, the coastal belt of Kwa-Zulu Natal rises sharply from the ocean to a fertile central plateau and then extends to the escarpment of the Drakensberg Mountain Range.

The Western Cape has the widest range of scenic attractions, including the Mediterranean-like luxuriance of the Cape Peninsula, rolling uplands to the east, excellent surfing beaches, the majestic peaks of the Katberg, the placid lakes of the Wilderness on the south coast of the

picturesque Garden Route, and the vast, arid distances of the Karoo and in the northern and northwestern Cape.

Although the country lies close to the Tropic of Capricorn, the inland areas are tempered by the high altitude. Being in the Southern Hemisphere, its seasons are opposite those of the U.S.-summer extends from October to March; winter from June to September. The rainy season in the Pretoria-Johannesburg area is during summer, and the temperature seldom rises above 90°F, with cool nights. Winter is dry and cool with daily temperatures varying from as low as 30°F during night to as high as 75°F during day.

Along the coastal area where Durban and Cape Town are located, heavier rainfall occurs during winter and spring, causing high humidity. Both cities experience strong winds-Durban from August through October and Cape Town throughout the year. The seasons are not pronounced but blend almost imperceptibly. South Africa's climate is comparable to that of central and southern California. For the most part, trees and shrubs remain green, with flowers blooming throughout the year. The high veld, however, which includes the Pretoria-Johannesburg area, has a dry, brown landscape during the winter drought period.

Population

Census figures indicate South Africa's population is 44.6 million. This attempts to take into account the unknown numbers of non-documented immigrants moving into the country from neighboring African states. Because ethnicity is politics in South Africa, a country with a history of cultural diversity, most analyses of the country's population are broken down into the major cultural and linguistic groupings. As of this date, no generally recognized nomenclature has yet taken the place of the former apartheid categories which were used as an instrument of racial domination and suppression. The terms remain and

are used in the census descriptively rather than prescriptively as in the past: "Africans" or "blacks" constitute 34.3 million, or 77% of the population; "whites" 5.4 million, or 12%; "coloreds" (people of mixed racial origin) 3.8 million or 8.5%; "Asians" (including Indians) 1.2 million or 2.5%. (Source: Development Bank of South Africa) Of the population of European descent, 60% are native Afrikaans speakers, 40% native English speakers.

Most of the "colored" population lives in the Cape, while most South Africans of Indian descent live in Kwa-Zulu Natal.

Eleven languages are officially recognized and enjoy equal legal status. In descending order of demographic importance they are Zulu (7 million), Xhosa (6 million), Afrikaans (5 million), Pedi, English, Tswana, Sotho, Tsonga, Swati, Venda and Ndebele. While English is spoken by only 9% of South Africans in the home, it is the lingua franca of the country, with Zulu, Xhosa and Afrikaans spoken across a wide spectrum as well.

While many Africans still have no economic options other than to live in the rural areas (former "Homelands") to which they were relegated by the apartheid regime, blacks of all ethnic groups can be found living and working throughout South Africa. About 75% of employed blacks work outside the Homelands to which they were originally assigned. The Homelands are now fully politically integrated into the country.

At the turn of the twentieth century, the Boer War (or the "Anglo-Boer War," as it is called in South Africa) largely ignored the majority of indigenous peoples living on South African territory. The struggle was between "Afrikaner"-descendants of the Dutch, French Huguenots, and Germans who came to the Cape in the seventeenth century; and the English who arrived two centuries later. The influence of these two groups remains disproportionately high compared to their demographic

representation, mainly because they were able to impose their political, cultural, and economic will over the country during the course of 300 years. Afrikaners are largely members of the Dutch Reformed ("NG") Church, traditionally a bastion of conservatism. Other religions found in South Africa include other Protestant as well as Catholic and Greek Orthodox churches, and Hinduism, Judaism and Islam.

The system of legally mandated racial segregation, or "apartheid," is now officially dismantled though economic and social barriers still stand in the way of genuine integration. Former apartheid laws which held the system together (now repealed) were the Group Areas Act of 1950, which segregated residential neighborhoods by race; the Land Acts of 1913 and 1936, which restricted black ownership of land to certain designated homelands; and the Population Act of 1950, by which people were racially classified at birth.

The Homelands, which were never recognized by the U.S. or the world community at large, gathered ethnic groups in geographic areas, which were not conducive to trade, production or development. The efforts of the apartheid government to make life in these areas economically viable were a generally recognized failure. Much of the black labor from the Homelands was employed in areas of production outside the Homelands as transient workers. The practice was highly disruptive to the family structures of those employed.

Now that the impediments to free movement have been lifted, black migration to the cities has intensified, and has created challenges to urbanization with rapid shifts in population, and with infrastructures unprepared. Questions of land reform, electrification, potable water and other amenities have become acute. The ANC government can boast of doubling school enrolment since it took office in 1994, and in major advances in rural electrification. However, hous-

ing construction has followed at a much slower pace.

Local and national governmental structures have generally passed to the hands of the majority population, and antidiscrimination laws have been passed in areas such as fair employment and fair access to housing. However, economic readjustments have taken only baby steps thus far, with high unemployment exacerbating the sense of stagnancy in the black community. The official figures on unemployment hover at 28-30%, while the generally accepted rate is 50-60%. In the townships, the figure often approaches 80-90%.

Another indicator of discrepancies in the lifestyle of the various ethnic groups is life expectancy, which for whites is 73.1 years, but remains at 60.3 for blacks (and 66.5 for coloreds and 68.9 for Asians). Birth rates have declined in recent years in all ethnic groups, from 40 per 1000 for blacks in 1970 to 25.3 in 1994; versus 22.9 for whites in 1970 down to 13.7 in 1994 (source: Central Statistical Service).

Crime remains a challenge for the government and the citizenry, with all ethnic groups among the victims. Homicide, now stemming generally from criminal and not political motives, stands at a proportional rate of seven times that of the U.S.

Public Institutions

The new Constitution of the Republic of South Africa, signed into law on December 10, 1996, codifies the separation of powers, appropriate checks and balances and a far-reaching Bill of Rights. South Africa is one of the few countries, which, through a single entrenched law, protects all universally accepted fundamental rights against government interference and individual abuse. Socioeconomic rights such as housing, health care, access to food and water, social security and basic education are also recognized. The constitution makes the bill of rights "horizontal" in its application, bind-

ing private persons as well as the State.

In terms of the constitution, the Constitutional Court is the highest court in cases regarding the interpretation, protection and enforcement of the constitution. While the Constitutional Court decides on constitutional matters only, the Supreme Court of Appeal has jurisdiction to hear and determine an appeal against any decision of a High Court.

After centuries of minority rule and decades of confrontation, South Africa held its first democratic election in April 1994. The African National Congress (ANC) obtained 62.65% of the national vote in the 1994 elections against the National Party's (NP) 20.39%, the Inkatha Freedom Party's (IFP) 10.54%, the Freedom Front's (FF) 2.17%, the Democratic Party's (DP) 1.73%, the Pan Africanist Congress's (PAC) 1.25% and the African Christian Democratic Party's (ACDP) 0.45%. Nelson Mandela (ANC) subsequently became President, with Thabo Mbeki (ANC) as Executive Deputy-President and FW de Klerk (NP) as Deputy-President. On a provincial level the ANC won seven out of the nine provinces, while the NP won a majority in the Western Cape and the IFP in Kwa-Zulu Natal.

The Cabinet consists of the President, the Executive Deputy-President and 25 Ministers appointed by the President. A party with at least five percent of the seats in the National Assembly, which decides to take part, may have one or more Cabinet posts based on the number of seats it holds.

Government is structured at national, provincial and local levels. Instead of a clear division of powers, the constitution introduces the concept of "co-operative governance" in terms of which each tier of government must endeavor to resolve any disputes by mediation and negotiation.

Parliament consists of the National Council of Provinces (NCOP) and

the National Assembly. The Senate was replaced by the NCOP, which came into operation on February 4, 1997. The NCOP was established to ensure that provincial interests are taken into account in the national legislature. South Africa is divided into nine provinces, each with its own Legislature, Premier and Ministers.

The National Assembly consists of 400 members elected by a system of proportional representation. Each party has a number of seats based on the share of the votes gained in the 1994 election. Of the 400 members, 200 were elected on a national list and 200 on provincial lists.

There are currently seven political parties represented in the South African Parliament and the seat representation in the National Assembly is as follows:

- African National Congress, 252
- National Party, 82
- Inkatha Freedom Party, 43
- Freedom Front, 9
- Democratic Party, 7
- Pan Africanist Congress, 5
- African Christian Democratic Party, 2

The ANC has succeeded in stabilizing the inflation rate and liberalizing exchange control regulations, but unemployment, low economic growth and housing shortages remain serious problems. The ANC has had problems maintaining labor support for its "liberal" Growth, Equity and Redistribution (GEAR) macro-economic framework.

With the May 1996 withdrawal of the NP from the Government of National Unity (GNU), party politics entered a new phase. Deputy President FW de Klerk's resignation from the Cabinet left the ANC in almost total charge of government, with the IFP receiving two ministerial positions. The NP has been racked by internal tensions and resignations; has experienced a distinct decline in the opinion polls; has had little success in building a black support base; and may be headed towards a future as a

regional political entity in the Western Cape.

While the IFP remains a powerful force in the province of Kwa-Zulu Natal, it has lost substantial support amongst White and Indian voters, leaving little formal organization outside of its key support base of Zulus in the Kwa-Zulu Natal hinterland. More serious to the IFP is the party's loss of popular electoral support amongst Zulus in the urban areas of Durban and Pietermaritzburg. The IFP now faces a dilemma-to move closer to the ANC in order to form an alliance or to keep its distance, acting as a regional opposition party.

Born out of the Afrikaner nationalist far right, the Freedom Front (FF) has continuously engaged the ANC-led government in pursuing its goal of protecting Afrikaner minority rights in the new South Africa. A pragmatic approach from General Constand Viljoen has made him one of the most respected white political leaders outside the ANC. A dwindling ethnic-Afrikaner support base and the ANC's refusal to countenance the creation of a "volkstaat" does not bode well, however, for the party in the run-up to the next election.

The DP, while outperforming many of its rivals in proposing alternative policies to those offered by the ANC, is still hampered by its inability to break out of its narrow support base of middle-income whites. The party has bounced back after a poor performance in the 1994 elections under the dynamic leadership of Tony Leon. The party refused an offer in 1997 from President Mandela to join the government, preferring to polish its opposition credentials.

The Pan Africanist Congress is still unable to attract any large-scale support away from the ANC. The party is simply too small with too few symbols of the struggle to attract meaningful quantities of black voters.

Arts, Science, and Education

Most South African cities have an active cultural life. Each province has a Performing Arts Council, subsidized by the central government, whose productions come from both the Western and indigenous repertoires. Following the end of the cultural boycott, a number of prominent foreign artists have recently appeared in South Africa. Johannesburg has several ambitious multiracial performing arts centers and an active local community theater. South Africa is highly developed scientifically. Its scientists are well educated, and many have international reputations. The veterinary faculty of the University of Pretoria at Onderstepport is one of the world's finest. The Council for Scientific and Industrial Research (CSIR) covers a wide range of scientific research. The medical profession is highly developed, and significant progress has been made in experimental medicine—South Africa was the pioneer in successful heart transplant surgery. The Medical Research Institute is capable of the development and production of sophisticated pharmaceuticals. South Africa has 21 universities that include those in the former Homelands. They are open to all races, although historically many have been reserved for either white or black students. All of the most prestigious traditionally white institutions now freely admit qualified blacks. The University of South Africa, with 110,000 enrolled, offers instruction to all races by correspondence. Admission is based on stringent matriculation examinations. Universities do not yet have programs of general studies during the first 2 years as in American universities, but require specialization for the entire 3-year course at which the bachelor degree is given. "Honors," the completed fourth year of university instruction, provides the equivalent of a 4-year U.S. bachelor's degree. Other bachelor degrees may take 4-5 years. A bachelor of architecture takes 6 years.

For those students not attending the American International School in Johannesburg (AISJ), which provides a standard American high school curriculum, entry into American universities may pose some problems. Some students may have difficulty in adjusting to different curriculum standards beginning with Standard 9 (11th grade) when local students begin a 2-year matriculation program geared toward entry into the local university system. An above-average student should have little difficulty, but a weak student, without the benefit of pre-matriculation curriculum training, may find it difficult to master the program without tutoring, particularly in science and mathematics which are accelerated compared to most American public schools. The school year begins in January and ends in December with 3-4 week holidays separating the three school terms.

The South African curriculum is a blend of British and South African education (i.e., Standard 9 corresponds to the British Form IV and almost corresponds to U.S. grade 11—Standard 10 [Form V] is the matriculation year that is followed by university study). The regular matriculation course of study includes English, a physical science, a foreign language, a social science, a combined mathematics course, and minor courses such as art and physical education.

The manner in which subjects are presented in class may also require adaptation by American students. Mathematics is broken down into algebra, geometry, trigonometry, etc., but is considered one completely integrated unit with advancing stages of difficulty each year. A percentage grading system is used in almost all schools that require clarification to U.S. university systems. In some high school courses, for example, 40% can be a pass and 75%-80% is frequently a distinction.

The local high school curriculum follows the same subject matter as in the U.S. (English, social science, foreign language, mathematics, etc.)

American students entering the matriculation process (Standard 9) at age 16 or 17 without previous earlier level study here may find little flexibility in course offerings. Students are required to take whatever language or social science is given in a particular school. World history is also a course that extends through the entire 2 year matriculation period and mainly focuses on South African and European history. Local schools do not teach American history which is required in the U.S. Matriculation courses are taught through the lecture method; students should take extensive notes and frequent examinations. The seminar or project educational method is rarely used in the public high school system. Examinations are given much emphasis and weigh heavily in determining the final grade. For these reasons, Americans with 17- and 18-year-old children (preparing for U.S. universities) may prefer to send their children to AISJ. AISJ enrollment as of June 1998 is approximately 600 students (K-12).

Contact AISJ directly (Tel 27-11-464-1505 and Facsimile 2711-464-1327). AISJ is accredited in all areas.

Commerce and Industry

Despite the introduction of democracy to South Africa in 1994, gross inequities continue to exist along racial lines in wealth, income distribution and education as a result of apartheid. In addition, the South African economy declined during apartheid's final decade and the increase since then has been too small to create the formal-sector jobs needed by the country's population. Nevertheless, much of the South African formal economy more closely resembles that of the United States or Western Europe than those of other African countries. There are modern transportation, communication and financial infrastructures that easily overshadow and dominate the economies of South Africa's neighbors. A large

manufacturing sector produces a wide variety of consumer goods including automobiles, some of which are exported to Europe and Asia. Inflation has recently declined to about 5% and the decline of the Rand since 1996 has made prices on many items inexpensive in dollar terms. While tariffs on most items have declined considerably over the past few years, automobiles are still expensive relative to similar U.S. models. With the decline in the price of gold, mining is no longer the single most vital part of the economy. Agriculture, financial services and tourism are all strong and growing contributors to the South African GNP. The economy is organized according to free market principles, but there remains from apartheid days considerable government involvement in many industrial sectors. The private sector remains dominated by six large industrial groups but the degree of dominance has declined considerably as the economy has opened to the outside world and local conglomerates restructure themselves in order to compete internationally.

Transportation

Automobiles

Privately owned motor vehicles are essential in South Africa. Public transportation is available but does not serve all areas. Taxis must be called by phone but are not reliable and expensive.

Traffic moves on the left. Right hand drive imported Chryslers and Fords are now available (not US model) in South Africa. Other vehicles, which can be purchased from a bonded warehouse, are Saab, Volvo, Renault and Peugeot. Toyota, Nissan, Hyundai, BMW and VW are available locally. 4 x 4 models currently available are Jeep, Isuzu, Mitsubishi, Toyota and Ford Explorer. Prices of new vehicles are competitive. Reconditioned vehicles can be imported from Japan. The quality of these vehicles seems satisfactory.

Leaded and unleaded gas is available locally and prices fluctuate regularly around R2.25 per liter.

The South African Foreign Ministry requires balance of third-party insurance for all vehicles, as a minimum. However, due to the high crime and accident rates in South Africa, comprehensive insurance is recommended. The Department of State requires personal liability insurance for all personal vehicles whilst vehicles are being driven in South Africa or any other African country. Local insurance companies offer the required coverage at good rates.

Local

Public transportation to and from the city and around the suburbs is frequent and reliable during business hours. However, it does not serve all residential areas. Weekend and evening schedules are limited both in area of service and availability. Taxi service is available 24 hours daily by telephone because they do not service areas seeking passengers.

Regional

With few exceptions, international flights into South Africa land at Johannesburg International Airport located 16 miles from Johannesburg and 30 miles from Pretoria. However, there is a direct SAA/AA flight between Cape Town and Miami. International arrivals and departures with direct or connecting flights are scheduled to almost any point in the world. The American Airlines/ South African Airlines code share provides daily flights from Johannesburg and Cape Town to New York and Miami respectively. United/Lufthansa and Northwest/KLM also provide daily service to the United States via Europe and return. South African Airways serves all major cities in South Africa. Service is good with numerous daily flights to Cape Town, Durban, and other cities. British Airways, operated by ComAir and Sun Air also serve major cities in South Africa as well as neighboring cities including Windhoek, Victoria Falls and Gaborone.

Railroad transportation with South Africa is available. The Blue Train from Pretoria or Johannesburg to Cape Town provides luxury service at very high cost but make reservations well in advance.

Communications

Telephone and Telegraph

Telephone communications in South Africa are good. International Direct-dial connects all major cities and connections to the U.S. are good but rates are higher than in the U.S. Many people use MCI, SPRINT, AT&T or a call-back service for their long distance carrier. Telegraph service is available at reasonable rates to all parts of the world.

Mail

International mail to and from the U.S. is reliable and takes 8-14 days. Air letter forms may be used in either direction at a reduced rate. International surface mail from the U.S. takes 4-8 weeks.

Radio and TV

South Africa's state-owned television service (SABC-TV) broadcasts daily on three channels. SABC 1 and SABC2 offer entertainment and news programs in all of South Africa's eleven official languages. SABC3 offers news, entertainment and educational programming in English only. All SABC-TV broadcasts are in the PAL-I system. American broadcast standard (NTSC) television sets will not work properly in South Africa. Cable TV (M-NET) and Direct Satellite TV (MultiChoice) are available at reasonable costs. These services offer movies, sports, and American and international news, and audio programming. South Africa's first privately owned free-to-air television station is scheduled to begin broadcasting in late 1998.

Video rental stores are common throughout South Africa. Rental tapes are all in VHS format and PAL system. Your VCR must either be a PAL or multi-system machine to view locally rented videotapes.

Radio in South Africa ranges from low-power community stations (broadcasting mostly in FM), to state-owned SABC stations throughout the country, to several new privately owned stations. There is a format for every taste. For local news, listen to Radio 702 (702 kHz) and SAFM (103 to 107 MHz). VOA reception at 909 kHz is very good in the evenings and early mornings.

Newspapers, Magazines, and Technical Journals

English-language newspapers are published daily in South Africa. The Star, Sowetan, Pretoria News, Business Day, Citizen (in the Johannesburg-Pretoria area), the Cape Times and the Cape Argus (in Cape Town), and the Mercury and Natal Witness (in Durban) are the main English-language dailies. Weeklies include the Weekly Mail

Guardian and City Press. The two main Sunday papers are the Sunday Times and the Sunday Independent. The International Herald Tribune, Time, and Newsweek are available at bookstores or by subscription at slightly higher than U.S. prices. Reader's Digest is also published in South Africa. Bookstores are well stocked with current books and magazines, including technical journals. U.S. editions of magazines may be received through the pouch or through international mail, but may arrive several weeks late. You may also use the Internet to access publications, news and information.

Health and Medicine

Medical Facilities

South Africa medical and dental facilities in the major cities of Johannesburg, Pretoria, Bloemfontein, Durban, Cape Town, Nelspruit, Kimberly, Rustenberg, and Port Elizabeth are excellent.

Specialists of all types are available in Johannesburg, Pretoria, Cape Town, and Durban. Many excellent private hospitals and clinics are available and most public univer-

sity hospitals are also well equipped. Nursing care is excellent. Extremely modern and well-equipped laboratory and radiology facilities exist throughout the country. A highly developed pharmaceutical industry produces or imports a complete listing of medications.

Community Health

High standards for community sanitation exist in the major cities. The water is potable and in good supply. Sewage and refuse disposal is good. Electricity supply is excellent. Minor traffic congestion and city pollution exist.

Animals are immunized for rabies. A lowland, rainy season annual increase in malaria cases occurs requiring travelers to those areas to take malarial prophylactics. The AIDS virus has reached epidemic levels in South Africa. Because of the high caseloads of HIV disease, tuberculosis cases are also increasing.

Fresh water lakes and rivers are infested with the schistosomiasis (bilharzia) parasite that enters through the skin.

Restaurants in general are reputable and prepare good food with sanitary techniques.

Meat, poultry and seafood can be purchased locally and prepared normally. Insects and vermin are no major problems although occasional poisonous snake and scorpion exposure occurs.

Vegetables and fruits require no special treatment, and milk and milk products are pasteurized.

Preventive Measures

Pretoria and Johannesburg are between 5000 and 6000 feet above sea level causing some mild symptoms of increased fatigue upon arrival. These symptoms clear in a couple of weeks.

The climate is dry with increased dust in the highlands. Solar exposure is increased and sun block, pro-

TECTIVE clothing and sunglasses should be used.

Although malaria is not a problem in the major cities of South Africa, medication prophylactics is needed in lowland areas near the game parks and along the Zimbabwean/Mozambican borders.

In South Africa, precautions are mandatory for sexual and body fluid exposure due to the high incidence of AIDS. Unprotected sex must be avoided. Blood exposure should occur only in hospitals with HIV testing available.

Fresh water wading and swimming should be avoided due to schistosomiasis. Yellow fever immunizations are required for travel to tropical countries, and South Africa requires proof of immunization if you visit any of those countries.

NOTES FOR TRAVELERS

Passage, Customs and Duties

When packing, remember that seasons are the reverse of those in the U.S. Spring and fall coincide approximately with fall and spring in the U.S.

South Africa has tightened its visa requirements for certain categories of visitors. Only visitors on tourism, short business consultations, or in transit do not require visas; others need visas or they will be refused admission and returned to their point of origin. Visitors who intend to work in South Africa must apply for work permits abroad at the appropriate South African embassy or consulate. Travelers entering South Africa from countries where yellow fever is endemic are often required to present their yellow World Health Organization (WHO) vaccination record or other proof of inoculation, or they must be inoculated at the airport in order to be permitted entry. Travelers may obtain further information from the Embassy of South Africa, 3051 Mas-

sachusetts Avenue, N.W., Washington, D.C. 20008, telephone (202) 232-4400, web site at <http://usaembassy.southafrica.net>, or, the South African consulates in Los Angeles, Chicago, or New York. Overseas, inquiries should be made at the nearest South African embassy or consulate.

Travelers should avoid nighttime travel and use caution when driving in the former "independent homelands" of Transkei and Ciskei, which have been incorporated into the provinces of Eastern Cape and KwaZulu-Natal. Some areas, such as the "wild coast" in the former Transkei, have significant levels of crime and inadequate medical services. This situation, though improving, has caused problems for foreign travelers to the area. Travelers may contact the U.S. Consulate General in Cape Town or the U.S. Consulate General in Durban for further information before embarking on trips to these areas.

Americans living in or visiting South Africa are encouraged to register at the Consular Section of the nearest U.S. consulate and obtain updated information on travel and security within South Africa. The U.S. Embassy is located at 877 Pretorius Street Arcadia in Pretoria, telephone (27-12) 342-1048, fax (27-12) 342-5504. The U.S. Embassy web site is <http://usembassy.state.gov/pretoria/>. Note: The U.S. Consulate General in Johannesburg provides most consular services for Americans in the Pretoria area.

The Consulate General in Johannesburg is located at No. 1 River Street (corner of River and Riviera Road), Killarney, Johannesburg, telephone (27-11) 644-8000, fax (27-11) 646-6916. Its consular jurisdiction includes Gauteng, Mpumalanga, Northern, North West, and Free State provinces.

The Consulate General in Cape Town is located at Broadway Industries Center, Heerengracht, Foreshore, telephone (27-21) 421-4280, fax (27-21) 425-3014. Its consular

jurisdiction includes Western Cape, Eastern Cape, and Northern Cape provinces.

The Consulate General in Durban is located at Durban Bay House, 29th floor, 333 Smith Street, telephone (27-31) 304-4737, fax (27-31) 301-8206. Its consular jurisdiction includes KwaZulu-Natal province.

Pets

At present, there is no quarantine imposed for pets being imported from the USA. Pets shipped from the US must be in possession of a valid rabies and health certificate and must be accompanied by the original import permit. The rabies vaccine must be older than 30 days and not older than one year. Your

local vet should carry out the health clearance, within 90 days prior to departure for South Africa. The area or Government vet must also clear the rabies and health clearance certificate within 90 days prior to departure for South Africa.

The following information must be furnished to obtain an import permit: Number and/or species and/or class of animal, Country and city of origin, Airport from which the animal will be loaded, Date of embarkation for South Africa, Address and telephone number to which the permit must be sent. Permits are sent via courier service at a cost of approximately \$20.

Pets must travel as manifested cargo and may not be brought as excess baggage or in the cabin. Should you not comply with this regulation and/or provide the required documentation, the pet will be returned to the country of origin.

In addition to the above regulations, cats must be accompanied by a feline enteritis vaccination certificate and a rhinotracheitis vaccination certificate (snuffles vaccination).

Firearms and Ammunition

Those over age 16 or older may purchase locally from a reputable and

licensed South African weapons dealer one rifle and one approved shotgun each for personal use provided they comply with all South African laws pertaining to the use and storage of such weapons. Under no circumstances is the purchase, possession or use of handguns permitted.

Currency, Banking, and Weights and Measures

South Africa's currency is the Rand (R). The rate of exchange in July 1998 was approximately \$1 = R6.40; the rate is subject to frequent fluctuation. Banking facilities are adequate. With good Internet service available, Internet banking, for paying bills and transferring money in the U.S., is possible for an increasing number of people.

While Electronic Funds Transfers are not yet reliable enough to recommend within South Africa, FSC Paris does have the capability.

The South African Rand is a freely convertible currency and the rate against the US Dollar varies daily due to market influences. Many find it convenient to open a checking account with a local bank. Banks also have available Visa and MasterCard for your use, although the interest rates are high. Stateside credit cards can be used at most local stores including supermarkets, theaters, travel agencies and numerous retail outlets.

US Dollars and travelers checks as well as cashier checks are available from the banks given sufficient notice (usually two workdays).

The system of measurement in South Africa is primarily metric.

LOCAL HOLIDAYS

- Jan. 1 New Year's Day

Khartoum, Sudan

SUDAN

Republic of the Sudan

Major City:

Khartoum

Other Cities:

'Atbarah, El Fasher, El-Gedaref, Jubā, Kassalā, Khartoum North, Omdurman, Port Sudan, Wadi Medani, Wau

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated July 1994. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Called Nubia by the ancient Egyptians, the Republic of the **SUDAN**, with its rich cultural diversity and historical background is, in many ways, Africa in microcosm. The largest country in area on the continent, it lies at the traditional crossroads between East and West Africa, and between Africa and the Middle East.

Sudan has been called a country of the 21st century. Although it is one of the least-developed nations in the world, and remains primarily agricultural, it continues efforts to implement an ambitious development program. With the cooperation of several Western countries and

international institutions, it has had the potential of emerging as a principal food-growing area and an important source of minerals. However, the drought which has enveloped such a large part of Africa in this decade has significantly slowed economic growth.

MAJOR CITY

Khartoum

Khartoum is northeast of the country's geographical center, at about 15 degrees north latitude. At the junction of the White and Blue Niles, the area contains a total population of an estimated 3.8 million in three cities: Khartoum, Khartoum North, and Omdurman. Khartoum is the busiest and the government center. Most resident Europeans live in the city and its outlying suburbs. Across the Blue Nile from Khartoum is Khartoum North, a traditional city with a growing industrial area. The ancient city of Omdurman, across the White Nile from Khartoum, contains miles of traditional markets, where local artisans make and sell their wares.

Once dominated by Arabs, Khartoum now has a sizable population

of displaced southerners. Arabic is the common language, but English is usually understood by Sudanese who have completed secondary school. English is used in transacting business with foreigners. Minority groups resident in Khartoum include Egyptian, Greek, Lebanese, Italian, West African, and Armenian.

Shops and businesses often close between 1:30 pm and 5:30 pm, during the hottest part of the day.

Food

Importation, manufacture, or consumption of alcohol is prohibited by the Government of Sudan.

Some imported products can occasionally be found in local groceries. Fresh fruits and vegetables are sold at open air markets. Available fruit includes small bananas, grapefruit, limes, oranges, watermelon, and mangoes. Throughout the year, onions, cucumbers, green peppers, carrots, tomatoes, okra, garlic, and eggplant are available. For a few months such cool season crops as cabbage, potatoes, beets, squash, lettuce, green beans, radishes, peas, and cauliflower appear. Beef, mutton, chicken, and, occasionally pork are available locally. Pork can be ordered. Beef and mutton are frequently found in unfamiliar cuts.

Flooding in Khartoum, Sudan

AP/Wide World Photos, Inc. Reproduced by permission.

Outstanding Nile perch and tilapia provide an alternative to meat and are sometimes available.

Individuals in outlying areas find some food staples available locally. Meat and seasonal fruits and vegetables are usually available; the variety depends on local production.

Clothing

Clothing is informal; however, Sudanese are conservative in dress, and Western attire is frowned upon. Clothing is washed more frequently here and therefore wears out faster. Sturdy cottons are best for hot months, and polyester is suitable for winter. Sweaters and wraps are needed in early mornings and evenings during cool months; a few winter things are necessary if you intend to travel to cooler climates.

Clothing needs in outlying areas are similar to those in Khartoum, except individuals visiting the

southern regions should include rain gear because of the heavy annual rainfall in that area.

For men, work attire consists of sport shirts or safari suits. Many men wear shorts for home or recreation. A lightweight suit or sports jacket is appropriate for more formal occasions. Men should avoid shorts and going shirtless in public. Bring wash-and-wear shirts since dry-cleaning is expensive, and quality may be unsatisfactory. Women wear dresses, skirts, and tops or pants in the office or for leisure. In deference to Islamic traditions, women should avoid sundresses, shorts, or tight slacks or blouses. For evenings, long skirts or caftans are popular. Outdoor entertaining makes flats more comfortable, as high heels sink into the lawn. Children wear jeans and shorts, and sandals or tennis shoes. Long Bermuda shorts can be worn to school.

Supplies and Services

Supplies: Many commodities are in short supply or not available. Bring favorite brands of toiletries and cosmetics, unless you are prepared to switch.

Basic Services: Tailors and seamstresses can be found, but work is slow and quality poor, except for the most simple safari suits for men and long, formless dresses for women. Simple shoe repair is available.

Barber shops and beauty parlors are more reasonably priced than those in U.S. cities. Quality of supplies, cleanliness standards in the shops, and qualifications of some operators, do not measure up to U.S. standards, however.

Religious Activities

The Anglican, Greek Orthodox, and Roman Catholic churches, and the Khartoum International Church

(Protestant) conduct regular English-language church services.

Education

Most American children attend Khartoum American School (KAS). The school's major vacation is 18 days at Christmas. School hours are 7:20 a.m. to 2 p.m.

The school is located on the southern edge of New Extension in a new, air-conditioned/air-cooled, eight-building campus built to U.S. standards. KAS offers a U.S. curriculum taught by a well-qualified staff that maintains U.S. standards. The curriculum consists of various academic subjects, ESL (English as a Second Language) instruction, music, art, and physical education. Foreign-language offerings include Arabic and French. There is also a computer specialist and a resource specialist. A good library is served by a trained librarian. It has 14 classrooms, a science laboratory, a computer lab, and art and music rooms.

Bring paper, notebooks, pencils, pens, colored pencils, colored pens, etc., as a limited supply is available at school. A lunch break is given at midday. All children take at least a quart of water to drink each day, usually utilizing a large, unbreakable Thermos (e.g., Playmate jug).

There are no other English-language schools in the area, other than the KAS. The French School might accommodate students reasonably fluent in French, though its enrollment is small.

While there are secondary-level English-language schools in Khartoum (e.g., Unity High School, Sisters School for girls, and Camboni College for boys), vacancies are rare.

Special Educational Opportunities

The University of Khartoum and the African International University offer language instruction in Arabic. Applicants for full-time uni-

versity study must pass rigorous exams in *both* English and Arabic.

Sports

Khartoum has an American Club. Membership includes expatriates assigned to Sudan as well as Sudanese. The American Club's facilities include a swimming pool, concrete tennis courts, and a snack bar.

Sudanese professional clubs—civil service, army, engineers, university—are exclusive, but sports clubs accept those actively interested. The Sudan Lawn Tennis Association is also open for membership and offers both grass and cement courts.

Bowling and billiards are available to those who join the private Hilton Hotel Club. The annual individual membership fee allows access to bowling (with automatic equipment), billiards, sauna, massage, and hard-surface tennis courts with lighting.

Water skiing on the Blue Nile is available. Joggers are invited to participate with the Khartoum Hash House Harriers on their weekly jaunts. Spectator sports are limited to soccer, tennis tournaments, occasional horse and camel races, and informal polo matches. Public sports facilities are scarce, and each private national club has its own activities for members only.

Al Mogran Family Park is an amusement park on the point of land where the White and Blue Niles meet. The park has rides, refreshment stands, and a first-aid station. It is operated by the Sudanese People's Armed Forces.

Touring and Outdoor Activities

Jebel Aulia Dam, a 1-hour drive (possible in a sedan with high clearance), is a pleasant spot to see a wide variety of water birds and watch Sudanese cast their round nets for fish. Fish can be purchased on the spot. A small grass plot is

available for picnics. The dam serves as a major crossing of the White Nile. A constant stream of camels, donkeys, sheep, and goats with their herders passes by. Bird-watching, especially during migratory seasons, is also good all along the Niles.

Other excursions outside Khartoum are likely to take on the aspects of a picnic or a camping trip by four-wheel-drive vehicle fully equipped for the length of the journey. A favorite day or overnight outing is an about a 2-hour drive north to the Nile's Sixth Cataract in Sabaloka Gorge. On a 3-day weekend you can visit the Meroitic ruins near Shendi. A visit to Dinder National Park, a game preserve, takes several days and is rugged. If attempting this last trip, one must be prepared to carry along about 90 gallons of fuel.

Facilities available to travelers are almost nonexistent outside Khartoum. Ample food, fuel, and water must be carried on trips. Bring camping gear if you enjoy this type of activity. With continual fair skies, people rarely bother with tents, but cots are recommended, as the ground is stony and covered with thorns.

The Red Sea has some of the world's most beautiful coral. Snorkeling and scuba diving in Port Sudan are popular, but no facilities are available to refill scuba tanks. The coast is over 700 miles away from Khartoum. Port Sudan is 1 hour by jet, or 2½ hours by prop plane from Khartoum. A small resort at Arusa is north of Port Sudan, and the ancient city of Suakin is 60 km. south of Port Sudan. To reach Suakin, one must fly to Port Sudan and obtain transportation to Suakin.

Hunting opportunities range from local bird shooting (sand grouse, dove, water fowl) to big game hunting in the southern parts of Sudan. Hunting requires use of a four-wheel-drive vehicle and often a guide. Hunting licenses are required for different types of game.

Sport fishing is possible along either Nile or at Jebel Aulia Dam on the White Nile. Giant Nile perch are excellent to eat, but are rarely caught from shore. Good tasting and commonly caught from shore are tilapia and several varieties of catfish. Tigerfish are good game fish, but they are not edible.

Points of interest in the Khartoum area include the National Museum housing archeological collections and the Faras frescoes, the Ethnological Museum with a charming display of tribal artifacts, and the Natural History Museum's display of specimens of Sudan's birds and wild game. There are a few zoological gardens in Khartoum that are also pleasant to visit.

Omdurman's large market area (or "souk") offers local color, an occasional bargain, and the Khalifa Museum. The museum was formerly a residence and now houses relics of the Mahdiya period. On Friday afternoons, whirling dervishes perform near the tomb of a saint. Opposite the zoo is the landing for the Tuti Island Ferry. You can cross to the island for a walk around its typical rural village and small farms.

Photography in Sudan requires a special permit. Caution must be exercised, since many scenes or areas are not to be photographed. At times whole groups will insist on posing for you; in other cases, the presence of your camera will create vigorous disapproval.

Entertainment

American, British, French, and German cultural centers have libraries, show films, and sometimes offer special programs. The Rec Site has a film night each week. Dining out choices include restaurants in the larger hotels, a Chinese restaurant, and a few restaurants serving local cuisines.

Social Activities

Among Americans: The International Volunteer Welfare Group (IVWG) membership has open

membership. They meet monthly to raise funds for Sudanese charities and hold monthly programs on Sudanese culture.

International Contacts: Although private clubs are strongly divided by nationality, it is possible to mix internationally. Social activities, such as tennis, bridge, Hash runs, bingo, and sports, provide contacts in the local and international communities. For those interested in singing, the Khartoum Singers is an informal group that performs at Christmas and at a few private functions. The Sudanese Archaeological Society, supported by the German and British Cultural Centers and the University of Khartoum, arranges regular tours of sites and lectures for its members.

OTHER CITIES

'ATBARAH (also spelled Atbara), a city of about 115,000 in 2002, is situated in northeastern Sudan. Located at the junction of the Nile and Atbara rivers, it is a major administrative and commercial center. Two main road and rail lines converge at 'Atbarah, providing the bulk of the jobs in railway maintenance. A large cement factory is located south of town.

EL FASHER (also spelled Al-Fashir) is the capital of Darfur Province, about 500 miles southwest of Khartoum. It is a primitive city, with simple buildings and straw homes. As the market center for the cereals and fruits of Darfur, El Fasher also has a vigorous trade in animals, as well as in gum. El Fasher's population is about 186,000.

About 200 miles southeast of Khartoum is **EL-GEDAREF** (also spelled al Qadārif), a commercial center for many products from the southern areas of the province. The population, currently 251,000, is mainly Arab or Nubian Sudanese.

Situated in southern Sudan, 100 miles north of the Ugandan border, **JUBĀ** acts as a critical transportation hub. The nearby agricultural areas bring tobacco and coffee for trade; Jubā is the southern terminus for Nile River traffic. It is the headquarters of the University of Jubā, founded in 1975. The city was the site of a conference in 1947 which united the Sudan. Ironically, Jubā spurred a revolt that led to civil war in the late 1950s. The population is about 151,000.

KASSALĀ is the capital of Kassalā Province in the northeast, 250 miles east of Khartoum. The city, with a current population of 308,000, is situated on a plain about 1,700 feet above sea level. It has noted fruit gardens and an extensive market trade which compensate for the decline of its cotton trade. It has excellent transportation links to Khartoum and Port Sudan, to the north of the Red Sea. Kassalā was founded as a fort by the Egyptians in 1840. It was held from 1885 through 1894 by Mahdists and retaken by Italian forces after a battle on July 17, 1894, and restored to Egypt in 1897. During World War II, the city was held briefly by the Italians.

KHARTOUM NORTH and Omdurman, although technically part of the greater capital area, are large cities which have expanded from town or suburb status on the river banks across from Khartoum. Khartoum North, with a population of 921,000, is a growing textile city, and the site of an agricultural college. The city contains dockyards, marine and rail work shops, and sawmills. Several industries are located in Khartoum North, among them brewing, brickmaking, tanning, and food processing. A cultural center located in town has tennis courts, a swimming pool, and a library.

OMDURMAN has a population of 1.7 million, and is a commercial center for livestock and a variety of handicrafts and other goods. The Islamic University of Omdurman

Aerial view of Omdurman, Sudan

© Christine Osborne/Corbis. Reproduced by permission.

founded there in 1912, was elevated to university status in 1965. Furniture, pottery factories, and a tannery are also important to the local economy. Most goods are shipped by truck. For the tourist, Port Sudan offers sailing, a selection of swimming pools, and an excellent fishing opportunities.

PORT SUDAN, in the far northeast part of the country on the Red Sea, is a modern harbor and rail terminus. Located in Kassalā Province about 400 miles northeast of Khartoum, it currently is the country's only port; however, another is planned at New Suakin. Port Sudan was founded in 1904, but was not expanded and modernized until the 1950s and 1960s. Shipping lines are operated here from the Red Sea to ports in the Mediterranean and northern Europe. Port Sudan serves the cotton-growing regions of the Nile Valley, and also is the export center for peanuts, oils, and hides. An oil refinery and an international

airport are located near the city. The city has a population of approximately 401,000 (2002).

WADI MEDANI (also spelled Wad Madanī), capital of the Blue Nile Province 100 miles southeast of Khartoum, is another city of significant size (277,000), but is not often visited by Americans. It is the center of Sudan's irrigated agricultural region. The University of al-Jazirah, founded in 1975, is located in Wadi Medani. A good railway and road link Wadi Medani to Khartoum. A ferry service operates on the Blue Nile near the city.

Located in Southwestern Sudan, **WAU** is an important trading center for agricultural produce, cereals, fruits, and vegetables grown north of the city. Wau was virtually destroyed during anti-government protests in 1965. The city was reconstructed in 1972 and is home to 110,000 residents.

COUNTRY PROFILE

Geography and Climate

Sudan, a vast, sun-baked land, gained independence in 1956, following the end of the Anglo-Egyptian condominium. It is the largest country in all Africa, stretching almost 1 million square miles. Superimposed over a map of the U.S., Sudan would reach from the Canadian border to Houston, and from eastern Utah to St. Louis. To the north are the Libyan and Nubian Deserts. In mid-country, a band of rocky semi-desert reaches from the Chad border eastward to encompass the range of arid mountains along the Red Sea coast and the Ethiopian border. The southern half consists of savanna and swampland grading into semitropical forests along the Democratic Republic of the Congo and Uganda

borders. Although arable, fertile land is available (37%); little (1.5%) is cultivated because of inadequate water usage. The U.S. was involved in many projects to improve water usage and agricultural methods through the U.S. Agency for International Development (USAID), but these programs were cut when the military took over the civilian government in 1989.

Through these diverse regions flow the White and Blue Niles, which converge at Khartoum. The Nile system, with its major tributaries—the Bahr al Ghazal, Sobat, and Atbara—is the primary water supply for much of northeastern Africa. Most cultivation in the north of Sudan depends on these rivers, but further south, rainfall is sufficient for cultivation and grazing.

The river is navigable only in certain areas. The Bahr al-Arab, flowing west to east, forms a natural frontier. Another, more formidable obstacle to the south is the Sudd, an immense 12,000 square miles of swamp and floating vegetation into which the White Nile expands before reverting to river again. Over great distances, only a few paved roads, a limited rail line, and unreliable air service connect broadly scattered towns and settlements.

Khartoum is Usually hot and dUsty. During May, June, and July, daily temperatures average 120 °F, with frequent dust storms called “haboobs.” July, August, and part of September are not as hot, with rare but heavy rain storms (average 8 inches yearly) and continuing haboobs. From November until April, daily temperatures range around 95 °F; nights, around 70 °F, are pleasant. Cool weather at night and in the early mornings sometimes requires light sweaters or blankets.

Population

Sudan bridges Arabic and African cultures. Its approximately 36 million people are from different ethnic

groups, cultures, and creeds. About 70 percent are Moslem and 30 percent are Christian or animistic. Among the northern groups are the Hadendowa, Bisharin, and Beni Amer of the Red Sea hills; the Nubian tribes of the northern Nile Valley; a conglomeration of “Arab” tribes occupying the central belt; the Kababish and other nomadic tribes west of the Nile; and descendants of earlier peoples, such as Nuba, Fur, and Ingessana. Although some still speak their own Hamitic, Semitic, or other ancient languages, the common language of northern Sudan is Arabic. Many local dialects are spoken.

Southern Sudan was isolated from early external influences by climate and geography. It is inhabited by African ethnic groups that speak over 100 separate languages and dialects classified as Sudanic, Nilotic, and Nile Hamitic. The common language of Sudan is Arabic. The Dinkas, with a population around 2 million, constitute the largest southern tribe. Other tribal groups include the Nuer, Shilluk, and Azande.

Political History

The North and South of Sudan have been at war for the last 10 years. The military dictatorship was overthrown in April 1985. After a transitional period, Sudan held its first free elections in 17 years in 1986. Although the civil war prevented elections in 37 of 68 southern constituencies, a Parliament was elected and a democratic coalition government formed. Six of 40 parties from a broad political spectrum participated in Sadiq Al-Mahdi’s coalition government until June 30 1989, when General Omar Hassan Ahmed Al Bashir headed a military coup which overthrew the government. Bashir dissolved the Parliament and suspended activities of all political parties. The present regime is heavily influenced by the National Islamic Front.

Arts, Science, and Education

Sudan’s education system requires 12 years compulsory education. Literacy is 46 percent. Instruction through high school is in Arabic. The University of Khartoum is the center of Khartoum’s intellectual life. Arabic has replaced English as the primary language of instruction in Sudanese universities.

Al Nilein University (or University of Two Niles), formerly the University of Cairo, is located in Khartoum; the Islamic University and the Ahfad College for Women operate in Omdurman—adjacent to Khartoum. The University of Juba has moved to Khartoum due to the war. There are also the University of Gezira in Wad Medani, and Kordofan University in El-Obeid. The French and German Cultural Centers offer language classes and cultural events. The American Center (U.S.IS) sponsors academic exchanges and arranges cultural activities.

Commerce and Industry

Agriculture is one of the country’s major activities, capitalizing on extensive fertile land irrigated from the Nile. Agriculture provides much of the country’s export income: cotton is the leading cash crop, followed by sorghum, groundnuts, sesame, gum arabic, and livestock. Fruits and vegetables are grown for local consumption. Limited industry processes agriculture produce. Sudan’s natural resources include some oil reserves, iron ore, copper, and chrome. Although Sudan is believed to possess other minerals, including zinc, iron, and uranium, mining is still insignificant. The country’s petroleum resources had attracted some foreign investment (led by Chevron), but Chevron sold its last oil concessions to a private Sudanese corporation in 1992. In 1999, a boom in oil production changed the face of Sudan’s economy, spurring economic growth.

Approximately 185,000 barrels of oil are produced daily, and oil now accounts for 70 percent of the country's export earnings.

Despite Sudan's physical advantages, it is among the world's poorest countries, with a per capita income of about \$1,000 a year. The Sudanese economy has suffered from high inflation and low output. Labor shortages have developed, because skilled workers have emigrated to better job prospects abroad. Like many developing countries, Sudan's infrastructure has gaps: Transportation, especially outside Khartoum, is difficult and impedes development; power blackouts are frequent, and telephone service is irregular. Certain essential commodities are occasionally scarce.

Oil production has helped lift Sudan's economy, allowing growth of 6-7% annually in recent years. Overall results, however, have been disappointing, in part because of declining foreign assistance levels. Western economic assistance has declined drastically due to international dissatisfaction with the Government's human rights record, and any assistance received from the Gulf states was terminated when Sudan sided with Iraq during the Gulf War. Current Western assistance is almost entirely humanitarian relief.

Transportation

Local

Local buses are rarely used by foreigners. Taxis are easy to find downtown, but cannot be called by telephone. Most Sudanese white-collar workers use taxis, frequently in groups. Taxis are not readily available after dark in residential areas. Most taxi drivers do not speak English. Daytime rates are reasonable; they usually double at night. Rates typically are at least double for foreigners.

Regional

Sudan's regional transportation system seriously impedes its economic development. Paved, all-weather roads connect Khartoum with Port Sudan via Kassala, and with Kosti and Sennar. Travel elsewhere by car is difficult, even with four-wheel-drive vehicles. In the rainy season, travel in the southern regions is virtually impossible. At the present time, travel to the south is restricted due to the ongoing civil war. Because of the danger of breakdown, you should travel any lengthy journey with at least another four-wheel-drive vehicle.

There is good, daily train service between Port Sudan and Khartoum.

Communications

Telephone and Telegraph

The telephone system is overloaded in Khartoum and inadequate beyond. Installation of a new telecommunication system is underway.

Commercial telex facilities are available at the Hilton and the Acropole hotels. Some individuals have had success placing international calls at Key International and the Nissan Parts Place, both in the Amarat section of Khartoum.

Radio and TV

Radio Omdurman broadcasts one 15-minute English newscast daily. Other programs of commentary, poetry, drama, and music are in Arabic. Sudan TV broadcasts in color about 7 hours each day. Four or five programs a week are broadcast in English, but they are usually dated and of minimal interest.

Newspapers, Magazines, and Technical Journals

The main printed source of news in English is the daily mimeographed news bulletin put out by SUNA (Sudanese News Agency). A monthly magazine in English published by the Government of Sudan, *Sudanow*, is filled with informative stories of Sudanese issues and

events, as does the daily *New Horizon*.

The European edition of *Newsweek* appears on newsstands some days old, as do copies of the *International Herald Tribune* and a few other European papers, but availability is inconsistent. If you want regular delivery, it is best to order your own subscription. The American Center (U.S.IS) holds the best collection of U.S. periodicals and newspapers.

Several small bookshops offer a limited selection. All English-language books are imported, and the costs of transportation, duty, etc., make them expensive.

Health and Medicine

Community Health

Khartoum water is potable when it leaves the processing plant, but the distribution system is subject to contamination.

The extreme heat occurring 9 out of 12 months of the year quickly ferments uncollected garbage dumped on abundant vacant lots. Sewage problems are common in some areas of the city when frequent power outages stop sewage pumps. Lack of toilet facilities, inadequate refrigeration, and poor health standards in food handling and processing make it necessary to use extreme care in preparing food at home and selecting food when eating out. During and following the short rainy season, the city is infested with flies, mosquitoes, and other insects.

Constant dust plays havoc with sinus and bronchial systems. If you are prone to respiratory disease, dust allergies, and hay fever, be aware that this is a hazard in Khartoum. Air humidifiers are recommended in the bedrooms at night because of extremely low humidity.

Preventive Measures

Endemic diseases or other health hazards in Khartoum and through-

out Sudan include malaria, dysentery, parasitic and respiratory infections, hepatitis, rabies, cerebrospinal meningitis, and tuberculosis. Bilharzia is present in the Blue and White Niles, and the main Nile.

Boil and filter drinking water, and drink pasteurized, fresh milk. Do not use local long-life milk because of local storage and age factors. Other brands of long-life milk are available at the commissary. Meat should be well cooked, and salads or other uncooked vegetables and fruits should be avoided unless you are sure that they have been properly cleaned.

Adults should drink 12–16 glasses of water or similar clear liquid (excluding coffee, tea, and alcohol) a day to prevent dehydration in the extreme heat and low humidity.

All persons coming to Sudan should begin taking malaria suppressant tablets two weeks before arrival and continue the program throughout the specified period. Yellow fever, rabies, polio, tetanus, typhoid, and hepatitis immunizations, and necessary childhood immunizations should also be current before arrival.

NOTES FOR TRAVELERS

The U.S. Department of State warns against travel to Sudan due to security instability. Rebel activities, ongoing civil war, and bombing campaigns make the area unsafe for travelers. Extreme caution should be exercised at all times.

American carriers do not operate to Sudan. The best connections from the U.S. are made through Frankfurt, Paris, and Amsterdam. Each of these involves another stop in Cairo before arriving in Khartoum.

Importing foreign currency is not quantitatively restricted, but is

closely monitored by the Sudan Government.

A visa is required for entry into Sudan. Although presentation of up-to-date immunization records is no longer routinely required upon arrival in Sudan, travelers should have them available.

Careful consideration should be made before bringing a pet to Sudan. Owners should keep in mind the extreme heat and possibilities of disease. Though death/illness of pets does not happen often, a few very unfortunate incidents have occurred. Many people choose to adopt animals found in Khartoum, such as dogs, cats, even rabbits. Veterinary care is available in Khartoum for treatment or inoculation.

You may bring animals into Sudan with an import permit. Pets arriving without a permit are subject to quarantine and possible extermination.

The Sudanese dinar (SDD) is the national currency. In January 2002, the exchange rate was SDD 257.44/ U.S.D.

The metric system of weights and measures is used.

Mbabane, Swaziland

SWAZILAND

Kingdom of Swaziland

Major City:

Mbabane

Other City:

Manzini

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report for Swaziland. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

SWAZILAND, geographically one of Africa's most diverse smaller states, lies landlocked in the southeast corner of the continent between Mozambique and South Africa. A country of rolling hills and valleys, sound fiscal management, and financial cooperation with its largest neighbor, South Africa, Swaziland's standard of living is better than that of most African countries. Swaziland also maintains the simplicity and mysterious traditions that tend to keep it relatively insulated from the turmoil that afflicts the other nations of southern Africa. Many Swazis continue to wear traditional dress rather than Western fashions. Mbabane, Swaziland's capital city, is a clean and orderly

town where an outdoor African market and a Kentucky Fried Chicken restaurant coexist.

Sobhuza II, known to his people as the Lion of the Swazis, the Inexplicable, the Great Mountain, the Bull, the Son of the She-Elephant, and the Knight of the British Empire, was the world's longest reigning monarch, ruling Swaziland from 1921 until his death on August 21, 1982. For the next four years, Queen Ntombi Tfwala, one of Sobhuza's many wives, acted as regent until the coronation of Crown Prince Makhosetive. The coronation, held April 25, 1986, took place three years earlier than anticipated in order to end an ongoing power struggle between vying royalist factions. Eighteen-year-old King Mswati III, *the Ngwenyama*, or lion of his people, told his countrymen at his colorful coronation ceremony: "My experience is short, but I have behind me the sacred trust and strength of the people."

MAJOR CITY

Mbabane

Mbabane was chosen by the former British administrators as the capital of the High Commission Terri-

tory because it was free of the malaria prevalent at lower altitudes in the country. Today, it bustles with commercial and official activity resulting from its status as the seat of government of independent Swaziland. Pleasant, well-shaped residential areas spread over the hills surrounding the growing business section. Downtown stores and a nearby shopping mall with a U.S.-style supermarket provide most of the goods and services available in a small- to medium-sized American town. Mbabane's population is approximately 67,000.

Mbabane has many social and climatic characteristics of a small town in Oregon or Washington. The combination of its 26° south latitude (longitude 31° east) and 3,800-foot altitude gives Mbabane cool and dry winters and mild summers. Most of the rainfall comes in long, misty drizzles between October and March. Heavy rains in that period are frequently accompanied by hail and violent electrical storms. Evenings tend to be cool, even in summer, and frost can occur in the winter months.

The capital's previous English colonial atmosphere has dissipated with the "localization" of the civil service. Although a substantial European population remains, it is now com-

posed mostly of South Africans, English, and Portuguese engaged in commercial activity. Mbabane's Swazi population is made up of government officials and also rural Swazis who have to come to the capital looking for jobs. Languages most heard in the capital are siSwati, used by Swazis among themselves and for most local broadcasting; English, spoken by expatriates and in government offices; and Portuguese, used by members of the Portuguese business community.

Taxis are available at all hotels in Mbabane; the usual tip is 10 percent. There are also car rental services in Mbabane; an international driver's license is required and driving is on the left.

Allister Miller Street, one of the main thoroughfares in Mbabane, has modern shops, boutiques, hotels, commercial banks, and the offices of several diplomatic missions. Nearly all of Swaziland's government ministries and departments are located in and around the Mbabane area.

On the south side of the city is the Industrial Site, with several light industries and commercial concerns. The Small Enterprises Devel-

opment Company's (SEDCO) complex is located here. There is a friendly little shopping center offering handmade clothes in colorful African fabrics, finely crocheted shawls, pottery, tapestries, artificial flowers made from local grasses, and a wide range of other items.

Visitors are drawn to the Swazi Plaza, now the established commercial center of Mbabane. The plaza provides nearly every type of shopping and service facility, all on one level. Access from the adjacent Mbabane town center is gained by merely walking across the bridge that spans the Mbabane River.

Education

Sifundzani School is a primary school in the city of Mbabane that provides adequate facilities for American children, and as a Swazi Government school, it follows a British curriculum. Founded in 1981, the school is a coeducational institution and receives support from the Office of Overseas Schools. The school is situated in a hillside area and consists of six buildings, 14 classrooms, an auditorium, playing field, and swimming pool. Sifundzani has grades one through seven and enrolls children the year they turn six. The curriculum at the school includes five years of French

and siSwati. Extracurricular activities include drama, sports, and choral and instrumental music. Visits to game reserves, museums, houses of Parliament, industrial areas, and agricultural projects are part of the curriculum. The school day is from 7:30 a.m. to 1 p.m. Simple, inexpensive uniforms of shirts and jeans for boys and pinafores for girls are required. The school year lasts from January to December. Further information can be obtained at: P.O. Box A286, Swazi Plazi, Mbabane, Swaziland.

Waterford-Kamhlaba United World College of Southern Africa (P.O. Box 52, Mbabane), a private school set among the foothills overlooking the city, is considered one of the finest preparatory schools in southern Africa. Because it is usually full and often has a waiting list, parents contemplating enrolling their children in Waterford-Kamhlaba should communicate with the headmaster as many months ahead as possible. However, admission to Waterford-Kamhlaba on any level is by competitive entrance examination and by merit.

The school was founded in 1963 with the aim of providing a high standard of secondary education in a multiracial environment. Originally a boy's school, it is now coeducational.

The school is comprised of 20 buildings, 21 classrooms, a 16,000-volume library, auditorium, four tennis courts, three playing fields, seven science labs, computer center, swimming pool, and infirmary.

Waterford-Kamhlaba offers a seven-year British (approximate) secondary curriculum divided into a five-year section and a final two-year section. The first five-year program leads to the Cambridge External Board School Certificate ("O" level) which is almost equivalent to a U.S. high school diploma. At the end of the first five years, a student must reapply for the final two years, which will lead to the International Baccalaureate degree. Classes begin at 8 a.m. Monday

through Friday and alternate Saturdays. They end at 3 p.m. Monday, Tuesday, Thursday, and Friday, and at 1 p.m. on Wednesday and alternate Saturdays. Sports activities are scheduled two days a week and, on these days, students may remain as late as 4 or 5 p.m.

Subjects offered include English language and literature, history, geography, mathematics, economics, chemistry, physics, biology, languages (Afrikaans, Spanish, French, Zulu/siSwati), music, and art. The "O" level examinations are taken on six to nine subjects from the list. The International Baccalaureate examination is taken on a combination of six subjects and includes a "theory of knowledge" paper and an extended essay based on the student's own research and reading under the guidance of one of the teachers. Extracurricular activities consist of sports (including swimming), art, chess, music, science clubs, camping and other outdoor activities, drama, gymnastics, dance, yearbook, and newspaper.

Many parents and children living in the Mbabane area, including American families, share the faculty's view that boarding provides the ideal educational and social experience. Boarders may join their families every Wednesday afternoon and weekends.

Several nursery schools operate in Mbabane. Private tutoring in art, crafts, and sports is also available. In addition to its regular Swazi-oriented programs in English and siSwati, Sebenta National Institute (adult education) has evening courses in siSwati for foreigners.

Recreation

Swaziland has many good sports facilities. Group sports, usually conducted by clubs, are typically British: soccer, rugby, cricket, and bowls. Many Swazis are avid soccer players and fans, and semi-professional games are played weekends in Mbabane, or in the Somhlolo National Stadium in Lobamba.

The country has several golf courses, including one at the Mbabane Club and the international-standard course at the Royal Swazi Hotel. Tennis is increasing in popularity. There are three municipal courts at Coronation Park in Mbabane, six courts at the Mbabane Club, and others at nearly every major center in the country. Horseback riding facilities are available at several hotels and nature reserves around the county as well as privately run stables. Stabling is available for privately owned horses. Most hotels have their own pools.

Swaziland's striking mountains and highveld attract outdoor enthusiasts. Camping, hiking, picnicking, and fishing are popular in the latter. Horses can be rented for outings. Several bushmen painting sites are within easy driving distance of Mbabane. The country now has five game parks: a small but growing one in the middleveld in the Malkerns valley (Mlilwane), and a larger, undeveloped protected area in the bushveld (Ehlane). The former has well-kept roads that bring the visitor within a few feet of a wide variety of game, many imported from other parts of Africa. These include antelope, rhino, zebra, giraffe, hippo, ostrich, and many birds. Elephants and rhinos are being reintroduced into Swaziland in the outlying reserves. The Swaziland Natural History and Mineral and Gem Societies often arrange lectures and tours to these areas.

Indigenous fish, including bream, yellowfish, silver barbel, mud fish, and eels, are found in most rivers. Black bass have been successfully introduced into a number of dams. Streams in the Usutu Forest are stocked with trout but fishing in these waters is by permit only. Permits are available from the Usutu Forest Fishing Club.

The Swaziland Automobile Club organizes many rallies during the year. The Swaziland Flying Club at Matsapha Airport has its own plane and gives flying lessons. An annual

raft race is held on the Usutu River near Big Bend.

Travel in neighboring South Africa is a favorite way of adding variety to Mbabane's small-town life. American tourist travel is not encouraged by Mozambique, which usually issues visas to Americans on official business only.

Those in search of "city lights" can choose between the South African cities of Pretoria, Johannesburg, and Durban, all of which offer cinema, theater, music, and good restaurants and nightclubs. However, many facilities are closed on Sundays. Durban, on the Indian Ocean, has the additional attraction of beaches and a seaport atmosphere.

Those looking for wider open spaces have a number of available routes. Two hours north of Swaziland is South Africa's Kruger National Park, containing much of the game still found in southern Africa, including lion and elephant. The northern Natal areas have other smaller game parks, and also the famous Drakensberg mountains with snow-covered peaks where one can go climbing, trout fishing, and camping. Blyde River canyon, about three hours north of Mbabane, has beautiful hiking and climbing areas.

Entertainment

Mbabane is a town of self-generated entertainment. It can be dull for a person not active in sports or in social and cultural life. Nightly movies are shown, including recent releases, at the Cinelux Theater in Mbabane, and older films are shown at a cinema in Manzini. "Classic" and art films are shown several times a week in the 230-seat theater of the Mbabane Theatre Club, which also stages frequent dramatic productions. They also have a dinner theater featuring short plays and amateur folk nights. Touring vocal and instrumental artists appear on an average of once a month, under the auspices of the Swaziland Music Society.

In addition to its nightclub entertainment, the Royal Swazi Sun

Hotel has roulette tables, poker and blackjack games, and slot machines. On payment of a small fee, nonresidents have access to these diversions and to the hotel's facilities for golf, tennis, bowls, swimming, and dancing, as well as to its spa compound. Several "local color" nightclubs are in Mbabane. Square dance evenings are organized in Mbabane, and Scottish dancing evenings are held in Manzini.

Occasional horse events and gymkhanas are held at local stables. The Swaziland Art Society sponsors two exhibitions each year featuring the work of artists residing in Swaziland. A commercial art gallery, Indinglizi, in Mbabane, has regular exhibitions. Swaziland is a photographer's delight with both natural scenery and colorful national dress. Film processing is available in Mbabane, but slides are sent to South Africa.

The Swazis have two traditional dance festivals each year, the *Umhlanga* or Reed Dance (women) in late August or early September, and the *Incwala* (men) in late December or early January. Both are open to the public. Permits are normally required for taking still photographs at close quarters, and the use of movie cameras is discouraged. Visitors may get permission to photograph these ceremonies from the Government Information Service at B.P. 338, Mbabane.

Although social entertaining in the Western sense is not a part of Swazi social life, occasional opportunities exist to visit Swazi homes, and Swazis usually accept dinner invitations. Small lunches, dinners, barbecues (called *braais*), and similar get-togethers are held often. Many Swazis go to their homesteads on weekends, so most entertaining is done during the week. Swazi people are very friendly and helpful to visitors.

OTHER CITY

The largest city in Swaziland is **MANZINI**, located in the central part of the country about 25 miles southeast of Mbabane, with a population of 73,000. Most Swazi towns originally grew around trading stores, and Manzini, the industrial and agricultural center of the country, is a prime example. The town has modern shops, a maize mill, light engineering works, small factories, a rice drying plant, and is the seat of the Swaziland Trade Fair Exhibition Center. Dairy and beef cattle are also raised, and Swaziland's main meat processing plant, creamery, cotton gin, and fruit canning factory are located in and around Manzini. Manzini was the capital of Swaziland before 1902. There are two hotels in Manzini. Their names and addresses are: The George, P.O. Box 51; and Highlands Inn, P.O. Box 12. Taxis are available for hire at the hotels. Cars may be rented at the Manzini airport, located five miles outside of town.

COUNTRY PROFILE

Geography and Climate

Swaziland is an independent kingdom in southeastern Africa. Its 6,704 square miles (less than the area of New Jersey) are all but surrounded by the Mpumalanga and KwaZulu-Natal provinces of the Republic of South Africa. Its eastern border on Mozambique is about 40 miles from the Indian Ocean. The greatest distance from north to south is less than 120 miles, and from east to west is less than 90 miles.

Swaziland has four well-defined regions of roughly equal breadth, running from north to south: highveld, middleveld, lowveld (or bushveld), and the Lubombo Plateau. The mountainous highveld in the west (where Mbabane, the capital,

is located) rises over 6,000 feet, with an average altitude of 4,000 feet. The middleveld averages 2,000 feet, the lowveld 700 feet, and the Lubombo Plateau about 1,800 feet.

The highveld has a humid, near-temperate climate with 40 to 90 inches mean annual rainfall. Daytime weather is more variable in the highveld than in the other regions, with a foggy or overcast morning sometimes followed by a sunny afternoon, and vice versa. Temperatures for Mbabane, located in the highveld, range between a mean low of 51°F and a mean high of 72°F. Extremes of 17°F and 99°F have also been recorded.

The middleveld and Lubombo Plateau are subtropical and drier, with 30 to 45 inches mean annual rainfall. Temperatures for Manzini, the country's main industrial center and the city nearest the university campuses, range between a mean low of 57°F and a mean high of 78°F. Extremes of 32°F and 108°F also have been recorded.

The lowveld is warmer and less humid than the middleveld, with 20 to 35 inches mean annual rainfall, usually during heavy summer storms. Temperatures for Big Bend, center of the sugarcane industry in eastern Swaziland, range between a mean low of 58°F and a mean high of 84°F. Extremes of 26°F and 108°F have been recorded.

Population

Swaziland's resident population is estimated at 1.1 million. Thousands of Swazi nationals normally work outside the country, principally in the South African mines. Mbabane has a population of 67,000 (2002 estimate). Swaziland's other major city is Manzini, which has a population of 73,000. The annual growth rate is about 1.8 percent.

A small percentage of the Africans in southern Swaziland are Zulus; most of the rest are Swazis. The European community of about 30,000 consists of English-, Afrikaans-, and Portuguese-speaking

groups. Afrikaners are in both the northern and southern parts of the country, whereas the English and Portuguese are located largely in the north. Europeans engage mainly in agriculture, trading, construction, mining, and the professions.

Most Swazis are engaged in agriculture and are strongly bound to tradition. Society is patriarchal, with the usual family homestead including a man, his wives, his unmarried children, and his married sons and their families. If his mother is living, she has a great deal of influence in the homestead. The Swazi farmer lives in a "beehive" hut, wears beaded neck ornaments and a brightly colored wraparound cloth overlaid with an animal skin, and has a diet consisting mainly of maize, greens, and milk. Although Swazis love meat, those living in homesteads have meat only on special occasions or when they have visitors. Even though many homesteads have cattle, they prefer to slaughter them mainly for celebrations.

More than half of the Swazis belong to various Christian churches; most of the rest practice a traditional religion based on ancestor-worship. The official languages of Swaziland are English and siSwati.

History

One of Africa's last ruling dynasties, the Swazis trace their history back 400 years. In the 19th century, as one of the weaker Bantu tribes of southern Africa, the Swazis were driven back by the powerful Zulus to the rocky, mountainous region that became Swaziland.

Early Swazi rulers kept their land independent from the surging Zulus, Boers, and British with a combination of warfare and diplomacy, until the 1890s when the Boers took control. Following the British victory in the Boer War, Swaziland became a British High Commission Territory in 1903. It achieved independence on September 6, 1968, becoming the 28th inde-

pendent member of the British Commonwealth.

Government

As a British colony, the British High Commissioners who ruled Swaziland foresaw the tiny African nation as one day being incorporated into South Africa. Independence was not contemplated until the 1960s, and at that time, the British envisioned the government to be a constitutional monarchy with a democratic parliament. But Sobhuza II, whose reign during the British protectorate was as a limited constitutional monarch with a largely ceremonial role, believed that his rule, with the advice of a tribal council, was better for the Swazis than any form of Western democracy. He formed his own political party—*Imbokodvo* (Grinding Stone)—and in the first parliamentary election held in 1967, won all 24 seats in Parliament with 80 percent of the vote. Full independence was achieved for Swaziland, with Sobhuza II in control, on September 6, 1968.

The constitution in effect at the time of independence stated that legislative power was vested in a bicameral parliament, with a senate and a house of assembly. In April 1973, King Sobhuza repealed the constitution, suspended political activity, and took all executive, legislative, and judicial powers himself. Although there was no threat to Sobhuza's power, it appeared that he preferred to rule as Swazi King rather than as constitutional monarch, and to have governmental organization and procedures more compatible with Swazi tradition. In September 1973, the Royal Constitutional Commission was appointed to draw up a new constitution. In March 1977, the king abolished the parliamentary system and replaced it with traditional tribal communities—*tinkhundla*. The other traditional council—known as the Supreme Council of State until 1985 (*liqoqo*)—is composed of 16 members of Swazi royalty and other notables appointed by the king, who advise him on all matters regulated

by Swazi law and custom and connected with Swazi tradition and culture.

A new constitution was declared on October 13, 1978, and is based on traditional tribal communities. It called for a bicameral Parliament, or *Libandla*, made up of a House of Assembly with 50 deputies and a Senate with 20 senators. An 80-member electoral college, made up of two people elected from each *tinkhundla*, in turn elect 40 deputies and 10 senators. The king then chooses an additional 10 members for each house. The functions of the legislature were confined to debating government proposals and advising the king. Ultimately, the king must approve any parliamentary acts before they become law.

Sobhuza II was the world's longest reigning monarch when he died in 1982 at the age of 83. He was born the same year in which his father, King Ngwane V, died. Traditionally, the king's successor is not named until after his death so as to prevent the successor from posing a threat to his father. Sobhuza was chosen from among his father's many heirs by a tribal council headed by the queen mother, or favored wife, who is designated as a She-Elephant. Sobhuza's power was partly based on tradition and on his people's belief that he was the great rainmaker and the sole source of fertility in Swaziland. The role he played during the British protectorate, while viewed as merely ceremonial, was in fact very important because ritual plays a large role in the lives of the Swazis.

On August 21, 1982, the full powers of the head of state were transferred to the constitutional dual monarch—the Queen Mother, or She-Elephant (*Indlovukazi*). The Queen Mother, Dzeliwe, also took the title of Queen Regent. On August 9, 1983, Dzeliwe was replaced in a palace coup by Queen Ntombi, the mother of Sobhuza's successor, Prince Makhosetive. The new Queen Regent was advised by the Supreme Council of State (*liqoqo*) and was assisted by Prince

Sozisa Dlamini in administering state affairs until his suspension in September 1984. It was expected that Queen Ntombi would act as regent until her son reached age 21 and was crowned king. During that time, the young prince was to receive his formal education in England as well as learn his country's tribal customs and laws. However, due to the power struggle between members of Sobhuza's family that began with the dismissal of Queen Dzeliwe, the regency of Queen Ntombi was terminated three years early. Prince Makhosetive, Sobhuza's second youngest son, born April 19, 1968, was crowned King Mswati III on April 25, 1986. Swaziland is one of only three monarchies that rule on the African continent. The others are Morocco and Lesotho.

Swaziland has two court systems. Swazi National Courts, under the Ministry of Local Administration, administer Swazi law and custom and all rules made by the *Ngwenyama* or chiefs. The other system, under the Ministry of Justice, deals with matters in the modern sector. It comprises a number of magistrate courts throughout the country, plus a one-man high court (chief justice) and a multi-judge court of appeal, convened when necessary to review decisions of the high court.

Red Cross, Scouting, and 4-H (called 4-S in Swaziland) are active in varying degrees throughout the country.

Swaziland is a member of the United Nations, UNESCO, WHO, the Economic Commission for Africa, and several other world and African organizations. It maintains diplomatic relations with 40 countries, including Israel, Mozambique, Taiwan, the United Kingdom, and the United States, all of whom have embassies in Mbabane. Swaziland also maintains diplomatic missions abroad in London; Washington, D.C.; Maputo, Mozambique; and Nairobi, Kenya.

Swaziland's flag consists of five horizontal bands: narrow blue (for peace), broad crimson (for past bat-

ties), and narrow blue, divided by gold stripes (for mineral resources). The large central emblem consists of an ox-hide shield and spears decorated with feathers.

Arts, Science, Education

Much of the Swazi artistic expression is reflected in traditional dances held several times a year nationally, and more frequently on a regional basis. Best known are the dances performed by special male troupes called *Sibaca* dancers; by puberty-age girls in the annual Reed Dance in reverence to the queen mother; and by men of the various age-group "regiments" in their year-end homage to the king on the occasion of the religious festival of Incwala. Choral singing is another form of artistic expression for the Swazis. Regional, national, and international competitions are held annually.

Swazi handicrafts are widely recognized as being among the most creative in Africa. In recent years, a lively export market has been established worldwide. The Mantenga Craft Center, located south of Mbabane near Swaziland's most famous waterfall—Mantenga Falls—has contributed to the success of the handicraft market in stimulating the natural weaving ability of local women trained at the center. Established in May 1976 as the country's original handicraft center, Mantenga Craft Center trains people in tapestry, rug-making, ceramics, screen-printing, and the making of silver jewelry. The center consists of a series of workshops converted from farmsheds situated in the cool shade of tall trees, and today employs 150 local craftspeople.

Pictorial tapestries, woven from handspun, hand-dyed wools, cotton, and mohair are among the most outstanding items produced at the center. Scenes depicted in the tapestries are based on the pastoral elements of daily traditional life. The workers at the center also produce intricate woven hair tapes-

tries. These are based on the traditional African culture that decreed a wide range of hairstyles. The tapestries are woven in merino wool, with long thick strands of cotton or linen representing the hair, which is tied, twisted, and knotted in various styles. Many of these tapestries have been displayed in Europe or are in private collections. Handwoven cottons produced on fast-shuttle looms are another specialty of the Mantenga Craft Center. Designs are taken from traditional and contemporary symbols of local life and are sewn into placemats, tablecloths, and bedspreads. Beautifully shaped pottery, with a distinctive earthy look, is yet another facet of the center's craftsmanship.

Primary education in Swaziland is voluntary beginning at age six and lasting for seven years. Secondary education is by choice; it begins at age 13 and is divided into two cycles of three and two years.

Swaziland is the site of two campuses of the University of Swaziland, both some 20 miles southeast of Mbabane. The Kwaluseni campus houses the faculties of humanities, economics and social studies, education, and science; the Luyengo campus houses the faculty of agriculture, which operates a farm and several research stations around the country. In addition to the University, several schools exist for technical training, adult literacy, management, and teacher training.

In 1995, 77 percent of the Swazis were considered literate. Almost all of them have at least attended primary school.

Commerce and Industry

Since independence in 1968, Swaziland has made steady progress in terms of economic growth and has significant promise for the future. Given its size and population, it is one of the wealthiest countries in Africa. Because of the pineapples and sugarcane grown here, it is often called the "African Hawaii."

Real growth averaged around 4.7 percent in the 1970s; from 1979 through 1982, it averaged about 1.7 percent; in 1984, it jumped to 11 percent. In 1990, real growth rate was estimated at five percent. This has been made possible by rapid expansion in the modern agricultural sector and through diversification of the economy as a whole. Swaziland's Gross Domestic Product (GDP) was \$4.4 billion in 2000; per capita income was estimated to be about \$4,000, making it one of the highest in Africa. However, this figure does not accurately represent the average Swazi, who is still a subsistence farmer.

About 60 percent of the country's land area is held by the *Ngwenyama* in trust for the Swazi nation. The remaining land is owned primarily by Europeans and commercial companies, many of whom are not resident in Swaziland. The problem of land alienation, stemming from the granting of extensive concessions to Europeans in the last two decades of the 19th century, is still large. However, under a British grant-financed program, the Swazi nation is acquiring under-utilized freehold land on a "willing buyer, willing seller" basis. Almost 70 percent of the country is unimproved grazing area.

About 75 percent of the country's exports go to South Africa. Agriculture and forestry account for approximately one-quarter of the GNP and employ three-quarters of the work force. However, due to the fact that most land in the country is owned by foreigners, the agricultural sector is almost entirely in non-Swazi hands.

The country's three sugar mills, all of which are irrigated, are located in the lowveld. The sugar industry (headquartered in the southeastern town of Big Bend) produces the largest export and employs close to 20 percent of the work force. Soft drink concentrate and sugar are the main exports. Much of the sugar is exported to the European Union countries. Wood pulp is produced from pine and eucalyptus trees har-

vested from some of Africa's largest man-made forests.

Swaziland's manufacturing is considered large for a developing country. Manufacturing activities consist primarily of five export-oriented sectors: wood pulp production, drink processing, fruit canning, refrigerators, and sugar processing. Mining has been declining in Swaziland. The Ngwenya iron ore mine, which opened in 1964, ceased production in 1978. Exports stopped late in 1980 with the depletion of the reserves. The Havelock asbestos mine is one of the largest in the world and is 15 percent government owned. In the past Swazis have valued cattle for their own sake as a nonproductive status symbol. They are increasingly regarding them as a source of milk, meat, and profit. Slaughter stock, hides, and skins are becoming important exports.

Tourism is a very important component of Swaziland's economy. Visitors are attracted to the country's game reserves and beautiful mountain scenery. Of the total number of visitors, most were from South Africa. Most South Africans are lured by the Swaziland Casino, since gambling is prohibited in South Africa. Most tourist visits to Swaziland are short, usually weekend visits. Nearly 300,000 tourists visit Swaziland each year.

Most of Swaziland's imports are of South African origin. Principal imports are motor vehicles, machinery, transport equipment, petroleum products, foodstuffs, and chemicals.

Remittances by Swazi nationals working in South African mines accounts for a significant percent of national income. Receipts from the Southern African Customs Union provides between a quarter and a half of the government's revenue.

The government promotes foreign investment through the National Industrial Development Corporation of Swaziland (NIDCS).

The Swaziland Chamber of Commerce and Industry is located in Mbabane. The mailing address is P.O. Box 72, Mbabane. The address of the Ministry of Commerce, Industry, and Tourism is B.P. 451, Mbabane.

Transportation

Daily flights from Matsapha Airport, near Manzini, link Swaziland, with Johannesburg (for connections to main world routes). Twice weekly there are flights to Kenya, Lesotho, and Tanzania and there are five weekly flights to Botswana, Zambia, and Zimbabwe. Flights leave for Maputo daily except Tuesday and for Durban four times a week. The Swaziland railway crosses from the Ngwenya iron ore mine, near Oshoek, to the Mozambique border, where it connects with the line to the port of Maputo. It does not, however, have passenger service.

A private car is essential for the enjoyment of any prolonged stay in Swaziland. Registration and licensing of motor vehicles is a simple procedure, which requires a road-worthiness certificate issued by the Public Works Department. The Mbabane and Manzini areas have taxis (few, expensive, and unreliable) and unscheduled buses. Scheduled buses link the main towns. Few Americans use public transportation

Traffic moves on the left. Good all-weather roads link the main centers, but most side roads are dusty and uneven during the dry season, and very slippery and dangerous during the rainy season. The maximum speed limit for all motorists is 50 miles per hour. Drivers must keep within the indicated limits; must be careful of pedestrians, particularly children; and must keep an eye open for stray cattle. It is not advisable to drive at a high speed on

Street scene in Swaziland

Cory Langley. Reproduced by permission.

gravel roads, especially in wet weather.

Heavy mists, which blankets Mbabane and other areas of the highveld several months each year, combined with poor car maintenance, intoxication, and general risk-taking behind the wheel makes driving hazardous. Indeed, Swaziland has one of the highest accident rates and accident fatality rates in the world. It is highly recommended to wear seat belts at all times, to have children in car seats or seat belts, and to drive defensively. The crime rate in Swaziland, particularly violent crime and theft, is increasing. Car alarms and immobilizers are recommended to combat the escalating rate of car theft in Swaziland.

The main national highway runs from Oshoek on the western border to Lomahasha on the eastern border. It is paved for the 65 miles

between Oshoek and Mpaka. The remaining 38 miles to Lomahasha are of fair-quality gravel. Thirty-one miles of paved road link the Usutu Forest settlement of Mhlambanyati with the main national highway.

Car dealerships in Mbabane include Audi, BMW, Mazda, Nissan, Opel, Toyota, and Volkswagen, Honda and Mercedes are available in Manzini.

Third-party insurance is covered by a levy included in the gasoline price. Comprehensive coverage is highly recommended because of the high rate of vehicle theft and accidents.

Communications

Telephones in Mbabane and Manzini operate on a dial system, and are connected to the rest of Swaziland and to international operators through the local exchange. Direct dialing is available for between many countries, including the U.S.,

and for calls from those cities to South African exchanges. International and local telegraph facilities are available. Fax machines are incorporated into most business and donor communities. International airmail takes about five days to two weeks between the U.S. and Swaziland.

The Swaziland Broadcasting Service (SBS) is on the air in both siSwati and English. FM is the popular mode, but there is one medium-wave station that also provides service. English service is on the air approximately eight hours per day (medium-wave only). Daily programs are listed in the local newspapers. South African broadcasts can be heard in most areas with normal aerials. Voice of America (VOA) medium-wave transmission can be picked up clearly in the evening, and other English-language short-wave transmissions, including the BBC, can be heard in Swaziland

with a high-quality FM and short-wave receiver.

Color TV is broadcast by the Swaziland Television Broadcasting Corporation for five-six hours each evening, with extended service on weekends. Transmission includes local news and delayed international news from London as well as programs purchased in the U.S. and Europe. With special antennas, you can receive broadcasts from South Africa, including daily South African and international news and sports programming. American expatriates are advised to bring a multi-system or PAL/I TV set and VCR with them, as local broadcasts and videotapes are PAL/I system. Several video rental outlets have opened around Swaziland, carrying a good, up-to-date selection. Most tapes are PAL/I VHS format.

There are two daily English-language newspapers in Swaziland that are published Monday through Friday with separate weekend/Saturday editions. They are the privately-owned *The Times of Swaziland* and the parastatal *The Swazi Observer*. The *Swazi News* is published weekly. South African newspapers arrive in Swaziland about six hours after publication in Johannesburg. Two magazines are published monthly in Swaziland. *Dzadze* family magazine covers various aspects of Swazi life, customs, and politics, *Swazi TV Times* is a TV guide, with local news and events. International editions of *Time* and *Newsweek* are sold at newsstands. The Swaziland News Agency in Mbabane carries some London papers, arriving five days after publication, and a limited variety of magazines and paperbacks. Books can be borrowed from the National Library in Manzini, 25 miles from Mbabane, and from the privately-operated lending library in downtown Mbabane.

Health

Adequate medical care is available in Swaziland for routine illnesses. Because there are no trauma or intensive care facilities in Swazi-

land, serious illnesses and accidents must be treated in South Africa. In such emergencies, helicopters airlift patients to Johannesburg or Pretoria to medical facilities and care that compare to those in the U.S. However, helicopter evacuations can only occur during daylight hours, in the absence of rain and fog. In addition to government hospitals and clinics throughout the territory, a few privately run clinics and hospitals operate, which Americans use more frequently. One of the latter, the Mbabane clinic, has 26 beds, major and minor operating rooms, and X-ray equipment. It also has a small medical laboratory, but complicated tests must be performed in South Africa. The Raleigh Fitkin Memorial Hospital in Manzini, operated under Nazarene missionary auspices, has 25 beds for private patient care, X-ray equipment, a small laboratory, and U.S.-trained anesthetists. A limited intensive-care unit is being added. The Mbabane clinic and the Raleigh Fitkin Memorial Hospital provide 24-hour medical care.

Swaziland lacks trained anesthetists and functioning EKG equipment. There are also no satisfactory delivery facilities. It is recommended that women plan to deliver in South Africa or elsewhere. There are physicians who provide prenatal care in Mbabane.

Most physicians are associated with the local government or missionary-run installations. About half of the physicians in the country were trained in Great Britain or South Africa. Mbabane and Manzini have adequately stocked pharmacies. Dental services are available from the clinic and from private expatriate dentists.

Public sanitation facilities (sewage, garbage disposal, etc.) run by the Mbabane and Manzini municipal governments are satisfactory. Water from the town supply is not considered safe for drinking. Milk from the local commercial dairies is pasteurized and is used by many American and other foreign families. Since dairy sanitary controls are not up to

U.S. standards, some families prefer to use powdered milk.

Tuberculosis, bilharzia, malaria, venereal diseases, and tick fever, are endemic to Swaziland. Malaria is not found in the highveld, but it is found year round in the middleveld and lowveld areas. Those living in or traveling to the lowveld should take malaria suppressants and see a physician at the onset of any fever. Similarly, travelers to Mozambique, Kruger Park, and Natal should take malaria suppressants; in all cases, these should be effective against chloroquine-resistant malaria. Bilharzia is still prevalent in all streams, ponds, and lakes below 4,000 feet, and can be contracted simply by coming into contact with the water. Swimming, wading, or washing in natural bodies of water should be avoided here. Snakes, including poisonous species, are common in Swaziland, especially in the bushveld.

Acquired Immune Deficiency Syndrome (AIDS) is an increasing problem in southern Africa as it is worldwide. Local blood supplies are not safe, although they are screened. The American community contributes to a "walking blood donor" program administered by the Embassy nurse. Advice on AIDS prevention is available from the health staff at the American Embassy and HIV testing is available locally.

Roaming dogs are sometimes rabid, even in Mbabane, and persons (especially children) who may be frequently in contact with them should receive injections against rabies.

Clothing and Services

Mbabane's climate is moderate throughout the year. However, the temperature can vary noticeably between morning and evening in both summer and winter. For this reason, the layered look is practical because various articles of clothing, including a sweater, can be added or

removed. Several hot weeks in summer require light dresses or suits. Woolens and sweaters are sometimes needed for the rainy, misty weather common to Mbabane summers and are essential in winter. Therefore, a full range of clothing, including rainwear, is needed.

The only clothing taboo in Swaziland pertains to women wearing slacks and pantsuits. Mini-skirts, see-through blouses, and short tennis skirts are not appreciated in town. Women wear short dresses or skirts to work and in the evening.

Because of Swaziland's outdoor orientation, visitors will find a good pair of walking shoes useful. Adults should bring a supply of dress and regular shoes with them. It is impossible to find shoes in narrow widths such as AA. Children's shoes are available locally. Sandal-toe or support hose are not obtainable in Swaziland or South Africa.

A basic but limited selection of clothing is available in Mbabane at prices generally higher than in the U.S. Adults should bring most of their clothes with them.

The range of foodstuffs in Mbabane compares with that available in a small- to medium-size American town, but with occasional shortages. Several grocery stores, produce markets, bakeries, and butcher shops, as well as a delicatessen, are available. Items not available include chocolate chips, solid vegetable shortening, good vanilla extract, and other baking essentials. Some ingredients for Mexican, Italian, and other ethnic dishes are hard to find. However, many can be obtained on shopping trips to South Africa where those items are usually quite expensive. A full range of liquor is available in the local stores. Swaziland also has a brewery. Wine from South Africa is both inexpensive and quite good.

Most personal and household needs can be supplied in Mbabane; they are usually imported from South Africa and are expensive. Not all

American brand name products are obtainable.

Clothing repair and dry cleaning facilities are available in Mbabane, but at a standard lower than in the U.S. Dressmakers and tailors are available. The quality is variable. Beauty salons and barbershops are available.

Some garages in town do adequate work on European and South African cars, but are rarely able to deal adequately with American makes. American-made cars should be taken to Pretoria, Johannesburg, Durban, or Ermelo (90 miles from Mbabane) for major repairs. Body work is available at a reasonable price.

Domestic Help

Most houses in Mbabane have servants quarters and many families hire domestic and garden workers. Domestic workers usually live in, sometimes with their children. Workers are usually provided a "13th-month" payment, a food allowance, overtime pay for baby-sitting and dinner parties, and many employers take responsibility for their worker's health care. An employment act lists minimum wages and other regulations concerning worker employment.

NOTES FOR TRAVELERS

Swaziland is linked with international routes by regular air service to and from Matsapa Airport, which is about five miles from Manzini.

To enter the country, an American citizen needs only a valid passport unless he is entering from an endemic yellow fever area, in which case yellow fever immunization papers are required. Inoculations for infectious hepatitis A (gamma globulin), hepatitis B, yellow fever, tetanus, and typhoid are recommended before arrival.

Visitors or temporary residents must register with police within 48 hours of arrival.

An import permit for pets is required by the Swaziland Government and must be presented upon the pet's arrival. If the animal will transit South Africa, a South African transit permit for the animal is also required. Both permits can be mailed to the traveler if at least eight weeks notice is given. It is advisable to have several copies of all papers dealing with pets. The Swaziland Animal Welfare Society operates kennel facilities in Mbabane. They also have pets for adoption. A private veterinarian practices in Mbabane and several veterinarians are on contract with the Swazi Government.

Big game hunting is prohibited in Swaziland. Permits for hunting small game and birds are issued by the Ministry of Agriculture. Diplomatic personnel are discouraged from bringing firearms into Swaziland. Non-diplomatic personnel desiring to import firearms into Swaziland must obtain a permit in advance from the Firearms Licensing Board, P.O. Box 49, Mbabane or apply to the Royal Swazi Police.

Anglicans (Episcopalians), Baha'is, Baptists, Catholics, Christian Scientists, and Methodists hold Sunday services in English in Mbabane.

There is a nondenominational Protestant Sunday school. The Nazarenes are very active throughout the country and have services in most towns. There is no synagogue, but the Israeli Embassy usually holds services on the important holidays. An Islamic Information Service organization and a Christian Women's Club are located in Mbabane. Several Bible study groups and prayer cells meet regularly.

The time in Swaziland is Greenwich Mean Time (GMT) plus two hours.

Swaziland introduced its own currency (singular, *lilangeni*; plural, *emalangeni*) in 1974, although the South African rand is still freely

accepted by local vendors on a par basis.

The metric system of weights and measures is used.

The U.S. Embassy is located in Mbabane in the Central Bank Building, Warner Street, P.O. Box 199; telephone (268) 404-6441/5; FAX (268) 404-5959.

TANZANIA

United Republic of Tanzania

Major Cities:

Dar es Salaam, Zanzibar

Other Cities:

Arusha, Bagamoyo, Bukoba, Dodoma, Iringa, Lindi, Mbeya, Morogoro, Moshi, Mwanza, Tabora

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated July 1993. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Tanzania's history is varied—including Portuguese exploration, Arab domination, German colonization, British administration under a League of Nations mandate, and UN Trusteeship. Tanganyika gained independence in 1961, and in 1964, Zanzibar, also independent, united with the mainland to become the United Republic of Tanzania.

For over 20 years following the 1967 Arusha Declaration, Tanzania followed a policy of socialism and self-reliance. Although this is still the official policy guiding government programs, the past few years have seen significant changes. The United Republic has played an active role in efforts to bring inde-

pendence and majority rule in southern Africa. Mainly because of its past prominence in regional and international affairs, Dar es Salaam is an active diplomatic post.

A hot climate, changing economic conditions, and health risks offer challenges for those staying in Dar es Salaam, but a visit here can be stimulating and enjoyable. Tanzania offers warm and friendly people, magnificent mountain scenery, the seashore, the finest wild game preserves on earth, excellent game fishing, scuba diving, and other water sports.

MAJOR CITIES

Dar es Salaam

Under German rule, Dar es Salaam became the capital of Tanganyika in 1894. The Germans designed a spacious city plan, began to develop the natural harbor as a port, and constructed many public buildings that are still in use. On the north side of the harbor are tree-lined streets, a botanical garden, and a museum. The President's office and most government buildings are in this area.

At the end of World War I, Tanganyika became a mandated territory of

the League of Nations under British rule. Between wars, the town developed slowly. But after World War II, the city developed rapidly and great population growth brought wealth to the capital.

Since the 1979 war with Uganda, and as foreign exchange problems have become acute, the city has deteriorated sharply. Streets are poorly maintained. The prices of luxury items and basic commodities have risen astronomically. Crime has increased with the shortage of commodities. The city is home to 2.4 million in habitants.

Food

On the local market shortages of basic items such as flour, sugar, bread, rice, and cooking oil sometimes occur. Fresh fruits and vegetables are available seasonally. Green beans, cauliflower, carrots, eggplant, onions, potatoes, and salad vegetables are of fair-to-good quality and available most of the year. Tropical fruits such as coconuts, pineapples, papayas, bananas, oranges, limes, avocados, and mangoes are plentiful.

The quality of local fresh meat is below U.S. standard cuts, but is, nonetheless, quite adequate. Beef, pork, lamb, chicken, and eggs are available. Shrimp, lobster, and

other fish are excellent, plentiful, and not overly expensive.

Clothing

Tanzanian custom combined with the climate make Dar es Salaam very informal. Tropical clothing is worn year round. Local shoes are of poor quality, and sizes and widths differ from the U.S.

Dry-cleaning facilities are limited and of poor quality, so bring washable fabrics.

Men: Men wear short-sleeved shirts and trousers or short-sleeved safari suits to the office and to most evening gatherings. Sports clothes are similar to those worn in the warmer regions of the U.S.

Women: Women need several washable skirts, tops, and dresses for daytime wear both in and out of the office. Informal long or short dresses or skirts are common for most evening occasions; caftans or evening dresses are worn to receptions and more formal dinners. A lightweight sweater or shawl is useful for evenings in the cooler season. Panty hose or stockings are seldom worn. Miniskirts and low-cut blouses or dresses should not be worn. Sundresses, jeans, modest shorts, and T-shirts are acceptable for nonbusiness occasions.

Children: Bring comfortable summer-weight clothes and sneakers or sandals. Sunhats are useful for trips to the beach.

Supplies and Services

Basic Services: Tailoring services are available, but workmanship is only fair.

Religious Activities

Christian denominations in Dar es Salaam include Roman Catholic, Anglican, Presbyterian, Greek Orthodox, Lutheran, Baptist, Seventh-day Adventist, and Mennonite. Many, including the Catholic, Anglican, Presbyterian, Baptist, and Lutheran have Sunday morning services in English. Dar es Salaam

has several mosques and Hindu temples, but no synagogues.

Education

Most children attend the International School of Tanganyika in Dar es Salaam. Three units—located on separate campuses—comprise the school: Kindergarten, Lower School (grades 1-6), and Upper School (grades 7-12).

In the past kindergarten to grade 6 levels have suffered from erratic leadership and organization. A new curriculum is being instituted, a new management team is in place, and teacher performance is being more closely monitored, however. Most parents consider the elementary school to be of adequate standard. Educational materials for classroom use are adequate.

Grade 7-8 fall well below overall U.S. standards. The school board is making a concerted effort to correct deficiencies, however, and improve overall academic standards. The curriculum for grades 9 and 10 is based on the English system known as IGSCSE.

Grades 11-12, which make up the International Baccalaureate (IB) program, are considered sound academically. The school has now brought its program into conformity with international standards and the educational program is a standard 12-year program.

Children must have reached the age of 5 by September 1 to enter kindergarten 2, and age 6 by September 1 to enter 1st grade. The school is very rigid in this regard; no exceptions are made.

Classes are taught in English, but many students are learning English as a second language. The curriculum is a mixture of British and American curriculums with the British influence stronger at the upper level. Some curricular modifications are made to accommodate the needs of an international student body such as the English-as-a-second-language program. The

Upper School offers French language classes.

The school does not have programs for handicapped children, but does have a program for children with mild learning disabilities in the Lower and Middle schools.

The school year, approximately September 1 through the end of June, is divided into three terms with a 3-week vacation at Christmas and a 1-week break in October and at Easter. The Lower and Middle School begins at 7:10 am and ends at 12:30 pm, Monday-Friday. The Upper School begins at 7:10 am and ends at 1 pm, Monday-Friday. Upper-level students in the Upper School also attend afternoon classes twice a week.

Students must wear uniforms to school. Girls wear a simple-styled dress made from blue/white vertically striped material. This may be of any material, so long as it is blue and white striped. There is no standard for shade of blue. Girls can wear a blue-and-white-striped skirt and a white blouse—the blouse must have a collar and at least short sleeves. Sleeveless dresses or blouses are not acceptable. Boys wear plain white cotton shirts with collar and short-sleeves and gray shorts. There is no standard for shade of gray. Uniforms are worn 2 days per week. Both boys and girls wear navy blue shorts and plain white T-shirts for physical education classes twice a week. Some ready-made uniforms are available, but they are expensive and children may be reluctant to wear them once they see the range of clothing worn to school. Bathing suits are required for swimming lessons. One day per week is designated as a free-dress day when students may wear clothes of their choosing.

The school has its own large playing fields and swimming pool with instruction once a week. Afternoon programs for the children include instruction in art, drama, music, and sports but enrollment is limited.

Dar es Salaam also has a French school with supervised correspondence instruction in French, and a Swedish elementary school with instruction in Swedish.

Special Educational Opportunities

The Alliance Francaise gives French lessons. The Goethe Institute offers instruction in German.

A number of departments at the University of Dar es Salaam conduct seminars in English that are open to the public. Under exceptional circumstances, foreigners can enroll in certain subjects at the University.

Sports

Tanzania is one of the world's principal "big game" countries. The Tanzanian Wildlife Corporation enforces strict control of hunting. Hunting licenses for select game such as impala, warthog, and buffalo are granted to residents from July 1 to December 30.

Several beaches offer year-round swimming, scuba diving, and snorkeling. Sailing, fishing, and shelling are also favorite pastimes. You can keep both sail and power boats at the Yacht Club. The Yacht Club offers scuba diving lessons.

The Gymkhana Sports Club has tennis courts and an 18-hole golf course of fair quality with sand greens. Lessons in tennis and golf are offered. Squash courts are maintained. The club sponsors cricket, soccer, hockey, and rugby teams.

Membership in the Yacht Club and Gymkhana Club take some time to acquire. Both are based on a British membership system that requires that prospective members be sponsored and seconded by current members. Americans frequently find this tedious, but it can be an entertaining experience if approached in the right spirit. Both of these clubs have members from a variety of cultures, races, and ethnic groups, and each provides multiple opportunities for socializing outside the official American community.

The International School pool is open to school families on a membership basis.

The amateur mountain climber can try to climb Mount Kilimanjaro (19,340 feet). It is an extremely long, but technically not exacting, hike. Tanzanian law requires that experienced guides take climbing parties up the mountain. Children under age 12 are not allowed to climb. You do not need special equipment, but warm clothing and comfortable climbing shoes are necessary. Almost everything that is needed can be rented from nearby hotels.

Touring and Outdoor Activities

Tanzania's many game parks offer opportunities for vacations away from the city. You can visit several of these parks by car, but road conditions make a four-wheel drive vehicle preferable and, in many cases, necessary. Rental vehicles are sometimes available from the AERA and occasionally charter aircraft are available locally, but they are expensive.

You can drive from Dar es Salaam to Mikumi National Park in 3-4 hours. Arusha, near the northern game parks, is an 8-10 hour drive. Accommodations are adequate, but not luxurious. If you plan to go on safaris, tent camping offers a unique dimension to the experience as well as greater economy. All major wildlife parks have camping facilities.

Air service operates between Dar es Salaam and Nairobi. Zanzibar is 30 minutes by plane, and about 90 minutes by hydrofoil.

Entertainment

Dar es Salaam has several movie theaters, including a drive-in theater that usually shows Asian films. Few American travelers attend films at any of the cinema houses.

The Dar es Salaam Musical Society is open to anyone who plays an instrument or sings. The Dar es Salaam Players, an amateur group, is open to prospective thespians.

They stage five or six plays a year. Sometimes foreign governments sponsor concerts by artisans from their countries.

A number of restaurants offer European, Chinese, Indian, and Ethiopian food, but the food can be unsafe. Dining out can be pleasant, however, so long as one chooses foods that are not subject to quick spoilage (generally, avoid shellfish in restaurants). The service at Tanzanian restaurants is a source of entertainment all its own.

Social Activities

Among Americans: Social contact among Americans is mostly at informal cocktail parties, dinners, and buffet suppers at home. Daytime coffees, teas, and bridge parties are held occasionally. The American Community in Tanzania (ACT) is an active organization open to both women and men. Its purpose is to have enjoyable gatherings and learn more about the host country through tours, lectures, and films.

International Contacts: The most popular form of entertainment is the cocktail party, held in the home between 7 and 9 pm. Small dinners and buffets are also held at home. At functions you will have an opportunity to meet Tanzanians and citizens of other countries represented in Tanzania. The International Women's Group hold monthly meetings. A number of charitable and social organizations such as Rotary, Lions, the Corona Society, and the Caledonian, St. Patrick, and St. George Societies welcome members.

American travelers in Tanzania find limited opportunities for community activities with the International School, churches, hospitals, and orphanages.

Zanzibar

The city of Zanzibar on Zanzibar Island, 45 miles to the north off the coast from Dar es Salaam, has a fascinating history as a slave trading center. The Afro-Arabian architecture of the old town has been pre-

Sailors at work in Dhow Harbor, Zanzibar, Tanzania

Susan Rock. Reproduced by permission.

served, and its unique setting in luxuriant tropical scenery makes it one of Africa's most beautiful spots. Among its historic buildings are David Livingstone's house near the harbor, and the former sultan's magnificent palace facing the sea. The island itself is called the Isle of Cloves in recognition of its principal export.

Bougainvillea, exotic flame trees, and the bright blue blossoms of the jacaranda line the streets, providing a colorful backdrop for the market and residential areas. Westerners who visit Zanzibar find that life here is quite different; there is opportunity for swimming, fishing, or sailing, but there is no golf, limited access to tennis, and no hunting. The beaches provide excellent bathing at high tide. Little danger exists from sharks, but care must be taken in some coral and rocky areas to avoid cuts and abrasions.

It is possible to take interesting drives to visit beaches and palace ruins, but the island is small and the length of drives is, accordingly, limited.

Zanzibar has no live Western entertainment. African music, local or from the mainland, is presented

periodically, usually in connection with public functions at one of the clubs. Cinemas show Indian and European and, occasionally, American, German, Russian, or Chinese films. Color television, the first in Africa, is broadcast for about two-and-a-half hours each evening, but programming is almost entirely in Swahili, and is strongly local in orientation. The current population is approximately 249,000.

OTHER CITIES

ARUSHA, 50 miles from the Kenyan border, is the starting point for safaris into the famous Serengeti National Park. The city, which has several shops and services that cater to both photographic and hunting safaris, is noted for its lavish flower displays. Manufactured products include the renowned meerscham and briar pipes. Arusha's population is about 166,000.

BAGAMOYO is a seaport town 50 miles north of Dar es Salaam. The last mainland stop for slaves before shipment to the Zanzibar slave markets, the settlement was once Tanganyika's capital. The Old Customs

House, ruins where the slaves were kept, and a small German fort are among historic sites. The population is about 66,000.

BUKOKA, on the western shore of Lake Victoria, lies in an area of rolling grassland and heavy rainfall. The presence here of the tsetse fly has prevented livestock raising. Coffee, tea, and bananas number among the principal cash crops of the region. Fishing is also important. Bukoba has a population of approximately 42,000.

DODOMA, in the northeast-central zone, will be the nation's capital in a few years. All government ministries have moved to the city from Dar es Salaam. A wine industry and 84,000-acre ranch are in the vicinity. On the Arusha road, about 100 miles north of Dodoma, the Stone Age Kondoia Iranqi rock paintings can be viewed. The city is a market center for peanuts, sunflower seeds, maize, rice, wheat, coffee, tea, tobacco, and sorghum. Several industries are located in Dodoma. These industries manufacture furniture, beverages, processed food, milled rice, flour, and soap. The population of Dodoma is about 157,000.

IRINGA, 100 miles due south of Dodoma on the main Tanzania-Zambia road, is a farming center. Tobacco is the major crop. Ruaha National Park can be easily reached from Iringa, whose population is 138,000.

LINDI, a regional capital and seaport, lies in southwestern Tanzania at the mouth of the Lukeledi River. Roads link the city to Dar es Salaam and Nachingwea. Lindi, with a population of about 67,000, is the site of a regional airport.

Situated near the Southern Highlands in the southwest, **MBEYA** is the final stop on the Tanzam railroad before Zambia. The city is the capital of Mbeya region, and has a population of about 199,000.

MOROGORO, one of the most industrialized cities in Tanzania, lies 105 miles west of Dar es

Salaam. An industrial hub, it ships sisal (a durable fiber used to make twine), tobacco, kapok (a silky fiber mass utilized as filling for mattresses), and sugar. The area is the site of a large military base. A tarmac road, rail access, and an airport provide good transportation. Morogoro's current population is about 235,000.

Mount Kilimanjaro towers over **MOSHI** in the far northeast. The city is in the middle of a fertile area which grows nearly half of Tanzania's wheat. It is also the heart of the coffee-growing zone. Kilimanjaro International Airport, located between Moshi and Arusha, spurs development for the expanding game-park tourism industry. Moshi's population is approximately 183,000.

MWANZA is a city of nearly 291,000 residents in the northern region of Tanzania. It lies on the southern shore of magnificent Lake Victoria, and serves the surrounding area as a major port and rail terminus.

TABORA (formerly called Kazeh) is a commercial and agricultural trade center in the west-central area. Its location at the junction of east-west and north-south railways makes the city a major trade link. The modern town was founded by Arabs in 1820; during World War I, it was taken by Belgian forces on September 19, 1916. Tobacco, vegetables, and cassava are principal cash crops. The current population in 2002 was estimated at 139,000.

COUNTRY PROFILE

Geography and Climate

Tanzania, the second largest country in East Africa, is just south of the Equator. The mainland stretches from north to south for 740 miles and from east to west for 760 miles with a 500-mile coastline

on the Indian Ocean. It shares borders with Kenya, Uganda, Burundi, Rwanda, Zaire, Zambia, Malawi, and Mozambique. Including the islands of Unguja and Pemba that make up Zanzibar, Tanzania's total area is 362,820 square miles (with 20,600 square miles of lakes), equal to the area of Texas and New Mexico. The coastal strip is tropical with high humidity; temperatures range from 80°F to 95°F. The country's annual rainfall averages 65 inches. The central plateau (altitude 3,000-4,000 feet; rainfall 2-30 inches), which covers much of the country, is hot and dry. The semi-temperate highlands (up to 6,000 feet; rainfall 40-100 inches) are fertile and cool. The islands of Zanzibar (rainfall 60-75 inches), 25 miles off the coast, are tropical and humid.

Tanzania has two rainy and two dry seasons. During the long rains, from March through May, heavy downpours occur daily (though it is not unusual to have as many as 2-3 days of sunny, pleasant weather between showers). The short rains come in November and December. Temperatures and humidity are high from November to April, and surface winds are moderate. June through September is pleasant and generally mild. Mildew and rust are constant problems.

Population

Tanzania's population is about 36.2 million; 99 percent are of African origin. Tanzania has more than 130 tribes; principal tribes are the Nyamwezi, Ha, Makonde, Gogo, Haya, Chagga, and Hehe. These agricultural peoples migrated to Tanzania in the last 2,000 years. A small part of the population is made up of peoples of Nilotic origin. The Masai, the best-known group, are nomadic livestock keepers.

The national language is Kiswahili; however, each tribe has its own language, often related to other Bantu languages. Kiswahili is a Bantu language with strong Arabic and some English influences. English is widely used in government, commerce, and for all education above

the primary level, although the level of English has fallen sharply in recent years.

About 50,000 Tanzanians trace their ancestry to the Indian subcontinent and southwest Asia. Its traders came to East Africa during the last 3 centuries, but mostly since 1900. About half the original number of Asians have left Tanzania since independence. Arab immigrants and people claiming Persian origin have migrated to East Africa for 1,000 years; this group has almost been assimilated into the African population. Several thousand Western expatriates live in Tanzania as missionaries, technical experts, business people, or farmers.

Tanzania's first residents were animists. Their practices and rituals included ancestor worship and belief in the unity of the dead and living. The first Arab traders were Islamic, and Islam is now the religion of over one-third of the population. Christian missionaries first arrived in the mid-19th century. Today about one-third of the population is Christian. The remainder practice traditional religions, and members of all faiths continue to share many traditional beliefs, such as ancestor worship. A sizable percentage of the Asian minority are Hindus.

Public Institutions

In 1992, Tanzania became a multiparty democracy. This amendment was made to allow for political opposition to the Revolutionary Party (Chama Cha Mapinduzi in Swahili, or CCM), which was formed in February 1977 with the merger of the mainland's Tanganyika African National Union and the Afro-Shirazi Party of Zanzibar. Currently, thirteen different political parties are officially recognized by the government, although the CCM still holds a significant majority in the National Assembly. The country's first multiparty elections were held in 1995. Elections were held again in 2000, at that time Benjamin William Mkapa was elected

for a second term as president. Frederick Sumaye was appointed as prime minister in 1995.

All major posts in government and civil service are held by Tanzanian citizens. Foreign expatriate employees serve as advisers or technicians in fields for which Tanzanians are not yet trained. The government's policy is to gradually replace these expatriates with Tanzanian citizens.

The National Assembly has 275 members, 232 of whom are popularly elected from the mainland and Zanzibar. The remaining composition of the assembly includes 37 seats appointed for women and 5 members elected by the Zanzibar House of Representatives.

National Assembly actions are valid for Zanzibar only in specifically designated Union matters. Zanzibar's own 75-member House of Representatives has jurisdiction over all non-Union matters.

The judiciary includes primary courts, district courts, resident magistrate courts (regional), the High Court of Tanzania, and the Court of Appeals. Tanzania bases its legal system on Anglo-Saxon principles of jurisprudence, with modifications to accommodate the country's authoritarian political system, and customary and Islamic law in civil cases. The Constitution provides for a nominally independent judiciary, due process, and equality before the law and, for the first time, the 1984 Constitution contains a Bill of Rights.

The Chief Justices appoint judges, except those for the Court of Appeals and High Court, who are appointed by the President. Military courts do not try civilians, and no security courts exist. The government offers legal counsel to defendants charged with treason or murder; in Dar es Salaam, free legal counsel is provided to some indigent defendants by the Tanzanian Bar Association and Legal Aid Society.

Zanzibar, comprising the islands of Unguja and Pemba, united with mainland Tanganyika in 1964 to form the United Republic of Tanzania. Despite the Union, Zanzibar retains considerable self-government. Foreign affairs and defense are considered Union matters. Following the 1964 revolution, Zanzibar experienced bloody purges and expulsions and a severely repressive, arbitrary regime. The first popular election did not take place until 1981. The adoption of a 1984 Isles Constitution, however, brought with it a number of reforms. The new constitution includes a Bill of Rights, provides for the popular election of the President run by the sole political party, and, for the first time, mandates that a two-thirds majority of the Zanzibar House of Representatives must be directly elected by the people. The new constitution also brought Zanzibar's judiciary into conformity with that of the mainland and did away with the former system of people's courts in which legal representation was denied and judges had no legal training.

Among the nongovernmental organizations active in Tanzania are the Red Cross, YMCA and YWCA, Chamber of Commerce and Industry, Confederation of Tanzanian Industries, Rotary Club, Lions Club, Round Table, Christian Council, Caritas, Salvation Army, Catholic Relief Services, Plan International, Africa Wildlife Fund, and World Wildlife Fund.

Arts, Science, and Education

Tanzania has made a major effort to improve its educational system. It has a literacy rates estimated at approximately 69 percent of the population (1995). The University of Dar es Salaam is located on the city's western edge. Sokoine University, a smaller agricultural and technical college, is located in Morogoro about 100 miles west of Dar es Salaam.

Educational, scientific, and artistic activities accessible to foreigners are limited. Tanzania is one of the world's best known areas for field work in paleontology and zoology. The traveler can visit the site of the famous Leakey discoveries at Olduvai and browse through the tiny museum. Jane Goodall's work with chimpanzees at Gombe Stream is well known. A number of Americans come to Tanzania every year to do other extensive field work in wildlife studies. Many researchers are affiliated with the Serengeti Research Institute.

Commerce and Industry

Tanzania is one of the poorest countries in the world, with a per capita GDP of \$710. Numerous external factors have contributed to the problem—oil price increases, poor rainfall, and the war with Uganda—but most of the blame falls on the government's socialist economic policies. These policies were viewed by sympathetic nations in the 1970s as an alternative model for African development. The policies, however, were not successful. Recently, in partnership with multilateral and bilateral donors, Tanzania has undertaken an economic reform program that has begun to reverse previous negative economic trends. Strict fiscal policies have helped the country achieve significant economic growth in recent years, averaging 5 percent each year.

The Tanzanian economy is heavily dependent on agriculture. This sector accounts for about 49 percent of the total gross domestic product (GDP), about 88 percent of total employment for the country's 36.2 million people, and 85 percent of Tanzania's export earnings. Tanzania grows crops for food and export. The most important food crops are maize (corn), rice, cassava, wheat, bananas, and beans. Export crops include coffee, cotton, tea, sisal, cashews, pyrethrum, and cloves. From 1973 to 1985, when the agricultural policies of the ruling party were implemented, production

steadily declined, particularly that of export crops. Poor government policies included artificially low producer prices, over-centralized marketing systems, poor input delivery programs, and over concentration on an inefficient, state-owned industrial sector.

Minerals are exploited only on the mainland. Diamond production from mines near Shinyanga has declined considerably since the 1967 peak of 998,000 carats, but is still an important foreign-exchange earner. The deposits are owned by the government and private business. Other important mineral products are gold; Tanzanite, a gemstone unique to Tanzania; other gemstones; coal; and salt.

Despite the government's strong emphasis on the industrial sector, it is one of the smallest in Africa, contributing about 17 percent of GDP. The severe economic crisis the country has been facing, which worsened seriously starting in 1981, has forced many plants to close. Virtually all run far below capacity due to water and energy shortages, as well as the inability to obtain the foreign exchange needed to purchase new materials and spare parts.

The oldest and largest manufacturing enterprises are in the agricultural processing sector; cigarettes, meat canning, brewing, pyrethrum processing, and cashew nut shelling. Textiles, sugar refining, and cement capacities have expanded rapidly but operate substantially below capacity.

Tanzania has great potential to attract tourists, but remains substantially undeveloped. The beautiful Indian Ocean beaches, magnificent game parks, and reserves of the north and south are tremendous resources that are hardly used. The tourist infrastructure is gradually improving, but the industry's services are erratic in quality and significantly overpriced.

The country has been experiencing severe balance-of-payment problems. Exports have been declining

Transporting bananas in Tanzania

Cory Langley. Reproduced by permission.

in dollars and volume. Despite stiff economic reforms, imports continue to grow faster than exports, increasing the hard currency deficit and the government's dependence on foreign donors.

The World Bank, Sweden, Netherlands, EEC, West Germany, and Denmark provide much of Tanzania's donor assistance. The USAID assistance to Tanzania is active in the transport (rural roads and the Tazara Railroad), private enterprise development, and health (family planning and AIDS control) sectors.

Peace Corps volunteers are working in Tanzania. Their projects cover a wide range of activities including wildlife management, teaching, forestry, and agricultural mechanics.

Transportation

Local

Bus service is available in and around Dar es Salaam and up-country, but schedules and routes are inadequate. Buses are always crowded, undependable, and unsafe.

Taxis are available 24 hours daily at certain locations, including the airport, railway station, Kilimanjaro Hotel, and the Palm Beach Hotel at

Selander Bridge. Drivers seldom use meters, but charge flat rates per trip. Agree on the rate in advance, as taxi drivers will try to gouge the passenger.

Regional

From Dar es Salaam International Airport, flights are available to several points in Europe and East Africa. At least one European airline is scheduled almost every day between Dar es Salaam and various European cities. Flights and connections to African locations are fewer and less convenient; most are via Nairobi or Addis Ababa. Air Tanzania provides domestic and some regional service, but due to overbookings and maintenance problems, delays and cancellation of flights are common.

Dar es Salaam is the ocean terminus of the railway that runs 900 miles to Kigoma on Lake Tanganyika and to Mwanza on Lake Victoria by way of a branch line beginning at Tabora. Full train service with sleeping and dining cars runs daily but experience lengthy delays and occasional derailments. The Chinese-built Uhuru Railway, or TAZARA as it is more commonly known, running 1,000 miles from Dar es Salaam to New Kapiri-Mposhi, Zambia, began passenger service in

View of Zanzibar, Tanzania

© Jack Fields/Corbis. Reproduced by permission.

October 1975 and now operates four round trips weekly. Facilities on passenger trains are far below American standards, but for the adventurous a trip can be a unique experience.

Many of Tanzania's roads are badly deteriorated, but an extensive World Bank integrated roads program is attempting to reverse that trend. One main paved 123-mile road to Morogoro leads out of Dar es Salaam. This road connects with the main road system in Tanzania and East Africa and provides connections to Tanga, Arusha, Nairobi, and Mbeya, among other locations. Do not drive at night outside Dar es Salaam, even on good roads.

Communications

Telephone and Telegraph

Tanzania has local and long-distance telephone service. International connections are available to the U.K., U.S., and other parts of the world. Direct dialing of international calls is now available.

The telephone system is in very poor condition; as not all residences have telephones.

Radio and TV

Radio Tanzania, a government-owned company, broadcasts locally in Swahili and English on medium, shortwave, and FM (monophonic).

Programs consist of music, news, and special features. A good short-wave receiver can pick up Europe and the U.S., as well as Nairobi. Schedules for the Voice of America are available from USIS. Bring a good-quality shortwave radio.

Zanzibar telecasts in color in Swahili a few hours in the evenings. These telecasts require a good antenna in Dar es Salaam and cannot be picked up by standard American sets.

Newspapers, Magazines, and Technical Journals

The Daily News is an English-language newspaper and has limited coverage of world events. Uhuru is published in Swahili. A few new weekly and biweekly newspapers have recently started publication. The International Herald Tribune, available by postal subscription, arrives at least 4 days after publication (though street vendors frequently have it within 2 days of publication). The Kenya Daily Nation is available on the day of publication.

Local bookstores carry a few international magazines and very few paperbacks.

The Dar es Salaam Public Library has an aging collection of books for children and adults. The British Council also has a good collection of books. The USIS Library is open to the American community, but its collection contains little fiction; rather it concentrates on economics, international affairs, management, business, and communications for a Tanzanian audience.

Health and Medicine

Medical Facilities

Tanzania has legalized the private practice of medicine, and several clinics and small hospitals in Dar es Salaam offer limited services. Muhimbili Medical Centre, the public teaching hospital administered by the Department of Health, is the main source of medical care for the

general population. Although the local hospitals have some fairly well trained physicians, they are not reliably accessible and when available have limited diagnostic or treatment facilities. Ancillary medical facilities such as laboratory, x-ray, and EKG are either not available or not reliable as to accuracy of results. Equipment is often antiquated or, if newer, not functioning because of lack of parts. Unreliable sources of electricity and water contribute to nonfunctional medical facilities.

The Nordic Dental Clinic will see Americans for emergency dental work and on a space-available basis for routine care. Most employees defer dental work until they are in the U.S. Optical services are available in town. Repairs and simple lens work can be readily accomplished. Eyeglass frames are expensive and in short supply.

Tanzania has some well-trained physicians, but they are hampered by severe shortages of medicines, medical equipment and supplies, lack of trained staff, and medical facilities that have been allowed to deteriorate over the last 30 years.

Bring prescriptions for ongoing medical problems, as well as birth control supplies, contact lens solutions, over the counter medications, lotions and sun screens, extra eyeglasses, and sunglasses.

Community Health

The level of sanitation in Tanzania requires special measures. Tap water is not safe to drink until it is boiled or otherwise disinfected and filtered. The city streets in Dar es Salaam are full of piles of garbage, due to extremely irregular garbage pickup. Disinfect all fruits and vegetables before eating.

Mosquito and fly control measures are necessary. Residences are equipped with screens on the windows and mosquito nets are supplied for each occupied bed.

A number of diseases now rare in the United States are endemic to

Tanzania. These include bacterial meningitis, cholera, rabies, plague, and a variety of parasitic infections.

Preventive Measures

Simple precautions will offer more than adequate protection from any of the common medical problems. Don't eat or drink anything unless you know that it has been properly cleaned and disinfected. Don't go near animals unless you are certain that they are not infected with rabies or other transmittable animal-borne diseases. Make sure all your recommended vaccinations and inoculations are up to date.

Chloroquine-resistant malaria is endemic in Tanzania. Several measures are recommended to limit mosquito bites. Sleep under mosquito nets, use mosquito repellent, wear protective clothing, ensure that the windows are adequately screened, and use insecticides to kill the mosquitoes inside the house.

Anti-malarial medication is provided for members of the mission. The current recommendations are: (1) chloroquine weekly and Paludrine daily, or (2) Mefloquine weekly.

Chloroquine is a very potent drug with a narrow margin between the effective dose and the toxic dose. It is extremely toxic for small children in excessive amounts, so it should be stored in a safe place where a child cannot have access. Significant side effects to chloroquine are rare. Some people experience some nausea and stomach distress that can usually be avoided by taking the medication with meals or at bedtime.

Chloroquine in the recommended dosage does not affect the eyes and is safe to take during pregnancy. Paludrine is a drug with relatively minor adverse reactions, such as mouth ulcers or stomach upset. Paludrine must be taken daily to be effective. Mefloquine is a relatively new drug as an alternative medication for malaria prophylaxis. Side effects can include GI upset, dizzi-

ness, headache, and, rarely, psychotic episodes.

Malaria in a pregnant woman is a very serious problem because the changes brought on by pregnancy alter a woman's ability to fight this disease. Paludrine and chloroquine can be taken safely during pregnancy. Because malaria is potentially a threat during pregnancy, pregnant women may wish to consider departure to the U.S. early in pregnancy.

The fluoride level in the water in Dar es Salaam is 0.25 parts per million. Children between the ages of 3 and 13 should receive 2.2 mg of sodium fluoride daily.

Acquired Immune Deficiency Syndrome (AIDS) is a serious problem in Tanzania. It is transmitted sexually and through blood transfusions and use of contaminated needles. The Government of Tanzania is beginning to recognize the seriousness of the problem and has launched an extensive AIDS control program. With personal prevention, exposure to the virus can be avoided.

NOTES FOR TRAVELERS

Several flights during the week are available from a number of European cities to Dar es Salaam.

Visas are required to enter Tanzania. All travelers to Tanzania must have valid immunization certificates for yellow fever and cholera.

You must have an import permit to bring a pet into Tanzania. This permit may be obtained from the Ministry of Agriculture and Cooperatives, Animal Industry Subdivision, P.O. Box 9152, Dar es Salaam. You should initiate this action far in advance since the procedures are time consuming. For both cats and dogs, include a certificate that the animal has been vaccinated against rabies at least 6

months and not more than 3 years before entry into Tanzania. No dogs or cats younger than 7 months old will be allowed into Tanzania except with the special permission of the Director of Veterinary Services. The permit, along with a health certificate from a licensed veterinarian issued within 10 days of departure for Tanzania, should be attached to the pet's shipping crate. Keep copies of these documents.

The Tanzanian shilling, divided into 100 cents, is the basic local currency. It cannot be imported or exported and generally is nonconvertible. The official rate of exchange changes slightly from time to time. In December 2000, the rate of exchange was Tshs 803.4=U.S.\$1. Coins in current use are in denominations of 1, 5, 10, and 20 shillings. Bill denominations are 20, 50, 100, 200, 500, and 1,000 shillings.

Tanzania uses the metric system of weights and measures.

No limit is placed on the amount of dollars, other foreign currency, or travelers checks that you can bring into the country. You can convert foreign currency to shillings only at authorized points. Strict currency control regulations govern conversion of shillings into foreign currencies.

No private or foreign banking facilities are yet available in Tanzania. The banking laws have been revised, however, and although private banking is legal, no private foreign bank has yet been licensed. For the time being, the government-owned National Bank of Commerce (NBC), the only commercial bank, has branches throughout Tanzania. It provides a wide range of national and international banking services including sale of U.S. and foreign travelers checks. Major credit cards are becoming increasingly accepted at major hotels and restaurants.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated September 1995. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The West African Republic of **TOGO**, which had existed as part of the German protectorate of Togoland, as a League of Nations mandate and, later, as a United Nations trust territory under French administration, has been independent since 1960. Four years earlier, Togo had gained autonomy within the French Union.

The Portuguese were the first Europeans to explore the Togolese coast, arriving late in the 15th century. Between 1600 and 1800, Brazilian, British, and other slave traders repeatedly and tragically raided the region, and Togo became known as the Slave Coast.

This small republic gives the visitor an unusual, first-hand look at developing Africa. Densely populated by African standards, it has a variety of cultures among its more than 35 ethnic groups, many of whom still follow their African traditions and customs.

MAJOR CITIES

Lome

Lome, the capital and chief commercial center of Togo, is on the Atlantic coast at Togo's extreme southwest corner. Part of the city lies on a mile-wide sandbar that rises 15–20 feet above the sea. The center of the city is a 20-minute walk from the Ghanaian border. Lome shares the climate of Togo's southern zone, and its sea breeze blows pleasantly all year. The city proper has 658,000 residents, and the greater area has a population of 727,000.

The major central thoroughfares are lined with small shops, occasional parks, and countless street vendors. In the Grand Marche, a bustling three-story building, vendors sell food, cloth (largely wax-print cottons locally made or imported from England and the Netherlands), housewares, small

fetish objects, and almost anything else found in Lome. The railroad, as well as some buildings and roads still in use today, were built by the Germans.

Only main city streets have lights. Some streets are paved; others are of red laterite earth and sand—dusty in the dry season, muddy when it rains, and usually full of potholes.

Most buildings are cement over soft-brick or concrete blocks. However, traditional rectangular one- or two-room mud-brick with corrugated metal or palm-thatch roofs built along the walls of a compound are still common. Residential areas with large houses include Lome proper, the suburb of Tokoin above the lagoons, Kodjoviakope, and a housing project located near the University of Benin.

The larger businesses are, for the most part, controlled by the French. A small but economically important Lebanese population also engages in commerce. Lome has 11 resident foreign diplomatic missions, 8 honorary consulates, U.N. and other country aid organizations, and regional banks.

Food

Lome has a good supply of fresh foods, although supply can be sea-

Aerial view of Lome, Togo

© Scheufler Collection/Corbis. Reproduced by permission.

sonal. Local vegetables include leaf lettuce, spinach, tomatoes, green beans, sweet peppers, cabbage, eggplant, spring onions, onions, carrots, palm hearts, potatoes, sweet yams, African yams, hot peppers, mint, parsley, and several other herbs. The local fruits available are avocado, lemon, lime, orange, pineapple, banana, papaya, guava, grapefruit, cantaloupe, watermelon, coconut, mango, and passion fruit. Imported apples, pears, kiwi, and a few other European fruits can sometimes be found. Local fruits and vegetables are generally available in open markets throughout the year. Imported fresh fruits and vegeta-

bles are sometimes available in supermarkets at high prices.

Fresh meat, imported and domestic, includes beef, veal, pork, lamb and poultry. Locally made and imported French and German sausage, pate, ham and other prepared meats are available in the butcher section of local supermarkets. Duck, rabbit and guinea fowl are available at the local market, as well as the local delicacy, bush rat or agouti. Fresh fish, shrimp, lobster, mussels, hard-shell crabs and other seafood are sold in season either in the local market or in one supermarket.

Imported fresh foods arrive by air every week and some by ship every 2 weeks. These stocks include meat, cheese, fish, vegetables (artichokes, mushrooms, celery, endive, and lettuce), and fresh fruits. A limited variety of wines, herbs, and spices is imported, as are specialty items like canned Chinese and Lebanese foods. Prices for imported items are high. Imported frozen foods are available at several locations, include meats, poultry, fish, fruits, vegetables, prepared foods, and deserts.

Imported UHT and powdered milk are readily available, as are puddings and whipping cream. Local

milk products such as yoghurt and sour cream can be found in the supermarkets. A local Danish-run factory produces ice cream. Some better quality, but very high-priced, imported brands are also available in supermarkets. Good French breads and fair pastries are made in Lome.

Coca-Cola, Sprite, Fanta, soda water, tonic and a variety of other local soft drinks is bottled here. A good beer is also bottled by a German-established factory.

Most Americans do their shopping at one or more of the three modern supermarkets in Lome. In the heart of the business district is a lively congested Grand Marche, a three-story, open-air market where Togolese sell their fresh produce, fish and other foodstuffs. Clothes, household items, glass beads, wax cloths, and an endless variety of goods can be found. Many intriguing items can be discovered on a walking tour of the central business area, which abounds in small shops selling a wide diversity of items. Every "quartier" has its own open market. Many small provision stores, mostly run by members of the Indian community, are located around town. Necessary items are rarely all available in one place and sometimes not at the expected place, so shopping requires several trips and lots of time.

Clothing

Men: Dress is less formal than in Washington. Safari suits or slacks and shirt combinations may be worn during office hours. Formal clothing (light-weight dinner jacket and black dress trousers) is optional. Sport shirts and slacks or safari suits suffice for most social engagements. Cotton or cotton polyester blend slacks and short-sleeved shirts are advisable for road travel. All clothes should be light-weight and washable since dry cleaning services are expensive and limited. Clothing wears out quickly due to frequent washing. All synthetic fabrics are less comfortable in the heat and humidity than cotton, linen or cotton-blend fabrics.

Women: Warm-weather washable dresses, blouses, and slacks or skirts are the norm. Simple dresses are worn at daytime and evening affairs. Cocktail dresses are often worn, and more formal long gowns are worn on few occasions. A light wrap or shawl may be useful at night during the cooler rainy season. Outdoor clothing and sometimes a sweater are convenient.

A limited supply of imported dress materials, as well as extensive supply of African-style cotton prints, both imported and locally manufactured, are available in the market area. Dressmakers do adequate work with supervision. A few expensive boutiques carry dresses and fancy dresses and accessories. Hats, gloves, and stockings are seldom worn. Lingerie in cotton or the cooler synthetic fabrics is usually not available. Walking on Lome's sandy streets is easier with sensible shoes. Several pairs of sandals are suggested.

Children: Bring a good supply of outdoor, hot-weather washable children's clothes, underwear, and shoes. Some sandals, underwear, and clothes are sold locally. Local seamstresses do a fair job making children's clothing.

Bring plenty of suitable sportswear and equipment for the entire family, including tennis or golf clothes and equipment as these are either expensive or not available locally.

Supplies and Services

Supplies: Consider bringing your own brand of toiletries, cosmetics, medicines, etc., as many American brand products are not available.

Basic Services: In general, community services are not well developed, and materials are often not available.

Dry-cleaning is not recommended except at the Hotel 2 Fevrier or Sarakawa, and at one dry-cleaning shop in town. Several beauty shops are recommended, as are several barbers in Lome. Some Togolese

barbers will come to your home for a moderate fee. Shoe repair is satisfactory, but the materials used are usually of poor quality. Tailors or dressmakers do adequate-to-good work. Wicker and wooden furniture can be made locally and wears well in the humid climate. Due to high humidity, mildew is a problem.

Religious Activities

Baptist, Seventh Day Adventist, Roman Catholic, Church of Christ, Islamic, Lutheran, Protestant, Pentecostal and Methodist places of worship can be found in Lome. Most services are in French and Ewe and occasional Protestant services are in English. An English-language non-denominational Christian service meets every Sunday at the Hotel 2 Fevrier and an English-Language Roman Catholic mass is celebrated each Sunday at the cathedral in Lome.

Education

The American International School in Lome, established in 1967, follows the general academic curriculum for American schools. The private, coeducational international school, encompassing pre-school through eighth grade, is currently applying for accreditation. The school year extends from September to June. The school day begins at 7:30 a.m. and ends at 1:00 p.m. Instruction is in English. The school is housed in a large two-story building, and has a library, science room, and music room. In addition to basic academic subjects, AIS's curriculum includes French, art, music, drama, P.E. and health.

None of the several Togolese primary and secondary schools in Lome are recommended. Lome has one very good French Government supported lycee. The school ranges from kindergarten through the end of secondary school and prepares students for the French university entrance examination. The school program is identical to that of schools in France. Instruction is conducted in French; inability to speak the language presents a major drawback for all levels except grade 1. Several privately-run

French-language nursery schools for 2–5 year olds are open most of the year.

In addition to the American and French schools, the privately-owned International Primary School offers an accredited American-based curriculum in English for children 2–12. The British school of Lome offers 3–16 year olds instruction in English following the British system.

Recreation and Social Life

Lome is a generally pleasant place and offers the opportunity for year-round sports activities. Many Americans enjoy touring in-country and taking short trips to the several neighboring countries which can be easily and quickly reached by road.

Sports

Swimming is possible in hotel pools. Due to the heavy surf and a dangerous undertow, saltwater swimming is limited to certain beaches. The sea and lagoons offer limited fishing. Lac Togo, located about 20 minutes from Lome, has sailing, windsurfing, and pedal boating.

Several tennis clubs, including hotel clubs that Americans can join, are available, as well as volleyball, badminton, and table tennis facilities. The golf club has a nine-hole course about 8 miles from Lome. There is a riding club at the Hotel Sarakawa, and another near the airport. There are several fitness centers offering karate, weight lifting, body building, aerobics, and sports therapy massage.

Soccer is the principal spectator sport. Tennis, basketball, volleyball, and handball are other sports that are enjoyed by both Americans and Togolese. Sporting stores are few and merchandise that is available is expensive.

Touring and Outdoor Activities

In Lome itself, tourist attractions include the National Museum and the Village Artisanal Center where handcrafts are made and sold.

Outside of Lome, you may join tours of Togo and Benin arranged by hotels for their guests or by the Bureau of Tourism. Most in-country touring is done individually by private car. A main road extends from Lome northward to the Burkina Faso border. The road is paved and suitable for motoring, but the driver must be alert for animals and people on the road. Daylight travel is best.

The paved coastal road from the Ghana to Benin borders provides a continuous view of beaches, coconut palms, and small, scattered fishing villages. About 18 miles east of Lome and a short distance inland is Lac Togo, a lagoon with a hotel, restaurant, bar, swimming pool, and boat dock next door. Residents visit the Lac for a mild change in scenery; visitors from neighboring countries appreciate its French cuisine. On the hillside bordering the lake is Togoville, a small village that was the first permanent German settlement in Togo. It can be reached by car or pirogue.

An automobile trip to Kpalime and its environs can include the Centre Artisanal in Kloto, the Blind school and the Chateau Viale, which offers a mountain view and an occasional glimpse of Lake Volta.

Two hours beyond Kpalime brings you to the Akowa waterfall, just 7 miles from Badou. The Akowa waterfall, 35 meters high, descends vertically from an underground spring. It is accessible to the reasonably hardy. Following an animal trail, under vines and over rotting logs, one must hike for nearly one half hour before reaching the allegedly therapeutic falls. The scenery is beautiful. Guides must be hired at the village. The trip can be made in one long day, or visitors can stay at a hotel in Badou.

North of Atakpame, you journey more deeply into Togo's traditional culture. Acceptable but very modest hotels at Atakpame and Sokode provide overnight lodging. Many visit the game park at Fazao in central Togo, which suffers from a lack of

wildlife at present, however. The hotel at Lama-Kara offers good accommodations and a swimming pool. Further north, the traditional African-architecture accommodations in the Keran reserve are adequate.

Places of interest in the neighboring country of Benin (also French-speaking) are within easy driving distance from Lome and include: Ouidah, the center of voodoo and the site of an old Portuguese fortress whose museum houses relics of the slave trade and illustrates cultural exchanges between Brazil and Africa; Cotonou, Benin's capital and major city; the villages of Lac Nakous and Ganvie, built on stilts in the middle of the lake; Porto Novo, 19 miles from Cotonou, which has a museum of handicrafts; and Abomey, a day's drive from Lome and the seat of the ancient kingdom of Abomey (1600–1900), with an interesting historical museum in a former palace.

Entertainment

For those who like to dine out, Lome has a number of good restaurants offering French cuisine as well as Chinese, German, Italian, Lebanese, Ethiopian, Vietnamese, and traditional Togolese dishes. Restaurants are comparable to those in U.S. cities. Lome has many night clubs and discotheques, including those at the major hotels. Saturdays are disco nights in Lome, and discos are generally crowded and lively, with a variety of music and atmosphere. The Hotel Palm Beach, the Sarakawa, the 2 Fevrier, and the Hotel de la Paix all have casinos with tables for Blackjack and Roulette.

The German, French, and American Cultural Centers are active in Lome, offering scheduled monthly activities, as well as occasional special programs such as jazz and classical music concerts, art exhibits, and other cultural offerings.

Foreign films and a few American films (with the soundtrack dubbed in French) are shown at the cinemas. Sound equipment, projectors,

Cory Langley. Reproduced by permission.

Going to market in Togo

seats and overall cleanliness could be better at some.

The USIS library, available to the public, is well stocked with American periodicals, books in French and English, and some recordings of American music. The German Cultural Center has books available for public use. The British School has a large book and video (PAL system) library available for those who have children enrolled in their school or otherwise sponsored. Bookshops in Lome are well supplied with French books and periodicals but quite limited in English-language periodicals and books. Avid readers should bring a supply of reading material and arrange to receive subsequent mailings from one or two book clubs.

Other activities available in Lome include dance classes and lessons and the International Choir.

Since both Accra and Cotonou are within 2 1/2 hours of Lome, Americans often visit these cities for a day or weekend of shopping and sight-seeing.

Social Activities

Among Americans: The home is the center of evening activities such as cocktail parties, barbecues, and card games. Other social activities may also include one or two dances a year, occasional concerts, and national day celebrations.

International Contacts: Brazil, China, Egypt, France, Gabon, Germany, Ghana, Nigeria, Libya, North Korea and Zaire have embassies in Lome, and several countries are represented by Honorary Consuls. The U.N. has a resident representative and personnel from various nations working in Togo. The European Union is represented. Several nations have technical assistance

teams. Rotary, Lions, Zonta and Soroptomist Clubs are active. A newly formed International Women's Association provides opportunities to make friends quickly with women of other nationalities and engage in charitable work.

OTHER CITIES

ANÉHO, 26 miles east of Lomé, dates to the slave-trade period. Later, the Germans and French made the town Togo's capital. Aného is an important intellectual center for Togo, although it hasn't grown as rapidly as other cities in Togo. Still standing are many of the thick-walled colonial homes built by the Germans. The current population is about 25,000.

The town of **ATAKPAMÉ** was settled in the nineteenth century by the Ewe and Yoruba peoples. It is situated in an important cotton-growing area, and serves as a major trading center for cocoa and coffee. The current population is 62,000.

Situated in northern Togo, **DAPANG** is renowned for its temperate climate. People from all over Togo and Burkina Faso come to this city of 30,000 for the festive marketplaces and local dances.

KPALIMÉ (often written Palime) is Togo's cocoa city, about 65 miles northwest of Lomé. Coffee and oil palms are cultivated here. Kpalimé is a major center for commercial trade in Togo. Scenic areas surround Kpalimé, including the massive Mount Aghou and Kpime and Kolme waterfalls. The Pottery Centre is a haven for ceramics lovers. The population is about 72,000 (2002).

Inhabited by the Anoufo people, **MANGO** is on the Oti River in northern Togo. It is the center for the cattle and peanut trade in the region and currently has a population of 23,000.

In the central region lies **SOKODÉ**, the nation's second largest city. Because of its location in the middle of the forest, hunting is popular. The city is a major commercial trade center for the country's northern regions. Industrial activities include cotton ginning and sugar processing. Muslim holidays are celebrated in Sokodé, especially *Adossa*, or Festival of the Knives. The population is approximately 82,000 (2002).

Located 20 miles (32 kilometers) north of Lomé **TSÉVIÉ** is home to the Ewe people. The town is an important palm oil processing center and a major commercial trading area. In 2002, Tsévié had a population of roughly 36,000.

COUNTRY PROFILE

Geography and Climate

Togo, a narrow country of 21,853 square miles, about the size of West Virginia, stretches 370 miles from north to south and averages 56 miles in width. It is bounded on the west by Ghana, on the east by Benin, on the north by Burkina Faso, and on the south by the Bight of Benin on the Atlantic Ocean.

Brackish lagoons cross the country to the southeast, separating the mile-wide sandbar along the Bight of Benin from the geographical mainland. To the southwest a low plateau gradually rises, followed by a southwest-northeast mountain range that is from 2,300 to 3,300 feet high. Another plateau lies to the north of the mountain chain. An open savanna then unfolds and extends to the Burkina Faso border.

Togo is mostly flat. Much of the land lies at an altitude of less than 660 feet; scarcely one-sixth of the land exceeds 1,300 feet. Togo has no navigable rivers, but several rivers have the potential for irrigation, which the Togolese are beginning to exploit. The country's most fertile areas are in and around the mountain range; the northern savannas are the poorest.

Savanna-type vegetation dominates. Large trees, including the baobab, common in the south, are rarer in the north. Mangrove and reed swamps dot the coastal region, and coconut plantations grow along the sea.

Some deer, antelope, buffalo, wart hogs, and hippopotamuses roam the north. Togo's most common animal life includes monkeys, snakes, lizards, and birds. Chickens, sheep, goats, and a few other domestic animals are kept in the city as well as the rural areas.

There are protected forest game reserves at Fazao and Keran, in the central and savanna regions.

The country is divided climatically into southern and northern zones. The southern tropical temperatures fluctuate between 70°F and 89°F, with February and March the hottest months, and June, July, and August the coolest. Humidity is high (80%–90%) most of the year. The major dry season extends from the end of November to the end of March; August and early September are also sometimes quite dry. The two wet seasons are from the end of March to July, with maximum rainfall in June, and from September to mid-November, with the greatest rainfall in October. The coastal area receives the least rainfall; the region of Kpalime, about 65 miles inland, receives the most. Equatorial conditions in the mountains of Togo support the country's only rain forest.

Northern temperatures fluctuate between 65°F and over 100°F, and humidity is less severe than in the south. The northern zone has one rainy and one dry season. In December–January, a cool, dry, dust-laden “harmattan” wind from the Sahara sweeps across the land.

Population

The population of Togo was estimated at 5.2 million persons in 2001. Lomé, the capital city, has a population of about 727,000. Other major population centers are Sokode, 82,000; Kara, 49,000; Atakpame, 62,000; Kpalime, 72,000; Tsévié, 36,000; Dapaong, 30,000; Bassar, 30,000; Aneho, 25,000; and Mango, 23,000.

In Togo, 59 percent of the population are animists; 29 percent are Christians; and 12 percent are Muslims. In the south, most of the Ewe, Guen, Ouatchi, Akposso, and Ife-Ana ethnic groups are Catholics and Protestants. In the north, most of the Kabiye, Losso, and Lamba are Catholics and Protestants, but the Cotocoli, Bassar, Konkomba,

Tchamba, Anoufo, and Moba are primarily Muslims.

Although Togo has some 37 different ethnic groups, three major ethnic groups dominate the population. These are the Ewe, the Kabiye, and the Mina groups. The Ewe group includes the subgroups of Ouatchi and Guen. They live in the Maritime region and a large part of the plateau region. The Kabiye group includes the Cotocoli and Losso groups. The Kabiye are mostly located in the Kara region. The Mina group is dominated by the Moba, followed by the Gourma, the Bassar, and the Konkomba groups. The home area of these groups is the savanna region.

Togo's prehistory and early history were marked by the migrations of various African peoples: prehistoric Sangoan hunting and gathering tribes who settled in central and southern Togo; people from the Sudan-Nile region who came to the north in the 10th–13th centuries; and the Ewes and other tribes from Nigeria who migrated between the 14th and 16th centuries; the Mina and other peoples from Ghana; and the Cotocoli and other ethnic groups from Burkina Faso who came in the 17th century. The boundaries of these kingdoms extended beyond present-day Togo.

The Portuguese, the first Europeans to explore the Togolese coast, came in the late 1400s. Between 1600 and 1800, Brazilian, British, and other slave traders raided the coast and later the interior, and Togo became part of what was known as the Slave Coast. German traders and missionaries reached Togo in the mid-1800s. In 1884, Germany set up a small coastal protectorate, gradually moved inland, and developed the social and economic infrastructure so successfully that Togo became its sole self-supporting colony. From 1885 to 1914, Lome was the administrative and commercial center of German Togo (called Togoland), which included what is now Togo and the Volta region (now part of Ghana). In 1914, Britain and France jointly invaded and took con-

trol of Togo. After World War I, Togo came under a League of Nations mandate and was divided into British and French Togo. The U.N. took over the mandate in 1946. Social and economic repercussions of the British-French trusteeship continue to be felt, particularly the splitting of the Ewe and other tribes and their territories.

In late 1956, French Togo voted for status as an autonomous republic within the French Union; the British-ruled people of the Volta region opted to join Ghana, which became independent in 1957. On April 27, 1960, French Togo gained full independence from France.

Although Western contact has affected the life and outlook in the towns, much of the countryside remains less affected. Traditional animist culture, and the customs peculiar to it, continues to strongly influence the Westernized population. Polygamy is widely practiced in rural areas and even in Lome and other towns. As in the rest of Africa, Togolese life centers on the extended family, which includes those far from the immediate family circle. Loyalties reach out beyond the family to the tribe. Traditional mud-brick homes and communal wells give way, in urban areas, to more modern housing and facilities. However, walled courtyards as centers of family life, cooking with charcoal or wood fires, and communal piped-water taps with the customary social life they create, are still common. Complex traditional women's hairstyles and dress for both men and women provide interesting contrasts to European fashions.

Western culture and Christianity have had the greatest influence in the south, the area that has been the source of most government officials, teachers, journalists, office workers, artisans, and traders. Recently, however, more northerners have become civil servants and professionals through an active government program to rectify past disparities.

The literacy rate in Togo is 51 percent. There are about 50 African dialects spoken. French is the official language, as well as the language of commerce. Some people also speak English or German. The government has a policy of developing two national languages—Kabiye and Ewe—as languages of instruction. Some broadcasting (both radio and TV) is done in these languages, and one page in the daily newspaper is devoted to news in each of these languages. The principal native languages are Ewe and Mina in the South, and Kabiye and Hausa in the North.

Public Institutions

Togo's first President, Sylvanus Olympio, was overthrown and killed in a coup d'état on January 13, 1963, in which the current President, General Gnassingbe Eyadema, participated. After 4 years of rule under civilian President Grunitsky, Togolese President Eyadema came to power as a result of a bloodless coup d'état staged on January 13, 1967. The country's constitution and National Assembly were abolished, and the President ruled by decree. In 1969, the *Rassemblement du Peuple Togolais* (RPT) was founded as the sole political party, with Eyadema as its President and founder. However, beginning in late 1990, strike actions and demonstrations led by students and taxi drivers began a movement that demonstrated the Togolese wish for a more democratic form of government.

A transitional government was named in August 1991 to lead Togo through constitutional, local, legislative, and presidential elections. The transition process was not smooth. Demonstrations, an opposition-sponsored political general strike from November 1992 through July 1993 that severely shocked the economy, and sporadic outbreaks of violence from elements of the security forces and others created an unsettled atmosphere for much of 1991 through 1994.

Progress toward free elections and installation of a definitive government was slow and painful. A new, democratic constitution was approved in a referendum in September 1992. In seriously flawed presidential elections in August 1993 and again in 1998, President Eyadema was reinstated for a 5-year term. However, these elections were boycotted by the major opposition parties and a majority of the voters and therefore did not resolve underlying divisions between the opposition and pro-Eyadema factions of Togolese society. After extensive negotiations between the opposition and the presidential side, legislative elections were held in February 1994. The parties opposed to Eyadema won a slim majority in a poll that was generally held to have been free and fair. The 1999 parliamentary elections were boycotted by the major opposition parties, allowing the RPT to gain control of 79 of the 81 seats.

The constitution requires the president to name the prime minister from among the parliamentary majority. President Eyadema selected Agbeyome Messan Kodjo to be Prime Minister, and his government was installed in August 2000. Overall, the government, while faced by severe economic difficulties, shares the generally free-market, pro-Western orientation of previous governments and has declared its intention to promote democracy, human rights, and the rule of law but faces a major challenge fulfilling its promises of political and economic betterment.

Arts, Science, and Education

All public education in Togo is free. In principle, all children must begin school at the age of 6, but attendance is not compulsory. The attendance situation varies from region to region. In almost all villages, there are primary schools, and in the administrative districts, some junior secondary schools and lycee (secondary schools). Educational institutions, whether primary, sec-

ondary or technical, are either government affiliated or are associated with the Catholic church, Christian missionaries, or private institutions.

The Universite du Benin, founded in 1970, has a faculty of sciences and letters, schools of law, medicine, agronomy and science, and an advanced Institute for Industrial Engineering. Many Togolese go abroad to study, usually to France. Some also study in Germany and the U.S.

Paul Ahyi, sculptor, muralist, and painter, is the country's best known artist. Many of his works are publicly displayed in Lome. Several other artists occasionally exhibit works at Lome's hotels, the Palais du Congres, or the American, French, or German Cultural centers.

Many bronze, wood, ivory, and semi-precious stone artifacts are peddled by the ubiquitous traders in Lome and in other cities. Handicraft making has been boosted by the creation of a crafts center in Kloto, about a 30-minute drive from the capital. Craftsmen fashion batiks, hand-carve wood, weave cloth, and produce glazed pottery. Jewelers, sandal-makers, embroiderers, cloth and basket weavers, and workers in wood, ivory, and bone can be found in major cities.

Folklore remains an integral part of Togolese life, particularly in the villages, where you will find spontaneous plays and community singing and dancing. Traditional regional festivals are celebrated throughout the year.

Commerce and Industry

Togo is a small country on the coast of West Africa. Its economy depends heavily upon agriculture, phosphate mining, and regional trade. Togo had a per capita income of \$1,500 and GDP of \$7.3 billion in 2000. The majority of the population depends on subsistence agriculture. The

agricultural sector accounts for 42 percent of the GDP and employs over 65 percent of the population. Principal food crops include yams, cassava, millet, corn, sorghum and groundnuts. Agricultural production rose to a record high in 1993 due to political disturbances and an 8-month general strike (1992–93) that forced many unpaid civil servants to migrate from Lome to rural areas and farms. Coffee, cotton, and cocoa are the major cash crops produced for export and account for approximately 40% of export earnings. Some attempts are being made to export pineapples, houseplants, vegetables, and palm oil. There has been a greater emphasis in cotton production in the last decade, leading to major growth in exports. Cattle, sheep, goats, and pigs are also raised.

Phosphate mining is the most important industrial activity. Togo has an estimated 130 million tons of phosphate reserves, and the government-owned Togolese Phosphates Office (OTP) has a production capacity of 3.25 million tons a year.

Industry plays a growing role in the Togolese economy, accounting for 21 percent of the GDP. Much of Togo's industrial base dates back to the government's industrialization program in the late 1970s and early 1980s, which resulted in a number of poorly run parastatals. Demands for higher wages have had a particularly negative impact on domestic industry. The government has liquidated some parastatals, privatized others, and improved the management of many of those remaining under state control. The government's privatization campaign has brought foreign investment in several former state-owned companies, including a steel mill, a dairy factory, a cookie factory, a pasta factory, a brewery, a flour mill, a detergent factory, and an edible oil refinery. In 1989, Togo created an export processing zone to encourage foreign investment and an export-led economic growth. Growth has been limited by Togo's political troubles.

Togo has few energy resources of its own and relies heavily on hydroelectric power from Ghana for its electrical needs. Togo's energy production capacity, however, increased with the completion of the Nangbeto hydroelectric dam, which was built on the Mono River in central Togo, near the Togo/Benin border. Electricity supplies in Lome and in several smaller cities are generally reliable, but wide fluctuations are common.

Regional trade is a very important component of the economy of Togo. In fact, commerce is the single most important economic activity in Togo, after traditional agriculture, and Lome has long been known as an important regional trading center. The commercial sector is dominated by five major trading companies, which control roughly half of the registered import activity. There are also many smaller registered commercial enterprises. Togo has a well-developed banking sector, with five full-service commercial banks. Lome's position as a regional banking center, however, has been reduced because of the political and economic difficulties of the early 1990s.

The modern and autonomous port of Lome, an extensive paved road network, and an improving telecommunications system all help to make Togo's infrastructure one of the best in the region. The country has over 2,250 miles of paved roads, the most important of which are the north-south road from Lome to the Burkina Faso border and the coastal road linking Ghana and Benin. The port of Lome, which was inaugurated in 1968 and expanded in 1984, has piers capable of handling a large variety of ships. The port operates daily and has extensive transit and storage facilities. It has a 173-acre free port area and an additional 1,581-acre industrial park, making it an attractive regional base. Warehousing, assembling, and manufacturing operations can receive customs exoneration on imported raw materials and exported finished exports. Togo's good infrastructure has made Togo

an important transshipment center, particularly for goods going to Nigeria, Ghana, Burkina Faso, Mali and Niger.

Togo's relative advantages as a regional trading center have eroded in recent years due to improvements in the business climates in neighboring countries and the political instability in Togo. The decline in regional trade was accelerated from late 1990 to 1993, due to political unrest. Trade through the port of Lome has dropped.

Capital and consumer goods in Togo are imported mainly from France, Germany, the Netherlands, Lebanon and China. Some 60 percent of the imports consist of consumer goods, one-third of which are foodstuffs and beverages.

In the past the Togolese Government had put a high priority on developing the country's tourist trade. Lome has 5 modern European-style hotels and many smaller tourist hotels. There is one nice, government-owned hotel in Kara, 430 kilometers north of Lome. The tourist industry has been badly affected by the long period of political instability and periodic violence.

Transportation

Local

In-town taxis provide inexpensive transportation to any point within central Lome, although vehicles are often in poor condition. Tipping is not expected. Taxis can be easily obtained during business hours. American drivers should exercise extreme caution while driving. Personnel should wear seat belts and have car seats for infants and small children. The condition of motor vehicles on the road is quite poor, so defensive driving is very important. The majority of Lome's population walks or cycles and frequently ignores traffic rules. Sheep, goats, chickens, and dogs wander the streets freely.

Cars can be rented with or without a chauffeur from a car rental firm, but prices are high.

Bicycles, motorscooters, and motorcycles are numerous on already congested streets. Limited brands/models of bicycles, motorscooters, and motorcycles (Yamaha, Honda, etc.) can be obtained locally. Togolese law requires the wearing of helmets, however, many cyclists do not wear them or wear inadequate protection.

Avoid night driving whenever possible. Many roads are full of large potholes and most are without street lights, additionally, many cars do not have proper headlights or taillights.

Most police vehicles are blue and white. Fire department vehicles are red. Official government vehicles are generally black. It is common practice to stop or reroute traffic if a VIP is going to pass. Everyone is required to obey either police or military persons directing traffic.

Most Americans travel by privately owned vehicle, although taxis and mini-buses provide regular (if crowded and not very safe) transportation to all towns. A railroad provides limited service from Lome to Blitta and Kpalime.

Regional

Togo's air-conditioned airport officially opened in 1988. Air services to and from neighboring countries are available although delays are common. Air Afrique flies three times weekly between Paris and Lome, making stopovers in other African cities. KLM offers two flights a week between Lome and Amsterdam, with connections to New York. Sabena airlines also offers two flights a week between Lome and Brussels, with connections to New York. Air France has a weekly flight between Lome and Paris. No American carriers serve Lome.

Togo has limited rail transport, but the two-lane macadam roads to Cotonou, Benin and Accra, Ghana permit automobile travel. All driving

within the west African region is done on the right-hand side of the road. Cotonou and Accra are both about 3 hours by car from Lome; Lagos, Nigeria is approximately two hours beyond Cotonou, but road travel is not recommended to Lagos for safety reasons. It is also possible to drive to Burkina Faso via a serviceable paved road completed to Togo's northern border in 1980.

Togo's roads are not in good condition, with many potholes and bad stretches of road. Most country roads are dirt or sand routes. four-wheel drive vehicles are popular among the American community.

Communications

Telephone and Telegraph

France Cable operates a satellite communications system linking Lome, Europe and the U.S., 24 hours daily. Service is reliable and efficient (especially on weekends) but expensive. Phone connections to cities in Francophone Africa, such as Cotonou and Abidjan, can be made without too much delay, but calls to other African cities are difficult and sometimes impossible to make in a day.

PTT Lome, in conjunction with France Cable, provides commercial telegraph service 7:00 am to 5:00 pm, Monday through Saturday, and 8:00 am to noon, Sundays and holidays.

Telex service to all parts of the world is fair.

Radio and TV

Radio Lome broadcasts from 5:00 a.m. to midnight daily, with news broadcast in French and local languages. Radio Kara, in northern Togo, broadcasts 97 hours per week. Radio France International (RFI) has received approval to set up an FM transmitter in Togo. Privately-owned Radio Kanal Plus, the station most listened to by English-speaking expatriates, plays an eclectic selection of music, ranging from European classical to rap. The Voice of America (VOA) and the British Broadcasting Corporation

(BBC) transmit shortwave English-language broadcasts to West Africa.

Government-owned TV Togo (one station, one channel) was officially inaugurated in 1973. Programming is in color. Broadcasts are generally in French from 6:00 p.m. to 10:30 p.m. weekdays, and from noon to 11:30 p.m. on weekends. There is a prime-time newscast in French at 8:00 p.m., which is repeated at 10:00 p.m. TV fare features movies, music videos, documentaries, and some American TV situation comedy reruns dubbed into French.

The Ghana Broadcasting Corporation (GBC-TV) can be received with an outside antenna and booster. GBC-TV offers a wider variety of programs than TV Togo. Most programs are in English. They transmit from 5:00 p.m. to 1:00 a.m. on weekdays from 10:00 a.m. to 1:00 a.m. on weekends and holidays. Prime-time news is shown at 7:00 p.m. and retransmitted at 10:00 p.m. CNN International is featured from midnight to 1:00 a.m. American TV sitcom reruns are shown, as well as feature films.

There is a cable company in Lome that offers access to CNN International and Canal France International for those with special antennas. The company is currently negotiating with several other cable operators, including BET International.

Newspapers, Magazines, and Technical Journals

The government-owned *Togo Presse* is published six days a week. Most of the paper is in French with one page (half-page each) in Ewe and Kabiye, the major Togolese languages. Several independent French-language weeklies can be bought from street hawkers or local bookstores, which also carry the French dailies *Le Monde* and *L'Express*, and other French and European magazines. European editions of *Time*, *Newsweek*, and the *International Herald Tribune* are available. Air subscriptions of these publications are available, but they

are expensive and arrive with delays.

English-language books can be found on rare occasions in some local shops. Those who have children enrolled at the British School can borrow English-language books from their well-stocked library.

Health and Medicine

Medical Facilities

Bring eye-glass prescriptions with you in case you need emergency replacement. Bring any cleaning solution/equipment for contact lenses with you as you won't be able to find these in Lome.

Local dental care is adequate for routine care, such as fillings and cleaning, but you should complete any special treatment (endodontal, periodontal, crowns, or oral surgical problems) before coming.

The Lome city hospital is below American standards and is not used for health care by the American community. A small missionary hospital staffed by American surgeons is situated 2 1/2 hours north of Lome. The hospital has an adequate laboratory, x-ray unit and a clean, well-equipped operating room.

Lome's physicians, both generalists and specialists, are European or locally trained, and are called in for consultation on occasion. Obstetrical and diagnostic services are extremely limited. Prenatal care is substandard, and expatriates must be medevaced for delivery. Pregnant women are at increased risk from malaria.

Community Health

The level of sanitation in Lome, while good by African standards, is far below that of cities in developed countries. Water from the public system is contaminated and must be boiled and filtered. Most of the city is not served by a sewer system. Waste and contaminated water are discharged on the beaches. Garbage and trash are collected irregularly.

Local government funds for food inspection, insect control, and disease prevention are extremely limited. Therefore, locally butchered meat must be thoroughly cooked, and fruits and vegetables should be soaked in a suitable disinfecting solution.

Many diseases unknown in the United States are present in Togo. These include malaria, dysentery, typhoid fever, leprosy, Guinea worm, Schistosomiasis, skin diseases, and various intestinal parasites, to name a few. For expatriates living in Lome and observing ordinary sanitary precautions, most of these illnesses are not a hazard. Rabies is present in Togo and care must be taken to avoid infected animals. Childhood diseases such as measles, diphtheria, polio, and strep infections are common. With the advent of chloroquine-resistant *Falciparum* malaria to West Africa, malaria has been a major concern for expatriates. Malaria in Togo is a pervasive, year round disease. The mortality rate among the Togolese is high. Expatriates are extremely susceptible to the disease and constant attention to preventive medications and mosquito control is necessary.

Preventive Measures

Most Americans remain remarkably well in Lome by following a number of preventive measures that soon become routine:

Bring water to a rolling boil for 3 minutes and then filter.

Wash fresh fruits and vegetables well, and soak in chlorine or iodine solution for 30 minutes, then rinse with boiled water.

Maintain a clean kitchen; foods spoil quickly here—refrigerate and store foods carefully; ensure that servants are not disease carriers by obtaining a pre-employment medical exam; periodic follow up tests for parasites every 6 months, and chest X-rays every 2 years; also ensure that servants are carefully instructed in sanitary working habits.

Be sure that the entire family has received, and remains up-to-date on, recommended inoculations. Yellow fever is required for entry into Togo. Inoculations recommended include: measles, mumps, German measles, polio, hemophilus, meningitis, hepatitis, tetanus, rabies, and typhoid.

Teach children basic health and hygiene practices. Contact with infected soil causes hookworm infestation and larva migrate. Contaminated food and carriers can be the source of several intestinal parasites.

Machine dry or iron all clothes to prevent larval infestation of the skin.

Do not swim in or drink from bodies of water or streams of fresh water anywhere in Togo. Schistosomiasis due to infected snails is prevalent and enters through the skin. Guinea worm is contracted by drinking contaminated water.

The State Department's Office of Medical Services recommends that all Americans take mefloquine to prevent malaria. Mefloquine is an effective prophylaxis regimen in Togo and most other areas where there is chloroquine resistance. Mefloquine is safe and well tolerated when given weekly. Doxycycline has comparable effectiveness. However, those unable to take mefloquine or doxycycline should take chloroquine in combination with paludrine to prevent malaria.

Dosages for the prevention of malaria should begin 2 weeks before arrival, continue while in Togo and 4 weeks after you leave. While in Togo, screen houses, use mosquito nets at night; use repellents and aerosol sprays as necessary; and control local mosquito breeding areas. Malaria is a life-threatening disease.

NOTES FOR TRAVELERS

Air travel to Lome is the only feasible transportation for visitors coming long distances.

Visas for Togo are issued by the French consular officers in the countries with no Togolese diplomatic mission. Americans may enter Togo without a visa and obtain a resident visa after arrival.

Dogs and cats being imported into Togo must have a current rabies vaccination and a certificate of good health issued within 48 hours of departure. With the exception of Accra, which allows dogs to accompany visitors, entering British or former British areas en route to Togo requires special permits, which are difficult to arrange. If possible, avoid such areas and bring dogs and cats by air directly to Lome. Although available locally, pet supplies are very expensive.

Togo's currency is the CFA franc (Communaute Financiere Africaine) which is fixed to the euro. The exchange is about 656 CFA to one euro, and in January 2001 was 699 CFA to the U.S. dollar.

Commercial banks in Togo include: Ecobank, Union Togolaise de Banque (UTB), Banque Internationale pour l'Afrique Occidentale (BIAO), and Banque Togolaise pour le Commerce et l'Industrie (BTIC).

Commercial banks provide checking facilities, sell travelers checks, and will accept currency, drafts, and travelers and personal checks. Banks charge for service when a deposit in dollars is made to a franc account and do not return cancelled checks with periodic statements. While some larger hotels and restaurants may accept credit cards, not all types are accepted.

The metric system of weights and measures is used.

No ceiling is imposed on the amount of CFA francs you can legally import. However, permission must be obtained from the Togolese Government to convert CFA into dollars, except in the case of official personnel to whom the privilege is extended automatically.

Tunis, Tunisia

TUNISIA

Republic of Tunisia

Major Cities:

Tunis, Monastir, Kairouan

Other Cities:

Béja, Bizerta, Gabès, Hammamet, La Goulette, Mahdia, Menzil-bourguiba, Moknine, Nabeul, Qafsa, Sfax, Sousse

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated August 1994. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

TUNISIA is a land abounding in contrasts. It is not the stereotypical African desert country, even though it is enveloped by a large percentage of arid land. In fact, it was once called "the green land," describing the days when it served as a granary of Rome, and the wheat, wine, and olives introduced by the Phoenicians were sent north across the Mediterranean. Tunisia is Mediterranean in its affinity for the inland seas and in its proximity, both culturally and politically, to southern Europe. The countryside west of the capital city of Tunis is decidedly more European than African. The tree-lined roads are reminiscent of southern France, and the resort areas on the Gulf of Hammamet,

which include 700 miles of white sand beaches, are similar to those of the Côte d'Azur.

Historically, Tunisia has been at the crossroads between Europe and the Middle East. Bathed in centuries of Phoenician, Roman, and Arab civilizations, it was then westernized by several decades of French presence. The legacies left behind have helped to shape this land into the most modern and sophisticated country in North Africa. History still abounds in the ruins of Carthage, Utica, and Dougga, as well as in the modern cities of Tunis and Kairouan.

To a generation of Americans and British, Tunisia is the memory of major battles fought during World War II in North Africa. In the quiet greenery of its military cemeteries and scattered burial plots lie thousands of victims of the battles of El Alamein, Kasserine, Long Stop Hill, and Hill 609. However, the intervening years have softened the image, and new generations of Westerners are converging on Tunisia. Its closeness to Europe makes Tunisia even more attractive, for, in a short time, one can change continents, culture, and civilization.

MAJOR CITIES

Tunis

Tunis is built on the west bank of a shallow salt lake on Tunisia's northeastern Mediterranean coast. Originally a Phoenician trading post, it has been the capital of what is now Tunisia since the 13th century. It comprises two adjacent districts, widely different in character—the old Arab town (the *medina*) with its narrow, shop-lined streets, and the new French-influenced city of wide avenues and tall buildings. The *souks*, where anything from hand-woven rugs to used buttons can be found, the famous Zitouna Mosque, old residences noted for their tiles and blue grillwork, and narrow alleys that twist and turn are some of the memorable sights in the *medina*. The new city, developed during the French Protectorate of 1881 to 1956, resembles a typical western Mediterranean metropolis, and surrounds the old section.

Greater Tunis covers an area of more than 1,600 square miles. It has a population of 1.64 million, of whom perhaps 30,000 are Europeans, mainly French and Italian. French and Arabic are spoken; little English is heard.

Tunis has four seasons, with spring and fall the most pleasant. Summers are hot and dry, although sea breezes moderate the heat. Winters are rainy and damp, with days of brilliant sunshine intervening. Except at the highest altitudes, the temperature rarely drops below 40°F.

Agriculture remains a major source of income. Olives and cereals are the principal crops grown. There are several manufacturing companies in Tunis that produce carpets, cement, textiles and clothing.

Tunis is the center of government, and an active commercial center and seaport. The large international airport, Tunis-Carthage, is five miles from the city and, although there are many large, good hotels in town, the beach resorts on the outskirts attract most of the European visitors. Car rental agencies operate both in the city and at the airport. Detailed information about tours and hotel accommodations is available from Office National de Tourisme Tunisien at avenue Mohammed V, Tunis.

Currently, more than 60 countries maintain resident diplomatic missions in Tunis. The city has been the site of the Arab League's international headquarters since 1979.

Education

In Tunis, the American Cooperative School, designated as a U.S. Government-sponsored institution and established in 1959, has facilities for 160 children from kindergarten through tenth grade.

The teachers at American Cooperative are qualified members of the U.S. and international communities. Instruction is in English, although French is taught in all grades. The curriculum is similar to, and compares favorably with, those in U.S. schools.

Almost all American children in Tunis attend American Cooperative.

Girl Scout, Brownie, Boy Scout, and Cub Scout troops are very active. The groups hold weekly meetings after class hours. American Cooperative plans periodic activities for children, such as sporting events and dances. It also has an active Hyper Club for students in grades five through nine; activities have included a bowling night, ski trip, beach parties, and a sight-seeing trip to Roman ruins. Other extracurricular activities include computer training, choral and instrumental music, and school yearbook.

Public schools and private Catholic, Jewish, and Muslim schools are available at all levels, including high school. A few private French nurseries operate in the city and its suburbs.

Tunisian schools are similar to those in France. From an American point of view, they have a rigid curriculum and long hours of class work. Fluency in French is imperative, and some classes are conducted in Arabic.

Americans have sent their children, with mixed results, to one of the three French *lycées* operating in Tunis and La Marsa. The tuition is considerably less than at the American Cooperative School, but parents must pay for textbooks and supplies. Uniforms are required.

Many junior and senior high school children attend schools in Morocco, Italy, Spain. The U.S. Torrejon American High School in Spain is operated by the U.S. Department of Defense. It is a coeducational institution, with instruction in English.

Notre Dame International School in Rome, conducted by the Brothers of the Holy Cross, provides a liberal education in accordance with American tradition. The faculty is mainly American, and instruction is in English. Classes are for grades four through high school. Its sister school for girls is the Marymount International School. The faculty consists mostly of nuns of the Order of the Sacred Heart of Mary.

St. Stephen's School is a four-year coeducational school emphasizing college preparatory work. It is accredited by the New England Association of Schools and Colleges.

Recreation

Tunis and its environs offer good facilities for tennis, golf, hunting, scuba diving, and some fishing. Swimming, sailing, and windsurfing are also popular, but the beaches close to and in Tunis used for swimming have been found from time to time to be contaminated and unsafe. Americans should check with the U.S. Embassy Medical Unit before going to the beach. Tunis has three municipal swimming pools, two of which are heated in winter; the weather is suitable for outdoor swimming from June through September.

Public tennis courts are available in most of the suburbs, and private courts can be found in several places around the city and at resorts. In Tunisia, white is still worn on the court, but is not mandatory everywhere. Tennis balls should be brought from home; local ones are expensive and of poor quality.

Some Americans play golf on the 18-hole course at La Soukra, about seven miles from Tunis. The course is good from October to June, but very dry in summer. The greens are a mixture of sand, crushed olive pits, and crude oil—a new experience for most American golfers. Lunch and dinner are served in the clubhouse, which may also be used for large receptions. Annual dues are high, but nonmembers can play at daily or weekly rates. The magnificent new 18-hole course at the resort of Port El Kantaoui in northern Sousse, about a three-hour drive from Tunis, is good for a golf weekend. Created by eminent golf-scape architects, the course is star-shaped and covers four miles and 170 acres. Each of the 18 holes is on a different kind of terrain. There is a luxurious clubhouse and equipment to rent.

Softball games and jogging programs are enjoyed by the American community. In addition, bowling is

V-shaped office building in Tunis, Tunisia

Cory Langley. Reproduced by permission.

available at a standard six-lane alley at La Baie des Singes Hotel in a northern suburb of Tunis.

Saltwater fishing and scuba diving are popular sports. Little freshwater fishing exists in Tunisia because only one river flows year round. Motorboats may be rented, but no facilities are available for chartering boats for offshore fishing. Spearfishing with scuba equipment is prohibited, but is permitted while using snorkeling gear. No facilities currently exist for refilling scuba bottles.

Wild game is in season from September to June. A shotgun can be used for small-game hunting. Open-season dates vary only slightly each year and are published each August. Quail, duck, woodcock, snipe, partridge, and wild boar are the most common game. The latter is found in the mountainous regions close to the Algerian border. Hunt-

ers are limited exclusively to shotguns in the pursuit of game, and 12-gauge is the most common. Rifled slugs are required for boar hunting; buckshot is prohibited. Hunters must have a permit for the weapon, a hunting license, and insurance.

Camping is popular among Americans. Many undeveloped and a few developed campsites exist in the countryside. All equipment should be brought from home, as it is both scarce and expensive in Tunisia.

Kasr Sa'id, known as one of the most beautiful racetracks in North Africa, is about five miles from Tunis. The racing season begins October 1 and lasts through May. Purebred Arab and English racehorses—some locally bred and some imported—and imported trotters compete for the purses. Kasr Sa'id has a riding club; another is in La Soukra.

Sailing centers around the yacht clubs at La Goulette and at Sidi-bou-Sa'id, the exquisite artists' village near Tunis. Various types of boats, including cruisers, sailboats, sloops, and ketches are available. There is no single racing class of boats in Tunisia.

The visitor can make endless sight-seeing and picnic trips to the Roman, Punic, and Byzantine ruins scattered throughout Tunisia. Le Bardo Museum in Tunis contains the largest and most beautiful collection of Roman mosaics in the world, as well as Roman and Punic statues, coins, jewelry, and other interesting exhibits.

Tunisia's main places of interest are all within easy driving distance of Tunis, and are connected by good blacktopped roads. The port city of Bizerta is 40 miles to the north through pleasant countryside. The ruins of ancient Utica may be vis-

Cory Langley. Reproduced by permission.

Seaside complex on the Mediterranean in Tunis, Tunisia

ited just off the Bizerta highway. Sousse (87 miles from Tunis) and Sfax (166 miles) are central Tunisian seaports. The old Arab sections of both cities are still encircled by ancient ramparts and watchtowers. Sousse, a popular tourist attraction because of its beautiful beaches, has a small, excellent museum devoted to Roman and early Christian mosaics. Nearby are catacombs as extensive as those in Rome. Just north of Sousse is the huge new complex called Port El Kantaoui, with its 18-hole golf course, magnificent harbor, luxury hotels, villas, riding school, tennis courts, pools, and beaches.

Many other smaller resorts and tourist centers can be visited. Tunisia is continuing an extensive program to improve tourist facilities throughout the country, including attractive modern hotels ranging from first class to economy. Ain Dra-

ham, in the cork and oak forests of the Kroumirie Mountains 110 miles west of Tunis, offers a change of scene and climate. At an altitude of 2,600 feet, Ain Draham is pleasantly cool in summer and often has snow in winter. It offers excellent boar hunting. About an hour south of Tunis are the picturesque seaside towns of Hammamet and Nabeul where one can swim off broad sandy beaches. At Nabeul, Tunisian artisans work on rugs, baskets, and their famous pottery.

About 350 miles south of Tunis is Djerba, a palm-covered white sand island, which retains much of the original Arab architecture. According to local tradition, it was the home of the indolent, dreamy *lotophagi* (lotus eaters) of Homer's *Odyssey*. On the island is a Jewish colony, which may antedate the Diaspora. Its beautiful synagogue at Hara Kebira is well worth a visit.

The oases of Tozeur and Nefta, which produce fine dates, are 310 and 350 miles, respectively, southwest of Tunis on the Algerian Sahara border and on the edge of the extensive Chott Djerid, a dry salt lake. Tozeur has, perhaps, the most luxurious oasis. Its 200 springs feed thousands of the best date palms. Tozeur's buildings are built with unfired yellow bricks; the town can be toured on donkey or camel. Nefta's oasis resembles a bowl. The town, made up of sand-colored homes and holy places, is situated on a plateau. A guide is needed for a trip through the oasis on donkey.

Motor trips to Djerba and the oasis country make pleasant four- or five-day journeys. The best time of year to visit these areas is from late fall to early spring. Daily flights to Djerba from Tunis are available all year.

Roman ruins are scattered throughout Tunisia. The ruins of Utica can be reached from Tunis or Bizerta. Utica was a Phoenician colony founded in 1100 B.C. After entering by a great arched gateway, the visitor will see the marble flooring of a mansion set in a garden. Mosaics depicting sea fish decorate a water basin and the pool of a former fountain. Remains of several other houses reveal decorated flooring of Phoenician, Roman, and Byzantine periods. Phoenician tombs contain interesting remains.

Carthage, historically the most famous ruins, is closest to Tunis—only 20 minutes by car. When the Romans, furious at humiliations inflicted upon them by the Carthaginians, conquered Carthage in 146 B.C., they razed and plowed it into the ground. Later they rebuilt the city, making it their provincial capital of North Africa. The Vandals further destroyed the city in 439.

More extensive ruins can be seen at Dougga (70 miles), Thuburbo Majus (32 miles), and Sbeitla (160 miles). Dougga was a major Roman city with paved streets. Its theater, built in A.D. 168 to seat 3,500, resounds again when classical plays and other performances are staged. El Djem, 125 miles south of Tunis, features a coliseum almost as large as the one in Rome.

Train and bus transportation is available to most sites, but public transportation may be uncomfortable or inconvenient for longer distances. It is an advantage to have a car for trips, although many local travel agencies and hotels now operate modern air-conditioned buses.

Entertainment

The theater season in Tunis is November through May. Two companies present a series of six to eight well-known French-language plays. The Tunis Symphony Orchestra gives monthly concerts from November through May, with guest soloists and touring groups appearing occasionally. Theater and symphony performances take place at

the Municipal Theater in downtown Tunis.

Tunis and its suburbs have about two dozen movie theaters that offer a wide selection of American and English films, with French dialogue dubbed in. Italian, Spanish, Mexican, and Egyptian films are also occasionally shown. Most films, however, are French produced. Cultural centers, notably the French and Tunisian, offer films at little or no charge to the public.

Many special occasions are celebrated in Tunisia. The Orange Festival of Cap Bon in January; the Festival of the Hawks in El Haouaria in April; music and dancing festivals in Hammamet, Djerba, Dougga, and Bizerta during the summer; the International Cultural Festival of Carthage in July; Monastir's Drama Festival in August; the spectacular Festival of the Sahara in November; and a number of other events which lure visitors from Tunis.

Restaurants in Tunis and environs are attractive and the food is very good. Among those recommended are the Strasbourg, the Hungaria, the Malouf, and Chez Slah. The national dish is *couscous*—semolina (a specially processed wheat) prepared with vegetables, meat, fowl, or fish, and a piquant sauce called *harissa* (hot red peppers). Another favorite local dish is *brik*, a thin, fried pastry envelope with an egg, meat, or tuna stuffing.

In the summer, outdoor dining and dancing places may be found along the coast. Many restaurants in the city are closed from mid-July to September, during the beach season.

The International Women's Club is an active organization providing services to the international communities. All American women and wives of U.S. citizens residing in Tunisia are eligible to join; one-third of the total membership is composed of people from other countries. The club eases the adjustment to life in Tunisia, and provides a

center for service projects and social activities.

Tunisians are kind and hospitable, and this is reflected in their warm style of entertaining. At nonofficial parties, informality is the keynote; meals are usually buffet style, with food always in great abundance. Tunisian Muslims generally do not eat pork, so alternatives must be provided when they are guests. Alcoholic beverages may be served, but soft drinks or fruit juices should also be offered.

Monastir

The seaport town of Monastir, the birthplace of former President Habib Bourguiba, is situated in northeast Tunisia, on the southernmost point of the Gulf of Hammamet. It is about 80 miles southeast of Tunis and just south of Sousse. A fort has existed on this point since the dawn of history, warding off invaders who threatened from the sea. Up until the end of the seventh century, Monastir—first as Rous Penna of the Carthaginians and later as the Roman Ruspina—has played an uninterrupted role as the defensive stronghold of the coastline. The area was further built up as a military fortification by the Aghlabites in the eighth century.

One building from this era—the *Ribat*—still stands today as a majestic reflection of the past. Built in the eighth century and then fortified and enlarged in the ninth and 11th centuries, the *Ribat* was originally a defensive fortress and a place for monastic seclusion. Today, the *Ribat* exudes the charm of a historical shrine. The Hall of Prayer, on the first floor, has been converted to a Museum of the Islamic Arts. A vast array of objects preserved from the past are displayed and carefully labelled.

Not only known as a military stronghold, Monastir was also a holy city from the 11th century onward. A number of sacred legends date from that era. One of the legends said that entry into heaven could be ensured with a three-day

stay in Monastir. Another legend, told by the Prophet himself, was that Monastir had the distinct privilege of containing a gate to heaven.

Monastir today uses its history and location to great advantage. As a seaside resort, it welcomes visitors to enjoy the sunshine and local curiosities. Since Tunisia's independence in 1956, the government has introduced an infrastructure that has rejuvenated the economy of Monastir. The Chraga quarter has been restored and a new roadway has been constructed. Located in the heart of Monastir, the Chraga offers craft shops (where the traditional arts of tapestry, pottery, basketwork, wrought iron work, and other decorative and practical items are displayed and sold), cafe terraces, and restaurants where visitors can try local specialties. The Habib Bourguiba Mosque, rebuilt recently at the edge of this quarter, is an example of classic religious architecture.

Nostalgia is found throughout Monastir. Leaving the *medina*, the visitor can't help but notice the high battlement walls flanked by square towers. These are the only parts of the 18th century ancient fortified enclosure that remain standing. The century-old streets also reveal ancient Monastir and its 12 gates. In contrast to the old parts of Monastir, the city is also proud of its modern buildings. Green areas, squares, and modern intersections adjoin the old areas. A convention center was recently built to house international meetings.

University life in Monastir is developing around schools of chemistry and dental surgery affiliated with the University of Tunis. There is also a residence hall for girls, a library, and a stadium that seats 20,000.

Monastir is becoming a favorite spot for the international film world. Franco Zeffirelli shot *Jesus of Nazareth* here, and, in 1981, a studio was constructed to film indoor scenes.

A number of festivals and cultural events are held in Monastir during the summer. From the end of July through the beginning of August, an international folk festival is held every other year. In the intervening years, there is an international theater festival. A fair and exhibition are held from August 1 through 15.

Hotels run along the coastline to the little fishing port between the two peninsulas. On Sidi Ghedamsi Island, linked to the coast by a causeway, is the tourist complex of Cap Monastir. The area boasts many different sporting facilities including a golf course, a marina, and a fishing port. Due to its proximity to the Skanes-Monastir airport, Cap Monastir is recognized as one of the area's most comprehensive tourist centers. Monastir's current population is 59,000.

North of Monastir, in a residential area, is the Presidential Palace of Skanes. The residence is richly decorated with Arabian ornaments, marble, and decorated earthenware. It is situated in the middle of an exotic park. Beyond the park lies the oasis of Dkhila, known for its palm wine. Hotels line the beaches of Dkhila, where numerous water sports may be enjoyed. Visitors can participate in windsurfing, water skiing, and sea excursions. Beginner's lessons in horseback riding, tennis, and other sports are given at the hotels by qualified instructors approved by the Ministry of Youth and Sports. At night, discotheques play the latest European and American hits, but the Tunisian folk customs of belly dancing and snake charming may also be enjoyed.

Kairouan

Kairouan is a city of 116,000, located 100 miles southwest of Tunis in the center of a vast plain. Kairouan is the third most holy city in the Islamic world, after Mecca and Medina. Founded in 670 by the warrior, Oqba Ibn Nafaa, it grew from a simple military outpost to the greatest cultural center of the Maghreb. During the Kharijite Revolt of 758-761, the city was pil-

laged, but restored during the Aghlabite Dynasty (800) on an even grander scale. The Aghlabites gave the city some of its most beautiful monuments. They developed all spheres of activity in Kairouan, and soon the city rivalled all other great civilization centers of the Mediterranean.

Kairouan (also spelled Qairawan) is comprised of an old city encircled by a high wall of uniform brick with many imposing doorways. The ramparts were built in 1052 by Al-Moezz, the Fatimite, and restored by the Husseinites in the 18th century. The modern city, on the other side of the ramparts, has conformed to an ancient architectural style evident in its recently completed cultural and commercial center.

Long a holy city to Muslims, Kairouan's religious vocation is evident everywhere. According to legend, seven visits to Kairouan equalled one to Mecca. The city is especially known for its mosques and tombs. Its Great Mosque is the most fascinating Islamic structure in Tunisia. Dating back to the eighth century, the mosque draws thousands of visitors in prayer and admiration. The Great Mosque is the focal point of the city's *medina*. The vast inner sanctuary stretches out like a fortified stronghold with its imposing architecture. From the entrance, one can see the marvelous archways and immense marble-laid courtyard. The columns, done in various architectural styles; the interior of the prayer hall; the bas-relief work; the floral and calligraphic designs; and the crystal chandeliers all make this mosque one of the most beautiful in the Muslim world. Kairouan is also endowed with 50 other mosques in its *medina*.

The proliferation of religious activities does not prevent the inhabitants of Kairouan from enjoying life. The joyous occasion of *Mouled* (or Mouloud), the Prophet's birthday, brings pilgrims from all around to the city to join in lighthearted celebration. In addition to the *makroudh*—small cakes made of hard

wheat paste stuffed with dates and soaked with honey—that are a year-round specialty of Kairouan, the city's women also prepare *assida*—a sweet dish—to mark the beginning of the festivities.

Kairouan is also known for its handicrafts. Metal engraving, weaving, and saddle-making are all carried out in the city. But, the most important handicraft which, along with the Great Mosque, has made Kairouan famous, is the art of carpet-weaving. The National Office of Handicraft encourages the development and production of carpets and has set up a quality control system whereby each carpet is examined by specialists in the control center before being granted the official seal of approval. The National Office of Handicraft houses a Museum of Rugs; the Museum of Islamic Art is located opposite the Great Mosque.

Lodging in Kairouan is pleasant and reasonably priced. The deluxe Aghlabite Hotel, on the city's outskirts, has a swimming pool, fine restaurant, and wooded grounds. Other hotels are located in the central city and play an important role in the activities of Kairouan. The range of restaurants in the city run from the deluxe to the corner cook-shop, giving the visitor a wide variety of local cuisine.

OTHER CITIES

BÉJA has a history dating to ancient times. Situated 65 miles west of Tunis in the Marjardah Valley, the city was the site of Vacca, a Punic town and Roman colony. Béja exports wheat and has been a major agricultural market since at least the first century B.C. Sugar refineries and an agricultural research station help employ the estimated 56,000 residents.

BIZERTA (also spelled Bizerte), on the Mediterranean, is Africa's northernmost town. Once the Roman city of Hippo Zarytus, there are reminders throughout the area of the various civilizations that suc-

ceeded one another. Oil refining and fish canning are the two principal industries. A beach resort, Bizerta is also a major exporting area and seaport. Bizerta exports fish, phosphates, iron ore, and cereals. The town is connected to Tunis, 50 miles southeast, by road and rail. Visitors will find cooler weather in Bizerta during the summer season. Its population is approximately 112,000.

GABÈS, (also spelled Gabis) located in east central Tunisia on the Gulf of Gabès, is 200 miles south of Tunis. It is a fishing port and center of an oasis known for date palms and textile milling. Founded by the Romans, Gabès was one of the chief Tunisian headquarters for the French Saharan garrison. The economy of the city was focused entirely on the needs of the army. Since then, Gabès has developed an infrastructure and industry that has made the city important throughout the country. A power station and an oil refinery have been constructed here. A large port and a railroad terminus link Gabès with the rest of Tunisia. The current population of Gabès is about 109,000.

HAMMAMET is a small fishing village which attracts numerous tourists each year with its marvelous gardens, and its luxurious hotels concealed behind orange trees, palm trees, bougainvilleas, and a thousand other perfumed plants. Located in northeastern Tunisia on the Gulf of Hammamet, at the southern base of the peninsula ending in Cap Bon, Hammamet is about 30 miles southeast of Tunis. The city's fort, built on the sea in the 15th century, has long arched passages, galleries, and square towers. In the main courtyard of the fort, there is a small museum of traditional costumes. During World War II, Hammamet served as the headquarters for the German general Erwin Rommel. Hammamet has an International Cultural Center where, during summer, there is an open-air theater and an International Cultural Festival. Hotels in Hammamet are built to blend in with the natural surroundings; there is an agreed maximum height

for buildings so as to not overshadow the natural beauty. Hammamet boasts clean beaches and a wide variety of leisure activities, including swimming, tennis, golf, and horseback riding. There are also terrace cafes, restaurants, shops, and two art galleries. Hammamet's population was about 51,000 in 2002.

LA GOULETTE (also called Halq al-Wādī and Goletta) is the port of Tunis, seven miles from the capital. Its harbor manages most of the country's imports and roughly half the exports, principally fruits, vegetables, iron ore, and phosphates. The city is a renowned bathing resort and residential area of Tunis. La Goulette boasts remnants of Hispano-Turkish battlements nearby. About 79,000 people live in the city.

MAHDIA, (also spelled al-Mahdiah) a fishing port and resort town, is 30 miles south of Monastir. The all-powerful Obaid Allah, known as the Mahdi, developed the town in the 10th century as a stronghold and capital of the Fatimite dynasty. Economic activities center around olive cultivation, olive-oil production, fishing, fish canning, and a thriving handicrafts industry. The population of Mahdia is about 44,000.

Ten miles southwest of Bizerta lies **MENZIL-BOURGUIBA** (also spelled Manzil Bū Rugaybah and formerly known as Ferryville). Named after Tunisia's president, Habib Bourguiba, the town is a modern one. Much of its growth took place during the French Protectorate (1881–1956) with the development of adjacent Sidi Abdallah's naval base and dockyard. Today Menzil-Bourguiba is a heavy industry center. Roads and a railway link the town with Bizerta. The population is about 49,000.

MOKNINE is a market town of 49,000, located 13 miles south of Monastir. Part of its population is Jewish, and the traditional jewelry items they make are among the exhibits in the town's small folk museum.

Jason Laure. Reproduced by permission.

Modern Carthage

NABEUL (also spelled Nabul) is the administrative capital of Cap Bon, located at the southern end of the base of Cap Bon Peninsula, about 40 miles southeast of Tunis. Ancient Phoenician ruins are found along the shore; the Romans destroyed the Phoenician settlement in 146 B.C., later rebuilding it as Neapolis. Today, it is one of Tunisia's most important towns because of its special activities: ceramics, embroidery, and pottery; perfume distilleries using the oldest formulas; needlework and lace. Pottery is an art dating back to Roman times; there are hundreds of workshops in Nabeul producing both glazed and porous pottery. Functional utensils, curios, jars, and ornaments are made. The workshops of blacksmiths, weavers, embroiders, and lacemakers may also be visited. The city's weekly market—Le Vendredi—offers regional specialties, including tapestries, curios, agricultural products, and camels. The current population of Nabeul is 57,000.

QAFSAH (also spelled Gafsa) is a popular irrigated fruit-growing oasis, in the eastern part of the country, about 115 miles west of Sfax. The original town was destroyed by the Romans, rebuilt, and became a center of Byzantine, Arab, Berber, and Ottoman leaders. Today, Qafsah is a major shipping center for phosphates. The area is populated primarily by nomads and cultivators of olives, dates, and cereals. Qafsah's population is roughly 80,000.

SFAX (also called Sāfagis) is Tunisia's second largest city and a bustling commercial center. Situated in eastern Tunisia on the Gulf of Gabès, it is about 150 miles south of Tunis, and is the terminus of the Sfax-Gafsa railroad. The town was bombarded by the French in 1881 prior to their occupation of Tunisia and during World War II, when it was used as an Axis base until captured by the British in 1943. With Gabès farther south, the city serves

as a major port for the export of phosphates, olive oil, cereals, and sponges. Offshore oil has been discovered in the area. Once the site of Phoenician and Roman colonies, Sfax was briefly held by Sicily (1150) and by the Spanish (16th century), and was later a stronghold of Barbary pirates. The current population of Sfax is 266,000.

Fishing and tourism provide the economic mainstays of **SOUSSE** (also spelled Sūsah and Sousa), located in a convenient central position on the eastern coast 75 miles south of Tunis. Once the ancient Phoenician trading post of Hadrumetum, Sousse has kept its ancient walled city in original form. The eighth century *Ribat* was built as one of the fortified monasteries defending North Africa from Christian attacks. Its watchtower gives a splendid view of the *medina*, as does the garden terrace of Sousse's museum. The city grew rapidly under the French Protectorate

(1881–1956), and today is a prominent trade area. Sousse is a popular resort, with beautiful sand beaches, opportunities for horse and camel riding, and many excellent hotels. It is an export point for olive oil, and its ancient remains include Christian catacombs. About 153,000 people live in Sousse.

COUNTRY PROFILE

Geography and Climate

The Republic of Tunisia lies at the northernmost tip of Africa. Together with Morocco, Algeria, and northwestern Libya, it forms the Maghreb (the Arabic name for the northwest), a place of common history, language, ethnic groups, and culture.

The country's area of 63,378 square miles is slightly smaller than Missouri. Tunisia has 1,000 miles of Mediterranean coastline. Northern Tunisia is the most heavily populated part of the country, and is mountainous and relatively fertile, although elevations rarely reach 3,000 feet. The north also claims Tunisia's one major river, the Majardah. The central section of the country is semiarid highland with poor soil, little rainfall, and scant population. The south is arid and barren, except for occasional oases, as it merges with the Sahara. The desert makes up about half of Tunisia's total square miles.

Tunisia's climate is temperate, with mild winters and hot summers. The countryside becomes dry and brown in summer and quite green in winter. Summers in Tunis, the capital, are characterized by high temperatures and low humidity; evenings are pleasant. Winters are short, rainy, humid, and chilly. The temperature rarely is below freezing. Snow occurs in the northwestern mountain region. From mid-May until mid-October, the sky is usually cloudless and little rain falls. In an

average year, only 120 days have any rainfall.

Population

Tunisia's population is estimated at 9.7 million; 98 percent are a mixture of Berber and Arab origin, and about one percent are European. The French comprise the largest foreign community, and the influence of the French language and culture is still quite strong. The population is young and increasingly urban.

In the 15-year period following the country's independence in 1956, the Tunisian population increased by 45 percent. As jobs are sought in urban areas, there has been a decrease in the rural population of Tunisia; in 1995 that decrease was 38 percent.

Islam is the state religion, and nearly all Tunisians belong to the orthodox Sunni sect. Other religions are tolerated; Christian and Jewish denominations continue to exist.

In 1995, an estimated 67 percent of Tunisians age 15 and over could read and write. Tunisia's relatively high literacy rate is due in large part to the strong emphasis placed on universal education. The official language is Arabic, but French is widely spoken in urban areas and is used by the government as a second working language.

Government

After 75 years of French protectionism, Tunisia gained independence in 1956. Tunisians then voted to abolish the monarchy. Today, Tunisia has a republican form of government with strong executive powers.

Habib Bourguiba, who had served as Tunisia's president since 1957, was ousted from power on November 7, 1987. The new president, Zine el Abidine Ben Ali, instituted a number of political reforms to curb the excesses of his predecessor and calm domestic unrest. One of the most significant political reforms

was the legalization of opposition political parties in 1988. The president is elected to five-year terms and appoints the prime minister, the cabinet, and 23 provincial governors. In 1994 and in 1999, President Ben Ali was reelected without opposition. The Constitutional Democratic Party is the dominant political party of Tunisia.

Legislative authority is vested in a 182-member Chamber of Deputies. Elections to this legislative body are held every five years. In 1994 the government changed the electoral code to guarantee that the opposition would be able to win seats.

The former religious tribunals have been integrated into secular courts to form a single three-level judiciary: first-instance courts; courts of appeal; and the highest judicial body, the Court of Cassation, which ultimately resolves cases not solved in the lower courts. All judicial proceedings are in Arabic. In addition to the existing auditing court, there is also an administrative jurisdiction.

Women share equal rights with men on the basis of a personal-status code established shortly after independence. This code is considered a model for Arab and developing Third-World countries. Polygamy is illegal.

The Tunisian flag is red, with a central white disc containing a red crescent and a red star.

Arts, Science, Education

Tunisia's cultural and artistic heritage is a blending of Phoenician, Roman, Arab, Turkish, French, and Berber influence. Museums have magnificent collections of Roman mosaics and statues, Phoenician coins and jewelry, and early Arab manuscripts. Archaeological sites scattered through the country are constant reminders of the abundance of Tunisia's legacy. Remains of Punic ports; a Roman coliseum, aqueduct, numerous temples, and

villas; and Turkish forts are all part of the country's living past.

The University of Tunis was established in 1960 under the Ministry of National Education. Entry requires passing the baccalaureate and is very selective. Most of the faculties are in the Tunis metropolitan area; others are in Sousse (medicine), Sfax (medicine), and Monastir (science). Institutes affiliated with the university also provide advanced study in public administration, management, press and communications, commerce, languages, and education.

The university, however, only represents the pinnacle of an educational system that has expanded rapidly since independence. Today, more than a million students, almost 90 percent of school-age children, attend public schools. To earn the high school baccalaureate degree they must attend at least 13 years of school and pass the qualifying exams. This achievement-oriented system results in a high literacy rate (67 percent). Concurrently, with the expansion of education, the government promoted the Arabization of instruction. Thus, many students who do not continue their educations beyond the primary level are literate in Arabic rather than French.

Commerce and Industry

The Tunisian Government has prepared a series of economic development plans aimed at raising the standard of living, diversifying agriculture, and promoting industry. Economic planning is centered on resolving Tunisia's persistent unemployment and trade deficit problems.

The largest economic sector is services, accounting for about 54 percent of GDP. Tourism, the largest source of foreign exchange, was severely affected by the Gulf War in 1991, but has since recovered. The manufacturing and industry sectors

comprise 32 percent of GDP. Agriculture comprises about 14 percent.

Oil exports provide Tunisia with a large source of foreign exchange earnings. National oil production from existing fields peaked at 5.4 million tons in 1981 and now remains roughly at 3.4 million tons. Oil exploration is currently being conducted throughout the country, and involves several American firms. In 1967, the oil field at El Borma, in southern Tunisia, was established. It has 55 million tons of recoverable reserves and currently produces over three million tons. The offshore Ashtart field, in the Gulf of Gabès, produces more than 20 percent of Tunisia's annual crude oil production.

Since 1981, there have been new finds at Zarzis and El Franig-Sabria. Natural gas production is limited at present, but royalties from Algerian gas flowing through Tunisia and possible future production from the large offshore field at Miskar and several recently discovered fields promise substantial quantities of natural gas, as well as some oil.

Phosphates and some iron, fluoride, barite, lead, and zinc are also exploited. The government-owned phosphate company is the largest company in Tunisia in both number of employees and capital investment.

New industries, including textiles; paper pulp manufacture from esparto grass; a steel mill; an oil refinery; assembly plants for trucks, automobiles, and tractors; as well as the production of enriched phosphate fertilizers, have been created. An industrial complex has been developed at Gabès, based on a phosphoric acid plant, and a new port was established there in 1972. Additional fertilizer and chemical plants are being planned for the Gabès area.

Tourism is also an important foreign exchange earner for Tunisia, providing the largest source of foreign exchange earnings. Large

investments in this sector from other Arab countries have led to rapid expansion of tourism infrastructure. Over 3.8 million tourists visit Tunisia annually, spending over \$1 billion.

Tunisian artisans, under the leadership of L'Office National de l'Artisanat, are striving to preserve their traditional crafts, including rug making, pottery, jewelry, and ironwork.

Tunisia is meeting the challenges of economic problems and population pressures with a determination that has attracted interest from many aid-giving countries. Other than from the U.S., which has been an important source of such aid, there has been active interest in Tunisian development from Germany, Kuwait, France, Italy, Canada, Sweden, Norway, the former U.S.S.R., the People's Republic of China, Bulgaria, Belgium, and many others.

The Chambre de Commerce is at rue des Entrepreneurs, 1000 Tunis.

Transportation

Tunis Air and Air France fly daily direct flights to Paris. Daily flights to Rome are provided by Tunis Air and Alitalia. Most of these flights can be coordinated with flights from Paris or Rome to New York or Washington. KLM flies weekly to Amsterdam, and Tunis Air flies there twice weekly. Several flights to Frankfurt are available on either Lufthansa or Tunis Air, and there are six weekly flights to Casablanca. Five international airports provide service—Tunis/Carthage, Monastir, Jerba, Sfax, and Tozeur.

Personal air travel from Tunis may be paid for in Tunisian dinars which have been purchased at a bank with foreign exchange. In this case, the official exchange attestation must accompany the dinar payment. Tickets may also be purchased with a check from a convertible dinar account. All airlines accept the American Express card. Some travel agencies and airlines accept other credit cards as well. Costs for

short trips are about 30 percent higher than for longer flights. No direct sea transportation is available from Tunis to the U.S., but weekly sailings of large, comfortable ferries to Naples, Genoa, and Marseille are possible on Italian (Tirrenia), and Tunisian lines. Crossings take 22 to 24 hours, and reservations must be made months in advance if a vehicle is involved. Those interested can contact NAVI-TOUR, 8 rue d'Alger, Tunis, for information on the Italian and Tunisian lines.

Local transportation is crowded and only marginally satisfactory because of overcrowding and unreliable schedules and equipment. Buses travel the more heavily populated sections of Tunis, and electric trains and buses serve the outlying suburbs. Service to most areas ends by midnight.

Taxis are plentiful in Tunis but, can be almost impossible to find at certain hours and in some areas. They carry a maximum of three passengers. Fares are metered and inexpensive within the city. For a trip to the suburbs, the price should be predetermined. All the larger Tunisian cities are connected by well-kept, hardtop roads. The railroad system covers almost 1,400 miles, and serves all of the large cities; long-distance bus service also exists.

Communications

Local and long-distance telephone service is good, although occasional interruptions occur. Direct dialing is available for many international calls. Overseas calls are expensive when initiated in Tunisia, but are only about half the price if the call is made from the U.S. Telegraph service is worldwide, and also expensive. Transit time for international mail is 10 to 14 days.

Local radio stations broadcast in both French and Arabic on standard AM frequencies. There are local FM stations; one broadcasts in Arabic, another in French. A shortwave radio offers wider reception, with

broadcasts from Voice of America (VOA), British Broadcasting Corporation (BBC), and the Armed Forces Radio Service.

A few television channels broadcast in Tunisia. A domestic channel features programs mainly in Arabic. A second TV channel features 90 percent of its programming in French, following a cooperative agreement which was signed with the France II TV channel. Most of the programs are in color. An Italian channel, RAI 1, offers programming relayed from Italy. Both the Arabic-language channel and the Italian channel operate daily from the afternoon through late evening. The French-language international channel operates from 11:00 a.m. until midnight, except on weekends when it begins in the afternoon.

Only sets incorporating the PAL/SECAM system are suitable. They may be purchased locally or in Europe.

The *International Herald Tribune* arrives in Tunis from Paris late on the same day of publication, and is available at newsstands or by subscription. International editions of *Time* and *Newsweek* may be purchased within a few days of publication. Several French- and Arabic-language dailies are published in Tunis; daily newspapers from France are also available. The U.S. Embassy library is open to all, and facilities at the British Embassy, United States Information Service (USIS), and American Cooperative School may be used with permission.

Health

Tunisian physicians represent almost all medical specialties. Most have received all or part of their training in France. Many do not speak English. Small private hospitals (clinics) and laboratory and X-ray facilities are available in Tunis. Many American women have their babies in Tunisia, although *primiparas* (first pregnancy/delivery) are strongly discouraged from delivering in Tunis.

Local pharmacies stock a wide range of French products. A number of dentists provide adequate general dental services. Currently, no orthodontists or periodontists practice in Tunis. There are no facilities for handicapped individuals. Public sanitation standards, although constantly improving, are still somewhat lower than in Western Europe. Trash and garbage are picked up daily, including Sunday, in Tunis and its suburbs. A municipal sewage system has been enlarged and made more efficient. Drinking water should be boiled.

Americans generally maintain good health in Tunisia, but diseases such as tuberculosis, intestinal infections, intestinal parasites, hepatitis, and schistosomiasis require some precautions. Raw fruits and vegetables must be properly cleaned, and raw shellfish avoided.

Malaria is present only in certain remote areas, and malaria suppressants, in most cases, are not required.

Mandatory inoculations include those for yellow fever (within six days of traveling from infected area). Recommended immunizations are for polio and diphtheria-tetanus, plus gamma globulin for hepatitis. Rabies pre-exposure immunization is also advised.

Clothing and Services

A normal Mid-Atlantic wardrobe is suitable for Tunis. Lightweight, washable clothing is worn from May through October; light woollens are recommended for the rest of the year. Winters are cold, damp, rainy, and windy, making raincoats with zip-out linings very practical. An umbrella and rain boots are also useful.

Clothing can be purchased locally, but the choice is limited and the prices are high, especially for imported clothes. French and British materials are good, and available most of the time. Although

there are good seamstresses and tailors in Tunis, their work is expensive. Locally made sandals and summer shoes are comfortable and inexpensive, but not durable.

Children need few heavy winter garments. Sweaters and warm jackets are the most practical choices. A substantial wardrobe (especially of shoes) is advised.

Meat, poultry, fish, excellent fresh vegetables, and fruit are available year round. Tunisia has no commercial frozen food industry yet, so fruits and vegetables are available only in season. Prices are set by the government and posted in the marketplace. With the exception of bread and some dairy products, which are subsidized by the government, food is as expensive as in Washington.

Pasteurized and sterilized milk, eggs, and other dairy products are available, but occasional shortages occur. Tunisian and Italian brands of sterilized milk are good and have a long shelf life. Few imported foods are sold locally; they are expensive, and supply is sporadic.

The colorful central market in downtown Tunis has hundreds of stalls where produce, meat, fish, and dairy products are sold. Pork can be purchased there and at a few other locations in the Tunis area. Smaller central markets are found in most neighborhoods. Several large chain stores offer self-service grocery facilities.

Most services are available in Tunis. Shoe repair, dry cleaning, beauty care, radio repair, etc., all are easily obtained, but some services are not up to American standards. Dry cleaning is expensive and, occasionally, clothes are damaged in the process. Few commercial laundries exist.

Domestic Help

Domestic services are available and inexpensive. Most servants speak French; few have any knowledge of English. The employer sometimes

provides food, lodging, and uniforms. Local customs require additional expenses, such as daily transportation costs and holiday gratuities.

Domestics are not included in the Tunisian government's social security system, but some customs must be respected; e.g., provision for one free day a week for full-time help, and 12 days, paid vacation after one year of employment. No regulation exists for separation pay, although it is usual to give a week's salary for each year of employment.

NOTES FOR TRAVELERS

No nonstop or direct flights are available between North America and Tunis. Air travel from the U.S. to Tunis is via Frankfurt, Paris, or Rome. Sea travel is via Marseille or Naples.

Valid passports are required for all visitors arriving in Tunisia; visas are not required for a stay of four months or less, or for nationals of the United Kingdom, France, Germany, Japan, the U.S., and certain other countries.

There are no restrictions on the importation of pets but, to avoid administrative delays, pets should accompany owners when possible. Owners of dogs and cats must provide a good health certificate, a rabies vaccination dated more than one month and less than six months before the entry date and (for dogs) a distemper certificate. Adequate veterinarian services are available in Tunis.

Religious denominations represented in Tunis are Muslim, Roman Catholic, Anglican, Jewish, and Greek and Russian Orthodox. Catholic and Protestant services are in French and English. Mass is said in English at St. Jeanne d'Arc Church, located near the U.S. Embassy. St. George's Church, in the *medina*, is Anglican and holds Sunday services

in English. Jewish services are conducted every Friday and Saturday at the Grand Synagogue, 43 avenue de la Liberté.

The time in Tunisia is Greenwich Mean Time plus one hour. The official currency is the dinar, divided into 1,000 millimes. Among the foreign banks represented by branches are Bank of America and Citibank. Tunis is the main financial center. The metric system of weights and measures is used.

Special Note: Visitors to Tunisia will find no restrictions on travel within the country, but care must be exercised in visiting certain frontier regions.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated July 1996. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

UGANDA, once called the "Pearl of Africa," is a nation that has, in little more than two decades, been battered into near ruin by rampant military violence and blatant abuses of the most basic human rights. It has suffered a succession of brutal, dictatorial regimes, widespread atrocities, and crushing starvation and disease.

Raging terrorism affected every segment of society until finally, in January 1986, rebel forces overthrew those in power and a new leader, Yoweri Museveni, promised the formation of a non-aligned government committed to the restoration of peace and stability. Museveni's National Resistance Movement

largely put an end to the human rights abuses of earlier governments and initiated substantial political and economic reforms. A new constitution was ratified in 1995 by a popularly elected constituent assembly.

The United Kingdom, which had established hegemony over Uganda in the 1890s, granted full internal self government to the country in March 1962. Political struggles soon began, and were intensified during the turbulent rule of the infamous Idi Amin (1971–1979). Both Great Britain and the United States severed diplomatic relations with Uganda, following open threats and brazen incidents of human rights violations. The U.S. Embassy was reopened in the capital city of Kampala in 1981, but tough American criticism of continuing abuses in Uganda created mounting tension. With a new government in place, a calmer atmosphere prevails.

Insurgent groups, with support from Sudan, harass government forces and murder and kidnap civilians in the north and west. Due to Sudanese support of various guerrilla movements, Uganda cut off diplomatic relations with Sudan in 1995.

MAJOR CITIES

Kampala

Kampala began as a settlement near the palace of the *kabaka* (the former absolute monarch of the Baganda) at Mengo, and in the 20th century developed into the largest town in Uganda, dominating the country's political and economic life. It was granted city status during the nation's independence celebrations in October 1962. An estimated 774,000 people live in the metropolitan area.

Kampala lies on the shores of Lake Victoria, about 20 miles north of the equator, at an altitude of close to 4,500 feet. It is built on a number of low-lying hills, surrounded by green, rolling countryside dotted with small farms. These farms grow mostly plantains, the main subsistence crop and staple food.

Along Kampala's central streets, modern stores and office buildings—many of them multi-storied—mix with old-style shops. On Janan Luwum Street and Nkurumah Road, near the main market, are many small shops that trade in a variety of goods. On the other side of the main street, called variously along its length Bombo, Kampala,

Jason Laure. Reproduced by permission.

Street in Kampala, Uganda

or Jinja Road, are large government structures, the most important of which is the Parliament building with its Independence Arch.

Residential areas, located on a series of hills surrounding downtown, had made Kampala one of Africa's most attractive capitals, but more than two decades of neglect is sadly apparent. Some effort has been made to restore the city to its once verdant beauty. Within the city are Kololo Hill (easily recognized by the tall television mast), and other hills such as Nakasero, Makindye, Makerere (the home of Makerere University), Mulago, Mbuya, and Muyenga. Outside of Kampala, still more hills are dominated by Namirembe Cathedral (Anglican), Rubaga Cathedral (Roman Catholic), the Baha'i Temple, the former *kabaka's* palace, and Kibuli Mosque.

Education

The Lincoln International School, assisted by the U.S. Department of

State's Overseas Schools Program, serves the international community. It follows the American curriculum for kindergarten through the twelfth grade. The school is coeducational.

Extracurricular activities include drama, yearbook, choir, field trips, swimming, soccer, softball, basketball, and volleyball. The school also offers numerous clubs.

Most children of expatriates (in upper grades) attend schools in the U.S., Europe, or Kenya.

Recreation

Club membership is necessary in Kampala to use facilities for tennis or golf, but such membership is inexpensive and available. There is an 18-hole course at the Kampala Golf Club.

The Kampala Club has good facilities for tennis and squash, and also has a swimming pool which is gen-

erally in usable condition. Swimming in Lake Victoria is dangerous because of the likelihood of contracting bilharzia, a debilitating parasitic disease.

The Nyanza Sailing Club sails from two locations in the Kampala area on Sunday afternoons and holidays.

Soccer is a national sport and attracts large crowds for weekend matches.

The Kenya Highlands to the east and the mountains of southwestern Uganda provide a change from the weather of Kampala. Cold-weather gear for an extended trek to the higher altitudes may be useful. These are both six-to-eight-hour drives. The accommodations in Uganda are not good at present, but rehabilitation is going on. In Kenya, pleasant country hotels offer modest facilities for rest and relaxation. The capital city of Nairobi provides an opportunity to enjoy excellent

shopping for foodstuffs, household items, African handicrafts, as well as offering night life and other diversions. Nairobi is nine to 10 hours by road and 90 minutes by plane.

Uganda is the home of three of the best game parks in Africa. All are open and operating, and extensive repairs are in progress. Some animals are beginning to return to Kabalega National Park from the Democratic Republic of the Congo (the former Zaire) and other nearby areas where they took refuge during the 1979 Liberation War. Poaching is still a problem and the animals are quite shy. The game park also offers the opportunity of seeing a spectacular cataract in which the Nile forces its way through a 19-foot cleft in the rocks. Chobe is the nearest operating game lodge and it offers comfortable lodgings. No scheduled launches go to the falls, but arrangements can generally be made at Paraa Lodge.

Kidepo Park in northeastern Uganda contains land of great beauty, and also some animals which are not observable anywhere else in Uganda. It is, however, remote and difficult to reach. Rwenzori National Park in the west still has some surviving large animals.

Mombasa (Kenya), on the Indian Ocean, is two-to-three days' travel by road. It has pleasant beach accommodations and many tourist attractions. The islands of Madagascar, Mauritius, and the Seychelles are also nice places to visit. Frequent air service from Nairobi reaches the coastal resort areas as well as the islands.

Entertainment

Entertainment is limited in Kampala. The Alliance Française offers French films with English subtitles on Saturdays, and the French Cultural Center has educational programs. Amateur theatricals in English and in local languages are shown at the National Theater.

The British High Commission Social Club sponsors an active

Darts League that meets on Fridays during the equivalent of "happy hour." A rugby club meets twice a week on a pitch near the stadium. Golf, tennis, fishing, and sailing are common entertainments for Americans and Europeans as well as for many Ugandans.

A small, but good, museum is a must for newcomers. It portrays the history, culture, and economy of Uganda.

Kampala's active professional soccer league plays daily games from January through May at Nakivubo Stadium.

Entebbe

Entebbe, situated on the equator 22 miles south of Kampala, is Uganda's other principal city, but its population (43,000) is lower than that of other centers. It was administrative capital of the country from 1894 to 1962 and, although most government offices have moved to the capital, the State House (residence and office of the president) remains at Entebbe. It is the center of a region that produces bananas, coffee, and cotton.

Several attractions are located in Entebbe, among them botanical gardens, a veterinary research laboratory, and a virus research institute. The city is a transportation hub for eastern Africa, with an international airport and shipping connections to Kenya, Tanzania, and other parts of Uganda via Lake Victoria.

Entebbe figured prominently in international news in July 1976, when the passengers and crew of a hijacked airliner were rescued in a dramatic Israeli commando raid on Entebbe Airport. An elderly British citizen died, and it was at this time that the United Kingdom broke diplomatic relations with Uganda. Gen. Idi Amin Dada, now in exile in the Middle East, was president and dictator at that time.

OTHER CITIES

JINJA, 50 miles east of Kampala, is Uganda's second largest city, with about 65,000 residents. Built around the Owens Falls dam and power station, it is the country's chief industrial region. Jinja is home to several industries, including the first steel-rolling mill in eastern Africa, a copper smelter, a brewery, tannery, textile factory, and large sugar plantations. The city is a major transportation center for railroads and lake steamers.

KABALE, the highest town in the nation at 6,600 feet above sea level, is 200 miles southwest of Kampala. Trips to nearby lakes, especially to Lake Bunyonyi, are considered worthwhile for tourists. The current population is 29,000.

KISORO, in the Mitumba Mountain range of the extreme southwest, is a popular tourist spot. The city of 10,000 is the starting point for expeditions to Mounts Muhavura and Mgahinga. Numerous lakes and Ruwenzori Park are in the area.

Historic Fort Mosaka is in **MASAKA**, 80 miles southwest of Kampala. A market town and commercial center, the city produces processed meat and fish, beverages, footwear, bakery products, furniture, clay products, and glass. It is a critical commercial area for the surrounding coffee growing region. The population is approximately 50,000.

Mount Elgon dominates **MBALE**, the country's third largest city and the hub of the eastern region. Round trips to the mountain, an extinct volcano, take about three days; climbs in the rainy season may be difficult. Mbale is an agricultural trading center and the site of one of Uganda's principal dairies. The current population is about 54,000.

MBARARA is a center of cattle ranching in the southwestern region of Uganda. The famous Ankole cattle are raised in the area.

The city is the headquarters of a large army camp and base for the Lake Mbuho Game Reserve. Located 167 miles southwest of Kampala, Mbarara is noted for its woodcarving, weaving, and pottery-making. Industries produce soap, oils and fats, textiles, beverages, processed food, rope and twine, and plywood. It has approximately 41,000 residents.

MOROTO, in the extreme northeast near the Kenyan border, is the home of the Karamojong people. Cattle are vital here, and disputes with Kenyan border tribes over cattle raiding are common. The proud, traditional Karamojong should be approached with care, ideally with a knowledgeable guide. The Karamojong produce various crafts including pottery, woodworking, weaving, and clay products. The current population is 14,000.

TORORO is a major road and rail junction in the far eastern region, near the border with Kenya. This town of 44,000 lies at the base of a hill that dominates the area.

COUNTRY PROFILE

Geography and Climate

Uganda occupies a fertile plateau in the center of Africa at an average altitude of 4,000 feet. The plateau's edges are turned up on the east by Mt. Elgon (14,178 feet) and the Kenya highlands, and on the west by the Rwenzori Mountains (16,791 feet). The country is crossed diagonally from southeast to northwest by the Nile River, which begins its journey to the Mediterranean near the city of Jinja on Lake Victoria, about 50 miles from Kampala. With an area of 91,000 square miles, Uganda is roughly the size of Oregon.

The temperature ranges from a high of 80°F to 85°F at noon to 60°F to 65°F at night. A greater range of

Mosque in Kampala, Uganda

© Jack Fields/Corbis. Reproduced by permission.

temperature change occurs during the course of the day than between seasons. The hottest interval is generally from October through March, and the temperature is usually hot in the sun from 10 a.m. to 4 p.m. anytime of the year.

Annual rainfall averages 63.9 inches. During the rainy seasons—March/April and September/October—the weather is cool and overcast. Frequently heavy thunderstorms last 30 minutes to an hour. It seldom rains for an entire day, even during the so-called rainy seasons. Wind gusts accompanying downpours are sometimes strong, yet seldom damaging. Red murrain dust can be a problem dur-

ing dry periods, but this affects city dwellers primarily when they venture beyond the town and leave the asphalt roads.

Virtually every residence has insects of various sizes, but the ever-present lizards provide “exterminator” service.

Population

The population of Uganda is 24 million. Africans of four racial groups—Bantu, Nilotic, Nilo-Hamitic, and Sudanic—constitute most of the populace. Of the four, the Bantu are the most numerous and include the Baganda, the largest single ethnic group, with more than 3.5 million

members. The Iteso constitute the second largest group, followed by the Basoga, Banyankore, and Banyarwanda, all with populations of more than 500,000.

At one time, the Indo-Pakistani comprised a large part of the population. Most were deported during Amin's rule, but some returned as skilled laborers and office workers. Many Europeans also fled the country during Amin's rule and, after the Liberation War, they too began to return, although political turmoil kept their numbers at a minimum.

English is the official language. It is spoken by almost the entire European community, most of the Asian community, and all of the educated Africans in Kampala.

Elementary Swahili is useful in the Kampala area for talking to servants and to African tradesmen and craftsmen. Outside of Kampala and the Buganda region, Swahili is used as the lingua franca among many people who do not speak English, in addition to their maternal tongues.

Most members of the Baganda tribe, however, prefer not to speak Swahili. They use their own language, Luganda, which is spoken or understood by at least four million people.

The religious work begun in 1877 by missionaries was successful, and today some 66 percent of the Ugandan population is Christian, divided equally between Protestants and Catholics. The rest is made up of Muslims (16 percent) and animists (18 percent).

History

When British explorers, searching for the headwaters of the Nile, first arrived in Uganda in 1862, they found the northern shores of Lake Victoria controlled by the Baganda, a people who had developed a complex agricultural society ruled over by an absolute monarch called the *kabaka*. Christian missionaries entered the area in 1877 and, by 1892, British authority was established through a series of treaties of

protection with Buganda and the other kingdoms of Uganda. These kingdoms had already well-developed political institutions dating back several centuries.

As a result of the decision by the early British administrators to govern indirectly through the chiefs and rulers, and because of their beliefs that the area was unsuited to European settlement, the country was developed from the beginning primarily as an African territory. Land ownership was reserved for Africans at an early date, so that there is now almost no Asian or European rural settlement group.

Government

When the bloody dictatorship of Idi Amin Dada came to an end in 1979, Dr. A. Milton Obote, who had been overthrown by Amin's army coup eight years earlier, was restored to power. Continued abuses of human rights, however, led to the ousting by rebel troops of Obote and his government. The rebel troops, calling themselves the National Resistance Movement, selected Yoweri Kaguta Museveni as chairman of the National Resistance Council. The National Resistance Council (NRC) is the legislative branch of the National Resistance Movement. Under the NRM system, local resistance councils at the village, parish, subcounty, county, and district level elect representatives to the next level in the pyramidal structure.

The main thrust of the present government is to rebuild the seriously damaged economy. Food production is the area of greatest concentration.

A number of philanthropic and social organizations thrive here. The YMCA, YWCA, Lions, and Rotary are active and play an important role in charitable affairs. In addition, the Uganda Red Cross, which has ties to International Red Cross groups, and the Uganda Foundation for the Blind are active. Youth programs are organized by the National Council of Sports. The National Union of Youth Organiza-

tions sponsors a sports club program. In addition to the above, youth programs are organized through the school system.

The Ugandan flag consists of repeated bands of black, gold, and red. In the center is a white disc with an emblem of a crested crane.

Arts, Science, Education

In the arts, the National Theatre once again is flourishing with performances in drama, dance, and song every weekend throughout the year by groups coming to Kampala from all over Uganda. Several popular rock groups entertain regularly. The Uganda Museum, presents a comprehensive insight into the area's history. There are regional museums at Saroti and Kabale. The Nommo Gallery, a parastatal institution, features mostly *batiks*, but is striving to reestablish its collection in diverse art forms. Many individual *batik* artists ply their trade within the country. Although radio and television have some technical problems, they do a commendable job in theatrical and musical presentations.

Interest in the sciences is beginning to form again. Individual Ugandans are still invited to international science conferences, but are often unable to attend for lack of foreign currency.

A strong public and private secondary school system exists. Only the most promising primary school students are enrolled. For more than a decade, almost nothing was done to develop and nourish higher education. Makerere University, once the premier institution of higher learning in East Africa, is on the rise again but faces many difficulties because of lack of sufficient funds. Shortages range from lack of housing for faculty and students to insufficient textbooks, scientific journals, and laboratory equipment. Despite its problems, Makerere continues to educate a student body in various disciplines. Other higher educa-

tional institutions are the National Teachers College, Institute of Teacher's Education, Uganda Polytechnic, the National College of Commerce, and the Institute for Public Administration.

Commerce and Industry

Uganda has substantial economic resources, among them fertile soil, regular rainfall, and abundant reserves of cobalt and copper. However, commerce and industry were seriously disrupted under both Amin's and Obote's rule, and by the looting that followed the countless civil disturbances. Government and private businesses, with foreign assistance, are making progress rebuilding the industrial sector. Manufacturing began recovering in the 1980s, and by the mid-1990s Uganda's industrial production was three times larger than it was in the late 1980s. Most facilities are still trying to rebuild, however, and the industrial sector still operates at only 40 percent or less of capacity.

Agriculture is Uganda's principal economic sector, employing 82 percent of the labor force. Coffee, cotton, tea, beans, corn, and tobacco are the main export crops; sugar and cocoa also are important. The main food crops are cassava, millet, corn, sweet potatoes, beans, and cereals. The chief industries are those for the processing of the food crops and for textiles, soap, cement, brewing, metal products, vehicle assembly, and steel. Rehabilitation of the sugar, textiles, paper, and steel industries is underway, mainly funded by international aid agencies.

The tourist industry, very important as a foreign exchange earner, is slowly beginning to recover. Several lodges are being rehabilitated for the public, and animals are becoming more evident in game parks, although many have been killed by poachers. Uganda's principal attractions for tourists are the forests, lakes, and wildlife. In the late 1980s, Uganda launched a program

to create new national parks and build new hotels.

The National Chamber of Commerce and Industry is at 17-19 Jinja Road, P.O. Box 3809, Kampala.

Transportation

Air traffic into Uganda is being used increasingly. Entebbe Airport is only 20 miles from the capital over an asphalt road, but there is a scarcity of public or private transportation available between the cities. Kenya Airways and Uganda Airlines operate flights between Entebbe Airport and Nairobi several times a week. Air Tanzania also has one flight per week between Uganda and Tanzania. Buses travel to the Kenya border where bus connections to Kisumu and Nairobi can be made. The Uganda Railways Corporation operates train service between some rural towns and Kampala.

In Kampala, public transportation is poor. The few available buses are overcrowded and do not follow any schedule. Local taxis are, in reality, private cars that crowd in as many passengers as possible, and charge as much as those passengers will pay. The taxis are unsafe and unreliable. Most Americans do not use public transportation.

In general, private automobiles are a necessity. Those planning a stay in Uganda should either bring a car to the country or purchase one in neighboring Kenya. Autos can be bought locally, but selection is limited, and the cost is many times the actual value.

While large cars are more comfortable for long trips, small vehicles are easier to handle on Uganda's narrow roads. A Ugandan driver's license is required and, unless the applicant has a valid Kenyan or Tanzanian license, both oral and road examinations are necessary. Americans who have, or who can show that they have held, a driver's license from an East African or British Commonwealth country, can obtain a permit without testing.

All automobile owners are required by law to carry minimum third-party insurance, but rates are low. However, comprehensive coverage is quite costly because of the high incidence of auto thefts. The prospect of easy money from the sale of stolen vehicles makes owning a car a risky prospect in Uganda. Gasoline, at about five dollars a gallon, is usually available. Traffic moves on the left.

Communications

Telephone service is only fair. International calls to the U.S. and Europe are sometimes difficult to place, but reception is generally good, since there is a satellite station in Kenya. Overseas telegraph facilities are available, but not always reliable. Service for local calls within Uganda is often reliable.

International airmail to and from the U.S. is slow, taking roughly 10-15 days. Delivery is fairly reliable for letters. However, packages should be sent through international mail.

Special note: The typewritten stamps of Uganda, issued before the country owned a printing press, are among the most unusual in the world. They were prepared by Rev. E. Miller of the Church Missionary Society in 1895, and are very valuable today.

The government-operated radio system, Radio Uganda, broadcasts in many different languages, divided into the following linguistic groups: the Bantu spoken in the south by three-fifths of the population; Nilotic or Nilo-Hamitic found in the north and northeast; the Sudanic found in the northwest; and English, French, and Arabic. English-language news is broadcast six times daily. Ordinary radios in Kampala are limited to local-station reception. In order to receive a variety of shortwave broadcasts, a good set is required. Reliable shortwave sets can pick up Voice of America (VOA), British Broadcasting Corporation (BBC), and the U.S. Armed

Forces Radio Service. Commercial FM radio stations began broadcasting in the mid-1990s; these carry VOA and BBC news and play a wide variety of contemporary music.

Local and foreign-produced television programs consisting of news, entertainment, movies, and sports are shown in the evenings. Most shows are in English, but there is some Swahili and Luganda programming. Television is transmitted by the British and European PAL system. American television sets are not compatible with this system. A multi-system receiver should be purchased. Television sets purchased in Nairobi are compatible with the system in Uganda.

Uganda's freedom of press has given rise to several daily and weekly newspapers in both English and Luganda. *New Visions*, *The Star*, *Monitor*, and *The East African* are some of the major newspapers. There are several weeklies and periodicals. A number of newspapers have editions in the Luganda language, and are widely read in the Kampala area. Some American or international newspapers or magazines are available.

Bookstores typically carry a fair selection of academic books but stock very little fiction. The Makerere University Library has a rather large collection, especially of East African and Ugandan history, but lack of tight control and inadequate air conditioning have resulted in theft and the deterioration of the collection. Uganda maintains no public lending libraries. However, United States Information Services (USIS) has a small public library, with a selection of current magazines and back issues of U.S. newspapers and the *International Herald Tribune*.

Health

Mulago Hospital is a government-owned hospital, but there have been problems with lack of personnel and supplies. Several missionary hospitals, which are well staffed, provide adequate services. Nsambya Hospi-

tal is run by the Franciscan Sisters and staffed by Irish nuns who are physicians and nurses. It has its own training school for general nursing and midwifery. The hospital has an adequate laboratory, X-ray unit, and blood bank. The operating room is clean and well equipped.

A British general practitioner who runs a competent private practice is under contract to the U.S. Embassy, and is recommended highly. He has a small laboratory and uses hospital X-ray facilities when needed. He is available at night and on weekends, and he makes house calls. Westerners with serious medical problems go to Nairobi for treatment.

In Kampala, public sanitation is quite good, and a waterborne sewage disposal system serves 90 percent of the municipal area. However, immediately outside the city limits, public sanitation is completely lacking. A large portion of the population are afflicted with intestinal parasites; health inspections of food are not stringent. The city sporadically collects garbage around some of the market areas.

For those who wash fresh fruits and vegetables well, boil and filter all drinking water, and take an antimalarial drug regularly, health hazards are not great within Kampala's residential areas. Allergy diseases (hay fever, asthma, sinus), colds, diarrhea, influenza, and several unidentifiable viruses constitute most maladies.

All water must be filtered because of the silt content, regardless of the purification process. Drinking water must also be boiled; as an alternative, treatment with iodine or chlorine is acceptable. Bottled water is not available. A household bleach or iodine solution should be used to disinfect fresh fruits and vegetables.

Malaria is widespread in Uganda. Four different parasites of *Plasmodia* cause four types of malaria. The type most common in Uganda is falciparum, which the old textbooks called "malignant malaria," since its

frequent complications involve the brains and kidneys, and often cause death. No mosquito-control inspection or spraying is currently taking place. A regular regime of antimalarial drugs is advised, starting two weeks before arrival in Uganda and continuing for four weeks after leaving. Chloroquine (Aralen or Nivaquin) and Fansidar are the drugs commonly used by Americans.

There is a significant AIDS risk in Uganda. Visitors and expatriates are urged to use extreme caution in order to avoid infection. Contracting tuberculosis is a risk if one is exposed over a lengthy period.

Most houses in residential areas are equipped with modern plumbing facilities. Nevertheless, ants, cockroaches, mosquitoes, fleas, and ticks are a constant, if minor, problem. Sanitation standards are not high in the market area, and food bought there should be carefully inspected and washed.

Clothing and Services

Summer-weight clothing is needed all year in Uganda. Very little is available to suit Westerners' tastes, except for the cotton prints in African designs which are always in the marketplace in Nairobi (Kenya), and sometimes in Kampala. Clothing and shoes for the entire family sometimes can be bought in local stores, but they are expensive.

Men find that tropical safari suits are the most comfortable and satisfactory. Often they wear either suits or sports shirts and slacks to work. Women need sweaters and stoles for cool evenings and during the daytime in the rainy season. Women usually wear slacks, jeans, cotton blouses, and skirts during the day.

Several dry cleaners do business in Kampala, but most laundry is done at home. A few reputable hair salons in Kampala serve both men and women, but their prices are extremely high. Of the handful of shoe repair shops, one is good; the

two or three others are mediocre. Some automobiles and radios can be repaired locally.

Fresh fruits and vegetables abound in the markets around Kampala. Fresh vegetables, such as green peppers, lettuce, carrots, potatoes, cabbage, tomatoes, eggplant, and cucumbers, are always in stock. Most tropical fruits also are available and in good condition. Pears, peaches, and apples are not found in Kampala. Beef, poultry, and eggs are plentiful, but prices are high compared to those in the U.S. Good quality, fresh, lake fish is available. Pork, sausages, bacon, and frozen fish sometimes can be found in butcher shops.

Packaged pasteurized milk made by Uganda Dairy Corporation is sometimes available. Fresh milk can be bought from farmers by prior arrangement, and instant powdered milk and evaporated milk are available. Canned margarine, butter, imported coffee, and salt, though usually available, are expensive. High quality Ugandan coffee and tea are in plentiful supply. Cooking oil, which can be adulterated, is not always available and is extremely expensive. Baby foods, dried fruits, soy sauces, spices, and salad dressings are not usually sold in local markets. Several bakeries make bread and a variety of pastries.

There is a great shortage of goods. Most medicines and toiletries are both expensive and difficult to find. Toys and books must be brought from home.

Domestic Help

As good servants are scarce, constant supervision is necessary to see that work is done properly and theft is kept to a minimum. Breakage of china and glassware and some disappearance of food must be expected. These problems can be controlled with proper supervision. Both male and female servants are available for cooking and housecleaning. *Ayahs*, or nursemaids, can be hired to care for small children.

There are no European or Asian servants.

The minimum wage prescribed by the Ugandan government is very low. If servants provide their own food, they get an allowance. The average American household has a combination cook/houseboy, a gardener (if house and plot are occupied), and an *ayah* if there are small children. Single people living in apartments usually need only one servant. Most servants live in semi-detached or detached servants quarters. Day and night guards are necessary.

NOTES FOR TRAVELERS

The required entry visa can be obtained at either the Ugandan Embassy in Washington, D.C., or the diplomatic offices in New York. Incoming travelers must also possess cholera and yellow fever immunization certificates on the World Health Organization's standard form. It is wise, once in Uganda, to renew visas for multiple entry.

Because of rebel and bandit activity and fighting in the area along the Sudanese border, travel in the northern part of Uganda is dangerous. The area affected encompasses Apac, Gulu, Kitgum, Kotido, Lira, Moroto, Moyo, Nebbi, and Soroti Districts. The inability of the Ugandan government to ensure the safety of visitors makes any travel in the area unwise. Vehicles have been stopped and destroyed; passengers have been robbed and/or killed. There have been at least two land mine explosions on the roads north of Gulu. Additionally, random acts of violence involving American and other tourists have occurred in northern Uganda, such as a grenade attack at a tourist hotel in Arua. Bomb attacks have occurred in Kampala at various public places, all travelers should exercise extreme caution.

Travel to Murchison Falls National Park is unsafe. Three Americans were robbed in a violent attack by armed men in March 1997 near the southern entrance to the park. In addition, rebels have operated inside the park on the northern side of the Nile River. Visitors should consult U.S. Embassy officials about travel plans to Murchison Falls National Park.

Travel to western Uganda is unsafe. The Ugandan military is pursuing rebel groups in the Rwenzori Mountains, Queen Elizabeth National Park, and in portions of Kasese, Bushenyi and Rukunguri Districts. In March 1999, tourists were kidnapped and murdered in Bwindi Impenetrable Forest. Travel to the southwestern corner of Uganda near the Zaire and Rwanda borders can also be risky. There have been attacks by bands of armed men in and near Mgahinga Gorilla National Park, as well as the abduction of American tourists. Visitors should consult U.S. Embassy officials about travel plans to western Uganda.

The Government of Uganda is expected to maintain laws forbidding the importation of firearms

and ammunition. Updated information should be sought.

Pets bought into Uganda must have valid health and rabies vaccination certificates. Pets will not be quarantined if they are accompanied by these certificates.

Many religions (Baha'i, Muslim, Hindu, Christian, and animist) are represented in Kampala and its environs. Christian churches include Baptist, Anglican, Roman Catholic, Greek Orthodox, Seventh-Day Adventist, and Church of God. Services are usually conducted in English.

The time in Uganda is Greenwich Mean Time (GMT) plus three hours.

Uganda uses a decimal currency of shillings and cents.

The metric system of weights and measures is used.

U.S. citizens are encouraged to register with the U.S. Embassy in Kampala and to obtain updated information on travel and security in Uganda. The U.S. Embassy

address is: P.O. Box 7007, 10-12 Parliament Avenue, Kampala; telephone: 256-41-259-792/3/5.

ZAMBIA

Republic of Zambia

Major Cities:

Lusaka

Other Cities:

Chingola, Kabwe, Kitwe, Livingstone, Luanshya, Mbala, Mongu, Mufulira, Ndola

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated February 1997. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The best thing about Lusaka is the climate—it's wonderful. If you enjoy outdoor activities, i.e., horseback riding, golf, camping, etc. this is the place to be. It is also within reasonable driving distance of Victoria Falls, several game parks and Harare.

ZAMBIA is one of the continent's newer, developing nations. Its intense concern over minority rule in southern Africa, its relative affluence, and its prestige among non-aligned nations worldwide accord it a singular measure of importance.

Formerly known as Northern Rhodesia, Zambia was a British protectorate from 1923 until 1953, when it

became one of the three territories of the Federation of Rhodesia and Nyasaland. On October 24, 1964, the country achieved independence as the Republic of Zambia, 75 years after first coming under the administration of the British South Africa Company.

MAJOR CITIES

Lusaka

Lusaka, with a population of almost 1.7 million, lies 4,200 feet above sea level and spreads across a rolling plain. The city is well planned and landscaped. Several wide boulevards planted with trees and shrubs divide the city into sections. In the most affluent residential areas, large and comfortable ranch-style houses preside over wide lawns and gardens. In other parts of the city, the City Council has constructed substantial, modest-income housing. Shanty towns exist on Lusaka's outskirts, and the city itself has areas of squalor and congestion like many other African capitals.

Lusaka's main shopping area is a boulevard called Cairo Road. Adjacent to this boulevard are several streets of Asian and African general stores that sell traditional African

staples: blankets, cooking utensils, kerosene lamps, cornmeal, clothes and shoes. An industrial park lies at the northwestern end of town. Smaller shopping areas are scattered throughout the city.

Food

A fairly wide variety of fresh produce is available in local markets. In addition to tropical fruits, you can buy oranges, apples, pineapple, strawberries, grapefruit, and lemons in season. Vegetables abound: potatoes, onions, tomatoes, carrots, mushrooms, spinach, lettuce, cabbage, green beans, peas, broccoli, garlic, celery, beets, green and red peppers, cucumbers, cauliflower, brussels sprouts, pumpkin, and squash. Some shops even offer Chinese cabbage and bean sprouts.

On the economy, one can buy sugar, molasses, jam, coffee, tea, condiments and spices (curry powder, cinnamon, coriander, cloves, nutmeg). Supermarkets stock flour, pasta, sunflower oil, household laundry soap and cleaning products. Keep in mind that these are made in Zambia, South Africa or Zimbabwe and may not be exactly the same as American products. Imported goods in local stores are expensive.

Lusaka butcher shops sell good quality chicken, beef and pork, including sausages and bacon, at

reasonable prices. Baby food and formula are sometimes available on the economy, but most people find these unsatisfactory. Dietetic and diabetic foods are not generally stocked.

Clothing

Summer clothing is worn eight months of the year. Moderately heavy clothing is necessary during the cooler winter months. Remember the seasons are the reverse of those in the U.S. Lusaka nighttime temperatures can get as low as 40–50 degrees fahrenheit from mid-May to mid-August. Those arriving are advised to pack some light wool or wool-blend clothing in their suitcases. The rainy season (November through April) requires lightweight raincoats (rain boots for children) and umbrellas. Include a good supply of clothes in your shipment. Local shops are not a reliable source due to sporadic availability, poor quality and high prices.

Bring a sufficient supply of shoes, as those locally manufactured are of poor quality. Imported shoes are rarely available and are expensive. Fabric shops offer a variety of cotton, rayon and polyester fabrics suitable for clothing and home furnishings.

Men: Men customarily wear lightweight tropical-worsted or dacron blended suits at the office and official functions, although at least one wool, informal suit is a good idea. During the hot summer months, many men wear slacks with a shirt and tie. For restaurant dining and unofficial events, sport shirts and slacks (without ties) or safari suits are acceptable. Golfers who prefer to wear shorts are required to also wear knee-high socks.

Women: Women wear short-sleeved or sleeveless cotton, linen or lightweight fabric dresses, cotton and linen skirts, or tailored trousers and blouses for the office. Sweaters or lightweight jackets are also needed during winter months. Informal long and short dresses are normally worn to cocktail parties and dinners. For barbecues, pool

side, and patio parties, women often wear long or short sundresses, jeans, slacks, skirts, pantsuits, or shorts with casual tops, depending on the season and time of day. For cooler evenings, sweaters or lightweight wraps or shawls may be required.

Children: Bring a good supply of all children's lightweight summer clothing, swimwear, tennis and sandal-type shoes, and sweaters. Children wear mostly cotton dresses, shorts, jeans and T-shirts.

Supplies And Services

Supplies: U.S. brands deodorants and other toiletries, cosmetics, feminine supplies, medicines and over-the-counter drug items, laundry detergent and cleansers, paper supplies, and other common household items are not generally available. Those found on the economy are usually not up to American standards and/or very expensive.

Basic Services: People who have found good tailors and dressmakers in Lusaka are happy to recommend them to newcomers. Many tailors and dressmakers can copy ready-made garments as well as follow printed patterns. Dry-cleaners are of mixed reliability. Haircuts, perms, manicures and pedicures are available.

Religious Activities

Religions represented in Zambia include but are not limited to (in alphabetical order): Anglican, Assemblies of God, Baha'i, Baptist, Brethren, Christian Science, Church of Christ, Greek Orthodox, Hinduism, Islam, Judaism, Lutheran, Methodist, Presbyterian, Roman Catholic, Seventh-day Adventist, and various independent Pentecostals.

Education

American Embassy School of Lusaka (AESL), founded in 1986, offers a curriculum designed to meet or exceed the standards of better public schools in the U.S. The school enrolls children aged 2 to 14 years, starting with preschool for 2–4 year

olds and ending with grade 8 for 13–14 year olds. Class size is restricted to 10–16 children in a class with one teacher and 17–19 children in a class with two instructional staff (a teacher and an assistant teacher). AESL is accredited in the U.S., as well as Europe, and is sponsored by the United States State Department. The school's curriculum emphasizes the academic subjects of English language arts, mathematics, science and social studies and includes art, music, physical education, computers and information technology, and library skills. Children in grades 1-8 have daily French lessons. Throughout the curriculum there is an emphasis on helping children learn about and appreciate Zambia's people, culture and environment. Special programs are provided for children who are learning English as a second language and for children with learning disabilities.

The school has moved into a new, purpose-built facility on a 15 acre campus with spacious classrooms, a well-stocked library media center with video and computer areas, specialized rooms for art, music, and science, and extensive sports facilities, including playgrounds with equipment for younger children, soccer/softball fields, tennis courts, a running track, a covered basketball court and a large swimming pool with changing rooms. The parent community is encouraged to use the school's sports facilities.

A few other schools in Lusaka enroll children of expatriates. In its primary section, the International School of Lusaka uses American materials, but all other schools are based on the British, South African, or Zambian systems of education. These include Nkhwazi School, Baobab Trust School, Lusaka International Community School and Lake Road School.

Sports

Zambia's most popular spectator sport is soccer. Throughout the country, teams compete in various leagues.

Facilities are available both in Lusaka and in the Copperbelt for cricket, field hockey, golf, tennis, squash, bowling (on the greens), and swimming. The Municipal Council operates an Olympic-sized public swimming pool in Lusaka near the International School. Entrance fees are nominal. The Lusaka Sports Club, which is quite run-down, maintains several clay tennis courts, a billiards room, squash courts, a swimming pool and a children's wading pool. It also sponsors soccer, cricket, field hockey, badminton, squash, and tennis teams.

Golf is quite popular in Zambia among both expatriates and Zambians. Three golf clubs in Lusaka have excellent courses: the Lusaka Golf Club and the Chainama Hills Golf Club (both 18 holes) and the Chilanga Golf Club (9 holes). A polo club sponsors periodic horse shows. The Lusaka Flying Club, located at the Lusaka City Airport, provides flying lessons.

All sports items cost more than in the U.S. Zambia boasts vast wildlife resources and hunting is popular. Hunting licenses for small game are inexpensive, but difficult to obtain. Licenses for large game are expensive and more difficult to obtain. Game is available for the enthusiast who has a rugged disposition and the necessary equipment, including a four-wheel-drive vehicle. A hunting safari can be costly, but photo safaris are quite reasonable.

Foreigners and Zambians enjoy fishing and many Zambians depend on fish as their chief protein source. About 35 miles from Lusaka is the Kafue River, which offers fair-to-good angling for bream, barbel (a type of catfish), and a variety of large mouth perch. Also, within 30 miles of Lusaka are many small man-made ponds that offer bream and barbel. Although fishing is generally possible throughout the year, the best time is between April and November. The Zambezi River offers perhaps the best tiger fishing grounds in Africa. Kasaba Bay on Lake Tanganyika is renowned for

its Nile perch and nkupi (yellow-bellied bream). Other good fishing grounds are Lakes Kariba, Samfya and Kalabo.

Horseback riding is popular. Several stables are here. The Lusaka Gymkhana Club and the Lusaka Pony Club sponsor periodic horse shows. At the Lusaka Polo and Hunt Club, polo is played every weekend from March to October. Membership fees and dues for these clubs are reasonable. The cost of purchasing and stabling horses in Lusaka is less than in the U.S. Tack and riding apparel are not available locally. Riding instruction for children is available, although the quality varies.

Touring and Outdoor Activities

As a tourist center, Lusaka is ideally situated. It lies at the junction of the main highways to the north, east, south and west. Lusaka has an international airport with convenient airlinks to the tourist attractions of Luangwa Valley and Victoria Falls. Zambia's natural heritage offers unequalled opportunities for the tourist to view waterfalls, rivers, lakes and vast wildlife sanctuaries. In recent years, the Zambia National Tourist Board has made a determined effort to improve tourist facilities.

Victoria Falls, known by its ancient name of "Mosi-o-Tunya" (The Smoke That Thunders), is a must stop for all visitors to Zambia. The falls (twice as high and half again as wide as Niagara) are 295 miles, or a six-hour drive, from Lusaka near the border town of Livingstone. Accommodations range in cost and comfort from the Intercontinental Hotel to rustic cottages. Just outside of Livingstone is a small drive through park with 1,300 varieties of animals, reptiles and birds, including lion, giraffe, zebra, white rhino, antelope, warthog and bush pig. Other attractions near Victoria Falls are the National Museum, which houses many cultural and anthropological exhibits; the Maramba Cultural Village; and

white water rafting trips organized by the American Company Sobek.

Zambian game viewing, walking safaris and hunting safaris are unparalleled. South Luangwa National Park is outstanding, comparable to the famous parks of East Africa in variety of game present. Kafue and Lochinvar National Parks offer conducted walking or Land Rover safaris, where visitors can get quite close to most wildlife. Luangwa and Kafue have inexpensive self-catering cottages with kitchens, as well as numerous full-service lodges. Each park is approachable by road, but visitors to Luangwa usually prefer to fly because of the long distance and poor roads (400 miles northeast of Lusaka).

Lake Tanganyika is accessible by road but nearly 700 miles from Lusaka. Lake Kariba, conveniently situated 93 miles south of the capital is a favorite weekend resort for Lusaka residents. Here you can stay on the Zambia side or cross into Zimbabwe. The area offers boating, fishing, water sports and swimming. Another option at Lake Kariba is spending your time on a house boat and cruising the lake.

Entertainment

Most Americans entertain in their homes. There are several movie houses in Lusaka; few non-Zambians attend them.

Lusaka restaurants are in the moderate to expensive range; dining quality ranges from fair to good. The Intercontinental Hotel has a coffee shop, barbecue grill and an expensive restaurant. The Pamodzi Hotel also has a coffee shop, an a-la-carte restaurant, and a poolside snack bar. Other restaurants offering both lunch and dinner are: Arabian Nights (Pakistani/steak); Danny's (Persian/Asian); Golden Spur, Holiday Inn (steak/mixture); Gringo's Grill (steak); Jayline (steak/Creole); Lilayi Lodge (buffet/a-la-carte); Marco Polo (Italian); Polo Grill (steak); and Shenai (Indian/Chinese). The Intercontinental has a casino.

Social Activities

Among Americans: The largest American get-togethers occur at Fourth of July, Thanksgiving and Christmas.

The American-Canadian Women's Club is open to all American and Canadian women and wives of Americans and Canadians. Activities include monthly afternoon meetings at the homes of members featuring guest speakers and refreshments. The Club runs special holiday events for children and evening parties for members and their partners.

International Contacts: Official representatives of 89 nations and 30 international agencies are accredited to Zambia. Of these, 74 are resident in Lusaka. Also present are many international business visitors interested in the copper industry, government contracts, and development opportunities. Another source of international contact is

among the expatriates: professors, doctors, engineers, missionaries and other professionals who come to Zambia from around the world to assist in development projects.

OTHER CITIES

CHINGOLA, 30 miles northwest of Kitwe, is a large city which has expanded with the growth of the copper-mining industry. It has a current population of 186,000.

KABWE (formerly called Broken Hill/Kabwe), 50 miles north of Lusaka on the Great North Road, is a city of historic prominence. In the early 1900s, the Broken Hill mine was opened, introducing Zambia to foreign mining interests. One of Africa's first hydroelectric power plants began operations here in 1924 to supply power to the mines. Archaeologists found human and animal fossils in the mines in 1921,

leading to the discovery of the "Rhodesian man." Kabwe is also the home of Zambia Railways and of a major trucking firm. The city is surrounded by large, fertile farming areas. Corn and tobacco are cultivated in the large farming areas surrounding the town. The population is approximately 210,000.

KITWE, with a population of 439,000, is about 175 miles north of Lusaka. Several small international communities of business representatives are in the area. Express and local trains from Lusaka serve Kitwe, and many amenities (although not equal to those in Lusaka) are available. The Edinburgh and Nkama Hotels are both modern and convenient. Taxis or car hire are easily obtained. Kitwe is Zambia's second largest city and is connected by rail, air, and road with major cities of central and southern Africa. The city has a large European population.

LIVINGSTONE, a marketing, distribution, and tourist center in southern Zambia, is close to Victoria Falls. This city of 108,000 was the capital of Northern Rhodesia from 1907 to 1935. It has several good hotels, among them the Intercontinental and the North-Western, the latter a favorite gathering spot for expatriates. Frequent buses from Lusaka serve Livingstone. The city is a major distribution point for agricultural products and timber. Livingstone has several nearby tourist spots, including Victoria Falls, Lake Kariba, Livingstone Game Park, and Kafue and Wankie National Parks. The Livingstone Museum has a collection of ethnological, historical, and archaeological exhibits, including those related to the explorer-missionary David Livingstone. The population in 1988 was 98,000.

Known as "the garden town of the copper belt," **LUANSHYA** is a city of 125,000, about 150 miles north of Lusaka. It is the terminus of a rail branch from Ndola and is linked to other cities in the province. In addition to mining, there are also machine shops and factories in Luanshya.

MBALA is a city of 16,000 in the extreme north, off Lake Tanganyika. Hills provide a majestic backdrop for the town, with the Kalambo Falls—nesting place of the maribou stork—nearby.

MONGU is a fascinating tourist stop located in the Western Province, some 300 miles west of Lusaka. Two noteworthy ceremonies performed here are the *Kuomboka* in March and the *Kufulehela* in July. These correspond to the rainy season, so actual dates fluctuate. Lozi basketwork and carvings are on display in the town's curio shop. A thermal power station at Mongu supplies electricity to the area. An airfield is located in Mongu. The current population is approximately 37,000.

MUFULIRA is a principal copper-mining center in north-central Zambia, southeast of the Zaire border.

Smelting and refining of copper as well as an explosives plant are the city's surface industries. Mufulira's population is close to 131,000.

NDOLA, 175 miles north of Lusaka on the Zaire border, is Zambia's second largest city. It is linked by rail to the capital, Lusaka. Its more than 348,000 residents work in copper and sugar refineries, tire and car factories, and service industries. Educational opportunities in Ndola include the National Technical College and the Ndola campus of the University of Zambia.

COUNTRY PROFILE

Geography And Climate

Zambia, in central southern Africa, is mostly on a high, level plateau, 3,000-5,000 feet above sea level. Lusaka is one of the higher points in the country. Zambia, bordered by Tanzania, Malawi, Mozambique, Zimbabwe, Botswana, Namibia, Angola and Zaire, has an area of 290,586 square miles (a little larger than Texas).

All of Zambia lies within 18 degrees of the Equator. The climate is pleasant and rivals that of southern California. Humidity is quite low except during the rainy season (November-April), and the temperature rarely exceeds 95 degrees Fahrenheit; it can get into the 40s during the winter months (June and July). Summer clothing is worn mid-August to mid-May. Light woollens are useful in winter (mid-May to mid-August). Generally, summer evenings are cool and winter days are sunny and warm.

Annual rainfall during the rainy season averages 34 inches. At the season's beginning and end, showers are brief. During January, however, heavier rains punctuated by thunderstorms often occur.

Population

Zambia's estimated population in 2001 was 9.8 million. Expatriates, mostly British or South African, live mainly in Lusaka and in the Copperbelt in Northern Zambia. There are about some Americans living in Zambia, most of whom are missionaries. Zambia also has a small but economically important Asian population, most of whom are Indians. The annual growth rate is 1.93 percent.

There are more than 70 tribal groups; English is the official language, with about 70 local languages and dialects. The principal ones are Bemba, Tonga, Nyanja, Lozi, Luvale, Ndembu (Lundu) and Kaonde. Some tribes are small, and only two have enough people to constitute at least 10 percent of the population. The predominant religion is a blend of traditional beliefs and Christianity.

The major cities are the capital - Lusaka (population 1.2 million), Ndola (348,000), Kitwe (305,000), and Kabwe (213,000).

Like many African countries, Zambia's new African elite consists of high government officials and successful business representatives. Next in salary status are lesser officials and urban managerial employees. Mine workers, factory laborers, and clerical and manual employees form a third social stratum in Lusaka, Livingstone and on the Copperbelt. Most Zambians in rural areas are subsistence farmers growing corn, soybeans, cotton, sugar, sunflower seeds, wheat, sorghum, millet, cassava, tobacco and various vegetable and fruit crops.

Public Institutions

After 27 years of one party rule, Zambia experienced a dramatic transformation in October 1991. After a vigorous multi-party campaign, the Movement for Multi-party Democracy (MMD) won a resounding victory and established a new government committed to democracy, respect for human

rights, and economic reform. The President of Zambia, currently Levy Patrick Mwanasa, has executive power and appoints a 23-member Cabinet. The 150-member National Assembly has legislative powers. The President can veto legislation enacted by the National Assembly, and the Assembly can overrule the veto by a two-thirds vote. The judiciary is independent.

Arts, Science And Education

Artistic and intellectual activity in Lusaka is usually an informal affair with people gathering at one another's homes. A few organized societies for the arts exist, prominent among which is the Lusaka Musical Society that offers several professional performances annually.

Zambia requires seven years of compulsory education but attendance is less than 50 percent of those eligible for grades 1-7. Less than 20 percent of primary school graduates are admitted to secondary school. The literacy rate is 78 percent.

The University of Zambia, founded in 1966, is the educational center of Lusaka. The University maintains a library, sponsors lectures and seminars, and hosts cultural events of variable quality.

Copperbelt University, established first as a regional branch of the University of Zambia in 1977 and opened as a separate institution in 1989, includes the schools of Business, Environmental Studies, and Technology. Teachers' training colleges, Evelyn Hone College of Applied Arts and Commerce, and other primarily vocational-technical schools complete the picture of Zambian tertiary educational institutions.

The fine arts in Zambia are still in the developmental stage, but a few painters and printmakers have achieved recognition beyond Zambia's borders.

The Zambia Cultural Services maintains a handicrafts shop with objects drawn from rural areas throughout Zambia and offers occasional outdoor performances by the national Dance Troupe at Kabwata Cultural Village. The National Collection, housed in Lusaka's Mulungushi Hall, is an interesting exhibition of works of Zambian artists. The nation's best museums are the Livingstone Museum in Southern Province, Mbala's Moto-moto Museum in Northern Province, and the Choma Museum (on the way to Livingstone).

Commerce And Industry

Zambia is one of Sub-Saharan Africa's most highly urbanized countries. About half of the country's 9.8 million people are concentrated in a few urban zones strung along the major transportation corridors, while rural areas are underpopulated. Unemployment and underemployment are serious. Per capita annual incomes are lower than their levels at independence, and at \$880 place the country among the world's poorest nations. Social indicators continue to decline, particularly in measurements of life expectancy at birth, currently only 37 years, and maternal and infant mortality. The high population growth rate, near 2 percent per annum, makes it difficult for per capita income to increase. The country's rate of economic growth can support neither rapid population growth, nor the debilitating effects on maternal and child health resulting from it. Inflation is extremely high, at 27.3%.

Agriculture provides the main livelihood for 80% of Zambia's population. Maize (corn) is the principal cash crop as well as the staple food. Other important crops include soybeans, cotton, sugar, sunflower seeds, wheat, sorghum, millet, cassava, tobacco and various vegetable and fruit crops. Zambia has the potential for significantly increasing its agricultural output, as cur-

rently less than 20 percent of its arable land is cultivated.

The Zambian economy has historically been based on the copper mining industry, which has accounted for a significant portion of the gross domestic product (GDP), from one-third to one-half of government revenues, and more than 75 percent of Zambia's foreign exchange earnings. Due to a decline in world copper prices starting in the mid-1970s, lack of investment to increase productivity and output, nationalization and mismanagement, and socialist economic policies, the copper mining base of the economy has eroded over time.

Beginning in the 1970s, Zambia relied heavily on socialist-style planning and administrative controls to manage its economy; on the public sector - especially parastatal enterprises - to undertake investment and generate economic growth and employment; and on international borrowing to finance public sector investments and to support levels of consumption that proved to be unsustainable. As a result, in late 1991, the Zambian economy faced many problems: basic goods and services were in short supply; the money supply was growing rapidly because of the manner in which the government's domestic debt was financed; military expenditures were rising while social sector expenditures were declining; tax compliance was low, the budget deficit was large and increasing; many parastatal companies were heavily indebted and suffered crippling losses; private investment had collapsed; business and consumer confidence had eroded; external debt was not being serviced; a parallel market in foreign exchange was flourishing; asset holders were transferring their capital out of the country and switching to foreign currency for local transactions; the country's physical infrastructure was rapidly deteriorating; and Zambia had neither food reserves nor the financial resources to deal with natural disasters and emergencies.

The present government came to power after democratic, multi-party elections in November 1991, committed to an economic recovery program. Since these economic reforms began, Zambia has suffered droughts (three years out of the five) and falling copper production.

Although growth has been slow, positive effects are emerging. All domestic and external trade, except petroleum products, has been left to the private sector, resulting in a greatly improved availability of consumer and producer products in the market.

Transportation

Local

Buses are generally unsuitable and unsafe for commuter travel. Taxis and rental cars are expensive (Avis is available). Taxis tend to be unsafe.

Regional

Paved roads lead from Lusaka to the Copperbelt, Livingstone, Tunduma (on the Tanzanian border), Mongu (near Angola to the west), and to the Malawi border. Dirt or gravel roads connect the capital with other parts of the country. Paved roads usually have potholes.

Lusaka has an international airport, with flights to Europe, the United States and other cities in Africa originating with either British Airlines, KLM or South African Air. Aero Zambia and Zambian Express fly to points in Zimbabwe, South Africa and Ndola and Livingstone in Zambia. Eastern Air flies to Chipata, Mfuwe (Luangwa Game Park) and Kasama. Flights are often full during British and South African school holiday times and travelers should make reservations well in advance.

Zambia Railways offers domestic passenger service, but because passenger service is unreliable and unsafe and rail travel is generally slower than travel by car, few foreigners travel by rail. TAZARA Railway operates to Dar es Salaam

several times a week. It is a fascinating (albeit very long) trip for those who do not expect European train travel standards. First class approximates European second class coaches. At the southern end of the line of rail, Zambia Railways ties into the Zimbabwean rail system connecting with the Mozambique Railroad coming up from the Indian Ocean port of Beira, and with the South African railway system. Bus service is also available to major points in Zambia and Zimbabwe, as well as Johannesburg.

Zambia's distance from the capitals of the neighboring African states makes air travel the most comfortable, convenient and popular way to travel to and from Zambia.

Communications

Telephone and Telegraph

Local service is adequate, but repair times can be lengthy. Direct dialing and trunk booking connect Zambia to the U.S. and many other locations in the world but can be extremely expensive. Obtain an AT&T calling card to take advantage of the AT&T USA Direct line, which offers much cheaper rates.

International cable service is generally good, but domestic service is still questionable.

Newspapers, Magazines, and Technical Journals

The principal papers are the daily *Times of Zambia*, *Daily Mail*, *Sunday Times*, *Sunday Mail*, *Post*, *Financial Mail*, *National Mirror*, and *Sun*.

Lusaka has several commercial bookstores. None has a wide or dependable selection. The University of Zambia's bookstore usually offers numerous titles on Zambia and Africa.

Lusaka has several free libraries, including the Municipal Library in the main business area. The National Archives Library has a good collection of books on Africa. USIS and the British Council each

operates a library. Books are limited to American and British subject matter, respectively. The American Embassy School of Lusaka has a fine children's library.

Health And Medicine

Medical Facilities

In Zambia most hospitals and outpatient clinics are government subsidized, and care is provided at relatively low cost. Unfortunately, these clinics and hospitals are far below American standards, poorly staffed, with virtually no medicine available and limited testing capabilities.

Local dental facilities are adequate for routine care, such as fillings and cleaning, but complete any special treatment (i.e., crowns, periodontal or oral surgical procedures) before coming. Additional dental clinics will be opening with more capabilities such as crowns and partial dentures which are made in South Africa. Ophthalmologists are scarce. Several opticians practice in Lusaka, but glasses are expensive. Purchase contact lenses and glasses (including extra pairs) before arrival in the country. Bring eye prescriptions with you in case you need emergency replacement. Bring any cleaning solution/equipment for contact lenses with you since you won't be able to find these in Lusaka. Most medicines are difficult to find in Lusaka. If you take medicine routinely for any long-standing medical condition, be sure to bring adequate supplies with you.

Community Health

The sanitation level in Lusaka is fair. City tap water is not potable. Testing of water in many of the residences showed that the chlorine levels were far below what is needed to make the city or bore hole (well) water acceptable for drinking. The local water lacks fluoride. Cholera and other diarrhea diseases are also endemic but should not affect the U.S. community when water is filtered and proper food handling and hand-washing are practiced. Pas-

teurized milk is available and is considered safe to use.

Preventive Measures

Automobile accidents probably present the greatest risk to personnel. Therefore, it is particularly important to wear seat belts and to have car seats for infants and small children. The condition of other motor vehicles on the road is quite poor, so defensive driving is very important. Avoid night driving whenever possible, as most roads are without street lights, and many cars do not have proper headlights or taillights.

Malaria is a constantly changing and challenging disease. Malaria is endemic, and all personnel should begin taking malaria prophylaxis two weeks prior to arrival.

Other measures to prevent mosquito bites are very important.

Consider all bodies of water (lakes, rivers, dams) to be infested with bilharzia. Anyone swimming, wading or using these waters will be at risk for developing bilharzia. Use only treated pools for swimming.

A shot record is required for entry into Zambia. Although no vaccines are strictly required for entry, yellow fever is required if entering from an endemic area. It is valid for ten years. Immunizations for typhoid, tetanus, diphtheria, rabies, hepatitis A and B, polio and meningitis are strongly recommended.

Wear protective clothing to protect against snake bites, especially for travel in rural areas.

Some well-staffed hospitals with limited medical supplies are in the rural areas, but the distances between them are often great.

AIDS and HIV

The most quoted figures for HIV prevalence in Zambia range between 25 to 30 percent, especially in urban areas such as Lusaka. HIV/AIDS continues to be a large and difficult health problem in Zambia in spite of many government

and donor-sponsored programs to supply information and prevention. The death rate due to AIDS and AIDS-related illnesses appears to still be escalating.

Since HIV/AIDS is not casually transmitted, this situation should pose minimal risk to Americans posted here. The health unit periodically checks any local clinic or dental clinic to whom American personnel may be referred with special emphasis on sterilization of equipment and single use of all disposable items.

NOTES FOR TRAVELERS

Passage

Travelers, including Foreign Service personnel, temporary duty personnel, consultants, experts and any official or nonofficial visitors, must obtain visas from the Zambian Embassy in Washington, D.C., or at the Zambian Mission to the U.N. in New York. All travelers should also have a South African visa in the event a medical evacuation to that country is necessary.

Currency, Banking, And Weights And Measures

Zambia uses a decimal currency. The kwacha (which means dawn) is the main currency unit. Currency notes come in the following denominations: 10,000, 5,000, 1,000, 500, 100, 50 and 20. The exchange rate in January 2001 was 4,024.53 kwacha to one U.S. dollar.

Facilities

Banking facilities in Lusaka are satisfactory. A growing number of major commercial banks operate in Lusaka, including one American bank.

Travelers checks are easily cashed at banks and hotels, but not at all shops. Money cannot be withdrawn from automatic teller machines unless the traveler has an account set up in Zambia. American Express, Visa, MasterCard and other credit cards are accepted by some hotels, shops and restaurants in Zambia and surrounding countries.

Zambia follows the metric system for weights and measures.

In addition to the above books, the Wildlife Conservation Society of Zambia has a small selection of films available for loan. Particularly worth viewing is the documentary, "Last Kingdom of the Elephants," which was filmed in Zambia's Luangwa Valley and is narrated by the late Orson Welles.

Harare, Zimbabwe

ZIMBABWE

Republic of Zimbabwe

Major Cities:

Harare, Bulawayo

Other Cities:

Gweru, Hwange, Kadoma, Kwe Kwe, Masvingo, Mutare, Nyanda

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 2000 for Zimbabwe. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The word "Zimbabwe" derives from the Shona *dzimba dza mabwe* (house of stones). It has been written that one of the most striking features of Zimbabwe is the depth of its historical roots; that the past of Zimbabwe can be followed, through both traditions and documents, as a continuous story for five centuries.

With more than a passing resemblance to a magazine's best-of issue cover, Zimbabwe is a beautiful country to visit. The cities are bright and well-organized havens; the hinterlands are positively bursting with gorgeousness, both four-legged and furry, wild and winged, spiky and splashy.

Bantu-speaking farmers were the first occupants of the Great Zimbabwe site in the south of the country. As early as the 11th century, some foundations and stonework were in place, and the settlement, generally regarded as the nascent Shona society, became the trading capital of the wealthiest and most powerful society in southeastern Africa. In the 19th century European gold seekers and ivory hunters were moving into Shona territory. The best known of these was Cecil John Rhodes who envisioned a corridor of British-style "civilization." Sanctioned by Queen Victoria, white settlers swarmed in, and by 1911 there were some 24,000 settlers.

Ian Smith became Rhodesian President in 1964 and began pressing for independence. When he realized that Britain's conditions for cutting the tether would not be accepted by Rhodesia's whites, he made a Unilateral Declaration of Independence, which the UN declared illegal. Increasingly fierce guerilla warfare ensued and whites began to abandon their homes and farms. Smith was forced to call a general nonracial election and finally had to hand over leadership. In 1980 Zimbabwe joined the ranks of Africa's independent nations.

In Zimbabwe traditional arts include pottery, basketry, textiles,

jewelry, and carving. Shona sculpture, a melding of African folklore with European artistic training, has been evolving over the past few decades.

Music has always been an important part of cultural life. Traditional musical instruments include the marimba, a richly toned wooden xylophone, and the mbira, a device more commonly known as a thumb piano.

English is the official language of Zimbabwe, but it is a first language for only about 2% of the population. The rest of the people are native speakers of Bantu languages, the two most prominent of which are Shona and Sindebele.

As one of the world's newest nations, Zimbabwe offers the rare combination of an exciting and evolving political and social scene and, in its capital of Harare, a pleasant living environment.

MAJOR CITIES

Harare

Harare is a pleasant city located in the north-central part of Zimbabwe. It is the seat of government and the

Aerial view of Harare, Zimbabwe

country's cultural, transportation, and communications center. Harare was first established by British settlers in the 1890s and has a modern downtown and numerous attractive residential neighborhoods. The brilliant colors of the flowering trees contrast sharply with the city's modern architecture. Since independence, residential suburbs have become fully integrated, although a large percentage of the black population still reside in a number of surrounding high density suburbs.

Harare proper has several major hotels of international standard, a national art gallery/museum, 12 movie theaters, a choice of good restaurants, and a few nightclubs. Extensive parks and sports and recreational facilities, including thoroughbred racing, tennis, golf, trail riding, horseback riding lessons, squash, and swimming are available. Entertaining is often done in homes or private clubs. A car is essential, as residential areas are

spread out. Religious services are available for Catholic, Jewish, Protestant, and other denominations. Hobby, art, theater, dance, and musical groups are active.

Supermarkets and department stores provide shopping facilities comparable to a small American city, though with a much more limited selection of goods. Most necessities are locally produced and usually available. A wide variety of products are now available on the market. New and diversified shopping centers have been built in the northern suburbs, thereby decreasing the need for people residing in those areas to shop in the city center.

Utilities

Both electricity and water are generally reliable in Harare, although the local electricity company may occasionally practice a brief period of load shedding. Most houses have generators. All electrical current is

220, 50 cycles. Adapter plugs (to the Zimbabwean three square prongs) can be purchased locally. All appliances provided are electric, including cooking ranges. Most appliances can be purchased locally, but prices are considerably higher and quality often lower than comparable equipment in the U.S.

Food

Over the last couple of years Zimbabwe has seen tremendous changes with regard to the quantity and quality of items stocked in local stores. However, over the past two years, prices have more than doubled. There are local cheeses and you can buy processed cheese from South Africa. Cottage cheese, cream cheese, yogurt, and sour and fresh cream taste a bit different, but work well in recipes.

Most spices and basic gravy mixes and food colors are available (not pure essences though), as are French and English mustards, and

Heinz Ketchup. Hellmans Mayonnaise and Miracle Whip are now in most stores. You can get pickles though they don't taste like their American counterparts; Greek olives, bottled salad dressings are available (not as many varieties, and you cannot find Ranch). Vegetable oil is available as is olive oil. Occasionally, you can buy extra virgin olive oil, but if you use it a lot, bring it. Plain rice is plentiful; most baking products are available locally (baking powder, cream of tartar, baking soda, dry yeast, cooking chocolate and cocoa), however, you may find that they do not always taste exactly like U.S. brands. Supermarkets now carry Duncan Hines Cake Mixes. Most varieties of nuts are available (some expensive), but pecans and macadamias are locally grown and inexpensive. Local and imported cereals are available.

Tuna is available in brine and oil. Juices are available in boxes in a variety of brands. Most are quite good. Some Mexican and Chinese products are available, but expensive. Dry pastas are plentiful. Canned tomatoes, puree, and paste are available, but not tomato sauce. Canned kidney beans and other canned vegetables are available as well.

Formula and baby food are available, but you may not be able to find a special. Jars of baby food are available, but expensive (US \$1 a jar). Zimbabwe makes and imports baby cereals-compared to the U.S. there is not so much variety and the quality is not as good.

Good meats, vegetables and fruits are in abundance. Fresh fish, including some varieties of frozen freshwater and deep sea, is also available.

Local wines and beer, and imported wines, beers and spirits are available in Harare shops.

Several brands of local cigarettes are produced. Pipe and chewing tobacco are not available.

There is no cat litter in Zimbabwe, so owners should bring a large supply. Pet food is available, but inferior.

Clothing

Fashionable, Western-style clothing is popular in Harare with very little traditional African dress in evidence. Sweaters, jackets, and light coats are needed in June, July, and August, when the evening temperatures can drop below 40 °F. Since homes are not centrally heated, flannels and bathrobes are needed. Virtually all clothing products can be purchased locally, but style, quality, and prices differ from those in the U.S.

Evening wear is similar to that worn in the U.S. Men wear a suit or sport jacket.

Women tend to dress less casually here. Jeans, shorts, and T-shirts are reserved for home wear. Dresses and skirts are worn to the office more often than slacks. Pantyhose are available, but quality varies.

Supplies and Services

Both electricity and water are generally reliable in Harare, although the local electricity company may occasionally practice a brief period of load shedding.

Locally produced varieties of most household and personal supplies can be bought in Harare at moderate prices, though quality is often inferior to U.S.- or European-produced goods. U.S.-made items are not available. Hair care products are expensive and some items are not available, although an appointment at the hairdresser for a shampoo and dry is only US\$3-\$5.

Most basic services are available at a reasonable price in Harare. These include dry-cleaning, tailoring, hair and beauty treatment, shoe repair, and most small appliance repairs.

Domestic Help

Wages for domestic help are relatively low. The average wage for domestics (most of whom reside in staff quarters adjacent to the house)

is US \$50 a month, plus "rations." Rations vary from home to home. Many employers pay domestics cash in lieu of food supplies; others provide meat, tea, bread, sugar, cornmeal, toilet paper, and soap.

Employers are not required to pay social security or government contributions of any kind for domestic employees, but must respect minimum wages set by the Zimbabwean Government for domestic employees. Many enroll their domestic employees in a local health program.

Religious Activities

Harare's religious community encompasses virtually all major denominations. Services are in English and Shona, as well as in other languages. Consult the local newspaper for details of church services.

Sports

Because of Harare's moderate climate, outdoor sports opportunities abound. Local clubs play cricket, rugby, softball, and soccer. Golf courses and tennis courts (and instruction in both) are plentiful. Horseback riding is another recreational opportunity in Harare. Serious riders may consider bringing their own saddle and tack and can lease a horse at a local stable for a very reasonable rate.

Bring your own equipment, as local varieties are expensive and frequently unavailable. Tennis balls in particular are expensive.

Touring and Outdoor Activities

Zimbabwe has some of the most beautiful scenery in Africa. Lake Chivero Game Park, a 30-minute drive from Harare, offers fair game viewing in a relaxed atmosphere on a weekend afternoon. Also within a 30-minute drive from the city are the Ewanrigg Botanical Gardens with 24 hectares of landscaped gardens, a large collection of cactus, and many exotic trees; the Lion and Cheetah Park; a snake park; and the Larvon Bird Gardens, in which

are 400 species of local and exotic birds.

Several attractions within a 2-3 hour drive afford pleasant weekends. The Eastern Highlands (Nyanga, Troutbeck, Vumba) offer beautiful and serene surroundings and diverse recreational opportunities. The choice of accommodation is wide, ranging from self-contained cabins in the National Parks to a five-star hotel complete with a casino in Nyanga.

Destinations within the country for long weekends or short vacations are numerous. The Zimbabwe Ruins, described as "one of Africa's greatest mysteries," are fascinating, and a tour to this area is a must for any visitor to the country. Hwange National Game Park is Zimbabwe's largest game sanctuary, covering some 14,620 square kilometers (larger than Connecticut). Safari vehicles are designed to offer maximum opportunity to photograph and view the large variety of animals that abound there. Victoria Falls have been described as one of the seven natural wonders of the world. They are 1,690 meters in width and their mean height is 92 meters; their greatest recorded flow was 160 million gallons per minute; the gorges were cut over millions of years by the raging waters of the Zambezi River.

A leisurely cruise on Lake Kariba is very relaxing. The lake is the home of the tigerfish, the supreme challenge for any angler; and a sundowner cruise, which takes place in the cool of the evening, is a good way to unwind.

Other destinations include Lake Kyle, Chimanimani Mountains, Bumi Hills, and Spurwing and Fothergill Islands.

An elaborate network of roads is well paved and reasonable and attractive package tours are available by air. One can choose between a "full board" rate (all meals and transportation paid) or a "bed and breakfast" rate, which allows the

traveler to choose how to spend leisure time.

Hunting and fishing trips are plentiful and fruitful in Zimbabwe, though hunting licenses for big game are expensive. Facilities for camping, hiking, and boating are good and readily accessible.

No restrictions are imposed on travel in Zimbabwe except in some parts of the Matabeleland area (south), and the extreme eastern border with Mozambique. However, the unpredictability of fuel supplies makes travelling outside of Harare more restrictive.

Entertainment

First-run films are shown at Harare's many movie theaters. The films arrive about 2 months behind their release in the U.S. and can be censored. The local theater group, REPS, performs regularly. Several international special attractions also come to Harare each year, namely theater groups, comedy shows, and special fairs. The annual Harare Show is a week long festival that provides interesting exhibits and attractions. Symphony, ballet, and choral societies give occasional performances.

There are numerous video clubs in the Harare area, but the tapes are VHSm British PAL system, and therefore require a multisystem television and VCR.

Social Activities

Social life among the American community is generally casual, with most informal entertaining done at home, either around meals or cocktails or during an afternoon "braai" (cookout).

The American Women's Club, an active society composed primarily of private American citizens resident in Zimbabwe, sponsors dinners and other social events.

An informal crafts group meets occasionally to share ideas, plan field trips, and work on crafts projects.

Charitable organizations are abundant in Harare, including the SPCA, hospital aid societies, and local orphanages. These organizations provide excellent opportunities to meet Zimbabweans and other foreigners.

Bulawayo

Bulawayo, 240 miles southwest of Harare, is the second largest city in Zimbabwe, with a population of close to 414,000. It is the chief town of Matabeleland, and a rail and commercial center for the vast surrounding area. The city was founded toward the end of the last century, and has grown dramatically in size and importance. Breweries and flour mills are important industries here. Automobiles, tires, building materials, furniture, televisions, and textiles are produced here. Gold and coal deposits have been found close by. The good air, rail, and bus services are constantly expanding, and the city has many hotels and a variety of restaurants.

Nearby tourists attractions are the Khami Ruins, and the Rhodes tomb in the Rhodes Matopos National Park. A National Museum is located in the city.

Bulawayo has been the scene of intense dissident activity during the past 25 years. Joshua Nkomo, the guerrilla leader who helped free his country from white-minority rule, lives in a suburb south of the city.

OTHER CITIES

GWERU, which was called Gwelo until 1982, is in the southwest. Several industries are located in Gweru. Dairy products, footwear, textiles, and building materials are produced here. It is a mining center with a population over 120,000.

HWANGE (formerly called Wankie) is in far western Zimbabwe, about 300 miles west of Harare. Its 39,200 residents depend on coal mining for their economic base. Nearby Hwange National Park and local

safari areas add tourism to the economy. The city was founded about 1900 and named after a local chief, Whanga.

KADOMA (formerly called Gatooma) was named for nearby Kadoma Hill, in the central region, 75 miles southwest of Harare. It is a vital farming center, with both an agricultural research station and cotton pest research agency located in the city. Kadoma's population is about 44,600.

KWE KWE (formerly called Que Que) is situated in the center of the country, halfway between Harare and Bulawayo. It is an important processing and distribution point for products such as rails, chrome, and steel, as well as livestock and tobacco. Cotton textiles are manufactured near Kwe Kwe and nickel and pyrites are mined nearby. Cotton textiles are manufactured near Kwe Kwe and nickel and pyrites are mined nearby. Approximately 47,600 people live in Kwe Kwe.

MASVINGO, located near the Macheke and Mshangashe rivers, is a tourist center for the Kyle National Park, and the Great Zimbabwe ruins. Asbestos and gold are mined near the city. Masvingo is linked by road with Harare and Pretoria, South Africa.

MUTARE (formerly called Umtali) is a city of 85,000 in northeast Zimbabwe, on the Mozambique border. Great fields of tobacco are grown in the area. Gold, silver, copper, lead, and iron deposits are found throughout the adjoining region, for which Mutare is the trading center. Several industries are located here among them oil refining, automobile assembly, textiles, clothing, and leather goods manufacturing. Tourism in the nearby national parks is an important economic asset.

The city of **NYANDA** now uses a local name but, for 92 years, it was Fort Victoria, named in honor of the woman who was then England's queen. Located in an area of gold mines 190 miles south of Harare, it has a resident population of 25,000.

Nyanda is noted especially for its proximity to the famed Zimbabwe ruins.

COUNTRY PROFILE

Geography and Climate

Zimbabwe is a landlocked country between the Zambezi and Limpopo Rivers of south-central Africa. Elevations range from below 2,000 feet in the river basins to over 7,000 feet in the Eastern Highlands. Harare and most population centers are located on the highveld, a savanna-covered plateau, some 4,000-5,000 feet above sea level.

Zimbabwe covers 150,000 square miles, about the size of Montana. It is bounded by Zambia on the north, Mozambique on the east, Botswana on the west, and South Africa on the south. The landscape varies from flat and rolling ranges, to farmland and mountains, all marked by granite outcroppings. Points of geographical and scenic interest include the magnificent Victoria Falls and man-made Lake Kariba on the Zambezi River; the mountainous Eastern Highlands along the Mozambique border; and the historically important ruins of Great Zimbabwe, the capital of the ancient civilization of Zimbabwe, located near Masvingo; and a number of game parks.

The climate on the central plateau is moderate in all seasons with warm days and cool nights. Homes do not have central heating or air-conditioning, although room heaters and fireplaces are used on winter nights (May-August). Annual rainfall averages about 28 inches on the highveld, more in the Eastern Highlands, and much less in the lowveld of the southeast and the Zambezi Valley. The sun shines nearly every day, even at the height of the warm rainy season (November-March). In Harare, the average low temperature in winter is 45°F at night,

though frost occasionally occurs. The average daily temperature in summer is 75°F, with temperatures seldom surpassing 90°F.

Population

Zimbabwe's population was 12.4 million in mid-1998 and has been growing at an annual rate of 3.1%. The population is 87% African. Of that group, some 71% belong to Shona-speaking tribes. The largest

Shona subgroups are the Karanga, the Zezuru, and the Manyika. The remaining 16% of the black population is Ndebele tribe of Zulu origin inhabiting the southern and western part of Zimbabwe-or Kalanga, Deme, San, Shangaan, Swana, Tonga, and Venda. Whites, mainly of South African, British, and European ancestry, number about 70,000. Asians, of Indian ancestry, and Coloreds, people of mixed European-African origin, number about 30,000.

English is the official language. Shona and Sindebele are spoken in their respective areas. The literacy rate is estimated at 85%. A large majority of the population is formally or nominally Christian. Thousands of Zimbabweans have earned university degrees in their own country or in the U.S., U.K., or Europe, giving the country one of the most highly educated populations of any African state.

The Harare metropolitan area has a population of more than 1.6 million, including the municipality of Chitungwiza, which has an estimated population of between 350,000 and 800,000. Other major cities are Bulawayo (790,000), Mutare (170,000) Gweru (160,000), and Kwe Kwe (100,000). Most Zimbabweans live in communal lands, areas formally reserved for African settlement and covering nearly half the nation's territory. Some 40% of the population live in urban areas. Communal lands tend to be overcrowded and overgrazed, and inhabitants rely heavily on subsistence agriculture. About 4,000 mostly white-owned commercial farms occupy much of

the nation's most productive land and produce half of Zimbabwe's staple food crop, white corn, and the main export crops: tobacco, cotton, sugar, tea, and coffee. As a result, Zimbabwe possesses one of the highest inequality ratios in all of sub-Saharan Africa. Resettlement of blacks on government-purchased commercial farmland is a high priority of the administration, but the question of land distribution remains highly controversial.

Public Institutions

The Republic of Zimbabwe became independent on April 18, 1980, after a guerrilla war against the white colonial government that had announced its Unilateral Declaration of Independence (UDI) from the U.K. in 1965, in an effort to avoid the tide of majority rule which was then sweeping through Africa.

The African majority had fiercely resisted UDI, as it forestalled achievement of self-rule, and the first incidents of armed opposition against Prime Minister Ian Smith's regime began in the late 1960s, continuing at a low level through the early 1970s. The fall of the Portuguese Empire in 1974 led to the creation of an independent Mozambique in 1975. The outlawed Zimbabwe African National Union (ZANU), which had been in exile in distant Tanzania, was then permitted to operate from adjacent Mozambique, while the rival Zimbabwe African People's Union (ZAPU) continued its guerrilla operations from Zambia, resulting in an increase in the general level of fighting.

Various attempts at ending the "Rhodesian problem" through negotiation failed, as did the attempt to create a state under the joint rule of Ian Smith and Bishop Abel Muzorewa, known as "Zimbabwe-Rhodesia." A joint conference held at Lancaster House in London under British auspices between September and December 1979 led to agreement by Smith, Muzorewa, ZANU leader Robert Mugabe, ZAPU leader Joshua Nkomo, and

other factional leaders on a constitution and a plan which provided for a brief return to British rule, general elections open to all parties, and ultimate independence.

In the elections of late February 1980, which were monitored by international observers and considered to have been free and fair, Mugabe's ZANU-Patriotic Front won 57 of the seats in the 100-member House of Assembly; Nkomo's Patriotic Front-ZAPU won 20; Bishop Muzorewa's United African National Council (UNAC) won 3; and Ian Smith's Rhodesian Front (RF) won all 20 seats reserved for whites. Robert Mugabe was selected to be the country's first Prime Minister.

Once in office, Mugabe pursued a policy of national reconciliation with the country's small, but economically influential white community. He set up a government of national unity which included PFZAPU and some whites. Normally blessed by good rains and spurred by international aid and pent-up demands resulting from the 15 years of U.N.-imposed sanctions, the economy was very healthy and the internal political situation was positive in the first year of independence. However, the euphoria of independence wore off as the Government came to grips with the myriad of problems involved in running a country. Serious political differences developed between ZANU-PF and PF-ZAPU as the result of strife between excombatants of the two former guerrilla armies and the discovery of illegal arms that were cached on PF-ZAPU properties. As a result, Mugabe fired Nkomo and several of his close aides from the cabinet in 1981. A low level security problem-marked by serious human rights abuses by both the Zimbabwe National Army (ZNA) and the "dissidents" continued in the Ndebele-populated provinces of Matabeleland, where Nkomo's party was the strongest, until 1987. That year, ZANU-PF and PF-ZAPU agreed to unite; the parliamentary seats reserved for whites were abolished, and Prime Minister Mugabe became

executive president, initially for a 3-year term. However, ethnic tension and the failure to redress the human rights issues remain an underlying point of stress in the so-called Unity Accords. ZANU-PF's dominance of Zimbabwe politics was confirmed again in 1990, when Mugabe was elected to a full 6-year term as President and led his party to victory in that year's Parliamentary elections for a new 150-member unicameral Parliament, consisting of 120 elected seats, 10 chiefs elected by their peers, 8 provincial governors, an attorney general, and 12 non-constituency MPs appointed by Mugabe, and a speaker of Parliament elected by parliament. Mugabe was re-elected to the presidency in 1996.

The constitution provides for protection of fundamental human rights as well as the independence of the judiciary. The central government is responsible for making and implementing policies on health, education, and social welfare throughout the country; however, city councils in the urban areas and rural councils in the countryside have increasing powers as the country implements a policy of decentralization and the central government's resource base shrinks. The civil service is set up along British lines; a nationwide police force is controlled from national headquarters in Harare.

The Government repealed the 25-year-old state of emergency in 1990. It announced plans to repeal the repressive Law and Order Maintenance Act (LOMA), but has since backtracked on these plans. Also in 1990, the ZANU-PF Central Committee formally abandoned the one party state, and other political parties were allowed to operate. In 2000 there were approximately 35 opposition parties. ZANU-PF also relaxed its Marxist/Socialist policies during the 1990s and has generally allowed the private sector to operate freely. Economic liberalization has been slow, however, and the Government still controls a wide array of inefficient and money-losing parast-

atals that continue to drain Government resources.

In 1999, leaders of the country's powerful labor union confederation, The Zimbabwe Congress of Trade Unions (ZCTU), formed the country's first major opposition party, the Movement for Democratic Change (MDC). Capitalizing on a sluggish economy and growing dissatisfaction with the Government, the MDC quickly became the first serious challenge to the ruling ZANU-PE. In February 2000, the voters defeated the Government's proposed new constitution in the first electoral setback for the Government since independence, Veterans of Zimbabwe's liberation struggle and other ZANU-PF supporters embarked on a campaign of political violence designed to intimidate supporters of the opposition. Despite the intimidation campaign, the MDC won 57 of the 120 contested seats in June 2000 parliamentary elections-another setback for ZANU-PE which previously held 117 of the contested seats.

Zimbabwe is replete with civic and charitable organizations including the Red Cross, the Jairos Jiri Association and St. Giles Association (for the physically handicapped), the St. John's Ambulance Corps, Rotary, Island Hospice, Masons, Soroptomists, and numerous missionary organizations that welcome volunteer assistance.

The country enjoys a number of relatively strong nongovernmental organizations, including civil society organizations, human rights groups, and welfare organizations. Examples of civil society organizations which focus on good governance, accountability, and human rights include: Zim Rights, Transparency International, Amani Trust, Legal Resources Foundation, Catholic Commission for Justice and Peace, Women's Action Group, Zimbabwe Women Lawyers' Association, and the National Constitutional Assembly.

Foreign Relations

Nearly 4,000 Zimbabweans studied in the U.S. during the UDI period. Now scattered throughout senior levels of both government and the private sector, they represent a substantial reservoir of good will toward the U.S.

The U.S., which played a behind-the-scenes role during the Lancaster House Conference, extended official diplomatic recognition to the new government immediately after independence, and a resident Embassy was established in Harare on Zimbabwe's Independence Day, April 18, 1980. The first U.S. Ambassador arrived and presented his credentials in June 1980. Until the arrival in 1983 of a resident Ambassador in Washington, Zimbabwe's relations with the U.S. were handled by its Ambassador to the United Nations (U.N.) in New York.

At the Zimbabwe Conference on Reconstruction and Development (ZIMCORD) held in Harare in 1981, the U.S. Government pledged US \$225 million over 3 years as the U.S. contribution to Zimbabwe's development needs. This goal was more than met; from independence to September 1998, the U.S. provided more than \$720 million in economic and development assistance to Zimbabwe, making it the largest bilateral aid donor. In addition, most of this assistance was in the form of direct grants and was used to help rebuild schools and clinics, train agricultural experts, build low cost housing, and get the national economy-suffering from the war and sanctions-back on its feet.

Agency for International Development (AID) assistance to Zimbabwe in the 1990s has focused on agriculture/food security, education, family planning, HIV/AIDS prevention, private sector development, low-income housing, micro-enterprise funding and democracy and governance programs, and emergency food aid.

Bilateral relations are generally good. A series of undiplomatic state-

ments by the Zimbabwe Government led to a suspension of most U.S. aid in 1986, but aid resumed in 1988. The collapse of the Communist regimes in Eastern Europe and the former Soviet Union led Zimbabwean leaders to reexamine their world view, and Zimbabwe and the U.S. cooperated very closely during the former's latest tenure on the U.N. Security Council, 1991-92.

President Mugabe visited Washington informally in September 1980, and on official working visits in September 1983, July 1991, and in 1995, meeting with Presidents Carter, Reagan, Bush, and Clinton respectively. He also led the Zimbabwean delegation to the U.N. in 1980, 1984, and 1991. Then Vice President, George Bush, visited Harare in November 1982 on a trip to several African countries.

Diplomatic relations with the West again soured in 1997 when President Mugabe announced plans to seize white owned farms without providing compensation. An agreement was reached between the Government and donors in 1998, whereby donors would provide funding to much needed land reform. The process broke down in 2000 when the Government again announced plans to seize white owned farms for the resettlement of landless Blacks in a "fast-track" resettlement program. The Government's program was implemented by war veterans occupying more than 1,000 farms. Many Western donors withdrew part or all of their aid until the Government took steps to restore law and order in the land reform process.

Historically, Zimbabwe's closest links have been with the U.K.; however, in the past 3 years, this relationship has been very strained. Britain has provided substantial aid as the result of a pledge made at ZIMCORD. A British Military Advisory and Training Team assisting the Zimbabwe Army. British investment in Zimbabwe remains the largest of any single nation. As with the U.S., thousands of Zimbabweans studied in the U.K., and private

links remain close; however, official relations at times are strained.

Other West European countries have also forged close ties with Zimbabwe. The Scandinavian countries share certain philosophical affinities and have provided much assistance as have France, Canada, and the Federal Republic of Germany. Portugal and Greece maintain links partly because of the sizable Portuguese and Greek communities in the country. Similar historical ties have led to the establishment of close relations with India and Pakistan, and to a lesser extent, with Bangladesh.

Zimbabwe maintains diplomatic relations with virtually every African country, although some ties are closer than others. African nations with embassies in Harare are Algeria, Angola, Botswana, Egypt, Ethiopia, Ghana, Kenya, Libya, Malawi, Mozambique, Namibia, Nigeria, Senegal, South Africa, the Sudan, Tanzania, Tunisia, Zambia, and DRC.

Because of its "birth by armed guerrilla warfare," Zimbabwe developed and maintains close ties with a number of revolutionary states and organizations. Among these are the People's Republic of China, Cuba, the People's Democratic Republic of Korea, Iran, Iraq, Libya, Yugoslavia, and the Palestinian Liberation Organization.

Shortly after attaining independence, Zimbabwe was welcomed into the world community of nations and granted membership in many international organizations. Chief among these is the United Nations, which Zimbabwe joined just before the General Assembly convened in September 1980. In honor of its newest state, Africa chose Zimbabwe to hold one of its seats in the Security Council, which it did for the biennium 1983-84 and again in 1991-92. Zimbabwe participates in many bodies within the U.N. system. It is also a member of the Organization of African Unity, the Non-Aligned Movement, the Common-

wealth, the World Bank, and the International Monetary Fund.

Arts, Science, and Education

Zimbabwe's cultural life is diverse, with ample opportunities for foreigners to study, appreciate, and participate in both Western and African traditions.

The National Gallery of Zimbabwe offers a small collection of European art and a collection and workshop for African sculpture, mostly impressionistic soapstone works. The Queen Victoria Museum in Harare, located next to the College of Music, has ethnographic, geological, and natural history displays. The National Archives also has excellent permanent displays. The National Museum of Bulawayo has very good displays of Zimbabwe's wildlife and history. Harare and Bulawayo have several private art galleries which show interesting work.

Amateur theater groups welcome new participants. Professional or semi-professional theatrical performances are continually available. There are several choral groups and a few small orchestral ensembles. Several cinemas offer films (mostly American and British) a few months after their first run in the U.S. Video shops rent tapes of feature films, and there are occasional dance performances Zimbabwean, modern, and classical-by local groups. Performances by Zimbabwean popular musicians are numerous and inexpensive.

Performances by non-Zimbabwean artists and groups—whether of music, dance, or drama—are relatively rare.

There are scientific, cultural, hobby related, and artistic societies, with frequent meetings open to spectators and prospective members.

Several subscription libraries in Harare offer a fair selection of reading material. A decent selection of

new books is available in local bookstores.

The University of Zimbabwe is an important force in the community, and its courses, lectures, and library are open to foreign students. Universal primary education remains one of the state's goals. The government currently estimates that there are more than 2.5 million children in school in Zimbabwe, up from about 800,000 at independence. Educational opportunities have greatly increased, but unfortunately so has unemployment.

Commerce and Industry

At independence, Zimbabwe inherited one of the strongest and most complete industrial and financial infrastructures in sub-Saharan Africa, as well as rich mineral resources and a strong agricultural base. Most urban infrastructure is comparable to that in rural areas of the U.S., although much of it suffers from decades of insufficient investment and lack of maintenance. However, cellular service providers are rapidly filling the gap, albeit at much higher rates. Erratic electrical power is another periodic problem area.

Zimbabwe has been one of the few countries in sub-Saharan Africa able to consistently feed itself, although it is subject to periodic droughts with devastating effects (not just to the economy, but people, too). Locally produced fruits and vegetables, meats, dairy products, and processed fruits are usually available. Subsistence agriculture still provides the livelihood for a majority of Zimbabwe's farmers. Corn, called maize in Zimbabwe, is the staple crop. Export crops include tobacco, cotton, sugar, horticultural products, coffee, and tea.

Manufacturing is developed, largely as the result of international trade sanctions imposed during the UDI period. Privately owned factories grew to supply many consumer goods, although a large percentage

of these businesses grew inefficient over the decades as they remained highly protected from import competition as the Government of Zimbabwe pursued an import substitution economic growth model. The largest industries are iron, steel, metal products, food processing, chemicals, textiles, clothing, furniture and plastic goods. Tourism is very important as a foreign currency earner for the country.

Zimbabwe is endowed with rich mineral resources. Mining is largely in the hands of multinational companies. Exports of gold, asbestos, chrome, coal, nickel, and copper are foreign exchange earners. No commercial deposits of petroleum have been discovered, although the country is richly endowed with coal-bed methane gas that has yet to be exploited.

The Government is currently attempting a reorientation of the Zimbabwe economy, moving from the state-controlled socialist paradigm it espoused during the 1980s toward a more market-based, private sector-oriented model. The Government of Zimbabwe expressed an intent to attract foreign investment to complement what domestic business can generate and is in the process of liberalizing and eventually reducing many of the restrictions that served to deter investment in the past. It has decontrolled many prices and moved to eliminate the losses of several large parastatal companies. South Africa is still the predominant trading partner, though trade with Europe, Japan, the U.S., and neighboring African countries is considerable.

The giant Kariba Hydroelectric Dam on the Zambezi River, supplemented by several thermal generators and a coal-fired thermal plant recently established at Hwange supply the country's electric power. Without petroleum of its own, the country must depend on imports of gasoline and diesel for all transport needs. To stretch imported supplies,

gasoline is blended 85/15 with locally produced ethanol.

Zimbabwe's inflation rate at year-end 1999 was more than 55%. The per capita income is about US \$350. The country experienced rapid devaluation of the local dollar vis-à-vis the U.S. dollar in 1997/2000. The official exchange rate as of November 2000: US \$1 = Z\$55.

Transportation

Automobiles

Traffic moves on the left, British fashion, but although U.S. standard left-hand-drive cars can be used, they are not recommended for safety reasons.

Valid U.S. or foreign drivers licenses are acceptable for use in Zimbabwe, provided there is a photograph on the license.

Local auto insurance is required. All customary forms of automobile insurance are available. All Americans must purchase at least "third-party extended" insurance, which covers damage to other vehicles and injury to parties not in the insured car. The cost is minimal, less than US \$50 per year per vehicle. Comprehensive and collision insurance is highly recommended.

Parts are generally, but not always, available for domestically assembled vehicles. Delivery of parts from South Africa for other makes can take several weeks. Fuel shortages have become endemic since January 2000, with supplies sporadic and unpredictable. Gasoline, when available, at current exchange rates, costs about US \$3.00/gallon. This results in limited vehicular mobility.

Local

Taxis are readily available and inexpensive, but not up to U.S. standards. They are found at special stands in town and are available on call in the suburbs. Bus service within Harare is available, but buses are usually crowded and ser-

vice does not always keep to schedule.

A very good network of paved roads stretches across the countryside. Buses and passenger trains serve the larger towns. Air Zimbabwe and/or Zimbabwe Express run daily flights linking Harare, Bulawayo, Kariba, Victoria Falls, and other towns. An express bus service operates between Harare, Bulawayo, and Mutare.

Regional

International flights connect Zimbabwe with London, Amsterdam, Athens, Frankfurt, Lisbon, and Vienna in Europe; with Australia; and with numerous regional African cities. Other destinations are within easy reach via connections in neighboring African countries. Flights to and from Europe are generally overbooked and can be extremely difficult to reserve during the school holidays-December-January, April-May, and August-September.

In addition to Air Zimbabwe, the national airline, Harare is also served by British Airways, South African Airways, Kenya Airways, Ethiopian Airways, Egypt Air, Ghana Airways, and Air Tanzania. There are also flights via regional African airlines.

Communications

Telephone and Telegraph

Harare's telephone system is being upgraded, but it is not always reliable, especially during the rainy season. Fortunately, several mobile phone companies have recently entered the market and service is beginning to improve. Calls made from a home phone that are not operator-assisted are charged by the unit. This includes local and long distance direct-dial calls, and unless a call is booked through an operator, which is more expensive, the individual charges are not listed on the phone bill.

A satellite ground station began operation in 1985, and direct dialing out of Zimbabwe is sometimes eas-

ier than reaching a local number. It is cheaper to call from the U.S. to Zimbabwe than vice-versa. Zimbabwe has direct telex and telegraph service through London to most countries. Internet service providers are available in Zimbabwe.

Mail

International airmail between Zimbabwe and the U.S. takes 5-21 days; sea mail sometimes takes several months.

Radio and TV

Radio and TV in Zimbabwe are government owned. The state TV system broadcasts from about 4 pm until 11:30 pm on two channels that feature a variety of shows, including many older British and American series. Some residents have opted for satellite TV and subscribe to the South African entertainment channel MNet which offers several movie channels, ESPN, CNN, BBC, MTV, VH-1, Cartoon Network, cooking stations, Discovery Channel, and more. The television system used in Zimbabwe is British PAL. A television set purchased in the U.S. will not work in Zimbabwe, except when used to play NTSC videotapes. Radio Zimbabwe transmits on two AM and four FM channels in Shona, Ndebele and English from early morning to late evening. One FM station broadcasts 24 hours daily. Shortwave reception for U.S. Armed Forces Radio, VOA, and BBC is generally good with the aid of an external antenna.

There are also numerous local video rental clubs around Harare, although the quality of the videos is sometimes somewhat less than that of U.S. videos. A multisystem or PAL system TV and VCR are necessary to play local tapes.

Newspapers, Magazines, and Technical Journals

There are two daily newspapers, at least three weekly and two Sunday papers in Harare, in addition to numerous local magazines on a variety of subjects. A limited selection of international publications is available. U.S. magazines found in

bookstores include Newsweek and Time. Others magazines are available, but expensive. Ordering them via pouch is advisable. Bookstores carry a fair selection of popular British and American fiction and nonfiction, but prices are high. Secondhand bookstores offer reasonable prices. The selection of children's books is very limited.

Health and Medicine

Medical Facilities

There are three adequate hospitals; one opened in December 1998. There are good clinicians in most of the medical specialty areas. Laboratory, diagnostic imaging, and blood transfusions services are of good standards. Pharmacies are adequately stocked, and medicines that are not available in Zimbabwe can usually be purchased from South Africa. However, the unavailability of foreign exchange has made purchasing of certain medicines uncertain. The trauma clinics and road/air evacuation standards in Harare continue to improve. Medical evacuation is usually to South Africa.

However, adequate private medical care outside Harare is sparse. Government medical facilities are declining throughout the country.

Community Health

Public health standards are quite high in low-density urban suburbs. However, it varies throughout the high-density and rural areas. Public boards are responsible for, and stringent in setting standards for meats and produce available locally. Water in major cities is generally safe to drink. Sewage treatment is advanced, as are virtually all sanitation controls.

HIV/AIDS, tuberculosis, Hepatitis A, Hepatitis B, and bilharzia are at epidemic levels throughout the nation.

Preventive Measures

Malaria continues to be a problem in regions outside Harare. Adjunctive measures for prevention of

malaria are strongly recommended. Mefloquine or Doxycycline are the prophylaxis regimes of choice because of the high incidence of chloroquine-resistant malaria.

No particular safeguards are necessary in food preparation. Fruits and vegetables are washed thoroughly with tap water. Drinking water should be boiled and/or filtered as a precaution.

Most lakes and standing bodies of water are infested with bilharzia. Swimming and wading in them is ill advised.

Individuals with asthma or allergies may be adversely affected due to the great variety of year-round pollens and dry and wet seasons.

NOTES FOR TRAVELERS

Passage, Customs and Duties

A passport, return ticket, and adequate funds are required. U.S. citizens traveling to Zimbabwe for tourism, business and transit can obtain a visa at the airports and border ports-of-entry, or in advance by contacting the Embassy of Zimbabwe in Washington, D.C. U.S. citizens who intend to work in Zimbabwe as journalists must apply for accreditation with the Zimbabwean embassy at least one month in advance of planned travel. It is no longer possible to seek accreditation within Zimbabwe at the Ministry of Information. Journalists attempting to enter Zimbabwe without proper advance accreditation may be denied admission or deported.

There is a non-waivable airport departure tax of 20 dollars (US) by all U.S. citizens, including holders of official and diplomatic passports.

Travelers should obtain the latest travel and visa information from the Embassy of Zimbabwe, 1608 New Hampshire Ave. NW, Washington, DC 20009; telephone (202) 332-7100. Overseas, inquiries should be

made at the nearest Zimbabwean embassy or consulate. Upon arrival in Zimbabwe, travelers should keep all travel documents readily available, as well as a list of residences or hotels where they will stay while in Zimbabwe.

Most Americans in Harare travel through Europe and then to Johannesburg, in South Africa. British Airways, KLM, and Lufthansa no longer fly non-stop to Harare. An overnight rest stop is permitted and recommended in Europe to break up two consecutive all-night flights.

If you arrive between May and August, include in accompanying baggage warm clothes for chilly evenings. Unaccompanied airfreight from the U.S. can take 1-3 months.

Currency control restrictions are tight in Zimbabwe, and frequent arrests are made of those dealing in the export of Zimbabwean or foreign currency. Declare to customs officials the amount of cash in all currencies you are carrying. No more than Z\$2,000 may be imported or exported.

Americans living in or visiting Zimbabwe are encouraged to register at the Consular Section of the U.S. Embassy in Zimbabwe and obtain updated information on travel and security within Zimbabwe. Americans may register on-line by accessing our web site at <http://USEmbassy.State.Gov/Zimbabwe>, then access the consular/American citizen page to complete the registration on-line. The U.S. Embassy is located at 172 Herbert Chitepo Avenue, Harare, telephone (263-4) 250-593/4, after hours telephone (263-4) 250-595, fax (263-4) 722-618 and 796-488. The mailing address is P.O. Box 3340, Harare. The e-mail address is consular-harare@state.gov. American citizen service hours are from 1:30 p.m. to 3:30 p.m. Monday through Thursday and from 8:00 a.m. to 11:30 a.m. on Fridays, except U.S. and Zimbabwean holidays.

Pets

No quarantine period is required for cats and dogs in Zimbabwe. Birds can be imported, but the paperwork takes some time to complete. Import permits for all animals are required and can be obtained by writing directly to the Ministry of Agriculture at the following address: The Ministry of Agriculture Ngungunya Building, 1 Borrowdale Road P/Bag 7701 Causeway Harare, Zimbabwe.

Transiting South Africa with a pet can be problematic. It is easier to travel through Europe.

Veterinary services are quite adequate with a simple consultation costing about Z\$500 (about US \$7.50). Dogs and cats are dipped for fleas and ticks regularly during summer (October to April). A rabies vaccination is required prior to arrival and it is advisable to have a parvo and hepatitis shot as well. Government of Zimbabwe Customs also requires a veterinary certificate stating the animal is in good health. Bring all grooming aids and anything special that your animal requires, as well as any special foods or medicine. Pet foods are available, but cat litter is not. There is a kennel club, a feline club, and a bird club in Harare and dog and cat shows are held throughout the year.

Licenses are required for both cats and dogs. Unspayed females are Z\$20, and males and spayed females are Z\$10.

Firearms and Ammunition

U.S. citizens who are bringing weapons and ammunition into Zimbabwe for purposes of hunting should contact the Embassy of Zimbabwe in Washington, D.C. to find out what permits are required. (Please check the Entry Requirements section for the address and telephone number for the Embassy of Zimbabwe.) Some Americans traveling in Zimbabwe have come under added scrutiny from immigration and police officials in the wake of the March 1999 arrest of three American citizens at Harare International Airport, who were allegedly in possession of undeclared assault

weapons. Travelers are advised to make sure that all of the necessary documentation is in order before departing the United States. The weapons also must be cleared through U.S. Customs to ensure their expeditious re-entry into the United States at the conclusion of one's trip.

Currency, Banking, and Weights and Measures

The local currency is the Zimbabwe dollar (Z\$). US \$1 equals about Z\$55 (as of November 2000). However, this rate is extremely volatile at this time.

Barclays, Standard Chartered, and Zimbank provide commercial banking services. Zimbabwe uses metric measurements.

PREFACE

Cities of the World represents a compilation of government reports and original research on the social, cultural, political, and industrial aspects of the nations and cities of the world. Most of the country profiles included here are based on official personnel briefings issued as *Post Reports* by the U.S. Department of State. The *Post Reports* are designed to acquaint embassy personnel with life in the host country. Consequently, the reports concentrate on cities in which the U.S. government has embassies or consulates. To increase coverage of other important cities, the editors have added information on a large number of cities—31 of which are new to this edition—not reported on by the Department of State.

Since the fifth edition of *Cities of the World*, the Department of State has issued 62 new or revised *Post Reports*, all of which have been incorporated into this sixth edition. Selected data in *Post Reports* not revised by the Department of State since the last edition of *Cities of the World* have been updated by the editors with revised statistics acquired through independent research. In addition, articles have been written on thirty-three countries for which no *Post Report* exists.

Readers familiar with the fourth edition of this publication will notice that with the fifth edition the page size was enlarged to accommodate more information. This sixth edition includes new photographs selected by the Gale editors. The photographs depict scenes found in a city and countryside and, in many cases, reveal the cultural flavor of the area as well. As in the prior edition, many chapters feature a map of that country's capital or major city, with a superimposed locator map indicating the nation's geographic location in relation to its regional neighbors.

Volumes in This Series

This series includes four volumes:

- Volume 1: Africa;
- Volume 2: The Western Hemisphere (exclusive of the United States);
- Volume 3: Europe and the Mediterranean Middle East;
- Volume 4: Asia, the Pacific, and the Asiatic Middle East.

In all, this set provides coverage of over 2,000 cities in 193 countries.

Format and Arrangement of Entries

Cities of the World is arranged alphabetically by country name. Its chapters are divided into two basic sections, Major Cities and Country Profile, each of these with several subdivisions. A Major City listing might comprise information on Education, Recreation, and Entertainment. Other Cities, smaller cities and towns which are designated as other than major, are discussed in brief paragraphs at the end of the Major City section. Country Profile sections are subdivided into: Geography and Climate; Population; Government; Arts, Science, Education; Commerce and Industry; Transportation; Communications; Health; Clothing and Services; Local Holidays; Recommended Reading; and Notes for Travelers. Thus, *Cities of the World* presents not only basic information, but also comprehensive data on local customs, political conditions, community services, and educational and commercial facilities.

Contents and Index

The Contents and Index in each volume provide easy access to these reports. Listed under each country in the Contents are the cities that appear in its Major Cities section, as well as listings for the Other Cities and Country Profile sections. A Cumulative Index, combining the four individual volumes is found at the end of each volume. The Index is arranged alphabetically by city name, including listings for both major and minor cities that are mentioned in each volume; as well as by country name with names of cities indented below.

Acknowledgments

The editors would like to thank the U.S. Department of State for providing copies of *Post Reports* to aid in the compilation of these volumes. The editors would also like to thank Adam A. Gall and Marlon C. Tussel for their editorial assistance.

Suggestions Welcome

The editors invite comments and suggestions concerning *Cities of the World*. Please write to: Editors, *Cities of the World*, The Gale Group, Inc., 27500 Drake Road, Farmington Hills, MI 48331-3535; fax (248) 699-8074; or call toll-free (800) 877-4253.

CITIES OF THE WORLD

Volume 2:

**The Western Hemisphere
(exclusive of the United States)**

ANTIGUA AND BARBUDA

Major City:
St. John's

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report for Antigua and Barbuda. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

ANTIGUA (pronounced An-tee-ga) is a three-island nation located about 1,200 miles southeast of Miami. The country consists of the islands of Antigua, Barbuda, and the uninhabited island of Redonda. Each of these islands is unique. Antigua's topography is varied. In the north and west, the gently undulating terrain consists of limestone, marls, and sandstone. In the south and east, the land is of volcanic origin, with high ridges and forests common to many other Caribbean islands. Thirty-two miles to the north, Barbuda is a 62-square mile flat island composed of limestone, ancient coral reefs, and sand. It has a 14-mile long beach. Twenty miles west lies Redonda, a solitary

volcanic cone jutting directly out of the sea to a height of over 1,000 feet. Steep cliffs surround the area of less than one-half square mile.

Among Antigua's attractions are 365 beautiful white sand beaches. Tourists arrive by cruise ship, yachts, and airliners to relax in the sea, sun, and surf, or enjoy all kinds of water sports. In the off-season, it is possible to find many uninhabited beaches. History buffs will find Antigua rich in human events, agriculture, and strategic importance.

MAJOR CITY

St. John's

St. John's, with a population of 24,000 (2000 estimate) is the capital of Antigua and Barbuda. It is situated on Deep Water Harbor, where as many as five Caribbean cruise ships dock for the day, adding hundreds of tourists to the daily activity. From this protected location nearly all commerce occurs; from the quaint fish market to the modern mini-mall, people come to trade and transact business. In daytime, people scurry about in the narrow streets, taking time to greet friends along the way. On cool evenings,

people stroll leisurely in the refreshing sea breeze.

Clothing

Antiguans dress in moderation and are conditioned to tropical living. As a result, it is common for men to work in blue jeans and long sleeve shirts, and women in synthetic fabric dresses. It is acceptable for tourists to wear shorts. However, American women living in Antigua find dresses or slacks more appropriate. North Americans who are not accustomed to living in tropical climates should bring lightweight clothing. Cotton or cotton-blend garments are the most comfortable. Antigua has a few fine-quality clothing stores, but clothing is expensive. Expatriates should bring an ample supply of shoes as local varieties are not well made and sizes are different from U.S. standards. In the heat and humidity, shoes one-half size larger are more comfortable.

Clothing and accessories suitable for men include wash-and-wear business suits, sport jackets, shirts worn with or without ties, sport shirts, and slacks. Shirt jacs or a *guayabera*, and slacks are popular. Working attire for women is usually a modest suit, a cotton dress, or a blouse and skirt. Stockings are not normally worn. Hats are not normally worn except occasionally to

church or at a sunny beach. Antiguan women are fashion conscious and like to dress for cocktail and dinner parties. Nights are occasionally cool, so a lightweight cotton sweater or shawl is useful. For children, normal U.S. summer wear is suitable, with lightweight jackets or cardigans for cool evenings. All schools, including preschool, require uniforms. Girls wear simple one-piece dresses, or skirts and blouses. Boys wear slacks and shirts. In secondary schools, a tie completes the dress code. Uniforms are made and sold locally.

Supplies & Services

In general, it is possible to buy most anything in Antigua. However, prices are often highly inflated. Stocks are often small and selections are poor compared to the U.S. American expatriates often order most items via catalogs. St. John's offers an interesting variety of stores and boutiques. Specialties include straw goods, pottery, batik and silk-screened fabrics and jewelry incorporating semiprecious Antiguan stones. China, crystal, watches and perfumes are obtainable at duty-free prices. Heritage Quay and Redcliffe Quay are the two main shopping areas in St. John's. Many expatriates also making shopping trips to St. Martin's or Puerto Rico.

The number of establishments offering basic services is limited. Dry-cleaning services are poor. Many people restrict the need for dry-cleaning because of the expense, and availability of cotton and synthetic substitutes. Shoe and leather repair service is good, and some crafters do custom work. Barber-shops are adequate and charge reasonable prices. A wide range of hair care services are available, including permanents, tints, and stylings. Many hairdressers are expatriates. Dressmakers vary in skill, but some can take a length of fabric and fashion anything from sundresses to formal wear. Some repair work is good, but the standard of most is uneven, particularly if unsupervised. Progress is often slow and further

Street in St. John's, Antigua

hampered by periodic unavailability of materials and electrical failures. Repair work on cars, electronic equipment, and household appliances varies in quality, because of the lack of expertise and unfamiliarity with certain electronic devices.

Food

St. John's has four supermarkets, several well-stocked minimarkets, and numerous small stores. Many canned and packaged goods are U.S. name brands, the rest are from Europe or nearby islands. Imported dairy products are safe; local products are not. Most eggs are imported. Cattle, hogs, and chickens are raised and processed locally. All are safe to eat if cooked properly. Cuts vary widely from those in U.S. meat markets. Beware of frozen packaged meats in smaller stores; power failures are frequent and meat lockers may not have generator backup. Local bakeries make fresh breads and pastries. Packaged cereals may not be fresh, and grain products are subject to bug infestations.

Fresh seafood is always available at the Saturday morning market; for other times, it is wise to establish contact with a local fisherman. Fresh vegetables and fruits are also

sold at the Saturday market and stores. Most are imported, since the economy does not have an agricultural base. Most stores sell wines, hard liquor, and brand name soft drinks. Diet foods and products are rarely available.

A local cuisine specialty is *roti*. It is an unleavened bread shell folded in half and filled with a curry gravy, vegetables, and a meat. *Roti* made from conch meat is considered a delicacy. Barbudan lobsters are excellent. Cockles are an island favorite, especially around Whit's Day. Numerous downtown restaurants cater to the professional community. Antigua has a U.S.-based fast-food chicken restaurant.

For dining out, it is possible to choose from a variety of hotel restaurants, offering everything from smorgasbords to full course meals. Most specialties are "the catch of the day" seafoods. Also, ethnic restaurants featuring Italian, French, Chinese, British, and American cuisine exist. Dress is casual at restaurants, but hotels are slightly more formal. Hotels that cater to tourists may inflate some prices.

Domestic Help

Domestics are available for laundry and household chores. Some fami-

lies with large gardens may also hire a part-time gardener. Reliable employees can usually be found through friends. However, it is best to hire on a temporary basis at first and set out the terms of employment.

Wages are governed by law; minimum wage is generally EC \$20 a day from 9 a.m. to 1 p.m., five days a week. Workers have one paid holiday a month. Domestic help is entitled to all local holidays, and a Christmas bonus is suggested. All workers over 18 years of age must register. Employers pay social security and medical insurance that is accumulated by a deduction of 5.5% from employee wages and an employer contribution of 7.5%. Employers provide either transportation or bus fares.

Education

The children of American expatriates attend local schools. Schooling is adequate through high school. However, American history and geography are not taught. Many parents select private schools as they are perceived to have a higher quality of education. Schools in St. John's follow the British educational system and are in session from September until the last week in June. Instruction is in English. Teachers and teaching assistants may be hired locally or recruited from neighboring islands or the expatriate community. All schools have open play areas and all-purpose playing fields; however, they do not have closed auditoriums. Some extracurricular activities are available such as scouting, cricket, basketball, volleyball, and soccer.

Schools in Antigua cannot support special educational requirements. Children with learning disabilities, or physical, behavioral, or emotional handicaps should be placed in U.S. schools.

Recreation

As in most Caribbean countries, cricket is Antigua's national sport. Soccer (locally called football) and basketball are played in the off-sea-

son. A local board game, called *warri*, is played on a board with hollowed pockets. Two opponents move warri beans about, seeking to capture the opponents' beans. Warri is popular with cabbies and bus drivers awaiting fares.

Antigua has two golf courses open for year-round play. Cedar Valley Golf Club has an 18-hole championship course. This challenging course has narrow fairways, deep roughs, and hilly terrain. Clubs and accessories are available at the recreation building. Half Moon Bay Hotel, located on the opposite side of the island, has a 9-hole course more hospitable to casual players. Equipment can be rented.

All water sport activities abound. It is possible to rent sailboats, both large and small. Powerboating is used mainly for fishing, but in some places, powerboats are used for parasailing, water skiing, and sight-seeing. Small craft and inexperienced pilots should not operate in the open Atlantic. Coral reefs and shoals encircle Antigua, and novices must learn to identify and navigate these hazards. Antigua's clear waters offer abundant marine flora and fauna.

St. John's offers many sight-seeing opportunities. St. John's has an old fort that can be readily explored. Fort James, built in 1703, guarded the entrance to St. John's Harbor. Many of the original buildings no longer exist, but some buildings that remain date back to 1749. The fort still has ten cannons. Each weigh about two and one half tons and can propel a cannonball one and one half miles. Another tourist attraction is St. John's Cathedral. Built in 1722, the cathedral's interior is encased in wood to protect it from hurricane and earthquake damage.

In addition to sights in St. John's, there are points of interest throughout the island. Nelson's Dockyard, built in 1784 as the headquarters of Admiral Horatio Nelson, is situated in one of the safest landlocked har-

bors in the world. Today, the Dockyard has been restored to its original state and houses a museum that is very popular among visitors. Indian Town, one of Antigua's national parks, features Devil's Bridge, carved out by the forces of the Atlantic Ocean. Clarence House, the Governor's residence, is open to the public when the Governor is absent. The house was once the home of the "Sailor King," William IV, when he was Duke of Clarence.

Many old sugarcane mills are familiar landmarks throughout the island. Betty's Hope is one of the oldest plantation sites in Antigua, dating back to 1655. It was Antigua's foremost sugar plantations for large-scale sugar cultivation and innovative processing methods. The Sugar Factory had twin stone windmill towers, a laborers' village, and an extensive water catchment system. Most buildings are in ruins, but restoration plans are underway.

Antigua hosts several international events. In late July, Antigua hosts a ten-day Carnival. Visitors come from all over the world. It is a time when people celebrate the people's emancipation and freedom from subjugation. During "J'Ouvert," a Carnival highlight, everyone comes together jumping and jamming to the pulsing, rhythmic sounds of steel pan and brass bands. Carnival Monday is a riot of color. The elaborate costumes are combinations of sequins, feathers, beads, and glitter, often towering ten to fifteen feet in the air. Each represents countless hours of painstaking work to design and create.

Antiguan Sailing Week has evolved into one of the world's top sailing regattas. It attracts many spectators to watch the excitement of the races and to join in the parties that follow. Sailing Week, which begins the last week in April and continues during the first week in May, is a blend of international, regional, and local yachts. Many colorful sails catch the wind as yachts jostle to pass each other on the sea. Races

are organized into different categories.

Entertainment

St. John's has limited forms of entertainment. One popular discotheque occasionally offers performances by regionally well-known groups. Apart from this, nightlife is confining. The one movie theater, in the shopping district, offers a mix of martial arts movies, "B" movies, and an occasional recently released film. Video clubs are coming to Antigua, but prices are high.

Many hotels offer live entertainment on particular nights. Steel drums and reggae bands, along with other musical groups, are featured. Casino gambling is popular; however, odds heavily favor the house.

Among expatriates, cocktail parties, small suppers, or dining out are common ways to entertain. Community fund-raising events are held throughout the year. The American Women's Club coordinates philanthropic and community activities. Most people find the life-style on Antigua limiting and feel a periodic need to leave the island. Many expatriates also enjoy golf, bridge, and special hobbies.

COUNTRY PROFILE

Geography and Climate

Antigua is roughly oval in shape, 10 miles by 12 miles, with a land area of 108 square miles. Although Antigua is volcanic in origin, it also has extensive limestone geology. Various coral reefs surround the island. Antigua's shores are washed by the Atlantic Ocean on the east and the Caribbean Sea on the west. This makes Antigua unique and diverse in both terrestrial and marine flora and fauna. Boggy Peak, at 1,330 feet, is the highest prominent landmark. Barbuda, which is not commercialized or overly developed, promises a nearly unspoiled fishing,

snorkeling, and scuba-diving paradise. Most of the 1,500 Barbudans live in the town of Codrington.

Antigua's climate is heavily influenced by the easterly trade winds and sea currents that are present all year. Drier than most other Caribbean islands, Antigua and Barbuda's climate is tropical, with low humidity and an average rainfall of 42 inches. Most homes in Antigua have cisterns, and the island has numerous ponds, reservoirs, and catchment systems to store rain water, which until recently was the only natural fresh-water source on the island. During the cool season, December-February, night temperatures range from 60°F to 65°F. Average daytime temperatures are 76°F, December-April, and 85°F in August and September.

Although the official hurricane season begins June 1 and ends November 30, August and September are the two most active months. At this time, tropical storms form in the eastern Atlantic Ocean and spend days building their wind velocities as they approach the Caribbean. On September 16, 1989, Hurricane Hugo passed within 40 miles south of Antigua, causing extensive damage to the entire island. Historically speaking, the threat of a major hurricane hitting Antigua is small; the last direct strike was in 1952.

Population

The people of Antigua and Barbuda are almost exclusively of black African origin. Antiguan and Barbudans are largely descendants of African slaves who were transported from West Africa in the seventeenth and eighteenth centuries. Several minorities are also represented. These persons are the descendants of Lebanese and Syrian traders, British colonial settlers, and Portuguese laborers. Statistically, life expectancy is 68 years for males and 73 years for females (2001 estimates). The educational requirement is a compulsory 9 years, and the literacy rate is roughly 90%. Antigua and Barbuda

has an estimated population of 64,500; 98% live on Antigua. Redonda is uninhabited.

History

The earliest known human-made artifacts have been carbon dated at least to 1775 B.C. These people have been named the "Siboney," the Stone People. Their society was that of nomadic food gatherers having no agriculture or permanent settlements.

About the time of Christ, an agricultural society made its way up the chain of islands from South America. They brought with them new plants such as peanut, pineapple, cotton, and tobacco plants.

Later, A.D. 1200-1300, two Amerindian societies with opposing lifestyles coexisted; the peaceful and pottery-making Arawaks, and the fierce and warlike Caribs. Arawaks came here for clay, a resource in short supply elsewhere and essential for making pottery. The Caribs are thought to have exploited another earth resource, flint, a hard mineral necessary in the making of arrowheads and spear points.

The first Western explorer believed to have discovered Antigua was Christopher Columbus. In his second voyage in 1493, Columbus was sailing from the south when he spotted Antigua on the horizon. It was at this time that he named Antigua after a sainted miracle worker, Santa Maria de Antigua, from Seville Cathedral, Spain. Columbus did not stop or set foot on Antigua, he continued northbound to Hispaniola, convinced that gold and spices existed there.

For the next 200-300 years, there was great imperial rivalry for control and possession of the Caribbean islands. The Spanish Armada, the Dutch and French fleets, and British Navy all had a military presence.

The English successfully colonized Antigua in 1632. Although the

island was held briefly by the French in 1666, Antigua remained thereafter under British control.

Sir Christopher Codrington established the first large sugar estate in Antigua in 1674 and leased Barbuda to raise provisions for the plantation. Barbuda's only settlement is named for him. Sir Codrington and others brought slaves from Africa's west coast to work the plantation. To exploit the land for sugar cane production, plantation owners cleared the forest and woods. Today, many Antiguans attribute frequent droughts to the island's early deforestation. Antigua's profitable sugar plantations were soon the envy of other European powers. To defend the island's growing wealth, the British built several large forts. The ruins of these forts are notable tourist attractions.

Antiguan slaves were emancipated in 1834, but they remained bound to their plantation owners. A lack of surplus farming land, no access to credit, and an economy built on agriculture rather than manufacturing limited economic opportunities for the freed men. Poor labor conditions continued until 1939, when a member of a Royal Commission urged the formation of a trade union movement. The Antigua Trades and Labor Union, formed shortly afterward, became the political vehicle for Vere Cornwall Bird, who became the union's president in 1943. The Antigua Labor Party (ALP), formed by Bird and other trade unionists, first ran candidates in the 1946 elections, thus beginning a long history of electoral victories. In 1971, general elections swept the Progressive Labor Movement into power, but Bird and the ALP returned to office in 1976. Prime Minister Bird's ALP government has led the country since, winning a renewed mandate in the 1989 general election.

Government

Antigua and Barbuda is a member of the British Commonwealth. As head of the Commonwealth, Queen

Elizabeth II is represented in Antigua and Barbuda by a Governor General, who acts on the advice of the Prime Minister and the Cabinet. The Prime Minister is the leader of the majority party of the House, and the Cabinet conducts affairs of state. Antigua and Barbuda has a bicameral legislature: a 17-member popularly elected Upper House or Senate appointed by the Governor General (mainly on the advice of the Prime Minister and the leader of the opposition) and a 17-member popularly elected House of Representatives. The Prime Minister and Cabinet are responsible to the Parliament, which has a normal term of five years.

Constitutional safeguards include freedoms of speech, press, worship, movement, and association. Like its English-speaking neighbors, Antigua and Barbuda has an outstanding human rights record. Its judicial system is modeled on British practice and procedure, and its jurisprudence on English Common Law.

The flag of Antigua and Barbuda is red with an inverted isosceles triangle based on the top edge of the flag; the triangle contains three horizontal bands of black (top), light blue, and white with a yellow sun rising in the black band.

Arts, Science, Education

The longest established gallery is The Art Center at English Harbor. It only displays local art, but it has influenced the development of art in the Caribbean. The island's newest addition is the Seahorse Studio's Art Gallery. This studio was established in 1985 to provide graphics and layout services for local businesses. In addition to Caribbean art displays are unique gold and bronze marine crafts made in Antigua by "The Goldsmitty." The Island Arts Foundation has four galleries in Antigua, and six associate galleries throughout the islands. Island Arts offers the widest variety of Caribbean art anywhere in the region. It is a nonprofit company devoted to

economic support of Caribbean-based artists. Coates College and The Art Gallery both feature local artists' exhibits year round. Harmony Hall of Jamaica has a branch studio on Antigua at Brown's Bay. Exhibitions change every three to four weeks, November to March. Aiton Place has art pieces at numerous fine hotels.

The Antigua Arts Society, a group of local and regional artists, actively provides direction and promotes growth in all art forms. The Society sponsors regional art fairs and showings.

Antigua has four museums. The Museum of Antigua and Barbuda has tours, book libraries, and computer libraries open to visitors and residents. It is also a research area for foreign students. The museum has direct links with several universities, such as Tulane, Brown, Northern Illinois, and Cambridge. Students can research in areas from geology and archeology to sociology and communications. A second museum, the Museum of Marine and Living Art, offers a stunning collection of seashells and relics salvaged from old shipwrecks.

The oldest museum in Antigua was established in 1953 at English Harbor. The Dockyard Museum is near the waterfront and deals with naval history. Antigua was Britain's major Caribbean naval base for much of the colonial period. The museum has large ship models on loan from the British National Maritime Museum.

The newest museum is on the road to Shirley Heights. This once was the largest fort, and its main function was to reinforce Antigua's defenses. It now houses the Military and Infantry Museum.

In Antigua, public education is free and compulsory for children ages five-16. The education system is modeled after British schools. Parents provide books and uniforms for the three local coeducational elementary schools. One is secular, a

second is Roman Catholic, and a third is Lutheran. Tuition varies according to the school's funding.

Antigua has two Roman Catholic high schools, one for girls and one for boys. Both schools are highly regarded. Uniforms are required, and a demerit system governs discipline and conduct. Classes in history, geography, and literature are regional in nature.

The University of the West Indies (UWI) has campuses in Barbados, Trinidad, and Jamaica, and maintains extramural departments in several other islands including Antigua. Antiguan students interested in higher education enroll at UWI campuses, or schools in Britain, the United States, Europe, and Canada.

The Venezuelan Institute for Culture and Cooperation offers many interesting programs, free to the public. Spanish lessons are provided for adults at all conversational and grammatical levels. Sewing lessons are offered throughout the year. Occasionally, cooking, music, and art classes are also given.

Commerce and Industry

Sugar cultivation, long dominating Antigua and Barbuda's economy, was a major export until 1960, when prices fell dramatically and crippled the industry. By 1972, the industry was largely dismantled. The agricultural pattern in Antigua has shifted to a multiple cropping system. Though fruit and vegetable production predominates, the Antiguan government has encouraged investment in livestock, cotton, and export-oriented food crops.

Currently, the economy is based on services rather than manufacturing. Tourism is the economic backbone and main source of foreign exchange. Over 150,000 cruise ship visitors and 250,000 overnight visitors arrive each year.

In the private sector, domestic and foreign investments are encouraged. Private businesses benefit from a stable political environment, good transportation to and from the island, and a pleasant climate. Government policies also provide liberal tax holidays, duty-free import of equipment and materials, and subsidies for training local personnel. The country's reasonably sound infrastructure is an added incentive.

Nontraditional exports have grown in recent years. Foreign investors, lured by Antigua's good transportation connections to North America and Europe, have set up light manufacturing industries on the island, primarily in the finished textile and electronic component assembly sectors. Some of the newer industries produce durable household appliances, paints, furniture, mattresses, metal and iron products, and masonry products for the local market as well as for export.

Barbuda supports a tremendous diversity of unexploited native habitats, including a bird sanctuary. It is hoped that development will focus on preserving these natural attributes.

Redonda's economic importance lies in the past. In 1860, Redonda was worked for its valuable bird guano, and later for aluminum phosphate. At the outbreak of World War I, mining operations ceased. After the war, technological advances made during the war made further mining uneconomical. Today, the island's only inhabitants are the birds. Redonda's quarry works stand alone, mute testimony to a bygone day.

Transportation

Americans need private cars. Most Americans buy cars here, as right-hand drive vehicles are more appropriate for local driving. Japanese cars predominate locally; other Asian Pacific Rim cars make up the difference. There is a 100% duty

rate for locally purchased or imported cars. U.S. Government employees are exempt from this tax. Landrovers are popular, especially for exploring the island or towing a boat. Many people consider air-conditioning indispensable, particularly in the rainy, hot season. Fuel-injected or sport cars are not recommended due to the inferior quality and low octane of imported gasoline.

Auto mechanics and repair shops service locally sold cars satisfactorily, but parts are generally unavailable for other imports. Expatriates should bring an ample supply of spare parts with them, including a dry-charged battery, fanbelts and hoses, a tune-up kit, fuel and water pumps, windshield wiper blades, oil, gasoline and air filters, headlights, indicator lamps, and an extra set of tires.

An Antiguan drivers license is required for all drivers. To obtain a license, present a valid U.S. drivers license to the local constabulary. A three-month temporary permit is issued and should be used until the permanent license is received. The U.S. drivers license is also returned.

Antiguan roads are not well maintained. Potholes are numerous, and roads are narrow and steep in hilly areas. Newcomers should exercise extreme care when driving in Antigua. The accident rate is very high because of poor road conditions, excessive speeding and passing by some residents, and because Americans are unfamiliar with driving on the left. Speed limit signs are infrequent and poorly observed or enforced. Taxis and buses frequently stop in the middle of the road for passengers. Road markings, such as center lines, are absent. In the city of St. John's, only a few streets are identified with signs. Rural roads do not have signs. Caution should be observed when driving in rural areas because livestock often wander aimlessly into traffic.

For those who do not have their own cars, taxis and rental cars are the main source of transportation. It is important to negotiate fares before getting into a cab because the cabs are not metered. Some comfortable, newer buses and minivans commute between St. John's and outlying communities. However, they are often overcrowded and driven recklessly. Several car rental firms offer mostly small Japanese models for rent by the day, week, or month. Rates are expensive.

Vere Cornwall Bird International Airport handles all international flights. Nonstop connections to Antigua from London, New York, Miami, Puerto Rico, Toronto, Frankfurt, Guadeloupe, Baltimore, and St. Maarten are available. Connections from several U.S. cities are routed through San Juan, Puerto Rico. Regularly scheduled air service is provided by British Airways, American Airlines, British West Indies Airways, Air Canada, and Continental Airlines. The regional airline, Leeward Island Air Transport (LIAT) provides service from Antigua and Barbuda to many locations within the Caribbean.

Communications

Antigua Public Utilities Authority (APUA) suffered extensive damage from Hurricane Hugo and is slowly repairing and upgrading its telephone equipment. Phones often stop working, and service is slow and unreliable. Long-distance, direct-dialing is available to most of the world.

The government-operated Antigua and Barbuda Broadcasting Service (ABBS) has one radio station and a television station. A privately owned radio station, Radio ZDK, broadcasts from St. John's. The format of Radio ZDK consists primarily of local news and features and sometimes includes prerecorded programs from U.S. satellite services. Antigua's one Christian broadcast radio station, Caribbean Radio Lighthouse, is affiliated with

the Baptist Church. Many Americans enjoy listening to GEM-94, which broadcasts from the island of Montserrat. This satellite syndicated station features contemporary and oldies music.

Because it experiences little electromagnetic interference, Antigua is an ideal location for shortwave reception. Stations from around the world, including BBC Caribbean and Radio Deutsche Welle, can be received. The Voice of America also has a relay station on Antigua that broadcasts daily. Programming is mainly regional and world news, with some special music features and world reports aired on the weekends.

Antigua has three weekly publications that publish local and regional events but do not cover social and international events. Freedom of the press is guaranteed by law. *The Nation* and *The Worker's Voice* are government owned and abridged. *The Outlet* is privately owned and unabridged.

U.S. paperbacks and magazines are readily found. *The Miami Herald* and *USA Today* are available one day late. Bookshops, although small, sell a wide range of paperback novels, some reference books, and hardcovers at about twice U.S. prices. The small public library in St. John's has a good reference section. Library fees are reasonable.

Health

Antigua has some qualified doctors who were trained in the U.S. or Britain. However, specialists in pediatrics, surgery, ear, nose, and throat, cardiology, oncology, dermatology, neurology, orthopedics, and more advanced internal medicine are limited. Emergency obstetrical care is not immediately available. Holberton Hospital is old and inadequate. Nursing care is limited.

Current community health requirements fall below U.S. standards. In St. John's, open gutters carry

untreated waste. Sewage treatment is inadequate, and the limited public restroom facilities are unclean. The weekly garbage pickup is deposited into open dump sites.

In St. John's, water is treated and has been safe to drink. However, the distribution system is old, and broken water mains can lead to contamination. If this occurs, unpotable water must be boiled and filtered before use. Homes have cisterns as an alternative source.

Infectious hepatitis, gastroenteritis, and intestinal parasites are common. Tropical weather and high humidity are conducive to skin and fungal infections.

Frequent power outages can result in food spoilage. Therefore, exercise caution when purchasing frozen foods. Meats purchased in Antiguan markets should be thoroughly cooked. Some large predatory fish that feed from the reef environment food chains contain a neurotoxin, which can produce diarrhea, vomiting, muscle aches, numbness, tingling of the mouth and extremities, itching, and severe headaches. Neurological symptoms can last a few days or longer.

Although none of the following inoculations is required for entry, they are highly recommended. Visitors and expatriates should be inoculated against typhoid, polio, tetanus, and hepatitis. Children should have measles, mumps, rubella, and DPT (diphtheria, pertussis, and tetanus) shots, and an oral polio vaccine (OPV).

Although no special preparation of fruits and vegetables is required, visitors and expatriates should be aware of some toxic plants. The manchineel is a tropical American tree that has a poisonous fruit and a poisonous milky sap that causes skin blisters on contact. Three other common ornamental plants with a similar alkaline sap are the candleabra cactus, the frangipani bush,

and the poinsettia. They too can cause skin redness and irritation.

Antigua and Barbuda do not have poisonous snakes since the introduction of the mongoose. However, there are scorpions, centipedes, and tarantulas. Their sting or bite is toxic and painful, and immediate care should be sought. The islands also have rodents and flying and crawling insects. Certain types of coral formations (the fire coral) can cause severe skin irritation, and spiny sea urchins can cause major foot infections if stepped on and left untreated. Visitors should also be aware that the stings of Portuguese man-of-war and the scorpion fish can be very painful and possibly deadly. Broken glass and sharp metal objects are often found at old ruins and abandoned sites. Caution should be exercised when exploring these areas.

Gradual exposure to the tropical sun's rays is the best protection against painful sunburn. Gradually increasing the length of exposure time each day will build up a protective tan. A hat should be worn between 11 am and 2 pm as the sun is most intense during this period. A sunscreen with an SPF of 15 or better should be worn.

NOTES FOR TRAVELERS

Passage, Customs & Duties

A valid passport or certified birth certificate and picture identification, such as a driver's license, are required of U.S. citizens entering Antigua and Barbuda. A return ticket is sometimes requested. Immigration officials are strict about getting exact information about where visitors are staying. There is no fee for entering the country, but there is a departure tax. U.S. citizens entering with documents other than U.S. passports should take special care in securing those documents while traveling. It can be time-consuming and difficult to acquire new proof of citizenship to facilitate return travel.

The possession, use, or sale of non-prescription controlled substances such as cocaine, heroin, marijuana, etc., is expressly forbidden. Bring prescriptions in their original containers with prescription labels attached.

Americans living in or visiting Antigua and Barbuda are encouraged to register at the Consular Section of the U.S. Embassy in Bridgetown, Barbados. Travelers may contact the Embassy to obtain updated information on travel and security within Antigua and Barbuda. The Embassy is located in the Canadian Imperial Bank and Commerce (CIBC) Building on Broad Street, telephone (246) 436-4950, web site <http://www.usembassy.state.gov/posts/bb1/wwwhemb1.html>. The Consular Section is located in the American Life Insurance Company (ALICO) Building, Cheapside, telephone (246) 431-0225 or fax (246) 431-0179, web site <http://www.usembassy.state.gov/posts/bb1/wwwhcons.html>. Hours of operation are 8:00 a.m. to 4:00 p.m., Monday - Friday, except local and U.S. holidays.

U.S. citizens may also register with the U.S. Consular Agent in Antigua,

whose address is Bluff House, Pigeon Point, English Harbour, telephone (268)463-6531, fax (268)460-1569, or e-mail ryderj@candw.ag. The Consular Agent's hours of operations are 9:00 a.m. to 4:00 p.m., Monday-Friday, except local and U.S. holidays (please call for an appointment).

Pets

Only pets currently residing in Britain may be imported, accompanied by appropriate veterinary certificates, into Antigua and Barbuda. This rule offers no waivers or relaxations. Pets from the U.S. can be sent to Britain for six months' quarantine. This is, however, extremely costly. Mongrel dogs and cats abound in Antigua, and many strays need homes. Antigua has an American veterinarian. The most common endemic parasites treated are tapeworm, hookworm, and heartworm. Rabies is not present on the island.

Firearms & Ammunition

Prior approval by the Chargé d'Affaires is required to import weapons and ammunition. In addition to obtaining the prior approval of the Chargé, all authorized weapons must be registered and licensed by the Police Commissioner. Separate applications must be made for the licensing of each gun including air rifles and pellet guns. Licenses are issued for a twelve-month period.

Currency, Banking and Weights and Measures

The official currency of Antigua is the Eastern Caribbean (XCD) dollar. All currency is graced with the likeness of Queen Elizabeth II. Paper bill denominations are in the amounts of 5, 10, 20, and 100 dollar notes. Coins are minted in 1-, 2-, 5-, 10-, and 25-cent denominations and a EC\$1 coin. The official exchange rate in May 2002 was 2.70XCD to \$1 U.S.

Travelers checks and major credit cards are honored at many hotels, restaurants, and most businesses.

Personal checks drawn on U.S. accounts are not generally accepted.

Antigua has no personal income taxes or general sales taxes. However, hotel and restaurant bills include a 7% government tax, and many restaurants also add a 10% gratuity.

The U.S. standards of measurement are the most widely observed in daily commerce. However, since virtually everything is imported, metric units are often used in food stores and appliance centers.

Disaster Preparedness

Like all Caribbean countries, Antigua can be affected by hurricanes.

The hurricane season normally runs from June to the end of November, but there have been hurricanes in December in recent years. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated February 1997. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

ARGENTINA is different from most Latin American countries in that 97% of its population is Caucasian, with Spanish and Italian strains predominating. There were few Indians in the area when the first permanent Spanish colony was established in 1536 on the site of what is now Buenos Aires. As a result, the Indian genealogical influence is slight. In the early years of this century, large-scale European immigration stimulated the modernization of the country, giving it economic and cultural status in the Western Hemisphere. Argentina is the second largest country in South America (after Brazil).

MAJOR CITIES

Buenos Aires

Buenos Aires is the capital of Argentina and its largest city. Situated on the Rio de la Plata 100 miles from the Atlantic Ocean, it is the country's major port and the center of virtually all activity.

Greater Buenos Aires has approximately 12,431,000 people; it is the world's fifth largest metropolitan area.

The general atmosphere of Buenos Aires is cosmopolitan and its people are quite sophisticated. The change from leisurely 19th century European living to present-day patterns is striking in the residential areas of Barrio Norte, Palermo, and Belgrano. Here, Paris-inspired mansions with wrought iron grillwork and carved doors pass from private hands to become Ambassadorial residences, government agencies, museums, or make way for tall apartment buildings boasting penthouses and swimming pools. In the high rise apartments and in the comfortable houses of the northern suburbs of Olivos, Martinez, and San Isidro, it is possible to reproduce U.S. patterns of living while enjoying much of the Argentine way of life.

The streets and avenues of Buenos Aires tell the story of the city, from afternoon tea at a sidewalk restaurant on Avenida Callao to late night on Avenida Corrientes, the "Broadway" of Buenos Aires. There is, for instance, Avenida 9 de Julio, claimed to be the world's widest avenue, and Calle Florida, an exclusively pedestrian mall where tourists shop year round. Avenida Santa Fe could be called the Fifth Avenue of Buenos Aires, while on Avenida Alvear, the small, elegant shops remind you of Paris and Vienna. The Costanera, the wide riverside boulevard, boasts dozens of open-air cafes.

There is a modern system of transportation with bus, train, and subway complexes contrasted with horse-drawn vehicles, whose drivers offer carriage rides through Palermo Park. Buenos Aires has some supermarkets and department stores. However, small businesses abound, from open and covered marketplaces to arcades lined with small boutiques and cafe bars.

Entertainment is plentiful and varied in Buenos Aires. The Colon Theater, one of the world's great opera houses, each year plays host to ballet troupes, opera stars, and symphony orchestras from Europe and the U.S. Folkloric music can be heard at various restaurants

around the city. In small out-of-the-way places, the Tango is still danced to the music of small combos; and the colorful water front area of La Boca offers noisy nightlife. With over 60 legitimate theaters in the city, Buenos Aires is popular with traveling theatrical groups as well as outstanding local professional companies.

The city is very sports minded, too. Golf, tennis, riding, fishing, horse racing, polo, soccer, rugby, and boating are all popular sports. "Pato," considered the Argentine national game, is played on horseback with a leather ball (about soccer size) with six leather handles. More than a dozen private golf courses and a municipal course in Palermo Park are near the city center. In recent years bowling has become popular, with automatic alleys in both the city and northern suburbs.

The foreign community is extensive. The passport-holding Italian community is the largest (488,000), followed by the Spanish (374,000), the Polish (57,000), and the German (24,000). The British number about 22,000; North, Central, and other South Americans number about 800,000.

Food

Food is plentiful in Argentina. Supermarkets are well stocked, and carry some U.S. brands.

Clothing

Most clothing items are more expensive in Argentina, but are plentiful and fashionable although for women, smaller sizes only. When planning and packing, remember that when it is summer in the U.S., it is winter in Argentina.

Men: Men wear medium-weight woolen suits during cool months (mid-April to mid-November) and tropical worsted and wash-and-wear suits during the warm months. Many wear vests or sweaters under suit coats for extra warmth in July and August. The same type wardrobe worn in Washington, D.C. is needed here except that heavy overcoats are seldom needed. Due to the high cost of dry

cleaning, wash-and-wear suits are a wise investment.

Good woolen cloth is manufactured in Argentina, and good tailors are available. Nice, reasonably-priced winter suits can be bought locally, but few wash-and-wear suits are sold. Raincoats with zip-out linings are useful. Good leather coats and jackets are made here with prices similar to the U.S., as are woolen sweaters and socks.

Women: Woolen suits, dresses, pants, blouses, and sweaters are basics for Argentine winter wardrobes. Ready-made woolen and knit clothing can be found locally in sophisticated styles but more expensive than comparable qualities in the U.S. Raincoats and coats are necessary although winter weather is less severe than in Washington, D.C. Lightweight summer clothing is recommended for the warm, humid months. Local cotton fabrics are available but drip-dry fabrics are seldom found. Tall and large sizes are virtually nonexistent.

Some opera evenings are very formal, but most performances can be attended in afternoon attire. Shorts can be worn on the streets and golf courses, but are more commonly used for beach wear, tennis, and casual outdoor parties.

Argentine shoes are of excellent quality leather, but the lasts are different and sometimes uncomfortable for Americans. Broad feet are more easily fitted than narrow and large sizes (9 and up) are very difficult to find. Gloves, belts, purses and other leather items can be purchased locally in a wide variety of styles, colors and prices. Hats, except for rain, are seldom used in Buenos Aires. Woolen sweaters of excellent quality are available at fairly reasonable prices.

Children: Beautiful knit clothes for babies are sold locally, however, most children's and babies' clothing is of lower quality than in the U.S. and is very expensive. Rubber pants and disposable diapers are often of inferior quality. U.S. diapers are better for keeping babies dry at night.

Shoes are of fairly good quality although narrow and small shoes are hard to find. Woolen sweaters and coats are generally of good quality. Snowsuits are often used for infants as winters are damp and cold. Winter pajamas with feet are popular with children and blanket-type sleeping bags are often used for babies. Warm socks, sweaters, trousers, and coats are standard wear.

Supplies and Services

Common household supplies are available in Buenos Aires on the local market, and nearby pharmacies dispense first aid supplies, pills, and other drugstore needs. Special prescriptions should be brought in quantity. Many well-known cosmetic firms have branches in Argentina, although their products may be slightly different, and the prices higher. Bring along a good first aid kit.

All books are expensive in Buenos Aires.

Tailoring and dressmaking as well as mending services for hosiery and shoes, are available. Beauty shops are plentiful and Radio and TV repairs are generally good if parts are available. Occasional problems are experienced with stereo repairs.

Religious Activities

Argentina is predominantly Roman Catholic. Other denominations include Anglican, Baptist, Methodist, Latter-Day Saints, Lutheran, Seventh-day Adventist, Presbyterian, Jewish, Russian, Greek Orthodox and Christian Scientist. English services are conducted at some of the churches.

Education

Most American children in Argentina attend the Asociacion Escuelas Lincoln, generally known as the American Community School. It is a tuition-supported school which also receives periodic grants from the U.S. It is accredited by the Southern Association of Colleges and Schools.

It is essential that you begin the enrollment process at least 60 days prior to your arrival. Screening tests are given to all new students

in grades K-8. Lincoln School has established English proficiency standards based on testing for full admission as well as for conditional admission.

Students admitted without knowledge of Spanish are provided with special Spanish classes until they can integrate with their regular classes. Students are screened for placement in the Special Spanish program.

Lincoln maintains an Elementary Resource Room which is setup to attend to the needs of students with minimal learning difficulties on a part-time pull out basis, grades 1-8. Due to the nature of the school and curriculum, it is not possible to provide a special program for every student as is the norm in most U.S. school districts. It is ESSENTIAL for parents of students with a history of learning problems to contact the school WELL IN ADVANCE so that it can be determined if Lincoln is a suitable educational environment and, if so, to obtain the necessary testing data. There is no special education program in the high school.

Diagnostic Testing—In grades K-6, based on teacher and parent referral, the Guidance Counselor and Resource Room Teacher administer specific diagnostic tests to students who exhibit learning problems. These tests are used to diagnose learning styles and achievement levels so that individual educational programs can be developed to meet each student's needs. The American School maintains a preschool, kindergarten, and grades 1-12. It is located in the Buenos Aires suburb of La Lucila along the shores overlooking the Rio de la Plata. Enrollment is about 800 students.

Approximately 35% of the student body is American but also includes Argentines and children from about 40 other countries. The property of the school includes a playground, athletic field, auditorium/gymnasium, cafeteria, and large swimming pool. The school has well-stocked libraries and suitable laboratory facilities.

Aerial view with La Plata River, Buenos Aires, Argentina

The curricula of both private and public schools in Argentina must conform with that stipulated by the National Council of Education. By Argentine law, all students through the first semester of the 8th grade must pursue the Argentine course with instruction in Spanish.

Approximately one third of each day must be devoted to these studies. Newcomers are placed in language classes commensurate with their knowledge or abilities. New students should not be too concerned, as a "grace period" of one semester is allowed before testing in Spanish proficiency is attempted. New students are not expected to be proficient in the language upon arrival. All high school courses are taught in English, except for foreign language courses.

School terms run from early August to late December, and from mid-February to late June. The summer holiday of about five weeks starts in July. The American Community School's academic year corresponds as closely as possible to the school year in the U.S.; i.e., the second term of the academic year begins after the long summer vacation.

Bus service and hot lunches are available to children attending the

American School. The school has no boarding facilities. School hours are 8:00 a.m. - 3:15 p.m.

In addition to academic education, extracurricular opportunities abound for adults and children within Greater Buenos Aires, including lessons in guitar, piano, riding, dancing, yoga, art, and ceramics. Children may join scout groups or participate in Little League, soccer, basketball, and other sports.

Sports

Recreational opportunities abound in Argentina. There are excellent private golf clubs and one public course, the Municipal Course in Palermo Park. Good tennis clubs and facilities for yachting, fishing, rowing, swimming, horseback riding, bowling, skiing, and hunting are available. There are also tennis courts which can be rented by the hour, with or without lessons. Jogging, biking and roller blading in the parks are popular exercises. Indoor facilities include several gymnasiums, one of which—the YMCA—is equipped for handball, fencing, boxing, wrestling, and many other sports. Most clubs specialize in only one or two activities, making the cost of participating in a variety of interests, quite high.

Susan Rock. Reproduced by permission.

Avenida 9 de julio, Buenos Aires, Argentina

Ocean swimming is available in Uruguay or south of Buenos Aires in Mar del Plata, Pinamar, Miramar and other beach resorts. The nearest ski areas are in Bariloche and Neuquen in the Argentine Patagonia (4 hours, depending on type of aircraft; 2 days by train or car), or in Chile.

Hunting licenses are easily obtained. Most hunting is done on private lands and is by invitation or arrangement. Hunters find an abundance of game birds, including the “perdiz” (similar to partridge), copetona (resembling guinea hen), “colorado” (a pheasant-like bird having all white meat) and duck. You can also hunt deer, rheas (the Argentine ostrich), wild boar, hare, and fox. Guanaco and mountain goats are found in the high mountains, and pumas are found in many parts of the country. U.S. hunting equipment is highly prized here. Guns can only be imported with a customs declaration and special

permit. Satisfactory shotguns and 22 caliber ammunition are available locally. High quality ammunition should be brought with you.

Fishing catches include dorado, a large, gold-colored fish found only in the rivers of Argentina, Uruguay, Paraguay, and Brazil. Deep sea tackle is used for these game fish. The country abounds in trout and landlocked salmon, which grow to fantastic sizes. Trout fishing with a fly rod is very popular. Bring a fairly heavy casting rod to do double-duty casting and trolling. Spinning reels are recommended. Equipment for most sports can be bought in Buenos Aires, but quality is inferior to U.S. equipment and prices are higher.

Spectator sports include the immensely popular football (soccer), played year round at every level from sandlot to professional (at many stadiums in the city); the aristocratic polo; tennis; horseracing (tracks in Palermo, suburban San

Isidro, and nearby La Plata); pato, the rough gaucho-on-horseback spectacle; rugby; car racing; and boxing and wrestling at the Luna Park Stadium.

Polo was first played in Argentina by a group of Britons on August 30, 1875. They called it the game “of the mad Englishmen”, but it was taken up with enthusiasm by the Argentines. The game spread with the founding of the Buenos Aires Polo Club in 1882 and was made popular among Argentines with the emergence of great players.

In 1920 Argentine polo made its presence felt internationally and soon became known as the best in the world, a label it has never lost. Argentina is known to have the best polo ponies, which are much sought after by the rest of the polo-playing world. While the early matches were played on farm horses, the breeding of polo ponies soon became a fine art. Today’s polo ponies are fast, strong, agile, docile, and intelli-

gent, and often crossbred with racehorses.

In Argentina the horse has always been associated with the country dweller's work and play. Pato is a game played on horseback, and forms part of the native tradition. It is played by two teams of four players each. A stuffed leather ball similar in size to a soccer ball, but with six leather handles attached, is held by one of the players. The name of the game derives from the original ball—a live duck tied up in a sack. The object is to throw the ball through a vertical ring defended by the opposing team. The game requires both skill and strength and puts the horses' speed and endurance to the test. The match is divided into four or six *tiempos* (sets) of 8 minutes each, with 5-minute intervals between them. The pato season in Buenos Aires runs from the end of April to November.

Touring and Outdoor Activities

While expensive and generally far from Buenos Aires, Argentina has numerous beautiful and interesting tourist areas. One of the most popular recreation spots for the Argentines and an exception to the previous sentence is Tigre, 28 miles from Buenos Aires on the Parana River delta, reached by train, bus, or car. Facilities are available for sailing, fishing, rowing, and cruising among the main islands and channels at the mouth of the river.

Mar del Plata, about 250 miles southeast of Buenos Aires, is the principal seaside resort in Argentina and is 30 minutes by plane, 5½ hours by train, 5 hours by car, or 6½ hours by bus. Mar del Plata is an important city and seaport. It has magnificent residences, parks, wide beaches, hotels, restaurants, shops of all kinds, and a huge, luxurious casino. A smaller casino is attached to the famous Hotel Provincial, one of the city's best. Mar del Plata is one of Argentina's most popular vacation spots, and the atmosphere is similar to Atlantic City. Several smaller seaside resorts near Mar

del Plata include: Pinamar, more expensive and exclusive, with more private homes than hotels; and Miramar, called the "City of Children," which attracts many American visitors. Attractive beaches in the River Plate area are found at Punta del Este near Montevideo, a ferry trip from Buenos Aires or 35 minutes by air.

In northeastern Argentina at the junction of the Argentine, Paraguayan, and Brazilian borders lies the spectacular 237-foot-high Iguazu Falls (Niagara is 167 feet high). It may be reached by a two-day car ride or by plane. Excellent hotels are available on both the Brazilian and Argentine sides of the falls. There are 14 large falls, most of them of great height and beauty. The river areas below the Falls provide excellent fishing. Because of cooler temperatures and more abundant rainfall, the best months to visit Iguazu are from May to September.

Bariloche, in the lake district of Nahuel Huapi in the Patagonian Andes and about 950 miles southwest of Buenos Aires, is another popular tourist resort. It is very pleasant in summer and an excellent place to escape from the city heat. Winter skiing can be done over well-developed trails. Bariloche may be reached by plane, train, or car. Often called the "Argentine Switzerland", it boasts beautiful scenery, with snowcapped mountains, noble forests, mirrorlike lakes, and numerous trout streams.

The city of Mendoza, at the foot of the Andes, is the center of the wine-growing district. The Transandine Railway connects Mendoza with Santiago, Chile, and passes the tallest mountain in the western hemisphere, Aconcagua—almost 23,000 feet high. The Chilean beach resort of Vina del Mar is three hours by car from Santiago.

For the traveler who is looking for something extra, it is possible to visit the Antarctic though a very expensive trip. Other attractions within a few hours by air of Buenos Aires include Asuncion, Paraguay,

which also can be reached by river boat or bus from Iguazu; Ushuaia in Tierra del Fuego, the southernmost city in the world; and such Brazilian cities as Sao Paulo and Rio de Janeiro.

Camping is very popular and campsites are numerous. Some have water, electricity, bathrooms with hot water, and general stores, while others are open land where you must set up a tent. Many beautiful National Parks have camping sites next to lakes or high in the mountains. Caution: Do not bring a tall tent. Argentine camping requires mountain tents, even in the flat lands, due to occasional high winds. For those who are interested in camping, it is advisable to purchase equipment in the U.S.

Entertainment

If you have a good knowledge of Spanish, the scope of entertainment in Buenos Aires is unlimited. Local theater is active, with good professional companies and amateur groups. Modern and classic plays by Spanish and Argentine authors, as well as translations of Broadway and European hits, are presented year-round. In summer, open-air performances are given in the Teatro Caminito, located in a section of Buenos Aires called "La Boca," one of the older parts of the city with tenements gaily painted in corals, greens, and blues. In this period (December to March), several outdoor theaters present classical plays, while operas, concerts, and ballets are held in San Martin Theater and Palermo Park, and the grounds of the National Library. Many of these summer performances are free.

Teatro Colon, the huge opera house, is typical of Old World magnificence. According to Arturo Toscanini, it has the best acoustics in the world; it was inaugurated on May 25, 1908. It covers an area of 7,050 square meters, is 117.5 meters long, 60 meters wide, and is 43 meters tall at its highest point.

The regular opera and symphonic season lasts from April to November

with a full program each year of operas, concerts, soloists, and ballets. As the season in Buenos Aires falls during summer in the Northern Hemisphere, many of the great opera stars from Europe and the U.S. have been able to appear at the Colon. Argentina's symphony orchestras give many performances throughout the year. Ballets are also presented by local companies.

Movies are numerous, imported from the U.S. and Europe, and represent a good cross section of the world's cinematography. Most foreign films, including American, are subtitled and are heard in the original language.

The city has several good museums and many art galleries. There are many guided tours of the city with English-speaking guides available. Local newspapers publish schedules of cultural events in the entertainment section.

Small nightclubs, called "boites," are common in the city, and larger places have open-air dancing in the suburbs along the river. The music, orchestral and recorded, alternates between Latin and North American dance beats. Argentine folk music, while little known outside the country, is becoming increasingly popular with Americans here. "Penas Folkloricas" (public folk music clubs) offer the whole range of native music, from the lively carnavales of the far northwest to the slower samba and the familiar tango of Buenos Aires.

Social Activities

The American Club of Buenos Aires, at Viamonte 1133 on the top three floors of a 10-story building, is principally a lunching club, open Monday through Friday. The dining room accommodates members and guests for lunch only. Private dining rooms for parties up to 120 people are available on the 8th floor, and the 9th floor dining room is used for private functions of up to 500 people for cocktails or 350 for lunch or dinner.

The American Women's Club meets twice a month week. All female citi-

zens of Western Hemisphere nations may join. In addition to biweekly teas and monthly meetings, activities are planned around the members' interests, and are in English. In the recent past, classes have been held in art, bridge, Spanish, cooking, music, and Argentine literature and poetry. The American Women's Club holds a charity benefit each year.

The American Society of the River Plate is the social and welfare organization of the American community in Argentina. Citizens of the U.S. and sons and daughters of U.S. citizens may join. The society has no clubrooms but meets in the American Club. The society promotes and maintains friendly relations between the U.S. and Argentina, encourages friendly relations between U.S. and Argentine citizens and promotes their respective interests, assumes responsibility for the celebration of days of national remembrance and Thanksgiving, and gives aid to institutions and/or individuals in need of assistance.

The American Chamber of Commerce in Argentina represents over 500 U.S. business firms. It publishes trade statistics, a weekly newsletter, a monthly magazine, and an annual business directory.

The Chamber holds monthly membership luncheons with guest speakers from government (both Argentine and U.S.) who are prominent in international business. Various committees are active. For example, the Export Committee (AGEX) gives seminars in Argentina and other countries on the technicalities of exporting, and a communications committee arranges—among other things—a lecture program designed to convince students in 15 Argentine universities of the advantages of the free enterprise system. Also active are a legal committee, an industrial relations committee, involved in salary studies among other things, and other committees.

Americans have many opportunities to meet and work with Argen-

tines and representatives of other nations.

The University Women's Club meets monthly for luncheons featuring guest speakers. The club offers orientation courses, tours, and study groups. Programs are generally in English. Any woman, regardless of nationality, who has attended an accredited university or college for 2 years is eligible for membership.

Special Information

By the terms of Law 12.665, the Argentine National Commission of Museums, Monuments, and Historic Places is empowered to register, control the transfer of, and expropriate private property which it considers to be "of historic-artistic interest." Objects of this nature may not be removed from Argentina. When ownership of such antiquities is transferred, the former owner is obliged to report the transaction, together with the name and address of the new owner, to the Commission within 10 days. Failure to do so automatically raises a presumption of concealment. Anyone guilty of such concealment, or of illegally transferring or exporting such articles, is subject to fine. The law specifically includes historical documents in the category of national treasures and lists such things as old maps, autographed letters and memoranda, and public documents.

Córdoba

Córdoba, a cultural and intellectual center on the Primero River about 400 miles northwest of Buenos Aires, is Argentina's second largest city. It is the capital of Córdoba Province and one of the earliest cities in the country. Founded in 1573, it predates the first permanent settlement at Buenos Aires. Córdoba prospered during colonial times as a link on the commercial route between Buenos Aires and Chile. The advent of the railroad in the 19th century also increased its prosperity. In 2000, it had a population of 1,407,000.

Córdoba is the seat of the country's oldest university, which was founded in 1613 by priests of the Jesuit order as the College of Monserrat. The original building still stands. The college became a university in 1622 and is now, as Paraná, part of the national educational system. A new Catholic university was founded in the city in 1956.

Córdoba is noted for its excellent astronomy observatory; the beautiful and well-preserved colonial architecture; its museums and theaters; its numerous new, large buildings which have transformed the skyline; and its physical beauty, which is emphasized by its location on the slopes of the Sierra de Córdoba.

Near the city, on the Primero, is one of South America's most important dams. (Dique San Roque) Formerly used for cattle ranches, the surrounding land has been enriched by irrigation and transformed into orchards, vineyards, and grain fields. Wheat, cattle, lumber, and minerals are exported from Córdoba.

In recent decades, many industries have developed (textiles, leather, food processing, chemicals, glass), and the city is now one of Argentina's principal commercial and transportation centers. The city is serviced by a modern airport, Pajas Blancas, as well as excellent highways and railways. Also, the tourist industry in and around Córdoba continues to grow.

Education

There are two schools in Córdoba which are recommended to English-speaking students, although Spanish is used as an integral part of their curricula. Academia Arguello is located in the city on Avenida Rafael Nunez, and Reydon School for Girls is at 5178 Cruz Chica, Provincia de Córdoba, Argentina.

Rosario

Rosario is the principal city of Santa Fe Province in the north-central part of the country. It is a major rail

terminal and the nation's largest inland port. Rosario lies on the Paraná River, 190 miles northwest of Buenos Aires, and is a commercial city and export center for the neighboring agricultural provinces. Its population of over 1,228,000 includes a large British expatriate community. Nearby Fisherton Airport serves the city.

Rosario was settled in 1689, and founded as a city under its present name in 1725. After the Argentine war of independence, the nation's first flag was raised here in 1816 and, each summer, commemorative ceremonies are held at the site.

Rosario began developing into a major center late in the 19th century, and is now an important industrial city known for sugar refining, flour milling, automobile production, steel milling, and meat processing. It has a national university, founded in 1968.

The city has several museums, among them the Municipal Decorative Arts Museum, the Municipal Fine Arts Museum, and the Museum of Provincial History. Tourists also enjoy viewing Rosario's Renaissance-Style Cathedral, Municipal Palace, and the Monument of the Flag which commemorates the raising of the first Argentine Flag.

La Plata

La Plata, 35 miles southeast of the capital, was built as a new city after Buenos Aires became a federal district in 1880. For a brief period, from 1952 to 1955, La Plata's name was changed to Eva Perón, in honor of the wife of Juan Perón, who was president at that time. The city's name was returned to the original when Perón fell from power.

La Plata, the capital of Buenos Aires Province, has a population of 676,000. Its commercial enterprises include meat packaging, textiles, oil refineries, and sawmills. Among its cultural institutions are a national university, a museum with a world-famous collection of anthropological

artifacts, a national library, and fine zoological gardens.

Mendoza

Mendoza, situated in an oasis in western Argentina called the "Garden of the Andes," is a major metropolis and the center of a fruit- and wine-producing region which was settled mostly by Italian immigrants. Its vast fields are irrigated by the Mendoza River. Each March, the city celebrates the grape harvest with the Fiesta de la Vendimia, and *bodegas* (wine cellars) in the surrounding area are open to the public for the sampling of the new wine.

Mendoza was founded in 1516. It belonged to Chile until 1776, when it came under the viceroyalty of Río de la Plata. José de San Martín began his final preparation here in 1817 for the liberation of Chile. The city was destroyed by an earthquake and fire in 1861, but rebuilding was well underway within two years.

Mendoza is the eastern terminus of the 75-year-old Transandine Railway, which traverses the Andes at Uspallata Pass, connecting the city with Santiago, Chile. It passes the tallest mountain in the Western Hemisphere, Aconcagua, at a height of 22,834 feet. In Mendoza, from the summit of Cerro de la Gloria, which is crowned with a statue of San Martín, there are spectacular views of the Andean peaks to the west.

Mendoza, with a greater area population of 943,000 is noted for its museums and parks, and for its numerous restaurants which offer fine food at moderate prices. The city has several theaters, the National University of Cuyo and two other private universities. The population of the city proper, considerably smaller, is somewhat over 120,000.

San Miguel de Tucumán

San Miguel de Tucumán is a city of about 642,000 inhabitants in northern Argentina, and is the center of

the country's sugar industry. Its more than one million acres of sugarcane are irrigated by tributary waters of the *Dolce River* at the foot of the *Sierra de Aconquija*, in the eastern range of the Andes. Large maize-producing plantations are also in operation in the area. A mild, pleasant climate and rich flora has earned the city a reputation as "the garden of the republic." The surrounding district is also known as a lumbering center, and the entire area is rich in mineral deposits.

It was at Tucumán on July 9, 1816, in the first congress of the republic, that the United Provinces of La Plata (the River Plate) proclaimed their independence from Spain after a bitter war against the royalists.

The city had been founded originally in 1565 on the *Río del Tejar*, south of the present site, in a place now known as the *Pueblo Viejo*, but was moved to its present location in 1685 in the aftermath of a disastrous flood. Many colonial buildings of the 18th century remain.

The National University of Tucumán was founded here in 1914. The city also boasts a shrine to Our Lady of Mercy, which is visited annually by throngs of tourists. Tourists also visit the city's museums, colonial cathedral, and the *Casa de Gobierno* (Government House).

Mar del Plata

Mar del Plata, about 250 miles southeast of Buenos Aires, is the principal seaside resort in Argentina and is six hours from the capital by train, car, or bus. It is an important city and seaport, with an atmosphere similar to that of Atlantic City. It has magnificent residences, parks, wide beaches, luxury hotels, restaurants, and shops of all kinds. Each year, during Easter and the November "spring" holidays (Southern Hemisphere seasons are the reverse of those in the U.S.), the population figure of about 533,000 is swelled to more than a million by the influx of tourists. All activities during these weeks seem to revolve around the huge casino which is one

of the largest in the world. A smaller casino is attached to the *Hotel Provincial*, one of the city's best.

Several smaller seaside resorts near Mar del Plata include: *Pinamar*, expensive and exclusive, where there are more private homes than hotels; and *Miramar*, called the "City of Children," which attracts many American visitors. Lovely beaches in the *Río de la Plata* area are found near *Montevideo* (Uruguay), just an overnight boat trip from Buenos Aires, or 45 minutes by air. Costs are higher there than in Mar del Plata.

Mar del Plata is home to the *Stella Maris University*, and the *National University of Mar del Plata*, as well as several museums. The city is linked by modern highways, railroads, and air transport with other major Argentine cities.

Salta

Salta, capital of the northwestern Argentine province whose name it bears, has a population over 350,000. It is situated in the *Lerma Valley*, close to the foothills of the Andes, and is considered one of the country's prettiest cities. It is the commercial center of the region, exporting sugar, farm products, minerals, tobacco, wine grapes, and livestock. Its access to the Pacific came with the completion of a railroad extending to the north Chilean port of *Antofagasta* in 1848.

Founded in 1582, Salta is one of the oldest cities in the country. Here, in 1813, Argentine patriots under *Manuel Belgrano* defeated Spanish royalists in a battle leading to national independence. The city has experienced severe earthquakes throughout the centuries. However, many of Salta's colonial buildings remain intact. Of particular interest are the *Church of San Francisco*, which is reported to have the tallest tower of any South American house of worship, and the city's well-known cathedral. One of the best Argentine museums, the *Cabildo Histórico*, is located here. Other tourist attractions include the ther-

mal springs located near the city and the *Miracle Fiesta*, a festival held every September to celebrate Salta's survival after a severe earthquake in 1692. During the *Miracle Fiesta* (*Fiesta del Milagro*), religious icons are paraded through the city streets. The tourist office is at *Avenida Buenos Aires 93*.

OTHER CITIES

AVELLANEDA (formerly called *Barracas al Sud*), on the estuary of the *Río de la Plata* in east central Argentina, was named in honor of Argentine President *Nicolás Avellaneda* in 1904. Avellaneda is situated just south of Buenos Aires. The city is a major seaport and an industrial center. Wool and hides are shipped, and industries include meat-packing, textile production, and oil refineries. The population is approximately 350,000.

BAHÍA BLANCA ("white bay") is an Atlantic port approximately 370,000 in southwestern Buenos Aires Province. It is situated at the head of a deep, sheltered bay, and is the chief shipping port of the country's southern region. Bahía Blanca is also an industrial center and rail terminus. It originated as a trading post in 1828, but development came in the early 20th century with the increased production of the south *Pampa* area. The city conducts a huge import-export business; oil, grains, wool, and hides are the major exports. Bahía Blanca has a university, founded in 1956.

CATAMARCA (also called *San Fernando del Valle de Catamarca*) is located in the foothills of the Andes in northwestern Argentina, 210 miles northwest of Córdoba. Situated in a fertile valley, the city's economy depends on the agricultural products of the region; These include the production and processing of cotton, grapes, cereals, meats, and hides. Catamarca is known for its hand-woven woolen ponchos. Tourists enjoy the city's pleasant winter climate, hot springs, excellent scenery, and historical build-

ings dating to 1694. Catamarca also has a museum of art and an art gallery. The city also has many fine examples of colonial architecture such as the Church of the Virgin of the Valley. Its population is about 100,000.

The city of **COMODORO RIVADAVIA** is a seaport in southern Argentina on the Golfo San Jorge, about 1,000 miles south of Buenos Aires. It is significant to Argentina's economy because of nearby oil production. A 1,100-mile-long pipeline supplies natural gas to Buenos Aires, and tankers from the city's port deliver oil to refineries in northern Argentina. Comodoro Rivadavia has a population of approximately 126,000. The city's university was founded in 1961. Comodoro Rivadavia is linked by a national highway and air transport with Buenos Aires and La Plata. The city is the site of a major base of the Argentine Air Force.

A trading hub in northeastern Argentina, **CONCORDIA** is 225 miles north of Buenos Aires. It is situated on the Uruguay River, opposite Salto, Uruguay. As one of the largest cities in the region, Concordia enjoys a flourishing shipping market and trades with Uruguay and Brazil. Its main industry is food processing. Other industries include sawmills, flour mills, rice mills, and tanneries. The modern city was founded in 1832 and has a race track, a theater, a golf course, and parks. Salmon and dorado fishing in the Uruguay River is an added tourist attraction. Its population is about 120,000.

CORRIENTES is the center of a rich agricultural region, and the capital of Corrientes Province in the northeastern part of the country, close to the border with Paraguay. This commercial city of nearly 270,000 is an important port on the Paraná River, exporting cotton, *quebracho* (a sumac-like wood), cabinet woods, grains, rice, tobacco, citrus fruits, and livestock. Founded by the Spanish in 1588, Corrientes was the scene of a dramatic uprising in 1762 against the colonial governor, an

event which foreshadowed the wars of independence. The city and province were also among the first to rebel against the tyrant Juan Manuel de Rosas in 1844. Corrientes boasts a museum, founded in 1854, and a university, founded in 1957. The city is noted for its colonial architecture and served as the setting for the novel *The Honorary Consul* by Graham Greene.

GODOY CRUZ is located in western Argentina, less than 20 miles south of Mendoza. The city is a major manufacturing center with flour mills, canneries, breweries, sawmills, and meat-packing plants among its industries. It is also known for its wine-making. A highway and railroad link the city with Mendoza. A hydroelectric power plant is located near the city. Its population is about 180,000.

PARANÁ, a port city on the river of the same name, is the capital of Entre Ríos Province in northeastern Argentina, 80 miles north of Rosario. The city, with an approximate population of 207,000, was founded in the late 16th century by settlers from Santa Fe. It is the center of the grain and cattle district, and the home of an agricultural school. Paraná was the capital of the Argentine Confederation from 1853 to 1861. Paraná is the site of several notable buildings and monuments, among them are the Bishop's Palace, the Cathedral of Parana, the Museum of Entre Rios, the Senate of the Argentine Confederation building, and the home of Argentina's first president, General Justo Jose de Urquiza.

Located in eastern Argentina near the border with Paraguay, **POSADAS** is the capital of the Misiones Province. Situated on the Paraná River opposite the Paraguayan city of Encarnación, Posadas was established as a Paraguayan trading post and port. In 1879, the city was named in honor of Gervasio Antonio Posadas, a national hero. Most of its 140,000 residents work in public service. The city is an administrative center, and also manufactures iron and

wood products. A ferry between Posadas and Encarnación links Argentina and Paraguayan railroads.

RESISTENCIA, the capital of Chaco Province in northern Argentina, lies opposite Corrientes on the banks of the Paraná. A city of 230,000, it is a center for the shipping of cattle, hides, lead, and *quebracho* wood. Resistencia is connected by a bridge with the city of Corrientes.

RÍO CUARTO is located in north-central Argentina, 350 miles northwest of Buenos Aires and 125 miles south of Córdoba. It was established in 1794. The city's economy is basically agricultural, but there has been some light industrial development. Fruit, meat-packing, and flour milling are important activities. Historical landmarks include the Museo Municipal de Bellas Artes and a cathedral built in 1794. The city is also the site of a military base and an arsenal. Río Cuarto's population is about 150,000.

SAN JUAN, capital of the eponymous province in western Argentina, is also a center for wine-growing; its vineyards add to the charm of the surrounding landscape. The province also produces fruit, raises cattle, and is rich in minerals. Situated 100 miles north of Mendoza, San Juan was founded in 1562 and moved to its present location after 1593. This city of about 120,000 residents figured prominently in the civil wars of the 19th century. Domingo Faustino Sarmiento, the romantic writer and president of the republic from 1868-74 was born in San Juan. In 1944, a disastrous earthquake almost leveled the city.

SANTA FE, a city with an approximate population near 350,000, is the capital of Santa Fe Province in east-central Argentina, 90 miles north of Rosario. It is a port connected to the nearby Paraná River by canal; the port was opened to ocean going vessels in 1911. Santa Fe's modern port is the most inland seaport in the world and accommodates ocean going vessels. It also is a shipping

point for grain, meat, and *quebracho* (a sumac-like wood), from the country's northwest. Several industries are located in Santa Fe, among them are dairy plants, flour mills, mineral smelters, and automobile manufacturers. Santa Fe has several notable churches and is the seat of the National University of the Littoral, founded in 1889. A Catholic university also opened here in 1960. The Argentine constitution was promulgated in Santa Fe in 1853.

COUNTRY PROFILE

Geography And Climate

Argentina is South America's second-largest country, after Brazil, in size and population. It occupies most of the continent's southern region between the Andes Mountains and the Atlantic Ocean. Argentina stretches from 22 to 55 south latitude—a distance of about 2,300 miles—and is shaped roughly like an inverted triangle that tapers southward from a base about 1,000 miles wide. It borders on five South American countries: Chile to the west, Bolivia and Paraguay to the north, and Brazil and Uruguay to the Northeast.

In climate, size, and topography Argentina can be compared with the portion of the U.S. between the Mississippi River and the Rocky Mountains, although the North American region has colder winters. The humid lowlands of eastern Argentina, especially along the rivers of the Rio de la Plata system, resemble the Mississippi Valley. In northern Argentina, the savannas and swamps of the Chaco region find a parallel in coastal Louisiana. Westward, the humid Pampa (plain) gives way to rangeland and finally to desert that is broken only by irrigated oases, just as the Great Plains of the U.S. become drier toward the west. The Andes present a far more imposing barrier than the Rockies, but both mountain systems mark the western end of the plains.

Argentina's area of 1,072,067 square miles is about one-third that of the U.S. Although Argentina is narrower than the U.S., it extends much farther from north to south. Thus, Argentina has a range of climates that supports a broad diversity of vegetation, tropical as well as temperate. But the extreme temperatures that characterize comparable latitudes in North America are mitigated in Argentina by the oceanic influences that affect much of the country.

Except for its northernmost fringe, which lies in the Tropics, all of Argentina is in the Southern Hemisphere's Temperate Zone, which includes the world's most economically advanced regions south of the Equator. Climates in the Temperate Zone range from subtropical in the extreme north to sub-Antarctic in southern Patagonia. About 22% of Argentina's land area consists of accessible forests; another 3% is inaccessible forests. The variety of vegetation in Argentina is striking. The Patagonian-Fuegian Steppe in the south is characterized by a cold, windy, and very dry climate. Trees are scarce, and vegetation is dominated by low plants bearing a cluster of leaves that grow in a dense, cushion-like tuft. North and northeast are desert and scrub regions of the interior parts of central and northern Argentina. This desert/scrub area, known as the monte, has a climate as dry as that of the Patagonian-Fuegian Steppe, but somewhat warmer and essentially without a winter season. Its vegetation is highly drought-resistant and consists partly of low trees. In the Chaco region of northern Argentina the vegetation is a mixture of forests and savannas. The trees often grow in salt-impregnated soils, marshes, or swampy areas. The southern Andes region has high intermountain valleys with dry grasslands and often sub-desert shrubs and trees.

In sharp contrast with such areas of limited economic efficiency is the vast Pampa region. It is the most extensive level grassland in South America, and covers roughly one-

quarter of the nation. A great nation has been fashioned from its economic potential. It fans out for almost 500 miles from Buenos Aires. Containing some of the richest topsoil in the world, the Pampa is extensively cultivated in wheat and corn and provides year-round pasturage for most of Argentina's 50 million head of cattle. Average annual rainfall ranges from 20 inches in the west to 40 inches in the east.

The Andean region extends from the dry north to the heavily glaciated and ice-covered mountains of Patagonia, and includes the dry mountain and desert west of Cordoba and south of Tucuman, embracing the irrigated valleys on the eastern slopes and foothills of the Andes. Annual precipitation ranges from 4 inches to 24 inches in the arid regions and 20 inches to 120 inches in the heaviest rainfall areas.

Patagonia is a region of arid, wind-swept plateaus, covering about 300,000 square miles. Except for some irrigated valleys, this is poor, scattered pasture land. Far south, the weather is continuously cold and stormy; the region has no summer, and winters can be severe.

The alluvial plain of the Chaco in the north has a subtropical climate with dry winters and humid summers. Rainfall decreases from 60 inches to 20 inches and temperatures reach 120°F.

The Argentine Mesopotamia, which consists of the provinces between the Uruguay and Parana rivers, is made up of flood plains and gently rolling plains. The highest precipitation falls in the extreme north of Misiones Province, where it amounts to about 80 inches yearly.

Buenos Aires, is located on the right margin of the Rio de la Plata, and is part of the vast Pampa. The terrain within the city varies from low flatland only inches above the high tide line to slightly rolling country with a maximum elevation of 129 feet. The city's climate is similar to that of Washington, D.C., except that

winters are less severe and it never snows.

Average rainfall in Buenos Aires is 39 inches (Washington—41.4 inches), distributed evenly throughout the year. Humidity is high year-round (yearly mean is 76%). High humidity makes winters seem colder and summers hotter. Abrupt temperature changes are experienced throughout the year, bringing relief to summer's heat and winter's cold.

Population

Argentina's population is approximately 37,215,000 (2000 est.). Ninety-seven percent of the people are Caucasian, mostly of European origin, with Italian and Spanish strains predominating. The population also includes many Germans and Central Europeans, and about 700,000 of Arab descent, most of them Lebanese Christians. Practically no Indians or mestizos reside in Buenos Aires; however, some 650,000 are concentrated in the northern and western border provinces.

Since most of the land is habitable, space is available for an increase in population. The Pampa's 15th century settlers were the offspring of Indian mothers and Spanish fathers. For more than 200 years they and their descendants populated the Pampa. The gaucho, or cowboy, was the typical country dweller who herded cattle, was an expert in breaking horses, and was said to be quick with his knife. Gauchos were the rank and file of the revolutionary army that won independence from Spain in the early 19th century.

During the 19th century the population grew rapidly. From then on the Spanish element lost its numerical dominance, blacks practically disappeared as a visible group, Indians were reduced to a few thousand living on reservations, and the mestizo population decreased. Much of the present population stems from a European immigration that was concentrated in the years 1880-1930, with a spurt after World War

II. The proportion of foreign born reached a peak of 30% in 1944. Of the total European migration between 1859 and 1937, Argentina received 11%. Birth rates were much higher than death rates during this period of population increase.

Since 1910 the Argentine nation has been more urban than rural. Over half its people reside in places of more than 2,000 population. Much of urban Argentina is concentrated in one area, Greater Buenos Aires, where more than a third of the Argentine population lives. Argentina is by tradition a rural, agricultural country, and the transition since 1910 to an urban society and an industrial economy has created strains in the social structure.

Industry developed and business flourished. Urban society was much like that of European countries, with a growing middle class of business and professional men and women. By the end of World War II many rural workers migrated to the cities in search of a better living. The pace of this migration has since increased. At the same time industry and commerce have grown substantially, requiring more workers.

Most Argentines are city dwellers, and most of them live in apartment buildings. Family life is close and affectionate. Women frequently work outside the home, if they do not have young children.

Argentine people eat well, and their per capita consumption of meat is one of the world's highest. Salads are popular; vegetables and fruits are abundant and available year-round. Many Argentines dress well and keep up with international fashion trends.

In sports, the Argentines favor football (soccer), horseracing, boxing, and tennis. Their polo teams are said to be the best in the world. "Pato" is a gaucho equestrian sport.

Argentines read widely. A tradition of public libraries goes back to 1870, when then-President Sarmiento established 100 free libraries. Some

of the best known Latin American book publishers can be found in Argentina and Buenos Aires is the home of thousands of book shops; the annual book fair is a major public event.

Public Institutions

Argentina is a republic of 23 provinces and a federal capital district (the city of Buenos Aires). The Argentine Constitution, modeled on the United States Constitution, provides for an executive branch with ministries, a bicameral legislature, and a Supreme Court.

Roman Law forms the basis of Argentine jurisprudence. Although provincial and federal courts, and ultimately Supreme Court-appointed judges traditionally administer justice behind closed doors, public, oral trials for criminal cases are increasingly common.

In 1983, free elections were held after 7 years of military government, and the country returned to constitutional rule. Full liberties were restored following years of a state of siege and the suspension of many civil and political rights originally aimed at combating leftist-inspired political violence. National, provincial and local elections have been held regularly since then; the most recent were presidential elections in May 1995. The national congress and provincial legislatures function normally again, alongside elected governors, mayors, and other municipal authorities.

The Argentine military is under the civilian control of the President, who is Commander-in-Chief, and the Ministry of Defense. While there have been three minor military uprisings since 1983 (the last in 1991), the armed forces as a whole have pledged their respect for democratic institutions and civilian government.

Argentina is a member of the UN, the OAS, the World Health Organization (WHO), the Inter-American Development Bank, the World Trade Organization (WTO), the World

Bank, the Red Cross, and many other international organizations.

Arts, Science, and Education

Buenos Aires is the cultural capital of Latin America and is one of the world's largest book publishing centers. It has more than 60 theaters where internationally known groups (such as the Comedie Francaise or well-known English theater groups) and artists (such as the New York Philharmonic Orchestra or American Ballet Theater) perform during the cultural season (April to October). Along with these international attractions, local performers compete with experimental avant-garde groups in this lively city. The Colon Theater, one of the world's most beautiful, is the leading opera house in Latin America; it features famous artists, both foreign and Argentine.

The National Library holds 1,700,000 volumes. Every day public lecturers present talks in Buenos Aires on diverse cultural and artistic subjects. More than 100 art galleries exhibit the works of important foreign and local artists. Other cities, such as Rosario, Cordoba, and Mendoza, also take great pride in their extensive cultural life.

Argentina has 75 officially accredited universities with a total of 740,545 students. The largest, the University of Buenos Aires, has 173,345 students.

The country has a high literacy rate, estimated at 96%. The educational system provides free primary and secondary schooling. Primary (or elementary) education is compulsory up to grade 9 - the pupils' ages range from 6 to 14 years.

Private, foreign, and religious schools are permitted but must conform to a nationally prescribed pattern of teaching in the Spanish language. The Lincoln (American Community) School offers classes in Spanish and English in conformity with government regulations.

Commerce and Industry

Argentina has the second largest economy in South America with a gross domestic product of \$476 billion (2000 est.) and a per capita income of about \$7,600, the highest in Latin America. The strength of the economy is largely related to economic restructuring in the 1990s, which included major new investments in services and industry. As a result, Argentine exports have more than doubled in eight years - from about \$12 billion in 1992 to about \$26.4 billion in 2000. Imports also grew rapidly during the same period, rising from \$15 billion to about \$25.2 billion.

Argentina is traditionally a leading exporter of agricultural products, including sunflower seeds, lemons, soybeans, grapes, corn, tobacco, peanuts, teas, wheat and edible oils. Other exports include fuels and energy, and motor vehicles.

One major boost to trade came from MERCOSUR—the customs union of Argentina, Brazil, Paraguay and Uruguay, which entered into force in January 1995. Chile signed a free trade agreement with MERCOSUR which became effective in October 1996 and Bolivia is expected to join soon.

Foreign trade now equals approximately 18% of GDP and plays an increasingly important role in Argentina's economic development. Still, exports represent only 10% of Argentine GDP.

Foreign capital has been a key component in Argentina's recent economic growth. U.S. direct investment in Argentina is concentrated in telecommunications, petroleum and gas, electric energy, financial services, chemicals, food processing and vehicle manufacturing. The stock of U.S. direct investment in Argentina approached \$18 billion at the end of 2000.

Transportation

Local

Buenos Aires has an extensive transportation system. Five separate privately-owned subway lines serve many parts of the city. At certain stops you can transfer from one subway line to another without paying an additional token.

The most extensive above-ground transportation is by "colectivos" (privately owned buses holding about 40 passengers). Bright colors indicate the line and route traveled. The average fare is about 50 cents and there are no transfers.

Fares for Buenos Aires metered taxis are quite reasonable. Small tips are appreciated, though not always expected. Taxi meters show units based on distance and time.

The "remise", a kind of taxi-limousine service, is telephone dispatched, but you can hail them in front of major hotels. Charges are lower than U.S. cab fares. Always establish the fare before riding.

Traffic moves on the right. Buenos Aires has many wide streets and highways (such as Avenida del Libertador, Santa Fe, and the Costanera), but few modern super-highways such as the Ricchieri Autopista from Ezeiza Airport into the city limits, the General Paz which follows the city limits along three sides of Buenos Aires, 25 de Mayo which runs east to west, and the Pan American Highway.

Driving in Buenos Aires has been described as being at least as hectic as Rio, Tokyo, or Mexico City, as your first ride in a taxi or "colectivo" will reveal.

Regional

Travel outside Buenos Aires can be by train, air, bus, or auto. But since the general points of interest in Argentina are so far apart, a great deal of time is lost if you do not go by air. Some overnight train service is available to main cities with sleeping cars and service (room and food). Two main airports are accessible to

the city. One is Aeroparque Jorge Newbery, near the downtown section and the River Plate. This airport handles propeller aircraft and smaller jets such as the Fokker-28 and Boeing 727 and 737. All domestic flights, and several regional flights to Asuncion, Montevideo, Santiago, Rio de Janeiro, Sao Paulo, and Santa Cruz, use the Aeroparque. The International Airport of Ezeiza is about a 45-minute drive from the city center. It handles all large jets and most international flights.

Communications

Telephone and Telegraph

The telephone company (former ENTEL), which was a government entity, has been privatized. Presently, former ENTEL has split up into private companies (Telefonica and Telecom), which are responsible for different sectors and TELINTAR, which is mainly responsible for international service. Phone service in Buenos Aires is generally very dependable.

A telephone is essential in Buenos Aires.

Long distance calls can be made from your home. Many people use a call-back service which is less expensive than using a calling card, or direct dialing.

Users of ATT, Sprint, and MCI credit cards receive a substantial discount on overseas calls.

The government owns and runs a telegraph and telex system.

Radio and TV

Buenos Aires has a wide range of radio programming on both AM and FM, featuring talk, music, news and sports (particularly soccer). Radio Mitre, Radio Del Plata, Radio Continental and Radio America, plus the government-owned Radio Nacional, are the most popular stations in Buenos Aires. VOA broadcasts are available by shortwave and Radio Nacional will begin using at least one hour daily of VOA programming late in 1996 after the installation of a VOA-donated antenna.

Television viewing in Buenos Aires changed dramatically over the past several years. From having five "air" channels available, one of them government-owned, television viewers in the federal capital now have the option of 65 channels from one of the big three cable TV systems: Cablevision-TCI; VCC; or Multicanal. Local programming is competing with a wide range of foreign programs, especially from the U.S. American channels, such as HBO, Fox, Warner Brothers, Cinemax, Sony, ESPN, CNN, TNT and others are heavily represented on the Cablevision-TCI (51% American-owned) cable system and, to a lesser degree on the others. Certain U.S. channels are broadcast with two audio tracks, Spanish and English, which can be accessed using a stereo television, or only in English with Spanish subtitles. USIA's Worldnet television network is also available on all Buenos Aires' cable systems.

Newspapers, Magazines, and Technical Journals

Buenos Aires is an important Spanish-language publishing capital. There are 10 daily newspapers, varying in importance and size from "La Nacion" and "Clarín" to small circulation money-losers. The "Buenos Aires Herald" is the only English-language daily. Newspapers are very expensive in Buenos Aires, costing an average of \$1.25 per copy. Economic hard-times have forced many people to reduce the number of newspapers they buy daily from two or three to one, further pressuring the highly-competitive newspaper market place.

A wide variety of magazines are available locally, from picture and news magazines such as *Noticias*, and *Gente* to trade, technical, and professional journals. *Time*, *Newsweek* and many other American magazines are available on local news stands, but some are very costly. For example, an issue of "Vanity Fair" costs over \$7.00 on the local market.

Bookstores are numerous in Buenos Aires and books in major languages,

from publishing centers around the world, are available here. Stores such as ABC and Rodriguez have large stocks of English-language books but all imported hardbacks and paperbacks are expensive.

Health and Medicine

Medical Facilities

Buenos Aires has many good hospitals which in the private sector are called either "clinicas" or "sanatorios." U.S. trained physicians practice in all specialties. Medical costs are higher than in the U.S.

Community Health

Sanitary conditions in public facilities, such as restaurant kitchens are usually good. Health and sanitary controls are enforced and immunizations for school children are checked by the Health Ministry.

Hepatitis does occur, and all susceptible travellers should be immunized with the newer Hepatitis A vaccine. The Hepatitis B carrier state has been estimated at 1.1%. Vaccination against hepatitis B is recommended. Yellow fever is present in the northeastern portion of Argentina, and vaccination may be required when entering into another country. Carrying your yellow "International Health Certificate" with you is advisable. Malaria does occur below 4000 feet elevation in Jujuy and Salta provinces, and has on occasion been found in the Misiones and Corrientes provinces. Risk is higher in the summer months (December through May).

Water supplies are considered to be potable in Buenos Aires; higher risk of water-borne illness occurs countrywide outside of Buenos Aires.

The humid climate, vegetation, and diesel fuel can aggravate sinus conditions. Colds sore throats and mild forms of flu are common.

Traffic is generally heavy, and the risk of accidents is high. Seat belts and child restraint systems should always be used.

Keep these immunizations current: diphtheria, tetanus, typhoid, yellow fever, measles, mumps and rubella. Hand-carry your "yellow" International Immunization card. You do need special malaria prevention for in-country travel.

Flies and mosquitoes are common in summer. Most houses and apartments are not equipped with screens.

NOTES FOR TRAVELERS

Passage, Customs & Duties

American and United Airlines have regular flights between the U.S. and Argentina. The flights take approximately eight hours from Miami.

The most rapid and direct transport from Ezeiza International Airport is by remise (rental car with driver) which will charge a flat rate from point to point (maximum three passengers per car). Bus service is also available in front of the terminal and will drive to major hotels and/or a bus terminal in central Buenos Aires where taxis are available.

Buses are convenient for one passenger. For more than one passenger, the cost of the bus is almost the same as the cost of a remise.

A passport is required. U.S. citizens do not need a visa for visits up to 90 days for tourism and business.

The age of majority in Argentina is 21 years. Minors who are permanent or temporary residents of Argentina who are traveling alone, with one parent, or in someone else's custody, are required to present at departure from Argentina a notarized document which certifies both parents' permission for the child's travel. A parent with sole custody should carry a copy of the judicial custody decree. Although Argentine regulations do not require that minors who enter Argentina as tourists carry certified parental permission, immigration officials infrequently do request such a certification upon arrival in Argentina. Either document should be notarized before an Argentine consular officer or, if in Argentina, a local notary (escribano). For current information concerning entry and customs requirements for Argentina, travelers can contact the Argentine Embassy at 1600 New Hampshire Ave., N.W., Washington, D.C. 20009, tel. (202) 939-6400. Internet: <http://athea.ar/cwash/homepage>. Travelers may also contact the nearest Argentine consulate in Los Angeles, Miami, Atlanta, Chicago, New York, or Houston.

Americans living in or visiting Argentina are encouraged to register at the Consular Section of the U.S. Embassy in Buenos Aires and obtain updated information on travel and security within Argentina. The U.S. Embassy is located at 4300 Avenida Colombia, 1425 Buenos Aires, Argentina. The main Embassy switchboard telephone is (011)(54)(11) 5777-4533. Recorded consular information, including instructions on whom to contact in case of an American citizen emergency, is available at telephone (54)(11) 4514-1830. The main embassy fax is (54)(11) 5777-4240. The Consular Section fax is

(011)(54)(11) 5777-4205. Additional information is available through the Embassy's web site at <http://us---embassy.state.gov/baires> embassy, which has a link to the Consular Section's email inquiry Address: BuenosAiresConsulate@state.gov.

Pets

For the importation of pets into Argentina, you will need veterinary certificates of good health and rabies vaccination, each accompanied by a photograph of the animal. The signature and license of your veterinarian must be authenticated by a federal veterinary officer in the country in which you are living. In addition, the certificates must be validated by an Argentine Consul.

If such certificates are not presented at the Argentine port of entry and/or if the animal shows symptoms of sickness, it will be quarantined for 40 days at the owner's expense.

Limited boarding facilities exist for pets in Buenos Aires. You should investigate them carefully in advance for cleanliness and quality of service. Some residential hotels will accept pets.

Currency, Banking and Weights and Measures

The unit of currency in Argentina is the Argentine peso (ARS) It is issued in both bills and coins, with the bills in the same denominations as US currency. The value of coins are of 5, 10, 25, 50 centavos and 1 peso.

The value of the peso is pegged to the US dollar at a fixed rate. 1ARS=US\$1.

Argentina uses the metric system of weights and measures.

THE BAHAMAS

Commonwealth of the Bahamas

Major Cities:

Nassau, Freeport

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated September 1994. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The Commonwealth of the **BAHAMAS** is a chain of islands, cays, and reefs that sweep in a broad arc from 50 miles off the Florida coast, southward to the northern limits of the Caribbean. Blue skies and sparkling waters have lured generations of winter visitors to this subtropical archipelago, which was British colonial territory as recently as 14 years ago. The islands now comprise a fully independent state within the community of the British Commonwealth, having achieved autonomy in July 1973.

Close historical, social, cultural, and economic ties with the United

States have left their imprint here. American investments and tourism in this island nation continue to make the Bahamas substantially more important to the U.S. than its small size and population would indicate. However, it retains its own distinctive character, and the society and institutions which lie behind its facade defy easy classification. Bahamian culture is a blend of the islands' African, English, and American origins, combined with the influence of the sun, the sea, and the tourists.

MAJOR CITIES

Nassau

Nassau, capital of the Bahamas and its major port and city, is nearly 300 years old. Time and the elements—hurricanes, decay, fires, and termites—have destroyed many of the old buildings. The downtown area has a distinctive architecture accented by columns, verandas, jalousies, and pastel colors. More Victorian than anything else, Nassau's narrow walks, streets, and prolific flowering bougainvillea and hibiscus have helped preserve its charm.

Nassau's population in 2000 was estimated at 195,000.

Nassau is located on the island of New Providence—21 miles long and 7 miles wide—one of the smallest and most central of the Bahamas chain. Nassau and its suburbs, which range east and west along and behind Bay Street, occupy mostly the northern half of the island. Miami is 210 miles to the northwest and New York is 1,080 miles almost due north.

History

Proprietary governors of Carolina and other North American colonies administered the Bahamas as trading markets with little pretense of civil administration. By 1700, the islands were well established as pirate camps for such immortals as Blackbeard and Calico Jack. In 1718, the First Governor, Captain Woodes Rodgers (an ex-privateer), gave the Bahamian pirates the choice of either confronting the small army he brought with him, or accepting a Royal Amnesty. Most took the latter, but eventually drifted off to other islands to resume their profession.

During the American Revolution, the Bahamas served as a supply point. Afterwards, the islands saw

Susan Rock. Reproduced by permission.

Government building in Nassau, Bahamas

their biggest change, as some 8,000 British loyalists and their slaves fled the U.S. These settlers brought the plantation system to some of the smaller islands, but poor soil, over-cultivation, and the boll weevil exhausted the chances of large-scale cotton crops in less than 10 years.

With the agricultural exhaustion of lands, poverty became more serious. However, the American Civil War brought prosperity as Nassau became the center for Confederate blockade running and the Royal Victoria Hotel (a once grand, now largely demolished) old building in the center of downtown Nassau became the haunt for both spies and gunrunners. In 1866, depression returned and for the next 50 years a succession of attempts to create wealth from conch (pronounced “konk”) shells, tobacco, fruits, vegetables, sponges, and shipbuilding

failed. The Florida land boom from the early 1900s and again in 1920 drew many Bahamian immigrants to the U.S.

With the Prohibition Act of 1920, the Bahamas reemerged as a major base for blockade running, this time for bootleggers. World War II and the establishment of U.S. bases and facilities in the Bahamas brought back the prosperity of the 1920s.

Food

The selection and quality of food found in Bahamian food stores in Nassau is comparable to those of an average American supermarket with some exceptions. Certain popular brands may not be available, and specialty items such as delicatessen and ethnic food selections are usually meager. Produce is not comparable to an American supermarket,

but a broad selection does exist and fresh vegetables can be found through careful shopping. Prepared food items often cost twice as much as the same products in southern Florida.

Clothing

Local tastes and standards are similar to those of southern Florida. Summer clothing is worn year round, but with somewhat heavier material during the Bahamian “winter.” Fabrics comfortable for the season range from lightweight washables to heavier fabrics and knits. Winter can be quite cool and clothes tend to be more formal. Wardrobes should include sweaters and possibly lightweight woolens. Heavy clothing is not necessary unless winter trips abroad are contemplated. Sportswear is available locally at reasonable prices.

Bahamian women often dress elegantly when attending church services and other special occasions.

Children's clothing is dictated by the time of year. All schools require uniforms which are available locally, so children probably need little more than play clothes. Children's clothing is available, but expensive. Parents may wish to purchase additional children's clothing before arrival.

All students wear uniforms for school and casual clothes at other times. Attractive casual clothes, including a sport jacket or suit for boys and appropriate dresses for girls are necessary, as young people are often included in social functions. Clothing for girls is readily available, but student sizes for boys are difficult to find.

Supplies and Services

Nassau drugstores, supermarkets, and speciality shops stock a variety of brand name toiletries, cosmetics, feminine personal supplies, home medicines, and common household needs. Prices are higher than in the U.S., and stores do not always maintain adequate supplies.

There are at least five custom tailor shops and six dressmakers in Nassau, and 23 custom drapery shops. The quality of the tailoring and dressmaking shops is spotty; only a few are recommended. Custom-made drapes and reupholstery in Nassau are expensive and believed to be on a par with the more expensive shops in large U.S. cities.

Dry-cleaning and laundry outlets are conveniently located. The quality of dry-cleaning service is poor. Some individuals have experienced difficulty with delicate fabrics and specialty cleaning, such as removing difficult stains from linens or silks.

Most skilled appliance and automotive service personnel are employed by major appliance stores and auto-

mobile dealers. Preference is given to customers who have purchased the appliance or automobile from the dealer. Warranties on items imported from the U.S. are not valid. Several independent automotive and appliance repair shops exist. Service varies greatly. Some independent repair shops take on projects for which they lack proper tools, equipment, training, or knowledge and can create more service/repair-related problems than they solve.

All the major hotels have qualified beauticians and barbers who meet U.S. standards of sanitation, styling, and beauty care services.

Shoe repair is limited but heels and soles can be repaired while you wait. Only two watch repair shops are located in Nassau but the quality of service is good. Some small, independent jewelers also do limited watch repairs and produce high quality custom-made jewelry. U.S. companies, such as IBM, Xerox, and Wang, provide reliable service on electric typewriters and personal computers.

Religious Activities

Full freedom of religion exists in the Bahamas, which has no favored or official State religion. The Bahamas is a predominately Christian country, and over ninety churches on New Providence represent Protestant, Roman Catholic, and interdenominational religions. Most of these churches are members of the Bahamas Christian Council, a national association which coordinates church activities and represents church services. Church services are conducted in English, but one church conducts services in Creole for Haitian residents. New Providence has no Jewish synagogues or Islamic Mosques.

Education

The Bahamian school system, including most private schools, offers curricula based on the British system. All the Catholic schools are

based on the American system. However, parents should be prepared to supplement their children's education with studies of American history and literature, especially for students in grade 7 and above. Overall, the resource centers, libraries, and curricula are inadequate by comparison. On the other hand, most private schools in Nassau have smaller class sizes and less disciplinary problems than many public schools in the U.S. No American International School exists in Nassau. The school systems follow the British in terms of grade levels.

A major concern is that teachers in many schools are not required to fit their study programs into a planned, step by step overall program, resulting in some gaps in subject coverage. Elementary Schools in Nassau range from thoroughly inadequate (Bahamian public schools) to very good. The upper grades (9-11), however, offer neither breadth nor depth in their study programs. Many college-bound high school students go to boarding schools in the U.S., Canada, or Britain. However, there are some good high schools in the Bahamas.

People with school-age children should complete and forward school applications to the CLO upon learning of their assignment to the Bahamas. Many schools have waiting lists.

A short description of the highest rated schools follows:

Lyford Cay School, located on the extreme western end of New Providence, occupies a six-acre wooded site within the boundaries of Lyford Cay. The school is able to take advantage of a 24-hour private security system. The children have access to two superb beaches and a 20-meter swimming pool at the Lyford Cay Club.

The school receives children from all over the island and accommodates up to 175 children ages 3-11. The pupils come from many different backgrounds and nationalities.

The school curriculum is based on the British system and is geared to the resources of the Bahamian environment. The children are tested annually by the Bahamian government and the Educational Research Bureau. Tuition for the 1993-94 school year ranged from \$3105 to \$3500.

St. Andrew's School is interdenominational, and coeducational. The children come from families in the middle and upper income brackets. Approximately 75% are Bahamian and the teaching staff is mostly British, with 3-year teaching certificates. The campus is large, the buildings are in good condition, and the student-teacher ratio is approximately 20 to 1. The school offers many extracurricular activities and has excellent sports facilities, including an outdoor swimming pool.

Structured on the British system, the school offers programs for approximately 750 students as young as 3 in a preschool program, and ranging to the late teens for children in the 12th grade. Tuition for the 1993-94 school year ranged from \$4,755 to \$5,790 per year depending on grade level. Even though the school is structured on the British system of eleven grades, the twelfth year was added to help students compete with other 18 year olds in the U.S. system.

St. Augustine's College (high school, grades 7-12) St. Augustine's is Roman Catholic, and coeducational. The students are 90% Bahamian, from middle and upper socioeconomic bracket families. All the teaching staff is Bahamian, most with teaching certificates.

The buildings are well kept, on a large and beautiful campus. Religious education and regular church attendance are mandatory. The school has excellent sports facilities, including an outdoor swimming pool.

The curriculum is equivalent to British Comprehensive schools, incorporating elements of American junior and senior prep school along with computer science. In addition, the S.A.T. is taken in the final year for admission to American colleges and universities. The library is inadequate and most books date from 1967 or before. The physical education program is good, and a few extracurricular programs are offered. Tuition for the 1993-94 school year was \$2,040.

Tambearly School is an independent, recently established school with a curriculum for children age 4 (Reception) through eighth grade. It has a well planned study program using a combination of textbooks and workbooks (rare for Bahamian schools), combined with frequent field trips. Its goal is to prepare students for integration into schools abroad. All students utilize the computer and take French and Spanish.

Tambearly has a student enrollment of approximately 130, and is located at Sandypoint, West Bay Street. The school accommodates up to 15 students per class, and has a staff of 12 full-time teachers and four part-time. Tuition for the 1993-94 school year was \$4,050.

Special Educational Opportunities

The College of The Bahamas offers programs leading to the Bachelors Degree, the Associate Degree, Advanced Level G.C.E. (London), College Diplomas, and Certificates in Business Administration, Education, Humanities, Natural Sciences, Nursing and Health Sciences, Social Sciences, and Technology. The College's first Bachelor's Degree program, a B.B.A. in Banking and Finance, was introduced in September 1991. The College operates on a semester system—two semesters, and one summer session. Tuition fees are about \$25 per credit hour per semester for Bahamians and \$50 for non-Bahamians.

The Bahamas Hotel Training College and the University of the West Indies (degree program) offer courses in tourism and hotel management.

The University of Miami, Barry University, and Nova University, conduct a 2-year program in Nassau leading to an MBA. Courses are held on weekends and are designed for business executives and managers. American family members who have enrolled have found it challenging and worthwhile. Additional information on the University of Miami program is available by telephoning the University at (305) 284-2510, or contacting the CLO or USIS Education Advisor.

Several business schools offer courses in secretarial skills, business, word processing, and computer programming. The Industrial Training Center offers one-year courses in the technical/vocational curricula.

Sports

The emerald and turquoise waters of the Bahamas set the backdrop for sports in the country. Swimming, fishing, boating, sailing, scuba diving, snorkeling, and water skiing are excellent year round. Instruction is available for all sports, but may entail club memberships.

Golf and tennis are also popular. Nassau has four 18-hole golf courses, but green fees are expensive. Paradise Island's seaside course offers a view as well as a challenge. Divi Beach Golf Course is the newest course. Like Paradise Island, it can be crowded and expensive. Electric carts are required at all courses. The course at Lyford Cay has a limited membership and is very expensive. Many hotels have tennis courts. Several private tennis clubs are available, as well as athletic clubs, gyms, and spas. The world-class "Gold's Gym" opened in October 1993.

New Providence Island has in-season pigeon and duck shooting. The

Family Islands also have seasonal pigeon, duck, and wild boar shooting. Horseback riding is offered by stables in the Coral Harbour area as well as on Paradise Island and Nassau East.

Spectator sports include boxing, baseball, cricket, softball, soccer, rugby, basketball, American football, and volleyball. Some events are free; others charge a small admission fee.

Touring and Outdoor Activities

Literally all of New Providence can be explored in less than a week's time. The Family Islands, including Eleuthera, the Exumas, Bimini, and Abaco, are most popular with Americans. The terrain is flat as in New Providence. The islands can be reached by air, charter boat, or mailboat. Tours can be taken by taxi, bicycle, and surrey, or by glass-bottomed boat trips, sailing cruises or even an air-conditioned submarine which dives 80 feet below the surface.

Entertainment

The major importance of the tourist industry to the Bahamian economy has determined to a large extent the type of entertainment facilities here, which mirror those of a popular American resort city.

Luxury hotels on Paradise Island and on the north shore of New Providence offer a wide variety of specialty restaurants, cocktail lounges, cabarets, and discos. Two large casinos exist in Nassau, one on Paradise Island at the Britannia Towers Hotel and the other at the Crystal Palace Casino. Both the Crystal Palace Hotel and the Britannia Towers Hotel produce a Las Vegas-style extravaganza or floor show. Several other night clubs located in hotels and separate from hotels offer Bahamian and American-style shows and dancing.

Apart from the luxury-class restaurants, many good restaurants fea-

turing Bahamian, American, Italian, and Greek food are patronized by nontourists.

Many choirs exist in Nassau and the Dundas Centre for the Performing Arts produces numerous well-known musicals and plays throughout the year. In addition, it also produces folk ballets and dramas written by Bahamians. Several of the larger hotels offer aerobic and other dance classes.

Two movie theaters operate in Nassau. They feature popular American films.

Social Activities

An American Men's Club and an American Women's Club, the latter affiliated with the Federation of Women's Clubs of America, coordinate philanthropic and community activities among resident Americans. Outstanding among these are the annual Fourth of July picnic and the annual Christmas season wine and cheese tasting and dinner dance.

An Hispanic Women's Club, including many U.S. members, is also active in the community.

Some organized activities exist for children, ages 7 to 15 years, including Boy and Girl Scouts, and extracurricular school events. Two swimming clubs for children offer competitive swimming. A riding school exists for those interested in horses. Some children also participate in operetta society productions, gymnastics, tennis, and Little League baseball.

You may contribute your time and skills through churches, the American Women's Club, the Hispanic Women's Club, the Bahamas National Trust, the Yellowbirds (Princess Margaret Hospital volunteers), the Bahamas Humane Society, Animals Require Kindness, the Red Cross Society, Ranfurly Home, the Women's Crisis Center, and assorted clinics. The Historical Soci-

ety and the National Trust offer lectures on the Bahamas.

Special Information

The primary hazard facing anyone living in or visiting Nassau comes from residential and street crime, primarily burglary, robbery, and larceny. Residents and visitors should exercise caution and common sense. Doors and windows should be kept locked at all times, and deserted beaches, back streets, and poorly lighted areas should be avoided.

As the Bahamas remains a transit area for drugs designated for the United States, narcotics are easily obtainable. Parents should take extra precaution to educate their children on the dangers of illegal drug use. Parents should also become involved in their children's outside activities and closely monitor the company they keep. Drug offenses are dealt with very seriously in the Bahamas.

Temporary duty visitors to The Bahamas and newcomers should exercise extreme care while driving. The accident rate in Nassau is high due to the driving habits of Bahamians, poor enforcement of speed limits, and adverse road conditions. Accident rates among visitors who rent motorbikes and motorscooters are particularly high.

Freeport, Grand Bahama Island

Freeport is a modern community located on the southwestern shore of Grand Bahama Island, 120 miles northwest of Nassau. In 2000, Freeport's population was approximately 41,000. The island is 530 square miles in area, and the highest point of elevation is 68 feet. Although cooler than Nassau and with a higher rainfall, effects of the climate are similar to those in Nassau.

Freeport boasts a 450-seat Regency Theater in which the Freeport Players Guild presents several plays

throughout the year. In addition, the Grand Bahama Players also present plays by Bahamian playwrights. The Freeport Friends of the Arts are active in bringing music and dance performers to Freeport. In the past, the group has brought in the Billy Taylor Jazz trio, the Alvin Ailey Dance Repertoire Ensemble, the English Chamber Orchestra, Russian concert pianist Boris Block, and singer Harry Belafonte.

Tourism is an important factor on Grand Bahama Island, and more than 5,000 resort hotel rooms are available for tourists. Planned less than 30 years ago, Freeport is still hopeful of attracting more investors. Major industries in Freeport include an oil transshipment company, several pharmaceutical plants, a perfume factory, a liquor blending company, three shipping companies, and a cancer immunology research center.

Taxis are readily available. No public transportation system exists, but jitneys are sometimes available. Roads are excellent and better designed than in Nassau. Most major highways are divided expressways.

Communications

Telephone service in Freeport is reliable, but callers to the U.S. find that the circuits are often busy. Direct dialing to long distance numbers is possible. Listings for Freeport and Grand Bahama are contained in the Commonwealth of The Bahamas Telephone Directory published by the BATELCO.

The Broadcasting Corporation of the Bahamas operates radio station ZNS-3 out of Freeport to service Grand Bahama, Abaco, and Bimini with local as well as national programming originating in Nassau. AM reception of Florida stations is fair to good depending on atmospheric conditions, but FM reception from Miami requires special antennae. A Miami-based company operates a CATV positive cable sys-

tem which provides good reception to seven television stations from southern Florida. In addition, viewers can tune into Bahamian Channel 13, ZNS. Satellite dishes are popular, but expensive.

Three Bahamian newspapers, the *Guardian*, the *Tribune*, and the *Freeport News*, are available as are the Miami Herald and the New York Times.

Health

Medical facilities in Freeport are adequate for routine medical care, but are more limited than those in Nassau. The government-owned Rand Memorial Hospital has 50 beds and includes departments of surgery, general medicine, obstetrics and gynecology, radiography, and an emergency room. The Antoni Clinic is privately owned, and in addition to the services provided at Rand Memorial, this clinic includes plastic surgery, dentistry, and orthodontics, as well as oral and maxillo-facial surgery. The Lucayan Medical Center is limited to family medicine, internal medicine, and obstetrics.

Community health conditions in Freeport are comparable to those in Nassau, but Freeport does not have a large Haitian expatriate population.

Education

The same concerns that affect choice of education in Nassau hold true for Freeport. Numerous private schools, mostly church affiliated, offer programs for preschool age (3-5) children through high school. School years are divided into three terms. Brief descriptions of major schools follow.

Freeport Nursery School and Play Group—Calvary Academy This kindergarten offers three terms during the period September-June for children ages 3-5. Classes are from 9 am to 2:30 pm. In addition, the day care center operates from 8 am to 5:30 pm for children between the

ages of 3 months and 5 years. Tuition varies from about \$300 per term.

Sunland Lutheran School Sponsored by Our Savior Lutheran Church, this coeducational school accepts children ranging from nursery school through grade 10. Fees range from \$508 per term for nursery school children, and are graduated for older children up to \$650 per term. Enrollment is approximately 500, with 35 faculty members.

Mary, Star of the Sea School This Roman Catholic school offers coeducational training from nursery school through 8th grade, and is staffed by two Franciscan sisters and about 40 lay teachers. Enrollment is approximately 850, and at times applicants are put on a waiting list. Term fees range to about \$440.

St. Paul's Methodist College This coeducational school accepts children ages 3-16 and is administered by the same Board of Trustees as Queens College in Nassau. Term fees range from \$435 to \$554. The faculty consists of 40 teachers and maximum enrollment is 800.

Freeport High School This coeducational high school (grades 7-12) is administered by the Anglican Diocese of the Bahamas. Normal term fees are \$550. A special college preparatory program is also available for an additional fee. Enrollment is about 400, with 25 teachers.

Grand Bahama Catholic High School This coeducational high school schedules its instruction in two semesters and offers a 4-year program to prepare students to take the American College Board examinations based on the British System. Tuition is approximately \$1680 per year. Enrollment is 340 and the faculty consists of 18 lay teachers.

Recreation and Social Life

Grand Bahama offers an unusual activity for underwater explorers that is unavailable in Nassau. Due to the unique "sponge-like" structure of the Grand Bahama land mass, many ocean holes or small underground lakes connect to the sea. These underground, water-filled caverns are popular with scuba divers who enjoy exploring. One of the larger underground caverns, the Lucayan Cavern, contains over 33,000 feet of exploration line. Due to abuse by some souvenir hunters, the Bahamas National Trust closed this cavern to the public for an indefinite period.

COUNTRY PROFILE

Geography and Climate

The Bahama Islands lie between 20 and 27 °N. latitude and 72 and 79 °W. longitude. Separated from the North American Continent by the Florida Channel and cooled in the summer by the northeast trade winds, the Bahamas enjoys a moderate climate. During the summer, temperatures rarely rise above 90°F, while the lowest winter temperatures vary between 40° and 50°F. Rainfall ranges 40-60 inches a year.

The Bahamas extends over 100,000 square miles of sea, with slightly less than half lying in the Tropics. The Tropic of Cancer crosses the lower part of Long Island.

The Bahamas covers a distance of some 760 miles from northwest to southeast and include 29 inhabited islands, 661 cays, and about 2,387 exposed reefs. The total land area is approximately 5,380 square miles, about the size of Wales or two-thirds the size of Massachusetts. The largest island is Andros, with an area of 2,300 square miles, and the smallest is Spanish Wells, with an area of one-half mile. Some of the most

beautiful beaches and lagoons in the world are located in the Bahamas.

Over 50 varieties of trees can be found here, including such exotic species as the African tulip, the casuarina (hardy Australian pine), the cork tree, several varieties of palm trees, and about 40 varieties of fruit trees. In addition, large varieties of shrubs, climbers, vines, vegetables, and herbs are found here.

Significant seasonal changes requiring winter clothing or central heating do not occur here. The rainy season is from May to October, and the hurricane season extends from May to November. In the winter, temperatures rarely fall below 60°F, and usually reach 77°F by midafternoon. During the summer, temperatures fluctuate between 90°F in the daytime and 75°F or less in the evening.

Although humidity can reach above 80% (relative humidity for September is 82%), prevailing easterly winds lessen personal discomfort. Temperatures vary from a low of 76.7°F in January to a high of 89.1°F in August. Humidity causes mildew on leather and textile products, but homes equipped with central air-conditioning or dehumidifiers neutralize the harmful effects.

Rainfall often occurs in the form of fairly intense showers, frequently accompanied by strong, gusty winds. These storms are usually short and are followed by clear skies. Weather conditions can change rapidly. Statistically, a hurricane can be expected to occur in some part of the Bahamas every nine years. The last hurricane (Andrew) struck in August 1992.

Population

In 2000, the approximate total resident population of the Bahamas was 287,550. The statistics show that New Providence (where Nassau is located), has 171,542 persons accounting for 67.35% of the popula-

tion, representing a 2.7% increase compared to the 1980 census. Grand Bahama, with the second largest population, has 41,035 persons representing 16.11% of the population, an increase of 31% over 1980. Abaco follows with a population of 10,061 or 3.95% of the population, Andros with 8,155, and Eleuthera with 8,017 accounting for 3.20% and 3.15%, respectively. Exuma had 3,539 persons and 1.39% of the total population, while Long Island with 3,107 persons had 1.22% of the population.

The Lucayan Indians, a branch of the Arawaks, discovered the islands in the ninth century. Some 600 years later, on October 12, 1492, Christopher Columbus made his first landfall in the New World on San Salvador Island. Some studies by historians have disputed the San Salvador theory, however, and suggest that the landfall may have occurred at Samana Cay instead. Spanish adventurers followed Columbus to the Bahamas and soon shipped the remaining Lucayan population as slaves to mines in Cuba and Santo Domingo, where the race was extinguished.

The islands were the setting for several attempts at establishing colonies of religious refugees, including the Eleutherian Adventurers. Although they all ultimately failed, many family names in the Bahamas derive from seventeenth century English settlers.

Most Bahamians are of mixed African and European descent. Of the European portion of the population, 90% are descendants of early British and American settlers, most notably loyalists from New York, Virginia, and the Carolinas. The Bahamas also has a considerable Greek community. Most are second and third generation Bahamians, whose descendants came to the islands as sponge fishermen.

English is universally spoken as is Bahamian, a variant of Caribbean English. A wide variety of religious

denominations and interfaith and evangelical churches are found in the Bahamas.

Public Institutions

The Bahamas is a constitutional, parliamentary democracy. As a fully independent member of the British Commonwealth of Nations, the nominal Head of State is Queen Elizabeth II, represented in the Bahamas by an appointed Governor General. The Head of Government is the Prime Minister. The 1973 Bahamian Constitution was enacted by a Parliament composed of the Senate and the House of Assembly.

The House of Assembly consists of 49 members, elected by constituency every 5 years on the basis of universal adult suffrage. The Senate consists of 16 members appointed by the Prime Minister and the Leader of the Opposition. The Parliament performs all major legislative functions. The leader of the majority party serves as Prime Minister. The Cabinet, which answers to the House of Assembly, consists of the Prime Minister, a Deputy Prime Minister, an Attorney General, and other Ministers of executive departments.

The judiciary consists of a Supreme Court, a Court of Appeals, and various Magistrates' Courts, with the right to appeal to Her Majesty's Privy Council in the United Kingdom. The Chief Justice of the Supreme Court is appointed by the Governor General on the advice of the Prime Minister and the Leader of the Opposition.

In January 1993, the government instituted a form of local government for the Family Islands (Bahamian islands beyond New Providence) by appointing individuals to local licensing boards. Commissioners, who formerly served as administrators for the Family Islands, now serve as secretaries to these boards in addition to their duties as local magistrates.

Arts, Science, and Education

The historic Bahamian cultural experience is essentially British (English), but American cultural values have had an increasingly important impact on Bahamian society due to modern media, the large number of Bahamians who visit Florida, and the increased number of American tourists who visit the Bahamas.

Education is free and compulsory between ages 5 and 14. The Ministry of Education has responsibility for all Bahamian educational institutions. Ninety-six primary schools, 29 secondary schools, and 46 all-age schools receive government funding. In addition, 6 special schools, and 45 independent schools operate in the Bahamas.

Courses lead to the Bahamas Junior Certificate (B.J.C.) taken in grade 9. In 1993, a new Bahamian National Examination (administered in grade 12 as an exit examination), the Bahamas General Certificate of Secondary Education (BGCSE), was instituted in both private and government schools.

The College of The Bahamas (COB) is the only tertiary level institution in the country. Founded in 1974, it currently enrolls some 2,500 full and part-time students. Essentially a 2-year institution offering Associate of Arts degrees in liberal arts and sciences, the COB recently instituted a Bachelors Degree program in banking and is working on plans to add additional 4-year degree programs. It also administers a School of Nursing. In conjunction with the University of the West Indies (UWI), it offers a Bachelors Degree in Education. UWI operates a Center for Hotel and Tourism Management, also a degree program, which draws students from throughout the Caribbean.

Success Training College offers certificates, diplomas, some associate degrees in business, computer sci-

ence, and electrical technology. Several U.S. universities (St. Benedict's/St. John's, Nova University, Barry University, and the University of Miami) offer in-country programs to be followed by courses on the parent campus which lead to Bachelors or Masters degrees.

A large number of Bahamians complete university studies in the United States; fewer further their education at schools in Great Britain, Canada, and at UWI.

The Dundas Center For the Performing Arts, located in Nassau, presents two repertoire seasons each year including performing artists in drama, dance, and song. The Bahamas National Dance Theatre and the National Youth Choir were founded in 1992 as part of the country's activities in commemoration of the Quincentennial Celebrations of Christopher Columbus's discovery of the islands and the New World. Other active cultural groups include the Nassau Music Society, The Renaissance Singers, The Nassau Players, and the Freeport Player's Guild, located in Freeport, Grand Bahama.

Two of the most spectacular folk cultural events in the Bahamas each year are the Junkanoo Parades held on December 26 (Boxing Day) and New Year's Day. The parades begin at 2:00 am and continue until 9:00 am. Participants prepare costumes, rehearse months in advance, and compete for various individual and group prizes. The Junkanoo is an integral part of the traditional culture of the Bahamas, dating back to the days of slavery when slaves were given three days off during the Christmas holidays.

Music is provided by goatskin drums, cowbells, whistles, conch shells, and bicycle horns. Junkanoo music can also be heard whenever Bahamians feel in a festive mood or wish to celebrate.

Commerce and Industry

Since World War II, the Bahamas has become a tourist and financial center. These two industries remain the mainstays of the Bahamian economy.

The Bahamas was a vacation destination for over 4.2 million visitors in 2000. Realizing the importance of tourism for the economy, more than more than \$1.5 billion has been spent on hotel construction and refurbishment in The Bahamas over the past five years. Tourism and related services now account for up to 60% of GDP and employ nearly two-thirds of the labor force.

About 80% of the tourists who come each year are from the U.S. The luxury hotels and casinos are clustered in Nassau, Paradise Island, and Freeport. New directions in tourism include a growing interest in the smaller, sometimes very luxurious, resort hotels of the Family Islands. About half the tourists visiting The Bahamas arrive by cruise ship, and port facilities in Nassau and the Family Islands have been upgraded to accommodate this growing market. In October 1995, The Casino Taxation Act was amended to allow for the establishment of small-scale casinos and the Lotteries and Gaming Acts allowed for sports betting.

Financial services, the second major sector of the Bahamian economy, consists primarily of banking, trust administration, insurance and mutual funds. The 400 banks and trust companies engage primarily in the business of managing assets of wealthy individuals. Strict banking secrecy laws are enforced. The Bahamas are widely known as a tax haven for non-Bahamians seeking to avoid income tax payments. As a result of new anti-money laundering laws passed in response to an initiative with the G-7's Financial Action Task Force (FATF), government revenues from International Business Companies (IBCs) declined from \$2.5 million in the

first four months of 2000 to \$908,701 for the corresponding period in 2001.

The Bahamian Government recognizes the need for diversification, new industry development, exploration, and exploitation of agriculture and fisheries resources. The Bahamas imports over \$250 million in agricultural goods per year, representing about 80% of its food consumption.

The agriculture and fisheries sectors together only account for about 5% of GDP and employ about 5% percent of the work force full time. A larger portion of the workforce is employed on a temporary basis during the opening weeks of lobster (crawfish) season. In an attempt to meet more of its own food needs, the government is working with local farmers to introduce new varieties of crops. However, foreign investment will be needed for this project.

The U.S. is the Bahamas' most important trading partner. Principal Bahamian exports to the U.S. are pharmaceuticals, lobster, salt, and hormones. Most food and other consumer goods are imported from the U.S. Brand name products are readily available, although transport and considerable import duties add some 50% or more to comparable U.S. consumer prices.

Freeport, the industrial center of the country, is a planned community built by foreign investors. A subsidiary of a major U.S. pharmaceutical manufacturing company has a sizeable facility there and there are several smaller export-oriented pharmaceutical and chemical plants. Solar salt and aragonite, two of the Bahamas' otherwise scanty natural resources, are exported from other points in the island chain.

The Bahamas have several labor unions, the largest and strongest of which is the Hotel Workers' Union.

Transportation

Local

Most areas of New Providence are serviced by small mini buses called jitneys. The jitneys operate from 6:30 a.m. to 7:30 p.m., although service to some residential areas is infrequent and hours of operation more limited than in the downtown area. The fare is about 75¢. No inexpensive limousine or bus connections serve Nassau International Airport. Taxis are metered and rates are controlled by the government. Cabs can also be hired for about \$25 - \$30 per hour. Limousines cost \$50 per hour.

Several automobile rental agencies are in Nassau and Freeport, including subsidiaries of some well-known American agencies. Rental fees vary with the size and type of vehicle and the duration of the rental period, but are much higher than in the U.S. Several agencies also rent motorbikes, but they should be avoided because of the vehicles' very high accident rates.

Regional

Traffic moves on the left side of the road in the Bahamas. Road conditions vary greatly from four-lane highways to narrow streets with sharp curves. Some road surfaces are very poor with potholes and badly eroded shoulders that could damage a vehicle. Surface drainage is poor and large areas of standing water can be found on the roads after a heavy rainstorm. Posted highway speeds vary from 25 to 45 miles per hour. Cars, taxis, and buses often stop unexpectedly in the middle of the road to pick up or discharge passengers.

Regional travel throughout the Bahamas is principally by commercial, charter, and private aircraft. Fares on car ferries serving Eleuthera, Andros, and Abaco from Nassau are \$200 for a car and two passengers, or \$59 for foot passengers. Some travelers use the services of interisland mailboats. More than 20 mailboats depart Nassau

for the Family Islands each week; one way fares range from \$20 to \$45.

Several direct flights connect Nassau with major American airports daily. American Eagle provides hourly service to Miami. Bahama-sair, Delta, U.S. Air, Carnival Airlines, Paradise Island Airlines, and others provide direct service to Atlanta, Charlotte, Raleigh-Durham, Fort Lauderdale, Miami, New York, Orlando, and West Palm Beach. Air Canada has flights to Toronto on Thursday, Saturday, and Sunday only. Schedules change frequently.

Communications

Telephone and Telegraph

New Providence (Nassau) has a 24-hour telephone and telegraph service provided by the Bahamas Telecommunications Corporation (BATELCO). BATELCO has in the past few years completed systems upgrades, modernization, and increased features for its customers. For instance, direct dialing service is now available to 120 countries around the world, including the U.S., except Alaska. Direct dial calls are considerably less than for operator-assisted calls. For example, a 3 minute night call to Virginia costs \$1.05, whereas the same operator assisted call costs \$6. In some overseas areas the savings are more dramatic; a 3 minute call to Switzerland is \$4 if dialed directly, whereas an operator assisted call costs \$15. New digital exchanges have enabled BATELCO to offer several new features in addition to the standard services. Two speed calling services are now available. The eight most frequently called numbers can be reached by dialing only one digit. The other allows calls to 30 most frequently dialed numbers by dialing just two digits. Both services include long distance direct dial numbers. Other services available include call-forwarding and three-person conference calls. These new features and services are not

yet available to all subscribers, although some 90 to 95% of the population is currently covered.

While BATELCO has made dramatic strides in modernizing its equipment and in expanding its range of services, it is still plagued by chronic problems associated with growth and older equipment. In some areas of Nassau, customers have waited months and even years for a telephone line. In other areas, frequent malfunctions occur and telephones can be out of order for weeks. The quality of calls to the U.S. is excellent. BATELCO maintains an over-the-horizon link with Florida City and a submarine cable links Nassau, Grand Bahama Island, and West Palm Beach, Florida. The quality of calls to other overseas locations is comparable to calls placed from U.S. telephones.

The monthly rental charge for one basic telephone instrument is \$9.50, with additional costs for added features and extensions.

Telegrams may be telephoned to the telegraph office and charged on the regular telephone bill. Full rate telegrams to the U.S. cost \$.24 per word and night letters cost \$.12 per word (minimum 22 words).

Health and Medicine

Medical Facilities

While at times strained by the volume of cases, adequate medical facilities and sufficiently trained physicians in Nassau provide reliable medical care for most routine needs. The principal hospital is the government-operated Princess Margaret Hospital offering 24-hour emergency medical service and has 484 beds. Doctors Hospital is privately owned and operated, and has 72 beds and offers 24-hour emergency medical services. Rooms are considerably more expensive than those in Princess Margaret. Both are located in downtown Nassau. On the western end of New Provi-

dence in Lyford Cay, the Western Medical Clinic has a 14-bed care facility with a four-bed intensive care unit. It specializes in plastic and reconstructive surgery. The hospital houses the cardiac diagnostic center providing such services as doppler echocardiography, 24-hour electrocardiograms, exercise electrocardiograms, and facilities for pacemaker implantations and evaluations. The Sandilands Rehabilitation Center, with 344 beds, is a psychiatric hospital and a 133-bed geriatrics facility, including a maximum security unit, a child and family guidance center, and a combined substance abuse facility for drug and alcoholic patients.

Nassau has over 111 physicians including specialists in pediatrics, obstetrics and gynecology, dermatology, cardiology, gastroenterology, nephrology, neurosurgery, ophthalmology, orthopedics, anesthetics, pathology, radiology, and internal medicine. Among the 42 dentists in Nassau, two are oral surgeons.

Most doctors and dentists attended medical or dental schools either in the U.S., Canada, or the United Kingdom. The ophthalmological service at Princess Margaret Hospital is partially staffed by Yale Medical School ophthalmology residents who rotate every three months.

Community Health

Nassau has no major medical hazards. The water, however, tends to be brackish, and at times is not potable. Some visitors have experienced gastroenteritis, vomiting, and diarrhea after drinking tap water. These symptoms usually run 24-72 hours and subside without medication. Tuberculosis, hepatitis, and malaria have been reported among Haitian refugees living in close quarters, but no major outbreaks have occurred.

Newcomers should be aware that at certain times of the year, some large predatory fish which feed from reef environment food chains contain a neurotoxin (ciguatera) that can pro-

duce diarrhea, vomiting, muscle aches, dysesthesia (abnormal sensations), paresthesia (numbness and tingling) of the mouth and extremities, itching, and severe headaches. Neurological symptoms can last a few days, several months, or years. No known specific treatment for ciguatera exists. Barracuda and certain species of jack and grouper have been known to cause ciguatera. Deep ocean fish such as shark, marlin, salmon, and tuna do not feed on the reef and therefore are usually safe. Lobster, shrimp, and other shellfish are not affected. Occasionally, food poisoning associated with raw or "scorched" conch occurs, usually from improper handling by street vendors.

Preventive Measures

No serious, prevalent, endemic diseases exist in Nassau. Sanitary standards for food handlers, barbers, and beauticians are high. Food is imported from the U.S., Europe, and New Zealand and subject to inspection by the country of origin. Locally produced dairy foods meet U.S. health and sanitary standards. No special preparation of fruit and vegetables is required. Sewage is adequate but, in some low areas where drainage is poor, septic tanks and drainage pits require frequent waste water removal.

Although New Providence has no poisonous snakes, it does have poisonous insects, such as black widow spiders and scorpions. Certain types of coral formations can cause severe skin irritation and spiny sea urchins can cause severe foot infections if stepped on. No known cases of rabid animals have been reported on New Providence Island.

NOTES FOR TRAVELERS

Passage, Customs and Duties

Ample flights are available on American air carriers and should be

used. Bahamasair, which flies the Miami-Nassau route, is a Bahamian carrier.

For the traveler who may have forgotten that airplanes were once powered only by propellers, Paradise Island Airlines, an American carrier, offers flights from downtown Miami and Fort Lauderdale International Airport in an amphibious, propeller-driven aircraft. The flights land in Nassau Harbor.

U.S. citizens must present original proof of U.S. citizenship (a valid or expired passport, a certified U.S. birth certificate or a Certificate of Naturalization), photo identification, and an onward/return ticket for entry into The Bahamas. Voter registration cards, driver's licenses, affidavits and other similar documents are not acceptable as proof of U.S. citizenship. Visas are not required for U.S. citizens for stays up to eight months. There is an airport departure tax of \$15 for travelers age six years and older. For further information, U.S. citizens may contact the Embassy of the Commonwealth of The Bahamas, 2220 Massachusetts Avenue, N.W., Washington, D.C. 20008, telephone (202) 319-2660, or the Bahamian consulates in Miami or New York. Additional information is available on The Bahamas Tourist Board web site at <http://www.bahamas.com> or telephone 1-800-422-4262, and on the official web site of the Government of the Bahamas at <http://www.bahamas.gov.bs/>.

The Bahamas Dangerous Drug Act makes it an offense for an unauthorized person to import, export, or be in possession of marijuana, morphine, opium, or lysergic acid (LSD) in the Bahamas. The provisions of this Act are strictly enforced.

Firearms & Ammunition

It is illegal to import firearms or ammunition into The Bahamas or to possess a firearm in the country without appropriate permission. Tourists who arrive by private boat are required to declare firearms to

Bahamian Customs and leave firearms on the boat while in The Bahamas. Penalties for illegal possession of a firearm or ammunition are strict and can involve heavy fines, lengthy prison terms, or both. For further information on firearms in The Bahamas, please contact the Embassy of the Commonwealth of The Bahamas in Washington, D.C., or the Bahamian consulates in Miami or New York

Americans living in or visiting The Bahamas are encouraged to register at the Consular Section of the U.S. Embassy in Nassau and obtain updated information on travel and security within The Bahamas. The U.S. Embassy is located next to McDonald's restaurant on Queen Street in downtown Nassau; telephone (242) 322-1181, after hours: (242) 328-2206. The Consular Section hours are 8:00 a.m. - 12 noon, Monday - Friday, except local and U.S. holidays. The U.S. Embassy is also responsible for consular services in the Turks and Caicos Islands, an overseas territory of the United Kingdom. The Consular Information Sheet for the British West Indies provides additional information on the Turks and Caicos Islands.

Laws

Boaters should be aware that long-line fishing in Bahamian waters is illegal. All long-line fishing gear must be stowed below deck while transiting through Bahamian waters. Fishermen should note that stiff penalties are imposed for catching crawfish (lobster) or other marine life out of season or in protected areas.

U.S. citizens should exercise caution when considering time-share investments and be aware of the aggressive tactics used by some time-share sales representatives. Bahamian law allows time-share purchasers five days to cancel the contract for full reimbursement. Disputes that arise after that period can be very time-consuming and

expensive to resolve through the local legal system.

Pets

There are no known cases of rabid animals in the Bahamas. No pit bulls and no dogs under six months of age are permitted to enter the Bahamas.

An Import Permit is required from the Bahamian Ministry of Agriculture and Fisheries for all animals brought to the Bahamas. Applications for such permits should be made several weeks in advance to the Ministry of Agriculture and Fisheries, P.O. Box N-3028, Nassau, Bahamas. The telephone number is (809) 322-1277.

Dogs and cats over the age of 6 months, imported from the U.S. or Canada, must be accompanied by a Veterinary Health Certificate issued within 24 hours of embarkation and a certificate of Rabies Vaccination issued not less than 10 days or more than 9 months before.

Pets under 6 months do not require a Rabies Vaccination Certificate, but must have a Veterinary Health Certificate. Dogs under six months are not permitted to enter.

Dogs and cats traveling to the U.S. from the Bahamas need a Health Certificate issued within 24 hours of departure. If you intend to ship pets to the U.S., check with the U.S. Department of Agriculture Animal and Plant Inspector at Nassau International Airport well in advance of planned travel to confirm this policy.

Disaster Preparedness

The Bahamas, like all countries in the Caribbean basin, is subject to the threat of hurricanes. Hurricane season officially runs from June 1 to November 30, although hurricanes have been known to occur outside that time period. Visitors to The Bahamas during hurricane season are advised to monitor weather reports in order to be prepared for

any potential threats. General information about disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov>.

Currency, Banking, and Weights and Measures

Virtually all stores, restaurants, hotels, and other commercial facilities accept American currency, which is on par with the Bahamian dollar. Major credit cards and travelers checks are also widely accepted. No restriction is placed on the amount of currency brought into or taken out of the Bahamas.

American currency, usually exchanged on a one-to-one basis with Bahamian dollars, can be used throughout the Bahamas. Most major stores, hotels, and restaurants will accept major credit cards and travelers checks, but will not accept a personal check without a check cashing card (Chekard).

Standard U.S. weights and measures are used in the Bahamas.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated November 1995. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The British influence remains alive and strong in **BARBADOS**. Although this small Caribbean nation has been independent for more than two decades, the mark of the Crown survives in its language, in its passion for cricket, in conservative dress, and in the carefully nurtured observance of afternoon teatime. A renowned tourist mecca, Barbados is, in many ways, the most advanced of the smaller Caribbean islands, and it enjoys its position as a stable, independent state within the British Commonwealth.

The island is geographically isolated and offers few sophisticated cultural amenities, but the sun shines nearly every day, and the sea

beckons to visitors throughout the year. From quiet coves to sprawling, luxurious resorts, Barbados is well-equipped for tourism.

The island was settled by the English, but it is thought that perhaps it had been named earlier by Portuguese explorers—*Los Barbados*—for the bearded fig trees they found in such profusion.

MAJOR CITY

Bridgetown

Bridgetown, founded in 1629, is Barbados' capital and largest city. It has about 123,000 inhabitants. The Careenage, a small inlet of the Atlantic Ocean, divides the city. Some tourist charter boats and fishing boats are docked there. Two of the old warehouses lining the Careenage have been partly renovated and provide space for some cafes and shops.

Broad Street is the principal tourist shopping and banking street. A small statue of Lord Nelson stands in the square, commissioned by the Bridgetown merchants in gratitude for Nelson's saving the West Indies by defeating the French at Trafalgar.

A deep-water harbor was constructed in 1961, and interisland shipping has since been moved from the Careenage to a shallow draft harbor. The government has built Bridgetown Fishing Harbour, which provides piers and moorings for the fishing fleet and a fish market.

The Garrison Savannah, once the training ground for the British West Indies Regiment, is now a park. Horse-racing is held at the track there on most Saturdays in season and on some holidays. Surrounding the Savannah are private buildings that once housed the British forces. One of these is the Barbados Museum.

Many of the older buildings in Bridgetown have been destroyed to make way for modern, utilitarian structures. In recent years, the Barbados National Trust has become interested in preserving Barbados' architectural heritage. As a result, a few of the charming old buildings have been repainted and renovated.

Food

Most meat sold locally, except for chicken, is imported. American beef is available, but quite expensive. Local pork, chicken, and lamb are available, fresh and frozen. Fresh fish is sold every afternoon at fish markets around the island. Kingfish, dorado (referred to locally as

Boats in Bridgetown Harbor, Barbados

Susan Rock. Reproduced by permission.

dolphin), and flying fish are staples; red snapper is available during the summer months. Tuna, shark, and marlin are also available. Shrimp and lobster are available, but at high prices.

Pasteurized milk, cream, yogurt, cottage cheese, and sour cream are available from the local dairy and are safe for consumption. They are also expensive by U.S. standards and tend to spoil rapidly. Ice cream and frozen yogurt are also produced locally, but are very expensive.

The variety and quality of fruits and vegetables available are disappointing. Prices are high by U.S. standards, whether the produce is locally grown or imported. Most fruit sold in the supermarkets is imported. Local lettuce is available, as are cucumbers, green beans, carrots, bell peppers, and cabbage, but with frequent shortages of these items, especially during the tourist season (mid-December to mid-April). Tomatoes, avocados, melon, squash, broccoli, mangoes, and papayas are seasonally available. Quality varies and you may have to search through the local vendors stalls to find good ones. All bananas sold in Barbados are grown locally. Oranges, grapefruit, and pineapple are imported from the other CARICOM countries. The market at

Cheapside, open mornings, Monday through Saturday, is where many local small farmers sell their produce. Although the variety is limited, the prices are much lower than in supermarkets, and some families find this a better source than the supermarkets.

Clothing

Dress in Barbados is more traditional and conservative than elsewhere in the Caribbean. This translates to more suits and ties and dresses than may be expected from perusal of tourist brochures of cruises and vacations in the Caribbean.

Lightweight, informal clothing is worn by both men and women. The selection available locally is limited and expensive.

Keep in mind that clothing will be laundered more frequently here; it fades and wears out quickly. Elastic loses its stretch; metal pieces rust. When purchasing new items for Barbados try to avoid metal buckles, zippers, snaps, or buttons. Leather belts and shoes tend to mildew.

Clothes not worn frequently that are left in closets on metal hangers may be damaged by rusting of the hangers, sometimes even rusting

through the fabric at the shoulders. Leave most woolen clothing or other items that require dry-cleaning in storage. The humidity increases the amount of mildew forming on clothing kept in closets, resulting in the need to wash or dry-clean clothing that has not been worn.

Men: A suit is worn to the office and most social functions. The locally available “shirt jac” (something like the *guya-bera* in Latin America or safari suit in Africa) is acceptable on some occasions. When selecting your wardrobe for Barbados, keep in mind the heat, the humidity, the island’s limited professional cleaning facilities, and the fact that clothing fades and wears out quickly here.

Women: Short-sleeved cotton dresses or skirts and blouses are suitable for work. Short-sleeved or sleeveless cotton dresses, sundresses, blouses, and skirts or shorts are suitable for home or running errands, although residents do not generally wear shorts downtown—only the tourists do. Slacks are also worn in the evening or when the weather is cooler. Bring 100% cotton clothing and lingerie. Synthetics are fine for the office or evening. Hats (except on the beach), gloves, and hose are rarely worn. Sweaters are rarely needed, except at the office.

Children: School-age children wear uniforms. Each school has their own color uniform. Some pieces (i.e., white shirts, brown or black shoes) may be purchased in the U.S. at a lower cost. Some specific items must be purchased locally. Children will live in swimsuits, shorts, and T-shirts. Children’s clothing is more expensive and of poorer quality than that available in the U.S.

Supplies and Services

Tailors and dressmakers are hard to find, and the quality of workmanship varies. Dry-cleaning is much more expensive than in the U.S., and the quality is not always the best. Several good beauty shops

operate with prices that are similar to those in the U.S.

Religious Activities

More than 140 different religious denominations and sects are represented in Barbados. The Anglican Church predominates and Anglican churches abound. The island has six Catholic churches. Protestant denominations include Methodist, Seventh-day Adventist, Moravian, Pilgrim Holiness, New Testament Church of God, Church of the Nazarene, Assembly of God, Baptist, and the United Christian Brethren. Christian Science, Mormon, and Jehovah's Witnesses are also here. More Caribbean in character and African in outlook are the Sons of God Apostolic Church or "Spiritual Baptists" and Rastafarians. Barbados has two Greek Orthodox churches, a synagogue, and a mosque. Baha'is and Hindus are also here.

Education

The education system in Barbados is modeled on the British system and is in many ways not comparable to education in the U.S. In addition to the stress of coping with a different education system, the educational environment lacks amenities taken for granted in the U.S. The schools have no science labs or theaters; the libraries and gyms are inadequate or nonexistent; very little computer training is available. The buildings generally appear run-down; the walls are bare. Children coming from an American education system have found the adjustment especially difficult at the secondary level.

Many parents are satisfied with local preschools and primary schools. The local schools are not obliged to accept U.S. children, however, and it is difficult to find places after June 30.

Primary school children usually attend St. Gabriel's, St. Angela's, or St. Winifred's. All schools require uniforms. Some schools have Brownie and Cub Scout troops.

Secondary education begins at age 11 upon completion of the 11 plus examination.

The differences in the educational system are most apparent at the secondary level, where emphasis is on memorization of material in preparation for taking public examinations. The curriculum is inflexible, and course offerings are limited by the form (grade) in which a child is placed. For example, if your child is ready to begin the second year of Spanish and the form is in the third year of French, the child will have to do third-year French or no foreign language at all. Creativity is not rewarded and often discouraged. No credit is given for having completed course work; scores on the year end public examination determine success or failure. Extracurricular activities such as sports, drama, music, journalism, or other special interests are not normally available. Pressure is placed on children to compete with their classmates to be "first in form."

Special Educational Opportunities

Children can take lessons in ballet, modern dance, swimming, tennis, riding, piano, Spanish, French, chess, table tennis, drawing, karate, judo, gymnastics, and recorder. The Barbados Yachting Association offers sailing lessons in the summer for children 8 and older.

The Barbados Community College also offers courses to adults in foreign languages, computers, and other continuing education. The Alliance Francais offers French-language courses at various levels.

The University of the West Indies will allow a college-age dependent to enroll as an "occasional student" and audit courses on a noncredit basis. Expenses are equal to a non-resident student at a U.S. university. Computer courses are held at a local institute.

The Office of Overseas Schools advises against bringing handicapped children to Barbados.

Sports

Cricket is the national sport, and most Barbadians take an avid interest in it. The quality of cricket played locally is high, especially the test matches, and the West Indian team is one of the world's top test match teams.

Soccer, rugby, golf, field hockey, running, cycling, and tennis are popular, and basketball is becoming increasingly so. Individuals have access to three courses: the 18-hole Sandy Lane Hotel Course, the 18-hole course at the new Royal Westmoreland Golf Course, and the 9-hole course at Rockley. Tennis courts are available, although few are public, and most require club membership. At least five squash clubs are available and several gyms and fitness centers offer exercise classes as well as Nautilus equipment. Bodybuilding is a very popular sport in Barbados. The country has produced a number of world-class bodybuilders, including a former Mr. Universe and a former Mr. World.

All beaches in Barbados are public. A certain amount of harassment by panhandlers and itinerant vendors is a problem with some selling drugs. Women who are alone can expect to be approached by several persistent young men who make a living that way. Swimming, water skiing, sailing, windsurfing, scuba diving, snorkeling, and fishing are popular sports. The water is warm year round. Some of the hotels offer use of their pools gratis or for a small fee. Most swimming areas do not have lifeguards, and swimming on the east coast can be very dangerous.

Sailing conditions are good, but possible local destinations are very limited. No marinas or docks are available to pleasure boat owners in Barbados. Those that exist are only for commercial fishing boats. Boats may be moored along the coast; most are moored in Carlisle Bay adjacent to the Yacht Club. No charge is made for your mooring. The Yacht Club has modest fees to join for both boating and tennis and

sponsors serious sailing races for racing, cruising, and dinghy classes.

Thoroughbreds on the island are limited in number, although the Barbados Turf Club holds periodic races during the year. Horses are occasionally brought in from Trinidad or Martinique. Polo matches are held during winter.

Barbados offers opportunities for water polo, horseback riding, rifle shooting, Ping-pong, and netball. For runners, two or three 10K races and a marathon are held each year. The Barbados Hash House Harriers meet every Saturday afternoon at various spots on the island for a run or walk through the countryside. The National Trust sponsors walks each Sunday morning and afternoon that offer great views as well as good exercise.

Touring and Outdoor Activities

All touring on Barbados is done by car. Distances are not great, but travel can sometimes be time consuming due to narrow, congested, and unevenly maintained roads.

Barbados has several old plantation "Great Houses" open to the public. Sam Lord's Castle, Villa Nova, and St. Nicholas Abbey are the best known, but Sunbury and Francia are also interesting to visit. Farley Hill, a great house now in ruins, is a National Park with beautiful views of both coasts, a picnic area, and playground. The Flower Forest, Welchman Hall Gully, and Andromeda Gardens are botanical parks. The Wildlife Reserve has monkeys, caiman, peacocks, tortoises, and other small animals and is a favorite with children. Harrison's Cave is a large limestone cavern also very popular with the younger set.

St. Vincent and the Grenadines offer some of the most beautiful sailing waters in the world. It is a short flight from Barbados to Grenada, Union Island, or St. Vincent. Chartering a sailboat and sailing among the Grenadine islands is a memorable experience for those who are able to take advantage of the oppor-

tunity to explore the unique character and attractions of each of the islands.

Entertainment

Entertainment possibilities in Barbados, beyond the tourist-oriented shows, are limited and hard to find. Those who seek them out, begin by asking long-term residents and Barbadians. The island's drive-in movie theater is a great treat on balmy evenings with a cooler of drinks and a vat of popcorn.

Most Americans in Barbados have VCRs (VHS predominant) and get current copies of releases from the many video clubs located around the island. Many of these copies are of indifferent quality and do not appear authorized. Amateur and semiprofessional theater, music, and dance groups perform occasionally. In addition, most larger hotels provide calypso and steelband music of varying quality year round. The island also has some nightclubs and discos.

Barbados has many restaurants that, in general, offer standard tourist fare at tourist prices. A few noteworthy restaurants offer excellent cuisine at prices comparable to those of similar quality in Washington, D.C. Some of the hotels offer buffet specials, which can be more reasonably priced.

The Barbados National Trust holds an open house each week from January to April at some of the finer homes on the island. The plantation houses are varied, with luxury winter homes. These tours are popular with residents and tourists alike. The Barbados Museum supports an amateur archeological group that has been digging with great success at a pre-Columbian Indian site.

Amateur photographers and artists will find both scenic beauty and human interest shots. Art materials are limited. Film can be purchased locally, but is expensive.

Several active bridge clubs hold regular sessions. The Barbados Bridge League offers duplicate bridge four

times a week. A chess club and a ham radio club accept members.

Social Activities

The American Women's Club is a large local organization that meets monthly. Membership is open to both Americans and others. The club sponsors several activities, including a book group, a cooking group, bridge, a literary group, and an occasional charity ball.

Opportunities exist to meet Barbadians officially and in community activities. These contacts can later broaden into more personal relationships, but may require more effort to overcome the reserved distance characteristic of Barbadian culture. Nationals of other countries, particularly the U.K. and Canada, are easy to meet and share many interests with Americans. The Multi-National Women's Committee sponsors an annual fundraising fair to benefit a variety of children's charities each February, thereby offering opportunities to get involved in Barbadian society and meet people from many countries.

International organizations represented in Barbados include, among others, UNDP, PAHO, EEC, IDB, UNICEF, and the OAS.

COUNTRY PROFILE

Geography and Climate

Barbados lies about 270 miles northeast of Venezuela and 1,612 miles southeast of Miami. It is 21 miles long and 14 miles wide with an area of 166 square miles. Constant westward tradewinds temper the tropical climate much of the year.

Situated 100 miles to the east of the Caribbean Windward Island chain, Barbados is distinct from those islands in many ways. It is a coral island, rather than volcanic, and relatively flat.

Mt. Hillaby, the highest point, is only 1,104 feet above sea level. Bridgetown, the capital, is located on the southwest corner of the island. The west and south coasts leading out of the city are densely populated, with hotels, residential, and commercial areas intermingling. The rugged, windswept east coast boasts the scenic Scotland district. The currents on the east coast are very dangerous, and swimming is forbidden in many areas. The interior of the island rises gently and sugarcane fields are interspersed with villages, farms, and the occasional plantation Great House.

Actual temperatures in Barbados vary little during the year, averaging about 77°F (25°C) and rarely rising above 89°F (32°C) or falling below 65°F (18°C). The intensity of the sun this near the Equator makes it seem much hotter, but the effects of the changes in humidity are even stronger. During the summer months, which make up the rainy season and coincide with the hurricane season, high humidity levels greatly intensify the discomfort of the higher temperatures. During the winter, which is the “dry” tourist season, it can feel almost cold in the evenings. Even during those months a significant amount of rain falls.

Population

Approximately 260,000 people live in Barbados, with about 123,000 of them residing in the capital of Bridgetown.

Arawak Indians are thought to have lived here once, only to be destroyed by the fierce Carib Indians who then abandoned the island. Barbados was uninhabited when British sailors landed at what is now Hometown, in 1625. As the sugar industry developed into the main commercial interest, Barbados was divided into huge estates. Slaves were brought from Africa to work the plantations until slavery was abolished throughout the British Empire in 1834.

Barbados is much more densely populated than its Eastern Caribbean island neighbors. The people of Barbados came from Africa, England, South America, North America, other Caribbean nations, and, more recently, from Asian countries. Over 90% of the population is directly descended from African slaves, and they dominate the island's politics. Over the last 15 years, a growing interest in exploring their African cultural heritage has occurred. Approximately 20% of the population are of mixed black and white blood, with shades of skin color playing an important role in defining how Barbadians view one another. This can be seen in the variety of terms used to describe the variations between black and white—brown skin, light skin, fair skin, high brown, red, and mulatto among them. About 7% of the population is white, and still control much of the economic activity on the island. Since the mid-1980s, a willingness on the part of educated blacks and others to discuss racial problems and concepts has often led to heated debates. Racially motivated violence, however, is rare to nonexistent.

Barbadians consider themselves as friendly, relaxed, and informal, and many visitors to Barbados who stay for only a few days or weeks leave with that same impression. Outsiders who live here, however, perceive Barbadians as more reserved, formal, and less spontaneous and outgoing than any other people in the West Indies. They are not nearly so quick as Americans to deal with others on a first-name basis, resorting more often to titles and formal forms of address. A proud people, Barbadians may take offense easily to any perceived slight, and sometimes seem to be looking for signs of disrespect or condescension.

English is the official language, but dialects vary from country to country in the region, as well as from parish to parish on each island. Most Americans need some time to adapt to the heavy Barbadian dialect, which can become absolutely impenetrable at will. A French

patois is spoken widely in St. Lucia, Dominica, and in certain areas of St. Vincent as these islands were all under French control at one time or another.

Public Institutions

From the arrival of the first British settlers in 1627 until independence in 1966, Barbados was under British control. Its House of Assembly, which began meeting in 1639, is the third oldest legislative body in the Western Hemisphere, preceded only by Bermuda's legislature and the Virginia House of Burgesses.

Local politics at that time were dominated by a small group of British plantation owners and tradesmen. It was not until the 1930s that a movement for political rights was begun by educated descendants of the emancipated slaves. One of the leaders, Sir Grantley Adams, founded the Barbados Labor Party in 1938.

Progress toward a more democratic government was made in 1950 when universal suffrage was introduced. This was followed by steps toward increased self-government until full internal autonomy was achieved in 1961.

From 1958 to 1962, Barbados was one of 10 members in the West Indies Federation. When the Federation was terminated, Barbados reverted to its former status as a self-governing colony. Following several attempts to form another federation composed of Barbados and the Leeward and Windward Islands, Barbados negotiated its own independence at a constitutional conference with the U.K. in June 1966. After years of peaceful, democratic, and evolutionary progress toward self-rule, Barbados attained independence on November 30, 1966.

Barbados is now an independent and sovereign state within the Commonwealth. Under the current constitution, Barbados is a Westminster-style parliamentary democracy. The Queen of England,

Barbados titular head of state, appoints a Governor General as her representative in Barbados. The bicameral Parliament, consisting of an appointed Senate and an elected House of Assembly, is supreme. The Prime Minister (normally the leader of the House majority party) and other Cabinet members are appointed from among the House members. The Senate consists of 21 members; the House, 28. The Governor General appoints all Senators: 7 without advice to represent religious, economic, social, or other interests; 12 on the advice of the Prime Minister; and 2 on the advice of the opposition leader. The country's two major political parties, the Barbados Labor Party and the Democratic Labor Party (which arose out of the labor movement in the West Indies) have precipitated much of the country's political change.

The judiciary comprises the Supreme Court of Barbados and numerous courts of summary jurisdiction. The Supreme Court includes a Court of Appeal and a High Court.

The island is divided into 11 parishes and the city of Bridgetown. No local government exists, and all these divisions are administered by the central government.

The territories are linked in various ways, but little popular support exists to merge the islands into a common Caribbean or other regional political grouping. There have been unsuccessful attempts to form a single political union.

Arts, Science, and Education

The educational system, traditionally geared to prepare administrative and clerical personnel as well as some university entrants, has changed recently. Certain branches of technical training, especially manufacturing, engineering service, hotel management, and management training, have progressed greatly.

The government operates primary and secondary schools, and through grants, aids some private schools, all of which offer regular academic subjects—English, math, languages, science, history, and geography. The educational system is patterned after the British model. The Cave Hill Campus of the University of the West Indies (UWI) has faculties of law, arts, and general studies, natural and social sciences, and a school of education. Other UWI facilities are located at the Jamaica and Trinidad campuses. The Barbados Community College offers junior college-level courses in commercial, engineering subjects and liberal arts and recently introduced the associate degree program modeled after the U.S. system. The Samuel Jackman Prescod Polytechnic Institute concentrates on vocational and technical education. Erdiston College conducts a 2-year teacher training course. Codrington College, an Anglican seminary dating back to the early 1700s, now is also affiliated with UWI.

Each year the National Cultural Foundation (NCF) sponsors a guitar festival in February, and the National Independence Festival of Creative Arts (NIFCA) in November. The Caribbean and Latin American Music Society (CLAMS) sponsors a series of classical chamber music concerts in January, and the Barbados Dance Theater sponsors a "season of dance" in March. All of these activities involve a limited number of amateur performances (usually fewer than six) over the space of a few days. The NCF also sponsors the island's largest festival, Crop-Over, from June to August. This is similar to the Carnival celebrated on other islands in the Caribbean. It includes calypso competitions and other festivities, culminating in "Kadooment," a street parade of costumes and general merrymaking.

Throughout the year, performances by calypso artists, amateur theatrical productions, the Barbados Symphonia (a local orchestral ensemble), and a variety of talent competitions and concerts by local

groups and church choirs are offered. Several local art shows are also here.

Commerce and Industry

Historically, sugar production was Barbados' largest industry since its introduction in the 17th century. But in recent years, tourism and light industry have surpassed sugar both as foreign exchange earners and employers.

Tourism is a major industry in Barbados and continues to increase each year, with an 8% growth in 2000. The majority of visitors are from the United Kingdom, but U.S. visitors have increased in the past few years. To encourage tourism and industrial development, the government is expanding the recently completed major highway program that links the airport, deep-water harbor, several industrial parks.

Sugar production continues and even rose by about 10% in 2000 to its highest yield since 1997. Most of the sugar produced is sold to the European Community at a guaranteed price. Non-sugar agricultural production, vegetables and cotton, grew by about 6%. However, agriculture only accounts for about 4% of the GDP, and imports are still needed to provide Barbados with much of what it needs to survive, not only in foods, but in energy and other consumer products. In 2000, Barbados import expense was about \$800 million. Major trading partners are the U.K. and the U.S.

Barbados is a member of CARICOM, a regional trade alliance.

Unions play an important role in the nation's political and economic development. Some 40% of the work force is unionized, and the labor movement, particularly the Barbados Workers Union, has traditionally been a significant factor in the political process in Barbados.

Transportation

Local

Barbados has an extensive road network—900 miles of paved roads—but the roads are narrow, poorly developed, and many are indifferently maintained. Blind corners and dangerous intersections are encountered throughout the island. The tropical climate includes frequent brief rains that leave the roadway extremely slippery. The lack of sidewalks means pedestrians are often encountered in the road. Traffic tends to be congested in Bridgetown during daytime hours.

Inexpensive public bus service covers nearly all the island. Buses are not air-conditioned and are overcrowded during rush hours and on Saturdays when people go to market. Independently owned minivans operate at low cost and breakneck speed, with a minimum of regulation and according to no published schedule. Taxis are available in population centers and at most hotels, but fares are too high for regular use.

Regional

Daily flights are available to Miami, New York, and through San Juan to other cities. Travel from the U.S. to the other islands of the Caribbean can be expensive, particularly in the high season—mid-December to mid-April. Travel within the Caribbean islands costs the same year round. Several local travel agents offer moderately priced packages over holiday weekends and during the low season to the other Caribbean islands, Puerto Rico, and Caracas. Martinique, St. Vincent and the Grenadines, St. Lucia, and Grenada are close.

Communications

Telephone and Telegraph

The telephone system in Barbados is good, with direct-dial service via satellite to the U.S. Repairs can take a very long time. The area code for Barbados and most of the Caribbean is 809. Direct calls are expensive, but cheaper when charged to a U.S. telephone credit card (cur-

rently, AT&T and cable and wireless have an agreement to permit use of AT&T cards in Barbados). Telegraph service is also good.

Radio and TV

Two local AM radio stations, four local FM radio stations, and one wired service are available only to subscribers. The AM stations favor West Indian sounds, with lively discussions on local issues and extensive local news coverage. The FM stations present American pop, easy listening, and religious formats. One of the FM stations also presents a classical program on the weekends. The wire service, Redifusion, carries classical music, drama, and literature. The BBC's *World News* is broadcast on both AM and FM daily. In addition to the Barbados stations, several regionally based radio stations can be picked up on the AM band, including Radio Francaise Outre-Mer and stations in Grenada, St. Vincent, Puerto Rico, Trinidad, and Venezuela. VOA is carried 7 hours a day over Radio Antilles (930 AM).

The Caribbean Broadcasting Corporation's (CBC) TV station carries 12 hours of programming daily, including about 4 hours of CNN *Headline News* weekday mornings. Evening programming is a mix of older American and British serials, locally produced news, and information and entertainment shows. *Sesame Street* is telecast weekday afternoons. CBC broadcasts in NTSC and U.S. sets operate without adjustment. They have recently made available four subscriber channels, ESPN, CNN, TNT South, and Lifetime, at a fee comparable to U.S. cable services that have many more channels.

Newspapers, Magazines, and Technical Journals

Barbados has two daily newspapers, *The Nation* and *The Advocate*, both published in Bridgetown and available throughout the island. These concentrate on local and regional news. Their coverage of international news not directly affecting Barbados is limited. Home delivery is available. A local distributor

offers same day or 1-day-later provision of *The Wall Street Journal*, *USA Today*, *The Herald Tribune* and *The New York Times*.

Popular U.S. magazines may be purchased at the three or four local bookstores and newsstands, but they are expensive. International editions of U.S. news magazines are available locally.

Barbados has a public library system, and the small central library has a fair collection. Several local bookstores carry a very limited selection of paperbacks and hard-bound books at very high prices.

Health and Medicine

Medical Facilities

Barbados has good medical facilities, and most medical specialties have practitioners here. Some areas of medical practice are lacking, however, and certain ailments and injuries cannot be adequately treated locally.

Medical facilities on the other islands are barely adequate, and most lack the facilities to treat major medical problems. Each island has at least one hospital, but complicated cases are usually transferred to Barbados.

Two main hospitals, the government-supported Queen Elizabeth Hospital and the private Bayview Hospital are available, along with local polyclinics. The selection of a personal or family physician is the responsibility of the individual and should be done as soon as possible. The physician with whom you register will determine at which hospital you will receive treatment. In case of emergency, your private physician will meet you at the hospital, which will greatly speed the care given.

Individual or family counseling is available through recommended community resources.

Therapy services, including physical, occupational, and speech, are available both privately and through government services. Most therapists are trained abroad in the U.S., U.K., or Canada and provide good-quality care by U.S. standards.

General dental and orthodontic services are available. When possible, crowns, root canals, dental surgery, etc., should be done in the U.S.

Not all local pharmacists will fill U.S. physician prescriptions. In general, pharmacists will supply a medicine to someone who has run out of a supply while visiting, if the vial and some form of identification are produced. Drug agencies in Barbados order from all over the world, including the U.S., with many of the brand names supplied in the U.S. available here, sometimes at a lower price.

Community Health

The Government of Barbados is continuing its efforts to improve sanitation. Most residences in Bridgetown are connected to sewers. Free garbage pickup is provided once or twice a week in many areas. Sanitation inspectors periodically check homes, hotels, restaurants, and factories to control flies and mosquitoes.

Barbados has pure water, filtered through 600 feet of coral. Tap-water is potable. The water is not fluoridated. The water's lime and calcium content are high. Do not assume the tap-water is potable on the other islands. Drink bottled water, soft drinks, etc.

Preventive Measures

The intense sunlight is a serious hazard. Use sunscreen daily before leaving home. Children particularly need to be protected from overexposure. Sunscreen is available locally. The climate can cause heat exhaustion, sunburn, and fatigue. Drink plenty of fluids to offset increased perspiration.

Local milk and milk products are safe. Fruits and vegetables need only washing.

Skin problems such as acne and fungal infections may be aggravated by the humid climate, and extra measures of hygiene are necessary. Photosensitivity reactions from taking certain medications may occur. Pollen from cane, cashews, and other flora may cause allergic reactions. Some people suffer gastrointestinal disturbances after arrival, but the effects are generally slight and mainly due to the change in eating habits, climate, and water. External ear infections are common. Hookworms, roundworms, and pinworms are common, but normally do not present a problem to resident Americans.

Dengue fever occurs periodically. No protection is available other than the avoidance of mosquito bites. Use coils and repellants. A few cases of bilharzia (schistosomiasis) continue to be reported annually on St. Lucia as well as the French islands of Martinique and Guadeloupe. To avoid the disease, do not expose any part of the body to any freshwater streams, lakes, or pools. Tuberculosis is a recurrent problem in Dominica, and, to a lesser extent, in St. Lucia. Skin tests for tuberculosis are available in the Medical Unit.

LOCAL HOLIDAYS

The exact dates of some religious holidays are based on the lunar calendar and change each year.

Jan. 1	New Year's Day
Jan. 21	Errol Barrow's Birthday
Mar/Apr.	Good Friday*
Mar/Apr.	Easter Sunday*
May 1	Labor Day
May/June	Whitsunday*
May/June	Whitmonday*
Aug. 1	Emancipation Day
August (first Monday) . . .	Kadooment Day
October (first Monday) . . .	United Nations Day
Nov. 30	Independence Day
Dec. 25	Christmas Day
Dec. 26	Boxing Day
	*variable

NOTES FOR TRAVELERS

Passage, Customs & Duties

You can reach Bridgetown from Washington, D.C., by air via New York or Miami. American Airlines has daily flights from JFK and Miami with a stopover in San Juan. No regularly scheduled U.S. passenger liner service is available between the U.S. and Barbados.

U.S. citizens may enter Barbados for up to 28 days without a valid passport, but must carry original documentation proving U.S. citizenship (i.e. valid or expired U.S. passport, certified U.S. birth certificate, Consular Report of Birth Abroad, Certificate of Naturalization, or Certificate of Citizenship), state-issued photo identification and an onward or return ticket. U.S. citizen visitors who enter Barbados without these items, even if admitted by immigration authorities, may encounter difficulties in boarding flights for return to the United States. U.S. citizens entering with documents other than U.S. passports should take special care to secure those documents while travelling. It can be time-consuming and difficult to acquire new proof of citizenship to facilitate return travel. The Barbados government requires payment of a service tax upon departure from the island.

Barbados customs authorities may enforce strict regulations concerning temporary importation into or export from Barbados of items such as firearms and agricultural products. It is advisable to contact the Embassy of Barbados in Washington, D.C. or one of Barbados's consulates in the United States for specific information regarding customs requirements.

Americans living in or visiting Barbados are encouraged to register at the Consular Section of the U.S. Embassy in Barbados and obtain updated information on travel and security within Barbados. The U.S. Embassy is located in Bridgetown

at the Canadian Imperial Bank of Commerce (CIBC) Building on Broad Street, telephone (246) 436-4950, web site <http://usembassy.state.gov/posts/bb1/wwwhemb1.html>. The Consular Section is located in the American Life Insurance Company (ALICO) Building, Cheapside, telephone (246) 431-0225 or fax (246) 431-0179, web site <http://www.usembassy.state.gov/posts/bb1/wwwh-cons.html>. Hours of operation are 8:00 a.m. to 4:00 p.m. Monday through Friday, except local and U.S. holidays.

Pets

Barbados is rabies free, and the authorities are determined to keep it so. Most families purchase animals locally. Some purebred animals are sold locally, but they are expensive. Dogs and cats can generally be imported into Barbados only from the U.K. If you want to import a dog or cat, strict quarantine regulations require that the animal be quarantined for 6 months in the U.K. You must then apply for an import permit from the Barbados Ministry of Agriculture at least 30 days in advance of pet's arrival date. Importation from another rabies-free country is not always permitted, but the cost savings make it worth taking the steps to apply for an import permit from the Ministry of Agriculture well in advance of your arrival. The U.K. Ministry of Agriculture will supply a list of recommended kennels for quarantine upon request. If you want to import other animals, you must obtain an import permit from the Barbados Ministry of Agriculture before shipping the animal. Excellent veterinarians are located on the island who offer boarding facilities as well.

Currency, Banking, and Weights and Measures

The monetary unit is the Barbados dollar (BDS\$), comprising 100¢. US\$1= BDS\$2 (fixed rate). Most hotels and restaurants on the island accept U.S. currency. The East Caribbean dollar (EC\$), comprising 100¢, is also accepted. US\$1=EC\$2.70. Rates seldom fluctuate.

The Central Bank of Barbados issues Barbados currency in denominations of \$100, \$50, \$20, \$10, \$5, and \$2 in notes. Coins are issued in \$1, 25¢, 10¢, 5¢, and 1¢ denominations. The Caribbean Currency Authority issues East Caribbean notes in denominations of \$100, \$20, \$10, \$5, and \$1. Coins are minted in 50¢, 25¢, 10¢, 5¢, 2¢, and 1¢ denominations.

Barbados and the other islands of the Eastern Caribbean use the metric system.

Disaster Preparedness

All Caribbean countries can be affected by hurricanes. The hurricane season normally runs from June to the end of November, but there have been hurricanes in December in recent years. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov>.

RECOMMENDED READING

The following titles are provided as a general indication of the material published on this country. The

Department of State does not endorse unofficial publications.

Several books are available in Barbados regarding West Indian life, history, and culture. Most are not widely available outside of the Caribbean. Rather than include a long list of these books here, members of the Embassy staff recommend newcomers read the following books, which are available in the U.S. as an introduction to Barbados.

A-Z of Barbadian Heritage. Kingston, Jamaica: Heinemann Publications, 1990.

Alleyne, W. *The Barbados Garrison and Its Buildings*. Hampshire, England: Macmillan Caribbean, 1990.

Beckles, Hilary. *A History of Barbados*. Cambridge: Cambridge University Press, 1990.

Broberg, Merle. *Barbados*. New York: Chelsea House, 1988.

Hoefler, Hans. *Barbados: Insight Guides*. APA Publications: Singapore, 1985.

Hoyos, F.A. *Barbados: A History from Amerindians to Independence*. Macmillan Publishers.

Michener, James. *Caribbean*. New York: Random House, 1989.

Pariser, H. *Adventure Guide to Barbados*. New York: Hunter Publishing, 1990.

Potter, Robert B., and Graham M.S. Dann, comps. *Barbados*. Santa Barbara, CA: ABC-CLIO, 1987.

Wouk, Herman. *Don't Stop the Carnival*. Garden City, NY: Doubleday, 1965.

Major Cities:

Belmopan, Belize City

Other Cities:

Dangriga, Orange Walk, Punta Gorda, San Ignacio

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Belize. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The tiny country once known as British Honduras, lies on the Caribbean coast of Central America, tucked in between Mexico on the north and Guatemala on the west and south. Its first European settlement was made in 1638 by shipwrecked British sailors but, subjected to repeated attacks by neighboring Spanish colonies, it endured a troubled 150-year period until the British established control just before the turn of the 19th century. Full status as a crown colony was formally declared in 1862. Belize has been independent since 1981. Although Britain had sovereignty, Guatemala had long disputed Britain's claim to the territory, maintaining its own terri-

torial claim allegedly inherited from Spain. Guatemala finally recognized Belize's independence in 1991. The Guatemalan claim, however, remains unresolved.

Belize is a land of natural wonders and broad ecological diversity. It is noted for its virgin rain forests and pine savannas; the richness of its marine and wildlife; and, especially, for its 176-mile-long barrier reef, second only in size to the Great Barrier Reef of Australia. Estuaries, caves, and cascading waterfalls add further wealth to the tropical environment.

Archaeological sites at Xunantunich and Altun Ha reveal the extensive Mayan civilization that flourished here approximately 1,500 years ago. With almost every new excavation, spectacular discoveries are made, and the country becomes ever more notable for its pre-Columbian culture.

MAJOR CITIES

Belmopan

Belmopan is situated some 50 miles inland in the foothills of the Maya Mountains, at the country's geographic center. When the capital

was moved here in 1970 from Belize City, the principal municipality, the area first had to be cleared of its dense jungle growth. The city was built after the devastation wrought in 1961 upon Belize City by Hurricane Hattie. Although Belmopan is also vulnerable to hurricane winds, its mean altitude of 182.5 feet above sea level is greater than Belize City's, and this protects it against the waters which have inundated the latter in previous times, causing widespread damage and loss of life.

Belmopan is easily accessible by one of the country's two good highways, although heavy rains can cause severe flooding on the sections of road close to Belize City.

The capital's main point of interest is the National Assembly building, patterned on an ancient Mayan motif, and flanked by government ministries around a spacious esplanade.

The official residences of the governor-general and the prime minister also are here, as are some foreign consulates. The city is administered by an agency of the national government rather than by an elected municipal authority.

Belmopan lacks the amenities found in Belize City. It has a handful of shops and stores, a market, one movie theater, a hotel, two commer-

cial banks, one service station, and a small hospital for minor health problems. On weekends, many people travel the short distance to Belize City for shopping and entertainment.

Current plans for Belmopan's future include expansion to accommodate several times its present population of about 6,000 with the addition of residential, governmental, commercial, industrial, educational, and medical facilities. A 20-room hotel has convention facilities. Also, the broad, fertile valley of the Belize River, stretching several miles to the north and west of Belmopan, provides an excellent area for agricultural development.

Belize City

Belize City is a mixture of modern concrete buildings, Victorian-style wood houses, and old buildings dating back to the 1800s. A branch of the Belize River, known as Haulover Creek, divides the city into "northside" and "southside". Three bridges join the two halves. Downtown (alternately described as dumpy and charming) and the poorer sections of town are southside. The Fort George area and the Southern Foreshore, facing each other at the mouth of the Creek, are the older residential areas. Kings Park, Caribbean Shores and Bell Vista, where most Mission personnel live, are newer developments on the nourished, upriver toward the airport.

The city is built on reclaimed mangrove swamp and expansion can occur only by further reclamation, an expensive process. The two roads leaving the city pass through several miles of wetland before reaching slightly higher ground.

Seaward, the view is interesting. Four or five scenic cayes with good fishing, swimming, and skin-diving, lie within a 30-minute boat ride. The island villages of San Pedro and Caye Caulker are the favorite jumping-off spots where skin-diving and scuba equipment can be rented.

Close in to Belize City, the sea is shallow, muddy, and polluted. Freighters dock at a cargo pier outside the city, while cruise ships often anchor offshore in winter. Though locals can often be seen swimming along the city shoreline, there are no beaches. You should swim only at the cayes, along the reef, up rivers or at designated beach areas. The nearest white-sand beaches are 30 minutes east by boat or a one-hour drive south.

Food

Most packaged, canned and bottled items needed in the average household can be bought in Belize. Four supermarkets and several small groceries carry a good supply of imported U.S. and British food and housekeeping supplies. Most baby foods, formulas and disposable diapers are available. Prices on all items are high. The supermarkets have imported fresh butter, margarine, various cheeses and a modest assortment of frozen products, including fruits, vegetables, bakery goods, and processed meats. Frozen whole chickens, chicken parts, beef and pork from local producers are stocked as well. Fresh meat is sold in various meat markets and, with the exception of lamb which is increasing in popularity, is in generous supply. Beef is not as tender here as in the U.S., but is lean and of quite acceptable quality. Local chickens are good, as are local dairy products in general.

Fish, conch, shrimp and lobster are caught and frozen locally. The supply of fresh fish varies according to the weather and prices are cheaper than in the U.S.

Mexico offers less expensive shopping: Chetumal is just over the border (two-hour drive), while Cancun and Merida (six-hour drives) boast fully stocked Wal-Marts and Sam's Clubs.

Clothing

The most important thing to keep in mind when buying clothing to wear in Belize is that the fabric must be suitable for the hot and humid climate. No garment will be wearable

if the fabric is heavy or retains heat. Synthetics and double knits are too hot. Pure cotton is ideal, but always think lightweight and permanent press. There is one dry-cleaner in Belize City. Another consideration is the type of recreational activity most popular here. Casual clothing is acceptable for swimming, fishing, boating and travel to out-of-the-way archeological ruins. It also is a good idea to have a hat for protection from the sun. Ladies straw hats and men's summer caps can be purchased in Belize, but beachwear is best brought to post. Remember that clothes wear out quickly, as there is no change of season. Therefore, bring more, rather than less; little is available on the local market. Lightweight hiking boots and outdoor clothing or jungle fatigues are a good idea for hiking in the rainforest.

Men: Dress is cool and casual. Guayaberas (embroidered Mexican shirts with evenly hemmed tails worn outside the pants) are appropriate on most occasions and are worn in the office and for evening social events. Any open-necked short- or long-sleeved shirts are acceptable for business and most informal social occasions. Lightweight suits are worn for a few special events, especially official functions. Black-tie is almost never worn, but when it is, both black and white jackets are acceptable. Poor drainage in the city, which is one foot below sea level, floods streets and hides ditches during the rainy season, so getting wet is a part of life here. Sweaters are needed for winter evenings.

Women: Dressing is casual, although less so in the office where air-conditioning is efficient. Dresses or slacks are worn. Lightweight slacks and tops, and sleeveless dresses are worn for shopping and marketing. Sun-dresses are also popular for everyday wear. Stockings are never worn except occasionally in the evening and in the office. Hats are rarely required. Short cocktail dresses and patio-type clothes are worn at evening parties. Formal parties are rare, so the need

for long evening dresses is minimal. In December and January, dresses with sleeves are comfortable. A light stole is useful to have in the evening during the cooler months. Bring a sweater and heavier clothing for traveling to mountain areas.

Completely closed leather or synthetic shoes are a bit warm for Belize. So canvas espadrilles and sandals are common daytime wear. Women's casual shoes are sold here, but styles and fit are limited. Narrow sizes are not available.

Children: Infants and children wear simple clothing. Cotton T-shirts, light pants, shorts, and simple dresses are worn. Sneakers are the usual footwear, so bring a supply. Children tend to dress up for birthday parties and religious services.

All schools mandate that uniforms be worn. Children's shoes are available, but don't count on the local selection. Some British and American toys and baby supplies are sold, but prices are high.

Supplies and Services

Most all necessities can be bought at one of the several department, hardware, and drugstores, but shortages occur. Hobby, recreational, beauty and medicinal/medical items can be another story. If they are available, they're expensive. Make sure you bring along books, art supplies, CDs and special needs like cosmetics, medicines and toiletries. A good rule of thumb is: If it's not in every store in the U.S., don't assume it's to be found anywhere in Belize (though sometimes Belize can surprise you).

There is one dry cleaner in Belize City and three or four commercial laundromats. Electricians, plumbers, carpenters, auto mechanics, etc., are easy to find, but service is generally slow, and replacement parts not always on hand. Barbers and hairdressers are competent, as are upholsterers, drapery makers, dressmakers and jewelers.

Domestic Help

Most American households have a maid, though experienced and trained servants are difficult to find. Domestic workers typically do not live in, and work 6-8 hours per day. The legal minimum wage for domestics is Bz\$2.25 per hour. Overtime is paid for extra hours. Employers pay Social Security tax for all domestics who work over 23 hours per week. Maids do routine cleaning, laundry and child care, and may speak Spanish and/or English. Night baby-sitting and help at parties requires overtime pay. Hours and fringe benefits should be agreed upon at time of employment.

Religious Activities

Belize is roughly 60% Roman Catholic and 38% Protestant. Although church attendance is relatively low, the country is very religious; prayers accompany virtually every public ceremony. Denominations represented in Belize include Anglican, Assemblies of God, Baptist, Hindu, Jehovah's Witnesses, Mennonite, Methodist, Mormon, Muslim, Nazarene, Pentecostal, Presbyterian, Roman Catholic and Seventh Day Adventist. All conduct services in English.

Education

Local schools provide good education through the junior high school level. The basics are taught, but creative art, music and laboratory science are lacking. The school year usually begins the first Monday after September 10, and ends in mid-June. There is a three-week vacation at Christmas and a two-week vacation at Easter.

Some schools have U.S. priests and nuns on their staff, but most of the schools are staffed by Belizeans. The educational system is basically British (although the textbooks in some schools come from the U.S.), and some of the curriculum and the approach to learning differs from that in the U.S. Most students re-entering schools in the U.S. have no difficulty at their expected grade level.

To enter first grade, a child must be five years old by January 1, following the beginning of the school year. Infant I (kindergarten) enrolls children from ages three to five, and there are morning and afternoon sessions.

Most foreign grade-school children attend the British Toucan School, located at the Belize Defense Forces Airport Camp. Some others attend the new and privately operated Belize Elementary School.

At the high school level, girls can attend St. Catherine Academy or Palloti, both of which are run by Roman Catholic nuns. St. John's College, run by Jesuit priests, is the premier school for boys. The Anglican Cathedral College is a coeducational high school. Belmopan Christian Academy in Belmopan offers an American curriculum and several American teachers. These schools are regarded as the best in Belize.

Special Educational Opportunities

St. John's Sixth Form is a coeducational junior college with U.S. accreditation. St John's College Extension and the Extramural Department of the University of the West Indies offer a few evening courses for adults. Several people have learned Spanish through these courses as well as the Mexican Cultural Institute. These night classes are attended by working people who are studying to pass the high school equivalency test or who are upgrading then office skills by taking commercial courses

The University College of Belize provides higher education. Degrees are offered in Business Administration, Math English, Chemistry, Biology, Environmental Health, Education and Social Work Elective courses are in English, Literature Economics, History and Mathematics

Sports

Adequate exercise and outdoor recreation are essential to morale and physical wellbeing in Belize. Opportunities for outdoor recreation are

limitless, while those who don't like the outdoors are likely to find life here frustrating. Jogging and bicycling are popular. Close proximity to some of the world's most beautiful boating and swimming makes this an ideal post for water sports. Sailing, canoeing (on rivers), sea kayaking, motor-boating, SCUBA, snorkeling, fishing, and exploring the barrier reef and the cayes are popular activities. From Belize City, water taxis take you out to the cayes. There are plenty of boats for hire, or bring your own. Outboard motors are in ample supply and cheaper than in the U.S. Races for various classes of local and imported sailboats are held two or three times a year. Fishing tournaments, too, are held several times a year. Manatee can be seen upriver; and it is possible to canoe from the Guatemalan border into Belize City in 3 or 4 days (experienced outfitters can arrange the trip). The Belize Pickwick Club, the main tennis and social club, is in decline and membership is expensive. There are a few free or less expensive courts to be found around town, and partners are easy to find.

There is one private golf course. The Caye Chapel course is on an island ten miles east, and is being upgraded whilst the entire island is remade into an exclusive resort. It charges Bz\$50/round. (Bring your own set of clubs, rentals don't exist here.) Golf is also possible in Cancun.

The cost of recreational and hobby equipment is high. It's a good idea to bring your own supplies and equipment. A fully equipped gymnasium is available northside at reasonable monthly fees.

Bird watching and hiking are popular activities. Belize is a world famous bird watching destination with over 560 species. An enthusiastic and professional Belize Audubon Society is active throughout the country. Belize has several caves to explore. Some can even be floated through on rivers in inner tubes.

The Radisson Fort George Hotel and Marina, and the Fiesta Inn open

their main pools to non-hotel guests, who have come for a meal. Also, a public pool has just been completed.

The Belize Fishing Association benefits sports fishermen and promotes fishing-related tourism. The association explores all kinds of sport fishing, organizes fishing tournaments, and advances marine conservation by maintaining records of fish caught in Belizean waters, such as grouper, snapper, tuna, marlin and swordfish.

Popular sports include karate, softball, basketball, horse racing, body building, soccer and cross-country bicycle racing.

The government reciprocally issues amateur radio licenses upon presentation of a U.S. license. The Belize Amateur Radio Society offers code and technical courses. In addition to high frequency operations, there is wide-spread two-meter activity across the country, with the assistance of active repeaters.

Touring and Outdoor Activities

Possibilities for weekend excursions are limitless. Roads, hotels, food and restaurants are generally good, the language is English, distances are short, and the variety of scenery great. A wide variety of ethnic groups can be found, and rural people are friendly. Particularly welcoming are the resident Americans, who are scattered all across the country, and are preeminent in the tourism industry.

A number of Mayan ruins in Belize have been excavated and partially restored. The two well-excavated ruins are Xunantunich, 70 miles west of Belize City, and Altun Ha, 30 miles north. The latest ruin, Caracol, rivaled (and in fact once defeated) Tikal, and requires an adventurous 4-wheel trek into Belize's tropical rainforest. Many sites are still under excavation and archeologists sometimes welcome visitors.

The Belize Zoo and Tropical Education Center, 30 miles west of the city, is a trend-setting world-class

facility, started and run by an American. It offers not only an interesting selection of Belizean wildlife in their natural settings, but also has educational programs on the flora and fauna of the region. A Baboon Sanctuary (actually black howler monkeys), butterfly farms across the country, bird sanctuaries (featuring the Western Hemisphere's largest bird, the jabiru) near Belize City and several national parks nationwide have established trails and guides. The world's only jaguar reserve is in the south.

The Mountain Pine Ridge, about three hours from Belize City off the Western Highway, provides a change of climate with cool nights. A number of resorts in the 3,000-foot high Pine Ridge offer horseback riding through Mayan ruins, inner tubing through ancient river caves, and ecological camping trips. Caves, waterfalls, natural pools and scenic views abound. The Mexican town of Chetumal (a two-hour drive), with freshwater, crystal clear lagoons for swimming close by, makes a good weekend excursion. The modern resorts of Cancun, Cozumel, Playa del Carmen and Isla Mujeres are six hours by car and are popular vacation sites. Cancun boasts every American chain restaurant and a Wet n Wild water park. Merida, the capital city of the Yucatan is also a six hour drive. It has excellent shopping and sightseeing facilities, and can be used as a base for visits to the famous ruins of Uxmal and Chichen-Itza.

Guatemala City and the colonial town of Antigua are an inexpensive and easy flight away. The quaint, sinking Guatemalan island village of Flores and the nearby Mayan ruins of Tikal are three hours by car.

Closer to home is Ambergris Caye, a large sandy island, only 15 minutes by plane or 1-1/2 hours by boat from Belize City. A fishing village turned tourist hub, San Pedro, is the premier jumping off spot for the best fishing, diving and boating. Many other lovely cayes are minutes from Belize City by boat, a couple with cabana guest rooms. Placencia, a

rustic, mainland fishing village about 30 minutes by air or three hours by car, is one of several popular beach-front village vacation spots in the south.

Entertainment

The Calypso Bar and Grill, part of the Fiesta Inn, has a live band and dancing every Thursday through Saturday nights, and attracts an older crowd. Lindbergh's Landing is a popular hangout, and the happy hour at Mangos restaurant is well-attended. The Bellevue Hotel is favored by older young people. Karaoke is popular. There are several nightclubs, but no movie theaters.

There are a number of festivals year round. September 10, the anniversary of the Battle of St. George's Caye, and September 21, Independence Day, both feature parades, beauty contests, street dances and special events. Pan American Day and Garifuna Settlement Day (the anniversary of their arrival in Belize) are also celebrated.

Social Activities

The 3,000-strong American community consists mainly of business people who have enterprises, hotels or farms on the cayes or in the interior. Several American clergy and religious orders live in Belize City and in the districts. An American Chamber of Commerce formed in 1998.

Your social life can be active or quiet depending on inclination. Belizeans are friendly and easy to get to know, and a wide circle of acquaintances can easily develop. Most social activity takes place in the home, out on the cayes, and through scheduled events of the various clubs. Both Rotary and Lions have active branches in Belize.

OTHER CITIES

DANGRIGA (formerly called Stann Creek) is located in east-central Belize on the Caribbean Sea. The town was founded by black refugees from Honduras in 1823. It soon became a

trading center and port for timber, fish, coconuts, and bananas. Dangriga has facilities for canning and freezing orange juice. The town's population is about 7,000.

Situated on the New River in north-eastern Belize, **ORANGE WALK** is about 50 miles north of the capital. During the late 19th and early 20th century, Orange Walk enjoyed prosperous mahogany trading. Today, the economy is based on sugarcane and rum distilling. The area's inhabitants are a mixture of Maya Indians, Creoles, and a small number of Mennonites. The city's population is about 10,400.

PUNTA GORDA, in southern Belize, lies on a coastal plain about 75 miles south of Belmopan. Livestock are raised locally. Punta Gorda is linked to Belmopan by the Southern and Hummingbird highways via Dangriga. Its exports include coconuts, sugarcane, and bananas. Most of the 2,600 residents are Caribs.

SAN IGNACIO (formerly called El Cayo or Cayo) is the administrative center of the Cayo district in west-central Belize. The town lies on the Belize River, near the border with Guatemala. Rice, beans, cattle, and corn are traded in San Ignacio. The town's inhabitants are mostly Maya Indians, *mestizos*, and a substantial number of Mennonites. The population is about 8,000.

COUNTRY PROFILE

Geography and Climate

Belize is located along Central America's eastern coast, bordered to the north by Mexico, to the west and south by Guatemala and to the east by the Caribbean Sea. It measures 175 miles north to south and 69 miles across at its widest point. Total land area is about the same as New Jersey.

The savannas of northern Belize are flat and dry compared to the rest of

the country (receiving only 50 inches of rain a year). The primary source of income for the predominantly Mestizo population there is sugarcane. South and westward, the hilly inland terrain is more forested, including some remaining stands of mahogany. Next is the Mountain Pine Ridge range, with pine-covered peaks of over 3,000 feet that enjoy cool nights year round. To the south are citrus plantations, fishing, and rainforests where the annual rainfall increases to 120 inches. The Mayan Indian and Garifuna inhabitants subsist primarily upon small-scale farm - subsist and fishing.

Much of the coastline consists of either dense growths of mangrove habitats or broken, low-lying and narrow sandy shoreline. Belize City itself rests upon filled mangrove forest, with an elevation that is actually a foot below sea level.

The central Belize District is the most populated of six and is predominantly Creole. Economic activity centers around commerce and some light manufacturing. Belize's barrier reef is the second largest in the world, running some 150 miles nearly the entire length of the coast, featuring three of the Caribbean's four atolls. Small islands or cayes (pronounced keys; abundant in the crystal-clear waters of the reefs.

Belize's subtropical climate is hot and humid most of the year. In Belize City the average daily temperature is 85°F, but the daytime high is often in the 90s between May and October, with uncomfortably high humidity. Dry season runs from January through April. Heavy rains begin in June and can continue through December. Mosquito outbreaks are a perennial result. From March to November, a fairly steady breeze makes the heat in Belize City less intolerable. The coolest period is December to February, when the average daily temperature is only 75°F. During this period, night temperatures can drop into the upper 50s.

Tropical storms and hurricanes can occur from June through November.

In 1931 and 1961, hurricanes devastated Belize City; Hattie in 1961 put 15 feet of water in the chancery. Hurricane Greta (1978) was much less intense, but still covered the first floor of the chancery with 18 inches of water.

The country's capital is Belmopan, at the country's geographic center in the foothills of the Maya Mountains. It was conceived and constructed as the capital after hurricane Hattie's devastation. Though Belmopan is still vulnerable to hurricane winds, its distance inland (50 miles) and 180-foot elevation protect it from the waters that inundate Belize City. Belmopan is an easy hour away by paved highway.

Belmopan's modest main point of interest is its government buildings, styled after ancient Mayan architecture, arranged around a wide plaza. While it lacks the amenities of Belize City, it does have a handful of shops and produce stalls, a supermarket, banks, three hotels and a hospital. Plans to increase the city's 7,000+ population have stalled in recent years, and Belize City remains the principal shopping, business and entertainment center.

Population

Belize's three major ethnic groups are the Mestizo (Spanish/Indian descent), the Creole (African/European descent) and the indigenous Maya Indians. Garifuna (African/Arawak Indian descent), East Indian, Lebanese, European, Mennonite and Chinese people make up the rest of the population, which is estimated at 230,000. Average annual growth rate is 2.6%, due to a high birth rate coupled with a higher immigration than emigration rate.

The Creole and Garifuna together comprise roughly 36% of the population. Descended from African slaves, the two groups are distinguished by lineage and culture. The Creole, who predominate in Belize City, intermarried with Europeans, and their local English dialect is

Street in Belize City, Belize

also known as Creole. Their culture is a blend of West Indian, British and American. The Garifuna are slaves intermarried with Carib Indians, who were deported by the British from the French West Indies around 1800. Garifuna communities are in the south. They maintain distinctly African cultural traits, while their first language combines an African dialect with Maya and Spanish words.

About 45% of Belizeans are of Latin and/or Indian lineage. Some are direct descendants of the regional Mayan tribes, who have become part of the money economy, learned Spanish, and married Latin descendants; this group is often referred to as the Mestizo. In remote areas, such as in the south, some Mayans still maintain some ethnic purity in custom and language.

In recent years, the influx of Hispanic refugees has had a significant impact on the population of Belize. The refugees came mostly from El Salvador, Guatemala, and Honduras during the wars of the 1980s. A reduced number still come, primarily for economic reasons. Official estimates place their numbers at 40,000. Some are being assimilated into Belizean society, working as laborers or in service industries in the larger towns. Many live as squatters, practicing slash-and-burn agriculture on interior lands.

Mennonites of European stock are often seen in black clothing and horse and buggy. They inhabit the northwest, and produce lovely furniture and much of the country's poultry and vegetables. The few remaining British subjects, the Lebanese, East Indian and Chinese business communities are predominantly in Belize City. English is the official language and mother tongue of over half of the population, with Spanish, Mayan dialects and Garifuna spoken as the first language of the rest of the population. Literacy is liberally estimated at 90%.

Public Institutions

After more than 200 years of British colonization, independence was granted on September 21, 1981. But Belize has enjoyed internal self-government since 1964, boasting the most stable democracy in the region, with a British-style parliamentary government, headed by a Prime Minister and 10 or more Cabinet ministers who all serve in the House of Representatives or Senate. Upon independence, Belize joined the Commonwealth, making Queen Elizabeth the head of state. The monarch is represented by a Governor General, whose appointment is recommended by the Prime Minister.

In 1993, British Forces withdrew all but a small training detachment of

its former garrison. Today, defense is the responsibility of the small but dedicated Belize Defence Force (BDF). Policemen, like the British bobby, are unarmed on the beat.

There are two principal political parties—the People's United Party (PUP), and the United Democratic Party (UDP). The two have exchanged control of the government in every election since independence.

Arts, Science, and Education

Most exponents of Belizean art are the Garifuna, Creole, Maya and East Indian peoples. The work of wood and slate carvers, black coral jewelers, and local musicians and vocalists are readily available in stores where tourists shop, although much of the handicrafts are imported from Guatemala. There are many talented and popular painters, some of whom are exhibited fairly regularly in Belize City, especially at the National Handicraft Center and the Mexican Cultural Center.

Various choral societies practice and perform regularly. There are five national dance companies under the auspices of the National Arts Council, a couple of which have toured overseas on occasion.

The Belize National Theater Company and the Arts Council put on three to four shows a year, favoring works by local and Caribbean writers.

Scientific activity centers around the excavation of some of the 900 pre-Mayan/Mayan ruins throughout the country. A historical society, run by an American expatriate, is active.

The government and private citizens have set aside tens of thousands of acres of wildlife and ecological habitats where researchers study everything from herbal medicines to the coral reefs, manatees, mangrove trees and the spiny lobster. Reportedly, Belize has a higher percentage of its land (40%)

held as nature reserves or parks than any other country; and ecotourism is popular.

The University College of Belize (UCB), the only 4-year junior college with U.S. accreditation; the Belize Agricultural College; the University of the West Indies (UWI) Belize campus; and the Belize Teachers College are the premier institutions of higher learning. Check with the individual institutions, however, for their accreditation and academic levels of proficiency, as relevance and carry-over to American programs may differ greatly.

There are relatively few cultural traces of two centuries of British colonialism; widespread cable television in particular, has increasingly Americanized the country.

Commerce and Industry

Sugar, citrus, rice, bananas, fishing, cattle ranching, and tourism have long since surpassed logging as the country's major economic activities. Still, only a small percentage of the cultivable land is in use, and tourism is now the largest industry (160,000 tourists, 65% of them Americans, visited in 1997).

Historically, Belize has exported agricultural products such as sugar and bananas, and has imported everything else. Through the efforts of Mennonite and Central American immigrants, it has achieved a modicum of self-sufficiency in basic foodstuffs like rice, corn, and red kidney beans. There are only a handful of small industries - cigarettes, beer, soft drinks, floor milling, concrete blocks, dairy products and agricultural processing.

Since Belize's modest market imports almost everything from the U.S., the UK or the English-speaking Caribbean, the cost of living remains high. Many Belizeans do their shopping in Mexico or Guatemala, where goods are cheaper.

Transportation

Automobiles

Private cars are a necessity and air-conditioned, heavy-duty vehicles are popular. High clearance vehicles are needed for traveling out of town. Parts and service are most easily obtained for Fords and Toyotas, which have full dealerships here. Jeep, Chrysler, Land Rover, Mitsubishi and Suzuki have agencies, with a limited supply of parts. The Ford Explorer and Suzuki Vitara or Sidekick are among the most popular models. Flood damage and poor maintenance make urban streets so full of potholes that tires and shock absorbers often need replacement (some would say high clearance is needed in town as well).

Driving licenses and registration certificates are issued with minimum formality and free of charge. Third-party liability insurance is compulsory and can be obtained locally at reasonable rates. Regular, high-octane, leaded and unleaded, and diesel fuels are readily available.

Local

Tropic Air and Maya Island Airways are the two local airlines, using single- and twin-engine planes to serve the district towns, resort cays and Tikal, Guatemala.

Paved roads link Belize City north to the Mexican and west to the Guatemalan borders. A dry-weather road (now being paved) connects to Punta Gorda in the far south. Roads on to Tikal, Guatemala and Cancun and Merida, Mexico are paved and in good shape.

Regular, inter-city bus service (on modern as well as aging buses) operates on the all-weather roads. In-town bus service is infrequent. Traffic moves on the right, American-style. Taxis are reasonably priced (Bz\$5 per person within the city during the day), and are usually available.

Regional

From Houston and Miami, Belize is a 2 hour flight. TACA makes daily flights from these cities, San Salvador (with connections to all Central

America), and Roatan and San Pedro Sula, Honduras. Continental Airlines flies twice daily from Houston, while American Airlines flies daily from Miami. Commuter airlines link Belize City to Tikal, Guatemala, and Chetumal and Cancun, Mexico.

Commercial cargo flights arrive in Belize weekly. Freighters make port calls from Miami two or three times a week, taking three days to make the journey. It is also possible to sail on cruise ships that call at Belize City in the winter.

Communications

Telephone and Internet

Belize enjoys excellent but expensive telephone service. All districts and major population centers are now linked by dial service. Direct-dial capability to the U.S. and many other countries is available through the local phone company. It is possible to use USA Direct for both AT&T and MCI from Belize if you have a calling card.

The country is Internet-friendly, with a well developed net, lots of web sites and home e-mail service readily available.

Mail

International airmail service between Belize and the U.S. is reliable. Postage for a one-half ounce letter to the U.S. is 75¢ (US\$3 80 equivalent). International air parcel post from the U.S. is expensive, but fast and reliable. Airmail packages sent from Belize to the U.S. are slightly less expensive and service is equally reliable. International mail from Belize can be registered and insured.

Personal mail between the U.S. and Belize can take from four days to a week (first class or priority mail). The same is true of parcel post. Fourth class mail generally arrives within a month; and mail is received on a daily basis.

Radio and TV

There are few facilities for entertainment and recreation, so two

local TV stations and 60-plus cable channels make a TV and VCR a necessity.

There has also been a rapid increase in the number of radio stations across the country. For the most part, programming consists of contemporary and Caribbean music. Live programming takes the form of newscasts, talk shows, government and public service announcements and political propagandizing. Though the country is English-speaking, Spanish stations and programs are on the rise.

British Forces Belize broadcast on FM in Belize City, and IBB/VOA can be heard on AM. Short-wave reception is good.

Newspapers, Magazines, and Technical Journals

There are five weekly newspapers in circulation in Belize. All are in English and each represents a different point of view. Four are published in Belize City, and one in San Pedro on Ambergris Caye.

A variety of U.S. magazines, including the Latin American editions of Time and Newsweek are sold locally. Several poorly stocked bookstores carry detective, Western, gothic romance and comic books. Belize City has a new public lending library with novels, text and reference books, but few are new.

Health and Medicine

Medical Facilities

Some local doctors are well-trained and competent to thwart common ailments. Diagnosis and treatment of complicated illnesses are difficult due to lack of equipment and facilities. Trained laboratory technicians are available, but equipment and supplies in the government hospitals are limited. For these reasons, serious conditions and cases involving special care are treated in Miami. Many Belizeans travel to Mexico or Guatemala for medical attention. Local ophthalmologists provide high quality care, and

glasses, contact lenses, and exams are comparatively priced to the U.S. Emergency dental work should be evacuated to the U.S.

Several pharmacies carry a wide variety of basic medicines. However, bring to post a supply of prescription drugs, medicines and first aid supplies, since these items are imported and scarcities occur.

Community Health

Although Belize City now has a modern water treatment plant, and sanitation has improved greatly in recent years, things are still well below U.S. standards. About 90% of urban households are connected to the citywide sewage system, but sewage still runs in some open canals which empty into the sea. Although there is regular removal of city garbage, it is common to see it strewn about.

Houseflies, horseflies, sandflies, mosquitoes, roaches, land crabs, rats, and mice are widespread, and mildew, rot rust, and salt air corrosion are a continuous problem. For pets, ticks and fleas are a constant annoyance. Bring plenty of tick/flea shampoo, spray, collars, powder or whatever you normally use to control the problem (what is available here is expensive).

The constant mildew and dust in the city can aggravate allergies and sinus conditions, and colds are common. The high heat and humidity make this a debilitating climate, and extra exertion can quickly bring on heat exhaustion and dehydration.

Preventive Measures

No specific immunizations are recommended for Belize.

Bring an ample supply of insect repellent (Belizean mosquitoes are immune to Skin So Soft) and sunscreen to avoid the damaging effects of overexposure to the sun's rays. The latter is particularly important when traveling to the cays by boat where the sun's intensity is amplified by the reflection from the sea.

NOTES FOR TRAVELERS

Passage, Customs & Duties

From the Texas border, it is a 1,650 mile drive across Mexico to Belize City, most of it on 4-lane toll expressways. Good hotels, restaurants, spectacular scenery and mild mountain temperatures mark the route. Or, one can drive to Miami and take a plane from there to Belize City.

Plane connections to Belize are through Miami and Houston.

U.S. citizens need a passport valid for duration of stay. U.S. citizens do not need visas for tourist visits up to thirty days, but they must have onward or return air tickets and proof of sufficient funds. Visitors for other purposes must obtain a visa. Additional information on entry and customs requirements may be obtained from the Embassy of Belize at 2535 Massachusetts Ave., N.W., Washington, DC 20008, telephone (202) 332-9636. Information is also available at the Belizean Consulate in Miami or at the Belizean Mission to the UN in New York.

U.S. citizens living in or visiting Belize are encouraged to register at the Consular Section of the U.S. Embassy in Belize City and obtain updated information on travel and security in Belize. The U.S. Embassy is located at the intersection of Gabourel Lane and Hutson Street in Belize City; telephone 011 (501) 2-77161/62/63. The Embassy is open from 8:00 a.m. to 5:00 p.m., Monday through Friday, except for the 12:00 noon to 1:00 p.m. lunch hour.

Pets

Although no restrictions exist for bringing pets, and no quarantine is imposed, a current rabies shot and a health certificate (valid for no more than six months prior to arrival in country) are required. Also, a pet importation permit is required from the Vet Clinic in Belize, and a copy

of it is required by the international carrier before personnel can board with their pet(s). A fee of BA 10 per pet is levied, and the permit is valid for 60 days. A veterinarian's health certificate must show an examination conducted not more than 10 days before arrival in country.

Heartworm is a deadly illness in Belize, therefore all dogs must receive constant preventative medication. Daily and monthly worming medicines are available, but you may want to bring your own supply to guard against shortages. Belize has a good clinic with several veterinarians, usually trained in the U.S. or Britain.

Firearms and Ammunition

Weapons must be registered with local authorities upon arrival. Only the following non-automatic firearms and ammunition may be brought to Belize.

Item Quantity: Pistols 1, Rifles 1, Shotgun 1. Ammunition: Rifle/pistols 100 rounds, Shotgun 50 rounds.

Currency, Banking, and Weights and Measures

The Belize dollar (BA) rate of exchange has remained steady for over 20 years at Bz\$2 - US\$1. U.S. dollars are accepted everywhere. It is not possible to access U.S. bank accounts through automated teller machines (ATMs) in Belize. Travelers, however, can obtain cash advances from local banks, Monday through Friday, using major international credit cards.

Distances are measured in miles and weights in pounds.

Disaster Preparedness

Belize is a hurricane-prone country. The coastal islands of Belize, which are low-lying and lack high ground, are particularly vulnerable to direct hits by hurricanes and tropical storms. The islands have been cut off from communications and assistance during previous hurricanes. Extensive flooding as a result of storm activity is common both on the islands and in areas of the country not directly affected by hurricanes. General information about

natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>

St. George

INTRODUCTION

Bermuda is the most northerly group of coral islands in the world, lying just beyond the Gulf Stream some 650 miles off the coast of the Carolinas. Although very small and isolated in its part of the ocean, it offers a wide variety of places to see, people to meet, and things to do. With an economy based on tourism and international business, Bermudians enjoy a high standard of living with almost no unemployment, no national debt, and no income tax. They do face, however, a high cost of living and an increasing share of the stress associated with maintaining the lifestyle of an economically developed western society.

Places to see vary from Hamilton, the capital, with its smart shops and busy harbor, to St. George, the only other municipality, with its Old World lanes and fortresses. You can sightsee from the North Shore, with its bizarre rock formations, to the South Shore with its pink and white beaches. From end to end Bermuda is picturesque. Nature has endowed it with an abundance of verdant trees and colorful flowers. The landscape is dotted with pastel-hued, white-roofed houses and stately, tasteful hotels. No factories, billboards, or neon signs blot the quaint scenery.

In addition to the pleasant and hospitable Bermudians, the people include large numbers of more recent arrivals from around the world, some official representatives of the UK and their families, hundreds of Americans and Canadians who live on the island all or part of the year, a constant stream of tourists from the U.S. and Canada, a small but long-settled Portuguese community, and many residents and workers from the West Indies.

Bermuda offers many things to do. For recreation, Bermuda offers a host of outdoor sports including golf, tennis, fishing, sailing, diving, and swimming, and an adequate number of pursuits such as movies, occasional theatrical productions, and musical concerts.

Life in Bermuda is confined, yet varied. The island can be restful, yet interesting, busy, but not hectic

MAJOR CITY

Hamilton

Only 2,000 people reside within Corporation limits, but as the island's business center Hamilton's daytime population swells to about 14,000. The city's main attractions

are its restaurants and its smart shops and department stores along Front Street, which faces the busy quay side of Hamilton's harbor. The city's low traditional buildings are rapidly giving way on many streets to international-style low-rise business buildings with a few Bermudian architectural grace notes, but the town still retains a basically

British-colonial appearance. From across the harbor, its central skyline is dominated by the towers of City Hall, the Bermuda Cathedral, and the Sessions House or parliament building. The last contains the chambers of the House of Assembly and Supreme Court. Nearby on Front Street is the Cabinet Building, which houses the Senate chamber and the offices of the Premier and his staff. On a hill just north of the city stands Government House, the official residence and office of the Governor, overlooking the city and the harbor to the south, the Dockyard across the water to the west, and the ocean to the north. Hamilton's other attractions include Albouy's Point, site of the Royal Bermuda Yacht Club and a park overlooking the harbor, the Bermuda Library, which houses the Museum of Bermuda History, and the adjacent Par-La-Ville Gardens. The remains of Fort Hamilton are on the east side of the city, also pro-

viding harbor and city views from its ramparts

Utilities

Electricity in Bermuda is U.S. standard, 110/60 cycle. All American electric or electronic equipment can be used here. The electrical supply is fairly reliable, with the occasional weather-associated or equipment-failure outages to be expected by residents of islands.

Food

Almost all of the island's food supply is imported. With transportation costs and import duties, all consumer good prices are much higher than in the US. A few foods—some vegetables, bakery goods, fresh milk and eggs, meats and several species of fish—are produced locally but are expensive. U.S.-style supermarkets abound.

Clothing

Clothing which would be suitable for wear during summer in Washington, D.C., may be worn in Bermuda from April through November. Moderately heavy clothing is useful during Bermuda's frost-free but chilly winters. Sweaters are essential but are something of a bargain at times in local stores.

Fashionable clothing of all sorts is available in local stores, usually but

not always at prices somewhat above those of Washington. Wash-and-wear clothing is a great boon in Bermuda's climate, especially since dry cleaning is very expensive.

Office wear is more casual than in Washington, and Bermudians often wear Bermuda shorts with long socks, blazers, and ties. In general, dress in Bermuda is informal and colorful, but not to the extent associated with the tropical tourist islands to the south. Most social occasions and visits to all the better restaurants and hotels require at least jackets and ties, if not suits, for men and comparable outfits for women. Formal wear can be rented locally.

Supplies and Services

Virtually everything is available in Bermuda at a price or can be obtained quickly by mail order from the United States.

Numerous satisfactory beauty salons and barber shops are available in Hamilton and elsewhere. Nearly all appliance repairs are available somewhere in Bermuda but can be difficult if the right parts are not in stock. As with everything else, this can be expensive.

Musical instruments suffer in the climate and need tuning every few

months. A piano becomes "tinny" after a year or two of exposure to the subtropical climate. The wooden structure of a violin or guitar may warp. A brass instrument may corrode, unless frequently polished.

Domestic Help

Good, reliable domestic help is hard to find and is expensive because the demand greatly exceeds the supply. For general housekeeping, count on paying about \$15 per hour. Very few live-in domestics or nannies are available. Importing one from elsewhere may be useful. Baby-sitters are available but are also expensive. The going rate for an average teenage babysitter is approximately \$7 per hour. Gardeners are provided where needed at leased housing.

Education

Bermuda is in the process of reorganizing its public education system to provide middle schools and reduce the number of existing secondary schools. Professionally, the Ministry of Education seems to rely heavily on advice from educationists in the Province of Ontario and has followed many of their approaches to educational policy.

The Bermuda College, established in 1974, provides post-secondary education on a level with American junior or community colleges. Courses offered include "academic studies" (designed for preuniversity work), "commerce and technology" (designed to prepare students for various trades and business skills), and "hotel technology." In 1980, the government opened Stonington Beach Hotel, which is operated by the College and staffed by students training for careers in the hotel industry. The College offers some courses from Queens University in Canada.

Bermuda has a number of private schools. In addition to denominational (Roman Catholic and Seventh-Day Adventist) schools, there is one girls' school and two co-educational English style grammar schools, one of which offers a post-graduate year designed to prepare qualified graduates of any Bermuda

secondary school for attendance at American and Canadian universities. Another private school on the university level is Webster University which operates associate, bachelor's, and master's degree programs.

The reorganization of the public school system has created distrust among the public in the system as a whole. This in turn has nurtured a growing rush by parents to place their children in private schools, so waiting lists may apply.

The island's proximity to the U.S. east coast opens a wide choice of specialized schools for those who wish it.

Sports

Much of the island's life centers around outdoor activity. The island boasts of having more golf courses per square mile than any other country in the world. Of nine courses on the island, three are public, four are associated with hotels, and two are private with long waiting lists for membership. Greens fees are more expensive than at comparable courses in the U.S.

Tennis is also popular and almost all hotels have courts. The National Tennis Stadium has five courts available at moderate charges, and five tennis clubs throughout the island may be joined easily.

Sailing is the outdoor sport supreme; racing in the various classes takes place throughout the year, but the sport is expensive. Sailing classes for children are held three mornings a week at the Royal Bermuda Yacht Club and the Royal Hamilton Amateur Dinghy Club during the summer. The Bermuda Yachting Association also offers a subsidized sailing program in the summer.

Excellent light tackle fishing is available and more than 200 species of fish are found in the waters off Bermuda. Charter boats equipped with outriggers and all modern equipment are available at reasonable prices.

Bermuda's beaches are the main recreational areas. Along the South Shore stretch superb white and pink sand beaches which are ideal for swimming and sunbathing. Throughout the year hardy individuals can bathe in the sea, although the popular swimming season is from late May to early October. A Bermudian would not think of taking a dip in the sea between October and May, but visitors and foreign residents do. Water skiing can be enjoyed in the protected waters of the harbors and sounds. Skin-diving with mask and snorkel or with aqualungs is popular, and even inexperienced swimmers can soon learn how to explore reefs close off Bermuda's shore.

Most sporting equipment can be bought from local shops. Every make of camera and film can be found in Hamilton's shops.

Entertainment

Hamilton has two modern movie theaters. Other movie theaters are located at Dockyard and St. George's. Visiting concert musicians and ballet troupes sometimes perform in the small theater at Hamilton's City Hall. In recent years several excellent plays have also been presented by overseas theatrical groups.

As a tourist mecca, Bermuda has a varied program of spectator events. The Queen's Birthday in June and other national holidays are celebrated with military parades on Front Street. The opening of Parliament each autumn is also marked by impressive ceremonies. The International Yacht Race between Newport, Rhode Island, and Bermuda, held every other year in June, brings well over 100 entries from North America, South America, and Europe to Hamilton Harbor where they form as large a fleet of ocean-going sailing vessels as may be seen anywhere in the world. Another popular sports event is the two-day cricket Cup Match each August. Both days of the match are national holidays. 1997 also saw the third annual "ShootOut" professional golf tournament, and the

inaugural offerings of a celebrity golf tournament and a Bermuda Film Festival.

There is an active International American Women's Club and Junior Service League for women.

Good restaurants are available throughout the island, and most hotels have first-class dining rooms. However virtually all dining establishments are priced for the tourist trade and are expensive. "Continental" and Italian cuisine predominate. Ethnic restaurants-Chinese, Indian, and Mexican-exist, but are far from authentic. Many hotels and clubs offer dancing nightly. Prices are scaled to the tourist traffic.

OTHER CITY

The only other municipality in Bermuda is **ST. GEORGE**, on the extreme east, about 12 miles from Hamilton. It is much larger than Hamilton, with an area of 400 acres, but has a population of less than 1,700. St. George is probably the oldest English-speaking community in the Western Hemisphere, and it preserves the atmosphere and appearance of a 17th-century settlement. A series of high-walled, cannon-bedecked fortresses dating from the early 1600s line its eastern seacoast. The most imposing is Fort St. Catherine, and in one of its chambers an illuminated diorama illustrates scenes from the colony's history. Nearby is Gunpowder Cavern, a brick-lined cluster of chambers and walkways deep within a man-made hill—formerly an ammunition magazine, but today a charming restaurant.

In King's Square, the former marketplace, stands a replica of an ancient stock and pillory. Around the square are most of the city's main attractions: St. Peter's Church, probably the oldest Anglican church site in the New World, in use, although often restored, since 1612; the Old State House, the colony's first stone building, constructed in 1619; Tucker House, a

high-ceilinged mansion built in 1711, and the St. George Town Hall, in use since 1782. The square is lined on the south by the busy docks on the harbor.

Across St. George's harbor, to the south, lies St. David's Island, most of which is occupied by the U.S. Naval Air Station. The base's runways are shared with the Bermuda Civil Air Terminal, the colony's only civilian airport. The southernmost tip is the site of the Bermuda National Aeronautics and Space Administration (NASA) installation, which has played an important role in manned space programs.

Separating St. David's and St. George's Islands from the 15-mile-long central island—sometimes called Main Island—is Castle Harbor, a six-square-mile body of seawater. Much of the eastern portion of Main Island is occupied by Harrington Sound, a three square-mile incursion of the sea that almost forms a lake.

Along the narrow strip of land between Castle Harbor and Harrington Sound are several caves where visitors may view impressive formations of stalactites and stalagmites. On the neck of land between Harrington Sound and the sea lies the village of Flatts, the most populous settlement between St. George and Hamilton. Nearby is the aquarium, where a fascinating collection of more than 200 varieties of fish and other marine life found in Bermuda's waters may be seen. Adjoining is the Natural History Museum, which displays shells, fossils, and marine antiques, and the Zoological Garden, featuring an array of tropical birds and animals.

At the southernmost point of Harrington Sound is Devil's Hole, a natural saltwater pool stocked with large fish and tortoises. Here visitors can drop baited, but hookless, lines to lure the creatures part way out of the water.

The western portion of Bermuda has its attractions, too. The large village of Somerset occupies much of

Somerset Island, which lies just off the western terminus of Main Island, about 12 miles from Hamilton. Like St. George, Somerset retains much of the atmosphere and appearance of a 17th-century settlement. This island is connected with Main Island by Somerset Bridge, reputed to be the smallest functioning drawbridge in the world. It has a 22-inch-wide plank across its center which is raised by hand to allow clearance of sailboat masts.

Near Somerset, on a peninsula off Main Island, lies the U.S. Naval Air Station Annex, occupying about 268 acres. North of the base are the waters of Great Sound and, to the south, lies Little Sound. On Main Island, directly south of the base across Little Sound, stands Gibbs Hill Lighthouse, one of the most powerful lighthouses in the world. Completed in 1846, it stands on a 245-foot hill and is, itself, 117 feet high. Its rotating beam of a half-million candle power is visible as far away as 40 miles. Visitors may mount the spiral stairway to the top during the daytime.

COUNTRY PROFILE

Area and Geography

Bermuda is an archipelago of seven main islands and some 150 other islands and islets. The main islands, joined by bridges or causeways, stretch from northeast to southwest in a long, narrow formation that hooks northward at the western end. On the map the shape is much like that of a fishhook. The main islands are in close proximity, and since being joined the Bermuda Islands (or Somers Isles, their other name) are generally called the island of Bermuda.

Total land area is about 20 square miles—some 22 miles in length and an average of less than a mile in

width. This is slightly smaller than the area of Manhattan. During World War II, the U.S. military created 1.25 square miles of the present area by uniting and enlarging some of the islands with material dredged from the sea bottom.

The archipelago is the summit of a submerged volcanic mountain range, 14,000–15,000 feet high, which has been extinct since before the first ice age. Over the volcanic foundation and just under the inches-thin layer of soil capping it lies a 200-foot thick layer of limestone formed by deposits of mollusks, coral polyps, and other sea creatures. The coral content in the limestone substructure justifies Bermuda's classification as a "coral island," though it is more accurately a mixed superstructure of aeolian petrified sand hills and limestone upon an eroded volcanic base. Only the surrounding reefs are true coral growths, and Bermuda is the most northerly point on the globe where reef-building coral exists.

Bermuda lies at latitude 32° 18' N and longitude 65° 46' W. Geographically, it is remote and does not lie within or near the West Indies or Caribbean, with which it is often erroneously identified. The nearest land is Cape Hatteras, North Carolina, 570 nautical miles away. New York City is 733 nautical miles to the northwest.

The terrain is hilly. Some hills exceed 200 feet in height; the highest, Gibbs Hill, is 260 feet above sea level. A fertile valley extends along the length of the main island. On the rocky northern shore wind-carved cliffs cascade into the sea. Similar rock formations form a dramatic backdrop for the long beaches and small coves of the sandy south shore. The enclosing reef, a few yards offshore on the south coast and up to several miles offshore on the north, emerges from the sea each day at low tide, framing the islands and completing the topographical picture.

Except for a few small ponds, no rivers, streams, lakes, or other fresh-

water surface formations exist on the islands. For most of its history, Bermuda was thought to have no ground water, but in the 1920s and 30s, freshwater lens formations lying above underground salt water were discovered and exploited to supplement the island's main source of drinking water; rainwater collected on roofs and paved catchments.

Though far north from tropical latitudes, Bermuda has a mild, humid, frostfree climate. The annual mean temperature is 70.2 F. Highs in summer rarely top 90 E, lows in winter rarely are below the upper 50s. The lowest temperature ever officially recorded was 44 E. The Gulf Stream, running west and north of the island, is the main reason for the good climate. Average annual rainfall is 57.6 inches, spread evenly across the 12 months. The year-round high humidity, averaging more than 75%, makes some days uncomfortably sticky in summer and damp in winter.

January through March tends to be overcast and squally, though when the sun shines it can be just breezy and spring-like. April and May are very pleasant. June through August are like summer in Washington, D.C., except that Bermuda nights are comfortable in houses positioned to catch southerly breezes. September is the stormy season; the hurricane season extends from June through November. Barring hurricanes, October through December are calm, usually sunny, mild months, considered by many the most pleasant part of the year. The climate plus the well-distributed rainfall and heavy dew make for a luxuriant growth of vegetation of every description, despite the dearth of soil.

Palms, Australian and Norfolk Island pines, mangrove, poinciana, casuarina, and ficus trees, along with citrus and some tropical fruits, grow well in Bermuda. Oleander and hibiscus are common. The famous Bermuda cedar trees which for centuries dominated the landscape and were the islands' pride

were afflicted by a blight in the early 1940s and by 1944 more than 90% of them were dead. They are now protected but few are as robust as formerly. Some cedar reforestation, with blight-resistant stock, is being undertaken.

History

Bermuda is named for the Spanish seafarer Juan de Bermudez, who discovered the island in 1503. There is evidence of occasional visits by Spanish or Portuguese seamen, and at least one fruitless Spanish plan to settle the island, but generally the local reefs and raucous native birds gave Bermuda a bad name among Spanish sailors, who avoided a place they thought inhabited by devils. In 1609, Admiral Sir George Somers' ship *Sea Venture*, carrying a new lieutenant governor to Virginia, ran aground on Bermuda's eastern reef. The crew was stranded until they built a new ship from local timber to continue their voyage. Descriptions of Bermuda attracted great interest, and in 1612 about 60 colonists (including some of Somers' crew) sailed for what were then called the Somers Isles. Shortly after landing, they founded the town of St. George at the eastern end of the island. In 1790, the more centrally located town of Hamilton was incorporated. In 1815 the seat of government was transferred from St. George to Hamilton, which had a larger harbor and was more central to a greatly-expanded British program of fortification building that saw the creation of the massive Royal Dockyard at the West End, and Fort Prospect (the principal land garrison) and other forts in the parishes near Hamilton.

During the first three centuries of the Colony's existence, except for its function as a military bastion of the Empire and periods of prosperity generated by the American Revolutionary War and Civil War, Bermuda itself remained quite isolated from developments abroad. The industrial revolution virtually passed it by. By the turn of the 20th century, wealthy Americans, Canadians, and Britons, seeking refuge

from the pressures of modern life, were renting or buying homes and estates for seasonal occupancy in Bermuda. Soon shops and restaurants sprang up to cater to this carriage trade. As the economic benefits of tourism became apparent, the colony sought to cultivate and broaden it. During the 1920s several impressive luxury hotels were built. In the early 1930s large passenger steamships were put into liner service between New York and Bermuda. In 1937, passenger seaplane service between New York and Bermuda was inaugurated. The tourist industry continued to develop until the outbreak of World War II.

The war gave new significance to the Colony as a strategic outpost for the Anglo-American forces. In 1941, the UK granted the U.S. a 99-year rent-free lease for construction and maintenance of two bases in Bermuda. The bases, the U.S. Naval Air Station, Bermuda, on St. David's Island, and the U.S. Naval Air Station Annex in Southampton, were for fifty years an integral and important part of the Bermudian scene and economy. The U.S. bases closed, however, in September of 1995. The airfield built by U. S. forces as part of the base during World War II now also serves as Bermuda's international airport.

Population

Bermuda's population is 58,460 (1991 census). This includes about 15,800 foreign-born residents without Bermuda status (the nearest thing to citizenship this British Dependent Territory has). The racial composition of the native Bermudian population is about 76% black and 24% white; of the total population the proportion is nearer 60% - 40%.

Several thousand Americans and Canadians live on the island either all or part of the year. About half the 6,000 or so Portuguese (Azoreans) on the island are now Bermudians, with the other half contract workers expected to return to their homeland. Several hundred Europeans-

British, Italians, Yugoslavs, Irish, Austrians, Swiss, and French-are employed in Bermuda's hotels, restaurants, guest houses, and other service areas, as are an equal number of Filipinos, other Asians, and West Indians. Some 600,000 tourists visit the island every year, most of them Americans.

Slavery was abolished in the British Empire in 1834, but racial segregation was practiced in Bermuda's schools, restaurants, hotels, and other public places until the 1960s. Racial discrimination in any form is not tolerated in today's multiracial Bermudian society.

English is the official and vernacular language of Bermuda. The traditional Bermudian dialect is characterized by broad vowels and a frequent transposition of "v" and "w" sounds. Educated Bermudians have accents ranging from standard British to standard American, with the "typical" accent sounding to the American ear like a cross between New England and Maritime Canadian. British visitors often find the local accent American, while many American visitors think it is vaguely British-sounding. Some Azorean Portuguese is also heard in Bermuda.

Bermuda has a strong religious tradition, rooted in its rural past. Many Christian denominations are represented on the island, distributed among the Church of England (28%), Roman Catholic Church (15%), African Methodist Episcopal (12%), Methodist (5%), and Seventh Day Adventist (6%), along with many other smaller Protestant followings. Baha'i, Moslem, and other groups are also present. Jewish services are held informally; there is no synagogue on the island.

Public Institutions

Bermuda is the oldest self-governing colony in the British Commonwealth. Representative government was first introduced to the Colony in 1620. Since 1684, the Governor of the Island has been appointed by the Crown and the colony's laws

enacted by a local legislature. Though Bermuda is a British Dependent Territory, it has a separate written Constitution, giving its elected Cabinet government almost complete self-determination in conducting local affairs. The Bermuda Parliament is the third-oldest in the world, following Iceland's and Britain's.

The Queen appoints the Governor, who is responsible for external affairs, defense, and internal security. In other matters the Governor acts on the advice of the Cabinet. The Deputy Governor is appointed by the Foreign & Commonwealth Office, and is normally a British Foreign Service Officer. These two officials are the only representatives of the United Kingdom on the island.

The Legislature consists of the Senate and the House of Assembly. Members of the Senate are appointed by the Governor, five on the advice of the Premier, three on the advice of the Leader of the Opposition, and three by the Governor at his own discretion. The Senate elects its own president and vice president. The House of Assembly, consisting of 40 popularly elected members from 20 constituencies, elects a Speaker and a Deputy Speaker. Universal suffrage on the one-person, one vote principle has existed since 1968. In 1989, the voting age was lowered from 21 to 18.

The Cabinet consists of the Premier and at least six other members of the Assembly or the Senate. The Governor appoints the majority leader in the House of Assembly as Premier, who in turn nominates the other Cabinet Ministers. They are responsible for government departments and related business. The Opposition Leader, which in British parliamentary practice is a formally designated position, is the leader of the largest minority party in the House of Assembly.

The judiciary consists of the Court of Appeal, the Supreme Court, and the Magistracy. The Chief Justice presides over the Supreme Court

and is consulted by the Governor in the appointment of judges, magistrates, and court officers.

Hamilton, the capital, was made a city by an act of legislature in 1897 and is governed by a Corporation. The town of St. George, one of the oldest English settlements in the New World, was founded in 1612 and remained the capital until 1815. Charges for water and dock facilities and municipal taxes are the main sources of revenue for both.

Aside from the two municipalities, Bermuda is divided into nine districts, called parishes. From east to west, these are St. George's, Hamilton (not to be confused with the city of Hamilton), Smith's, Devonshire, Pembroke, Paget, Warwick, Southampton, and Sandys.

Politics

The United Bermuda Party (UBP) is the ruling party and has not lost an election since its founding in 1968. It is a multiracial party, and has combined moderately progressive social policy with conservative fiscal policy. The UBP saw significant erosion in its parliamentary majority in the 1989 elections, falling from 31 to 22 of the 40 seats in the House, largely because of internal party dissension arising from disputes over independence for Bermuda. In the 1993 elections, the UBP's majority slipped even further, and the party now maintains only 21 seats in the House, as well as five Senate positions. New elections must be held every five years, and thus the next scheduled vote must take place by the Fall of 1998.

The opposition Progressive Labor Party (PLP) holds 18 seats in the House and three in the Senate. The PLP is largely identified with the black population, closely allied to organized labor, and favors independence for Bermuda.

In August of 1995, former Premier Sir John Swan, the head of government for 13 years, bucked UBP supporters and staked his political

career on an independence referendum, which was defeated at the polls by a three to one margin. The new Premier and UBP leader, Pamela Gordon, has held her position since March 1997. She previously served as Minister for the Environment & Minister for Youth, Sports & Recreation.

Arts, Science, and Education

Bermuda hosts a variety of cultural events featuring both local talent and groups touring from abroad. The Bermuda Festival is held in January-February, attracting additional tourists during the winter and providing cultural entertainment for local residents. The Festival features performances by international-class artists, which have included The Dance Theater of Harlem, the Flying Karamazov Brothers, the Vienna Choir Boys, Wynton Marsalis, and The Empire Brass Quintet.

Local amateur arts groups include the Bermuda Musical and Dramatic Society (performing arts), Bermuda Society for the Arts (exhibitions, art gallery), and the Gilbert and Sullivan Society (light opera). Memberships and participation are open to all.

The Bermuda Biological Station, on Ferry Reach at the island's eastern end, was founded by a group of North American universities to further the study of marine sciences, and receives both Government of Bermuda and U.S. National Science Foundation support. It hosts researchers from the U.S. and elsewhere, conducting research at sea with its own ocean-going research vessels.

Conservation/preservation groups include the Bermuda National Trust, Audubon Society, the Bermuda Maritime Museum, and the Bermuda Zoological Society (responsible for the popular Aquarium, Zoo, and Natural History Museum). The Bermuda Botanical Garden (also site of the Premier's

official residence, Camden) and an Arboretum are publicly maintained.

Commerce and Industry

Bermuda's GDP is over \$9 billion, or about \$27,500 per capita—one of the highest per capita income rates in the world. Most Bermudians owe their livelihood, directly or indirectly, to tourism, which provides 55% of GDP.

Bermuda's other source of national income is foreign companies operating out of offices in Bermuda. These offshore "exempt" and "nonresident" companies, almost all of them reinsurance or captive insurance companies, for the most part conduct international operations unrelated to Bermuda. The fees, charges, and taxes they pay, and their local expenditures, contribute about 40% of GDP, a share that is growing relative to tourism. Some 8,700 foreign firms are registered in Bermuda, though only a few actually maintain a physical presence here.

Total exports for 1996 were estimated at \$67.7 million. Roughly 98% of total exports fell under the tariff #99.7000 - "Other Miscellaneous Manufactured Items". The re-export of pharmaceutical goods accounts for roughly 99% of this tariff number. Trading countries for pharmaceutical items include: Holland (50%), Brazil (13%), Canada (6%), Caribbean (5%), and all other countries (26%). The remaining export items are traded to the following partner countries: USA (91%), Canada (1%), Caribbean (1%), and UK (7%).

Fishing and agriculture (vegetables, fruits, eggs, and some milk) produce only a fraction of Bermuda's needs. Almost all manufactures and foodstuffs are imported, nearly two-thirds of them from the United States.

The largest single source of government revenue is customs duties, supplemented by a land tax, employment taxes, hotel occupancy

taxes, departure taxes, and a hospital levy. There is no local income tax. Government spending in the FY 95 budget totaled \$406 million on current account, including \$34.5 million on capital projects. Bermuda traditionally does not borrow for current expenditure, and public borrowing for the capital account is limited to 10% of GDP.

Bermuda has tight immigration and property ownership and management regulations. The Immigration Board will grant permission for a non-Bermudian to work only if no qualified Bermudian, or person with Bermudian status, is available for the position. Applications for work permits are scrutinized carefully, and the procedure is complicated and time-consuming. Foreigners may purchase only those houses or condominiums listed as available for sale to non-Bermudians. The list is short and the properties are expensive. Such properties may not pass by inheritance beyond the children of the original purchasers.

Transportation

Automobiles

Cars have been a part of the Bermuda scene only since 1946. The law limits a car's size and horsepower, forbids the use of private cars by all but residents, and provides for only one car per household (and only members of that household may drive it). Because of the latter restriction, most families own one (or more) motorbike, motor scooter, or motorcycle in addition to a car. Rental cars are not available.

Bermuda's laws restrict passenger vehicles to a maximum of 169 inches in overall length and 67 inches in overall width, with a maximum engine capacity of 2,000 cc (2.0 liters). There are technical restrictions that might bar other vehicles, such as sports cars or unusual models. Most cars in Bermuda are of Japanese manufacture (Mitsubishi, Nissan, Honda, Toyota, and Mazda, etc.). Volkswagen, British Ford, Hyundai, Peugeot, BMW,

Susan Rock. Reproduced by permission.

Fishermen cleaning their catch in Hamilton, Bermuda

and various other makes are also sold here. Bermudians drive on the left, so almost all cars are right-hand drive. Right-hand drive cars are not compulsory, however. Because most roads are narrow and winding, Bermuda's speed limit is 35 km/h (21.7 mph).

Bermuda's laws virtually forbid the import of used cars. A vehicle may be imported only if it was purchased new within 6 months of importation. The local used car market is small and prices tend to be high, as they reflect the 75% duty that new car buyers pay. New cars may be purchased through local dealers.

Cars brought to Bermuda should be undercoated to protect the chassis against the corrosive effects of the climate and seasprayed roads. Bermuda has adequate repair shops for most popular makes of small cars; spare parts are usually in stock. Labor and materials are expensive.

All drivers must, without exception, pass a driving test. The Transport Control Department (TCD) does not recognize any foreign licenses for use by Bermuda residents. A driver's license issued in Bermuda is normally valid only for the licensee's car.

All motorized vehicles must be registered with and inspected by TCD. Motorized vehicles with engines of 50cc or less may be driven with a local learner's permit or a foreign license (this permits tourists to rent 50cc mopeds or scooters on temporary visits to Bermuda). TCD vehicle inspection requirements are similar to examinations in the U.S. Third-party liability insurance is also compulsory on all vehicles. Most Bermuda insurance firms grant no-claim discounts; travelers with a record of accident-free driving should bring letters from their previous insurance firms attesting to this.

Used motorbikes or scooters are readily available. As with cars, duty must be paid on a new vehicle bought from a local dealer's existing stocks.

Gasoline sold at local service stations costs about \$4.60 a gallon. Safety helmets must be worn when driving any two-wheeled vehicle.

Local

More than 600 taxis are available. Some 300 Bermudian taxi drivers have attained "Qualified Tour Guide" status by successfully completing special government exams. Taxi fares are high; the fare from the airport to Hamilton is about \$25.

Local bus service is extensive and reasonable in price and is heavily used by both Bermudians and tourists. The government ferry service connects Hamilton with points in Paget and Warwick (across the har-

bor from Hamilton) running at frequent intervals. Less frequent service on larger ferries goes to three points in Somerset, including the Dockyard. The ferries are heavily used by tourists and are a convenient form of commuting for those living near the landing points. The ferries are canceled, however, whenever sea conditions are unfavorable.

Regional

Flights are available daily between Bermuda and New York. Good non-stop services also connect Bermuda with Baltimore, Boston, Atlanta, London, and Toronto. Baltimore-Washington International Airport is about 2 hours away by plane. British Air and Air Canada are the only non-American carriers serving Bermuda. Passengers on the many U.S. carrier flights to the U.S. are pre-cleared by U.S. Immigration and U.S. Customs at Bermuda's airport, arriving at domestic terminals on the mainland. Bermuda is on Atlantic Time, one hour ahead of the East Coast throughout the year.

Cruise ships service Bermuda from New York and Boston from May to October, with occasional voyages from other ports during this period.

Communications

Telephone and Telegraph

Telephone and fax service extends throughout the island. Long distance service is rapid and efficient, with direct dialing to the U.S. and most of the world.

Rental rates and local service costs are comparable to those in the U.S. A 3-minute direct-dialed station-to-station call to the East Coast averages \$3.75. Calls to Bermuda from the U.S. are cheaper than the other way around. The Bermuda Telephone Company, Ltd. uses Canadian-built equipment and many international brands of telephone and fax sets are available for home and business use.

International telegraph service is operated by Cable & Wireless Ltd.

Round the clock service is available by calling 297-7000. Communications in Bermuda are state-of-the-art, with multiple satellite, ocean cable, and fiber-optic cable facilities in place.

TV and Radio

The three local TV stations can be received on any standard American TV set without alteration. One is a CBS affiliate, another carries NBC programs, and the other carries some ABC programs. A fourth station offers some CNN and BBC programming. Cable service is also available, similar to that in most American cities.

Newspapers, Magazines, and Technical Journals

Bermuda has one daily newspaper, the morning Royal Gazette. The Mid-Ocean News and Bermuda Sun appear weekly on Fridays. While all newspapers concern themselves mainly with local events, they have wire-service coverage of leading U.S. and other foreign news stories. The New York Times and Washington Post are received by local vendors daily and usually arrive by air the same day of publication, or the following morning. Several other leading American and British newspapers are available on local stands.

American newspaper and magazine subscriptions should be sent via pouch. Magazines are normally sent by surface mail, arriving at least two weeks after publication. Current books, including paperbacks, are available in Hamilton bookstores, but are quite expensive. Subscription to book-buying services or clubs in the U.S. is advisable.

Health and Medicine

Medical Facilities

All physicians in the yellow pages of the Bermuda telephone directory are licensed by the Bermuda Government and are considered acceptable.

The only hospital in Bermuda is the King Edward VII Memorial Hospital just east of Hamilton. It is a well-equipped and modern general medical and surgical hospital with about 300 beds. All customary services are available at King Edward, including an emergency and outpatient department. The hospital is accredited under a Canadian system. Local dentists are competent, most trained in the U.S. or Canada.

Community Health

Immunization and preventive care in Bermuda are undertaken vigorously and the general health of the community is good. Immunization programs exist for diphtheria, whooping cough, tetanus, poliomyelitis, and measles. Vaccination against smallpox is compulsory. No unusual communicable disease or severe epidemics have been recorded in the past few years. A successful diabetic program and the family limitation and birth control programs are being continued. The decrease in the number of births has continued annually since 1963.

As in any subtropical region, Bermuda is afflicted with a variety of insect pests. Most households, no matter how clean or how fumigated, may have ants and/or cockroaches and termites. These are kept under control by regular spraying under commercial contracts. Few mosquitoes are found on the island, due to the scarcity of standing fresh water, and mosquito-borne diseases have been eliminated. Small and harmless lizards, mostly chameleons, may enter houses but are often welcomed as scavengers of insects. Bermuda has no snakes and few household rodents.

The Department of Health monitors food operations of all hotels, restaurants, shops, food manufacturers, pasteurizing plants, dairy farms, and slaughterhouses. A close watch is kept on the quality of imported foods. The health standards of housing and sanitary engineering are supervised by the Bermuda Government. Garbage is collected once a week as are recyclables. Recycling at present is limited to aluminum

cans and glass. Virtually all homes have septic tanks for sewage disposal, utilizing either brackish or fresh water. In the latter case, the supply is dependent on rainfall and may run short during droughts.

Preventive Measures

Few health hazards exist in Bermuda. Because the source of home water supply is rainwater stored in cisterns, the possibility of contamination always exists. Simple precautions and periodic testing of each water supply has made this problem minimal.

Foodstuffs available on the island present no health hazard. Milk from local dairies is safe. No unusual dangerous insects or animals are present, and the island is rabies free.

You can be severely sunburned during the summer, and standard precautions should be taken. The Portuguese man-of-war abounds in the waters off Bermuda; its presence near shore depends on prevailing currents. Its sting produces serious but not fatal illness among swimmers. If you are stung, get immediate medical care.

No special treatment of raw fruits and vegetables is required. All milk is pasteurized. Some people add chlorine to the water in underground storage tanks.

The Bermuda Department of Health recommends that those coming to Bermuda be vaccinated against smallpox, diphtheria, tetanus, and whooping cough, but merely as a precautionary measure. Tuberculosis exists in Bermuda, but its incidence is decreasing and cases are rigidly controlled.

Those with respiratory ailments may suffer from the humid climate, which also seems to activate potential arthritis in those susceptible. Asthma and hay fever sufferers, however, will find some relief here. You need not bring any special medicines or drugs; any medication can be bought locally. It would be economical to stock up on any regular

medications needed, however, as local pharmacy prices are high. Fluoride supplements are provided for all children over 6 months old at government expense, as part of a 25-year study.

NOTES FOR TRAVELERS

Passage, Customs & Duties

U.S. citizens entering Bermuda must present a U.S. passport or a certified U.S. birth certificate, and photo identification. The Consulate strongly recommends that visitors travel with a valid passport at all times. A U.S. driver's license or a voter registration card is not sufficient for entry into Bermuda. For additional information on entry requirements, travelers may contact the British Embassy at 3100 Massachusetts Avenue, N.W, Washington, D.C. 20008, telephone (202) 462-1340, or the British consulate in Atlanta, Boston, Chicago, Dallas, Los Angeles, New York or San Francisco; Internet: <http://www.britain-info.org> or the Bermuda Department of Immigration; <http://www.immigration.bdagov.bm>.

U.S. citizens who are taking prescription medication must inform Bermuda customs officials at the point of entry. Medicines must be in labeled containers. Travelers should carry a copy of the written prescription and a letter from the physician or pharmacist confirming the reason the medicine is prescribed.

Bermuda customs authorities may enforce strict regulations concerning temporary importation into or export from Bermuda of items such as animals, arms, ammunition and explosives, building sand, crushed rock, gravel, peat and synthetic potting media, foodstuffs (animal origin), fumigating substances, gaming machines, historic articles (relating to Bermuda), lottery advertisements and material, motorcycles, motor vehicles, obscene publications, organotin anti-fouling paint, plants, plant material, fruits

and vegetables (living or dead, including seeds), pesticides, prescription drugs, prohibited publications, seditious publications, soil, VHF radios, radar and citizens band (CB) radios. For additional information on temporary admission, export and customs regulations and tariffs, please contact Bermuda Customs at telephone 1-441-295-4816, or email customs@bdagov.bm, or visit the Bermuda Customs web site at <http://www.customs.gov.bm>. U.S. citizens may register with the Consular Section of the U.S. Consulate General located at Crown Hill, 16 Middle Road, Devonshire DV03, telephone 1-441-295-1342, where they may also obtain updated information on travel and security in Bermuda. Office hours for American Citizens Services are 8:30 a.m.-11:30 a.m., Monday through Thursday, except Bermudian and U.S. holidays. American citizens in need of after-hours emergency assistance may call the duty officer at telephone 1-441-235-3828.

Pets

Bermuda has no quarantine restriction, for pets arriving on the island, but an animal entry permit from the Bermuda Department of Agriculture is required. Failure to satisfy all requirements for this permit can result in the animal being refused entry, and there are no facilities at the airport or elsewhere for storing animals while the permit is straightened out. Veterinarians are available in Bermuda, as is pet grooming. Fleas abound.

Firearms and Ammunition

Bermuda laws are extremely strict with regard to firearms and ammunition. No private firearms may be brought into Bermuda. There are no exceptions to this regulation.

Currency, Banking, and Weights and Measures

Bermuda's currency is on the decimal system; notes come in \$100, \$50, \$20, \$10, \$5, \$2 denominations, and metal coinage in \$1, .25, .10, .05, and .01 issues. U.S. money, while not legal tender in Bermuda, is freely accepted by all trading

establishments on a one-for-one basis, although the official exchange rate makes the Bermuda dollar worth slightly more than the U.S. dollar.

Most local concerns accept U.S. credit cards and many vendors take checks drawn on U.S. banks. No restrictions are placed on the importation of U.S. dollars, other currency, or travelers checks-the export of Bermudian currency requires a foreign exchange permit (usually granted) from the Bermuda Monetary Authority.

British Imperial standard weights and measures are in general used in Bermuda and many Bermudians habitually use American terms of measurement-but the Bermuda Government has adopted a policy of gradual shift to the metric system. Road signs and local gas pumps are metric.

BOLIVIA

Republic of Bolivia

Major Cities:

La Paz, Santa Cruz, Cochabamba, Sucre, Potosí

Minor Cities:

Oruro, Tarija, Trinidad

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated June 1996. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

BOLIVIA can be described as a land of contrasts. There are spectacular geographic contrasts—its natural beauty varying from the dramatically barren *altiplano*, to the snowcapped Andean mountains, to the lush jungles of the Amazon lowlands. Its chief cities, which lie in the *altiplano*, are some of the highest in the world, and Lake Titicaca, also situated on this two-and-a-half-mile-high plateau, is the largest freshwater lake in all of South America.

Furthermore, Bolivia is endowed with some of the richest mineral resources in the world. An international leader in tin production, it also mines copper, silver, tungsten,

bismuth, antimony, and zinc. But despite these mineral riches, Bolivia is one of the poorest countries in Latin America; most Bolivians live by subsistence farming, raising sugarcane, potatoes, corn, wheat, and rice.

The people of Bolivia are predominantly Indian. They descend from the Aymara, who produced a highly advanced culture between the seventh and the 10th centuries, and from the Quechua-speaking Incas, one of the world's greatest imperial dynasties. The Spaniards arrived from Peru in 1535 to conquer Bolivia, and during most of the colonial period kept it as a dependency of the viceroyalty of Lima. Independence was established in 1825.

MAJOR CITIES

La Paz

La Paz, the de facto capital of Bolivia, is in the west-central part of the country, in a deep canyon about 60 miles south of Lake Titicaca. At about 12,500 feet, it is the highest capital city in the world and has a metropolitan population of about 1.5 million.

La Paz was founded in 1548 by the Spanish conquistadors, who chose the site as a halfway station for the llama pack trains bearing silver ore from Potosí to Lima. After Bolivia achieved independence, La Paz grew to be the commercial and financial center of the country. Although Sucre remains the constitutional capital, all government offices except the Supreme Court are in La Paz.

The city's architecture is a mixture of colonial and modern styles. The older sections, with their narrow cobblestone streets, contain some fine colonial buildings from the 16th century. Many high-rise office and apartment buildings have been completed or are under construction in the center of the city. Most business is conducted in small shops or in local markets run by colorfully clad Indian women.

Business activity within the city is mainly light industry, such as clothing and food manufacture, and commercial and financial enterprises, which support the country's mining economy.

One of the few level areas in La Paz is directly adjacent to Avenida 16 de Julio (El Prado) in the center of the city. Virtually all major streets radiate from the Prado, and some are so steep that they are difficult to negotiate.

Deeply eroded water courses cut through the city at a number of points, contributing to the irregular street pattern. The slopes of the canyon are rocky and bleak, except where eucalyptus trees have been planted. Although the *altiplano* countryside is barren, the magnificent snowcapped mountain peaks (particularly Mount Illimani) that overlook the canyon and the multi-colored eroded hillsides provide a most spectacular setting for the city.

La Paz Airport, above the city on the *altiplano*, is the highest international airport in the world, at 13,300 feet above sea level. The descent from the *altiplano* provides a beautiful panorama of the entire canyon and city. Most of the year, particularly during “winter,” the air is crystal clear and the sky is a magnificent blue.

Clothing

Temperatures in La Paz are not extremely hot or cold. Spring and fall clothing may be worn all year. Temperatures vary considerably in the sun or in the shade. Although lightweight clothing may be comfortable in sunshine, temperature drops are sudden in the shade.

During winter—May through August—a light winter coat is worn in the morning and evening. With the sun, daytime temperatures become quite warm, especially at midday. During rainy weather a raincoat (preferably with a zip-in lining), boots, and umbrella are needed. Warm bathrobes or sweat-suits and slippers are comfortable at home during mornings and evenings.

Except for fur and wool items, clothing in La Paz is expensive, hard to find, and usually behind U.S. styles. Shoes in La Paz (except for Italian imports) are poorly made, wide, and expensive. Due to steep and very slippery sidewalks, low-heeled, rubber-soled shoes are needed.

Some good seamstresses and tailors in La Paz copy fashions from photographs. Fabrics (including British wool imports) are available but at

Aerial view of La Paz, Bolivia

higher prices, making it cheaper to buy material in the U.S.

Men wear medium-weight suits all year. Some men wear vests or sweaters with their jackets on cooler days. A good supply of shirts, shoes, underwear, socks, and accessories should be brought from the U.S. as well as lightweight clothing and sportswear.

Clothing worn in the U.S. in early spring and fall is worn by women year round in La Paz. Skirts and sweaters, as well as basic medium-weight suits and dresses that can be dressed up or down are best. Three-piece suits and dresses with jackets are practical, since they can be varied to suit temperatures. It is advisable to bring shoes, undergarments, purses, and sportswear from the U.S. These items are expensive and hard to find. Sweaters are essential and available locally. Pantsuits, slacks, and jeans are seen everywhere and are worn for casual wear to provide warmth

in unheated buildings. Some summer clothes, including a bathing suit, are needed for trips to warmer climates.

In general, children’s clothing in La Paz resembles what is worn in Washington, DC in the fall. Emphasis should be on layered clothing that can be added or subtracted according to temperature changes, rather than on extra heavy clothing. All types of clothing for babies and some children’s clothing are available in La Paz. Locally made clothing is inexpensive. Imports are limited and expensive. Dress for school-age children is informal. Girls wear jeans, slacks, skirts, sweaters, and dresses to school. Boys wear jeans, slacks, and shirts without ties. Both need windbreakers or jackets, sweaters, raincoats, and sturdy shoes. Children use lightweight jackets, sweaters, or sweatshirts almost daily. Locally made blouses and shirts and velour sweatshirts are well-made and can be bought at reasonable prices.

Food

Availability of most foodstuffs is good, through there are occasional shortages of basic and specialty items in the marketplace. Processed food in La Paz costs much more than in the U.S. since many goods are imported. Stocks are less varied and almost no frozen foods exist. Major food sources in La Paz are local shops, open-air markets, and a supermarket in Obrajes. Markets sell fresh produce, meats (beef, pork, lamb, and poultry), fresh fish (especially trout from Lake Titicaca and tropical fish from Cochabamba), and dairy products. The wide variety of fruits and vegetables is of good quality and reasonably priced. Meat is not cut U.S. style, varies in quality, and supply is sometimes limited. In addition to open-air markets, small shops and several supermarkets stock expensive canned and packaged items and specialty shops carry good quality, expensive cheeses and other imports. Although called "supermarkets," these stores only slightly resemble U.S. chains.

Reconstituted pasteurized milk, butter, and limited cheeses are available. Locally canned fruits and vegetables are expensive and of lower-than-average quality.

Meats and vegetables require longer cooking in La Paz due to altitude. Pressure cookers save time and energy and tenderize tougher meat cuts. Cakes and other pastries require adjustments in ingredients and baking time. Although local cooks are familiar with high-altitude cooking, Americans find the *Andean Cookbook*, written in Spanish and English, very useful.

The wine industry in Bolivia is just being developed, but a couple of local wineries are marketing some good wines.

Supplies & Services

La Paz has several adequate dry cleaners and prices are reasonable, but to rid clothes of strong cleaning fluid odors, they must be aired. A few laundries are available, but

most laundry is done at home by maids or laundresses.

Men's tailoring costs about the same as in the U.S. but quality is somewhat lower. Good quality women's tailoring is available. Fair shoe repair and leather service is available and costs compare with those in the U.S.

La Paz has good barbers and beauticians who offer all standard services at moderate prices.

Electrical and mechanical repairs vary in quality. Prices depend on parts availability. Labor costs are reasonable; quality work is rare. It is advisable to check and repair electrical and mechanical items before coming to La Paz. Automobile body service is very satisfactory.

Film developing is available but of poor quality, high cost, and not all films can be processed. Camera and watch repairs can be made here.

Religious Activities

Most churches in Bolivia are Roman Catholic. Services are usually conducted in Spanish. An English mass is said every Saturday at the Santa Rosa Church in La Florida, and La Paz Community Church, a non-denominational Protestant church, has services in English every Sunday. Most major Protestant denominations have at least one Spanish-speaking church in La Paz. The Church of Jesus Christ of Latter-Day Saints (Mormon) has several Spanish-speaking branches in the capital and other Bolivian cities. The headquarters of the Andes South Mission is in La Paz. The Jewish community in La Paz holds religious services at two synagogues, and also maintains a school.

Domestic Help

Virtually all foreigners find domestics necessary due to marketing difficulties and the extra time needed to prepare and cook food at the high altitude. A combination maid/cook is generally sufficient for a couple with one or two children in a small house. Many Americans with more than two children employ a cook and a general maid or houseboy.

Everyone with gardens needs a part-time gardener.

The salaries for domestics are reasonable. The employer provides meals, uniforms, medical care, and lodging for live-in servants. Local law requires an extra month's pay as a Christmas bonus and a patriotic bonus paid in July. Domestics are entitled to 10 days of paid vacation per year. If mutually acceptable, extra pay may be given in lieu of vacation.

Domestics vary in efficiency and dependability, but all need training. During a three-month probationary period, an employee may be terminated without notice or compensation. After this period, 15 days' discharge notice or 15 days' pay are required. When employees are discharged after 12 months' service they can receive a longevity bonus equal to 15 days' pay for each year of employment.

The prospective employer pays for medical checkups (which include a chest X-ray) before hiring domestics. All employees sign a work contract.

Education

Most American children living in La Paz attend the American Cooperative School in the residential suburb of Calacoto. The school also sponsors a kindergarten and pre-kindergarten at the same location. In 1994, the school had 500-600 students, 25% American, 55% Bolivian, and 20% third country nationals. The school had 60 full-time teachers, 80% of these teachers were American. The student-teacher ratio was less than 25 students per teacher. An American director supervises American high-school and elementary school principals, and the teaching staff. Instruction is in English, secondary-level courses compare to college preparatory courses in U.S. schools. Spanish is taught as a foreign language.

The American Cooperative School has maintained a good rating and is accredited by the Southern Association of Colleges and Schools. School runs from mid-August to late May,

Skyscraper in Cochabamba, Bolivia

Cory Langley. Reproduced by permission.

with the usual holidays and vacations. The school also runs a six-week summer school offering a variety of courses, including remedial math and English classes, Spanish, sports, and others. Special education resources are also available at the school.

In addition to the regular curriculum, several extracurricular activities are offered. Among these are student government, a school newspaper, intramural and interscholastic sports program, drama, forensics, Knowledge Bowl, astronomy, photography, the Cultural Convention, and a jazz band. Various Boy and Girl Scout troops spon-

sored by the American community also use school facilities.

School facilities include modern buildings, housing science laboratories, auditorium with stage, cafeteria, library, audiovisual center, gymnasium, all-purpose room, sports field, volleyball and basketball courts, and shower and dressing rooms.

There are several other schools available in La Paz, all opening in February or March and running to late October or early November. The American Institute is a coeducational school operated by Methodist missionaries. It has regular primary

and secondary grades and also offers a three-year commercial course. Classes are held in Spanish, and English is taught as a foreign language.

St. Andrew's is a Catholic-administered, nonsectarian school with a U.S.-trained Bolivian headmaster. Classes are taught in Spanish.

Franco Boliviano is a French coed school, supported partly by the French Embassy. Classes are conducted in French with Spanish and English taught as foreign languages.

San Calixto and La Salle are Catholic coed schools; classes are taught in Spanish with English as a foreign language.

School of the Sacred Heart is a coed school directed by a French mother superior. Classes are in Spanish, with French and English taught as foreign languages.

The German community in La Paz directs and supports nonsectarian Mariscal Braun. Classes are in both Spanish and German.

Kindergartens are maintained by the English Catholic College, the Mariscal Braun School. Several private kindergartens, not connected with schools or institutions, are also available. Little English, if any, is taught in private kindergartens. A Spanish-speaking Montessori school is available for preschool children.

Private instruction in photography, art, music, folk dancing, and ballet is available. The American Cooperative School provides the community with a program of after school and evening sports and educational activities for both students and adults. Depending on demand and availability of teachers, these include photography, ballet, exercise, square dancing, handicrafts, business courses, language, and culture.

The German, American, and French binational centers periodically offer courses and lectures in various

fields. Once each semester, a graduate-level course for credit is offered at the American Cooperative School through the University of Arkansas. For those with a working knowledge of Spanish, other special educational opportunities exist. The municipal government sponsors a cultural foundation (Casa Juvenil de la Cultura "Juancito Pinto") which offers music, folk dancing, and puppetry to children, free of charge.

Recreation

Bolivia's varied climate is ideal for outdoor sports. The elevation at La Paz adds a sense of novelty to participation in sports such as skiing, golf, and tennis. Tennis balls are depressurized especially for the high altitude, and 300-yard drives on the golf course at La Paz are occasionally enjoyed by the competent player. Soccer is the national sport, but basketball and volleyball are sufficiently important to support national federations. The American Cooperative School's evening programs include a men's basketball league.

La Paz boasts the Mallasilla Golf Club, an 18-hole course with magnificent vistas, about 25 minutes from the city. There are tennis clubs, a rod and gun club, a bowling alley, and a glider club. The climate in the capital discourages swimming, but in warmer areas of the country swimming can be enjoyed.

Many Americans enjoy trout fishing in the areas surrounding La Paz. The trout of Lake Titicaca and nearby glacier lakes are of the salmon family. Catches in Lake Titicaca have been reported as weighing up to 28 pounds; however, fishing here has been poor in recent years due to netting, trapping, and dynamiting by commercial fishermen. The small glacier lakes, about three hours from La Paz, produce rainbow trout weighing up to four pounds. Fly fishing is found two-to-three hours from La Paz in the streams of the lowland valleys of the Yungas. Stream fishing is as effective as lake fishing, but is more difficult due to the rugged terrain

and fast waters. Better fishing may be found farther from La Paz, but reaching the least-fished waters requires four-wheel-drive vehicles or transportation by air. Other tropical varieties of fish are found in the warmer waters of the Beni and Sata Cruz.

Opportunities for partridge, duck, and wild fowl shooting are available year round on the eastern shore of Lake Titicaca, and at certain other high-altitude lakes. The Beni area in the lowlands offers big-game hunting possibilities, including wild hog, puma, ocelot, anteater, deer, and alligator. Hunting and fishing licenses are required in Bolivia. Bolivia has a long list of protected animals and birds with which one should be familiar. No special clothing nor dogs are required for hunting. Hunters or fishing enthusiasts should bring their own gear.

Sailing on Lake Titicaca, the world's highest navigable lake, is rewarding. Actually it is two lakes, separated by a narrow strait. The lower lake—Huinamarca—is much smaller and shallower than Upper Chucuito, a veritable inland sea, with water horizons and persistent swells. Visibility is generally almost unlimited. The most consistent winds and sunniest weather occur on winter afternoons. Summer, though generally warmer, is characterized by light, variable winds, and frequent rain showers.

Chacaltaya, site of the highest ski run in the world at 17,400 feet, offers a spectacular course for expert skiers on a glacier during the October through April season. When snow cover is heavy enough to fill gullies in upper headwalls, experts will find very challenging skiing. The primitive, 5,000-foot cable tow operates on Saturdays, Sundays, and holidays when there is skiing. The slopes adjacent to deep precipices are wide and steep, with varying and unpredictable snow conditions. Chacaltaya is about a 90-minute drive from La Paz; the Andino Club provides transportation from La Paz. A four-wheel-drive vehicle is recom-

mended for driving the steep dirt road, although normal cars can manage under good conditions. A day lodge serves soft drinks and some snacks.

Bolivia offers excellent opportunities for mountain climbing and hiking. Two major cordilleras, the Cordillera Real and Cordillera de las Tres Cruces, are accessible by mining roads. The third significant cordillera, Apolobamba, is harder to reach. Bolivia's highest peak is Nevada Ancochuma (21,489 feet) near the Peruvian border. Other mountains over 20,000 feet include Illampu, Sajama, Illimani, Huayna Potosí, and Chachacomani. Hundreds of peaks in the 17,500- to 18,500-foot class are excellent for experienced climbers. Although most summits have been reached, many new routes are possible, and climbing is still very challenging. Backpacking is another popular pastime, and Bolivia offers superb opportunities. Mountain hiking is aided by a network of Indian paths and ancient trails on the dry western slopes, and a less extensive network on the wet and steep eastern side. It is on these eastern slopes, however, that hikers in good condition find excellent opportunities for walks of from two days to a week through magnificent scenery, often over trails originally engineered by the Incas. Stretches of these well-designed ancient roads remain in use today.

Good one-day rock and ice climbs can be found in the Khala Cruz-Charquini-Sora Patilla group south of Huayna Potosí and on nearby 18,700-foot Cerro Milluni and its rocky satellites. Climbers and walkers should bring their own equipment to Bolivia.

La Paz has a glider club. Some hang gliding has been done, but thin air makes this sport difficult and dangerous. Andean air currents offer some of the world's most challenging and highest gliding for experienced pilots, but this area is not considered suitable for novices. An equestrian club offers boarding facilities for privately owned horses

and classes in horsemanship. Another club offers rentals and lessons. Periodically, public horse races are held.

By far, the most popular spectator sport in Bolivia is football, or soccer. Several Bolivian teams are often in international competition. Other spectator sports include wrestling, basketball, and an occasional bullfight.

Bolivia has many interesting tour sites. A popular place is Copacabana, a resort town 88 miles from La Paz on Lake Titicaca. It is noted especially for the Shrine of the Virgin of Copacabana, to which many Bolivians make a pilgrimage. Copacabana can be reached by car from La Paz in about four hours. It also is possible to take a hydrofoil from Huatajata (a town on Lake Titicaca) to Copacabana. Day trips by motorboat to the Isles of the Sun and Moon, famous in Incan mythology, can be made from Copacabana.

En route to the western shore of Lake Titicaca, 60 miles from La Paz, are the ruins of the advanced Aymara culture of Tiwanaku, which can be reached by car from La Paz in about two-and-a-half hours.

Situated 95 miles from La Paz at 8,700 feet, Sorata provides relief from the high altitude of the capital and the *altiplano*. Sorata is in a valley at the foot of Illampu, one of the highest mountains in Bolivia. There are some interesting caves that can be explored nearby. The trip takes roughly four hours, one way, by car. In the vicinity of Sorata, along the east shore of Lake Titicaca, is a tremendous slough that provides some of the best duck and goose shooting in Bolivia.

The Yungas are a series of deep valleys sloping from the cordillera into the eastern jungle region. They can be reached by car in three-to-four hours. Landslides may block roads during rainy months. The road from La Paz to the Yungas crosses the eastern cordillera through a 15,000-foot pass, then drops down rapidly into lush, semitropical valleys in less than 50 miles, one of the

most spectacular sights in the country. Hotel accommodations are available at Coroico, Chulumani, and a few other points.

North of Lake Titicaca in Peru is Cuzco, center of the ancient Inca civilization and famed site of the Incas' last stand. Cuzco and nearby Machu Picchu, the "lost city of the Incas," are sight-seeing attractions for tourists from all over the world. The trip from La Paz to Cuzco by air takes 50 minutes.

Arica, a Chilean seaport 20 minutes away by air or 12 hours by train, is a good change of scene for those who enjoy the seashore.

The tropical lowlands facing Brazil provide another interesting change from La Paz. These areas are interlaced with large rivers, are heavily forested, and abound in many varieties of wild game. Driving trips to some parts of the area are possible but require elaborate preparation and four-wheel-drive vehicles.

The region around Santa Cruz is the fastest developing area in Bolivia. Santa Cruz can be reached by road and by air. Northwest of Santa Cruz is the department of Beni, a sparsely populated region with great potential for agricultural development and increased cattle production. The region is traversed by the major rivers in Bolivia and offers excellent fishing. These tropical lowlands facing Brazil provide a pleasant change from La Paz. They are interlaced with large rivers, and are heavily forested, with a large variety of game. Road trips during dry months to some areas are possible but require elaborate arrangements and four-wheel-drive cars.

Entertainment

Adequate entertainment is available in most of the large cities. La Paz has a few nightclubs, and the most popular among these are the discotheques. Others have dance bands, and most feature additional entertainment on weekends. Americans as well as Bolivians enjoy the *peñas* or clubs which specialize in authentic folk singing, dancing, and art. These clubs have shows on Fri-

day and Saturday nights, and serve drinks and meals. A visit to one of these *peñas* is a good way to be introduced to Bolivian folklore.

Some unique folklore festivals highlight the year in La Paz. In January, a week-long fair, "Alacitas," centers around Ekeko, the Aymaran talisman of prosperity and good fortune. Miniatures, from clothes to buses, are bought (and given) with the hope that what they represent will be obtained soon. Carnival is celebrated with parades (a very charming one features children in costumes) and dancing in La Paz. "Jesús, el Gran Poder" is honored in June in La Paz with a parade of dancers and musicians. Year round, small pueblos in the outskirts of La Paz stage interesting festivals.

Several restaurants have good quality food, service, and atmosphere that Americans normally associate with dining out.

Movie theaters in La Paz are inexpensive and show many American films as well as films from Argentina, Brazil, Italy, and France. All films are in the original soundtrack with Spanish subtitles. Films make their debut in La Paz a year or more after their release.

Video clubs recently have become very popular. The variety is not the best, but tapes can be rented for very reasonable prices. Local clubs carry Beta and VHS tapes.

Santa Cruz

Santa Cruz, the seat of early Spanish culture, was founded in the mid-16th century, and reestablished in 1595 by settlers from Paraguay. With a population of 1,110,000 (2000 est.), it is the second largest city in Bolivia. Its economy is based on exports of oil and agricultural products.

The people of Santa Cruz call themselves Cruceños or Cambas. They are staunchly proud of their land and of their heritage. The Cruceños are innately polite and hospitable, slow to anger, generous, and proud. Typical of the people of tropical cli-

mates in Latin America, Crucenos maintain a very active social calendar, and are extremely warm, friendly, and outgoing.

Education

The Santa Cruz Cooperative School is a coeducational, day, school for pre-kindergarten through grade 12. The school was originally established to serve the children of the Gulf Oil Company personnel. When Gulf Oil was nationalized, many Americans left Bolivia. The school continued as a cooperative, and over the years, the percentage of host country students has increased to a large majority. Currently about 10% of the students at SCCS are American, 65% are Bolivian, and 25% are from other various nations. Facilities include two science laboratories, a computer lab, a new library/media center, and a comprehensive sports/fine arts complex. Classes follow a U.S. school year and a U.S. curriculum, granting both American and Bolivian secondary diplomas.

Cochabamba

Cochabamba is Bolivia's third largest city. Its population is approximately 377,260 (2000 est.). This valley city is 8,430 feet above sea level. Cochabamba was founded in 1574 and was originally called Villa de Oropeza. The city has many historical buildings and is an important alpaca handicraft center and vacation spot.

Education

Cochabamba Cooperative School is a coeducational school for pre-kindergarten through grade 12. A U.S. curriculum is used for its 100 students.

The American International School of Bolivia offers the International Baccalaureate (IB) as well as U.S. and Bolivian degrees. It receives a State Department grant and has about 100 students in kindergarten through grade 12.

The Carachipampa Christian School is run by the Andes Evangelical Mission and has about 100 stu-

dents kindergarten through grade 12.

Sucre

Sucre is the judicial center and constitutional capital of Bolivia. Its population is 152,000 (2000 est.). The city lies in a mountain valley on the eastern slope of the Andes, 9,320 feet above sea level. A learning center for centuries and the city where Bolivia proclaimed independence, Sucre is now a university town. It offers large monasteries, fine churches, exquisite colonial architecture, colonial paintings, and Old World art collections.

Potosí

Potosí, at 4,000 meters (over 14,000 feet), is the highest city in the world. Today it is a mining town producing some silver and substantial amounts of tin, lead, and zinc, but in 1553 it was decreed an Imperial City by Charles V, Holy Roman Emperor and King of Spain, due to the discovery of silver here by the Spanish conquistadors in 1545. During the late 1500s, it was one of the largest cities in the world (population 160,000), and the name Potosí became synonymous with the idea of untold riches. It is estimated that over a billion dollars' worth of silver was extracted from the Cerro Rico Mountain overlooking Potosí. By the 18th century the silver mines were depleted and the city was in decline. In 2000, Potosí had a population of 114,092.

However, the aura of its fabulous past still lingers and can be seen in some of the colonial architecture, much of which is baroque in design. The colonial Art Museum in Sucre contains detailed color drawings of Potosí in its prime. One of the chief attractions and places of renown in Potosí is the Casa de la Moneda, or mint, established to control the minting of colonial wealth. The restored building has been called the most important monument of civilian building in all of South America. It houses an important collection of colonial paintings,

sculptures, and archaeological and minting materials.

OTHER CITIES

ORURO, with a population of 125,240 (2000 est.), is 120 miles southeast of La Paz, situated at an altitude of 12,160 feet. Capital of Oruro Department, the city is also the country's railroad center. Founded early in the 17th century to exploit the nearby silver deposits, Oruro nearly became a ghost town in the 19th century when silver production declined. However, other mineral resources, primarily wolfram, copper, and tin are now mined and are the basis of the city's economy. Due to the altitude, agriculture is almost nonexistent. A technical university was founded in Oruro in 1892. A major tin refinery is located here. An outstanding celebration takes place here; day-long parades feature the world-famous *diabladas* (devil dancers), bears, and *morenadas*, creating an outstanding display of folkloric costumes and *altiplano* music. Oruro is a major hub for Bolivia's railway system.

TARIJA, at an altitude of 6,398 feet, is located in a fertile Andean valley, about 160 miles southeast of Potosí. The area has rich soil and a moderate climate, making the region famous for its vineyards and orchards. Vegetables, wheat, potatoes, corn, and other crops are grown near Tarija. However, due to the city's remote location, they are consumed by the local population. Founded in 1574, the city's commercial growth lagged due to a lack of communications. With a population of nearly 403,000 (2000), Tarija is known for its *Vendimia*, or grape harvest festival, held each February. Residents of the city are noted for their outdoor religious processions. A university, founded in 1966, is also located in Tarija.

TRINIDAD, capital city of the Beni Department, is located in northeastern Bolivia, about 250 miles north of La Paz. The city has a sugar refinery and also trades in sugarcane,

rice, beef, and cotton. A busy commercial center, Trinidad has an airport and several roads leading to other cities. The city is the seat of the “Mariscal Jose Ballivian” Bolivian University.

COUNTRY PROFILE

Geography and Climate

Landlocked Bolivia shares borders on the north and east with Brazil, on the south with Argentina and Paraguay, on the southwest with Chile, and on the northwest with Peru. With an area of 420,000 square miles, Bolivia is about the size of Texas and California combined. The country has three well-defined geographic zones—the high plateau (*altiplano*); the temperate and semitropical valleys of the eastern mountain slopes (*yungas*); and the tropical lowlands (*llanos*) of the Amazon River Basin. Each of these regions differs from the others in a significant way.

Lying between the main eastern and western ridges of the Andean Mountains, the *altiplano* is 500 miles long and 80 miles wide, at altitudes varying between 12,000 and 14,000 feet. It is one of the world’s highest inhabited regions. Lake Titicaca is situated in the *altiplano* and straddles Bolivia’s border with Peru in the north. It has an area of 3,500 square miles with depths of up to 700 feet, and maintains a constant temperature of 55°F. The land surrounding the lake is the most agriculturally productive and heavily populated section of the *altiplano*, with a population density of more than 125 per square mile in some localities. Most of the region’s inhabitants are Aymara and Quechua Indians, who maintain a primitive subsistence agricultural and grazing economy. Principal animals are sheep, alpacas, llamas, and the fast-disappearing vicunas. The rich mineral deposits that form the backbone of the Bolivian economy are found on

Cory Langley. Reproduced by permission.

Going to the market in Bolivia

the *altiplano* and in nearby mountainous areas. Several cities (La Paz, the capital; Oruro; and Potosí) and industries are located here.

To the east and northeast of the *altiplano* lie the *yungas*, the temperate and semitropical valleys. Cochabamba, Sucre, and Tarija are major cities in the more arid mountain valleys to the southeast of the capital. These areas vary in altitude from 1,600 feet to 9,000 feet above sea level and have a moderately warm and humid climate. This region is mainly agricultural—chief crops are corn, barley, coffee, cacao, citrus fruits, and sugarcane.

The *llanos* cover more than two-thirds of the country. Through the *llanos* flow the major tributaries of the Amazon: the Mamoré, Beni,

Ichilo, Itenes, and Madre de Dios rivers. With the exception of the Santa Cruz area, the lowlands are sparsely populated and are only now being developed. This fertile region offers excellent possibilities for agriculture and stock-raising. Santa Cruz (Bolivia’s second largest city), Trinidad, Riberalta, and Cobija are the principal cities in the lowlands.

Bolivia lies entirely within the tropics, but the extreme differences in elevation—as low as 300 feet along the Brazilian border and more than 21,000 feet on the highest mountain peaks—produce a great variety of climatic conditions. These, coupled with a wide diversity in soils, result in vegetation ranging from the sparse cover of scrub in the semi-arid highlands to lush rain forests

in the abundantly watered plains of the east.

La Paz has only two seasons: rainy and dry. The rainy season begins in December and continues through March; some rain falls almost daily during this period. Even in the rainy season, the humidity is very low. Average annual rainfall is 20 inches. The climate is cool, but the warm sunshine raises the temperature during the daytime, making outdoor parties and activities at midday very pleasant.

Population

Reliable demographic data is difficult to obtain in Bolivia. Bolivia's estimated population is about 8.1 million (2000), with an estimated 1.5 million people inhabiting the capital city of La Paz. Population density, the lowest in Latin America, is approximately 7 per square mile, but varies greatly by area.

An estimated 55% of the people are Aymara- and Quechua-speaking, descended from peoples of pre-Inca cultures. Virtually all Indians live in rural areas or villages. The hard daily life of the Indian population is occasionally brightened by colorful fiestas which often last for days. Bolivians of mixed Indian and European ancestry (*mestizos*) comprise 30% of the population and work mostly in small businesses, factories, and government offices. *Mestizos* generally speak Spanish as a first language, but often know at least one native language.

The rest of the population is of European descent and fill most professional and management positions in Bolivian society. The most recent large-scale immigration of Europeans to Bolivia took place before and during World War II. More recently, there have been smaller immigrations of Taiwanese, Japanese, Koreans, and Mennonites to the underpopulated tropical lowlands of Santa Cruz.

Although Roman Catholicism is the recognized religion of Bolivia and

95% of the population is Catholic, other religions are freely practiced.

History

Between A.D. 600 and 900, Aymara Indians living at the southern end of Lake Titicaca produced an advanced native civilization known as Tiahuanaco. In about 1200, the Quechua-speaking Incas invaded the area and incorporated much of what is now Bolivia under their control, until the Spaniards arrived from Peru and conquered Bolivia in 1535.

The area became a dependency of the viceroyalty of Lima, and the principal cities were Chuquisaca (now Sucre), the seat of the Audencia de Charcas, La Paz, and Potosí, for many years the largest city in the Western Hemisphere. The Bolivian silver mines were a major source of the wealth of the Spanish Empire. As Spanish royal authority weakened during the Napoleonic Wars, Bolivia swarmed with secret patriotic societies. Although independence was proclaimed in 1809, 16 years of struggle followed before the Republic (named for the patriot and liberator, Simón Bolívar) was established on August 6, 1825.

The 19th century saw one military leader after another succeed to power, frequently by force. This political disorder and instability impeded social and economic progress. A disastrous war with Chile (1879–84) caused Bolivia to lose its seacoast and the rich nitrate fields and copper mines of the region around Antofagasta, Chile. A major aim of Bolivian foreign policy since then has been to recover a port on the Pacific coast.

Government

Political stability improved during the early 20th century, although the Chaco War with Paraguay (1932-35) exhausted Bolivia economically and discredited its traditional ruling classes. A protracted period of political unrest ended in the revolution of April 9, 1952, which put in power the Nationalist Revolutionary

Movement (MNR). The MNR introduced universal suffrage, agrarian and educational reform, and nationalized the three largest private tin enterprises under the state mining corporation, COMIBOL.

Divisions within the MNR and growing opposition to its rule led to its overthrow in November 1964 by a military junta. The Ovando-Barrientos junta retained the MNR's major reforms. In August 1966, the junta leader was elected president. On September 26, 1969, the military overthrew the president and formed a civilian-military government.

From 1969 to 1982, Bolivia experienced several coups and rapid changes of government. The first two years of the UDP (Popular Democratic Unity, 1982-85) were marked by national disasters, a deteriorating economy, and lack of political consensus. The fragile government was teetering by 1984, threatened by political extremists and undercut by its lack of coherency. The president, responding to an initiative of the Catholic Church, began talks with the opposition, and, as a result, curtailed his term, calling for elections in 1985.

Since then, despite continual changes in players, elections have been held peacefully and on schedule.

The 1967 constitution, revised in 1994, provides for balanced executive, legislative, and judicial powers. The traditionally strong executive, however, tends to overshadow the Congress, whose role is generally limited to debating and approving legislation initiated by the executive. The judiciary, consisting of the Supreme Court and departmental and lower courts, has long been riddled with corruption and inefficiency. Through revisions to the constitution in 1994, and subsequent laws, the government has initiated potentially far-reaching reforms in the judicial system and processes.

Bolivia's nine departments received greater autonomy under the Admin-

istrative Decentralization law of 1995, although principal departmental officials are still appointed by the central government. Bolivian cities and towns are governed by elected mayors and councils. The Popular Participation Law of April 1994, which distributes a significant portion of national revenues to municipalities for discretionary use, has enabled previously neglected communities to make striking improvements in their facilities and services.

The Bolivian flag consists of three horizontal bands in red, yellow, and green.

Arts, Science, Education

Education, from primary to post-secondary, is currently the subject of much debate in Bolivia, focusing on how to provide educational opportunities for all and still maintain quality.

Bolivia has nine state universities and eight private universities. In addition to their usual curriculum, the universities serve as centers of scientific activities with programs in space sciences, geology, mineralogy, genetics, and other sciences. The University of San Andrés Observatory at Chacaltaya (near La Paz) is world famous for its work on cosmic rays.

The National Symphony Orchestra and the Coral Nova choir, based in La Paz, give several concerts a year. A national ballet company performs occasionally and visiting music and dance performers are sponsored by the Casa de la Cultura, the Centro Boliviano Americano, and other cultural institutions. There are also a Chamber Orchestra and a Youth Orchestra in La Paz. Folk music can be enjoyed at the various folklore nightclubs called *peñas* on weekends and some week nights at programs of the Centro Boliviano Americano. The Municipal Theater offers various programs, including visiting artists, jazz groups, and other entertainers. These perfor-

mances vary in quality, from very good to mediocre.

Art exhibits are held in the National Museum of Art, the Casa de la Cultura, the University of San Andrés, the Centro Boliviano Americano, the lobby of the newspaper *El Diario*, and in a number of private galleries, and commercial art galleries in the major cities. La Paz has several museums. The National Museum of Archaeology and the Diez de Medina Museum both house good collections of Inca and pre-Inca artifacts. The National Folklore Museum and the Fine Arts Museum are located in beautifully restored colonial palaces. The latter contains interesting examples of colonial art, but the finest collections are in Sucre and Potosí.

A wealth of handicraft art is found in colorful Indian markets or urban boutiques in Bolivia, ranging from the crude and primitive to the refined. Gold and silver jewelry is a good buy; Bolivian goldsmiths can make jewelry in any design at a cost below that in the U.S. A great deal of work is done with pewter and in a metal similar to silver, and the products are handsome. Good quality sweaters, coats, scarves, and rugs of sheepskin, llama, and alpaca are reasonably priced.

Commerce and Industry

Since 1985, the Government of Bolivia has been implementing a far-reaching program of macroeconomic stabilization and structural reform aimed at restoring price stability, creating conditions for sustained growth, and alleviating poverty. Important components of these structural reform measures include the capitalization of state enterprises and strengthening of the country's financial system.

The most important recent structural changes in the Bolivian economy have involved the capitalization of numerous public sector enterprises. (Capitalization in the Bolivian context is a form of privatization where investors

acquire a 50% stake and management control of public enterprises in return for a commitment to undertake capital expenditures equivalent to the enterprise's net worth). Parallel legislative reforms have locked into place market-oriented policies, especially in the hydrocarbon and mining sectors, that have encouraged private investment. Foreign investors are accorded national treatment, and foreign ownership of companies enjoys virtually no restrictions in Bolivia. The privatization program has generated commitments of \$1.7 billion in foreign direct investment over the period 1996-2002.

In 1996, three units of the Bolivian state oil corporation (YPFB) involved in hydrocarbon exploration, production, and transportation were capitalized. The capitalization of YPFB allowed agreement to be reached on the construction of a gas pipeline to Brazil. A priority in the development strategy for the sector is the expansion of export markets for natural gas. The Brazil pipeline contract projects natural gas exports of 9 million metric cubic meters per day (mmcmd) by the end of 2000, increasing to over 30 mmcmd by 2004. The government plans to position Bolivia as a regional hub for exporting hydrocarbons.

By May 1996, three of the four Bolivian banks that had experienced difficulties in 1995 were recapitalized and restructured under new ownership with support from the Bolivian Government's Special Fund for Strengthening the Financial System (FONDESIF), which helped restore confidence in the banking system. In November 1996, the Bolivian Congress approved a comprehensive pension reform that replaces the old pay-as-you-go system by a system of privately managed, individually funded retirement accounts, and the new system began operations in May 1997.

Bolivia's trade with neighboring countries is growing, in part because of several regional prefer-

ential trade agreements it has negotiated. Bolivia is a member of the Andean Community and has free trade with other member countries—Peru, Ecuador, Colombia, and Venezuela. Bolivia began to implement an association agreement with MERCOSUR (Southern Cone Common Market) in March 1997. The agreement provides for the gradual creation of a free trade area covering at least 80% of the trade between the parties over a 10-year period. The U.S. Andean Trade Preference Act (ATPA) allows numerous Bolivian products to enter the United States free of duty on a unilateral basis. Tariffs have to be paid on clothing and leather products only.

The U.S. remains Bolivia's largest trading partner. In 1998, the U.S. exported \$626 million of merchandise to Bolivia and imported \$149 million, according to the World Trade Atlas of the Global Trade Information Service. Bolivia's major exports to the U.S. are tin, gold, jewelry, and wood products. Its major imports from the United States are computers, vehicles, wheat, and machinery.

Agriculture accounts for roughly 15% of Bolivia's GDP. The amount of land cultivated by modern farming techniques is increasing rapidly in the Santa Cruz area, where weather allows for two crops a year and soybeans are the major cash crop. The extraction of minerals and hydrocarbons accounts for another 10% of GDP. Bolivia exports natural gas to Brazil. Manufacturing represents less than 17% of GDP.

The Government of Bolivia remains heavily dependent on foreign assistance to finance development projects. Most payments to other governments have been rescheduled on several occasions since 1987 through the Paris Club mechanism. External creditors have been willing to do this because the Bolivian Government has generally achieved the monetary and fiscal targets set by IMF programs since 1987. Some countries have forgiven substantial amounts of Bolivia's bilateral debt.

Transportation

Jet service to and from the U.S. is available daily. Flights to Guayaquil (Ecuador), Cali (Colombia), and Asunción (Paraguay) are also possible. LAN Chile, and LAB (Lloyd Aéreo Boliviano) also fly to and from Santiago (Chile). Lufthansa Airlines has two flights a week to and from Lima (Peru). LAB, the national airline, has frequent flights to other major cities in Bolivia as well as international flights to Arica (Chile), Asunción, Cuzco (Peru), Caracas (Venezuela), Panama, Santiago, Rio de Janeiro (Brazil), Buenos Aires (Argentina), São Paulo (Brazil), Lima, and Miami. Argentine, Brazilian, and Paraguayan Airlines have flights to several Bolivian cities.

Train service is generally limited and slow. Trains run from La Paz to Antofagasta and Arica (Chile); and from La Paz to some interior cities and to Argentina. An interesting train trip is one between La Paz and Cochabamba. Many points in Bolivia can be reached only by car, truck, or bus over inferior roads, and many interesting and important areas are frequently inaccessible except by four-wheel-drive vehicles.

Cars move on the right in Bolivia. La Paz has few stop signs, and automatic and hand-operated traffic lights are erratic. Uphill traffic has the right-of-way; car horns are sounded to signal right-of-way at intersections. Most Bolivian drivers use no lights or only parking lights for night driving. Defensive driving means adjusting to hazardous conditions. Streets in La Paz are steep, narrow, and often slippery, particularly during the rainy season. Outside the city, most roads are unpaved, can be dangerous, and are sometimes impassable during the rainy season.

Bus and taxi service is erratic at best. Small buses, or *micros*, operate to the suburbs. They seat about 21 persons, and carry as many standees as possible. The large *littoral* buses are cheaper, but seldom used by Americans because they are slow

and overcrowded. Taxis must be hailed on the street (no call service) and can be identified by their orange license plates with a "T" prefix. *Trufi* taxis, following several set routes, operate from the suburbs to the city. These taxis are identified by flags on their bumpers. All taxis are collectives, so one usually must share a cab with others going in the same direction.

Communications

Telephone service within Bolivia is steadily improving, and direct-dialing between most major cities and between the U.S. and some major cities is possible. Empresa Nacional de Telecomunicaciones (ENTEL) provides long-distance service to the U.S. A microwave system links La Paz, Oruro, Sucre, Potosí, Trinidad, Tarija, Cochabamba, and Santa Cruz, with calls made through an operator, but service is good. Calls to other parts of the country are reached through the long-distance operator. Telegraphic service is available to all foreign points. International airmail between Bolivia and the United States takes between five and eight days, and surface mail six to eight weeks.

La Paz has 18 AM and nine FM radio stations which broadcast in Spanish and in two Indian languages. Music programs include Bolivian and Latin music, American popular music, and some classical selections. Some stations specialize in covering sports events; others emphasize news or cultural programs. All stations currently tie into the government news broadcasts. A shortwave radio is essential for receiving American or English stations. The quality of shortwave and FM reception varies with location and ionospheric conditions, but is generally adequate. Several Americans operate ham radios in La Paz with satisfactory results.

Eleven television stations currently broadcast in La Paz; seven are privately owned and the one is owned by the government. The other three broadcast in the UHF band. All programming is in Spanish. A private

cable company also offers English-language programming for an installation fee and a monthly charge.

Six daily newspapers are printed in Spanish in La Paz. The better papers contain fair coverage of international news along with extensive local coverage. No English-language newspapers are published in La Paz but U.S. newspapers can occasionally be found. Except for the Latin American editions of *Time* and *Newsweek*, American magazines are outdated and expensive in La Paz.

Several bookstores carry English-language books and paperbacks at prices about double those in the U.S. Records are also available here, but prices are high. La Paz has a municipal public library, used only for research. The library at the Centro Boliviano Americano lends books and magazines including works in English. The La Paz Book Club maintains a lending library also.

Health

The newcomer to Bolivia is sometimes apprehensive, often because of stories about serious altitude effects. Most of these stories are exaggerated. Altitude sickness symptoms are grouped under the term *soroche* and may include headaches, sleeplessness or sudden awakening, shortness of breath, loss of appetite, abdominal cramps, nausea or vomiting, chest pains, and dizziness. For most people these symptoms, if present at all, gradually decrease or disappear after the first few days. Many of the symptoms are due to dehydration; therefore, sufficient fluids should be taken. Humidifiers and vaporizers are also helpful. Newcomers are advised to rest for three days after arrival, eat only light meals, and not drink alcoholic beverages or smoke cigarettes for the first week.

You should make sure you consult with your doctor before making the trip to Bolivia, particularly if you have one of the following illnesses or

conditions: sickle cell anemia or sickle cell trait, heart disease, lung disease, elevated cholesterol or blood pressure, diabetes, or asthma.

Respiratory infections such as colds, sinusitis, and bronchitis are relatively common. Colds are treated with rest, aspirin, and occasionally antihistamines. The most common complaint is nasal stuffiness and dryness, usually caused by the extreme dryness of the altitude rather than by allergies. Fungal skin infections are rare in dry climates. Severe sunburn and excessive skin dryness are the most troublesome skin disorders. Ultraviolet radiation is high; light-skinned persons should have no more than 15 minutes of direct or reflected exposure at one time. Some people report difficulty with contact lenses due to diminished atmospheric pressure and dry air; plenty of lubricating solution should be brought along.

Several good physicians and dentists—many trained in the U.S.—practice in La Paz. Hospitals and inpatient clinics, for the most part, are inadequate by U.S. standards. Travellers should carry a sufficient supply of medications, prescription and over-the-counter, along with first aid supplies.

Bolivia's sanitation procedures are poor, and sewage disposal is inefficient and inadequate. Purification of city water is not reliable, and few official inspection systems for water and food products exist. These conditions increase the incidence of intestinal disorders, especially during the December, January, and February rainy season. Flies transmit bacteria and amoebic cysts. Water for drinking, making ice cubes, brushing teeth, and rinsing vegetables must be filtered and then boiled for at least 20 minutes. For out-of-town trips, water should be treated with Globaline tablets.

Rabies exist here because many wild or loose dogs roam freely through the cities and countryside. Routing pre-exposure rabies vaccine is recommended. All animal bites and scratches should be reported

immediately to a physician. Pets should be vaccinated against rabies, distemper, and parvo virus. Snakes and venomous insects are rare except in tropical areas.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Commercial travel from U.S. to La Paz is by air. Service to Bolivia is available from Washington, New York, Miami, Houston, and New Orleans. Direct flights to La Paz via Panama take 10 to 15 hours, depending on point of departure. Surface travel to other places in Latin America and then overland to landlocked Bolivia is possible, but complicated and time consuming.

A valid U.S. passport is required to enter and depart Bolivia. U.S. citizens do not need a visa for a stay of one month or less (that period can be extended upon application to 90 days). Visitors for other purposes must obtain a visa in advance. U.S. citizens whose passports are lost or stolen in Bolivia must obtain a new passport and present it, together with a police report of the loss or theft, to the Bolivian government immigration office in La Paz, Cochabamba, or Santa Cruz to obtain permission to depart. An exit tax must be paid at the airport when departing Bolivia. Travelers who have Bolivian citizenship or residency must pay an additional fee upon departure. For further information regarding entry, exit, and customs requirements, travelers should contact the Consular Section of the Bolivian Embassy at 1819 H Street, N.W., Suite 240, Washington, DC 20006; telephone (202) 232-4827/4828; or the Bolivian consulate in Houston, Los Angeles, Miami, New Orleans, New York, San Francisco, or Seattle.

The Bolivian government has very strict laws concerning attempted theft or removal from Bolivia of any item that it considers to be a national treasure. The Bolivian and

U.S. governments are currently completing renewal of a cultural property protection agreement. In addition to the traditional examples of pre-Colombian artifacts, certain historical paintings, items of Spanish colonial architecture and history, and some native textiles, the Bolivian government also considers certain flora, fauna, and fossils as national treasures. It is illegal to remove any such items from Bolivia without prior written permission from the appropriate Bolivian authority. Any type of fossil excavation, even picking up a fossil, without prior written authorization from the appropriate Bolivian authority, is also illegal. Violation of the law can result in lengthy jail sentences and fines. Please contact the Embassy of Bolivia in Washington, D.C. or one of Bolivia's consulates in the United States for specific information regarding customs requirements.

U.S. citizens living in or visiting Bolivia are encouraged to register at the Consular Section of the U.S. Embassy in La Paz and obtain updated information on travel and security in Bolivia. The Consular Section is open for U.S. citizen services, including registration, from 8:30 a.m. to 12:30 p.m. weekdays, excluding U.S. and Bolivian holidays. The U.S. Embassy is located at 2780 Avenida Arce in La Paz; tel. (591-2) 2433-812 during business hours 8:30 a.m.-5:30 p.m., or (591-2) 2430-251 for after-hours emergencies; fax (591-2) 2433-854; Internet: <http://www.megalink.com/usembla-paz>. There are also U.S. consular agencies in Santa Cruz and Cochabamba, which are open weekday mornings from 9:00 a.m.-12:00 noon, excluding U.S. and Bolivian holidays. The Consular Agency in Santa Cruz is located at Calle Guemes 6, Barrio Equipetrol; tel. (591-3) 3363-842 or 3330-725; fax (591-3) 3325-544. The Consular Agency in Cochabamba is located at Avenida Oquendo 654, Torres Sofer, Room 601; tel. (591-4) 4256-714; fax (591-4) 4257-714.

Pets

Pets may be imported by presenting a valid certificate of vaccination against rabies certified by a Bolivian consul or other official. No quarantine is imposed. Pets obtained in Bolivia should be inoculated against distemper and rabies. Veterinarians will make house calls to provide these shots. Other medication for pets is difficult to obtain.

Firearms & Ammunition

The only firearms which may be imported are pistols, rifles, and shotguns (one each), and a total of 500 rounds of ammunition. All firearms must be registered with the police immediately.

Currency, Banking and Weights and Measures

The time in Bolivia is Greenwich Mean Time (GMT) minus four.

The unit of currency is the *peso* Boliviano (\$b). Banking facilities are readily available in La Paz, where there are several branches of U.S. banks. Dollars in cash or travelers checks are widely acceptable and can be exchanged at favorable rates at most banks or *cambio* (exchange houses). They are accepted at hotels, restaurants, and stores at very favorable rates. American Express and Visa cards are accepted on a limited basis.

The metric system is used in local weights and measures, except in the markets, where pounds and kilos are both used.

LOCAL HOLIDAYS

- Jan. 1 New Year's Day
- Feb/Mar (Mon. & Tues. before Ash Wed. . . Carnival*
- Mar/Apr Good Friday*
- Mar/Apr Easter*
- May 1 Bolivian Labor Day
- June Corpus Christi*
- July 16 La Paz Day (in La Paz only)

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Brazil. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The Federative Republic of **BRAZIL**, occupying almost half of continental South America, is the fifth largest country in the world. With a 1996 population of roughly 160 million people, it sprawls across 3.3 million square miles of forest and plain, and shares boundaries with every South American state except Chile and Ecuador. In spite of profound economic problems, Brazil is an intriguing country. Its daring venture, nearly three decades ago, of carving a new capital city out of almost inaccessible territory, captured the interest of the world. Its bustling cities offer a broad contrast to the beauty of the countryside, and the widespread intermixtures among Caucasians, Negroes, and

native Indians have resulted in a land of varied cultures and fascinating people.

MAJOR CITIES

Brasilia

The city of Brasilia, one of the wonders of the modern world. Modern buildings, is a futuristic city design and road system, rolling landscape, and a lake are features of the city. Brasília, 600 air miles northwest of Rio de Janeiro in the central plateau of Brazil, is similar in topography and vegetation to western Texas. The Federal District, home of Brasília and its satellite cities, lies within the State of Goiás and comprises some 2,200 square miles. The District lies at the junction of the headwaters of three major Brazilian river systems, with an elevation of about 3,700 feet.

Brasília is growing steadily but retains many U.S. small-town characteristics, such as an emphasis on family life. People are friendly and lifestyles tend to be informal. Construction of Brasília began in 1957. In 1960, the city formally became the capital of Brazil. Over the next decade, the President, Congress, Federal Supreme Court, Foreign

Ministry, and most other government agencies moved to Brasília from the former capital, Rio de Janeiro. All official acts are signed in Brasília, and all embassies are here.

Brasília's demographics and economy make it a unique city. Brasília's standard of living (the highest in Brazil) is stable due to regular employment in the government. Indeed, most of the population depends either directly or indirectly on government employment. Locals consider Brasília as being on the Plano Piloto, while other cities in the Federal District are satellite cities. Satellite cities, originally created to house construction workers early in Brasília's history and intended to disappear after construction was completed, have remained to be Brasília's suburbs. Although construction workers originally populated them, skilled and semi-skilled workers and government bureaucrats now mostly populate satellite cities.

The city's population comes from all parts of Brazil and is heterogeneous. The native population is small. The appearance, thinking, and idiosyncrasies common to each area within Brazil are present in Brasília. People consider themselves state citizens and form close associations with state groups.

Brazilians rely heavily on the family unit, spend their free time together, and depend on one another for assistance. The big Sunday family dinner is far more common here than in the U.S. Although some Brasilienses speak English, Portuguese is important for dealing with any stratum of Brazilian society. Limited recreational facilities and cultural activities, close living, and isolation can be problems, unless you develop hobbies or other leisure-time activities. Most who have served here have found life in Brasília pleasant.

Outside the official U.S. Embassy community, most Americans living in Brasília are missionaries, farmers who only work part of the year within the Federal District, and teachers employed by the American School.

Brasília's moderate temperatures make the climate pleasant. Winter temperatures drop as low as 55°F at night and reach about 80°F during the day. Summer temperatures average from 65°F to 85°F. Average relative humidity varies from 50% to 70% during the summer's rainy season. Rainfall averages 60 inches annually, falling mostly between October and April. During this period, mildew is sometimes a problem. During the rainy season, flash storms bring several inches of rain in a short time. It rains in the morning or afternoon, followed by clear skies. Brasília has spectacular sunrises; the sunsets are equally breathtaking.

The dry season, from April to September, has little or no rainfall, with humidity as low as 10%. Days are warm, but nights are cool.

Although pests do not plague Brasília, ants, roaches, mosquitoes, flies, lizards and spiders are sometimes plentiful. Snakes are not generally found in populated areas.

Food

Brasília has several well-stocked, large supermarkets. Vegetables and fruits are in good supply. They can also be purchased in small shops,

Japanese markets, or from large, open, suburban markets where fruits and vegetables are fresher, cheaper, and found in greater quantity and variety. Frozen meats and prepared foods are available.

Almost all American-type fresh fruits and vegetables are available. Tropical fruits such as papaya, pineapple, mango, tamarind, passion fruit, sweetsop, Chinese gooseberry, and even more exotic fruits are available seasonally. Other fruits such as strawberries, apples, grapes, pears, peaches and nectarines are imported. Standard U.S. beef cuts are not widely available, but Brazilian cuts are acceptable. Beef filet, chicken, and fresh pork are excellent. Lamb is also available. Fresh and frozen fish are abundant, but shellfish is expensive. Local fresh, pasteurized, powdered, and long-life milk are available. Dairy products, such as butter, cream, yogurt, and cheese, are available in grocery stores, cheese stores, health food stores, delicatessens, and bakeries.

Brasília has many good restaurants. Chinese, French and Mexican cuisine is available, as well as outstanding, traditional Brazilian barbecued meat (churrasco), and other national and international dishes. The American fast-food chains McDonald's and Arby's have representation here, too.

Clothing

Men: Summer and spring suits are worn year round. Bring primarily lightweight suits and one or two medium weight suits for the cool season. Generally, the quality of dry-cleaners is good, but expensive. Slacks and sports shirts (short or long sleeved) are suitable for off-duty hours. Bring a variety of clothes for a warm climate, from casual to semi-formal. Sport jackets, sweaters, light jackets, and wind breakers are comfortable during the cool season. Local clothing prices vary from city to city and U.S. sizes are not always available. Styles are more European than American.

Women: Fashion-conscious Brazilian women follow all the latest trends abroad, and have some of their own. Although entertaining is informal, elegant sports clothes are often worn. You can buy chic well-made clothing, but prices are high. Cotton suits and lightweight knit dresses can be worn during the cool and rainy seasons and evenings. Some warmer clothing is occasionally necessary. Except for the rainy period, days are often hot, so bring cotton and synthetic blends. If you are planning to travel to Bolivia, Chile, Argentina, or south of Brasília during winter, you will need winter clothes. Generally, informality prevails in Brasília. However, evening wear is often considered "elegant casual." Bring sweaters or lightweight jackets for occasional cooler days and nights of the rainy season and the evenings of the dry season. A raincoat may be too warm, but an umbrella is essential. Wool slacks and long-sleeved blouses or dresses for cool, rainy days and a warm robe are welcome.

Bring plenty of sportswear, including washable slacks and shorts. Local prices for underwear and beach ensembles are high. Women's and girl's swimwear is available in all sizes, but run small. Brazilian swimwear, even one-piece suits, exposes more than U.S. styles. Sun hats are advisable.

Bring shoes or leave shoe size with a U.S. store and order as needed. All types of shoes, sandals, and tennis shoes are found in Brasília, but it is difficult to find good fits, particularly for half and narrow sizes. Brazil manufactures many kinds of footwear available at a variety of prices, though for the most part the quality is inferior to shoes found in the U.S.

Children: Bring washable children's clothing, swimwear, and shoes. Include sweaters and lightweight jackets for cool nights and mornings. Blue jeans are a must for outside play. Light-colored play clothes stain easily from Brasília's red clay. Dress at the American School is informal; both boys and

girls may wear jeans. Elementary school-aged children wear shorts with short-sleeved shirts or T-shirts most of the year.

Supplies & Services

Toiletries and patent medicines of Brazilian manufacture may be bought locally. Many are U.S. brands manufactured under license and are expensive. Bring or order specialty items from the U.S. Bring all essential store items with you such as Tylenol, children's cough syrup, toothpaste, suntan lotion, contact lens solution, etc. If you have a baby or are expecting, bring all items with you. These items are imported to Brasília and the costs are about double that in the U.S. Baby food and diapers can be ordered through the commissary or the internet Netgrocer shopping service.

Litter boxes are not available in Brasília. Pet supply stores sell leashes, brushes, flea collars, and a few toys. Pet treats and rawhide chew sticks are available. Fleas are prevalent year round. Consult your veterinarian regarding flea repellents and flea collars. Anti-flea sprays and lotions, shampoos, etc. are roughly twice the price here than they are in the States. Program is also sold here, although it is more expensive than in the States.

Laundry and dry-cleaning services are available throughout Brasília.

Beauty shops and barbershops do acceptable work and some are reasonably priced. Specialty services such as hair coloring/frosting and perms are generally more expensive than in the U.S. Massages, manicures, and pedicures are available at varying prices.

Domestic Help

Part-time servants usually suffice, although full-time and live-in help are desired by some. Wages vary from USD 150-200 (at an exchange rate of R\$2 to USD 1) a month for live-in maids, plus the cost of various benefits guaranteed them under Brazil's Constitution.

In addition to wages, the employer of a live-in servant provides bed linens, towels, food, and, if desired, uniforms. Live in maids are sometimes scarce, as many prefer to work during the day only. House-keeping and laundry services are fair, but you must train the maids to use modern appliances.

Day cleaning personnel currently charge USD 15-20 per day (again, with an exchange rate of R\$2 to USD 1). They are generally available for 1 or 2 days a week per family, with services divided among two or three employers. The 1988 Constitution guarantees various rights to domestic workers.

Religious Activities

Brasília has many Catholic churches. An English-language mass is conducted each Saturday at one of the churches. Several Protestant churches and a Greek Orthodox church have congregations in Brasília. English-language worship services and religious instruction are held Sunday mornings by an interdenominational Protestant group and a Baptist church. A small Jewish cultural association welcomes members from the official and diplomatic communities. Services are conducted weekly and on all holidays at the local synagogue.

Education

The American School of Brasília (EAB) was founded in 1964 and offers preschool through grade 12 based on a U.S. public school curriculum. Instruction is in English, but English-speaking students are required to study Portuguese. The school has about 600 students from about 40 countries. Facilities include a soccer/softball field, a library with 10,000 volumes, a science lab, a computer classroom, a gym, and a canteen. Enrollment is close to school capacity.

The Southern Association of Colleges and Secondary Schools of the U.S. accredits the school. The lower school is recognized by the Secretary of Education in the Federal District. The educational allowance currently covers all school expenses

for grades K-12. Preschool is not covered by the educational allowance. The school year runs from early August to early June, with a one-week vacation at Carnaval and a four-week vacation during the Christmas season.

Some supervised extracurricular sports, as well as other after-school activities including band, are available, though they are quite limited, especially for the lower grades. Bring music materials, as they are expensive in Brasília.

EAB participates in sports and some academic competitions along with other American schools in Brazil and the region, giving students the opportunity to travel and take part in these events while meeting a variety of South American and international students.

Another school that is used by some in the American community in Brasília is the School of Nations, a B'hai school. Instruction is bilingual, one-half in English and one-half in Portuguese. The school is not accredited. The School of Nations offers instruction from pre-kindergarten through 11th grade and offers a US-based curriculum with a strong emphasis on diversity and values.

Preschool aged children may attend the Affinity Arts pre-school. There is a strong emphasis on music in the program along with other activities such as language, science, theater, swimming, cooking and playground.

Other schools in the Federal District include public, private, and parochial institutions. Instruction is given from nursery school through grade 12, but not in English. Children with a good background in Portuguese may attend these schools. Note: the Brazilian school year has summer vacation during December, January, and February, with a mid-term break in July.

Sports

Sociedade Hipica de Brasília (Horse Riding Club): This is the most complete and centrally located

Atlantic coast development, Rio de Janeiro, Brazil

Susan Rock. Reproduced by permission.

horse-riding club in Brasília. Horses are rented. Nonmembers can ride on weekends at scheduled times.

Other facilities include a social clubhouse with bar and restaurant, two swimming pools, tennis court, basketball, volleyball, soccer, and a large riding pavilion. Riding lessons are available.

The following clubs are available for membership, but memberships are extremely expensive: the Yacht Club of Brasília (late Clube), the Club of Nations (Clube das Nações and the Brasília Country Club, Cota Mil Yacht Club, and the Academia de Tennis (Tennis Academy). There are numerous commercial health clubs (called academias) whose fees are similar to health-club fees in the U.S.

Touring and Outdoor Activities

Brasília's Lake Paranoá is beautiful. However, floating debris and raw

sewage make all water-related activities in the lake unsafe. Swimming in pools is a popular pastime. Bring diving masks, goggles, and flippers if desired.

Brazil's national sport is soccer. Numerous games are played in Brasília between various amateur teams, and a small professional league. Brasília has a team in the national league.

Hunting for birds and small game is prohibited in all states except Rio Grande do Sul. Fishing for any but the smallest kinds of fish requires a 3- to 4-hour drive to the Verde River or an 8-hour drive to the Araguaia River in Goiás State. Excellent fishing is found on the Island of Bananal, accessible only by 1-1/2 hours' flight by small plane.

Brasília offers limited sightseeing with few museums and galleries. A well-laid out zoo houses several species of Brazilian wildlife and is con-

tinually expanding. You can view various types of vegetation and plant life can be seen at the botanical reserve.

Brasília's TV tower is the fourth tallest in the world at 715 feet. Oscar Niemeyer, the famous architect who designed much of Brasília, designed it. The top of the tower is 4,403 feet above sea level, and a lookout platform provides a panoramic view of the city and surrounding countryside. A "hippie" fair, featuring handicrafts, clothes, shoes, and wood and leather items, is held at the foot of the tower on Saturdays, Sundays, and holidays. There is a lovely gem museum located on the Center level of the TV tower. At Christmas, the tower is strung with lights to resemble an enormous Christmas tree.

An outstanding landmark in Brasília is the national flag flown on Three Powers Square. The enormous 286-square meter flag flies

from a 100-meter high flagpole that consists of 22 joined staffs representing the states of Brazil. A different Brazilian state donates a new flag on the first Sunday of every third month. The new flag is raised amidst a colorful ceremony with music and traditional folk dancing.

In late June, Brasília hosts the "Feira dos Estados," a charity state fair including state displays, local products, regional cuisine for sale, folk dancing performances, and a midway. Representatives of foreign countries also participate.

In May, one of the liveliest and most colorful festivals is the Cavalhadas in Pirenópolis about 2 hours from Brasília. During this brilliant pageant, richly caparisoned horses and riders simulate ancient Iberian Peninsula tournaments. Both fine horsemanship and wild stunt riding by masked riders are displayed in this fascinating folk festival.

Driving outside Brasília can be a pleasant pastime. The town of Cristalina, a gem seeker's paradise, is about 2 hours south of Brasília. The shops located around the town-square offer Brazilian precious and semiprecious stones and other gifts or souvenirs. You can visit some working pit mines a short drive out of town. A quaint country restaurant serving local fare is located in Luziania, mid-way between Brasília and Cristalina, and is a popular place to stop for lunch when returning from a shopping expedition.

Goiânia, about 2-3 hours southwest of Brasília, is the capital of Goiás and its largest city. The city, founded in 1933, is a planned city like Brasília. With an altitude much lower than Brasília's, it is warmer and more humid. Goiânia is a pretty town with tree-lined streets, interesting 1930s architecture, a centralized shopping center, good hotels, tall apartment buildings, and some excellent restaurants. On weekends, a "hippie fair" offers a variety of goods and crafts.

The beautiful Itiquira waterfalls, amid a rugged terrain, are located 2 hours north of Brasília over newly paved roads. For those interested in a health spa, a first-class resort hotel and several warm, natural pools are located near Caldas Novas, about 5 hours from Brasília in Goiás. Visit this resort for a relaxing 3-day weekend.

Travel to São Paulo - Brazil's largest city, or to Rio de Janeiro - world famous for its natural beauty - for a real change of pace and scenery. By highway, Rio is 753 miles and 15-20 hours away; São Paulo is 627 miles from Brasília with driving time of 14-17 hours. Frequent air connections to both cities are available. Air travel time is about 1-1/2 hours.

If you want to leave the main road, secondary roads are often unpaved and difficult. Four-wheel-drive vehicles are useful, especially for camping.

There are two softball seasons, and several coed teams, with participants from the American and international community. Bowling is available at Park Shopping.

The Parque da Cidade (City Park), located in Asa Sul, offers opportunities for outdoor activities such as bicycle riding, jogging, walking, paddleboats, children's amusement park, barbecue sites, etc. Additionally, one of the main highways is closed on Sundays and made available to bicyclists and joggers.

Entertainment

Dinner parties, cookouts and casual buffets are a popular form of home entertainment. The American Women's Club International (AWCI) organizes monthly meetings with speakers on various topics. Weekly and monthly AWCI activity groups meet to enjoy such things as tennis, bridge, playgroup, Portuguese conversation and social services work, to name just a few. The AWCI book clubs buy a wide selection of current bestsellers with membership fees. The American School sponsors a Christmas Bazaar, Fun Run, International

Fair, Flea Market, and two stage productions which are attended by the Brasília community at large. The Casa Thomas Jefferson, which is actually three Brazilian-American binational centers, sponsors art exhibits and musical events that feature both American and Brazilian artists and performers.

Brasília has many movie theaters. Admission costs are comparable to the U.S. English-language films are popular. Most films are American originals with Portuguese subtitles. Children's films tend to be dubbed. Some French and Italian films are also shown in the respective embassies as well as in Brazilian theaters.

The National Theater presents concerts and occasionally has ballet or other dance performances. The circus comes to town once a year, as do various foreign performers. The University of Brasília holds interesting performances by staff members in its music school. Military and police groups hold parades and other activities on various national holidays. Americans are welcome at all cultural and national celebrations.

Brasília has some nightclubs; most have dancing, some have floor shows. Several popular discotheques attract various age groups. Outdoor cafes featuring drinks and snacks are popular evening meeting places.

Shopping malls have movie theaters, a variety of shops and eateries. Park Shopping, adjacent to one of the largest supermarkets in the area, has eleven movie theaters, a 24 lane bowling alley built by Brunswick, a McDonald's, an international food court, and approximately 175 shops. Many other new malls have been built recently, including Brasília Shopping and Patio Brasil, each with stores, eateries and movie theaters. There is an arcade with small amusement rides and video games, and an in-door skating rink during the Christmas holidays.

Rio De Janeiro

Rio de Janeiro, the center of a metropolitan area of about 11 million people, offers one of the world's most beautiful physical settings. Set adjacent to an ocean bay off the Atlantic Ocean and facing south, Rio is surrounded by mountains with spectacular formations and tropical greenery, and is truly what its residents, the Cariocas, call the *Cidade Maravilhosa* (marvelous city). Its landmarks are the striking Sugar Loaf Mountain Pão de Açúcar and Corcovado Mountain with its famous Christ Statue overlooking the city. Brazil's seasons are the reverse of those in the U.S., with summer from December to March. Rio's normal temperatures range from 75 to 95°F. Extremes vary from 40°F during winter to 105°F in the hot, humid summer. Intense rainfall also occurs throughout the year and may occasionally cause severe flooding within the city itself. Infrequent landslides affect housing on mountain slopes in densely populated slum areas known as *favelas*.

The city was Brazil's capital until 1960, and many government offices are located here. Rio is a focus of transportation, communications, military, cultural and journalistic activity. However, its history is as a seashore resort famous for its beaches, Carnival, and its outgoing people. But the continued population increase within Rio has created other problems common to a megapolis: traffic congestion, air and noise pollution, and a high crime rate. Pollution and crime have, in fact, jeopardized the traditional tourist industry. The Department of State has designated the crime threat rating level for Rio as critical.

While Rio is cosmopolitan, Portuguese is necessary for everyday use (shopping, newspapers, and social events). Its beaches are often a focal point for recreational activities but they can be overcrowded and polluted.

Cariocas commonly refer to Rio being divided into three residential areas: Zona Sul (South Zone) and

Zona Norte (North Zone) and Barra da Tijuca. There is a mountain range, which forms a spectacular, scenic separation between the zones. The Zona Sul area is significantly smaller, less than 1 million people and is also the area where virtually all official Americans reside. The sparsely populated area known as Centro, separates the relatively more affluent south zone from poorer neighborhoods in the north zone.

Another fast-growing and relatively new part of Rio de Janeiro is the southern suburb of Barra da Tijuca. This area which was once considered out of town is the fastest growing district in the city. Barra da Tijuca features several large shopping centers as well as large megamarkets, which include everything from groceries to clothes to hardware to car supplies (i.e., similar to Super Wal-Marts in the States). In addition to the shopping, dozens of new condominiums have sprung up. American fast food outlets are common. Office parks are also being built, not to mention major amusement parks. Barra da Tijuca is also home to the cleanest beaches in the city of Rio de Janeiro.

The American community in Rio is fairly large, with about 6,000 registered at the Consulate General. Only a relatively small number participate in activities that bring the expatriate community together. Rio's American Society organization is active. The American business community in Rio is strongly represented with Fortune 500 firms. The American Chamber of Commerce meets regularly and maintains full-time offices. However, significant reductions in the presence of American businessmen have had a marked affect on community life, including reduced enrollment by American students at the American School of Rio.

Food

Rio has many large supermarkets. Selection is generally good. Many employees purchase fresh produce from weekly markets (*feiras*) that rotate through residential areas;

costs can be higher but the quality is better. Each neighborhood has its own smaller grocery store, butcher, bakery, and other specialty shops which results in decentralized frequent shopping (Brazilians often shop on a daily basis). Local beef is not aged and lacks tenderness but is reasonably priced; lamb is generally not available. Fish and seafood are plentiful, but expensive. The COBAL in Leblon is another market similar to the *feiras*, but is covered. It is open Tuesday through Sunday. Fresh fruits, vegetables, fresh cut flowers, meat, seafood and poultry are available. The prices vary from stand to stand, but the quality is similar to those at the *feiras* or (better).

Recognized international and U.S. food companies manufacture many of their products in Brazil but retail prices are higher than in the U.S. Employees are supplied bottled drinking water. One and a half liter plastic bottles are now available at the supermarket; larger size containers can be home-delivered.

Clothing

General: Bring lightweight, washable, comfortable clothing. Dry-cleaning is available but is expensive and not always reliable. Small clothing stores line shopping malls and shopping areas with reasonable selections and often focus on designer clothing. During summer days, beachwear is frequently the norm in shopping areas and restaurants. Shoes available here may not conform to U.S. sizes or durability. Good sandals and casual shoes are available locally. Shoe repair workmanship is good and reasonably priced.

Women: Although temperature differences between summer and winter are not wide, seasonal differences in dress are noticed. In summer, bright, gay colors, and patterns in lightweight materials predominate; in winter, lightweight woollens and knits in darker tones appear. A light jacket is occasionally needed, and during damp, rainy weather, a sweater or sweatshirt would be comfortable. Slacks and jogging

suits are worn year round. Hose is rarely worn, except on dressier occasions or in office settings. Locally produced panty hose is of variable quality, so bring a supply from the U.S. A good selection of casual wear is a must for both seasons.

Bikinis dominate beach wear (Cariocas actually prefer the even briefer tanga), but all styles are worn. Frequent swimmers or sunbathers should have several changes of beachwear to avoid drying problems. All styles of swimsuits and beach cover-ups are available locally, but larger sizes (above a US size 10) may be difficult to find. Evening social events require dressier clothing. Brazilian women favor long or very short dresses of silk and other fine materials. Dressy cottons and synthetics are practical.

Many seamstresses are available, but finding the right one is difficult. Some prefer to work in their own homes; others will work in a customer's home and must be provided a sewing machine. U.S. patterns are not available locally; some seamstresses make their own patterns, use those in Brazilian fashion magazines, or copy from ready made clothing or pictures. If you sew, bring a supply of U.S. patterns. A wide variety of Brazilian textiles, some in wash-and-wear materials, is available. Many fabrics are not preshrunk. Quality materials cost more than U.S. goods.

Stylish belts, costume jewelry, purses and other accessories are available in Rio. Brazilian gems and jewelry designs are world renown. The quality of Brazilian ready-made clothing is adequate, but expensive. Women's sizes are not comparable to those in the U.S., particularly undergarments. Bring an ample supply of hot weather clothes, as during the long summer, repeated laundering and intense sun cause fabrics to fade and lose body.

Men: Heavy wool suits are never necessary. Suits of lightweight wool, linen, or other natural fiber are comfortable and practical. Dark

suits are useful for evening events. The need for formal clothing is negligible in Rio.

Raincoats or overcoats are rarely seen on men except during a cool winter's rain. Ready-made suits in various materials are available locally, but cuts differ from the U.S. Tailors are expensive but offer quality continental-style tailoring.

Sports clothing is necessary. Long sleeved sports shirts in conservative colors and sports jackets are commonly worn to social functions and restaurants. A wide variety of good-quality sports clothes, including jeans, is available locally at prices roughly comparable to those in the U.S. Bring cheap, generic baseball caps for use on the beach. Cotton sweaters and light jackets are useful on cooler days.

Children: Children's shoes and clothes are more expensive and sometimes less durable. Most families order clothes from U.S. catalog companies.

Supplies and Services

Rio has several large shopping areas and malls where one can find both local and imported products. The variety is impressive. More specialized malls include the São Conrado Fashion Mall, emphasizing clothing, and the Rio Design Center in Leblon, with beautiful furniture and decorative accent pieces for the home. Many international pharmaceutical and cosmetic companies manufacture locally under license. Suntan lotion is an expensive item in Brazil. Appliances, household tools, electrical supplies, plastic ware, and a wide range of consumer goods are manufactured locally. In most instances, prices are higher than comparable U.S. items.

Beauty shops and barbershops abound. Prices are generally higher than U.S. levels, depending on location and reputation of the shop. Quality is good if language is no barrier. Some hairdressers for both men and women have trained in either the U.S. or Europe. Repair costs for electrical equipment and

appliances, such as radios and TVs, are higher than U.S. prices. Reliable service is a problem.

Print film can be developed locally and 1-hour processing is available. Several good automobile repair shops exist. General bodywork is adequate but more sophisticated electronic repairs are difficult to obtain. Costs are sometimes high, especially for spare parts, and estimates should be requested before repairs are authorized. Spare parts for U.S. cars must be imported; tires are available locally for U.S. cars. Repair services for Brazilian made cars (Chevrolet, Ford, Fiat and VW) are good.

Domestic Help

The quality of domestic help varies and turnover is high. Domestic workers who have worked for other Americans are helpful, but few understand English, and you need at least a rudimentary knowledge of Portuguese. Most apartments have domestic quarters that are located off of the kitchen area. Employers furnish room and board, uniforms, and linens. A cook or housekeeper currently receives about \$200-\$400 monthly, plus the Brazilian Social Security contribution, currently 12% of salary. Day workers are paid from \$20 to \$40 per day plus lunch. Occasionally transportation cost will be assessed.

Religious Activities

Brazil is the most populous Roman Catholic nation in the world. Many Catholic churches are found in Rio. The Chapel of Our Lady of Mercy has services in English.

Protestant churches with English language services include the Union Church, a Protestant nondenominational church; the Christ Church (American Episcopal Church of England), which has an international membership; the International Baptist Church; the Christian Science; and the English Lutheran.

Jewish services are held at the Sinagoga Copacabana (Orthodox), the Associação Religiosa Israelita

(Conservative), and the Centro Israelita Brasileiro (highly Conservative, Sephardic). All services are in Hebrew.

Education

The American School, Escola Americana of Rio de Janeiro (EARJ), is a coeducational school offering a U.S. curriculum from pre-school through grade 12, including the International Baccalaureate degree. Accredited by the Southern Association of Colleges and Secondary Schools of the U.S., it is a member of the National Association of Independent Schools. Its enrollment is about 1,000, and U.S. colleges readily accept its graduates. The faculty numbers 118 (37 Americans). Students with American citizenship make up about 10% of the student body with about 85% being Brazilian students.

The first semester begins in early August and runs to mid-December; the second term runs from early February to mid-June. Extracurricular activities are at an extra expense. Classes are 5 days weekly, from 8:00 a.m. to 2:30 p.m., in a modern, hillside complex of 9 interconnected buildings. Full cafeteria facilities are available; extracurricular activities are similar to those in U.S. schools. School buses serve most residential areas.

Arrangements for enrollment can be made directly with the Escola Americana, Estrada da Gavea, 132, Gavea Rio de Janeiro, RJ 22451-260 Brazil.

Our Lady of Mercy School, a coeducational Catholic school, follows an American curriculum for grades 1 through 12. The U.S. Southern Association of Colleges and Secondary Schools accredits the school. The school is sponsored by the Society of Our Lady of Mercy and provides a chapel for English-speaking Catholics. Graduates have been readily accepted in U.S. colleges. Our Lady of Mercy also offers a pre-nursery school program for children age 2 and up.

The school term is similar to the American School. Hot lunches are available. Extracurricular activities are similar to those in U.S. Schools. Make enrollment arrangements directly with the Headmaster, Rua Visconde de Caravelas 48, Botafogo, Rio de Janeiro RJ 22271-030, Brazil.

The British School is coeducational and offers instruction from pre-nursery through age 13. Following a British curriculum, it qualifies students for the British common entrance examinations. School terms are from February to July and August to December. Lunch is provided for all, except pre-nursery and kindergarten children who go home at noon. Large playground and playing fields are available for sports. School bus transportation is available. Average class size is 24. Enrollment is arranged through the Headmaster, The British School, Rua da Matriz, 76, Botafogo Rio de Janeiro, RJ 22260-100 Brazil.

Several pre-schools accept children as young as 1 year old. One such institution, St. Patrick's, teaches in English. All are more expensive than comparable U.S. facilities. Bus service is available for many. Arrangements for these schools may be made after you arrive at post. Generally, St. Patrick's accepts children age 2 and up. Classes are taught in English through the 4th grade.

Special Education Opportunities

Working knowledge of Portuguese greatly enhances any trip to Rio. Portuguese language training is available through various institutions. The Brazilian-U.S. Institute offers frequent Portuguese language courses. Tutors for private lessons are available. Portuguese courses are also available at any of several local universities. There are no programs of higher learning in the English language in Rio.

Sports

The main recreational activities relate to the beach. The popular beach promenades have all been

illuminated and are now enjoyed by many both day and night. Games of soccer, volleyball and that incredible combination of the two, fute volley, seem to be going on 24 hours of the day. There are no public recreational facilities with swimming pools or golf courses. Club memberships within Rio range in price from the nicely affordable (Clube Flamengo) to the extravagantly expensive (Country Clube). While a few apartment buildings have facilities reserved for tenants, most buildings do not. The city does have a bicycle path that follows along certain beach areas. On Sundays and holidays, half of the primary beach avenue is closed to normal traffic to the great enjoyment of walkers, joggers, cyclists, and rollerbladers.

Soccer is the national sport. Brazil won the 1994 World Cup; the popularity of the sport is reflected by the size of Rio's Maracaña Stadium. It is one of the world's largest, originally configured to seat 200,000 people. The nearby smaller Maracañzinho Stadium is used for special events, such as ice shows and basketball games. Neighborhood soccer and volleyball games are also played frequently, as are weekend games on nearly every beach.

Rio's extensive beaches are popular for swimming, boogie boarding, and surfing but one must be alert to publicized, regular health warnings and avoid dangerous levels of water pollution. The advisability of beach swimming is published daily in the local newspapers. Strong undertow is also a common hazard. Many people with their own transportation travel to cleaner, less heavily populated beaches south of the city.

Sports equipment is manufactured locally and imported, but prices are generally higher than U.S. prices. Be sure to bring your bicycles and rollerblades.

Touring and Outdoor Activities

As a transportation and communications center, Rio offers excellent opportunities for touring all parts of Brazil. The cost of domestic air

transportation is high. If possible, try to purchase the special Brazil Air Pass from the Brazilian carrier Varig prior to your arrival (not all travel agents can/ will sell these since one purchase requirement may be the possession of a round trip ticket to Brazil from the U.S.).

For overland travel, many highways are good but sometimes crowded. Brazilian drivers are impatient in heavy traffic. Highway fatality rates are among the highest in the world. Night highway driving is exceptionally dangerous and is not recommended. Bus service, including the sleeper bus, is frequent, and not overly expensive. The bus conditions are varied but can be cramped.

An automobile trip of about an hour and a half will lead you to cooler mountain areas. Quaint colonial cities, lovely seaside communities, and modern industrial centers are all within a 3-6 hour drive. Few roadside motel accommodations are available; lodgings at major destinations are satisfactory.

Camping, hang-gliding, surfing, surf fishing, mountain climbing, and water skiing are other activities available within Rio's vicinity. Deep-sea fishing is fair but expensive; freshwater fishing is available in the mountains. Hunting is prohibited in Brazil, except in Rio Grande do Sul.

Entertainment

The greatest single annual entertainment event in Rio is its famed Carnival. During the 4 nights and 3 days preceding Ash Wednesday, commercial and official activities come to a complete standstill. Then samba schools, street parades, and night-long parties dominate Rio's scene. Carnival also attracts many foreign visitors. Tickets for Carnival balls and main parade seating are relatively expensive but the events, especially the parades, are exceptional and should not be missed.

From June to September, outstanding Brazilian and foreign artists offer varied programs of music,

opera, and dance at several theaters. The Brazilian theater season is year round; both original Brazilian works and foreign plays are presented in Portuguese, and in an informal off-Broadway style. Children's plays are offered regularly in Portuguese. An English-language small theater group offers productions and performance opportunities on an irregular basis.

Nightclubs and small boate offer shows of varying quality; many feature jazz, samba music, and dancers. Well known foreign entertainers and groups appear occasionally at some larger theaters and nightclubs.

Movie theaters are numerous and good. First-run American and European films are shown with original dialogue and Portuguese subtitles at prices comparable to the U.S. Late-night network TV sometimes features programs in English. Rio has several good TV stations, which can help improve Portuguese language abilities. Many neighborhoods offer cable TV for a monthly fee with programs such as CNN, ESPN, and MTV Excellent FM radio broadcasting is also available.

Restaurants offer varied national and international cuisine at comparable U.S. prices. A churrascaria (specializing in barbecued meat) is a popular type of Rio restaurant.

Many art and historical museums are available. Rio also has interesting and photogenic churches, a large botanical garden, a major tropical forest park (Tijuca National Park), and a zoological park. Art galleries abound, and although prices of established Brazilian artists are high by U.S. standards, new painters always await discovery. Art courses in Portuguese are available at the Parque Lage, the Museum of Modern Art, and the Catholic University.

Rio has no English-language newspapers. Local newsstands regularly offer the Miami Herald and the International Herald Tribune; individual subscriptions can be

arranged at reduced cost, but are still expensive. English language editions of some leading U.S. news magazines are also available.

Social Activities

The American Society and the International Newcomers Club help integrate the social activities of the American community. Another organization, "The Players," has periodic English language performances that provide opportunities related to the theater.

São Paulo

São Paulo is the largest and one of the fastest growing cities in South America. It is a thriving metropolis of contrasts, with skyscrapers built alongside small, residential houses; narrow cobblestone streets feed wide avenues; street vendors hawk their wares near five star hotels. A dynamic city rich in historic and modern culture, it boasts three symphony orchestras, many fine art galleries, and an international selection of museums. Thousands of avid spectators follow everything from soccer matches to horse races. São Paulo is the industrial and financial heart of Brazil, and the bustling city sets a pace that resembles New York City. [It is also home to fine restaurants, theaters, nightclubs, first-run movie theatres, and performances by major international stars.] With something of appeal from every point of view, these inviting contrasts make living and working in São Paulo exciting, interesting and challenging.

Utilities

The water supply is plentiful in São Paulo. Water pressure is reasonable in all areas of the city. All parts of the city now have fluoridated water, although levels of fluoridation are below recommended U.S. levels. Tap water is not consistently potable anywhere in Brazil. Electric current is 110v 60 cycle, AC; 220v, 3-phase, AC, is available for ranges, high-voltage heaters, and dryers. Power interruptions are uncommon, though voltage regulators are recommended for occasional current

Aerial view of Sao Paulo, Brazil

fluctuations. Electrical outlets vary even within households and you will need several different types of adapters. They are available locally for a reasonable price, but you may want to bring an assortment.

In the past, U. S.-made appliances were preferred for quality and price to local products. However, appliances are now increasingly comparable to U.S. products in price, quality and availability.

Like any large U.S. city, São Paulo has a wide variety of local radio stations, including several FM stations with continuous (mostly American and Brazilian popular) music, classical music and talk radio. Radio

short-wave bands receive VOA and BBC in the evening.

Local TV is on the PAL-M system, so U.S.-purchased sets (NTSC or European PAL sets) will only receive in black and white, unless modified-a process that is commonly performed for around 150 Reals. Videocassette recorders are popular and video clubs like Blockbuster are plentiful. However, U.S. VCRs are not compatible with PAL-M-only TVs and must be converted, the cost of which is about 100 Reals. Cable is available at costs comparable to U.S. prices.

São Paulo winters can be cold and damp. The temperature rarely drops below 32 Fahrenheit, and cen-

tral heating is nonexistent. Electric blankets and space heaters are recommended. Blankets and comforters are more expensive in São Paulo, so bring a sufficient supply. As a side note, pollution tends to be heavier in the winter months. Occasionally, this affects individuals with allergies or respiratory problems. You may want to bring air purifiers.

Food

Most foods are available locally. Pasteurized fresh milk, butter, cheeses, and other products are plentiful. Almost all fresh fruits and vegetables are available year round in supermarkets, as well as open-air fruit and vegetable markets. Oranges, tangerines, bananas, pineapples, papayas, melons, mangoes, and other fruits are always in season. Locally grown apples, pears, peaches, plums, strawberries, and grapes are available seasonally, and imported varieties, year round. Ample supplies of meat and fish exist. American-type supermarkets and European-style hypermarkets carry locally made goods that compare with U.S. brands. Some of these supermarkets also offer U.S. cuts of beef (Brazilian cuts differ markedly from U.S. cuts). Local wines and spirits are of good quality.

Clothing

Although São Paulo's climate is milder than that of the northeastern U.S., bring clothes for cool and rainy weather, including sweaters, fall suits, raincoats, and umbrellas. Rain is common in São Paulo and during the summer there can be heavy rainstorms each afternoon. Every family member needs at least one good umbrella. Temperatures vary, so layered dressing is important. Fall and winter (June - October) can be chilly. Bring light and warm clothing that can be worn indoors due to of lack of central heating. An all-weather coat with removable lining should meet your outdoor needs. Those accustomed to living in very warm climates may need a pair of gloves, a scarf, and a knit hat.

Local shoes vary in quality though shoes are stylish and easily found although narrow widths are not readily available. Walking shoes are a must and, due to uneven, cobblestone sidewalks, occasional heel repair is necessary. Leather is of good quality. São Paulo is a high fashion city; every new fashion can be seen and is acceptable, from conservative to trendy. All types of sports goods and clothing are sold in São Paulo, at prices similar to those found in the U.S.

Dress for social functions is often business attire, depending on the nature of the event. Tuxedo or formal dress rental places are abundant throughout the city. Long dresses are seldom worn to formal dinners. For women, local lingerie, hose, and other nylon clothing are of lesser quality than U.S. made products, but are readily available.

Supplies and Services

It is important to note that the Brazilian economy is drastically changing and therefore it is difficult to state with certainty that Brazilian-made products are higher or lower in cost relative to the U.S., although imported items are generally higher-priced (e.g., some clothing, luxury items). The cost of living is comparable to that in Washington, D.C. Dining out, food purchases, and entertainment (theater, movies, etc.) cost the same or less.

Miscellaneous toiletries, cosmetics, household needs, cigarettes, tobacco, and liquor products are sold on the Brazilian market. However, not every brand is consistently available. American-style supermarkets and superstores like Walmart and Sam's Club sell all types of household cleaning equipment. Prescription and nonprescription drugs, many made by subsidiaries of U.S. or European companies, are available at reasonable prices. Imported cosmetics are more expensive, but some U.S. brand names (Revlon, Helena Rubinstein, etc.) are manufactured locally. Travellers with infants or small children may want to bring disposable diapers, a supply of baby food, any special

Cathedral Brasilia, Brasilia, Brazil

AP/Wide World Photos, Inc. Reproduced by permission.

baby formula, and a bottle warmer in accompanied airfreight. Disposable diapers are available locally, but are expensive.

Dry-cleaning and laundry services are common and equal to U.S. prices. Shoe repair is inexpensive, workmanship is good, and rubber and leather are used for heels and heel tips. Nylon is not generally available. Hair salons are less expensive than in the U.S.; work is good and reasonably priced. Consider bringing your favorite hair shampoos, rinses, and sprays, as these are not consistently available. Repair work on watches, radios, stereos, televisions, and other electrical appliances is good.

The quality of auto maintenance and repair facilities is inconsistent. Repair work is good, but most services take more time than in the U.S. GM, Ford, Fiat, and VW produce cars locally at favorable prices.

Domestic Help

Domestic help is readily available, but trained servants are hard to find and few speak English. Salaries depend on class of servant, i.e., trained cooks earn R\$100 to R\$150 a week; live-in housekeeper, R\$100 and up. Staff with newborns often hire a live-in nurse who has had about 6 months of formal education in pediatric nursing. The live-in nurse earns around R\$125 a week. Families with older children often

employ a live-in nanny. Salaries may change as the economy settles.

Brazilian houses and apartments are designed with a maid's room and private bath, located near the laundry and kitchen area. Employers can provide uniforms, and live-ins normally receive bedding, towels, and furniture. Servants get one day off weekly, plus major national and religious holidays. Under the Brazilian Constitution, employers must give servants a 13th-month bonus equal to one month's salary or prorated to the length-of-employment during the year. Also, the employer must contribute to the local Brazilian retirement system for the domestic employee.

Medical Care

São Paulo has very competent doctors and dentists. Many speak English and were trained in the U.S. Quality orthodontic services are available as well. In general, the costs for an office visit are equal to fees in the U.S. Maternity and other in-hospital care is good, despite a lack of thorough training for support personnel.

Religious Activities

São Paulo has many churches and synagogues. Many Protestant churches, including the Fellowship Community Church, inter-denominational; St. Paul's (Anglican); Calvary International Church; First Church of Christ Scientist; and the Church of Jesus Christ of Latter Day Saints, hold English-language services. The American priests of the Order of the Oblate Fathers conduct services in English at the Chapel School. A Greek Orthodox Cathedral also exists. The city has several synagogues. The largest, Congregação Israelita Paulista, follows the conservative traditions and has an American rabbi.

Religious-oriented summer camps are available for children.

Education

Three schools in São Paulo follow the U.S. public school curriculum: the São Paulo Graded School, the Chapel School (School of Mary

Immaculate), and the Pan American Christian Academy. The Southern Association of Colleges and Schools accredits all three schools.

The local Chamber of Commerce established the São Paulo Graded School, in 1929. The faculty, though predominantly American, employs teachers of several nationalities. Instruction is from kindergarten through grade 12. There is also a large preschool for 3-year-olds and older. The preschool and lower grades are taught on a modified Montessori program. The school follows curriculum standards of New York State. Enrollment is about 1,168; 38% are U.S. citizens. Facilities include a gym, auditorium, science labs, computer center, satellite TV, libraries, and a cafeteria serving hot lunches. Buses serve all residential areas. Most sports played in the U.S., except American football, are offered; teams compete within the school and with other American schools in Brazil. Additional extracurricular activities include theater, yearbook, and scouting. A program for students with special learning problems is available.

Felician Sisters and lay teachers staff Escola Maria Imaculada (The Chapel School) under the direction of the Oblate Fathers of Mary Immaculate. Instruction is from nursery school through grade 12. Advanced placement and the International Baccalaureate are integral parts of its quality academic program. Most graduates are accepted into universities and colleges of their first choice. The students represent over 30 countries; 40% of the students are non-Catholics and enrollment is 700; 25% are U.S. citizens. Facilities include: two libraries, a gym, a large playing field, a cafeteria, an auditorium, science labs, a computer center, an audiovisual room, an infirmary staffed by a nurse, and a student union. Organized sports include soccer, basketball, gymnastics, softball, tennis, handball, and volleyball both varsity and junior varsity teams. The school is a member of the São Paulo High School League. Twice a year, sports meets are held

with American schools in São Paulo, Brasilia, and Rio de Janeiro at alternating locations. Additional extracurricular activities include judo, cooking, ballet, debating, choral groups, and band.

The Pan-American Christian Academy is operated by evangelical missionaries and is located some distance outside the city. Instruction from kindergarten through grade 12 is conducted in English. The level of instruction and discipline is reportedly high. Enrollment is approximately 317; 40% are U.S. citizens.

Each school begins in early August and runs through early June, with a 6-week midyear vacation in December and January. Requirements for enrollment are similar to those in the U.S. Schools adequately prepare students for entrance into U.S. colleges and universities.

Two preschool programs often used by American families are: Playpen, a Montessori school that has classes in English, and Portuguese and Tiny Tots, a preschool operated by a British-Brazilian family, with instruction in both English and Portuguese. Both often offer instruction during periods when the major schools (Graded, Chapel, etc.) are not in session. There are numerous other preschool programs in Portuguese throughout the city.

Tuition costs vary according to school and grade, with higher costs for middle school and senior high school.

A French-language school and a British school, St. Paul's, are also available. Also, many Brazilian nursery schools and kindergartens offer excellent, inexpensive programs. The required Portuguese language programs at the American schools are good, but some families send younger children to a public or private Brazilian school to learn Portuguese. Most Brazilian schools do not have facilities for children with speech or learning problems. Differences exist in preparation for American and Brazilian universi-

ties; therefore it is not recommended that you use Brazilian schools beyond the primary level.

Special Educational Opportunities

Although São Paulo has several fine universities, among which are the University of São Paulo, Mackenzie University, and Fundacao Getulio Vargas (FGV), you must be fluent in Portuguese in order to take advantage of their study programs. The Alumni Association and Uniao Cultural, two U.S. Brazil binational centers in the city, offer Portuguese language courses that can be used to supplement the post's language training program. However, there are certain opportunities for educational advancement available in English.

Through the Graded School, graduate level education courses are periodically offered for teachers, parents, and community members, with priority for enrollment in that order. These courses are taught by visiting professors from U.S. universities. The Graded School also offers courses in computers for teachers, parents, and members of the community. Other computer courses, in English and Portuguese, are available at private institutes throughout the city. Many schools of dance, adult exercise classes, and tutors in music, ballet, and painting are available.

Sports

Like other metropolis areas, São Paulo has various spectator sports. The most popular sport is soccer. Horse, auto and motorcycle racing, basketball games, tennis and golf tournaments, sailing regattas, polo, boxing, and wrestling matches complete the picture. São Paulo has no public golf courses or tennis courts, but many private tennis, squash, and racquetball courts are widely available on a pay-as-you-go basis. Private clubs include facilities for golf, tennis, swimming, horseback riding, boating, and basketball. Membership is expensive.

Most sporting equipment sold locally is comparable to price and quality of products in the U.S.

Touring and Outdoor Activities

The area around São Paulo is ideal for weekend excursions. Many beach and mountain resorts are within 100 miles of São Paulo and connected by good roads. Hotel quality and prices vary greatly, though most are very reasonable. Weekend houses are sometimes available for rent. The northern coast has various little towns and pristine beaches where hotel rooms are as little as \$15 a night and rental boats will take you to secluded natural pools.

Iguaçu Falls (2 hours by air) offers one of Latin America's unique tourist sights. You may want to take an extra day to visit the falls from the Argentine side. The huge Itaipu hydroelectric project is nearby. Other popular outings for weekends or vacations include Rio de Janeiro; Ouro Preto, a mining town in Minas Gerais, with colonial baroque churches and other old towns nearby; Campos do Jordão; and Brasilia, a stunning example of city planning and modern architecture. Local travel agencies can be helpful in obtaining tour packages throughout Brazil and to other South American locations. São Paulo and Mato Grosso offer excellent fishing and camping along the coast.

Weekly artist fairs are held on Sundays at the Praça da Republica, in the Asian neighborhood of Liberdade, and in Embu, on the outskirts of São Paulo. These fairs offer local artwork, handicrafts, and geological specimens. The city also has many shopping facilities reminiscent of those in American cities.

Entertainment

São Paulo offers excellent, professional theater in Portuguese. During winter, several symphonies often offer concerts, some with guest soloists. Operas are presented and local and touring concert groups and ballet companies also perform. Most movie theaters feature first-

run American or foreign movies, as well as many Brazilian films. Foreign movies are usually shown with Portuguese subtitles. The city has many world-class art museums and galleries. Every 2 years, São Paulo hosts the Biennial, an internationally important modern art exposition, with extensive multinational representation.

With about 25,000 restaurants, cafes, and bars, São Paulo is one of the world's greatest cities for dining out. The city is especially rich in Italian, Japanese, and continental restaurants, and almost all ethnic communities are well represented. Brazilian churrascarias abound, serving a wide variety of richly seasoned, grilled meats accompanied by generous salad bars and side dishes. Fast food branches of American chains or local imitations are increasingly available.

Social Activities

There is a wide range of both business and social events, while home entertaining is also common. Much of the entertaining in the American community consists of luncheons and dinners.

The Newcomers Club, an English speaking club composed of all nationalities, is open to individuals for their first 2 years in Brazil. The club helps newcomers get acquainted and settled, and provides an opportunity for members to exchange information. Social activities include coffees and teas, museum outings, luncheons, dinners, book exchanges, and trips.

The American Society is a social and philanthropic organization for Americans in São Paulo. It organizes an annual field day for American Society members on the Fourth of July, an eggnog party at Christmas, and sponsors other social activities during the year. The American Society also issues an annual directory of members, a handy classified shopper's guide in English, and publishes a monthly newspaper with news of the English-speaking community. The American Society has a welfare pro-

gram that provides financial, medical, and educational assistance to U.S. citizens in distress and also sponsors little league baseball, soccer, and flag football.

The São Paulo Women's Club, an international English-speaking club, provides social, cultural, and charitable activities. These include two book clubs, a free circulating library, a chorus, small theater group, current events group, and classes in bookbinding, painting, languages, and gems.

Masons, Rotary, and Lions clubs meet regularly in São Paulo. Illinois and São Paulo participate in a program called Joint Partners of the Americas. Finally, the PTAs of the three American schools sponsor many children's activities, such as sports teams and competitions, scouting, drama, dances, and school trips.

Special Information

If you are traveling between June and October, include cool weather clothing in accompanied baggage; other times bring warm weather clothing.

The winter is brief but can be chilly. An all-weather coat with zip out lining should meet your needs. Those accustomed to living in warm climates may need a pair of gloves, a scarf, and a knit hat. Children need a warm jacket. For the rest of the year, cardigan and pullover sweaters and sweatshirts in assorted weights will suffice.

It rains nearly every afternoon in summer (December to February). Therefore, each family member needs at least one good umbrella. Plastic rainwear is uncomfortable, and a lightweight cloth raincoat would be preferable. Footwear for wet weather is also useful.

Travelers with infants or small children should include disposable diapers, a supply of baby food, any special baby formula, and a bottle warmer in accompanied airfreight.

Disposable diapers are available locally, but are expensive and of poor quality.

São Paulo has competent doctors and dentists. Many speak English and were trained in the U.S. Their fees for an office visit are higher than fees in the U.S. Adequate orthodontic services are available at prices higher than those in the U.S.

Maternity and other hospital care is good, despite the absence of thorough training for support personnel. Admission to private institutions, even for an emergency, requires a substantial cash deposit if you do not belong to a local health plan.

São Paulo is a major metropolitan area with all the noise, pollution, and congestion found in large cities. Pollution levels are high, which affects those with allergies or respiratory problems. Heavy traffic and noise are common problems.

Recife

Recife, a city of startling contrasts, stretches 30 miles along Brazil's east coast. Miles of attractive beaches front the modern, luxury suburbs of Boa Viagem and Piedade at the city's southern tip. The central city, situated on two islands and the delta formed by the Capibaribe and Beberibe Rivers, is laced with numerous old and new bridges. It is a bustling, dynamic area, with thousands of taxis and small passenger vans clogging the narrow streets. The total absence of a grid system, the rivers winding through the city, and maze of one-way streets (at times unmarked) make finding one's way a challenge.

Recife's many small parks and plazas are well maintained. The thriving open market, Mercado de São Jose, is a principal tourist attraction, as are feiras (smaller markets) scattered throughout the city. Colonial Portuguese churches abound, the railroad station is a well-restored Victorian marvel, and an adjacent former prison has been converted into the Casa da Cultura, where hundreds of stalls feature

local handicrafts. Neighboring Olinda is considered one of Brazil's greatest colonial treasures and offers a fascinating glimpse into 17th century architecture.

Recife is the capital of Pernambuco and is the principal port city of Brazil's developing northeast. It is the commercial, cultural, and political center of the consular district, which has about 40 million people. The city has 2 million inhabitants; the greater metropolitan area has 3.5-4 million inhabitants. The city skyline is an impressive jumble of modern skyscrapers and sturdy old church towers. Residential areas along the Boa Viagem, Piedade and Candeias beaches feature kilometers of 2030 story apartment buildings.

Developing industrialization includes sugar refining, alcohol distillation, truck assembly, aluminum fabrication, and the manufacture of textiles, rum, vegetable oils, leather, glass, ceramics, canned goods, pharmaceuticals, paint, electronic equipment, and synthetic rubber. Tourism is an expanding industry with a growing influx of tourists traveling from southern Brazil during winter and summer and from Europe in winter. Agriculture remains the base of the Pernambuco economy; sugar has been the principal crop for over 300 years. Cotton raised in the interior, sisal, livestock, and fruits, vegetables, and grain crops are also economically important. Over the past few years, Brazil's largest center for the production of irrigated tropical fruit has developed in Petrolina, about 700 km west of Recife.

The countryside surrounding Recife is tropical, hilly, and fertile; it reaches inland some 20-30 miles. The undulating foothills and low mountains of the drier agreste region offer some relief from the tropical monotony of the coast. The agreste gives way to the semiarid sertão which stretches far into the central regions of the Northeast. It is dry and desolate most of the year; its cowboy folklore reminds one of the American southwest. Its loca-

tion on the eastern extremity of Brazil places Recife about 1,500 miles across the south Atlantic from Dakar, Senegal, and about 1,300 miles north of São Paulo. Recife's geographic location makes it an important refueling point for transatlantic flights from South America to Europe. There are currently several non-stop flights a week to Miami as well as to destinations in Europe. Local connections to other Brazilian cities are also widely available and deregulation in recent years has led to a drop in domestic airfares. While few American tourists visit Recife, increasing numbers are visiting other beach cities in the consular district, most notably Natal and Fortaleza. Fernando de Noronha, an archipelago approximately 400 miles northeast of Recife which belongs to Pernambuco state, is rapidly gaining international notoriety as a destination for ecotourism.

Recife is located on the eastern edge of Brazil's time zone; sun time is over an hour ahead of clock time. Throughout the year it is dark soon after the Consulate closes at 5 pm, and there are never daylight hours for outdoor activities in the evening. Many Brazilians rise with the sun at 4:30 or 5:30 am and exercise on Boa Viagem beach or use the 8-kilometer walkway that stretches the length of the beach. For the late starter, for whom vigorous early morning exercise has little appeal, there are other options, including golf, equestrian sports and sports facilities at local clubs.

Recife has year-round rainfall, but the winter rainy season (May-September) has heavy daily rains that account for most of the annual 77 inches along the Pernambuco coast. Summer (October-April) is drier, with many clear, beautiful days. During the winter rainy season humidity is high and temperature variations are slight; the thermometer rises from 80°F to almost 90 degrees F, distinguishing winter from summer. The Northeast averages 250 days of sun per year, and the sun shines at least part of the day even during the rainy season.

The climate is not unbearably tropical, due to prevailing trade winds. Nevertheless, many expatriates experience problems with upper respiratory allergies during the rainy season, and post has obtained dehumidifiers to alleviate problems with some success.

Brazilians are a mixture of many ethnic groups: Portuguese, African, and Brazilian Indian backgrounds predominate in the Northeast. The largest foreign community is Portuguese, but small French, German, Israeli, Italian, Japanese, and Middle East groups exist. There are over 2,000 Americans registered in the Consular district and approximately 25% live in Recife. Many of those registered are dual nationals, although there is an important American missionary community.

Food

Recife's modern, air-conditioned supermarkets are well stocked and provide all the essentials to meet food and other household requirements of the average American family. In addition, the city is host to several specialty stores that provide oriental and other ethnic foods. Some types of meat, veal for example, are hard to obtain, but aside from this, you can maintain a perfectly adequate nutritional regimen with the food products available locally. Exceptional local tropical fruits and vegetables are available year round. Temperate climate fruits are brought in from southern Brazil and Argentina.

Clothing

Men: Summer clothes may be worn year round as temperatures seldom fall below 70 degree F. Most businessmen are casual in their dress, although some, such as bankers, still prefer suits to sport shirts.

Wash-and-wear items are most practical. Local custom-made linen, tropical worsteds, and Brazilian-made wash-and-wear suits range from \$200 to \$300, but are of lower quality. Bring at least one or two dark, lightweight suits for business calls and evening social functions.

You do not need hats (although caps for use in outdoor activities are highly recommended), but bring shirts, underwear, socks, and shoes. You can buy good-quality imported shirts in Recife, but they are expensive. Summer-weight washable slacks and shorts are useful, as is beach attire. Dry cleaning is available, but of questionable quality and expensive. Formal attire, such as a tuxedo or smoking jacket, is rarely required (only for the Carnival ball). Tuxedos can be purchased or rented locally.

Women: Clothing stores are plentiful and varied, although Brazilian styles are considerably tighter fitting than U.S. clothing. Bring plenty of comfortable summer clothing: skirts, shorts, shirts, and bathing suits. A good basic evening wardrobe might consist of washable cocktail separates (pants, skirts, blouses, etc.) and a few washable evening dresses. Cotton dresses and separates are preferable for afternoon functions.

Dressmakers range from expensive designers to tailors who take in mending; in between are competent, reasonable dressmakers who can adequately copy the simple lines of current fashions. Fabrics are available locally. Hats are seldom worn (except for informal hats and caps for outdoor activities). Carnival calls for costumes of fancy dress or shorts and a T-shirt.

Children: Bring children's clothing from the U.S. Given the weather, do not purchase winter clothes. Spring and summer weight clothing can be used year-round. Children rarely require long pants. Local seamstresses can be hired to mend and alter clothing and to make play clothing for children, although inexpensive locally manufactured play clothing is available and of acceptable quality.

Supplies and Services

Brazilian cosmetics and toiletries, many manufactured under agreements with U.S. firms, resemble U.S. products and are plentiful but more expensive than their U.S.

Susan Rock. Reproduced by permission.

Teatro do Amazonas, Manaus, Brazil

counterparts. Internet buying services offer an excellent option for the purchase of U.S. goods.

Dry-cleaning service is available in Recife, but the quality is not up to U.S. standards. Full- or part-time launderers work in homes. Good beauty shops are available. Men's haircuts average \$10. Women's cuts and styling range from \$20-\$40.

Repair work on radios, TVs, and other electrical appliances is not always satisfactory, but authorized service centers are available for most major brands. Parts are available, but expensive. Recife has the second most developed medical infrastructure in Brazil, and as a result medical and dental care is excellent, but more expensive than in the U.S. Note: Check your health insurance before arrival to see if overseas claims are based on an U.S. fee schedule or on a straight percentage of charges.

Domestic Help

Servants are necessary in Recife for the American or Brazilian running a household. The system benefits the family in that necessary household help is supplied, and employment and security is provided for semiliterate and untrained persons. Nannies are also common and readily available. Current monthly wages (including all benefits are estimated as follows: cook/housekeeper, \$200; nanny \$200; cook, \$150; housekeeper, \$150. Fringe benefits include quarters for the live-in cook and housekeeper (all housing, including smallest apartments, provides separate servants quarters and bath), food, uniforms, and social security/health insurance (for those that do not live in, a transportation allowance is also provided). Live-in employees are more common and less expensive. Part-time domestic employees charge on average \$200 a month. A note of caution, finding suitable servants can be difficult and challenging.

Religious Activities

Recife has churches of almost every denomination including a synagogue, but few English-speaking services. English-language Baptist church services and a children's Sunday school are held every Sunday. Many beautiful and historical Catholic churches are located in Recife and in the adjoining town of Olinda. Mass is conducted in Portuguese. Many Catholic churches hold special Masses for adults, family, and youth. The youth mass is particularly interesting for young people who bring their guitars for group singing.

Education

The American School of Recife, founded in 1957, is a private, non-sectarian coeducational school that offers an instructional program from pre-kindergarten through grade 12 for students of all nationalities. The school is governed by a seven-member Board of Directors elected for a 2-year term by the Association, composed of the par-

ents of children enrolled in the School. The Principal Officer is a non-voting member of the school board.

The curriculum is mainly that of U.S. general academic, preparatory, public schools. The Southern Association of Colleges accredits the school. There are 32 full-time and 6 part-time faculty members, of which 13 are U.S. citizens, 20 Brazilians, and 5 of other nationalities. Enrollment is approximately 350 students of which 40 are U.S. citizens, 250 host-country nationals, and 60 third-country nationals.

The school occupies an 8.5-acre site in a beautiful residential area of Recife. The pre-K/Kindergarten, elementary and high schools are in separate buildings. General facilities include classrooms, a science laboratory, two audio/visual rooms, a computer laboratory, a library with 12,000 volumes and a small theater. The school also has an adequate snack bar and lunch area as well as spacious sports and playground facilities.

Special Educational Opportunities

An art academy and a music conservatory are located in Recife. The Federal University of Pernambuco School of Fine Arts offers courses in theory, instrumentation, and ensemble playing. Private instruction is available on musical instruments. Private art instruction and group ballet lessons are also available.

Spouses need a basic command of Portuguese before coming to Recife; all practical day-to-day communications is in Portuguese. Additional language instruction for adult dependents is available.

Sports

Many health clubs and fitness centers in the city offer aerobics, gymnastics, dance, and exercise equipment. They are similar to those in the U.S., with trained instructors and such amenities as saunas, steam baths, and optional massages. Membership fees are low

by U.S. standards and are paid monthly.

Other social clubs offer recreational facilities in the city. There is also a golf and equestrian club.

Touring and Outdoor Activities

The Northeast offers some of the best beaches in Brazil, and many are less than a day's drive from Recife. Beaches range from established resorts to isolated stretches and most are easily accessible by vehicle, although a four-wheel drive vehicle would be preferable. Other one-day sightseeing trips afford visits to sugarcane plantations and mills, forts from the Dutch era in the 17th century, and quaint fishing villages on the coast and inlets. Most major routes are paved, and the remote, adventuresome routes are passable, except during the rainy season.

Several small towns, from 2-3 hours away offer a cooler, drier climate than the coastal region. Satisfactory overnight accommodations are available. Other cities in the consular district, such as Fortaleza, Natal and João Pessoa offer considerable tourist attractions. Salvador, the colorful, historic first capital of Brazil is approximately an hour's flight south. Rio de Janeiro and São Paulo are a 2-1/2-hour flight south.

Entertainment

Recife has several modern multiplex theaters offering first-run U.S. and Brazilian movies. Several comfortable movie theaters also show other foreign films. Foreign films are in their original language with Portuguese subtitles, although children's films are dubbed. Recife has many restaurants ranging from simple, beachfront seafood houses in Olinda, to luxurious and expensive restaurants in Boa Viagem. Downtown restaurants are patronized mainly at lunchtime. Open-air restaurants along the beach in Boa Viagem are popular for evenings and weekends. Cuisines include Chinese, Italian, and seafood restaurants; churrascarias for grilled meats are also available. Prices

vary, but dinner for two with wines is less than in the U.S.

The renovated old city, Recife Antigo, offers an excellent option for nightlife. Open-air bars and sidewalk cafes, along with cultural events sponsored by the city, make Recife Antigo the center of nightlife in the city. There are several large discos and nightclubs (including Brazil's largest) which are very popular.

Recife also has several large modern shopping centers with many services, including bowling alleys and arcades. One, Shopping Recife, is the largest shopping center in South America.

Several radio stations and five color TV stations broadcast in Recife. An American black-and-white TV operates with a transformer and a voltage regulator. U.S. color sets need a PAL-M to NTSC converter, which can be purchased in the U.S. Local TVs are readily available, although more expensive than U.S. TVs.

Local TV offers numerous variety shows, popular Brazilian novelas (soap operas), daily national news programs, public interest features, Brazilian soccer and, occasionally, world sports events. Direct TV is available as are affordable satellite TV services offering US premium cable channels.

No English-language newspapers are published in Recife; foreign news is sparsely covered in the local press. The Latin American editions of Time and Newsweek are available weekly. However, internet service is readily available and inexpensive (approximately \$20 per month for unlimited access).

Recife's Carnaval is world famous. It is considered the largest street carnival in the world. Two events during Carnaval, the Bloco de Parceria on the Sunday before Carnaval and the Galo de Madrugada the Saturday of Carnaval vie for the title of largest concentration of people in the Guinness Book of World Records (each brings an estimated 2

million people together). Tourists from around the world flock to Olinda and Recife Antigo for more traditional carnivals. Other important celebrations include the São Joao festival in June, which offers typical northeastern music and dancing and special Brazilian dishes, and Recifolia, one of the largest out-of-season carnivals in Brazil. Several libraries are located in Recife for those who can read Portuguese, although books cannot be loaned out. A small library of American books and current periodicals is located at the binational center.

Social Activities

This region of Brazil is known for its hospitality and receptivity to foreigners. Most of the social activity in Recife revolves around the extended family, which often includes close family friends. Dinners are also common. Most entertaining, both in a family or more formal setting, is done at home. Entertaining is also more informal in nature, reflecting this family orientation.

The social life in Recife is active and Americans are readily welcomed into the community. Adults, adolescents and children quickly develop their own social life and meet frequently for parties and various activities.

Pôrto Alegre

Pôrto Alegre, capital of the State of Rio Grande do Sul, is the center of one of the most prosperous areas of Brazil. The city, with an estimated population of 2.9 million, lies at sea level at the mouth of the Guaíba River, the head of the sea's freshwater outlet, Lagoa dos Patos. The State of Rio Grande do Sul covers 108,951 square miles, and is slightly larger than Colorado. It is bordered on the north by the State of Santa Catarina, on the west by Argentina, and on the south by Uruguay.

Traditionally an agricultural state, it grows and processes rice, corn, wheat, soybeans, livestock, and a

variety of other products. Extensive industrial expansion, including the refining of petroleum and its by-products, and the production of steel, ships, footwear and leather products, wine, wood, paper and cellulose, textiles, and electrical products has occurred in recent years.

Although Pôrto Alegre's basic cultural pattern is dominated by its Luso-Brazilian heritage, this has been modified by Texas-like gaucho traditions, and (more recently) by heavy German and Italian immigration.

Pôrto Alegre's architecture reflects its historical development: early colonial buildings, baroque structures derived from Italy and France, and Brazilian modern design. Pôrto Alegre is built on hills, some of them quite steep. Narrow cobblestone streets, buses, and taxis, and many office buildings in the downtown district contribute to traffic congestion that is out of proportion to the city's size.

The Americans in Pôrto Alegre include those on assignment with agencies of the U.S. Government, a small number of business firms, and several religious organizations. The British community is somewhat larger. Periodically, American business representatives visit the city. Membership in the American Chamber of Commerce is almost entirely Brazilian.

Schools for Foreigners

Rio Grande do Sul, and Pôrto Alegre in particular, has one of the best school systems in Brazil, but all instruction is in Portuguese. Fluency in that language is more or less mandatory for admission and for satisfactory performance in Brazilian schools.

The only English-language school in Pôrto Alegre is the Pan-American School, which offers kindergarten through eighth grade, and can provide correspondence-school supervision for grades nine through 12. The school was organized in 1966, and had a 1991 enrollment of about 87 students. There were nine full-time

and seven part-time teachers at the school in 1991. The Pan-American School is a coeducational institution with a U.S.-style curriculum. The school has 12 classrooms, a 5,000-volume library, playing field, computer lab, and science lab. Extracurricular activities include soccer, field trips, and school newspaper. Information is available from the school at Rua João Paetzel 440, 90.000 Pôrto Alegre, Rio Grande do Sul, Brazil.

Four private American missionary schools exist but, as the founders have died or been replaced by Brazilian teachers, the schools have lost their U.S. character. The schools are Colegio Americano (Methodist for girls), Instituto Pôrto Alegre (Methodist for boys), Colegio Batista (Baptist, coeducational), and Ginasio Menino Deus (Catholic, coeducational in the primary grades, operated by the Bernardine Sisters from the U.S., but taught mostly by Brazilian nuns). All offer first grade through high school. Children, especially girls, must wear uniforms.

Several good Portuguese-language schools are in Pôrto Alegre—the Colegio Anchieta (Jesuit, coeducational), Colegio Farroupilha (coeducational), Colegio de Aplicação (junior high and high school, coeducational), Colegio Rosario (Marist Brothers for boys), and Colegio Sevigne (Sisters of St. Joseph for girls). Pôrto Alegre's Jewish community runs the Ginasio Israelita Brasileiro. Schools are in session about four hours a day, morning or afternoon, six days a week. Children too young to travel alone are taken to and from school by parents. A few private institutions have buses.

Principal universities in Pôrto Alegre, among the first in Brazil, are Catholic University and Federal University. Courses are taught in Portuguese. Private Portuguese-language instruction on a reasonable hourly basis may be arranged.

Recreation

Many sports are available in the Pôrto Alegre area, among them ten-

nis, golf, yachting, fishing, swimming, riding, and trap, skeet, and target shooting. A number of clubs maintain good tennis courts, and several clubs also have swimming pools. Ocean swimming is available at beach resorts such as Torres, Capão da Canoa, Tramandaí, and Cassino, two to six hours by car from the city. There is a fine harbor at Veleiros do Sul, one of the two major yacht clubs. The other club, Jangadeiros, caters to day sailors and holds frequent regattas for small centerboard sloops. Motor-boating is also popular.

Spectator sports are soccer and horse racing.

Those interested in touring will find Caxias do Sul an interesting spot. About 75 miles north of Pôrto Alegre in the center of the mountainous wine-growing region, it is a clean and attractive city well worth visiting. The Italian community holds an annual wine festival there. Slightly closer than Caxias do Sul is the mountain resort town of Gramado. Many people living temporarily in Pôrto Alegre also make trips to Florianópolis, the capital of Santa Catarina, to enjoy the fine beaches. Iguaçu Falls are accessible by scheduled airlines in a three-hour flight or a one-day drive over good roads. Bordered by Brazil, Argentina, and Paraguay, the falls are world renowned for their volume and beauty.

Entertainment

Pôrto Alegre has several air-conditioned movie theaters. U.S. films (six months to one year old) predominate, supplemented by French, Italian, German, British, and Brazilian productions.

The Pôrto Alegre Symphony Orchestra plays at least once a month in season, and another concert series brings international guest artists to the city. Professional Brazilian theater companies perform occasionally. The city offers many good restaurants, some featuring German, Italian, or Chinese cuisine, as well as the traditional

churrasco (barbecue). Several night-clubs exist.

Celebration of *Carnaval* season is fairly moderate and is best represented by social events organized by clubs and neighborhood groups.

Many members of the English-speaking community join the British Club. Facilities include tennis courts, swimming and wading pools, and playground equipment. Although the club serves as a gathering place for English speakers, membership is not confined to persons familiar with the language. The International Women's Association also offers opportunities for social activities.

One of the attractive features of visiting or living in Pôrto Alegre is the chance to meet and know Brazilians, and the only limit to the newcomer's international contacts is language. Pôrto Alegre has several active Rotary and Lions clubs and Masonic lodges. The ability to speak Portuguese fluently will greatly enhance opportunities for social contact.

Special Information

Santa Catarina, in the U.S. consular district of Pôrto Alegre, is in the south temperate zone of Brazil. Its climate is similar to that of Rio Grande do Sul. The state is divided into three distinct geographical zones: the coastal plain, the central highlands, and the western highlands. The state borders Argentina to the west, Paraná to the north, and Rio Grande do Sul to the south. The capital is Florianópolis.

Blessed with abundant rainfall and numerous lakes, the state is one of Brazil's most beautiful. The coastal area includes superb beaches and coves, and attracts visitors from many parts of Brazil, Uruguay, and Argentina.

The State of Santa Catarina's population of four million includes 30 percent German, 30 percent Italian, 15 percent Portuguese, 10 percent Polish, five percent Russian, five percent Negro, and five percent of

mixed origin. Santa Catarina is the most European of Brazil's states. Entire communities of German-speaking peoples abound, especially in the Blumenau-Joinville-Brusque area. The architecture, language, music, and cultural traditions all give the state the air of a central European country.

Santa Catarina has elementary and secondary schools in all municipalities of 2,000 inhabitants or more. In the western highlands, few secondary and preparatory schools exist.

The only accredited university in the state, the Federal University of Santa Catarina, is in Florianópolis. Present enrollment is about 6,000 full-time students. Separate faculties also exist in Joinville (economics and public administration) and in Lages (chemistry and industrial engineering). Blumenau has a municipal university.

Santa Catarina's many lakes and ocean-front beaches make it a fisherman's heaven. For hunters, all sorts of wild game abound, including rabbit, squirrel, bobcat, puma, bear, raccoon, wild boar, and over 25 species of game birds. The western portion is ideal for overnight camping.

Salvador Da Bahia

Salvador Da Bahia, formerly Salvador, is Brazil's oldest city, located in one of the most historic parts of the country. The Portuguese first landed in Brazil at Pôrto Seguro in the southern part of the State of Bahia, and when they colonized the country, they built the city which is now Salvador da Bahia. It was Brazil's capital from 1549 to 1763.

Situated on a hilly peninsula at the entrance to All Saints' Bay (Bahia de Todos os Santos), it is a picturesque city famed for its many baroque churches, distinctive food, colorful costumes, and religious ceremonies. Although strong African influences are found in Bahia, the main cultural tradition is Western, influenced at first by Portugal, and

more recently by France and the U.S.

Salvador da Bahia is one of Brazil's largest modern ports. Cocoa, tobacco, sugar, sisal, diamonds, iron ore, aluminum, hides, and petroleum are exported through Salvador da Bahia's port. The city has many important industries, among them textiles, ceramics, food and tobacco processing, automobiles, chemicals, and shipbuilding.

The metropolitan area has an estimated population of 2.4 million and is growing rapidly. Although this growth is accompanied by modern urban problems, the city retains much of its charm because of its privileged location by the bay and ocean, its varied topography, and its rich collection of historic buildings, many of which are registered and cannot be torn down.

Salvador da Bahia is divided into two parts—the "lower city" at sea level with the old port and commercial district; and the "upper city," reached by stone steps, and the site of government buildings, residential areas, museums, and churches. Some of the old and historically significant churches have been made into museums.

Schools for Foreigners

The Pan-American School of Bahia, with a student body of about 470, representing many nationalities, is partially sponsored by the U.S. Government. It offers an English-language curriculum from kindergarten through 12th grade. In 1991, the school had 50 full-time teachers, 25 of whom were Americans. Located 15 minutes from downtown Salvador da Bahia, the school consists of two buildings, 25 classrooms, a 35,000-volume library, two playing fields, two science labs, and a computer lab. In December 1977, Pan-American was accredited by the Southern Association of Colleges and Schools. Its program follows the U.S. educational system, and students have transferred easily into American schools and universities. Extracurricular activities include field trips, computers, year-

book, basketball, volleyball, and soccer. The school address is: Caixa Postal 231, Salvador da Bahia 4000, Brazil.

Two universities in Bahia offer interesting courses, seminars, and lectures for those with a firm command of Portuguese. Many Americans study that language with private tutors or at the Binational Center.

Recreation

Golf, tennis, sailing, swimming, and volleyball are the sports which normally attract members of the foreign community in Bahia. Skin diving, rock fishing, and deep-sea fishing are also available. Game in the area is scarce, but duck hunting is possible.

Many Americans join clubs which, in addition to offering sports facilities, provide a place to dine and relax on weekends. The Yacht Club, with a large freshwater pool, a boat-house, and restaurant/bar in attractive surroundings, makes available a temporary (four-month) membership. The Associação Atletica also offers a temporary (six-month) membership. Both the Bahia Tennis Club and the Cajazeira Golf Club provide either transferable or temporary memberships. The British Club, strictly a social organization, is the gathering place for the English-speaking community, and an English-language library is maintained there.

Salvador da Bahia and many nearby historic towns are good for sight-seeing. In the city itself, there is the excellent Museum of Sacred Art, considered the most beautiful in all of Brazil; it contains many works of Brazil's renowned baroque sculptor, Aleijadinho (Antônio Francisco Lisboa), known as "the little cripple." The visitor will also find numerous churches, forts, a small zoo, and many buildings of historical and architectural interest.

It is possible, by prior arrangement, to attend a *condomble* (voodoo religious ceremony). Photographs may

not be taken at such ceremonies without specific permission.

Entertainment

Movies in English, with Portuguese subtitles, are shown in many theaters. A cultural society presents a series of musical recitals and concerts during the May-to-December season.

The few nightclubs, generally discotheques without live entertainment, compare in price to those in large cities of the U.S. Salvador da Bahia has many fine restaurants.

Local radio programs are good, and shortwave is usually satisfactory, but sets should be tropicalized and powerful because of the distances involved. Most people on extended assignments have stereo equipment for home entertainment, and they find that the humidity makes it necessary to use cartridges of variable inductance rather than the ceramic type. There are three television stations in the city. No adjustments are needed for reception on black-and-white American sets.

The closely knit international community in Salvador da Bahia consists mainly of Americans (executives from the private industrial sector and petrochemical complex, and petroleum industry workers), Scandinavians, Swedes, English, Germans, and Argentines. Most speak English and send their children to the Pan-American School. In several book clubs, English-speaking members collectively purchase and share publications. The International Women's Club is one of the city's active social and charitable organizations.

Foreigners participate actively in the city's normal social life. Bahians are friendly and welcome contact with foreigners, especially Americans. English-speaking business representatives meet each Wednesday for lunch at the Clube do Comércio.

Because of the interesting scenery and relaxed life in Salvador da Bahia, many prominent artists

Cory Langley. Reproduced by permission.

Transporting soda pop in Brazil

make their homes in the area, and are easily accessible to foreigners.

Belo Horizonte

Belo Horizonte (Beautiful Horizon), capital of Minas Gerais, is Brazil's third largest city, with a population of over 4 million. Minas Gerais is Brazil's second most important state economically, after São Paulo. It is a major center of mining, steel production, automobile (Fiat), electronics, heavy machinery, and agriculture.

Minas Gerais maintains a higher economic growth rate than the nation as a whole. The state's utilities are generally well run providing better than average services, for Brazil. However, investment in basic infrastructure, especially roads, has not kept pace with the state's economic growth. The effects of rapid economic growth of the past decades are evident in the prolifera-

tion of common urban problems, such as air pollution (especially severe during the dry season), a crowded downtown area, and slums. Nevertheless, the city is less crowded and congested than Rio or São Paulo, and seems much smaller than a city of 4 million.

Accelerated economic growth in the past few years has also brought an explosion in the cost of living in Belo Horizonte. Consumer prices and rents are comparable to Rio de Janeiro and São Paulo. Officers stationed in Belo Horizonte do not receive tax-free gasoline privileges.

Belo Horizonte, founded in 1897, is spread out over a rolling terrain and many streets are steep. The cross-work of avenues, streets, and diagonals can be confusing to a newcomer. Belo Horizonte has few landmarks of historical significance. The most interesting features of the city include the Praça da Liberdade, the center for the state government;

the Municipal Park with tree-shaded paths, a small recreation area for children, small lake, and the Lagoa da Pampulha area with a larger lake; and the Oscar Niemeyer-designed São Francisco de Assis Church, with murals and frescoes by the internationally famed Brazilian painter, Portinari. Brazil's colonial past is illustrated by a series of beautifully preserved historical cities such as Ouro Preto and Sabara, within 2 hours' drive of the capital. The city has an active night life, with many bars, clubs, restaurants and music.

Belo Horizonte enjoys a warm and dry climate. Winters are mild and sunny, with few genuinely cold days. Summers (December-March) are warm with few spells of hot, muggy weather. Most precipitation occurs from November to February with intermittent rain, heavy at times, causing severe, dangerous flooding.

The city is a junction for highways, connecting Rio de Janeiro (4-4-1/2 hours by car), São Paulo (8 hours), and Brasilia (10 hours). Highways are paved and in good condition, although overcrowded with trucks carrying mineral and steel products and agricultural goods. The city's streets are well kept generally, although the quality of pavement is poor in many areas. Most of the city is paved and has a clean look, although pollution is becoming a problem. Modern shopping centers are located in and around the city, offering many stores, including many international chains.

Two airports, Confins (60 min. downtown) and Pampulha (20-30 min.), provide frequent connections to Brasilia, São Paulo, Rio de Janeiro and other cities.

Food

Food is available locally in adequate quantity and variety. Fresh meat is plentiful. Fruits and vegetables in season are plentiful. Canned goods, frozen foods, and a growing variety of packaged and convenience foods are available but expensive. The central market and neighborhood markets continue to be important sources of supply for fruit, vegetables, and meats. Large supermarkets carrying a wide variety of merchandise, in addition to food items, are available.

Clothing

All types of temperate climate clothing are useful, including a limited number of woollens for occasionally chilly winter mornings, evenings, or when traveling in southern Brazil during winter. Styles for men and women are informal, but some business and social occasions call for business suits or formal wear. Brazilian women are style conscious and women coming to post may wish to vary their wardrobe after arrival according to local fashions. Various pants, blouses, and pantsuits will suffice for most occasions, with long dresses used only for formal social events.

Supplies and Services

Basic supplies are available locally. Officers stationed in Belo Horizonte should make arrangements to buy items available at the commissary in Brasilia.

Local tailors and dressmakers are adequate. Shoe repair is good. Laundry and dry cleaning services are good, but prices are high.

Local physicians, surgeons, and dentists can treat all but the most serious medical problems. Many have studied or done residencies in the U.S. and speak some English. The cost of medical services in Belo Horizonte is high. An office call currently costs about \$70. You can obtain advanced and highly specialized medical services in Rio de Janeiro and São Paulo. Pharmacies carry adequate stocks of Brazilian-produced prescription and nonprescription medicines.

Repair facilities for foreign automobiles, appliances, or electronic items are difficult to find. The reliability of repairs varies. Local carpenters and cabinetmakers are competent, but slow.

Good household help is difficult to find. Increased job opportunities for women in manufacturing industries and businesses have sharply reduced the number interested in domestic employment. Finding and keeping skilled and reliable help is a problem. Personal recommendations are the best way of finding help; employment agencies are not recommended.

Education

American and English-speaking children attend the American School. Classes are from kindergarten through grade 12.

The Federal University of Minas Gerais and the Catholic University of Minas Gerais provide programs in most subject areas. Foreign students are few. The binational center and the Federal University offer Portuguese courses.

Sports

Free public recreation facilities are limited and crowded. These include the Municipal Park downtown, a zoo in the Pampulha area, Mangabeiras Park, and Minas Gerais and Fernão Dias Parks.

Many local residents join sports and social clubs and memberships cost \$2,000 and up. Clubs offer swimming and tennis facilities. Monthly fees cost \$200 and up. Fishing and boating are available on the San Francisco River, some 200 miles from the city. Spectator sports include professional soccer, basketball, and volleyball.

Entertainment

Several colonial cities famous for their baroque architecture and colorful settings are located in Minas Gerais State and are popular tourist attractions. Movie theaters often feature international films with Portuguese subtitles. The Palácio das Artes is home of the Minas Gerais Symphony Orchestra and sponsors performances by local and international musical and theatrical groups. A growing number of art galleries exhibit the works of local artists. The city has an active night life, with many bars, restaurants, nightclubs, concerts, and dancing. The small American community offers limited opportunities for social contact and activities. It consists of temporary residents working for American firms with local branches, missionaries, and permanent residents, including Americans settling in Minas Gerais after marrying Brazilians. A monthly picnic is held at the American School for all members of the community. The city has a small diplomatic community with consulates from Portugal, Argentina, Italy, and Chile.

Mineiros, as natives of the state are known, are friendly but reserved. Host country and other officials meet through business, commercial, fraternal organizations, country clubs, and artistic and cultural events. Family life centers in the home in Minas Gerais. However, once new acquaintances are estab-

lished, families welcome friendly relationships in their homes.

Belém

Belém, a port city, lies about 1°S. of the equator. The ninth largest city in Brazil, it is the capital of the State of Pará. Belém is the economic and political center of the Amazon region. Its narrow streets, tile-fronted homes, random Victorian architecture, modern high-rise office and apartment buildings, and wide streets lined with mango trees bear testimony to Belém's rich and varied history. The city was founded in 1616 by the Portuguese as a base to protect their territorial holdings in what now is northern Brazil. Throughout its history, as now, Belém has served as the port of entry to the vast Amazon Basin, and port of exit for regional products. Products exported via Belém include Brazil nuts, cassava, jute, black pepper, and aluminum.

Some of Brazil's most beautiful old churches are in Belém, among them the Santo Alexandre, the Basílica da Nossa Senhora de Nazaré, and the 17th-century Mercês Church. The city's Cathedral (cathedral) dates from 1748. Noteworthy among the modern structures is Teatro da Paz, one of the country's largest theaters, the public library, and archives building.

The city is 90 miles inland from the Atlantic Ocean, at the junction of the Guamá River and Guajara Bay, which form part of the southern estuary of the Amazon River system. High temperatures and relative humidity make the climate debilitating and, at times, exhausting, but moderate easterly winds bring some relief. Insect and animal pests flourish.

About 25 percent of the city's estimated population of 1.5 million is of European descent, mostly Portuguese. The remainder is either of Indian or mixed racial origin. The foreign community includes some 25,000 Portuguese, 10,000 Japanese, and several hundred English, Dutch, French, German, Italian,

Spanish, Lebanese, and Eastern Europeans. About 1,000 Americans live in and around Belém, and another 1,500 are scattered throughout the district.

A modern airport, which is one of Brazil's largest, is maintained in Belém.

Manaus

Manaus (formerly spelled Manáos) is the capital of Amazonas State and the major city of the Amazon Basin, standing near the confluence of the Amazon and the Río Negro. The rubber boom of the late 19th century effected temporary prosperity, but the decline in that industry left the city to shrink in influence until a renewed interest in the Amazon Basin brought economic growth. Approximately 615,000 people now live in Manaus. It is the major port of northwestern Brazil, and its floating docks can accommodate oceangoing vessels. Brazil nuts, rubber, rosewood oil, and several forest products constitute Manaus' primary exports. Several industries make their home in Manaus, including ship building, soap manufacturing, brewing, petroleum refining, and chemical production. An international airport has been built, and coexists with the British-built customs house, the Portuguese townhouses, and the lavish Opera House, where Sarah Bernhardt once sang.

Manaus features a cathedral, zoological and botanical gardens, and the Museu Indígena Salesiano, which is dedicated to the region's Indian cultures. The tourist office is at Praça 24 de Outubro, Rua Taruma 329, and there are information kiosks at the airport and at the floating docks. Most banks in the city will change foreign currency only in the morning, but money can be exchanged at *Selvatour* in the Hotel Amazonas. One- and two-day river trips up the Río Negro from Manaus are readily available, and considered worthwhile excursions; it is possible to stop along the river banks to explore the fringes of the forest or to canoe in the clear lakes of the interior.

Fortaleza

Fortaleza (Portuguese for fortress), a city with an estimated population of 2.8 million residents, is the capital of the State of Ceará in northeastern Brazil. The city (often referred to as Ceará, the state designation, by foreigners) served as a center for the sugar plantations in colonial times and, today, processes sugar and cotton, and ships exotic products such as carnauba wax and oiticica oil. Fortaleza is also known for traditional handicrafts, especially lace-making.

The Dutch occupied Fortaleza in the mid-17th century, and Nossa Senhora da Assunção, a fort built by them, still stands. Excellent seafood is brought to the nearby beaches by the fishermen in their hand-crafted vessels each day at about sundown, and the lobsters here are considered particular delicacies. The 1,393-acre Ubajará National Park, featuring caves of the same name, is close by. Fortaleza's tourist office is located at Rua Senador Pompeu 250, and there is a branch in the old prison.

Curitiba

Curitiba, a rapidly growing city of more than 1.4 million residents, is a commercial and processing center, and also the capital, of the southeastern State of Paraná. It was founded in 1654, but developed slowly until the influx of German, Italian, and Slavic immigrants in the early part of the 20th century. The metropolitan area now accommodates well over one million residents.

During the past 30 years, Curitiba has seen swift expansion and modernization. New housing and public buildings have sprung up both in the central city and the burgeoning suburbs, yet the city has not succumbed to the clutter and confusion which often accompanies urban growth. Beautiful, wide avenues and vast expanses of park land remain, bestowing an aura of tranquility seldom found in a modern setting.

Curitiba is home to several industries which manufacture textiles, automobiles, furniture, matches, tobacco, soft drinks, lumber, and tea. Tourist attractions in the city include the Paran ense Museum and an Egyptian-style temple located near Lake Bacacheri.

Two institutes of higher learning are located here—Federal University of Paran , dating from 1912, and Catholic University, which opened in 1959. Curitiba also is the site of the State Library. The International School of Curitiba, which follows a U.S. curriculum and employs six American teachers, is in a suburb overlooking the city.

Goi nia

Goi nia, capital of the State of Goi s and its largest city, is about two-and-a-half hours west of Brasilia. Like Brasilia, it is a planned city, and was built in 1933 to replace the old city of Goi s as the state capital. With an altitude much lower than Brasilia's, it is usually considerably warmer and more humid. Goi nia is an attractive city with tree-lined streets, attractive parks, interesting 1930s architecture, a shopping center, good hotels, and some excellent restaurants. It also has fine museums and art galleries, and a good urban transportation system. The Sunday fair is one of the best in the area.

Goi nia's population has grown to over 702,000. The city is a shipping and processing center for livestock, crops, and minerals. It is the seat of two schools of higher learning, Federal and Catholic universities, as well as several technical institutes. The city is accessible by air, road, and railway.

OTHER CITIES

The city of **AN POLIS**, in the State of Goi s, is situated in central Brazil, 82 miles south of the capital. Lumber, rice, coffee, and livestock are processed in this industrial center. An polis distributes diamonds,

gold, maize, and rubber by rail. A highway and an airport are located nearby. Its population is about 161,000.

ARACAJU is the capital city of Sergipe State in northeastern Brazil. It is near the mouth of the Sergipe River and has an excellent harbor. As the state's commercial hub, it ships cotton, sugar, hides, and rice. The city has several industries which process salt, cotton, sugar, beans, bananas, cashews, and leather. Several roads and airports link Aracaju to Recife, Macei , and Salvador da Bahia. Aracaju's population is about 289,000.

CAMPINA GRANDE is situated in northeastern Brazil in the State of Para ba. Since Campina Grande is located in a cotton-growing region, most of its industries are mainly based on that product. Other factories in the city manufacture metallurgical products, pharmaceuticals, and plastics. It also produces sugarcane, fruit, vegetables, and tobacco. The city is the home of an art museum and a regional university. Road, river, air, and rail transportation is available to Recife, Jo o Pessoa and several other cities. The population of Campina Grande is about 222,000.

Located in the State of S o Paulo, **CAMPINAS** is about 57 miles northwest of the city of S o Paulo. At one time, Campinas was Brazil's top coffee producer. Today, its industries include the processing of cereals, cotton, and sugarcane as well as coffee. Cosmetics, soap, textiles, motorcycles and agricultural machinery are also produced. Campinas has a symphony orchestra, as well as theaters, museums, and art galleries. A tourist attraction near Campinas is the Salto d'Ita Falls, located five miles north of the city. There are two universities here. The city's population is approximately 567,000.

CAMPO GRANDE, in southwestern Brazil, is the fastest-growing city in the State of Mato Grosso. Industries include tanneries, meat-packing plants, and slaugh-

terhouses. Coffee, corn, rice, and beans are grown in areas surrounding the city. The railroads and airways in Campo Grande are an essential means of transportation for the surrounding region. Campo Grande's population of 282,800 is the largest in Mato Grosso.

CAXIAS DO SUL (formerly called Caxias) is an Italian immigrant settlement in the State of Rio Grande do Sul in southern Brazil. Regional farming supports the city's industries which include cattle-raising, wine making, and hog slaughtering. The city's population is close to 199,000.

CORUMB , a small southwestern port city of approximately 66,000 residents on the R o Paraguai, is the chief trade center for Mato Grosso State. Visitors often take boat trips north from here through the Pantanal, a vast wildlife preserve. Other attractions are the regional museum, and the arts and crafts center at the old jail. Corumb , a junction on the railroad connecting Brazil and Bolivia, was a key strategic point in the War of the Triple Alliance (1865), and changed hands often. Factories in the city process xarque (dried beef) and animal hides.

FLORIAN POLIS is located on Santa Catarina Island, off the coast of southeastern Brazil, and is connected to the mainland by two spans, the oldest of which is the handsome and historical Herc lio Luz Bridge. The city has spilled over onto the Estreito strip of the mainland, and the total population is estimated at 154,000. The city produces a number of products including pharmaceuticals, communications equipment, perfume, and plastics. Now a bustling commercial center and the capital of Santa Catarina, Florian polis' colonial houses still stand along the narrow streets of the city's older section. An anthropology museum at Federal University is worth visiting, and excellent beaches have made the area popular with tourists. The city, named for an early Brazilian president, Floriano Peixoto, was once

known as Destêrro. It is linked by excellent roads with the coastal cities of Pôrto Alegre and Curitiba. Flights are available from Florianópolis to Rio de Janeiro, Pôrto Alegre, and São Paulo.

Located in northeastern Brazil, **JOÃO PESSOA** is the capital of Paraíba State. Founded in 1585, João Pessoa today supplies cement, clothing, beverages, and cigars locally. One of its better-known historical buildings is the 18th-century Church of São Francisco. The church still has its original wooden grilles, entrance, and decorative towers and domes. The city manufactures chemicals, metals, plastics, and electrical products. The city is the home of Paraíba University. João Pessoa's population is close to 290,250.

JUIZ DE FORA is 80 miles north of Rio de Janeiro in the southeastern State of Minas Gerais. The city, with an estimated population of 300,000, is an important manufacturer of knitwear. Many crops are grown near Juiz de Fora, among them bananas, sugarcane, coffee, and rice. Textiles and plastics are also manufactured here. A major tourist attraction is the Mariano Procópio museum. In 1960, the Federal University of Juiz de Fora was opened here.

Situated 125 miles southwest of Recife, in northeastern Brazil, **MACEIÓ** is the capital of Alagoas State. An industrial city, Maceió produces household items, cotton textiles, chemicals, cigarettes, sugar, and foods. Exports include tobacco, cotton, rum, and sugar. Reflecting its colonial background, the city's landmarks include a lighthouse in the center of the city the Church of Bom Jesus dos Mártires, the Metropolitan Cathedral, and the Government Palace. Maceió is linked with Recife and cities to the north by road and rail. The population here is about 375,700.

NATAL, with a population of close to 376,500, is situated in northeastern Brazil. It is the capital of Rio Grande do Norte State. A major

port, it ships hides, salt, cotton, and sugar. Important industries include salt refining and cotton spinning and weaving. The city was founded on December 25, 1599; "natal" means "Christmas" in Portuguese. The coastline has nice beaches and a folk museum housed in a 16th-century fort. Railroads and highways extend from Natal to the interior and to coastal urban centers. Flights are available to the cities of Recife and Teresina.

Located on the Atlantic coast in Pernambuco State, **OLINDA** is about 60 miles south of Natal and about 50 miles north of Maceió. Less than four miles from Recife, Olinda is one of the major architectural centers of Brazil. The narrow, steep streets here are flanked by beautiful churches and centuries-old houses. A large colony of artists in the city produce wood carvings and pottery. The colorful Moorish fountains give an added dimension to this historic town of 267,000 residents.

OURO PRÊTO, located in the mountains of eastern Brazil, was founded during the gold rush at the turn of the 18th century, and became a prosperous mining town in the following decades. Since 1933, the city has been considered a national museum, and bears the designation, "world monument," an honor bestowed by United Nations Educational, Scientific, and Cultural Organization (UNESCO). The city's colonial-era houses, churches, and public buildings have been preserved and restored. On June 24 of each year, it becomes the capital of Minas Gerais State for one day (it was superseded by Belo Horizonte in 1897). The 18th-century atmosphere of twisting streets, and the old houses and churches of the town have been preserved. At the churches of São Francisco and Carmo, one may view the baroque sculpture of Aleijadinho, the "little cripple." The museum of the Inconfidência, housed in a large colonial penitentiary, is dedicated to the history of gold mining and culture in Minas Gerais. For those interested in mineralogy, a museum at the old colonial governor's palace contains a

beautiful collection of minerals native to Brazil. The still-operating gold mines three miles north of town are of interest. The tourist office at Praça Tiradentes 41 features films about Ouro Prêto several times daily. Maps in English are available at the Luxor Hotel. The population here is about 27,900.

Once the coffee capital of Brazil, **RIBEIRÃO PRÊTO** is located in southeastern Brazil in São Paulo State. It was founded in 1856 and has over 300,000 residents. Several crops are grown near the city, among them corn, rice, cotton, sugar, and fruits. Cottonseed oil, beer, and textiles are manufactured in Ribeirão Prêto. The city is accessible by road, air, and rail from São Paulo.

SANTOS, a city of approximately 416,000 in São Paulo State, is the world's largest coffee-exporting port, and one of the principal ports of Brazil. Settled in 1543, it is situated on the island of São Vicente, near the town of the same name, which was the first permanent Portuguese settlement in the New World (1532). Several factories are located in the city. These factories produce soap, soft drinks, cement, and candy. Santos' energy needs are met by a large hydroelectric plant and the petroleum refinery at Cubatão. Santos' humid climate and marshy terrain once made living conditions difficult, but new housing, drainage canals, and updated sanitation facilities have dramatically improved the city. Santos, with its fine beaches and seaside facilities (particularly at suburban Guarujá), is a fashionable residential and resort area.

COUNTRY PROFILE

Geography and Climate

Brazil, with a land area of 3.3 million square miles, is larger than the

continental U.S. It extends from the Amazonian equatorial plains at latitude 4°N. to cool uplands at 30°S., where frost often occurs. It borders all South American countries except Chile and Ecuador and, to the east, the coastline runs along the Atlantic Ocean for 4,600 miles.

The vast regions of the Amazon and La Plata River basins occupy about three-fifths of the total area. The huge plateau, rising from 1,000 to 3,000 feet above sea level in São Paulo and Rio Grande do Sul, is the country's main physical feature. This is crossed by two mountain ranges; the highest, at 9,823 feet, is near Rio de Janeiro. A second mountain system, in central Brazil, has an eastern range with a maximum altitude of 4,206 feet, and a western peak of 4,500 feet near the city of Goiânia. Because of its great plains and basins, 40 percent of the country has an average altitude of only 650 feet.

Although Brazil is immense in size and varies in topography from the sweeping sea-level Amazon basin south to the mountains of São Paulo and Pôrto Alegre, the temperature range is narrow. The seasons are the reverse of those in the U.S., with summer from December to February. The rainy season usually extends from October to March.

Population

Brazil's population of roughly 160 million is composed of four major groups: indigenous. Indians, the Portuguese, Africans brought to Brazil as slaves, and various. European and Asian immigrant groups. The Portuguese navigator Pedro Alvares Cabral discovered Brazil in 1500, and the country was subsequently colonized by the Portuguese. A strong African influence exists in the northeast, the legacy of slaves brought to Brazil. The population in the southern half of the country reflects various waves of immigration, with many Brazilians of German and Italian descent in Santa Catarina and Rio Grande do Sul. A large Japanese population is concentrated in the agricultural and

industrial area around São Paulo, and Brazil also has a significant population of Arab descent. Travelers to Brazil will note a distinct atmosphere and population in each region—the result of the wide diversity in Brazil's ethnic composition.

Brazilians are warm and friendly people eager to know foreigners and their habits and customs. In large cities, many Brazilians speak some English, but appreciate Americans who speak Portuguese. A knowledge of the language is necessary to understand and enjoy the people and their intriguing culture.

Some 90% of the population live in the central plateau and the narrow coastal plain along the Atlantic. The tropical Amazon River basin, comprising almost half of Brazil's total area, is sparsely settled. The Trans-Amazonian Highway Project, as well as several large development projects such as Carajas, are aimed at developing the local economy and encouraging migration into the less populated regions of northern Brazil.

Almost every religion is represented in Brazil, but Roman Catholics are predominant (89%). Animism is widespread and is practiced alongside Catholicism. Religious freedom and separation of church and state prevail.

Public Institutions

Brazil is a constitutional federal republic with broad powers granted to the federal government. The 1988 constitution establishes, at the national level, a presidential system with three branches - executive, legislative, and judicial. Brazilians reelected President Fernando Henrique Cardoso and his vice-president, Marco Maciel, to second four-year terms beginning January 1, 1999. This marked the fourth direct election for Congress, governorships and the President.

The bicameral national Congress consists of 81 senators (three from each state and the Federal District)

elected to eight-year terms, and 513 federal deputies elected at large in each state to four year terms, based on a complex proportional representation system, weighted in favor of less populous states. The apex of the judicial system is the Supreme Federal Tribunal, whose 11 justices are appointed by the president to serve until age 70.

Brazil is divided administratively into 27 states and a federal district, which includes the capital, Brasília. The structure of state and local governments closely parallels that of the federal government. Governors are elected for four year terms. A federal revenue-sharing system, in place since the 1988 constitution, provides states with considerable resources.

Arts, Science, and Education

Brazil's tremendous ethnic and regional diversity makes for a vibrant and varied cultural scene. São Paulo and Rio audiences enjoy a constant menu of outstanding national music and art events, and a steady diet of top international fare as well. Brasília and Recife are less tied into the international circuit, but local and national cultural options are regularly available.

Brazil's federal and state higher education institutions include some of the finest in Latin America, a product of heavy government investment in graduate-level programs and university research capacity since the 1960s. Of the 68 major universities in Brazil, 35 are federal, 20 are private or church-related, two are municipal and 11 are state supported. Every state but one (Tocantins) and the Federal District of Brasília has one or more federal universities, all of which operate directly under the Ministry of Education. In many states there are also one or more state universities and one or more Catholic universities. In addition to the universities, there are approximately 800 other degree-granting colleges and institutions of higher education

in such areas as engineering, medicine, agriculture, law, economics and business administration. While bloated payrolls and an innovation-stifling bureaucracy have come to pose a serious challenge to the health and quality of the system, a number of reforms stressing greater teacher and student performance based accountability and more streamlined budgetary processes promise to address many concerns.

The Cardoso Administration recognizes that to be competitive in today's more open and service-driven economy places greater demands on workforce education at all levels, and resources are being shifted to the long-neglected primary and secondary levels. Both access and quality are showing improvement. Although eight years of schooling have been legally compulsory since 1973, 1992 figures revealed that the average Brazilian worker had fewer than five years of formal education. That figure is expected to be closer to seven years in 1998 figures, and the sharply upward trend is likely to continue based on much better retention rates in primary schools over the past four years and surging enrollment rates in secondary schools.

During the 70s and 80s, the poor quality of public schools prompted almost all Brazilian middle- and upper-class families to send their children to private or church-affiliated schools. Those children were then better prepared to pass the difficult entry exams for the public universities, creating a paradox in which the less affluent Brazilians were the least able to benefit from the free public universities. Today that trend is showing some signs of softening as quality improvements and economic pressures lead an increasing number of middle-class families to opt again for public schools.

Commerce and Industry

Brazil's gross domestic product (GDP) of US\$800 billion in 1998

makes it the world's ninth largest economy. Brazil's population of 160 million makes it the fourth most populous country, and its territory is the fifth largest. Rich resources make Brazil a country of tremendous potential. Per capita income averages US\$5,000, with sharp disparities; in general, the south and southeast are more prosperous, while the northeast is much poorer.

Brazil's economy is highly diversified both agriculturally and industrially. Brazil is a major exporter of manufactured products (73 percent of total exports). It is the world's largest exporter of coffee and orange juice concentrate and a major exporter of soybeans, sugar, cocoa, meat and cotton. Mining is also important, particularly iron ore production.

After many years of high inflation, Brazil achieved its most sustained period of stability, beginning in July 1994 with the introduction of a new currency, the real (plural is reais; abbreviation is R\$). This stabilization plan was developed when current President Fernando Henrique Cardoso was Finance Minister (May 1993 - April 1994). The inflation rate, which had reached 50 percent per month by June 1994, declined to less than two percent per month throughout 1995. Inflation came down as a result of a strongly valued currency bolstered by very high real interest rates.

In order to consolidate the stabilization program, attract more long-term investment, and put Brazil on the path to long-term sustainable growth, the government must implement wide-ranging structural reforms. Over the years, Brazil has built a cumbersome government-dominated economy that has benefited a few special interests at the expense of the overall society. Many of the necessary reforms require amendment of Brazil's 1988 Constitution. The Congress passed in 1995 five reforms opening the economy to greater investment by the private sector, including foreign investors. Since then some US\$80 billion of mostly federally owned

assets have been privatized with another US\$20 billion of state and local enterprises set for the auction block in 1999.

The GOB has been engaged in a multifaceted program to stabilize its economy in the face of a global financial crisis which began in Asia in late 1997 and was further aggravated with Russia's default and the devaluation of its currency in September 1998. Brazil's vulnerability was its high fiscal deficit. To address this, the Brazilian government has cut spending modestly while simultaneously raising taxes. In early 1999, it abandoned its foreign exchange policy which had closely bound the real to the dollar in a "crawling peg," embracing, instead, a floating exchange.

There was strong consensus that the real has been overvalued for some time. The result was a nearly 50 percent devaluation against the dollar in its first month. To further address the fundamental causes of fiscal deficit, Brazil continues to make structural reforms, primarily in the area of social security and public sector retirement programs. Other reforms currently under consideration include an overhaul of its tax system, labor reform, and political reform to strengthen party organization and discipline.

Transportation

Automobiles

Parts for cars not produced in Brazil must be ordered from abroad. Few mechanics are trained for repair of imported vehicles. Brazil manufactures gasoline, alcohol, and some service-type, diesel-powered vehicles. Gasoline available is only a 72-octane gasohol mixture. Nearly all gasoline sold in Brazil contains up to 25% anhydrous alcohol. Non-Brazilian-manufactured vehicles run well on the local gasohol. But low-compression engines, either imported or produced locally, are recommended. The gasoline is non-leaded and therefore it is not necessary to remove the catalytic converter.

Ford, Chevrolet, Fiat and VW manufacture full lines of vehicles in Brazil. Most models are based on the companies' European models, but a few are similar to models sold in the U.S. Toyota, Honda and Renault manufacture a limited selection of models in Brazil. Brazilians overwhelmingly prefer vehicles with manual transmissions; automatic transmission is available on a few models, though not all. Used cars are readily available.

The number of imported cars in Brazil is increasing, and dealers are improving service and parts availability. However, it would still be prudent to bring a shop/repair manual and some make/model specific spare parts. There are several competent mechanics in town.

All POVs must carry mandatory and third-party insurance. The mandatory insurance covers personal medical expenses resulting from an accident and costs about R\$60 a year. The third-party insurance may be obtained from a Brazilian or a U.S. firm. The minimum required coverage is \$400,000 for property damage and \$400,000 for personal injury or death. Insurance should include coverage for all persons who may, with permission, operate the vehicle.

The Brazilian Transit Department (DETRAN) issues Brazilian drivers licenses. Those without a valid U.S. or other foreign license are required to have an eye exam. Only eligible family members (EFMs) 18 years old or older are eligible to obtain a Brazilian license.

Brasília: Taxis are available and offer adequate transportation, particularly for short runs. They are, however, expensive. Municipal governments set metered taxi rates, with higher rates being charged after 11 p.m. on weekends and holidays. All cabs have red license plates with white numbers. Tips are not required, but 10% of the metered fare is appropriate for excellent service.

Bus transportation passes through the center of the city, as well as on other major thoroughfares and is good. Bus service is also available to Brasília's many satellite cities.

Rio de Janeiro: Many metered taxis are available at reasonable prices, depending on the distance to be traveled. Radio controlled taxis which can be requested by phone are also available. Drivers have a reputation for being reckless. The Security Office advises personnel to avoid riding public buses because of the high incidence of theft. The Metro is also another form of transportation from Copacabana to downtown. The Metro is reasonably priced at R\$1.00 each way. Air conditioned buses are widely available and the price ranges from R\$3.00 to R\$5.00. The air-conditioned buses are generally safer than the public buses. Public bus price is R\$.70 each way if you choose to take this route of transportation.

São Paulo: Metered taxis are available at reasonable prices.

Recife: Recife's extensive bus system is efficient and inexpensive. Taxis are abundant and inexpensive. Although we recommend against their use, inexpensive gypsy cab vans ply regular routes.

Belo Horizonte: The rapid growth of this city has overburdened the city's transportation system. Bus lines are extensive and inexpensive, but some knowledge of the city is required. The bus system is chaotic, with most lines ending in the downtown area requiring a change of bus for cross town trips. Although economical, city buses are overcrowded and offer only minimal comfort.

Taxis are plentiful and can be found at stands situated throughout the downtown and principal residential areas. Taxi fares are moderate. Trips to outlying areas require a fare supplement. Taxi companies provide radio-controlled service.

Crowded traffic conditions and a limited number of parking spaces in the downtown and adjacent com-

mercial areas of the city make the use of private cars impractical at times. Trips to this area during business hours are best taken on foot or by taxi.

Regional

Direct international air service is available to and from the U.S., Africa, and Europe. Rio de Janeiro and São Paulo are the primary entry airports for U.S. flag carriers. However, some international flights terminate in Manaus, Belem, Recife, Brasília, Belo Horizonte, and other Brazilian cities. Intracountry connections to Brazil's major cities by national airlines are excellent, but airfares are high. Air transportation to and from Belo Horizonte is excellent, as the city is served by all four Brazilian commercial air carriers and American and United Airlines. Air transportation to and from Porto Alegre is also excellent, although most destinations require an intervening stop in Rio or São Paulo.

Bus transportation between cities is inexpensive and widely used. Some of the longer routes have air-conditioned buses with sleeper chairs (leito), coffee service, and toilets. Most intracity buses are not air conditioned and are crowded during rush hours, but run frequently and are inexpensive. Metro service operates in Rio de Janeiro and São Paulo.

The highway system in southeastern Brazil and as far north as Salvador is good. Brasília is connected directly to Foz do Iguacu, Belem, Goidnia, and to Rio de Janeiro and São Paulo. Gas stations, restaurants, and hotel accommodations are scarce on some highways.

The Amazon and Plata Rivers with their tributaries provide 25,600 miles of navigable rivers. Regular water transportation is available from Rio de Janeiro south to Buenos Aires and up the Amazon to Iquitos on the Peruvian border. You can obtain information in Belem on ships traveling up the Amazon.

Communications

Telephone and Telegraph

Brazil's telephone service is good. Local rates are higher than in the U.S., however. Reception on incoming international calls is excellent; for outgoing calls reception varies considerably. Direct dialing is available internationally and throughout Brazil. A telephone calling card from a major carrier (AT&T, Sprint, MCI, etc.) is quite useful. Cellular phone service is popular.

Mail

Registered mail service is available at Rio de Janeiro only.

Radio and TV

Brazil has some 3,000 radio stations and more than 400 television stations. For most Brazilians, TV and radio act as the principal source of news, sports and entertainment. TV Globo, with 107 stations, is known throughout the world for its telenovelas (soap operas), which bring Brazilian stories to TV fans throughout the Americas, Europe, Asia and Africa.

Unlike the U.S. standard NTSC system, Brazil television is broadcast with the PALM system. A U.S.-purchased NTSC set can receive the PAL-M signal, but only in black and white. NTSC-PAL-M converters that will allow you to use your NTSC set and receive the normal color transmission are available in large cities for prices that range between \$60 and \$100. Multisystem TVs are available in Brazil, as well; as of February 1999, a 29-inch SONY multisystem set was selling for about \$600.

While Brazil's commercial and public networks provide an ample selection of Portuguese-language news, talk shows, soap operas, sports and variety programs, most expatriates also subscribe to one of the cable systems. Since the launch of cable service in 1993, it has grown rapidly, with projections to reach an estimated 6 million subscribers in the year 2000. The major companies are Globo's NET, TVA/Abril and Direct TV. Monthly fees range from

about \$25 to \$40, depending on the package selected. CNN, ESPN, HBO, Cartoon Network, Discovery Kids and similar cable fare are available via all three systems.

Video rental outlets, including U.S. giant Blockbuster, are common throughout Brazil. American-made films for children are generally dubbed into Portuguese; those for adults generally carry subtitles. Video rental prices range from \$1 to \$3 at February 1999 exchange rates.

Radio fare runs the gamut from MPB (Brazilian Popular Music) and Bossa Nova to Motown and classical music. U.S. music fans can easily identify several stations that focus on music from back home, and Portuguese-speaking news hounds will find a growing selection of all-news or mostly-news formats. The Brazilian Government continues to require all commercial broadcasters to air the government-run Radiobras news program from 7 to 8 p.m. During election time, the public airwaves are also dedicated to a couple of hours a day of free campaign spots for candidates.

Internet use has grown rapidly in Brazil. An estimated 3.5 million Brazilians will be surfing the net by the year 2000, and Brazilian web sites are proliferating daily. Those who would like to practice their Portuguese from the U.S. can start by accessing dozens of Brazilian newspapers via <http://www.zaz.com.br/noticias/jornais.htm> or listen to Brazilian radio stations via the Internet at <http://www.lancc.utexas.edu/ilas/brazctr/radio.html>

Internet providers are multiplying throughout the country, and prices have become more competitive over the past couple of years. You can expect to pay \$20 to \$35 for monthly service, depending on the amount of usage and your location. AOL is coming into Brazil shortly, so the U.S. standby will also be an option. Phone lines have historically been the limiting factor with Internet service, as 56k modems were wasted on bad lines. With the privatization of phone companies throughout

Brazil, the future looks brighter (and faster).

Newspapers, Magazines, and Technical Journals

Brazilian newsstands are jammed with an array of newspaper and magazines, ranging from the serious to the frivolous. Major dailies such as *Folha de São Paulo*, *Jornal do Brasil*, *O Estado de São Paulo*, and *O Globo* are great sources for information about Brazilian politics, society and culture. They and many smaller, regional newspapers can be accessed on-line via <http://www.zaz.com.br/noticias/jornais.htm>. *Veja*, the most widely circulated weekly magazine in Brazil, offers both newcomers and veterans an excellent overview of the country.

International newspapers such as the *International Herald Tribune*, *The Wall Street Journal*, *The Miami Herald* and *The New York Times* are available at major newsstands, but the news will be at least a day - and sometimes a week - old. Single editions sell for the equivalent of USD 2.50 to USD 4.00, and subscriptions are available.

Latin American editions of *Time* and *Newsweek*, which focus more on international events and issues, are available both at newsstands and via subscription. National bookstore chains such as Saraiva and Livraria Siciliano carry a selection of English-language paperbacks alongside their Brazilian titles, but prices tend to be significantly higher than what readers can find via amazon.com or other U.S. providers.

Internet Support: Computers and associated hardware are more expensive in Brazil than in the U.S. Parts for personal computers made by international vendors (Dell, Compaq, Hewlett-Packard, etc.) are usually available. Qualified repair personnel can be difficult to find. Be sure to bring power and telephone line protection for computer equipment.

Health and Medicine

Medical Facilities

Most of the pharmaceuticals used in the United States are available in the Brazilian post cities. In some cases the identical brand name medication is marketed locally. However, in some instances, the quality or availability of locally marketed medication is suboptimal.

The testing of blood products for transfusion purposes in Brazil has improved considerably over the past several years and blood supplies are considered safe.

Brasília: There are several very adequate hospitals available and the level of competence and technical sophistication among the local health care providers is very good. Dental, orthodontic, and prosthodontic care is available and of good quality. Supplies of medications are good. There is an abundance of specialist consultant physicians available, many of whom are English speaking and have had training in the United States.

Rio de Janeiro: As in Brasília, there are inspected and satisfactory hospitals, well trained specialist physicians, and other medical support services are readily available. Likewise, dental, orthodontic, and prosthodontic care is available and of good quality. Supplies of medications are good.

São Paulo: São Paulo is the largest city in Brazil and as such has a very sophisticated and excellent medical infrastructure.

Community Health

Bottled water, available on a post-reimbursable basis, is recommended for direct consumption, at all locations. Municipality supplied water is treated and considered acceptable for bathing, laundering, and cooking. Fluoride content is variable and not directly added to bottled water and so fluoride supplementation is advised, for children under the age of twelve.

Food inspection and cleanliness of marketed meats and produce is very variable. Fruits and vegetables that are eaten uncooked and or unpeeled should be thoroughly washed and soaked in a disinfecting solution prior to consumption. Meats should be cooked thoroughly. Adequate pasteurization of dairy products is much improved but still variable and "long life" milk is recommended. Likewise, restaurant inspection is less enforced than in the United States. It is advisable to keep this constantly in mind and use discretion in ordering choices, and particularly to be careful with buffet type presentations in regard to freshness and adequacy of food chilling.

Several insect borne diseases are a problem in different areas of Brazil. In the Amazon and Northern regions malaria and Chagas disease are endemic. Dengue fever, a mosquito-transmitted viral illness, is becoming more disseminated throughout the country. To date, Brasília and São Paulo are still considered nonendemic cities. There is no vaccine available for dengue fever. The malaria in Brazil is considered chloroquine resistant. As important, is to make provision for avoidance of mosquito bites by means of protective clothing, bed netting, and insect repellents. Schistosomiasis, a tissue-invasive worm infestation, is present throughout the countryside. The parasite is transmitted by a microscopic water dwelling larval form, which can invade through the skin unnoticed. Bathing in lakes and river pools is inadvisable because of this organism.

Viral hepatitis, both A and B types, is a significant danger in Brazil and immunization for both is strongly recommended. Tuberculosis is a widespread illness in the country and biannual skin testing for the disease is appropriate. The incidence of HIV AIDS is rapidly increasing in Brazil. Appropriate protective measures and diligent awareness of the problem are essential. Education of potentially at-risk individuals is well advised.

Rabies is present in the country, but not in sufficient intensity to warrant universal immunization for individuals. Pets accompanying the employee should be current in rabies vaccination. Environmental hazards include heat prostration, air pollution in Rio de Janeiro and São Paulo, dehydration during the dry season (May-October) particularly in Brasília, and sun exposure-related skin problems. Liberal use of sun screens lotions/creams while outdoors along with wearing protective clothing and headgear is a good habit to develop.

Preventive Measures

You should be immunized against yellow fever. Likewise, immunization against polio, typhoid fever, tetanus, diphtheria, and hepatitis A and B should be current for those coming to Brazil. Due to Brasília's elevation and proximity to the equator, the sun's ultraviolet rays are more intense and hence more dangerous to skin exposed to the sun. It is important to protect against this hazard with clothing, hats, and sun-screen application.

Persons with ongoing health problems requiring medication or medical appliances and equipment should bring several months' supply of the prescribed drugs along with them. If you use corrective lenses, bring an extra pair of glasses as well as the lens prescription with you, the same applies to contact lenses. The local supply of these items is actually quite adequate, but some delay may be involved in the replacement process.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Direct Delta, United, and American flights to Brazil are available from New York, Miami, San Francisco, and Los Angeles. Usual ports of entry are Rio de Janeiro and São Paulo.

A passport and visa are required for Americans traveling to Brazil for any purpose. Brazilian visas must be obtained in advance from the Brazilian Embassy or consulate nearest to the traveler's place of residence. There are no "airport visas," and immigration authorities will refuse entry to Brazil to anyone not possessing a valid visa. All Brazilian visas, regardless of validity, are considered invalid if not used within 90 days of the issuance date. Immigration authorities will not allow entry into Brazil without a valid visa. Minors (under 10) traveling alone, with one parent or with a third party, must present written authorization by the absent parent(s) or legal guardian, specifically granting permission to travel alone, with one parent or with a third party. This authorization must be notarized, authenticated by the Brazilian Embassy or Consulate, and translated into Portuguese. For current entry and customs requirements for Brazil, travelers may contact the Brazilian Embassy at 3009 Whitehaven St. N.W., Washington, D.C., 20008; telephone (202) 238-2818, e-mail consular@brasilemb.org; Internet: <http://www.brasilemb.org>. Travelers may also contact the Brazilian consulates in Boston, Houston, Miami, New York, Chicago, Los Angeles, or San Francisco. Addresses, phone numbers, web and e-mail addresses, and jurisdictions of these consulates may be found at the Brazilian Embassy web site above.

Americans living in or visiting Brazil are encouraged to register at the Consular Section of the U.S. Embassy or Consulates in Brazil and obtain updated information on travel and security within Brazil. The U.S. Embassy is located in Brasilia at Avenida das Nacoes, Lote 3, telephone 011-55-61-321-7272, after-hours telephone 011-55-61-321-8230; web site at <http://www.embaixada-americana.org.br>. Consular Section public hours are 8:00 a.m.-12:00 noon and 1:30 p.m.-4:00 p.m., Monday through Friday except Brazilian and American holidays. There are consulates in the following cities:

Recife: Rua Goncalves Maia 163, telephone 011-55-81-3421-2441, after-hours telephone 011-55-3421-2641; web site at <http://www.consulado-americano.org.br>. Consular Section public hours are 8:00am-12noon and 1:00pm-4:00pm Monday through Friday except Brazilian and American holidays.

Rio de Janeiro: Avenida Presidente Wilson 147, telephone 011-55-21-2292-7117, after-hours 011-55-21-2220-0489; web site at <http://www.consulado-americano-rio.org.br>. Consular Section public hours are 8:30am-11:00am and 1:00pm-3:00pm, Monday through Friday except Brazilian and American holidays.

Sao Paulo: Rua Padre Joao Manoel 933, telephone 011-55-11-3081-6511, after-hours telephone 011-55-113064-6355; web site at <http://www.consuladoamericano.org.br>. Consular Section public hours are 8:30am-11:00am, Monday through Friday and 2:00pm-3:30pm Monday, Wednesday, and Friday except Brazilian and American holidays.

There are Consular Agencies in:

Belem: Rua Oswaldo Cruz 165; telephone 011-55-91-242-7815.

Manaus: Rua Recife 1010, Adrianopolis; telephone 011-55-92-633-4907.

Salvador da Bahia: Rua Pernambuco, 51, Pituba; telephone 011-55-71-345-1545 and 011-55-71-345-1548.

Fortaleza: The Instituto Cultural Brasil-Estados Unidos (IBEU), Rua Nogueira Acioly 891, Aldeota; telephone 011-55-85-252-1539.

Porto Alegre: The Instituto Cultural Brasil-Norteamericano, Rua Riachuelo, 1257, Centro; telephone 011-55-512-225-2255.

Pets

Dogs and cats are required to have the following documentation before their arrival: (1) certificate of vaccination against rabies, and (2) a U.S.

public health certificate issued within 30 days of departure and validated by the U.S. Department of Agriculture (USDA). Veterinarians are familiar with this procedure.

The same procedure is followed for pets coming from outside the U.S., i.e., a public health certificate from the country where the pet is located.

Firearms and Ammunition

The importation of personal firearms is to be for sporting purposes only. Those wishing to import a personal firearm into Brazil or purchase one locally should be aware of the following restrictions: There are restrictions on the number and caliber of weapons that can be imported or purchased locally. All personal firearms must be legally registered with the Brazilian Government. The focal point for all matters pertaining to personal firearms is the regional security office in Brasilia. All questions pertaining to personal firearms should be directed to that office. A written request which includes the make, model, serial number, and a copy of the original sales receipt must be forwarded to that office a minimum of 120 days prior to the intended date for shipping personal firearms.

Currency, Banking, and Weights and Measures

The currency of Brazil is the real. The rate of exchange is determined by market forces and varies from day to day. It is illegal to purchase currency from individuals or entities that are not authorized by the Central Bank of Brazil to perform exchange services.

In Recife and Belo Horizonte, authorized exchange dealers provide these services. A limited number of automated teller machines (ATMs) accept U.S. ATM cards. This service is expanding. As an added convenience, many personal bills for things like residential telephones and cable television services may be paid at banks.

Brazil has many banks, including Citibank and the Bank of Boston.

Most banks also offer ATM service for account holders.

International credit cards are beginning to enjoy widespread acceptance in Brazil. Major credit cards include Diner's Club, American Express, Master Charge, Visa, and Credicard. They may be used for a variety of purchases and for travel expenses. The rates of exchange offered on credit card purchases are competitive at this time.

The international metric system of weights and measures is standard for Brazil.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated April 1996. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The vast nation of **CANADA**, which borders on three oceans and spans seven time zones, abounds in contrasts. It boasts magical coasts, majestic mountains, wild rivers, untrod forests, and untouched lakes. It also boasts sky-scraping cities, sophisticated shopping, and culinary delights. From the Calgary Stampede to the Shakespearean Festival, from ethnic festivals to the changing of the guard in Ottawa, Canada is a fascinating blend of English and French, historic and modern, ceremonial and casual.

Canada has always had close ties with the United States, as evidenced by the fact that the two countries share the longest

unguarded border in the world. In spite of its extensive geographical, cultural, financial, and economic ties with the U.S., however, Canada retains a unique distinction from its southern neighbors.

MAJOR CITIES

Ottawa

Ottawa (from an Indian word meaning "near the water") is a clean, attractive, modern city at the junction of the Ottawa, Rideau, and Gatineau Rivers, about 60 miles north of the New York State border and 120 miles west of Montreal. City residents total over 400,000, and the total metropolitan population is over one million. The climate is healthful and bracing, and the area abounds with opportunities for outdoor activities and family living.

Samuel de Champlain reached the site of what is now Ottawa in 1613; however, a permanent settlement did not develop until after the Rideau Canal was built in 1827. Originally named Bytown, Ottawa was incorporated as a city under its present name in 1854. It was selected as the national capital by Queen Victoria in 1888.

As Canada's capital, Ottawa's main business is government and, as in Washington, DC, little industry exists. Living conditions are similar to those in comparably sized U.S. cities, although social life is geared to demands of diplomatic and government circles.

Small Oriental, Lebanese, Portuguese, and Italian colonies exist in Ottawa, but the majority of residents are of British or French descent. Most francophones (35% of the population) are also fluent in English. Approximately 15,000 Americans live in the Ottawa district; they have merged into the population and do not constitute a discernible American colony. About 50 U.S. companies have subsidiaries or affiliates in the area, but only a few have American citizens on their local staffs.

During summer, there is a flow of U.S. tourists through the city, and all year government officials and business representatives visit Ottawa in their respective roles.

The diplomatic community is large and growing. Some 146 nations maintain relations with Canada, although only 100 have resident missions in Ottawa. Most are small, with two or three officers and a chief of mission. The only large missions are those of the U.S., U.K., Russia,

Education

Ottawa's public school system offers instruction from kindergarten through grade 13. There are 55 elementary schools for kindergarten through grade eight, and 15 high schools with English instruction and five with French instruction, both covering grades 9 to 13. Tuition is free for Ottawa residents attending public schools. Children may enter kindergarten at age five, or four if the child will be five before December 31 of that year.

Courses meet the standards established by the Ontario Ministry of Education. The teacher-student ratio in elementary schools is about 1:16, and in secondary schools about 1:12, ratios which have remained constant for several years.

Parents may place their children in one of two language programs: the immersion program consisting of instruction totally in French in the first few years, and a gradual phasing in of English instruction until the program becomes bilingual; or the core program consisting of at least 20 minutes daily of French instruction from kindergarten

through eighth grade and making it optional at some level after that. The core program is not a rigid one and may vary from school to school.

While some students coming from U.S. schools have found the Ottawa high schools somewhat less demanding than their own, most students and parents report few differences or problems. Instructional programs and course offerings vary from school to school within a particular area.

Students pursuing a commercial, technical, or vocational curriculum in high school can receive a diploma after grade 12. Those planning to continue their studies beyond high school, especially if applying for admission to colleges and universities in Ontario, have, until recently, been required to complete grade 13, but this proviso is currently being phased out.

The Roman Catholic Church maintains a "separate school" system in Ottawa composed of 42 primary schools (19 with French instruction, 23 with English); six intermediate schools (five with French instruction, one with English); and two junior high schools, all with English instruction. Tuition through grade

10 is free for Ottawa residents. The curriculum of the "separate schools" meets all the requirements of the Ontario Ministry of Education.

The schools located in the suburban areas of Ottawa come under either the Carleton Public or Carleton Roman Catholic School Boards. Tuition for schools in both systems is free for residents of the school district. The Carleton Public School Board has 60 elementary schools (including 28 offering French immersion). There are 16 high schools, grades nine through 13, including several with a French immersion program. In addition to the schools offering French immersion, many schools in the Carleton jurisdiction offer French instruction similar to the Ottawa Board's core program. As with the Ottawa Board, parents are advised to check with the school in their neighborhood for specific details regarding the French program.

The Carleton Roman Catholic School Board has 51 elementary schools (32 with English instruction, 19 with French), all of which provide kindergarten to grade eight, and five high schools, grades nine through 13. However, after grade 10, the schools are considered private and tuition must be paid by parents. Many English-instruction elementary schools have French programs similar to those offered in the public school system. For details, parents should check with the neighborhood school their children will attend. The Carleton Roman Catholic School Board has no high schools where the language of instruction is French.

As in the Ottawa public and separate school boards, the curriculum in both boards in Carleton meets all the requirements of the Ontario Ministry of Education.

While a few American families live in Quebec Province (across the Ottawa River in the greater Hull area), the U.S. Embassy strongly discourages families with school-age children from residing in Quebec. The volatile French-lan-

guage issue and related educational controversies, plus frequent teachers' strikes, have created considerable turmoil in the schools. Children not already reasonably conversant in French will probably encounter problems, especially at the high school level, even if enrolled in an English-language school.

Quebec Province requires all high school students to take French throughout high school and to pass a standard provincial French-language examination before graduation.

Both public and separate school systems in Ottawa and the suburban areas offer extracurricular activities similar to those found in the U.S., including athletics, drama, music, and student government. The Ottawa school year, longer than that of the U.S., runs from Labor Day to the last week in June. Students have a week-long vacation at Christmas and a spring break of 10 days (usually in March). Grades are released quarterly.

Ottawa has a number of nursery schools which accept children from age three. In addition, there are a number of "play schools" for children 18 months to age four. These are usually two or three half days a week, and these require some type of parent participation.

There are two private preparatory schools in the Ottawa area: Elmwood School for girls (kindergarten through the fourth grade is coeducational; grades five through 13 are only for girls), and Ashbury College for boys (covering grades five through 13). Ashbury enrolls both day and boarding students.

Two universities, a technical institute, a teachers' college, and a variety of business and professional schools provide ample opportunity for education on a full- or part-time basis. These include Carleton University (English-language and private, founded in 1942); and University of Ottawa (bilingual and government-supported, founded in 1848). These universities offer a

multitude of courses at the undergraduate and graduate levels leading to degrees in liberal arts, sciences, engineering, theology, business administration, education, medicine, nursing, law, and applied sciences. Evening courses at both universities provide many opportunities for both degree and non-degree study. Both universities have extensive evening programs for part-time students as well. Unlike most U.S. colleges, courses are generally conducted on a yearly rather than semester basis.

Algonquin College of Applied Arts and Technology, a community college with four campuses, offers a wide range of day and evening courses, one-year certificate programs, and two- and three-year diploma programs. In general, tuition and fees for colleges and universities in Ottawa are less than those of state colleges and universities in the U.S.

Ottawa has four schools for trainable, mentally handicapped children. They are École Jeanne-Lajoie, the Clifford Bowie School, McHugh School (affiliated with the Royal Ottawa Psychiatric Center), and the Crystal Bay School (Carleton Board of Education). One school, Centennial, is for the physically handicapped, and additionally, the Ottawa Crippled Children's Treatment Center has teaching facilities for physically handicapped and autistic children.

Other educational opportunities include tutoring or group study in languages, music, dance, art, and related activities. These are available for all ages at reasonable cost, usually through the various school systems, Algonquin College, the universities, and the YMCA. Often, however, waiting lists are encountered for those wishing to obtain the most competent instruction available. This is particularly true of French-language courses.

Recreation

Extensive opportunities for participation in many recreational sports activities exist in and around

Ottawa. In winter, cross-country and downhill skiing are very popular. Trails and slopes abound within a 100-mile radius of the city, ranging from those for the beginner or casual skier to expert slopes for the advanced enthusiast.

Main roads are kept open and passable in winter, providing access to a number of ski trails and tows in developed ski complexes. Bus service is available. There is one ski area within the Ottawa city limits—Carlington Park. Within an hour's drive are the ski complexes of Camp Fortune and Edelweiss Valley. Camp Fortune, located in Quebec Province (in Gatineau Park) is one of the country's largest ski complexes, offering downhill and cross-country skiing at all levels of difficulty, day and night skiing, instruction, and rentals. It is a 20-minute drive from Ottawa.

Farther afield, the slopes at Mount St. Marie (Quebec) and Calabogie (Ontario) are 60 miles away. All have a variety of slopes and trails and offer instruction and rentals. Season passes for instruction, rentals, and tows are offered at most ski facilities. The elaborate winter sports resorts of Mount Tremblant, Quebec, can be reached from Ottawa in about three hours.

Ottawa also boasts what is billed as the world's largest outdoor skating rink. During the winter, a five-mile stretch of the Rideau Canal, built by the British after the War of 1812, between Dow's Lake and the National Arts Center is cleared and partially lighted for ice skating. Warming huts and snack bars are located at convenient intervals along the canal. It is not unusual to see business-people, with briefcases in tow, skate to work on the canal.

Ample facilities for all types of sports have been developed in and around Ottawa, including ice skating arenas, curling rinks, bowling alleys, indoor and outdoor swimming pools, and tennis and squash courts. One of the largest, and most unique, is the Nepean Sportsplex located in West Ottawa. Under one

roof it contains an ice skating rink, hockey arena, curling rink, gymnasium, squash courts, indoor swimming pool, auditorium, sauna, pub, and restaurant. It offers instruction for all age groups in sports activities as well as physical fitness classes, ski fitness clinics, arts and crafts, ballroom dancing, and ballet and tap dancing. The sportsplex publishes an annual bulletin of activities; enrollment in some courses is limited, and first preference is given to Nepean Township residents.

In the summer, ample opportunity for all types of water sports exists on the Ottawa, Rideau, and Gatineau Rivers, and at nearby lakes. There are several yacht clubs with extensive sailing programs. Beaches within Ottawa city limits are limited to one or two spots along the Rideau River, and Britannia Beach on the Ottawa River; facilities at these places are often crowded. On some of the lakes in the area, both in Ontario and Quebec, there are developed-access roads, beaches, and docks for canoes and boats, while other lakes are more isolated and primitive.

Some private golf clubs keep their courses open from May to October; several operate their dining rooms all winter. Ottawa also has public courses.

Tennis and squash facilities are available at a number of private clubs, such as the Ottawa Athletic Club. Municipal tennis courts are scattered about the area as well, offering seasonal membership at reasonable cost, or free use on a space-available basis. Instruction is also provided at the private and public tennis facilities.

Bicycling and jogging are very popular during summer, and there are numerous cycling and jogging trails in Ottawa and across the Ottawa River in Quebec's Gatineau Park. Some roads are closed to auto traffic on Sundays for the exclusive use of hikers, joggers, and cyclists. Additional popular participant sports include archery, badminton, bowling, camping, cricket, flying, judo,

riding, rugby, rowing, soccer, snowshoeing, and sailing.

For the spectator in winter, ice hockey, Canada's national sport, is virtually a mania. National Hockey League games are televised several times a week. In 1992 the Ottawa Senators, a new National Hockey League franchise, began play. The Ottawa Rough Riders represent Ottawa in the Canadian professional football league. The season begins in late July and ends in early December with the Grey Cup finals between the champions of the Eastern and Western Conferences.

Canadians are avid baseball fans, too, and root for the American major league teams as well as the Canadian entries in Toronto (Blue Jays) and Montreal (Expos). Tickets for Montreal Expo games are sold in Ottawa, and there are chartered buses from downtown Ottawa to the baseball stadium in Montreal for selected games. Stock car racing is held in Stittsville, about 20 miles from Ottawa, in the summer months.

In the greater Ottawa area, which includes suburban areas in and around Hull, Quebec, there are numerous parks operated by various municipal, provincial, and federal authorities. Much of the land adjacent to the Ottawa River on the Ontario side is part of the National Capital Commission and is maintained as park land, with hiking and bicycle trails which serve as cross-country skiing trails in winter. In nearby Quebec is the largest of the area parks, Gatineau Park, whose 75,000 acres are maintained by the National Capital Commission. It offers opportunities to painters, hikers, photographers, naturalists, skiers, and picnickers.

Ottawa citizens often form private fishing and hunting clubs, which acquire and stock private lakes within driving distance. Public or crown lands, other than in the protected areas of Gatineau Park, are generally open to hunters and fishermen. Ontario hunting licenses are issued for a nominal fee upon pre-

sentation of a valid hunting license from another province or from the U.S., or after passing a basic firearms handling test.

In Ottawa there are several museums of interest, including the National Gallery of Art; the Museum of Science and Industry, with unique viewer-participation exhibits especially recommended for school-age children; the Museum of Man; the Bytown Museum (natural history); and Laurier House (former residence of Canadian prime ministers).

Tours of the Parliament buildings are conducted daily throughout the year. During the summer there are sight-seeing tours and moonlight cruises on the Rideau Canal and the Ottawa River. Tours of the Royal Canadian Mounted Police headquarters, the Queen's Printer, the Royal Canadian Mint, and other government agencies can be arranged upon request. Within an easy drive of Ottawa are the St. Lawrence Seaway, the Thousand Islands area, and the restored pioneer settlement of Upper Canada Village.

Toronto and Montreal, Canada's two largest urban centers, are both close to Ottawa—Toronto is 275 miles to the west, and Montreal 120 miles to the east. Toronto, five hours away by road and rail and 55 minutes by air, is the business center of Canada. Here, visitors find a wide variety of reasonable hotel accommodations, extensive shopping facilities, museums, restaurants, and a lively theater district. Montreal is only two hours from Ottawa by road and rail, or 35 minutes by air, and offers a definite French-Canadian atmosphere, which can be enjoyed in a day's visit or for a longer period. There are attractive shopping areas, numerous restaurants, nightclubs, museums, and theaters.

Washington, DC (Dulles) and Baltimore, Maryland (BWI) airports are connected to Ottawa by direct air service. There are daily flights between Ottawa and BWI. Air travelers to other cities in the U.S. must

make connections in either Montreal or Toronto. Washington, DC is about 600 miles by road from Ottawa, via excellent interstate highways. New York City can be reached in one day by car and is about 455 miles from Ottawa, also via interstate highways.

Entertainment

Ottawa offers a wide variety of entertainment. The National Arts Center is a cultural center of the first rank, where national and international stars, orchestras, and ballet and theatrical troupes perform regularly. Top-flight soloists and musical groups also are featured at Ottawa and Carleton Universities in programs which are open to the public. The Ottawa Little Theater, with a cast of amateur players, offers a full season of plays.

Ottawa now has some 20 movie houses, and an active National Film Theater whose thrice-weekly showings of classic and foreign films attract crowds of movie buffs to the auditorium in the Public Archives.

The National Gallery of Canada owns and displays a small but excellent collection of European and Canadian paintings, and a small group of contemporary American art. Special exhibits are scheduled throughout the year; the opening ceremonies and receptions are well-attended social events. The gallery also sponsors film shows and art lectures.

The number and quality of Ottawa's restaurants has been rising, and ethnic cuisine is available in a range of prices. Dancing is provided nightly in hotels, in the National Arts Center, and in several of the nightclubs in town and across the Ottawa River in Hull, Quebec. Another attraction in Hull is the abundance of excellent restaurants which may be found in that predominantly French-Canadian city.

Annual events of interest are the Winterlude Festival in February; the Tulip Festival in the latter half of May; and the Central Canada

Ontario Place, Toronto, Canada

David Johnson. Reproduced by permission.

Exhibition, a week-long country fair held each September.

Because of the absence of a language barrier and the openness of Canadian society, Americans blend easily into the local scene. Ottawa has a number of social clubs and public activities which provide opportunities for contact with Canadians. These include an International Women's Club; Boy and Girl Scout groups; and a number of civic organizations, such as Lions, Rotary, Kiwanis, and Optimists.

Toronto

Toronto, Canada's largest city, occupies the site of an old French trading post, Fort Rouillé founded in the 1790s. The city was founded as a British Army garrison town, Fort York, on the shores of Lake Ontario in 1793. It succeeded Niagara-on-the-Lake as capital of Upper Canada in 1797. Chartered as a city in 1834, its name was then changed to Toronto. Toronto served as the country's capital from 1849 to 1851, and from 1855 to 1859.

The Municipality of Metropolitan Toronto consists of the city of Toronto and five boroughs, with an estimated population of 4.7 million (2000), and covering an area of about 625 square miles. It is a beau-

tiful city of parks and trees with a mixture of old and new buildings, connected by an excellent network of roads. Tall construction has been kept to a minimum, creating a feeling of spaciousness. The city is the capital of the Province of Ontario, the most populous and industrialized province in Canada. Toronto is the commercial, financial, and industrial center of Canada.

With the opening of the St. Lawrence Seaway, Toronto has become an important shipping center with modern harbor facilities. It is also one of Canada's principal aviation and railway focal points. Well over 1,000 U.S.-controlled companies have plants or representation within the U.S. consular district, and American investment in the area is enormous. This area is said to contain the largest concentration of American-owned or American-controlled plants in any consular district outside the U.S.

Toronto is the headquarters of the Canadian book and magazine publishing industry, three large daily newspapers, and English-language radio and TV broadcasting. It is the center of English-speaking culture in Canada.

An estimated 200,000 U.S. citizens live in the district; many are dual

Skyline of Toronto, Ontario

nationals. In addition, tens of thousands of Americans visit the city annually, many of them in connection with conventions, or while en route to and from recreation and vacation areas north of the city.

Education

English is the language of instruction in virtually all public schools and in the universities. For those families who may be interested, French has been offered recently as the language of instruction at certain selected public schools throughout the metropolitan area. French is also taught as a required subject in elementary schools.

Toronto's public school system, used by most expatriates, consists of kin-

dergarten, eight years of elementary school, and four or five years of secondary school, depending on the course selected. The fifth year of high school (grade 13), once necessary for admission to most universities in Ontario, is currently being phased out to put Ontario in step with the rest of Canada and the United States. Standards in Toronto secondary schools are comparable to those in the U.S. Course work may be on a yearly basis or semester system, depending on the school attended. Some students entering during the later high school years may have difficulty with subjects that are not taught as a matter of course in American schools. In Canadian schools, many subjects build on a foundation established

the year or two before. It does not seem to be an impossible problem, but young people should come prepared to study hard if they wish to enter a collegiate school. It also should be remembered that, in this bilingual country, French is required of all students. All college entrance examinations are offered in Toronto.

A separate school system is maintained for Roman Catholic children. Catholic schools receive financial support from the property taxes assessed on those homes occupied by Roman Catholic families. Education is free through grade 10, but tuition must be paid from grade 11. Uniforms are required beginning in ninth grade, and only a couple of Catholic schools are coeducational.

Several excellent private schools accept both boarding and day pupils. Tuition rates are about the same as in comparable schools in the northeastern U.S. These schools are usually not coeducational, and uniforms are worn.

Toronto offers extensive educational opportunities, ranging from the University of Toronto to night courses available at the local high schools.

The University of Toronto (founded in 1827), an institution of high academic standing, offers undergraduate and postgraduate courses in virtually all fields of endeavor, including the arts, sciences, commerce, medicine, applied sciences, and engineering. The Ontario College of Art and the Royal Conservatory of Music are affiliated with the university.

York University is Toronto's second university; founded in 1959, it is much newer, and has faculties of art, administrative studies, environmental studies, fine arts, science, and law.

Admission standards at both universities are high, and completion of grade 13 or an equivalent year is mandatory. Undergraduate courses

are offered in the evening, and summer school is also available.

In addition to university-level education, the past few years have seen a rise in the number of community colleges. These schools offer post-secondary education in numerous fields, primarily in technical areas.

The Toronto area offers exceptional facilities for the education of the mentally retarded. Special full-time programs are available through the public schools; counseling, special classes, and parent relief activities by the Provincial Ministry of Community and Social Services' Surrey Place Center; and a very active association for the retarded with its own nursery and training programs and community activities (summer camp, meetings with specialists, etc.). These combine to provide families with retarded children greater opportunities for development. However, as possibilities may depend on the age of the child and the nature of the retardation, advanced contact with the Metropolitan Toronto Association for the Mentally Retarded and with Surrey Place Center is advised.

Recreation

Toronto and the nearby areas have much to offer the sports enthusiast, both as spectator and participant. For the spectator there are both professional and amateur hockey, football, soccer, lacrosse, tennis, wrestling, boxing, baseball, and horse racing.

Hockey is by far the most popular professional spectator sport, and is followed by all ages with such enthusiasm that it ranks as a national craze. The Toronto Maple Leafs, an entry in the National Hockey League, play to packed houses at Maple Leaf Gardens from October through April.

Close behind hockey in popularity is football. The Toronto Argonauts are members of the Canadian Football League. There are two horse racing tracks within the metropolitan area offering both thoroughbred and harness racing. Pari-mutuel betting is

permitted. The Toronto Blue Jays baseball team became a member of the American League in 1977, and has gained an enthusiastic following of fans of all ages; they won the Eastern Division pennant in 1985 and the World Series in 1992.

For the sports participant, there are swimming, tennis, roller and ice skating, curling, golf, bowling, skiing, fishing, and hunting. Swimming is a popular summer sport and there are many public pools, operated by the Toronto Parks Commission. Because these pools are usually overcrowded on weekends, and because the waters of Lake Ontario are generally considered too cold for anything other than wading, many Torontonians head north to the lake regions for swimming.

Tennis can be played on a number of public courts. Artificial ice skating rinks are located throughout the metropolitan area. Curling, a new game to most Americans, is another popular winter sport, played indoors on ice in arenas built expressly for this purpose.

Numerous golf courses are in the Toronto area or within a 30- or 40-mile drive. They range from crowded public courses to the exclusive, well-maintained, and expensive private clubs.

Because of Toronto's proximity to Lake Ontario and the lake regions to the north, boating is a popular summer pastime, and the city has several yacht clubs. Good fishing and hunting can be found by driving about 120 to 150 miles north of the city. Skiing in and around Toronto is possible, but the real skiing enthusiast will go north 60 to 100 miles to the Collingwood and Gravenhurst areas.

The Province of Ontario maintains an excellent system of toll-free expressways and paved secondary roads, making all but the most remote parts of the province accessible by car. However, traffic is heavy, particularly during the summer months. Distance by road (miles) to

the following points are: Buffalo, New York, 100; Windsor-Detroit, 235; Ottawa, 286; Montreal, 350; Quebec City, 480; New York City, 478; and Washington, DC, 520.

Toronto's fine park system offers a variety of activities, winter and summer. The pride of the system is Centre Island Park, located on a large island in Lake Ontario off the harbor area, and accessible only by ferry. Ontario Place is also located on a series of man-made islands in Lake Ontario, adjacent to the Canadian National Exhibition grounds, the largest annual exhibition in the world. The Canadian National Exhibition is a popular event. The exhibition features theatrical and musical events, animals, farm and horticultural displays, and an international air show.

Children's playgrounds are located throughout the city and, in summer, playground directors supervise children's activities. During winter, the Parks Department operates numerous ice skating and hockey rinks.

Entertainment

Toronto does not lack cultural or entertainment activities, and offers everything normally found in a cosmopolitan city of comparable size.

Many first-run and neighborhood movie theaters show American, British, and foreign films. Live theater is also very much in evidence in the Toronto area. The 3,200-seat O'Keefe Centre for the Performing Arts and the Royal Alexandra Theatre both present full seasons of opera, ballet, and musical and dramatic productions, featuring not only the top Canadian companies, but also the best American and British companies. Toronto's concert hall, Massey Hall, a venerable old building with near-perfect acoustics, housed the Toronto Symphony Orchestra until the Roy Thomson Hall was opened. Recitals are given here by touring internationally known artists.

In Stratford, Ontario, about 90 miles southwest of Toronto, the Stratford Shakespearean Festival

features world famous actors. Niagara-on-the-Lake, about 80 miles south of Toronto, is the home of the Shaw Festival. Both have become very popular spots for the theater lover during the summer season.

Jazz, folk music, chamber music, and numerous smaller professional and amateur theatrical groups can be found throughout Toronto. The city is purported to be the third most important center for theater in the world, after New York and London. There are also many fine restaurants of every cuisine, cocktail lounges, coffee shops, and night-clubs to suit every taste.

The Royal Ontario Museum, the Ontario Art Gallery, the McLaughlin Planetarium, and the Ontario Science Centre provide many hours of interesting viewing.

Montreal

Montreal, with an estimated metropolitan population of 3.4 million, is the second largest city in Canada and the second-largest French speaking city in the world. When Jacques Cartier visited the area that is presently Montreal in 1535, he found the Indian village of Hochelaga. The island was visited in 1603 by Samuel de Champlain, but was not settled by the French until 1642, when Sieur de Maisonneuve founded the Ville Marie de Montreal. The city became the center of fur trade and a starting point of expeditions into the interior. Montreal was the last Canadian city held by the French; it surrendered to the British in 1760. From 1844 to 1849, Montreal was the seat of Canadian government.

Montreal is a cosmopolitan city of charm and variety, where skyscrapers share space with 200-year-old buildings. More than two-thirds of its people are French-speaking. Most of the rest are English-speaking, primarily of English, Irish, Scottish, and Welsh descent. Italians are the third largest ethnic group. About 60% of all the people in Montreal speak English fluently. Several million Americans visit the

Street in Montreal, Quebec

Province of Quebec every year, and nearly all visit Montreal.

The visitor soon discovers that Montreal has everything needed for a pleasant stay—an absorbing history, a rich and varied culture, outstanding cultural and recreational facilities, comfortable and attractive apartments and houses, a French cuisine which justifies the title of “Paris of America,” and over 3,000 restaurants specializing in the foods of many other nationalities. The general standard of living is high. Montrealers, particularly well-to-do French-Canadians, are more fashion-conscious than most Americans and accept European style trends more readily.

Montreal is located in the southern part of the Province of Quebec, 120 miles east of Ottawa, and about 40 miles from the New York and Vermont borders. By car, it is 400 miles from New York City and 615 miles from Washington, DC. It is situated

on an island some 30 miles long, and seven to 10 miles wide, at the junction of the St. Lawrence and Ottawa Rivers. Mount Royal, for which it is named, rises almost in the center of the city to a height of about 765 feet above sea level (the city’s average altitude is 63 feet). Most of Mount Royal is a natural park, providing areas for picnics in summer and skating and skiing in winter.

Education

Over the last several years, the school system in Quebec has been in a state of some turmoil because of strikes and linguistic and pedagogical issues. The current provincial language law severely restricts access to English education, although exceptions are granted to children expecting to live in Quebec Province for temporary periods only.

The public school system in Montreal consists of 11 grades (grades one through six is elementary school; grades seven through 11 is

high school). Some public schools have kindergartens, but this is not the general rule. The public schools, which are free, are run by two separate school boards: Catholic and Protestant, each administering francophone and anglophone schools. For public school purposes, Protestant generally means non-Catholic. Basic instruction can be in French or English. Moreover, English schools provide French immersion courses in which students may elect to take a portion of their subjects in French.

Students entering the Quebec system in the elementary grades will generally find the education to be on a par with that in the U.S., with the bonus of being able to develop a sound knowledge of French. Students entering at the secondary level may, however, encounter problems as a result of French-language requirements and the 11-grade system.

Provincial regulations require that any student who has been in Quebec for more than two years pass a French equivalency test, given to all 11th-grade students, in order to receive a school leaving certificate, which is the equivalent of a high school diploma. Most students entering in the eighth or ninth grades will therefore require extra tutoring to enable them to attain required proficiency levels in French.

Grading procedures in Quebec are also different than in the U.S. For the upper grades, class marks, which are reflected in transcripts, are heavily based on standardized provincial examinations, given at the end of the year to all Quebec students.

The absence of a 12th grade presents other problems. For the Quebec student, the normal sequence is to graduate from high school at the end of the 11th year, enter the two-year CEGEP system (somewhat like a U.S. junior college), and subsequently go on to a university. Based on recent experience, education authorities will not authorize

entry to the CEGEP system for any American student who has not graduated from an American high school. The alternatives for an entering student who would normally enter the 12th grade in the U.S. are to repeat the 11th grade, which Quebec authorities insist is equivalent to the American 12th grade, or to go to school in the U.S.

American students finishing the 11th grade in Quebec have several alternatives. They may elect to go to a boarding school in the U.S. for the 12th grade, although a graduating student could elect to stay in Montreal, since one private boy's school offers a 12th-grade program. However, no 12th-grade programs for girls exist in Montreal. Alternatively, the student could elect to enter the CEGEP system or apply directly to an American college. Some Quebec students enter U.S. colleges after the 11th grade. The willingness of an American college to consider the application of an American student from Quebec would depend, however, on the success of the student in fulfilling course requirements by the end of the 11th grade.

Montreal has a number of private schools. Entrance to these schools is based on competitive examinations, and most of them have waiting lists for entry. The role of private schools in Quebec and the extent to which they should receive government support are under review by the provincial government. Most private schools in Quebec require uniforms.

Montreal has adequate facilities for any type of education from nursery school to the most advanced academic and scientific degrees; private tutoring in any subject; instruction in music, dancing, painting, and the other arts; and special training in crafts, hobbies, sports, gardening, use of power equipment, and other skills.

The Montreal school system has facilities at all grade levels for both physical (including the deaf and blind) and learning handicaps.

The school year runs from just after Labor Day until mid-June. The opening and closing dates for Catholic and Protestant schools differ by a few days, but time in school is the same. All schools have a five-day week. Schools have a two-week holiday at Christmas and a few days at Easter, usually Holy Thursday through Easter Monday.

While extracurricular activities are similar to those in the U.S., they tend to be less extensive, particularly in the area of sports.

Montreal's universities have many American students. The largest of the universities is the French-language Université de Montreal, founded in 1876. The Université du Quebec à Montreal (founded in 1969) is also a French-language institution. Most popular with Americans is the English-language McGill University, founded in 1821. The other large English-language institution is Concordia University, formed by the amalgamation of Sir George Williams University and Loyola College. Concordia has an extensive evening program where it is possible to earn degrees in a variety of fields. All of Montreal's universities offer evening extension programs, but not all lead to degrees.

Recreation

Canada's national sport is hockey. Canadian children learn to skate almost as soon as they learn to walk, and start playing hockey soon thereafter. In winter, free public skating and hockey rinks are found in every section of the city. During the season, Les Canadiens, Montreal's almost legendary National Hockey League team, play at the Forum. Announcements at Canadiens games are made in both French and English.

Montreal's professional baseball team, the Expos, is part of the National Baseball League. The Expos utilize the 1976 Olympic Stadium for their home games. Bowling and curling also are popular, and there are a number of clubs and leagues.

The city has many public tennis courts, and a number of tennis clubs, some with indoor courts. The Montreal area is dotted with private golf courses. A few public courses exist, but they are usually crowded. Excellent and extensive jogging paths are located on Mount Royal. Joggers also enjoy running along the seven-mile Lachine Canal. The Montreal International Marathon, run in late September, attracts over 10,000 participants annually.

Boating is popular. Several yacht clubs on Lake St. Louis (about a half-hour by car from the city) and on the Lake of Two Mountains offer keen inter-club competition and a limited cruising area. Most sailboats on Lake St. Louis are center-board types because of the large shoal areas, but there are many larger boats, and the International Dragon Class is very active. Two- to three-week cruises to the Thousand Islands, Ottawa, and the Rideau or Lake Champlain are popular with local yachters.

Montreal has an excellent range of readily accessible year-round recreational opportunities in Quebec Province and in northern New York and New England. The Laurentian mountain area, which begins about 45 miles from the city and includes Mont Tremblant Park, is one of the most attractive winter and summer resort areas in Canada. Mont Tremblant, 100 miles from Montreal, and Stowe, Vermont, 120 miles away, provide the best skiing in eastern North America. There is limited skiing in Montreal itself on Mount Royal, but the nearest really good skiing areas begin about 50 miles away. Cross-country skiing is very popular both in and outside of Montreal.

The many lakes in the Laurentians and other nearby areas provide swimming, boating, and water-skiing. There are good camping facilities and accommodations, from luxury hotels to simple lodgings in all areas.

Fishing and hunting are good and are possible close to Montreal. The

lakes, rivers, and streams of the province have a variety of fish; speckled trout are the most common. Partridge are found in most woods. The flyways over Lake St. Francis and Lake St. Peter, each about 75 miles from Montreal, offer some of the finest duck shooting in North America. About 150 miles down the St. Lawrence is the only place in the world for hunting the beautiful snow goose. Deer and bear are found within 100 miles of the city.

Montreal has 362 parks. The top of Mount Royal has been preserved as a 500-acre natural forest park. Both the Chalet, at the peak, and Beaver Lake, at the beginning of the park area, are popular in winter and summer. The Chalet has a remarkable view of the city. Beaver Lake, an artificial lagoon, is a favorite place for model-boat enthusiasts. In addition to skiing and tobogganing in winter, the Beaver Lake Pavilion has a large ice skating rink. Mount Royal also has bridle paths for horseback riders.

Another delightful park is located on St. Helen's and Notre Dame Islands in the middle of the St. Lawrence, between the harbor and the seaway. It has an amusement park (the site of Expo '67), swimming pools, picnic areas and playgrounds, and other attractions, including Montreal's Military and Maritime Museum. Its Helene-de-Champlain Restaurant, in a castle-like chalet, provides a picturesque setting and good food.

The Garden of Wonders, better known as the Children's Zoo, is a fascinating feature of Lafontaine Park, which also has two lagoons. Rowboats are for rent, and rides can be taken in a miniature paddle-wheeler "showboat" and in a miniature train.

The extensive greenhouses of Montreal's Botanical Gardens, conveniently located on a principal street, are open all year; its outdoor gardens are open from May or June to October. There are spectacular exhibitions in November and at Easter,

and excellent shows at various other times.

Montreal has a number of fine museums. The best historical museum is the Chateau de Ramezay, built in 1705 as the residence for the governor of Montreal. It was the headquarters of the American Army of Occupation in 1775-76, and well-known Americans who stayed there included Benjamin Franklin, Charles Carroll of Carrollton, and Benedict Arnold. Redpath Museum has interesting geological and zoological exhibits and Indian relics. McGill University's McCord Museum, now associated with the Montreal Museum of Fine Arts, has a unique collection of Canadian historical and North American archaeological exhibits. The Wax Museum has more than 200 life-size figures, depicting scenes from Canada's earliest history to modern times. The Bell Telephone Company of Canada has an industrial science museum with original equipment, replicas, and pictures of communications from ancient sight and sound signals to Telstar. Many of these exhibits can be seen in operation.

The Montreal Museum of Fine Arts, entering its second century, is located in the city's center, and houses a formidable collection of paintings, decorative arts, and sculptures, as well as ancient glass and textile collections.

Several Catholic churches have museums with collections of paintings and religious and other exhibits. The museum of Notre Dame de Bon Secours Church, also known as the Sailor's Church, has model ships presented by sailors and an excellent collection of fine dolls. There is also the Museum of Contemporary Art, which opened prior to the 1976 World's Fair held in Montreal. A planetarium and an aquarium were established within the city during 1966-67.

In February 1990, the Montreal Insectarium opened to the public. Built to resemble a stylized insect, the building has a total area of

View of Quebec City, Quebec

© Wolfgang Kaehler/Corbis. Reproduced by permission.

approximately 7,000 square feet and includes exhibition areas, open-space laboratories, a multipurpose hall and a 40-seat theater.

Entertainment

Nowhere is Montreal's cosmopolitan nature better reflected than in its entertainment. Plays may be seen throughout the year in both English and French, with occasional productions in other languages. A mobile summer theater for children is operated by the Montreal Parks Department. The Montreal ballet company, Les Grands Ballets Canadiens, performs regularly, and there are other ballet performances as well.

Montreal's modern Place des Artes is the city's center for symphonies, ballets, stage productions, and visiting national and international performers. Place des Arts houses three theaters, the largest seating approximately 3,000 people. Throughout the year, there are many vocal and instrumental recit-

als. The International Music Competition, held in May or June of each year, is one of the most important artistic events held in Montreal. The Montreal International Jazz Festival, held in June or July, features concerts and shows by many of the world's great jazz musicians. The World Film Festival is held annually in August and September.

There are many movie houses, both downtown and in the neighborhoods. New American films are shown at the same time as in the U.S. Films are in English and French. A few theaters show films in their original languages, with English or French subtitles.

The midwinter Carnival festivities in Quebec City are attended by many people from Montreal, Quebec, New England, New York, and elsewhere. The Sherbrooke Festival des Cantons features Quebecois shows, horse-pulling, and gourmet cuisine.

Almost every social group contains a number of the Americans living in Montreal. An American Women's Club meets regularly for lunch and has annual bazaars, fashion shows, dances, and bridge tournaments for the benefit of Canadian charities. The Montreal Post of the American Legion is also active. No other American community organizations exist.

Quebec City

Quebec City is the provincial capital and the center of French Canada. The city takes its name from an Algonquin Indian word meaning where the river narrows, but its many residents, although North American, bear the clear imprint of their French ancestry and culture. The city is located on the site of the old Indian town of Stadacona and was visited by Jacques Cartier in 1535 and 1541. In 1608, Samuel de Champlain established a trading

post here which became the first permanent settlement. The area was briefly controlled by the British and was the capital of New France from 1663 to 1763. It also served as capital of Canada from 1851 to 1855, and from 1859 to 1867.

Greater Quebec is a metropolitan area of about 646,000. Quebec, the largest municipality, is divided into two distinct areas. These are Lower Town (which winds around the base of the promontory, along the banks of the St. Lawrence into the St. Charles River Valley), and Upper Town (on heights 200 to 300 feet above the St. Lawrence). When viewed from the sister city of Levis (part of Greater Quebec), Upper Town has a distinctly Old World appearance, including the imposing roof and turrets of the Château Frontenac. Stone walls encircle part of the business and residential section of Upper Town and reach to the ramparts of the Citadelle. The area within the old city walls is recognized as a historic monument. Building restrictions and the tasteful restoration of old houses preserve the Old World flavor of the area. Most buildings in the city have painted tin roofs, dormer windows, colorful shutters, and wooden doors.

The city's population is about 96% French-speaking. Most of the remainder are English Canadians, and only a small minority is of other national and racial origins. In the surrounding countryside, the population is almost totally French-speaking, and is descended from French colonists led by Champlain, who established the first settlement in 1608. Although they are undeniably French in origin, their attitudes and viewpoints reflect the fact that development of their distinctive society has taken place in North America.

Quebec harbor is one of the most important in Canada. It has extensive passenger and freight-handling facilities, including large elevators for the transshipment of grain. Quebec is a regularly scheduled port of call for

steamship lines during the ice-free months from April through November and, for several years, has enjoyed an increasing volume of winter freight traffic as well.

The Port City life has been reanimated at the Vieux-Port de Quebec. La Société du Vieux-Port, commissioned by the Canadian Government, manages this facility which consists of a walkway, outdoor amphitheater, marina, market, and residential units.

In 1977, developers and artists pooled their resources to rescue North America's oldest neighborhood from an undeserved fate. Warmed with color and flowers, the Quartier Petit Champlain is once again a community and a real delight. Its beautifully restored houses shelter more than 50 businesses, outdoor cafes and restaurants ranging from classic French to European fast-food, art galleries, a theater, and charming boutiques. One can meet artists and crafts-people in their studios, or in the street, where pedestrians, musicians, clowns, and jugglers mingle.

Currently 2,000 Americans are registered with the U.S. Consulate and about 7,700 Americans live within the district, many of them French-Canadian descent.

Education

Quebec's public and private schools, from preschool through eighth grade, are generally comparable to American schools. High schools, however, are organized somewhat differently and, in general, are less demanding than their American counterparts.

The final year of high school is the 11th year of studies. Provincial regulations require that every student have two years of high school French and pass both oral and written examinations in French before graduation. The exception to that rule is only for dependents of diplomats, who are exempt from the language law, and who may attend

either English- or French-language schools.

Public schools in the province are Catholic or Protestant, but the emphasis on religion has diminished considerably in recent years. Quebec now generally minimizes the importance of religious study much the same as in U.S. public schools.

Quebec has no French-language Protestant schools, public or private. Protestant parents are free to enroll their children in the French-language Catholic schools located throughout the city.

Excellent boarding schools are found throughout the neighboring New England states and in Montreal.

There are a number of specialized schools and organizations in the area for physically and mentally handicapped individuals. Children with learning disabilities attend special classes in the regular school system. For those more severely handicapped, special education, including vocational training, is available through grade nine. Interested individuals should contact the U.S. Consulate in Quebec for further information.

At Laval University (founded in 1852), many faculties, such as medicine and law, accept students only at the graduate level. Other faculties accept students at what would be considered the undergraduate level. Students wishing to enter Laval should discuss the matter with university authorities.

Laval offers evening courses during the academic year in a variety of subjects at the undergraduate level. Instruction in these courses is in French. Laval also offers an intensive summer French-language program which is well known in the U.S. and is attended by several thousand Americans each year. At other times, French-language instruction is offered in the evening at both beginning and advanced levels.

Recreation

Many opportunities exist for ice skating, skiing, and other winter sports in Quebec City. Good ski slopes are within 30 miles of town. Mount Ste. Anne—the highest—has a vertical drop of over 2,000 feet and is one of the best ski mountains in eastern North America. Cross-country skiing is enjoying a major boom, and cross-country trails are maintained in a great number of federal and provincial parks within easy driving distance. For those who prefer to break trail on their own, the open rolling countryside near the city offers virtually unlimited opportunities.

In winter, two or three professional ice hockey games are played each week by the National Hockey League's Quebec Nordiques. The Coliseum was recently renovated and enlarged. Announcements at Nordiques games are made only in French. Several other ice arenas in the municipal area provide instruction and organized competition in both hockey and figure skating.

Quebec City's premier cold-weather event is the annual 10-day Winter Carnival, held in February. There are ice sculpture contests, a majestic ice castle on Place du Palais, a canoe race on the St. Lawrence, and two parades through city streets.

Several indoor curling clubs admit both men and women to membership. There is great interest in this ancient sport here, and membership in one of these clubs affords an opportunity to meet a large number of business and professional persons.

There is good hunting and fishing close to Quebec. The provincial government runs camps in the Laurentides Park. Summertime can be very pleasant in Quebec, in spite of the overwhelming number of tourists who crowd into the city. Golf, tennis, sailing, and fishing are available near town, as well as swimming, hiking, and camping.

Quebec City is the gateway to the Laurentides Park, which begins

about 30 miles north of the city and is easily accessible on one of the newest and most modern highways in the province. The areas north and east of Quebec City abound in wooded hills and mountains, with numerous small lakes perfect for flat-water canoeing and boating. These areas can be reached in a short time on good roads. Fishing and hunting are excellent. There are opportunities for day-hiking and backpacking in the park, particularly in the valley of the Jacques Cartier River. The valley also affords supervised rock-climbing, as well as white-water canoeing and kayaking.

A popular summer resort is located at Murray Bay (La Malbaie), on the north shore 100 miles down-river from Quebec. The principal hotel is the Manor Richelieu, operated by the Quebec Government. There is a fine swimming pool and golf course, both of which are open to the public. Another resort, Tadoussac, is 50 miles farther down-river at the mouth of the Saguenay River, but this resort is primarily popular with older people, and there is little excitement or activity to be found. Murray Bay can be reached by train, car, or the Saguenay excursion boats in half a day. Tadoussac can be reached by car, although the road is not well surfaced. The trip is best made by boat.

Baie St. Paul, on the north shore 89 miles down-river from Quebec, has an art center and several art galleries. This artists' haven is also a favorite among crafts-people.

Chicoutimi, a city of 60,000, located 130 miles north of Quebec City, is a tourist base for exploring the Saguenay area. The Saguenay River itself is a fjord with steep canyon walls which can be viewed from sight-seeing boats from June to September. The city is also surrounded by true "wilderness," offering excellent hunting and fishing as well as numerous other outdoor activities.

The south shore of the St. Lawrence and the Gaspé Peninsula has many small resorts of interest during the

warmer months, and the trip around this spectacular peninsula can be made comfortably in four or five days by car. Lake St. Joseph and Lake Beauport, about 30 to 15 miles, respectively, from Quebec, are pleasant places to spend a day or weekend during summer.

An attraction only five miles from Quebec is the thunderous Montmorency Falls; just beyond that lies the Island of Orleans, accessible by bridge, which retains much of the charm of the early French-Canadian countryside. The island has several good restaurants and numerous artisan stores offering handwoven articles and ceramics. In summer, visitors can buy fresh fruit at farmers' stands, or pick their own in the fields.

A short distance farther along the north shore of the river is Cap Tourmente National Wildlife Refuge, where virtually the entire east coast population of snow geese congregate in a vast honking horde twice a year, in the spring and fall, on their way to breeding or wintering grounds.

Entertainment

Quebec has several good movie theaters showing American, French, French Canadian and, occasionally, English films. One or two theaters show English-language pictures, but most American films are shown with French soundtracks.

Many visiting companies and artists stop in Quebec. The Quebec Symphony Orchestra, the oldest in Canada, has a full season. There are several avant-garde stock theater groups of considerable talent. An opera company performs occasionally during the winter season, and gifted local folk singers offer concerts. The Grand Théâtre, dedicated in January 1971, has a large auditorium for music, plays, and opera, and a small auditorium for experimental theater. The Grand Théâtre is the home of the Quebec Symphony Orchestra. Several societies, such as the Institut Canadien, offer interesting series of lectures and concerts.

Canada Place, Vancouver, British Columbia

Susan Rock. Reproduced by permission.

The Quebec Winter Carnival is a major event in the area. For three weeks before the beginning of Lent, little else occupies the minds and time of the Quebecois. Among the principal events are the masquerade and regency balls, peewee hockey played by boys 12 and under, boat races over and around the ice floes on the St. Lawrence River, dog-sled races, huge parades, and street dancing. A three-story palace is constructed of enormous blocks of ice, and ice snow statues are carved and placed along many city streets.

During July, the city sponsors a 10-day music festival offering jazz, folk, rock, and classical music in several public parks in the old town. The city, in general, is particularly lively during summer as numerous Quebecois stroll through the historic area and frequent outdoor cafes.

The historic area of Quebec City is beautifully preserved and is completely surrounded by ramparts. The city's oldest hotel, the Chateau Frontenac, and the Citadel, a star-shaped military fortress, are two main historical attractions.

Quebec boasts some excellent restaurants offering French cuisine, among them the Continental, Marie Clarisse, Rabelais, and the Serge

Broyere; and out of town, the Manoir St. Castin at Lac Beauport. The variety of nightclubs is limited.

The recently-opened Museum of Civilization is a popular attraction in Quebec City. This museum contains an entire hall dedicated to the history of games—board games, cards, gambling, toys, and other recreational activities.

There are few resident Americans in Quebec, and they are well integrated into the community. A group called the American Colony Club meets infrequently, but participates in community activities and organizes an annual Thanksgiving dinner, a children's Christmas party, a summer picnic, and receptions. Rotary Club also has a chapter in the city.

The city's tourism office, located at 60 rue d'Auteuil, has advice and free booklets for tourists.

Vancouver

Vancouver, the third largest city after Toronto and Montreal, is the largest, most cosmopolitan, and most exciting city in western Canada. Strategically located in the extreme southwest corner of mainland British Columbia, it is the gateway to Alaska, to the Pacific

Ocean, to the American Northwest, and to the Orient. The provincial capital and seat of government is Victoria, on Vancouver Island.

The first settlement in the area was established by 1865 and called Granville. It was incorporated as a city in 1881 and named for Captain George Vancouver. Vancouver's development was aided by the completion of the trans-Canada railroad in 1887. Fire destroyed Vancouver in 1886, the year it was incorporated. Reconstruction began immediately and an area known as Gastown became the new city center. The Gastown area declined when the commercial district expanded away from the waterfront; in 1969 restoration of Gastown began and it was preserved as a vital link to the city's past.

As of 2000, Vancouver had an estimated population near 2 million. It is by far the largest city in the Province of British Columbia. Vancouver is located on the eastern shore of the Strait of Georgia, between the Fraser River on the south and Burrard Inlet on the north. The city has a beautiful, landlocked, ice-free harbor, with wooded mountains to the north rising to 4,000 feet and snow-capped much of the year. Its glittering skyscrapers are softened by a dazzling array of parks that bring British Columbia's great outdoors to the heart of the urban setting. At its doorstep are 10 beaches and miles of sheltered cruising waters, with the lighted ski runs on Grouse Mountain only a half-hour to the north.

Vancouver's year-round port handles more dry tonnage than all five U.S. West Coast ports combined. The port is a hub for most passenger ships and Alaskan cruises from May to October.

The climate is comparable to that of Seattle, with few extremes of heat or cold. The temperature rarely exceeds 80°F in summer, and winters have relatively few days when the temperature drops below the freezing point. The mean temperature is 63°F in summer and 36°F in winter. Rainfall averages 59 inches

annually in Vancouver, but is considerably less in the outlying districts south of the city. There is also very little snowfall. Living conditions are comparable to those of many other large modern cities in North America, with the additional attraction of extensive and readily accessible outdoor recreational facilities.

The U.S. consular district covers both the Province of British Columbia and the Yukon Territory—a total of 573,331 square miles. It is an area greater than California, Oregon, Washington, Wyoming, and Montana combined. The population is relatively small in British Columbia (3,105,000 in 1989) and in the Yukon (29,000 in 1990), but British Columbia is Canada's second fastest growing province.

People from the prairie provinces, as well as immigrants to Canada, are moving into British Columbia in large numbers, attracted by the climate and economic opportunities. These include Australians, Indians, Iranians, Germans, Dutch, Italians, Scandinavians, French, Swiss, Filipinos, Chinese, and Japanese. Next to San Francisco and New York City, Vancouver has the third largest Chinatown in North America. As a result, many shops specializing in ethnic goods or foods are found in the city, in addition to a host of Chinese restaurants. Chinese laborers were instrumental in building the Canadian-Pacific Railway in this part of Canada.

Currently, about 60,500 American citizens reside in British Columbia and the Yukon. Tourism plays a major role in the economics of the province. About two million Americans visit "The Evergreen Playground" each year. Vancouver was the site of the world's fair—Expo '86—in 1986. It was opened on May 2 by the Prince and Princess of Wales, Charles and Diana.

Education

Public and private schools are on a par with those in the U.S. The Vancouver public school system consists of roughly 95 elementary schools

and 18 secondary schools. Roman Catholic schools are run by the church and charge monthly tuition. One public elementary school offers a French immersion program through sixth grade. French is also offered as an optional subject, along with other foreign languages at the secondary level.

Vancouver has three provincial universities: the University of British Columbia (founded in 1890 at Point Gray), University of Victoria (founded in 1902, elevated to university status in 1963), and Simon Fraser University (founded in 1963 at Burnaby).

In addition to credit and non-credit programs and courses offered by technical institutes, vocational training centers, and community colleges, Vancouver and the surrounding municipalities offer adult education day and evening classes. Subjects range from strictly academic courses to instruction in sewing, golf, and ceramics. Fees are moderate.

Vancouver has about 30 educational facilities for the mentally retarded and physically handicapped. Treatment is available for most age groups in schools specializing in disabilities ranging from autistic and behavior disorders to the multi-handicapped. Schools specifically for the deaf and blind are also available. A complete listing of facilities may be obtained by writing directly to the U.S. Consulate General.

Recreation

Vancouver is a sportsman's paradise. There are a number of excellent golf courses, both public and private, where the visitor can play most of the year. The city also has many public tennis courts. Horseback riding is available, but expensive. The surrounding mountains offer skiing from December through April. Popular runs are found on Seymour and Grouse Mountains in North Vancouver; Garibaldi Park, 30 miles from Vancouver; Whistler Mountain, some 75 miles away; and Mount Baker, east of Bellingham, Washington, where skiing is possi-

ble most of the year. Also available are numerous cross-country trails, some close by on the North Shore. There are several public and private ice skating rinks.

Boating and water-skiing are very popular, and numerous small-boat launching sites and mooring facilities are found in the surrounding salt water. Many of the interior lakes also provide boating facilities. The boating season runs from late May through September. Bowling (both indoor and lawn variety) and curling are popular. The many mountain trails offer good hiking possibilities.

For the spectator-sports fan, Vancouver has three professional teams. The British Columbia Lions play in the Western Conference of the Canadian Football League; the Vancouver Canucks are in the National Hockey League; and the Vancouver Canadians, the top farm club of the Milwaukee Brewers, are members of the Pacific Coast League. Major U.S. sporting events are telecast in Vancouver as well.

British Columbia is famous for its fishing and hunting. Freshwater trout and salmon are the most popular catches of the sport fisherman. For big game, including bear, deer, moose, mountain goat, and wild fowl, the hunter usually has to travel some distance into the interior of the province.

Camping is a popular summer activity, but facilities are often rough in the interior regions.

Numerous points of scenic interest are within easy driving distance of Vancouver. Vancouver Island, the largest island on the west coast of North and South America, features the provincial capital of Victoria, unusual gardens, beaches, and mountain scenery. One of the most scenic attractions in the Province of British Columbia, Victoria is just an hour's drive along the highway overlooking Howe Sound. The spectacular Fraser River Canyon is several hours away via Hope and Cache Creek.

In the interior of the province, east of Quesnel, lies the historic ghost town of Barkerville, a booming gold town a century ago. The Rocky Mountain Resorts of Banff and Lake Louise, about 650 miles east, just across the British Columbia-Alberta border, can be reached by car, rail, or plane almost all year. Alaska can also be reached via weekly sailings from Vancouver.

Metropolitan Vancouver contains many attractive parks, the largest being world-famous Stanley Park on a 1,000-acre forested peninsula adjacent to the downtown area. Governor General Lord Stanley, in whose honor the NHL's championship cup was named, dedicated the peninsula as a park in 1889, a year after its official opening. Stanley's life-size statue graces the park's entrance. It is a prime tourist attraction, with a zoo, gardens, one of North America's finest aquariums, picnic areas, woodland trails, playgrounds, and scenic viewpoints overlooking the entrance to Vancouver harbor. The MacMillan-Blodel Conservatory is in the park. Queen Elizabeth Park, south of the downtown section, is another picturesque area, noted for its flowers and views of the city and surrounding area.

Vancouver has a strong international flavor, with large Italian, Greek, and East Indian communities. The city has the second largest Chinatown in North America. Every possible kind of ethnic cuisine is served somewhere in the city.

Gastown is Vancouver's "heritage" area—a colorful redevelopment of the original settlement. Cobble streets, a steam clock restored heritage buildings housing shops and restaurants, a town square and a statue of Vancouver pioneer Gassy Jack are all part of the ambience. Handicrafts and local artists flourish here.

Shopping in Vancouver tends to be mall oriented and, because it is a port city, many exotic goods can be found. The corner of Georgia and Grandville is the key to a major downtown shopping area. The city

has two underground malls, Pacific Centre and Vancouver Centre. A \$100-million extension to the Pacific Centre complex has made it one of the largest retail-office complexes in Canada. It is linked to the rest of the shopping center by overhead walkway and a tunnel. The extension added 100 stores to the existing 127 retail outlets, and features a covered central atrium and a waterfall.

Numerous beaches exist in Vancouver proper and in north and west Vancouver, although the water is usually chilly, even in summer.

Vancouver also has a small but growing art gallery, an excellent maritime museum, and a new planetarium. The Anthropological Museum at the University of British Columbia is excellent.

Entertainment

Entertainment to suit all tastes is available at some time during the year. The excellent Vancouver Symphony Orchestra has a regular concert season extending from fall to spring. This and other orchestras, an opera company, soloists, and first-class theatrical companies, ballets, and choruses from many parts of the world perform at the modern Queen Elizabeth Theater, which has a capacity of 2,800.

Vancouver has a large pool of professional actors from which resident theater companies draw for stage productions of a high order. The Playhouse Theater Company, based in the Queen Elizabeth Theater, and the 450-seat Arts Club Theater, located on Granville Island, each offers seven or more major annual productions, ranging from Shakespeare to Tennessee Williams and modern Canadian playwrights.

The Waterfront Theater, Carousel Theater (for young people), and City Stage add to the variety of what is available on almost a year-round basis. A six-week Festival of Arts each summer features both local and visiting artists of distinction. A Jeunesses Musicales chapter fosters youthful musical activities in Van-

cover and throughout the province. The city has many first-run movie theaters and assorted nightclubs.

Many cultural events also take place from October to June at the University of British Columbia and Simon Fraser University.

The Pacific National Exhibition (PNE), held the last two weeks of August, draws exhibitors from across Canada, the U.S., and other countries. Many top entertainers perform here during the exhibition's run. The "midway" section of the PNE also is open during summer and on weekends during good weather. An Oktoberfest is also held in Vancouver.

The excellent main public library has branches in every neighborhood.

Vancouver social life is like that in any large U.S. city. Americans soon find opportunities to make acquaintances among Canadians. People in Vancouver are hospitable and extend numerous invitations to various social or public affairs.

Organized groups include, among many others, the Board of Trade, Rotary, the English-Speaking Union, and the Consular Corps—both a men's and women's group. Vancouver has three downtown men's luncheon clubs; the Vancouver Club, the Terminal City Club, and the University Club. All of these offer comfortable, convenient facilities, pleasant associations, and good food. American men and women are welcome to participate in the charitable organizations that exist in Vancouver.

Calgary

Calgary is located in the foothills of the Rocky Mountains, 3,440 feet above sea level. From the city, one can see jagged peaks of the Rockies rising to a height of 12,000 feet only 65 miles to the west. Calgary is 160 miles north of the U.S. border.

Calgary, with an estimated population of 888,000 (2000), is one of Can-

ada's fastest growing cities. It is the center of Canada's oil industry (there are about 400 oil companies producing 90% of Canada's oil in the city) and the heart of an extensive ranching area. Calgary was founded in 1875 when the Royal Northwest Mounted Police established a fort at the junction of the Bow and Elbow Rivers. The Canadian-Pacific railroad reached Calgary in 1883; soon a bustling town had outgrown the fort to become the hub of cattle ranches and meat-packing plants. By 1891, the town had attracted 3,100 people. It was chartered as a city in 1893. By the 1950s, it had grown into a peaceful, prosperous provincial city of nearly 100,000.

A U.S. consular agency was established at Lethbridge in 1891, soon after railway connections were opened to Great Falls, Montana. This later was closed, and a consulate was established in Calgary in 1906, a year after Alberta became a province. In 1963, that Consulate was made a consulate general. The consular district includes the Provinces of Alberta, Saskatchewan, and Manitoba and the MacKenzie and Keewatin Districts of the Northwest Territories.

Calgary was the host of the XV Winter Olympic Games in 1988. To prepare for this event, downtown office complexes, hotels, and department stores were connected by climate-controlled elevated skyways.

Education

Calgary has a good public school system, which includes elementary, junior high, senior high, and combined junior and senior high schools. Tuition is free for all Calgary residents attending public schools. Instruction is in English, and in some schools, in French.

Physical education is compulsory through grade 10, after which it becomes an extra elective. Inter-school athletic competitions are an integral part of school life. French is, in general, the only language offered through grade 12. Two years of a foreign language are among the requirements for a high school

Downtown Calgary, Alberta

© Brian A. Vikander/Corbis. Reproduced by permission.

diploma. Music and art instruction is offered in all grades.

Several private nursery schools and kindergartens are available. Nursery schools generally accept children from the age of three.

The Catholic Church maintains a separate system of elementary, junior high, combined elementary and junior high, and high schools. French and Latin are the only languages offered through grade 12. Textbooks are supplied free through grade nine, and no tuition fees are charged for Calgary residents.

The University of Calgary gives complete courses in arts, commerce,

education, engineering, music, physical education, and science, premed. The student body totals about 20,000.

The Southern Alberta Institute of Technology provides educational programs in technology, art, business, trades, correspondence, instruction, and adult education. The institute is operated by the Alberta Department of Education and is financed by the provincial and federal governments.

Mount Royal Junior College is a public institution offering several types of programs: vocational training; high school completion at accelerated rate; course make-up while

studying at the University of Calgary; and a transfer program geared to enrollment at a degree-granting institution.

The Calgary School Board offers a wide range of evening courses and services, primarily in high schools. Academic subjects for adults as well as general interest courses are also offered at the University of Calgary and Southern Alberta Institute of Technology.

Calgary has programs to aid the mentally and physically handicapped and children with learning disabilities. Special educational services provide alternative educational programs for children unable to cope with or benefit adequately from the regular school programs. Emphasis is placed at the elementary level, but programs for some students are available through grade 12. Schooling for the handicapped is also available at the Children's Hospital.

Recreation

Football is the main spectator sport in Calgary, and the Stampeders play in the Western Conference of the Canadian Football League. Beginning with the 1980-81 season, Calgary also has a team in the National Hockey League. The Flames moved to the Canadian city from Atlanta, and play during the winter at the Saddledome, which was also used during the 1988 Winter Olympics.

Several good horse shows are held during the year, and pari-mutuel horse racing is held regularly. Good public and private golf clubs are nearby; both the Banff Springs Hotel and Jasper Park Lodge have excellent courses.

The city has several tennis clubs. During the winter many enjoy badminton, curling, and ice skating. Boating and canoeing are also popular. Within the city, many parks and playgrounds have community swimming pools. Bowling, both five-pin and 10-pin, is popular. Downhill and cross-country skiing are available just outside the city limits, as well

as on the slopes at Banff and Lake Louise. Several riding academies on nearby ranches offer lessons. Calgary also has an excellent planetarium and zoo.

A spectacular annual event is the Calgary Stampede, held during the first part of July. This event, which began in 1912, has since grown into a 10-day celebration. Rodeo and western enthusiasts are drawn from all over Canada and the U.S. during this time, when the city completely surrenders to the spirit of the Old West. Besides rodeo programs and chuck wagon races, street dancing, chuck wagons selling flapjacks and bacon, and marching bands are popular. More than half-a-million Americans pass through Calgary every year to see the stampede and to enjoy nearby scenic attractions.

Within a few hours of Calgary, in the Canadian Rockies, are some of the most scenic areas of North America: Banff (also known as a center for native arts and crafts), Lake Louise, and Jasper National Park. Banff, about 75 miles to the northwest, may be reached by car in about one-and-a-half hours; another half-hour will take the traveler to Lake Louise. The "Badlands" at Drumheller, and the dinosaur burying ground, some 85 miles north and east, are also of interest, as is the Cypress Hills area in the southeastern corner of the province.

To the south, straddling the Canadian-U.S. border at the junction of Alberta, British Columbia, and Montana, is Waterton-Glacier International Peace Park. This rustic recreation area comprises large park sites of both countries. The oil and natural gas fields in Turner Valley, just southwest of Calgary, are points of interest, as are the Pembina and Leduc oil fields to the north. The tourist may drive on the Alaska Highway to Dawson Creek and beyond. Excellent highways extend into British Columbia through beautiful scenery. The nearest U.S. border points from Calgary are the small Montana towns of Babb, 165 miles to the south, and Sweetgrass, 195 miles to the south-

east. Other road mileages from Calgary are: Helena, Montana, 395; Great Falls, Montana, 330; Seattle, Washington, 760; Boise, Idaho, 680; and Salt Lake City, Utah, 995.

Edmonton, Alberta's capital, is connected to Calgary by an excellent highway and frequent air service.

Big-game hunting is possible, and antelope, caribou (woodland), bear (black and grizzly), deer, elk, mountain goat, bighorn sheep, and moose are found within easy driving distance of Calgary. On the flyway for millions of migratory water fowl, Alberta offers excellent hunting for several varieties of duck and geese. Pheasant, grouse, partridge, and ptarmigan are hunted in many areas.

The larger northern Alberta lakes are inhabited by huge northern pike and lake trout; pike, perch, and pickerel can be found in most Alberta lakes. In the Rocky Mountain lakes and streams are found Dolly Varden trout, rainbow trout, and grayling. The Bow River, which flows through Calgary, is one of the best rainbow trout streams in North America.

Camping is popular in Alberta, and campsites are available in the three Rocky Mountain National Parks, as well as in 37 provincial parks. The national parks offer superb recreation throughout the year; entry permits, valid for a year, can be bought for a nominal fee.

Entertainment

Calgary has a philharmonic orchestra, a chamber music society, several choral groups, an amateur theater, an opera association, and a large number of movie houses. The permanent home of the Calgary Philharmonic Orchestra is the splendid new Calgary Centre for the Performing Arts. In addition, traveling orchestras, ballets, and musicals visit the city each year. The Glenbow Museum houses displays of Eskimo and Indian artifacts, as well as exhibits on ranching, railroads, farming, oil, and the mounted police.

Calgary's Chinatown is small compared to those in Vancouver, Toronto, and Montreal, but the restaurants on South Centre Street are lively late into the evening. There are very good Italian, Greek, Hungarian, Italian, Mexican, and Vietnamese restaurants, and first-class French cuisine.

Calgary has several public libraries. New works of fiction and nonfiction from Canadian, American, and British publishers are regularly added to the stacks. An almost complete array of U.S. magazines and pocket-books can be found at most newsstands, department stores, and supermarkets.

Social contact between members of the American community is informal. The American Women's Club is a group of mainly longtime Calgary residents, many of whom are Canadian citizens.

Other gatherings include both Canadians and Americans. Many opportunities exist for contributing voluntary time, skill, and effort to Canadian charitable and other activities. Rotary, Kiwanis, and Lions Clubs are active in the city. Several ranking men's clubs are available downtown, including the Calgary Petroleum Club, the Ranchman's Club, and the 400 Club.

Halifax

Halifax is the center of economic, political, and military activity in the Atlantic provinces. The capital of the province of Nova Scotia and the largest, most important city in the Atlantic region, Halifax is located on the south coast of the Nova Scotia peninsula. The city itself is a tiny peninsula with one of the finest natural harbors in the world.

Halifax was founded in 1749 by Edward Cornwallis as a British stronghold, and became the capital of Nova Scotia in place of Annapolis Royal the following year. It was incorporated as a city in 1842 and has been an important Canadian naval base since 1910.

Beginning life as a fort, its situation was so ideal for trade that, during the early 19th century, Halifax was the wealthiest part of Canada. Today, Halifax is an interesting mix of old and new. Province House where the Nova Scotia legislature meets, is a fine example of Georgian architecture. The residence of the lieutenant governor is also a beautiful building with lovely period furniture. The Old Town Clock on Citadel Hill, ordered by the Duke of Kent, father of Queen Victoria, during his tenure as commander of the Halifax Garrison, has been the symbol of Halifax for many years, but is now challenged by the towers of encroaching high-rise office and apartment buildings.

The Halifax Container port, Halifax Shipyards Ltd., and HMC Dockyard (the largest naval base in Canada) are the most important waterfront industries. Although Halifax spent the first half of the 20th century tearing down its old buildings, it is spending the latter half restoring those which are left. A fine example of this change of heart is the Historic Properties waterfront development, which features warehouses, banks, and other buildings of historic value.

The population of metropolitan Halifax (including its twin city of Dartmouth and other contiguous communities) is estimated at 321,000 (2000). The decline in merchant shipping has adversely affected the local economy, as have the recent severe problems in the fishing industry, an important one in this area. Nova Scotia now bases its hopes for economic prosperity on the gas finds off Sable Island, just as Newfoundland has great expectations founded on offshore oil. Although the oil glut has dimmed these hopes for the moment, exploration is still going on. Dartmouth, until recently best known as the bedroom of Halifax, is doing better with related industry which supplies the drilling rigs. Unlike Halifax which, cramped into its small peninsula, literally has no place to go, Dartmouth is able to provide space for industry in its Burnside

Industrial Park. Halifax International Airport is located in Kelly Lake, about a 20-minute drive from Dartmouth.

Halifax is the Atlantic regional headquarters of the Canadian Broadcasting Corporation (CBC); the federal departments of Manpower and Immigration; Northern and Indian Affairs; Public Works; and Transport. It is also the principal military, rescue, and emergency planning headquarters of eastern Canada. The main office of the Atlantic Provinces Economic Council is in Halifax, as are the regional headquarters of many banks and corporations.

The U.S. consular district was originally established in 1827 as the first consular office in British North America. Now, it covers four of Canada's 10 provinces—New Brunswick, Nova Scotia, Prince Edward Island, and Newfoundland. The first three are known as the Maritime Provinces; along with Newfoundland, they are known as the Atlantic Provinces.

Education

Educational opportunities are excellent in Halifax, which is the center of the largest concentration of institutions of higher learning in Atlantic Canada, attracting students and teachers from many parts of the world. This contributes to the area's growing cosmopolitan atmosphere.

Within the corporate boundaries of the city are seven degree-granting institutions—Dalhousie University (founded in 1818), St. Mary's University (founded in 1841), King's College, Nova Scotia Technical College (founded in 1907), Mount St. Vincent University (founded in 1873), Atlantic School of Theology, and the Nova Scotia College of Art and Design. Also available is the Nova Scotia Institute of Technology.

School attendance is compulsory for all children ages six to 16. The language of instruction for most of Nova Scotia is English. The Halifax public schools are divided into elementary schools and junior and

Old Town Clock in Halifax, Nova Scotia

senior high schools. Vocational and technical training is offered by the provincially operated vocational school.

Tuition is free for Halifax residents. No school bus transportation is provided; students either walk or rely on public transportation. French instruction is available on a voluntary basis at all levels, and one school offers a French immersion program in elementary grades. It is anticipated that the program will expand gradually to include upper grades as well.

The Catholic Church operates one private school in Halifax—the Convent School of the Sacred Heart.

Tuition is charged. The school offers classes for girls through grade 12, and for boys in grades primary to six.

Another private school is the Armbrae Academy. It is coeducational and offers classes for grades primary through twelve.

Halifax has a number of nursery schools, one popular school being the Halifax Early Childhood School, on Inglis Street.

Special education opportunities in Halifax include facilities for the mentally handicapped and those with learning disabilities, grades primary through nine, and for the

physically handicapped, grades primary through 12. In addition, educational facilities are available for the emotionally disturbed and those with behavioral difficulties in grades one through nine. Transportation, if required, is available, and in very special cases, teaching in the home is possible.

A school for the blind (primary to 11th grade) is also located in Halifax. An effort is made to keep visually handicapped children within the regular school system, particularly at the high school level. A school for the deaf, serving New Brunswick, Prince Edward Island, and Nova Scotia, is located in Amherst, Nova Scotia, about 125 miles from Halifax.

Recreation

Several beaches are on both the south and east shores within two hours' drive of Halifax. Sea bathing is for the hardy only, since the water temperature is rarely over 65°F. Freshwater swimming is available at Grand Lake outside Halifax and in the Dartmouth Lakes. Indoor pools are located at the YMCA, the YWCA, and Centennial Pool. The Halifax Dalplex and the Dartmouth Sportsplex offer swimming, skating, and gym facilities, as well as exercise classes. Skating and curling clubs are popular. Outdoor skating on the various lakes is limited because of the changeable climate.

Most of the city's leading business and professional people belong to one of two yacht clubs, the Royal Nova Scotia Yacht Squadron or the Armdale Club, even if they do not own boats.

The area has four golf clubs: a public club, the Ashburn Golf and Country Club in Halifax (the largest); Brightwood in Dartmouth; and a private club, Oakfield Golf and Country Club, Ltd., outside the city.

A majority of the tennis courts are controlled by the tennis clubs and universities. Among the clubs with tennis courts are the South End Tennis Club, the Waegwoltic Club, St. Mary's Boat Club, and the

Northwest Arm Rowing Club. Indoor tennis is available at the Burnside Tennis Club in Dartmouth. Public tennis courts are located on the Halifax Common and at other parks throughout the city. Other court games available (at private clubs) are squash, handball, and badminton.

Persons who have some skill in football, basketball, or hockey can join amateur leagues or club teams. Health-building programs and gym facilities are available at the local YMCA, YWCA, and at various health clubs. Nova Scotians are also interested in skating and curling. Many people join skating clubs. The ancient Scottish game of curling is entirely a club activity, and membership in either of two curling organizations is an easy way to get to know the Haligonians.

Wentworth, about 90 miles north of Halifax, and Mount Martoc near Windsor have limited skiing.

Halifax is far from the larger Canadian and U.S. cities, but is well situated for excursions within the Maritimes. Its coastal scenery is beautiful, and the provinces contain many places of interest, with sailing, sunbathing, hunting, and fishing as the chief attractions. These points are not resort towns in the usual sense, so a car is useful. Bus transportation is available; railway travel is slow, except on the main line.

Two main highway routes connect most points of interest. One leads from Halifax to Yarmouth, on the southwestern end of the province, close to the famous tuna fishing grounds, then northeast along the Bay of Fundy through the apple-growing belt of the Annapolis Valley and Evangeline country. The Evangeline trail covers the country first colonized by the French. The oldest permanent settlement in North America was at Port Royal, and the French Habitation built there in 1605 has been reconstructed.

The other route leads northeast from Halifax, across the Strait of Canso and around the scenically magnificent Cabot Trail to Sydney, a city of about 35,000 and Cape Breton's steel center. Cape Breton Island, with its Cabot Trail, Louisbourg Fortress, and the Alexander Graham Bell Museum at Baddeck, is a very popular tourist attraction.

Hubbards, Chester, Mahone Bay, and Lunenburg, all with less than 5,000 population, lie along the Atlantic Coast, some 20 to 100 miles southwest of Halifax. These towns have comfortable accommodations for visitors in the tourist season, as do most Nova Scotian towns. Peggy's Cove and colorful fishing villages lie along the bays of the south coast.

Nova Scotia's 4,500 lakes, 50 rivers, and numerous streams offer fantastic fishing—shad, brook trout and, especially, Atlantic salmon. Some of the best smoked salmon can be found in the small Nova Scotian town of Tangier.

In New Brunswick, Fundy National Park, maintained by the federal government, features camping facilities, hiking, boating, horseback riding, nature trails, and many other worthwhile recreational activities. New Brunswick also has a number of festivals related to the area's fishing industry, including the Shediac Lobster Festival and the Campbellton Salmon Festival. Not far away is the former summer home of President Franklin D. Roosevelt at Campobello Island, now maintained jointly by the U.S. and Canada. The picturesque resort town of St. Andrews-by-the-Sea, with its white frame houses, reminds the visitor of the U.S. New England states.

Prince Edward Island (P.E.I.), the garden province, is alive with activity in the summertime, with its many museums, beaches, parks, and theaters. Music camps and the Atlantic Canada Institute Summer School are held in July at the University of P.E.I. Country Days and Old Home Week feature music, agri-

cultural displays, handicrafts, and parades. The Anne of Green Gables Festival, along with lobster, strawberry, and potato blossom festivals and craft fairs, are also part of its summer attractions. P.E.I. is a favorite vacation spot for young families.

Newfoundland offers many opportunities for camping, hunting, fishing, and sight-seeing. Its capital, St. John's, is a good base from which to explore the province's scenic and historic Avalon Peninsula.

Year-round ferry service to Port Aux Basques on Newfoundland's southwest coast is offered from North Sydney, Nova Scotia. Many summertime visitors to Newfoundland, however, prefer to take the ferry which operates during summer months from North Sydney to Argentia, Newfoundland, an Avalon Peninsula port (in Placentia Bay near the site where Roosevelt and Churchill drafted the Atlantic Charter), only 85 miles from St. John's. Newfoundland's annual regatta is one of the oldest sporting events in North America.

Air service is provided by Air Canada and Eastern Provincial Airways to numerous cities in the Atlantic Provinces. Two ferry services connect Nova Scotia with Prince Edward Island at two points: one, operating throughout the year, crosses from Cape Tormentine in New Brunswick to Port Borden, about 35 miles to the west of Charlottetown, Prince Edward Island; the other, which operates only when there is no ice, crosses from Pictou, Nova Scotia, to Woods Island, about 35 miles southeast of Charlottetown.

Entertainment

Halifax has a professional repertory theater, The Neptune, and is the home of Symphony Nova Scotia, a professional orchestra, recently formed under the musical direction of Boris Brott, a well-known and talented Canadian conductor. The orchestra performs chamber music as well as symphonic programs. Rebecca Cohn Auditorium, located

at Dalhousie University, is the locale for various kinds of entertainment, including concerts by such well-known Canadians as André Gagnon and Liona Boyd. An ensemble called Nova Music performs classical music by contemporary composers. Distinguished films are shown in the auditorium on Sunday nights.

Dalhousie University, St. Mary's University, and the Canadian Broadcasting Corporation (CBC) sponsor concert series throughout the season which feature international and national artists. Local amateur groups also present plays and operettas. Spectator sports include football, basketball, hockey, boxing, and wrestling. The various university and service teams compete in amateur football, basketball, and baseball.

Several movie theaters in Halifax and Dartmouth show current American and British films. Nova Scotia is also the home of the Annapolis Apple Blossom Festival and the Highland Games.

Two Canadian television stations have studios in Halifax, and there are several radio stations in the metro area, both AM and FM. Halifax Cablevision Limited provides a cable service which picks up the U.S. public broadcasting channel, NBC, and ABC from Maine transmitters. French-language broadcasts are presented on radio and TV.

The Halifax Memorial Library, established in 1951, offers free library service from its collection of about 130,000 volumes. It has a good selection of late and current fiction and nonfiction and an excellent reference section. A mobile service for the city and the county has been operating for several years. Books are available at local bookstores, but cost 20% more than in the U.S.

Art exhibits are held at the Art Gallery of Nova Scotia and at various universities.

Some excellent restaurants are located in Halifax, specializing in seafood delicacies and French cuisine.

Winnipeg

Metropolitan Winnipeg is the fifth largest city in Canada, ranking after Toronto, Montreal, Vancouver, and Calgary. It is known worldwide for its seemingly endless wheat fields, its blizzards, and its hockey team, the Jets.

A fur trading post was established on the site of modern-day Winnipeg in 1738, and later a colony was founded by the Scots. The village of Winnipeg was settled in the late 1860s, and incorporated as a city in 1873.

Winnipeg resembles cities of comparable size in the middle western plains in the U.S. Situated on the eastern edge of an 800-mile stretch of prairie-land, it is the home of the Canadian Wheat Board and the Board of Grain Commissioners. Winnipeg is also located almost midway between the two oceans, near the geographical center of North America. Its people are friendly and hospitable. Their interests, habits, and mode of life are similar to those of the American Westerner.

The capital of the Province of Manitoba, Winnipeg is situated at the junction of the Red and Assiniboine Rivers, about 70 miles north of the international boundary. It is 485 miles, by car, from Minneapolis, Minnesota. It is 760 feet above sea level, and the surrounding area within a 100-mile perimeter is flat, broken by occasional wooded areas and streams. The area has a healthy climate, comparable to that of Minneapolis, although colder. Winter temperatures drop to as low as 40°F or more below zero. Winters are fairly dry and summers are cool and pleasant.

Greater Winnipeg's population was about 652,400 in 2000. English is the principal language spoken in the city. However, in St. Boniface, a

part of metropolitan Winnipeg, more than 40% of the present population is of French or Belgian ancestry, and most people speak French as well as English.

Although about 40% of Winnipeg's population is British in origin, with a strong Scottish strain, there are a number of other nationalities, including Ukrainians, Germans, French, Italians, Dutch, Philip-pines, Vietnamese, and Chinese. There is no American colony as such in Winnipeg. In fact, the social, economic, and cultural background of the city is practically the same as in the contiguous areas of the U.S. There is a constant shift of population in both directions across the border, and estimates place the number of persons in the district with claim to U.S. citizenship above 10,000. Upwards of one-and-a-half million American tourists have annually visited the Province of Manitoba.

Education

Winnipeg's good, free education for kindergarten through grade 12 is comparable to American standards. Two nondenominational private schools and two Roman Catholic schools are also of good reputation. The nondenominational school for girls, Balmoral High School, has classes from kindergarten through grade 12. The Roman Catholic school, St. Mary's Academy for Girls, provides facilities for grades seven through 12. St. John's Ravenscourt School for Boys (and girls from grades nine through 12) provides excellent education from grades one through 12. St. Paul's College (Roman Catholic) provides education for boys and young men (grades nine through 11 and through university). Tuition and annual fees at private schools are slightly lower than those in the U.S.

Special educational opportunities are available in each school division in Winnipeg for children who have learning disabilities or who are mentally or physically handicapped. Special educational institutions are also available for severely physi-

cally handicapped or mentally retarded children.

Winnipeg has two universities. The University of Manitoba, is the oldest university in Western Canada. Founded in 1877, it is a first-class provincially operated institution and offers a large number of undergraduate and graduate programs. The University of Winnipeg, located in the center of the city, is a relatively new institution (founded in 1967), with undergraduate courses in the liberal arts and pre-professional education.

Red River Community College specializes in practical courses for both degree and nondegree students. All three institutions have evening and summer sessions.

Various levels of instruction are offered at the Winnipeg School of Ballet. Students taking private lessons in music may take examinations leading to the certificate of Associate of the Toronto Conservatory of Music. The University of Manitoba gives a bachelor's degree (AMM) in music. The Winnipeg Art Gallery also offers art classes.

Recreation

Winnipeg offers numerous and varied year-round recreational facilities for adults as well as children. Nearly every residential neighborhood has school playgrounds and local community clubs where instruction is given to children in handicrafts, dancing, skating, hockey, football, tennis, and other sports. Four large and some small parks, the largest of which is Assiniboine Park (which has a fine zoo, formal gardens, and conservatory), provide pleasant surroundings for picnicking, sports, and walking. All parks are conveniently served by local transportation.

Golf, tennis, swimming, and boating are the most popular summer sports in Winnipeg. Golf may be played at several very good municipal courses or at a number of semiprivate clubs where reasonable greens fees are charged. Winnipeg has a number of neighborhood wading pools, one

large municipal outdoor pool, and several indoor pools. An Olympic-size indoor pool, one of the largest in the world and the site of the 1967 Pan American Games' swimming events, is located in the city.

Several local skiing clubs teach the fundamentals of skiing and jumping on the banks of the Red and Assiniboine Rivers, but it is necessary to travel some distance from the city for really good downhill skiing conditions. Cross-country skiing is popular in and around Winnipeg. Indoor sports such as badminton, squash, bowling, curling, and roller skating may also be enjoyed.

Excellent hunting abounds in Manitoba. Deer, moose, and even polar bear are found in the north. Duck, geese, prairie chicken, and grouse are found only a few hours' drive from Winnipeg in some of the best hunting regions in Canada. Good fishing can be found throughout the district, and both open water and ice fishing are very popular.

The Precambrian Shield, 50 miles east of the city, is an area of woods, rocks, and lakes. The nearest resort area is the district on the southern shores of Lake Winnipeg, about 35 miles to the north by road, where many people have small cottages. There are limited bathing facilities in several of the beach towns.

The western section of the very attractive Lake of the Woods area is about 120 miles east of Winnipeg and easily accessible by car, bus, or train. Among the pleasant resorts closest to Winnipeg are Kenora, Whiteshell Forest Reserve and, to the west, Riding Mountain National Park. Many attractive summer homes are found throughout the area. Hotel accommodations are good; motels are satisfactory. Most resort spots offer special camping facilities.

To the north, places such as Flin Flon, a copper-zinc-gold mining center, and Fort Churchill on Hudson Bay are interesting places to visit. There is a good paved road to Flin Flon (560 miles) and to Thompson (a

nickel mining town), but Fort Churchill is reached only by rail or air. Each year a few rail excursions of several days' duration are run to Churchill, with the tourists living on the train. The Selkirk Navigation Company operates a five-day cruise on Lake Winnipeg during June, July, August, and September. Accommodations on the modern *Lord Selkirk* are comfortable.

Northwest of Winnipeg, at the south end of Lake Dauphin, is the town of Dauphin (population 9,000). Known for barley, timber, and fisheries, Dauphin is also host to Canada's National Ukrainian Festival, held annually in August.

Entertainment

Winnipeg prides itself as being "The Convention City" and, as might be expected, it offers a wide variety of entertainment opportunities. These include the internationally renowned Royal Winnipeg Ballet, the Winnipeg Symphony Orchestra, the Manitoba Theater Center, the Contemporary Dancers, and the Opera. Performances are usually held in the Concert Hall and the Manitoba Theater Center, both located at the Centennial Center adjacent to City Hall. There is also an open-air theater—Rainbow Stage—where plays, musicals, and other attractions are held during the summer.

Also in the Centennial Center is the Museum of Man and Nature, which offers a wide variety of exhibits on the general theme of man in relation to the environment. There are several other museums in the city, the most impressive of which is the new and strikingly handsome Winnipeg Art Gallery.

The city's ethnic diversity is reflected in the variety of festivals held throughout the year, including Festival du Voyageur (a winter festival in St. Boniface), Ukrainian Week, and Folklorama, a major event each summer, during which pavilions representing various ethnic groups provide entertainment in the form of traditional songs, dancing, and food.

Probably the most popular attraction in the city is hockey, with its National Hockey League franchise, the Jets. The Winnipeg Arena is located on Maroons Road, named after a senior hockey team which brought honor to the city 20 years ago. When the Jets joined the NHL, the roof of Winnipeg Arena was raised and 5,400 additional seats were installed. This brought the arena up to NHL standards of at least 15,000 seats.

Other spectator sports include football and curling games, as well as thoroughbred racing at Assiniboine Downs.

There are about 15 motion picture theaters in the city. Several of these are first class and feature the latest American and, on occasion, European films. Winnipeg also has a 200,000-volume, Carnegie-endowed public library located in a new, attractive building.

Weather dictates the nature of much of the activity: concerts, theater, ballet, bridge, and winter sports when it is cold; and fishing, touring tennis, golf, cycling, and walking when the glorious spring and summer weather arrives.

Hamilton

Hamilton, on the western tip of Lake Ontario, is about 40 miles southwest of Toronto. Explored by Robert LaSalle in 1669 and first settled in 1813, it is Canada's most important steel-producing center, and also is a transportation hub with a harbor, an airport, and a rail terminus. Other industries include the manufacture of automobiles, tires, railroad equipment, clothing, chemicals, and farm implements. The metropolitan population is approximately 599,800 (2000 est.).

Hamilton has many attractions for the visitor. Its 1,900-acre Royal Botanical Gardens are among the most beautiful on the North American continent. There are also gardens in Gage Park, and formal gardens close to the Art Gallery of Hamilton. The city is home to Can-

ada's largest open-air market, which teems with residents and visitors during the growing season. Hamilton Beach on Lake Ontario is a summer playground.

One of the major tourist sites in the city is the 72-room Dundurn Castle, which houses a museum and a children's theater. It was built by Sir Allan Napier MacNab from 1832 to 1835 and bought by the city in 1900. MacNab was prime minister of the United Province of Upper and Lower Canada from 1854-1856.

The Hamilton Visitors and Convention Bureau is located at 155 James Street South.

Regina

Regina is the capital city of Saskatchewan, Canada's fifth largest province. Founded in 1822, it was the capital of the Northwest Territories from its inception until 1905 and, that year, when Saskatchewan was designated as a separate province, it became the seat of provincial government. It is called by Canadians the "Queen City of the Plains."

Regina is a transportation and commercial center in the midst of a large farming region. It is the site of Campion College (founded in 1917), the Canadian Bible College (founded in 1941), the Regina branch of the University of Saskatchewan, and Luther College (founded in 1921). Among its points of interest are the Museum of Natural History, the Regina Plains Museum, the Telecommunications Historical Museum, the Saskatchewan Archives, and MacKenzie Art Gallery, with its extensive collection of Canadian and European art and antiquities from the ancient world. Sports enthusiasts can spend a day amidst memorabilia and artifacts at the Saskatchewan Sports Hall of Fame and Sport Museum. Its population is approximately 192,800.

Regina was named by Princess Louise of Great Britain in honor of her mother, Queen Victoria. It was the

headquarters of the Royal Canadian Mounted Police until 1920. The Royal Canadian Mounted Police Centennial Museum contains buffalo coats, guns, saddles, uniforms, and photographs illustrating the legendary police force's intriguing past.

Regina hosts a number of major events each year: the Western Canada Farm Progress Show in June, Buffalo Days in July, the International Arabian Horse Show in August, and the Canadian Western Agribition each November.

The city has a rich cultural tradition as evidenced by its many theater, dance, music and ethnic performing groups and by the Saskatchewan Center of the Arts, one of the finest concert halls in North America. The Regina Symphony is the oldest continuously operating symphony orchestra in Canada.

The city operates a number of excellent parks and complexes, the Regina Sportplex, five outdoor swimming pools and several excellent golf courses. Wascana Centre, located in the heart of the city, has a man-made lake, bicycle paths, paddle-boat rentals, a waterfowl park, double-decker bus tours, and several historic points of interest.

Just north of Regina, in the small town of Craven, the largest outdoor country music extravaganza in Canada is held annually in July. The Big Valley Jamboree features many U.S. country music performers.

Saskatchewan's rich Indian heritage can be explored at the summer powwows held on most Indian reserves. Major ceremonies include the Poundmaker Powwow near Cutknife, and the Standing Buffalo Indian Powwow at Sioux Bridge near Fort Qu'Appelle.

Edmonton

Edmonton, Alberta's capital, is Canada's "Gateway to the North," known for its excellent quality of life. It boasts a population of 940,000 and is the oil capital of the

country. In addition to oil, Edmonton's major industries include flour milling, meat-packing, plastics, tanning, dairying, lumbering, and petrochemical production. Established in 1795 as a Hudson's Bay trading post, it expanded and developed during the gold rush to the Klondike in 1898. The quiet town of 1,500 settlers became the supply center for miners drawn by the promise of gold. It is now a modern city with a new international airport. The city's numerous rail lines have contributed to Edmonton's reputation as the transportation hub of northwestern Canada.

Located 350 miles north of the U.S. border, Edmonton is the northernmost major city in Canada. Just 185 miles from the center of Alberta, Edmonton is surrounded by a rare natural setting. Verdant foothills banked with wood and the mighty North Saskatchewan River soften the effect of all the city's new concrete. Along the river runs an impressive 35 miles of greenbelt.

The University of Alberta (founded in 1906) is located in the city, as are St. Joseph's College (founded in 1927), the Christian Training Institute, and other specialized schools.

Football and curling are popular spectator and participant recreational activities, but of greatest interest is Edmonton's National Hockey League team, the two-time Stanley Cup champion (1984 and 1985) Oilers.

Attractions in Edmonton range from various types of theater, particularly at the Citadel, to galleries and the domed Provincial Legislature buildings. Several rodeos are held during the summer months. In July, when the sun hardly sets, Edmonton hosts Klondike Days. The city's frontier past and gold rush days are celebrated at that time with sourdough raft races, beard growing contests, and other events. In August, the city hosts a Folk Music Festival. This festival features traditional and bluegrass music, country, blues, and Celtic

music, arts and crafts displays, and a food fair.

Perhaps the biggest attraction in Edmonton is West Edmonton Mall, located seven miles from downtown. It is the world's largest shopping mall and the world's largest indoor amusement park—all under one roof. Covering 110 acres and housing 836 stores on two levels, the mall also includes a reproduction of the Versailles fountains; a recreation of New Orleans' Bourbon Street; a miniature golf course; an indoor amusement park called Canada Fantasyland; a water park that offers water-skiing and body surfing on artificial waves; an NHL regulation-size ice rink (the Oilers practice here often); and a hotel, with fantasy-style rooms.

Built in phases (the first was opened in 1980) by four Iranian-immigrant brothers at a cost of \$750 million, the mall attracts 400,000 visitors a week, two-thirds of them from out of town.

London

London, a city of 381,500, is the chief municipality of southwestern Ontario. It is an industrial and railroad center, first settled in 1826, on the Thames River, about 20 miles north of Lake Erie. Much of its architecture and atmosphere is suggestive of the more famous city on another Thames, and visitors find that the Ontario London has many characteristics reminiscent of England's capital. London is surrounded by a rich agricultural area. Vegetables, fruits, grain, and dairy products are produced in this region. Several products are manufactured in London, including brass and steel products, textiles, diesel locomotives, food products, clothing, and electrical appliances.

London is well known for its art museum and for its Museum of Indian Archaeology and Pioneer Life, housed at the University of Western Ontario. Other popular tourist spots include the Storybook Gardens for children and the Royal Canadian Regiment Museum.

There is also a unique Guy Lombardo Museum.

The city offers theaters and cultural activities (many connected with the several private colleges and the university) and other opportunities for sports and entertainment.

St. John's

St. John's, the capital of Newfoundland, is the oldest city in North America north of Mexico. Located on the southeast coast of the province, on the Atlantic Ocean, St. John's is the commercial center and principal port of Newfoundland. With a metropolitan population of about 173,000 the city has an excellent natural harbor and is the terminus of the railroad which crosses the island.

The area was colonized by Sir Humphrey Gilbert in 1593, and Water Street bustled in 1600, making it the continent's oldest business district, but a permanent settlement was not established until early in the 17th century. Twice destroyed by the French and Indians, St. John's was permanently controlled by the British beginning in 1762. It served as a naval base during the American Revolution and the War of 1812. On Signal Hill in 1901, Marconi received the first trans-Atlantic wireless message. The first nonstop, trans-Atlantic flight was made from St. John's in 1919.

As a base for the province's fishing fleet, St. John's industries are mainly related to fishing, and include shipbuilding, manufacturing fishing equipment and marine engines, and the storing, preserving, and processing of fish. St. John's has Roman Catholic and Anglican cathedrals, and is the site of the Newfoundland Museum, Memorial University (founded in 1949), and Queen's College (founded in 1841).

St. John's has many fine parks throughout the city. One of the largest is C.A. Pippy Park. This park offers opportunities for recreation and relaxation that include hiking

and cross-country skiing. It has picnic areas, a campground, golf course, and row-boat rentals. Bowring Park is located in the western part of the city. The park is noted for several very attractive and interesting pieces of statuary. It has been customary for various heads of state and members of the British Royal Family who have visited St. John's to follow the tradition of planting a tree in Bowring Park as a living reminder of their visit.

Victoria

Victoria, the capital of British Columbia, is located on the south-eastern portion of Vancouver Island, at the east end of Juan de Fuca Strait. The 2000 population of the metropolitan area was estimated at 287,900.

Victoria is the largest city on the island, as well as its major port and business center. Industries in the city include sawmills, woodworking plants, grain elevators, and fish processing factories. Victoria is also the base for a deep-sea fishing fleet and the Pacific headquarters of the Canadian Navy.

The city was founded in 1843 as Fort Camosun, a Hudson's Bay Company post. It was later named Fort Victoria. When Vancouver Island became a crown colony in 1849, its new town (built in 1851–52) was called Victoria and named the capital of the colony. In the late 1850s, gold was discovered in British Columbia and Victoria became an important base for miners on their way to the Cariboo gold fields. The island was united with the mainland in 1866, and Victoria remained the capital. In 1871, it became the capital of the province.

Victoria, with its mild climate, beautiful gardens, and many parks is a popular center for American and Canadian tourists. The city's most famous garden is Butchard Gardens, which dates back to 1904. Other beautiful gardens worth visiting include those at Government House and Beacon Hill Park. Beacon Hill Park features ponds, gar-

dens, forests, and one of the tallest totem poles in the world. The Dominion Astrophysical Observatory and the University of Victoria (founded in 1902 and elevated to university status in 1963) are located here. During the annual Victorian Days festival, inhabitants dress in Victorian clothing.

The downtown core of Victoria is small and packed with stores. Handmade chocolates, imported bone china, Irish linens, antiques, and English woolens are some of the items sold.

Nightlife includes the brilliantly lit parliament building, a small Chinatown, and an old section of town full of boutiques and restaurants. The city's provincial museum contains Indian, gold rush, early settler art and artifacts, and many superb old totem poles. A sawmill and logging museum is located in the nearby town of Duncan.

For the sports enthusiast, golf is available year-round at such courses as Royal Colwood, Olympic View, Glen Meadows, Cordova Bay, and Cedar Hill. To see harbor seals, porpoises, marine birds and killer whales, one can take a three-hour, 50-mile boat trip into the Gulf Islands. For those interested in salt-water fishing, charters for both sail and power boats are available at Victoria's marinas.

Windsor

Windsor, Ontario, known as the "City of Roses," on the Detroit River, is a major border crossing between Canada and the United States. The Ambassador Bridge and the busy Detroit-Windsor river tunnel, which connect the two countries, carry countless commuters to their jobs in both cities, and serve the thousands of tourists who casually shop and dine and attend theaters and recreational activities in Detroit and Windsor.

A two-week-long International Freedom Festival is held jointly with Detroit in late June and early

July, celebrating both the Canadian and the U.S. independence. The highlight of the festival is a huge fireworks display over the Detroit River. Windsor's riverfront is lined with parks. Jackson Park and Dieppe Gardens are the pride of the city.

With an estimated 2000 population of 262,000, Windsor has grown into a modern business and industrial center in the years since its incorporation as a village in 1854, then as a city in 1892.

Windsor was settled by the French at about the turn of the 18th century, just after the foundation of Detroit in 1701. It was headquarters for U.S. Gen. William Hull in the War of 1812.

Among the many products manufactured in Windsor are automobiles, pharmaceuticals, machine tools, and chemicals. Brewing and distilling facilities are major businesses here also. The city's educational institutions include the University of Windsor (founded in 1963), Assumption University (founded in 1857), and Holy Name (1934), and Canterbury Colleges (1957).

The town of Amherstburg, just a few miles south of Windsor, is one of the oldest settlements in the area, with an eventful history reflected in the numerous historic sites and buildings. When the British left Detroit, they established a fort and a navy yard here. Fort Malden National Historic Park contains part of the 1796 British earthworks. The Boblo Island amusement park can be reached by the Amherstburg ferry. Several intimate restaurants have recently given the town a reputation for fine cuisine. The population of Amherstburg is 5,700.

OTHER CITIES

ANTIGONISH is a city of 5,000 in northeast Nova Scotia, off St. George's Bay. The French first settled the region in 1762, followed by the British some 25 years later.

Antigonish exports lumber and fish and has nearby quarries. With its 117-year-old St. Ninian's Cathedral, the city is the seat of a Catholic diocese. The Antigonish Movement (a pioneering, self-help, cooperative program) was founded at local St. Francis Xavier University in 1930. Tourists visit the Highland Games which the city holds every summer; these have their origin in the Braemar Games of Scotland.

BRAMPTON, known as the "Flower City" because of its many nurseries, is located in southeastern Ontario, 20 miles west of Toronto. Founded in the 1820s, Brampton pleasantly blends old and new, and has preserved much of the architecture from its early days. Recently, the city has become industrialized, manufacturing metal products, automobiles, shoes, furniture, stationery, optical lenses, and communications equipment. Visitors to Brampton enjoy the Great War Flying Museum, which displays World War I aircraft, as well as the five-story-high White Star Slide, located in the Shopper's World mall. Brampton's population is approximately 268,000.

BRANTFORD is located in southeastern Ontario, about 22 miles southwest of Hamilton. It was founded in 1830 and named for the famous Indian chief, Joseph Brant, who led the Six Nations Indians from their homeland in upstate New York to this site on the Grand River. Today, Brantford retains many of its associations with the heritage and culture of the Six Nations Indians; there are exhibits in the Brant County Museum and the Woodland Indian Cultural Education Centre and Museum. Indian heritage is celebrated every August during the Six Nations Indian Pageant and at the Indian John Memorial Shoot, an archery contest held each June. Her Majesty's Chapel of the Mohawks, located in Brantford, is the world's only royal Indian chapel and the oldest Protestant church in Ontario. Brantford is also the place where Alexander Graham Bell invented the telephone and made the first long-distance call

from his home to Paris, Ontario, in 1876. Bell's home in Brantford is open to visitors; it is furnished just as it was when he lived here and many of his inventions are on display. Brantford has a population of approximately 76,070. Truck bodies refrigeration equipment, textiles, and agricultural implements are manufactured here. The city is also the birthplace of hockey's Wayne Gretzky.

CHARLOTTETOWN, capital and only city of Prince Edward Island, has a population of 15,300. It was named for Queen Charlotte, consort of George III. It is on the Gulf of St. Lawrence, near Prince Edward Island National Park.

Historic **DAWSON** (formerly called Dawson City) lies at the confluence of the Yukon and Klondike Rivers in western Yukon Territory. A town of only 1,790, Dawson in its heyday of the Klondike Gold Rush (late 1890s) boasted over 30,000 residents. The rapid exhaustion of accessible mines in the early 20th century dealt the community a serious blow. The town's status as administrative center of the territory was lost in 1953. Now a major tourist and distribution area, Dawson celebrates its past with annual Discovery Day celebrations in August. The cabins of writers Jack London and Robert W. Service have been restored. Other attractions include the restored turn of the century Palace Grande Theater, Post Office, gold dredge No. 4, the Steamer Kero, and the cabin of the famous Canadian author, Robert Service.

FREDERICTON is the capital of New Brunswick, located 60 miles northwest of St. John's in the south-central region. The city has military, political, and literary traditions dating to the post-Revolutionary War period. A stronghold of Empire Loyalists (Tories), Fredericton is named after Frederick, King George III's son. Canada's first university, the University of New Brunswick, is in this Georgian-style city. Riverside mansions recall earlier days of grace and charm. Loyalist traditions live on at Kings Landing

Historical Settlement. Fredericton is located alongside the Saint John River. The river is a focal point of city life. Each summer, the River Jubilee Festival pays tribute to the river. Tours and dinner cruises are available aboard the Pioneer Princess, a replica of the original paddle-wheelers that once plied the river. Fredericton is also the home of the internationally renowned Beaverbrook Art Gallery. The gallery displays a permanent collection of 2,000 works of art. It is distinguished as being one of the most comprehensive British collections in Canada and the most complete representation of Canadian painting, historical and contemporary, east of Montreal. The population of Fredericton is approximately 44,000.

GANDER is a modern city of 10,000, 210 miles northwest of St. John's, Newfoundland. It is best known for its airport, one of North America's largest. Transatlantic flights have been handled in Gander since 1939. During World War II it was a critical connection for air ferries and Atlantic patrols. The area's many wild geese and the Gander River were the origin of the city's name. It was incorporated in 1954.

The manufacturing city of **GUELPH** is located in southeastern Ontario, about 15 miles northeast of Kitchener. Founded in 1827 on several hills, Guelph produces rubber goods; electrical apparatus; paint; carpets; clothing, cigarettes, woolen, cotton, and linen goods; and iron and steel products. Foundries and tobacco warehouses are located in the city. Guelph is characterized by maple trees, wide avenues, and fine old homes constructed of local limestone in early Canadian architecture. The city is the birthplace of Col. John McCrae (1872-1918), the poet and physician best known for his nostalgic poem, "In Flanders Fields," written in 1915; his birthplace is open to the public. The University of Guelph, founded in 1964, covers 1,110 acres and includes a 350-acre arboretum. Guelph boasts one of the largest mechanical floral clocks in the province; it contains six to seven thousand flowers. A

Spring Festival, featuring classical music, recitals, concerts, and song and dance programs, is held annually in late April and mid-May. Guelph's population is approximately 88,000.

KINGSTON, with a population of roughly 57,380, is strategically located in southeastern Ontario at the southern end of the Rideau Canal at the point where Lake Ontario flows into the St. Lawrence River. Fort Frontenac was built here by the French in 1673 and was destroyed by the Iroquois Indians shortly thereafter. Restored in 1695, the fort became a key point in reaching the Upper St. Lawrence River. The present city of Kingston, or "king's town," was settled by Loyalist refugees in 1793. In the early 1800s, the city seemed a likely target for an American invasion, so Fort Henry was built to guard the royal dockyards; it was used as a base for the British naval forces on Lake Ontario during the War of 1812. Fort Henry is currently a military museum. Kingston served as the capital of Canada from 1841 through 1844. Today, the city is an important transshipment point for the Welland Ship Canal and an outlet for traffic on the Rideau Canal. Aluminum sheeting, synthetic fibers, ceramics, mining equipment, ships, leather, and diesel engines are manufactured here. Kingston is the home of Queen's University (founded in 1841) and the Royal Military College of Canada (equivalent of West Point; founded in 1876). The city has an impressive concentration of 19th-century buildings that give it a unique appearance. Many of these buildings have been converted into pubs, restaurants, art galleries, and museums. The city is a departure point for boat tours along the Rideau Canal to Ottawa and around the scenic Thousand Islands. Kingston was the birthplace of organized hockey and the first league game was played here in 1885. The International Hockey Hall of Fame museum depicts the development of the sport through displays of equipment, photographs, and mementos.

KITCHENER, an industrial city in southeastern Ontario, is about 60 miles southwest of Toronto. Largely settled by the Pennsylvania Dutch in 1806, the area was then settled by Germans in 1825. The Germans named the city Berlin, but it was renamed in honor of Lord Horatio Kitchener, a British statesman. Kitchener honors its German heritage with an Oktoberfest, North America's largest. The city has a population of 178,000 (1996 est.); its metropolitan area, which includes the adjoining city of Waterloo, has a population of 346,000 (1990 est.). Manufactured items include furniture, textiles, shoes, appliances, and rubber products; industries include distilling, brewing, tanning, and meat packing. Kitchener is the site of St. Jerome's College, founded in 1864, and of Woodside National Historic Park, which commemorates the birthplace of William Lyon Mackenzie King, a Canadian statesman and former prime minister.

MEDICINE HAT, Alberta, lies on the South Saskatchewan River, 180 miles southeast of Calgary. This city of 40,000 is located in the heart of one of the biggest natural gas fields in the world. It is also on the Trans-Canada Highway and Canadian Pacific Railway. Medicine Hat is the home of several industries, among them pottery manufacturing, glassblowing, and flour milling. The mostly agricultural economy is dominated by ranching and vegetable growing. According to Indian legend, Medicine Hat acquired its name from a frightened Cree medicine man who lost his hat escaping from warriors. The city hosts an annual stampede and exhibition and has a highly regarded historical museum.

NIAGARA FALLS, with an estimated population of 70,500, is the site of one of the world's great natural wonders, drawing tourists from all over the world. The city itself is a manufacturing center located just below the falls in southeastern Ontario, opposite Niagara Falls, New York, to which it is connected by two bridges. Founded in 1853, the city was known as Clifton from

1856–1881, and was incorporated in 1904. The center of a large hydroelectric power complex, Niagara Falls also produces fertilizer, chemicals, abrasives, cereal, paper goods, silverware, and sporting goods. It is best known, however, as a bustling tourist town with several man-made attractions. A 25-mile park system stretches from above the falls downriver to Niagara-on-the-Lake. The falls are equally spectacular in the summer and in the winter when frozen; an illumination system also makes them a spectacular nighttime attraction.

Situated in a beautiful setting on Lake Ontario at the mouth of the Niagara River, **NIAGARA-ON-THE-LAKE** is one of the prettiest and best-preserved 19th-century towns in North America. Founded in 1780 and originally named Newark, Niagara-on-the-Lake was the first capital of Upper Canada from 1791–1796. Although the town was burned in 1813, parts of Fort Massasauga are still visible. Today, the city is best known for the Shaw Festival, a major annual theater event featuring the plays of George Bernard Shaw and his contemporaries. Performed in the Royal George Theatre, the Court House Theatre, and the modern Festival Theatre, the festival runs from early May through September. Located opposite Fort Niagara, New York, Niagara-on-the-Lake has a current population of 12,200.

Situated on the northeast shore of Lake Nipissing in northern Ontario, **NORTH BAY** is a busy year-round tourist city, well known to fishermen and hunters. It has a "golden mile" sandy beach with picnic facilities and shore-land parks, as well as numerous hiking trails. A transportation hub, North Bay produces lumber, dairy products, fur products, mining machinery and brass fittings; there are dairy farms in the area. The city is also home of the Quints Museum; the original Dionne family log farmhouse has been restored and now houses memorabilia from the world's first

recorded surviving quintuplets. The annual Festival of the Arts, a series of cultural, musical, and social activities, is held in late September and early October. The local French community organizes sports and social events in early February for the Bon Homme Winter Carnival. North Bay's current population is 51,300.

OAKVILLE, located on Lake Ontario 22 miles southwest of Toronto, is a wealthy community of approximately 128,400 with an attractive harbor and an enduring, 19th-century charm. Automobiles, plastics, aluminum ware, and paper are produced in Oakville. The city is also a summer resort and has a golf course—Glen Abbey—designed by American pro golfer, Jack Nicklaus.

OSHAWA, situated on Lake Ontario 33 miles northeast of Toronto, is one of the main centers of Canada's automobile industry. Founded in 1795 as a lake port, Oshawa was incorporated as a town in 1879 and as a city in 1924. There are several old buildings near the lake-front that are preserved as part of the city's past. As an industrial city, Oshawa produces motor vehicles and parts, foundry products, electrical appliances, metal stampings, glass, plastics, textiles, pharmaceuticals, and furniture. The Canadian headquarters of General Motors is located here. The Canadian Automotive Museum, which displays collections from Canada's early car industry, is also located in Oshawa. The city's population is roughly 134,000.

PETERBOROUGH, a bustling city with many reminders of the past, is located in southeastern Ontario on the Otonabee River and Trent Canal, 13 miles north of the west end of Rice Lake and 70 miles northeast of Toronto. Sawmills were established on this site in 1821; the city was founded four years later and incorporated in 1905. Today, Peterborough is an industrial city whose products include electrical machinery, marine hardware, boats, plastics, lumber, carpets, and watches. Dairy farms are also

located in the area. In addition, Peterborough is the southeastern gateway to the Kawartha Lakes and is the major link in the Trent-Severn Waterway. The Hydraulic Lift Lock is the world's highest hydraulic lift and the symbol of the city. It literally lifts pleasure craft, along with the water in which they float, 65 feet straight up. There is constant traffic, especially on summer weekends; during winter, there is skating on the canal beneath the lift lock. Peterborough also boasts the highest jet fountain in Canada. The Centennial Fountain shoots water 250 feet up from Little Lake, just south of the city. Trent University was founded here in 1963. The population is roughly 62,500. Southeast of Peterborough is the industrial town of Belleville, located on the Bay of Quinte. With a population of 35,300, Belleville is the gateway to two great recreation regions—the Highlands of Hastings, with its clear lakes (Bancroft is a tourist center there), and the sandy beaches of Quinte's Isle to the south (Picton attracts tourists there). A popular vacation spot, Belleville has one of Ontario's finest yacht harbors, along with facilities for golf, fishing, and swimming. Southwest of Belleville, on the eastern terminus of the Trent Canal system, is Trenton, whose population is 15,100. A popular water-oriented city, Trenton offers sailing, swimming, and fishing in summer, and ice boating and ice fishing in winter.

Situated in south-central Saskatchewan, **PRINCE ALBERT** is an important distribution point for the northern reaches of the province. Its varied economic base includes oil refining, woodworking, paper milling, tanning, and food packaging. Tourism here centers on nearby Prince Albert National Park and the unique Lund Wildlife Exhibit. Visitors are often attracted to Prince Albert's numerous museums and art galleries. Outdoor enthusiasts also enjoy the area's excellent hiking and skiing trails, and beautiful lakes where fishing is abundant. The metropolitan area is the site of a federal penitentiary, a school for the retarded, and several

Indian reservations. Prince Albert has a population of about 34,000.

Situated in central British Columbia, 485 miles north of Vancouver, **PRINCE GEORGE** serves as an important provincial administrative and transportation hub. Explorer Simon Fraser founded the city in the early 1800s as a trading post on the river that now bears his name. The city grew with the opening of the Grand Trunk Pacific Railway in 1913. The community's approximately 66,000 residents rely heavily on the lumber industry, as well as on minerals, oil, and hydropower, for their livelihoods. Tourists and sportsmen know Prince George as a base for expeditions into the Cariboo district.

SAINT CATHERINES, "the Garden City," is an industrial city situated on the Welland Ship Canal, just south of Lake Ontario. Settled by the Loyalists in 1790, Saint Catherines was incorporated as a town in 1845 and as a city in 1876. It was once a depot of the Underground Railroad; was the site of the first Welland Canal, built in 1829; and had the first electric streetcar system in North America. Today, Saint Catherines produces automobile parts, machinery, electrical equipment, hardware, textiles, and hosiery. Fruit is packed and shipped from its harbor. Brock University, founded in 1962, was named for (Gen.) Sir Isaac Brock, who commanded the Canadian and British forces at the battle of Queenston Heights in 1812. The Niagara Grape and Wine Festival, marking the ripening of the grapes in the Saint Catherines area, is held annually in late September. The 10-day festival, begun in 1952 as a one-day observance, now includes more than 200 events. The population of Saint Catherines is approximately 124,000.

SAINT JOHN, New Brunswick's largest city, boasts an excellent harbor, large dry docks, and terminal facilities. It is a year-round port with shipping connections to Europe, North and South America, and the West Indies. The city is the

commercial, manufacturing, and transportation center of the province. The city's major industries include brewing, tanning, fish processing, shipbuilding, and oil refining. Visited in 1604 by French explorer Samuel de Champlain, Saint John eventually became a French fort and trading post (1631), and in the ensuing years was captured and recaptured as England and France struggled for possession. Saint John is famed for its museums; its buildings dating to colonial times; and for the Reversing Falls, which are actually rapids caused by the famous high tides. Not far away is the former summer home of U.S. President Franklin D. Roosevelt at Campobello Island, now maintained jointly by Canada and the U.S. Historical attractions include the Carleton Martello Tower, a stone fortification surviving from the War of 1812; the Fort Howe Blockhouse, a replica of a 1777 blockhouse. Visitors are afforded a panoramic view of the city from the fort. Many of St. John's homes and buildings are worthy examples of historic architecture. The population of Saint John is about 102,000.

SARNIA is the center of Ontario's oil refining and petrochemical industries. Located on the Saint Clair River in southeastern Ontario, at the south end of Lake Huron, Sarnia is connected to Port Huron, Michigan, via the Bluewater Bridge, as well as by a railway tunnel. An important lake port, Sarnia produces lumber, plastics, sailboats, and automobile parts. Settled by the French in 1807 and by the English in 1813, Sarnia's waterfront offers a variety of recreational activities, including swimming, boating, and golfing. There are more than a dozen fully equipped marinas along 42 miles of white, sandy beaches. One of Sarnia's main attractions is fishing—trout, perch, whitefish, pickerel, walleye, chinook, and coho salmon may be caught from shore or boat. Water pollution problems have, occasionally, been serious. Those concerned about swimming in this region or eating locally caught fish are advised to contact

appropriate provincial agencies. Known as the "Salmon Capital of Ontario," the city is host to the annual Sarnia Salmon Derby in May. Thousands of sailors and spectators descend upon the city for the Port Huron-to-Mackinac Race each summer. The population is estimated at about 80,000.

SASKATOON, in Saskatchewan, is the potash capital of the world. Half of the world's potash reserve is located in this area. Industries located in Saskatoon include food and dairy processing, flour milling, brewing, tanning, oil refining, and meat-packing. The city also manufactures electronic equipment fertilizers, clothing, and chemicals. Saskatoon is the home of the Mendel Art Gallery, which houses a collection of works by Canadian artists. Other museums in Saskatoon include the Ukrainian Museum of Canada, which has contemporary and historical exhibits dealing with the early settlement of Saskatchewan and culture on the Ukrainian people, and the Western Development Museum, which features a "Boom Town" that recreates a 1910 village. Saskatoon also hosts several annual fairs, and festivals which attract tourists and natives alike. The city offers numerous opportunities for fine dining. The population is about 194,000; the city is the birthplace of hockey great Gordie Howe.

SAULT SAINTE MARIE was established on the site of a mission founded by Pere Jacques Marquette in 1668. It is situated at the falls on the St. Mary's River (the link between Lakes Huron and Superior), just opposite Sault Sainte Marie, Michigan. This is the site of one of the most active canals in the St. Lawrence Seaway system; lake freighters traveling to and from the upper Great Lakes use the locks to bypass the rapids. Tours of the locks are available. Two-hour cruises through both the American and Canadian locks, the world's busiest, are offered from late May until Thanksgiving. The Canadian lock, located at the edge of the St. Mary's River rapids, was completed in 1895

and is the oldest in the system. A pretty city with many old stone and brick buildings, Sault Sainte Marie's economy depends upon the Algoma steel plant, lumber, agriculture, and tourism. Although the city is considered part of the summer resort system, it also has many wintertime events. World class cross-country skiing trails are numerous and the downhill skiing is excellent. Groomed trails for snowmobiling are available. The Ontario Winter Carnival Bon Soo, featuring dog sled races, speed skating, polar bear swimming, and more is held here in late January/early February. To the east of Sault Sainte Marie, on the North Channel of Lake Huron, are several resort and vacation centers. Bruce Mines was named for Canada's first successful copper mines. Thessalon, a lumber town situated at the river mouth, has a large government wharf and marina. Iron Bridge, on the historic Mississagi River, is known for its sturgeon fishing. Blind River is a mining and lumbering center. A short distance inland is Elliot Lake, founded in 1954 when uranium deposits were discovered nearby. A modern town of 20,000 on the shore of one of the 170 lakes in the area, Elliot Lake offers winter and summer sports activities.

STRATFORD, Ontario, is located just north of London on the Avon River. Founded in 1832, the city produces furniture, brass, and leather and rubber goods. It is best known, however, for its deliberate resemblance to Stratford-upon-Avon, England, the home of William Shakespeare. The Stratford Shakespearean Festival in Ontario began modestly in 1953 and has since become a major world theatrical event, utilizing three theaters. While still based on a Shakespearean season, the festival now incorporates diverse forms of music and theater, from folk-singing to opera. The season runs from June through October. Stratford's population is over 27,000.

"The nickel capital of the world," **SUDBURY** is 40 miles north of

Georgian Bay in south-central Ontario. The city has a population of roughly over 90,000, and is in the middle of the country's most important mining region. Minerals were first discovered here in 1883; today, in addition to nickel, copper, gold, cobalt, sulfur, iron ore, silver, and platinum are mined. Industries include lumber milling, woodworking, brickworking, and machine shops. Sudbury is linked to other cities by the Trans-Canada Highway, as well as by two transcontinental railways. It acts as the area's main commercial and educational center.

THE FORD MINES is a mining community of 20,000, 50 miles south of Quebec City in southern Quebec province. It is known as one of the world's major asbestos-producing regions, but also mines chromium and feldspar (a crystalline mineral). Dairying, chromium and feldspar mining, saw milling, and fiberglass manufacturing are other commercial activities in Thetford Mines. It was founded in 1876 and became a city in 1912.

THOMPSON lies on the Burntwood River, 400 miles north of Winnipeg, in north-central Manitoba. This planned community was built in the late 1950s and has an estimated population of 14,700. The International Nickel Company is the principal employer. Its chairman, John Thompson, gave his name for the city when it was completed in 1961. The company's combination nickel mining-smelting-refining plant was the first of its kind in the Western Hemisphere. Thompson is linked to Winnipeg by air.

THUNDER BAY is Canada's third largest port, and the western terminus of the St. Lawrence Seaway. The twin cities of Port Arthur and Fort William joined to form Thunder Bay on January 1, 1970. The city is located in the midst of a rich mining and fishing region. Several industries in Thunder Bay are involved in brewing, flour milling, paper milling, truck and aircraft manufacturing, and shipbuilding.

The city is easily accessible by boat, highway, and rail. It has an estimated population of 114,000.

TROIS RIVIÈRES (Three Rivers), in Quebec, is the second oldest city in the province. Founded in 1634, it is predated only by Quebec City, which was established in 1608. The city has a strong manufacturing base. Factories in Trois Rivières produce clothing, electrical appliances, paper, textiles, shoes, and wood pulp. Abundant woodlands, combined with a large hydroelectric plant make the city one of the world's largest producers of newsprint. It has a beautiful 17th-century Anglican church, and a Gothic-style cathedral whose stained-glass windows are among the most exquisite on this continent. Approximately 51,800 people live in the city.

WHITEHORSE, the capital of the Yukon, is headquarters for the Royal Canadian Mounted Police. Its population is roughly 20,700. The Yukon was the site of the Klondike Gold Rush in 1898. The Gay Nineties days are relived every summer. Dramond Tooth Gerties in Dawson is a gambling casino, with blackjack and roulette tables. Other points of interest in Whitehorse include the McBride Museum, which features an in depth look at Yukon heritage and wildlife, a tour aboard the restored steamboat *S.S. Klondike* and a guided tour of the city.

YELLOWKNIFE, capital of the Northwest Territories, is one of Canada's youngest cities (1935). It is only 275 miles south of the Arctic Circle. From May through July, this is the land of the midnight sun. In late June, Yellowknife hosts the Pacific Western Midnight Sun Golf Tournament. The Northwest Territories covers one-third of Canada's land area, but the total population is only about 14,000. Coppermine, Cambridge Bay, Bathurst Inlet, and Bay Chimo are small communities north of Yellowknife.

COUNTRY PROFILE

Geography and Climate

The world's second largest country in land area (3,851,809 square miles), Canada is bordered on the north by the Arctic Ocean, on the northeast by the Atlantic Ocean, on the south by the United States, and on the west by the Pacific Ocean and Alaska.

Much of Canada's industry is concentrated in the southeast near the Great Lakes and the St. Lawrence River, in an environment similar to adjacent areas of the U.S. To the northeast are the rolling Appalachian country of southern Quebec, the Maritime Provinces, and the Island of Newfoundland. The most outstanding physical feature is the Shield, a rugged area of Precambrian rock which surrounds Hudson Bay and covers most of eastern and central Canada—almost half of the country. This semi-barren area, and the Arctic Archipelago to the north, are sparsely populated and as yet largely undeveloped.

Another major region is the Canadian prairies, an extension of the mid-continent Great Plains. This area lies between the western border of the Shield and the Canadian Rockies. It is the Canadian breadbasket, and an area that is also rich in petroleum, gas, and other mineral resources.

Far-western Canada, comprised mostly of British Columbia, is laced with towering mountain ranges. Most people here live on the temperate southwest coast and Vancouver Island.

The climate varies greatly in the many diversified regions—ranging from frigid to mild—but Canada generally may be described as lying in the cool temperate zone, with long, cold winters.

Population

More than two-thirds of Canada's 31.3 million people live within 100 miles of the U.S. border. Canadians and Americans are not "just alike," however, as many observers often assume. The Canadian character and outlook have been forged from a distinctive historical and social background which has produced a "Canadian way of life" that flourishes in a sovereign nation.

About 28% of the population is of British stock, about 23% of French, 15% is other European, and about 2% is indigenous Indian and Inuits (Eskimos). Canada's more than six million French-speaking citizens are mainly descendants of colonists who settled the country three centuries ago. They are concentrated in the Province of Quebec, although about 20% live in other parts of the country, mainly Ontario and New Brunswick. There is a sizeable French community in Manitoba as well.

The English-speaking population has been built up by immigration from the British Isles. The largest influx from the U.S. occurred during the American Revolution, when thousands of "Empire Loyalists" fled to Canada. Most settled in "Upper Canada," in southern and southeastern Ontario. Those Canadians who are of neither British nor French origin are mainly Germans, Ukrainians, Scandinavians, Italians, Dutch, Poles, Chinese, Indians, and Pakistanis.

Religion plays an important, though diminishing, role in the life of the Canadian. About 42% are Roman Catholics. The largest Protestant denomination, about 17% of the population, is the United Church of Canada—a union of Methodists, Congregationalists, and Presbyterians. Almost 10% are Anglicans, with Presbyterians, Lutherans, Baptists, and Jews next in number.

Government

Canada's parliamentary system of government reflects both its Old

World heritage and its North American experience. The British North America Act of 1867 provided a written constitution, similar to that of the British. The lack of specific guarantees of rights, combined with profound regional disputes, led to serious consideration of a truly Canadian constitution in the late 1970s. After years of discussions, then-Prime Minister Pierre Trudeau "brought home the constitution" in 1982. Following British Parliament approval, Queen Elizabeth II and Trudeau signed the Constitution Act on Ottawa's Parliament Hill in April 1982. Included in the new constitution is a Charter of Rights and Freedoms.

Many of the country's legal and parliamentary practices are derived from ancient custom, as in Great Britain. On the other hand, the 10 provinces are united in a federal system resembling that in the U.S., though provinces have greater responsibilities and powers than have American states.

Queen Elizabeth II is the head of the Canadian state, and is a symbol of Canada's Commonwealth status. Her personal representative in Canada is the Governor-General.

Parliament consists of the Crown, the Senate, and the House of Commons, the latter clearly having the dominant voice in legislation. Its 282 members are elected for nominal five-year terms. The Senate's 104 members are appointed by the governor-general on the advice of the prime minister, and hold office until mandatory retirement at age 75.

Executive power is vested in the Cabinet, headed by the prime minister, who is the leader of the political party in power. The Cabinet remains in power as long as it retains majority support in the House on major issues.

Provincial government is patterned much along the lines of the central government. Each province is governed by a premier and a single, elected legislative chamber. A lieu-

tenant governor, appointed by the governor-general, represents the Crown.

Criminal law, a parliamentary prerogative, is uniform throughout the nation, and is largely based on British law. Civil law is based on English common law, except in Quebec. Here, civil law is derived from the Napoleonic Code. Justice is administered by federal, provincial, and municipal courts.

During the past century, national politics has been dominated by two major parties, the Liberals and the Progressive Conservatives. While these parties have adopted many traditions from their British counterparts, there are substantial differences. The Liberals correspond, in very general terms, to the Democratic Party in the U.S., while the Progressive Conservatives would be the rough equivalent of the Republican Party. Distinctions between the two parties, however, are increasingly blurred since both take a pragmatic approach to Canada's problems.

Also represented in parliament and active in provincial politics is the New Democratic Party (NDP). The NDP corresponds roughly to the social democratic parties of Europe. The Communist Party is almost insignificant, and holds no seat in either the federal or provincial legislatures.

Canada is a member of the British Commonwealth, the United Nations, United Nations Educational, Scientific, and Cultural Organization (UNESCO), World Health Organization (WHO), North Atlantic Treaty Organization (NATO), and the following international associations: Inter-American Development Bank, International Energy Agency, International Sugar Organization, International Wool Study Group, and the International Wheat Council.

The Canadian flag consists of a red maple leaf on a white background, flanked by vertical bands of red.

Arts, Science, Education

The development of the arts in Canada reflects not only the country's culture and geography, but also bears the imprint of a rapidly growing nation. The existence of two dominant cultural traditions—French and English—has led to a diversity in the arts. Focal points of artistic activity have grown up in several metropolitan centers scattered about the country. Since World War II, economic growth has given Canadians greater means to practice and enjoy the arts, and the influx of immigrants has increased the pool of available talent.

All provincial governments, through various departments, agencies, or educational institutions, provide some assistance for professional and amateur artists within their borders. The federally funded, as well as privately funded, Canada Council administers a similar program on a national scale.

Well-known artistic groups include the Stratford Festival Company, the Montreal Symphony, Toronto's Canadian Opera Company, and the Winnipeg Ballet. All of these groups make extensive tours throughout North America, and occasionally tour abroad.

A technologically advanced nation, Canada needs and produces much scientific activity. Most major research projects reflect the increasingly interdependent industrial, university, and government laboratories. In addition, considerable scientific cooperation is undertaken with other nations—especially with the U.S. and the U.K.

All of Canada's activities in the field of atomic energy are the responsibility of the federal government. The most diversified program of scientific research is carried out by the National Research Council—a federal agency. On the other hand, most basic medical research is conducted by universities.

Education at the elementary and secondary level is the responsibility of provincial governments; curricula and teacher qualifications vary a great deal. In all provinces, public education is free. Ages of mandatory attendance vary from province to province, but are generally from seven to 15. In Halifax, Vancouver, and Winnipeg, free public education is controlled and funded by public school boards, as in the U.S. Private schools, primarily Roman Catholic, exist as well, and charge tuition. The literacy rate is estimated to be 99%.

In other Canadian cities, free public education is funded and controlled locally by two types of boards—either “public” or “separate.” Except in Quebec, the public boards are nondenominational, reflecting a Protestant and English historical development; the separate boards are Roman Catholic. In Quebec, the public boards are Roman Catholic—further divided into boards for French- and English-speaking children; the separate boards are nondenominational, also with French and English subdivisions. Both types of boards fund public education from property taxes. Parents usually cannot elect to send children in the same family to schools controlled by different boards.

Education at the elementary level in Canada is considered to be on a par with schools in the U.S. At the secondary level, schools in Ontario and the western provinces are also considered to be at par, but in Montreal, Quebec City, and Halifax, schools at the secondary level do not always meet these standards.

In the non-French-speaking areas of Ottawa, Toronto, and Winnipeg, local school districts offer French-language instruction at all levels. In elementary schools, there are generally two tracks of instruction—a required French course, or an optional immersion program, which begins in kindergarten and offers instruction totally in French, with English being phased in gradually in the third or fourth grade. At the secondary level, French is usu-

ally optional and is offered along with other languages, such as German and Spanish. At other places (outside Quebec), French is offered on an optional basis, primarily at the secondary level. In English-speaking schools in Quebec Province, French is also a required subject at all levels.

Canada's 60 universities range from small liberal arts colleges with as few as 1,000 students to multiversities (made up of colleges, faculties, and research institutes) with enrollments as high as 20,000. Most instruction is in English—although some institutions use French only—whereas both English and French are used at the University of Ottawa and two other institutions. There are numerous community colleges, usually called technical schools.

Commerce and Industry

The Canadian economy is highly developed, giving Canadians one of the highest standards of living in the world. Manufacturing is concentrated in transportation and communications equipment, engineering, and steel and consumer goods. Especially notable is the production of motor vehicles and parts, encouraged by the auto pact between the U.S. and Canada. Most manufacturing is concentrated in Ontario and Quebec.

Alberta is growing fast in industries related to oil and natural gas. Primary industries built on Canada's rich natural resources remain an important part of the economy and a major source of exports. Leading resource industries are: forest products; oil, natural gas, and hydroelectric power; grains and other agricultural products; mining of asbestos, potash, and nonferrous metals; and fishing. As in other developed countries, the service sector is growing rapidly.

The economy is closely linked by trade and investment with other countries, especially the U.S. For-

eign trade, two-thirds of which is with the U.S., represents more than one-fifth of total output. There is considerable two-way direct investment between the U.S. and Canada, although the level of U.S. investment in Canada is higher, as is its relative importance in the economy.

Americans find that most products and services available in the U.S. are also available in Canada. Local prices are often higher, but this may be offset by a favorable exchange rate for the Canadian dollar.

The main office of the Canadian Chamber of Commerce is located at 55 Metcalf St., Ste. 1160, Ottawa, Ontario K1P 6N4. There are regional offices in all of the provinces.

Transportation

Except in the remote northern areas, Canada possesses an advanced transportation system in all modes comparable to that in the U.S. An extensive air network links all major and many minor traffic points with adequate connections to the rest of the world. Domestic air fares per mile are higher than in the U.S., and distances between population centers are considerably greater. A good highway system (with somewhat less emphasis on interstate-type roads) exists, and supports extensive truck, bus, and automobile traffic.

The Canadian railroad system, while vast, has many problems similar to those affecting the U.S. Although passenger service continues to exist, it is poor except in the Quebec-Windsor corridor.

Water transportation is important largely from the foreign trade viewpoint. Major ports exist at Vancouver, Montreal, other St. Lawrence River points, Halifax, and St. John (New Brunswick). The Great Lakes St. Lawrence Seaway and River System is an important domestic and binational transport route, which permits the movement of smaller-sized oceangoing vessels as

far west as Duluth, Minnesota and Thunder Bay, Ontario.

All larger cities have public transit systems, generally buses. There are subways in Montreal and Toronto, and streetcars in Toronto and Calgary; plans are being formulated to develop rail systems in Edmonton and elsewhere. By and large, Canadian cities have public transportation arrangements at least as good as in American cities of similar size. They are better developed closer to the city's downtown center. Low population densities have inhibited the development of equivalent service in distant suburbs. The operation of public transport is frequently subsidized by provincial and local governments, making most fares reasonable.

In spite of extensive public transportation arrangements, Canada is as much an automobile society as the U.S. All American automobile manufacturers have plants in Canada, producing standard North American vehicles, and the greater portion of the automobile market in Canada is shared by these manufacturers. Most European and Japanese models found in the U.S. are also sold in Canada. Spare parts are available for all these vehicles. Repair facilities in the major cities compare to those in the U.S. There may be service problems with some European and Japanese cars outside the major cities, but most cars can be serviced readily except, perhaps, in remote areas.

U.S. grades of gasoline (leaded and unleaded) are widely available, and are sold in liters. Safety standards for cars are similar in the U.S. and Canada. Left-hand-drive vehicles are standard; traffic moves on the right. International highway symbols are used in Canada, and distances have been converted to the metric system. Seat belts and infant/child seat restraints are mandatory in the provinces of Ontario, Quebec, Saskatchewan, and British Columbia. Fines are imposed for non-use of seat belts and child restraints.

Communications

Telephone service, provided by the Bell Telephone Company of Canada in Ontario and Quebec, and by provincial companies in other provinces, is excellent. Canada (except for the Northwest Territories) is integrated with the U.S. direct distance dialing system. Telegraph services are operated by the two transcontinental railway companies, and by the federal government to outlying districts.

Mail service within and from Canada to other countries is satisfactory. All first-class mail is airmail within Canada at no extra cost, and letters to the U.S. require only a regular first-class stamp. There is no censorship, and customs formalities are minimal.

Broadcasting is well developed in Canada. Radio and TV stations operate in all major cities and carry extensive amounts of U.S. programming. There are two national TV networks (CBC and CTV), and independent TV stations also exist in many large cities. The Canadian Broadcasting Corporation (CBC) operates an extensive radio network, with domestic (AM and FM), northern, and international short-wave service. It operates dual networks for English and French programming; there are even French outlets in the western cities where the francophone population is limited. The Province of Quebec also has its own French-language broadcasting system. The Province of Ontario operates an impressive educational TV system which, at night, features nonacademic programs.

Direct reception of nearby U.S. radio and TV stations is possible in many parts of Canada. In most Canadian cities there is a well-developed cable TV system which relays most of the U.S. networks (including PBS), some distant Canadian stations for an additional charge, and distant FM radio as well.

About 109 daily newspapers are published in Canada—89% are in

English, the rest in French. Most major cities have at least two local papers, usually morning and evening. Ottawa has only one daily, *The Citizen*. About six Canadian newspapers publish a Sunday edition. Most cities receive major U.S. newspapers within a few days of publication. (*The New York Times* is available daily, including Sundays, in Ottawa, Toronto, Vancouver, and Montreal.)

Most American magazines and books are available, but usually at slightly higher prices. *Maclean's*, a biweekly, is the only national Canadian news magazine. *Reader's Digest* publishes a Canadian edition.

Health

Medical care in Canada is excellent. Competent doctors, dentists, and specialists in all fields are available, and most, except in some areas of Quebec, speak English. Canadian medical educational standards are equivalent to those in the U.S., particularly in dentistry and ophthalmology. There is a shortage of trained personnel and facilities in the physical rehabilitation field, although availability of these services has improved in recent years.

Laboratories and hospitals maintain high standards and are well equipped. Professional fees and hospital and prescription drug costs are comparable to those in the U.S. Pharmaceutical facilities are excellent.

There are no special health risks. Standards of community health and sanitation are very good, and no diseases are endemic to large cities; however, several possible health problems should be noted. Winnipeg's climate might affect visitors seriously afflicted with asthma, sinusitis, or Raynaud's disease, a circulatory vascular condition. Hay fever sufferers should remember that Toronto has the highest pollen count of any large North American city. While the hay fever season is short—about six weeks—persons with hay fever experience great dis-

comfort unless they take medication or remain in air-conditioned areas.

Clothing and Services

Americans find that tastes and standards in clothing are basically the same as in the U.S. The climate in winter makes warm clothes essential. For the most part, summers are somewhat cooler in Canada, but hot periods occur, and lightweight clothing is necessary. Wraps are usually needed for evenings, even in summer. Children dress casually, as in the U.S., but those who attend private schools ordinarily wear uniforms.

Ready-made clothes of all kinds are available at every price level. Items manufactured in the U.S. are expensive—often one-third higher than the American retail price.

Practically all services and supplies are available in the cities throughout Canada. The prices are often higher, but the current favorable exchange rate offsets the expense. Domestic help is difficult to find (as in the U.S.), and if the level of competence and experience is favorable, wages also are high. Professional catering and cleaning services are available.

NOTES FOR TRAVELERS

Passage, Customs & Duties

When entering from the United States, U.S. citizens must show either a U.S. passport or proof of U.S. citizenship and photo ID. U.S. citizens entering Canada from a third country must have a valid passport. A visa is not required for U.S. citizens for a stay up to 180 days. Anyone with a criminal record (including a DWI charge) should contact the Canadian Embassy or nearest Canadian consulate before travel. For further information on entry requirements, travelers may contact the Embassy of Canada at

501 Pennsylvania Avenue, N.W., Washington, D.C. 20001, telephone (202) 682-1740, Internet address: <http://www.cdnemb-washdc.org>; or the Canadian consulates in Atlanta, Boston, Buffalo, Chicago, Dallas, Detroit, Los Angeles, Miami, Minneapolis, New York, San Juan or Seattle.

U.S. citizens living in or visiting Canada may register at the Consular Section of the U.S. Embassy or at a U.S. Consulate General in Canada, and may obtain updated information on travel and security within Canada.

The U.S. Embassy is in Ottawa, Ontario, at 490 Sussex Drive, K1N 1G8, telephone (613) 238-5335, fax (613) 688-3082. The Embassy web site is <http://www.usembassy-canada.gov>. The Embassy's consular district includes Baffin Island, the following counties in eastern Ontario: Lanark, Leeds, Prescott, Renfrew, Russell and Stormont; and the following counties in western Quebec: Gatineau, Hull, Labelle, Papineau, Pontiac and Tamiscamingue.

U.S. Consulates General are located at:

Calgary, Alberta, at Suite 1050, 615 Macleod Trail SE, telephone (403) 266-8962; emergency-after hours (403) 228-8900; fax (403) 264-6630. The consular district includes Alberta, Manitoba, Saskatchewan, and the Northwest Territories, excluding Nunavut.

Halifax, Nova Scotia, at Suite 904, Purdy's Tower II, 1969 Upper Water Street, Halifax, Nova Scotia B3J 3R7, telephone (902) 429-2480; emergency-after hours (902) 429-2485; fax (902) 423-6861. The consular district includes New Brunswick, Newfoundland, Nova Scotia, Prince Edward Island and the islands of Saint Pierre and Miquelon.

Montreal, Quebec, at 1155 St. Alexander Street, telephone (514) 398-9695; emergency-after hours (514) 981-5059; fax (514) 398-0702. The

consular district includes south-western Quebec with the exception of the six counties served by the U.S. Embassy in Ottawa.

Quebec City, Quebec, at 2 Place Terrasse Dufferin, telephone (418) 692-2095; emergency-after hours (418) 692-2096; fax (418) 692-4640. The consular district includes the counties of Abitibi-West, Abitibi-East, St. Maurice, Trois-Rivieres, Nicolet, Wolfe, Frontenac and all other counties to the north or east within the province of Quebec. The new arctic territory of Nunavut is also in this district.

Toronto, Ontario, at 360 University Avenue, telephone (416) 595-1700; emergency-after hours (416) 201-4100; fax (416) 595-5466. The consular district includes the province of Ontario except the six counties served by the U.S. Embassy in Ottawa.

Vancouver, British Columbia, at 1095 West Pender Street, telephone (604) 685-4311; fax (604) 685-7175. The consular district includes British Columbia and the Yukon Territory.

Pets

Dogs and cats imported from the U.S. must be accompanied by a veterinarian's certificate showing that the dog or cat has been vaccinated against rabies during the three years preceding entry. From countries recognized by Canada to be free of rabies, a certificate issued by a veterinarian of the National Veterinary Service of the country of origin is required, certifying that the animal has been in that country for a continuous six-month period preceding shipment. From all other countries, a certificate issued by a veterinarian of the National Veterinary Service should certify that the animal was vaccinated against rabies not less than 30 days nor more than one year preceding shipment. Dogs and cats from countries other than the U.S. arriving without a certificate will be placed in quarantine for a 30-day period and vaccinated for rabies.

Firearms & Ammunition

Firearms are strictly controlled. As of January 1, 2001, visitors bringing firearms into Canada, or planning to borrow and use firearms while in Canada, are required to declare the firearms in writing using a Non-Resident Firearm Declaration form. Multiple firearms can be declared on the same form. At the border, three copies of the unsigned declaration must be presented to a Canadian Customs officer. The declaration will serve as a temporary license and registration certificate for up to 60 days. The Non-Resident Firearm Declaration costs \$50 (Canadian). Visitors planning to borrow a firearm in Canada must obtain in advance a Temporary Firearms Borrowing License, which costs \$30 (Canadian). The form must be signed before a Canadian Customs officer and the fee paid at the border. In order to save time at the border, Canadian authorities recommend that visitors complete the declaration form, but not sign it, and make two copies of the completed form before arriving at the port-of-entry. Requests made at the border for photocopies of the form may be denied. Full details on this new policy are available at the Canadian Firearms Centre web site, <http://www.cfc-ccaf.gc.ca>, under the heading "Visitors to Canada." The Non-Resident Firearm Declaration and the Temporary Firearms Borrowing License applications may also be obtained from this web site.

Canada has three classes of firearms: non-restricted, restricted, and prohibited. Non-restricted firearms include most ordinary hunting rifles and shotguns. These may be brought temporarily into Canada for sporting or hunting use during hunting season, for use in competitions, for in-transit movement through Canada, or for personal protection against wildlife in remote areas of Canada. Anyone wishing to bring hunting rifles into Canada must be at least 18 years old, and the firearm must be properly stored for transport. Restricted firearms are primarily handguns; however, pepper spray and mace are also

included in this category. A restricted firearm may be brought into Canada, but an Authorization to Transport permit must be obtained in advance from a Provincial or Territorial Chief Firearms Officer. Prohibited firearms include fully automatic, converted automatics, and assault-type weapons. Prohibited firearms are not allowed into Canada.

In advance of any travel, please contact a Canadian embassy or consulate, or the Canadian Firearms Centre (<http://www.cfc-ccaf.gc.ca>) for detailed information and instructions on temporarily importing firearms. In all cases, travelers must declare to Canadian Customs authorities any firearms and weapons in their possession when entering Canada. If a traveler is denied permission to bring in the firearm, there are often facilities near border crossings where firearms may be stored, pending the traveler's return to the United States. Canadian law requires that officials confiscate firearms and weapons from those crossing the border who deny having them in their possession. Confiscated firearms and weapons are never returned.

Currency, Banking, and Weights and Measures

Canada covers seven time zones. The time in Newfoundland is Greenwich Mean Time (GMT) minus three-and-a-half. The time in Halifax is GMT minus four. The time in Ottawa, Toronto, Montreal, Quebec City, Hamilton, London, and Windsor is GMT minus five (Eastern Time in the U.S.). The time in Winnipeg and Regina is GMT minus six (Central Time in the U.S.). The time in Calgary and Edmonton is GMT minus seven (Mountain Time in the U.S.). The time in Vancouver is GMT minus eight (Pacific Time in the U.S.).

The unit of currency is the Canadian dollar, divided into half-dollar, quarter, dime, nickel, and penny coins, all similar in size and shape to U.S. currency. Canadian and U.S. dollars are fully convertible at

banks. The conversion rate fluctuates.

Canada officially adopted the metric system in September 1977. Most road signs are now showing distances in kilometers and speed limits in kilometers/hour. Containers show contents and weights in both pounds and ounces, quarts and kilograms, and grams and liters.

LOCAL HOLIDAYS

Santiago, Chile

CHILE

Republic of Chile

Major Cities:

Santiago, Viña del Mar, Valparaíso, Concepción, Antofagasta

Other Cities:

Arica, Chillán, Chuquicamata, Iquique, La Serena, Puerto Montt, Punta Arenas, Talca, Talcahuano, Temuco, Valdivia

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated July 1996. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

CHILE can accurately be described as a land of variety and geographic delight. The northern deserts; the rich fields in the central valley; the labyrinths of channels, inlets, fjords, and peninsulas in the south; and the Andes in the east all provide stark contrasts that give Chile a unique beauty. Its cultural, political, financial, and commercial activities have been influenced by these geographical features. Its history is as varied as its topography, and it is almost as much a "melting pot" as the United States. Although many nationalities have settled here, the population is homogeneous and nationalistic.

Ferdinand Magellan was the first European to behold the coasts of

Chile when, in 1520, he made the crossing from the Atlantic to the Pacific through the strait that now bears his name. An expedition led by Diego de Almagro moved southward from Peru in 1536, but the conquest was halted due to unfavorable weather and hostile Indians. Six years later, the city of Santiago was founded. Historical sources reveal that the name Chile was derived from either the name of a native chieftain, from a river in the area, or from the sound of an indigenous bird.

MAJOR CITIES

Santiago

Founded in 1541 by Pedro de Valdivia, greater Santiago today is a modern city of 5,261,000 inhabitants. It is the cultural, political, financial, and commercial center of Chile. Santiago impresses foreigners as being more European than most Latin American cities—a reflection of its population characteristics and Chile's historical isolation from its neighbors. The city's high level of sophistication is apparent in the educated, neatly dressed populace, the posh shopping malls, and the efficient transportation system.

The city lies at the eastern edge of the fertile central valley, and some of its residential areas reach into the Andean foothills. The Andean peaks, which are snow-covered much of the year, are visible from the city's center on a clear day. Situated roughly 70 miles from the Pacific ocean, Santiago is at an altitude of about 1,700 feet.

Chile's standard of living, which ranks high in Latin America, is highest in Santiago, where most of the country's wealth and 40% of its population are concentrated. There is a small but active American community. Chile's other large population centers—Valparaiso, Concepcion, Temuco, and Antofagasta—have distinct personalities but are more provincial. Valparaiso has a long history as a vital and colorful seaport.

Food

Americans are usually delighted with Santiago's modern supermarkets which offer most of the variety of major US grocery chains. The colorful array of high quality fresh fruits and vegetables is one of the many attractions of Chile. However, they must be cleaned and soaked in a special disinfectant before being eaten. Winter produce is more limited but selection is still good. Fish and seafood from the vast Chilean coastline include many interesting,

little-known varieties which Americans have come to enjoy.

Milk products manufactured in Santiago are good quality. The pasteurized milk in supermarkets comes in three varieties: natural whole milk, reconstituted, and low in butterfat. Condensed, evaporated, long life, and powdered milk are also sold. A variety of local cheeses are available, in addition to many kinds of imported cheeses. Other local dairy products include yogurt, margarine, butter, sour cream, cream cheese, cottage cheese, ricotta, and ice cream.

Local brands of cereal, cake mixes, snack foods, canned and frozen fruits and vegetables, and acceptable baby formula and strained foods are available, as well as the complete range of staples, such as flour, sugar, oils, vinegar, etc. Most locally produced food items in Chile are currently less expensive than in the U.S.

Chile is famous for its fine selection of excellent wines, which are inexpensive. Beer and soft drinks (including diet varieties) are also good quality.

Clothing

Located in the temperate zone, Santiago has four seasons. Clothing needs for this climate are the same as for the Bay area south of San Francisco. Winter is long but generally mild. June through September rainfall may be heavy but almost never freezes. During these months some poorly heated homes become damp and chilly, requiring warmer indoor clothing. Lightweight thermal underwear is useful. Bring raincoats, umbrellas, and boots.

Spring and autumn are sunny and mild with some rain. However, almost no rain falls during Santiago's warm, sunny and dry summer (December through March). Houses usually remain cool and pleasant.

The temperature drops at sundown, and cool summer evenings require a light wrap.

Chileans dress stylishly and shop windows display fashionable, well-made clothes. However, large sizes are difficult to find, and extra-long men's clothing is unavailable. Hand knit wool and cotton sweaters are a good buy here, as are leather goods. Chile manufactures lovely leather shoes, but, compared with US-manufactured footwear, the choice of lasts is smaller and most ready made shoes come only one width for each size. Long and narrow widths are available in only 2 or 3 stores. Locally made clothing is of good quality and reasonably priced, imported brands are more expensive.

Quality and workmanship among Santiago's seamstresses and tailors vary. Good men's suits can be made from the woolens, cottons, and synthetics locally available; a wider variety of material is available for women's wear. Dry-cleaning service is good.

Men: Men wear business suits for office and social functions. A dark suit is appropriate for almost all evening occasions. For year-round wear medium-weight wool blend suits are most practical, though some men prefer a heavier fabric for winter and wash-and-wear suits for summer. A raincoat is necessary, preferably washable with zip lining. A top coat may be useful; hats are a matter of personal preference.

Chile's four seasons require a variety of sportswear. Flannel or wool shirts are comfortable for winter. Attractive wool and synthetic knit shirts and sweaters are available usually for less than one would pay in the U.S. Slacks, shorts, and swim trunks are also available but styles and colors may be limited, and cuts may not fit everybody. Cotton knit underwear and socks are available.

Women: Chilean women tend to dress more formally than American women—even in the grocery store. They wear the latest European fashions in clothes, both in style and fabrics. A basic wardrobe of multi-purpose clothing is more practical than many clothes of limited use.

Suits, wool dresses, knits, and two and three-piece combinations of wool and wool synthetic blends are popular for office, street or daytime functions from April through October. Some houses may be damp and chilly during this period, so warm clothing is needed. Skirts, blouses, and sweaters often are worn for office and informal meetings as well as at home. Slacks are acceptable at the office, jeans are worn on the weekends and for very casual occasions. (Here again, for Chileans, they are usually "designer" styles.) The widely varying temperatures during a 24-hour period often make the "layered look" the most practical.

In the summer (and occasionally in spring and autumn) women wear cotton, linen, and synthetic fabrics. Cool evenings usually require a light wrap. Stoles and blazers, as well as sweaters or sweater-coats, are useful.

Children: Generally children's clothes are attractive and inexpensive here. Medium weight ski jackets are used a great deal. Boots are recommended. Sweaters that are easily washed, warm gloves, and light or medium-weight cotton thermal or knit long-sleeved pajamas are essential. Snowsuits are useful for winter trips to the ski resorts.

Satisfactory cotton knit and synthetic shorts and shirts are available for summer but may require special care compared with similar U.S. garments. This is also true of some of the highly styled children's clothes.

Most people buy their children's shoes locally. Leather shoes are generally well made and inexpensive. Sneakers such as Nike, Puma, and Diadora are sold in most stores and are expensive, but local brands are very reasonable.

School uniforms are required in Chile with the exception of nursery schools. However, the Nido de Aguilas School only requires uniforms through fifth grade. Some other schools where American students go do not require uniforms. No school

Susan Rock. Reproduced by permission.

La Moneda, changing of the guard, Santiago, Chile

uniforms should be purchased until you know in which school your children will be enrolled. Younger children sometimes wear coveralls or smocks over their uniforms—these may be purchased locally.

Boys' uniforms for those schools that require them usually consist of medium to dark gray trousers, white or light blue shirts, tie, and navy blue jackets with navy socks and black shoes. In winter boys may wear navy blue pea-jackets or ski jackets. Girls wear navy blue jumpers that must be purchased or made here in a specified style. Private schools for both girls and boys have different type of uniforms.

Teens in secondary grades at Nido de Aquiles wear the same clothing popular in a typical US high school, i.e., jeans, T-shirts, tennis shoes. Stylish teen apparel for boys and girls is sold in all the shopping areas.

Supplies and Services

Some well-known brands of American and international toiletries are available on the market but, if not made locally, may prove to be expensive. On the other hand, certain brands of face soaps and shampoos such as Camay and Silkience are manufactured here and are inexpensive.

Tailors and dressmakers charge less compared to the U.S. Laundry service, dry-cleaning, and shoe repair are good quality and also less expensive.

Service at beauty salons, which includes care of wigs, is good and comparable to U.S. The same is true of barber shops.

Simple car repairs and services are readily obtained for American (especially GMC) and foreign cars.

Auto rental rates locally are expensive, \$60 and up per day.

Religious Activities

Chile is predominantly Roman Catholic, though Spanish-speaking Protestant congregations are also numerous. For the English-speaking community, the Santiago Community Church offers English language Protestant services, and the Holy Cross Order at St. George's School provides a Roman Catholic Mass in English during the Chilean school year. Other faiths represented in the city are Christian Science, Mormon, Baptist, Jewish, Greek Orthodox, and Seventh-Day Adventist.

The Santiago Community Church holds Sunday school for children. Through the International Preparatory School, Nido de Aguilas, and

other schools, Roman Catholic religious instruction is available. There is a Jewish day school. The Estadio Israelita (community center) offers religious instruction (in Spanish on Friday afternoons for children who do not attend the day school.

Education

Chile's established public school system is supplemented by numerous private schools for students in nursery through high school. The school year extends from March to mid-December with a vacation of two weeks in July and one week in September. All schools in Chile (public and private) schools require uniforms (see Clothing.)

Most American children attend Nido de Aguilas International School, (Casilla 16.211, Santiago 9), a coeducational, non-sectarian, N-12 school for students from Chile, the US, and numerous other countries. At Nido instruction is in English, and the curriculum, textbooks, and methods are US-based. The school is accredited by the U.S. Southern Association of Colleges and Schools. The student-teacher ratio is 20 to 1. Currently there are 750 students at Nido. The Headmaster is an American, as are approximately one-third of the teachers.

The elementary grades offer an individually guided program based on language arts, social studies, math, science, music, and art. The secondary school prepares students to meet the admission requirements of both US and Latin American universities.

Electives and special tutorial courses help to accommodate the varied educational backgrounds and needs of all international students. The International Baccalaureate (IB) program for grades 11 and 12 offers advanced level instruction in English, Math, Science, and Social Studies which can provide advanced placement in college.

College and career counseling for Chilean, American, and other international students is a regular part

of the program. The standardized testing program to measure achievement annually includes the Iowa Test of Basic Skills for grades 2,4,6, and 8; the preliminary Scholastic Aptitude Test (PSAT) for grades 10 and 11; and the College Board Scholastic Aptitude Test; and National Merit Scholarship Test. The high school is a member of the National Honor Society. Junior and senior high school students can participate in Nido's active sports program and numerous extracurricular activities. The music program includes three bands, an orchestra, and a chorus. Nido's school calendar begins in early August and runs through the following June with a long break mid-December through February.

Several other schools offer an opportunity to study in English. Some of the schools that American children presently attend are: Santiago College (Pk-12), a bilingual school with courses taught in English at the elementary level and primarily in Spanish in grades 9-12; the International Preparatory School (Pk-12), a small British school; and the Santiago Christian Academy (K-12), a small Baptist missionary school with an American curriculum that follows the U.S. school calendar, but is not accredited by the Chilean Ministry of Education or the US Southern Association of Colleges and Schools.

Special Educational Opportunities

Spanish language training courses for adults are available through private tutors. The Chilean-North American Institute provides special study opportunities and many cultural activities, such as lectures on Chilean history and culture and exhibits on Chilean art, as well as Spanish and English language training. The Institute's library features facilities in both English and Spanish.

Courses in painting, judo, ceramics, ballet, guitar, folk singing and dancing, and other cultural subjects are offered at various institutes around Santiago. There are good profes-

sional schools in classical dance and a respected music conservatory with excellent instruction. Fees vary but compare favorably with stateside prices. French language courses are available at the Alliance Francaise and the French Bi-national Institute; German is taught at the Goethe Institute.

Admission to Santiago universities can usually be arranged for those fluent in Spanish and with adequate academic credentials. However, US colleges and universities do not always recognize credits from local universities. Several institutes offer computer training.

Sports

Chile has such a wide variety of tourist and sports activities throughout the year, that avid sports enthusiasts are hard-pressed to find the time to take advantage of all the opportunities. Even confirmed couch potatoes find themselves getting involved.

Tennis is played year round in private clubs or on the excellent public courts which provide ball boys and instruction for very modest fees. Most courts are clay, and players should bring balls from the States as they are expensive here. Both private and public squash courts are also available. Racquetball is a relatively new addition to the sports scene, but there are a few courts.

Homes with swimming pools are common in Santiago, but serious swimmers might prefer to join a private club with a larger pool. Also Sauna Mundt Spa located uptown offers an excellent indoor swimming pool. The city also has several public swimming facilities.

Golf is a favorite pastime in Chile, and the courses are lovely. Although all the golf clubs in Santiago are private, there are some public greens in the resort areas along the coast. Private country clubs range in price from prohibitively expensive (Club de Golf Los Leones) to fairly reasonable (Club de Golf Lomas de La Dehesa). Some of the more exclusive clubs have long waiting lists or are no longer accepting new member-

ships. For non-golfers, a sports club such as Stade Francais, which offers tennis, squash, swimming, and a restaurant may be more appealing and much less expensive. Gyms with weight machines and supervised exercise programs welcome memberships for a fraction of US prices.

Many water sports are popular throughout Chile. The lakes in the central valley and the south attract boaters and water skiers. In some of the coastal cities, motor and sailboats are available for rent.

White water rafting trips for beginners and experts can be arranged on certain rivers. Scuba diving requires a wet suit due to the cold ocean water.

Chile offers superb trout fishing from October through mid-April in the south-central part of the country and some mountain lakes.

However, the nearest fresh water fishing spots are over four hours away by car, and ideal trout and salmon fishing streams are a day away by car, bus, or train or about 3 hours by plane from Santiago. Deep sea fishing (broadbill, swordfish, and marlin) and surf casting are also available but less popular. Heavy tackle (20-25 pounds) is recommended; bring it with you. Hunting is popular, but Chile has no large game. Rifles may only be used in the extreme southern part of Chile. Most hunters use 12-gauge shotguns with No. 8 shot. Partridge, quail, doves, ducks, and rabbits are hunted throughout Chile, but very little game is found within a few hours drive of Santiago.

Horseback riding is a year-round activity in Santiago, where several academies and riding clubs rent horses and provide instruction. Riding trips of a few hours up to a week can be arranged, and during the summer there are children's camps that specialize in horseback-riding. There is also a polo club.

The mountains visible from Santiago offer a challenge to the day hiker as well as the experienced

mountaineer. At 8700 feet, Provincia can be scaled in a day, while the Cajon de Maipo, southeast of Santiago, is a mountain climber's paradise, with peaks reaching over 20,000 feet. There are hiking and climbing clubs in Santiago, catering to the needs of beginners and experts alike. Experienced guides are available for the most challenging climbs.

Skiing ranks as the outstanding winter sports attraction in Chile, where some of the finest skiing centers in the hemisphere are located. The skiing season extends from June to October (and occasionally through November). The most popular ski areas—Portillo, 3 hours away from Santiago, (site of international championship competitions located on the international highway to Mendoza, Argentina); and Farelones, Colorado, Valle Nevado, La Parva, one hour away from Santiago (weather permitting)—offer slopes for every skill level. Hotel rooms are expensive and reservations for July and August must be made several months in advance. The slopes are never as crowded as are many in the United States.

Spectator sports include soccer, horse-racing, and rodeos. Team sports for youngsters are offered at Nido de Aguilas (which has good facilities) and some other schools, as well as some of the private clubs. There is a local softball league which welcomes players and fans alike.

Shoes, clothing, and equipment for nearly every sport areas available in Santiago. Prices and quality vary. For instance, European imported skis are expensive, but are comparable to U.S. prices, while good fishing gear is very expensive. Golf equipment is very high while a top quality tennis racket may be slightly less than in the States.

Touring and Outdoor Activities:

Pleasant day trips are possible outside the city. In the winter one can decide between an active day on the ski slopes or a leisurely lunch by the

sea as a Sunday excursion. Beautiful beaches are located within a 2-4 hour drive from Santiago. Some, however, are dangerous because of strong undertows and lack of lifeguards. The cold water makes swimming unattractive even in the summer. Hotel accommodations are adequate, but make reservations for the summer months well in advance.

Chile's largest summer resort, Viña del Mar, offers excellent hotels, a municipal gambling casino, night-clubs, golf and tennis facilities, a racetrack, and public beaches. Other fine beaches, located both south and north of Viña, often lack the accommodations and facilities of the more popular resorts, but are far less crowded. Most Chilean hotels are currently comparable to United States hotels cost wise.

Other attractive summer resorts are found in the lake region, about 500 miles south of Santiago. Known as the "Switzerland of South America," this area offers excellent trout fishing and some of the most magnificent scenery on the continent. Limited hotels require advance reservations during January and February.

The long list of summer touring activities includes: boat trips through the channels and fjords from Puerto Montt to Punta Arenas on the Straits of Magellan at the tip of the continent; the excursion to the Juan Fernandez Islands, 400 miles off the coast at Valparaíso; a visit to wilderness preserves such as the Torres del Paine Park near Punta Arenas; or a trip to Easter Island in the South Pacific.

In Chile's extreme north (1,300 miles from Santiago, two hours and 40 minutes by jet), Arica features year round spring weather, making it a popular spot in winter. It is also the base for excursions to the high Andean plateau and Lauca National Park, with vicuñas, flamingos and other Andean wildlife. All the major Northern seacoast cities—La Serena, Antofagasta, Iquique, and Arica—have a mild cli-

mate, sandy beaches, and sunshine most of the Year.

Opportunities for mountain climbing, hiking, and camping abound.

Camping facilities vary widely, but most provide baths and hot showers. Campsites are crowded during January and February, but usually are empty the rest of the summer. Camping equipment and supplies are readily available, but are usually less expensive if purchased in the U.S.

Note that tours to out of the way areas involving boats or air travel can be very expensive. In addition, the Pan-American Highway is mostly two lane and heavily traveled, making trips by car long and arduous.

Santiago is rather isolated from its neighbors. Lima is three and a quarter hours away by jet; however, Peru's prime attractions, the Incan cities of Cuzco and Machu Picchu, Buenos Aires (700 miles from Santiago), Montevideo, and Brazil are other favorite tourist destinations. Mendoza, Argentina is only 40 minutes away by jet or four to five hours by car; however, in winter the pass is often closed by snow.

Entertainment

In Santiago, the lovely Teatro Municipal is the center of an opera season, two ballet seasons, and two symphony orchestras that offer weekly concerts during the winter. Chamber music and choral groups perform frequently. Inexpensive businessmen's concerts are held weekly during the season at lunch time with sandwiches and beverages available in the theater lobby. Relatively economical season tickets are available.

Theater plays an active role in Santiago's cultural life. Several theaters present a variety of dramatic and satirical plays in Spanish throughout the year. The English-language amateur theater group, Santiago Stage, produces shows and is always delighted to have newcomers join.

The numerous movie theaters in the city and suburbs are good and inexpensive. All films are subject to censorship, with enforced minimum age limits set for each. Foreign films, which include many American films, are shown in their original language with Spanish subtitles.

Santiago has a few good nightclubs and discotheques. In general, Chileans prefer entertaining in their own homes, although young, unmarried adults frequently patronize clubs. Teenagers are generally pleased with the nightlife here. Several discos cater to their age group, and young people usually go with a group of friends. Unfortunately (for parents, at least) Chileans keep much later hours, and discos and private parties often begin between 11:00 pm and midnight, making typical US curfews difficult to enforce.

Plenty of average-to-very-good restaurants are available in Santiago. Service starts at about 2000 hours and is usually very good. Excellent inexpensive Chilean wines provide an elegant accompaniment to any meal.

Social Activities

Membership in the American Association of Chile is open to all Americans in Chile. Monthly meetings, usually a lunch or tea, provide a good opportunity to meet other Americans from the private sector. The Association sponsors a variety of activities, such as tennis, golf, bowling, bridge, library, quilting, and sewing groups, and several charitable activities.

The Rotary and the Lions Club have several local chapters. The US Chamber of Commerce has an affiliate in Santiago. Both the YWCA and the YMCA offer facilities for sports and cultural programs in the downtown area.

Special Information

Central Chile is one of the most seismically active places on earth, and destructive earthquakes have

struck the country periodically throughout its history.

Residents of Santiago will frequently feel tremors which seldom result in damage.

Viña del Mar

Viña del Mar, a popular tourist spot near the Pacific Ocean, is Chile's second largest city. Located six miles east of Valparaíso, Viña del Mar has a population of close to 302,800. It is the country's largest summer resort, and also manufactures textiles, paint, glass, soaps, chemicals, and beverages. The area has first-class hotels, a municipal gambling casino and nightclub, golf and tennis facilities, a racetrack, beautiful parks and gardens, and public beaches. Other fine beaches may be found both south and north of Viña. These often lack the accommodations and facilities of the more popular resorts, but they are far less crowded.

Education

Mackay School, in Viña del Mar, is a boys' day school for kindergarten through grade 12. Founded in 1857 and governed by an elected board of governors, its admission requirements include tests and an interview.

The curriculum is Chilean-based, with English, French, and Spanish offered as foreign languages. Other elective classes are art, band, computer science, physical education, and vocational courses. Extracurricular activities include computer, drama, gymnastics/dance, guitar, literary magazine, newspaper, and rugby, soccer, and swimming. There are also special programs for children with learning disabilities.

The school year runs from March through December, with vacations in July and September. Enrollment is currently 651; there are 15 full-time and 50 part-time teachers. The staff also includes a math specialist, a counselor, and a nurse.

Mackay School is located in a coastal village about seven miles

north of Viña del Mar. Facilities include language, computer, and science labs; a video studio; audiovisual room; library; cafeteria; and sports fields. The mailing address is Casilla 558, Viña del Mar, Chile.

Valparaíso

Valparaíso is the third largest city in Chile and the country's chief port. It is located 60 miles northeast of Santiago on the Pacific Ocean. Founded in 1536 by the Spanish conqueror Juan de Saavedra, the city was not permanently established until Pedro de Valdivia's arrival eight years later. The early history of Valparaíso was scattered with raids by English and Dutch pirates; it was bombarded by the Spanish fleet in 1866. Unimportant during colonial times, Valparaíso grew after the last severe earthquakes in 1907 and 1971.

Valparaíso is situated on a narrow waterfront terrace. Steep hills rise to give the city the effect of an amphitheater, with the wharves and business section below and the residential areas above. A cable railway is used to ascend some of the steeper areas. The city faces a wide bay and is partially protected by the breakwaters. The climate is generally mild, although severe winds do occur during the winter months.

As the principal port in Chile, Valparaíso has extensive modern dock facilities and handles the bulk of the country's imports. It manufactures chemicals, textiles, paint, leather goods, clothing, metal products, vegetable oils, and sugar.

Thousands of tourists annually visit Valparaíso, whose resident population is about 276,800. Visitors are attracted to the city's parks, theaters, cafes, colonial buildings, and museums.

Concepción

Concepción, 275 miles southwest of Santiago near the mouth of the Bío-Bío River, is one of Chile's commercial and industrial centers. It was founded in 1550 by Pedro de

Susan Rock. Reproduced by permission.

Lower city along the bay, Valparaíso, Chile

Valdivia about six miles from its present site. Throughout its history, Concepción has been completely destroyed by earthquakes five times. It was further damaged in 1960 by an earthquake, and it is the numerous restorations that have given the city its modern look.

Concepción produces glass, steel, textiles, sugar, and hides. Woodworking, food processing, glassmaking, and brewing are also important industries. Its port, Talcahuano, located just north of Concepción on the Pacific Ocean, ships products produced in the rich agricultural region to the east. Concepción has an estimated population of about 33,000 (2000).

Education

St. John's School, in Concepción, is a coeducational, proprietary school for pre-kindergarten through grade 12. Founded in 1942 and governed by an elected board, admission requirements include an application, past school records, tests, and an interview.

The curriculum is Chilean-based. French is offered as a foreign language, along with the following elective classes: art, chorus, computer science, and physical education. Extracurricular activities include ceramics, chess club, computers,

drama, yearbook, literary magazine, gymnastics/dance, guitar, and basketball, football, volleyball, hockey, and rugby.

The school year runs from the middle of March through December, with vacations in July and September. Enrollment in 1991-92 was 1,026; enrollment capacity is 1,260. There were 52 full-time and 20 part-time teachers. The staff also includes a counselor and a nurse.

St. John's School is located in a residential area of Concepción. Facilities include 45 classrooms, cafeteria, infirmary, a gymnasium, playing fields, and a 9,000-volume library; there are also science labs, computer labs, and a stadium nearby. The mailing address is Casilla 284, Concepción, Chile.

Antofagasta

Antofagasta, located 700 miles northwest of Santiago, is a port on the Pacific Ocean. It was founded in 1870 in Bolivian territory by Chileans wanting to exploit nitrates in the Desert of Atacama. This action, along with the city's occupation by Chilean troops, resulted in the War of the Pacific in 1879 with Bolivia. As a result of the Treaty of Valparaíso following the war, the area was ceded to Chile in 1884.

The economy of Antofagasta depends greatly on nitrates and copper exports, and the city is affected by fluctuations of these products in world markets. The city's industries include large foundries and oil refineries, food and beverage processing, and fish-meal production; it is also an international commercial center.

Antofagasta is surrounded by desert hills and has a pleasant, dry climate. Rainfall is scarce and necessitates the piping in of water from the San Pedro River, 280 miles away. The population was approximately 226,800 in 2000.

OTHER CITIES

ARICA, with a population that exceeds 180,000, is located in northern Chile, just south of the Peruvian border. Arica is situated on the Pacific Ocean at the northern limit of the Desert of Atacama. The city was originally part of Peru, but was occupied by Chile in 1880. Following the War of the Pacific, Arica was ceded to Chile, along with Tacna, through the Treaty of Ancon in 1883. After the Tacna-Arica Controversy was resolved in 1929, Chile retained jurisdiction over the city, but agreed to provide complete port facilities to Peru. Arica is currently a free zone, with both Chile and Peru maintaining customs facilities here. Access to the sea through Arica was also granted to Bolivia in 1920 via the Arica-La Paz Railroad. Today, Arica is a resort, and its port ships mineral exports—mostly copper, tin, and sulfur—for both Chile and Peru. Two major industries, automobile assembly and fish-meal processing, are located in Arica. The city is a major transportation center. It has an international airport, seaport, and railway links with neighboring Bolivia and Peru. With year-round spring weather, the city is popular during the winter months.

CHILLÁN, located in central Chile, is the birthplace of one of the nation's fathers of independence,

Bernardo O'Higgins. Chillán has had two severe earthquakes (1833 and 1939) since its founding in 1580. The city uses the raw materials (fruits, grains) from its rich farmland to produce wine and flour. Industries located in Chillán include shoe factories, flour mills, and lumberyards. Skiing is popular in the foothills of the nearby Andes. The resident population is approximately 163,000.

CHUQUICAMATA, about 125 miles northeast of Antofagasta, at an elevation of 10,435 feet, is located on the western slopes of the Andes. Chuquicamata is a mining town and has the world's largest copper-mining center. The open-pit copper mine, which dates to 1915, produces almost all of Chile's copper. Copper from this mine is transported south to Antofagasta for export. The population today is over 30,000.

IQUIQUE, a port on the Pacific, is located in northern Chile between Arica and Antofagasta, just 130 miles south of the Peruvian border. The city was founded in the 16th century and became part of Chile during the War of the Pacific in 1879. Rock and sand surround Iquique on the east; the city has fine beaches, a mild climate, and year-round sunshine. Water must be piped to Iquique from 60 miles away, as the area receives little rainfall. As a port, Iquique exports iodine and nitrates from the Atacama Desert. The city is an excellent place for deep-sea fishing. Tourism, based on sport fishing and beach facilities, also contributes to the economy. Fruits, sugarcane, and olives are grown near the city and exported through Iquique's port. The current population is about 160,000.

LA SERENA, 250 miles northwest of Santiago, is a popular beach resort noted for its cathedral and its gardens. With a population of close to 124,000, La Serena is situated on the Elqui River in a commercial and agricultural region known for vineyards and orchards. The city was founded in 1543 and was the site of

Chile's Declaration of Independence on February 12, 1818. La Serena has been damaged many times by earthquakes, but still retains its old world charm. La Serena is a popular tourist resort. The city has a mild climate and sunshine most of the year.

PUERTO MONTT is a port on the Gulf of Ancud, an inlet of the Pacific Ocean. With a population of just over 130,000, Puerto Montt is located 600 miles south of Santiago. Named for former Chilean president Manuel Montt, Puerto Montt was founded in 1853, and is an important area for fishing and sheep farming. The city's industries include fish canning, tanning, and sawmilling. Agricultural products, including potatoes and various grains, are grown near the city. The city is the southern terminus for the country's railroads and the starting point for navigation in the inland waterways and islands to the south. Puerto Montt is a popular resort with beautiful scenery—lakes, narrow fjords, forested hills, and peaks. During the summer, boat trips may be taken from Puerto Montt to Punta Arenas. There is an American School here; it is described in the Education section under Santiago.

PUNTA ARENAS, with a population of 120,000, is located in Tierra del Fuego. Sometimes called Magallanes, it is one of the world's two largest southernmost cities (Ushuaia, Argentina is further south), and the only one situated on the Strait of Magellan. Punta Arenas was founded in 1849 in order to secure Chile's claim to the strait, and was a busy coaling station until the Panama Canal was constructed. Today Punta Arenas is an important center for exporting Patagonian wool and mutton; naval and military facilities are also present in the area. Lumber and petroleum are exported through the city's port. Despite a long rainy season, Punta Arenas is a popular tourist resort and has one of South America's finest museums.

TALCA is about 150 miles south of Santiago near the Pacific Ocean. It is located in Chile's wine-producing region. Talca's industries include paper and flour mills, shoe factories, foundries, tanneries, and distilleries. The city was devastated by two earthquakes, in 1742 and 1928. Rebuilt in 1928, Talca now has a modern atmosphere with pleasant parks and avenues. The city is accessible by railroads and the Pan-American Highway. The population is estimated at 175,000.

TALCAHUANO is located on a small peninsula extending into the Pacific Ocean. It is in the State of Bío-Bío, approximately 50 miles north of Concepción. Talcahuano is an important manufacturing, and commercial center. Several industries are located here, among them flour milling, fish canning, and petroleum refining. Many products, such as hides, wool, fur, coal, and lumber are exported from Talcahuano's port. A large steel plant is located in nearby Huachipato. A Peruvian warship captured by Chile during the war of the Pacific is on display in Talcahuano's harbor. The city has a natural harbor that is considered the best in Chile. A leading commercial port, Talcahuano is also home of the country's naval base. The city suffered two earthquakes (1730 and 1960s). Its population today is about 270,000.

TEMUCO is 400 miles south of Santiago, on the Cautin River in central Chile. After its founding in 1881, other points to the south of Temuco began to be settled. The region was occupied by the Araucanian Indians, who are still an important part of life here. Temuco is a commercial city trading in livestock and agriculture produced in the region; grains, fruit, and timber are among the products traded and processed. Of interest in the city is an Araucanian museum. Temuco has a military air base, a cathedral, and several missionary schools. The city is accessible via railroads and the Pan-American Highway. The population was over 253,000 in 1997.

VALDIVIA is located in southern Chile, about 250 miles from Santiago. The city was founded as a fortress against the Araucanian Indians in 1552. When German immigrants arrived in the mid-19th century, the city began to grow with the introduction of its first two industries—beer and shoes. Other industries include lumber, metal goods, boats, and foodstuffs. Valdivia was mostly destroyed by an earthquake in 1960, but has been extensively reconstructed. Today, it has a population of about 122,000, and is a tourist center in the lake region.

COUNTRY PROFILE

Geography and Climate

Chile is a narrow ribbon of land stretching almost 2,700 miles along the west coast of South America. Although it is one of the world's longest countries, its average width measures only 100 miles, and its maximum width, only 250 miles.

Santiago, Chile's capital and largest city, is almost directly south of Hartford, Connecticut. Valparaíso, the country's chief port, is farther east than New York City.

Wedged between the Andes on the east and the Pacific on the west, Chile is bordered by Peru to the north and Bolivia and Argentina to the east. Larger than any European country, except Russia, Chile covers an area of 292,257 square miles, about the size of California, Oregon, and half of Washington state combined. In the extreme south where the Atlantic and Pacific merge, the land becomes an archipelago with Cape Horn at its tip. Since Chile is south of the equator, the seasons are the reverse of those in the Northern Hemisphere. Santiago is about as far from the equator as are Atlanta and Los Angeles.

The Cordillera of the Andes which extends the length of the land is

Municipal market, Tenuco, Chile

Susan Rock. Reproduced by permission.

Chile's dominant feature. Over 100 volcanoes dot the mountain system, and its relatively recent creation accounts for the country's often damaging earthquakes. This majestic chain has several peaks over 20,000 feet, including Mount Aconcagua (23,000 feet), the highest in the western hemisphere.

Chile has distinct geographic regions which can be roughly divided into four areas: the arid North; the fertile central valley midlands; the forested land and lakes in South-Central Chile; and the archipelagos, fjords, and channels of the far south.

The great northern desert or "Norte Grande" which constitutes one fourth of the country is one of the driest most barren areas on earth. Ironically this desolate, inhospitable land also produces rich mineral deposits such as copper and nitrates which are vital to the country's economy. Separating the northern desert from the central valley is a semiarid stretch of land known as the "Norte Chico" (Little North).

The central valley, where most of the population lives, begins with the Aconcagua River basin north of Santiago and continues on to the Bío-Bío River at Concepción. The nation's major industrial and agri-

cultural production is located in this section.

South-Central Chile below the Bío-Bío River is punctuated with an exquisite string of lakes running on a line from north to south and parallel to the Argentine border all the way from Temuco to Puerto Montt. This is the famous lake district, renowned for its beauty.

The archipelago south of Puerto Montt is usually rainy, with forested fjords and many glaciers and sea channels resembling southernmost Alaska. Still further to the south are the windy steppes and sheep country of Patagonia and Tierra del Fuego.

A number of Pacific islands are a part of Chilean territory. The Juan Fernandez Islands are 400 miles southwest of Valparaíso. The abandoned sailor, Alexander Selkirk, lived on one of these islands for 5 years; his adventures inspired Daniel Defoe's *Robinson Crusoe*. About 2,000 miles west of the continent is the famous Easter Island, or Rapa-Nui (Chilean since 1888), which is inhabited by Polynesians and is distinguished by gigantic stone monuments and carvings unique to the island. Chile also claims a wedge-shaped portion of Antarctica.

Chile's climate is as varied as its geography. In the far north, summers are warm and winters along the coast quite mild. Despite the fact that much of the north lies within the tropics, the cold Humboldt Current off the coast and the relatively short distance between the coast and the snow-covered Andean peaks to the east modify what might otherwise be a tropical climate. Precipitation is scant. In Santiago long, dry summers (December-March) feature warm days and cool evenings with temperatures reaching the low nineties. The June-September winter season is cold and rainy (14 inches of rain per year), with dampness and fog making the cold more penetrating, even though the temperature rarely drops to freezing. The weather in the capital is almost identical to that of Palo Alto and the southern bay region of California. The lake region is colder and wetter with annual rainfall reaching 100 inches. In the far south, the climate is colder still with gale force winds most of the year. Rainfall continues at the rate of 100 inches annually except in Patagonia where it drops to 20 inches a year.

Population

Chile's population is about 15.2 million (2000). Chile is mainly urban (83%), with almost 40% of its people living in the capital and environs. As in other developing countries, the population is youthful. About 30% of the population is under 15 years of age.

Chile is one of the more sparsely populated countries of Latin America (about 50 inhabitants per square mile). Its annual population growth rate is 1.5%. The family is usually a cohesive unit at all levels of society. A large middle class, with a nucleus of professional people, is important in business and government. But Chile also has a large poor class living in "poblaciones" (makeshift communities scattered in suburban areas of the larger cities). The rural population, including the indigenous Araucanian Indians, has a

standard of living generally well below that of the urban population.

The largest ethnic group is Spanish. Other principal groups include German, English, Italian, Yugoslav, and Arab. The population includes a small number of native Indians but almost no Asians or Blacks. The Indians live mainly south of the Bío-Bío River and in the Andean North. The most important group, the Araucanian Indians, has never been fully assimilated into Chilean society.

During the colonial period, European immigration originated almost entirely from Spain; early colonists were mainly Basques and Castilians. A small but influential number of Irish and English immigrants also came to Chile and played important roles in Chilean history. Bernardo O'Higgins, Chile's national hero, was of Irish descent.

After Chile won independence in 1810, many Irish, Scottish, and English immigrated to the new republic. In 1845 an official Chilean colonizing agency was set up in Europe to stimulate immigration, particularly from Germany. A small group of German colonists which arrived in 1850 was the first of a large-scale immigration that continued for 90 years. Most Germans settled in the Valdivia-Llanquihue-Chiloe area in the south, where towns have a decidedly Bavarian ambience. Spanish immigrants continued to arrive in large numbers throughout the 19th century and were joined by Italians, French, Swiss, British, Yugoslavs, and others. The twentieth century brought an influx of Middle-Easterners (principally Palestinians and Lebanese) as well as Europeans. Several thousand displaced persons resettled here after World War II.

Despite the diversity of their origins, few South American populations are more homogeneous than the Chileans. Their homogeneity and insularity are in large part the result of isolating geographic factors: mountains, deserts, a vast ocean, and long distances from outside cultural and political centers.

The Catholic religion predominates and is influential at all levels of society. However, religious freedom and separation of church and state are guaranteed by the Constitution. About 10% of the population is Protestant, and there is a small Jewish community.

Most Chilean holidays commemorate events important in the country's history or celebrate traditional feast days or holy days of the Catholic Church. The Fiestas Patrias, a 2-day celebration commemorating Chilean independence in mid-September, is the main patriotic holiday. The greatest religious festivals occur during Christmas and Holy Week. Some areas celebrate other religious holidays with centuries-old processions and dances.

Typical Chilean cuisine is simple, hearty, and rather blandly spiced. Beef, chicken, and seafood are the most popular main dishes. Cazuela, a stew of chicken, beef, pork, or fish, and the empanada (a pastry turnover filled with meat, fish, spiced onions, cheese, or even edible seaweed and served hot) are specialties.

Wine accompanies most meals. Other typical Chilean drinks include borrego, red wine mixed with sparkling water and fruit; cola de mono, a Christmas drink similar to eggnog; chicha, grape or apple cider; and pisco sour, an indigenous liquor distilled from grapes, mixed with sugar syrup and lemon juice.

Public Institutions

Chile is a unitary republic with a highly centralized administrative structure and a strong executive. The President who serves a six-year term and cannot seek immediate reelection, appoints cabinet ministers and rector of state universities, as well as 13 regional administrators (intendentes), 51 provincial governors and numerous other officials. In December 1993, Eduardo Frei, the candidate for a coalition of center and moderate leftist political parties, was elected President with 58% of the vote. Frei, the son of a

former president, took office in March 1994.

The bicameral Congress is made up of a Senate and a Chamber of Deputies. The Senate has 38 elected seats—two from each of 19 senatorial districts (circumscripciones)—and nine designated seats, which are variously filled by appointees of the Supreme Court, The National Security Council and the President. In addition, ex-presidents who have served six consecutive years also have the option of serving in the Senate for life. Senators are elected or appointed to eight-year terms. Half of the elected seats come up for reelection every four years.

The 120 members of the Chamber of Deputies are all elected, two from each of 60 electoral districts, and serve four year terms. Permanent commissions, roughly equivalent to committees in the U.S. Congress, work out the details of proposed legislation. Since reopening with the return to democracy in 1990, the Congress has been located in the port city of Valparaiso, 115 kilometers (about ½ hours by car northwest of Santiago).

Chile operates under a constitution promulgated during the military government of General Augusto Pinochet (1973–1990). That constitution provides for a democratic system, including an independent judiciary, while containing some limitations on popular sovereignty. It also grants considerable institutional autonomy to the armed services and national police.

Arts, Science, and Education

Santiago has traditionally been one of Latin America's most active centers of the fine and performing arts. Cultural events are generally held from March to November.

The Philharmonic Orchestra of Santiago and the Chilean National Symphony have subscription series, as do the Municipal Ballet and Opera. The National Ballet of the University of Chile also performs

during the cultural season. The hub of ballet and opera activity is Santiago's superb Municipal Theater, which is a magnet for top foreign artists. The Beethoven Society of Santiago, the leading private cultural institution, offers a yearly subscription series featuring internationally recognized musicians during its May to September season.

Frequent concerts and recitals by local artists are held throughout the year. In January there is an international jazz festival in Santiago and in February there are two music festivals which attract international artists as well as local talent. One, held in Viña del Mar, features popular and rock and roll music; while the other, held in Frutillar on Lake Llanquihue, is devoted to classical music and provides a forum for Chile's young musicians. In addition, Santiago has a number of cultural FM radio stations.

Several professional theater companies in Santiago present exceptionally high quality productions by both Chilean and foreign playwrights. "Santiago Stage," the Anglo-American community's amateur theater group, produces plays in English each year. Many American and British films reach Santiago's cinemas only a few months after their release in the United States, and European and Latin American films are also frequently shown. Cinema films are usually shown in the original language with Spanish subtitles, though nearly all non-Spanish television films and other programs are dubbed in Spanish. Local "art" movie houses present re-runs of notable film classics.

Santiago has several good museums featuring pre-Columbian, folk, colonial, religious, and contemporary art; science; and Chilean history. Works by modern artists, sculptors, and photographers are exhibited and sold in the many private galleries. The National Library of Chile is one of the largest in Latin America. In addition, the Chilean-American Cultural Institute (BNC) has one of

the most modern libraries in the capital.

Chile's folklore is rich. Examples of traditional music and dance are offered nearly every night of the year in several Santiago nightclubs and at festivals and special occasions outside the capital. Other night spots feature urban "folk" music, jazz, and tango. Santiago has several discotheques.

Chilean writers have won international fame for their achievements. Among the country's twentieth-century poets are the Nobel Prize winners Gabriela Mistral and Pablo Neruda, as well as Vicente Huidobro and Nicanor Parra. José Donoso, Maria Luisa Bombal, Isabel Allende, Manuel Rojas, and Jorge Edwards head the list of leading novelists. The country has also produced a number of fine short-story writers, essayists, historians, and playwrights.

Science

The Chilean government, universities, and other public and private entities actively encourage scientific activity.

Most universities have departments of science and technology and several of the country's finest centers of higher learning specialize in these fields. The Chilean Scientific Society publishes a scholarly journal.

Although Chile, unlike Peru to the north, was never the seat of a great Indian culture, archeological research centered in the northern desert has uncovered considerable evidence of pre-Columbian settlements showing southward extension of Incan and pre-Incan Andean civilizations.

Its location and clear desert air have made northern Chile the center of Southern Hemisphere astronomical research. Two of the world's largest observatories are located near La Serena, a day's drive north of Santiago; one is run by a consortium of U.S. universities.

Education

Chile has been a leader in public education in Latin America since the mid-nineteenth century. Of the country's universities, the oldest and most prestigious are the University of Chile, founded in 1842, and Catholic University, founded in 1888. The University of Santiago, dedicated mainly to science and technology is also important.

Valparaiso has three good-sized universities and Concepcion two. Most other provincial capitals have universities which serve their respective regions. Many private universities have been created over the past 15 years being the most prestigious Diego Portales University, Gabriela Mistral, Universidad Central, Andres Bello, etc.

Commerce And Industry

Chile's current government adheres to largely free market economic policies, including low and uniform tariffs (except on automobiles and a few other items regarded as luxury consumption) and an openness to foreign investment. As a result of these policies Chile has enjoyed several years of real economic growth, relatively low inflation, balance of payments equilibrium and, more recently, near full employment. In particular, the innovative use of debt-for-equity swaps has allowed Chile to make deep cuts in its debt to foreign bankers.

To lessen the country's dependence on mining activity, especially copper, the government has promoted development in areas such as forestry, fruits, and fishing in which Chile has a comparative advantage. As a result copper now accounts for less than 50% of Chile's export earnings compared to over 80% in the early 70s.

There are no quotas or embargoes on imports, and foreign goods are abundant, though generally somewhat higher priced than in the US. The US remains Chile's main trading partner with some 23% of the

import market. Other important trading partners are Japan, Brazil, Argentina, Venezuela and Germany. Chile is ranked 34th among the U.S. trading partners.

Transportation

Automobiles

The axis of the generally adequate road network is a hard-surfaced highway running from Arica (in the North) to Puerto Montt which expands to four lanes near Santiago. Many other roads, however, are narrow and unpaved. Good paved roads link Santiago with Valparaíso and other cities on the central coast and connect central Chile with the Argentine border en route to Mendoza, Argentina, and the Argentine highway system. The road to the Argentine border is frequently closed by snow in winter.

Bus

Santiago offers a very comprehensive bus system. Although there are many new buses, the majority are run down, and they are all crowded during rush hour. However, the price is right—about a quarter. The subway system is always a pleasant surprise to newcomers. Clean and efficient, it costs even less than a bus.

The streets are teeming with taxis which are easily recognizable by their color—black with a yellow roof. The service is good and prices are reasonable. All taxis now have meters except tourist taxis at larger hotels, which charge a flat rate for certain trips. Taxis levy a legal surcharge on Sundays and daily after 9 p.m. which increases again after midnight. This surcharge is not shown on older meters, but newer meters indicate holiday and night rates. In addition there are "colectivos" or shared cabs that follow fixed routes. All black, with signs on the roof announcing their routes, "colectivos" can be flagged down like cabs.

Public transportation can meet most needs, but as in the US, at the price of some inconvenience and waiting.

Railway

Chile has a fairly extensive but old railway system, although at this time no rail passenger service operates north of Santiago. Sleeping cars and roll-on, roll-off cars for automobiles provide overnight rail service between Santiago and Puerto Montt. Most intercity buses are new and comfortable and follow fixed schedules. Some long-distance buses feature sleeping berths.

Air

Air service is well-developed and important to Chile's economy. Several domestic lines serve principal Chilean cities. Various carriers provide frequent flights between Chile and the US, including two American airlines. American and foreign passenger ships and freighters call at Valparaiso.

Communications

Telephone and Telegraph

Telephone service is very good. Privatization of long distance telephone service and local carrier completion has resulted in improved telephone service in all aspects. Calls can be made via the carrier of your choice (at last count there were six carriers operating in the Santiago area). International dialing rates are relatively inexpensive at this time, though the prices have been dynamic since the multi-carrier law went into effect in October of 1994. Local phone cards are available for placing long distance calls from any public phone in Chile or the United States. U.S. calling cards can also be used, though the rates tend to be slightly higher.

Radio And TV

Radio is Chile's most influential mass communications medium. There are a total of 300 AM and FM radio stations in Chile, with about 50 broadcasting from Santiago. Broadcasting is almost exclusively in the Spanish language, although a few English language programs can occasionally be heard. Several Santiago stations broadcast a broad range of American music in FM stereo. English language news can be heard on shortwave via the Voice of

America (VOA) and the British Broadcasting Company (BBC).

Santiago has six VHF TV channels, all of which broadcast in color, using the U.S. NTSC system. Programming includes a number of older U.S. television series and movie productions, local and imported soap operas, and a variety of news and local entertainment shows. There are no UHF stations. Some areas have access to one or two cable TV systems which carry the international versions of CNN, ESPN, TNT, HBO, AND MTV. There are also a number of stations from Europe and other Latin American countries as well as C-SPAN and Worldnet at certain times.

Newspapers, Magazines, And Books

English language books and magazines are scarce in Chile. Books in English can be obtained from a few local bookstores but they are expensive. The Chilean-American Cultural Institute (BNC) has 10,000 English language books and 115 U.S. periodicals. The American Association of Chile sponsors book groups which buy English language books for members' use, and the Santiago Lending Library is a volunteer organization which has a small but quality collection of fiction and nonfiction. (Both the latter charge a minimal monthly fee.) Students of Nido de Aguilas and their parents have access to the school library and some of the churches with English language services also have collections of books in English.

There is an English language weekly paper *The News Review*, also the international editions of *Time* and *Newsweek* are sold locally. American newspapers are available two to four days late through several newsstands. A subscription to the Miami Herald can be arranged with same day delivery, but it is expensive. The American Association of Chile publishes a monthly pamphlet, *The Spotlight*, which is full of information and practical advice for foreigners living in Chile. Likewise, The Journal of the American Chamber of Commerce is

geared to the needs and interests of the business community.

Chilean information media operate entirely in Spanish. *El Mercurio*, a conservative, Santiago morning publication, is Chile's most prestigious and influential paper. Several weekly news magazines representing various political points of view have a nationwide readership. In addition, there are magazines featuring women's fashions, science, economic-financial matters, and sports.

Health And Medicine

Medical Facilities

While in the US, individuals should obtain a yellow fever shot, which can be given only at approved vaccination centers. Though yellow fever is not found in Chile, the shot is required in some South American countries, and yellow fever immunization protects travelers in tropical and sub-tropical areas.

Most diseases or disorders can be treated in Santiago.

A number of local physicians have obtained medical training in the U.S. and Europe. Well-trained, English-speaking dentists and orthodontists also are available. The cost of doctor visits or dental care by these English-speaking or foreign-trained practitioners is comparable to US prices.

There are several hospitals in Santiago that provide the full range of medical services found in US hospitals, usually at a lower cost than in the US.

Many medical facilities provide round-the-clock emergency services, including ambulance transportation and duty medical personnel.

A number of pharmacies are open 24 hours on a rotating basis, and a few others are open 24 hours daily. The cost of some drugs is high, and many medications sold in the United States are not available in Chile.

Some commonly prescribed drugs in Chile are not approved by the U.S. Food and Drug Administration and may have serious side effects.

Eyeglasses, including bifocals and contact lenses, and lens prescriptions can be obtained in Chile.

To protect your skin from the dry climate, body lotions, moisturizer creams and bath oils should be used. Suntan preparations should be worn at the beaches and skiing areas. Exposure to the sun should be limited to prevent severe burning, which occurs rapidly in this climate.

Community Health

Community health standards are generally fair in Santiago and compare to those of other large Latin American cities. The sewage system and trash collection are efficient. Nevertheless, earthquake damage and sometimes deficient supervision of sewage systems during construction and repair, e.g., road pavement, metro construction, etc., causes the drinking water to be occasionally contaminated in certain areas of the city. Otherwise the water is purified and generally safe to drink. Just the same, many people go through an adjustment period to the water due, in part, to its high mineral content; and some prefer to boil their drinking water. (To be effective water should boil for five minutes; however, boiling will not affect the mineral level.) Outside the larger cities water may be contaminated, and bottled water is recommended. No unusual pests or vermin problems exist in Santiago.

Food and beverages are generally safe. However, care is required in choosing restaurants and preparing raw fruits and vegetables. Milk sold in paper or plastic containers, often reconstituted, is pasteurized and safe. "Long-life" sterilized milk which does not require refrigeration prior to opening is readily available. To avoid tuberculosis, boil fresh milk found on farms. Good quality powdered and liquid processed milk is sold on the local market.

Santiago has a serious smog problem. Although the pollution hangs all year long in the congested downtown area, it is particularly heavy in the winter months when the fumes of heating fuels are added to the dust and the exhaust of vehicles. Even the outlying suburbs generally have air pollution problems, and there are days when the smog reaches up the slopes of the Cordillera. As a result, respiratory and eye, ear, nose, and throat problems are common for employees and dependents. Minor eye irritations are endemic on bad days, and "smokers' hack" hangs on for many nonsmokers throughout the winter. Joggers often quit running for the duration of their tours here because of the air pollution.

Preventive Measures

Because Santiago appears to be a relatively clean, modern city, people are often surprised at the number of intestinal problems they experience here. Almost no one is immune to these upsets (indigestion and diarrhea), but new arrivals are particularly susceptible to attacks, and mild disorders occur regardless of precautions taken. While most people adjust rapidly, some experience recurring problems throughout their tours. More serious infections such as bacillary dysentery, amoebic dysentery and typhoid fever usually can be avoided, if care is taken.

Wash all salad ingredients, berries, and fruits in an appropriate solution. (First they should be washed in detergent, rinsed, soaked in a solution of one tablespoon of chlorine solution to one gallon water for 15 minutes, and then thoroughly rinsed again.) Antiseptic products such as Zonalin or iodine tablets are not as effective as a chlorine solution such as Chlorous or its local equivalent, Chlorous.

In restaurants, avoid fresh, unpeeled produce. Mayonnaise, custard, and creme fillings spoil quickly, especially in the summer months. Insist on the freshest seafood at markets and restaurants.

Typhoid and hepatitis do occur. All travellers are urged to renew typhoid and to be vaccinated against Hepatitis A.

Respiratory ailments are prevalent. Chile's climate, with its sharp temperature changes from day to night, coupled with the pollution and poorly heated houses, contributes to a high incidence of respiratory illnesses. Sore throats and sinusitis are common.

NOTES FOR TRAVELERS

Passage, Customs & Duties

A passport is required to enter Chile. U.S. citizens do not need a visa for a stay of up to three months. At the international port-of-entry, a fee, payable in U.S. dollars only, is levied on U.S. citizen visitors. The receipt is valid for multiple entries during the validity of the traveler's passport.

Dependent children under age 18 (including the children of divorced parents) arriving in Chile alone, with one parent, or in someone else's custody, are required to present a letter notarized before a Chilean consular officer in the United States certifying that both parents agree to their travel. To exit Chile, children traveling under one of these scenarios must present either the notarized letter used to enter the country or a letter of authorization signed before a Chilean notary if executed in Chile. In either case, the document presented must be executed not more than three months prior to entry or departure.

Travelers considering scientific, technical, or mountaineering activities in areas classified as frontier areas are required to obtain authorization from the Chilean government at least 90 days prior to the beginning of the expedition. The portions of Antarctica claimed by Chile are exempt from these pre-approval requirements. Officials at

the Torres del Paine National Park require mountain climbers to present an authorization granted by the Frontiers and Border Department, obtainable at the Chilean Embassy or Chilean consulates throughout the United States.

For further information concerning entry, exit, and customs requirements, travelers may contact the Chilean Embassy at 1732 Massachusetts Avenue, N.W., Washington, DC 20036, tel. (202) 785-1746, Internet - <http://www.chile-usa.org>. Travelers may also contact the Chilean consulates in Los Angeles, San Diego, San Francisco, Clara, Miami, Honolulu, Chicago, New Orleans, Boston, New York, Philadelphia, San Juan, Charleston, Dallas, Houston, and Salt Lake City.

Americans living in or visiting Chile are encouraged to register at the Consular Section of the U.S. Embassy in Santiago and obtain updated information on travel and security in Chile. The U.S. Embassy is located at Avenida Andres Bello 2800, Santiago; tel. (56-2) 335-6550 or 232-2600; after hours tel. (56-2) 330-3321. The Embassy's mailing address is Casilla 27-D, Santiago; the Consular Section's fax number is (56-2) 330-3005; and the e-mail address is "santiagoamcit@state.gov". The Embassy home page is: <http://www.usembassy.cl>, where Americans may also register on-line.

Pets

Importation of household pets is permitted. The animal must be vaccinated against rabies within 30 days before arrival.

Health certificate issued by the US Animal Health Dept. must be obtained prior shipping pet. Rabbis and Health certificate are to be presented to Chilean animal Health Dept. upon entering Chile. Shipping a pet as accompanied baggage is usually safer, cheaper and more convenient than sending the animal alone. Animals are not quarantined upon arrival.

Currency, Banking, and Weights and Measures

The Chilean peso (CLP, written \$) is Chile's official currency. The official rate of exchange as of June 2002 is CLP\$660.74 pesos = US\$1.00. This rate changes slightly on a daily basis. Chile has 46 banking facilities, including several U.S. banks, many of which have numerous branches.

Chile uses the metric system of weights and measures.

Disaster Preparedness

Chile is an earthquake-prone country. Limited information on Chilean earthquake preparedness is available in Spanish from the Oficina Nacional de Emergencia de Chile (ONEMI) via the Internet at <http://www.angelfire.com/nt/terremotos2>. Other general information about natural disaster preparedness is available from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>.

Bogota, Colombia

COLOMBIA

Republic of Colombia

Major Cities:

Santafe de Bogota, Medellín, Cali, Barranquilla, Cartagena, Bucaramanga

Other Cities:

Armenia, Bello, Buenaventura, Cúcutu, Girardot, Itagüi, Leticia, Manizales, Montería, Neiva, Palmira, Pasto, Popayán, Santa Marta, Tuluá, Tumaco, Tunja, Valledupar, Villavicencio

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated January 1997. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

COLOMBIA, washed by the waters of both the Pacific Ocean and the Caribbean Sea, is a land of geographical diversity and broad historical interest. It is a bridge between two great civilizations that flourished before the discovery of the New World—the Aztec to the north and the Inca to the south. It is a nation of cosmopolitan Andean cities and booming coastal ports, and yet it spreads across thousands of square miles of mountains, plains, and rain forests. Also, it is the most Spanish of the South American countries, although it has been independent since 1819.

Colombia is steeped in history. During its colonial era, it was one of the

principal administrative centers of the Spanish possessions in the New World. Its present capital, Bogotá, was the seat of the viceroyalty of New Granada, which included what are now Venezuela, Ecuador, and Panama. After Colombia attained independence, Panama remained part of the republic for 90 years. Simón Bolívar, the great South American patriot, was the country's first president.

MAJOR CITIES

Santafe de Bogota

Bogota is considered a high-threat area for both terrorism/insurgency and crime. Individuals must exercise caution and follow effective security measures to minimize risks and vulnerabilities while in country. Although the security situation is closely monitored, caution must be exercised at all times.

The city of Bogota is nearly 8,700 feet above sea level, on a plateau of the Eastern Cordillera (range) of the Andes and is surrounded by peaks rising to 10,500 feet. The climate is cool and there are only two seasons, wet and dry; however, it is frequently wet in the dry season, and there can be lengthy dry peri-

ods in the wet season. The weather resembles early fall or spring in the north-central U.S. average temperature is 55 degrees F. The San Andres Fault line also runs through Colombia, and there are occasional earthquakes. The most recent, on June 6, 1994, was centered about 250 miles from Bogota, measured 6.2, and caused hundreds of deaths and did extensive damage.

Besides being the capital and largest city (population 6,834,000), Santafe de Bogota is also the cultural and economic center of the country. While a modern metropolis in some respects, the city's infrastructure has failed to keep pace with its growth. Combined with occasional power outages, traffic jams are frequent and monumental.

Well-kept residential areas, schools, shopping malls, grocery stores, and many restaurants and movie theaters assist in adjusting to living in this city.

The city has a mixed look from old world Spanish architecture which dominates in the southern part of the city, to modern high-rise apartments which dominate the north. Scattered throughout all areas of the city, however, are structures in severe conditions of decay. The lower windows of old and modern

structures are heavily barred for security.

Bogotanos are proud of their cultural achievements. The city supports museums, universities, art galleries and many bookstores.

The English-speaking community is bolstered by a significant number of British and Canadian citizens, and many other people of European origin who live in the city. While Bogota is not considered a tourist center, about 1,000 Americans, mostly business representatives, visit the city annually.

Food

Bogota has an abundance of fresh foods and many varieties of fruits and vegetables; frozen seafood is carried by the better stores. Meat markets have large assortments of fresh meat. The quality is adequate, although meats are usually not aged and cuts often differ from those in the U.S.

Pasteurized milk is available in any supermarket and powdered milk is available, although expensive.

Local supermarkets are similar in style to those in the U.S. There is a variety of local and imported items, but fewer, smaller than in the U.S. There is usually a full stock of staple items. Some local supermarkets offer a variety of high-quality imported foods such as pate and smoked oysters, at very high prices.

Clothing

Clothing needed in Bogota is similar to that worn on the East Coast in the late fall season. The weather can be crisp and temperatures chilly. All-weather coats and umbrellas are a good idea. Styles for both men and women are fashionable and similar to that worn in the U.S.

Men: Colombian men tend to dress conservatively. Suits are worn more than sport coat-and-slacks combinations. Colors are also conservative—greys, dark blues and black predominate. Lightweight wool suits are recommended.

A wide variety of ready-made 100% wool and fine blended fabric suits and sport coats are available locally, but prices can be high. You will experience difficulty in obtaining ready-made suits in long sizes larger than 42.

Men's shirts must be tailor-made for sleeve length greater than 34.

Several tailors do excellent work and hand-tailored suits or of either imported or locally made material. Repair services are also available and reasonable. Socks and underwear are available, but do not equal U.S. quality.

Shoes are manufactured in Colombia, although it can be difficult to find a proper fit and the variety of styles is limited. Shoes and boots can be made to measure at reasonable cost.

Women: Shorts are rarely worn in Bogota, but are useful for tennis and trips to the "hot country." Skirts and sweaters or blouses are popular for daytime wear, as are lightweight suits and skirt-blouse-blazer combinations.

Jackets, short coats, and full-length fall coats are useful. Bring rain gear, including raincoat and umbrella.

Some name-brand lingerie is sold, but at higher prices than in the U.S.; therefore, bring a good supply of preferred items. Although nylons are sold, sizes are not U.S. standard. There are tailors and dressmakers who do good to excellent work at reasonable rates. Beautiful fabrics are available locally, but are expensive.

Locally made shoes are not made to American specs, and sizes vary. Narrow sizes and larger sizes are especially hard to find. Shoes can be made to order at prices similar to good quality, ready-made American shoes.

Children: Children wear the same type of clothing worn in early spring or late fall in the U.S. Heavy cloth-

ing is not necessary, but a supply of wool sweaters or jackets is recommended. Wool sweaters are available locally, as are good-quality blue jeans of local manufacture (prices are higher than in the U.S., and quality is poorer.) Children's tennis shoes compare with U.S. makes and sell for similar prices.

Bring raincoats, umbrellas, and boots. Bring baby supplies in your luggage.

Small girls wear jeans for play and cotton dresses with sweaters or skirts and sweaters for school. Older girls can use wool suits, skirts and sweaters. Lightweight coats and jackets are useful.

Warm clothing such as sweaters, long-sleeved T-shirts, corduroy creepers, etc., are desirable for babies.

Slim and husky sizes are hard to find and children with narrow feet cannot be fitted locally.

Supplies and Services

Many popular American brand-name cosmetics and toiletries are sold in Bogota at high prices. If you prefer special brands, bring a supply. Toothpastes and shaving cream are reasonably priced and many U.S. name brands can be found. It is best to bring a supply of family medical and cosmetic needs.

Bogota has several good dry-cleaning establishments. Since quality of work varies even in the best establishments, it is often necessary to re-press clothing which has been cleaned. Most laundry is done in the home by maids.

Bogota has many good beauty shops, and barbershops. Major hotels give inexpensive, quality haircuts.

General Electric, Philco, Westinghouse, Phillips and Whirlpool are represented locally, but appliance repairs are generally of fair quality.

Religious Activities

There are a large number of Catholic churches in the city, and services are frequent during the week. There is one Catholic school which offers an English-speaking Mass on Sundays at 10:15 am. Masses are conducted by a group of American priests from the Mission of the Sacred Heart, and an order of Franciscan nuns offers instruction to the children. The chapel, located at Gimnasio Moderno, is located on Calle 74 between Carreras 9 and 11.

English-language Protestant, non-sectarian services are held in the Union Church on Sundays at 11:00 am. They also offer Sunday morning adult Bible study, Sunday School for children and a nursery service. The Union Church is located at Carrera 3a No. 69-06.

Additionally, there are three Jewish Synagogues, as well as a Baptist Chapel, Christian Science Church, and a Church of Jesus Christ of Latter-day Saints.

Education

Several English-language schools are available in Bogota. Parents are advised that all private schools in Colombia are Colombian-oriented and are administratively controlled by the Colombian Ministry of Education. Therefore, these schools are not, in the true sense, international in nature.

If you require special schooling for your child or desire some special type of education, curriculum, or extracurricular activities, contact either your agency or the school directly in Colombia for more information.

Colegio Nueva Granada is located at Carrera 2E No. 70-10. The mailing address is as follows:

Colegio Nueva Granada
 Director
 Apartado Aereo 51339
 Bogota, Colombia

Instruction is in English, but Spanish is a required course for all students. The school is divided into elementary (kindergarten-5); middle school (grades 6-8); and high school (grades 9-12). Each of the three sections has its own principal and counselor. The director of the school is a US citizen and U.S.-trained, as are most of the administrative staff.

Nearly all the staff are trained teachers—about 70% hired locally (both American and Colombian) and 30% brought from the U.S. The school is accredited with the South-

ern Association of Colleges and Secondary Schools. The school year runs from late August to June.

A placement exam is required of all entering students before they are enrolled. It is given frequently during the summer months and at various times throughout the school year.

The school is coeducational with an enrollment of approximately 1,500 students. About 75% of the students are Colombian, 10% North American, and 10% dual citizenship (U.S./Colombian) 5% represent some 25 other countries.

The uniform of Colegio Nueva Granada as of the 1996–7 school year is as follows:

- White tennis shirts, plain white turtlenecks or mock turtlenecks, or white oxford shirts with the CNG monogram.
- Navy blue V-neck sweaters with two white stripes on the right sleeve.
- Navy blue gabardine trousers for boys and girls.
- Navy blue gabardine culotte-skirts for girls (optional).
- Navy blue CNG jacket - School tie for boys/girls on Fridays (middle and high school).
- Navy blue blazer with school emblem for boys and girls in middle and high school (optional).
- White, blue, or black tennis shoes or black, navy or brown leather shoes to be worn with white or blue socks
- A navy blue sweatsuit with CNG emblem required for elementary school.

The school sells uniforms on campus; plan to spend about \$200 per child. Jewelry and hair accessories are to be conservative and blue and white color and size for use with a school uniform. Only stud earrings

for girls are allowed. No earrings will be permitted for boys, and length of hair must be appropriate for school. NOTE- "Appropriate" in Colombia means conservative.

Special Educational Opportunities

Locally, both the Universidad de los Andes and the Universidad Javeriana provide instruction in Spanish and other languages using the most modern teaching techniques.

Those interested in linguistics will find the Instituto Caro y Cuervo one of the best of its kind in the world.

Classes in painting, sculpture, and music can be arranged at the following institutions: Universidad de los Andes, Universidad Javeriana, Galeria de Arte Moderno, and Conservatorio de Música. Teachers of piano and guitar are available and fees are reasonable.

Bogota has several good universities in addition to Andes and Javeriana. Worthy of special mention are Colegio Mayor de Nuestra Señora del Rosario, Universidad Externado de Colombia, and Universidad de la Sabana. Special extension and night courses in many fields are offered at each. Instruction is in Spanish.

Recreation, Social Life, and Sports

Facilities for sports are limited and expensive. Although several country clubs have excellent golf and tennis courts, memberships are expensive.

Bogota has few public golf courses or public tennis courts. No swimming pools are open to the general public.

Arrangements can be made for horseback riding, and expert instruction is available at a reasonable cost. Many families make periodic weekend trips to the lower, hot country where swimming pools and tennis courts are available at the hotels and resorts. Spectator sports include soccer, boxing, wrestling,

horseracing, and bullfighting. Plaza de Santa Maria, the bull rink in the center of the city, has fights on Saturdays and Sundays between December and February. Soccer is very popular and fans avidly follow various local teams.

Lake Tota, northeast of Bogota, is a favorite fishing spot for foreigners and Colombians alike. The lake is high in a mountain basin in the Department of Boyaca. The lake can also be reached by flying to Sogamoso and taking a taxi about 18 miles to the lake. Its crystal clear waters are stocked and offer good trout fishing. Outboard motorboats can be rented. Two rustic hotels, plus the Tisquesusa, the Rocas Linda, and the Pozo Azul, offer comfortable accommodations. A small outboard motorboat (5-15 hp) is useful for trolling.

Trout fishing also can be found in Lake Neusa. Neusa is approximately a 1-1/2 hour drive north of Bogota. The drive is easy, and the roads are generally in good condition. Winding through the mountains, the roads take you through Pine and Eucalyptus forests. The entire trip is a steady climb into the mountains, probably 100 feet or more above Bogota. In Neusa, you can take a boat tour, or rent your own by the hour.

Deep-sea fishing is possible off the Atlantic and Pacific coasts, and the fishing enthusiasts will find trips to these areas rewarding. Fishing tackle is available in Bogota, but it is expensive.

Sailing is done on two of the man-made lakes near Bogota.

Scuba-diving and snorkeling can be done on the coast in Cartagena (1-hour flight from Bogota) or in the nearby island of San Andres or Santa Marta (both about a 2-hour flight from Bogota).

Hunting in Colombia requires a certain amount of planning and time. Dove hunting is popular, but the current security situation has

resulted in the closing of many traditional hunting areas.

The hills surrounding Bogota offer ample opportunity for the mountaineer, and the snowpeaks of the Andes are a real challenge to the serious climber. The Laguna de Guatavita, origin of the legend of El Dorado, offers a delightful one-day adventure.

Additionally, there are a number of gyms and spas for weight-lifting and aerobics. Monthly or yearly membership fees are similar to those in the U.S. Many have saunas and/or steam rooms, and some offer massages, facials and other cosmetic features.

Touring and Outdoor Activities

By virtue of certain characteristics, such as dress, speech, mannerisms, cars and homes, Americans are susceptible to criminal attack. Consequently, common-sense security precautions should always be practiced when touring and sight-seeing in Bogota and elsewhere in Colombia. For example, women should not wear elaborate jewelry when visiting crowded shopping areas of the city. Carry as little money as possible and guard your wallet, purse, watch and valuables carefully.

Several museums display the historical, cultural and artistic heritage of the country. A fascinating collection, consisting of gold objects fashioned by the Indians who lived in Colombia before the arrival of the Conquistadores, is in the Museo de Oro at the Banco de la República.

On a mountaintop, 1,500 feet above the city, stands the Spanish-style church of Monserrate, considered the characteristic landmark of Bogota.

The original church, built in 1650, was destroyed by fire. About 25 years old, the present church commands a magnificent view of the city and surrounding plains. You can reach the church by the old, almost perpendicular "funicular" railway or the newer Swiss-built

aerial cable car both of which take about three minutes.

A neighboring mountain peak, higher than Monserrate, is the site of the chapel of Guadalupe. This peak was the location of several earlier chapels dedicated to Our Lady of Guadalupe, patron saint of Latin America. The present chapel, with its huge dominating figure of the Virgin, is a 20th century work.

At the falls of Tequendama during the wet season, the Bogota River plunges 475 feet into a narrow gorge below. Only 15 miles southwest of Bogota, this waterfall can be reached by road.

Thirty miles north of Bogota by train or car lies the salt mine of Zipaquirá—a solid mountain of rock salt. The mine has been worked since before the Spanish arrived, and while its tunnels penetrate deep into the mountain, the supply of salt has hardly been touched. On this site a massive Gothic-style cathedral has been carved out of the mountains. Illuminated by indirect lighting and severely simple in its decorations, the cathedral is impressive and unique. An interesting, colonial-style inn with a restaurant is on the grounds of the salt mine.

For a change of scenery and relief from the altitude and cool climate, the warm, tropical valleys that lead to the Magdalena River are ideal. Several resorts are within a few hours of Bogota. Girardot—1/2 hour by plane, three hours by car—is one of the most popular warm weather spots. Here, a large variety of tropical fruits and unusual pottery can be purchased in the town's center plaza.

Paipa, at about the same altitude as Bogota, can also be reached in about four hours by car. The Hotel Sochagota, in addition to its excellent conference facilities, is a popular first-class hotel fronting on a small lake. Activities center around the thermally-heated swimming pool but also include horseback riding, pool and billiards, and ping-pong. The

hotel also has 12 detached cabañas, each with sleeping facilities for six, fireplace, efficiency-type kitchen, two bathrooms and private thermal bath facilities.

Barranquilla, with a population of over 1.2 million is the principal seaport on the mouth of the Magdalena River. One hour by jet from Bogota, the city is popular for its February carnival. Its famous Hotel del Prado is a large country club-like hotel with air-conditioned rooms, swimming pool, tennis courts and exercise facilities including a sauna. The hotel also maintains the Prado Mar Beach Club at Puerto Colombia for ocean bathing and fishing.

In March, Barranquilla is the site of the international tennis tournament called the "South American Wimbledon."

Cartagena, population 918,000, is about 70 miles southwest of Barranquilla on the Caribbean coast. The walled city dates back to the days of the Spanish Main. Its famous fortress of San Felipe de Barajas and ancient churches, including the Shrine of St. Peter Claver, make Cartagena one of the most interesting cities in Colombia. The city boasts a number of modern beachfront high-rise hotels as well as the older, colonial-style El Caribe Hotel. Most hotels have swimming pools; some have tennis courts. Nearby restaurants offer good seafood. In November, Cartagena commemorates its independence in a carnival atmosphere which includes the national beauty contest for the crown of "Miss Colombia."

Leticia is Colombia's principal town on the Amazon River, 670 miles southeast of Bogota. Accessible by air, Leticia provides tourists with such attractions as Amazon River excursions, visits to primitive Indian villages, and trips through dense rain forests. Leticia is located at the northern end of the Peru-Brazil border, and it is easy to cross over to one country for lunch and then to the other for dinner, and return to Leticia for the night.

Entertainment

The National Symphony has regularly scheduled concerts during most of the year, often with world-famous guest artists. Dance companies, chamber music groups, and concert artists perform seasonally. Theater is available from time to time, but its enjoyment is limited to those fluent in Spanish.

Movie theaters and video clubs are numerous; those in the downtown section and better residential areas are equal to theaters in the U.S. First-run American films are shown with Spanish subtitles, three-four months after their U.S. premiere. Movies at the best theaters cost about USD 8.00 per person. Bogota has few American-type nightclubs; however, several clubs have floor shows and dancing and offer a welcome change on a night out. Many restaurants serve continental and regional dishes.

The changing of the guard outside the Presidential Palace at 5:00 PM every afternoon is a colorful ceremony. Soldiers dress in 19th-century-style uniforms, including spiked helmets. Various festivals are held throughout the year in Colombia. Cartagena has a world-famous film festival, and annual fairs are held in Barranquilla.

Social Activities

Social life in Bogota depends greatly on your own initiative. Because of the large number of Americans and educated Colombians, it is possible to have a wide, varied circle of friends.

The American Women's Club admits all American women in Colombia and meets monthly. The American Society is open to all Americans living in Colombia. This club sponsors monthly social activities and a number of charitable programs.

Social contacts among Colombians who enjoy having foreign friends can be also be made through the Bi-National Center (BNC) and its various groups and activities and

through a number of charitable, religious and social organizations.

Bogota has some resident business representatives from countries friendly to the US as well as about 40 other diplomatic missions. It is relatively easy to develop a circle of friends from among these groups.

Medellín

Medellín, with an estimated population of 3.8 million, is Colombia's second largest city. It is the capital of the Department of Antioquia, one of the country's most progressive areas. Although it was settled earlier, it was not officially established or named until 1675.

Medellín is an important industrial, commercial, and banking center and is located in a valley three to seven miles wide and about 25 miles long in the Central Cordillera of the Andes, about 150 air miles northwest of Bogotá.

Medellín, at an altitude of 5,000 feet, has a mild climate year round. Annual mean temperature is 70°F, with a temperature spread of 27°F. There are two rainy (winter) and two dry (summer) seasons of varying length each year. Rainfall averages about 55 inches annually.

The metropolitan area includes the city of Medellín and adjoining municipalities in the same valley. Total population of the valley is estimated at slightly above two million. The center of the city contains many large, modern office and apartment buildings. Despite a significant boom in recent years, however, a number of small businesses are still housed in converted residences.

Typical residential architecture is the one-story modern house, with red tile roof. There are two pleasant suburbs, 10 to 15 minutes from the city center, where the bulk of the foreign population resides. Comfortable, modern apartments are also available in the city.

Medellín, the original industrial heart of Colombia, remains a major

center of indigenous capital, and supplies wealth and talent to all parts of the country. It is a banking and insurance center and headquarters for ANDI, the Colombian equivalent of the National Association of Manufacturers. Medellín's industries include food processing, wood-working, automobiles, chemicals, and metallurgy. The principal industry is the integrated manufacture of textiles, cotton, cotton-synthetics and, to a lesser degree, wool. Other important products are steel and steel products, tobacco, plastics, leather, cement, glass, beer, ceramics, electrical appliances, soft drinks, and packaging materials. Medellín is also an important marketing center for coffee, bananas, cement, and cattle. The Federation of Coffee Growers, which exports Colombia's foremost dollar-earning product, has a regional office in the city.

Americans, British, and Germans, with lesser numbers of Italians and French, comprise the small foreign community. The American element, about 600 persons, is almost indistinguishable, as many are married to Colombians, or are the product of Colombian-American marriages. There is a large number of English-speaking people in Medellín. Many Colombian professionals are U.S.-college educated, and still others are acquainted with the language through travel and study.

Although the city dates from the middle of the 17th century, only slight traces remain of the colonial era. Many social customs still reflect the Spanish past, but these too are being rapidly modified.

Antioquenos, as the people of the department are called, consider themselves apart from other Colombians. The colony of Antioquia began with the immigration of a small number of Spanish Basques and Andalusians. The early settlers, noted for their large families, occupied themselves primarily with gold mining. As the population grew and the gold supply diminished, the people turned to the land and cleared the high, healthful regions for food

crops, and the middle levels for coffee production. Usually, the land was opened by the man who tilled it, and the small landholder pattern persists to this day. Larger families also meant forced migration, and the Antioqueno was the principal colonizer of the Departments of Caldas and Valle. Antioquia's population continues to grow rapidly, especially in Medellín proper (now over 1.6 million), which has attracted people from the rural areas in search of greater opportunities.

Antioquia is mountainous and, except for some fertile valleys and a banana-producing area in its northwest corner, is not well suited for agriculture. Cattle production is of growing importance. The Department of Chocó, which represents the other extreme within the Medellín district, is jungle-like, sparsely populated, and very undeveloped economically. Antioquia is Colombia's conservative stronghold and the Antioquenos, nearly all Roman Catholic, are devout supporters of the Church. A fairly rigid class structure persists and a large percentage of the wealth remains concentrated in the hands of a few families. Nonetheless, the region has traditionally provided opportunities for economic mobility to the industrious (or the fortunate), and an important and growing middle class exists.

Air travel is the most practical means of transportation in and out of Medellín. The airport, which operates during daylight hours only, is 10 minutes by car from the city center. Because of frequent fog and the lack of navigational aids, the airport is often closed and flight delays are common.

Driving in Medellín has certain risks, although the traffic is somewhat tamer than in Bogotá. Drivers in general, and bus and truck drivers in particular, are aggressive and undisciplined, and pay little heed to traffic lights or other controls. The size of the vehicle usually determines who gains the right-of-way, and under no circumstances should

pedestrians compete. Driving outside of the city calls for nerves of steel. The road network is limited, poorly maintained, and heavily used. Collisions are frequent and, although labor for bodywork is less expensive than in the U.S., import regulations result in much higher prices—and often delays—for repair parts.

Education

Two private schools in Medellín are considered adequate for the academic needs of American children. The Columbus School is a coeducational day school for kindergarten through grade 12. Founded in 1947 and sponsored by the U.S. Department of State, it is accredited in the U.S. by the Southern Association of Colleges and Schools.

The school follows both American and Colombian curricula. Most instruction is in English. French and Spanish are also offered. Extracurricular activities include computers, chorus, gymnastics, drama, newspaper, yearbook, and several participant sports. With a student body of about 900 (90% are Colombian), Columbus School employs 80 full-time and four part-time teachers; 43 are American. The staff also includes a counselor.

The school year runs from mid-August to mid-June, with a one-month vacation from mid-December to mid-January.

Columbus School is located on a mountainside, three miles northwest of Medellín. Facilities include seven buildings, 48 classrooms, science labs, computer lab, cafeteria, gymnasium, playing fields, and a 15,000-volume library. The mailing address is Apartado Aéreo 5225, Medellín, Colombia.

The Montessori School in Medellín is relatively new and plans to extend its grade structure by adding one grade each year. Currently, classes from kindergarten through grade eight are taught. The Colombian and American curricula are followed, with emphasis on English. Enrollment is divided between

Americans, Colombians, and several other nationalities. The school's directors are American. The mailing address is Apartado Aéreo 623, Medellín, Colombia.

Colegio Montelibano is a coeducational, day, company-sponsored school for pre-kindergarten through grade 12. It is located in the village of Montelibano, in the Córdoba Department, which is northwest of Medellín. Founded in 1980, the school is accredited by the Colombian Ministry of Education.

The school's curriculum is both U.S. and Colombian. Spanish is a required language; other courses offered include French, art, computer science, physical education, and vocational studies. Extracurricular activities are varied.

The school year, in English, runs from August to mid-June; in Spanish, the year runs from February to mid-December. Both calendars have a 10-day Easter vacation. The student body totals 387; enrollment capacity is 594. Of the 41 teachers, three are American.

Colegio Montelibano's facilities include science laboratories, an audiovisual room, and athletic fields. The school, on a 15-acre campus, is air-conditioned throughout. The mailing address is Apartado Aéreo 6823, Bogotá, Colombia.

Recreation

Because of the condition and extent of the roads, touring is not a popular pastime in the Medellín district. Nonetheless, a few nearby areas within a two-hour drive offer a change of scenery, and one of the prime pleasures of Colombians and Americans alike is the enjoyment of the surrounding countryside. Many Colombians own country homes, and these become the center of family life during weekends and the long Christmas season. Although Americans usually have no such refuge, nearby mountain areas provide many lovely spots for picnics.

Santa Fe de Antioquia is the original capital of the Department of

Antioquia. It has a population of about 18,000 and is a three-hour drive from Medellín. Situated on the bank of the Cauca River in what is locally termed the “hot country,” the city contains many examples of Spanish colonial architecture.

Rionegro is about an hour’s drive from Medellín. It is in an attractive valley at about 6,000 feet elevation. Rionegro was the site of the signing of the Constitution of 1863.

Quibdó, capital of the Department of Chocó, is on the banks of the Atrato River, which empties into the Caribbean Sea near the Colombian border with Panama. Chocó is sparsely populated by the descendants of escaped slaves who made their way to the hot, jungle-covered area bordering the Pacific coast of Colombia. The northern part of Chocó is said to have one of the most abundant rainfalls found anywhere in the world. Quibdó, with a population over 47,000, is about one hour by air, 15 hours by car.

La Pintada is a small town on the Cauca River two-and-a-half hours from Medellín and located in the “hot country.” As another alternative for weekend outings, it offers an attractive landscape and a modest hotel with swimming pool. The model ranch of the Antioquian Cattle Fund is also located here.

Medellín’s public athletic facilities are seldom used by Americans. There are private sports clubs, where membership is possible; Medellín also has two attractive private country clubs, each with a golf course, tennis courts, and swimming pool. Initial membership fees are expensive.

Spectator sports in Medellín consist chiefly of soccer matches, but baseball games are becoming popular among Colombians. Bullfights are held seasonally. Hunting and fishing are available, but facilities and accommodations within a reasonable distance from the city are almost completely lacking.

Church towers in Cali, Colombia

© Owen Franken/Corbis. Reproduced by permission.

Horseback riding at country *fincas* (estates) is a popular pastime. Water-skiing and sailing are possible on a man-made lake about three hours from Medellín.

Entertainment

Among the many movie theaters in Medellín, 10 are considered first-class. Newly released American films with Spanish subtitles are shown.

Local civic organizations and private industries sponsor occasional concerts and musicals. Good amateur plays are presented several times during the year at the Pablo

Tobon Theater. Several private clubs offer floor shows, and a few nightclubs are acceptable.

Medellín has active Rotary, Lions, and Kiwanis clubs, through which it is relatively easy to broaden one’s contacts among other working professionals. Many women join the Pan-American Women’s Association, a group composed mainly of members of the English-speaking colony, including Colombians. There are a number of opportunities in Medellín for international contacts.

Although Colombians are favorably disposed to the U.S., most Americans find that it requires a major

effort to develop close personal relationships with them.

Special Note

In recent years, Medellín has been the center for a violent drug cartel. Because of this, the U.S. State Department advises against travel to this area. Visitors should check with the Embassy for further details.

As in many areas of the world, personal and physical security are increasing problems in Medellín. Nonviolent purse and jewelry snatchers abound on the streets, especially at night. Large amounts of money should not be carried, nor should jewelry be worn in public places.

Cali

Cali, Colombia's third largest city, rests in the southwest corner of the pear-shaped Cauca River valley, the principal center of cattle and sugar production. The city is also a manufacturing and distribution center between the Pacific coast port of Buenaventura and Bogotá. Cali is the capital of the Department of Valle del Cauca.

One of the oldest cities in the Americas, Cali was founded in 1536 by Sebastián de Belalcázar, who marched northward from Peru after aiding Francisco Pizarro in subjugating the Incas. Belalcázar's conquests afterwards were made a dependency of the Spanish viceroyalty of Lima. Parts of central Cali reflect the tastes of the colonial period, with palmed plazas lined by wood-roofed buildings. Charming bridges and walks along the river in the city's center date from the late 19th-century period. Newer sections of the city have incorporated varied contemporary influences.

Cali's elevation of 3,319 feet poses no physical challenge. Temperatures vary little throughout the year. Maximum daytime temperatures are in the low 80s; at night temperatures drop a little below 70°F, making it pleasantly cool in

most residential sections of the city. Humidity remains at a comfortable low year round. Most of Cali's moderate rainfall occurs during the Northern Hemisphere's fall and spring months. Heaviest storms cause flooding in low sections of the city, but the rain usually comes in brief showers. Hurricanes, tornadoes, and cyclones are unknown. However, several minor earthquakes have struck the city in recent years.

Cali's metropolitan population is approximately 2.1 million, and its physical size is about that of Washington, DC. The city center is compressed into a small area. Growth of better suburbs has been along and into the foothills, while poorer sections have pushed out across the valley floor. The city's main activity, industry, is a product of favorable location and transportation. Moreover, more than half of Colombia's foreign trade passes through Cali en route to and from Buenaventura, on the Pacific coast. It is also headquarters for units of the departmental government, the Third Brigade of the National Army, and the Air Force Academy at Marco Fidel Suarez Base.

About 3,000 U.S. citizens reside in the district, more than two-thirds of whom live in Cali. Most are associated with some 100 partially- or wholly-owned U.S. firms doing business in the area. Some of the larger ones are Grace, International Paper, Goodyear, U.S. Rubber, Container Corporation, Corn Products, Home Products, Colgate-Palmolive, Gillette, Union Carbide, Squibb, and Quaker Oats. A substantial number of Americans are working with the Universidad del Valle at the International Center for Tropical Agriculture (CIAT).

Cali is becoming increasingly a center for tourism. The Pan American Games of August 1971 helped to bring the city to international attention, and its new Hotel Intercontinental and Palmaseca Airport have served as attractions to visitors. The Feria de Cali, with its week of bullfights, beauty contests, and parties,

is perhaps the major social event in Colombia during the Christmas and New Year period.

Education

Most American children in Cali attend Colegio Bolívar. It is a coeducational day school for pre-kindergarten through grade 12. The school was organized in 1948 through the efforts of the American business community, and receives help from the U.S. Government Inter-American Schools Service. It is accredited by the Southern Association of Colleges and Schools and the Colombian Ministry of Education.

The curriculum is U.S.- and Colombian-based. Classes are in English, with additional mandatory instruction in Spanish beginning in the third grade. Elective classes include art, vocal music, computer science, and physical education. Among the extracurricular activities are yearbook, newspaper, literary magazine, field trips, scouting, and various sports. There is also a special program for children with learning disabilities.

The school year runs from the end of August to the middle of June, with vacations at Christmas and Easter. In 1991, the student body totaled 1,050; of the staff of 90 full-time and two part-time teachers, 45 were American. The staff also includes a counselor and a nurse.

Colegio Bolívar is located on 10 acres of land in a rural area about 10 miles from Cali. Facilities include 10 buildings, 42 classrooms, cafeteria, auditorium, an audiovisual room, science laboratories, computer lab, gymnasium, playing fields, swimming pool, and a 20,000-volume library. The mailing address is Apartado Aéreo 26300, Cali, Colombia.

Cali has three other English-language schools: Colegio Bennet, for kindergarten through grade 12; Jefferson School, offering courses through the 12th grade; and the British-American School, which accepts children from kindergarten through grade 12.

The Centro Colombo-Americano offers Spanish courses, and also maintains an English-language lending library. The city's main bookstore, Librería Nacional, has a limited selection of American paperbacks. Most principal American newspapers are available, as is *Time* magazine, but often these are a week old.

Recreation and Entertainment

The Cali area offers several points of interest for outings or weekend excursions. Twenty miles northeast of the city, near El Cerrito, is El Paraiso, a country house which was the scene of the 19th-century romantic novel, *La María*, written by Jorge Isaacs and describing life in his native valley. Operated by the Colombian Government, the house is preserved in minute detail complete with original furnishings, and is beautifully located at the foot of the Andes. A similar country house, Canasgordas, lies six miles south of Cali. It too was the setting for a novel—*Eustaquio Palacios El Alferéz Real*. The house earlier served as the residence of Spanish colonial governors.

Within an hour's drive are various sugar refineries; Manuelita, in the city of Palmira, offers tours. Another site of interest is the Calima Dam and hydroelectric project, about a two-hour drive from Cali, in the western hills. En route to Calima lies the tranquil valley town of Buga, where lunch and an afternoon at Hotel Guadalajara's swimming pool provide a popular Sunday excursion. Buga's handsome 17th-century cathedral is being meticulously restored.

The nearest available beach with adequate hotel facilities is close to Tumaco (in Nariño Department), an hour away by plane. Hotel accommodations are adequate, but unpretentious. Other weekend trips can be made to the mountainous lake region near Pasto, where an attractive Swiss-run lodge is located, and to the interesting pre-Columbian archaeological site of San Agustín (in Huila).

Within certain limits, good recreational facilities are available in Cali year round. While no beaches are nearby and river swimming is discouraged, many Americans belong to one of several social clubs having excellent pools. Golf and tennis also are available.

Lake and ocean sport-fishing is possible within the district, but not near Cali. The Calima reservoir, one-and-a-half hours' drive from the city, is excellent for sailing, water-skiing, picnicking, or just for a change of scene. Dove hunting is available in the area, but big-game hunting requires a trans-Andean trip.

A number of good movie houses feature American films in English, with Spanish titles. Admission prices are low. Concerts and plays by local or visiting artists are given on occasion at the Teatro Municipal and at the conservatory. Visiting musical and dance troupes sometimes perform in Cali. Bullfights, featuring some of the world's best matadors, are given during the December *feria* week, and are also held at various times during the rest of the year. Boxing, baseball, soccer, and swimming meets are the available spectator sports.

Cali has many small nightclubs and discotheques, usually packed on Saturday nights. A handful of good restaurants in the city offer dinner at reasonable prices.

Cali has an American Women's Club and an American Men's Society.

Barranquilla

Barranquilla, capital of the Department of Atlántico, is the largest and most important northern coast city in the country. It is called the "Gateway to Colombia."

Although founded in 1629, it lacks the colonial atmosphere of many South American cities because there was little development here prior to the 20th century. Barranquilla emerged as an important seaport and industrial city with the

completion of the Bocas de Ceniza project, which created a deep-water river port at the mouth of the Magdalena River. This river serves as a major transportation link with the interior of the country.

Barranquilla spreads south from the river to a hilly area where most of the new housing and businesses are located. The city center and older suburbs show the effects of rapid growth and overcrowding found in most of the developing cities of the Third World. The population explosion (the estimated figure is over 1.2 million) has created a strain on city services, but new development programs are now underway, and municipal improvement has a high priority.

The biggest celebration in Barranquilla is Carnival, a four-day festival of parades, dancing, parties, and general festivities during which the city comes to almost a complete standstill. The popularity of Barranquilla for this mardi gras celebration—which in some cases rivals Rio in costumes and enthusiasm—is shown by the throngs of celebrants converging on the city. Pre-Carnival and post-Carnival celebrations abound as well and the outgoing Barranquillero is at its best during this joyous occasion.

Barranquilla is hot and humid year round, with cooling breezes during the windy season of December through February. The rainy seasons, April through June and September through November, bring torrential downpours which inundate certain streets and turn them into raging rivers. In parts of the city, curbs are 3-4 feet high in an effort to channel the water into the Magdalena River and out to sea. Knowledgeable Barranquilleros avoid these streets at all costs at the first sight of rain, since people, cars, and buses are frequently washed away.

Barranquilla's varied industrial base consists of chemical manufacturing, cement, metal fabrication, food processing, automobile assembly, textiles, shoes, publishing,

sugar, beer, glass, perfume, and clothing manufacturing. The city is the major air terminus for northern Colombia and is served by several international airlines. A darker side to the recent growth of Barranquilla has been the massive drug-smuggling trade. Both the U.S. and Colombian governments have active control programs, and the U.S. Consulate is a focal point of this activity.

The American community in Barranquilla is small, but should expand with the development of the El Cerrejón coal mining project. This project will exploit vast coal reserves in the César and Guajira Departments and involve the construction of two airports, a seaport facility, and a railroad to transport coal to the coast.

The consular district includes the Departments of Atlántico, Córdoba, Sucre, Norte de Santander, Cesar, Bolívar, Guajira, Magdalena, and the Intendencia of San Andrés y Providencia.

Education

Barranquilla has three English-language schools. Colegio Karl C. Parrish is a coeducational institution for pre-kindergarten through grade 12. Accredited by the Southern Association of Colleges and Schools and the Colombian Ministry of Education, the school was founded in 1938. The Parrish School and other private schools in the area offer excellent bilingual education at the primary and secondary levels, and graduates are accepted at major universities throughout the world.

Colegio Karl C. Parrish follows the American-Colombian curriculum, with the study of Spanish required of all students. French is also offered, as well as computer science and physical education. Extracurricular activities include computer, newspaper, yearbook, and varied sports.

The school year extends from mid-August to the beginning of June, with vacations at Christmas and Easter. The student body totaled 727 in 1991; there were 66 teachers,

13 of them American. The staff also includes a reading specialist and a counselor.

Colegio Karl C. Parrish is situated on 20 acres just outside the city. Facilities include eight buildings, 35 classrooms, an audiovisual room, science laboratories, computer lab, playing fields, tennis courts, and an 8,000-volume library. Some of the classrooms are air-conditioned. The mailing address is Apartado Aéreo 52962, Barranquilla, Colombia.

The Marymount School is a coeducational day school for pre-kindergarten through grade 12. Founded in 1953, it is accredited by the Colombian Ministry of Education, and is operated by the nuns of the Order of the Sacred Heart.

The school uses both U.S. and Colombian curricula. The study of Spanish is required of all students. French is also offered, along with other electives and several extracurricular activities.

The school year runs from the beginning of September to the middle of June, with a three-week vacation at Christmas and a one-week vacation at Easter. The student body in 1991 numbered 1,325, under the tutelage of 110 full-time and 20 part-time teachers, of whom 35 are American. The staff also includes a counselor.

Marymount is located in a residential section in the northern part of the city. Facilities include ten buildings, 80 classrooms, a gymnasium, two playing fields, two science labs, swimming pool, auditorium, and a 17,000-volume library. The library and a typing room are air-conditioned. The mailing address is Apartado Aéreo 51766, Barranquilla, Colombia.

Colegio Albania is a coeducational, company-sponsored school for children in kindergarten through grade eight. The school is sponsored by Morrison Knudsen International and accredited by the Colombian Ministry of Education.

The curriculum is U.S.- and Colombian-based, offering the study of Spanish as well as other electives, and a variety of extracurricular activities, including a Boy Scout troop, drama, dance, yearbook, newspaper, and field trips.

The school year follows the usual calendar here. In 1991, the school had 746 students. There were 85 full-time teachers, 25 of whom were Americans.

Colegio Albania is located one hour by air from Barranquilla in an isolated camp. Its facilities include science and computer laboratories, tennis courts, two swimming pools, three playing fields, and two libraries. The school is completely air-conditioned. The mailing address is Apartado Aéreo 52499, Barranquilla, Colombia.

Another school attended by Americans is Fundación Colegio Bilingue, located in Valledupar, about 150 miles east of Barranquilla. The school is a coeducational day school covering pre-kindergarten through grade 12. It was founded in 1979 and is accredited by the Colombian Ministry of Education. The curriculum here is both U.S. and Colombian. French is offered in the secondary grade levels; other elective classes are art and vocational studies. There is also a program for students with learning disabilities.

The school year at Colegio Bilingue runs from the end of August to the first week in June, with vacations at Christmas, *Carnaval*, Easter, and national holidays. The student body currently totals 380. There are 32 full-time and three part-time teachers, of whom 11 are American. The staff includes a counselor. Fundación Colegio Bilingue is located just outside the central business district. The mailing address is Apartado Aéreo 129, Valledupar, Colombia.

Several other private elementary and secondary schools in Barranquilla follow the Colombian system, and classes are conducted in Spanish. Also, universities here offer

Street in Cartagena, Colombia

© Enzo & Paolo Ragazzini/Corbis. Reproduced by permission.

both graduate and undergraduate courses in a wide field of subjects, taught in Spanish. Anyone enrolling in these classes will need a working knowledge of that language.

Recreation and Entertainment

Several national parks located near Barranquilla have limited facilities, and their quality of maintenance is very low. They do, however, offer a chance to view local wildlife. No acceptable camping facilities are in the area, but interesting day trips can be made.

San Andrés Island, a one-hour flight from the city, offers excellent hotel accommodations, crystal clear

waters abounding with fish and marine life, and white sand beaches. This island is also a free port, and its markets stock a wide variety of U.S. toiletries, appliances, clothing, and food.

In Barranquilla, tennis, golf, bowling, and water sports are available, but most facilities are in private clubs. The Barranquilla Country Club has swimming pools, tennis courts, and an 18-hole golf course. The Club Caujaral offers full recreational facilities. Guest membership cards can be obtained for temporary use of these clubs.

Each March, the city is the site of the international tennis tourna-

ment called the "South American Wimbledon."

Santa Marta, one-and-a-half hours by car from Barranquilla, has excellent beaches and good hotels. This Caribbean city is also noted for its Spanish architecture.

There are several beaches within a half hour of Barranquilla. Unfortunately, the sea here tends to be quite dirty because of silt from the Magdalena River, and swimming is not recommended. Many people spend the afternoon at local beaches sunbathing, people-watching, and eating fried fish and *patacones* (fried banana slices).

Barranquilla has several air-conditioned movie theaters showing recent releases of both U.S. and European films. These are reasonably priced and serve as a major form of entertainment. A film club shows revivals of classic films in one of the local theaters.

Another major form of entertainment here is the video cassette recorder. Rental centers with cassettes in English abound. Local television transmission is compatible with that in the U.S. and offers black-and-white and color programming in Spanish. Several current American series are dubbed in Spanish.

Radio programs range from *cumbia* (Colombian folk dance) to classical music. Stations broadcast in Spanish. A shortwave set is necessary for the reception of Voice of America (VOA), Radio Canada, and British Broadcasting Corporation (BBC).

Barranquilla has a wide range of excellent restaurants. French, Italian, Chinese, Arabic, and other specialties are available, as are restaurants featuring steak and ribs. Restaurants serving typical Colombian food, such as seafood or chicken with coconut rice, are also very popular. Fast-food restaurants are opening.

English-language editions of *Time* and *Newsweek*, the *Miami Herald* and, occasionally, the *New York Times*, are available. A small, cooperative lending library has books in English, and the Centro Colombo-Americano Library may be used by expatriates. The Centro Colombo-Americano often hosts art exhibits. Barranquilla public libraries do not shelve English-language books.

Cartagena

Cartagena, whose walled city dates back to the days of the Spanish Main, lies about 70 miles south of Barranquilla on the Caribbean coast. It was founded in 1533, and during the 17th century was a center of such importance in the Western Hemisphere that it was second

only to Mexico City. During Spanish times, Cartagena (full name, Cartagena de Indias) was a strongly fortified town on an island, but one of its two entrances to the bay was barricaded by the Spanish after a heavy attack by English forces, and the city is now permanently linked to the mainland. The greatest of the Latin American heroes, Simón Bolívar, made Cartagena his headquarters in the Magdalena campaign of 1811.

The famous fortress of San Felipe Borajas, towering over the approaches to the city, and the ancient churches, including the Shrine of St. Peter Clavar, make Cartagena one of the most interesting cities in Colombia. The old town is a maze of narrow streets, houses with tiled roofs and balconies, and small shopping stalls—a contrast to the new, commercial city with its wide boulevards and the Plaza Bolívar, where a huge statue honors the memory of “The Liberator.” Cartagena is a busy, modern city, handling the export of platinum, coffee, timber, and oil products. Cosmetics, textiles, sugar, tobacco products, leather goods, and fertilizer are produced here. Cartagena is one of Colombia’s major ports. Aerovías Nacionales de Colombia (AVIANCA) flies in from New York and Miami, bringing businessmen to its industrial and commercial houses, and tourists to its fascinating historical sites and cosmopolitan attractions. The population of Cartagena was 918,000 in 2000.

Cartagena commemorates its independence each November in a carnival atmosphere, which includes the national beauty contest for the crown of “Miss Colombia.” Candlemas Day, the religious feast of the Virgin de la Candelaria, is fervently observed every year on the second day of February at the monastery of La Popa, in the hills outside the city.

Cartagena is known throughout Colombia for its fine restaurants and its jazz and disco clubs. There are good hotels in the new city,

attracting tourists throughout the year.

Education

George Washington School is a coeducational, day, proprietary school for children in pre-kindergarten through grade 12. Founded in 1952 and sponsored by the Office of Overseas Schools and the U.S. Department of State, it is accredited by the Southern Association of Colleges and Schools and the Colombian Ministry of Education.

Both U.S. and Colombian curricula are used. Spanish is offered, along with art, computer science, and physical education. Extracurricular activities include drama, gymnastics/dance, literary and news publications, field trips, and varied sports.

The school year extends from mid-August to the beginning of June, with vacations at Christmas, Easter, and U.S. and Colombian holidays. In 1991, the enrollment at George Washington School was 483. Of 27 full-time and seven part-time teachers, eight were Americans.

George Washington School is located on beach front property in Cartagena. Facilities include 20 classrooms, science and computer laboratories, athletic fields, cafeteria, and a 11,000-volume library. The mailing address is Apartado Aéreo 2899, Cartagena, Colombia.

Bucaramanga

Bucaramanga, the capital of Santander Department, is in north central Colombia, about 200 miles northeast of Bogotá. It is situated in the Cordillera Oriental of the Andes Mountains at an altitude of 3,340 feet. The city was founded in 1622, and many of its colonial monuments and buildings are still in evidence. Today, with a population of 1.5 million, Bucaramanga is a leading commercial city in the center of the country’s coffee and tobacco area. Cacao and cotton are also produced. Several manufacturing ventures in the city produce cigars, cigarettes,

textiles, straw hats, and iron products.

Known for its beautiful parks, Bucaramanga is often called Colombia's "garden city." It is also noted for the modern Universidad Industrial de Santander, which opened here in 1947.

Many American children in the area attend the Pan-American School, a coeducational, day, proprietary institution. Implementing a U.S. and Colombian curriculum (French is a required language), the school year extends from February to December, with vacations at Christmas, Easter, and from mid-June to mid-July. In 1991, the school had 318 students. Nine of the school's 24 full-time teachers were American. The school has a cafeteria, science lab, computer lab, and playing field. The school is located on five acres of land just outside the city; the mailing address is Apartado Aéreo 522, Bucaramanga, Colombia.

OTHER CITIES

ARMENIA, located in west-central Colombia, about 100 miles west of Bogotá, is a relatively new city. The city is situated in a rich agricultural region, best known for coffee and for the production of food and beverages. Other crops grown include corn, beans, silk, sugarcane, and plantains. Its population, counted with neighboring Calarcá, has already reached 306,000. As the capital of Quindío Department, it is the seat of a university, founded in 1962.

BELLO, at 4,905 feet above sea level, is located in northwestern Colombia. Situated on the Río Porce, in a fertile region, Bello was once a commercial center. Today, it is a part of the industrial complex of Medellín, located six miles south. The major industries are textile milling and brush manufacturing. Bello's estimated population is 370,000.

BUENAVENTURA is a Pacific port, about 50 miles west of Cali. Located on Cascajal Island in Buenaventura Bay, the city is the shipping point for the tobacco and sugar produced in the nearby Cauca Valley. Other items exported from here include coffee, hides, platinum, and gold. The city was founded in 1540, but was destroyed by Indian raids in the 16th century. Buenaventura's importance as a port increased with the building of the Panama Canal. It has steamer connections with Panama and is also the terminus of railroads in western Colombia. The current population is 271,400.

CÚCUTU (also known as San José de Cúcuta) is in northeast Colombia, 250 miles north of Bogotá. It is the capital of Norte de Santander Department, near the Venezuelan border on the Colombia-Venezuela highway. Cúcutu was founded in 1733 and captured from Spanish forces by Simón Bolívar in 1813. From here, Bolívar set out on his march to Caracas. Destroyed by an earthquake in 1875, Cúcutu was rebuilt, and today its population, including the environs, is 682,325. Cúcutu is an industrial city and the center of a rich coffee, oil, and mineral region. The city is linked by air, river, and railway connections with the cities of northeastern Colombia and Venezuela.

GIRARDOT is about 50 miles southeast of Bogotá, and one of the most popular warm-weather spots in the country. The city is noted for its numerous acacia trees. Also, large varieties of tropical fruits, as well as unusual pottery, can be purchased in the town's central plaza. Founded in 1853, Girardot is a commercial center whose principal products include coffee, livestock, and tobacco. The current population is close to 125,000.

Located in northern Colombia near the Río Porce, **ITAGÜI** was formerly a resort and local commercial center. Today, like other cities in the area, Itagüi is a part of the industrial complex of Medellín, located five miles northeast. The important

industry in Itagüi is textile milling. Its population is close to 435,000 (2001).

LETICIA, capital of the Amazonas *comisaria* (lesser territory), is Colombia's principal town on the Amazon River, 670 miles southeast of Bogotá. Accessible by air, it provides tourists with such attractions as Amazon River excursions, visits to primitive Indian villages, and trips through dense rain forests. Leticia has practically no industry and relies on rubber gathering as a major economic activity. Leticia is located at the northern end of the Peru-Brazil border, and it is easy to make border crossings among the three countries in one day. The town, with a population of approximately 8,000, has been the site of several border disputes between Peru and Colombia. Peru ceded it by treaty in 1922, but seized it back 10 years later. The region was ultimately awarded to Colombia by the League of Nations in 1934.

MANIZALES, capital of Caldas Department, is 100 miles west of Bogotá and 125 miles north of Cali. Located at an altitude of 7,063 feet, it is a commercial and agricultural center in an area producing much of the country's coffee. The city was founded in 1847 by gold prospectors and there are gold and silver mines nearby. A cement plant is located in the city, as are factories producing agricultural machines, textiles, refrigerators, furniture, and leather goods. Manizales is the site of the University of Caldas. An earthquake destroyed Manizales in 1878, and it was leveled by fire in 1925. Situated in a higher and cooler setting than Cali, Manizales straddles a narrow ridge beneath snow-capped Mt. Ruiz, where adventurous souls have tried skiing on the 16,000-foot slope of year-round snow. The population today, including nearby Villamaria, is over 330,000.

MONTERÍA, with a population of over 230,000, is the capital of Córdoba Department. Situated in northwestern Colombia, it is an inland port on the Río Sinú. The city

was originally a Zenúe Indian village used as a hunting post—Montería means “hunting” in Spanish. Industries here include lumbering, stock raising, and tagua nut production. The University of Córdoba is located here.

NEIVA, the capital city of Huila Department, is located in south-central Colombia, over 100 miles south of the nation’s capital. Capt. Diego de Ospina claimed Neiva for the Spanish crown in 1612, after several others had tried unsuccessfully to establish the settlement. The city is basically agricultural, producing corn, rice, cotton, and sesame. It manufactures cement and cotton goods and processes marble. Neiva has excellent water, land, and air routes. The city’s population in 2001 was approximately 349,000.

PALMIRA, with a population of well over 150,000, is located on the Pan-American Highway about 50 miles east of Cali and 175 miles southwest of Bogotá. At an altitude of 3,000 feet, Palmira is situated in the Cauca River valley, and is known as the agricultural capital of Colombia. Major crops in the area include coffee, tobacco, rice, corn, and sugarcane. Tours of the sugar refineries in Palmira are open to the public.

The city of **PASTO** is located in southwestern Colombia, just over 100 miles north of Quito, Ecuador. It is the capital of Nariño Department and is situated on a high plateau at the foot of the Galeras volcano. Pasto has flour and textile mills, sugar refineries, distilleries, and tanneries. Its principal product is wooden bowls finished with locally produced varnish. Founded in 1539, the city served as royalist headquarters during the revolutionary wars. The University of Nariño is located here. Pasto’s population is almost 405,000 (2001 est.).

POPAYÁN, 75 miles south of Cali, is situated at an altitude of 5,500 feet on a volcanic terrace above the Cauca River. The city was founded in 1536 by Sebastián de Benalcázar and was the most important settle-

ment in southwest Colombia during the colonial and immediate post-independence periods. During colonial times, Popayán prospered as a religious, cultural, and aristocratic trade center. Following Colombia’s independence, Popayán lost much of its commercial importance, but retained its cultural prominence. There has been a university here since 1827. With a population of 230,137 (2001 est.), it is the capital of the Department of Cauca. Coffee is the chief commercial activity; mining is also done in the surrounding region. The city has several small manufacturing enterprises. These industries process food and beverages and manufacture building materials and clothing. Popayán is the repository of many priceless examples of Spanish colonial art and architecture. Numerous buildings destroyed in a recent devastating earthquake are now being restored. A visit to the city during Holy Week to view the internationally famous religious processions is worthwhile.

SANTA MARTA is situated in northern Colombia on the Caribbean Sea, 50 miles east of Barranquilla. Founded in 1525 by Rodrigo de Bastidas, Santa Marta is the oldest city in Colombia. It became an important banana shipping center in the late 19th century; today, the city’s banana industry is operated by the United Fruit Company and is one of the most important in South America. The Atlantic Railway, which climbs through the beautiful mountains to connect Santa Marta with the interior, was completed in 1961. The city is also accessible by highway and air. With a population over 235,000, Santa Marta has fine beaches and is a tourist resort. Santa Marta is the home of the Technological University of Magdalena. Simón Bolívar died on an estate near here in 1830.

TULUÁ is situated in western Colombia, over 100 miles from Bogotá. It was originally settled by the Putimáes Indians and called Villa de Jerez by the explorers. The Indians resisted the Spanish attempts at conquest and, in 1636,

Tuluá was established as a large cattle ranch and Indian village. It was not until 1814 that the city won municipal status. Primarily an agricultural center, Tuluá produces yeast, beef, and milk. An annual fair is held to display prize cattle and industrial goods. It is located near the Puerto Berío-Popayán railroad and the Pan-American Highway. The population here is almost 185,000.

TUMACO is located in southwestern Colombia, 375 miles from Bogotá. Situated on a small island just off the coast, it is Colombia’s southernmost Pacific port. A commercial center, with about 160,000 residents, the city is the center of lumbering activity including plywood and molding factories. Gold mines are in operation near Tumaco. Tumaco exports ivory, nuts, cacao, tobacco, vegetables, coffee, and other items produced in the country’s interior.

TUNJA, 85 miles northeast of Bogotá, on the Pan-American Highway, is the capital of Boyacá Department. The city was founded in 1529 and became independent from Spain in 1811. Many of its early structures are still standing. Situated in the Cordillera Oriental of the Andes, Tunja is a commercial center and distribution point for coal, emeralds, mineral water, and agricultural products produced in the area. Tunja is the home of the Pedagogical and Technological University of Colombia. The city is linked by rail and highway to Bogotá. Tunja’s population is about 123,000 (2001 est.).

VALLEDUPAR, the capital city of César Department, has a population of approximately 354,000 (2001 est.). It is situated in northern Colombia, just west of the Venezuelan border. Founded in 1550, the city was prosperous during the colonial period but experienced setbacks during the 19th-century civil wars. Today, as a commercial hub, Valledupar produces bricks and ice. A large sawmill is also located here.

VILLAVICENCIO lies on the Meta River, about 50 miles southeast of Bogotá. Its position in the eastern foothills of the Andes makes it the gateway to the eastern plains of Colombia and the primary urban center of the llanos and forest region in this area of the country. Villavicencio is the capital of Meta Department. The climate here is warm, and the town is a cattle center with a frontier atmosphere. Industries include a distillery, a brewery, soap factories, coffee-roasting plants, and saddleries. Other products are coffee, bananas, rubber, and rice. The current population is about 340,300.

COUNTRY PROFILE

Geography and Climate

The Republic of Colombia (about 440,000 square miles), roughly the size of Texas, Arkansas, and New Mexico combined, is in northwest South America. Its location on the Caribbean Sea and Pacific Ocean, proximity to the Panama Canal, and economic potential give it a position of international importance.

As well as its frontier with Panama on the northwest, Colombia shares borders with Ecuador and Peru on the south, with Brazil on the southeast, and with Venezuela on the northeast.

The Andes dominate the western two-fifths of Colombia, giving it a very different character from the remaining three-fifths in the east. The Amazon region of southeastern Colombia lies below the Equator.

Well over 90% of the population is concentrated in the mountainous west and along the Caribbean and Pacific coasts. The remainder live in the Eastern Llanos, a large plains area, constituting 54% of the nation's area.

Most live on plateaus and mountain slopes, where elevation reduces the heat of the equatorial climate and contributes to the health and vigor of the people. By concentrating people in isolated pockets at high elevations, the mountain ranges determine not only settlement patterns, but also lines of communication and travel, which parallel the ranges in a north-south direction. Movement from rural to urban areas has been heavy, and nearly three-quarters of the population is now urban.

Colombia's climate varies with its different altitudes. Its three climatic zones are called "hot country," "temperate country," and "cold country."

Population

According to Colombian government statistics, the 2000 population was over 40 million. The population growth rate is 1.6%. Colombia is unique in Latin America in that 26 cities have populations over 100,000.

Due to recent improvements in health and sanitary conditions and a decrease in infant mortality, the population is relatively young: 31% are under 15 years of age, and only 5% are over 65.

In terms of total area, population density is a low 39 persons per square mile. This figure is misleading because the density per arable square mile is about 1,500 persons. Whether this ratio can be maintained or held down to a reasonable level through productive use of large jungle, forest, and plains areas is a major socioeconomic problem.

Settlement is divided into several broad regions. Each has been rather isolated by geologic obstacles to travel, so each has a high degree of economic independence of essential raw materials and fuel. Much of the prevalent regional sentiment can be traced to early settlement patterns.

When the Spanish Colonists entered what is now Colombia, they found a rather well-organized Indian population on the plateaus and high valleys of the Eastern Cordillera. A moderate climate, adequate natural resources, and Indian labor allowed the Cundinamarca-Boyaca area and parts of Tolima and Huila to develop into an economic entity which today has the heaviest concentration of people in the country. Here, Bogota became the economic, political, and cultural center of Colombia.

In the early 19th century, another population center developed along the northern end of the Eastern Cordillera when the export of cinchona bark became highly profitable. White settlers then appeared in significant numbers in what are now Santander and Norte de Santander.

A third population center developed in the area of the Departments of Antioquia and Caldas, usually called the Antioquia region. Other major population concentrations are in the Cauca River Valley (from Popayan to Cali and Cartagena), and the ocean ports: Buenaventura and the Pacific coast and the Cartagena-Barranquilla-Santa Marta region along the Atlantic shore.

Among the countries of Latin America, Colombia is commonly described as a mestizo nation, rather than a white or an Indian one, with a mixed and diverse society.

Colombians describe their society as tri-ethnic, due to mingling between Caucasians and peoples of African descent with the original Indians to form a new combination. This fusion has taken nearly four centuries and, consequently, most Colombians are of mixed origin. Ethnic boundaries have not been completely erased. Colombians still attach importance to ancestral characteristics, although these no longer demarcate distinct social groups.

Spanish is spoken throughout Colombia, except by small groups of

Indians who still speak aboriginal languages; however, these groups are becoming increasingly bilingual. San Andres, a small island Department in the Caribbean, is another exception; San Andrians speak English as a first language. Colombians are proud of their Spanish and consider it, especially that spoken by the upper classes in Bogota and other large cities, as the purest form of that language in Latin America today.

Colombia is overwhelmingly a Catholic country (approximately 90%.) Although freedom of worship is guaranteed by the Constitution, the Catholic Church receives some funds from the government and exercises considerable, although diminishing, influence over education. The church is the major social force in Colombia.

Public Institutions

The Republic of Colombia was established in 1823. In the same year, the United States became one of the first countries to recognize the new Republic and establish a resident diplomatic mission.

Colombia, unlike many Latin American countries, established an early tradition of civilian governments and regular free elections. Despite this background, Colombia's history has been marred by periods of violent political conflict. The period known as "La Violencia" in the 1940s and 1950s claimed between 100,000 and 200,000 lives. More recently, drug and guerrilla-related violence have plagued Colombian society. Since the early 1980s, the Colombian government has engaged in intermittent peace talks with guerrilla groups. In 1990, the guerrilla group M-19 (Movement of April 19) delivered its weapons to the government and scored surprising electoral gains as a legal political party. However, the two political parties, the Liberal and Conservative, soon shadowed the M-19 emergent preponderance. Two older and larger guerrilla armies, the Revolutionary Armed Forces of Colombia (FARC) and the National Liberation

Army (ELN), remain in armed conflict with the government.

A military coup in 1953 brought General Gustavo Rojas Pinilla to power. Initially, Rojas enjoyed wide popular support, partly for his success in reducing La Violencia. When he did not promptly restore democratic government, however, he was overthrown by the military with the backing of the two major political parties (the Liberals and the Conservatives), and a provisional government took office in 1957.

In July 1957, the last Conservative president, Laureano Gomez (1950-53), and the last Liberal president, Alberto Lleras Camargo (1945-46), proposed the formation of a "National Front," under which the Liberal and Conservative parties would govern jointly. Through regular elections, the presidency would alternate between the two parties every four years; the parties would also share all other elective and appointive offices.

The first three National Front Presidents brought an end to La Violencia and the blind partisanship which had afflicted both parties. They committed Colombia to the far-reaching social and economic reforms proposed in the Charter of the Alliance for Progress, and, with assistance from the United States and international lending agencies, achieved major economic development.

The 1886 Constitution was substantially amended in 1991 by a 74-member Constituent Assembly. On July 4, 1991 a new Colombian Constitution was enacted. The new Constitution, one of the largest in the world, expanded citizens' basic rights. Among others, the most relevant is the "tutela" (immediate court action at the request of a citizen if he/she feels his/her constitutional rights have been violated and no other legal recourse is available). However, keystones to the constitutional reform in 1991 were the need to reform Congress and to strengthen justice administration by introducing the accusatorial sys-

tem. Other relevant amendments were the approval of freedom of religion (in the past, Colombia's official religion was the Roman Catholic), civil divorce for all marriages, the election of a Vice-President, the election of governors, and dual nationality.

Colombia remains a democratic republic under a presidential system with Executive, Legislative and Judicial branches of government. Elected for a 4 year term, the President is the chief of the Executive Branch. He may not be reelected. The Vice-President runs for election on the same ticket as the presidential candidate, and both should be members of the same political party. The Vice-President fulfills the duties of the President in case of the President's resignation, serious illness, or death. However, the Vice-President may be assigned other special responsibilities, hold public positions, and even fulfill special presidential functions at the President's request. During the President's temporary absences, such as international trips, the Minister of the Interior or another minister in order of precedence performs his duties.

Colombia's bicameral Congress consists of a 102 member Senate elected on the basis of a nationwide ballot, and a House of Representatives whose number, currently 165, is elected proportionally by adult residents (age 18 and over) of the Departments and the Capital District. Congressional elections are held every four years, on a different date from the Presidential election. If a member of Congress is absent temporarily or permanently, his seat is taken by an alternate elected at the same time as the member.

Congress meets in two sessions annually, from March to June and from July to December. The president may convene special sessions at other times.

The country is divided into 32 departments, 1,025 municipalities—of which 30 cities have over 100,000 inhabitants—and the Capi-

tal District of Santa Fe de Bogota (herein referred to as Bogota). Governors and mayors are elected for a 3-year term.

Judicial power is exercised by subordinate courts and four high tribunals: The Constitutional Court (9 members elected by the Senate), the Supreme Court (20 members, highest criminal, civil and labor tribunal), the Council of State (26 members, highest tribunal for contentious administrative matters), and the Judiciary Superior Council (13 members, highest tribunal for justice administration and disciplinary issues of the judicial branch). The high court justices are elected for an 8-year term. Justices of the Constitutional Court, the Supreme Court and the Council of State may not be reelected.

The Office of the Prosecutor General (Fiscalía General de la Nación) was created under the 1991 Constitution and serves as the driving force in Colombia's accusatorial model of criminal investigation. The Prosecutor General is elected by the Supreme Court for a 4-year term and may not be reelected.

The Office of the Attorney General or Public Ministry (Procuraduría General de la Nación) oversees the performance of public servants. The Attorney General is elected by the Senate for a 4-year-term oversees the performance of public servants. The Attorney General is elected by the Senate for a 4-year term.

The Office of the Public Defender (Defensoría del Pueblo), under the Attorney General, is elected by the House of Representatives for a 4-year term to protect and defend human rights.

Arts, Science, and Education

Bogota is a cultural center with thriving theaters, orchestras, opera, museums and art galleries. Other major cities in Colombia also support the arts. The Centro Colombo-Americano in Bogota and its coun-

terpart Binational Centers around the country also provide venues for art presentations.

Visiting dancers, musicians and actors from all parts of the world perform in Bogota. Films from around the world are also screened in the many cinemas, including current U.S. movies in English with Spanish subtitles.

Bogota's bookstores, among the finest in Latin America, offer titles in English, French and German as well as Spanish. The American Library at the Centro Colombo-Americano has a solid and current collection of books and recent periodicals in English.

A small video library is also maintained there, and the annex where it is located offers service to visitors and students on weekend hours. Other libraries also hold small selections of English-language collections.

Colombia's literacy rate is over 91%. The basic structure of education in Colombia includes two years of preschool, five years of primary school, and six years of secondary school. Curricula for public and private elementary and high schools are developed by the Ministry of Education.

Under the 1991 Constitution, education is compulsory up to age 15. Previously, only the first five years were mandatory. The student population, including 500,000 at the university level, is estimated more than 4.5 million. The more than 230 institutions of higher education in Colombia offer programs in a wide variety of disciplines and at different types of institutions which grant degrees at the technical and/or professional levels. The biggest public university is Universidad Nacional de Colombia, with the main campus in Bogota and others in Medellin, Manizales and Palmira. Some of the oldest and most reputed private universities are Universidad de Santo Tomas, founded in 1580; Pontificia Universidad Javeriana, founded in 1622; and Colegio Mayor de Nuestra Señora del Rosario,

founded in 1653. Universidad de Los Andes in Bogota and Universidad del Valle in Cali are among the leading universities in the country and are known internationally for their academic excellence. Universidad Javeriana offers summer programs in Spanish language. Many Colombians do their graduate studies abroad.

Commerce and Industry

Colombia has a diversified economy which has enjoyed steady growth throughout the 1980s and 1990s. Contrary to popular opinion, cocaine trafficking does not play a major role in the overall Colombia economy nor does it provide significant foreign exchange earnings for the nation. Colombia is rich in natural resources and fertile agricultural land. It is the world's second largest producer and exporter of coffee. Other agricultural products include sugar, cotton, rice, bananas, corn, potatoes, yucca, cocoa, barley, flowers and sisal-like fiber ("fique"). Livestock also accounts for a large share of agricultural output, although in recent years the cattle industry has been in decline. Other products include petroleum, gold, platinum, silver, coal, iron, lead, limestone and salt. In addition, nickel exports are an important source of foreign exchange. Colombia's emeralds are world famous.

Coal and petroleum have become important exports in the last ten years. An affiliate of EXXON and the Colombian National Coal Company (Carbocol) together developed Colombia's giant north coast coal field. The project, named Cerrejon North, required an investment of US\$3.2 billion and represents the largest U.S. investment in Colombia. Production began in 1985, and exports grew quickly to over US\$600 million in 1990.

Occidental Petroleum Company and the Colombian national oil company Ecopetrol, jointly developed Caño Limon, a major oil field in the Llanos near the Venezuelan border.

Development includes facilities for extraction and transport, and storage and export facilities in Coveñas on Colombia's north coast. The field's proven reserves are over one billion barrels. Production from the field has helped make Colombia self-sufficient in crude oil and a significant Latin American oil exporter (approximately 250,000 BPD). Colombia must still import a large percentage of its gasoline, due to insufficient refining capacity within the country.

Drummond Ltd. recently began operations in La Loma coal deposit. This bituminous coal has similar characteristics to that mined at the Cerrejon deposit and La Loma's project infrastructure is capable of producing up to 10 million tons a year to be exported via a private port venture. The government can create incentives for foreign investors in mineral development projects under the Mining Code.

Colombia enacted its 1991 Constitution under the principles of sustainable development and the protection of the country's rich biodiversity. The creation of the Ministry of the Environment and the National Environmental System sets a new framework for the government to plan strategies for the development of an environmental conscience in the public and private sectors; to develop policies for the efficient use of natural resources; to enforce environmental regulations; to control industrial pollution sources; and, to improve the institutional and legal framework of the environmental entities within the system.

In 1990, Colombia greatly accelerated an ambitious program of economic opening, called *apertura*, which is designed to make Colombia globally competitive. The country's industrial base, while growing slowly, is undergoing changes as Colombia frees its trade regime to allow more imports to enter at lower tariff rates. Less efficient industries are facing foreign competition, forcing them to modernize, improving technology and efficiency.

As part of the *apertura* program, legislation was passed at the end of 1990 to liberalize and modernize the foreign investment, foreign exchange, labor, tax and foreign trade regimes. Changes include legalization of 100% ownership of financial institutions by foreign investors, a reduction in currency controls, increased profit remittance ceilings, and more flexible hiring and firing practices. Prior licenses for imports have been virtually eliminated. Tariffs, although still high for luxury goods, have been reduced substantially. These laws will improve the already close financial and commercial ties between Colombia, the U.S. and Europe.

Foreign investment is permitted in all sectors of the Colombian economy with the exception of public security (defense and police) and nuclear energy. The government is interested in privatizing or bringing private investment into previously restricted sectors such as telecommunications and public works. Long distance telephone services are scheduled to be provided by competing private companies starting in 1997. Private oil and mineral extraction projects must still be approved by the Ministry of Mines and Energy, and financial sector investments must have the prior approval of the Banking Superintendency.

Until recently, the Colombian government maintained a policy of gradual devaluation (crawling peg) of the peso against the dollar to keep Colombian products competitive in world markets. Colombia's principal exports are coffee, oil, coal, textiles, leather products, bananas, cut flowers, fruits and citrus, cotton, sugar, tobacco, cement, lumber, shrimp, rice, cowhides, and precious metals.

Approximately 80% of Colombia's population lives outside Bogota. Much of the country's economic activity is spread among several modern and urbanized industrial centers. The cities of Medellin, Cali, Barranquilla, Cartagena, Bucara-

manga, Pereira, among others, play a significant role in the country's economy. The existence of four major ports and six international airports guarantees that goods may flow freely to and from Colombia without dependence upon Bogota.

The United States continues to be Colombia's largest trading partner, accounting for about 35% of its exports and 39% of its imports. The two nations formed the Joint Commission on Trade and Investment (TIC) in July 1990 to further economic ties and reduce barriers to trade between Colombia and the U.S. The TIC met most recently in May 1996.

Transportation

Local

Taxis are easily available and rates are reasonable. You may call via telephone, and one will be radio dispatched, or you can wave them down on the streets. As in most large cities, your wait may be long during rush hours and on rainy days. All taxis are metered and inexpensive by U.S. standards, except the green - and - white tourist taxis, which provide transportation to and from the first-class hotels.

Special arrangements can be made to hire taxis by the hour for local shopping trips, sight-seeing tours, etc. Bogota and most other cities in Colombia have bus service, but security and safety are poor.

Regional

Airline service within Colombia is good, ranging from Avianca's modern jet fleet to some "budget" airlines' DC-3s. Fares are expensive by U.S. standards for jet service. Connections between major cities are frequent and schedules are generally adhered to.

Bogota has a major international air terminal, with daily flights to the U.S., Europe, and other parts of Latin America. Barranquilla and other major cities also have ade-

quate airport facilities with many international flights. Air fares for international routes are expensive; a round-trip excursion between Bogota and Miami between June through August and December through February, including taxes is approximately US\$700. At other times, the fare is approximately US\$500. Off-season special fares are currently offered twice annually. Both Continental and American Airlines service Colombia. The Colombian Government imposes a departure tax on international travelers of approximately US\$23 which can be paid in local currency or U.S.dollars.

Colombian drivers are very aggressive and often do not obey local traffic regulations. Traffic is heavy, road conditions are often bad due to numerous potholes. Minor accidents are frequent. Maintenance and body work are normally good, but parts and labor are expensive.

Traffic moves on the right. All distances and speed limits are given in kilometers, and international symbols are used for stop signs, railway crossings, etc.

Communications

Telephone and Telegraph

Long distance telephone service is satisfactory. Calling the U.S. from Bogota is expensive, and you may wish to apply for a long-distance telephone credit card such as AT&T. A three minute call to Washington, D.C., costs about US\$8.48 (plus US\$1.49 per minute thereafter) during the week and US\$4 (plus US\$1 per minute thereafter) on Sundays.

Colombia has complete domestic and international telegraph and FAX service.

Radio and TV

Colombia has many commercial radio stations and reception is good.

Programs are mostly Latin American music; however, some stations broadcast classical music and cul-

tural programs and others give heavy play to American popular music, including rock and jazz. All broadcasts are in Spanish. English-language newscasts are heard on shortwave broadcasts by the VOA and American Forces Radio (AFRTS); reception is good. Numerous FM stereo stations operate in Bogota.

In 1992 the government began a program of restructuring Colombian television. Ownership has changed from completely government-controlled to shared public and private hands with the airwaves, transmission infrastructure and some of the production facilities owned by Inravisión, the government's broadcasting regulatory authority. Sixty percent of airtime must be given to Colombian-produced programs. Foreign programs are shown to supplement local production.

Inravisión operates three national channels. Programming includes local and world news, soap operas, sports, educational, entertainment and movies. There is also parabólica satellite antenna and Cable TV available for an additional fee, which offers several English-speaking movie channels as well as CNN and ESPN.

Newspapers, Magazines, and Technical Journals

All major cities have at least two daily newspapers; the two major dailies in Bogota, *El Tiempo* and *El Espectador*, are available in all cities and on the Internet. Most papers lack comprehensive coverage of international events, but *El Tiempo* and *El Espectador* offer adequate coverage. An English-language weekly newspaper is available. Internet access is relatively expensive.

A satellite edition of the *Miami Herald* is printed in Bogota on a same-day basis. The *International Herald Tribune* and the *New York Times* are sold in major tourist hotels one or two days after publication.

The Latin American editions of *Time* and *Newsweek* magazines are regularly available in all major cities. Copies of most US magazines available locally are scarce and at least double Stateside prices.

Health and Medicine

Medical Facilities

Reputable and reliable doctors, dentists and optometrists practice in Colombia. Many have been trained in the U.S. and speak English.

The Santa Fe Clinic (Hospital) is generally recommended, although there are several other local facilities which offer good care. Equipment and technology at the Santa Fe Clinic are equal to those available in good hospitals in the U.S. Nursing care is acceptable and improving. Support services such as laboratories are also above average.

Barranquilla has a University Hospital and private facility, Clínica Bautista, where medical attention of good quality can also be obtained. Doctors and support services are also adequate.

Common medications are available in Colombia and cheaper than in the U.S. Bring any specific/prescription or other medicines (allergy, etc.) in airfreight or household effects, since many brand names are unavailable locally.

Community Health

The Colombian environment is generally healthy. Sanitation in Colombia varies, depending on the area, from adequate to lax. Diarrhea, amebiasis, infectious hepatitis and other diseases caused by contaminated food and water are more prevalent than in the U.S. Water is considered safe in some large cities, but not in villages or outside the cities. Pasteurized milk and milk products of high quality are available in the supermarkets in large cities, as is bottled water. As in the U.S., mumps, measles, chicken pox, and poliomyelitis as well as other viral infections are encountered here.

Rabies is prevalent in some areas of Colombia; however, at present, cases of rabies transmission to humans are very rare in the cities. Antirabies campaigns are nagging in Colombia.

Preventive Measures

Most foods can be freed of contamination by cooking or boiling, or, with fruits, by peeling. Lettuce and leafy vegetables are treated by washing well and rinsing. A soaking for 30 minutes in an iodine or chlorine solution provides added protection.

Recommended inoculations include typhoid, tetanus, polio, yellow fever, Hepatitis B and Hepatitis A. Have your shots checked before departing, and keep them current.

Bogota's high altitude causes short-term breathing difficulties, insomnia, and weight loss in some healthy individuals. Normally, these symptoms quickly subside.

Malaria suppressant pills (i.e., Aralen) are unnecessary in the major cities, but are suggested for individuals who plan to visit eastern Colombia, the Pacific Coast and the lower Magdalena River Valley.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Air travel to Colombia is recommended; all major cities have airports American Airlines and Continental are currently the only U.S. flag carriers.

A valid U.S. passport is required to enter and depart Colombia. Tourists must also provide evidence of return or onward travel. U.S. citizens do not need a visa for a tourist stay of 60 days or less. Stiff fines are imposed if passports are not stamped on arrival and if stays exceeding 60 days are not authorized by the Colombian Immigration Agency (Departamento Administrativo de Seguridad, Jefatura de Extranjeria, "DAS

Extranjeria"). U.S. citizens whose passports are lost or stolen in Colombia must obtain a new passport and present it, together with a police report of the loss or theft, to the main immigration office in Bogota to obtain permission to depart. An exit tax must be paid at the airport when departing Colombia. For further information regarding entry and customs requirements, travelers should contact the Colombian Embassy at 2118 Leroy Place, N.W., Washington, DC 20008; telephone (202) 387-8338; Internet website - <http://www.colombiaemb.org>; or the Colombian consulate in Atlanta, Boston, Chicago, Houston, Los Angeles, Miami, New Orleans, New York, San Francisco or San Juan.

In an effort to prevent international child abduction, many governments, including Colombia's, have initiated procedures at entry/exit points. These often include requiring documentary evidence of relationship and permission for the child's travel from the parent(s) or legal guardian not present. Having such documentation on hand, even if not required, may facilitate entry/ departure.

Colombia's specific procedures mandate that minors (under 18), regardless of nationality, who are traveling alone, with one parent or with a third party must present a copy of their birth certificate and written authorization from the absent parent(s) or legal guardian, specifically granting permission to travel alone, with one parent or with a third party. When a parent is deceased, a notarized copy of the death certificate is required in lieu of the written authorization. If documents are prepared in the United States, the authorization and the birth certificate must be translated into Spanish, notarized, and authenticated by the Colombian Embassy or a Colombian consulate within the United States. If documents are prepared in Colombia, only notarization by a Colombian notary is required. A permission letter prepared outside of Colombia is valid for 90 days. A

permission letter prepared in Colombia is valid for 60 days.

U.S. citizens living in or visiting Colombia are encouraged to register and obtain updated information on travel and security in Colombia either at the Consular Section of the U.S. Embassy in Bogota or via the Embassy's website (see website address below). The Consular Section is open for citizens services, including registration, from 8:30 a.m. to 12:00 noon, Monday through Thursday, excluding U.S. and Colombian holidays. The U.S. Embassy is located at Avenida El Dorado and Carrera 50; telephone (011-57-1) 315-0811 during business hours (8:30 a.m. to 5:00 p.m.), or 315-2109/2110 for emergencies during non-business hours; fax (011-57-1) 315-2196/2197; Internet website - <http://usembassy.state.gov/bogota>. The Consular Agency in Barranquilla, which provides some limited consular services, is located at Calle 77B, No. 57-141, Piso 5, Centro Empresarial Las Americas, Barranquilla, Atlantico, Colombia; telephone (011-57-5) 353-2001; fax (011-57-5) 353-5216; e-mail: conagent@metrotel.net.co.

Firearms & Ammunition

Colombian law prohibits tourists and business travelers from bringing firearms into Colombia. The penalty for illegal importation and/or possession of firearms is three to ten years in prison. It is advisable to contact the Embassy of Colombia in Washington or one of Colombia's consulates in the United States for specific information regarding customs requirements.

Pets

Pets must be accompanied by vaccination and health certificates certified by a Colombian consul. It is recommended that pets NOT be shipped as unaccompanied baggage.

Pets arriving at the airport as unaccompanied baggage after 2:00 PM cannot be cleared for entry until the next business day; unfortunately, the customs warehouse has no facilities for their proper care.

Currency, Banking and Weights and Measures

The basic monetary unit in Colombia is the Colombian peso (COP), a decimal currency. In writing, the same sign is used for both the peso (\$) and the U.S. dollar (\$) so they are often written either Col\$, COP or Ps. Both paper currency and metal coins are used; the most common bills are in denominations of 1,000, 2,000, 5,000, 10,000, and 20,000 pesos. Coins are minted in values of 50, 100, 500, and 1000 pesos. The exchange rate in June 2002 was roughly COP\$2,331.72 pesos per US\$1.

Among U.S. banks with partially owned subsidiaries in Colombia are the First National City Bank and Bank of America.

Colombia is officially metric, with all distances measured in kilometers, heights in meters and temperature in Celsius. Many bulk commodities, however, such as coal and wood, are sold in "cargas," which vary according to the material weighed. Generally, it is the amount which can be loaded on a horse or burro. Bulk foodstuffs, such as fruits, vegetables, etc., are sold by the pound rather than by the kilo, and gas is sold in liters.

Disaster Preparedness

Colombia is an earthquake-prone country. U.S. citizens in Colombia may refer to information on dealing with natural disasters on the U.S. Embassy's web site at <http://usembassy.state.gov/bogota/wwwhacsc.html>. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>.

COSTA RICA

Republic of Costa Rica

Major City:

San José

Other Cities:

Alajuela, Cartago, Golfito, Heredia, Liberia, Limón, Puntarenas

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Costa Rica. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Sometimes called the Switzerland of Middle America, Costa Rica straddles the mountain backbone that separates the Pacific from the Caribbean. Rugged ranges, topped by active volcanoes, climb sharply from lush jungles of the coastal regions and cradle a central plateau.

Legend holds that Columbus saw Indians wearing gold ornaments and named the region Costa Rica-Rich Coast. It enjoys a living standard considered the highest in Central America.

The explorers and "conquistadores" that were to come after Columbus did not find great native empires; instead, they found different tribes

that were loosely connected or fragmented completely. While important Indian empires were falling-in 1532 the Incas and in the 1540s the Aztecs-Costa Rica was left alone, mostly because dreams of gold and jewels had proved to be illusions. It was not until 1559 that Spain decided to conquer Costa Rica.

Costa Rica is different from the rest of Central America because its people distribute their wealth, land, and power far more equitably. Its social welfare system and parliamentary democracy have no equal. To its everlasting good fortune, it was the most neglected of colonial Central America. It had neither of the two things the Spanish conquistadors wanted: mineral wealth (gold and silver), or an abundant Indian population to work their haciendas. The absence of minerals and indigenous workers meant that settlers worked their own land-and there was plenty of it to go around for centuries-to form a huge middle class of yeoman farmers. Money became so scarce at times that colonists had to substitute it with the Indian equivalent — cacao beans.

Wheat and tobacco were among the first products to be exported to Spain and other countries. Costa Rica was transformed by coffee in the 19th century. The brown bean attracted foreign capital and immi-

grant merchants and promoted road and railroad development. In one of the major engineering feats of the age, the San Jose-Puerto Limon railroad was completed in 1890, and from it a banana empire was built in the process. It connected the U.S. fruit centers of New Orleans and Boston with San Jose.

The country boasts a population close to 3.5 million people, which by standards of the region, is not large. Also, the growth rate is only 2.3% per year and is one of the most homogenous of the region. 98% of the people are classified as white or mestizo, and two percent as black or indigenous.

Costa Rica is also homogenous in regards to social classes. Most of the population is middle class, and even though poverty exists, it is not as large a problem as it is in other Latin countries. By the standards of a developed country, Costa Rican incomes are very low, but when compared to other neighbors, salaries and earnings prove to be much better. Besides the poor and middle classes, there is an upper class, which is very elitist. The preponderance of a middle-class produces an impression of class and social homogeneity.

Democracy is the source of tremendous pride in a country that can

boast of having more teachers than policemen and of not having a standing army since 1948. Reform has always won over revolution and repression. Out of 53 leaders, only 3 have been military men and 6 can be considered dictators. Most Latin American countries can't affirm the same good fortune.

MAJOR CITY

San José

San José, with a metropolitan population of over one million, is almost completely surrounded by mountains, and just a few minutes' drive from the center of the city are foothills that offer a country atmosphere and lovely views.

The central part of the capital is divided into four quadrants by Avenida Central running east and west, and Calle Central running north and south. The arrangement of streets is logical, but initially confusing: Odd-numbered avenues (avenidas) are located north of Avenida Central and even-numbered avenues are to the south; odd-numbered streets (calles) are east of Calle Central, and even-numbered streets are to the west.

Street names or numbers are seldom used. Locations are given in relation to some landmark that may, or may not, be well known, such as a public building, a monument, a prominent intersection, or even a grocery store or gasoline station. Distances are expressed in meters ("metros" in Spanish), and 100 meters is roughly equivalent to a normal city block. At times the point of reference is a landmark that once existed but no longer is standing, a practice that works for longtime residents of San José but generally adds to the considerable confusion.

Most city streets in San José are paved, but many are narrow and rough, and congestion and noise are constant problems in the city. The

pollution at times can be stifling. Potholes are a constant threat to the unwary, both in the city and in the countryside, and often are deep enough to damage vehicles. Open manholes are a danger as well, since theft of manhole covers seems to be a favorite activity in San José.

Downtown commercial buildings usually have two or three stories, but newer structures are much taller. Residential sections have many modern homes of brick, wood, or concrete construction, with either tile or galvanized metal roofs. Parks of all sizes are located throughout the city.

The temperature in San José is generally pleasant, with two seasons distinguished mainly by the rainfall. The dry season runs from December through April and the wet season extends from May through November. Even during the wet season the mornings generally are clear, with the afternoons and evenings dominated by heavy rains nearly every day. Relatively high winds often are present during the dry season.

The average temperature in San José is 70 to 75 degrees Fahrenheit. In December, the coolest month, the average temperature drops to around 65 degrees. Temperatures drop into the 50s at night throughout the year.

Humidity in San José averages 80 percent throughout the year, and during the rainy season mold and mildew are serious problems. Leave a light burning in closets, but for more serious measures, a dehumidifier must be used to prevent damage. Electronic equipment, books, records, tapes, and photographic equipment also suffer in the humidity, and should be protected if possible.

More than 20,000 private American citizens, most of them retirees, live in Costa Rica, and approximately one half million tourists from the U.S. visit the country every year. Smaller groups of foreign residents include Canadian, British, French,

German, Italian, Chinese, Spanish, and other Latin Americans.

Precautions must be taken with regard to personal security. Pickpocketing, muggings, and assaults are on the rise, especially in downtown San José.

Food

Many newcomers to San José are shocked at the prices for food and other purchases, which often approach or exceed U.S. prices and are not typical of Latin America.

Most fresh fruits and vegetables are available year round. They include bananas, papaya, melon, grapefruit, oranges, lemons, pineapples, strawberries, plantains, tomatoes, beets, eggplant, radishes, cucumbers, zucchini, potatoes (white and sweet), carrots, cauliflower, broccoli, spinach, squash, lettuce, cabbage, celery, green and wax beans, and several varieties of fresh and dried beans. Local fruits and vegetables are of good quality. Apricots, peaches, pears, apples, and grapes are not grown in commercial quantities in Costa Rica, but they are imported by the better grocers. Prices for all imported fruits are high.

Good quality fresh meats are available at all times, and beef, pork, chicken, and fish are plentiful. Mutton and lamb are seldom available on the open market, but can be ordered from some butchers. Beef prices and quality are slightly lower than in the U.S., while chicken, fish, and pork are sold at prices similar to those in the U.S. Fresh and frozen shrimp is available, but prices are quite high since most shrimp is destined for the export market.

Several dairies sell pasteurized milk similar in price and quality to American brands. Other dairy products such as chocolate milk, ice cream, skim milk, buttermilk, cottage cheese, sweet and sour cream, whipping cream, yogurt and eggnog, and a great variety of cheeses also are available. The overall quality of dairy products is high.

Local supermarkets are well stocked with snack foods, packaged foods, pasta, canned meats and fish, and soft drinks. Dry cereals are available at high prices. Flour, sugar, yeast, chocolate, and other baking items are available, but packaged cake mixes are of poor quality. A few frozen items are available, but choices are minimal. Supermarket chains stock many imported American foods, but the prices for all imported items are inflated.

Clothing

Since temperatures vary little, basically spring and fall weight clothing as well as summer attire are suitable for San Jose. Local tastes and standards are similar to those in the U.S. and are becoming increasingly casual. Some lightweight sweaters are handy during the rainy season, when evening temperatures are slightly cooler, and for trips to the mountains. Umbrellas and comfortable rain gear are necessary accessories for your San Jose wardrobe.

Shoes made in Costa Rica and other Central American countries are available at reasonable prices. Styles are similar to those found in the U.S. Finding shoes made with American lasts is difficult and consequently locally made shoes may not fit satisfactorily. Shoes, however, can be custom made for prices lower than in the U.S.

While shopping malls do exist, as indicated, the major differences are price, selection, and quality.

A wide selection of locally made material is available for home sewing, and some imported material is available as well. Care should be exercised in buying, as "seconds" sometimes appear on the local markets. Local department stores have adequate supplies of zippers, buttons, hooks, and facings, but some notions, especially fancy trimmings, are difficult to find. Some women have used local seamstresses, with varying success.

Children's casual clothing follows U.S. styles, with emphasis on slacks

and jeans for both boys and girls, although girls are seen in dresses more often in Costa Rica than in the United States.

A recent change in regulations made school uniforms mandatory in all schools. Some uniforms can be purchased locally or from the U.S. Other uniforms are school specific and must be purchased locally. Prices for a complete uniform run between \$40 and \$50. Complete information about uniform requirements can be obtained from school representatives. Jackets, sweaters, and a water-repellent windbreaker with hood also should be included in a child's wardrobe. Locally made clothing is inexpensive, and of fair quality. Good quality, locally manufactured leather shoes are available in average widths, but extra shoelaces can be hard to find. Children's tennis shoes, made locally, are inexpensive and available in narrow to average widths, though no half sizes. Good quality boys underwear can be found, but underwear for girls is expensive if imported, and of inferior quality if made locally. Socks for both boys and girls are expensive. Infant clothing, as well as items such as receiving blankets, are available on the local market.

Supplies and Services

Some familiar American-brand and European-brand cosmetics, toiletries, and personal hygiene items are manufactured in Central America, and available at local drugstores and department stores. Common home medications found locally, and many medicines requiring a prescription in the United States, can be purchased over the counter. Generic medications are often sold.

A good supply of locally manufactured household products is available, such as soaps, detergents, floor wax, furniture polish, glass cleaner, insecticides (extreme care should be taken with some of the local products), and laundry supplies, although quality is below U.S. standards.

Locally made pots, pans, kitchen utensils, and dishes can be pur-

chased at moderate prices. Imported varieties also are available for much higher prices.

Laundries and dry cleaners in San José have modern equipment, but only one chain of cleaners offers U.S.-style martinizing service. San José has few self-service laundromats.

Small repair shops in the city service appliances, stereos, and cameras, but the wait is long and the quality of the repairs is poor. Household repair services are unreliable as well. Basic household tools are useful. Prices for tools are higher in San José than in the United States.

Many hairdressers have adequate equipment and competent operators, some of whom speak English. Services tend to be inexpensive. Satisfactory shoe repair is available.

Domestic Help

Many Americans in San Jose prefer to hire a live-in maid, as a convenience and as a deterrent to burglary, which is a major problem. Reliable maids are difficult to find. Some families are employing part-time maids instead of full-time, live-in employees. It is common practice to employ one person to do the cleaning and cooking for a family. For those who do not want a live-in maid, or who cannot find one, a guard or housesitter is necessary whenever the entire family is away from the house.

Some people also employ a day laborer part time to do heavy work in the home, such as waxing floors and washing windows. Local gardeners also can be hired for reasonable prices, and most have their own equipment. Tools are available locally, but are more expensive than in the U.S.

The typical cash wage in 1997 for a live-in maid was around 40,000 colones a month, plus 19.5 percent of their monthly salary that must be paid into the Social Security system on a monthly basis.

In addition to their salaries, both full-time and part-time domestics are entitled to two weeks paid vacation annually after 50 weeks of service, plus a Christmas bonus based on the number of months worked. Similar bonuses often are given to others, including garbage men, paper boys, and street sweepers. Maids are also entitled to severance pay when they are dismissed.

Full-time and part-time domestic employees are entitled to illness and maternity benefits of the Caja Costarricense de Seguro Social (the Social Security system). They are also covered under a Disability/ Old Age Retirement Plan. This is a compulsory program and in theory is funded through contributions by both the employer and employee. In fact, the employer generally pays the worker's share as well. Total contribution to the plan amounts to between 20 percent and 25 percent of the worker's salary. All domestic employees must be registered with the Caja.

Religious Activities

Catholicism is the state religion, and more than 90 percent of the population is affiliated with the Roman Catholic Church. Several local churches offer English services either Saturday or Sunday. Other

denominations represented in San José include Episcopal, Baptist, Jehovah's Witnesses, Lutheran, Methodist, Mormon, and Seventh Day Adventist. San José also has a Jewish Synagogue.

Education

American children in Costa Rica have several educational alternatives, including some private schools that offer college-prep curriculums and operate on a U.S.-style August through June schedule.

During the past year, however, several newly arrived families have encountered problems with the school enrollment process. Missing required documents are the primary problem. These documents included: original school transcripts for the past two years, results of recent standardized achievements tests, passport or birth certificate, vaccination record, two passport size photos, letter of recommendation from the principal or counselor of the previous school. The schools require a personal interview and admission tests. Students will be tested on several academic subjects. The results of these tests often take up to three days to be released. Students will not be accepted until the results are known. Additionally, many arriving families fail to iden-

tify and contact the school they wish to use before arrival. These schools operate on a limited enrollment basis; failure to reserve a space early may preclude admission. Therefore, it is highly recommended that families with school-age children contact the selected school as soon as possible, ideally before May for the following August. This is especially important, if the family will arrive at after school begins.

Special Education

Parents should be aware that the schools have limited resources and/or programs for students with special needs. In most instances, the buildings lack structures to facilitate the access of those in wheelchairs or with other physical disability requirements.

A few public schools in San Jose have devoted resources to establishing programs for children with educational requirements. These programs are below standards developed by schools in the U.S. and all such instruction is in Spanish. A few specially trained therapists are available, but physical, occupational, and speech therapists are in critically short supply. Parents should correspond directly with local schools for information about their child's special needs. Local school directors also can provide detailed information about curriculums, accreditation, student-to-teacher ratios, facilities, and extracurricular activities.

Private schools operating on a U.S. style schedule with classes in English, include: American International School (former Costa Rica Academy). Pre-kindergarten through 12th grade; 280 students; classes in English. Enrollment fee, \$1000 one time payment per student, grades 1 - 12; school maintenance fee, \$600 per family for 3 years; annual tuition: pre-kindergarten and kindergarten \$2000; for 1/2 day program, \$3500; for full day, 1st through 12th grade, \$5150; bus fee, \$900 annually.

For more information contact Director, Larry Lyons Apartado 4941-

1000 San Jose. Telephone: (506) 239-0376 E-mail: aiscr@cra.ed.cr

Country Day School: Pre-kindergarten through 12th grade; 800 students; classes in English. Enrollment fee, \$375 per year; Annual tuition: pre-kindergarten half-day, \$1832; kindergarten and prep half day, \$2680; kindergarten and prep full day, \$3995; grades 1 - 12, \$5390; bus fee depends on the location of your residence.

For more information contact: Director, Timothy Carr Apartado 8-6170, San Jose Telephone: (506) 228-1187 or (506) 289-8406.

Marian Baker School: Kindergarten through 12th grade; 210 students; classes in English. Enrollment fee, \$450; Annual tuition: kindergarten, \$2500 1/2 day program; kindergarten, \$3500 full day; prep. - 5th grade, \$4500; 6th-12th grades, \$5300. Bus fee, \$540 per student.

For further information contact: Director, Linda Niehaus Apartado 4269, San Jose Telephone: (506) 273-3426 or (506) 273-3204 E-mail: mbschool@sol.racsca.cr

International Christian School: Pre-kindergarten through 12th grade; 530 students; classes in English. Enrollment fee, \$190. PK \$340 for 1st child enrolled, \$220 for other siblings enrolled. Monthly tuition: pre-kindergarten half-day \$160; kindergarten and prep half-day, \$190; grades 1 - 6, \$300; grades 7 - 12, \$345.

For more information contact: Director, William Tabor Apartado 3512, San Jose Telephone: 236-7879 or 236-2970.

Each school may have additional fees not listed in the general pricing information provided, i.e., books, uniforms, school lunches, specialty or individual instruction classes, instrument rentals, maintenance and/or technology fees.

Private schools operating on the local February-November schedule,

with classes in English or in English and Spanish, include:

Lincoln School: Pre-kindergarten through grade 12; 750 students; classes in English. One-time family membership, \$450; Enrollment fee, \$180 per year; Registration fee, \$50 per year; Monthly tuition: pre-kindergarten and kindergarten, \$105; preparatory - grade 3, \$150; grades 4 - 6, \$170; grades 7 - 9, \$175; grades 10 - 11, \$185; grade 12, \$245.

For more information contact: Director, John Dellman Apartado 1919-1000, San Jose Telephone: 235-7733.

Escuela Britanica: Kindergarten through grade 12; 800 students; classes half in English, half in Spanish. One time fee per family, \$310. Enrollment fee, \$115 - \$162 depending on grade level. Monthly tuition: \$130 - \$225, depending on grade level.

For more information contact: Director, David Lloyd Apartado 8184-1000, San Jose Telephone: 220-0719

Of the above schools, Costa Rica Academy (American International School (AIS) and Country Day School (CDS) are the most similar to American schools, and their familiarity may help ease the transition for some students.

There are several preschools available for children.

El Girasol: Ages 2-6, instruction in Spanish. Monthly fees: \$90 with a matriculation fee of approximately \$80.

For more information contact: Director, Nora Masis Apartado 6063, San Jose Telephone 232-8496

ABC Montessori: Ages 1-1/2 to 5 years; 60 students, instruction in English and Spanish. Enrollment fee, \$95. Monthly tuition: \$105; materials, \$55; transportation, \$28, School calendar: March through

November. Hours: 7:30 a.m. - 12:00 p.m.

For more information contact: Laura Patino, 759-1007 Centro Colon, San Jose Telephone, 232-1805.

Kiwi Kinder: Ages 2-1/2 to 5 years; 32 students; instruction in English. Enrollment fee, \$80 per semester. Tuition per semester: 5 days per week, \$775; 3 days per week, \$525. School calendar: August through mid-June. Hours: pre-school, 8:00 a.m. - 12:00 p.m.; kindergarten, 8:00 a.m. - 3:00 p.m.

For more information contact: Director, Dianne Patterson Apartado 549-6150, Santa Ana Telephone: 282-6512

Special Educational Opportunities

The University of Costa Rica is situated on a modern campus in an eastern suburb of San Jose. The University has a faculty of some 2,500 and a student body of more than 30,000. Majors include history, art, law, education, science, economics, dentistry, medicine, microbiology, social work, agronomy, pharmacy, and engineering. Foreigners may take courses either for credit or on an audit basis. Admission requirements vary according to the courses desired and the individual's educational background. A good command of Spanish is necessary because all courses are taught in Spanish.

The Centro Cultural Costarricense-Norteamericano offers classes in Spanish at all levels, and private tutors of varying degrees of skill can be hired.

Courses in art are taught at the University of Costa Rica's School of Fine Arts, and in music at the National Conservatory. Many private teachers provide instruction in voice, music, painting, ballet, ceramics, swimming and diving, golf, tennis, and horseback riding.

Sports

The Costa Rica Country Club in Escazu is very expensive. It offers excellent facilities, including a heated swimming pool, tennis courts, a nine-hole golf course, saunas and exercise equipment, and a restaurant. The Costa Rica Tennis Club in La Sabana has a swimming pool, steam baths, tennis courts, and a restaurant. The Cariari Country Club, off the airport highway, offers an Olympic-size swimming pool, the country's only 18-hole golf course, tennis courts, exercise equipment, a nightclub, and a restaurant. The Indoor Club in Curridabat on the east side of San José, offers indoor and outdoor tennis courts, racquetball and squash courts, indoor and outdoor swimming pools, and a restaurant. And, the Los Reyes Country Club, located a half-hour drive from downtown San José, offers a nine-hole golf course, tennis courts, a swimming pool, and a restaurant. There are also several health clubs in the area that include: Spa Corobici, Hi-Line Gymnasio, San José Palacio, and Club Olimpico. For children, 6 months to 15 years, Kid's Gym offers classes in gymnastics and modern dance.

Joining the various clubs remains a costly proposition. Membership at the Cariari, for example, costs around \$3000 initially, plus another \$100 a month. Prices are increased frequently.

Horseback riding lessons are available at several stables, but most, including one of San José's best establishments, La Carana, cater to riders with their own horses. One stable in Guachipelin does offer lessons in dressage and jumping using horses they rent.

La Sabana park has a public swimming pool and many fields for soccer, baseball, softball, and basketball. A paved jogging track also circles the park. Other activities include swimming, golf, and tennis competitions, many of which are open to Americans.

Touring and Outdoor Activities

Costa Rica is a small country, and many interesting areas can be visited in a day trip from San José. They include the Braulio Carillo National Park; Poas, Irazú, Barva, and Arenal volcanoes; Lankester Gardens; beaches on both the Caribbean and Pacific coasts; the Sarchi ox cart factory; white water rafting trips, and a number of rustic restaurants reached after drives through the lush countryside. For those who prefer not to drive, there are scores of tour agencies that provide an abundance of packaged tours to all areas of the country.

After leaving San José the climate becomes either cooler or more tropical depending upon the destination, with altitude being the determining factor. Most day trips out of San José begin on divided highways, but the roads become less maintained outside the city. A few of these short trips include brief stretches on dirt roads.

Twenty-five percent of Costa Rica's land has been devoted to protected national parks and reserves, and visits to the parks can be the highlights of a stay in the country. The well-developed park system includes areas of dry forests, rain forests, and cloud forests, volcanoes, beaches on both coasts, caves, the highest mountain in Central America, nesting sites for several species of endangered sea turtles, and miles of hiking trails. Many of the parks are excellent sites for bird watching.

There are pristine beaches on both coasts, but most of the hotels are being developed along the Pacific. Several of the international hotel chains have accommodations at the more popular beaches. Small hotels, cabins, and bed and breakfasts can be found at almost any beach. Camping is available at some of the parks and beaches, but campsites with facilities are limited.

Social Activities

Periodic business and social meetings, dinner parties, and many other informal social events provide

opportunities for international contacts. Guest lists at such functions often include Americans, Costa Ricans, and nationals of other countries. The foreign segments may include people from the local or international business community, as well as people who have retired to Costa Rica.

The American Legion, Rotary Club, Lions, Masons, and several other fraternal organizations have branches in San José. Americans may join, although the memberships are mainly Costa Ricans.

Some of the many other international clubs that are available to join include: The Costa Rican Women's Club, Newcomers Club of Costa Rica, The Square Dance Club, National Bridge Association, and Women's Reading Group.

When invited to a formal dinner in a Costa Rican home, it is customary to send flowers.

OTHER CITIES

ALAJUELA, located in central Costa Rica 14 miles west of San José, was the capital of the country in the 1830s. With a metropolitan population of about 158,000, Alajuela is a commercial and agricultural center whose industries include sugar, coffee, and lumber. Four churches here are of outstanding architecture. The Juan Santamaria Museum is one of the city's principal tourist attractions. The museum features an exhibit of locally produced handicrafts. One wing of the museum exhibits the history of the Battle of Santa Rosa, where Costa Rican troops defeated filibusters led by William Walker in 1856.

CARTAGO is located on the Pan-American Highway, about 20 miles east of San José at the foot of Mt. Irazú. The city is situated at an elevation of 4,765 feet. Founded in 1563, Cartago was destroyed by the eruption of the Irazú volcano in 1723, and by earthquakes in 1841

Neighborhood in San Jose, Costa Rica

and 1910. Because of these disasters, no authentic colonial buildings exist in Cartago. However, new buildings are built with colonial styling. Cartago was the political center of Costa Rica until 1821, when a more liberal government was seated in San José. It was in this rich coffee-growing region that the system of small plantations was begun, and many of the early colonial traditions survive. The population is estimated at close to 109,000. Cartago's principal church, the Cathedral of the Virgin of Los Angeles, is the scene of annual pilgrimages. Another attraction is the Church of Orosi, the oldest colonial church still in use in Costa Rica. In addition to regular services, the church houses a small museum of colonial and religious artifacts.

GOLFITO, surrounded by steep hills, is situated in southern Costa Rica off the Gulf of Dulce, about 100 miles south of San José. The heavy rainfall promotes the tropical rainforest vegetation found in this area. Golfito is a major banana port and belongs to the Banana Company of Costa Rica. The city handles about one-fifth of Costa Rica's seaborne trade. The city's population is estimated at 30,000.

HEREDIA, whose population is about 67,000, is located in central

Costa Rica. It is the center of the nation's coffee and cattle industries. Founded in 1571, Heredia is a tourist attraction because of its colonial architecture. The lush vegetation of the area has earned Heredia the nickname "La Ciudad de las Flores" (city of the flowers).

LIBERIA, with a population of about 33,000, lies on the Liberia River in northwestern Costa Rica. Located near the Pan-American Highway, it is about 100 miles north of the capital. Liberia is a commercial center for grains, fruits, sugarcane, and livestock.

LIMÓN, on the Caribbean about 100 miles east of San José, is the leading port of the country, and a modern, busy city. It was founded in 1874 during the construction of the railroad to San José. Limón's major crops are coffee and bananas; cacao and timber also are exported from this city, whose population is about 68,000. Nearly 40 percent of the country's exports pass through Limón. Limón is a tourist resort. Several beautiful parks are located near the city. Cahuita National Park, with its lush flora and fauna, contains the only coral reef on Costa Rica's Caribbean coast. Tortuguero National Park is the most important nesting ground for the green sea turtle in the western Caribbean.

The park has an unique system of natural and man-made canals that serve as waterways for transportation and exploration. Columbus is said to have visited this area on his voyage in 1502.

PUNTARENAS is located about 60 miles west of San José on the Gulf of Nicoya. It was a major Pacific port before the building and expansion of Limón. With a population of approximately 92,000, Puntarenas is the center of the country's banana industry; coffee also is exported from here. Other industries include shark and tuna fishing and fish processing. Puntarenas is a picturesque resort.

COUNTRY PROFILE

Geography and Climate

At 19,730 square miles, about four-fifths the size of West Virginia, Costa Rica is, with the exception of El Salvador, the smallest country in Central America. It is bounded on the north and southeast by Nicaragua and Panama, respectively; on the east by the Caribbean Sea; and on the west and south by the Pacific Ocean. Limon, the major Caribbean port, is some 2,400 miles from New York; Puerto Caldera, the principal Pacific port, is located some 2,700 miles from San Francisco.

A rugged central massif runs the length of the country, north to south, separating the coastal plains. Even though Costa Rica lies totally within the tropics, the range of altitudes produces wide climatic variety. The country has four distinct geographic regions:

- The Caribbean Lowlands are hot and humid, and comprise about one-fourth of the total area of Costa Rica. It is the major banana exporting region. The lowlands contain less than 10 percent of the population.

- The Highlands are the economic, political, and cultural heart of the country, and include the Central and Talamanca mountain ranges and the Meseta Central where the capital, San José, is located. The Meseta, with elevations ranging from 3,000 to 4,500 feet, and adjacent areas contain nearly two-thirds of Costa Rica's population. The region has rolling, well-drained land, productive soil, and pleasant sub-tropical temperatures, with an annual rainfall of 60-75 inches. The central highlands have most of Costa Rica's improved roads, and there is direct access to both coasts by paved highway, rail, and air.

- The Guanacaste Plains comprise the rolling section of north-west Costa Rica, and include portions of the provinces of Guanacaste and Puntarenas, plus the Nicoya Peninsula. Despite having the lowest average annual rainfall and the longest dry season, the region is important for agriculture and livestock production as well as a popular area for tourism. The area contains 15 percent of Costa Rica's population.

Southern Costa Rica is the wettest part of Costa Rica with some 10 percent of the population.

Altitude determines the climate throughout Costa Rica. Areas below 3,000 feet have average annual temperatures of around 80 degrees, with little variation from month to month. The temperature drops from around 74 degrees at 3,000 feet to 59 degrees at 5,000 feet. Above 5,000 feet, the average annual temperatures can range as low as 40 degrees to the mid-50s, with occasional frost during the coolest months.

Palms abound in the freshwater and brackish swamps along the Caribbean coast, as do broad belts of mangroves along the Pacific shore and tidal streams and tropical hardwoods in the higher elevations. Logging operations, both legal and illegal, have stripped many previously wooded areas of Costa Rica,

and less than half the land now is forested. The broadleaf forests remaining contain mahogany, Spanish cedar, *lignum vitae*, balsa, rosewood, ceiba, nispero, zapote, Castilla rubber, brasilwood, and others. Oaks and grasslands once covered the Meseta Central, but the land there now is devoted largely to crops and pastures.

The country has approximately 12 active volcanoes; the last significant eruptions began in 1968. Seismic activity occurs on a regular basis in Costa Rica. The last major earthquake that caused considerable damage along the Atlantic coast was in April, 1991. Many buildings and homes in Costa Rica are built to withstand earth tremors.

Costa Rica long has been a haven for birdwatchers who track the 900-plus species. Animal life also is abundant. Deer, squirrel, opossum, tapir, monkey, porcupine, sloth, many species of reptiles, and several species of large cats can be found in some areas, although their ranges are constantly being reduced as their habitats are destroyed. Sport fishing on both coasts for tuna, swordfish, marlin, tarpon, and shark is popular, and opportunities for freshwater fishing also exist.

Costa Rica's economy traditionally has had an agricultural base, with the chief exports being bananas, coffee, sugar, and beef. Woodworking and leathercraft are the major handicrafts of the country. Tourism, along with the cattle industry, has grown rapidly in recent years, and non-traditional exports, both agricultural and manufactured, have become increasingly important as sources of revenue.

Population

In 1996, the population of Costa Rica was estimated to be 3.3 million. The San Jose metropolitan area, with a population of 1,230,848, accounted for over one-third of the country's people. Other provinces and their populations included Alajuela (607,486), Cart-

ago (381,420), Limon (258,369), Guanacaste (268,172), Heredia (272,711) and Puntarenas (379,002). Costa Ricans are called "Ticos" both by their Central American neighbors and among themselves.

According to the American Chamber of Commerce, more than 35,000 private American citizens, most of them retirees, live in Costa Rica, and approximately one half million tourists from the U.S. visit the country every year. Smaller groups of foreign residents include Canadian, British, French, German, Italian, Chinese, Spanish, and other Latin Americans.

Most Costa Ricans are Caucasians, and the country lacks the large indigenous Indian populations that characterize most other Central American countries. Small groups of Indians and Blacks live in Costa Rica, but together they account for less than 10 percent of the population. Descended from West Indian workers who began emigrating to Costa Rica in the late 19th Century, most Blacks live in the Limon Province on the Caribbean coast. Many speak English as their primary language.

Costa Rica's culture, like its racial composition, is relatively homogeneous. An old-line Spanish-Catholic tradition persists despite many changes brought about by an influx of people, goods, films, and books from other countries. Values of Latin American culture are evident in the great importance attached to family ties; a rather sedate, ritualized, conventional behavior; a yearly schedule of festivals; and an outwardly male-oriented and male-dominated society. Every town has its local patron saint whose day is celebrated with a "fiesta." Carnival in Limon in October, industrial and other fairs throughout the year are particularly interesting.

Public Institutions

Costa Rica is a vibrant democracy whose citizens have a strong sense of civic pride and considerable

respect for human rights, peaceful resolution of conflicts and democratic institutions. The national government, which employs a comprehensive system of checks and balances, consists of the executive, legislative, and judicial branches, plus a highly respected Supreme Electoral Tribunal that oversees elections every four years. The 57-member Legislative Assembly has representatives from two major political parties as well as several minority parties. Overall, the president remains the single most influential political leader, but the Legislative Assembly wields considerable power. Since 1969, the Constitution has limited the president and legislative deputies to single terms, although deputies may gain reelection after sitting out one term.

Numerous political parties compete for elective office at the national and municipal levels every four years. The Social Christian Unity Party (PUSC) and the National Liberation Party (PLN) have dominated most recent elections. In February 1998, PUSC candidate Miguel Angel Rodriguez won the presidency by a narrow margin over PLN rival Jose Miguel Corrales. The PUSC also won a plurality in the Legislative Assembly.

Costa Ricans pride themselves on the country's abolition of its standing military in late 1948, a concept enshrined in the 1949 Constitution. Governments give priority to public spending on education and health care. A small civilian Public Force under the Public Security Ministry performs security and police functions. Costa Rica has exercised an international influence well beyond its relatively small size. The Figueres administration (1994 to 1998) hosted several regional conferences including the May 1997 San Jose Summit involving the U.S. President and his counterparts from Central America and the Dominican Republic.

Arts, Science, and Education

The arts are flourishing in Costa Rica. At the beautiful and historic National Theater, the Melico Salazar Theater, and other venues throughout San Jose, there is a steady stream of high-quality representations of the visual and plastic arts from Costa Rica and abroad. The National Symphony Orchestra offers an annual concert series, as does the Costa Rican Youth Symphony. The National Dance Company and university dance groups also perform during the year. Professional theater groups offer works in Spanish throughout the year, and an amateur theater group produces plays in English. Costa Rica hosts three major international festivals: the annual International Music Festival and, in alternate years, the International Festival of the Arts and the International Guitar Festival.

Several institutional and commercial art galleries are located in San Jose. The Museum of Costa Rican Art, located in the terminal of San Jose's original airport, now a large city park, features several exhibits every year by both Costa Rican and foreign artists. The Ministry of Culture, located in a restored liquor factory, houses the Museum of Modern Art and Design, exhibiting the more avant-garde works of local and foreign artists.

San Jose's movie theaters offer American films, with Spanish subtitles, shortly after original release, as well as films from Europe and the rest of Latin America. The San Jose metropolitan area has a variety of world-class museums. The National Museum, occupying a former fortress near the Legislative Assembly, has an excellent collection of pre-Columbian artifacts and a national history collection. The Central Bank's Gold Museum, located beneath the Plaza de la Cultura, near the National Theater, houses a stunning display of pre-Columbian gold artifacts. The Coin Museum is located in the same building. The Jade Museum, located in the

National Insurance Institute, features one of the world's foremost collections of pre-Columbian jade pieces. The Children's Museum, established only in 1995, is located in a former penitentiary and offers a permanent display of history, science and technology with hands-on exploration for children. Other museums include the Serpentarium, the Museum of Natural Science, the Juan Santamaria Museum in Alajuela, and the Simon Bolivar Zoo.

Education is a national passion for Costa Rica, as reflected in the vast array of schools and universities throughout the country. The literacy rate, at 95 percent, is the highest in the region. Four state-supported universities and nearly forty private universities offer undergraduate and graduate courses in almost all major fields of study. The Centro Cultural Costarricense-Norteamericano, also known as the Binational Center (BNC), offers regular courses in English and Spanish as second languages, as do a host of commercial language schools. The BNC also houses an excellent lending library, which Mission families may join for a small annual fee, and offers art exhibits and performing arts events featuring American as well as Costa Rican artists.

Commerce and Industry

Costa Rica's economy emerged from recession in 1997 and is poised for relatively healthy growth for the near future. National account statistics from Costa Rica's Central Bank indicated a 1997 gross domestic product (GDP) of 2.2 trillion colones (USD 9.5 billion at the average exchange rate for the year), up 3.2 percent in real terms (measured in constant 1966 colones) from the year before, when GDP declined. Inflation, as measured by the Consumer Price Index, was 11.2 percent less than the 12.5 percent that was forecast. The central government deficit decreased to 3.4 percent of GDP in 1998, down from 3.7 percent from the year before but still above

the 3.0 percent target. Controlling the budget deficit remains the single biggest challenge for the country; economic policy makers, as servicing the accumulated public sector debt consume approximately 30 percent of the government's budget and limits the amount of resources available for needed investments in public infrastructure.

Costa Rica's major economic resources are its fertile land and frequent rainfall, its well educated population, and its location in the Central American isthmus, which provides easy accessibility to North and South American markets and direct ocean access to the European and Asian continents. With one fourth of it land dedicated to national forests, often adjoining picturesque beaches, the country has also become a popular destination for affluent retirees and ecotourists.

The country has not discovered sources of fossil fuels (apart from minuscule coal deposits), but its mountainous terrain and abundant rainfall have permitted the construction of a dozen hydro-electric power plants, making it self-sufficient in all energy needs, except oil for transportation. Mild climate and trade wind make neither heating nor cooling necessary, particularly in the highland cities and towns where approximately 90% of the population lives.

Costa Rica has an extensive road system of more than 30,000 kilometers, although much of it is in disrepair. All parts of the country are accessible by road. The main highland cities in the center of the country are connected by paved all-weather roads with the Atlantic and Pacific coast; and by the Pan American Highway with Nicaragua and Panama, the neighboring countries to the North and the South. Costa Rica needs to complete the Pacific coastal highway (and repair large sections of existing highway), build a new road along the Atlantic coast, and possibly construct coast-to-coast highway across the Northern plains of the country. These are

probably the most pressing infrastructural need of the country.

Tourism, which has overtaken bananas as Costa Rica's leading foreign exchange earner, is once again growing after stagnating in the mid-1990s. Earning in 1997 from an estimated 812,000 visitors were reported at 750 million U.S. dollars, up from 684 million dollars the year before. The number of visitors in 1996 was 781,000. The numbers also show that tourists spend nearly 1,000 dollars per person per visit. In 1998 the Ministry of Tourism projected a 4-5 percent increase in the number of tourists visiting the country.

Costa Rica is also aggressively pursuing investment in the high technology sector. Largely due to the personal efforts of President Figueres to attract new investment in the sector, Intel Corporation began construction of a plant in 1997 to produce Pentium II microchips with an investment plant that reached 200 million dollars by the end of 1998. Intel's total planned investment was 400-500 million dollars by the end of 1999. A number of other high technology companies were already present in Costa Rica, and more are expected to follow.

Reflecting the evolution away from agriculture, 1997 growth was strong in the construction sector (16.4 percent), in industry (4.5 percent) and in commerce, restaurants and hotels (4.0 percent). Agriculture declined by 0.7 percent. Statistics for 1997 indicated a widening of the trade deficit and an increase of the current account deficit from roughly 1.1 percent of GDP in 1996 to 4.5 percent of GDP in 1997. During 1999, roughly 55 percent of total trade was with the U.S. As usual, bananas led the list of merchandise exports, but tourism earned more foreign exchange. However, despite the current account deficit, strong private capital inflows brought international reserves to over 1 billion dollars, a level approximating three months of imports.

Transportation

Automobiles

The majority of streets and roads in Costa Rica are rough and narrow. Many of the roads to the beaches and other out-of-the-way locations are not paved. A high clearance, rugged suspension vehicle, such as Ford Broncos, Chevrolet Blazers, Toyota Land Cruisers, Isuzu Troopers, Jeeps, Mitsubishi Monteros and Nissan Patrols, is recommended if significant travel away from San Jose is planned. Replacement parts, when available, are expensive.

It is strongly recommended to install anti-theft devices, such as an alarm or the Club as car burglary and theft are serious problems.

Both international and local rental car companies have offices in San Jose, but the cost is substantial and the quality of the rental cars is not always of a high standard. Costa Rica is a dangerous country in which to operate an automobile. Driving in San Jose, and throughout the country, is a challenge. Turns across one or two lanes of traffic are common; and pedestrians generally are not given the right of way. The narrow roads often are blocked by stalled, unmarked vehicles, pedestrians, or livestock. Yawning potholes, honking taxis, and smoke-belching buses with dangerous drivers, make Costa Rican traffic most unpleasant.

Liability insurance is a monopoly of the Costa Rican Government and must be purchased in the country. A comprehensive policy can be obtained in Costa Rica and several U.S. companies sell comprehensive policies for coverage in Costa Rica, although few have local offices or claims adjusters.

Since 1995, all imported vehicles must have catalytic converters.

Local

Within San Jose, taxis are efficient and inexpensive, by U.S. standards, although during rush hours and when it is raining, taxis seem to vanish. Taxis are mandated to have

meters; passengers should insist that they be used, or at least determine the fare at the start of the trip.

Buses serve all parts of the city and surrounding suburbs. Service is inexpensive, but crowded, during rush hours, and some vehicles are in deplorable condition.

Regional

Costa Rica's principal cities are connected by air or highway with San Jose. The closest U.S. city is Miami, Florida, a two and a half hour non-stop flight. American carriers, American and United, as well as the national airline, LACSA, offer daily flights to Miami. Continental has a daily flight to Houston, Texas. American Airlines has a daily flight to Dallas, and Delta flies daily to Atlanta.

LACSA and other regional airlines include San Jose as a stop on their Central American schedules. Air travel within Costa Rica is very inexpensive, and many vacation spots can be reached easily by air. Travel to other Central American countries is quite expensive; a round-trip flight to Panama is \$300, and Guatemala costs approximately the same. Few discounts are available.

Currently, most international flights land at Juan Santamaria Airport, a 25-minute drive from downtown San Jose. Another international airport, located near Liberia, opened recently.

Several steamship lines offer freight service to both the Pacific and Caribbean coasts of Costa Rica, and Cunard lines makes port calls at both Puerto Caldera and Limon. Both the Pacific and Caribbean ports are connected to San Jose by highway and air.

Communications

Telephone and Telegraph

An automatic telephone system covers all of Costa Rica. Long-distance calls may be placed from one's home, and direct-dial service to the

United States and other Central American countries is available. Direct-dial rates to the continental United States range from \$0.65 - \$1.60 a minute, depending on the time of day, though the peak rate is expected to drop to \$1.10 by the middle of 1998.

Radiografica Costarricense handles all international telegraphic messages.

Mail

International air mail service to San Jose is also available. The service is slow but generally reliable. Air mail and Special Delivery from almost any point in the U.S. to Costa Rica usually takes at least a week, and there can be a lengthy delay and considerable expense before a parcel can be collected from Customs.

TV and Radio

Short-wave reception is good in San Jose. The country has more than 80 commercial radio stations, almost half of them FM stations. Several broadcast in stereo, and a few offer regular classical music programming.

Twelve TV stations operate in San Jose, broadcasting in color and offering local news and entertainment programs, plus U.S. programs dubbed in Spanish. Cable television is available in most parts of San Jose, including the areas where most Americans live. Service is available on a monthly or bi-annual subscription basis and English-language programs from the U.S. include ABC, NBC, FOX and CBS networks, ESPN sports programming, several "superstations," two movie channels, and CNN news programs.

Newspapers, Magazines, and Technical Journals

Costa Rica has six daily newspapers in Spanish, plus two weekly commercial publications, the Tico Times and Costa Rica Today, in English. There are also four Spanish news magazines published weekly. Many American books and magazines are available at local book shops and

newsstands, but prices are double those in the U.S. Consequently, magazine subscriptions and book club memberships are very popular.

The Centro Cultural Costarricense-Norteamericano, in the Los Yoses suburb of San Jose, maintains current periodicals and U.S. newspapers in its well-stocked library, the Biblioteca Mark Twain.

Health and Medicine

Medical Facilities

Costa Rica is known for the quality of its health care, and many competent surgeons, pediatricians, neurologists, dermatologists, gynecologists, cardiologists, general practitioners, dentists, and opticians work in San Jose. Many have trained in the U.S. or Europe, and some speak excellent English.

A number of local hospitals, clinics, and diagnostic laboratories are adequate for normal medical requirements, such as the Clinica Biblica or Clinica Catolica, both private medical facilities. Many Americans use the Clinica Santa Rita for maternity care.

Costa Rica also has an excellent social security (Seguro Social) hospital system with many hospitals in San Jose and other parts of the country. Costa Rica has the best children's hospital in Central America.

Essential medicines and medical supplies are available at local pharmacies, although prescriptions for some specific medications may be hard to fill.

Community Health

The general level of sanitation and health control in San Jose is below that found in the average U.S. city. Garbage is collected regularly, and San Jose has a central sewer system, but sanitary regulations sometimes are not rigidly enforced. The city's water supply is filtered and chlorinated, but the possibility of contamination is always present.

The altitude of San Jose (3,814 feet), the high humidity, the extremely high pollen concentrations at certain times of the year, and the general air pollution of the city can combine to affect persons with sinusitis, hay fever, or asthma. Colds and other respiratory problems occur with more frequency than in the U.S., because of the air quality, the pervading dampness during the rainy season, and the frequent and dramatic temperature changes from midday to evening.

Serious health hazards are found both in San Jose and in the provincial areas. These problems include common diarrhea, amebic dysentery, and bacillary dysentery. Common causes of intestinal diseases are contamination from flies, polluted water, and contaminated fruits and vegetables. Common sense precautions are necessary when dealing with food, particularly when traveling outside San Jose.

Cases of malaria have been reported in the coastal areas of Costa Rica that have altitudes of less than 2,000 feet at an increasing rate during the last few years. And in some regions of the country certain tropical diseases such as cholera and dengue still present a serious health hazard.

Use boiling as a means of water purification in areas where needed. Electronic water filtering systems are used in many restaurants and hotels. Commercially bottled water is available in San Jose.

Several dairies sell pasteurized milk and dairy products that are safe, but off-brand products should be viewed with suspicion. As in most countries, raw fruits and vegetables should not be eaten unless they have been properly washed, and this applies to produce purchased in local markets and grocery stores.

As of December, 1997, approximately 1,200 cases of AIDS had been diagnosed in Costa Rica, 60 percent of whom have died, and the number of undiagnosed HIV posi-

tives was estimated, as of December 1994, to be 15,000 to 20,000. AIDS testing is mandatory for certain groups, including blood donors, foreign applicants for temporary or permanent residence, patients consulting VD clinics or receiving treatment at Social Security hospitals, and prison inmates.

NOTES FOR TRAVELERS

Passage, Customs & Duties

A valid passport is required to enter Costa Rica. At the discretion of Costa Rican authorities, travelers are routinely admitted with a certified copy of their U.S. birth certificate and a valid photo identification. Foreign tourists are generally permitted to stay up to 90 days. Extension of legal stay beyond that time requires application to the Costa Rican Department of Migration. Tourists who have overstayed their 90-day limit without receiving a formal extension can expect to be fined at the airport as they depart the country. Those who have overstayed repeatedly, or have overstayed and wish to depart Costa Rica by land, must pay a fine to migration authorities in San Jose before departure. There is a departure tax for short-term visitors.

Additional information on entry and exit requirements may be obtained from the Consular Section of the Embassy of Costa Rica at 2114 S Street, N.W., Washington, D.C. 20008, telephone (202) 328-6628, or from a Costa Rican consulate in Atlanta, Chicago, Houston, Los Angeles, Miami, New Orleans, New York, Puerto Rico, San Antonio, or San Francisco. The Embassy of Costa Rica also maintains a web site at <http://www.costarica-embassy.org/>

Americans living in or visiting Costa Rica are encouraged to register at the Consular Section of the U.S. Embassy in San Jose and obtain updated information on travel and security within Costa Rica. The U.S. Embassy maintains a

web site at <http://usembassy.or.cr>. Americans visiting Costa Rica are encouraged to inform the Embassy of their itinerary and contact information via the web site. This can also be accessed through the Department of State's web site at <http://www.state.gov>. The U.S. Embassy in Costa Rica is located in Pavas, San Jose, telephone (506) 220-3050. The Embassy is open Monday through Friday, and closed on Costa Rican and U.S. holidays. For emergencies arising outside normal business hours, U.S. citizens may call tel. (506) 220-3127 and ask for the duty officer.

Pets

The importation of pets into Costa Rica is controlled by the Ministry of Public Health. Entry permits from the Costa Rican Health Ministry must be obtained before the arrival of the pet in the country. Failure to obtain the necessary permit may result in the pet being refused entry or being detained by health authorities. The pet should arrive with the family and be declared as luggage instead of cargo.

The following documents should be certified by a Costa Rican Consul before the pet's departure for Costa Rica, and must accompany the pet: international health certificate from an accredited veterinarian (this document must be certified by the U.S. Dept. of Agriculture/ APHIS before presentation to the Costa Rican Consul, call 301-436-8590); certificate of vaccinations for rabies, distemper, parvovirus, and leptospirosis (if applicable to the species of pet); and certification that the pet is free from taenia equinococcus. Plan ahead to have the vaccines given to your pets, as the rabies vaccine should be given at least 30 days prior to travel.

Costa Rican Government can require a quarantine period. Use proper cage or crate for shipment and bring a supply of pet food. If importing cats, bring a litter box, pooper scooper and cat litter. Cat litter is difficult to find; so, cat owners should bring a supply in their household effects.

American brands of cat and dog food are sold in local markets, at greatly inflated prices. Locally prepared pet food also is available, but the quality is not up to U.S. standards.

Firearms and Ammunition

Firearms are permitted in Costa Rica for persons over the age of 18. Firearm owners are authorized 1000 rounds of ammunition per weapon. Owners are advised to check with the U.S. Customs Service when shipping firearms from the continental U.S.

Currency, Banking, and Weights and Measures

The monetary unit in Costa Rica is the colon (C). Its exchange value with the U.S. dollar varies daily; in December 1999, the exchange rate was C296.00=US\$1. Costa Rica has a small black market with the unofficial rates close to the rates obtained at banks. Counterfeit money has also been found on the black market.

Banking and exchange facilities exist in San Jose, but they are painfully slow—even a simple visit to a bank to cash a check can involve a wait of an hour or more. Travelers checks may be purchased at a some local banks.

The Banco Central de Costa Rica (the Central Bank) directs monetary policy and foreign exchange credit facilities, as well as supervising the banking system. Major commercial banks are government institutions; private banking institutions perform some banking functions, but their services are somewhat limited.

The dollar is freely convertible into colones. Major credit cards are widely accepted at hotels, restaurants, large department stores and supermarkets, but it is best to check before making your purchase.

Costa Rica uses the metric system, and officially, weights and measures are in kilograms, meters, and liters. Unofficially, and illegally, it is not uncommon to find American mea-

asures or Spanish colonial measures still in use.

Unleaded gasoline costs approximately \$1.42 per gallon; leaded gasoline costs approximately \$1.28 per gallon, and diesel fuel costs \$1.06 per gallon in early 1995.

Disaster Preparedness

Costa Rica is an earthquake-prone country. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated October 1994. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The island that is now the Republic of **CUBA** was discovered and claimed for Spain by Christopher Columbus on his first voyage to the New World in 1492. Except for a brief period of British occupation soon after the middle of the 18th century, it remained under Spanish control for nearly 400 years. The Cuban struggle for independence, born out of discontent with a failing economy, broke into open rebellion in 1868, and peaked 30 years later when the United States battleship *Maine* was blown up in Havana Harbor, thus igniting the Spanish-American War. Spain lost the war and relinquished its rights to Cuba in the Treaty of Paris.

Three years of U.S. administration followed before independence was proclaimed on May 20, 1902. Cuba's history since then has been one of dictatorships and revolutions, the most dramatic of which was in 1959 when Fidel Castro overthrew the Fulgencio Batista dictatorship with promises for a return to democratic rule. Lands and businesses were nationalized, and the economy came under the direction of the state. All political activity remains under the authority of Castro's ruling Communist Party.

Although the United States Embassy in Cuba was closed in 1961, there has been a U.S. Interests Section here since September 1977, subject to a bilateral agreement with the Cuban Government, and under the aegis of the Embassy of Switzerland.

MAJOR CITIES

Havana

Havana is a capital rich in history, architecture, and culture. Old Havana, characterized by narrow, cobbled streets, El Morro Castle dominating the harbor entrance, stately buildings, and beautiful wrought-ironwork, evokes its Span-

ish colonial origin. The United Nations has designated virtually all of that area as a World Heritage Site, in an effort to stave off its demise and destruction.

The Riviera Hotel, Hemingway haunts like La Bodeguita Restaurant (where everyone adds their name to the graffiti-filled walls), the once-dizzy but now more worn Tropicana Nightclub, crumbling yet still beautiful former private residences, the number of mid-century American cars... all combine to reflect Havana's heyday as a 1940s and 50s gambling and vacation hotspot.

In the years following the Revolution, much of the government's energy and revenue went into rural improvements in the country's infrastructure. Schools, roads, electricity, and health clinics helped widen Cuba's pro-revolutionary advances in terms of Latin American literacy and health indices. Since the demise of communism in Eastern Europe and the former Soviet Union, economic support and subsidies have collapsed, compelling far fewer expenditures in those areas in the 1990s, and laying clear the inefficiencies and poor management resulting from a generous subsidy.

Clothing

Standards of dress in Cuba for most occasions are informal. Summer weight clothing is appropriate year-round. Women find dresses or skirts a good choice. Men wear guayaberas or short-sleeved shirts. Light jackets or sweaters are useful during the winter months (November-February) and in the office building.

Clothing is available in some *diplomatías*, but the variety is limited and generally quite expensive. You can have some clothing items made locally, and seamstress work is quite good.

Children's clothes are not available in any abundance or reasonable price range.

Supplies and Services

Dry-cleaning and shoe repair services are virtually nonexistent. The casual and tropical climate encourages more wash-and-wear clothing. Beauty parlors and barber shops offer acceptable services at an inexpensive price.

Religious Activities

From its Spanish legacy, Cuba developed an adherence to Roman Catholicism. From its African slave trade, Cuba absorbed tribal rituals and beliefs of ancestral gods. That vibrant mix, known today as *Santería*, remains a widely-believed and practiced religion. Of course, more traditional services are conducted, virtually all in Spanish. More churches appear open to worship than in previous years, as the Cuban Government alternately tightens and loosens its control over the faithful. A few Protestant churches and Havana's diminishing Jewish community offer services, too.

Education

There are three international schools in Havana. *L'école Française* provides instruction in French for nursery school (age 2 and-a-half) through the fifth grade. Secondary courses (grades 6 through 8) are provided via correspondence courses graded in

© John Spaul/Corbis. Reproduced by permission.

Aerial view of Havana, Cuba

France. The Centro Educativo Espanol offers Spanish-language programs for children starting at age 2. Secondary courses are graded via testing reports from Spain. The International School of Havana (ISH) offers instruction in English from preschool through the high school level.

USINT children historically have attended ISH. The school is headed by an English-speaking principal (currently a citizen of the U.K.). All the teachers are Cubans and employees of Cubalse. Few have any formal training as educators. The Office of Overseas Schools (A/OS) rates the school as adequate through grade 6, yet parents of several children in the upper elemen-

tary grades (4-6) have been dissatisfied with the school's program. Still, with a new principal (1993) ISH is trying to move beyond past problems.

The few secondary educational courses offered operate under a University of Nebraska correspondence program or Mercer College (a British program). The International School currently follows a curriculum loosely based on the Fairfax County standard. All primary school textbooks are from the U.S.

Special Educational Opportunities

The International School of Havana is in the process of expanding its Adult Education Program (now lim-

ited to English as a Second Language), and has offered workshops on stress reduction and a Cuban Cinema Seminar. Casa de las Americas, an institute which studies the American continent, offers special seminars in literature. All instruction is in Spanish. There are no special facilities for those with physical, developmental, or learning handicaps.

Sports

Tennis, golf, horseback riding, swimming, snorkeling, scuba diving, wind surfing, water skiing, and fishing are year-round sports in Cuba. Tennis courts can be rented or booked at several hotels.

Cuba has wonderful, unspoiled beaches, particularly at Varadero, two hours' east of Havana. That beautiful stretch of white sand beach ranks as one of the Caribbean's finest. Excellent beaches lie within 15 miles from Havana, while Herradura, the nearest coral reef for snorkeling or diving, is only an hour's drive west.

Cuba's coastal waters and coral reefs attract many fishermen and divers. You can charter deep-sea fishing boats at Marina Hemingway. Freshwater bass fishing is good at Hannabanilla, (called Treasure Lake on old maps of Cuba), a 5-hour drive into the mountains southeast of Havana. Scuba diving requires certification, which you preferably should have before arriving, along with your own equipment. Tanks can be recharged without problem.

The Havana Golf Club offers a nine-hole course, tennis courts, a squash court, bowling alley, pool and restaurant for a monthly fee. The Club Hipico Iberoamericano offers both Western and English-style horseback riding lessons and outings into Lenin Park. Some Americans enjoy bowling at the 24-lane alley built for the 1991 Pan-American Games, still in very good condition, and there is an outdoor roller-skating rink for rollerbladers of any age. Biking also remains a popular activity.

Touring and Outdoor Activities

Cuba's economic disintegration, reflected by its difficulty in sustaining consistent oil deliveries, has limited touring into the far reaches of the island. Gasoline may not always be available, and the quality of much of it is suspect. Still, one-day and one-tank drives afford an opportunity to enjoy a change of scenery from the city.

Beginning in 1994, however, the Foreign Ministry requires that all trips outside of Havana Province be reported to it in advance of the trip. There is no need to wait for authorization; only to inform MINREX of travel plans beyond the province borders.

Heading west from Havana into Pinar del Rio province, two areas attract interest. The waterfall and nearby orchid gardens at Soroa are just an hour's drive west of Havana. Running adjacent to the ridge of mountains known as Cordillera de los Organos, the highway to Soroa passes through large tracts of sugarcane and cattle-grazing pasture land.

Another hour brings you to Valle de Vinales, where the combination of soil and climate produce the best tobacco for Cuban cigars. These western mountains also offer rather dramatic contrasts to the agricultural lowlands, attractive vistas and cave exploration. Two hours east of Havana, in the province of Matanzas, visitors to Las Cuevas de Bel-lamar are guided through a small part of the extensive underground caverns.

Other more distant places of interest include Guama (a commercial crocodile farm), the cities of Trinidad and Cienfuegos (Spanish colonial architecture), and Santiago de Cuba (Cuba's second-largest and most important city, which sits close to Spanish-American War sites). Playa Giron, better known outside Cuba as the Bay of Pigs, is a three-hour drive southeast and worth an occasional weekend for snorkeling. Cayo Largo and Cayo Coco, island

resorts being developed for Cuba's tourism industry, can be reached via small aircraft. All overnight travel outside of Havana should be arranged in advance in order to ensure accommodations, which can range from rustic to comfortable.

Entertainment

Frequent power outages may contribute to fewer performances of cultural events, but they have not diminished Cubans' interest in the arts. The National Ballet continues to stage various productions at the famous and still-lovely Garcia Lorca Theater. Jazz remains quite popular, and a yearly festival features local and international artists. Cuba has annually sponsored the Latin-American Film Festival—a Cuban film won Best Picture and critical acclaim in 1994—and a number of theaters show Spanish and American films.

Museums and art galleries provide occasional hours of enjoyable relief. The Museum of Colonial Art, Hemingway Museum, Museum of the Revolution, Museum of the City, and the Museum of Natural Science are worth visiting. Museo Historico in the nearby town of Guanabacoa displays extensive information on Santeria and other Afro-Cuban religions deriving from ancestral and spiritual worship.

Walking through parts of Old Havana is pleasurable. The beautiful and graceful Spanish Colonial architecture of the Havana Cathedral, its cobble-stoned plaza and adjacent buildings, evokes the grandeur of colonial Cuba. Stain glass windows, richly-detailed stucco and moldings, elegant doorways and window treatments, complement the historic if faded ambience of this U.N.-designated World Heritage site. Some caution is required, however, as purse snatchings have increased in recent years.

For nightlife, some hotels offer cabaret shows and discos, and of course, the famous Tropicana Nightclub continues its half-century plus reputation for dinner, drinks, and a dizzying floor show. Cuba's strong push

Street in Santiago de Cuba, Cuba

to promote its tourism facilities and industry likely will result in more nightclubs, restaurants, and evening entertainment opening in the future.

Santiago de Cuba

Santiago de Cuba, a port on the southern coast of the island, is the capital of Oriente Province. With a population of over 405,350 (2000 est.), it is the nation's second largest city. It was founded in 1514, and was the capital of Cuba until 1589. Santiago, its more commonly used name, was once a center for brisk smuggling trade with the British West Indies, but is probably better known as the scene of military activity during the Spanish-American War. U.S. ships established a blockade here in the harbor and, on July 3, 1898, in the final major battle of the war, destroyed the Spanish fleet led by Pascual Cervera y Topete. There also was heavy land fighting near the city when San Juan Hill was taken two days before the successful blockade.

The Spanish-American battles were not to be the final military struggles at Santiago—the city was once again the scene of heavy fighting in July 1953, when Fidel Castro (Ruz) led his first armed revolt against the government in power.

Santiago has many famous landmarks, among them the old cathedral in the city and the crumbling forts on towering cliffs above the harbor. Interesting old colonial buildings add to the charm of Santiago. Two major libraries, one central and one provincial, are maintained here, as is the 30-year-old Universidad de Oriente, which has facilities in several disciplines and a student body now numbering 12,000.

Wood, minerals, and agricultural products are Santiago's major exports. Iron, copper, and manganese are mined in the area. A new textile factory was opened here in 1984.

OTHER CITIES

Founded in 1513, **BAYAMO** is in eastern Cuba, 60 miles northwest of Santiago, on Cuba's longest river, Río Bayamo. The city is commercially active, manufacturing sugar, coffee, tobacco, and rice. There is a major condensed milk plant here. Copper and manganese are mined in the area. The city is a patriotic favorite of Cubans. The Ten Years' War, 1868-1878, and the revolt of 1895 began in Bayamo. The population is about 141,000 (1995 est.).

CAMAGÜEY, with a population of almost 283,000 (2000 est.), is located in east-central Cuba. It is connected with Santiago and Havana by the Central Highway. Founded in 1515, the city prospered illegally by trading with the English and Dutch colonies in the Caribbean. Camagüey resisted Cuba's independence and several battles were fought nearby. The city maintains vestiges of its colonial architecture. Older parts of the city exhibit narrow, irregular streets and small plazas. Industries here include sawmilling, tanning, and dairying. The city is near major highways and railways, and has an international airport.

The port city of **CÁRDENAS**, on Cuba's north coast, is known as an important fishing port. The city's industries include rum distilleries, and sugar refineries. Cárdenas is 75 miles east of Havana and about 15 miles southwest of a fashionable spa, featuring white sulfur springs, in San Miguel de los Baños. A popular beach at Varadero is also nearby. Cárdenas has a population over 66,000.

CIEGO DE ÁVILA is in central Cuba, about 65 miles northwest of Camagüey. Situated in a fertile region, the city produces sugarcane, cattle, and tropical fruit. The population here is over 80,000.

The sugar port, **CIENFUEGOS**, is located about 140 miles southeast of Havana, on the south-central coast. Areas surrounding the city produce cattle, tobacco, coffee, rice, and sugarcane. Cienfuegos is home to several industries, among them are distilleries, coffee- and tobacco-processing plants. From May through November, the weather in Cienfuegos is hot and humid; winter temperatures are milder, with warm days and cool nights. The city is lovely—it boasts wide streets, numerous parks and promenades, a fine plaza, and interesting architecture. Visited by Columbus in 1494, Cienfuegos' port began operation in the early 1800s. Cienfuegos, site of Cuba's largest cement works, has a

population of approximately 195,000.

GUANTÁNAMO, a city of 200,400 residents (2000 est.), is a major sugar-producing center in southeastern Cuba. Its history dates to the early 19th century when French colonists, fleeing the slave uprising in Haiti, established a settlement here. The area is probably best known to Americans because of the U.S. Navy base which has been in operation since 1903 at nearby Guantánamo Bay. The city's port is at Caimanera, on the west side of the bay. The city's chief industrial activities are sugar milling, coffee roasting, and the processing of chocolate, salt, and liqueurs. Guantánamo is accessible by railroad and highway.

HOLGUÍN, which lies in the fertile hill country of northeastern Cuba 70 miles north of Santiago, has twice been a rallying spot for insurgents—the first time during the Ten Years War (1868-78), and again in the period preceding the outbreak of the Spanish-American War (1898). Holguín was founded in 1720. It is one of the country's major commercial centers, and products grown in the region (sugar, coffee, tobacco) are shipped from its port, Gibara. The city, whose population was 243,000 in 2000, supports a university extension institute, with schools of engineering and economics.

MATANZAS, situated in western Cuba, on the road between Havana and beautiful Varadero, is known for its fine, deep-water harbor. The lush Yumurí valley in which it lies, and the fascinating caves in the area, have become tourist attractions. Known as the "Athens of Cuba," Matanzas has a public library, active cultural institutions, and numerous scholars and artists. The city offers beautiful monuments, plazas, and scenic drives. Among Matanzas' industries are sugar refineries, textile plants, fertilizer, and shoe factories. The city, founded in 1693, has a current population of about 123,000. A municipal museum is established here.

Calle Barcelona & Capitolio in Havana, Cuba

The 300-year-old city of **SANTA CLARA**, in the west-central part of the country, made its mark in recent history as the scene of a decisive battle in 1959, when Castro's guerrilla forces overthrew the Batista government. This attractive city, nestled among the hills of Villa Clara Province, is the site of the Universidad de Las Villas, one of Cuba's three major institutes of higher learning; the school was founded in 1948, and currently has a student body of 8,500. Sugar and tobacco are the principal products of the area. The city is situated near the geographic center of the island and is a major junction for Cuba's railroads. Santa Clara has a population of 194,350.

Founded in 1514, and once Cuba's wealthiest city, **TRINIDAD** is situated in central Cuba, about 75 miles southwest of Havana. In order to maintain its colonial atmosphere and to celebrate famous former residents—including Spanish explorer Hernán Cortés—Trinidad has been declared a national monument. The city has numerous and varied industries, including sugar refineries, dairies, sawmills, and cigar and cigarette factories. Tourists enjoy its cool climate and mountainous landscape. Gold, amianthus, and copper deposits are found nearby. Trinidad has an airport railway that links with Cienfuegos, and good highways.

COUNTRY PROFILE

Geography and Climate

With more than 44,000 square miles (114,447 sq. km.) of land and 2,500 miles (4,000 km.) of coastline, Cuba rightfully lays claim to being the largest island in the West Indies, accounting for more than one-half of the total land area. The island stretches more than 745 miles (1200 km.) in latitude, yet only ranges from 20 to 125 miles (35-200 km) in longitude, lying about 90 miles (145 km.) south of Key West, Florida.

No larger than the state of Pennsylvania but contoured much differently, Cuba's coastline constantly breaks into literally hundreds of bays, inlets, and narrow, shallow rivers. The Isle of Youth (known as the Isle of Pines in pre-Revolution days), and some 1,600 keys and islets lie offshore. The deep-water harbors of Havana, Guantanamo, and Bahia Honda rank among the world's finest.

Topographically, three-fifths of Cuba displays flat or gently rolling fields and wide, fertile valleys - ideal for the sugarcane and tobacco crops which are the backbone and most recognizable symbols of the Cuban economy. The northern coast is low and marshy. Most of what remains, particularly at the southeastern end of the island, forms steep and at times formidable mountains. Three mountain ranges dominate the Cuban terrain, but by far the best-known and most rugged is the eastern Sierra Maestra, where peaks rise to almost 6,000 feet (1,829 m.) above sea level. Fidel Castro began his struggle there in the 1950s, and still today in speeches alludes to its historical significance in the Revolution.

Cuba is bordered on the north by the Gulf of Mexico and the Straits of Florida and on the south by the Caribbean Ocean. Prevailing trade winds combine with the warm

waters of the Gulf Stream to produce a mild and semitropical climate. Cuba's mean temperature is about 77°F (25°C) in winter and only slightly more, perhaps 80°F to 85°F (26°C), in summer. Averages range only between 70°F (21°C) and 82°F (27°C) for the coldest and warmest months. Summer readings of as high as 100°F (37°C) have been recorded. Occasional near-freezing temperatures occur only in mountain areas.

Relative humidity varies from 60 to 70% in the daytime and from 80 to 90% during the night, regardless of the season, of which there are only two. The dry season lasts from November to April. During the May through October rainy season, Cuba receives up to 75% of its yearly rainfall, which averages 54 inches (137 cm.).

Population

Cuba's population is over 11 million, with an annual growth rate of 1.1% and a density of 200 persons per square mile. Most of the population is of Spanish and African origin. Spanish, the official language, has particularly Cuban traits in its spoken form.

About 70% of the population is urban. Havana, the capital, is Cuba's principal port and city, and has a population of 2.3 million. Other major cities include Santiago de Cuba, Camaguey, Santa Clara, Holguin, Matanzas, Cienfuegos, and Pinar del Rio.

Before 1959, Roman Catholicism was observed by about 85% of the population. The 1976 Cuban Constitution nominally protects freedom of religion. In practice, however, church attendance has only begun to grow in recent years, following years of official persecution of religious institutions. Various religions are sometimes permitted to publish literature for use within their churches. Religious public demonstrations or radio/television programming are not permitted.

Public Institutions

Under that same 1976 Constitution, Cuba is organized with a party-government-state structure. The Communist Party, described in the Constitution as "the highest force of the society and state," is headed by a Politburo. The Communist Party, Cuba's only legal political party, is the focus of power in the state.

Executive power within the government is vested in the Council of Ministers, which heads the government. Legislative power allegedly rests with the National Assembly of People's Power, which elects the Council of State, but in fact is a rubber-stamp body with no independent power. All courts, including the People's Supreme Court, are subordinated to the National Assembly of People's Power (and thus to the Council of State).

Administratively, Cuba is divided into 14 Provinces plus the Isle of Youth.

Arts, Science, and Education

Except for their enormous state of flux, few agree today on how to characterize the status of the arts and education in Cuba. One of the leitmotifs of the prize winning film, "Fresas y Chocolate", is derision of the low quality of popular education in Cuba. On the other hand, a long-time American admirer of the revolution, Carol Brightman, has written that:

The so-called achievements of the revolution—lifelong health care, free and universal education, generous social security payments, free housing—have materially raised the standard of living of the vast majority of the population to levels undreamed of before 1959. (*The Nation*, v. 258,9: p. 299)

The strategy for long term economic recovery, emphasizing biotechnology, tourism development, and related fields such as medicine and

English teaching, and the stringencies of special period cutbacks, i.e., the reduction of Cuban book publishing from about 20 million volumes to 250,000, are forcing momentous changes, though few are discussed very openly. The enormous subsidies paid through the Ministry of Culture that kept tens of thousands of Cuban artists and intellectuals on the state's payroll have been reduced dramatically since members of the Union of Artists and Intellectuals (UNEAC) and the Union of Journalists (UPEC) were first allowed to work independently in 1992 and retain some or all of their hard currency earnings in 1993.

The Ministry remains the central authority for most museums and galleries, ballet and theater companies, musical groups, publishing houses, and the motion picture industry, but the ministry's personnel and activities have been cut back so far that it runs very little any more. Independent entities, such as the Pablo Milanés Foundation, have arisen as cultural impresarios and musical groups are increasingly arranging their own contracts with record companies and tourist hotels where they can be paid in dollars.

Museums now often depend on the revenue they can generate from tourists and international donors. Artisans sell their wares through co-ops and tourist stalls. The only Cuban films made in recent years have been foreign co-productions. The Ministry also retains responsibility for the "culturalization" of the people, but the legendary popular concerts and live performances of yesteryear are now generally restricted to TV appearances during rare home visits by big name performers.

The legendary cultural exports of the revolution, ranging from Alicia Alonso's ballet to a panorama of revolutionary films and Milanés' ballads, have decreased to a trickle. The 1993 Latin American Film Festival almost recouped some of the past glory by attracting a large

number of films from other countries, but "Fresas y Chocolate" was the only Cuban film exhibited. The Cuban Institute of Cinematographic Art and Industry (INCAIC) and the film institute that Colombian novelist Gabriel Garcia Marquez helped found in 1986 continue to promote "Latin American film consciousness," just with much less Cuban content.

There are lots of cinemas, theaters and concert halls in Havana and spread around Cuba, but performances as advertised are much less reliable than in the past. Concertgoers are rarely surprised to hear a number not on the program, and having tickets for a performance of a particular opera or ballet does not insure that the performance will occur as scheduled. The Cuban National Ballet, founded by the "primitiva" ballerina, Alicia Alonso, performs periodically, but performances are limited between foreign tours. Camaguey's dance company now rivals that of Havana, but it, too, is mostly on the road outside Cuba. Notable visiting artists from around the world occasionally visit Cuba, but in recent years they have come more to show solidarity than to perform.

Education is a pillar of the revolution, and teachers, after medical cadres and the military, have been among its most faithful. The independent employment allowed to artists and intellectuals remains unavailable to teachers. The regime maintains its claim of 96% literacy despite some evidence of functional illiteracy and criticisms of the educational system. Control of reading material has loosened greatly in recent years as the means to acquire it have diminished. In 1992-94 several Cuban universities and the National Library started accepting materials from the USIS book program. The pace of requests for more publications has now far outstripped the capacity to supply them. USIS also has distributed post-produced publications and donated newspapers and magazines, especially to support English teaching programs.

Cuban self criticisms of the waste, mismanagement, and inefficiency of their economy has rarely been applied to the educational system. The revolution succeeded in widespread school construction, especially in provincial areas, and in establishing a large-scale system of technical and normal education and the expansion of the country's public universities.

However, the well-endowed schools of the past are now all-but-forgotten when each new school year opens with a drive to raise funds to buy pencils and paper. During the prolonged blackouts of the special period, most schools lack electricity and all that goes with it, and water supplies and sanitary conditions are unreliable.

Despite all these problems, classes go on at all levels of the system amid the reductions, especially at the higher levels. Cuba's six universities and other centers of higher education appear to be losing enrollment, and concerns about the furloughing of faculty and other changes of status are mounting.

The big challenge for the universities in Pinar del Rio, Havana, Matanzas, Villa Clara, Camaguey and Santiago, as well as in the twenty or so other institutes of higher education is the lack of access to dollars. In 1993 these institutions were allowed to develop self-financing programs for the first time. Despite seemingly endless numbers of special courses, seminars and conferences for foreign students and academics, earnings appear limited.

Beside the lack of funds, many Cuban scholars trained in the former Soviet bloc now are without means of maintaining their scientific and professional development with respect to any international standard. In some faculties large-scale English programs have been started to retool the language capacities of the staff, and professional contact with visiting American scholars is eagerly sought out where it was once avoided. Profes-

sors are encouraged to participate in internationally-funded programs and to accept teaching opportunities in other countries that may generate some funds.

Academic and cultural contact with the United States is growing rapidly, largely at the initiative of U.S. institutions, but Cuban counterparts are quick to go along and often to take control of programs. From a low point during the mid-1980s when only a handful of academics traveled each year, today there are scores of U.S. visitors each month at the University of Havana, and several hundred Cubans visit the U.S. each year. The provincial educational centers are far less involved, especially in allowing faculty to travel, but U.S. institutions are beginning to focus their attention beyond Havana.

Commerce and Industry

Since the late 18th century, the Cuban economy has been dominated by sugar production and has prospered or suffered due to fluctuations in sugar prices. Sugar still accounts for about three-quarters of export earnings. Cuba has never diversified from its basic monocultural economy despite some development of tourism, nickel mining, pharmaceuticals, and biotechnology.

For almost 30 years, the defects in Cuba's economy and the effects of the economic embargo imposed by the U.S. in 1962 were partially offset by heavy subsidies from the former Soviet Union. But those supports ended with the collapse of COMECON in the late 1980s and with the demise of the Soviet Union in 1991. Cuba's break with its former patron and failure to undertake needed reforms combined to produce an unprecedented economic crisis. Its economy is estimated to have declined 40% from 1989 through 1992.

The economic prospects are not good, largely because of the Castro regime's decision to maintain the

state's highly-centralized control over economic decision-making, the lack of energy supplies, and inputs for industry. The "Special Period in Peacetime" relies upon strict rationing of food, fuel, and electricity, and gives priority to domestic food production, development of tourism, and biotechnology production.

Basic public services are provided by the state, either free of charge or for minimal fees. Access to education through high school is still generally available, but urban housing and medical care have deteriorated, as have communications and transportation.

The state owns and operates most of Cuba's farms and all industrial enterprises. State farms occupy about 70% of farmland, while peasant cooperatives account for about 20%. Private farms account for about 10% of Cuba's agriculture. Cuba's manufacturing sector emphasizes import substitution and provision of basic industrial materials. In recent years, many Cuban firms have closed or reduced production because of shortages of foreign exchange and limited access to spare parts and imported components.

The U.S. has a comprehensive trade embargo on Cuba. The Cuban Democracy Act, signed into law in October 1992, revoked Treasury authority to issue licenses for most U.S. subsidiary trade with Cuba and bans for 180 days vessels which have entered a Cuban port from loading or unloading in U.S. ports. The legislation provides support for the Cuban people by permitting licensing for "efficient and adequate" telecommunications and for humanitarian donations to non-governmental organizations in Cuba.

With the loss of trade and aid from the former Soviet Union and Eastern Europe, Cuba has attempted to attract foreign investment and Western buyers for its nickel, petroleum, biotechnology, and other sectors. Except in tourism, minerals and mining, Cuba has had limited success in that effort because of the

deterioration of the economy, its unpaid debt to Western countries, and the lack of clear title to expropriated property.

In 1993, the Cuban Government introduced measures to help revive the economy, including allowing more exiles from the U.S. to visit Cuba, expanding the permission for self-employment, and decriminalizing hard currency possession. In addition, Cuba also established the Basic Units of Collective Production (UBPCs), which allow greater control over the farms' administration and division of any profits with the farms' workers. However, concerned by the specter of a renascent capitalism and the possibility of corruption, the government already has limited the scope of such measures as self-employment.

Transportation

Local

Travel within and between Cuban cities is complicated by a dearth of reliable road maps, and signs or markers which are infrequently posted and poorly visible. Cuba's economic disintegration, after years of Soviet and Eastern Bloc support, has clearly manifested itself in gasoline shortages. Vehicle traffic in Havana is light, relative to past years when traffic jams and heavy pollution ringed the city. Yet if the volume of vehicular traffic is down, heavy bicycle traffic compensates, posing the latest and constant road hazard.

Driving is hazardous also due to potholes, obscure traffic signals, and parked or stalled cars in lanes of traffic. Dwindling revenue and central planning have contributed to the diversion of resources away from road repair and other infrastructural improvements. Power outages make signal intersections dangerous and leave many other streets in total darkness.

Rainy season flooding forces traffic off some streets, and it is not uncommon to encounter stalled cars and buses on the road even under

good driving conditions. Vehicle inspection regulations are sporadically enforced at best. Spare parts, supplies, motor oil, etc. for privately-owned vehicles are seldom available, making maintenance and safety problematical. Indeed, the only thing keeping so many cars, including many vintage American models, running along Havana's boulevards is creativity and ingenuity.

Cuba's promotion of tourism has resulted in far more taxis plying the streets, although generally you can flag one only in front of tourist hotels and other hard currency locations. It is difficult to hail one on the street, but you can call for one. Bus transportation is erratic, unreliable, overcrowded, and not recommended.

Regional

Increasingly, even within Cuba's major cities, the road system reflects poor and infrequent maintenance. Secondary roads and more rural highways suffer from severe neglect, with little or no grass-cutting, no fencing to keep animals from wandering into traffic, few signs or other distance and safety markers, and crumbling pavement. Gasoline stations which are open, have fuel, and accept dollars are almost nonexistent in many outlying areas. The quality of refined petroleum in Cuba is questionable, and bad fuel has damaged or destroyed more than one fuel injector system. At \$3.50 a gallon, the availability and price of gasoline confine most Americans to Havana or trips which can be achieved with one tankful.

Cubana de Aviacion serves Cuba's major cities but has limited international routes, which Americans are prohibited from using anyway. For domestic routes Cubana is the only airline from which to choose. There are a number of other international airlines and flights. Overnight train service, with a special car for dollar customers, transits Cuba from Havana to Santiago regularly.

Communications

Telephone and Telegraph

International telephone service is fair to acceptable, but frequently poor for local calls. Calls from Cuba to the States are subject to disconnection or dropped lines. It is virtually impossible to call Cuba from the States, and is getting more difficult.

Telephone rates vary based on the location called. Calls to the U.S. cost about \$2.50 per minute, regardless of the time, distance or day of week. Calls to all other overseas destinations cost much more. Cellular telephone technology exists in Cuba, but rates are higher still. The quality of phone service discourages use of fax machines. Indeed, the quality of office and residential telephone service is questionable, as bills periodically reflect hundreds of dollars in calls never made. Radio and TV

For a large part of the population, radio and TV provide access to entertainment and information. Radio stations throughout the country offer programming varying from news and public affairs to sports, music, and soap operas. Western music is very popular in Cuba, and classical music programs are broadcast most of the day. Of course, some stations air programs with a more political orientation. Close proximity to the U.S. and favorable weather conditions permit some Florida radio signals to penetrate Cuban airwaves. Major shortwave radio signals from the VOA, BBC, and Armed Forces radio also can be picked up. USIA's Radio Marti' is easily received, but TV Marti' is actively jammed by Cuba.

The Cuban government maintains two TV stations which broadcast a variety of news, sports, political events and speeches, musical variety shows, soap operas, dramatic productions, cartoons and feature films from the U.S., Europe, Japan and the former Soviet Union, all but a few in Spanish. In recent years there has been a proliferation of privately-owned satellite dishes.

Health and Medicine

Medical Facilities

The quality of medical and dental care available in Havana has deteriorated. Hospitals designated to care for tourists and diplomats with relatively modern, imported equipment appear suitable for routine outpatient cases; but, pharmaceuticals are in short supply. A hospital's ability to provide a required medication on demand is open to question. A full range of medical specialists is available but secondary and follow-up care is not up to U.S. standards. Patients requiring evaluation or treatment of more complex cases are evacuated to Miami.

Community Health

Community public health and sanitation programs are collapsing. Mosquito bites and insect-borne diseases are common in Cuba. Garbage collection and disposal equipment is limited. Pick-up schedules are random and haphazard. Air pollution is common during sugarcane harvesting months (December through June). Trash burning in some residential neighborhoods adds to the problem.

Rain produces sewage backups jeopardizing public water supplies. While city water is adequately treated as it enters the municipal water system, tap water is not considered safe for internal consumption due to the deteriorated water distribution system. Sanitation during food preparation may be adequate, yet standards of cleanliness in food processing factories, markets and restaurants are marginal.

Upper respiratory and sinus problems are common in the Cuban climate. There are frequent flu outbreaks in the Fall and Winter (September through March) USINT personnel have experienced various minor ailments such as diarrhea, intestinal parasites, fungal infections, and conjunctivitis. With the breakdown of preventive public health programs and with periodic torrential rains and flooding, serious illnesses such as hepatitis, den-

gue fever, typhoid are a threat. The last major typhoid outbreak occurred in 1977. The last dengue fever epidemic was in 1981.

In 1993, an outbreak of optical neuritis affected about 50,000 Cubans, some seriously. Apparently in part the result of vitamin deficiencies, the outbreak subsided later in the year. No U.S. citizens were affected.

Preventive Measures

Boil all water. Raw fruits and vegetables should be scrubbed, soaked in a chlorine solution and rinsed in drinking water.

There is a shortage of medication in Cuba. U.S.-brand drugs are not available. You should bring a generous supply of mosquito repellent, sunscreen lotion, first-aid items, prescription drugs, and a full range of medicine cabinet drugs. If you wear eyeglasses or contact lens, bring a second pair.

There are no mandatory immunizations. Typhoid, influenza, hepatitis B, gamma globuli, and, for travel to Central America, yellow fever shots are recommended. Cuban authorities do not require any particular inoculations for persons coming from the U.S.

NOTES FOR TRAVELERS

Passage, Customs & Duties

The Cuban Assets Control Regulations of the U.S. Treasury Department require that persons subject to U.S. jurisdiction be licensed to engage in any transaction related to travel to, from and within Cuba. Transactions related to tourist travel are not licensable. This restriction includes tourist travel to Cuba from or through a third country such as Mexico or Canada.

The following categories of travelers are permitted to spend money for Cuban travel and to engage in other transactions directly incident to the purpose of their travel under a gen-

eral license, without the need to obtain special permission from the U.S. Treasury Department:

- U.S. and foreign government officials traveling on official business, including representatives of international organizations of which the U.S. is a member.

- Journalists and supporting broadcasting or technical personnel regularly employed by a news reporting organization.

- Persons making a once-a-year visit to close family relatives in circumstances of humanitarian need.

- Full-time professionals whose travel transactions are directly related to professional research in their professional areas, provided that their research: (1) is of a non-commercial academic nature; (2) comprises a full work schedule in Cuba, and (3) has a substantial likelihood of public dissemination.

- Full-time professionals whose travel transactions are directly related to attendance at professional meetings or conferences in Cuba organized by an international professional organization, institution, or association that regularly sponsors such meetings or conferences in other countries.

- Amateur or semi-professional athletes or teams traveling to Cuba to participate in an athletic competition held under the auspices of the relevant international sports federation.

The Department of the Treasury may issue licenses on a case-by-case basis authorizing Cuba travel-related transactions directly incident to marketing, sales negotiation, accompanied delivery, and servicing of exports and reexports that appear consistent with the licensing policy of the Department of Commerce. The sectors in which U.S. citizens may sell and service products to Cuba include agricultural commodities, telecommunications activities, medicine, and medical devices. The Treasury

Department will also consider requests for specific licenses for humanitarian travel not covered by the general license, educational exchanges, and religious activities by individuals or groups affiliated with a religious organization.

Unless otherwise exempted or authorized, any person subject to U.S. jurisdiction who engages in any travel-related transaction in Cuba violates the regulations. Persons not licensed to engage in travel-related transactions may travel to Cuba without violating the regulations only if all Cuba-related expenses are covered by a person not subject to U.S. jurisdiction and provided that the traveler does not provide any service to Cuba or a Cuban national. Such travel is called "fully-hosted" travel. Such travel may not be made on a Cuban carrier or aboard a direct flight between the United States and Cuba.

Failure to comply with Department of Treasury regulations may result in civil penalties and criminal prosecution upon return to the United States.

Additional information may be obtained by contacting the Licensing Division, Office of Foreign Assets Control, U.S. Department of the Treasury, 1500 Pennsylvania Avenue NW, Treasury Annex, Washington, DC 20220, telephone (202) 622-2480; fax (202) 622-1657. Internet users can log on to the web site through <http://www.treas.gov/ofac/>.

Should a traveler receive a license, a valid passport is required for entry into Cuba. The Cuban government requires that the traveler obtain a visa prior to arrival. Attempts to enter or exit Cuba illegally, or to aid the irregular exit of Cuban nationals or other persons, are contrary to Cuban law and are punishable by jail terms. Entering Cuban territory, territorial waters or airspace (within 12 miles of the Cuban coast) without prior authorization from the Cuban government may result in arrest or other enforcement action by Cuban authorities. Immi-

gration violators are subject to prison terms ranging from four years for illegal entry or exit to as many as 30 years for aggravated cases of alien smuggling. For current information on Cuban entry and customs requirements, travelers may contact the Cuban Interests Section, an office of the Cuban government, located at 2630 16th Street NW, Washington, DC 20009, telephone (202) 797-8518.

U.S. citizens are encouraged to carry a copy of their U.S. passport with them at all times, so that, if questioned by local officials, proof of identity and U.S. citizenship are readily available.

The U.S. Interests Section (USINT) represents American citizens and the U.S. Government in Cuba, and operates under the legal protection of the Swiss government. The Interests Section staff provides the full range of American citizen and other consular services. U.S. citizens who travel to Cuba are encouraged to contact and register with the American Citizen Services section. USINT staff provide briefings on U.S.-Cuba policy to American individuals and groups visiting Cuba. These briefings or meetings can be arranged through USINT's Public Diplomacy office.

The Interests Section is located in Havana at Calzada between L and M Streets, Vedado; telephone (537) 33-3551 through 33-3559. Hours are Monday through Thursday, 8:30 a.m. to 5:00 p.m., and Friday, 8:30 a.m. to 4:00 p.m. After hours and on weekends, the number is 33-3026 or 66-2302. Should you encounter an emergency after normal duty hours, call these numbers and request to speak with the duty officer.

U.S. citizens who register at the U.S. Interests Section in Havana may obtain updated information on travel and security within the country. There is no access to the U.S. Naval Base at Guantanamo Bay from within Cuba. Consular issues for Guantanamo Bay are handled by the U.S. Embassy in Kingston, Jamaica. For further information on

Guantanamo Bay, please contact the U.S. Embassy in Kingston at telephone (876) 929-5374.

Pets

Cuba imposes no quarantine on arriving pets. However, all pets must have a certificate of good health signed by a veterinarian and dated within 10 days from the date of the animal's arrival in Cuba. Dogs and cats must have a veterinary certification showing the date of the last rabies vaccination. And all animals must be taken to a Cuban veterinarian shortly after arrival for a checkup.

Currency, Banking and Weights and Measures

Since the Cuban government legalized the use of dollars in July 1993, U.S. dollars are accepted for all transactions.

U.S. citizens and residents traveling under a general or specific license from the U.S. Treasury Department may spend money on travel in Cuba; such expenditures may only be for travel-related expenses at a rate not to exceed the U.S. Government's per diem rate. U.S. Treasury regulations authorize any U.S. resident to send up to \$300 per calendar quarter to any Cuban family (except families of senior government and Communist party leaders) without a specific license from the Office of Foreign Assets Control. Treasury Department regulations also authorize the transfer of up to \$1,000 (without specific license) to pay travel and other expenses for a Cuban national who has been granted a migration document by the U.S. Interests Section in Havana. For further information, travelers should contact the Office of Foreign Assets Control.

U.S. citizens and permanent resident aliens are prohibited from using credit cards in Cuba. U.S. credit card companies do not accept vouchers from Cuba, and Cuban shops, hotels and other places of business do not accept U.S. credit cards. Neither personal checks nor travelers checks drawn on U.S. banks are accepted in Cuba.

Both English and metric systems of weights and measures are used in Cuba, although the metric system predominates.

DOMINICA

Commonwealth of Dominica

Major City:

Roseau

Other City:

Portsmouth

INTRODUCTION

DOMINICA was the first island sighted by Christopher Columbus on his second voyage on Sunday (*dies dominica*), November 3, 1493. At that time, the island was inhabited by Carib Indians, whose ancestors had originally come from the Orinoco Basin of South America. The Caribs had seized the island from the indigenous Arawaks in the 14th century. The Caribs fought against conquest, and the Spanish lost interest in the island because it apparently had no mineral wealth. Carib resistance also prevented the French and English from settling on the island in the early 1600s. In 1660, England and France agreed to let the native Caribs control the island without interference, but within 30 years Europeans began settling there. France took possession of Dominica in 1727 but forfeited it to Great Britain in 1763. Dominica was governed by Great Britain as part of the Leeward Islands from 1871 until 1939. Between 1940 and 1958, it was administered as part of the Windward Islands. From 1958 until 1962, it belonged to the short-lived Federation of the West Indies. After that federation broke apart, Dominica became an associated state of the Commonwealth of Nations in 1967 and an independent republic on

November 3, 1978. Dominica fully supported the 1983 US-led military intervention in nearby Grenada.

MAJOR CITY

Roseau

Roseau, with a population of 21,000, is the capital of Dominica. Located on the southwest coast of the island on the south bank of the Roseau River, Roseau is the country's largest city. The town's name is taken from the French word for "reed" because the river's edge was once covered with reeds. Roseau has suffered from many catastrophes, including floods, fires, and ten hurricanes since 1781 (most recent in 1979, 1980, and 1989). Woodbridge Bay Deep Water Harbour, one mile north of Roseau, handles commercial and large cruise ships with a draft of 30 feet up to 500 feet in length. Agricultural plantations became the foundation of the economy. Coffee was the main crop during the French colonial era, and sugar production was later introduced by the British. The market near the mouth of the Roseau River is the city's center for commerce.

Recreation and Entertainment

Scuba diving and sailing are popular tourist activities. From Roseau, day trip hiking tours are available to explore the rugged natural beauty of Dominica's volcanic peaks, forests, lakes, waterfalls, and numerous rivers. Cricket is the national game of Dominica and is played all over the island.

The Botanical Gardens of Dominica lie just outside Roseau below the Morne Bruce hill. The gardens cover 40 acres and were first planted in 1890 from a converted sugarcane plantation. Since the gardens receive over 85 inches of rain per year, a wide variety of tropical ornamental plants can be grown. In the 1960s and 1970s, the gardens were a popular site for cricket matches. The aviary at the gardens is a breeding center for the endangered Jaco or Rednecked parrot (*Amazona arausiaca*) as well as Dominica's national bird, the Sisserou parrot (*Amazona imperialis*). The Morne Trios Pitons National Park to the east covers 17,000 acres. The park is a natural undisturbed rainforest, and it contains Boeri Lake and Freshwater Lake, as well as the volcanic Boiling Lake and Middleham Falls. The Emerald Pool, a cave filled by a waterfall and surrounded by beautiful plants, is also located in the Morne Trois Piton National

Park. Trafalgar Falls north of the city is located in a lush gorge covered with ferns and orchids.

The Old Market Square area in downtown Roseau features several prominent early buildings. Dominica has several historic churches, including some in Roseau such as the Romanesque-style Cathedral of Our Lady of the Assumption. The architecture of older wooden buildings, complete with overhanging balconies, gingerbread fretwork, shutters, and jalousies, displays the historic influence of France. Many of the older buildings were restored to their original style after Hurricane David struck Roseau in 1979. In 1993, the Bay Front district opened as a waterfront promenade. The construction of a new seawall allowed land to be reclaimed for the project and now offers the city greater protection from rough seas. Fort Young, with its massive walls, was constructed during the 1700s for protection of the city; it became a hotel in the 1960s.

Roseau's art galleries feature the works of local artists who have received international recognition. There are three main annual arts festivals: Carnival, DOMFESTA, and Independence. Carnival has street parades, and beauty and costume pageants. Music is an important part of Carnival, which features calypso and a marching competition. DOMFESTA is a week-long festival held at the end of July which focuses on contemporary art. Independence celebrates Dominica's heritage with traditional food, costume, dance, and music.

OTHER CITY

PORTSMOUTH is Dominica's second-largest town, located on the northwestern coast. Nearby Prince Rupert's Bay is a natural harbor that was originally home to the Caribs. The sheltered bay was discovered by Columbus on his second voyage and later became a Spanish port for conquistadors going to

South America. The town was originally planned as the capital, but the malaria-carrying mosquitoes in the nearby marshes led settlers to relocate to Roseau. Boat trips up the Indian River to see native flora and fauna are popular with visitors. Portsmouth has approximately 3,600 (1995) residents.

COUNTRY PROFILE

Geography and Climate

Dominica is part of the Windward Islands, and lies between Guadeloupe to the north and Martinique to the south. It lies in the middle of the Lesser Antilles chain of islands. Dominica has an area of 790 square miles and is 29 miles long (north to south) and 16 miles wide (east to west). Its terrain is the most rugged of all the islands in the Lesser Antilles, with many peaks, ridges, and ravines. There are several mountains with peaks that are over 4,000 feet above sea level. The Boiling Lake is the second-largest volcanic bubbling crater lake in world. Boeri Lake is a freshwater crater lake that lies 3,000 feet above sea level. Dominica's climate is fairly tropical. Temperatures average 77°F in the winter and 82°F in the summer. Annual rainfall ranges from 80 inches along the coast to 250 inches in mountainous inland areas. Almost one fourth of the land is planted with crops.

Population

Dominica's population is estimated at 64,000. The population density of 110 per square mile is one of the lowest in the West Indies. Over 90% of the population is descended from African slaves brought to the island in the 17th and 18th centuries. About 6% of the population is of mixed origins. The Carib Territory, some 3,700 acres on the northeast coast of the island set aside in 1903, belongs to the 3,400 descendants of

the original inhabitants of the Caribbean islands. Due to the historic influence of the French, about 77% of all Dominicans are Roman Catholic. Smaller groups include Anglicans, Methodists, Pentecostals, Baptists, Seventh-Day Adventists, Baha'is, and Rastafarians. The Caribs' religious beliefs combine features of Christianity and nature worship. English is the official language of Dominica. Most of the population also speaks a French-based dialect called *kwéyòl*. Dominicans are increasingly using *kwéyòl*, which is unique but has elements in common with the dialects of St. Lucia and other islands with cultures influenced by France. Language in Dominica exhibits characteristics of Carib dialect and African phrases.

Government

Dominica became an independent republic on November 3, 1978.

Dominica has a Westminster-style parliamentary government, and there are three political parties: The Dominica Labor Party (the majority party), the Dominica United Workers Party, and the Dominica Freedom Party. A president and prime minister make up the executive branch. Nominated by the prime minister in consultation with the leader of the opposition party, the president is elected for a 5-year term by the parliament. The president appoints as prime minister the leader of the majority party in the parliament and also appoints, on the prime minister's recommendation, members of the parliament from the ruling party as cabinet ministers. The prime minister and cabinet are responsible to the parliament and can be removed on a no-confidence vote.

The unicameral parliament, called the House of Assembly, is composed of 21 regional representatives and nine senators. The regional representatives are elected by universal suffrage and, in turn, decide whether senators are to be elected or appointed. If appointed, five are

AP/Wide World Photos, Inc. Reproduced by permission.

Street in downtown Roseau, Dominica

chosen by the president with the advice of the prime minister and four with the advice of the opposition leader. If elected, it is by vote of the regional representatives. Elections for representatives and senators must be held at least every 5 years, although the prime minister can call elections any time.

Dominica's legal system is based on English common law. There are three magistrate's courts, with appeals made to the Eastern Caribbean court of appeal and, ultimately, to the Privy Council in London.

Councils elected by universal suffrage govern most towns. Supported largely by property taxation, the councils are responsible for the regulation of markets and sanitation and the maintenance of secondary roads and other municipal amenities. The island also is divided into

10 parishes, whose governance is unrelated to the town governments.

The flag of the Commonwealth of Dominica consists of a green field with a cross composed of yellow, black, and white stripes. In the center is a red disk with 10 yellow-bordered green stars surrounding a parrot.

Arts, Science, Education

Education is compulsory between the ages of 5 and 15. Transportation to secondary schools is a problem for students in rural areas. Higher education facilities include a teacher training institute, a technical college, a nursing school, and a satellite center of the University of the West Indies. The Alliance Française of Dominica sponsors French-language classes for all ages and main-

tains a library and cultural center in Roseau.

Commerce and Industry

Agriculture, with bananas as the principal crop, is still Dominica's economic mainstay. Banana production employs, directly or indirectly, upwards of one-third of the work force. This sector is highly vulnerable to weather conditions and to external events affecting commodity prices. The value of banana exports fell to less than 25% of merchandise trade earnings in 1998 compared to about 44% in 1994.

In view of the EU's announced phase-out of preferred access of bananas to its markets, agricultural diversification is a priority. Dominica has made some progress, with the export of small quantities of citrus fruits and vegetables and the

introduction of coffee, patchouli, aloe vera, cut flowers, and exotic fruits such as mangoes, guavas, and papayas. Dominica has also had some success in increasing its manufactured exports, with soap as the primary product. Dominica also recently entered the offshore financial services market.

Because Dominica is mostly volcanic and has few beaches, development of tourism has been slow compared with that on neighboring islands. Nevertheless, Dominica's high, rugged mountains, rainforests, freshwater lakes, hot springs, waterfalls, and diving spots make it an attractive destination. Cruise ship stopovers have increased following the development of modern docking and waterfront facilities in the capital. Eco-tourism also is a growing industry on the island.

Dominica is a member of the Eastern Caribbean Currency Union (ECCU). The Eastern Caribbean Central Bank (ECCB) issues a common currency to all eight members of the ECCU. The ECCB also manages monetary policy, and regulates and supervises commercial banking activities in its member countries.

Dominica is a beneficiary of the U.S. Caribbean Basin Initiative (CBI). Its 1996 exports to the U.S. were \$7.7 million, and its U.S. imports were \$34 million. Dominica is also a member of the 14-member Caribbean Community and Common Market (CARICOM) and of the Organization of Eastern Caribbean States (OECS).

Transportation

A paved road circles the island. Both Roseau and Portsmouth receive ships. The Cabrits Cruise Ship Port, located in the northwest within the Cabrits National Park, handles only cruise ship traffic. There is a 2,500-foot airstrip north of Roseau.

Communications

In 1987 Dominica became the first country in the world to operate a telecommunications system that was entirely digital. There are five local radio stations and one cable television station. The island also receives broadcasts from neighboring islands. Two newspapers, the *New Chronicle* and the government's *Official Gazette*, are published in Roseau.

Health

Dominica's one general hospital, Princess Margaret Hospital, is in Roseau. There are also smaller hospital facilities in Portsmouth, Marigot, and Grand Bay, and 12 health centers scattered across the country. Tuberculosis and other respiratory problems are made worse by high humidity and rainy conditions.

Clothing and Services

Dominicans dress modestly. Tourists are advised that scanty clothes and swimwear are only to be worn on the beaches. Casual light cottons are worn during the day, with a light sweater for cooler evenings. Raingear and hiking shoes are recommended for the mountains and rainforests.

NOTES FOR TRAVELERS

U.S. citizens may enter Dominica without a passport for tourist stays of up to three months, but they must carry an original document proving U.S. citizenship, such as a U.S. passport, Certificate of Naturalization, Certificate of Citizenship or certified U.S. birth certificate; photo identification; and a return or onward ticket. For further information concerning entry requirements, travelers can contact the Embassy of the Commonwealth of Dominica, 3216 New Mexico Avenue, N.W., Washington, D.C. 20016, telephone:

(202) 364-6781, email: emb-domdc@aol.com, or the Consulate General of Dominica in New York at (212) 768-2480.

Dominica's customs authorities may enforce strict regulations concerning the temporary import or export of items such as business equipment, food and beverages, paints and varnishes, and chemicals. It is advisable to contact the Embassy of Dominica in Washington or the Consulate in New York for specific information regarding customs requirements.

Americans living in or visiting Dominica are encouraged to register at the Consular Section of the U.S. Embassy in Bridgetown, Barbados and obtain updated information on travel and security within Dominica. Consular Section hours are 9:00am-12 noon and 2:00pm-4:00pm, Monday-Friday except local and U.S. holidays. The U.S. Embassy is located in the American Life Insurance (ALICO) building, Cheapside, Bridgetown, Barbados, telephone 1-246-431-0225, fax 1-246-431-0179, e-mail: consular-bridge@state.gov or Internet: <http://usembassy.state.gov/posts/bb1/wwwhcons.html>

Disaster Preparedness

Dominica is a hurricane-prone country. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>.

Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The **DOMINICAN REPUBLIC** shares with the Republic of Haiti the tropical island of Hispaniola, one of the Greater Antilles situated between Cuba and Puerto Rico. Troubled by unstable political conditions throughout most of its history, it has had little chance until recent years to develop a sound economy capable of providing more than a subsistence level of living for most of its people. The period from the mid-1960s to the mid-1970s, however, was marked by rapid economic development and progress, and the 1982 peaceful transition of power indicates the nation's growing stability.

Since its discovery by Columbus in 1492 and its colonization by Spain, Hispaniola has been, for brief periods, under the nominal control of Great Britain, France, Haiti, and the United States (1916–24). A bloody revolution on the French-held western end of the island in 1791 led to the establishment of Haiti as an independent country. Haitian forces dominated the island for varying periods between 1801 and 1843. The Dominican Republic gained its independence in 1844 after a successful revolt against Haitian rule, but its political history remained stormy, with foreign intervention in the country's affairs from the late 1800s to the middle part of this century. Recent political events suggest a promise of permanent democratic tradition.

MAJOR CITIES

Santo Domingo

Santo Domingo, the oldest continuous European settlement in the Americas, is the capital and largest city of the Dominican Republic. It serves as the commercial, social, and political hub of the country, as well as the principal seaport. It is a fast-growing city which has more

than doubled its population in the last 10 years. The population is estimated at 3.6 million. Most inhabitants live in the older, poorer, *barrio* sections, bordering the Ozama River. Outside these areas and the commercial districts near the port, Santo Domingo is fairly modern, with new homes, apartments, and office buildings continually under construction. Here, streets and avenues are lined with palm and flame trees, and flowering shrubs.

La Plaza de la Cultura, on the western side of the city, is the most impressive cultural area in the Caribbean, boasting the Museum of Dominican Man (Museo del Hombre), with a collection of artifacts from the Indian migrations from South America through the Caribbean islands; the National Library (Biblioteca Nacional); and the National Theater (Teatro Nacional). Parks and playgrounds are numerous in the immediate outskirts of Santo Domingo, and nearby beaches lure Dominicans and tourists alike.

The present location of the nation's capital evolved through a series of incidents. Christopher Columbus made his first landing in the New World December 5, 1492, on the northwest coast of an island he named Hispaniola. On Christmas Day of that year, his flagship, the Santa María, was wrecked on the

reefs of Cape Haitien, and from the salvaged timbers of this vessel the crew built the first European fort in the Western Hemisphere. Leaving a garrison of 40 men at the fort, Columbus set sail for further explorations and eventually went back to Spain. When he returned the following year on his second voyage, he found that the Indians had revolted against Spanish abuse, and had destroyed his small garrison. Columbus then ordered the construction of a new city, La Isabela, near the present city of Puerto Plata on the north coast of the Dominican Republic. His brother, Bartholomé (in English, Bartholomew), was made governor of Hispaniola.

In 1496, Bartholomé, enticed by rumors of gold, a good harbor, and fertile land, and disheartened by sickness and bickering among the colonists, transferred the seat of government to the south coast on the bank of the Ozama River. He named the new city Santo Domingo in honor of his favorite saint, Dominic. The spot served as Spain's stepping-stone to further explorations in the New World. Except for the period from 1936 to 1961, when the city was called Ciudad Trujillo, for (then) President Rafael Leonidas Trujillo Molina, this name has endured.

During the early 16th century, Santo Domingo was the staging area for the Spanish *conquistadors*. Among the famous explorers who contributed to the colorful history of the area were Ponce de León, Sir Francis Drake, Diego de Velázquez, and Hernán Cortés.

Clothing

Drip-dry materials, wash-and-wear cottons, and synthetic combinations will withstand repeated washings and the bright sun of the Dominican Republic. Because dry cleaning establishments are not up to U.S. standards, washable clothing is strongly recommended. For the most part, apparel that is suitable for a Washington, DC summer is appropriate all year in the Dominican climate. Jackets, sweaters, and shawls are needed for the rare cool

evening. Lightweight rainwear and umbrellas are useful during the rainy season; rubbers or boots are not. Hats and gloves are rarely worn. Sun hats, shades, and other protective clothing are recommended because the tropical sun can be hard on the skin.

Tropical-weight shirts and neckties are normal office attire but, for special functions, a white or dark business suit is appropriate. Black dinner jackets (never white) are worn on some occasions. Women dress simply in cool, sleeveless (or short-sleeved) dresses for office or other activities. Stockings are worn only for special occasions. Pantsuits may be worn to the office; slacks are acceptable for casual gatherings or for shopping. Shorts may be worn. Shoes are available locally, although they are expensive and often poorly made.

Children wear summer garments year round. Nightclothes suitable for U.S. summers are practical for older children, but infants and young children may need warmer wear in air-conditioned bedrooms. Children's shoes, both locally made and U.S. brands, are available. Teenagers in Santo Domingo are style and label conscious, and formal wear is worn much more in Santo Domingo than in the U.S.

Food

Several modern supermarkets in Santo Domingo offer a wide variety of U.S. canned and frozen foods including baby foods, but at high prices. Coffee, bread, rice, and a variety of other local products are found in most supermarkets. Supermarkets sell pasteurized milk, yogurt, butter, and cheese. They are usually safe to consume once checked for freshness.

Fresh foods on the local market are generally in good supply and of adequate quality. Farmers' outdoor markets and door-to-door vendors also sell fresh fruits and vegetables. Special outlets for meats, eggs, baked goods, and dairy products are available. Beef, veal, pork, poultry, fish, lobster, and shrimp are also

available locally. Due to the danger of ciguatera, a serious type of poisoning, do not eat fish at home or in restaurants. Both commonplace and tropical vegetables are found in season.

Local tropical fruits, including breadfruit, kumquat (nispero), gump (limoncillo), and guanabana, are plentiful and delicious. Lemons, as Americans know them, do not grow here; limes are used instead. Temperate zone fruits such as peaches, plums, and apples are imported occasionally, but are expensive.

Dairies sell pasteurized milk and will deliver. Milk in wax containers is preferable to bottled milk, as bottles may be contaminated. Local butter and cheese are usually safe, but should be checked for freshness.

The German-Jewish colony in Sosua, on the north coast, prepares excellent meats, cheeses, and good sandwich bread, all sold in Santo Domingo.

Fine local beers sell at prices approximately equal to those in the U.S. Most kinds of soft drinks are bottled here and sold at reasonable prices.

Supplies & Services

Beauty and barber shops are numerous in the cities and at the major resorts, with services varying from adequate to good. Tailoring is used mainly for alterations, but many American women find local dressmakers satisfactory. Shoe repair is satisfactory. All of these services are reasonable, but some radio, stereo, and television repairmen charge high rates. Cost estimates should be obtained beforehand. Laundries are available, but most expatriates prefer to have their laundry done at home. Washing and ironing should be supervised to prevent damage to fabrics, washers, and irons. At the few local dry cleaners, the quality of work is inconsistent.

Repair service is available on most cars, and prices for routine work are

City of Santo Domingo, Dominican Republic

Courtesy of United Nations

reasonable. However, major repairs can mean delays while parts are ordered; this type of service is expensive and quality often only fair. Automatic transmission repair, electrical system adjustments, work on window and door fittings, and other jobs requiring a delicate touch are sometimes risky, depending upon the garage used.

Religious Activities

The Dominican Republic is officially Roman Catholic, but many other denominations maintain churches in the country. Members of the U.S. community in Santo Domingo usually attend English-language services at these churches: Epiphany Episcopal Church, Protestant Community Church, First Baptist Church, Parroquia Santiago Apóstol (mass in English), and Hebrew Synagogue Center (English prayer books, services in Hebrew each Friday). Other denominations, which have Spanish-language services, are Seventh-Day Adventist,

Plymouth Brethren, Latter-Day Saints, Assembly of God, Jehovah's Witnesses, and Roman Catholic.

Domestic Help

All types of servants are available. Generally, those who are experienced and well-trained pass from one expatriate family to another. Although efficiency and initiative are not outstanding characteristics, devotion to family and desire to please counterbalance these failings. Most servants speak only Spanish, but a few know some English. Many applicants for domestic work are illiterate and have no knowledge of American cooking or housekeeping, contrary to their claims. It is best to hire only on the recommendation of another employer, or to ask for advice at the U.S. Embassy personnel office, where a registry is kept on security-checked applicants.

The majority of Americans in the Dominican Republic (Santo Dom-

ingo, in particular) employ one or two full-time servants, and some have part-time yard boys and laundresses as well. Single people usually hire a maid for general housework, cooking, cleaning, and assistance with shopping at the local market. Some single people employ part-time maids. A family with children may need two servants, one acting as nursemaid in addition to helping with the housework. For security reasons, it is advisable to seek servants who will live in.

In addition to wages (\$200-300 a month for live-ins), the employer furnishes all meals, uniforms, linens, and toiletries. Additional money is agreed upon to cover daily transportation for servants who live at home. It is customary to give a month's salary as a Christmas bonus to domestics who have been employed for a year. Some employers assist with medical expenses, and a certain amount of paternal-

ism is involved in most employer-employee relationships. Servants customarily work a six-day week, with a paid two-week vacation after a year's service. Employers do not make obligatory payments for social or medical insurance.

Education

Most American children living in the capital attend the Carol Morgan School, a private, nonprofit institution providing coeducational instruction in English through grade 12. The curriculum parallels that of U.S. public schools, and the high school is accredited by the Southern Association of Colleges and Secondary Schools. The superintendent and teaching staff have U.S. certification. Of the total enrollment of 1,056, approximately 290 are Americans, 603 Dominicans (1994 est.), and the remainder other nationalities. School is in session from the last week in August to the first week in June, with a two-three week Christmas vacation, a week-long Easter break, and days off for the celebration of some U.S. and Dominican national holidays.

Carol Morgan School is just outside the city, in a complex of air-conditioned buildings. Spanish is taught as a foreign language in all grades, and four years of French are offered at the secondary level. The high-school curriculum is geared to college preparatory work. The physical plant has chemistry and physics laboratories, computer labs, 49 classrooms, infirmary, gymnasium, cafeteria, audiovisual facilities, and a 18,000-volume library. Physical education is offered in all grades, with intramural competition in volleyball, basketball, and softball. Extracurricular activities include a school newspaper, yearbook, literary magazine, dramatics and language clubs, and several special groups.

Santo Domingo has several other schools available to foreigners. Colegio Los Angelitos/St. George School has classes from nursery level to grade 12. The curriculum is bilingual. The school is large, well-orga-

nized, and follows a formal schedule combining British and American approaches to education. All teachers have certification. Resources and physical facilities are good. The school's name is Colegio Los Angelitos from nursery school through sixth grade, and St. George School in the upper-level classes.

ABC School offers a program based on U.S. and European educational systems. Enrollment is from kindergarten through grade six. Teachers either have college degrees or are university students.

American School of Santo Domingo provides coeducational instruction from pre-kindergarten through grade 12. The school is accredited by the Southern Association of Colleges and Secondary Schools in the U.S. The elementary classes receive instruction in English/language arts, mathematics, science, social studies, health, Spanish, art, music, and physical education. Special programs include remedial reading and comprehension, English as a second language, and mathematics. The high school follows a college preparatory program, covering all of the general areas of study, plus Dominican history and Spanish. Several electives are offered.

The George Washington School of English Education is also coeducational. An English curriculum is offered from nursery school to 12th grade.

Two nursery schools, Froebel School and Lucy's Lambs, are especially recommended. The Froebel School has excellent equipment and resources. The staff consists of a director and three assistants. The school has three classes: one for three-year-olds, a pre-kindergarten for four-year-olds, and a kindergarten for five-year-olds. Instruction focuses on the artistic, social, and academic aspects of the child's development.

Lucy's Lambs accepts children from ages two through five. There are two nursery classes for ages two through four, a pre-kindergarten for

ages four through five, and a kindergarten for five-year-olds. Each class has about 20 children. The director and the kindergarten teacher are certified teachers. Instruction follows traditional approaches of learning colors, numbers, concepts, social adjustment, etc.

Recreation

Swimming, water-skiing, sailing, scuba diving, motor boating, baseball, softball, horseback riding, polo, volleyball, tennis, basketball, and cockfighting are among the more popular sports in the country. Americans in Santo Domingo enjoy these activities year round. Water sports are particularly popular, and several shallow, palm-lined beaches are within an hour's drive of the city. All major Santo Domingo hotels have swimming pools. Snorkeling and scuba diving are particularly interesting because of the clear water and the variety of marine life in the Caribbean. However, sharks and sea urchins are possible dangers.

Some of the finest fishing in the Caribbean may be found off the Dominican coast. Freshwater fishing and surf casting are popular, as well as fishing for marlin, sailfish, and other game fish. Some of the best spots include Cumayasa, La Romana, Cabeza de Toro, and Boca de Yuma, all east of Santo Domingo; Palmar de Ocoa and Barahona to the south; and Monte Cristi, Puerto Plata, and Samaná to the north.

Some Americans join the Club Náutico of Santo Domingo, about a 45-mile drive from the city. There is a clubhouse with dining room and bar, a small saltwater pool, a pier with a marina, and a fair beach. The club sponsors annual hunting and fishing tournaments.

Riding has become a popular sport, as have racquetball and running. For the latter, the city offers a few places for joggers, including the oceanfront or *malecon*, the six-mile perimeter of the Paseo de Los Indios Park, and the almost four-mile perimeter of the National Botanical

Gardens. Many informal walking groups exist in the country.

The Dominican Republic now has several golf courses, and others are being planned or built. One 18-hole course is at the Santo Domingo Country Club on the outskirts of the city; membership is open to non-Dominicans. Two other championship courses are 80 miles east of the capital in La Romana, beside the Caribbean. A fourth course, designed by Robert Trent Jones, is also of championship quality; it serves the tourist facilities around the seaport town of Puerto Plata.

Baseball is the national sport, and all games draw large crowds. There are two seasons. The professional winter season (which occasionally features players from the U.S. major leagues) lasts from late October to the end of January, and the summer season runs from April to September. Games during both seasons are played at Quisqueya Stadium in Santo Domingo, and at stadiums in Santiago de los Caballeros, San Pedro de Macorís, and La Romana.

Hunting is permitted in the Dominican Republic. Ducks, which migrate from North America in winter, and doves are the principal fowl hunted. Quail (in small numbers), *yaguaza* (a West Indian tree duck), and guinea hen are also hunted; no large game is found in the country.

The restored colonial section of the city is the location of Santo Domingo's principal tourist attractions. These include the Cathedral of Santa María la Menor, Torre del Homenaje, Alcazar de Colón, and the Museo de las Casas Reales (Royal Houses). The cathedral, built between 1523 and 1540, is one of the finest examples of Spanish Renaissance architecture in the Western Hemisphere. The onyx and marble monument inside the edifice was brought block by block from Barcelona, Spain. Santa María is the oldest cathedral in the New World, and is one of three places which claim to contain the remains of Christopher Columbus. The cathedral was completely rehabili-

tated in 1992 in time for festivities celebrating the 500th anniversary of Columbus' arrival in the New World.

Torre del Homenaje, part of Ozama Fortress, was erected in 1503, and reflects the power of colonial Spain. The Alcazar de Colón is the restored fortress palace built by Diego Columbus, son of Christopher, and first viceroy of the island; it contains some fine pieces of period furniture. Museo de las Casas Reales houses exhibits of historical interest, and is the former residence of the captain general of Hispaniola.

There are several other museums of interest in the city. The Museum of Dominican Man is best known for its collection of pre-Columbian artifacts; the National Museum displays works by well-known Dominican and regional artists; and the Museum of Natural History and Geography houses exhibits dealing with the topography, agriculture, and flora and fauna of the republic.

A number of parks are scattered throughout the city. The largest of these, beautiful Paseo de Los Indios, is three-and-a-half miles long and offers scenery, botanical specimens, and recreational facilities. A municipal amusement park in this area, Mirador del Sur, has a variety of attractions for small children. The Jardín Botánico Nacional Moscoso (botanical gardens named for Dr. Rafael M. Moscoso) covers an area of over 1,800,000 square meters, and contains special laboratories with hundreds of varieties of tropical plants. Other attractions are the Great Ravine, the Japanese Park, and the world's largest floral clock; small boating facilities are available in an artificial lake in the garden. The modern Parque Zoológico Nacional is spread over 1,250,000 square meters, and includes about five miles of roads and walks. Animals from different parts of the world are displayed in open areas which resemble their natural habitats. The zoo features the largest bird cage in the world, a unique African plain, and a children's zoo.

An Olympic park, with a complex of sports facilities, was built for the XII Central Caribbean Games in early 1974. The complex includes a stadium for soccer and track and field events, a covered sports palace with a seating capacity of 10,000, an Olympic-size pool, a cycling track, and court facilities.

The best beaches on the south coast are Boca Chica, 20 miles from the city; Guayacanes, Playa Caribe, Juan Dolio, and Villas del Mar, 30 miles; Barahona, 75 miles to the west; and Bayahibe, in La Romana, 80 miles to the east. Points of interest on the north coast are Puerto Plata and Sosua (about 150 miles from Santo Domingo) with their beautiful white-sand beaches.

Shopping in Santo Domingo is a real bargain because the Dominican *peso* trades favorably with most foreign currencies, and there is a wide variety of items from which to choose. Popular items include native handicrafts such as paintings, straw, macramé, and mahogany products. Amber, the country's national gem (more is mined in the Dominican Republic than anywhere else), is another good buy. Larimar, the sea-blue stone found in the western part of the country, is another recommended buy. There are duty-free zones in both Santo Domingo and Puerto Plata; Santo Domingo's is the largest duty-free area in the Caribbean.

Entertainment

Movies, shown in comfortable, air-conditioned theaters in Santo Domingo, are one of the principal means of entertainment outside the home. New and old U.S. films with original soundtracks and Spanish subtitles predominate, but British, Mexican, Italian, French, and German films are also shown. Santo Domingo has five popular gambling casinos at major hotels, and several nightclubs with floor shows. Also, various discotheques feature American music.

The National Theater is the center of a number of cultural presentations, including regular symphony

concerts, occasional solo recitals, plays, ballets by visiting troupes, and operas or plays by local artists. The Binational Center (the Dominican-American Cultural Institute) and several private galleries offer exhibits by local artists.

Santiago

Santiago de los Caballeros is the "second city" of the Dominican Republic. Its name is commonly shortened to Santiago. Situated on the banks of the Río Yaque in the north-central part of the country, it is known for its Universidad Católica Madre y Maestra, a 23-year-old institution with a highly respected academic reputation. The university is considered the nation's best, and is supported by the Catholic Church and both public and private endowments.

Santiago was founded in 1504 by "30 Spanish gentlemen," and was rebuilt 60 years later after being demolished by an earthquake. It has endured not only several more earthquakes of varying intensity, but also a turbulent history of political insurrections. During the time that Rafael Trujillo was dictator in the middle years of this century, he tore down some of Santiago's finest old buildings, and erected what is widely considered to be an ugly "Peace Monument," and a \$4 million suspension bridge that leads nowhere.

Santiago has grown considerably in the past quarter-century, and is home to 1.5 people. It is the commercial center of an agricultural region and the distribution point for several industries. These industries are centered on the production of rum, furniture, cigarettes, soap, pharmaceuticals, and leather articles. It is an especially clean city which keeps a crew of workers sweeping and washing the streets daily.

Santiago is noted for its excellent hotels and restaurants, and for the *paradores*, or *pensiones*, which attract the tourist trade. It is also

famous for the fine Bermudez rum distilled here.

La Romana

La Romana is a seaport city of 133,000 in the republic's eastern province of the same name. Its popularity has increased in recent years with the completion of luxury tourist resorts, Casa de Campo and Club Dominicus, outside the city.

La Romana's name, meaning "The Scales," comes from earlier days when growers brought their crops to be weighed before shipment to Puerto Rican refineries. Its image has now changed to that of a spot popular with high society. It offers championship golf courses, superb tennis courts, good fishing facilities, swimming (off Catalina Island), a village inn, restaurants, a museum, and an exhibition hall.

The Casa de Campo complex near La Romana is fast becoming the Caribbean's most famous resort. Its 7,000 acres, spread out near the sea, include two championship courses designed by the golf architect Pete Dye.

About 10 miles from this luxurious resort is Altos de Chavón, an artist's replica of a 15th-century Spanish village. One of its famous attractions is a large, hillside amphitheater which serves as the site for cultural events. The tiny church in the village is popular for weddings.

La Romana itself is Gulf and Western Americas Corporation headquarters in the Dominican Republic, and also the site of the largest privately owned sugar refinery in the world. The city is home to several industries which manufactures soap, furniture, and shoes. The Abraham Lincoln School, a company-sponsored, English-language school, is open for students in pre-kindergarten through grade 12; admissions information is available from Fundación Gulf and Western, Central Romana, La Romana, Dominican Republic.

OTHER CITIES

AZUA (full name, Azua de Compostela) is located near the Caribbean Sea about 50 miles west of Santo Domingo. The original town, established in 1504, was destroyed by an earthquake, and Azua was rebuilt three miles inland at the foot of the Sierra de Ocoa. Trading includes rice, coffee, sugarcane, fruits, and timber. A paved highway connects the city with Santo Domingo. Azua's population is over 64,000.

BANÍ, capital city of Peravia Province, is located in southern Dominican Republic, 30 miles southwest of Santo Domingo. The city is a commercial center that produces rice, coffee, and bananas. Baní's population is close to 100,000.

BARAHONA (full name, Santa Cruz de Barahona) is situated on the Caribbean Sea in southwestern Dominican Republic, about 80 miles southwest of Santo Domingo. The city, site of a major port, has industries which include fishing, sugarcane, and fruits. It is also known for hunting. The city is accessible by air and roadway. Barahona's population is approximately 74,000.

CONSTANZA, 90 miles northwest of Santo Domingo over tortuous mountain roads, offers a scenery and climate change at 4,000 feet above sea level. The city's population is close to 15,200.

HIGÜEY, the capital city of La Altagracia Province, on the east coast, is known for its basilica, which houses the largest carillon in the Americas. The church represents the country's most outstanding example of modern architecture. The city is surrounded by fertile land where cacao, cattle, corn, rice, and dairy products are produced. A major highway links Higüey with Santo Domingo. The population of Higüey is about 83,700.

JARABACOA is a colonial city in the mountains, 60 miles northwest of Santo Domingo. It is now a small rural community with pleasant

scenery, overlooking cloud formations in the lower mountain valleys. Potatoes, strawberries, apples, vegetables, and flowers are grown near the city. Jarabacoa has an estimated population of 13,400.

LA VEGA (full name, Concepción de la Vega) is the capital of La Vega Province in west-central Dominican Republic. Founded in 1494, La Vega is a commercial city in a fertile part of the country. Its crops include tobacco, coffee, cocoa, rice, and fruit. La Vega is located near the paved highway to the capital, and has an airfield. Its population is about 56,000.

PUERTO PLATA, situated on a crescent-shaped bay on the Atlantic Ocean, is an historic town where pirate ships docked in the 1500s. It became a free port during the 18th century, and later a coffee port, when plantation owners built their townhouses on the streets which now are part of a national preservation plan. In town, horses still pull carriages past gingerbread houses with latticed verandas. The city, originally named San Felipe de Puerto Plata, is the capital of Puerto Plata Province. About 130 miles north of Santo Domingo, Puerto Plata has a population of about 86,000. Tobacco, coffee, sugar, cacao, bananas, and hardwoods are exported here. Liquor, dairy products, pasta, and leather are manufactured in Puerto Plata. The city is among the country's ten greatest cattle producing areas. Recently, the area has become the site of a large, and still expanding, international tourist complex. Major resorts include Jack Tar Village, Playa Dorado Hotel, Dorado Naco, and Villas Dorados.

SAMANÁ (formerly called Santa Bárbara de Samaná), situated on the east coast, is about 170 miles from the capital. It was settled in 1864 by escaped slaves from the U.S., whose ship bringing them from the Underground Railroad was blown ashore. Their descendants, now numbering 7,000, speak English, and maintain several old Protestant churches built over the

years. Samaná, a seaside town, has excellent beaches and, as a spot for sport fishing, was once a favorite of Franklin D. Roosevelt. The city is a commercial and manufacturing center for coconuts, timber, rice, and marble. It has grown from a fishing village to a cruise port of note. Its population is about 38,800.

SAN CRISTÓBAL, 25 miles southwest of Santo Domingo, is the site of the Mahogany House, built and furnished by the late Rafael Trujillo. The city was the site of the signing of the Dominican Republic's first constitution in 1844. Founded in 1575, the city is situated in a region that produces rice, sugar, fruit, potatoes, livestock, and coffee. It is the capital of the province of the same name and has a population of approximately 124,000.

SAN FRANCISCO DE MACORÍS, the capital of Duarte Province, is located about 60 miles northwest of Santo Domingo. It is the busy center of an important sugar- and molasses-producing area. Timber, coffee, fruits, cacao, rice, hides, and wax are other major products of the district. The population of San Francisco de Macorís is about 130,000.

SAN JUAN (full name, San Juan de la Maguana), located in west-central Dominican Republic, was founded in 1508. The Battle of Santomé in 1844, which resulted in Dominican independence, was fought near San Juan. Markets include rice, fruit, corn, potatoes, and cattle. San Juan's population is roughly 50,000.

SAN PEDRO DE MACORÍS is located in the southeastern part of the country, about 40 miles east of Santo Domingo. The city's modern port handles most of the country's exports, which include molasses, timber, cattle, and sugar. Industries include corn milling, the manufacture of clothing, and soap and alcohol distilling. The Universidad Central del Este was founded here in 1970 and is located on the main road to Santo Domingo. The city's population is approximately

124,000. In recent years, San Pedro de Macorís has become a hotbed for baseball, producing more players per capita for U.S. major league teams than any other town ever.

Several other cities of interest are located within easy driving distance of Santo Domingo. On the north coast are La Isabela, Columbus' first settlement in the New World (1493); Sosua, settled by Jewish refugees from Germany in 1939; and Macao, 95 miles from Santo Domingo, noted for its beautiful, long beach.

COUNTRY PROFILE

Geography and Climate

The Dominican Republic occupies the eastern two-thirds of the island of Hispaniola, the second largest (after Cuba) of the Greater Antilles group, and shares a 224-mile border with Haiti to the west. The island is bordered on the north by the Atlantic Ocean, on the south by the Caribbean Sea, and on the east by the Mona Passage, which separates the Dominican Republic from the island of Puerto Rico, 71 miles away.

The country has a land area of 18,712 square miles, slightly larger than Vermont and New Hampshire combined. With its 1,000-mile coastline, it extends about 240 miles east to west, and has a maximum north-south width of about 170 miles.

Much of the terrain is rugged. Four nearly parallel mountain ranges traverse the country from northwest to southeast. The Cordillera Central is the largest range and divides the country into almost equal parts. Pico Duarte, at 10,128 feet the highest mountain in the West Indies, is within this range. The largest and most fertile valley, the Cibao, about 150 miles long and 10 to 30 miles wide, is in the upper central part of the country.

Dominican rivers vary in flow with the season, and are navigable only for short distances at their mouths, if at all. Their main use is for irrigation and hydroelectric power. The major rivers are the Ozama, Yaque del Norte, Yaque del Sur, Isabela, Higuamo, and Soco.

The climate varies little throughout the year. Although the country is in the tropics, temperatures seldom exceed 90°F, mainly because of constant trade winds. Temperatures in the coastal cities average about 78°F, with seasonal variations of five to eight degrees. Rainfall varies regionally, with about two-thirds of the annual 57 inches coming in the May-to-November rainy season. However, this period differs in various parts of the country; for example, the rainy season on the south coast occurs between May and November, and in the north from November to May.

Mildew, mold, rust, and insects are problems related to year-round high humidity. Furniture, leather goods, clothing, metal items, and books must be carefully aired and protected. The climate also contributes to prevalent upper respiratory infections, skin irritations, fungus, and stomach and intestinal complaints.

Hurricanes are a significant weather threat, particularly from mid-July through October, and have caused serious damage in recent years. The worst hurricane on record, which virtually destroyed Santo Domingo, occurred in 1930. Hurricanes David and Frederick, in August and September 1979, caused considerable damage to the city and countryside. In September, 1987, Hurricane Emily barely missed Santo Domingo. Earthquake tremors are felt occasionally, but have not had serious consequences since 1948.

Population

More than half of the Dominican Republic's 8.3 million inhabitants live in towns with populations over 10,000. The cities, however, are

growing rapidly. The largest urban areas are Santo Domingo (3.6 million), and Santiago de los Caballeros (1.5 million).

The nation's population density of 171 persons per square mile makes it the seventh most densely populated country in Latin America, but it does not exceed that of most of the islands of the West Indies. Existing population pressure is accentuated by an annual growth rate of about 2%.

The nation's inhabitants are mostly descendants of both early European settlers and African slaves, but there are many relative newcomers of European and Middle Eastern origins. An estimated 16% of the population is Caucasian, another 11% are black, and the remaining 73% mixed Caucasian and Black. No traces of aboriginal Indians exist. No overt racial antagonism affects the relationship between the ethnic groups.

Spanish is the national language. It is spoken quite rapidly in the Dominican Republic, and many idioms and contractions are used in its colloquial form. English is spoken widely by the upper socioeconomic segment of society.

Under an accord with the Vatican in 1954, Roman Catholicism was formally established as the state religion, and the Dominican Government provides some financial support to the church. Freedom of worship is universal, however, and many Protestant denominations and missions of all faiths are found here.

Frequent colorful processions are held on various saints' day festivals. The nation's patron saint, Our Lady of Altigracia, is named after a vision of the Virgin Mary reported in the eastern part of the island in 1921. On holy days, mass is celebrated as a part of many public ceremonies.

The Dominican Republic does not have a large landholding class. A small but growing number of

wealthy people dominate the country's social structure. For many years (1930–1961), this group held what little economic power was not monopolized by the ruling Trujillo family. The preponderance of the Trujillos in both the economic realm and in government ended with the dictator's assassination in 1961, but some of the established social patterns continue to linger. Upward mobility is geared largely to the acquisition of wealth, although increasing importance is being attached to education and professional achievement.

Two small groups top the social scale. One is composed of well-to-do persons whose extensive rural properties were not expropriated under the Trujillo dictatorship, and who have used their land to gain leadership in commerce and industry. Most of this group is centered around the northern cities of Santiago and Puerto Plata, but many maintain second homes in Santo Domingo. The second group is composed of former civil servants and military officials who attained prominence and wealth under previous governments. Their ranks include a few professionals and men of letters, but many of the latter fall into the small but growing middle class.

The middle class has suffered in recent years due to economic problems. It includes civil servants, private-sector managers, white-collar workers, teachers, and other professionals.

About three-fourths of the people are at the lower end of the socioeconomic scale. The majority earn a subsistence wage, have minimal education, live in substandard conditions, are largely rural, and are migrating to urban areas in the hope of improving their lot by serving as domestics or laborers.

Construction and public works projects employ substantial numbers of skilled and unskilled laborers in the urban areas, but not a sufficient number to offset the growing demand for jobs. It is estimated

that more than 45% of the available labor force is unemployed or underemployed.

For many Dominicans, emigration is a viable alternative. Although the number seeking to enter the U.S., Venezuela, Canada, and Europe is increasing, the outflow is partially offset by significant illegal immigration of Haitians (estimated at 600,000) to the Dominican Republic.

Government

Originally a Spanish colony and later under Haitian rule, the Dominican Republic gained independence in 1844. Its subsequent history was characterized by alternating periods of authoritarian rule and instability. The collection of Dominican customs revenues was controlled by the U.S. from 1905 to 1940. A naval mission, chiefly composed of U.S. Marines, governed the country from 1916 to 1924.

Following Trujillo's assassination on May 30, 1961, the country again underwent a series of political crises, including the election and overthrow of the government of Juan Bosch, the first democratically elected president since 1930. This government lasted only seven months before it was toppled in a military coup in 1963. An attempt to restore constitutional government in April 1965 ended in civil war and the arrival of the Inter-American Peace Force (IAPF), of which U.S. forces were a part. Peace was restored, and the IAPF withdrew its last troops in September 1966.

In June 1966, Dr. Joaquín Balaguer was elected to a four-year term as president. During this period, his administration worked primarily to promote economic and social reforms. In June 1970, Balaguer was reelected to an additional four-year term. Although his second term was marred by both left- and right-wing terrorism and violence in 1970 and 1971, and by a minor short-lived guerrilla incursion in 1973, the country registered steady economic progress. Elections, in which an opposition alliance

abstained only days before (claiming unfair conditions), were held again in May 1974, and President Balaguer was returned to office for the third time. He was defeated for a fourth term in 1978 by the candidate of the Dominican Revolutionary Party, Antonio Guzmán (Fernández).

The 1982 elections brought Dr. Salvador Jorge Blanco to the presidency in an orderly succession, and a growing strength in the country's democratic institution has been demonstrated. The 1986 elections saw Joaquín Balaguer return to the presidency for a fourth term. Jacobo Majluta, the president of the Senate who opposed Balaguer in the balloting, conceded defeat after claiming irregularities in the closely fought race. Majluta lost by less than 44,000 votes. Balaguer was reelected to the presidency for a fifth term in August, 1990. The results of the May 1994 election were disputed, leading to scheduling of a new election in May 1996. Leonel Fernandez was elected president in a second round of voting and took office in August.

Under the constitution, executive power is vested in the president, who is assisted by a cabinet which includes secretaries of state for various areas of responsibilities, such as armed forces, foreign relations, finance, interior and police, education, fine arts and public worship, agriculture, industry and commerce, public health and social welfare, labor, public works and communications, and sports.

Legislative power is vested in a bicameral congress. There are 30 senators, one for each province and the National District (the city of Santo Domingo). As a result of the 1990 election, the Social Christian Reformist Party held 16 seats, the Dominican Liberation Party won 12 seats, and the Dominican Revolutionary Party gained two seats. The Chamber of Deputies has 120 members, one for each 50,000 inhabitants, based on the 1981 census.

The judiciary consists of local justices of the peace and civil courts of the first instance, special land courts in each province, district courts of appeal, and the Supreme Court of nine justices. Judges are nominated by the Senate. The judicial system does not include trial by jury.

Local authority emanates from the central government. The country is divided into 29 provinces, each administered by a governor appointed by the president. Santo Domingo and the municipalities are each governed by a mayor and a municipal council, elected by popular vote for four-year terms.

Besides the majority and opposing parties now in Congress (the Dominican Revolutionary Party (PRD) and the Reformists), several Communist parties and factions exist, as do others with Marxist leanings. These include the Dominican Communist Party (PCD), legalized in 1977; the Dominican Popular Movement (MPD); the Dominican Liberation Party (PLD); and the Anti-Imperialist Patriotic Union (UPA). These groups are active in intellectual circles, laboring classes, and student groups.

The Dominican Republic is a member of the United Nations and its various specialized agencies, the Organization of American States (OAS), the World Bank, the Inter-American Development Bank, and the International Monetary Fund (IMF), and is also a signatory to the General Agreement on Tariffs and Trade (GATT).

The flag of the Dominican Republic consists of two red and two blue sections divided by a white cross centered with the Dominican coat of arms.

Arts, Science, Education

The Dominican Republic has begun to achieve maturity in artistic, technical, and intellectual pursuits. In the past, opportunity to study

abroad was limited and individual intellectual activity was discouraged. In recent years, an exciting ferment of new ideas, artistic expression, and an eagerness to discover and take part in the best intellectual and cultural developments has emerged. Santo Domingo's modern Cultural Plaza with its four museums, National Theater, and National Library is the scene of many artistic, musical, and theatrical productions. The opening of the National Theater in August 1973 signaled the beginning of a new cultural era for the country; the theater now draws artists and groups from around the world. The National Library, with a capacity for 200,000 volumes, and the Museum of Dominican Man were also inaugurated in 1973.

Individual artists who have achieved international renown include painters Gilberto Hernández Ortega, Guillo Perez, Ramón Oviedo, Candido Bido, Soucy de Pellerano, Ada Balcazer, Orlando Menicucci, Fernando Urena Rib, and Francisco Santos. Antonio Pratts Ventos, Domingo Liz, Ramiro Matos, and José Ramón Rotellini are leading sculptors who have done interesting work in metals and wood. Dominican architects show imagination and beauty in design.

Books of literary merit—novels, short stories, histories, and criticism—are published frequently. A five-volume anthology of Dominican literature has filled a need for gathering the best in the nation's writing. Popular music, *merengue*, *salsa*, and *nueva ola* performers are numerous. Several troupes of folkloric dancers and singers also perform.

Public education in the Dominican Republic has suffered greatly from a lack of funding, with the result that literacy may have slipped within recent years to less than 70%. Few families can afford to do without their children's labor, and only a limited number of free secondary schools exist. In general, schools are overcrowded, understaffed, and lack

educational material and equipment.

Higher education is possible for only a fraction of the literate population. However, the oldest university in the Western Hemisphere, the 60,000-student Autonomous University of Santo Domingo (UASD), founded in the 16th century, has 10 times its enrollment of 20 years ago. Other excellent institutions are the Universidad Católica Madre y Maestra in Santiago, the Universidad Nacional Pedro Henríquez Urena and Instituto Tecnológico de Santo Domingo in the capital, and the Universidad Central del Este in San Pedro de Macorís. Although vocational and technical training cannot meet present needs, progress is being made in home economics, education, agriculture, commercial work, mechanics, electronics, metallurgy, and construction trades.

The principal institution for advanced technical training is the Instituto de Estudios Superiores. An English/Spanish branch of the World University of Puerto Rico is also active in Santo Domingo. Approximately 800 Dominican students attend universities in the U.S. annually, and several hundred also study in Europe (especially Spain) and in neighboring Latin American countries, particularly Mexico and Venezuela.

Commerce and Industry

Agriculture provides employment for roughly 17% of the Dominican labor force, and accounted for 15% of the total export earnings. Sugar, the mainstay of the economy, generates over \$506 million annually. Other important agricultural products include coffee, tobacco, and cacao. The Dominican Republic also produces rice, potatoes, beans, plantains, yucca, and other crops for domestic consumption.

Industry has as its principal concerns sugar refining, textiles, pharmaceuticals, light manufacturing,

and breweries that produce excellent local beer and rum. Mineral exports account for a substantial portion of total export value. In addition to recently discovered coal, the nation has important deposits of gold, silver, bauxite, and ferronickel.

The vigorous promotion of the Dominican Republic as a tourist haven has swelled the numbers of visitors to record levels placing the nation among the top Caribbean tourist destinations. Major resort complexes have been built on both coasts in an ambitious development program.

The U.S. is the principal trading partner of the Dominican Republic, and typically accounts for 70% of its exports and provided 46% of all imported goods. A relatively low inflation rate, import exonerations, low labor costs, and tax holidays help the investment climate. A long-needed revision of the basic foreign investment law is being considered to enhance the investment picture.

Transportation

Santo Domingo's international airport, Las Americas, is 19 miles from the city. It is served by the national airline, Dominicana (Compañía Dominicana de Aviación), American, Avianca, Viasa, ALM (subsidiary of KLM), Iberia, Lufthansa, Prinair, and Varig. Aeropuerto Internacional La Unión is the modern north-coast airport for the Puerto Plata/Playa Dorada/Sosua area.

Several private companies in the capital offer chartered, air-conditioned bus tours. A group of five persons can charter a car (*público*) at reasonable rates for trips to Santiago, San Cristóbal, or Barahona. Air charter service is available from Herrera Airport in Santo Domingo; also, daily service to Santiago, Puerto Plata, and other points on the island is provided by Alas del Caribe, the country's domestic airline.

Passenger and cargo ships call at Santo Domingo, Puerto Plata, Haina, and Port-au-Prince (Haiti) on an irregular basis. Freight lines of various registries call at Santo Domingo from all parts of the world.

The Dominican Republic has no passenger or freight railways. Private car lines and buses connect outlying cities to one another and to the capital. Air-conditioned express buses run daily on regular schedules from Santo Domingo to Bonao, La Vega, Moca, Santiago, Puerto Plata, San Pedro de Macorís, La Romana, and other towns in the interior.

Buses, minibuses, and *públicos* have regular routes throughout the capital. The latter, usually painted blue with red, white, or green roofs (depending on the zones they cover) cruise certain streets picking up as many passengers as the car will hold. Regular taxis are available at large hotels, as is private call-a-cab service; these taxis operate on a zone system, but drivers are occasionally willing to carry a passenger a short distance, called a *carrera*, for a minimum fare plus tip. It is advisable to settle on a fare before hiring a cab.

Traffic moves on the right. Laws are similar to those in the U.S., but local drivers are aggressive, making defensive driving necessary. It is against the law to smoke while driving. Traffic police control busy intersections, and their signals must be learned quickly and followed closely. Police cars are green and white; ambulances are white; fire trucks are red.

Santo Domingo is the hub of a fairly extensive road network. A hard-surfaced, four-lane highway leads from the capital to the international airport and beach areas east of the city, but the road narrows to two lanes about 30 miles out. A fairly good, two-lane, heavily traveled road connects Santo Domingo with Santiago de los Caballeros—the nation's second largest city—and with Puerto Plata on the north coast. There is a highway connecting Puerto Plata

eastward to the Samaná Bay area. Road networks throughout the republic are improving. Blacktop and gravel roads connect many outlying communities, although rural roads and bridges are often in poor condition. Vehicles with heavy-duty suspension and four-wheel-drive are generally required for these latter roads. Most Santo Domingo streets are blacktop, and their condition ranges from excellent to poor. The city has several divided boulevards. Most streets are narrow, particularly in the downtown shopping area, and permit only one-way traffic.

International driver's licenses are not valid in the Dominican Republic. Anyone without a license from his own country must take a written examination in Spanish and a road test to qualify for a Dominican license. Minimum third-party liability insurance is required; coverage should be obtained from a local firm, since few U.S. carriers are permitted to underwrite in the Dominican Republic.

Communications

Telephone service links all major points in the republic, and long-distance connections can be made to other countries without undue delay. There are some areas where growth has out-paced telephone expansion, but difficulties are minimal; local service is adequate. International mail is handled twice daily and normally takes three to five days for delivery to and from the eastern United States.

The Dominican Republic has over 200 radio stations, including short-wave and FM outlets. There are periodic newscasts all day, as well as interviews and all-round variety music programming.

Station HIJB (FM) has two classical music programs daily, "Gala Concert" at 1 p.m. and "Concert Hall" at 8 p.m. On Sundays, Texaco sponsors an opera at 1 p.m. Good shortwave radios can also pick up Voice of America (VOA), American Forces

Radio, and Puerto Rican, Jamaican, and Florida stations.

Santo Domingo has six television stations: Rahintel, Color-Visión, Teleantillas, Tele-Inde, and Tele-sistema, all privately owned; and Radio Televisión Dominicana, government-owned. All stations transmit in color. Programs include local and international news, weather, sports, variety shows, movies, and dramatic serials produced in Latin America and the U.S. The majority of programs are in Spanish. CNN and 18 other cable TV stations are available 24 hours a day. Many hotels have satellite dishes that allow them to receive foreign language broadcasts from countries around the world. U.S. TV sets can be used in Santo Domingo without modification. Usual broadcasting hours are 11 a.m. to midnight.

Nine major Spanish-language daily newspapers (Monday through Saturday) are published in the Dominican Republic. *El Caribe*, *Listín Diario*, *Hoy*, and *El Sol*, the morning papers, carry extensive news coverage and take independent political lines. *Última Hora*, *La Noticia*, and *El Nacional* are published in the afternoon. *El Día*, *Ya*, and *La Información* are published daily in Santiago, and serve the interests of the Cibao Valley. *El Nacional*, *La Noticia*, and *Listín Diario* have the only Sunday editions. Some of these papers subscribe to Associated Press, United Press International, and other news services. One major weekly news magazine, *Ahora*, is published locally. The *Miami Herald*, the *Wall Street Journal*, *Time*, *Newsweek*, and *The New York Times* arrive the same day or a day after publication. The English-language weekly, *The Santo Domingo News*, provides business and tourism news.

Health

Santo Domingo has many American-trained dentists and doctors, including specialists in obstetrics, pediatrics, neurosurgery, gynecology, cardiology, gastroenterology, dermatology, and diseases of the

eye, ear, nose, and throat. Most doctors speak some English. Emergency aids, such as incubators, oxygen tents, and blood banks are available, and several laboratories are equipped to do routine tests. A number of hospitals and small clinics are adequate, but not up to U.S. standards, particularly in nursing care, cleanliness, and diet. Nonetheless, Americans use them for obstetrical care, pediatrics, some surgery, and other illnesses or injuries requiring relatively short periods of hospitalization.

Primarily because of poor storage methods, the inadequate disposal of garbage and other wastes, and the tropical climate, Santo Domingo is infested with flies, cockroaches, ants, mice, and rats. Other pests include termites, ticks, bedbugs, tarantulas, and mosquitoes. Non-poisonous snakes are also found here. Small lizards and frogs sometimes get into houses. Commercial exterminators are available.

Sanitation standards are loosely enforced, and unsanitary practices in the processing, storage, distribution, and sale of food are common. Several modern supermarkets in the capital, however, have improved their refrigeration and handling of fresh produce and meat. Most Americans prefer these stores over local markets, even though supermarket prices are much higher. City water, often filled with surface seepage and sediment after heavy rains, is not potable unless boiled for 10 minutes. Filtered bottled water is available.

Fruits and vegetables must be washed thoroughly with soapy water and soaked in an iodine or clorox solution. Fruits should be peeled. Locally bought meats should be served well done. Shellfish is safe if cooked thoroughly.

Domestic employees should receive periodic physical examinations and chest x-rays to rule out tuberculosis. They must be trained in good food-handling techniques and in personal hygiene.

Dominican health authorities, with the cooperation of the Pan-American Health Organization and other international agencies, are conducting active campaigns against disease. Although some progress has been made, observers agree that the task is formidable. Diseases which affect the local population include intestinal parasites, tuberculosis, dengue fever, AIDS, malnutrition, venereal disease and, in some rural areas, malaria. Periodic epidemics of influenza and gastro-intestinal infections exist. Diarrhea, accompanied by dehydration and fever, is common, and particularly debilitating to young children. Other complaints include upper respiratory, ear, and gynecological infections; skin irritations; and fungal infections. Animal rabies is a problem.

The following immunizations are recommended by U.S. authorities: yellow fever and tetanus-diphtheria for ages seven and up; DPT (diphtheria-pertussis-tetanus), measles, mumps, rubella, and polio for those under seven; anyone over age 12 should take gamma globulin every six months to prevent hepatitis. Inoculations against measles, tetanus, and rabies are available locally.

NOTES FOR TRAVELERS

Passage, Customs & Duties

A valid passport, or a U.S. birth certificate, Certificate of Naturalization or Certificate of Citizenship, along with photo identification, are required for both entry and exit. Because of the high incidence of fraud in the Dominican Republic and potential delays with Dominican Immigration, the U.S. Embassy strongly recommends that United States citizens travel with passports. Visitors who do not obtain a visa prior to entry must purchase a tourist card to enter the country.

Americans living in or traveling to the Dominican Republic are encouraged to register at the Consular Section of the United States Embassy

in Santo Domingo and obtain updated information on travel and security within the Dominican Republic. The U.S. Embassy is located at the corner of Calle Cesar Nicolas Penson and Calle Leopoldo Navarro in Santo Domingo; telephone (809) 221-2171; after hours (809) 221-8100. The Consular Section is a half-mile away at the corner of Calle Cesar Nicolas Penson and Avenida Maximo Gomez. The American Citizens Services section can be reached by telephone at (809) 731-4294, or via the Internet at <http://www.usemb.gov.do/nacsl.htm>. Consular office hours are 7:30 a.m. to 12:00 p.m. and 1:00 p.m. to 2:00 p.m., Monday through Friday, except holidays. There is a Consular Agency in Puerto Plata at Calle Beller 51, 2nd floor, office 6, telephone (809) 586-4204; office hours are 9:00 a.m. to 12:00 p.m., and 2:30 p.m. to 5:00 p.m., Monday through Friday, except holidays. U.S. citizens may register at the Consular Section of the U.S. Embassy and obtain updated information on travel and security in the Dominican Republic.

Pets

A signed health and rabies vaccination certificate from a licensed veterinarian must be presented when importing a pet into the Dominican Republic, or the pet will be quarantined. Regulations change frequently; it is advisable to check beforehand with authorities.

Firearms & Ammunition

Dominican customs authorities strictly enforce regulations concerning the importation of firearms. Persons bringing firearms into the country, even temporarily, may face jail sentences and heavy fines. It is advisable to contact the Embassy of the Dominican Republic in Washington, D.C. or one of the Dominican Republic's consulates in the United States for specific information regarding customs requirements.

Currency, Banking, and Weights and Measures

The time in the Dominican Republic is Greenwich Mean Time (GMT) minus four (the same as observed

during Daylight Saving Time on the U.S. east coast).

The sole monetary unit is the Dominican *peso*, written RD\$. Currency is issued in the same denominations as U.S. currency, and the coins bear a close resemblance. The four American banks in the capital are Bank of America, Banco de Boston Dominicano (an affiliate of First National Bank of Boston), Chase Manhattan, and Citibank.

Officially, the Dominican Republic uses the metric system of weights and measures but, in practice, the U.S. system of ounces, pounds, inches, feet, gallons, and miles is commonly used.

Disaster Preparedness

The Dominican Republic is a hurricane-prone country. In the event of a hurricane alert, a notice will be posted in U.S. Embassy Santo Domingo's web page cited below. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov>.

Quito, Ecuador

ECUADOR

Republic of Ecuador

Major Cities:

Quito, Guayaquil, Cuenca

Other Cities:

Ambato, Azogues, Babahoyo, Esmeraldas, Guaranda, Latacunga, Loja, Portoviejo, Riobamba, Tulcán

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Ecuador. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Ecuador is not a large country, but it offers a striking variety of climates, customs, and cultures. The high, wide Andean plateau which dominates the country has been both a highway and a resting place for the Incan, Spanish, and mestizo civilizations which have shaped the nation's history. The lowland Amazonian jungle east of the mountains, home of several indigenous groups, is also the location of rough oil boom towns. The Pacific coastal plain to the west of the Andes is a land of tropical plantations, bustling port cities, and warm water beaches. Six hundred miles from the coast lie the Galapagos, a chain of volcanic islands which are home to unique

species of wildlife and a small number of islanders.

Quito is a city of sun and sky, set in agricultural highlands and surrounded by high mountains and snow capped volcanoes. With a balance of equatorial sunshine and mountain chill, the climate varies little throughout the year. Some newcomers find it difficult to adjust to the thin air and burning sun at an altitude of 9,300 feet and even the most athletic need to wait a week before undertaking any strenuous activity.

Guayaquil is a complete contrast to the capital. It is a busy, noisy town where the natives are both more aggressive and more openhanded than the reserved inhabitants of the Sierra. Like most port towns, Guayaquil is a center of commerce, a place where the shrewd can make a fortune or can capture and direct enough of the city's rough energy to make a successful political career.

MAJOR CITIES

Quito

When Spanish expeditions overwhelmed the Inca Empire, the Inca leader Rumiñahui destroyed the

city of Quito rather than surrender it to the conquerors. The Spanish built their own settlement, San Francisco de Quito, on the same site, at the southern end of the Pichincha Valley. It was an easily defensible location bordered by deep ravines and dominated by the smooth round hill now called the Panecillo.

Nestled in a high mountain valley surrounded by snow capped volcanoes, Quito will literally take your breath away with its natural beauty and altitude. The Andean setting, Spanish colonial architecture, Indian costumes, palm trees and bougainvillea, and steep hillsides with checkerboard patterns in vivid greens and yellows rising into the clouds a short distance from the sprawling city—all make Quito unique.

The colonial center of Quito has been declared a human heritage ("Patrimonio de la Humanidad") by UNESCO. This heritage is preserved today by zoning laws which forbid the demolition or exterior remodeling of the low, white-washed buildings in the center of the city. The old town, cut into squares by narrow streets with steep flights of steps, contains many colonial ecclesiastic monuments: La Compañía with its carved facade and gold-leafed interior; San Francisco, the

Aerial view of old Quito, Ecuador

Susan Rock. Reproduced by permission.

first spiritual center in South America, with a museum crowded with sculptures and paintings by Caspicara and Miguel de Santiago; San Augustin, a quiet convent with treasures in its ceilings and altars; the Cathedral, famous for art works of the Quiteño school; Santo Domingo monastery, with another museum of priceless paintings and sculptures, and many others.

The narrow streets of colonial Quito are a pleasure for an unhurried stroll on weekends when the city seems to shut down completely, though street crime compels caution. During the week the heavy traffic makes a walk through the center of town something of a struggle and it is unwise to venture through the colorful Ipiiales street market with important documents or valuables. A respite from the bustling throngs of shoppers, vendors, and noisy traffic can be found in the broad plazas with well-kept parks bordered by churches and public buildings.

In the mid-20th century, Quito grew quickly. Industrial areas and crowded popular barrios developed to the south of the city. To the north, Quito spreads up a wide valley bordering the dormant Pichincha Volcano. Originally farmland dotted

with villas built in fanciful Spanish, Moorish, or 1930s modern architecture, this area is rapidly becoming Quito's modern center. The Rio Amazonas shopping district runs from the park through a modern business center of high-rise office buildings that offer a variety of restaurants, shops, banks, and sidewalk cafes. Avenida Gonzales Suarez, Bella Vista, Quito Tennis and El Bosque are the areas where most of the diplomatic community lives.

Utilities

Most homes have reservoir tanks, pumps, and small electric water heaters. Houses and apartments have modern plumbing for the most part. Because of long waits for new phones, rent a house or apartment with a telephone already installed, a cordless phone may be convenient.

Electric current is the same as in the U.S.: 110v, 60 cycles, with 220v available for stoves and dryers. Do not rent a home without 220v triple-phase current available for appliances.

Homes in Quito have no central heating, and evenings can be quite chilly. Some houses are colder than others; those with eastern and western exposure benefit from the strong equatorial sunshine and are

warmer than those with north-south exposure.

At times in the past, Ecuador has experienced shortages due to lack of rainfall in the southern part of the country. Extended power rationing has often occurred during the winter months. The rationing has not occurred recently.

Food

Ecuador has a plentiful supply of tropical fruits and vegetables all year, with varieties not seen in North America. Avocados, artichokes, raspberries, strawberries, bananas, pineapples and papaya can be purchased all year, and peaches, apples, pears and other fruit can be found in season. Several markets in Quito have fresh produce, seafood, chicken and meat, cut flowers, and potted plants.

Beef, pork, lamb and veal can be bought in supermarkets and butcher shops. Filet mignon costs about half the U.S. price. Chicken is more expensive, and turkey costs about twice as much as in the U.S. Both American and European cuts of meat are available, though the beef here is usually unaged, and may be tough. Some families use meat tenderizers or marinade. A pressure cooker is very useful for cooking at high altitudes.

Although a wide variety of food items are available in Ecuador, including items imported from the U.S. and Europe, certain American food are difficult to find or very expensive.

Milk is pasteurized, though quality control is irregular, and comes in disposable paper cartons or plastic bags. Heavy cream is available in the supermarkets, and sour cream can be found in some stores. A variety of cheeses are available, though not of the same quality or variation as can be found in the states. Several brands of ice cream are considered safe, and several brands of good yogurt are available. Excellent pastry and a variety of breads can be purchased in Quito and the surrounding small towns.

Quito has two large supermarket chains; Supermaxi and Mi Comisariato, which are well stocked with groceries, dry goods, and fresh products at very reasonable prices. U.S. goods are available, but at somewhat higher prices than in the U.S. Comparable Ecuadorian and Latin American products are less expensive. Many small shops and delicatessens offer excellent quality food stuffs such as ham, sausages, cold cuts, pickles, olives, and pastas. In general, the cook who can use the local foods with imagination will find it economical to do without processed, packaged, imported goods.

Ecuadorian cuisine depends heavily on corn, potatoes, and pork. Wonderful soups are made with the great assortment of vegetables. One local specialty is loco, a potato soup with cheese and avocado; another is llapingachos, a potato and cheese pancake. Delicious "cebiche" (marinated seafood), "humitas" (baked corn cakes), and "empanadas" (pastries filled with meat or cheese) are standard fare.

Clothing

General: Light to medium weight clothing is used throughout the year in Quito. Due to varying temperatures during the course of the day, you will need sweaters, jackets, or raincoats, and an umbrella. In general, you can use almost anything in your wardrobe except heavy winter clothing. Bring summer clothing for trips to the beach and the jungle, and swimsuits for the heated pools in Quito. Warm up suits are a must for joggers and tennis players in Quito. Bathrobes and warm pajamas will be a comfort. Hats are useful for protection from the sun. A wide assortment of brimmed hats in beautiful colors and styles can be bought in Ecuador for much less than in the U.S. A lightweight coat will be welcomed on some of Quito's chilliest evenings. It is a good idea to bring a winter coat, in case a trip to Washington in January comes up. A down parka also comes in handy when visiting the volcanoes.

Many boutiques offer stylish clothing, dresses, and suits imported

from the U.S. and Europe, but prices are high. Locally made sweaters are inexpensive. Leather and suede coats for men and women may be made to order. Fashionable knitwear may be bought ready-made or made to order at reasonable prices. The quality of dry cleaning is good, and inexpensive.

Boots and shoes of good quality leather can be made to order. In women's shoes, U.S. sizes above 8½ are hard to find in ready-to-wear. In men's shoes, U.S. sizes above 9½ are also hard to find.

Men: Light to medium-weight suits are worn all year. Sport coats, sweaters, slacks, and long-sleeved sports shirts are useful for informal and casual gatherings. A raincoat with a zip-in lining is welcome on chilly evenings. Business and professional men do not wear hats except when watching sports events or other outdoor activities. Equestrians should bring riding helmets. Good tailoring is available at reasonable prices. Tuxedos are occasionally needed; white dinner jackets are not worn.

Women: Blouses, skirts, sweaters, slacks, and jackets are standard daily wear in Quito. Because mornings and evenings are cool and temperatures at noon quite warm, a cardigan or blazer is usually worn or carried. Light-weight wool is the most practical material. Informal and casual clothes are worn at social gatherings outside the city on the weekends, but simple cocktail dresses are needed for dinner parties during the week in town. Long-sleeved dresses with jackets and dinner suits are good choices for chilly evenings. Shorts, short skirts and tank tops should not be worn in public. Bring a wraparound skirt or warm up suit to throw on after exercise classes or tennis.

Rainwear and a light or medium-weight coat, stole, or cape for evenings are necessary. Hats are not worn, except for protection from the sun. Embroidered capes and stoles, different kinds of sweaters, and ponchos are available locally. Dress-

makers are available and fabric can be purchased locally.

Children: Light to medium-weight clothes are the rule. Warm, inexpensive sweaters can be bought locally. Bring raincoats, boots, and shoes. You should bring with you any special sporting good attire or equipment. Warm pajamas or nightgowns, bathrobes, and slippers are recommended. Teenagers of both sexes seem to live in jeans or corduroy slacks and tennis shoes, but those who like discotheques and parties will need more formal clothing. Young men will probably want at least one sports coat and girls a nice dress, skirt or pantsuit.

Supplies and Services

The local pharmacies carry most medicines and drugs, but availability of item, varies from month to month. If you plan to sew or use a dressmaker's services, bring a supply of sewing accessories, especially thread and zippers. A wide range of fabrics is available at varying prices, but imported fabrics are expensive. Good quality woolens and synthetics are manufactured locally.

Bring basic tools, as well as any hobby and do-it-yourself equipment. Batteries of all sizes are available.

Stationery, quality envelopes, greeting cards, wrapping paper, and ribbon are scarce and expensive. Aluminum foil, plastic wrap, waxed paper, toilet paper and disposable diapers are available, but expensive. Plain paper napkins can be bought, but the quality is only fair. Candles are sold in different sizes and colors at U.S. prices, but the dripless variety are not available. Artists should bring all supplies.

Children's toys are very expensive. Bring toys for your children and for gifts. Bring lunch boxes for kindergarten and elementary school-age children.

Parts for common electrical appliances, electronic products, and cars are often available, but expensive. Parts ordered from the U.S. take a

long time to arrive, and if sent air-freight they will spend one to two months awaiting customs clearance. Local mechanics are good. The cost of service on cars and appliances is, much lower than in the U.S. Painting is inexpensive.

Quito has many excellent hairdressers and barbershops and prices are lower than in the U.S. Hairdressers, masseuses, and manicurists will come to your home at reasonable cost. Several cosmetologists offer good service at low prices. Many reputable local artisans make and repair jewelry for much less than in the U.S. Good catering services are available in the city, and prices are reasonable. Good tailors and dress-makers are available at a range of prices.

Domestic Help

Domestic maids and gardeners are available for reasonable wages. Residents sometimes prefer live-in maids for babysitting duties and for security reasons, however, live-in maids are becoming harder to find. There are few trained nannies, although some maids handle child-care responsibilities well. Many maids can cook, but it is hard to find cooks who will handle other household duties or who are trained for representational duties. There are many good caterers who are available for parties. Many people in houses share the cost of a security guard with their neighbors.

A combination maid-cook is generally desirable for a single person or couple without children. Large families often hire more than one domestic employee. Domestic employees generally earn about \$150 per month. Workers who come in by the day generally earn about \$10 per day.

Under Ecuadorian law, domestic employees must be covered by Ecuadorian Social Security. Stringent laws cover employment and termination. These regulations are included in orientation material for new arrivals and should be read and followed carefully.

In addition to an annual salary, the domestic employee receives (per Ecuadorian law) a 13th, 14th, 15th, and 16th month salary plus a supplementary compensation, and a cost of living bonus. Live-out maids are also entitled to a transportation allowance. Although the employee and the employer are required to pay a portion of the employee's income to the Social Security system, most employers in Ecuador pay the entire amount for their domestic employees. By law, domestic employees are entitled to one day off every two weeks, but in practice they receive one day off each week. Domestic employees are also entitled to 15 days paid vacation annually. Domestic employees are not entitled to any holidays. Employers are required by law to provide uniforms for their domestic help.

Religious Activities

Ecuador is primarily a Catholic country, and Quito is the seat of an Archbishop. About 70 Catholic churches in the city serve Spanish-speaking congregations. An English-language service is held in the Dominican Chapel each Sunday morning, and confessions may be heard.

Traditional Jewish services in Spanish and Hebrew are offered each Friday evening and Saturday morning at the Asociacion Israelita.

The community has a number of Protestant activities and services in English. The Advent-St. Nicholas Church (Lutheran and Anglican) offers a worship service and adult discussion group every Sunday morning at Isabel La Catolica 1431. The First Baptist Church has Sunday school classes and worship services. The Inter-denominational English Fellowship Church, sponsored by the World Radio Missionary Fellowship (which runs radio stations HCJB and Voz Andes Hospital), offers Bible school and services on Sunday and a teen group program.

The Seventh-day Adventists offer services on Saturday mornings and Sunday evenings and operate the

Clinica Americana. Jehovah's Witnesses also have weekly services. The Church of the Latter-day Saints has Sunday services in Spanish.

Education

Quito has many public and private primary and secondary schools. Cotopaxi Academy, Alliance Academy, Colegio Menor and Colegio Americano are private schools usually preferred by Americans in Quito. Cotopaxi Academy and Colegio Americano receive limited grant support from the U.S. Government.

Cotopaxi Academy was founded in 1959 as a private, cooperative, American nonsectarian school offering classes from pre-kindergarten (for children from the age of 3) through grade 12. The school year runs from mid-August to mid-June. Some 750 students attend the school. About one-third are Americans, one-third are Ecuadorians, and one-third other nationalities. Instruction is in English, and both Spanish and English are taught as second languages. The teachers are certified in the U.S., and classes are limited to 20 students. An International Baccalaureate Diploma is offered for qualified students going on to universities around the world. It is located in a recently built campus in the northern part of the city.

Cotopaxi is affiliated with the Universities of Alabama, Kentucky, Massachusetts, and Pennsylvania for student teaching internship programs. It is accredited by the Southern Association of Colleges and Schools and the International Baccalaureate Office in Geneva.

In addition to the traditional academic subjects, classes are offered in art, band, physical education, computers, and French. Standard U.S. texts, teaching materials, and tests are used. Extracurricular activities include yearbook, newspaper, drama club, National Honor Society, Student Council, and several sports. Two guidance counselors are on the staff.

An integrated program for gifted students operates from prekindergarten

garten to grade 12. Programs for physically handicapped children and those with learning disabilities are limited, but available from pre-kindergarten through grade 12 after the candidates undergo prerequisite screening. The staff includes a remedial reading teacher. For children in higher grades who have special problems, consult the school prior to arrival.

Alliance Academy, founded in 1929 for the children of missionaries is a privately supported college preparatory school. The school provides educational facilities to the children of Protestant missionaries from Quito, as well as those from other parts of Latin America. It has kindergarten through grade 12. The school year runs from early August to late May. Of some 500 students, 60% are children of missionaries from many different missions, and 40% are children of diplomatic and international business families.

Eighty percent are U.S and Canadian citizens. Children from other international families are accepted on a space-available basis. The Christian Philosophy of Education is the focus of the school. Daily Bible classes and weekly chapels are a required part of the curriculum. Students of all faiths are accepted.

Classes are taught in English, and Spanish classes are required for all students. The basic subjects resemble those in most U.S. schools. Electives include woodworking, art, typing, home economics, photography, shorthand, and yearbook publication. Advanced placement courses pre offered in math, English, and Spanish. Computer math and programming are also offered. The school is well supplied with learning materials, including three fully equipped science laboratories, elementary and secondary school libraries, and an audiovisual center. The library holds about 35,000 volumes, 800 films, 2,000 filmstrips, and videotaping facilities. Spanish and English are taught as second languages. Programs are available for the gifted as well as for the mentally handicapped. The school con-

Street scene in Guayaquil, Ecuador

ducts a full and varied sports and extracurricular program, including chorus, band, and orchestra.

Alliance Academy is accredited by the Southern Association of Colleges and Schools and belongs to the Southern Association of Independent Schools, the Association of Christian Schools International, and the Association of American Schools of South America.

Colegio Americano was founded in 1940 as a private coeducational school for students of all nationalities from pre-kindergarten through grade 12. A Junior College provides secretarial and business management training. The school year is

divided into trimesters extending from early October to mid-July, the traditional Ecuadorian school year. The current school population is 2,800. Most students are Ecuadorian. The 22-acre campus is 10 miles north of Quito.

The curriculum is divided into two sections: an international section offers courses similar to those at U.S. college preparatory, public schools; a national section offers subjects required of Ecuadorian schools. Instruction is in both English and Spanish. Courses in art and music are also taught. The school is accredited by the Southern Association of Colleges and Schools and by the Ecuadorian Ministry of

Education. A Comprehensive Learning Disabilities program from prekindergarten through grade 12 is offered, as well as guidance counseling and college counseling. Both English and Spanish are offered as second languages. Eighty-three percent of the graduating seniors go on to study in universities in the U.S. and Europe.

There is at least one English-speaking preschool. Some accept children from age 18 months.

Special Educational Opportunities

Universidad San Francisco, Catholic University and the National Polytechnic School offer academic instruction at the university level in Quito. San Francisco and Catholic Universities have faculties of Law, Economics, Engineering, and Philosophy. The Polytechnic School offers courses in electrical and chemical engineering and nuclear science. All classes are taught in Spanish. The admissions process is lengthy and difficult.

Catholic University offers a special 6 week intensive courses in Spanish for about \$350. The course consists of 3 hours of class 5 days a week. Many Americans take this course. You can also find many schools in the city offering Spanish lessons at very reasonable rates. Tutors will also come to your house if requested.

Various well-known local artists accept students of all ages for private classes, and several resident Americans also give art lessons.

The National Conservatory of Music accepts students for voice training and instruction in musical instruments, especially piano and violin. Students attending the schools normally used by the American community may receive instruction in a variety of instruments. Students must have their own musical instruments, although the schools do rent smaller instruments.

The University of Alabama College of Education offers graduate studies

in education in Quito. Visiting professors offer courses in secondary education, elementary and early childhood education, and administration and planning. Four-week courses are offered in the fall and spring and during the summer to fulfill credit requirements toward a Master's Degree or Ph.D.

Several museums in Quito have impressive collections of paintings, archeological objects, and historical manuscripts. The National Museum of History has a noteworthy manuscript collection. The Casa de la Cultura often sponsors exhibits and performances of local artists. The National Museum of Colonial Art has an outstanding collection of sculpture and paintings.

The premier museum in Quito is in the Central Bank located at the Casa de la Cultura. Divided into separate archeological and colonial exhibits, the museum shows carefully selected pieces in a well-designed arrangement. Tours are conducted in several languages, and the museum shows an English-language film describing the country's history and archeology. Another interesting ethnographic museum is located a few miles north of Quito at the Mitad del Mundo monument on

the Equator. Nearby are the partially excavated ruins of an Inca fortress with guides on weekends.

Sports

Soccer is Ecuador's most popular sport, and games are played in Quito year round at the Olympic Stadium. Bullfights are also popular. In December a series of bullfights are held to celebrate Quito Days and some of the world's leading bullfighters perform then.

Those interested in outdoor and indoor sports will not lack for opportunity in Ecuador. Local parks are well-kept and widely used on weekends, but you should be aware of the rising rate of pickpockets or robberies in the parks. Don't go with large amounts of money or important documents. There are tennis, racquetball, basketball and squash courts as well as bowling alleys. American instructors give classes in gymnastics, yoga, and aerobic exercises. Judo and karate are taught at the YMCA. Volleyball is very popular. Bicycling is possible in the parks, but dangerous on the road. Flying lessons are available. There is a small hang-gliding group. Several private clubs in and outside of the city have dining facilities, tennis courts, golf courses, and stables. You

Street in Cuenca, Ecuador

can often join these clubs at costs ranging from \$30 to \$300 a month, plus initiation fees.

Opportunities for horseback riding abound. Buying and maintaining a horse is much less expensive than in the U.S. Lessons are available at different clubs, and riding competitions are held monthly. Polo players will find a small but enthusiastic group of colleagues in Quito.

Quito and its surrounding areas have several places for swimming. Swimming memberships are available at the Hotels Colon, Oro Verde and Quito. The Los Chillos Valley, south of Quito, has several pools and beautiful country clubs. Lago San Pablo, an hour's drive north of Quito, near Otavalo offers opportunities for windsurfing, water skiing and boating.

Health facilities are available in Quito, but range quite a bit in price and services offered. Several offer aerobics classes, weight machines and swimming pools. Memberships are available at the Hotel Hilton Colon, Oro Verde, Hotel Quito and the Elan gym (this list is not all inclusive). Prices range from \$450 to \$1,200 per year for a single membership.

Fishing enthusiasts can enjoy excellent freshwater and deep-sea fishing in Ecuador. Off the coast, deep-sea tackle is needed for the abundant marlin, tuna, dorado, and other species. Areas close to Quito have good stream and lake fishing for bass and trout. The best trout waters are located high in the mountains, in cold and rainy areas where parkas and waterproof pants are essential. A license to fish anywhere in Ecuador is required.

Good dove hunting can be found near Quito, partridge may be hunted in areas several hours away by car, and duck hunting is good on the coast. The Hunting and Fishing Club has a new clubhouse and excellent shooting range at Lago San Pablo. An overnight trip by car and horseback takes the hunter into good deer hunting country. Guns must be registered.

Mountain climbing, hiking, and camping are popular. Most of the mountains are not technically difficult, but the altitude-ranging from 14,000 to 20,000 feet-can cause problems. There are several climbing clubs. Mules and guides can be hired in villages near Chimborazo, Cotopaxi, Cayambe, and Tungurahua. Crude "refugios" on these

mountains offer shelter and cooking facilities. No one skis in Ecuador. The snow-covered peaks are steep and laced with crevasses. The Hash House Harriers has an active branch in Quito. This group sponsors runs twice a month and regularly organizes outings.

Ecuador is a paradise for the amateur photographer. Black-and-white, Kodachrome, and Ektachrome color film can be processed locally. Making pictures from slides is expensive. Film can be purchased locally but film speeds slower than 100 or higher than 400 are generally not available or difficult to find. It may be a good idea to bring extra film with you.

Touring and Outdoor Activities

Almost every corner of the country offers opportunities for interesting exploration. Anyone planning to take advantage of all possibilities will want to use a four-wheel-drive vehicle. Most sightseeing can be done on long weekends.

Less than an hour drive to the north of Quito is the equatorial monument at "Mitad del Mundo," marking the division between the Northern and Southern Hemispheres. Two hours from Quito is Otavalo, home of indigenous people known throughout the continent for their weaving. Their colorful Saturday morning market is a must for tourists, although you can now find a much smaller version of the market on any day of the week. The towns of Cotacachi and San Antonio de Ibarra, near Otavalo, are known for leatherwork and woodcarving respectively.

About three hours by car south of Quito on the Pan American Highway is Ambato, Ecuador's fourth largest city, which has an annual Festival of Fruits and Flowers held during Carnival. The region is known for its rug factories. Southeast of Ambato is the secluded and peaceful town of Baños, perched on the eastern edge of the Andean plateau at the foot of the Tungurahua volcano. Like many other resort

towns in the mountains, Baños is known for its thermal springs. Metropolitan Touring offers an interesting trip by train from Quito to the colonial city of Riobamba, continuing through this area by bus, with stops at the local Indigenous markets.

In the southern part of the country, continuing on from Riobamba is Cuenca, Ecuador's third largest and perhaps most picturesque city, known for its artisan work and hand-woven rugs and woolens. There are many factories that do the finish work on the Panama hats which are made in small towns close to the coast. The ruins of an ancient Inca fortress are nearby. The province of Loja, in the southernmost part of Ecuador, is famous for the town of Vilcabamba, whose residents are known for their longevity.

Trips can be made by road or air into the Oriente and the jungle. The low-lying tropics are a pleasant contrast to Quito's cool climate. Metropolitan Touring operates a river boat trip down the Rio Napo, with excursions into the jungle, and dug-out canoe rides. Visitors can reach the frontier oil towns by bus over rough roads if they prefer not to fly.

West of Quito, 3 hours by car down the Andean slope, is Santo Domingo de Los Colorados, home of Indigenous people who traditionally color their hair and skin with natural pigments. The area offers a wide variety of tropical fruits and other products. Farther down the road, 6-8 hours by car from Quito, is Guayaquil, the nation's largest city. Up and down the coast are beaches, some deserted, some dirty, some beautiful, and some highly urbanized, that offer a pleasant reprieve from Quito's altitude. The Galapagos Islands, 600 miles off the coast, are famous for their wildlife. In recent years Ecuador has taken great care to preserve the flora and fauna of the islands, strictly licensing and controlling the tourist industry that flourishes there. A proper tour of the islands takes at least a week. Ships operating in the tourist trade range from converted

fishing sloops with room for no more than six passengers to luxurious cruise vessels offering all the comforts of a large hotel.

Entertainment

Quito has some comfortable cinemas that show films in English with Spanish subtitles. Most of the movies considered "children's" movies are dubbed in Spanish with no English subtitles. Well over half the films are American, and major releases usually arrive in Quito within a few months of their premiere in the U.S. The Casa de la Cultura also programs foreign film series in conjunction with various embassies.

The National Symphony Orchestra offers an annual series of concerts, often with guest artists and conductors. Live theater is active in Quito, with several amateur and semiprofessional groups presenting works in Spanish. An English-language amateur group, the Pichincha Players, presents one or two plays or musicals a year.

Many talented groups of Ecuadorian musicians offer concerts and perform in the late-night folk music houses. The music of the Andes is especially known for its use of pipes, guitars, percussion instruments, and the "charango," a mandolin-like instrument fashioned from the body of an armadillo. For those who prefer a different kind of popular music, there are several good discotheques in town.

Quito has a growing number of nightclubs, most of which are small. Elaborate floor shows and large orchestras are rare, although Ecuador is on the circuit for touring Latin American musical spectacles. Casinos in the major hotels have slot machines, roulette, blackjack, and dice tables.

The city has an unusually large variety of good restaurants featuring Ecuadorian and international cuisines. Prices are reasonable except for imported items. A number of U.S.-style fast-food restaurants offer hamburgers, pizza,

Mexican food and fried chicken for those suffering from culture shock.

Quito, Latacunga, Guayaquil, and Cuenca have annual "festival day" celebrations with fireworks and dancing in the streets. Many of the surrounding towns have their own smaller versions of these festivities.

Social Activities

No formal organizations exist exclusively for Americans. There are many opportunities for U.S. citizens to meet and work with Ecuadorians and other foreign nationals. Quito has 36 resident and 37 nonresident embassies, plus several international organizations. Membership in private clubs facilitates contact with influential Quito residents. The Damas Norteamericanas y Britanicas runs a small library, and supplies funds for many local charities through profits made at their Thrift Shop and annual Christmas bazaar. The Women's Christian Fellowship Group holds monthly meetings, weekly Bible study groups, and occasionally sponsors trips and seminars.

The Ecuadorian-American Chamber of Commerce has a large and growing membership, including many prominent Ecuadorian and U.S. resident business representatives. Each month the organization sponsors a luncheon with a well-known speaker.

The Rotary and Lions Clubs are active. The Ecuadorian Canine Association sponsors dog shows, registers purebreds, and is involved in other activities. Quito has both the Boy Scouts of America and the Cub Scouts pack. Both groups are active within the community. Also, there is a very active group of Girl Scouts.

Guayaquil

This sea level city, formally named Santiago de Guayaquil, was founded in 1538. Tropical, bustling and noisy, Guayaquil is located on the Guayas River and boasts a large deep-water seaport on the saltwater

estuary 8 miles south of the center of town. The city is located 50 miles upriver from the Pacific Ocean. A few small hills rise abruptly in the northern residential section; the rest of the city is flat. With a population approaching 2,500,000, the city is growing rapidly, with extensive slums expanding on stilts over tidal estuaries. The city also has modern residential areas of attractive walled homes and gardens and many multistory apartment and condominium buildings. Temperatures are generally pleasant during the dry season from June to December, and no worse than Washington, DC in midsummer during the remainder of the year. Mosquitoes are common during the rainy season from January to May.

The business center is becoming increasingly modern, though unpainted cane buildings still exist side by side with modern high-rise structures on some streets. Many of the streets are in deplorable condition during most of the year despite patchwork repairs.

Guayaquil's vital commercial activity and frequently turbulent political life can help make for an interesting tour, though street crime and burglaries have become serious problems. The American community of several thousand new and long-time residents is well integrated with a much larger number of dual nationals, third-country citizens, and Ecuadorians who were educated or worked in the U.S.

Utilities

City water piped to houses is chlorinated and pure when it leaves the plant but is considered contaminated because of the old pipes and their proximity to sewer lines. Some areas of the city have frequent low pressure or water shortages because of distribution problems.

Standard two-wire, 110v, 60-cycle current is available for lights and appliances, including refrigerators and freezers. Water heaters, electric stoves, and some air-conditioners require U.S. standard three-wire, 220v-240v, 60-cycle current, which

is also available. Voltage regulators or surge protectors are highly recommended to protect specialized electronic equipment such as stereos, home minicomputers and microwave ovens against voltage fluctuations.

Food

Many tropical fruits and vegetables are available year round, and others in season. Some temperate zone fruits and vegetables are brought to Guayaquil from the cool mountain valleys. Prices are reasonable, but may rise during the rainy season.

Seafood, including fresh tuna, shrimp, crab, and oysters, is in good supply most of the time and is less expensive than in the U.S., but quality varies. Beef, chicken and pork are almost always available at prices similar to those in the U.S. Butter and cheese are of satisfactory quality. All imported foods are expensive. Soft drinks and beer are inexpensive, once the bottles are purchased. As a rule of thumb, bring in quantity anything non-perishable that you use often, such as Baker's chocolate, peanut butter, spices, cereal, or special cleaning aids.

Guayaquil has many good restaurants, fast food eateries and ice cream shops with prices similar to those in the U.S. Sanitation is almost never up to U.S. standards, therefore, salads, raw seafood and ice can cause stomach and intestinal problems.

Clothing

Men: Bring a dinner jacket (generally a dark jacket is used) only if you already have one. Men's clothing can be made here from local or imported material and tailors range from very reasonable to expensive. Lightweight suits, sport coats and slacks are worn in Guayaquil. A few dark conservative suits and some sporty outfits will fill most needs.

Women: You will need all your summer clothing here. Officers dealing constantly with the public, such as the principal officer and visa officers, wear dresses, suits, blouses and

skirts. For cocktail parties, dinners, and dances, the latest fashions are worn. Short-sleeved cocktail dresses for evening are comfortable most of the year.

Hats are not worn, except for brimmed sun hats. Sun-dresses and sandals are standard. Bring washable cottons, synthetics, and cotton blends. Tailors here make all types of clothing. Bring fabric and notions from the U.S. Cotton is more comfortable than synthetic material in this hot climate. Bring an ample supply of underwear and socks for everyone in the family.

Stoles, light sweaters, and scarves are used at night during the cooler season. Bring one or two autumn or winter outfits and party clothes for visits to Quito, Cuenca, and other mountain areas. Jackets and woollens are needed at that altitude, and warm slacks are useful. A great variety of stoles and ponchos are sold here at low prices.

Children: Bring a good supply of cotton clothing, shoes and sneakers. Blue jeans, warm jackets, rainwear and sweaters will also be needed.

The American School (Colegio Americano) and the Inter-American Academy both require school uniforms. At the Colegio Americano girls dress with skirts and boys wear blue jeans. Boys and girls are required to wear the same kind of shirt and physical education uniform. Black dress shoes are required except for the days students have gym class, when they bring white sneakers. The uniform for the Inter-American Academy may be purchased in the U.S. Girls wear dark blue jeans, slacks, or skirts with plain white shirts, and a blue jacket or sweater in cool weather. Shoes may be either leather or blue sneakers; sandals are not permitted. Boys wear blue jeans, white shirts, blue sneakers, and a blue jacket or sweater. The PE uniform for both boys and girls is plain blue shorts, white T-shirts, and blue or white sneakers. Reasonably priced blue jeans are available locally.

Supplies and Services

Most U.S. and European toiletries, cosmetics, cigarettes, and medicines are available, sometimes at less cost than in the U.S. Aluminum foil, plastic wrap, waxed paper and other paper products are more expensive than in the U.S., and are of inferior quality. Bring entertainment equipment. Video clubs abound in Guayaquil, with tape rentals from \$1.00 to \$2.00. An ice chest and beach supplies, particularly suntan lotion, are recommended.

The city has adequate shoe repair and dry-cleaning, radio, phonograph, and TV repair shops. Mechanics can repair most makes of automobiles, but service is from fair to unreliable, and generally slow. Automobile parts are readily available, but expensive.

A number of good tailors are available to make or alter clothing. Local hairdressers are good and reasonably priced. Single persons usually find they need at least a part-time maid, and many families have more than one domestic employee. Domestic employees' wages will run from \$80 a month for a general maid to \$120 a month for a cook, plus food and uniforms.

Religious Activities

The prevalent faith is Roman Catholic. One Catholic church offers an English Mass. Several Protestant denominations are represented in Guayaquil, but only the Guayaquil English Fellowship, and Inter-denominational group, offers services in English. Several branches of the Mormon Church are here, with services in Spanish.

Education

Educational facilities through grade 8 are generally adequate. Colegio Americano, with kindergarten through grade 12, has a student enrollment of 1,656. It has a bilingual program, and operates from a spacious campus a few kilometers north of the urban areas. The school year is May through January. Spanish and English programs through grade six exist at present. The Colegio Americano is accredited by the

Southern Association of Schools and by the Ecuadorian Ministry of Education.

Inter-American Academy was formed in 1978 when the former International Section split off from the Colegio Americano. It has kindergarten through grade 12, and is the only English-speaking school in Guayaquil at the high school level. It is accredited by the Southern Association of Schools, and offers an International Baccalaureate diploma. The Academy's diploma and credits are not recognized by the Ecuadorian Ministry of Education because it does not follow the Ministry's curriculum or calendar. The 1999 school year for the Academy starts in September. The 1998 student population is about 300. The school has limited athletic and laboratory facilities.

In addition to these schools, several Roman Catholic private schools have good reputations, but classes are taught entirely in Spanish. An excellent local German school is available for U.S. students who speak German.

Several nursery schools are available. Several Spanish-language universities exist, but the largest (University of Guayaquil) is frequently disrupted by political demonstrations, including occasional gun battles between rival groups of students.

Sports

Swimming, tennis, basketball, soccer, baseball, volleyball, jogging, bowling, and golf are enjoyed in the Guayaquil area. Lessons are available. The Tennis Club and the Country Club have swimming pools, but membership is expensive. The pool at the Oro Verde Hotel offers club membership at \$150 a year for families and \$120 for singles. A municipal Olympic-size public pool with adjacent running track is located nearby. The clubs, Nacional and Garibaldi, are moderately priced alternatives with tennis and swimming facilities. A few families have small private pools. Hunting in Ecuador, particularly bird hunt-

ing, can be excellent. In the coastal region around Guayaquil, dove and duck hunting can be spectacular, since there are more than six species of dove and three major species of non-migrating ducks. The rice-growing regions are home to the large Muscovy duck and wintering grounds for blue teal. White-tailed deer and collared peccary are game animals hunted locally. Other game includes the jaguar, but hunting is difficult in the thick swamps and rugged hills. Ecuador has no specified hunting season or bag limit. Hunters should bring all their equipment, including ammunition.

The Mountain Climbing Association in Quito draws members from Guayaquil. See also Sports-Quito.

Touring and Outdoor Activities

Two beaches, Playas and Salinas, offer a cooler climate and swimming, fishing, and boating. Playas is 50 miles southwest of Guayaquil. A small, marginally adequate hotel is situated on a wide, sandy beach with a sheltered picnic ground. Furnished houses are sometimes available for rent on or near the beach. Beaches are generally uncrowded from May to December. The sun and the ocean currents should be treated with respect. The strong sunshine can cause severe sunburn even after short exposure. Ocean currents are very strong in the area and bathers must exercise caution.

Salinas, a resort town 85 miles west of Guayaquil, can be reached by asphalt road in 2 hours. There are more hotels, restaurants, and clubs than in Playas. Sailing and boating facilities are good. There are good beaches along the coast to the north, and a modern hotel nearby on the south coast. Salinas offers some of the best sport fishing (marlin and sailfish) in the world. Charters are expensive, but many fishing enthusiasts find it reasonable to go in groups. Good snorkeling is found among the coral formations in bays north of Salinas.

Over a long weekend, an excursion to the mountains becomes practical

and offers a pleasant change in both climate and culture. The nearest city in the Sierra is Cuenca, about a 4 or 5 hour drive from Guayaquil. The road is subject to occasional landslides (especially during the rainy season) and fog banks, but the trip offers spectacular views. The train trip to Quito was a widely known tourist attraction, but service was suspended in early 1983 due to floods, and it is uncertain if service will ever be resumed.

Entertainment

Guayaquil has many movie theaters, some air-conditioned, that show fairly recent movies in English, with Spanish subtitles. Films considered to be for children however will be dubbed in Spanish without English subtitles. Concerts and plays are occasionally given by traveling American, Asian, or European groups. A Bi-National Center (Centeo Ecuatoriano-NorteAmericano), has an air-conditioned auditorium for public gatherings and cultural presentations, and a lending library with more than 4,000 volumes. Its small membership fee offers access to special programs, including movies, speakers, courses, and other activities. The Guayaquil Players, an English-language amateur theater group, stages productions two or three times a year.

Small but good collections of archeological antiquities are located in the Casa de la Cultura, the Municipal Museum, and the Museum of the Banco del Pacifico. Several small art galleries have weekly exhibits of artists from Ecuador and other Latin American countries.

Guayaquil's Independence Day, October 9th, is the most important local holiday. Indigenous festivals and markets can be seen all year by driving into the Andes. Horse races with pari-mutuel betting are held on Sundays throughout the year. Polo games and soccer games are held in season. Several hotels operate casinos. Bullfights are held twice a year.

Social Activities

About 2,500 U.S. citizens live in Guayaquil, providing a good opportunity for socializing with other Americans. The International Society has monthly dinners and several dances during the year. Numerous opportunities exist to meet and work with Ecuadorians and foreign nationals. The American-British Club is now the ABC International Women's Club. Many Ecuadorians have attended schools in the U.S. and welcome association with Americans. Guayaquileños are especially open and hospitable.

Cuenca

Cuenca, capital of Azuay Province in south-central Ecuador, is in one of the richest agricultural basins of the Ecuadorean Andes. A city with a population of 195,000 (1995 est.), it is approximately 68 miles southeast of Guayaquil and, because of its good rail and road connections, is the commercial center of southern Ecuador. One of its leading industries is the manufacture of Panama hats, made from the leaf of the *toquilla* palm which is brought to Cuenca from the coast. Other industries include tanning, sawmilling, flour milling, and paper milling. The city is also known for its artisan work and handwoven rugs and woollens.

Cuenca was founded by the Spanish in 1557 on the site of a native town called Tumibamba. It has been a Roman Catholic bishopric for more than 200 years. The churches and many other old buildings reflect the early Spanish influence in the area, and open-air flower and vegetable markets add to the charm of the older parts of the city. During its "festival days," there are beautiful fireworks displays, and dancing in the streets far into the night.

Cuenca has two universities, one public and one administered by the Catholic Church. The former, founded in 1867, has a student body of 20,000. About 3,000 students attend the latter.

Several good restaurants attract visitors, and a wide variety of entertainment is available. The city has two fine museums, the Provincial Archaeological and the Spanish Abstract Art Museum. The Ecuadoreans in Cuenca, as in other cities, are friendly and hospitable. Many speak English, but a knowledge of Spanish presents more opportunities to meet and socialize with the local population.

OTHER CITIES

AMBATO, capital of Tungurahua Province in central Ecuador, has a population of close to 111,500. It is about 50 miles south of the capital, on the Río Ambato, near Mt. Chimborazo. Due to its location, Ambato is susceptible to volcanic eruptions and earthquakes. Much of the city was destroyed during an earthquake in 1949. The city's historic landmarks include the mausoleum of Juan Montalvo, the noted 19th-century essayist, and a Renaissance cathedral. Along with sugarcane plantations, Ambato is known for its fresh fruits. Industries include tanning, leatherworks, food processing, and textile milling. Ambato is located on the Pan-American Highway and on the Guayaquil-Quito Railway. Miraflores, a suburb of Ambato, is a lush resort for the upper classes of Guayaquil.

The capital of Cañar Province, **AZOGUES** is located in south-central Ecuador, in a high Andean valley. Situated on the Pan-American Highway less than 20 miles north of Cuenca, Azogues has an estimated population of 13,840. The economy is based on agricultural products such as grains and fruit. Industries in the city include leather tanning and flour milling. The city's name comes from the Spanish word "azogue" which means "mercury." Mercury is a local resource, along with silver and copper.

BABAHYO, capital of Los Ríos Province, is located in west-central Ecuador, less than 25 miles north of Guayaquil. On the southern shore

of Río Babahoyo, the city is a trade center for the surrounding agricultural region. Sugarcane, rice, and fruits are grown. There is a government-owned distillery making alcohol, ether, and perfume. A technical university was opened here in 1971. The city has an estimated population of 43,000.

As the capital and major seaport of Esmeraldas Province, the city of **ESMERALDAS** is the chief trading center for the region. Located about 85 miles northwest of the nation's capital, Esmeraldas lies on the Pacific coast. The city is not strong industrially, but an oil refinery was completed in 1977 and new oil port facilities were opened in 1979. Its main exports are timber and bananas. Tourism has increased because of the addition of seaside resort accommodations, a pleasant climate, and a good highway to Quito. A technical university was opened here in 1970. The population in Esmeraldas is estimated at 131,000.

GUARANDA, capital of Bolívar Province, has an estimated population of 14,100. It is situated on a head-stream of the Río Chimbo in the Cordillera de Guaranda of the Andes. Less than 50 miles north of Guayaquil and about 75 miles south of Quito, Guaranda is an agricultural center trading corn, chincona, wheat, and timber. The city was an important transshipment point before the opening of Guayaquil-Quito Railway in 1908. Guaranda is linked by highway with the cities of Quito and Riobamba.

LATACUNGA, with a population close to 34,000, is the capital of Cotopaxi Province in north-central Ecuador. Located in an Andean basin on the upper Río Patate, the city is situated at an elevation of 9,055 feet. A pre-colonial city, Latacunga was favored by Incan royalty because of its hot springs. The city has been damaged by volcanic eruptions and subsequent earthquakes and, as a result, had to be rebuilt in 1797. Industrial activities include

pottery, furniture manufacturing, and flour milling.

Located in south-central Ecuador, **LOJA**, capital of Loja Province, is situated on a small plain at the foot of the Cordillera de Zamora of the Andes. The city was founded in 1553 and has since been totally rebuilt as a result of an earthquake. Trade here is typical of the region (sugarcane, cereals, coffee, and cinchona). Industries include tanning and textile weaving, and the manufacture of light consumer goods. Loja has many beautiful marble buildings. Loja is on the Pan-American Highway and is an air link to principal Ecuadorean cities. The seat of a Roman Catholic diocese, the National University of Loja, and a technical university are all located in the city.

Founded in 1535 by Spanish colonists, **PORTOVIEJO** is situated in the Pacific lowlands of western Ecuador. The city is about 100 miles west of Quito, on the eastern bank of the Río Portoviejo. Formerly located on the coast, Portoviejo was moved inland because of Indian attacks. With an estimated population of 122,000, the city is an agricultural and lumbering center; products include cotton, coffee, cacao, and sugarcane. Light industries here include the manufacture of Panama baskets, hammocks, and hats. Portoviejo has been the seat of a bishopric since 1871; a technical university was opened in 1952. There are air and road routes connecting the city with Quito.

At an altitude of about 9,000 feet, **RIOBAMBA**, capital of Chimborazo Province, is situated in the central highlands of Ecuador. It is about 75 miles east of Guayaquil and is the headquarters of the Guayaquil-Quito Railway. The city dates from pre-Inca and Inca times; it was settled by the Spanish in 1534, 12 miles south of its present location. Because of a landslide in 1797, Riobamba was moved to its present site near the Riobamba River. In 1830, the first Ecuadorian constitutional congress met at Riobamba and proclaimed the

republic. Industries include carpets, textiles, cement, and cotton. Riobamba is known for its native artifacts. The city has a weekly fair that attracts Indians from the surrounding countryside. Many fine products can be purchased here. The population is about 81,000.

TULCÁN, with a population of nearly 34,000, is the capital of Carchi Province, in the northern tip of central Ecuador bordering Colombia. The city was severely damaged by an earthquake in 1923 and has since been rebuilt. Quito is about 75 miles to the southwest. Nearby sites include the natural bridge of Rumichaca over the Río Carchi and, in Colombia, only a few miles northeast, the shrine of Nuestra Señora de Las Lajas. Situated in a rich agricultural region, Tulcán processes sugarcane, coffee, cereals, and is known for its dairy products. The Pan-American Highway runs through the city.

COUNTRY PROFILE

Geography and Climate

Ecuador straddles the Equator, its namesake, on the west coast of South America, almost 3,000 miles due south of Washington, DC. It is roughly the size of Colorado. Two north-south ranges of the Andes Mountains divide the country into three distinct sections: the Costa, a belt of tropical lowlands 10-100 miles wide along the Pacific coast, where Guayaquil, the major city, is located; the Sierra, where Quito is located, is a highland plateau 3,000-10,000 feet high; and the Oriente, which are the jungle lowlands east of the Andes that make up about half of the country's area. In addition, the Galapagos Islands (Archipelago de Colon) lie 640 miles off the coast. The nine main islands are inhabited by some 15,000 people and an amazing variety of wildlife that has fascinated scientists ever

since Charles Darwin visited there in 1836.

Ecuador claims an additional 100,000 square miles of territory in the Oriente, an area which includes navigable tributaries of the Amazon River. This territory was lost to Peru under the 1942 Rio Protocol of Peace, Friendship, and Boundaries, a fact which the Ecuadorian people and Government have never fully accepted. The national motto proclaims, "Ecuador was, is, and will be an Amazonian nation." Revising the treaty is one of the government's foremost foreign policy objectives. Efforts to settle the dispute have been unsuccessful because of strong nationalistic feelings in both countries. In 1995 an undeclared war took effect between Peru and Ecuador along the disputed southern border. Since 1995 the guarantors (U.S., Brazil, Chile and Argentina) have been very active in assisting Ecuador and Peru to resolve their differences.

Most of Ecuador is covered by equatorial forests. The rest consists of cultivated agricultural areas, some arid scrubland near the coast, and barren mountain ranges with 22 peaks over 14,000 feet high. These peaks include Chimborazo (20,561 ft.) and Cotopaxi, which is the second highest active volcano in the world (19,347 ft.). The spectacular array of snow capped volcanoes stretching north and south of Quito has been called the "Avenue of Volcanoes", and on a clear day the view from an airplane is breathtaking. On the Pacific slope the principal rivers are the Esmeraldas and the Guayas. Eastern Ecuador is part of the Amazon watershed. Its principal rivers are the Napo and Pastaza Rivers. None of the Amazon tributaries in Ecuador are navigable by oceangoing vessels.

Because of variations in altitude, Ecuador has a variety of climates. The lowland- are generally hot and humid Temperatures on the coast are moderated by the Humboldt Current to a range of 65° to 90°E Temperatures in the Sierra are generally cool, ranging from 35° to 75°E

Due to the altitude and thin air, temperature in direct sunlight can reach 85°F at midday. In the evenings it can range from pleasantly cool to very chilly. The tallest mountains are always syncopated, but it never snows in the inhabited altitudes, although it hails occasionally. During the Sierra dry season, from June through September, gusty winds are common.

In Quito the temperature pattern rarely changes from day to day or month to month. Mornings are cool and crisp, and midday is agreeably warm unless skies are overcast. Fog and mist may occur in the mornings or evenings as low-lying clouds spill over the sides of the valley. Since Quito is such a short distance from the Equator, sunrise and sunset vary only slightly from 6 am and 6 pm. Average annual rainfall in Quito is 50 inches, with 43 inches falling from October through May, and 7 inches from June through September. Relative humidity averages 75%. Occasional tremors are registered in the area, these may or may not be perceptible to residents. Earthquakes and volcanic eruptions are infrequent but do remain a possibility.

Population

Ecuador's population is 11,937,000; it is estimated that the population is 40% mestizo, 40% Indian, 10% white, 5% black, and 5% Asian and others. About half of the population lives on the Coast, where the principal group is mestizo. The average annual population growth rate is currently 2.3%. The term "mestizo" has a cultural significance in the Sierra; it is not simply a mixture of blood. An Indian who leaves his or her community, abandoning traditional dress, tribal ties, and native language, loses his or her Indian identity and is called a "mestizo."

Spanish is the official language, but Quichua, the language of the Incas, is still spoken by Indians constituting about one-third of the inhabitants. In the Oriente, several indigenous languages and dialects survive; some having no identifiable

link with any recognized language families.

Internal migrations are occurring from the highlands to the coastal area, and from the countryside to the cities. Today the population is divided about equally between the mountainous central highland region and the coastal lowlands. The urban segment of the population is about 55%.

Most of the population is Roman Catholic, though Protestant missionaries have been active in the country since the turn of the century. Religious freedom is observed.

Primary education is compulsory, and an estimated 85% of the population is literate. Both Catholic and Protestant missionaries have worked with indigenous peoples of the Oriente in conjunction with the Ministry of Education. Public university education is free, and there is an open admissions policy. Public and private university enrollment is large, although many students do not complete their degrees.

History

Perhaps 50 independent pre Columbian cultures flourished along the coast, in the Sierra, and in the Rio Napo Region before the Incas Conquered what is now Ecuador. Ceramics found in Valdivia date from 3200 B.C., are among the oldest found in South America. Archeologists have discovered rich gold works, ceramics, weavings, and mummies in several important sites. Around the year 1200, two important nations emerged: the Caras on the coast, and the Quitus in the Andes. These merged to form the Shyris nation, which was conquered by the Incas in the 15th century.

The Inca sovereign Huayna Capac consolidated his rule over the area in the early 1500s, just a few years before the first Spaniards landed on the shores of Ecuador. After seizing the treasures at Atacames on his first expedition along the coast from

his base in Panama, Francisco Pizarro returned in 1532 to conquer the Inca kingdom, by then weakened by civil war. The last Inca king, Atahualpa, was held prisoner for ransom and then killed by Pizarro.

A long period of warfare against the native population followed and the Spanish conquest destroyed all but a few of the Inca fortresses and temples. Quito was not subdued until Sebastian de Benalcazar took possession of the area, establishing San Francisco de Quito on December 6, 1534, on the site of the ancient Quitu capital. Guayaquil was founded a year later. Gonzalo Pizarro was named governor of the colony in 1540 and organized an expedition in Quito which resulted in the discovery of the Amazon River by Francisco de Orellana. In 1563 Quito was made a Royal Audiencia, first as part of the Viceroyalty of Peru, and then the Viceroyalty of New Granada, after 1718. Exploration, colonization and religious conversion of the Indians continued for almost three centuries, until independence in 1822. The first schools were established by the religious orders of the Catholic Church. So many monasteries and sumptuous churches were built in Quito that it became known as "The Cloister of America." The combination of Spanish art and Indian handicraft led to a unique production of sculpture and painting in what is known as the Quiteño School of Colonial Art, with many extraordinary native artists, such as Caspicara, Goribar, and Miguel de Santiago.

Land which had been taken from the aborigines was granted to the religious communities and to the Spaniards who had served their king. During the 17th and 18th centuries African slave labor was brought from the Caribbean to work the new plantations and agriculture flourished. The colonial economy rested on three institutions: the *encomienda* (a system of serfdom), the *mita* (forced Indian labor in mines and public works), and the *obraje* (forced labor in textile factories). While the land belonged to the Spanish crown legally, the

encomienda was the cession of land and people to the privileged. The Indians were supposed to receive the care of the patron and be instructed in the Catholic faith, in exchange for personal services. The native population suffered greatly under this system.

A number of European scientists visited Ecuador in the 18th century: Charles de La Condamine of France headed a geodetic mission to confirm measurements of the equator, and Alexander Von Humboldt made significant discoveries in natural science. Intellectual societies flourished in the capital and became centers of liberal political thought.

Eugenio Espejo preached independence and influenced many wealthy merchants and nobles who resented Spanish oppression, taxation, and trade restrictions. In 1809 a group of citizens overthrew the Royal Audiencia, but Spanish rule was restored within 3 months. In 1820 Guayaquil again declared independence, and soon after Simon Bolivar sent Antonio Jose de Sucre into Ecuador to lead a decisive campaign against the Spaniards. Sucre won a great victory in a fierce battle on the slopes of Mount Pichincha overlooking Quito in 1822, liberating Ecuador and uniting it with the Federation of Greater Colombia.

The Republic of Ecuador began its separate existence in 1830, and Juan Jose Flores was elected the first President. The constitution established a presidential system of government, with a division of powers among the executive, the legislative, and the judicial branches. The new government was beset from the beginning by personal and sectional rivalries between the Coast and the Sierra. For many years political power alternated between the Liberal and Conservative Parties.

In the 19th century, political conditions were unstable, and during the first 95 years of its independence, Ecuador had a succession of 40 presidents, dictators, and juntas. In 1851 slavery was abolished, 60,000 Negroes were freed, and tribute

payments by the Indians were abolished. In 1860, 15 years of authoritarian rule by President Gabriel Garcia Moreno began. After his assassination in 1875 on the steps of the Presidential Palace, a period of liberal constitutional development followed. The greatest figure of this era was Eloy Alfaro, who completed the Guayaquil-Quito Railway and created the Public Health Service. Under his leadership new constitutions removed religious qualifications for citizenship, reestablished freedom of worship, confiscated Church estates, and secularized government education.

In the early 20th century, there was political unrest and economic distress following World War I. From 1925 until 1948, the country went through an even more troubled period, with 22 Chiefs of State. Twelve years of relative stability followed. Galo Plaza Lasso (former Secretary-General of the Organization of American States) was elected President in free elections in 1948 and was succeeded by Dr. Jose M. Velasco Ibarra who completed his presidential term, and in turn was succeeded by Dr. Camilo Ponce E., who also completed his presidential term. The next elected President was again Dr. Jose M. Velasco Ibarra, who did not complete his presidential term because he was overthrown by a military junta. Dr. Jose M. Velasco Ibarra was elected President on 5 occasions. After almost 2 decades under military governments, a constitutional government was elected, led by Dr. Jaime Roldos A., who died in an airplane accident in 1982 and was succeeded by his Vice-President Dr. Osvaldo Hurtado L. In 1984 there was an orderly transition from one democratically elected government to another when President Leon Febres Cordero took office. He, in turn, relinquished power to democratically elected Dr. Rodrigo Borja C. 1988-1992. Sixto Durán-Ballén was President for the period from 1992 to 1996. Abdalá Bucaram Ortiz was elected President in 1996 for a period of 4 years, however, his presidency was revoked in February 1997. Fabian Alarcón (February

1997 - August 1998) is the current interim president elected by Congress and further reconfirmed by popular consultation in May 1997. New elections will be held in 1998.

Public Institutions

Dr. Fabian Alarcón, Ecuador's sixth President since the return of democracy in 1979, was elected by Congress in 1997, after nation-wide popular protests forced President Abdala Bucaram to step down. Bucaram, who served 6 months in office, was widely viewed as Ecuador's most corrupt President in recent history. He fled to Panama to avoid prosecution. Alarcón was elected to serve as interim president until new elections are held in 1998.

President Alarcón was a compromise candidate from a small center-left party, the Radical Alfarista Front (FRA), who drew support from the larger center-left and center-right parties in Congress for his Presidency. He was elected by Congress to correct the corruption of the Bucaram government and to lay the ground work for a Constituent Assembly to overhaul the state. His party has grown from 3 to 12 deputies in Congress since he took office and he has managed to build a coalition with the larger parties from the right and the left supporting his reform agenda.

The Ecuadorian constitution provides for a separation of powers between executive, legislative, and judicial branches of government. With 14 formally registered political parties and a free press, Ecuador has a lively and open political environment. In the 1998 national elections, a new President, Vice President, and Provincial and Municipal Officials will be elected to serve 4-year terms. In addition, of the 82 members of the unicameral legislature, 12 will be elected at-large for 4-year terms ("National Deputies") and the remaining 70 will be elected by province for 2-year terms ("Provincial Deputies"). Following a 1997 constitutional reform, the 31 members of the Supreme Court are selected by the Congress

from lists submitted by various social and professional organizations.

Ecuador's human rights record is generally good, although problems, principally involving abuse of authority and an ineffective judiciary, continue to exist.

Arts, Science, and Education

Quito's artistic tradition continued through the Republican era and flourishes today. Masters such as Oswaldo Guayasamin, Eduardo Kingman, and Oswaldo Viteri are joined by a younger generation that is gaining international fame. Marcelo Aguirre, one of these young painters, won the world's largest prize, the \$250,000 Marco prize from Mexico, in 1995. Galleries such as La Galeria and Art Forum in Quito and Expresiones in Guayaquil spotlight the best in contemporary art.

The National Dance Company performs modern ballet and groups such as Humanizarte focus on indigenous dance forms. The National Symphony performs weekly concerts throughout Quito and elsewhere in the country. There are also a number of classical concerts offered by the Philharmonic Society and several chamber music groups. Private clubs and restaurants showcase traditional Andean music, Latin pop, and even jazz.

Traditional arts and crafts are very much alive. Indian wool weavings and rugs woven in Inca designs have been successfully commercialized and are sold in the world famous market city of Otavalo, which is located about 2 hours outside of Quito. The city of Cotacachi, near Otavalo, is known for its leather goods, and San Antonio de Ibarra, just a few miles north, is a center for wood carving. The city of Cuenca has a wide variety of art forms, including sophisticated ceramics and the famous "Panama Hats." Tigua, a small town near Latacunga, is famous for native

paintings produced on stretched cowhides and furniture. A number of Indian communities combine colorful art forms with religious celebrations.

The government and a number of private organizations are working to preserve Ecuador's historic, archeological, and architectural heritage. Colonial Quito has been declared a "world cultural heritage site" city by UNESCO. Dozens of sites in Quito's historic center have been or are being restored. The Quito electric trolley system was built in an attempt to reduce the pollution and vibration that was harming many of the architectural treasures.

The Central Bank has long been a major player in the cultural world. The Central Bank's museums throughout the country showcase the artistic and archeological treasures of Ecuador. Perhaps the premier museum in Quito is the Central Bank museum at the Casa de la Cultura. The museum combines a large collection of pre-Columbian ceramics and gold with a historical review of Ecuadorian sculpture, painting, and furniture. The Guayasamin Foundation in the north part of the city pays homage to the work of Ecuador's best known painter. A major Quito city museum is due to be inaugurated, in the converted 16th century San Juan de Dios Hospital, sometime in 1998.

The Ecuadorian universities have lost much of their prestige over the past 25 years. Some 32 universities are recognized as "official" by the government. The two largest universities, the Central University in Quito and the University of Guayaquil, have launched reform projects, but it will take time for them to recoup the reputation for excellence they enjoyed 40 years ago. Most research takes place at the two technological universities, the ESPOL in Guayaquil and the National Polytechnic School in Quito. The Catholic University of Ecuador in Quito attracts some 200 U.S. students per year to study Spanish, while San Francisco Uni-

versity, founded just 7 years ago, has developed the nation's most impressive university campus in nearby Cumbaya while offering a 4-year liberal arts education similar to U.S. schools.

Ecuador's scientific community is small, however there is much work being done in biodiversity and other environmental areas. Researchers from around the world have come to Ecuador due to one of the richest environments on the globe. The Darwin Research Station in the Galapagos National Park is the center for studies of the islands. It receives funds from the Ecuadorian Government as well as international organizations for its activities. New research stations opened by Catholic University and San Francisco University in the Amazon basin are providing Ecuadorian and foreign scientists with the infrastructure to carry out projects there.

An increase in scientific activity is underway in Ecuador. The National Atomic Energy Commission is doing more extensive research with radioisotopes, particularly in medicine and agriculture. Several experimental agricultural stations are active. The Central University and the National Polytechnic School have research labs. Other research is being conducted in cancer, pharmaceuticals, astronomy, and linguistics fields.

Commerce and Industry

Ecuador is largely an agricultural country and enjoys abundant, relatively unexploited, natural resources. Both the coastal and highland regions are rich agricultural areas. The Sierra (highland) Region largely produces traditional consumption crops, but has excellent potential for export crops including flowers and vegetables. The coastal lowland produces mainly export crops, principally bananas, shrimp, coffee, and cocoa, as well as rice and sugarcane.

The main agricultural commodities accounted for approximately 43% of exports in 1995. Ecuador currently produces about 390,000 barrels per day of crude oil, about two-thirds of which are exported, accounting for 35% of total exports. Most of the oil is produced by state-owned Petroecuador, though foreign investors are conducting some exploration and development activities. Ecuador also appears to have extensive, underdeveloped mining potential, especially for gold. Ecuador's industrial sector produces largely for a domestic market which until recently has been heavily protected. Trade policy has been substantially liberalized in recent years, with current tariffs ranging from 5-20% and few nontariff barriers in place. Manufactured goods accounted for 20% of exports in 1995.

Economic growth in Ecuador has been uneven, influenced by international economic developments and natural disasters which have affected its petroleum and agricultural exports. Following a booming economy in the 1970s, which was driven by high petroleum prices, the 1980s was a decade of stagnation, as the debt crisis, inadequate domestic adjustment, and a volatile international oil market combined to thwart economic growth. Although economic growth has picked up in this decade, employment growth has been limited, and there is widespread agreement on the need for major structural reforms to revive economic growth. The economy grew by a rate of 2% in 1996, with inflation running at 31%. Open unemployment is around 7% and the informal sector employs over 40% of the urban workforce.

The Durán-Ballén government of 1992-1996 took a number of important steps to revitalize and restructure the economy. A major macroeconomics adjustment program was introduced, as were several important structural reform measures, including a budget reform law, liberalized investment regulations, a new capital markets law, hydrocarbons reform, customs

and tax reforms, new agrarian law, and a telecommunications privatization law. The government also reached an agreement with commercial banks on debt restructuring.

Economic reform stalled under the subsequent 6-month government of Abdalá Bucaram (August 1996 - February 1997) which was characterized by increased corruption and decreased investment. The current interim government of Fabian Alarcón (February 1997-August 1998) is faced with a number of challenges including implementing the Durán-Ballén era reforms, privatizing the state-owned telephone company, cutting the inflation rate to international levels and increasing social investment.

Transportation

Automobiles

City streets and principal intercity highways are reasonably well maintained. Many types of vehicles are used in Ecuador, from the smallest four-cylinder cars to the largest and most powerful luxury sedans. Automatic transmissions present no problems, except for replacement parts. Low-slung cars have problems when exploring remote areas. Heavy-duty shocks and suspensions are recommended. High road clearance and maneuverability are essential for this type of travel, and a good range of gears, heavy-duty tires, springs, shock absorbers, and a roll bar are recommended. An oversized radiator is a desirable safety feature. Four-wheel-drive vehicles, while expensive to rent, may be rented locally for recreational use or while waiting for your vehicle to arrive. Bring a new car or one in good condition. People who will not be traveling to remote areas will find a sedan or minivan to be an adequate means of transportation.

Unleaded gasoline is now readily available in Ecuador in two versions. The better quality is the "Super" gasoline which costs the equivalent of \$1.35 per gallon. The lesser expensive "Eco" which costs the equivalent of \$1.20, a low-

octane regular leaded gasoline is also available for \$1.10.

Most city streets are paved, although they are not always in good condition. Smaller towns usually have cobblestone or dirt streets. Travel by automobile can be slow, hard, and dangerous given the high number of unskilled drivers; some roads outside the cities are in poor condition and are very winding with steep drop-offs. The main roads are the north-south Pan American Highway that runs through Quito, the Quito-Guayaquil Road via Santo Domingo, and the Quito-Esmeraldas Road.

Local

Regular intercity bus service is available. Principal cities have numerous city buses. These are inexpensive, costing about \$.05, but they are crowded and often in need of repair. The city of Quito is now served by an electric trolley system running from the southern to the northern areas of the city and vice versa, the cost is about \$.25. Taxis are plentiful and the fares are reasonable. You can hail a taxi on the street or telephone to request one. If the taxi does not have a meter, negotiate the fare before beginning the trip. Taxis are difficult to find on the street, after 10:00 p.m. or when it is raining in Quito, but you can always request a taxi by phone.

Regional

American Airlines, SAETA and Ecuatoriana Airlines offer regular service to Quito and Guayaquil from Miami, with at least one flight daily. Continental provides daily service from Houston via Panama. There are several flights weekly to New York and also direct flights via Mexico or Miami to Los Angeles. Make your reservations well in advance of your trip, since all of these flights are crowded. Most are fully booked weeks in advance.

Mariscal Sucre is Quito's international airport. Ecuador has two international airlines (Ecuatoriana and Saeta) and three domestic airlines (SAETA, SAN, and TAME). Guayaquil is 30-45 minutes by air

from Quito, depending on the aircraft. Scheduled flights are also available to Esmeraldas, Cuenca, Lago Agrio, Coca, Loja, Manta, Machala, Tulcan, Portoviejo, Macas, and the Galapagos. The one-way fare from Quito to any continental Ecuadorian city is between \$40 and \$80.

Currently a round-trip flight from the capital to the Galapagos Islands costs about \$390 for persons who are not permanent residents of Ecuador.

Communications

Telephone and Telegraph

The per minute rate for calls to the U.S. is currently approximately \$1.10. You may want to research companies and rates for current programs and services before arrival in Ecuador. Companies such as AT&T, Sprint, and MCI all offer service in Ecuador. There is no time period with reduced rates. Most phones are touch tone and direct dial to the U.S. is readily available. Calls placed from the U.S. to Ecuador are considerably less expensive than those placed from Ecuador. Cellular phones have also become very popular within the country and sometimes are more reliable than the regular phone system. Phones purchased in the United States may not be able to be programmed for use within Ecuador, or it may cost up to U.S. \$100.00 to program them. The price of cellular telephones and service is slightly higher than in the U.S.; you will need to check with the local companies for pricing and service information.

Mail

International airmail is expensive and not very dependable. Packages arriving by international parcel post and unaccompanied air-freight will be inspected and charged a duty.

Radio and TV

Quito has a wide range of AM radio stations presenting primarily Latin American and American popular music. Good FM radio stations oper-

ate here with most broadcasting in stereo. The FM service of HCJB, a missionary-run broadcasting organization, features light classical music and offers nightly news broadcasts in English. Short-wave reception is usually good. Both Voice of America and BBC can be received clearly. HAM radio operators should bring their own equipment, since the Ecuadorian Government issues licenses to those with a valid American license.

Quito and Guayaquil are served by a cable TV service that provides 50 channels, about one-fourth in English from the U.S. These vary as stations are added and dropped, but generally the three networks (ABC, NBC, CBS), Discovery, Fox, Warner Brothers, CNN, ESPN and a few rerun stations are available.

The cost for full service is about \$35 monthly. Local stations broadcast in Spanish and include shows from all over Latin America, dubbed versions of many U.S. series and a variety of motion pictures.

Newspapers, Magazines, and Technical Journals

Quito has two independent morning newspapers, *El Comercio* and *Hoy*, and two afternoon papers, *Ultimas Noticias* and *La Hora*. Newspapers from Guayaquil, such as *El Universo* and *El Telegrafo*, are also sold in Quito. Newspapers are sold on the streets and in neighborhood stores and can be delivered to the home.

The Latin American edition of the *Miami Herald* is printed daily in Quito, using a direct satellite link and is currently available by subscription for around \$400 per year.

The Latin American editions of *Time* and *Newsweek* magazines are available weekly at about \$2.25 per copy and \$75.00 per year by subscription. Other popular magazines from the U.S., France, Spain, and Germany are also available. The BiNational Centers in Guayaquil and Cuenca subscribe to numerous English-language periodicals and have libraries with fiction and non-

fiction English-language books. The Damas Norteamericanas y Britanicas' Club operates a small rental library. AERA has a circulating library of bestsellers in fiction and non-fiction which is renewed regularly from the U.S., the cost of membership is \$15 per year. Major hotels carry some paperback books. Several bookstores have limited stocks of books in English, but they are expensive.

Recordings of U.S. and European popular music are increasingly available. Those produced under license in Ecuador are relatively inexpensive (about \$5), but imported recordings are costly. Selections of classical music are limited; recordings of Ecuadorian and Latin American popular and folk music are abundant, inexpensive, and of relatively good quality.

There are several video clubs, including the U.S. chain "Blockbusters," offering a wide variety of VHS tapes comparable to what would be found in the U.S. New movies take a significantly longer time to become available here than in the U.S.

Health and Medicine

Medical Facilities

There are several good hospitals for medical care and hospitalization. Many Ecuadorian physicians and dentists are trained in the U.S. or Europe and hospitals meet American standards. Though the local physicians and facilities are good, there are occasions that individuals are evacuated to Miami, Florida for medical treatment.

Quito has good dentists and orthodontists. Hygiene and quality of work is similar to the United States. Major dental problems such as root canal and crowns can be adequately accommodated here. Eye examinations and glasses are readily available in Quito. Contact lenses can also be fitted, though at a higher cost than in the U.S. German and American contact solutions are available on the local market, but

are also at a higher cost. It would be best to bring your own supplies if you prefer a specific brand. Contact lenses can be difficult to use due to the altitude and dryness of the climate. Bring a pair of prescription glasses as a backup. Most people find that the altitude and ultra-violet sun rays make sunglasses necessary. The sunlight is bright and sunglasses reduce the eye glare. Good dark sunglasses are difficult to find in Quito, bring a couple of pairs.

The local market does carry most of the medications available in the United States, but the availability at local pharmacies vary from month to month.

Local medical facilities are less adequate than Quito. Well trained physicians are available for consultation. The Clinica Kennedy is a small private hospital. Dental facilities are limited.

Due to the high humidity and temperature in Guayaquil, bring insect repellent and insecticides. Due to the risk of contracting malaria, insect repellent should be used when outside in the evenings. Insects are a problem in the homes, and U.S. brand insecticides (or bug sprays) are more effective in controlling their numbers. Antiseptic and antibiotic ointments are useful in prevention of bacterial skin infections.

Community Health

Quito and Guayaquil have central sewage systems, and garbage is collected regularly in most neighborhoods. However, sanitation facilities and public health controls are well below U.S. standards. Since the water system is subject to leaks and corrosion in the pipes, tap water is not safe.

Tap water should be boiled for 20 minutes.

The altitude can be a problem in Quito. During the first couple of days, most people experience some minor discomforts associated with the altitude. These symptoms

include shortness of breath, upset stomach, headaches, difficulty sleeping (including sleeping more than normal), dizziness, and loss of energy. After a period of adjustment, most individuals have no difficulty with the altitude. Colds and respiratory infections do require a longer convalescent period than at sea level.

Because of the thinness of the air and closer proximity to the sun, the equatorial sun is very intense. Skin irritation and sunburn can occur with short exposure to the sun. Use tanning products and sunscreens when outdoors. Bring a supply of sunblock with an SPF level of at least 8 but preferably higher. A wide assortment of brimmed hats can be bought locally, including the "Panama" hats (which are actually made in Ecuador).

Preventive Measures

Numerous diseases are endemic to Ecuador including cholera and rabies. Among the most common problems within the American community are intestinal parasites, hepatitis, viral infections and colds. Malaria is a problem below 5,000 feet (1,500 meters) in all areas of Ecuador, with the exception of the Galapagos Islands. Antimalarial medication should be taken by all persons living in or traveling to malaria areas including Guayaquil. Chloroquine-resistant malaria has been reported in parts of Ecuador, but neither Quito or Guayaquil are in these areas.

Vaccinations are a strong line of defense against diseases and illnesses while living in Ecuador. Yellow Fever injections are strongly recommended for Ecuador. Oral typhoid vaccine is another highly recommended vaccination for Ecuador. Hepatitis A vaccine is strongly recommended. Routine childhood immunization should be maintained including Hepatitis A and B, DPT, polio, MMR, and HIB. Tuberculosis is endemic in the country. It is advisable that immunization cards (the yellow shot cards) be reviewed in the United States before departing.

Soak fruits and vegetables in chlorine (Clorox) water for 20 minutes before being eaten raw. Wash fruits and vegetables with soap and water to remove dirt and pesticides before cooking.

Local milk is not considered to be pasteurized adequately for consumption without further boiling. Long-life milk and powdered milk can be purchased locally or in the commissary. Cheese and ice cream are processed adequately for consumption. All meat, including beef and pork, should be well done to prevent intestinal parasites. Do not eat mayonnaise based food because of risks of food poisoning. Food bought at the local supermarkets is safe and usually of good quality.

Have pre-employment medical examinations for domestic household staff members, especially if they will be cooking or caring for children. Establish strict standards for food handling and storage with your household staff.

NOTES FOR TRAVELERS

American Airlines has daily direct flights to Quito and Guayaquil from Miami. Some flights are non-stop and others may stop en route in Panama or Bogota. Continental Airlines has daily flights from Houston and New Jersey. SAETA and Ecuatoriana also arrive daily from Miami. Bookings on all airlines should be made well in advance of travel.

Immigration officials keep the international arrival card on file and return a carbon copy with the traveler's passport. Since you will have to surrender this copy upon leaving Ecuador, staple it to the last page of your passport. If you lose it, you may face a delay of 24 hours or more in obtaining a duplicate.

A valid U.S. passport is required to enter and depart Ecuador. Tourists must also provide evidence of return

or onward travel. U.S. citizens do not need a visa for a stay of 90 days or less. Those planning a longer visit must obtain a visa in advance. U.S. citizens whose passports are lost or stolen in Ecuador must obtain a new passport at the U.S. Embassy in Quito or the U.S. Consulate General in Guayaquil and present it, together with a police report of the loss or theft, to the main immigration office in the capital city of Quito to obtain permission to depart. An exit tax must be paid at the airport when departing Ecuador. For further information regarding entry, exit, and customs requirements, travelers should contact the Ecuadorian Embassy at 2535 15th Street, NW, Washington, DC 20009; telephone (202) 234-7166; Internet - <http://www.ecuador.org>; or the Ecuadorian consulate in Chicago (312) 329-0266, Houston (713) 622-1787, Jersey City (201) 985-1700, Los Angeles (323) 658-6020, Miami (305) 539-8214, New Orleans (504) 523-3229, New York (212) 808-0170, or San Francisco (415) 957-5921.

U.S. citizens living in or visiting Ecuador are encouraged to register at the Consular Section of either the U.S. Embassy in Quito or the U.S. Consulate General in Guayaquil and obtain updated information on travel and security in Ecuador. The Consular Section in Quito is open for citizen services, including registration, from 8:00 a.m. to 12:30 p.m. and 1:30 to 4:00 p.m., Tuesday through Friday, excluding U.S. and Ecuadorian holidays. The Consular Section in Guayaquil is open for those services from 8:00 a.m. to 12:00 noon, Tuesday through Friday, excluding U.S. and Ecuadorian holidays. The U.S. Embassy in Quito is located at the corner of Avenida 12 de Octubre and Avenida Patria (across from the Casa de la Cultura); telephone (011-593-2) 256-2890, extension 4510, during business hours (8:00 a.m. to 5:00 p.m.) or 256-1749 for after-hours emergencies; fax (011-593-2) 256-1524; Internet web site - <http://www.usembassy.org.ec>. The Consulate General in Guayaquil is located at the corner of 9 de Octubre and

Garcia Moreno (near the Hotel Oro Verde); telephone (011-593-4) 232-3570 during business hours (8:00 a.m. to 5:00 p.m.) or 232-1152 for after-hours emergencies; fax (011-593-4) 232-0904. Consular services for U.S. citizens in the Galapagos Islands are provided by the Consulate General in Guayaquil.

Pets

Pets are generally well accepted in Ecuador and relatively easy to bring into the country. Dogs and cats should have an up-to-date health certificate certified by your veterinarian. The certificate should include name of pet, age, sex, breed, color, and an up-to-date certification of rabies vaccination. You should carry these papers with you and make at least one copy to put in the animal's cage. Please note that pets greatly limit the choices for temporary quarters upon arrival, since many of the better hotels do not allow pets.

Firearms and Ammunition

The Government of Ecuador currently imposes the following size restrictions on the importation of personal firearms:

Handguns cannot exceed 9 mm; Rifles, limited to .22 to .30 caliber; Shotguns, 10, 12, 16, 20, 28, and 410 caliber.

Private weapons will only be used for recreational purposes, such as hunting and target shooting, and not for personal protection.

All are required by Ecuadorian law to register firearms. Upon registration, individuals will receive a weapons permit issued by the Ministry of Defense. This permit entitles them to possess and carry the weapon.

Carrying firearms about the city is dangerous, provocative and, generally, ineffective for protection. U.S. citizens abroad bearing or using weapons can lead to legal and diplomatic problems.

Possession and use of any firearm must be in compliance with Ecu-

dorian policy. Persons who maintain weapons in their homes are urged to be cautious in the use of such weapons. All weapons should be stored in a manner to preclude accidental discharge by children or domestic employees.

Currency, Banking, and Weights and Measures

The Ecuadorian unit of currency is the Sucre, designated "S/." and issued in bills of 5,000, 10,000, 20,000, and 50,000. Coins are minted in denominations of 50, 100, 500 and 1,000 Sucres. After several years of relative stability on the exchange market, the Sucre has deteriorated in value against the U.S. dollar from S/120\$1 in 1981 to S/11,143-\$1 in August 1999.

The metric system is used for both weights and measures, although food is often measured in "libras" (pounds). The ounce and the yard may be used in commerce. In hardware stores, gauges of pipes and fittings are often listed in U.S. measurements, as well as metric.

Taxes, Exchange, and Sale of Property

Ecuador has a direct sales tax (LVA.) of 10% which is collected on sales of goods and services, except for food items. A 10% service charge (tip) is included on most restaurant bills, along with the direct sales tax of 10%. It is not necessary to tip further, although an extra 5% is always appreciated when service has been excellent. An airport tax of U.S. \$25.00 is charged to all persons leaving Ecuador. A tax of 10% is charged on the purchase of airline tickets when travel originates in Ecuador.

There are no currency controls in Ecuador and the Sucre is traded freely at any of a number of banks and exchange houses. Some find local Sucre accounts useful. Citibank maintains an exchange service in the Chancery, and you may cash personal checks, purchase Sucres or Sucre checks, and buy travelers' checks. Mastercard, Visa, American Express, and Diner's Club

credit cards are honored in most shops and restaurants.

Disaster Preparedness Volcanos

Beginning in September 1998, the Guagua Pichincha Volcano, located just west of Quito, has exhibited a significant increase in the number of tremors and an accompanying rise in magma level. Since October 1999, there has been an intermittent series of explosions. Volcanic ash has fallen on Quito during some of the explosions, causing temporary closings of area schools and the airport. In the event of a full-scale eruption, geological experts conclude that the city of Quito is protected from possible lava flows, avalanches, and lateral explosions by the bulk of Pichincha Mountain, which stands between the city and the volcano crater. Parts of Quito could be affected by secondary mudflows caused by heavy rains that usually accompany an eruption. The entire city could also be affected by slight to significant ash falls and resulting disruptions of water, power, communications, and transportation.

The town of Banos, a popular tourist destination located approximately 80 miles south of Quito, was evacuated in November 1999 because of the increased activity of the adjacent Tungurahua Volcano. The volcano has been ejecting significant amounts of ash and incandescent rocks. Geological experts advise that an explosive eruption could occur quickly and with little warning. The resulting pyroclastic flows would pose a significant and immediate threat to Banos and several small villages in the vicinity. Travelers are advised not to travel to Banos or the surrounding area.

The Quito City Government and the Ecuadorian Geophysical Institute continue to monitor these volcanoes and issue regular reports on their activity. Travelers are advised to pay close attention to the news media in Quito for updates on the situation. Besides Guagua Pichincha and Tungurahua, other volcanoes in Ecuador may, from time to

time, also exhibit increased activity. Further information about these and other volcanoes in the Western Hemisphere is available from the National Oceanic and Atmospheric Administration via the Internet at <http://www.ssd.noaa.gov/VAAC/guag.html>.

San Salvador, El Salvador

EL SALVADOR

Republic of El Salvador

Major City:

San Salvador

Other Cities:

Acajutla, Ahuachapán, Cojutepeque, La Libertad, La Unión, Nueva San Salvador, San Miguel, San Vicente, Santa Ana, Sonsonate, Zacatecoluca

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated March 1992. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

EL SALVADOR, the smallest of the Central American republics, shares with its neighbors a history marked by frequent uprisings and unremitting political discontent. Years of power struggles, and their resultant abuses of human rights, created such international concern and pressure in the late 1970s that a provisional government was accepted to initiate political and economic reforms. Under a new constitution, formulated in 1983, support of democratic premises and policies was established. In January 1992, a peace accord was signed between the Salvadoran government and the Farabundo Martí National Liberation Front (FMLN). The pact ended

a 12-year civil war between the two parties.

What is now El Salvador was once two large Indian states and several principalities whose inhabitants were Pipils, a nomadic Nahua tribe similar to the Aztecs. The area was claimed for Spain in 1525 by Pedro de Alvarado, and remained a Spanish colony until 1821 under the captaincy general of Guatemala. In 1823, it became one of the five states of the Federal Republic of Central America and, when this federation was dissolved 15 years later, El Salvador began its existence as an independent republic.

MAJOR CITY

San Salvador

San Salvador, the capital and principal city of the Republic of El Salvador, is located in the "Valley of the Hammocks" at the foot of San Salvador volcano (6,398 feet high), about 19 miles from the Pacific Ocean. It is built on the volcanic belt which parallels the coast and, over the centuries, the city has suffered from such recurrent and severe earthquakes that it has had to be rebuilt frequently. Public buildings are constructed to resist shock, but

an earthquake (measuring 7.5 on the Richter scale) rocked San Salvador October 10, 1986, killing 1400, injuring approximately 21,000, and heavily damaging the downtown area and the San Jacinto residential neighborhood. Two hundred aftershocks wrought additional destruction, and a state of emergency was declared. Among the buildings hit were all but one of the city's hospitals, and the U.S. Embassy on Avenida Norte.

The climate here is semitropical with distinct rainy and dry seasons, but no extreme seasonal temperature variations occur.

San Salvador is the economic, political, and cultural center of the country. It is an old city, established in 1524, and has been the country's capital since 1841, except for a three-year period in the mid-19th century. It is the site of a national university, founded almost 150 years ago.

The metropolitan population of San Salvador is 1.5 million, and includes the cities of Soyapango, San Marcos, and Santa Tecla. While primarily Latin American in culture, many U.S. and Mexican influences are also apparent. Living standards of the Salvadorans belonging to the higher socioeconomic classes (and most foreigners) are comparable to

those of the same strata in the U.S., although the standard is achieved at a greater cost. The city has modern, comfortable, fast-growing residential suburbs, several up-to-date shopping centers and supermarkets, and a less modern downtown area.

San Salvador hosts a large foreign colony, including about 3,000 U.S. citizens. Each year more North American tourists "discover" the country. Other principal groups in the city are Germans, Japanese, British, and other Latin Americans. The better educated Salvadoran frequently speaks English; however, local businessmen and officials often prefer to conduct business in Spanish. Almost no English is spoken in the open markets and other food markets in the city.

Education

The local educational system consists largely of private schools; the Spanish curriculum prepares students for entrance into Salvadoran universities. Few American children attend these schools.

School-aged dependents of Americans usually enroll at the American School (Escuela Americana). The institution is not U.S. Government-operated, but receives government support from grants and loans. It is a private, coeducational day school founded in 1946.

Located on a spacious 29-acre campus near San Salvador, Escuela Americana consists of 18 buildings, two cafeterias, three playing fields, four science labs, three computer labs, and two libraries with a total of 35,000 volumes.

Escuela Americana, in session from mid-August to late-June with a month-long recess over the Christmas holidays, maintains six subdivisions from preschool to high school levels. The preschool is for ages four to six; elementary school from grades one through five; junior high, grades six through eight; and the American high school, grades nine through 12.

Escuela Americana not only provides an American education at the elementary and secondary levels, but also serves to demonstrate American educational methods and practices. The schools are headed by an American principal and staffed by American and Salvadoran teachers.

The American high school is accredited by the Southern Association of Colleges and Schools, and follows a U.S. grading system. The high school curriculum is basically college preparatory. All students, grades one through 12, must study Spanish as a second language. Students also attend some classes that are taught in Spanish. Special efforts are made to help children who enroll without foreign-language capabilities.

The school has a small but active athletic program. Soccer—the national sport—is played instead of American football. The school has no swimming pool. Basketball and volleyball are also played at Escuela Americana.

Special educational facilities in El Salvador are limited. Americans rarely attend local universities. Some local teachers offer private lessons in painting, crafts, ballet, and music.

Recreation

Soccer is the most popular spectator sport among Salvadorans, and is played nearly every Wednesday and Sunday in the capital's stadium. Basketball, baseball, and softball also are major attractions, and the usual participant sports—swimming, golf, tennis, squash, fishing, hunting, and boating—are available.

Several interesting scenic and recreational areas are located within El Salvador, but few have attractive overnight accommodations. Public parks in various parts of the country have picnic and swimming facilities, but these are overcrowded on Sundays and holidays.

The most frequently visited places are Ilopango, a large crater lake about 10 miles east of San Salvador, which has both public and private recreational facilities; Coatepeque, a similar lake about 40 miles to the west; and Cerro Verde, a mountain-top park with a spectacular view of the volcano Izalco and surrounding countryside. All are accessible for a day's outing. A government-operated hotel at Cerro Verde opened in 1975.

The beaches near La Libertad, about 23 miles west of San Salvador on the Pacific, are popular, but also can be treacherous because of the strong undertow, unpredictable currents, and the possibilities of sharks close to the shore. Few public facilities are available on these beaches. Some of the beaches have black volcanic sand; some have white sand.

Excellent saltwater fishing is found in a large estuary about 30 miles from San Salvador. Since rented boats are unavailable, most fishing is done on invitation by friends who own boats. A fishing license is not required. Dove and duck are plentiful anytime, with no hunting season or legal limitations. Firearms permits and hunting licenses are required by law.

The National Archaeological Museum has a collection of artifacts recovered from pre-Columbian times. An Indian pyramid at El Tazumal is located not far from the city of Santa Ana, another is near San Andrés where digs have taken place. The most prestigious recent archeological find is Joya de Ceren, an entire city preserved in volcanic ash. The site is still under investigation.

Guatemala City, four to five hours away by car, is the largest capital in Central America. The volcanic highlands region is strikingly beautiful and offers several spots with good, moderately priced hotel accommodations. The country's unchanged Indian culture is fascinating. Ruins from the ancient Mayan civilizations can be seen in El Salvador,

Honduras (Copán), and Guatemala (Tikal). Many are accessible by car.

Entertainment

Entertainment facilities in San Salvador are limited to several comfortable cinemas that show American and European films (with Spanish subtitles), in addition to Latin American films and to an interesting and growing schedule of concerts. The Cine Presidente, a large national theater in the Colonia Benito area of the capital, is popular for both movies and concerts. The larger hotels, with dinner clubs and discotheques, are becoming popular. San Salvador has many good restaurants.

The American Society, open to all Americans in San Salvador, organizes luncheons, a Fourth of July picnic, and several other functions during the year. The American Women's Association has been active in various charitable activities; all English-speaking women in the city are eligible for membership.

OTHER CITIES

ACAJUTLA, with a population over 16,000, is situated near the Pacific coast, about 50 miles west of San Salvador. In 1524, the Spanish conquered the Indians and the city became a colonial port. As the country's major port, Acajutla exports coffee, balsam, and sugar. During summer, the city is a beach resort.

AHUACHAPÁN, in western El Salvador, is the capital of the department of the same name. It lies at the foot of La Lagunita volcano on the Río Molino. Its most important product is coffee. There are mineral baths here, drawn from hot springs located below the nearby Malacatiupan Falls. Ahuachapán has an estimated population of 20,000.

COJUTEPEQUE, a city of about 20,600 residents, is 22 miles east of the capital, near Lake Ilopango. It is a trading center; its market products include rice, sugarcane, cotton,

and coffee. Known in El Salvador for its cigars and smoked meats, Cojutepeque's landmarks include a Palladian-style church. A large festival is held here every August 29 in honor of St. John.

LA LIBERTAD, located on the Pacific Ocean, is 20 miles south of San Salvador. It is the chief seaport and port of entry for the capital city. La Libertad exports coffee and sugar, and is also a beach resort. Agriculture and fishing are primary economic activities. The population is about 16,000.

LA UNIÓN is approximately 100 miles east of San Salvador on the Gulf of Fonseca, an inlet of the Pacific Ocean. It is situated at the foot of the Conchagua volcano. With a population close to 57,000, La Unión is one of the country's major seaports, exporting cotton and livestock, as well as most of the foreign trade products. The city is situated at the southern terminus of a railroad system and is on the Inter-American Highway. La Unión was the scene of severe fighting during the civil war.

NUEVA SAN SALVADOR (formerly called Santa Telca) is located in west-central El Salvador, eight miles west of the capital. It was founded in 1854 after San Salvador was destroyed by an earthquake. When the capital was rebuilt, what is now Nueva San Salvador became a wealthy suburb. It is also in the midst of a coffee-growing region. The beach resort, Los Chorros, is nearby. The Salvadoran Institute for Coffee Research is in the city. The estimated population is 120,000.

SAN MIGUEL, a commercial center, is situated about 65 miles east of San Salvador, at the foot of San Miguel volcano (6,057 feet). Founded in 1530, and with a population of more than 182,000, San Miguel produces vegetable oil, leather goods, textiles, rope, tobacco products, pottery, and flour, and has textile and dairy industries. The town's industries suffered disruptions during the early 1980s

because of fighting between government troops and leftist guerrillas.

Located in a region of geysers and thermal springs, **SAN VICENTE** is at the foot of San Vicente volcano (7,155 feet). It is in central El Salvador, approximately 25 miles east of the capital. Originally the ancient Indian village of Tehuacán, the city was founded in 1635. It served as the capital (1834–39) and housed the national university (1854–59). Industries include textile manufacturing and sugar refining. San Vicente's population is over 20,000.

SANTA ANA is the second largest city in El Salvador and an important commercial and industrial center. Located in the northwestern part of the country, 50 miles from San Salvador, the city is also near the Santa Ana volcano which, at 7,828 feet, is the highest in the country. Santa Ana is the commercial and processing center for a region that raises sugarcane, coffee, and cattle. It also produces textiles, leather and wood products, cigars, and pottery. Industries include distilling and food processing. Historic landmarks include the Spanish Gothic cathedral and El Calvario colonial church. The population is approximately 213,000.

SONSONATE, about 40 miles west of San Salvador, is the commercial center of one of the richest agricultural regions in the country. Coffee, sugar, tobacco, and dairy products are produced here. Sonsonate, with a population of roughly 60,000, has two beautiful churches and is surrounded by parks and resorts located near the Izalco volcano. Colorful fiestas may be seen in the neighboring village of Asunción Izalco.

ZACATECOLUCA, in south-central El Salvador, is about 25 miles south of the capital. The city lies at the foot of the San Vicente volcano and has a population of around 26,000. Markets in Zacatecoluca include those for lumber, cement, salt, cotton goods, and baskets. The city was severely damaged by an earthquake in 1932. José Simeón

Cañas, who successfully fought to end slavery in Central America, was born here.

COUNTRY PROFILE

Geography and Climate

Most of El Salvador is situated on a plateau (about 2,000 feet above sea level) on the Pacific slope of the Central American Cordillera. With an area of 8,260 square miles, it is the smallest independent mainland state in the Western Hemisphere. Roughly rectangular in shape, it is bordered on the west by Guatemala, on the north and east by Honduras, on the southeast by the Gulf of Fonseca (which separates El Salvador from Nicaragua), and on the south by the Pacific Ocean.

Mountain ranges running from east to west divide El Salvador into three distinct regions: a hot, narrow Pacific coastal belt on the south; a subtropical central region of valleys and plateaus, where most of the population lives; and a mountainous northern region. Ninety percent of the land is of volcanic origin and many places still bear volcanic scars. Almost all of the arable land is cultivated.

El Salvador's climate is modified by its elevation and, except for the hot, narrow coastal region, is semitropical. The capital city of San Salvador, 19 miles from the Pacific, has a pleasant climate. Daily temperatures here average 73°F and range from 50°F to 90°F. Cool evenings moderate the sometimes uncomfortably hot afternoon peak hours. The country has distinct dry and wet seasons. The dry season (December to April) is dusty, particularly in the country. The hottest time of the year (March and April) precedes the rainy interval. During the wet season (May to November), the rain is not continuous, but usually falls in early evening, and is sometimes accompanied by thunder and strong

winds. Rain patterns change during the season, and some June and September mornings are overcast. Occasional two- or three-day rainy spells occur. Mildew and insects can become problems during this season. Annual rainfall in San Salvador averages 66 inches.

Earthquakes and volcanic eruptions have been hazards in the past, and tremors occur periodically. Most tremors are felt during seasonal changes. A major earthquake in October 1986 caused damage to some sections of San Salvador and to other areas of the country. Hurricanes do not threaten El Salvador directly, but a strong Caribbean storm can generate heavy, damaging winds and rains as in 1974 with Hurricane Fifi.

Population

El Salvador is Central America's second most densely populated country, with an estimated 292 inhabitants per square mile. The population figure for 2000 was 5.9 million, of which roughly half was rural. The estimated annual growth rate is 1.85%. Because of unsettled conditions, many Salvadorans now live in neighboring countries and in the United States.

El Salvador's population is remarkably homogeneous with no significant minority. It comprises 90% *mestizo*, 9% Caucasian, and 1% Amerindian. The indigenous Indian population has been thoroughly assimilated, and only two or three Indian communities with native customs, dress, or dialects survive. Spanish is the national language and Roman Catholicism the predominant religion. Food varies from typically Latin to typically American. Clothing, houses, shopping facilities, and amusements in San Salvador resemble those in the U.S., but the atmosphere is distinctly Latin American.

Government

El Salvador is a democratic republic governed by a president and an 84-

member unicameral Legislative Assembly. The president is elected by universal suffrage and serves for a 5-year term by absolute majority vote. A second round runoff is required in the event that no candidate receives more than 50% of the first round vote. Members of the assembly, also elected by universal suffrage, serve for 3-year terms. The country has an independent judiciary and Supreme Court.

The most recent presidential election, in March 1999, was free and fair, but voter turnout was low (39%). ARENA presidential candidate Francisco Guillermo Flores Perez faced Facundo Guardado of the FMLN party and won with 52% of the votes. Since Flores received just over 50% of the votes, a runoff was not required. Francisco Guillermo Flores Perez of the ARENA party began his 5-year term as president in June 1999, and cannot succeed himself. In the March 2000 legislative races, FMLN won 31 seats in the Legislative Assembly, the ARENA won 29, the National Conciliation Party (PCN) 14, the PDC five, and the Coalition Democratic United Center (CDU) and National Action Party (PAN) won 3 and 2 seats, respectively.

As of March 2002, defections and realignments in the Assembly left ARENA with 29 seats, the FMLN with 26, the PCN, 15, and the FMLN-splinter "Renewal Movement (MR)" 5. The governing ARENA party retains a working majority (43) with its PCN allies. The defection of five FMLN dissidents (MR) also stripped the FMLN of its ability to block qualified (two-thirds) majorities required for major legislation, including approval of international loans and confirmation of supreme court justices. The FMLN retains the capital city of San Salvador, where Hector Silva was re-elected overwhelmingly in 2000. Low voter turnout (35% in 2000) remains a concern.

In accordance with 1992 peace agreements, the constitution was amended to prohibit the military from playing an internal security

role except under extraordinary circumstances. Demobilization of Salvadoran military forces generally proceeded on schedule throughout the process. The Treasury Police, National Guard, and National Police were abolished, and military intelligence functions were transferred to civilian control. By 1993--9 months ahead of schedule--the military had cut personnel from a wartime high of 63,000 to the level of 32,000 required by the peace accords. By 1999, ESAF strength stood at less than 15,000, including uniformed and non-uniformed personnel, consisting of personnel in the army, navy, and air force. A purge of military officers accused of human rights abuses and corruption was completed in 1993 in compliance with the Ad Hoc Commission's recommendations. The military's new doctrine, professionalism, and complete withdrawal from political and economic affairs leave it the most respected institution in El Salvador.

The Red Cross, Caritas, the Green Cross, and other privately supported refugee relief organizations are active. Additional organizations, such as professional and university student associations and chambers of commerce, also have active programs in the country.

El Salvador is a member of the United Nations, World Health Organization (WHO), and United Nations Educational, Scientific, and Cultural Organization (UNESCO), as well as the following international bodies: Inter-American Development Bank, International Wheat Council, Organization of American States (OAS), Central American Common Market, International Coffee Organization, and the Latin American Economic System.

The Salvadoran flag consists of three horizontal bands in light blue, white, and light blue, with a coat of arms on the white band.

Arts, Science, Education

In addition to overseeing the school system of El Salvador, the Ministry of Education maintains a Directorate General of Fine Arts, with schools of arts, music, and dance. It also sponsors the National Symphony Orchestra, the National Chorus, and National Theaters in San Salvador and Santa Ana.

The Ministry of Education maintains a national archaeological museum and sponsors several excavations of archaeological and anthropological interest. El Tazumal, located near the town of Chalchuapa in western El Salvador, is the major locale of pre-Columbian civilization in El Salvador. The site is open to visitors and includes a small museum. In San Salvador, the ministry sponsors a recently refurbished and expanded natural history museum and exhibit hall, with exhibits by local artists. Parks, recreational areas, and a zoo complete the city's leisure facilities.

The National Symphony Orchestra and the National Chorus give several concerts a year. The annual ballet season offers opportunities for students and professionals to perform. Several private art galleries exhibit the work of Salvadoran

artists, and semiprofessional theater groups offer several plays a year. The Salvadoran Institute of Tourism (ISTU) also sponsors cultural events which include folkloric productions and music and dance festivals, often held outside the capital, as well as annual crafts festivals in Panchimalco and Nahuizalco.

The Salvadoran Cultural Center in San Salvador has a modest library of Spanish and English books. Classes in English and elementary Spanish are offered, and frequent art exhibits and concerts are sponsored here.

Many classes have resumed at El Salvador's National University, which was closed in 1980 because of political unrest. Numerous private universities have arisen with the encouragement and support of the Ministry of Education. The second-largest and oldest of these private institutions is the Jesuit-administered Universidad Centroamericana José Simeón Cañas; it offers courses in engineering, economics, administration, and the humanities. The university library has over 40,000 volumes and has embarked on an expansion program financed by the Inter-American Development Bank. Albert Einstein University, founded in 1976, offers courses in

engineering and architecture to some 8,500 students. Universidad José Matias Delgado, with over 9,000 students, has courses in law, economics, and communications, and a recently established School for Agricultural Investigation in Santa Ana. The American School in San Salvador offers a two-year program in English. In 1995, an estimated 70% of Salvadorans could read and write.

Commerce and Industry

The Salvadoran economy continues to benefit from a commitment to free markets and careful fiscal management. The impact of the civil war on El Salvador's economy was devastating; from 1979-90, losses from damage to infrastructure and means of production due to guerrilla sabotage as well as from reduced export earnings totaled about \$2.2 billion. But since attacks on economic targets ended in 1992, improved investor confidence has led to increased private investment.

Rich soil, moderate climate, and a hard-working and enterprising labor pool comprise El Salvador's greatest assets. Much of the improvement in El Salvador's economy is due to free market policy initiatives carried out by the Cristiani and Calderon Sol governments, including the privatization of the banking system, telecommunications, public pensions, electrical distribution and some electrical generation, reduction of import duties, elimination of price controls on virtually all consumer products, and enhancing the investment climate through measures such as improved enforcement of intellectual property rights.

Natural disasters continue to plague the Salvadoran economy. The damage caused by Hurricane Mitch to infrastructure and to agricultural production reduced 1998 growth by an estimated 5%. Because of the earthquakes that struck the country in January and

February, the economy grew less than 2% in 2001.

Fiscal policy has been the biggest challenge for the Salvadoran Government. The 1992 peace accords committed the government to heavy expenditures for transition programs and social services. Although international aid was generous, the government has focused on improving the collection of its current revenues. A 10% value-added tax, implemented in September 1992, was raised to 13% in July 1995. The VAT is estimated to have contributed 51% of total tax revenues in 1999, due mainly to improved collection techniques.

Large inflows of dollars in the form of family remittances from Salvadorans working in the United States offset a substantial trade deficit and support the exchange rate. The monthly average of remittances reported by the Central Bank is around \$150 million, with the total estimated at more than \$1.9 billion for 2001. As of December 1999, net international reserves equaled \$1.8 billion or roughly 5 months of imports. Having this hard currency buffer to work with, the Salvadoran Government undertook a "monetary integration plan" beginning January 1, 2001, by which the dollar became legal tender alongside the colón. No more colones are to be printed, the economy is expected to be, in practice, fully dollarized, and the Central Reserve Bank dissolved, by late 2003. The FMLN is strongly opposed to the plan, regarding it as unconstitutional, and plans to make it an issue in the 2003 legislative elections.

Transportation

The usual mode of travel to El Salvador is by air. Ilopango International Airport is equipped for jet planes. Service is provided to the U.S. and Central American countries by TACA (Transportes Aéreos Centro Americanos), LACSA (Líneas Aéreas Costarricenses), COPA (Compañía Panameña de Aviación), Belize Airways, and

SAHSA (Servicio Aéreo de Honduras Sociedad Anonima).

Of the two main seaports in El Salvador, Acajutla is most important because of its all-weather dock facilities. Another port is Cutuco in La Unión. The Atlantic port generally used for surface freight shipments originating on the U.S. coast is Santo Tomás de Castilla, Guatemala, where cargo is loaded directly onto trucks bound for the Salvador customs warehouse.

Frequent bus service is available to all parts of the country, but is seldom used by Americans. In the cities, taxis are commonly used; they do not have meters, but operate on zone charges.

El Salvador's main roads are generally good, and most are paved. Back roads are often difficult and rough on both the passenger and the vehicle. Two principal branches of the Pan-American Highway pass through El Salvador—one crossing along the Pacific, the other at a more northerly point. Narrow roads, poor driving habits, livestock and pedestrians on the roads at night, and badly placed traffic signs constitute driving hazards.

The most practical mode of travel is by private car. Road transportation and a lack of recreational facilities within city areas make a car most desirable. An air-conditioned car, while not essential, makes traveling more enjoyable, especially because of the pollution from diesel vehicles. Driving is on the right.

Nearly all European and Japanese automobile manufacturers are represented in San Salvador. U.S. manufacturers are not well-represented and, for the most part, do not maintain spare parts in stock.

Communications

Telephone and telegraph service is available throughout El Salvador, with direct dialing to most of North America, South America, and Europe. International airmail is

dependable; the rates are high for parcel post.

El Salvador's 75 commercial radio stations generally operate from 6 a.m. to 11 p.m. Several FM stations, including one which presents classical music, broadcast in stereo. A guerrilla group operates its own station. Over 90% of the homes have radios. Shortwave reception is good for Voice of America (VOA) and Armed Forces Radio broadcasts. VOA also broadcasts a daily program in Spanish (Buenos Días America) on medium-wave (Radio Centroamericana).

El Salvador has four commercial television channels that transmit in color. Standard U.S. color receivers are used. All channels transmit at least 16 hours per day. Government-owned channels 8 and 10 are used for educational and informational purposes. Salvadoran TV presents many U.S. programs with Spanish soundtracks. TV sets are costly here. Video recorders are widely used, and several cassette clubs offer a wide selection of movies.

San Salvador has four leading newspapers, *El Diario de Hoy*, *Diario Latino*, *El Mundo*, and *La Prensa Gráfica*. The Santa Ana newspaper is *Diario de Occidente*. The *Miami Herald*, *Chicago Tribune*, and the *New York Times* are home-delivered on an almost-daily basis, and international editions of *Time*, *Newsweek*, and European periodicals are sold at newsstands. The Union Church in San Salvador has an extensive lending library of paperbacks; these also can be purchased in the large hotels and from various bookshops.

Health

Many Americans use the Hospital de Diagnostico y Emergencias, a 155-bed general medical and surgical hospital with an emergency room. Standards are below those of U.S. hospitals. More complicated or serious illnesses are normally referred to Gorgas Hospital in the Canal Zone or to U.S. facilities. San

Salvador has a good obstetrical center and maternity hospital, a satisfactory pediatric clinic, and an adequate emergency facility and hospital with 25 beds. Medical laboratories here have most of the necessary equipment. Nearly every medical specialization is represented in San Salvador by physicians who have received training in the U.S. or Europe, and who speak English. Satisfactory dental and orthodontic care is available at costs considerably below those in the U.S.

No water purification plant exists in San Salvador. Most water comes from deep wells or springs and is chlorinated; however, contamination is common because of the many cross constructions in the water distribution system. Potable bottled water is available, and tap water, boiled rapidly for 10 minutes, is also safe.

A food sanitation program is conducted by Salvadoran authorities, with routine inspections similar to those recommended by the U.S. Public Health Service, and carried out by trained sanitarians. Qualified veterinarians and sanitarians perform ante mortem and post mortem meat inspections. While modern meat markets have refrigeration facilities, most meat is not refrigerated either at slaughter or in distribution. Some control of poultry processing has improved sanitation, slaughtering, and packaging. San Salvador experiences frequent power failures, and refrigerated items are not always kept at the proper temperature. Caution should be used in buying foods the day after a power failure.

The country has no planned rabies control program as practiced in the U.S. Dogs are not required by law to be vaccinated against rabies, nor must they be leashed. At intervals, attempts are made to eliminate stray dogs.

The most serious health problems in El Salvador are intestinal diseases, including typhoid fever, and amoebic and bacillary dysentery. These diseases are usually caused by care-

less handling of food and contamination of food and water. Other diseases present are influenza, malaria, dengue fever (in the coastal regions), frequent colds, and hepatitis.

Clothing and Services

Except for the slightly cooler mornings and evenings during November, December, and January, little temperature change occurs in El Salvador. However, a lightweight wardrobe should be augmented with clothing suitable for travel to cooler areas such as Guatemala. Certain Central American ready-made garments (shirts, underwear, and casual trousers) are available and satisfactory. An umbrella is needed for the rainy season. A warm robe and slippers are useful. Clothing, especially leather, can mildew during the rainy season. It is unwise to use light bulbs in closets to counteract mildew, as they are a fire hazard. Electric dehumidifier rods are fireproof, more effective, and are available locally. Portable dehumidifiers are useful for home storage areas.

Cockroaches, grasshoppers, crickets, and other insects can damage clothing and upholstery; regular spraying with insecticides can eliminate nearly all of these problems. San Salvador has a number of satisfactory fumigating companies.

Several local firms make shoes of acceptable quality, but sizes do not follow the U.S. scale. Local cobblers can make leather boots at well below U.S. prices. Imported shoes are sometimes available, but at higher-than-U.S. prices.

Men wear lightweight clothing, such as tropical worsted, throughout the year. During cooler months, heavier suits of lightweight worsted are suitable for evening outdoor parties. Men wear shorts only on the beach and while participating in sports.

Salvadoran society quickly reflects U.S. women's fashion trends. Simple cocktail dresses (long and short) are suitable for most evening functions. Conservative, washable cotton/polyester knits and synthetic-blend dresses should be made of durable material, as the strong sunlight and frequent laundering quickly make even good fabrics look drab. Boutique prices in San Salvador are higher than in the U.S. Slacks are worn extensively in the city and for casual parties. Shorts are worn only at beaches, clubs, and homes, or for private parties.

Washable fabrics are preferable for children's clothes. Boys and girls wear clothing similar to that worn in summer in the U.S. Satisfactory children's shoes are available locally, but the quality is below that of the U.S. and replacements are required more often.

A wide variety of food is available in El Salvador. Cuts of meat often differ from those in the U.S., and quality meat is often higher in price.

Fresh vegetables are available throughout the year. All vegetables should be thoroughly washed, soaked, and peeled, or cooked before they are eaten.

A wide choice of tropical and semi-tropical fruit is available; temperate-zone fruits are imported and expensive. All fruit needs careful washing.

Pasteurized milk and cream are available, but quality is poor. Powdered and canned milk are also sold locally.

Tap water is not potable unless it is boiled. Local firms deliver bottled drinking water weekly, as well as beer, carbonated soft drinks, soda water, and tonic by the case.

NOTES FOR TRAVELERS

Passage, Customs & Duties

El Salvador may be reached by commercial airlines which serve the capital from any part of the U.S., via Washington, DC, Miami, New Orleans, Houston, Los Angeles, and San Francisco. Travel by ship is seldom undertaken, and is not recommended.

A current U.S. passport and a one-entry tourist card are required to enter El Salvador. The tourist card may be obtained from immigration officials for a ten-dollar fee upon arrival in country. Travelers who plan to remain in El Salvador for more than thirty days can apply for a multiple-entry visa, issued free of charge, from the Embassy of El Salvador in Washington, D.C. or from a Salvadoran consulate in the United States. Travelers may be asked to present evidence of U.S. employment and adequate finances for their visit at the time of visa application or upon arrival in El Salvador. An exit tax must be paid, either in Salvadoran colones or U.S. dollars, when departing El Salvador from Comalapa International Airport in La Paz. Travelers should be aware that airlines operating out of Comalapa International Airport require U.S. citizens to present a valid U.S. passport when boarding flights bound for the United States. Airlines will not accept Certificates of Naturalization or birth certificates in lieu of a U.S. passport, and information to the contrary should be disregarded. U.S. citizens traveling to El Salvador for any reason without a valid passport should apply for a passport in person at the U.S. Embassy in San Salvador before attempting to return to the United States. Citizens applying for passports overseas are reminded that original proof of citizenship and identity is required before a passport can be issued. Photographic proof of identity is especially important for young children because of the high incidence of fraud involving children.

Americans living in or visiting El Salvador are encouraged to register at the Consular Section of the U.S. Embassy in the capital city, San Salvador, and obtain updated information on travel and security in El Salvador and neighboring countries. The U.S. Embassy is located at Final Boulevard Santa Elena, Urbanizacion Santa Elena, Antiguo Cuscatlan, San Salvador; telephone 011-503-278-4444. The Embassy's web site can be accessed at <http://www.usinfo.org.sv>. The Consular Section provides services for U.S. citizens from 8:15 a.m. to 11:30 a.m. on normal Embassy work days.

Pets

The following health requirements must be met for the importation of a pet: the animal must be vaccinated against rabies no less than 30 days before arrival in El Salvador, and a certificate from a qualified veterinarian is required, stating that the animal is free from contagious diseases. Shots against distemper, leptospirosis, and gastroenteritis parvo-viral are required. If a bird is imported, the veterinary certificate must show that the bird is free of pullorum and laryngotracheitis; this must be issued within 30 days before arrival of the bird and certified by the nearest Salvadoran consul.

Currency, Banking, and Weights and Measures

The time in El Salvador is Greenwich Mean Time minus six (the same as Central Time in the United States).

The monetary unit of El Salvador is the *colón*, but U.S. dollars are widely used.

El Salvador officially uses the metric system of weights and measures but, because of its proximity to the U.S. and the extensive trade between the two countries, U.S. standards are fairly well known and used. Gasoline, for example, is sold by the gallon rather than by the liter, and foods are sold by the pound.

Disaster Preparedness

El Salvador is an earthquake-prone country. There is also the risk of flooding and landslides. An earthquake measuring 7.6 on the Richter scale devastated much of El Salvador in January 2001. A second earthquake in February 2001 measured 6.6 on the Richter scale and caused significant additional damage and loss of life. The damage was most severe in the southern half of El Salvador between the cities of San Salvador and San Miguel. While reconstruction efforts are underway and the country is returning to normal, experts indicate that it is common for aftershocks to occur for months or longer following a major earthquake. There also is continuing danger from landslides, particularly during the rainy season that runs from May through October. The most recent data on flood and landslide risk can be found on the Government of El Salvador's web page at <http://www.rree.gob.sv>.

GRENADA

Major City:

St. George's

Other Cities:

Gouyave, Grenville, Hillsborough, Windward

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report for Grenada. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Volcanic in origin, the small island nation of **GRENADA** (pronounced "Gre-NAY-da") lies at the southernmost point of the Windward Islands in the eastern Caribbean. Its recent leap to instant recognition was prompted by a U.S.-led invasion against Marxist control in October 1983, and now, with a newly elected government in place, it is endeavoring to revitalize its economy and its reputation as a charming, picturesque tourist haven. Grenada is the only significant spice-producing area in the Western Hemisphere and, as such, is popularly referred to as the "Isle of Spice."

MAJOR CITY

St. George's

St. George's, the capital, lies at the southwestern end of the island. Its picture-postcard, almost landlocked harbor is considered one of the Caribbean's most beautiful. The town has a distinctly Mediterranean flavor, with its sun-washed buildings, some of them from the 18th century, and its steep, narrow streets. Towering behind the small city are lush green mountains, studded with fine residences and simple homes.

The hub of St. George's, where many important businesses are situated, is the waterfront, known as the Carenage. Brightly painted, wooden, inter-island trading vessels and larger freighters tie up alongside the harbor walls, and trucks can be seen loading or off-loading cargoes. Yachtsmen moor in the inner harbor and motor over in their tenders to shop at the waterfront stores. Fishing vessels unload their catches, which are sold in the nearby market square. One pier, 800 feet long, is capable of berthing cruise liners and other large ships.

Fort George, surrounded by steep walls, is in a prominent position at the entrance to the harbor. A curi-

ous feature is the Sendall Tunnel—in 1890, it was cut through St. George's Point to connect the Outer Harbor (also known as the Esplanade) with the Carenage. At the southern edge of town is a botanical garden.

Farther south is the residential area of L'Anse aux Épinés, which has both large homes and simple, compact bungalows. Southeast of St. George's, the beautiful housing development of Westerhall Point overlooks the water.

The area population of St. George's is approximately 35,000.

Education

Education in Grenada follows the British system; children enter primary school at the age of five, and take the Eleven-Plus examination in sixth grade (age 11 or 12). Those who are successful then enroll in the government-run secondary schools, and take the "O" level exam at 16. Few students remain at school the extra two years to sit their "A" levels. The latter examination, required for entrance to British universities, is prepared and graded in England by Cambridge University.

Grenada's education, from an American point of view, is basic. The International School of Grenada

© Wolfgang Kaehler. Reproduced by permission.

Carenage Harbour, St. George, Grenada

opened in 1984. It is a coeducational institution that covers pre-school through grade seven. A U.S. curriculum is followed using U.S. textbooks and assistance from the Broward County/Miami Department of Education. Enrollment is about 40 with six full-time and four part-time staff. There is no permanent facility; the school's four classrooms, small library, playing field, and administrative office are housed within St. George's University School of Medicine. Tuition is \$1,300 annually. School is in session from the last week in August until the first week in June. Instruction is in English. Academic areas include language arts, math, social studies, science, French, art, music, computers, and physical education. There are no provisions for remedial programs or for students with severe physical, emotional, or learning disabilities.

Westmorland Primary is a good private primary school that is part of the Westmorland School, which is known to have the island's highest standard of education. However, the primary level has few vacancies and securing a place may be difficult. The school, covering nursery, kindergarten, and the early grades has an average class size of 24. It has a few trained Montessori teachers. The school year is divided into three terms and runs from early September to mid-July. There is another primary school, in the heart of St. George's, with a fairly solid reputation for teaching, but the physical plant is somewhat run-down, and has no telephone.

The vacancy situation at Westmorland Secondary is little better, with the lowest grade completely full and few places available in the more senior classes. Westmorland is a cooperative school owned by the parents of students and run by a

board of management elected annually. First consideration is given to Grenadian children and, since the school has a capacity for only 320 students, it simply does not have enough latitude to accommodate many foreigners. Westmorland prepares students to the "O" level.

The school year at Westmorland is divided into three terms, extending from early September to mid-July. Vacations are held at Christmas and Easter, and on the long summer holiday.

Government-run secondary schools do not meet U.S. standards. American children enrolled in these schools might feel isolated and uncomfortable because of differences in culture, social background, or future expectations between themselves and the main student body. Parents of older children would, in most cases, have no option

but to send them to the U.S. for secondary school.

No special facilities exist for children with learning disabilities or any other specific requirements.

Recreation

Pleasant drives amid breathtaking scenery of volcanic origin are among the most popular recreational attractions in Grenada. There are opportunities to see the beautiful Grand Étang (Great Pool) Lake in the rain forest; to drive through the resort developments at Fort Jeudy, Westerhall Point, L'Anse aux Épinés, and Levera Beach; and to visit the spice-processing factories at Gouyave or Grenville.

The old French and British bastions, Fort Frederick and Fort George, are points of historical significance in town. Other attractions include Grencraft, (the Grenada handicraft center), the National Museum, Spice Island Perfume Factory, the botanical gardens, the Anglican church, the old Georgian buildings on Le Carénage (the Carenage), and the Yellow Poui art gallery.

Neighboring Trinidad and Barbados afford a change from the quiet, small-island atmosphere of Grenada, and offer good shopping facilities. Trinidad, 90 miles to the south (flying time, 35 minutes), is renowned for its colorful pre-Lenten carnival; the island has a Hilton Hotel and a Holiday Inn, as well as various smaller hotels. Port-of-Spain, its capital city, has several large shopping malls.

Barbados, 120 miles from Grenada, is an attractive, bustling island with good hotels and restaurants and a lively nightlife. In the off-season, shopping is particularly good. Duty-free shops stock a wider range of items than can be found on Grenada; the many fashionable boutiques sell colorful sundresses, sarongs, and beachwear suited to the Caribbean climate. Flying time from St. George's to Barbados is 45 minutes.

Farther north are Martinique and Guadeloupe, with their French ambience and delicious cuisine. An interesting spot in Martinique is the St. Pierre Museum, an eerie monument to the 30,000 who died when Mount Pelée erupted in 1902. In Guadeloupe, a day trip to a living volcano, La Soufrière, can be arranged.

Venezuela's sophisticated capital, Caracas, with its eternal spring climate, is another spot for enjoying the bright lights. It has all the usual big-city amenities, but is expensive. Confirmed hotel reservations are essential.

The two most popular spectator sports in Grenada are cricket and soccer; the former is played on Saturdays and Sundays from November to May, the latter from June to November.

Several participant sports are available. The Richmond Hill Tennis Club, although privately operated, welcomes visitors as temporary members; public courts are at Tanteen and Grand Anse. Many hotels also have their own courts.

Grenada Golf and Country Club at Woodlands, with a nine-hole course, is in a beautiful setting overlooking the sea. It is a 15-minute drive from St. George's. The club sponsors tournaments throughout the year, often involving teams from other islands. Social events include games evenings, dances, and film shows. Membership rates here are reasonable.

Sailing is popular in Grenada, and the island is headquarters for some of the finest yachts to be found in Caribbean waters. Berthing is either in the harbor or at a marina in suburban L'Anse aux Épinés. The Grenada Yacht Club has more than 200 members, both Grenadian and foreign, and warmly welcomes newcomers. It sponsors various offshore races, including the annual Easter Regatta, and encourages visiting yachters from other Caribbean territories. The club, which has a sailing section, also serves as a social

center, holding dinners, cocktail hours, and barbecues all year. Mail and telephone facilities are maintained for offshore visitors.

The crystal-clear waters around Grenada make the island a yachting paradise, and cruising up the Grenadines, which extend from Grenada to St. Vincent, is especially rewarding. Sailing enthusiasts find a good selection of large, well-equipped yachts available with crew, and at reasonable rates, for daily or weekly charter. Carriacou Island sponsors an annual regatta the first week in August; races are held for work boats of all sizes, as well as for yachts. The many foreign vessels participating in this regatta make it one of the year's most important regional social events.

A combination of clear water, reefs, coral gardens, and tropical fish make scuba diving, spearfishing, and snorkeling excellent around Grenada.

From November to March, the waters offer good deep-sea fishing and boats for this purpose can be chartered by the day, week, or month. Small, open boats take parties out for a morning, or a day, to fish for snapper or grouper. It is advisable to ensure the availability of life jackets, especially for children, and to provide personal protection from the hot rays of the sun.

The Grenadian three-day fishing tournament, held the last weekend in January, attracts many large fishing cruisers, mainly from Trinidad. It is a popular sporting event and social get-together for the two neighboring islands.

Grenada has several attractive white sand beaches; the largest is Grand Anse, just south of St. George's, dotted with a number of hotels and guest cottages. There are no lifeguards, but the beach is relatively safe for bathing. Grand Anse Bay is popular for wind surfing. The many beautiful, quiet coves are good for picnicking and can be explored by car, although roads may be in poor condition.

Grenada has no public swimming pools or clubs with pool facilities. Some hotels will allow non-guests to use their pools, especially during the slow season.

Although few official sports clubs exist, some groups organize for informal activities such as bird-watching, hiking, or wind surfing. Small runs around the island are held every other Saturday, followed by an informal social gathering.

Entertainment

St. George's does not have a broad offering of formal entertainment. Apart from several popular discos, nightlife is non-existent. There is one poorly ventilated movie theater in St. George's which shows predominantly Kung Fu and "B" movies. Several video clubs exist which rent both current and classic movies.

Most of the restaurants feature local cuisine, and vary in quality. One of these, with a cheery, English-pub atmosphere, has become a favorite gathering spot for Grenadians, tourists, visiting yachtsmen, and U.S. students from the American offshore medical school at the southern point of the island. Some of the hotels have weekly barbecue parties featuring steel-band music for dancing. One of the yacht marinas operates an outdoor snack bar which many find ideal for enjoying a late-evening rum punch and mingling with people from visiting yachts. The marina's Thursday night barbecue is often attended by Americans, mostly employees of the U.S. Embassy in St. George's.

In recent years, Grenada has celebrated its annual Carnival, the national festival, in mid-August. It is an exciting event, but considerably smaller than the huge pre-Lenten pageant held in neighboring Trinidad. Steel bands and calypso performers—both Grenadians and residents of other Caribbean territories—vie for prizes as they parade in colorful costumes on the streets of St. George's.

Amateur radio enthusiasts enjoy Grenada because of its friendly ham-radio community; the terrain provides excellent antenna setting. Permission to operate is granted upon presentation of a valid Federal Communications Commission (FCC) license; third-party traffic is allowed. An adequate transformer is needed for 110-volt equipment.

It should be noted that Grenada, because of its size, has limited entertainment facilities and few cultural or educational opportunities. Grenadians are friendly and hospitable, but the educated professional community is small in number. Social contact is, therefore, circumscribed, and loneliness can become a problem for single people or for young children. Those who have been assigned to the island on official or business tours of any length, advise newcomers to bring with them a good supply of games, books, records, and hobby equipment.

There is no U.S.-sponsored women's club, but American women are welcome to join the few local organizations. Volunteer workers are needed by the Red Cross, St. John's Ambulance Brigade, the Salvation Army, and the Society for the Prevention of Cruelty to Animals (SPCA). Children can join Boy Scouts, Girl Guides, and Cub and Brownie troops, but teenagers find that there are few organized activities for them.

OTHER CITIES

GOUYAVE (also known as Charlotte Town), with an estimated population of 2,900, and **GRENVILLE**, with a population of about 2,100, are on opposite sides of the main island of Grenada. Both of these small towns have spice factories.

The only other population center of any size in Grenada is too small to be called a city but, as the capital of the dependent island of Carriacou, **HILLSBOROUGH** draws yachtsmen and tourists to its modest

accommodations. Market day, on Monday, brings the town to life. Many tourists also come here for leisurely walks through the hills or visits to the museum and the new Sea Life Centre. During Carriacou Regatta weekend, people come from all over the Grenadines to participate in the festivities. A highlight of the celebration is the big-drum dancing, an African tradition, in the market square.

WINDWARD, on Carriacou's east coast, is known for the building of wooden boats; many of its villagers are of mixed Scottish descent. Tyrell Bay, on the west coast, is also a boat-building center and a yacht anchorage.

COUNTRY PROFILE

Geography and Climate

Grenada, the southernmost of the Windward Islands, is situated in the eastern Caribbean, 90 miles north of Trinidad and 12 degrees north of the equator. The three-island nation includes Carriacou, the largest island in the Grenadine chain, and Petit Martinique. Grenada itself, roughly oval in shape, is 12 miles wide and 21 miles long. It comprises 133 square miles of rugged mountainous terrain, with lush tropical rain forests and little lowland. Its central mountains rise about 2,000 feet above sea level. The clear, clean air is fragrant with the aroma of the spices grown on the islands.

Carriacou has an area of 13 square miles, and its geographical characteristics are similar to Grenada's except for its lower elevations (approximately 1,000 feet above sea level). Petit Martinique, with a population of only 700, has no tourist facilities, but is famous for boat building.

Grenada's climate is sunny and tropical, averaging 80°F, with dry and rainy seasons. The dry interval,

Susan Rock. Reproduced by permission.

Houses overlooking the harbor, St. George, Grenada

January through May, is more comfortable, with cooling trade winds, but also occasional showers. The rainy season, June through December, brings moderate to heavy rainfall which fluctuates considerably from year to year. Temperatures drop in the evening, making it pleasantly cool. Sunrise is at 6:30 a.m., and dusk varies between 6 and 6:30 p.m., according to the time of year.

Heavy rainstorms and high winds occur in the wet season, but violent hurricanes are rare.

Mildew can be a problem during the rainy months. Commercial desiccants are a help, but it is also advisable to avoid filling closets too full—this precaution keeps mildew to a minimum and discourages cockroaches, who like undisturbed, dark places. Other pests are mosquitoes, flies, moths, ants, termites, rats, and mice. Most of these can be controlled by taking particular care in household cleaning, and by proper

disposal of garbage. Chinese coils, sold in supermarkets, repel mosquitoes; the scent of the coils is not unpleasant. Screens are strongly recommended. Because sand-flies are sometimes a nuisance on the beach, insect repellent should be kept available. Rust is another problem in the wet season, and furniture and appliances must be wiped dry often.

Population

Grenada was first sighted in 1498 by Christopher Columbus, on his third voyage to the New World. The island was inhabited by fierce aboriginal Carib Indians, who successfully discouraged attempts at settlement until French colonialists from Martinique purchased it from them in 1650 for “two bottles of brandy and a few trinkets.” The Caribs eventually were eliminated, with the last remaining natives hurling themselves off the cliffs on the north part of the island rather than surrender. The spot where

they died, Caribs Leap, is now a famous tourist attraction in the town of Sauteurs.

A series of bloody conflicts between Britain and France followed, with the British finally taking control of the island in 1783 under the Treaty of Versailles.

The French and British brought Africans to Grenada to work their plantations so the population is predominantly of African descent, over 90%, with mixed, East Indian, and Caucasian persons making up the rest of the population. The 1998 estimate put the population at over 96,000. In recent years, the rate of emigration has exceeded the birth rate, leading to a population decline. Most of the population is located in St. George’s and four or five other coastal towns.

Christianity is the major religion; 53% of the people are Roman Catholic, 14% are Anglican.

The Creole culture of Grenadians derives from their African, French, and English heritage. English is the spoken language, but often a French *patois* is heard. Some customs, such as the pre-Lenten carnival, date from the days of French rule. Racial tension is almost nonexistent. Grenadians are courteous and exhibit good-natured tolerance of foreign visitors and their ways; invariably, a smile begets a smile.

Government

Grenada became an independent nation within the British Commonwealth in February 1974. In a coup on March 13, 1979, the New Jewel Movement took control, setting up the People's Revolutionary Government under the leadership of Maurice Bishop. Disagreements within the party led to violence and the assassination of Mr. Bishop less than five years later (October 1983), prompting intervention by U.S. and Caribbean forces. This military action, which routed a Marxist government, has been called a welcome liberation by some, but an invasion by others. In December 1986, Bernard Coard, Grenada's former prime minister, and 13 others were convicted of killing Maurice Bishop.

The constitution was restored after the events of October 1983, and the governor-general, Sir Paul Scoon, named an interim advisory council. In 1990, Nicholas Brathwaite was elected Prime Minister. Keith Claudius Mitchell followed as prime minister in 1995 and 1999.

Grenada is governed under a parliamentary system based on the British model; it has a governor general, a prime minister and a cabinet, and a bicameral Parliament with an elected House of Representatives and an appointed Senate.

Citizens enjoy a wide range of civil and political rights guaranteed by the constitution. Grenada's constitution provides citizens with the right to change their government peacefully. Citizens exercise this right through periodic, free, and fair

elections held on the basis of universal suffrage.

Grenada's political parties range from the moderate TNP, NNP, and NDC to the left-of-center Maurice Bishop Patriotic Movement (MBPM -- organized by the pro-Bishop survivors of the October 1983 anti-Bishop coup) and the populist GULP of former Prime Minister Gairy.

Security in Grenada is maintained by the 650 members of the Royal Grenada Police Force (RGPF), which included an 80-member paramilitary special services unit (SSU) and a 30-member coast guard. The U.S. Army and the U.S. Coast Guard provide periodic training and material support for the SSU and the coast guard.

The United States, the United Kingdom, and Venezuela maintain resident diplomatic missions in the capital. In 2000, Grenada has an estimated population of 98,000. Grenada is a member of the United Nations, Organization of American States (OAS), Organization of Eastern Caribbean States (OECS), and Caribbean Common Market (CARICOM).

Grenada's flag consists of a red border with yellow and green triangles that form a central rectangle. There is a red circle in the center with a yellow star; there are three stars at the top and bottom of the red border, and a nutmeg to the left of center.

Arts, Science, Education

In 1972, the Commonwealth Caribbean member states formed the Caribbean Examinations Council (CXC) and, gradually, a new syllabus with more emphasis on regional matters has been developed. Some students still sit the British exam in certain subjects while Grenada converts to the new system. The University of the West Indies (UWI), which maintains campuses in several Commonwealth member

islands, is responsible for the preparation and grading of the CXC tests.

The Grenada National College at Tanteen, St. George's, conducts courses in carpentry and joinery, refrigeration, electrical installation and maintenance, plumbing, auto mechanics, and machine shop engineering. Its commercial division teaches stenography and office skills.

A craft center, also at Tanteen, offers instruction in woodworking, shell and bamboo craft, tie-dying, ceramics, and pottery. It also sponsors a summer extension program for cottage-industry instructors who teach handicrafts in villages throughout the island.

Most Grenadians interested in higher education enroll in British or Canadian universities, but some first-year evening classes are being conducted by UWI's extension department at Marryshow House, St. George's. UWI is working to restore a full curriculum for its student body, which dramatically declined after the 1979 political coup, and more courses will be developed during the next few years. The university's reference library is open to its students and faculty, as well as to librarians and academics working in Grenada.

Grenada's lively folk culture, based on its African heritage, is superimposed with French and English elements. Modern dance troupes still perform the old slave dances—*bele*, *shamba*, and *piqué*. At festival time, such traditional characters as the "stickman," "horsehead," and "jab-jab" are recreated. At a newly built small theater adjacent to UWI, concerts, dance shows, and operettas are performed. Children from all over the country stage regular concerts and Christmas pageants.

Several Grenadian artists, notably Elinus Cato and Canute Caliste, have received overseas recognition for their primitive paintings. Grenadian sculptor and painter Fitzroy

Harack teaches ceramics at the Jamaica School of Art.

The country has produced a number of outstanding writers, including folk poet Paul Keens-Douglas and journalist T.A. Marryshow. An English-born priest, Rev. Raymond P. Devas, O.P., has written a comprehensive history of the island, as well as books on birds and wildlife. Wilfred and Eula Redhead have published plays and children's stories, rich in Grenadian folklore.

Island music also reflects the people's African ancestry. The calypso beat is strong here, as in Trinidad, and Grenadians have even made the claim that old-time calypso, or *kaiso*, originated on this island and was taken to Trinidad by a group of Grenadian slaves. The steel band is popular; on a typical evening, the "pan beat" can be heard echoing softly against the hills, as "pan men" practice their skills.

Commerce and Industry

Grenada's gross domestic product (GDP) in 2000 was estimated at about \$394 million, with a per capita figure of about \$4,400.

The economy of Grenada is based upon agricultural production (nutmeg, mace, cocoa, and bananas) and tourism. Agriculture accounts for over half of merchandise exports, and a large portion of the population is employed directly or indirectly in agriculture. Recently the performance of the agricultural sector has not been good. Grenada's banana exports declined markedly in volume and quality in 1996, and it is a question to what extent the country will remain a banana exporter. Tourism remains the key earner of foreign exchange.

Grenada is a member of the Eastern Caribbean Currency Union (ECCU). The Eastern Caribbean Central Bank (ECCB) issues a common currency for all members of the ECCU. The ECCB also manages monetary

policy, and regulates and supervises commercial banking activities in its member countries.

Grenada also is a member of the Caribbean Community and Common Market (CARICOM). Most goods can be imported into Grenada under open general license but some goods require specific licenses. Goods that are produced in the Eastern Caribbean receive additional protection; in May 1991, the CARICOM common external tariff (CET) was implemented. The CET aims to facilitate economic growth through intra-regional trade by offering duty-free trade among CARICOM members and duties on goods imported from outside CARICOM.

Transportation

An international airport opened in October 1984 at Point Salines, on the southwest tip of the island. The old Pearls Airport was unable to accommodate commercial jets or night landings. Leeward Islands Air Transport (LIAT) runs daily round-trip flights to Carriacou and, from there, a boat can be taken to Petit Martinique. Carriacou has one or two clean, but somewhat rustic hotels; a third has recently been taken over by new management and is located out of town. Since they are all small and have limited occupancy, reservations should be made in advance. Boats leave for Carriacou twice a week from the Carenage in St. George's, or private accommodations are available from Grenada Yacht Services and Spice Island Charters.

Private cars and taxis are the principal means of transportation used by U.S. citizens on extended stays in Grenada. Some comfortable, newer minibuses travel certain routes around St. George's and to the airport but, for the most part, public transportation is inadequate. Taxis assemble for hire at designated places on the harbor front, at the airport, and at major hotels. Fares are higher than those in the U.S., but should be negotiated in

advance, since cabs have no meters. Unmarked taxis can be identified by the letter "H" (for hire) in front of the license number.

Grenada's major roads have improved greatly since 1984, although some are still being rebuilt. Secondary roads are often in poor condition and badly maintained. Potholes are numerous; roads are narrow and often steep. A four-wheel-drive car is not essential, but useful if plans are to explore the island. The Japanese-made, Land Rover-type vehicles sold locally are well suited to the rugged driving conditions, but their small, under-padded rear seats make traveling in the back somewhat uncomfortable. Since they have no trunks, roof racks are necessary. Several lines of smaller Japanese jeeps, as well as some British models (all right-hand drive), are also sold in Grenada, but no American cars are available.

No import restrictions apply. If a new car is shipped to the island, it should be a right-hand-drive vehicle, preferably of a make and model sold in Grenada, as local mechanics work better with familiar cars, and parts are more readily available. Manual transmissions are more easily and cheaply serviced. As a rule, auto agencies satisfactorily service the cars they sell, as well as imported cars.

Before importing a used car, it is advisable to have it thoroughly overhauled, particularly the clutch and brakes, which wear out quickly in the mountainous terrain. Tires may have to be replaced sooner than expected. Spare parts for American-made cars, such as windshield wiper blades and arms, oil, air and oil filters, fan belts, contact points, and turn-signal flash units, should be kept on hand.

Air conditioning will make driving more comfortable, although repair delays are possible because of a lack of spare parts. Specially ordered air conditioners for cars bought in Grenada cost \$1,000 or more.

Traffic moves on the left and no speed limits are posted. A Grenadian drivers license is required to drive in Grenada and can be obtained upon presentation of a valid U.S. drivers license and a completed application form.

Several rental firms offer mostly Japanese models, Volkswagens, or *minimokes* (modified dune buggies) at rates similar to those in the U.S. Some people rent minibuses by the day, week, or month at negotiable prices. As Grenada has no school bus system, parents sometimes jointly hire taxis or minibuses.

Communications

The government-owned Grenada Telephone Company operates a recently modernized, fully automatic dial system throughout the island. International telephone service is available 24 hours a day. Calls between Grenada and the U.S. are usually satisfactory.

Cable and Wireless, Ltd., provides international telex service Monday through Friday from 7 a.m. to 7 p.m., Saturdays to 1 p.m., and Sundays and public holidays from 10 a.m. to noon.

International airmail is received and dispatched Tuesday through Saturday by the Grenada General Post Office. Transit time for letters from the U.S. varies from six days to three weeks; letters from Grenada arrive in the U.S. in 7–14 days. Surface mail is erratic, and takes at least a month for delivery.

Radio Grenada operates an AM station providing music, local news, some Voice of America (VOA) programs, and a British Broadcasting Corporation (BBC) international roundup. AM broadcasts in English can usually be heard from Trinidad, Barbados, Montserrat, and The Netherlands Antilles. Spanish-language programs from Venezuela are also available. Although VOA and Armed Forces Radio can be received on shortwave, the quality of reception is often poor; equipment which

can be connected to outside antennas is advised. Radio Antilles in Montserrat broadcasts VOA news and other programs in the evenings on medium-wave.

Grenada-based Discovery TV transmits one channel in color, 7 days a week, from 9:00 a.m. to 11:30 p.m. Local Grenadian news and cultural programming is interspersed with American series reruns, cartoons, films and some NBA games. CNN midday news is broadcast in the evenings. Those who live on the south side of the island can usually pick up TV from Trinidad.

There are several weekly newspapers which largely confine themselves to events on Grenada and other Caribbean islands. International news takes a back seat to inter-island gossip. The weeklies are *The Grenadian Voice*, *The Informer*, *The Grenadian Guardian*, *The Grenadian Tribune*, and *The Indies Times*. The last three are affiliated with political parties. The current Latin American editions of *Time* and *Newsweek* are sold in book shops and supermarkets, and certain other popular U.S. magazines (*Good Housekeeping*, *Cosmopolitan*, *Harper's*) are also available, although at least a month old. Women's magazines, such as *Vogue*, are often stolen from the international mail.

Three small, but well-stocked, book shops sell a good range of paperback novels, as well as reference books and hardcover publications.

The Grenada Public Library on the Carenage in St. George's has a good selection of books and periodicals, many donated by the U.S., U.K., and Canadian governments. Reference materials are non-circulating and are restricted to Caribbean history, culture, and politics. Library lending cards are issued upon receipt of a refundable deposit and two recommendations from Grenadian residents. A small, but well-kept, reference library at the University of the West Indies, Marrayshow House, is open to research scholars.

The collection contains many hard-to-find works by Caribbean writers.

Health

The General Hospital in St. George's is old and inadequately equipped, and the nursing care does not meet U.S. standards. Resident Americans in Grenada are advised to use the facility only for emergencies. However, the hospital does maintain an eye clinic which is currently updating its diagnostic services and equipment. Trained ophthalmologists from the International Eye Foundation run a clinic at the General Hospital which is open daily. For ordinary needs, St. George's has an up-to-date firm of opticians who perform eye examinations.

Two district hospitals are in operation—one in St. Andrew's Parish, the other on Carriacou. Health clinics, some of them with maternity facilities, are located throughout the island. The Simon Bolivar Clinic, a small, well-equipped dispensary is operated by the St. George's University School of Medicine on its Grand Anse campus.

Grenada has a few qualified specialists who were trained in England or the U.S.; their practices are in surgery, internal medicine, gynecology and obstetrics, and pediatrics. Preventive dental care should be arranged before moving to Grenada, however, several U.S. dentists are available locally by appointment a month in advance. Because there are no local orthodontists, those needing this particular type of care have to go to Trinidad or Barbados.

Local pharmacies carry adequate supplies.

Community sanitation includes sewage treatment and garbage collection (not up to U.S. standards). Water is treated at the source, but the distribution system and fluctuating pressure result in an unsafe yield. All drinking water must be boiled. Frozen foods are often suspect because of spoilage during

Grenada's frequent electrical outages.

Infectious hepatitis, dengue fever, gastroenteritis, and intestinal parasites are common. The tropical weather and high humidity are conducive to skin and fungal infections. Rabies is prevalent in animals.

Although none of the following inoculations are required for entry to Grenada, all are advised for anyone planning an extended stay: typhoid, polio, tetanus, gamma globulin for infectious hepatitis, and yellow fever. Children should be given measles, mumps, rubella, and diphtheria, pertussis, tetanus (DPT) shots, and everyone over the age of one should have pre-exposure rabies immunization. Children over 18 months should receive a Hemophilus influenza b (Hib) vaccination before going to Grenada, as outbreaks of meningitis occur on the island and the vaccine is not available locally.

Clothing and Services

Grenadians dress to suit the climate, but they are modest, and women rarely wear shorts or midriff garments in town. It is important that all clothing, including underwear and socks, be of extremely lightweight material; either cotton or a cotton blend is the most comfortable. With frequent laundering, necessitated by heat and high humidity, garments wear out quickly.

An umbrella is needed for the wet season's heavy, almost-daily rainstorms. Raincoats and heavy footwear are impractical in this heat. Beachwear and shorts are acceptable for adults and children in resort hotels and for recreation or relaxation; beach wraps are needed for lunches on hotel patios.

Office attire for men is either a shirt or *guayabera* and slacks, or a "jac suit," which is a short-sleeved, open-collared jacket worn with

matching pants; no shirt or tie is needed for this practical outfit. Few Grenadians wear a regular jacket and tie in the office. The "jac suit" is also favored for social events, although a lightweight jacket and tie are equally appropriate. Jeans, although heavy for the climate, are popular in Grenada.

Working attire for women is usually a modest, short-sleeved dress, or a blouse with skirt or slacks, and sandals. Stockings are not normally worn. Sleeveless dresses are ideal for street wear in the humid months, but are not worn at work. Sundresses and straw hats are sold inexpensively by beach vendors. Stout canvas espadrilles are recommended for walking on beaches or along Grenada's rough roads.

Grenadian women are fashion conscious and like to dress up for parties. Home entertaining is popular in the foreign community and, since the same people travel in that circle, women find that they need substantial party wardrobes. Silk dresses, unless they are washable, are impractical, as St. George's one dry cleaner does only a rudimentary form of dry cleaning. A light stole is useful for cool nights.

Normal U.S. summer wear is suitable for children, with lightweight jackets or cardigans for cool evenings. Every child needs several pairs of sandals. Most Grenadian schools require uniforms (available locally).

Grenada has few high-quality clothing stores. There are a couple of attractive boutiques in St. George's, but stocks are limited and prices are not competitive with those in the U.S. Tourist shopping, however, is interesting, with a wide variety of straw items, spices, and coral handicrafts. Duty-free shopping is also available.

St. George's has several good tailors whose work is not expensive. There are also dressmakers, varying in skill. Shoe repair is fair. Beauty shops, although not elegant, have

good reputations. Barbershops are adequate and reasonable in price. Repairs (electrical, auto, etc.) are available, but uneven in quality; progress is often slow and further hampered by periodic power outages and unavailability of materials.

The style of cooking in Grenada is Creole, similar to that of neighboring islands, with one or two specialties such as *lambie*, found in abundance in surrounding waters. On Saturday mornings, this variety of mollusk may be purchased directly from the conch boats at the Carenage. Local cooks have a touch with soups, and some notable ones are *callaloo*, made from a green bush with added seasonings, and *tannia*, from a root vegetable. Other island delicacies include crab-backs (seasoned crab meat served hot in the shell); *souse*, and black pudding.

In general, food prices are higher than in the U.S., but foreigners living here find that the supermarkets are well-stocked and carry a good supply of processed foods from the U.S., Europe, and other Caribbean territories. Small, family-run groceries abound. There is a wide variety of fresh fish, fruits and vegetables, bakery items, and imported candies and cookies. Most meats sold in the markets are local and of indifferent quality. Chicken is imported from the U.S. Powdered and evaporated milk and baby formula are readily available, as well as "flash" sterilized milk which does not need refrigeration. Although fresh milk is occasionally obtainable, it should be avoided, since some cattle are not tuberculin-tested.

French, American, and German wines are widely available, as is excellent rum from Trinidad and Barbados, marketed at reasonable prices. The local lager, Carib, is good; other beers are imported.

Domestic Help

Competent, trained maids and cooks work for moderate wages. An

experienced domestic receives a monthly wage plus food, and many are prepared to live in or return in the evening to baby-sit. The employer's contribution to the compulsory national health insurance plan is 4% of the servant's salary. Under current codes, the employee serves a two- to three-month probationary period, is given two weeks' leave after one year of service, three weeks after two years, and a Christmas bonus of one month's pay. In addition, a maid/cook expects one-two days off each week; arrangements for weekends and holidays are fixed by the employer at the time of hiring.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Direct service to Grenada from North America and other Caribbean islands is provided by British West Indies Airlines (BWIA). Leeward Islands Air Transport (LIAT) serves the country several times daily from Barbados and Trinidad. American, Pan Am, Eastern, and Air Canada provide connecting flights through Barbados.

U.S. citizens may enter Grenada with proof of U.S. citizenship, (a certified birth certificate, a Naturalization/Citizenship Certificate, or a valid or expired passport) and photo identification. U.S. citizen visitors who enter Grenada without one or more of these documents, even if admitted by local immigration officials, may encounter difficulties in boarding flights to return to the U.S. No visa is required for a stay of up to three months. There is an airport departure charge for adults and for children between the ages of five and thirteen years of age. For additional information concerning entry/exit requirements, travelers may contact the Embassy of Grenada, 1701 New Hampshire Avenue, N.W., Washington, D.C. 20009, telephone (202) 265-2561, e-mail grenada@oas.org, or the Con-

sulate of Grenada in New York at telephone (212) 599-0301.

Grenada customs authorities may enforce strict regulations concerning temporary importation into or export from Grenada of items such as firearms, antiquities, business equipment, fruits and vegetables, electronics, and archaeological items. It is advisable to contact the Embassy of Grenada in Washington, D.C. or the Consulate of Grenada in New York for specific information regarding customs regulations.

Americans living in or visiting Grenada are encouraged to register at the Consular Section of the U.S. Embassy in Grenada and obtain updated information on travel and security within Grenada. The U.S. Embassy is located on the right hand-side of the main road into Lance aux Epines in the "Green Building," and is approximately 15 minutes from the Point Salines International Airport. Telephone: 1-473-444-1173/4/5/6; fax: 1-473-444-4820; Internet: <http://www.spiceisle.com>; email: usemb_gd@caribsurf.com.

Pets

Grenada will permit entry of pets with proper documentation, including health certificates and proof of recent inoculation against rabies. The health certificate, stating that the pet is free from infectious diseases and rabies, must be issued by a licensed veterinarian and stamped with verification of that license. Both Trinidad and Barbados, still used by some as entry points to Grenada, have strict laws governing pet importation (other than from Great Britain or Ireland). A quarantine station and appropriate airport facilities are available in Trinidad.

Currency, Banking, and Weights and Measures

The time in Grenada is Greenwich Mean Time minus four hours.

Local currency is the East Caribbean dollar, which is pegged to the U.S. dollar at a rate of

US\$1=EC\$2.70. Bills, from \$1 to \$100, are printed in a series of colors, and coins are minted in six denominations. All currency carries the likeness of Queen Elizabeth II. Only a few hotels and stores accept U.S. credit cards. Travellers checks are accepted everywhere.

Some effort is being made to introduce the metric system of weights and measures, but Grenadians continue to think in terms of pounds and miles, rather than kilograms and kilometers.

Disaster Preparedness

Grenada has experienced tropical storms during the hurricane season, from June through November. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>.

Guatemala City, Guatemala

GUATEMALA

Republic of Guatemala

Major Cities:

Guatemala City, Antigua

Other Cities:

Amatitlán, Chichicastenango, Chimaltenango, Chiquimula, Cobán, Esquipulas, Flores, Huehuetenango, Mazatenango, Puerto Barrios, Quezaltenango, San José, Zacapa

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated June 1996. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

GUATEMALA is one of the most diverse countries in the world. Its more than nine million inhabitants live in the highlands, the tropics, and the central plateau. Almost half of them are pure-blooded descendants of the Maya Indians, whose civilization flourished throughout much of Guatemala before the Spanish conquest in 1523.

Modern, comfortable Guatemala City, the capital, contrasts sharply with the rural interior. That area is characterized by Mayan ruins, mile-high Lake Atitlán, the ancient Indian cultures of Chichicastenango and Huehuetenango, and colonial Antigua, the proud capital of the country until it was leveled

by two disastrous earthquakes in 1773. Guatemala has survived a turbulent history of dictatorships, political unrest, and economic instability, and is now pursuing a comprehensive plan for national development.

MAJOR CITIES

Guatemala City

Guatemala City, the capital, is a busy metropolis, and despite air pollution, dust in the dry season, and mud during the wet season, it is a fairly clean place. The colorful native dress of the large Indian population adds charm and uniqueness to this interesting city. Guatemala City (its full name is Santiago de los Caballeros de Guatemala la Nueva) is located slightly southwest of the country's geographical center at an altitude of about 5,000 feet, and is built on a long, narrow plain completely surrounded by hills and mountains. It is the largest city in Central America, with a population of 2.7 million (2000 est.).

The older buildings are Spanish-style, but starkly modern structures are rising rapidly. Residential districts are spreading beyond the

town's outskirts, with newer homes either modern or Spanish colonial in design. Downtown Guatemala City's streets are narrow and, despite one-way traffic, congestion is bad and parking difficult. Several new shopping centers away from the city's center are gaining rapid popularity. Streets in the newer residential and business sections are relatively wide, attractive, and less congested.

The city has a number of interesting old churches. Large daily markets, the main source of fresh fruits and vegetables, are also centers for a variety of native textiles, blankets, and some pottery. The large block-size relief map of Guatemala, the National Palace, the Archeological Museum, and the Mayan ruins on the outskirts of the city are sight-seeing attractions. Parks are always full, especially on Sundays and holidays. Aurora Zoo is small, but worth seeing.

In spite of the thousands of foreign tourists who stream through the city every month and the multinational, intercultural mix of residents, the city maintains a calm tolerant aura of well-being. Although some nightlife is available, Guatemala City is not a nighttime city, and quietly finishes most days well before midnight.

Overview of city center, Guatemala City, Guatemala

The present city is the third permanent capital of Guatemala. It was founded in 1776 after Antigua was destroyed by earthquakes. An earthquake destroyed Guatemala City in 1917, but it was rebuilt on the same site. Guatemala City suffered less than did the countryside from the February 4, 1976 earthquake which killed 27,000, injured 76,000, and left more than one million homeless.

The level of living for Americans in Guatemala City is generally equal to that of a small U.S. city, but the cost of living is similar to that in Washington, DC. The American community, comprising some 6,500 persons in the capital and perhaps

1,000 elsewhere, is the largest single foreign group. The foreign community also includes much smaller German and British colonies.

Religious Activities

Roman Catholicism is the principal religion, and Catholic churches in the capital and throughout the country are staffed by native and foreign clergy in about equal numbers. Two of the churches, Villa Guadalupe and San Agustin are run by the American Maryknoll and Franciscan Fathers. Protestant services in English are offered by the interdenominational Union Church in Guatemala City and also by Episcopal, Lutheran, and Church of Christ congregations. Three Jewish

congregations, the Sephardic, Orthodox Ashkenazi, and a Reform group, hold regular services.

Education

The private educational system in Guatemala City is considered fairly good. Most schools require a birth certificate, a certification of good health, a vaccination certificate, and a transcript of education records. Although many private elementary and secondary schools operate in Guatemala, most American children attend the American or the Mayan School. Calvert System materials are not necessary, since these materials are provided by those schools using the system.
