The American School (Colegio Americano) offers kindergarten through secondary school instruction. Despite its name, it is a private Guatemalan school with American administrators and some American teachers (the enrollment in 1991 was 1,600, of which 160 were American children). Accelerated courses are available in all grades for students planning to enter university or who will be transferred to other areas in the fall. Classes are conducted in both English and Spanish and students can elect to be taught in either language. Quality of instruction at all grade levels is considered adequate.

The secondary school is accredited by the U.S. Southern Association of Schools and Colleges. The number of American teachers usually averages 25% of the total faculty. Athletic activities consist of softball, water polo, track and field, basketball, baseball, soccer, volleyball, and swimming. Other extracurricular activities include drama, dance, choral and instrumental music, yearbook, newspaper, literary magazine, computers, and field trips. An intramural and playground recreational program is stressed. Bus transportation to and from school is provided at nominal cost.

The school year runs from mid-January through mid-October, with vacations during Holy Week and at midyear. The school is located on 52

Central plaza, Guatemala City, Guatemala

acres of land in a residential area just outside the city. Facilities include an audiovisual room, auditorium, science labs, two computer labs, cafeteria, covered play area, gymnasium, swimming pool, and a 28,000-volume library. The mailing address is Apartado Postal 83, Guatemala City, Guatemala. U.S. mail may be sent in care of the U.S. Embassy, Guatemala, APO Miami, Florida 34024-5000.

The Mayan School (Colegio Maya) offers instruction for nursery through grade 12. It is a cooperative school sponsored by parents, administered by an elected board of directors, and fully accredited under the U.S. Southern Association of Schools and Colleges. The director and principal are American, as are at least 50% of the teachers and staff. The enrollment in 1991 was 340, almost equally divided among American, Guatemalan, and third-country nationals. General curriculum is taught in English with one class period daily in Spanish. Instruction provided in all grades is considered adequate. Art, physical education, and computer science may be elected. Extracurricular activities include drama, computers, yearbook, newspaper, field trips, and photography. Athletic activities comprise basketball, volleyball, baseball, and other orga-

nized sports. Playground equipment is also available for smaller children. Bus transportation is provided by the school.

The school year runs from the end of August to the beginning of June, with vacations at Christmas and Easter. The school is located on 12 acres of land about six miles from the city. Facilities include an audiovisual room, science and language labs, infirmary, cafeteria, a computer room, and a 10,200-volume library. The mailing address is Apartado Postal 2-C, Guatemala City, Guatemala. U.S. mail may be sent to APO 34024, Miami, Florida.

Recreation

Spectator events include frequent national and international soccer matches, bicycle and car races, and local wrestling. Baseball and softball are increasing in popularity and can be played year round. Joggers can be seen often here, and several organizations sponsor races throughout the year. Although Guatemala City has only two facilities, bowling is popular, with several regular city leagues and frequent national and Central American tournaments.

Golf courses and tennis courts are available for either membership or public use, as are several outdoor

and indoor pools. About two hours from Guatemala City, on the Pacific coast near the port of San José, is a large hotel with both fresh and salt-water pools. Ocean swimming on this coast, unfortunately, is not only dangerous because of strong undercurrents and occasional sharks, but also rather unpleasant because of the rough black sand, rocks, and narrow, limited "beach" areas. Caribbean beaches are lovely, almost virginal, territory, but not easily accessible.

Surf and deep-sea fishing are enjoyed on either coast where tarpon, barracuda, shark, sailfish, giant ray, red snapper, bonito, and jackfish are common. Lakes and rivers provide freshwater fishing.

Near Guatemala City, the volcanos Pacaya (8,345 feet), Fuego (12,851 feet), and Agua (12,307 feet) attract climbers and offer a rewarding view of both coasts on clear days. Pacaya, which is gently active much of the year, provides the unique opportunity for climbers to stand on one peak and view close at hand the lava activity on another. Climbing parties are organized during the dry season.

Wild game, such as deer, wild turkey, dove, geese, pheasant, duck, jaguar, and boar, is still plentiful in various parts of the country. Hunting is prohibited in most of Guatemala and hunters should obtain permission to hunt on private land.

Guatemala offers many opportunities for sight-seeing, as well as for sport. Lake Atitlán is two-and-a-half hours from Guatemala City by car over a good but winding road. Atitlán is generally considered the most beautiful lake in the country and is visited as part of the "must" excursion to Solola and Chichicastenango. Three large volcanos are nearby. Encircling the shores of the lake, 5,500 feet above sea level, are 12 Indian villages named after the Twelve Apostles. These villages can be reached by launch from the hotel area. Several good tourist hotels are located on the lakeshore in the town

of Panajachel. Swimming and boating are pleasant pastimes.

Tikal, largest and one of the oldest of the ancient Mayan cities, is located in the midst of a dense tropical rain forest in the Department of Petén, in the northeast section of Guatemala. Due to daily flights and occasional special tourist or charter flights, these magnificent ruins, formerly almost inaccessible to the traveler, are now within a short flying time of Guatemala City. Overnight accommodations with meals are available at either of two adequate but non-luxury hotels.

The highland and northern jungle regions of Guatemala, difficult to reach because of poor or no roads, offer a complete change of scene and atmosphere. The towns of Flores and Sayaxche are the jumping-off points for jungle trips. Trips can be arranged by air and jeep to the sites of Mayan ruins, and bus service is usually available to many remote villages. Airline service is furnished to about 20 points within Guatemala. The road-building program is gradually opening up previously inaccessible regions, and tourist traffic is increasing.

Visiting Indian communities throughout the country during their various patron saint festivals offers unique opportunities to experience the flavor of the Guatemalan heartland and its hospitable people. These fiestas, which usually begin a few days before the actual patron saint's day, are usually characterized by special dances, processions, and a profusion of decorations, as well as firecrackers, native marimba or other instrumental music, and often a lively market. There are no limits, outside those of good taste, to taking photographs.

For those who want to become acquainted with Guatemala, the country, and its customs, the Trekkers Club offers frequent group trips at minimum cost. The club is international in membership. Meetings are held one evening a month at the Union Church with featured speakers, movies, and/or slide show-

Tree-lined street scene in Antigua, Guatemala

David Johnson. Reproduced by permission.

ings. Trips are usually planned for weekends. Members share the responsibilities for organizing and leading the excursions, as well as serving on the board of directors.

Guatemala is a friendly country, and most Americans establish fine and lasting friendships with Guatemalans. Many Guatemalans speak excellent English, having been educated in the U.S., and many others are studying English at the Instituto Guatemalteco-Americano de Cultura (IGA) and other institutions. Americans usually find ample opportunity for social contacts, both private and official, with Guatemalans. Social contacts between the American colony and other foreign colonies are frequent and interesting.

The American Society is an organization of U.S. citizens living in Guatemala. Membership includes official personnel, members of the business community, and others. The society endeavors to improve Guatemalan-American relations on the local level and performs an important welfare function. The group also sponsors several social functions each year, including an annual Fourth of July picnic and a children's Christmas Party, and holds bridge and craft classes for

members. Other clubs include a Rotary Club, Lion's Club, an English-speaking Masonic Lodge, an American Legion post, and a Toastmasters International Club.

While the primary aims of the American Chamber of Commerce of Guatemala are business and investment-oriented, the group has a large and active membership of firms and individuals who maintain a high community visibility. Their monthly luncheon meetings are frequently open to the public and their programs and service activities promote excellent, broad-based relationships. Membership fees are reasonable.

Entertainment

Entertainment is widely available in Guatemala City, and the scope is quite ambitious. Guatemala City boasts a 2,000-seat National Theater that hosts plays, dance performances, and concerts. The National Symphony Orchestra and the National Ballet each have a wide repertoire that is expanding each year. Several small city theater groups perform everything from musical comedy to serious drama. Guest artists and performers, often traveling under the sponsorship of the U.S. Government, are consistently well received, and add fur-

ther dimension to the performing arts in Guatemala.

Recent U.S. films are shown at a number of theaters in Guatemala City, usually with Spanish subtitles. Mexican, Italian, French, and Argentine films are also featured, although less frequently. Guatemala City has several motion picture theaters, some of which are clean, modern, and as pleasant as any in the U.S.

Guatemala's art world is lively, especially the painting and sculpting. The binational center has at least one monthly exhibit, and frequent exhibits are held in the National Bank Building and smaller city galleries. Prices for art works, however, are comparable to those in the U.S. The National Palace displays examples of Spanish colonial art, and is decorated with vivid murals depicting the area's pre-colonial and Hispanic history. Several newer government buildings are decorated with facades of attractive modern sculpture.

One of the best sources of reading material is the IGA (the binational center) library, which has a collection of over 8,000 volumes in English and Spanish, and a bookstore offering current material. The American Club provides its members with a lending library of fiction and nonfiction best-sellers, and the Union Church maintains a library. Books are also available in commercial bookstores at import prices.

In addition to the first-class dining rooms of the major hotels, numerous good restaurants offer specialties ranging from typical dishes to French cuisine and Chinese food. Several popular restaurants specialize in "Argentine-style" beef. Many of the American fast food chains are represented in Guatemala.

Antigua

Antigua, previously named Ciudad de Santiago de los Caballeros de Guatemala, and sometimes called Antigua Guatemala, is located in

the south-central part of the country, less than an hour by car from Guatemala City over a good road. Once a metropolis rich in beauty and culture, its mossy arches, well-preserved architectural ruins, and quiet parks and gardens are reminders of the magnificence of a bygone era.

Antigua was founded in 1542 by survivors of nearby Ciudad Vieja, which was destroyed by an earthquake and a flood. The city became the capital of Spanish Guatemala and, by the 17th century, was flourishing as one of the richest capitals of the New World, rivaling Lima and Mexico City. By the 18th century, Antigua's population was over 100,000; the university was the center of the arts and learning and the churches, convents, monasteries, public buildings, and houses were characterized by extreme luxury. Situated amongst three volcanoes (Agua, Acatenango, and Fuego), Antigua was destroyed by two earthquakes in 1773. The capital was moved to Guatemala City a few years later.

Today, Antigua is a picturesque city of ruins and old, restored homes. Buildings are characterized by Spanish facades, patios, and arcades. With a population over 30,000, it is also a commercial center in a rich coffee-growing region. Now a major tourist center, Antigua has good, attractive hotels, one with a swimming pool, and all well-g geared to tourist traffic. Shopping in Antigua is considered delightful. Spectacular festivities are held here during Holy Week. Those planning to visit during this period should make hotel reservations well in advance.

Visitors to Antigua will delight in its many interesting churches and landmarks. The Cathedral of San José, built between 1543 and 1680, was a magnificent structure, featuring 16 chapels, 60 cupolas, vaulted archways, high naves, and excellent paintings and sculptures. The facade and much of the wall structure stand today, along with the ruins of several domes. Excavation

in 1935 revealed crypts beneath the cathedral. One is open to visitors and contains an altar, crucifix, and statues of saints. The conquistador of Guatemala, Don Pedro de Alvarado, is buried beneath the cathedral in an unidentified tomb. The present Church of San José was made from two of the original 16 chapels, which were restored in 1854. The cathedral was damaged in the 1976 earthquake, but has been reconstructed. Other interesting churches include La Merced Church, with lacy white stonework on its facade; and San Francisco, covering two square blocks, with its huge bell that tolls annually one stroke for each year of Guatemala's independence.

A few mansions, built during the colonial era, have been restored. Casa Popenoe, the House of Bells (converted into a shop), and the House of Lions all feature an austere outside wall encircling patios that contain fountains and gardens.

Ciudad Vieja (Old City) is about four miles from Antigua's central plaza, near the base of the volcano. The city was destroyed when it was engulfed by the eruptions of the volcano, Agua, in 1541. Parts of the city have been excavated. The church, built in 1534, was excavated intact; the third story of the governor's palace, built in 1527, has been exposed, but the first two floors remain buried.

There are several interesting Indian villages in the Antigua area that are accessible by car. Santa María de Jesús is less than seven miles from the foot of Agua volcano. Horseback and hiking expeditions to the volcano originate here. Just below Santa María de Jesús on the mountain slope is San Juan del Obispo. It is the site of the palace and former retreat of Antigua's colonial bishop; the palace is currently being rebuilt. Known for its hand-woven textiles, the village of San Antonio Aguas Calientes is five miles from Antigua.

OTHER CITIES

Situated in the mountains of south-east Guatemala, the city of **AMATITLÁN** lies on the shores of Lake Amatitlán, 12 miles southwest of Guatemala City. The lake is badly polluted, however, and swimming is no longer safe. With a municipal population over 33,000, Amatitlán is the center of a popular weekend resort area for Guatemala City residents, and is particularly noted for its scenery. Beautiful vacation homes are built around the lake-shore and hot springs may be found throughout the region. Coffee and sugar plantations are also located in the area. Native skin divers find well-preserved relics of Mayan religious ceremonies that took place at the natural hot springs that empty into the lake. Fragments of pottery discovered on the bottom of the lake indicate that a cemetery of an ancient city could be buried in the silt.

CHICHICASTENANGO, about 90 miles west of Guatemala City, is the center of the Quiche Indian culture and a principal sight-seeing attraction. Located in the heart of the highlands at about 7,000 feet above sea level, Chichicastenango became the spiritual center of the Quiche following their defeat by Pedro de Alvarado in 1524. Often called Santo Tomás, the town is quaint and charming, with a main plaza connected by a maze of winding streets. It is the site of one of the most colorful markets in Central America. On market days, Thursday and Sunday, Chichicastenango is crowded with Indians in their colorful clothing. On Sundays especially, they practice their semi-pagan religious rites in the two ancient Roman Catholic churches on the main plaza. In the Dominican monastery, the famous Popul-Vuh manuscript of Maya-Quiche mythology was discovered. There are also several excellent collections

of Indian relics, many of which are carved in jade.

CHIMALTENANGO is located 30 miles west of Guatemala City in the central highlands. This market center of over 30,000 was founded in 1526; today, its residents grow grains, sugarcane, and livestock. Brick-making is an important industry. Chimaltenango is noted for its church built on the Continental Divide, where water flows around the foundation—half to the Pacific and half to the Atlantic.

CHIQUMULA lies 70 miles east of Guatemala City on the Río San José. The city has been ravaged by earthquakes, especially in the late 1700s during the colonial period. A colonial church remains, in ruins. Chiquimula's hinterland produces fruit, tobacco, sugarcane, and cattle. The city is linked to the capital by road and railroad and has a population of approximately 42,600.

COBÁN is situated in a rich coffee-growing area about 60 miles north of Guatemala City. Although an all-weather road connects the city to the capital, it is more easily accessible by plane. The hillside church, El Calvario, built in 1559, is located just outside of Cobán. Indian villages are also nearby and are known for their silverwork. Tourist attractions near the city include ancient Mayan pyramids and the Lanquin Caves, a series of underground grottoes stretching nearly 250 miles. The population of Cobán is approximately 23,000 (1989 estimate).

The town of **ESQUIPULAS**, located 75 miles east of Guatemala City, is known for its church that contains the figure of the Black Christ, revered by the Indians. Each year, more than one million pilgrims from Central America and Mexico visit the Black Christ. The six-foot image of Christ, completed in 1594, is made of balsa wood. The population of municipal Esquipulas is about 18,800.

Once a stronghold of the Itzá Indians, **FLORES** is located in a vast tropical jungle area in northern Guatemala. The town, with a population of about 14,000, is on an island in Lake Petén Itzá and is an export center for chicle, rubber, sugarcane, and lumber. It is accessible by road or plane but, during the rainy season, mud and flooding make driving hazardous.

HUEHUETENANGO is an old mining city on the slopes of the Altos Cuchumatanes Mountains, 75 miles northwest of Guatemala City. The name means Place of the Ancients, and ruins of an ancient Indian settlement called Zaculeu are located nearby. Lead, copper, and silver are mined in this city, which is also a major trading area for the local Maya Indians. Corns, beans, and potatoes are grown near the city. The estimated population of Huehuetenango is 37,200. The main Pan-American Highway is close by.

In the southwest, 60 miles southwest of Guatemala City, lies **MAZA-**

TENANGO. This commercial and manufacturing city provides a link between Pacific ports and the interior. Coffee, sugarcane, cacao, fruits and, especially cotton, are major crops. Mazatenango is connected to Guatemala City by road and railway.

PUERTO BARRIOS is located in eastern Guatemala, about 150 miles northeast of Guatemala City on the Bay of Amatique, an arm of the Caribbean's Gulf of Honduras. Named for Guatemalan politician Justo Rufina Barrios, Puerto Barrios is the capital of Izabel Department and the country's major port. Leading exports are coffee and bananas. Puerto Barrios had a population of 38,000 (1989 est.), is the terminus of the International Railways of Central America, and also is the eastern seaport for El Salvador. The city sustained heavy damage from the earthquake of 1976.

QUEZALTENANGO is Guatemala's second largest city, located in the western highlands about 75 miles west of Guatemala City. It can be reached in about three-and-a-half hours by highland route over the Pan-American Highway, which is paved all the way and generally in good condition. A mountain town at about 7,600 feet, it has a cool, invigorating climate and clean air. Its interesting old market offers excellent textiles and handicrafts. The city also has a multilevel shopping center. The development of hydroelectric power has helped Quezaltenango become one of the Central America's leading industrial cities. Principal industries in the city include mills, breweries, and textile factories. As the site of the ancient Quiche kingdom of Xelaju, Quezaltenango is also noteworthy for its hot sulfur baths and mineral springs. Many of Guatemala's best-known scholars, musicians, and writers have lived in the city. The population is approximately 90,000.

SAN JOSÉ, a commercial port on the Pacific Coast, is two hours from Guatemala City over a paved road. The nearby beaches of Chulamar, Likin, and Iztapa offer surf bath-

ing—limited, however, by a strong undertow at certain hours, and occasional sharks. The beaches are black volcanic ash, which is extremely hot in direct sun. Water-skiing, swimming, and fishing are possible on the canal and river that empty into the Pacific near Iztapa. Deep-sea fishing excursions can be arranged. Deer, wild pig, duck, and dove are also hunted in this area. The population is about 18,000.

ZACAPA is the capital of Zacapa Department in the eastern region, 25 miles from the Honduras border. This old community grew fast in the late 19th century with the completion of the Puerto Barrios-Guatemala City railroad. It now has approximately 34,000 residents. A principal railway junction, Zacapa is known for its cheese and cigars. Growers from the hinterland ship their products to the city; yields include corn, beans, sugarcane, and livestock. The 1976 earthquake caused extensive property damage.

COUNTRY PROFILE

Geography and Climate

Guatemala is the most northern and populous of the five Central American countries. Occupying 42,042 square miles, it is about the size of Tennessee. It is bordered on the north and west by Mexico, on the southeast by Honduras and El Salvador, on the east by Belize and the Caribbean Sea, and on the south by the Pacific Ocean. Guatemalan coastlines cover about 200 miles on the Pacific Ocean and 70 miles on the Caribbean.

The country is roughly divided into four geographic regions: the central-western highlands, the low northern plateau which is largely jungle, the southern volcanic regions of the Sierra Madre, and tropical coastal lowlands. The temperate mountain regions are the most densely populated.

Guatemala City's rainy season is May through October and its dry season, November through April. Temperatures are generally moderate during both seasons, ranging from an average low of 53°F in January to 60°F–85°F in April. Frost and snow are unknown, and flowers bloom year round.

Rainfall is heaviest from June through October; the annual average is approximately 52 inches. The wet months can cause mildew damage to clothing, shoes, luggage, and upholstered furniture. Frequent airing and the use of heating units in closets helps to prevent mildew. Long-stay travellers should consider bringing portable dehumidifiers. During the dry season, days are clear, and the sun is hot at midday with chilly to cold mornings and evenings. During these months it is dusty, foliage turns brown, grass and shrubs wither, and gardens must be watered.

Guatemala has 33 volcanoes, 4 within view of the city. Although most are inactive, Pacaya, about 27 miles south of Guatemala City, erupts occasionally with lava flows to nearby localities. Fuego, about 30 miles from the city, periodically produces impressive displays visible from Guatemala City.

Earth tremors are common. In 1976, a devastating earthquake struck Guatemala. Some 27,000 people were killed and over 1 million left homeless. Damage was greatest in areas with adobe housing. The modern sections of Guatemala City suffered light-to-moderate damage, but most of the city has been repaired. Before 1976, the last major earthquake to cause considerable damage occurred in 1917.

Population

The 2000 estimated population was 12.7 million—some 3 million of whom live in the capital and its suburbs. The annual population growth rate is about 3%. An estimated 43% of the nation's population is culturally Indian. The remainder, which

includes Caucasians and people of mixed descent, speak Spanish and wear Western dress. Most of the small black population lives in the Caribbean coastal area.

Spanish is the principal urban language. It is necessary to have at least a basic knowledge of Spanish for day-to-day living. At least four major Indian languages and over 20 dialects are predominant in the villages where Spanish is not widely spoken. Many Indians, descendants of the Mayans, maintain ancient customs and wear colorful and distinctive regional dress. Many practice traditional Mayan forms of worship, often mixed with Christianity.

Public Institutions

Guatemala's 1985 Constitution and 1993 constitutional reforms provide for a popularly elected President and Vice President, a unicameral legislature representing the country's 22 departments, and an independent 13-member Supreme Court. All officials serve for 4 years.

Municipal officials are also elected. Political power has been concentrated in the executive branch, consistent with Hispano-Roman tradition. Department governors are appointed by the central government. Approximately 19 parties span a political spectrum from right to moderate left. The executive branch consists of 13 ministries: agriculture, livestock, and food; communications, transportation, and public works; culture and sports; economy; education; energy and mines; finance; foreign affairs; government; labor; national defense; public health and social welfare; and urban and rural development.

Autonomous or semiautonomous public institutions include the Guatemalan Telephone Company (GUA-TEL), Planning Council, Institute for Agricultural Transformation (INTA), the Electrical Development Institute (INDE), and the Bank of Guatemala.

As in much of Latin America, the national university, the University of San Carlos, is an institution of considerable importance and provides Guatemala with most of its technical experts and political leaders.

Arts, Science, and Education

Textiles and painting are Guatemala's primary art forms; many artists have gained international renown. "Artesania" thrives across the nation, producing colorful pottery, wood carving, and other objects. Exhibits by aspiring and established artists are held at the now autonomous Binational Center, Instituto Guatemalteco-Americano (IGA), and in other galleries. The Patronato de Bellas Artes promotes artistic expression and the preservation of Guatemala's rich heritage of both Indian and Spanish colonial art forms. To further bolster the arts, the government has recently boosted funding to the National Theater complex and a new corporate body modeled after the National Endowment for the Arts.

The National Symphony Orchestra and the National Ballet Company perform as funding permits. The Biannual Paiz Cultural Festival showcases every February in odd years, the performing and plastic arts.

Guatemala's national instrument, the marimba, known locally as "the voice of the trees," is played singularly or in groups of up to 20 musicians simultaneously playing five instruments. Though U.S. music, even "rap" with Spanish lyrics, is increasingly heard, marimba presentations still figure prominently in formal shows and at restaurants and theaters.

Perhaps the most interesting aspect of Guatemalan art and Indian culture is the profusion of native textiles. Guatemala's 23 ethnolinguistic groupings exhibit their different roots by distinctive costumes. The intricately hand-

woven or embroidered women's "huipiles," or blouses, are famous among textile connoisseurs throughout the world. Many are trying to protect both family/community weaving enterprises and this dying art itself from machines churning out lesser quality tourist wares. The modern Ixchel Museum, built according to U.S. specifications, on the campus of Francisco Marroquin University, not only engages in this endeavor, it houses permanent and changing exhibits of indigenous textiles, and conducts educational programs.

Although many village men have adopted Western dress, interesting men's costumes can still be seen in the Lake Atitlan region, Chichicastenango, and in the Province of Huehuetenango.

Theater consists mainly of semiprofessional organizations whose performances follow no regular season. Productions are held in small theaters, the Binational Center, or the city's modern, attractive National Theater complex. The School of Theater at the Universidad Popular and the Teatro de Arte Universitario at San Carlos University also offer performances throughout the year.

The Guatemalan scientific community is based in the universities, the National Meteorological Service, and the Academia de Geografia e Historia. Several research centers formed under the auspices of the Central American Common Market, including the Central American Nutritional Research Center, are also headquartered in Guatemala City. Most scientific effort is directed toward economic development.

The San Carlos University, the national campus that enrolls upwards of 70,000 students for minimal fees, was founded in 1676. All lectures are in Spanish. The Faculty of Humanities corresponds to a school of liberal arts in the U.S., offering courses in philosophy, education, and literature. Courses in the sciences, engineering, medicine, and law are also available. Begin-

ning in the 1960s, four smaller private universities, Rafael Landivar, Mariano Galvez, Francisco Marroquin, and Del Valle, opened their doors to students and have continued to grow: the four universities sponsor 20-odd "extension" campuses across Guatemala's departments.

For decades, scholars, researchers, students, and culturally oriented tourists have been lured to Guatemala for its rich anthropological and archeological attractions. Epigraphers stand awed before the secrets of Tikal, now a national park; historians delightedly burrow through the treasures of the Archivo General de Centro America and the Centro de Investigaciones de Mesoamerica (CIRMA) in Antigua.

Commerce and Industry

Guatemala's GDP for 2001 was estimated at \$20.0 billion, with real growth slowing to approximately 2.3%. After the signing of the final peace accord in December 1996, Guatemala was well-positioned for rapid economic growth over the next several years, though a financial crisis in 1998 limited its ability to achieve its potential growth rates.

Guatemala's economy is dominated by the private sector, which generates about 85% of GDP. Agriculture contributes 23% of GDP and accounts for 75% of exports. Most manufacturing is light assembly and food processing, geared to the domestic, U.S., and Central American markets. Over the past several years, tourism and exports of textiles, apparel, and nontraditional agricultural products such as winter vegetables, fruit, and cut flowers have boomed, while more traditional exports such as sugar, bananas, and coffee continue to represent a large share of the export market. Because of Guatemala's continued reliance on coffee exports, the recent downturn in world prices has contributed to Guatemala's rel-

atively slow growth over the past 2 years.

The United States is the country's largest trading partner, providing 35% of Guatemala's imports and receiving 27% of its exports. The government sector is small and shrinking, with its business activities limited to public utilities--some of which have been privatized--ports and airports and several development-oriented financial institutions.

Guatemala was certified to receive export trade benefits under the United States' Caribbean Basic Trade and Partnership Act (CBTPA) in October 2000, and enjoys access to U.S. Generalized System of Preferences (GSP) benefits. Due to concerns over serious worker rights protection issues Guatemala's benefits under both the CBTPA and GSP were reviewed in 2001. After passage of labor code reforms in May 2001, and the successful prosecution of labor rights violations against banana union workers dating to 1999, the review was lifted.

Current economic priorities include: Liberalizing the trade regime; Financial services sector reform; Overhauling Guatemala's public finances; Simplifying the tax structure, enhancing tax compliance, and broadening the tax base.

With 60% of all Guatemalans living in poverty, the country suffers from some of the worst mortality, illiteracy, malnutrition, and other social indicators in the hemisphere region. Providing \$30-\$50 million in annual assistance, USAID is working to address key constraints to Guatemalan development through the promotion of sustainable resource management, smaller and healthier families, improved basic education, enhanced trade and labor rights, and the sustained exercise of inalienable rights.

The headquarters for USAID's regional programs is also located in Guatemala. Through its regional programs, USAID promotes sustainable development throughout Central America, working with the

Central American Bank for Economic Integration, the Nutrition Institute for Central America, the Central American Commission for Environment and Development, the Permanent Secretariat of Central American Economic Integration, the Tropical Agricultural Center for Research and Education, the Inter-American Institute for Agricultural Cooperation, and a wide variety of nongovernmental organizations.

Transportation

Local

Buses, all private and independent, are the primary mode of public transportation within and between Guatemalan cities. In the capital, service is frequent, but most of the buses are old, smoke spewing, and noisy, and their drivers careless. Because of controversial increased prices and severe overcrowding on private buses, the city has recently inaugurated the use of converted semitrailers, with a capacity of 200 passengers, to offer express service along specified routes. Few buses are scheduled after 9 pm or 10 pm.; "ruleteros" (minibuses) pick up and discharge passengers along major streets until midnight. Taxis are available on a 24-hour basis, but are expensive and must be called by telephone or picked up at one of the several stations throughout the city. Use only recommended taxi companies such as those contracted by hotels. Since taxis are not metered, the cost should be settled before any trip. Tipping, though not expected, is always appreciated.

Regional

Interurban bus lines connect most towns and villages within the country. Although serviceable, these buses are often crowded and uncomfortable. Numerous tour agencies are available that offer comfortable transportation and guides at a reasonable cost; however, large-capacity rented vehicles and travel agency vans have been targeted by armed highway bandits.

Guatemala is a country brimming with natural beauty and color, and

travel into the countryside is a welcome respite from city living. Much of the country cannot be visited safely by surface transportation. Roadblocks are occasionally set up by thieves posing as military or police officers, and travel after sunset anywhere in Guatemala is extremely dangerous.

All-weather paved highways traverse the country between Mexico, El Salvador, and both seacoasts. Other roads, which are gradually being improved, vary from two-lane, gravel topped hard bed to single-lane dirt. During the dry season, most unpaved roads are passable, though often dusty and rough. In the rainy season mountain roads are treacherous because of poor markings, frequent landslides, and washouts. Driving to Mexico City takes about 3 days via the coastal route entering Mexico at Tapachula. San Salvador is about 4 1/2 hours by car from Guatemala City.

Drivers in Guatemala take more risks than those in the U.S.; one must drive defensively whether within the city and faced with cars coming in the opposite direction on a one-way street or along the highways where large semitrailers will pass on a blind curve at high speed. Guatemalan law is strict with all parties in an accident, and cars are often impounded.

Infrastructure problems common to many Third World countries are present in Guatemala. Main roads to the larger towns and cities are paved and generally fair though plagued by deep potholes, washed-out bridges, and, during the long, rainy season, sometimes impassable because of mudslides and large fallen boulders. The major road to El Salvador, along which is located one of the schools attended by Mission children, suffers from erosion and is continually undergoing construction efforts.

Bus service is available twice daily between Guatemala and El Salvador. Bus companies offer service from Guatemala to Mexico and Honduras but may require a bus trans-

fer at the borders. Travelers are urged to check with the Regional Security Office regarding guerrilla and criminal activity in the areas through which they plan to drive before planning any international travel. When traveling from El Salvador, the border crossing at Las Chinamas, El Salvador/Valle Nuevo, Guatemala, is preferred. When entering Guatemala from Honduras, the border crossings are at either El Florido or Agua Caliente. With all cross-border travel, travelers need plenty of time to complete border crossing formalities, which can be lengthy, in order to travel to a major town before dark. For group trips, chartered buses are available and border crossings are expedited.

Major car rental agencies, in convenient locations, offer car rental options, but rates are high, between \$35–\$50 a day for subcompact models. Insurance, both collision and liability, is required.

Tourism has recently increased between Guatemala and Costa Rica, with both the Costa Rican airline, LACSA, and Colombian airline, SAM, offering daily flights.

American Airlines provides three daily flights to and from Miami and one flight to and from Dallas each day. United offers daily service to and from Los Angeles, and Continental has one flight per day to and from Houston. The national airline, AVIATECA, has daily service between Guatemala City and Miami and Guatemala City and Los Angeles, and four flights per week to and from New Orleans, via El Salvador. AVIATECA also provides connections to Belize. TACA airlines offers a flight to Washington, D.C., and New York on a daily basis and provides connections to other Central American capitals. KLM, Iberia, and several other Latin American carriers also provide international connections.

Communications

Telephone and Telegraph

GUATEL, the government-owned and operated communications facility, provides internal and worldwide telephone service. Domestic rates are reasonable with the monthly usage rate averaging Q5. In 1995, a residential long-distance night call to Washington, D.C., cost \$8 for 3 minutes and \$2 for each additional minute. Direct-dialing is available 24 hours daily although service may be intermittent. An AT&T telephone calling card is useful in Guatemala. AT&T offers a more favorable rate on long-distance calling when the AT&T network is utilized. MCI and Sprint accounts also are operable in Guatemala City. The demand for new telephone lines and installations throughout the city has increased dramatically. GUATEL is currently in the process of modernizing their telephone network, which should facilitate the installation of new residential lines.

Telegraph service is also available through GUATEL to all worldwide locations. Internal usage is popular and fairly reliable. Western Union also provides a money transfer service to and from Guatemala.

Radio and TV

Guatemala City has over 65 Spanish radio stations. Thirty-four AM and 31 FM stations feature U.S.-style music, mostly of the pop hit parade variety. Some classical and jazz music programs are also available. News broadcasts can be heard three times daily on approximately 10 stations. Shortwave reception of VOA is good during the early morning or late evening hours. BBC programs (in English or Spanish) are also heard.

Five color TV channels, one government owned, broadcast a daily menu of mixed programs, including Spanish-dubbed U.S. series shows, feature films, Mexican soaps ("Tele-novelas"), and music revues. Two channels provide regular news programs in Spanish three times daily, at 1 pm, 6:30 pm, and 9:45 pm, and one channel offers an early morning

news broadcast from 7 am to 8 am. More than two dozen cable TV operators serve Guatemala City and offer a full range of U.S. programming in English. All major networks, with the exception of PBS, are available through cable, many transmitting 24 hours.

Newspapers, Magazines, and Technical Journals

Four morning and one afternoon papers are published daily in Spanish, including one official gazette. The two largest circulating dailies are *Prensa Libre* and *El Grafico*, both with ample international wire service news coverage. A weekly news magazine, *Cronica*, covers Guatemalan economic, political, and cultural news. English-language air express editions of the *Miami Herald*, the *New York Times*, the *Wall Street Journal*, and *USA Today* circulate at major hotels and newsstands. Latin American editions of *Newsweek* and *Time* appear promptly, and many popular English-language magazines and books are available throughout the city, although prices are double the U.S. price. Two locally published English-language news weeklies, *Central American Report* and *This Week*, contain regional political analyses. They are available only by subscription. Two, more widely distributed, weekly newspapers published locally, the *Guatemala News* and *Guatemala Weekly*, provide additional current event coverage for the English-speaking community.

Health and Medicine

Medical Facilities

Good, reliable medical services are available in Guatemala City. Competent and reputable doctors, dentists, ophthalmologists, and veterinarians are available. Most have studied or been trained in the U.S. or Europe and speak English. Specialization is common in most major fields and one or more physicians are available in each.

The major hospitals, clinics, and diagnostic laboratories are adequately equipped. The local supply of medicines, which can usually be bought without prescription, is adequate, but some may be difficult to obtain. If you take prescription drugs, bring a supply with you and arrange to have them sent to you as needed. If special medication is needed, bring a supply and a copy of the prescription.

Community Health

Guatemala City is about 5,000 feet above sea level. Healthy individuals rarely suffer ill effects from the altitude, though precautions must necessarily be taken to guard against overexposure to the sun's harmful rays. Guatemala's standards of sanitation are fair. Generally, health conditions in Guatemala City are good.

Diarrhea and amoebic and bacillary dysentery are not uncommon. These illnesses, as well as paratyphoid and typhoid fever, can be contracted from unpurified water and uncleaned vegetables. Hepatitis is endemic to the region. Safe drinking water remains a problem, but many Guatemalan communities are developing adequate supply and purification systems. Tuberculosis is the most serious contagious endemic disease and is prevalent in a large percentage of the Indian population. Although sanitariums exist, control of those infected with tuberculosis is inadequate, and the annual death rate from the disease is high. Smallpox has been eradicated.

In the coastal and other lowland areas of Guatemala, as well as nearby Lake Amatitlan, malaria is prevalent. Although a malaria eradication program is in operation, the incidence of the disease has increased significantly in the past few years. When traveling to these areas, appropriate prophylactic medication should be taken.

It is important to have window screens in residences to keep out disease-carrying mosquitoes and houseflies, and to eliminate or minimize breeding places in the immedi-

ate vicinity. The use of insect repellent is also recommended during times of the year when mosquitoes are more prevalent, and when traveling to lowlands and coastal areas.

Preventive Measures

Guatemala City's water supply is sporadic. During the dry season, water pressure occasionally drops so low that there is little or no water in many homes; in some instances, city water is turned off completely. Processed drinking water is delivered to the door and may be purchased in 5-gallon bottles for Q7.50. Most Americans use this or boil tap water to make it safe for drinking.

Although several dairies deliver pasteurized milk to homes, for consistency in quality and freshness, powdered or long-life shelf milk is recommended.

Locally purchased fresh fruits and vegetables should not be eaten raw, unless they can be peeled. Cooking is the only sure way to disinfect fresh fruits and vegetables. Another effective method is to immerse them in actively boiling water for one minute. Leafy vegetables treated in this manner will show only slight wilting on the outermost leaves, and the palatability of other sturdier vegetables and fruits will not be affected. An alternative method is to use a Clorox bleach solution for soaking fruit and vegetables.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Flights to Guatemala can be arranged from the U.S. on the Guatemalan government-owned airline, AVIATECA, or on TACA. In February 1991, a new Guatemalan airline, Aeroquetzal, began U.S. service between Los Angeles and Guatemala City. Good connections also are provided by other carriers. Some expatriates drive to Guatemala from the U.S. if they have the time and stamina. Drivers are cautioned

that during the rainy months (May-October) the roads in Guatemala can be treacherous because of washouts, landslides, and earth tremors that create temporary impasses. No American passenger ships come to Guatemala, and travel by ship via Panama and air to Guatemala is not a commonly used route.

A valid U.S. passport is required to enter and depart Guatemala, even though many people, including some U.S.-based airline employees, mistakenly believe otherwise. U.S. citizens returning to the United States from Guatemala are not allowed to board their flights without a valid U.S. passport. Therefore, U.S. citizens are strongly advised to obtain a U.S. passport before departing the United States. Certificates of Naturalization, birth certificates, driver's licenses, and photocopies are not considered acceptable alternative travel documents. While in Guatemala, U.S. citizens should carry their passports, or photocopies of their passports, with them at all times. Minors (under 18) traveling with a valid U.S. passport need no special permission from their parents to enter or leave Guatemala. U.S. citizens do not need a visa for a stay of 90 days or less (that period can be extended upon application). An exit tax must be paid when departing Guatemala.

U.S. citizens living in or visiting Guatemala are encouraged to register at the Consular Section of the U.S. Embassy in Guatemala City and obtain updated information on travel and security in Guatemala. You may now informally register with the American Citizen Services Section via e-mail to amcitsguatemala@state.gov. Your registry information should include your complete name, date and place of birth, U.S. passport number, itinerary, contact information in both the United States and Guatemala. You may wish to attach a scanned copy of your U.S. passport and/or e-mail it to your own address or to someone in the United States. This will enable you to easily retrieve a copy

of your passport to facilitate a replacement.

The latest security information is available from the Embassy, including its website (see below). The Consular Section is open for citizens services, including registration, from 8:00 a.m. to 12:00 noon and 1:00 p.m. to 3:00 p.m. weekdays, excluding U.S. and Guatemalan holidays. The U.S. Embassy is located at Avenida La Reforma 7-01, Zone 10; telephone (502) 331-1541 during business hours (8:00 a.m. to 5:00 p.m.), or (502) 331-8904 for emergencies during non-business hours; fax (502) 331-0564; Internet website - <http://usembassy.state.gov/guatemala/>.

Pets

All pets must be covered by certification of rabies inoculation. In addition, an import license issued by Guatemalan authorities is required for any pet arriving in Guatemala.

Currency, Banking, and Weights and Measures

The time in Guatemala is Greenwich Mean Time (GMT) minus six (or equivalent to Central Time in the U.S.).

The Guatemalan unit of currency is the *quetzalq*, which is on a par with the U.S. dollar. U.S. paper currency is widely accepted.

Various systems of weights and measures are used in Guatemala. Pounds and kilograms (2.2046 pounds) are the most common weight units, but more exotic units such as the *quintal* (100 pounds) are also used frequently. Gasoline is sold by the gallon (U.S.), but milk is sold by the liter. Common units of distance include centimeter, inch, foot, yard, *vara*, meter, kilometer, mile, and *legua*.

Disaster Preparedness

Guatemala is a geologically active country. Therefore, visitors should be aware of the possibility of earthquakes and volcanic eruptions, and the need for contingency measures. Occasional eruptions, such as those

in January-February 2000 of Pacaya Volcano near Guatemala City, have forced evacuations of nearby villages and briefly closed Guatemala City's international airport. The major earthquakes in El Salvador in early 2001 caused damage, injuries, and deaths in Guatemala, albeit to a much lesser extent than her neighbor to the east. Both the Caribbean and Pacific coasts of Guatemala are vulnerable to hurricanes and tropical storms from June through November. Mudslides and flooding during the May to November rainy season often kill dozens of people and close roads. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>.

Georgetown, Guyana

GUYANA

Co-operative Republic of Guyana

Major City:

Georgetown

Other Cities:

Bartica, Corriverton, Linden, New Amsterdam

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated August 1997. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

GUYANA, the territory once known as British Guiana, has been a republic within the Commonwealth since February 1970. Its colonial history dates to the 17th century, when the Dutch West Indies Company developed sugar plantations in the settlements of Essequibo, Demerara, and Berbice. The British gained control early in the 19th century and eventually united the three settlements as a crown colony.

Guyana is a young country which has suffered from political unrest, and is still a land of ferment and change. Its unusual racial situation combines African, East Indian, Amerindian, and British cultures and institutions, struggling to build

a sound economy. Guyana's topography includes a long, settled coastal area and a beautiful, isolated, and primitive frontier.

A tragic event in November 1978 brought worldwide attention to this small South American nation—900 members of a fanatic religious cult committed mass suicide in what came to be known as the Jonestown Massacre. Great numbers of the cult followers were American; U.S. Representative Leo J. Ryan and members of his party were ambushed and murdered when they arrived to investigate human abuses at cult headquarters.

MAJOR CITY

Georgetown

Guyana's capital city, Georgetown (pop. approximately 254,000), is located at the mouth of the Demerara River on the northeast coast of Guyana. Because it lies below sea level, it is protected by a seawall. Because there are no passable roads connecting it with any of the neighboring countries, and because its port is visited only by cargo vessels, Georgetown's only link to the outside world is by air. The only other communities of any size in Guyana

are New Amsterdam (pop. 25,000), 70 miles east of Georgetown at the mouth of the Berbice River, and the bauxite mining town of Linden (pop. 35,000), 67 miles south on the Demerara River. Inhabitants of the three principal urban areas are predominantly African; those of the countryside are mainly East Indian.

Declining national income during the 1980s and deteriorating infrastructure has resulted in substandard living conditions for most Guyanese citizens. Beginning in 1991, however, because of privatization, foreign investment, and the government's economic recovery program, the gross domestic product (GDP) has grown at rates in excess of 6% a year, and wages and benefits, employment, and working conditions have improved. Most consumer goods, which virtually disappeared during the 1980s, are now widely available again but still unaffordable for many Guyanese. Many basic services such as electricity, transportation, and health care, remain limited and unreliable.

About 310 third country nationals and 1,135 U.S. citizens live in Guyana, most of them dual nationals born in Guyana or born abroad of Guyanese parents. There are 12 foreign missions in Georgetown: the High Commissions of the U.K., Canada, and India, and the embassies of

Street in Georgetown, Guyana

EDP Photos/Richard Lobban. Reproduced by permission.

Brazil, Colombia, Suriname, Venezuela, the People's Republic of China, Russia, Cuba, North Korea, and the U.S. The U.N. Development Program, the European Union, the World Health Organization, the Inter-American Institute for Cooperation in Agriculture (IICA), and the Inter-American Development Bank also have offices in Georgetown. The Caribbean Community (CARICOM) Secretariat is headquartered here. Most of the other major countries have nonresident ambassadors who visit Guyana from time to time and a dozen or so are also represented by Guyanese acting as honorary consuls.

Food

Grocery stores and public markets in Georgetown offer a variety of meat, poultry, fish, and seasonal fresh fruits and vegetables. Sanitary conditions in the markets are poor.

Common locally grown vegetables include cassava, plantains, yams, breadfruit, eddoes (a dry variety of sweet potato) and eggplant. These are high in carbohydrates and available in season only. Green and yellow vegetables—bora beans (a thin green bean), leaf lettuce, cabbage, pumpkin and various squash, cucumbers, onions, potatoes, spinach, callaloo, and tomatoes—are

available throughout the year. Local celery is adequate for seasoning, but unsuitable for relish trays. Green onions (scallions), small red and green peppers, and fresh thyme are usually available. Parsley is expensive and occasionally found. Locally grown rice that has been parboiled before packaging is cheap and a staple in the Guyanese diet.

Local oranges, grapefruits, tangerines, watermelons, bananas, pineapples, mangoes, papaya, yellow melons, and avocados are good and plentiful, although some are available only seasonally.

A wide variety of canned foods, including canned baby foods and pet food, are available but expensive.

Local meats are generally available and special orders can be placed at several meat stores. Fish, chicken and pork are usually good; prawns (shrimp) and red snapper are especially tasty. Cheese, butter, milk (UHT, evaporated, and powdered, but not fresh), and all other dairy products are available at most grocery stores.

Clothing

Dress for tropical weather. Summer clothing is worn year round. Cotton wash-and-wear and synthetic knit fabrics are suitable. Silks are

impractical because of the need for expert dry-cleaning. Nylon is an easy-care fabric, but uncomfortable in the heat. Woolens are generally not worn, except for men's tropical-weight wool suits.

Men: In the office most men wear slacks with a short-sleeved shirt and tie. Suits and slacks can be made to order locally.

Most social occasions are informal or casual. Casual events call for short-sleeved sport shirts or the guayabera. Reasonably priced short-sleeved guayaberas can be purchased locally. Long-sleeved guayaberas (difficult to purchase locally) may be worn in place of a suit on some occasions.

Women: Sport and straw hats are worn frequently for outdoor events because of the strong sun. Few women wear stockings. Slacks are popular, but shorts are worn only for sports or at home. Long dresses are occasionally worn but cocktail dresses are popular for receptions and dinners. In the office, most women wear cotton dresses or blouses and skirts. Short-sleeved cotton or cotton-blend sweaters are also worn. Light sweaters or stoles are sometimes needed. Bring a good supply of shoes, sandals, sneakers, old shoes, and rubber boots. A fold-up plastic raincoat is useful, as is an umbrella. Bring a supply of lightweight undergarments.

Children: Guyana is beginning to produce some good children's clothing, particularly inexpensive, attractive dresses. Local clothing is limited in selection, size, and price, and even items of poor quality cost more than in the U.S. The American School does not require uniforms nor does the dress code prohibit jeans, shorts, sneakers, or jumpsuits.

Supplies and Services

Although toiletries and medicines can be purchased locally, the cost is usually high.

Laundry service is poor and slow. The only local dry-cleaning service

in town is reasonably good. Georgetown has numerous seamstresses and tailors, whose work is inexpensive but varies in quality. Shoe repair is adequate. Most beauty shop operators have been trained in the U.S. or U.K. and offer good services. Most shops are unisex and offer acceptable haircuts.

Religious Activities

There are many religious denominations in Guyana, and Georgetown has churches, temples, and mosques of many faiths, although the order of service and the music may differ from U.S. churches. The East Indians are mainly Hindu or Muslim. The largest Christian church is Anglican (Episcopal), with about 110,000 members; Roman Catholics number about 60,000. Other denominations include Methodist, Seventh-day Adventist, Presbyterian, Christian Scientist, Lutheran, Jehovah's Witnesses, Baptist, Pentecostal, Church of Christ, Moravian, Assembly of God, Baha'i, and the Church of Jesus Christ of Latter-day Saints.

Education

Most Americans and international children attend the Georgetown American School, an institution sponsored by the U.S. State Department through its Office of Overseas Schools, from nursery through grade 12. Founded in 1971, the school's goal is to provide an education equal to that offered at better American public schools. American texts are used in all courses. The faculty is well qualified and includes several Americans, one of whom is the Director. In recent years enrollment has steadily increased and for 1996–97 stands at 115. Class size is quite small and individualized instruction is the norm. In 1993–94, grades 10–12 were offered for the first time.

The school year runs from September through mid-June. The school day begins at 7:45 and ends at 2:15. Classes in music, art, foreign languages, and physical education are an integral part of the curriculum. The school has a respectable library,

a science lab, and an adequate number of computers.

The Parent Teachers Association (PTA) is composed of the parents of students enrolled at the school. School policy is set by a seven-member Board of Directors, six of whom are elected annually by the parents, and one, usually the Embassy administrative officer, is appointed by the U.S. Ambassador.

Special Educational Opportunities

Few opportunities for advanced study or adult education exist in Georgetown, other than those offered by the University of Guyana. Foreign language instruction in Spanish and Portuguese is offered to the public by the Venezuelan and Brazilian embassies. Language instruction in German is also available. A few music teachers instruct beginning and intermediate students, but facilities for advanced musical education are nonexistent. Ballet and modern dance lessons are available to adults as well as children.

Sports

There is a nine-hole golf course about 10 miles from town which is rough but playable. There are several tennis courts and tennis and golf tournaments and competitions are common. The Pegasus and Tower Hotels and the Guyana Bank of Trade and Industry (GBTI) offer swimming, tennis, and weightlifting facilities for a membership fee. Annual dues for access to tennis and swimming at the Pegasus for a family with children are about US\$600. GBTI is more reasonable. The Georgetown Club has a restaurant, bar and squash court, and annual dues are low.

Bicycles are widely used here for transportation among Guyanese, and bicycle racing is a popular sport. The National Park is an area where many people cycle, jog, or walk. It is not recommended that Americans walk/jog alone at the National Park or the seawall late in the evenings or early in the mornings.

Cricket and soccer are the two most popular sports for Guyanese. There are also rugby and basketball clubs and several karate groups. Another interesting sport, but not so common, is goat racing.

Touring and Outdoor Activities

Guyana's tourist attractions are not easy or cheap to get to. The east-west road offers endless views of rice and sugar plantations and the pavement on the north-south road ends at the bauxite mines. Few foreigners swim in either the ocean or the Demerara River. Ocean currents from Brazil carry silt from the Amazon to Guyana's coast and silt from Guyana's own rivers makes the ocean the color of thick coffee with mudflats to match. However, for those willing to travel by boat, truck, or small plane, Guyana offers a vast wilderness of undiscovered eco-tourism sites. Excursions can be arranged independently or through local travel agencies to sugar plantations (most of which have guest houses), jungle creeks, Amerindian villages, rustic tourist lodges (Timberhead, Shanklands, Madewini, and Kaow Island) and spectacular waterfalls. Guyana offers fabulous hunting (duck, deer, wild hog, and other exotic animals) and fishing. Birdwatchers find a large selection of species.

Kaieteur Falls, Guyana's best-known and most heavily visited tourist attraction, is five times higher than Niagara, but has no protective railings or tourist shops. Located in thick jungle 160 miles southwest of Georgetown, it is usually reached by chartered aircraft, but some choose to make the difficult 4-day overland trip by truck/boat/hiking.

Several ranches in the Rupununi Savanna offer comfortable overnight accommodations and various activities including riding, hunting, fishing, and swimming. Karanambo Ranch, which offers refuge to the endangered giant river otters, has been the subject of a *National Geographic* television special.

Adventurous types will want to consider investing in a sturdy four-wheel-drive vehicle. Although not essential, a winch, heavy-duty mud tires, and even a liftkit are all useful for driving trips deep into the interior. The adventurous will also want to consider investing in a boat of some type, as the best sporting and travel opportunities in the interior are on Guyana's numerous rivers and creeks. Individuals have found canoes, foldable kayaks, and aluminum boats with 25-horsepower outboard motors useful and enjoyable. The key to boating in Guyana is having a craft which your vehicle can transport from the road to the river. This generally means having both a four-wheel drive vehicle and a boat that can fit on or inside it. A boat that requires a trailer is restricted to those major rivers which can be reached by paved road.

The Swims Club, about 40 minutes south of Georgetown on the Demerara, offers not swimming but storage facilities and loading ramps for boats. Some people keep larger boats with inboard engines there for excursions on the river.

Points of interest in Georgetown include the Botanical Gardens which have an excellent zoo and an adjacent playground with slides, swings, etc. The National Museum in Georgetown is small, but its exhibits on the history of Guyana, Amerindian life and customs, gold and diamond prospecting methods, animals, and plants are well worth a visit.

For a change of scenery, vacation trips are possible to Antigua, Barbados, St. Lucia, Trinidad and Tobago, Grenada or other West Indian islands, and also to neighboring Venezuela, Suriname and French Guiana. The islands are popular for their excellent beaches and more cosmopolitan atmosphere. However, flight schedules usually require more than a 2-day weekend. Flying time is about 1 hour to Trinidad or 2 hours to Barbados or Antigua. Round-trip fares to those islands are about US\$150. Hotel prices are high in season, mid-December to

mid-April, but considerably lower during the off-season. Some hotels give discounts to diplomats or residents of the Caribbean community.

Entertainment

The Guyana Theater Guild and other drama groups have several good productions throughout the year, but only one auditorium in Guyana, the National Cultural Centre, is air-conditioned. Many video clubs offer a wide selection of tapes. Movie theaters are not usually patronized by foreigners.

Occasional outdoor concerts by the Guyana Police Force and the Guyana Defense Force Bands usually are held in the Botanical Gardens or at the seawall bandstand. Visiting musical or dance groups occasionally perform in Guyana, usually under sponsorship of one of the embassies. The National School of Dance also offers occasional performances.

Social Activities

Four or five restaurants in town, including the Hotel Tower and Pegasus, allow private entertaining—the Cara Lodge Bottle Restaurant opened during 1996 and may be the best. However, most Americans entertain in their homes with informal cocktails or buffets. There are several floating bridge, poker, and games nights in Georgetown that many Americans participate in. Several charity balls are given throughout the year. Rotary, Lions, and Toastmasters Clubs all have active memberships in Georgetown.

CORRIVERTON lies 70 miles southeast of Georgetown, in the far northeastern corner of Guyana. This city of about 11,000 is on an estuary of the Courantyne River, separating Guyana from Suriname. The villages of Springlands and Skeldon were united in 1970 to form Corentyne River Town, which later became known as Corriverton. It is a small port, as well as the terminus of a road from Georgetown. Area agricultural products include sugarcane and rice; cattle are also raised. Most residents of Corriverton are East Indian.

LINDEN is located 40 miles south of Georgetown on the Demerara River. It serves as a processing point for the bauxite mined extensively in the region. Linden's population of about 35,000 is linked to Georgetown by road and air.

NEW AMSTERDAM is a commercial and manufacturing center for Guyana's northeast lowlands. Situated on the Berbice River 50 miles southeast of Georgetown, New Amsterdam was built by the Dutch in 1740. By 1790, it had become the seat of colonial government, only to be seized by the British 13 years later. An Anglican cathedral bespeaks the British influence in an otherwise Dutch atmosphere. Agricultural activities include sugarcane and rice production, as well as cattle raising. The city is linked to Georgetown via highways and railroad. The population of New Amsterdam is approximately 25,000.

OTHER CITIES

BARTICA, despite its small size, plays a big role in Guyana. Situated at the confluence of the Essequibo, Mazaruni, and Cuyuni Rivers, 40 miles southwest of Georgetown, it is a commercial center of a few thousand residents. Small oceangoing ships dock here, while critical roads to interior gold and diamond fields start in the town. Bartica has air service to Georgetown.

COUNTRY PROFILE

Geography and Climate

Guyana lies on the northern coast of South America, bounded on the north by the Atlantic Ocean, on the southwest and south by Brazil, on the northwest by Venezuela, and on the east by Suriname. Its 285-mile coastline extends from Punta Playa

(near the mouth of the Orinoco River) in the northwest to the Corentyne River in the east. Guyana is 82,980 square miles in area, about the size of Kansas or Idaho.

The low-lying coastland, one of Guyana's three geographic regions, is a flat, often swampy strip of silt and clay about 5½ feet below sea level at high tide. Man-made concrete walls and earthen barriers keep the ocean back and prevent floods. Canals with sluice gates permit drainage to the rivers, and at low tide, to the sea. Most of the country's population and agricultural activity are concentrated in this narrow coastal strip between the Pomeroon and Corentyne Rivers.

The mountain region includes the Pakaraima Range, which lies along the western boundary between the Waini and Rupununi Rivers; a sandstone plateau 22 miles long and more than 9,000 feet above sea level; and the Kanaku Mountains, which lie on both sides of the Rupununi River near the Brazilian border.

The intermediate region, to the east and south of the coastal and mountain regions, is the largest of the three areas. It is mainly tropical forest and jungle, except for the Rupununi Savanna on the southwestern border with Brazil. Large rivers and their tributaries form a vast network of waterways. Rapids and falls hinder navigation and development along the larger rivers. The principal rivers are the Essequibo, Demerara, Berbice, and Corentyne. The Cuyuni, Mazaruni, and Rupununi are major tributaries of the Essequibo River.

Guyana's climate is typical of most tropical countries. Humidity ranges from an average low of 68% in October to 77% in May, and an average high of 79% in October to 86% in May through August. The average annual mean (AAM) is 73% in the afternoons and 83% in the mornings. The high humidity can cause mildew, but air-conditioning and sometimes dehumidifiers and lightbulbs in closets are used to prevent

its occurrence. Minimum temperatures in Georgetown, on the coast, range between 22–26°C (71–80°F) year around, with an AAM low of 75. Maximum temperatures range between 28–32°C (83–90°F), year round, with an AAM high of 86. The sea breezes (east-northeast trade winds) significantly mitigate the heat on the coast.

The coastal area typically has two wet seasons: May to mid-August, when about 40% of the total annual precipitation falls, and December to mid-January, which receive another 20%.

However, occasional rain may fall at any time of the year. Georgetown and the coast average 90 inches of rainfall annually; in the interior, 60–150 inches occur.

Population

Guyana's population of about 703,400 is divided between two major ethnic groups: Guyanese of East Indian origin, estimated at 49%, and those of African origin, 32%. Amerindians constitute about 6%, those of mixed heritage, 12%, and persons of Chinese and European origin comprise about 1%. About 60% live in rural areas; 30% of the labor force is in agriculture. About 50% of the population, including most Afro-Guyanese, is Christian, 9% Muslim, and 33% Hindu.

Guyana celebrates two Hindu and two Muslim holidays as well as Christmas and Easter. Dietary restrictions must be considered when entertaining Guyanese: pork should not be served to Muslims, nor beef to Hindus. Some Muslim Indians do not eat crustaceans, and some Guyanese are vegetarians.

Each ethnic group has made a unique contribution to the character of life in Guyana: the food and the music and dances of the Africans, East Indians, and Amerindians; and the language and legal, commercial, governmental, and educational structures of the British colonists.

Public Institutions

Guyana was a colony known as British Guiana until May 26, 1966. The Co-operative Republic of Guyana was created in 1970. Under the 1980 constitution, Guyana has a mixed parliamentary and presidential system of government. The President and members of Parliament serve for 5-year terms, unless earlier elections are called.

There is a 72-member unicameral parliament, elected by proportional representation, and an independent judiciary and an ombudsman. The Constitution provides for civil rights and the protection of minorities. The two main political parties are the largely Afro-Guyanese People's National Congress (PNC), which governed Guyana for 28 years, and the largely East Indian People's Progressive Party (PPP), which in October 1992 won Guyana's first free and fair elections after independence.

Principal social, philanthropic, and commercial organizations include the Georgetown Chamber of Commerce and Industry, Jaycees, Rotary, Lions, Kiwanis, and Toastmasters Clubs. The leading humanitarian organization is the Guyana Red Cross Society. The Boy Scouts, YMCA, and YWCA are active. Most denominations including the two largest, the Anglicans and Catholics—are represented on the Guyana Council of Churches.

Arts, Science, and Education

The University of Guyana is the mainspring of intellectual activity but is limited in scope. Located just outside of Georgetown, it offers degree programs in accounting, forestry, law, sociology. A university council under government authority administers the University's approximately 2,300 students, who are hampered by decaying facilities and a lack of books and qualified teachers.

Contemporary dance, steel bands, and drama are among Guyana's cul-

tural attractions. Scientific work, mostly agricultural in nature, is carried on at state-sponsored stations throughout the country.

Commerce and Industry

Guyana's economy is dominated by agriculture and mining. Principal products are sugar, rice, bauxite, and gold. The most important gold mine, operated by Canadian firms, is the largest in Latin America. The state-owned bauxite and sugar companies are in World Bank-sponsored rehabilitation programs that may result in their eventual privatization. Timber, rice, and fishing assets have been divested, and an American company purchased 80% of the phone company in 1991. As a result, international telephone and fax service is excellent. Internet service is available from local service providers. Increased demand for machinery in the mining and agricultural sectors is attracting American exporters to Guyana. Major U.S. firms are also involved in offshore oil exploration and the food and beverage industry. The Guyana Electricity Corporation is to be divested shortly.

Guyana trades mainly with the U.S., the European Community, Venezuela, Canada, and with neighboring Caribbean countries that belong to CARICOM. Trade with Brazil, Japan, and Cuba is also of some importance. In 1992 the U.S. supplied 38% of Guyana's imports and purchased 38% of Guyana's exports.

Transportation

Local

Most of Georgetown's streets are paved, but in need of repair. Fast-moving, crowded minibuses are a traffic hazard for Georgetown drivers. Taxis are inexpensive and much safer.

Outside of Georgetown, about 450 miles of paved roads run mainly along the coast and the populated east bank of the Demerara River. A

paved two-lane road runs south to the airport (27 miles). From the airport, a highway (in better shape than most roads) continues south to Linden (67 miles from Georgetown). Another main road runs from Georgetown east to Rosignol (65 miles), where the Berbice River can be crossed on a car and passenger ferry. On the eastern side of the river, at New Amsterdam, the highway resumes to the Corentyne River and the border of Suriname. The Corentyne, like the Berbice, is wide and unbridged, and only passenger ferry service is available.

Most of the 1,500 miles of unpaved roads and trails in the interior are passable by truck or four-wheel-drive vehicles, but only during the dry season. Speedboats, launches, and steamers service many river communities. Many miles of roadless swamps and jungle separate coastal Guyana from Venezuela. A laterite road from Linden to the towns of Lethem and Bon Fim on the Guyana-Brazil border is under construction, but about 60 miles remains to be finished. A floating bridge across the Demerara River opened in 1978. The Essequibo, like the Berbice, must be crossed by car ferry. In many respects, Guyana is like an island.

Regional

The main gateway to Georgetown and Guyana is Timehri International Airport, 27 miles from the city, 45 minutes by car. The government-owned Guyana Airways Corporation (GAC) has direct, nonstop flights to and from New York and Toronto. BWIA, a carrier based in Trinidad and owned by the Government of Trinidad & Tobago, provides daily service to and from JFK New York via Barbados and to and from Miami via Trinidad. It also flies from Guyana to Antigua and Jamaica. American Airlines flies daily between the U.S. and Trinidad and the U.S. and Barbados, but passengers on all the flights except the New York-Barbados flight, must overnight before taking BWIA, LIAT or Suriname Airways to Georgetown. LIAT (Leeward Islands Air Transport) operates between Geor-

getown and Barbados with connections there to all the eastern Caribbean islands as well as Puerto Rico and the Dominican Republic. Suriname Airways flies 2 days a week from Paramaribo to Georgetown. A small Venezuelan airline, ASERCA, provides service to Venezuela; there is no direct service to Brazil.

Guyana Airways Corporation offers daily service to many domestic locations. Charter flights can easily be arranged to other areas. Other means of transportation are poor or nonexistent. Guyana has no deep harbors, so only small ocean freighters, mostly under 10,000 tons, and a number of bauxite carriers call at Guyana's ports.

Communications

Telephone and Telegraph

Telephone service is available in Georgetown and throughout the settled coastal area. International phone and fax service is excellent, and it costs less to call from Guyana to the U.S. than vice versa. Currently, a 3-minute call to Washington, D.C., costs about US\$2.05, but rates may soon be increased. In Georgetown the annual phone rental is about US\$18. Calls to nearby cities cost about US\$0.04 for 3 minutes. Principal settlements in the interior have radio/telephone facilities. Extremely cheap telegraph service is available to and from the U.S. and the rest of the world. Telegrams to Washington, D.C., cost US\$0.47 for 100 words; a 22-word night letter costs US\$0.10. Internet varies from US\$1 to US\$54 a month.

Radio and TV

Guyana's two government-owned radio stations (Voice of Guyana and Radio Roraima) operate on two AM and two FM frequencies in Georgetown. Direct relays of the Voice of America (VOA) are used for special events, and VOA is available on medium wave, mornings and evenings. Georgetown has 15 TV stations, 1 of which is government owned. Many rebroadcast U.S. pro-

grams; including CBS and CNN newscasts and the “McNeil-Lehrer News Hour.”

Newspapers, Magazines and Technical Journals

Two daily newspapers are published in Guyana: the state-owned *Chronicle* and the independent *Stabroek News*. The *Mirror* is the twice-weekly organ of the ruling Peoples Progressive Party (PPP) and the *New Nation* is the weekly organ of the People’s National Congress (PNC). The Catholic Church publishes the *Catholic Standard* every Friday, often with important local news missed by the daily papers. The daily papers devote one or two pages each day to wire service reports of international news. The international editions of *Newsweek* and *Time* magazines are available each week, but many current foreign periodicals are not. Several small book-stores and the book departments of general stores offer a very limited selection.

Health and Medicine

Medical Facilities

Medical services in Guyana are extremely limited. Medical care is very marginal and serious medical or trauma cases will need evacuation to the U.S.

Guyana has several qualified, practicing dentists, but due to poor sanitary conditions in the offices visited, only one dentist has been identified for referrals for minor problems. There are no qualified orthodontists or periodontists, and few local dentists can maintain and adjust already-installed braces.

The few competent local physicians are extremely busy and sometimes hindered by shortages of medications and supplies. Specialists who are even fewer in number, work with the most basic equipment. Currently, there is no qualified cardiologist and only one urologist. The Georgetown Hospital recently commissioned a new ambulatory health-care facility which is being

plagued by shortages of medicines and qualified staff. CAT scan facilities are unavailable in the country and nursing skills are generally considered poor.

Local opticians and optometrists are qualified to fill prescriptions for glasses, but the quality of eye examinations is questionable. Choice of frames and lenses is limited. Two qualified ophthalmologists have private practices.

Local pharmacies stock common medicines, but supplies may be erratic. Purchasing medicines locally is done with caution and only products from approved manufacturers are chosen. Persons taking regular prescription medications are advised to bring an adequate supply to last until they can access local sources or arrange for regular supplies to be obtained from the U.S.

Local laboratory facilities perform many routine tests but may be hampered by outdated supplies and shortages of reagents. Some tests which are considered routine in the U.S. may pose a problem here. Venipuncture techniques vary from technician to technician.

Community Health

The incidence of malaria in the interior of Guyana has increased over the years and cases number some 40,000 per year. Chloroquine-resistant falciparum malaria has been confirmed in the country along with infections from plasmodium vivax, plasmodium falciparum and mixed infections. There has been a slight increase in malaria cases reported in Region 4 (Demerara/Mahaica) which includes Georgetown, but malaria chemoprophylaxis is not advised for Georgetown at this time. All persons are advised to sleep under a mosquito net which has been sprayed with permethrin (permanone) and to use personal protective measures routinely. Persons traveling out of Georgetown to interior regions are advised to contact the Health Unit for advice on prophylaxis.

Microfilaria is prevalent in the Guyanese population, and the advanced state of infection of this parasite is seen in the form of noninfectious elephantiasis.

Tuberculosis is reportedly on the upsurge in certain regions of Guyana, especially in Region 4.

Cholera is also a threat with regular outbreaks in the neighboring countries.

Typhoid and intestinal parasites are now considered endemic in Guyana. Sporadic outbreaks of gastrointestinal diseases occur from time to time along with hepatitis.

Dengue fever has been reported in epidemic proportions in five countries in South America during the last 10 years. Cases of the more serious Dengue Hemorrhagic Fever (DHF) have been reported. The Vector Control Unit has reported confirmed cases of dengue fever in Guyana.

In Georgetown, city garbage collection is irregular, and garbage pile-ups and illegal dumping are widespread. Sewage disposal in the outskirts of the city is by septic tank. In the city itself, the underground sewer system is antiquated and inadequate, and presents many problems due to frequent blockages and overflows. The drainage system is not adequately maintained so there is often flooding and accumulation of stagnant water during the rainy season. Water supplies are usually adequate, but can be interrupted by low pressure or breaks in the water mains. Tap water is not safe to drink. It should be either filtered and boiled, or distilled.

Care is required when buying fresh food. Market standards are poor. Frequent and long lasting power outages may pose a threat to refrigerated stocks in commercial establishments or markets.

Preventive Measures

- Ensure that water for drinking is safe. Use milk treated by UHT or pasteurization. Powdered milk is

also available locally. Wash fruits and vegetables well with detergent, then soak in a solution made up of one tablespoon of household bleach (5% chlorine) to one gallon of potable water for 15 minutes, then rinse well with potable water.

- Ensure that required immunizations are kept up-to-date. Immunizations required for Georgetown are yellow fever, typhoid, tetanus, polio, and hepatitis A and B.
- Check with the Health Unit before traveling out of town or into the interior to assess the need for malaria prophylaxis. Ensure that a high standard of sanitation is maintained in the home at all times. Keep surroundings clean, and grass and trees well trimmed.
- Use of sunscreen lotions to prevent burning by the strong tropical sun is a good idea. Use of insect repellent is also advised when going out in the evenings or when you expect to be in contact with grass.
- Have a full medical examination before coming to Guyana so that any existing problems can be treated.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Travel to Guyana is by air, as no passenger ships call at Georgetown and it cannot be reached by road or rail from any other country. There are no U.S. carriers serving Guyana. American Airlines has daily flights from Miami to Trinidad and Barbados, but passengers must overnight in either country before taking a BWIA, Suriname Airways, or LIAT flight to Georgetown. American has flights twice a day from JFK New York to Barbados, both of which arrive in time to connect with a daily BWIA flight to Georgetown. BWIA, a Trinidadian airline, provides daily service to Georgetown

from JFK New York (via Barbados) and Miami (via Port-of-Spain). Guyana Airways Corporation (GAC) offers service from New York (via Curacao) three times a week and nonstop from Miami once a week. Leeward Islands Air Transport (LIAT) offers daily service from Barbados and via Barbados from other Caribbean Islands. LIAT has a strict excess baggage charge on all luggage over 20 kg. (44 pounds) and very limited cabin space for carry-on items. Suriname Airways provides air service from Paramaribo 2 days a week; which continues on to Trinidad and Venezuela.

A valid U.S. passport is required for U.S. citizens to enter and depart Guyana. On arrival in Guyana, visitors are granted a 30-day stay. Extensions of stay may be obtained from the Ministry of Home Affairs at 60 Brickdam Street, Georgetown. The Central Office of Immigration located on Camp Street, Georgetown, must then note the extension in the visitor's passport. Travelers for other than tourism purposes should check with the Ministry of Home Affairs for information about requirements for work permits and extended stays. U.S.-Guyanese dual nationals departing Guyana for the United States under a Guyanese passport must present to Guyanese authorities a U.S. Certificate of Naturalization or similar document establishing that they may freely enter the United States.

Americans living in or visiting Guyana are encouraged to register at the Consular Section of the U.S. in Georgetown and obtain updated information on travel and security within Guyana. The U.S. Embassy is located at 100 Young and Duke Streets, telephone 011-592-225-4900 through 54909, fax 011-592-225-8497. Hours of operation are Monday-Friday, 7:00 a.m. to 3:30 p.m., except local and U.S. holidays. For emergencies after hours, on weekends and on holidays, U.S. citizens are requested to call the U.S. Embassy duty officer at 011-592-226-2614 or 226-8298 or 227-7868

and to leave a message for pager number 6516.

Pets

It is difficult to import pets into Guyana. Pets brought into the country must have a valid health certificate showing rabies inoculations at least 30 days from the arrival and must have an entry permit from the Government of Guyana. Pets must arrive with or after the employee.

All pets must be quarantined for 90 days, unless they are coming from Britain or another country using the British quarantine system. However, the official Government of Guyana quarantine stations are usually full. Pet food must be supplied by the pet owner. The quarantine cost at the Government of Guyana, Ministry of Agriculture/police kennels is US\$10 daily or US\$900 for 90 days. Food, etc., is extra.

Many exotic birds found in Guyana are protected species. The Guyana Ministry of Agriculture will permit only those persons who have been legally residing in Guyana for more than one year to take an exotic bird out of the country when they leave. Those Americans who have legally resided in Guyana for more than a year and who would like to take back to the United States any birds or animals, including pets, listed in Appendices I, II and III of the Convention on International Trade in Endangered Species (CITES), must have a Wild Bird Conservation Act (WBCA) import permit from the U.S. Fish and Wildlife Service (USFWS). Please note that this is a U.S. regulation that applies regardless of distinctions among the three Appendices. U.S. residents and non-residents continue to arrive at U.S. ports of entry without WBCA permits, and they encounter difficulties. Individuals can obtain WBCA fact sheets and permit applications from the USFWS Office of Management Authority, Branch of Permits, 4401 North Fairfax Drive, Arlington, VA 22203, telephone (703) 358-2104, fax (703) 358-2281.

Currency, Banking, and Weights and Measures

Guyana's currency is the Guyana dollar (GYP). The current rate of exchange is US\$1.00 = GYP\$179.60. The rate is subject to change on a daily basis. Georgetown has five commercial banks; only the Bank of Baroda (India) and the Bank of Nova Scotia, a small private Canadian bank, are foreign-owned. A third foreign-owned, bank Citizens Bank of Jamaica has been licensed and opened in October 1994, as well as a new commercial bank—The Demerara Bank.

Commercial banks provide a full range of banking services, including sale and redemption of dollar or sterling travelers checks and cashing of personal checks.

American citizens are advised to exchange currency only with banks, hotels, and established money exchange houses ("cambios"). Many foreigners who opt to exchange money on the streets, lured by promises of higher exchange rates, are increasingly becoming victims of fraud and recipients of counterfeit currency. There is no legal recourse unless the police are successful in apprehending the perpetrator; even then there is no guarantee that the money will be recovered. Street vendors usually offer rates very near to bank or "cambio" rates, so there is little advantage to be gained by changing money outside the formal system.

Weights and measures are British, although the metric system was officially introduced in 1982. In many cases British units of measures are the same as American units. Liquid measurements differ; the imperial gallon is equal to 1.20094 U.S. gallons and the British cup is 10 ounces rather than 8.

HAITI

Republic of Haiti

Major City:

Port-au-Prince

Other Cities:

Cap-Haïtien, Gonaïves, Jacmel, Kenscoff, Les Cayes, Pétionville, Port-de-Paix

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated August 1996. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

In October 1994, President Jean-Bertrand Aristide was restored to power in Haiti by a U.S.-led Multinational Force (MNF), ending 3 years of military dictatorship and extreme hardship for the Haitian people. Economic sanctions were lifted, and MNF troops were deployed throughout the country to ensure Haiti's peaceful transition to democratic rule. Shortly after Aristide's return, the international donor community met and pledged \$1.2 billion to assist in the rebuilding of the Haitian economy and social institutions. Parliamentary elections were held in the summer and fall of 1995, and, in accordance with the constitution, elections for President were held in December

1995. President Rene Preval was inaugurated February 7, 1996, completing the first-ever peaceful transition from one elected President to another and giving Haitians a democratically elected government from the local level to the Presidency. A small U.N. or multinational peace-keeping mission is expected to remain in Haiti through 1996.

Haiti is a land with too many people and almost no natural resources. Its forests have been cut down and its topsoil washed into the sea. To the outside world, its name has become synonymous with "boat people" and voodoo. It is a land of hunger, poverty, pride, and beauty.

Americans living in Haiti find the climate delightful, the people handsome and approachable, the arts fascinating, the poverty appalling, and the overall experience unique to each person.

MAJOR CITY

Port-au-Prince

Port-au-Prince, the capital of Haiti, is located on the Gulf of La Gonave, formed by the two great peninsulas that define Haiti's coastline. These two peninsulas are often compared to

the jaws of a crocodile that looks as if it is about to swallow Port-au-Prince.

To feel the pulse of Port-au-Prince, one can think of Haiti as "a fragment of black Africa which dislodged, drifted across the Atlantic and settled in the Caribbean." Following a successful slave revolt in 1804, this "bit of Africa" became the second independent country in the Western Hemisphere.

Port-au-Prince is a city with an uninspired waterfront and downtown area. The city has expanded onto adjoining hills with incredible vistas. At present, the city is a conglomeration of nondescript office buildings, slums, old Victorian houses with "gingerbread" trim, modern cement-block houses, and breathtaking million-dollar homes. The city's social system unofficially divides the populace into a majority of black African descent called "noirs" and a minority of mixed ancestry called "mulatres." This division continues to be the basis for the inequalities so glaringly visible in Port-au-Prince.

The city has few historic sites, but sight-seeing is ample for a short visit. Major attractions are the Episcopal cathedral with its Haitian Biblical murals, the Catholic cathedral, the Musee d'Art, and many private art galleries. Haitian handi-

craft stores feature metal arts created from old oil drums, many with a delightful sense of humor. There are over 8,000 U.S. citizens living in Haiti, and about half of those registered are children under 18. The American business community in Port-au-Prince is not sizable.

Food

During normal times Port-au-Prince offers a surprising variety of food products, although many items are imported and retail at prices well above the U.S. level. These include packaged, canned, and frozen foods, occasional cottage cheese,

sour cream and French cheeses, but only dry or long-life (UHT) milk is available. Goods are often beyond their peak upon arrival and many past their expiration date as well.

Local beef, pork, and chicken are available, but the quality does not

meet U.S. standards. Vegetables and fruit are available in season. Market women sell string beans, peas, avocados, beets, carrots, eggplant, tomatoes, squash, lettuce, cabbage, onions, garlic, parsley, special artichokes, cauliflower, potatoes, and radishes. Papayas, mangoes, oranges, grapefruit, tangerines, pineapples, bananas, and various melons are available in season but quality varies.

Uncooked vegetables or unpeeled fruit should be washed and treated with a chlorine solution as disinfectant.

Clothing

Lightweight clothing is worn year-round, with a sweater or jacket occasionally useful in the winter. The average temperature in Port-au-Prince is 80°F. Raincoats are not worn, as they are too warm, but umbrellas are useful. A lightweight sweater or jacket is needed for trips to the mountains.

Women: In public women wear dresses, skirts and blouses, or slacks and tops. Lightweight, washable cottons or synthetic cotton mixtures are most comfortable. A limited supply of Haitian-embroidered linen dresses are sold locally but at high prices.

Lingerie is available locally but is very expensive or of second quality. Nylon lingerie can be too hot for the Port-au-Prince climate. Hosiery is optional and rarely worn.

Locally made sandals are reasonably priced and available in the markets. It is wise to bring other footwear and tennis shoes from the U.S. Many beaches are stony, and sea urchins are numerous, so bathing shoes of some type are useful.

Children: Children in all grades at Union School wear uniforms. The uniforms, shirts and shorts are limited to the colors blue, white, and yellow and must be purchased locally. Play clothes are worn to children's parties. Most teenage entertaining is casual.

Supplies and Services

Most well-known brands of American toiletries and cosmetics are available but much more expensive. French and European toiletries and cosmetics often cost less.

Haitian fabric material is of poor quality, and imported fabrics are available but expensive.

Tailoring is inadequate for most types of men's clothing. Prices for low-quality tailor-made suits are reasonable.

Dressmakers are available. Seamstresses will come to the home at reasonable prices to make clothing for adults or children. Shoe repair often takes place on the street and is quite satisfactory. Good-quality dry-cleaning is hard to find.

In all of these service areas, language ability, or lack thereof, usually compounds any problem.

Religious Activities

Haiti is predominately a Roman Catholic country. Parish churches are located throughout the city, and the Port-au-Prince Cathedral is in the center city. Mass is traditionally said in French or Creole. An English mass is held on Sunday mornings at St. Louis de Gonzague Chapel in the downtown area.

Protestant services are held on Sunday mornings at the Episcopal Church of St. Jacques in Petionville and at the Quisqueya Chapel, a nondenominational church in Port-au-Prince. The Quisqueya Chapel also has Sunday School classes, Bible study groups, and a Sunday evening worship service. Services are held on Saturday mornings at the Church of the Adventist University of Haiti in Diquini.

Members of the Jewish and Muslim communities usually hold services in their homes to celebrate their holy days.

Vaudun (voodoo) plays a central part in the religious life of many Haitians. It is essentially a bringing together of beliefs and rituals of

African origin, closely tied to Catholic practices. Some understanding of voodoo is essential to an understanding of Haiti.

Education

The Haitian school system includes primary through university levels and is based on the French system, with classes taught in French or Creole.

Most foreign children in Port-au-Prince attend the SACS-accredited Union School. Classes are taught in English, with French a required subject at all grade levels. The Union School is open to all nationalities and offers a program from pre-school through grade 12. It has a capacity of 380 children and should be notified well in advance of enrollment plans for arriving children, particularly if they involve a mid-term transfer.

When planning enrollment in the Union School, students should bring with them complete school records including report cards and test results. A one-time bonding fee of \$150 per child is nonreimbursable. School hours are from 7:45 am to 1:30 pm. The school year normally begins toward the end of August and finishes in early June. Students at the Union School wear uniforms from kindergarten through grade 12, as do children in all Haitian schools. Children attending the Union School ordinarily have no difficulty transferring to U.S. schools.

The Union School has a Learning Center for children with mild learning difficulties, and it is generally recognized to have a very good elementary school program. Its high school curriculum has an advanced placement program, but there is no international baccalaureate available. The Quisqueya Christian School also provides English-language schooling from kindergarten through grade 12. The school is open to all nationalities and is attended by many American children. It currently has an enrollment of 200, and the staff are American educated.

Aerial view of Port-au-Prince, Haiti

Sports

Sports activities in Haiti are found primarily in private clubs. (There are no organized sports facilities such as the YMCA.) The Petion-Ville Club, about 3 miles from downtown Port-au-Prince, is on a hill overlooking the bay. Included in its 145 acres are a rugged nine-hole golf course, six tennis courts (four lighted), a 75-foot swimming pool (which can be enjoyed by children), and a clubhouse with dance floor, dining, bar, and locker accommodations. There are a number of tennis clubs in Port-au-Prince. These often have social facilities available in addition to the tennis courts. Most clubs require an initiation fee and/or monthly dues.

Touring and Outdoor Activities

A great deal of Haiti's outdoor life centers around its coastal waters and beaches. There are safe and pleasant beaches about a 60-minute

drive from Port-au-Prince, and a number have overnight and restaurant facilities. Swimming and snorkeling are ideal for all ages.

Scuba diving is popular in Haiti, but divers should bring their own tanks. There is one place in Port-au-Prince that will refill tanks, but only to 2,200 pounds unless you have your own compressor. There is no scuba-diving equipment available locally. The Cormier Plage Beach Resort, adjacent to Cap Haitien on the north coast, rents equipment. Scuba-diving instruction for certification is possible in Haiti at both beginning and advanced levels. The cost is 550 Haitian dollars.

Unstable political conditions have restricted the formerly good hunting for ducks, guinea hens, wild pigeons, and doves.

Kenscoff (45 minutes from Port-au-Prince) is a town at an altitude of 4,500 feet, set in mountains as high

as 6,500 feet. It is cool year-round and may even be cold in winter. Although the road has suffered wear and tear, people enjoy visiting Kenscoff on weekends. There are some wonderful places to hike. The scenery in the mountains is extraordinary, and travelers like to stop en route to visit the Baptist Fermathe Mission's arts-and-crafts shop and have lunch in its pleasant restaurant. For historic content, Forts Jacques and Alexandre can be added to the itinerary.

Cap Haitien (157 miles from Port-au-Prince; 6 hours by car), Haiti's second-largest city, is of primary interest because of its historic past. The famed Citadelle Laferriere, often referred to as the "eighth wonder of the world," was built on a 3,000-foot peak overlooking Cap Haitien. Below the Citadelle is Milot, where one can visit the ruins of Henri Christophe's Sans Souci Palace. Above Milot, horses can be rented for the uphill ride to the Cit-

adelle. Cap Haitien has adequate hotel facilities, and nearby are two very pleasant seaside resorts.

Jacmel (73 miles from Port-au-Prince; 2 hours by car) is on the southern peninsula and well known for its beaches. It is a picturesque town with turn-of-the-century architecture, a small iron market, and a few small art galleries. Jacmel has beaches inside the town and nearby at Carrefour Raymond. The road to Jacmel is in fair condition, and the town has two good hotels with restaurants.

Les Cayes (125 miles from Port-au-Prince; 4 hours by car) is the principal city of the southern peninsula and the third-largest city in Haiti. The city itself has little to offer, but the road from the capital passes through beautiful and interesting country. One of the best beaches in Haiti, Port-Salut, is nearby and has a restaurant and hotel. Les Cayes has two satisfactory hotels, one on the outskirts and one in the city.

The Arts and Entertainment

The Haitian art scene has attracted world-wide attention since 1946, when English teacher DeWitt Peters brought Hector Hippolyte, Philomene Obin, and other greats of Haiti's primitive art scene to the attention of the world's art establishment. One of the unique experiences of living in Haiti is the chance to visit the studios and galleries of the artists carrying on this fascinating tradition.

Haiti has no concert or theater series, but the Philharmonic Orchestra of Saint Trinite Cathedral presents seasonal concerts of classical music, and the cathedral provides a locale for the all-too-rare performances by visiting soloists or chamber groups.

The Musee d'Art Haitien, on the Champs-de-Mars, houses both standing and rotating art exhibits.

Private art galleries abound in the Port-au-Prince area, but one that holds a special place in Haitian hearts is the Jean-Rene Jerome

Museum, opened in the mid-1980s to honor the much-revered artist.

There are few archaeological sites in Haiti, but Dr. William Hodges of the Good Samaritan Hospital in Limbe has had as an avocation during his 30-year career in the country a search for the site where Columbus landed his first expedition on the north coast. If one is traveling to Cap Haitien by car, a stopover to visit Dr. Hodges' small museum in Limbe should be considered. For the real enthusiast, a journey to the east of Cap Haitien takes one to the site that Dr. Hodges' research leads him to conclude was the actual spot where Columbus established the first colony in the New World.

Port-au-Prince has several movie houses, of which the Imperial is the largest and most comfortable. Most films shown are French films, but even American films are dubbed in French.

There are a number of quite good restaurants in the area. Excellent French cuisine can be had at the pricier establishments. The larger hotels have dining rooms that feature special buffets, Sunday brunches, and an occasional floor show. A few nightclubs provide Haitian or disco music, and there are two hotel casinos.

Coverage of the entertainment scene in Haiti cannot neglect Carnival where dancing in the streets takes place every Sunday after Christmas and culminates in Mardi Gras, the two days before Ash Wednesday. Musical groups called rara bands dance across the countryside during the pre-Lenten season. Many Haitians join in these singing and dancing festivities, and drinking is excessive. Things tend to become rowdy, and foreigners usually prefer to watch these celebrations on television.

Social Activities

Most entertaining takes place informally in the home. Single people generally find sports clubs or outdoor activities the most satisfactory way to socialize. As most Haitians

do not receive high salaries, it is often difficult for them to return hospitality. There is an American Women's Community Association (AWCA), which meets monthly. It provides a welcome to new American women, sponsors seasonal parties for the children, and is open to any activities or projects for which members indicate enthusiasm. The Women's International Gourmet Society (WIGS) meets monthly to sample different restaurant cuisine. The local churches have women's groups to which all are welcome. The Quisqueya Chapel sponsors periodic men's breakfasts at a local hotel. These are open to all men in the community.

OTHER CITIES

CAP-HAÏTIEN (also called Le Cap), about 85 miles north of Port-au-Prince on the northern coast, is Haiti's second largest city. It is of primary interest because of its historic past. There are ruins here of former colonial dwellings and buildings; nearby Milot is the site of the ruins of King Christophe's Sans Souci palace. From Milot, horses or burros can be rented for a two-hour ride to the Citadelle Laferrière, also built by Christophe, and surmounted on a 3,000-foot peak overlooking the nearby plain. The city has a modern harbor which handles one-ninth of Haiti's imports and exports. One of the world's largest sisal plantations is located in Cap-Haitien. Pineapples, sugarcane, coffee, bananas, and cacao are grown near the city. From Port-au-Prince to Cap-Haitien, the trip is four hours by car, or 35 minutes by air. Cap-Haitien's 1995 population was about 100,600.

GONAÏVES is a port city on the Gulf of Gonave in western Haiti. The country's independence was proclaimed here in 1804, and today the city is a major commercial center. The region's agricultural products, including sugar, cotton, coffee, and bananas, are exported from the harbor. A main attraction in the city is the Musée du Centenaire. It was

inaugurated in 1904 to commemorate the 100th anniversary of Haiti's independence. The Gulf of Gonave is situated in the pincers of two mountainous peninsulas and is considered one of the most beautiful in the world. The city's population is estimated over 40,000.

JACMEL, situated on the southern peninsula, is a picturesque town of about 216,600. It boasts a small iron market, a few small art galleries, and beaches at nearby Carrefour Raymond. The road to Jacmel recently was rerouted and paved.

KENSCOFF, 10 miles south of Port-au-Prince, and where visitors go on weekends to escape the heat of the capital city, is at an altitude of 4,500 feet. Its mountains rise as high as 6,500 feet. The area is cool all year, and sometimes even cold during the winter. In addition to the climate change, the road to Kenscuff and the town itself offer beautiful scenery and picturesque countryside. Along the road to Kenscuff, sightseers often stop to visit the Baptist Mission's arts and crafts shop or to explore the historic forts, Jacques and Alexandre. The town has about 3,000 people.

LES CAYES is the principal city of the southern peninsula and the third largest city in Haiti, with over 37,000 inhabitants. It is situated 90 miles from Port-au-Prince, but the trip takes several hours by jeep, and then only when roads are passable. The city itself has little to offer, but the road from the capital passes through beautiful and interesting country. One of the best beaches in Haiti, Port-Salut, is nearby. The city is Haiti's principal southern port. Coffee, bananas, cotton, timber, and hides are exported from Les Cayes. Historic landmarks include an arsenal and several forts dating from buccaneer times.

PÉTIONVILLE, a suburb of Port-au-Prince, is five miles southeast of the capital in the hills of the Massif de la Selle. The community is mostly a residential resort area, tied to Port-au-Prince by a twisting toll road. Pétienville's estimated

population is 69,5000 (1995). Its name derives from that of Alexandre Sab s Pétion, a hero of Haiti's war for independence in the early 1800s.

Historic **PORT-DE-PAIX** is a seaport town opposite Tortuga Island, 45 miles west of Cap-Haïtien. Its tumultuous history dates to 1665 and the founding of the city by French insurrectionists from Tortuga Island. They originally settled near Môle Saint-Nicolas, where Columbus landed on December 6, 1492. The first slave revolt took place in Port-de-Paix in 1679. The area flourished in the 19th century when, for a while, it was the colonial capital. A 1902 fire devastated the city, physically and spiritually. Today, Port-de-Paix relies on coffee, bananas, rice, sisal (a strong fiber used to make rope), and tobacco production, as well as fishing, for survival. Agricultural produce, logwood, and hides are exported. The municipal population is over 20,000.

COUNTRY PROFILE

Geography and Climate

Eighteenth-century Haiti, famed for its wealth and productivity, was known to the colonial world as the Pearl of the Antilles. Located in the Caribbean Sea on the western third of the island of Hispaniola, Haiti is a 10,700-square-mile area of primarily mountainous terrain, some of which rises above 8,000 feet, and 850 miles of spectacular coastline. Haiti shares the island of Hispaniola with the Dominican Republic, which occupies the eastern two-thirds.

Haiti's tropical climate produces seasonal rainfall, although large areas of the country are semiarid. Temperatures year-round range from 70°F to 90°F with humidity sometimes high along the coast. Average annual rainfall varies from nearly zero in some areas to 53

inches in Port-au-Prince. The two rainy seasons that Port-au-Prince experiences are from April to June and from August to mid-November. Rain and accompanying thunder/lightning storms usually occur at dusk and at night, but the days remain clear and sunny. There is a crisp dry season from December to April. Surrounding mountains protect Port-au-Prince from Caribbean hurricanes.

Population

With its current population estimated at approximately 7 million, Haiti ranks among the most densely populated countries in the world. Port-au-Prince, the capital, has more than 1.7 million inhabitants. Cap Haïtien, on the north coast, is the second-largest city, with a population of 100,600. It is estimated that 95% of Haitians are of African descent. The remaining 5% include Haitians of mixed African-European descent plus immigrants from Europe and the Middle East. Haiti has both French and Creole as official languages even though only 20% of the population speaks French fluently. Creole is spoken and understood by all Haitians, but as a written means of communication it has to contend with Haiti's mere 45% literacy rate.

The culture and traditions of Haiti come from its African, Caribbean, and French roots. Following World War II, a significant number of Haitians began visiting or studying in the United States and Canada. Overseas Haitians now number around 1 million. This travel back and forth has made North American customs and habits increasingly familiar in Haiti. In an attempt to escape the country's grinding poverty (particularly during periods of political repression), tens of thousands of Haitians have attempted to enter the U.S. illegally, the vast majority in overcrowded, unseaworthy boats.

Public Institutions

The people of Haiti have fought with political instability since their independence in 1804. The country has had 21 different constitutions. But the most current Haitian constitution adheres to the principles of democracy and human rights as defined in the Universal Declaration of Human Rights of 1948.

The constitution provides for a system of representative government under which power is shared among branches.

The executive branch consists of a chief of state or president who is elected for a five-year term and is not eligible for immediate re-election or election for a total of more than two terms.

The head of government is the prime minister chosen by the chief of state from the membership of the majority party in Parliament; or, in the absence of a majority party, after consultations with the leadership of both parliamentary chambers.

The legislative branch consists of a senate made up of 27 members (three for each of the nine departments) elected by a direct popular vote at the departmental level for six-year terms and eligible for re-election for an indefinite number of terms. Terms are staggered on a two-year basis, one third of senators being elected every two years.

There is also a chamber of deputies consisting of 83 members elected by a direct popular vote at the municipal level for a four-year term, and eligible for re-election for an indefinite number of terms.

The Haitian judiciary is divided into four basic levels: justices of the peace; fifteen courts of first instance; five regional courts of appeal; and, The Haitian Supreme Court (Cour de Cassation).

The constitution also provides for an independent board of elections charged with the organization and

supervision of electoral procedures and political decentralization through the election of mayors and administrative bodies responsible for local government.

The Prime Minister's government is composed of a cabinet that must be confirmed by parliament. This cabinet is called the Council of Ministers. The Council of Ministers is presided over by the President of the Republic.

Many political parties of different ideologies are active in the Haiti. Most parties are not well structured. They lack adequate financial resources, and their focus is on personalities and regional alliances rather than national policy priorities.

Despite the dictates of the constitution, politics remain volatile. Elections are often contested and military coups have called for intervention from the U.N. and other countries. After elections supervised by the United Nations in December 1990, Jean-Bertrand Aristide was inaugurated as President in February 1991.

But in September 1991, a military coup forced Aristide out of Haiti. The U.S.-led Multinational Force restored government three years later and Rene Preval, took office in 1996. Aristide returned to be elected to a second term in the 2000 elections, but these were boycotted by the majority of opposition leaders.

Legislative elections were held in both 1995 and 1997, with disappointing results. New legislative elections did not take place until May 2000. They were expected to reconstitute the legislative branch of government, which effectively ceased to function January 11, 1999. However, they were so flawed as to call into question the legitimacy of the Parliament, which was convened on August 28.

The international community has refused to offer the new Haitian government funding for their projects if they do not negotiate

with the opposition in order to come up with an agreement that will satisfy both parties. Talks between the opposition and governing party aimed at resolving the political impasse have taken place under the mediation of the OAS (Organization of American States) and CARICOM (Community of Caribbean Nations), but have yet to result in an accord.

Arts, Science, and Education

Education is available in Haiti from preschool through university, although only 73% of 6- through 11-year-old Haitian children attend primary school. In driving through Port-au-Prince, one sees an extraordinary number of schools, including numerous preschools and kindergartens. Haitian parents prefer private schools over public ones and make great sacrifices to afford the tuition.

The University of Haiti, located in Port-au-Prince, is tuition free to those students who can pass the tough entrance exams. The university has schools of administration, agronomy, dentistry, economics, education, law, literature, medicine, and science. Most subjects are taught in French and in the French university tradition. Of late there has been some instruction in Creole, and the American educational system has influenced the curriculum at the Institute of Administration, Management, and Diplomacy (INAGHEI).

A significant number of art schools attempt to maintain the spirit of Haiti's 1940s explosion onto the world art scene. There are also institutes of science and technology and two private universities.

Commerce and Industry

Since the demise of the Duvalier dictatorship in 1986, international economists have urged Haiti to reform and modernize its economy. Under President Preval (1995-

2000), the country's economic agenda included trade/tariff liberalization, measures to control government expenditure and increase tax revenues, civil service downsizing, financial sector reform, and the modernization of two out of nine state-owned enterprises through their sale to private investors, the provision of private sector management contracts, or joint public-private investment. Structural adjustment agreements with the International Monetary Fund, World Bank, Inter-American Development Bank, and other international financial institutions intended to create necessary conditions for private sector growth, proved only partly successful.

In 1999, Haiti's economy began to falter after about 4 years of positive, though modest growth. Real GDP growth fell in 2001 by 1.2%. The Privatization program stalled. Macroeconomic stability was adversely affected by political uncertainty, low investment, a significant increase in the budget deficit, and reduced international capital flows. The lack of an agreement with the IMF has prevented the resumption of crucial international assistance. This recent weakening of the economy has serious implication for future economic development as well as efforts to improve the general standard of living.

External aid is essential to the future economic development of Haiti, the least-developed country in the Western Hemisphere and one of the poorest in the world. Comparative social and economic indicators show Haiti falling behind other low-income developing countries (particularly in the hemisphere) since the 1980s. Haiti's economic stagnation is the result of earlier inappropriate economic policies, political instability, a shortage of good arable land, environmental deterioration, continued use of traditional technologies, under-capitalization and lack of public investment in human resources, migration of large portions of the skilled population, a weak national savings rate, and the

lack of a functioning judicial system.

Haiti continues to suffer the consequences of the 1991 coup and the irresponsible economic and financial policies of the de facto authorities which greatly accelerated Haiti's economic decline. Following the coup, the United States adopted mandatory sanctions, and the OAS instituted voluntary sanctions aimed at restoring constitutional government. International sanctions culminated in the May 1994 UN embargo of all goods entering Haiti except humanitarian supplies, such as food and medicine. The assembly sector, heavily dependent on U.S. markets for its products, employed nearly 80,000 workers in the mid-1980s. During the embargo, employment fell below 17,000. Private domestic and foreign investment has been slow to return to Haiti. Since the return of constitutional rule, assembly sector employment has gradually recovered with about 25,000 now employed, but further growth has been stalled by investor concerns over safety and political instability.

If the political situation stabilizes, high-crime levels reduce, and new investment increases, tourism could take its place next to export-oriented manufacturing (the assembly sector) as a potential source of foreign exchange. Remittances from abroad now constitute a significant source of financial support for many Haitian households.

Workers in Haiti are guaranteed the right of association. Unionization is protected by the labor code. A legal minimum wage of 36 gourds a day (about U.S. \$1.80) applies to most workers in the formal sector.

Transportation

Local

"Service" (sharing) taxis operate on defined routes. There is no safe, clean, or modern intercity or intracity public transport available. There are some private taxi services, but these are very expensive, particu-

larly for new foreigners and during any gasoline shortages.

Regional

During normal times, Port-au-Prince has daily nonstop flights to and from Miami and New York and regular flights to Santo Domingo, Montreal, Paris, Kingston, and Curacao. Reservations can be difficult to make during the peak travel seasons of summer and Christmas.

Communications

Telephone, Telegraph, and FAX

Port-au-Prince has a dial telephone system, which is subject to interruption during rainy seasons and electricity shortages. Intercity calls can be made within Haiti. Overseas calls can also be made at most local hotels with a USA-direct card.

Radio and TV

Under normal conditions there are about 46 independent AM/FM stereo radio stations in Haiti, 22 of which are located in Port-au-Prince. Most broadcast 16 to 18 hours a day, including the government-owned radio station Radio Nationale. Shortwave radios pick up all principal international networks, including VOA and BBC. The VOA Creole service program is rebroadcast daily in the capital.

There are three television stations in the capital. Television Nationale d'Haiti (TNH), the government-owned station, broadcasts all over the country, with an estimated audience of 500,000. It provides French and Creole-language programs 18 hours a day, 7 days a week.

Tele-Haiti, a privately owned cable station, relays 14 separate channels of programs in English, French, and Spanish. These currently include CNN, HBO, the Learning Channel, the Disney Channel, and U.S. stations affiliated with CBS and NBC. Tele-Haiti (broadcasting 7 days a week, 24 hours daily) serves only Port-au-Prince and has approximately 100,000 viewers. Program quality is generally good, barring

power failures. PVS-Antenne 16, a privately owned station broadcasting on UHF, beams French- and English-language programming 8 hours a day, 7 days a week to about 20,000 viewers in the capital.

Newspapers, Magazines, and Technical Journals

Local bookstores no longer supply major newspapers, but magazines such as *Time*, *Newsweek*, *L'Express*, and *Le Figaro* are available about a week after publication.

At present there are 15 newspapers in Haiti, including three French-language dailies in Port-au-Prince. One of these dailies has occasional articles in English. Radio, television, and newspapers draw on Agence France Presse, Reuters, and AP for international news.

The Haitian-American Institute library, open to Americans, has about 3,700 volumes and is probably the best lending library in the country; membership is 5 Haitian dollars per year. The Colony Club, a private lending library located at the Petion-Ville Club, is open Fridays from 4 to 6 pm and can be joined for a minimal fee.

A few commercial bookstores have American, British, French, and Haitian books, although the supply of novels in English is slim, and prices are higher than in the U.S. For small children there are few books available outside the school library. It is wise to subscribe to U.S. magazines and book clubs for both adults and children to make up for the dearth of current English-language reading material available in Port-au-Prince.

Health and Medicine

Medical Facilities

Port-au-Prince has a number of competent Haitian doctors, but lack of equipment limits medical facilities. Expert diagnostic service is not available. Locally, there are several competent dentists. A number of American- or Canadian-trained spe-

cialists in cardiology, pediatrics, and eye/ear/nose/throat are available.

Local oculists and optometrists can issue eyeglass prescriptions. Lens-grinding facilities are available, but special lenses must be ground outside the country. It is advisable to bring extra eyeglasses, contact lenses, and sunglasses with ultraviolet screening plus a copy of your current prescription. Selection of contact lens solutions is limited.

The Canape Vert Hospital in Port-au-Prince has a doctor covering the emergency room from 7 pm to 7 am. It has some air-conditioned private rooms, and most doctors are permitted to practice there. The rates are lower than in the U.S., but due to inadequate nursing care and lack of supplies, hospitalization is sometimes precarious.

It is advisable to bring any medications and over-the-counter drugs used regularly and to make arrangements with a U.S. pharmacy for refills. Pharmacies are available in Port-au-Prince but often stock only European pharmaceuticals.

Community Health

The level of community sanitation and public cleanliness throughout the country is far below American standards. Streets in Port-au-Prince are littered with refuse, and sewage often stagnates in open gutters. Port-au-Prince's sewerage system is totally inadequate for the city's needs. Local vegetables and fruit that cannot be peeled must be washed with soap and water and soaked in chlorine solution.

Preventive Measures

Malaria is a serious problem in rural Haiti. It is recommended that travelers take malaria-preventive medication.

Other diseases common to Haiti include hepatitis A and B, typhoid fever, tuberculosis, venereal disease (including AIDS), intestinal parasites, dengue fever, polio, and rabies. Due to the high incidence of some of these diseases, any hired household help should have a pre-

employment physical examination and periodic checkups.

Occasional cases of dysentery, diarrhea, or dengue fever occur among Americans living in Haiti. While no vaccinations are required for entry into the country (unless one is coming from a yellow-fever-infected area), the State Department recommends inoculations against typhoid fever, tetanus, diphtheria, polio, hepatitis B, measles, and rabies. Children should be up to date on all recommended immunizations. Immune globulin is recommended every 4 to 6 months for prevention of hepatitis A.

As the local water supply lacks fluoride, supplementation for children is important to prevent tooth decay. A supply of sunscreen is essential to prevent skin damage from the tropical rays.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Haitian law requires travelers to have a passport to enter Haiti. In practice, officials frequently waive this requirement if travelers have a certified copy of their U.S. birth certificate. Due to fraud concerns, however, airlines do not board passengers for return to the United States unless they are in possession of a valid passport. The U.S. Embassy recommends that U.S. citizens obtain passports before travel to Haiti. The Haitian government requires foreigners to pay a fee prior to departure. For additional information regarding entry, departure and customs requirements for Haiti, travelers can contact the Haitian Embassy, 2311 Massachusetts Avenue, N.W., Washington, D.C. 20008, telephone (202) 332-4090, one of the Haitian consulates in Florida, Massachusetts, New York, Illinois or Puerto Rico, or via the Internet at <http://www.haiti.org/embassy/>.

U.S. citizens living in or visiting Haiti are encouraged to register at

the Consular Section of the U.S. Embassy in Port-au-Prince and obtain updated information on travel and security in Haiti. The Consular Section is located on Rue Oswald Durand, Port-au-Prince; telephone 011 (509) 222-7011; fax 011 (509) 222-1641. Consular Section hours are 7:30 a.m. to 2:00 p.m. Monday through Friday, except U.S. and local holidays. The U.S. Embassy is located on Harry Truman Blvd., Port-au-Prince; telephone (509) 23-0200, 223-0354, 223-0955 or 223-0269; fax (509) 23-1641. Internet: <http://usembassy.state.gov/haiti>.

Pets

To be admitted into Haiti, a pet must have an Authorization to Import certificate, issued by the Haitian Department of Agriculture, which states the animal's breed and point of departure for Haiti. All pets are required to have a recent veterinarian's clearance stating that they have had a current rabies vaccination and are free from disease.

Currency, Banking, and Weights and Measures

The Haitian Government permits a free-market exchange of U.S. dollars for gourdes, the Haitian monetary unit. Most prices in Haiti are quoted in Haitian dollars, where a dollar equals 5 Haitian gourdes. The metric system of weights and measures is the official standard. U.S. weights and measures are also widely used.

Disaster Preparedness

Haiti, like all Caribbean countries, can be affected by hurricanes and other storms. Hurricane season runs from approximately June 1 to November 30 each year. Extensive flooding as a result of heavy rainfall has occurred in the past. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated June 1996. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

HONDURAS, whose name is derived from the depth, or *hondura*, of the waters which surround its northern shores, is an underdeveloped Central American nation, struggling to improve its economic and social circumstances. It has had a history of turbulence since the coming of the Spaniards early in the 16th century—political struggles, war with its neighbors, intervention by others in its internal affairs—all major deterrents to the encouragement of progress.

Honduras is a country of rugged and varied terrain, a predominantly rural aspect, and a strong Indo-Hispanic culture. Its ancient temple city of Copán was one of the great

ceremonial centers of the vast Mayan empire.

MAJOR CITY

Tegucigalpa

Tegucigalpa, capital of the Republic of Honduras, is in a mountain-ringed valley about 3,200 feet above sea level. It is a provincial and picturesque city full of contrasts between the antique and the modern. At several points, streets of stairs connect one level of the city with another. At others, the city climbs the hillsides on terraces.

The predominant architectural style is Spanish colonial. Central Tegucigalpa is built around the traditional square. Narrow streets, remaining cobblestones, blank walls pierced by heavy doors and iron-grilled windows, and reddish tile roofs all add to an impression of architectural unity. But this unity is now being broken by the construction of new, modern buildings. Traces of former days contrast sharply with the new, modern residential sections surrounding the old town.

Spaniards founded Tegucigalpa in 1579 as a silvermining town with

the imposing name of Real Minas de San Miguel de Tegucigalpa. In Indian language this means hill or mountain of silver. In 1880 the capital of the republic was transferred from Comayagua to Tegucigalpa. Until 1898, Tegucigalpa and Comayagua, two settlements divided by the Choluteca River, were separate towns. The two were united in 1898 with the provision that each should retain its own municipal council. It was not until 1938 that they, together with other neighboring communities, were united to form the Central District.

Food

Pasteurized, fresh milk, as well as cheese, butter, eggs, cooking oil, and ice cream are available locally. Occasional shortages occur of items such as milk, eggs, flour, rice, beans, and chicken. Satisfactory locally bottled beer and soft drinks are also available.

Good quality frying chickens are available. Several outlets sell good quality beef (including fillet), veal, ham, and pork. Cuts and taste often differ from US meats. Good frozen and fresh lobster tails and shrimp are available at reasonable prices. Several supermarkets carry a fluctuating supply of local and imported food items and local meats. Items imported from the US are slightly

Courtesy of David Gibson

Overview of Tegucigalpa, Honduras

more expensive due to high transportation costs and import duties.

Fresh fruits and vegetables are available year round, but supplies vary with the season. Local vegetables include tomatoes, cabbage, broccoli, cauliflower, carrots, beets, corn, eggplant, and lettuce. Avocados, oranges, bananas, limes, melons, pineapples, and other tropical fruits are available year round.

Clothing

Summer clothing is suitable for most of the year in Tegucigalpa. Bring a complete wardrobe, as local selection is limited, expensive, and of lower quality. Local tailors and seamstresses are good, but quality materials are expensive. Tegucigalpa's weather is tropical by day and cool in the early morning and

evening. During the cool season (mid-November to February) it may be chilly during the day. At this time, lightweight wools and long sleeves are worn.

Men: Bring tropical-worsted, dacron, and other lightweight suits. One or two lightweight woolen suits or slacks with sport jackets are comfortable for cooler months.

Locally manufactured shirts (some well-known US brands) compare to those made in the US and cost about the same. Many men purchase locally made "guayaberas" (loose-fitting shirts), which are frequently worn at casual gatherings. Bring a supply of shoes, as those available locally are not the same quality as those made in the US.

Women: Bring a good supply of lightweight, synthetic, cotton, and cotton-blend clothes for the dry and rainy seasons. During the cool season, you may use long-sleeved synthetic knits, lightweight wools, sweaters, light jackets, and blazers. Include street-length dresses and skirts, separates, and sports clothes in your wardrobe. Shorts are inappropriate except for the beach. Rainy weather and unpaved streets are hard on shoes. Bring sandals, sport shoes, and boots for picnics and hiking. Bring plenty of lingerie and hose or panty hose, since sizes, styles, and colors are limited, and quality is only fair. Good quality imported items are expensive here.

Children: Local prices for imported children's wear are high and selection is limited. Children will need

washable synthetic or cotton clothing most of the year with sweaters and/or jackets for cool months, and umbrellas. All schools in Tegucigalpa require uniforms for which materials can be purchased locally.

Supplies And Services

Local shops are open from 9 am to noon and 2 pm to 6 pm daily and 8 am to noon on Saturdays. Several large grocery stores are open on Sundays from 10 am to 6 pm.

Tailors and seamstresses are available in Tegucigalpa. Most make only simple, inexpensive clothes. A variety of material is available in all price ranges; however, quality material is expensive and selection is fair to poor.

Dry-cleaning is adequate for most fabrics, except leather. Laundry service is available. Shoe repair is satisfactory. Beauty shops and barbershops offer adequate service, but operators are not professionally trained, and sanitary precautions are not as strict as in the US. The barbershop in the Hotel Maya is cheap, excellent and hygienic.

Religious Activities

Most faiths are represented in Tegucigalpa. English-speaking Catholic and Protestant services are available. Tegucigalpa has several Catholic and Protestant Missions representing the Seventh Day Adventists, Assembly of God, Central American Mission, Baptist, Four-Squared Gospel, Jehovah's Witnesses, Mennonites, Lutheran, Mormon, Southern Baptist, and World Gospel Mission. The American community is also served by the nondenominational Union Church and an English-language Episcopal Church.

Most Hondurans are Roman Catholic. Highlights of the religious calendar in Tegucigalpa are Christmas and Semana Santa (Holy Week). Christmas week through New Year's Eve is celebrated with much gaiety and fireworks. Holy Week is rigorously observed. Most stores and all government offices remain closed from Wednesday through

Sunday. Vehicular traffic on Good Friday is minimal. Honduran Catholics celebrate February 2 and 3 as feast days of the Patron Saint of Honduras, Our Lady of Suyapa.

Education

The largest school in Tegucigalpa offering a US curriculum is the American School. The school, a private institution organized under Honduran law, is not affiliated with the US Government. An elected school board, which includes US members, administers the school. About 10% of the student body are US citizens, 80% are Hondurans, and 10% are other nationalities. Enrollment is about 1,000, including pre-kindergarten through grade 12. Through guidance and financial support of the State Department's Office of Overseas Schools, it has improved significantly, upgrading teacher's professionalism and improving facilities. A new building for the high school was completed in 1991 and a new preschool complex will be completed in the Spring of 1995. The school has a large gym and modern exercise equipment.

Most classes are conducted in English with one period of Spanish-language instruction daily. The school follows the US curriculum through primary school (grade 6). Beginning in grade 7, students may choose from two curriculums: one prepares students to enter US colleges, the other prepares students for the National University of Honduras.

The American School is located in Colonia Las Lomas del Guijarro, a residential area. Overall, children of US parents do well at the American School, scoring above average on scholastic aptitude tests (SAT), many gaining acceptance to prestigious colleges of their choice in the US after graduation.

All students in grades K to 12 wear uniforms. Boys wear uniform pants, white, short-sleeved shirts, and dark socks. Girls wear jumpers with white, short-sleeved blouses and white socks. Girls may wear uniform pants with a white, short-

sleeved blouse. All shirts/blouses must have the American School patch sewn on the sleeve. Material for the jumpers and uniform pants is available at the school as are the patches; shirts/blouses may be purchased from the school or local merchants and are readily available. A navy blue sweater or windbreaker is necessary for cooler days. Most students wear tennis shoes, or black or dark brown dress shoes on occasion. Kindergarten children wear the same uniform. The school, accredited by the Southern Association of Schools and Colleges, has a parent-teacher organization. Extracurricular activities include cheerleading, band, sports, drama, and chorus.

School begins in late August and ends in June. Advance registration is necessary; the address is:

American School
Tegucigalpa
APO AA 34022
Fax (504) 32-2380

Some American children attend Academia Los Pinares. A board of missionaries administers this school, located in a highland area 1/2 hour by bus from Tegucigalpa. A US curriculum is followed from kindergarten through grade 12. The Honduran curriculum is also offered in grades 7 to 12. Bible study is a required course, emphasizing moral values. The grading system is academically more rigorous than that of the American School. Classes are in English with one period of Spanish-language instruction daily. Pinares offers a full range of sports activities, plus band and chorus.

Enrollment at the beginning of the 1994-95 school year was 625 in pre-kindergarten through grade 12. The enrollment was 15% US citizens, 5% other nationalities, and 80% Hondurans. The school year runs from September to June. Academia Los Pinares students wear dark green uniforms with green-and-white checkered shirts. Many students wear tennis shoes. Socks are white.

Address all correspondence to:

Director, Academia Los Pinares
Apartado 143C
Tegucigalpa, Honduras, CA

American children also attend the Discovery School, a small private preschool and elementary school located in Colonia Payaqui, a residential area. A US curriculum and hands-on approach are followed from Kindergarten through sixth grade. Classes are capped at 15 students. Classes are in English with a daily Spanish class. Enrollment for is about 30 students, in three multi-grade classes, and about 20 in the preschool. Parents interested in sending a child to the Discovery School should write directly to the school.

Discovery School
TGU 00015
P.O. Box 025387
Miami, FL 33102-5387

The Mayan School and the Elvel School are two other English-language schools in Tegucigalpa. Several recently opened preschools offer varied curriculums. Parents wishing to enroll their children in a preschool should visit various facilities to determine which best suits their child's needs.

Special Educational Opportunities

The University of Honduras offers limited facilities for college age students and adults. All classes are taught in Spanish. Advanced study is usually undertaken abroad. French-language lessons are taught at the Alliance Francaise under the auspices of the French embassy. The Alliance offers an excellent curriculum from beginning to advanced studies. Guitar, piano, and marimba lessons are available.

Sports

Horseback riding is popular, and you can enjoy it year round. A stable near the outskirts of town offers English riding lessons. Horses are boarded for a monthly fee, which includes feed, utilities, rent, and membership. Lessons are available

on an hourly basis after the membership fee is paid.

There are two Country Clubs which offers tennis and golf memberships. The Hotel Honduras Maya and the Alameda Hotel offer pool memberships. The Country Club and Los Delfines del Maya have competitive swim teams for young people. Bosques de Zambrano, a 40 minute drive from Tegucigalpa has indoor and outdoor pools, skeet shooting, tennis courts, picnic grounds, and restaurant services.

Tegucigalpa has three ballet schools for children and adults. Karate and judo classes are available for all ages.

Little league baseball, basketball, and soccer are played at the American School. Adults can join in pickup basketball or volleyball games.

Scuba diving, snorkeling, and fishing in the Bay Islands are fantastic. An active scuba diving club (Honduras Underwater Group) makes regular trips to various diving areas. You can also charter sailing yachts in the Bay Islands or rent small cays for overnighting.

The rugged hills around Tegucigalpa and the La Tigre cloud forest offer excellent hiking opportunities. Tegucigalpa has limited museums, zoological parks, and playgrounds.

Amateur archeologists may be interested in the Mayan ruins scattered throughout the country. All archeological relics are the property of the state, and exportation is prohibited by Honduran law and a treaty with the US.

Bring all sporting equipment and special clothing with you since selection is limited and prices are high.

Touring and Outdoor Activities

The former Presidential Palace, which has been converted into a museum is a beautiful, old building

situated above the river. Near the palace is the more modern Congress building. A stroll through its columned patio area is interesting. A drive or walk up the cobblestone streets to the old La Leona section of the city leads to La Leona Park, with its lovely view of Tegucigalpa. In this area are a few colonial style homes. Concordia Park is a small popular park that has replicas of the Copan ruins.

The National Cathedral of San Miguel was begun in 1756 and consecrated in 1782. One of the oldest pieces in the church is the stone baptismal font. As you enter the valley of Tegucigalpa, you will see Suyapa Basilica, home of the Patron Saint of Honduras, the Virgin of Suyapa, etched against hills to the east.

The Pan American Agricultural School at Zamorano is about 25 miles from Tegucigalpa over a mountainous paved road. School grounds are beautiful and well kept, and the colonial style architecture of the buildings is attractive. Nearby is San Antonio de Oriente, a picturesque mining town, home of well-known Honduran primitive painter, Juan Antonio Velasquez. It is a morning's hike from the Pan American School grounds, or you can go by four-wheel-drive vehicle.

Valle de Angeles is about a 30minute drive over a paved road that winds through hills to the quaint village where you will find an arts and crafts center. Santa Lucia, near Valle de Angeles, is a small silver mining town perched on top of one of the many hills surrounding Tegucigalpa. The age of the principal church in Santa Lucia is unknown, but a wooden plaque dated 1598 was found in the old building.

Parque Aurora, a lovely park off the north road, has a lake for rowing, a picnic area, roller skating rink, miniature golf, playground equipment, and small zoo.

Comayagua, th colonial capital of Honduras, is situated in a broad

Cory Langley. Reproduced by permission.

Street scene in Honduras

valley. It is a 90 minute drive on a paved road from Tegucigalpa. Comayagua's Cathedral, built over 400 years ago, is one of the most beautiful in Central America.

Lake Yojoa, the largest lake in Honduras, is about 2½ hours from Tegucigalpa. An hour's drive from Lake Yojoa is Pulhapanzak Falls. A jeep or four-wheel-drive vehicle is recommended.

Cedeno and Choluteca are reached by a paved road, the spur that connects Tegucigalpa with the Pan American Highway on the South Coast. A dirt road leads to the bathing beach of Cedeno on the Gulf of Fonseca, southwest of Choluteca. There is excellent fishing in the many shrimp farm canals near Choluteca.

The country's cultural heritage includes the remains of a great center of pre-Columbian civilization in

America, the Mayan ruins of Copan. This Mayan center rose and mysteriously declined seven centuries before Columbus set foot on Honduran soil. Since their discovery in 1893, the ruins of Copan have been explored, excavated, and studied by some of the world's leading archeologists. Copan is one of the greatest ceremonial centers of temple cities of a vast empire evolved from ancient peoples who inhabited Mexico and Central America before the birth of Christ. Visit by car or tour bus. Ranging from 10 to 40 miles off the North Coast are several picturesque islands, the largest of which are Guanaja, Roatan, and Utila. Once the haven of buccaneers and pirates, the islands are now sparsely populated by friendly descendants of English settlers who welcome all visitors. The Bay Islands offer lovely scenery, excellent snorkeling and diving, sailing, relaxed atmosphere, and good food, especially seafood. Go by boat,

scheduled airlines, or chartered aircraft.

Tela, on the North Coast, has fine, sandy beaches fringed by graceful palms. Telamar, a seaside resort, offers fair accommodations. La Ceiba also on the North Coast, is accessible daily by plane.

Entertainment

Movie theaters show current and old American films with English soundtrack and Spanish subtitles. They also feature some Mexican, Italian, French, and British films. Prices are low, even for first-run movies (L10 per person or \$1.10). Several new, air-conditioned, multi-cinema movie theaters are in the suburbs, and several comfortable movie theaters are in town.

The National School of Fine Arts has showings of local art. Classes are conducted in ceramics, painting, woodcarving, and sculpturing. The

average cost per class session is L25 (US \$2.80). Photography is a popular hobby. You can find considerable human interest subject matter as well as panoramic scenes. Most popular types and sizes of film are available in the commissary as is developing service for black-and-white and color films. Mail-order firms in the US can also be used for processing.

Occasionally, cultural attractions are sponsored by the US Government and other embassies. Locally produced concerts, folk festivals, and plays are also offered. Plays in English and Spanish are presented by a local dramatic group, Teatro Reforma. Mixed Company, an amateur English-speaking theater group, also presents several plays a year. Both groups welcome Hondurans and members of the international community. The National University has a theater group that presents occasional plays in Spanish. Instituto Hondureño de Cultura Interamericana (Binational Center) presents concerts, lectures, and local art shows.

Social Activities

The English-speaking Women's Club of Tegucigalpa is open to any English-speaking woman, regardless of nationality, and offers an excellent opportunity to meet Hondurans, Americans, and women from other countries. The club offers a monthly entertainment program and a variety of classes such as oil painting, international cooking, discussion groups, bridge, book club, etc.

OTHER CITIES

AMAPALA is the chief Pacific port in Honduras. It is located in the southern part of the country, on Tigre Island in the Gulf of Fonseca. Lumber and coffee are shipped to Amapala by launch from the mainland for export. Amapala is about 70 miles southwest of Tegucigalpa and has a population over 4,000.

COMAYAGUA, located about 35 miles northwest of Tegucigalpa, was the most important city of colonial Honduras. Founded in 1537, Comayagua, the conservative stronghold, rivaled Tegucigalpa, dominated by liberals, in the political struggle following Honduras' independence from Spain in 1821. The two cities alternated as capital until 1880, when Tegucigalpa became the permanent site. Comayagua today is the center of an agricultural and mining region. It has colonial landmarks, including a magnificent cathedral. The population over 40,000.

COPÁN is a village of about 2,000 people on the Honduran-Guatemalan border, 125 miles northwest of Tegucigalpa. It is near the ruined city of Copán, considered to be the center of the ancient Mayan culture. Of note among the ruins is the Hieroglyphic Stairway, dating to the year 756 and bearing the lengthiest known Mayan inscription.

LA CEIBA, located in northern Honduras on the Caribbean Sea, is about 100 miles north of Tegucigalpa. Situated at the foot of Peak Bonito, La Ceiba has beautiful beaches and is a departure point for the Bay Islands. The city is a commercial and processing center for the surrounding agricultural region; coconuts and citrus fruits are shipped from its port. La Ceiba was Honduras' main banana port until disease destroyed the surrounding plantations in the 1930s. The population in 1995 was about 89,200.

PUERTO CORTÉS lies on the Gulf of Honduras near the Guatemalan border, about 100 miles west of La Ceiba. Founded in 1525, Puerto Cortés is the principal Atlantic port, exporting mainly bananas, but also coffee, coconuts, hardwood, abaca, and minerals. The population here is approximately 42,000 (1987 est.).

SAN PEDRO SULA is the second largest city in Honduras, located 100 miles northwest of Tegucigalpa. With a metropolitan population

over 280,000, San Pedro Sula is a commercial center, producing foodstuffs, clothing, beverages, tobacco products, soap, and building materials. Industry here is small and consumer-oriented. The country's only railroad links northwestern banana and sugar plantations with the principal northern ports.

SANTA BÁRBARA is a commercial and administrative center in western Honduras, 80 miles northwest of Tegucigalpa. The community of over 26,000 residents, rests in the hot lowlands close to the Ulúa River and Lake Yojoa. In the city's outlying areas, livestock and sugarcane are economic mainstays; in the core, manufacturing of clothing and furniture is important. Nearby, ruins of the abandoned city of Tenacoa have been found. Santa Bárbara can be reached by a spur from the Inter-Oceanic Highway; it has an airfield.

Situated 25 miles from the Guatemala border and 115 miles west of Tegucigalpa, **SANTA ROSA DE COPÁN** is the country's westernmost major city. It was founded in the 1700s and first called Los Llanos. Today it is the commercial hub of western Honduras, with 32,000 residents. The varied economy here includes tobacco blending and cigar making, and the production of lumber, furniture, leather products, clothing, and beverages. Good transportation is assured by access to several highways in Honduras and El Salvador; Santa Rosa de Copán also has an airfield. A nearby tourist stop is the ancient Mayan city of Copán, 25 miles outside of town. Several ruins can be seen, mostly buried under tropical vegetation. Courtyards, ball courts, and stone columns are among the sites.

TELA is situated in the northwestern region on the Caribbean Sea, between Puerto Cortés and La Ceiba. It is the headquarters for a large area of banana plantations, as well as a port and commercial center. Tela has an estimated population of 71,000.

COUNTRY PROFILE

Geography and Climate

The Republic of Honduras is situated in the middle of six republics comprising the Central American Isthmus between Mexico and Panama. Roughly triangular in shape, it has a 459-mile Caribbean coastline to the north and narrows in the south to 89 miles at the Gulf of Fonseca on the Pacific Ocean. It is bounded on the west by Guatemala, the southwest by El Salvador, and the east and southeast by Nicaragua.

Honduras has an estimated land area of 43,277 square miles, slightly larger than Tennessee. Second largest of the six Central American Republics, it ranks 14th in size among all Latin American nations. However, population distribution is unequal. The northeastern part (Mosquitia, consisting of eastern Department of Colon, most of Olancho, and all of Gracias a Dios) is thinly inhabited. It comprises 44.5% of the entire national territory and only 8.6% of the population.

Honduras also has insular possessions, including the picturesque Bay Islands formed by the summit of a submerged mountain range. The Bay Islands (Roatan, Utila, Guanaja, Barbereta, Santa Elena, and Morat) form one of the country's 18 departments. Farther northeast lie the Swan Islands, previously used by the US as a weather research station and now recognized as Honduran territory. Puerto Cortes (Honduras' first container-loading facility), Tela, La Ceiba, and Puerto Castilla are major Caribbean ports. Honduras has two secondary Pacific ports: Amapala, on Tiger Island in the Gulf of Fonseca, and San Lorenzo, on the mainland.

Honduran topography is exceptionally rugged. The Central American Cordillera crosses Honduras from east to west, making it the most

mountainous of the six republics. The highest mountain peaks are in the southwest. Lowlands are the northern and eastern coastal plains, a narrow southern coastal plain, and river valleys. Principal rivers are in the north and flow into the Caribbean. Government estimates list 63.6% of the land surface as mountainous and 34.4% as plains and valleys.

Geographically and commercially, the country consists of two general regions: the highlands of the interior and southern Honduras and the tropical, banana-producing North Coast. Southern coastal lowlands are grouped with the highland region because of their economic linkage with Tegucigalpa, located in southwest central Honduras.

Tegucigalpa, located in a mountain basin at about 3,200 feet, is surrounded by jutting peaks, one of which reaches over 7,000 feet. The city proper lies at the foot of and on the slopes of Mount Picacho. It is 82 miles from the Gulf of Fonseca on the Pacific coast and 230 miles from the Caribbean to the north. The Choluteca River separates Tegucigalpa and its twin city, Comayagua. Seven small bridges connect the twin cities.

Tegucigalpa's altitude renders a moderate climate, and most days are like spring. Moderate to cool nights relieve occasional hot days. Average monthly temperatures vary from 66°F in January to 74°F in May. Extreme temperatures as low as 44°F and as high as 90°F may occur. Seasonal differences vary more in rainfall than in temperature. The rainy season usually begins in mid-May and continues through mid-November, with heavy rains ending in late October. During the rainy season, rains occur in the late afternoons and early evenings, and days are mostly sunny and clear. From mid-November to February, cooler temperatures and strong winds prevail. The hot, dry season in Tegucigalpa can be uncomfortable and lasts for about 34 months, beginning as early as mid-January. It reaches its peak in

April and continues until the first rains. During this time water shortages occur, the earth becomes brown and parched, and heavy dust and smoke from brush/grassland burnings hang in the air.

Population

Honduras' population is estimated at 6.1 million (2000), about 55 persons per square mile. Population distribution is concentrated in a rough crescent beginning at the South Coast, running through Tegucigalpa and Comayagua to San Pedro Sula, and then eastward along the North Coast through Tela to La Ceiba. Tegucigalpa, including Comayagueta (Central District), has a population of more than 800,000. Beginning in 1950, migration to the city from rural areas caused the population to rise sharply. Other population centers are San Pedro Sula, the country's industrial center; Puerto Cortes and La Ceiba on the North Coast; and Choluteca in the south.

The family is the basic social unit. Family ties extend to cousins, aunts, uncles, in-laws, and even godparents (known as "compadres"). Many families are large and often include representation from several social strata and different political affiliations. Although Roman Catholicism predominates, freedom of religion exists, and many other sects and denominations are represented.

Most Honduran Indians have been assimilated into the Hispano-American culture. Today, more than 90% of the population is comprised of mestizos, i.e., a mixture of white and Indian. A Caribbean black population is centered on the North Coast and the Bay Islands where most were born. Spanish is the official language, but North Coast blacks and most inhabitants of the Bay Islands speak an English dialect. A large colony of Catholic Palestinian emigrants is active in commerce and trade.

About 8,500 US citizens, many of whom are missionaries, reside in Honduras. Others are employed by

Mayan ruins in Copan, Honduras

Courtesy of Molly Flint

US-based firms and the US Government. A small international colony includes British, Chinese, German, Italian, French, Dutch, Finnish, Greek, and Spanish citizens. Although some Hondurans possess great wealth, a gap exists between upper class and middle-class groups and the poorer rural and urban populations. The middle class consists principally of professionals, merchants, entrepreneurs, and government employees.

Honduras is largely agricultural. More than 29% of the population depends on agriculture for its livelihood. Basic dietary staples are corn (usually prepared as tortillas), red beans, rice, fish, and eggs. Meat and fresh vegetables are added to the diet as one progresses up the economic scale.

Public Institutions

The 1982 constitution provides for a strong executive, a unicameral National Congress, and a judiciary appointed by the National Congress. The president is directly elected to a 4-year term by popular vote. The congress also serves a 4-year term; congressional seats are assigned the parties' candidates in proportion to the number of votes each party receives in the various departments. The judiciary includes

a Supreme Court of Justice, courts of appeal, and several courts of original jurisdiction--such as labor, tax, and criminal courts. For administrative purposes, Honduras is divided into 18 departments, with municipal officials selected for 4-year terms.

Reinforced by the media and several political watchdog organizations, human rights and civil liberties are reasonably well protected. There are no known political prisoners in Honduras, and the privately owned media frequently exercises its right to criticize without fear of reprisals.

Honduras held its sixth consecutive democratic elections in November 2001, to elect a new president, unicameral Congress, and mayors. For only the second time, voters were able to cast separate ballots for each office, and for the first time, denied the president-elect party's absolute majority in the Congress. The incidence of cross-voting between presidential and congressional candidates was marked.

The two major parties--the Liberal Party and the National Party--run active campaigns throughout the country. Their ideologies are mostly centrist, with diverse factions in each centered on personalities. The three smaller registered parties--

the Christian Democratic Party, the Innovation and National Unity Party, and the Democratic Unification Party--have increased their political muscle in the National Congress by doubling their representation. Despite significant progress in training and installing more skillful advisers at the top of each party ladder, electoral politics in Honduras remain traditionalist and paternalistic.

Under the 1982 Constitution, the Armed Forces are entrusted with ensuring both internal and external security. A branch, the Public Security Force (FUSEP), assumes police functions. The Armed Forces also play an important role in national political and economic affairs. They have supported the democratic process.

For administrative purposes, Honduras is divided into 18 departments. The chief official of each department is a governor appointed by the President.

Arts, Science, and Education

Tegucigalpa has six institutions of higher education. The National Autonomous University of Honduras (UNAH), founded in 1847, has its principal campus in Tegucigalpa with branches in San Pedro Sula and La Ceiba. UNAH and the local professional associations, such as the College of Engineers, share responsibility of issuing professional licenses. The public Universidad Pedagógica Nacional and the private Jose Cecilio del Valle University, a Catholic University, are also located in Tegucigalpa. Through extension programs, non-degree students can elect courses in painting, drama, archeology, and sculpture at any of these institutions. The newest private university in Tegucigalpa is the 1987 founded Central American Technical University (UNITEC). UNITEC offers 2-year programs, as well as BS and MS degrees in fields such as accounting, computer science, and human relations. The private

University of San Pedro Sula was founded in 1972 and offers degrees in business administration, economics, architecture, and anthropology.

In 1982 a scientific center of investigation was established at UNAH. The University has organized a marine biology center at La Ceiba. Despite these recent efforts, Hondurans pursue little scientific investigation and research.

The National School of Fine Arts and the National School of Music train qualified students. The Ministry of Culture and Tourism directs these institutions and sponsors the Cuadro Folklórico of Honduras and a Garifuna (a Caribbean coast ethnic group) song-and-dance group. The Institute of History and Anthropology, a part of the Ministry of Culture and Tourism, maintains a small museum in one of Tegucigalpa's historic houses and offers exhibits on topics of natural history, Honduran political history, and archeology. A study center at the museum conducts archeological studies and preserves Mayan artifacts. A second museum devoted to Honduran history can be found in downtown Tegucigalpa. A museum of North coast history and anthropology recently opened in San Pedro Sula. An excellent museum is located at the famous Copan ruins.

Aside from occasional visiting cultural presentations and the opportunity to attend courses at educational institutions, cultural opportunities are limited and do not compare with those available in larger regional cities in the US.

Commerce and Industry

Agriculture is the principal industry in Honduras. Although much farming is done at a low level of technology for basic staples such as corn and beans, commercial farming for export has become increasingly important in recent years. The tropical location combined with the mountainous terrain creates a vari-

ety of micro-climates suitable for a wide range of crops. Bananas, coffee, and sugar are the most important export crops; coffee alone accounts for some 30% of total exports. Nontraditional crops such as cantaloupes, watermelons, and vegetables such as cucumbers and squash are produced for the winter market in the US on an increasingly larger scale. Many other fruits, nuts, and vegetables are also grown but have not yet become significant exports.

Despite agriculture's importance, the Honduran countryside often seems empty when viewed from the roadside. This is due to both extensive forests and extensive cattle raising areas. Although cattle ranching remains important throughout Honduras, beef production has declined recently. The same may be said for the forestry industry. Although Honduras still has abundant forest reserves, primarily pine but with extensive tropical hardwood forests in some parts, poor government policies and inadequate reforestation have reduced commercial exploitation. Much of the population still uses wood as a primary fuel. This, along with clearing land for cattle and other food production, has resulted in deforestation in southern and central areas particularly.

The fishing industry is concentrated on the North Coast and in the Bay Islands. The large fishing fleet takes lobster, shrimp, and, increasingly, fin fish for both local and export markets. Farm-grown shrimp concentrated along the Gulf of Fonseca in the south form the base of a dynamic industry, which began in earnest in the early 1980s. As over-fishing in the north causes catches to decline, aquaculture in the south increases in importance. Recently disease has hurt production in the southern shrimp farms.

Honduras historically was a mining country, producing gold, silver, lead, and zinc. However, poor policies and low mineral prices have reduced mining's importance. El Mochito, the only large mine, still produces

zinc and lead. Several smaller mines are active, and individuals do placer mining for gold on rivers in the east. No petroleum production exists, but onshore exploration activities were initiated in 1991.

Manufacturing consists primarily of consumer goods for local markets. The notable exception is, the booming apparel industry that generates considerable employment, primarily on the north coast. Many local apparel companies do assembly operations for well-known US brands and companies. In 1990, the first privately operated industrial park was inaugurated and others are expected soon. Occupants of these parks and free zones include US and Asian companies producing apparel for the US market.

Although not traditionally an important tourism destination, the industry shows signs of becoming more dynamic. Reef diving off the Bay Islands and well-preserved Mayan ruins are current attractions. Accommodations on the islands have improved and new development projects are in planning stages. Two American carriers (Continental and American), as well as several Central American airlines, serve Honduras.

Principal exports are bananas, coffee, sugar, shrimp, and apparel. Other exports include tobacco products, melons, winter vegetables, wood products, and minerals. Principal imports are petroleum products, fertilizers and pesticides, plastic resins, and paper products. A wide variety of machinery, vehicles, and consumer goods also reaches Honduran markets. The US buys about 55% of Honduran exports and provides 50% of its imports.

Transportation

Local

Individually operated buses and minibuses ("busitos") provide service within Tegucigalpa, San Pedro Sula, and nearby cities such as Choluteca and Danli. Bus fare is 75

centavos (\$.08). No transfers are given, and often you must take several buses to a given destination. Taxi service is adequate in downtown areas of Tegucigalpa, but some drivers pick up as many passengers as possible along the way. Taxis can be hard to find in most residential areas and often you must walk to a main street. Major hotels and the airport in Tegucigalpa and San Pedro Sula have a fleet of cabs that charge two or three times normal rates. Taxis are not metered, so negotiate the fare first. Rental cars are available and taxis can be hired on a daily or hourly basis.

Regional

Rail service in Honduras is confined to the banana zone along the Caribbean coast and is not reliable.

Honduras has three international airports, located in Tegucigalpa, the capital city, San Pedro Sula, the commercial center and the coastal city of La Ceiba. Passenger and air freight services are reliable and efficient.

Air service from Tegucigalpa to Miami is provided by American Airlines and Taca Airlines. In addition, Taca provides service to New Orleans and Houston as well as to Guatemala City, San Salvador, Managua, San Jose, San Andres, and Panama. Continental Airlines provides air service from Tegucigalpa to Houston. Lacs, a Costa Rican airline, provides air service via San Pedro Sula to Cancun, San Jose, Panama, Barranquilla, New Orleans, Los Angeles, and New York. Since delays can occur in receiving your baggage when coming from the US, include a change of clothing and toiletries in your carry on bags.

Islena, a domestic air carrier, connect Tegucigalpa with the North Coast and the Bay Islands. Charter service and aircraft rentals (small single and twin-engine equipment) are available from private flying services operating out of Tegucigalpa, San Pedro Sula, and La Ceiba. Small jets land in Teg-

ucigalpa, San Pedro Sula, and La Ceiba.

Of Honduras' 22,724 miles of roads, about 4,053 miles are paved. Pot-holes are constant hazards, particularly during the rainy season. Night driving is discouraged because of such hazards as poor road conditions, animals on the road, pedestrians, unlit vehicles, and heavy commercial traffic. It takes 4 hours to drive from Tegucigalpa to San Pedro Sula.

When political and security conditions permit, you can drive to neighboring Central American capitals.

Bus service is available from Honduras to principal cities of Central America. However, buses are often overcrowded and rarely meet US safety and comfort standards. There is, however, a comfortable and very reasonably priced express bus service between Tegucigalpa and San Pedro Sula.

Communications

Telephone and Telegraph

Telephone service is adequate, but obtaining a telephone in a new housing area is difficult.

Telecommunications of Honduras (HONDUTEL) provides domestic and international telephone service. The monthly rate for residential telephone service is L20 (US \$2.25). Additional calls and/or increased calling time increase your phone bill. Direct-dial, long-distance calling within Honduras and to the US and many other countries is available. Costs are based on destination, and rates are available through operator assistance. Night rates are charged from 10 pm to 7 am daily. Direct-dial calls placed from the continental US to Honduras are considerably cheaper. AT&T credit card holders may use the less costly "USA Direct" service. Sprint 121 service is also available. World-wide telephone service offers good connections.

Telegraph service, also through HONDUTEL, is available to all parts of the world at a rate of L7 (\$.08) per word, including name and address. An urgent telegram costs L1.40 (\$.18) a word

Radio and TV

Radio reception is satisfactory. US-style music is featured on several stations, but news is exclusively in Spanish. A good shortwave radio is necessary to receive American stations and international broadcasts including the Voice of America (VOA).

Five local TV stations can be seen in Tegucigalpa, all with Spanish-language programming. Local viewing will improve your Spanish. Some local companies offer cable service with a wide range of stations, including major networks, CNN and entertainment-oriented stations (HBO Ole, CINEMAX, etc.).

Newspapers, Magazines, and Technical Journals

Six Spanish-language dailies are published in Tegucigalpa and San Pedro Sula. One weekly English-language newspaper is published in Honduras. Major sources of English-language news are the Latin American air express editions of the Miami Herald, the New York Times, the Wall Street Journal, the Washington Post, and USA Today. They normally arrive the day of, or day after, publication.

Overseas editions of *Time* and *Newsweek* are available at several newsstands at lesser cost. Several bookstores in Tegucigalpa carry limited selections of paperbacks, US magazines, and children's books. The Binational Center library carries a good selection of US newspapers, magazines, and some technical journals.

Health and Medicine

Medical Facilities

If you require medication for long-term conditions, bring an adequate supply and/or make arrangements

with your physician and pharmacist to ensure a continued supply. Drugs may be obtained locally but are sporadically available. In addition, finding the exact item desired can be difficult.

Many local physicians have had part or all of their medical education in the US or Europe and enjoy the confidence of the community. Diagnostic facilities, such as radiology units and laboratories, provide most basic services. Three private hospitals are utilized frequently and two have emergency services. Hospitalization is usually limited to short stays, as comfort and nursing care are only fair and services limited.

Ophthalmology and optometry services are good. A new ophthalmology clinic has up-to-date outpatient care services and 24-hour emergency services. Lenses, frames, glasses, and accessories are imported but are cheaper than in the US.

Routine dental care is quite good. Orthodontia is excellent and inexpensive. Many types of medical specialists are available and often are good.

Community Health

Honduras provides very little environmental sanitation or community health controls. Tap-water is considered contaminated and must be purified by the 3 minute boil-and-filter method before using for drinking, making ice cubes, brushing teeth, or washing fresh produce. All raw food products such as fruits, vegetables, and meats should be considered contaminated, and must be treated or properly cooked. Most endemic health hazards, including intestinal parasites and bacterial infections such as typhoid and infectious hepatitis, are directly related to water and food contamination. Pasteurized milk and other dairy products are available.

During the latter part of the dry season (February-April) water shortages occur. Many homes have water storage tanks (cisterns) with electric pumps in readiness for

shortages. During this same period, burning empty fields within the city results in an inordinate amount of smoke in the air. Upper respiratory infections and lung ailments, such as allergies and asthma, may be exacerbated during this period of dry, dusty, warm weather with smoke. If you are subject to any of these illnesses, bring a nebulizer, vaporizer and/or air purifier.

Rabies is present in Honduras but does not constitute a serious health problem. Mosquitoes and other flying insects are present in Tegucigalpa and can be somewhat controlled by repellents, sprays, and good screening. Malaria is exists outside Tegucigalpa, and malarial suppressants are recommended when overnighting in areas with elevation lower than Tegucigalpa. Crawling insects can be problems, and controlling them in homes requires constant care. To keep bugs out of food, use airtight containers.

NOTES FOR TRAVELERS

Passage, Customs & Duties

The best air travel to Tegucigalpa is via Miami on American Airlines (daily, nonstop flights are available). Luggage often does not arrive on the same flight as the traveler, therefore, use your carry on bag effectively (change of clothing, special medicines, etc.).

A valid U.S. passport is required to enter and depart Honduras. A visa is not required, but tourists must provide proof of return or onward travel. Visitors are given a permit to remain in Honduras for 30 days. Honduran immigration may grant up to two thirty-day extensions for a total of 90 days. Thereafter, tourists must leave the country prior to reentering. On departure, visitors are required to pay an exit fee, either in dollars or in local currency, at the airline counter.

Honduran customs authorities may enforce strict regulations concern-

ing temporary importation into or export from Honduras of items such as firearms, antiquities, medications, and business equipment. For example, Honduran law prohibits the export of antiques and artifacts from pre-colonial civilizations. To protect the country's biodiversity, it is illegal to export certain birds, feathers and other flora and fauna.

U.S. citizens who intend to stay in Honduras for an extended period of time and who bring vehicles or household goods into the country should consult Honduran customs officials prior to shipment.

For specific information regarding customs requirements, contact the Embassy of Honduras in Washington or one of Honduras's consulates in the United States.

Americans living in or visiting Honduras are encouraged to register at the consular section of the U.S. Embassy in Tegucigalpa and to obtain updated information on travel and security within Honduras. Travelers can register in person or fill out the form available on the Embassy website and fax it to the Embassy. Please include a copy of the data page of your passport and emergency contact information.

The U.S. Embassy and Consulate are located at: Avenida La Paz in Tegucigalpa, Honduras; Fax: 011-504-238-4357; Web site: <http://www.usmission.hn>; Telephone: 011-504-236-9320 or 011-504-238-5114. For information on services for U.S. citizens, ask for ext. 4400.

The Consular Agency in San Pedro Sula is located at: Banco Atlantida Building - 8th Floor, San Pedro Sula, Honduras, Telephone: 011-504-558-1580.

The Consular Agent at this office is available during limited hours to accept U.S. passport applications for adjudication at the Embassy in Tegucigalpa, perform notarial services and assist U.S. citizens with emergencies. Please call for office hours. The Consular Agent does not provide visa information or services.

Pets

The Government of Honduras' Ministry of Natural Resources has established import restrictions for pets. Before arrival, you must request an import permit and obtain a veterinarian certificate, which authorizes a 40 day in-house quarantine. Bring vaccination certificates for distemper, hepatitis, leptospirosis, and parvovirus. You must also bring, upon arrival in country, a health certificate not more than 14 days old and a rabies vaccination certificate that is at least 6 months, but not more than 1 year old. Local veterinarian services are fair to good.

Currency, Banking, and Weights and Measures

The official monetary unit is the lempira, named after a heroic Indian chief who fought against the Spanish conquistadors. It is usually written as L1 or 1 Lps.

Occasionally, the shopper will hear Hondurans use "peso". This monetary unit existed before the lempira was adopted and is currently equivalent to the lempira.

Lempiras are divided into 100 centavos. Bills the same size as US bills are issued in denominations of 1, 2, 5, 10, 20, 50, and 100 lempiras. Coins are issued in 1, 2, 5, 10, 20, and 50 centavos.

Currently, the official rate of exchange is L16.36=US\$1. The Central Bank of Honduras regulates both imports and foreign exchange. The value of the lempira against the dollar (exchange rate) is subject to periodic adjustment according to supply of and demand for dollars and other political economic factors.

The official system of weights and measures is the metric system, but the US system is, used most in markets, shops, and gasoline stations. The old Spanish system (e.g., vara vs. meter) is used in legal affairs. Most mechanics and carpenters are also familiar with US weights and measures.

Disaster Preparedness

Honduras is prone to flooding and landslides from heavy rains, especially during the rainy season which generally occurs from June to December. Hurricane Mitch caused extensive damage and loss of life in October 1998. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>.

Kingston, Jamaica

JAMAICA

Major Cities:

Kingston, Mandeville, Montego Bay, Port Antonio

Other Cities:

Bath, Black River, Falmouth, Morant Bay, Negril, Ocho Rios, Savanna-La-Mar, Spanish Town

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 2000 for Jamaica. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Travelers have long regarded Jamaica as one of the most alluring of the Caribbean islands. Its beaches, mountains, and carnal red sunsets regularly appear in the world's tourist brochures, and, unlike other nearby islands, it democratically caters to all comers: You can choose a private villa with your own private beach; laugh your vacation away at a party-hearty resort; or throw yourself into the thick of the island's life.

Jamaica has a vivid and painful history, marred since European settlement by an undercurrent of violence and tyranny. Christopher Columbus

first landed on the island in 1494, when there were perhaps 100,000 peaceful Arawak Amerindians who had settled Jamaica around 700 AD. Spanish settlers arrived from 1510, raising cattle and pigs, and introducing two things that would profoundly shape the island's future: sugar and slaves. By the end of the 16th century the Arawak population had been entirely wiped out.

In 1654 an ill-equipped and badly organized English contingent sailed to the Caribbean. After failing to take Hispaniola (present day Haiti and the Dominican Republic), the "wicked army of common cheats, thieves and lewd persons" turned to weakly defended Jamaica. Despite the ongoing efforts of Spanish loyalists and guerilla-style campaigns of freed Spanish slaves (cimarrones, "wild ones"-or Maroons), England took control of the island.

Investment and further settlement hastened as profits began to accrue from cocoa, coffee, and sugarcane production. Slave rebellions did not make life any easier for the English as escaped slaves joined with descendants of the Maroons, engaging in extended ambush-style campaigns, and eventually forcing the

English to grant them autonomy in 1739. New slaves kept arriving,

however, most of them put to work on sugar plantations. The Jamaican parliament finally abolished slavery on August 1, 1834.

Adult suffrage for all Jamaicans was introduced in 1944, and virtual autonomy from Britain was granted in 1947.

Post-independence politics have been dominated by the legacy of two cousins: Alexander Bustamante, who formed the first trade union in the Caribbean just before WWII and later formed the Jamaican Labor Party (JLP), and Norman Manley, whose People's National Party (PNP) was the first political party on the island when it was convened in 1938. Manley's son Michael led the PNP towards democratic socialism in the mid-1970s.

Jamaicans may have a quick wit and a ready smile, but this is not the happy-go-lucky island of Bacardi ads. Rastafarianism may mean easy skankin' to some, but its confused expression of love, hope, anger, and social discontent encapsulates modern Jamaica—a country that is struggling to escape dependency and debt.

MAJOR CITY

Kingston

The destruction of Port Royal by an earthquake in 1692 led to the settlement of Kingston to the north across the harbor. So rapid was growth that by 1703 it was declared by law the chief seat of trade and head port on the island. In 1872, it became the island's capital. After 1911, internal migration began to focus on Kingston, which led to the continuing trend toward movement from the countryside to principal urban areas. Kingston is now the largest English-speaking city in the Americas south of Miami.

Kingston is spread along the low coastal area surrounded by picturesque mountains. It is a bustling, sprawling city of striking contrasts. Typical of large cities, Kingston has areas of modern homes set in lovely gardens as well as sections of slums. The government is attempting to replace the "tin shanties" of the slums with low-cost housing developments.

The better suburban residential areas are close to several fairly modern shopping areas, which include supermarkets, drug stores, dry cleaners, small specialty shops, movie theaters, and boutiques.

The modern-day Port Royal, beyond the airport and across the harbor from Kingston, is considered one of the more valuable archeological sites in the Western Hemisphere. It was known as one of the richest and most wicked cities in the world before the 1692 earthquake, which plunged much of this buccaneer capital into the sea. Several old buildings are still standing, and there is an excellent museum. Restoration and an underwater archeological project are under way.

Kingston itself has several interesting old houses as well as galleries, museums, and other places to visit. The city features panoramic views of the mountains or the sea from

nearly any point and offers many opportunities for an enjoyable tour.

Utilities

Electric service in Kingston is fair, with sporadic power outages. AC current is 110v, 50 cycles (the U.S. standard is 110v, 60 cycles). Many U.S.-made appliances function satisfactorily on 50-cycle current, but electric clocks, tape recorders, and some other equipment may not. Frequent voltage fluctuations sometimes damage electrical equipment.

Food

Supermarkets and small specialty shops in Kingston have a wide variety of meats, fruits, vegetables, and canned goods. The better quality shops and markets inspect their meat, but no government inspection is required. Prices are somewhat lower than those in the U.S. for all cuts of standard quality meats. Some American-type cuts of beef and pork are available. Fresh and frozen fish, lobster, and shrimp are available seasonally.

Vegetables range from tropical to standard fare and are available year round. Choices include white Irish potatoes (no baking), sweet potatoes, yams, beets, green beans, leaf lettuce, eggplant, green peppers, chilis, avocados, onions, scallions, celery, carrots, cucumbers, corn, tomatoes, varieties of pumpkin (squash), and several local varieties of vegetables. Quality is often below U.S. standards, and prices are moderately high, especially for potatoes and onions.

Fruits are also seasonal, with oranges, tangerines, grapefruit, limes, papaya, watermelon, mango, guava, pineapple, bananas, plantains, and other good local fruits available. Prices range from reasonable to high, although quality is good. All fruits and vegetables should be washed well before eating.

Clothing

Clothing suitable for men and women in southern Florida, southern California, and Hawaii is appropriate for Kingston. Some necessary

items for men, women, and children are expensive but can be found here. A limited selection of lightweight fabrics is available. A few hard-to-find dressmakers can make dresses. Ready-made clothing is sold, and prices are often high. Careful shopping can produce good results.

Bring a good supply of shoes, especially for women and children. These are hard to find in the right size, and quality is below U.S. standards. Imported shoes are available but are expensive. For possible trips to cooler climates or the U.S., include some warm clothing. Also bring blue jeans, sports clothes, slacks, and a pullover if you like mountain holidays.

American-style sportswear is worn here. Long patio dresses are worn, but short sundresses are popular for informal evening wear.

Drip-dry fabrics are ideal but are expensive here. Due to the climate and need for frequent laundering, elastic deteriorates rapidly.

For the infrequent cool evenings, sweaters or light evening wraps, depending on the function attended, will suffice. Men need only a lightweight tropical suit, even for the coolest Kingston weather.

Children wear typical play clothing, particularly shorts and T-shirts, tennis shoes, and sandals.

Supplies and Services

Bring your favorite cosmetics and toiletries, as well as prescription medications.

The quality of dry cleaning is fair. Barber shops are generally adequate and less expensive than those in the U.S. Beauty shops are nearly up to U.S. standards and charge U.S. prices.

Domestic Help

"Helper," not "maid," is the term used by Jamaicans and foreigners alike for domestic help on the island. Most Jamaican helpers are female. Most types of household help are available, but reliable,

Business district of Kingston, Jamaica

© Howard Davies/Corbis. Reproduced by permission.

well-trained workers, especially cooks and gardeners, may be difficult to find.

The Jamaican legal minimum wage is low, and most U.S. travelers pay more generous salaries. The standard pay for a dayworker, for instance, ranges from J\$200 to J\$300 a day, with average weekly salaries (40-hour maximum work-week) of J\$1,000 to J\$1,500.

Various arrangements are made for helpers food, bus fare, and lodging. Helpers daily hours are not rigidly set, and various schedules can be arranged to suit your family needs. Gardeners are generally competent, but are hard on American lawnmowers and tools.

If uniforms are desired, employers must furnish them. Once a year each helper receives 2 weeks' vacation with pay. In some cases, a helper is given quarters and lives in.

Helpers and employers must make modest weekly payments to the National Insurance Scheme, the Jamaican social security system. Payments for hospitalization or unemployment are not required, though often made by the employer. If a helper who has been employed at least 4 weeks is discharged without cause, 2 weeks severance pay is required.

Although local custom is not strongly established on this point, the employer should pay the costs of some medical services for a helper in case of sickness or injury. Public hospitals provide a wide range of free services, although receiving them can be time-consuming.

Religious Activities

Most major faiths are found in Jamaica. A partial list of denominations in Kingston includes Anglican, Baptist, Friends (Quaker), Jewish, Methodist, Mormon (Latter-day Saints), Presbyterian/Congrega-

tional, Roman Catholic, and Seventh-day Adventist. All services are in English.

Education

In the Jamaican school system, students take two important examinations, the Common Entrance and the Caribbean Examination Council (CXC). In 6th grade, at the end of January, every Jamaican student takes the Common Entrance Exam to enter high school. Doing well means acceptance in one of the nation's better high schools; doing poorly means the child cannot attend high school except as a private placement. In 1996, more than 55,000 Jamaican students sat the exam to earn one of fewer than 20,000 places. During the latter terms of 5th grade and the first term of 6th grade, students attend extra classes at the schools to prepare for the Common Entrance Exam. In its favor, the exam tests student abilities in math mechanics, adding, multiplication, etc.,

math reasoning and problem solving, spelling, English grammar, parts of speech, and reading comprehension. Students learn using rote memorization methods; yet they leave the Jamaican schools with a thorough grounding in the basics of math and English.

At senior level, grades 7-11, the Jamaican curriculum prepares students for the Caribbean Examination Council Exam. If students pass this exam, they go on to "A" level courses in 12th and 13th grades, and after that, to university. No Jamaican school will admit a student to the 12th grade unless the student passes the CXC.

The Jamaican high school curriculum treats science and math courses differently from the U.S. A Jamaican student studies a science course such as chemistry, biology, physics, etc., throughout 3 years and earns course credits only at the end of the third year. The Jamaican math curriculum incorporates general math, algebra, geometry, etc., into one mathematics course, whereas, under a U.S. curriculum, these are individual courses taught in separate years. In both math and science, it is difficult for a student to carry a useful transcript crediting the student with having completed algebra, geometry, the sciences, etc., to the U.S. or another school. Finally, as the high school begins at 7th grade, foreign language instruction also starts at that grade level.

Under the Jamaican education system, a person may teach in a classroom with 3 years' university certification. The student to teacher ratio is higher in Jamaican schools than in U.S. schools. Values and morals, such as integrity, responsibility, self-control, and self-reliance, are part of the Jamaican school philosophy. The students address their teachers as "Sir" or "Miss." Schools in Jamaica may not have the modern and well-equipped facilities of American schools, for example, full-scale libraries, computer and scientific laboratories, physical education gymnasiums, and sports field; nevertheless, facilities are more than

adequate and children receive an education equal to U.S. standards.

In Jamaica, children enter kindergarten at age 4; thus for Americans attending Jamaican schools, the age and grade do not correspond with the U.S. system and American children may frequently be a year older than classmates. The Jamaican schools tend to place incoming children based on age, so parents should work with the school in placing their child. Some students do very well, in effect, "skipping a grade," but parents must consider whether the U.S. school system will readmit the child at the advanced grade or return the child back to a grade more suitable for the child's age, maturity, and intellectual and social development.

American International School of Kingston: AISK was founded in 1994 to meet the growing demands for a school that would offer quality education that more closely follows the U.S. curriculum and style of education. It is applying for accreditation from the Southern States Association. Class size is small (no more than 15 students per class), allowing for more individualized attention.

The school year runs from early September through to late June or very early July and is divided into three terms, the Christmas, Easter, and summer terms. The Jamaican education system separates into preparatory schools, pre-kindergarten to grade 6, and high schools, grades 7 to 13. AISK follows a traditional American grade division: an elementary program for grades pre-kindergarten through 6, a middle school for grades 7 and 8, and a high school from grades 9 to 12.

Since it does not offer a program to prepare students for the two major Jamaican exams, Common Entrance and Caribbean Examination Council, AISK is a real alternative for children from the U.S. and other diplomatic missions, American and international business families, and Jamaican families who do not need their children to sit the

Common Entrance Exam because their children will attend high school abroad.

For grades 9-12, the school is fully accredited with the University of Nebraska and uses the university's directed home study program under the supervision of two high school teachers. Facilities include a library configuration that includes separate libraries for the lower grades (pre-kindergarten through 6) and upper grades (7-12), totaling over 5,000 volumes. Two computer labs with CD-ROM and access to the Internet are available to the students at AISK.

Because of the small class size, there is an emphasis on hands-on learning, and students may learn according to their own needs. The curriculum for the early grades includes Spanish, French, and art. The school emphasizes the development of the individual student. The goal of the school, at all levels, is to help students achieve their highest potential.

The high school at present does not provide facilities found in many U.S. schools. The home study system is quite different from a normal high school program, and while students lose out on a "normal high school social scene," they gain in their ability to work independently. Two students graduated in 1995 from 12th grade, and they were both accepted into Canadian universities. Students attending AISK's high school program will have no problem entering a U.S. high school when they leave Jamaica.

Hillel Academy: Hillel Academy, founded in 1969 as the Jewish community's contribution to education in Kingston, is nondenominational and religious instruction is optional. The curriculum is designed to prepare students for the CEE, CXC, and SAT examinations, as many Jamaican students attend university in the U.S. Hillel is in the process of applying for accreditation from the Southern States Association. Class size is large (28-30) per class, and this can be a problem for

Susan Rock. Reproduced by permission.

Jamaican novelty market

some children who require more individualized attention.

The highly regarded preparatory school is nursery, called reception, to grade 6, and the senior school is grades 7-13. The 1995-96 enrollment was 662 students.

The prep school offers a curriculum that is closely linked to that of U.S. schools. Many of the textbooks used are from the U.S., particularly in math and science. Language arts is based on a Caribbean curriculum and uses Caribbean textbooks; for example, within the Caribbean curriculum the word "harbor" is spelled with a "u," harbour. Students in the 5th grade begin to prepare for the Common Entrance Exam, given in January of 6th grade. The prep school offers a library, computer lab, art and music programs, French and Spanish languages, and after-school activities such as soccer, netball, tennis, martial arts, and ballet.

Hillel, which is building a swimming pool in time for the 1996 summer term, will offer swimming instruction as part of the physical education classes and swimming as an intramural sports program.

Although the senior school has experienced some problems in the past with curriculum and discipline, the school has installed a new principal in the high school, and the reports are that firm discipline and school structure are making changes in the school. All students are required to take French and Spanish the first 3 years of senior school.

Hillel is on an 8-1/2-acre campus at the foot of the mountains. Blue uniforms are required but may be bought from a local manufacturer. Black shoes are required for both boys and girls. Boys wear dark socks and girls wear navy socks. Bring both shoes and socks to post

as well as crew socks and white tennis shoes, which are needed for physical education. White shorts for phys. ed. can be bought locally, and the phys. ed. T-shirt will be sold by the school in the appropriate "house color" for your child.

Hillel Academy

Special Educational Opportunities

The University of the West Indies has its largest campus in Kingston. It is a modern institution offering liberal arts, natural sciences, and medical training. Entrance requirements are at the level of 1 year of college in the U.S. It is possible to enroll in selected classes but difficult to enroll for a degree program.

The Edna Manley College of the Visual and Performing Arts includes the Schools of Dance, Drama, Art, and Music. Each offers programs for both adults and children.

Opportunities for learning languages such as French, German, and Spanish are available at the Alliance Française, the Jamaica-German Society, and the Institute of Bolivar y Bello. Private tutors are also readily available.

A number of facilities exist in Kingston for educating the handicapped, although equipment and staff are limited. These schools have limited space, and each should be explored for specific needs. Day programs are offered by the Jamaica Association for the Deaf, the Salvation Army School for the Blind, and the Mona Rehabilitation Center for the physically handicapped. Carberry Court Special School has day and boarding programs for the severely mentally handicapped. None of these programs meets U.S. standards.

Mico Care Center offers a 9-week remedial program for those with multiple handicaps. The Jamaica Association for Children with Learning Disabilities is a resource facility for assisting children while in their regular school program.

Sports

Jamaicans are sports conscious. Chief sports are soccer, cricket, golf, tennis, swimming, sailing, and horseback riding. Smaller groups are active in squash, rugby, scuba diving, snorkeling, basketball, and softball. Local sports groups and clubs accept foreign nationals.

There is a Saturday baseball league for students that begins in the fall. It is held on the campuses of local schools. Coaches and assistants are always welcome.

Although scuba gear is available for rental, it can be purchased here at higher-than-U.S. prices.

The Jamaica Sub-Aqua Club, a branch of the British Sub Aqua

Club (BSAC), gives scuba diving lessons for a minimal fee. BSAC certification with the club is required to participate in club-sponsored dives, arranged every weekend. PADI certification can be obtained at the Buccaneer Scuba Club in Port Royal and through some of the north coast hotels.

Jamaica has virtually no continental shelf, and the drop-off starts 200 yards from shore. Scuba diving and snorkeling enthusiasts enjoy exploring the many networks of caves, canyons, and crevices. The Ocho Rios area has traditionally had one of the Caribbean's finest reef communities. Over 50 species of coral include giant pillar, lettuce, antler, star and rose cup, and staghorn, as well as a wide variety of beautiful sponges and seaweed. Hurricane damage to the reefs in 1988 was extensive, particularly on the south side of the island.

Sergeant majors, tangs, and peacock flounders are among the many fish species to be seen. The island has over 800 species of shells.

There is saltwater sport fishing for jack, blue marlin (record 600 lbs.), sailfish, kingfish, dolphin, tuna, barracuda, tarpon, and snapper. Freshwater catches are snook, mullet, and others. Windsurfing is enjoyed at several north coast resorts. Water-skiing can be found in several places, especially at Blue Hole (Port Antonio) and Doctor's Cave (Montego Bay).

For joggers and walkers, the favorite spot to do laps is the Mona Reservoir. Daily running is also possible at the Police Officers' Club in Kingston. Running on the streets is not recommended because of dogs, traffic, and crime.

Constant Spring Golf Club offers a challenging 18-hole course marked by hills and narrow fairways. Entrance fees are moderate as are annual dues. Greens fees are low. Social membership entitles you to squash, badminton, tennis, and swimming. The initiation fee for social membership is moderate

when compared with U.S. private club fees. The clubhouse has a newly renovated bar and lounge room and snack bar. The pool area has also been renovated. There are no playground facilities at the club.

Caymanas Golf and Country Club is 12 miles from Kingston. Its facilities include a good 18-hole golf course and some tennis courts. Membership fees approximate those of the Constant Spring Club.

The Jamaica Golf Association (JGA) has a special arrangement for members of a Jamaican golf club. For a small annual fee, you may join JGA and play any course in Jamaica for about half price. There are 11 good golf courses on the island.

Kingston's Liguanea Club has a swimming pool; lighted tennis, badminton, and squash courts; a restaurant and bar; and an exercise room. The club has several dances a year and is used for other events. A special golf membership is available at Liguanea for play at the Caymanas golf course.

The Royal Jamaica Yacht Club has facilities available for those interested in sailing, boating, and fishing. Social events are also held. The club is located near the international airport, and its large veranda affords a panoramic view of the harbor, Kingston, and the mountains. Entrance fees and annual dues are moderate. Anyone with a desire to "crew" on sailboats should join the club and meet the boat owners.

Physical fitness clubs and health spas are available. The Spartan Health Club, for instance, offers universal weight lifting equipment, aerobic exercise classes, steam room, and shower facilities. Future Fitness is a state-of-the-art facility housed in the Wyndham Hotel. The air-conditioned facility offers aerobics as well as weight training, Stairmasters, bikes, and treadmills.

Kingston does not have extensive outdoor recreational opportunities for children. The city has a small zoo and botanical gardens where

children can ride bikes or rollerblade. Schools have limited playgrounds. Most families do not have sufficient space for bikes, except for tricycles. Children usually get their outdoor exercise in their own yards.

Many Jamaicans enroll their children in full-time nursery schools at the age of 2 or 3. Because of this, Americans find their own young children frequently lack playmates. Therefore, most families enroll young children in a nursery 5 days a week, at a reasonable cost.

There is little informal play between children of neighboring families in most neighborhoods in Kingston. Parents often schedule lessons or activities for the afternoons, especially for school-age children, since schools finish between 1:30 and 2:30 p.m. Tennis and golf lessons as well as piano, dance, and ballet lessons are popular. The Tae Kwon Do Club is enjoyed by all ages interested in self-defense.

Because summers are hot and humid, swimming is popular. Some families have homes with swimming pools, but beaches are some distance from Kingston.

Children will want to play indoors in the heat of the day when they first arrive, especially in summer.

Touring and Outdoor Activities

The most popular form of outdoor activity on the island is beach-going. The north coast of Jamaica has luxury resorts, hotels, and private villas every few miles. The off-season from mid-April to mid-December offers lower rates.

Bicycle riding is not recommended in Kingston because of erratic driving habits, potholes, and overzealous dogs. There also have been incidents of bikers being attacked and bikes stolen. The University of the West Indies campus offers several miles of quiet, scenic roads for riders of all abilities and ages. There are several tour companies that offer bike excursions into the

Blue Mountains. Bring a car rack, helmet, and rear-view mirror.

Another popular outdoor activity is a weekend or day trip to Newcastle, a Jamaican Defense Force training center about an hour's drive from Kingston. At 4,000 feet, the weather can be quite cool so warmer clothes are advised. Hiking is a popular outdoor activity.

Bird watching is popular, and over 250 species can be seen, including 25 found only in Jamaica. Resident species shared with neighboring countries are of special interest, since some have developed differences in behavior and appearance peculiar to Jamaica. Bring binoculars.

Garden clubs have regular outdoor shows. The Orchid Show is an annual event enjoyed by many.

Touring is popular. Kingston-area locales include historic sites at Port Royal, Castleton and Hope Botanical Gardens, the National Gallery, and the nearby Blue Mountains. Touring elsewhere is an easy day's drive from Kingston.

Negril, on the western end of the island, has 7 miles of white-sand beach and uninhibited simplicity.

To the east of Negril along the north coast is Montego Bay, tourist capital of the island with its beaches, hotels, and attractions. The area includes several excellent golf courses and Rose Hall, Jamaica's most famous great house, which echoes with the mystery of Annie Palmer (the "White Witch"), its former mistress with a murky past. Nearby is Greenwood, once owned by the Barrett family whose best-known members were poet Elizabeth Barrett Browning and Sarah Barrett, "Pinkie" in Sir Thomas Lawrence's portrait.

Falmouth, despite its neglect, is a charming north coast port. It is still the best-preserved late 18th- and early 19th-century town on the island. The old Georgian buildings are worth a sight-seeing tour.

The St. Ann's Bay/Discovery Bay/Runaway Bay area, where Columbus landed in 1494, is another interesting locale. Columbus Park, Columbus Statue, and the ruins of the first Spanish settlement, Seville Nueva, are here. Visitors to the area can tour the caves near Runaway Bay, which the last Spanish governor of Jamaica used as a safe haven while fleeing the British. Discovery Bay is the home of the University of the West Indies Marine Lab.

Ocho Rios is the resort area for the central north coast. The offshore reefs are among the finest in the Caribbean. Just south of Ocho Rios is Fern Gully, a rain forest where the road twists through a ravine. Also in the area is Jamaica's leading tourist site, Dunn's River Falls. Brimmer Hall Plantation (coconut and bananas) and Prospect Estate (pimento, citrus, and cattle) offer tours.

On the northeast coast near Port Maria is "Firefly," former home of Noel Coward. "Golden Eye," once home of James Bond's creator, Ian Fleming, is in Oracabessa.

Port Antonio, once vacation home of actor Errol Flynn, is considered Jamaica's most beautiful port and is the sport fishing capital of the island. The beauty of the area, the beaches, rafting on the Rio Grande River, Blue Hole (the world's largest natural swimming pool), Folly (ruins) built by an American millionaire for his love, Nunsuch Caves, Somerset Falls, and Maroon "jerk" pork and chicken still attract many visitors to its hotels and villas.

The trip back to Kingston along the coastal road to the east of Port Antonio is rewarding. Beautiful coastal scenes, extensive coconut and banana plantations, the John Crow Mountains, and interesting villages provide a pleasant break from tourist areas.

A 424-mile primary highway circles the island and several highways cross the mountainous interior from north to south. The two main north-

south roads used to cross the center of the island from Kingston are also interesting. A third, mostly paved road runs between Kingston and Buff Bay via Newcastle (41 miles). It is a narrow road through small villages and over Hardware Gap, the highest point on the primary road net, offering beautiful scenery. From Kingston to Annotto Bay (28 miles), a good but narrow road winds through the mountains. Along the way is Castleton Botanical Gardens, founded in 1862. These lovely gardens were severely damaged by the 1988 hurricane but have been restored. They provide a good setting for weekend picnic outings.

The other road crossing the island from Kingston begins by going west. It passes the Arawak Museum at White Marl, Caymanas race track, and Spanish Town, the old capital. Spanish Town is unique among Jamaican cities and has the longest history of settlement (1534) plus the finest collection of historic buildings and monuments on the island. It is also home of the National Archives.

From Spanish Town, the road winds its way north through the canyon of the Cobre River, across the narrow Flat Bridge, past Bog Walk, Linstead, and Ewarton (Alcan alumina plant), and over Mount Diablo (2,250 feet). At Moneague, where three small lakes periodically appear, the road branches to the left to St. Ann's Bay or to the right through Fern Gully to Ocho Rios.

Because of reasonable air fares and the proximity to Miami, Cayman Islands, and Haiti, it is easy to take trips out of Jamaica.

Entertainment

Two drive-in theaters and three walk-in theaters are frequented by Americans. Several theaters offer a selection of stage presentations: drama, reviews, variety, musicals, and pantomime. Kingston also has several active dance theater movements, the Jamaica Philharmonic, and several choral groups.

The island has several fine museums. The Institute of Jamaica has general displays. The Arawak Museum near Spanish Town and the Port Royal Museum with buildings and collections of relics of the Buccaneer heyday are all within the Kingston area.

The National Gallery of Art (downtown) and several smaller art galleries have excellent collections of Jamaican art. Regular exhibits of paintings, sculpture, ceramics, and native crafts are held in Kingston.

There are many colorful activities that are interesting to newcomers, including Jonkanoo dancing, a curious type of costumed, masked folk dancing of African origin that is seen during the Christmas season. Carnival is a popular event, celebrated the week after Easter with both adult and children's carnivals.

"Eating Jamaican" is not to be missed. Two popular dishes are ackee with saltfish and rice with peas (beans). Other specialties include curried goat, fricasseed chicken, escovitched fish, Port Royal's fried fish and bammy, jerk pork, jerk chicken, soups such as pepperpot and pumpkin, and gungo peas. Desserts such as sweet potato puddings, plantain tart, bulla, gizada, cut cakes, and grater cakes are popular.

Kingston has good restaurants offering Jamaican, British, Chinese, American, Indian, French, and Italian cuisine. Most restaurants are moderately priced compared to the U.S.

Social Activities

The American Women's Group is a social club for all American women. It has monthly programs and activity groups.

The American community, through various sponsors, celebrates our holidays-Christmas, Fourth of July, and Halloween-in traditional fashion.

Americans have opportunities to meet members of the foreign com-

munity. There are several active international groups such as the Diplomatic Association of Jamaica, the Consular Corps, International Proxy Parents and the Rotary Club.

Mandeville

Mandeville is a busy mountain city noted for beautiful gardens and a climate where both tropical and subtropical plants flourish. As a market center for the surrounding agricultural areas and a dormitory town for the two major bauxite and alumina installations, it is Jamaica's most flourishing parish capital. A U.S. Agency for International Development (USAID) contract post is in operation here. The city has a population of about 34,000.

Mandeville, at an elevation of 2,000 feet above sea level, maintains a year-round comfortable climate where neither air conditioners nor heaters are needed. The rainy seasons are basically in May and October.

Five shopping centers, reasonably good medical facilities, pharmacies, banks, restaurants, and a good library are available. Both radio and television reception are good. There are churches of many denominations, with varied activities sponsored within each church. Service clubs include Rotary, Jaycees, Lions, and Kiwanis.

Schools for Foreigners

Belair School, an independent coeducational, boarding institution, offers classes from kindergarten through grade 12 for children of all nationalities. Founded in 1967, it is sponsored by two bauxite companies. It is accredited by the Southern Association of Colleges and Schools.

Belair's curriculum is a combination of programs typically found in U.S. academic and college-preparatory schools, and has subjects leading to the Cambridge GCE ordinary-level examinations. The current enrollment (mostly Jamaican) is over 650,

and the staff numbers 45. Uniforms are required.

The elementary school is situated on a two-acre campus near the center of town; the preparatory and high school are located on a separate 11-acre campus. There is a 10,600-volume library. Further information can be obtained from the school at 43 DeCarteret Road, Mandeville.

Montego Bay

Montego Bay, on Jamaica's northwest coast, is the tourist capital of the island, with its good harbor and fine beaches. The city's permanent population of close to 75,000, is swelled each year by the thousands of visitors who are drawn to the yacht races, the excellent golf courses, beach parties, garden tours, and nightlife. The world's largest reggae festival, Sunsplash, is celebrated here each August.

Montego Bay was, for many years, one of several small ports on the north coast from which sugar was shipped. Many of the old buildings in town have been restored and now house restaurants and shops. Shopping centers are found downtown and close to the resort areas.

The Cage, a jail built in 1807 for runaway slaves, is now a museum. Historic mansions have also been restored as museums, and are a glimpse into life of the colonial era. Among Montego Bay's plantation houses are Rose Hall, which echoes with the mystery of Annie Palmer, the "white witch" who is said to have dabbled with the occult; and Greenwood, once owned by the family of Elizabeth Barrett Browning.

There are several trips that visitors may take to see the mountains and countryside around Montego Bay. The Governor's Coach is an all-day drive which winds through the mountains, stopping to visit the villages of Ipswich Caves and Appleton, and to tour a rum factory.

Port Antonio

Port Antonio, which lies on a divided bay in the northeast corner of the island, is a lovely port city called the "greenhouse of the gods" for its lush vegetation. It is almost the length of the island (134 miles) away from Montego Bay and 65 miles from Kingston, separated by the Blue Mountains. It is the fishing capital of Jamaica; dolphin, kingfish, wahoo, and bonito, with blue marlin are at their seasonal height in September and October.

Cruise ships dock here only infrequently, but the beauty of the area attracts numerous visitors to the town's hotels and villas. Attractions include the beaches; rafting on the Rio Grande River; Blue Hole, the world's largest natural swimming pool; Mitchell's Folly, the ruins of a palatial vacation villa built just after the turn of the century; nearby Somerset Falls; and Nonsuch Cave. Old Fort George, now part of the high school's grounds, is one of the town's few historic monuments, located at the tip of the peninsula.

Long a popular jet-set haunt, Port Antonio is still the site of many private villas nestled in the lush hillsides and along shoreline coves. The late Errol Flynn once had a home on the bay, and his former wife operates two boutiques in town and runs a 2,000-acre cattle ranch nearby. Port Antonio has a current population of approximately 13,000.

OTHER CITIES

BATH is located in southeastern Jamaica, 30 miles east of Kingston. The town of approximately 2,000 is famous for its hot springs and botanical gardens, the second oldest in the hemisphere. A runaway slave discovered the springs in the late 17th century; soon after, the area became a mecca for travelers from all over the island. The waters are supposedly helpful in the treatment of skin conditions, as well as rheumatic problems. The Bath Hotel has hot springs tanks for rent, in addition to outdoor bathing supplied by a bamboo pipe.

tion to outdoor bathing supplied by a bamboo pipe.

BLACK RIVER is a community of about 2,700 situated at the mouth of the Black River in the southwest, 30 miles south of Montego Bay. This quiet fishing town, once a main logging point, comes to life at the covered market on Fridays and Saturdays. The Waterloo Guest House here was the first house in the country to have electricity. Tourists enjoy visiting the Holland Estate and sugar factory. The acclaimed "Bamboo Avenue" is on the way to the town of Lacovia, less than 10 miles upriver.

FALMOUTH, despite years of destruction and neglect, is a charming north coast port. It is still the best-preserved late 18th- and early 19th-century town on the island. All the old Georgian buildings are worth a visit. Built as the capital of Trelawny Parish at the height of the area's sugar-growing prosperity, the town has been declared a national trust and plans for its restoration are being considered. Falmouth's population is about 4,000.

MORANT BAY, capital of St. Thomas Parish 30 miles southeast of Kingston, is a small town that played a big role in Jamaican history. This was the scene of the Morant Bay Rebellion of 1865, led by Deacon Paul Bogle. A protest march on the courthouse led to street battles and, eventually, mass executions. The governor was recalled in the ensuing controversy and Jamaica gained new status as a Crown Colony. The nearly 3,000 residents of Morant Bay now have rebuilt the courthouse, with a statue of Paul Bogle set prominently in the front. Near the town are the highly saline Yallahs Ponds and the remnants of a signal tower, now a national monument.

NEGRIL, on the western end of the island, has seven miles of white sand beach and uninhibited simplicity. The country's newest resort town, Negril is two hours from Montego Bay. Hotels and tourist facilities have been constructed since the

area was discovered by the “flower children” of the 1960s, but Negril’s natural beauty remains because no building can be taller than the highest tree. Restaurants abound, and there is a wide range of accommodations, although the town is small, with a population of less than 2,800. During Jamaica Race Week, many yachts drop anchor in Negril harbor.

OCHO RIOS, once a small fishing village, is now the resort area for the central north coast, a scenic two-and-one-half-hour drive from Montego Bay. Its offshore reefs, although severely damaged by Hurricane Allen in 1980, are among the finest in the Caribbean. Ocho Rios, which has a population of 11,000, is the site of the University of the West Indies Marine Laboratory. Just south of town is Fern Gully, a rain forest where the road twists through an old riverbed. Also in the area are the 168-year-old Brimmer Hall Plantation (coconut and bananas) and Prospect Estate (pimento, citrus, and cattle), which conduct tours. Near Ocho Rios is Dunn’s River Falls, a 600-foot cascade, and perhaps Jamaica’s most famous beauty spot. Surrounded by lush vegetation, the water cascades over rocks to the waiting sea. Guided tours are available for climbing the falls. Daily tours to the falls are available from all of Jamaica’s main towns. Also nearby is the Shaw Park Botanical Garden and Bird Sanctuary. In the vicinity, on the north coast near Port Maria, are Firefly, the former home of Noel Coward; and Golden Eye, once the residence of Ian Fleming, creator of the fictitious James Bond.

SAVANNA-LA-MAR, 25 miles southwest of Montego Bay on the west coast, has a most unfortunate past. The city of 12,000 has been ravaged by hurricanes that at one time demolished it. A fort—today used as a large swimming hole—was likewise considered a disaster. An admiral derisively noted in 1755 that it was the very worst in Jamaica. Savanna-La-Mar, whose name means “plain by the sea,” is an active sugar port.

SPANISH TOWN, 20 miles west of Kingston in the island’s foothills, is unique among Jamaican cities. It has the longest history of continuous settlement (1534), plus the finest collection of historic buildings and monuments on the island, among them the Anglican cathedral, built on the foundation of a Spanish chapel erected in 1524. The town also houses the National Archives. Formerly called Villa de la Vega and St. Iago de la Villa, Spanish Town became Jamaica’s most important city after the destruction of Port Royal by an earthquake in 1692. It served as the capital until 1872, when the seat of government was moved to Kingston. The city, with a current population estimated at 107,000, is the commercial and processing center for the surrounding rich agricultural region.

COUNTRY PROFILE

Geography and Climate

The island of Jamaica is perhaps best noted for its lush and scenic tropical beauty: the rugged spine of blue-green mountains rising to 7,400 feet; warm, clear Caribbean waters with exciting underwater reefs; and the picture-postcard north coast with its white-sand beaches.

Jamaica is the third-largest Caribbean island and lies nearly 600 miles south of Miami, Florida. The island is 146 miles long and 51 miles across at its widest point. Except for narrow coastal plains mainly on the island’s south side, the landscape is one of sharp, crested ridges, unique “cockpit” formations, and deep, twisting valleys. Almost half the island is more than 1,000 feet above sea level. Some 50 percent of the island is used for agriculture, 40 percent is woodland, and the remaining 10 percent is divided between mining and urban areas.

Jamaica has about 120 rivers. Most flow to the coast from the central mountain ranges. Those on the north side tend to be shorter and swifter than those on the south side. Only one is navigable for more than a short distance.

Kingston, the capital, is on the southeast coast and has the world’s seventh-largest natural harbor. From sea level at city center, the terrain rises to 1,800 feet. The suburban residential areas of St. Andrew in the foothills of the mountains are slightly cooler than the rest of the city.

Jamaica enjoys a favorable, though warm and humid, climate. Average temperatures are about 80°–95°F, May through September, and 70°–85°F during the cooler months. The higher mountainous regions reach a low of 50°F in the cooler months. Northeast trade winds help maintain a feeling of relative comfort.

Temperature and rainfall are markedly affected by the changes in elevation and geography of the island. Rainfall varies from an annual average of 25 inches at the Kingston airport to an average of 250 inches at Blue Mountain Peak. Suburban residential areas of Kingston receive about 50 inches on the average. Rainfall is generally heaviest during April–May and October–November, though these are not rainy seasons in the tropical sense. Mildew is a problem during these months. Relative humidity in Kingston ranges from 63 percent in February to 86 percent in October.

Jamaica is in the earthquake and hurricane belts but has not had a disastrous earthquake since 1907, even though every year has a few tremors. In September 1988, the island was struck head-on by Hurricane Gilbert, the first since 1980. The main force of the storm affected the entire island, especially the eastern coastal areas, and caused widespread damage, mainly to crops and vegetation, coastal properties, utilities, and roofs.

The island suffers from periodic droughts. The water situation in Kingston was improved dramatically by the completion of the Blue Mountain Water Scheme. Occasional water shortages do occur.

Jamaica has no dangerous wild animals. Black widow spiders and scorpions are present but rare. Many varieties of soft-bodied lizards and nuisance insects—particularly cockroaches, ants, and termites—present some problems. Mosquitoes and houseflies are troublesome in the Kingston area. Grass ticks and fleas are also annoying to outside pets.

Jamaica has over 600 insect species as well as 250 bird species—25 of which belong only to Jamaica. About 120 species of butterflies, including the world's largest (6" wingspan), are also found here. The island is especially noted for its fireflies, otherwise known as blinkies or peeny-waullies.

A profusion of flowering shrubs, trees, and cacti reflects Jamaica's great variation of climate and topography. Hundreds of imported plants are well established. Pimento or allspice is from an indigenous plant, and Jamaica is the world's largest producer. The ortanique, developed in Jamaica, is a cross between an orange and a tangerine. Jamaica also has over 220 species of native orchids, over 500 different ferns, more than 300 mosses, and many fungi.

Population

Jamaica's population of 2.5 million, according to 1993 estimates, is distributed unevenly, with large, sparsely populated areas in the mountainous interior of the island. Kingston is the island's largest city, with an estimated population of 700,000 for the Kingston-St. Andrew metropolitan area. Nearby Spanish Town, with 112,000 inhabitants, and Greater Portmore, with nearly 500,000, although in the adjacent parish of St. Catherine, are in effect extensions of the Kingston metropolitan area. Montego Bay,

with a population of 85,500, is the largest urban concentration outside of the greater Kingston area.

A colorful, complex cultural heritage makes Jamaicans a unique people. Their society is multiracially integrated, and the term "Jamaican" does not carry a particular color connotation. Jamaica's population is about 90 percent African or mixed descent. The remaining 10 percent are chiefly European, Chinese, East Indian, and Lebanese.

Over 70 percent of the population is under 35—the mean age is 18. The economic and emotional focus of the home is frequently the mother, as reflected by the title of Jamaican sociologist Edith Clarke's book, *My Mother Who Fathered Me*.

The language in Jamaica is English, but it varies from precise Oxford English to Jamaican patois. Because of differences in phraseology, inflection, and word usage, new arrivals may experience some difficulty in understanding Jamaican English, particularly on the telephone. Given time, most difficulties disappear. The exception is with patois, sometimes called Jamaican Creole. Understanding it takes time and attention.

While most Jamaicans speak standard English, a combination of patois and English is commonly encountered in dealings with street vendors, domestic helpers, and artisans. Most Jamaicans are familiar with the dialect, although few speak only patois. However, modern Jamaican theater includes much dialogue in rapid patois, which may be difficult to follow, even after extended exposure to it.

Religion is an important facet of the Jamaican character and a major stabilizing influence. Most Jamaicans are Christians, with Baptists now representing the largest single denomination. The Church of Jamaica, successor to the Church of England (Anglican) since the 1880s; Church of God; and Roman Catholic Church have substantial followings.

Many other denominations are also represented, including Moravians, Seventh-day Adventists, Methodists, Presbyterians, and Latter-day Saints (Mormons). There are also small Jewish, Muslim, and Hindu communities.

Also found are religious groups unique to Jamaica: the Revivalists, whose Afro-Christian blend of religion has a high trance-invoking emotional content, and the bearded, "dreadlocked" Rastafarians, who worship "Jah," whose earthly representative was the late Emperor Haile Selassie of Ethiopia.

Jamaican culture and traditions are largely African and British, but ties with North America are increasing. This is due primarily to the large number of Jamaicans who have lived in or visited the U.S. and Canada, the importance of North American tourists and the bauxite industry to the island's economy, and the influence of U.S. television shows and media.

Public Institutions

Jamaica is an independent member of the British Commonwealth. The British Monarch is the Head of State and is represented by a Jamaican Governor General nominated by the Prime Minister. The government is based on the Westminster parliamentary system and has an elected 60-member House of Representatives and an appointed 21-member Senate. Since the early 1940s, the Jamaican political scene has been dominated by two closely matched political parties: the Jamaica Labor Party (JLP) and the People's National Party (PNP). A third party, the National Democratic Movement (NDM), was formed in 1995 by former JLP chairman, Bruce Golding.

The government is elected for a 5-year term, but elections can be held earlier under certain circumstances. The ministries of government are directed by ministers selected from majority party members of the House and Senate and appointed by

the Governor General, acting on the advice of the Prime Minister. An experienced though somewhat understaffed civil service carries out governmental functions.

In the March 1993 general election, the PNP won a 52 to 8 majority in the House of Representatives. Jamaica's Prime Minister is P.J. Patterson, leader of the PNP, who succeeded Michael Manley when he retired for health reasons in 1992. Edward Seaga, leader of the opposition JLP, was Prime Minister from 1980 to 1989.

Legal institutions generally follow British practice. Cases are tried before an independent judiciary ranked in an ascending hierarchy of Petty Sessions Courts, Resident Magistrate Courts, Supreme Court, and Court of Appeal. Certain cases may be sent on appeal to the U.K. Privy Council for final determination.

The island is divided into three counties, which have no present-day functions. Within these counties are 14 parishes. Kingston and the suburban parish of St. Andrew are combined for administrative purposes into the Kingston and St. Andrew Corporation. Local government functions are handled by Parish Councils, which are to be elected every 3 years. They depend on support from the central government and can be dissolved if the national government believes parish affairs are being mismanaged.

Arts and Science

Culture. Jamaica has long been noted for the richness and diversity of its culture and the quality of its artists. In the area of theater, the island has produced such notable actors as Madge Sinclair, the Honorable Louise Bennett-Coverley, and Charles Hyatt. A variety of plays can be seen daily in the capital city of Kingston. Jamaica has an international reputation in dance, especially through the National Dance Theater Company, which fosters the development of traditional dance forms. The country also has a high reputation for its many fine paint-

ers, sculptors, and writers. Music is another field in which Jamaica is well known, particularly for reggae, which has been made famous by singers such as the late Bob Marley.

Music. Jamaica's music is perhaps its most revealing form of folk expression. Frank, natural, and spontaneous, it springs from the soul of the people and often reflects historical circumstances. The songs record joys and sorrows, wit, philosophy of life, and religion.

Traditional Jamaican music is percussive, polyrhythmic, and repetitive. Vocals rely heavily on the call-and-response form, while drums control the accompanying dances. The major influences are evident in the structure and behavior of Jamaican melody and harmony: the older heritage of African music and rhythm and the more recent legacy of European religious and popular music, introduced over the centuries of British rule.

Popular music has steadily evolved over the last 20 years from mento to ska to reggae. Reggae has been internationally promoted through the late Rasta folk hero and international pop star, Bob Marley. Other prominent reggae artists include Dennis Brown, Jimmy Cliff, and the late Peter Tosh. Several Jamaicans also have gained international recognition in the fields of classical music and jazz; Curtis Watson and Monty Alexander are notable examples. The philosophy, doctrine, and music of the Rastafarians heavily influence reggae in instrumentation, lyrics, movement, and delivery. The latest musical movement is called "DJ music." Similar to American rap music, it relies heavily on rhythmic chanting and emphasizes experiences of inner-city youth. Other forms of popular music include "dance hall," "dub," and "soca," a form of merengue music heard primarily during Carnival celebrations.

Art. Jamaican art is varied and reveals no predominant cultural or ethnic influences except, perhaps, very stylized African motifs. Many

of the established Jamaican painters and sculptors have achieved acclaim outside this country, particularly in the U.S. and Britain, where many of them were trained. Sophisticated works can be obtained in various media: oils, acrylics, watercolors, silk-screen prints, woodcuts, sculpture, ceramics, pottery, and textile arts. There is a fairly large group of expatriate artists—mostly from the U.S. and the Commonwealth—resident in Jamaica.

Kingston is the art center of the island, with many artists, the art school, and several well-respected high-quality galleries. Three broad categories of art are discernible: intuitive, abstract, and representational. Representational is the dominant mode. The National Gallery of Art maintains a large collection of Jamaican and Caribbean art from the 18th century to the present.

Crafts. Local craftwork is strongly influenced by cultural heritage and finds expression in straw, semiprecious stones and jewelry, wood, clay, fabric, shell, and bamboo. A substantial amount of the alabaster, embroidered cutwork, and appliqué craftwork is exported to the U.S. An attractive cluster of craft shops is located on the grounds of Devon House, a historic site.

Dance. The National Dance Theater Company (NDTC) was formed in 1962. Many of the troupe's more recognized members studied in England and the United States. The NDTC emphasizes indigenous dance and experimentation. NDTC choreographers have produced an extremely varied and culturally rich repertoire. The revived folk dances are actively performed on the island. They are presented at cultural festivals, on TV, and in resort areas.

Drama. Drama has expanded considerably in the past decade. During the 1980s, Jamaican playwrights typically produced works based on social currents and issues of the day. Today, the theater offers a broad

base, ranging from comedy and reviews to serious drama.

Festivals. Jamaica places much emphasis on the cultural heritage of its people. The artistic and cultural awakening has been accompanied by a keen search for roots in folk forms based chiefly in colorful and intensely rhythmic dances and songs. This is best reflected in the annual festival celebrated from the last two weeks in July until Independence Day, the first Monday in August. Winners of "all island" parish dance, song, poetry, and drama competitions perform during the festival. Other high-profile festivals include the Ocho Rios Jazz Festival, the Reggae Sunsplash Festival, and Carnival. Festivals provide an avenue of expression for Jamaicans at every level of society.

Science. Organized scientific investigation in Jamaica dates back to 1774 when the Botanical Department and the gardens at Bath were established. The Institute of Jamaica—which includes the West Indies Reference Library, the National Gallery of Jamaica, and several museums—is the most significant cultural organization in the country. Its Natural History Division is the chief source of information on Jamaican flora and fauna. The Institute also produces publications on Jamaican history and culture. Perhaps one of the most active units of the Institute is the Edna Manley College of the Visual and Performing Arts where students are instructed in dance, drama, music, and the fine arts.

Systematic geological surveys began over 100 years ago. In 1942, with the realization of the potential of bauxite, extensive research began, which led to the creation of a separate Geological Department in 1951.

Important areas of scientific research include geology, mineralogy, biochemistry, food technology, nutrition, agro-industry, crop and soil agronomy, epidemiology, ecology, and marine biology.

The Meteorological Office of the Jamaican Government and the Seismic Research Unit of the University of the West Indies compile and disseminate information to the public.

Commerce and Industry

Jamaica's pattern of trade and production has historically been based on the export of its principal agricultural products (sugar, bananas, coffee, cocoa, spices, etc.), as well as other foreign exchange earners (bauxite/alumina, rum) in exchange for imports of oil, machinery, manufactured goods, and food products (principally wheat, corn, rice, soybeans, butter). However, the fast growth of tourism, textile production, and the proliferation of service industries have changed the island's trading habits.

Tourism has been Jamaica's primary foreign exchange-earning industry since 1983. Total visitor arrivals have remained well over one million annually. Stopover visitors (visitors staying one night or more) average 65 percent of total arrivals, two-thirds of which come from the U.S. Hotel room capacity on the island is 19,760 and is expanding. In 1994, total foreign exchange earnings from tourism accounted for an estimated US\$977 million. The second largest source of foreign exchange in 1994 was remittances (approximately US\$600 million).

Jamaica has large commercial deposits of mineral resources such as limestone (two-thirds of the island), bauxite, gypsum, marble, silica sand, and clays. The mining and processing of bauxite continues to be the major economic activity. Net export earnings from bauxite/alumina (levies, royalties, local cash inflows) amounted to US\$231 million in 1994. Development of this industry is greatly influenced by worldwide aluminum consumption and price fluctuation in the international market. The agricultural sector generates about 8 per-

cent of GDP and employs over one-quarter of Jamaica's work force. Jamaica has a favorable climate and varied soil types. Major traditional export crops are sugar, spices, bananas, coffee, citrus, allspice, and pimento. Other crops of growing importance include yams, tropical fruits and vegetables, legumes, and horticulture.

Other nontraditional products have also strengthened Jamaica's export performance during the last few years. These include garments, cut flowers, ornamental plants, gourmet food items and spices, handicrafts, and furniture. World-renowned Jamaican products such as Blue Mountain coffee, cigars, and Red Stripe beer have experienced growth in demand. The U.S. continues to be Jamaica's leading trading partner, exporting an average of US\$1.06 billion annually to Jamaica and importing approximately US\$415 million worth of Jamaican goods during the 1992-94 period. Jamaica's other leading trading partners are the U.K., Canada, Venezuela, and Japan.

The Jamaican economy grew by 0.8 percent in 1994 following a modest growth of 1.2 percent in 1993. This resulted from growth in the agricultural sector, mining, tourism, financing, insurance, and other service sectors. The pace of economic growth in 1994 slowed somewhat due to tight monetary and fiscal policies, high inflation, and declining real incomes for the majority of the population. In addition, the servicing of a heavy debt burden, the deterioration in earnings from the bauxite/alumina industry, and high interest rates have further constrained economic growth.

Jamaica faces several ongoing economic problems. Although the external debt has been modestly reduced over the last 3 years, debt servicing still constitutes about 40 percent of the government fiscal budget, constraining both growth and the government's policy options. The stock of debt is approximately US\$3.6 billion, or US\$1,440 on a per-capita basis. Privatization,

tariff reform, liberalization of foreign exchange controls, and tight fiscal and monetary policies are some of the major policies implemented over the past few years to enhance economic growth and development.

Transportation

Automobiles

Driving is on the left, but either left-hand or right-hand drive cars may be imported. Left-hand-drive cars must usually have headlights re-aimed. Because of the narrow roads and in the interest of safety, serious consideration should be given to bringing a right-hand-drive vehicle.

Current Jamaican Government policy forbids the importation of vehicles over 3 years old (date of manufacture to date of entry into Jamaica).

Compact cars rather than larger American model cars are better suited to the narrow, winding Jamaican roads. A car with a high road clearance is an advantage because of the many potholes. Lighter colors are preferable, as they are cooler. An air-conditioner is desirable. Garages can service most American, Japanese, or European makes, but service is below U.S. standards.

Spare parts are expensive and sometimes hard to find, especially for older and less common models. Bring a basic supply of oil filters, radiator hoses, fan belts, and spark plugs, as well as points and condensers if your car uses them. Spare parts can also be obtained from Miami with delivery in only a few days, in most cases. Also, bring a basic tool supply and repair manuals for your make and model of car. Durable tires in good condition are necessary because of often poorly kept roads.

You must have a Jamaican license to drive. Automobile registration is accomplished by obtaining (1) an import license for your car at the time of importation, (2) compulsory

local liability insurance, and (3) a certificate of vehicle fitness.

Certificates of car fitness must be renewed annually. Besides being in good condition, all cars must have turn indicators. Those on U.S. cars are acceptable.

Communications

Telephone and Telegraph

Telephone service is available to most of the island, but service is below U.S. standards. Calls from one exchange to another are treated as long-distance calls despite relatively short distances, with rates determined by the mileage between exchanges. A direct-dialing system serves the whole island. Service to the U.S. by satellite is generally adequate.

A 3-minute, station-to-station call from Kingston to Washington, D.C., costs about US\$5.27 at full rate and US\$4 at the reduced rate (night and all day Sunday and on Jamaican holidays). AT&T calling cards can be used, and many U.S. long-distance companies offer collect-call services from Jamaica. Direct-dialing from the U.S. is possible using area code 809 and the Jamaican seven-digit number.

International telegraph service is good, and rates are moderate. Cables are sent via JAMINTEL Limited through the Jamaican postal service. Local service and delivery are erratic.

Mail

Local airmail service is available to and from the U.S. Transit time to Washington or New York is about 10 days, with some fluctuations in service. The airmail letter rate to the U.S. is J\$1.10 per ounce. Surface mail and international parcel post depend on sailing schedules to Jamaica and are unreliable. Delivery time from the U.S. varies from 2 to 6 months. International letter mail service ranges from -excellent to disastrous, while local mail can disappear or take weeks to travel a few miles.

Radio and TV

AM and FM radio reception in the Kingston area is excellent. There are several major national radio networks, including RJR Limited and the Jamaica Broadcasting Corporation (JBC). Radio stations offer a wide variety of programming, including music, talk shows, local and international news, and religious programs.

Shortwave reception from the U.S. and U.K. is fair to good, with occasional interference; some people find a shortwave set desirable. Voice of America (VOA) shortwave broadcasts get good reception in early morning and evening and have excellent news and sports coverage.

JBC has also operated a TV station since 1963. JBC-TV transmits Jamaican, U.S., U.K., and Canadian programs. A privately owned station, CVM-TV, broadcasts many popular American sitcoms and movies. Both stations offer regular local and overseas news programs. As a result of recent legislation governing cable TV service, a wide variety of cable programming is now, available through several local cable providers. Rates are comparable to those in the U.S. TVs made in the U.S. can be used in Jamaica.

Video rental stores can be found in Kingston. The vast majority of available tapes are VHS, not Betamax. Ordering of VCRs and color TVs can be done through the commissary at U.S. retail prices, plus transportation. There are now almost 20,000 satellite dishes in Jamaica that receive the whole range of U.S. TV offerings.

Newspapers, Magazines, and Technical Journals

The *Miami Herald* and the *New York Times* are usually available at local newsstands late on the day of publication. Limited international coverage is provided by the *Daily Gleaner*, the *Herald*, and the *Observer*, Jamaica's three main newspapers. Copies of these papers are usually available for perusal at

the Jamaica Desk (ARA/CAR) in the Department of State.

English and American magazines are available locally. American magazines are marked up at least 12%. Subscriptions to U.S. magazines will save money. Send them by pouch, if you don't mind them arriving at least 2 weeks late and occasionally in batches of two or three. Subscriptions to the international editions of *Time* or *Newsweek* will ensure that the magazine arrives during the week of publication. Books printed in England are available from several booksellers. U.S. bestsellers are months late arriving at local shops and difficult to find. Books cost more than in the U.S.

The Public Affairs Library has about 2,200 volumes, ranging from art to technology and the social sciences, as well as general reference works. The library also subscribes to 69 U.S. periodicals. The Kingston and St. Andrew Parish Library is part of the islandwide free public library service. It has about 75,000 volumes.

Health and Medicine

Medical Facilities

General practitioners and specialists are available. Many have received specialty training in the U.S., Canada, or U.K. These doctors are highly qualified and good diagnosticians even without the benefit of sophisticated equipment. Fees are generally lower than those in the U.S., particularly in the specialty areas. There are many good dentists whose fees are also lower than those in the U.S. Many professionals have migrated to the U.S., and in several specialty areas it is sometimes difficult to get appointments quickly.

Several small and generally adequate private hospitals are found in and around Kingston. People go to the U.S. for special treatment or surgery. Local doctors recommend trips to the U.S. if they believe their

own facilities are inadequate. The regional medical officer, who visits Kingston every 4 to 6 months, has stated that no elective surgery should be done in Jamaica. Miami is the designated medical evacuation point.

Community Health

Community sanitation in Kingston has improved in the past few years. Drains and plumbing are inspected sporadically. Insects are a constant nuisance, and there is not a regular spraying program to control the breeding grounds. Trash and garbage disposal in the urban areas has also improved. In rural areas, it is an individual matter. Sewage facilities and treatment are adequate in Kingston.

Preventive Measures

Some infectious diseases are influenza, whooping cough, scarlet fever, and German measles. It is now mandatory for students entering school for the first time to have documents verifying that they have been immunized against whooping cough, tetanus, diphtheria, measles, polio, and tuberculosis before admission is approved.

Rabies, yellow fever, and malaria are not present in Jamaica, but mosquitoes do transmit the unpleasant dengue fever. Cases of dengue fever rose dramatically in late 1995, but the problem is being addressed through aerial spraying and reduction of mosquitoes' breeding areas.

Quality pasteurized milk is available in Kingston. The commissary also stocks U.S.-origin milk and dairy products, but they are expensive.

Avoid excessive exercise during the heat of the day. Because of the large areas of dense foliage and high pollen levels, the climate can be unpleasant to asthma and sinus sufferers.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Those arriving from areas where yellow fever is known to exist must be immunized.

U.S. citizens traveling as tourists can enter Jamaica with a U.S. passport or a certified copy of a U.S. birth certificate and current state photo identification. They must also have a return ticket and sufficient funds for their visit. U.S. citizens traveling to Jamaica for work or for extended stays are required to have a current passport and must obtain a visa before arriving. A departure tax is collected when leaving the country. For further information, travelers can contact the Embassy of Jamaica at 1520 New Hampshire Avenue NW, Washington, DC 20036, telephone (202)452-0660, the Jamaican Consulate in Miami or New York, or one of Jamaica's honorary consuls in Atlanta, Boston, Chicago, Houston, Seattle or Los Angeles. Travelers may also contact Jamaican representative in the

United States through the Internet at <http://www.emjam@sysnet.net> or at <http://www.emjam@emjam-usa.org>.

U.S. citizens are encouraged to register with the Consular Section of the U.S. Embassy in Kingston. The Consular Section is located on the first floor of the Life of Jamaica Building, 16 Oxford Road, Kingston 5, telephone 1-876-935-6044. Office hours are 7:15 a.m. to 4:00 p.m. with window services available Monday through Friday, 8:30 a.m. to 11:30 a.m. For after-hours emergencies involving American citizens, a duty officer can be contacted at 1-876-926-6440. The Chancery is located three blocks away at the Mutual Life Building, 3rd floor, 2 Oxford Road, Kingston 5, telephone 1-876-929-4850 through -4859.

There is a Consular Agency in Montego Bay at St. James Place, 2nd floor, Gloucester Avenue, telephone 1-876-952-0160, fax 1-876-952-5050. Office hours are 9 a.m. to 12:00 noon, Monday through Friday.

The U.S. Embassy also has consular responsibility for the Cayman Islands, a British dependent territory. Please refer to the British West Indies Consular Information Sheet for information about the Cayman Islands. There is a Consular Agency located in the office of Adventure Travel, Seven-Mile Beach, George Town, Grand Cayman, telephone 1-345-946-1611, fax 1-345-945-1811. Office hours are 8 a.m. to 12:00 noon, Monday through Friday.

Pets

With the single exception of animals born and bred in the U.K., which have never had rabies shots, importation of pets is not allowed.

To bring animals from the U.K., the following procedure must be taken. You must have a certificate from the Ministry of Agriculture, Fisheries, and Food at Hookrise, Surrey, England, proving that the animal was born and bred in the U.K. This certificate must then be presented to the Veterinary Department at Hope Gardens in Kingston to

receive an import permit. These steps must be taken before the animal arrives.

Several excellent veterinarians practice in Kingston.

Currency, Banking and Weights and Measures

The currency is the Jamaican dollar. Bills are printed on different-colored paper in denominations of \$2, \$5, \$10, \$20, \$50, \$100, and \$500 while coins are minted in denominations of 5¢, 10¢, 25¢, 50¢, \$1, and \$5. The official exchange rate fluctuates within a 30¢ "band" or margin, and is adjusted at regular intervals. As of January 1996, it was US\$1 = J\$40. The exact exchange rate at any given time may be obtained from the Jamaica desk in ARA.

With the exception of gasoline, which is sold by liter, all other units of measure (inches, feet, yards, miles, etc.) and weight (pounds and ounces) are the same as in the U.S. However, there is an ongoing national project under way to convert the country to the metric system. Some road signs and consumer product labels already reflect these changes.

U.S. dollars or travelers checks may be converted readily into Jamaican currency at airports, banks, and hotels. While some north coast resorts will accept U.S. dollars, all official transactions must be made in Jamaican currency.

You may buy U.S. dollar instruments, including travelers checks, from local banks by presenting an airline ticket showing travel off the island.

Disaster Preparedness

Jamaica, like all Caribbean countries, can be affected by hurricanes. Hurricane season runs from approximately June 1 - November 30 each year. The Office of Disaster Preparedness and Emergency Management (ODPEM) has put measures in place in the event of an emergency or disaster. General information about natural disaster

preparedness is available from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>.

Fort-de-France, Martinique

MARTINIQUE

(including Guadeloupe and French Guiana)

Departments of Martinique, Guadeloupe, and French Guiana

Major City:

Fort-de-France

Other Cities:

Basse-Terre, Cayenne, Grand Bourg, Kourou, Le Vauclin, Les Trois-Ilets, Maripasoula, Pointe-à-Pitre, Saint-Laurent-du-Maroni, Saint-Pierre

INTRODUCTION

In the 16th and 17th centuries, France amassed a vast empire in North America and the Caribbean. Today, the three Overseas Departments of France in the Western Hemisphere—Martinique, Guadeloupe, and French Guiana—encompass virtually all that remains of that imperial sovereignty.

MARTINIQUE is one of the most beautiful islands in the Caribbean, and its beauty is matched by the richness of its history. Although discovered by Columbus, the island was taken for France in 1635 and has since been a possession of that country, except for three short periods when it was under British occupation. A singular feature of its history is that it has bred a race of queens. Joséphine, who was to become Empress of France; her daughter Hortense, who became Queen of Holland; Madame de Maintenon, morganatic wife of Louis XIV; and Aimée Debus, the *sultan validah*, or queen mother, of Turkey— all were born on Martinique.

Named for Santa María de Guadelupe de Estremadura by Christopher Columbus when he landed here in 1493, **GADELOUPE** offers a blend of cultures, mani-

fested in colorful dress and a variety of culinary delights. **FRENCH GUIANA** was probably discovered by Columbus on his third voyage in 1498. It has good beaches, but its principal charm lies in the unspoiled inner regions, reachable only by air or motorized canoe. The infamous penal colony, Devil's Island, was located off French Guiana.

MAJOR CITY

Fort-de-France

Fort-de-France, with more than 100,000 residents, is the only significant metropolitan center on the island. The city is picturesque in that the architecture is colorful, and the effects of the tropics tend to explain, and even soften, the rather shabby aspect of much of the town. Open drainage ditches alongside some streets are an eyesore and a nuisance, but they no longer carry sewage and are gradually being covered up.

Martinique was first settled by Europeans in 1635, and many parts of the island are associated with the history of the past three centuries. However, the climate, earthquakes, and the total destruction in 1902 of Saint-Pierre, then the island's prin-

cipal city, have erased many vestiges of the past. It was only after Saint-Pierre was destroyed by the volcanic eruption of Mount (Mont) Pelée that Fort-de-France gained prominence. Interesting archaeological sites exist on the island, once the scene of important developments of Arawak and Carib cultures dating back to the beginning of the Christian era.

Martinique and Guadeloupe are densely populated, tropical, and agricultural. Sugar, bananas, pineapples to a lesser extent, and assistance from metropolitan France are the economic underpinnings of the islands, providing them with a standard of living higher than that of most of the rest of the Caribbean. French culture is pervasive. The tourist industry has been slow to develop, although tourists are much in evidence during winter. They arrive aboard cruise ships, but generally leave after spending less than a day on Martinique.

Martinique lies about halfway down the arc of the Lesser Antilles that extends from Puerto Rico to Trinidad. It is some 900 miles north of the equator, about 280 miles from the South American mainland, and 4,400 miles from metropolitan France. Guadeloupe is 100 miles north of Martinique. Its island dependencies of French Saint-Martin and

Courtesy of Carolyn Fischer

View of Martinique

Saint-Barthélemy are 150 miles north of Guadeloupe proper and about 100 miles from the U.S. Virgin Islands. French Guiana, wedged between Brazil and Suriname on the north coast of South America, extends from the second to the sixth degree of north latitude.

Clothing

Lightweight clothing is worn throughout the year; washable, wrinkle-free fabrics are preferable. Cotton underwear and children's clothes can be purchased locally. Good quality yard goods are available, but expensive.

Men wear clothing similar to that worn in Washington, DC in the summer. Dark suits are appropriate for evenings. Women rarely need hats (except sunhats) or gloves; these are worn almost exclusively at church ceremonies. Dressy cottons are comfortable and suitable. Dur-

ing winter, some women wear cocktail dresses of silk and brocade. Also necessary is an ample supply of low-heeled shoes for walking over the rough sidewalks and streets in town. Shoes may be found locally, but none narrower than a B width. A coat is never needed but, on occasion, a fabric stole is useful.

Food

A number of supermarkets are found in Fort-de-France, including large ones in residential districts. Most stock is imported, and prices are high. Variety of produce is usually good, although delay in transport can result in occasional shortages. A few American brands are carried locally, usually manufactured under license in Europe.

Locally produced meat and fish have their own sizable markets in downtown Fort-de-France, and sev-

eral similar markets sell local fruits and vegetables.

Supplies & Services

A few tailors and dressmakers do good work relatively inexpensively. Shoe repair is adequate. Dry cleaning and laundry services range from fair to good, but are expensive by U.S. standards. Beauty shops have reasonable prices, offer adequately skilled service, and are beginning to install up-to-date equipment. Radio and other household repair service is apt to be casual, with disregard for deadlines or commitments.

Pharmacies are well-stocked with French drugs, but precise equivalents of American products are not always available.

Education

All local education is in French. The public and parochial elementary and secondary schools have lower

academic standards than in metropolitan France, although they operate according to the same system. Kindergartens are both available and good. During the past few years, Americans have enrolled children in elementary schools or kindergartens in Fort-de-France, but it is hard to gain admission to some of these institutions.

American children who speak French have no difficulty making friends among the children in the various communities on Martinique, either local or from metropolitan France.

High school students are normally sent to boarding schools in the U.S. or elsewhere. For teenagers who want to stay with their parents and are willing or able to follow French courses, education is possible here.

Fort-de-France has a school of music and a number of private music and dance teachers. Tutoring is available in diverse subjects to those whose French is adequate. A branch of the University of the Antilles and Guiana, a government-owned institution whose headquarters are on Guadeloupe, offers a four-year program in some subjects and a two-year program in others.

Recreation

The Martiniquais are sports-minded. Everyone, it seems, plays or closely follows one or more sports. Football (soccer), cycling, and basketball are among the more popular games. In recent years, Americans have enjoyed sports such as tennis (four courts are available through membership in two tennis clubs), riding (two riding stables are in the residential environs of Fort-de-France), golf (one nine-hole course 45 minutes from Fort-de-France), gymnastics, and judo classes for both men and women. Boating is popular and may be attractive to those willing to assume the expense involved. Sailing lessons under French governmental auspices are inexpensive and popular. Martinique is a fairly good spot for scuba diving, spearfishing, and snorkeling.

Being a beautiful mountainous island, Martinique would seem to offer much in the way of outdoor activities. However, much of the island's potential is undeveloped, and the hot, humid climate is not conducive to sustained physical effort. Few parks or public recreation areas exist on the island, and the only beaches near Fort-de-France are artificially made beaches adjoining the principal hotels, mostly across the bay in Trois Islets area. Black volcanic beaches are in the north, and beautiful white-sand stretches in the south are accessible within an hour's drive.

Hiking in and around Fort-de-France is difficult because of the climate and the total lack of serviceable sidewalks or footpaths. The higher mountains have trails for hardy hikers. Only in French Guiana is there any worthwhile hunting. For those who enjoy the out-of-doors, nature studies are attractive.

The area around Victor Hugo, Schoelcher, and Antoine Siger Streets in Fort-de-France is replete with boutiques and duty-free shops. There are also a department store, a designer fashion shop, and an arts and crafts center in this area.

There are a few small museums on Martinique. The sugar-plantation birthplace of Empress Josephine has been turned into an historical repository and included here is a display of Napoleon's love letters. Other archives include the Volcanological Museum in Saint-Pierre, a new gallery dedicated to Paul Gauguin, and a small museum that displays pre-Columbian and colonial artifacts.

There are 30 hotels on Martinique. Discotheques, nightclubs, and gambling casinos light up the night, but dining seems to be the favorite evening activity; an endless choice of restaurants feature French and creole cuisine.

Twice a year, a small company of actors comes from France, once to

produce classical French plays and once to sing operettas. Occasionally a musician, a traveling lecturer, or a local artist offers his talent for public enjoyment. There is considerable interest in music here, and amateur musicians can find ample scope to develop their talents in a congenial atmosphere.

The American community on Martinique is small, and is confined to a few business people, missionaries, several American spouses of French citizens, and some Martiniquais who have acquired American citizenship after living in the U.S., but have chosen to retire in the Antilles. Social organizations, such as the local bridge club, attract many of these Americans.

The most socially active times of year are the Christmas/New Year holiday season and pre-Lent carnival, and early summer. Most social life is centered around the family and, for this reason some single Americans assigned here have found it difficult to establish contacts. Reasonable fluency in French is the principal requirement for establishment of professional and personal relationships.

OTHER CITIES

BASSE-TERRE, the capital of Guadeloupe, located at the southern tip on the island which bears the same name, is a banana port and commercial center. It was founded by the French in 1643 and, with a population of roughly 14,000, it retains its French colonial atmosphere. The city is in the mountainous section of the island. The volcanic peak, Soufrière, emits sulphurous fumes, but has not erupted in several years, and can be climbed. Basse-Terre's beaches are volcanic sand and, therefore, black. Snorkeling is good on the reefs off the west and south shores. Fort St. Charles, built to protect the port between 1650 and 1780, now houses the local historical museum. Fishermen from the island of Les Saintes come to Basse-Terre daily to sell

their catch; Saturday is the best day to visit the native market. Other sites on this island include Carbet Falls Gorge, the archaeological park at Trois Rivières, and the rain forest.

CAYENNE, the capital of French Guiana, is located at the mouth of the Cayenne River which empties into the Atlantic Ocean. The city was founded in 1643 by the French. An Indian massacre destroyed the town, and it was not resettled until 1664. Great Britain, France, and the Netherlands fought for control of Cayenne and the surrounding region during the 17th century, and it later was occupied (from 1808 to 1816) by both the British and the Portuguese. The development of the city has been slow because of internal strife, the tropical climate, and the prevalence of disease. The harbor is shallow, making it necessary for deep-water ships to anchor some distance out. Exports include rum, timber, essence of rosewood, and gold. The Pasteur Institute here specializes in the study of tropical diseases. Several buildings from Cayenne's colonial days still stand, and there are many lovely parks. The city gave its name to the pungent pepper which is derived from plants that grow in profusion in this area. The 2000 population of Cayenne was approximately 52,000.

GRAND BOURG is the capital of Marie-Galante Island, Guadeloupe. Situated in the far southwest corner of the island, it has a protected beach and is known for its Creole-sauce seafood. Two hotels are available: Le Salut and Solédad. El Rancho, a new entertainment complex, offers a movie theater, restaurant, discothèque, and overnight accommodations.

KOUROU is located about 30 miles west of Cayenne and has a population of about 6,500. From 1851 to 1946, it was the center of the penal settlements in Guiana. The most famous of these was Devil's Island, built in 1852 on îles du Salut, an island in the Caribbean off the coast of French Guiana. Used largely for

political prisoners, its most famous was Alfred Dreyfus. Excursions may be taken to these offshore islands, where the crumbling remains of the prisons can be seen. Today, Kourou is the site of an extensive space center from which the European Space Agency launches commercial satellites.

LE VAUCLIN is one of Martinique's most scenic areas, situated in the southeast, 16 miles from Fort-de-France. This fishing town of 3,000 has a palm-lined beach that suddenly comes to life with the arrival of the fishing boats. Salt marshes and the other worldly Savane des Pétrifications are nearby. The latter is an arid region where veins of lava flows appear to be petrified wood.

LES TROIS-ILETS, on Martinique, is six miles south of Fort-de-France Bay. It is best known as the birthplace of Joséphine Beauharnais (1763-1814), the Creole beauty who became the first wife of Napoleon. Her house, La Pagerie, has been partially restored. The church where she was baptized can be visited, as well as a museum of the Napoleonic era. The estimated population of Les Trois-Ilets is 1,500.

MARIPASOULA lies on the Lawa River, 140 miles southwest of Cayenne, on French Guiana's western border. This village of about 550 is the threshold to Wayana Indian territory. The Wayanas are warm, friendly people; they are hunters who follow colorful rituals. Maripasoula has a small airstrip and an inn near the water to accommodate visitors.

POINTE-À-PITRE is the largest city on Guadeloupe, with a population estimated at 27,000 in 1995. It is located on the island of Grande-Terre, at the southern entrance of the Rivière Salée, the narrow, shallow ocean channel that separates Basse-Terre and Grande-Terre. Pointe-à-Pitre is its island's main port. More than 900 ships call each year; chief exports

are rum, coffee, sugar, and bananas. Yachting is a major business, with close to 1,500 pleasure boats based here. Pointe-à-Pitre is also the finishing point (in November and December) for the Route de Rhum Rade, a 3,700-mile solo transatlantic event that begins at Saint-Malo, France. The marketplace at Pointe-à-Pitre is one of the most colorful in the area. Fort Fleur d'Épée, at Bas du Fort near Pointe-à-Pitre, was used to repel the British invasions of the 1700s. The new Edgar Clerc Archaeological Museum houses a collection of Arawak and Carib Indian artifacts from the Lesser Antilles. The stores in Pointe-à-Pitre have a fine selection of perfume, crystal, gold jewelry, and rum. There is also fine dining, especially at the little Creole restaurants, as well as dancing, and shows.

SAINT-LAURENT-DU-MARONI is a city of approximately 14,000 people on the Maroni River, 120 miles northwest of Cayenne, French Guiana. Shipping and the making of parquet flooring are the main economic activities here. This seaport was once a receiving station for prisoners during the prison era. All but the incorrigibles were housed here; ruins of the prison remain. Saint-Laurent-du-Maroni is the starting point for river excursions. The Atyp and Peslier hotels are said to provide basic, reasonable accommodations. The area nightspots bring this quiet community to life during the evening.

SAINT-PIERRE, 12 miles northwest of Fort-de-France, Martinique, was the first city the French founded in the area, in 1635. It was the scene of one of the most horrendous volcanic calamities of all time in 1902. Mont Pelée's last eruption wiped out all but one of the city's 30,000 people. The survivor was a prisoner in solitary confinement—in an underground cell. Saint-Pierre, in its heyday, was renowned as the "little Paris of the West Indies." The steps and some columns from its beautiful opera house are all that remain of that

Street scene in Martinique

Courtesy of Carolyn Fischer

era. The city is now a tourist stop, and caters to that trade with the Musée Vulcanologique. On a hill is La Factorerie, a large restaurant run by a student-restaurateur staff. A black-sand beach in the southern district is popular. Saint-Pierre's estimated population is 5,000.

ISLAND PROFILE

Geography and Climate

Martinique, part of a group of islands known as the Lesser Antilles, stretches across the entrance to the Caribbean Sea. This archipelago, in the shape of an arc bowed out toward the Atlantic Ocean, extends for 450 miles from the Virgin Islands southward, almost to the coast of

South America. The northern part of the group is called the Leeward Islands; the southern half, the Windward Islands. Many of the islands are the result of volcanic eruptions forcing the ocean bed up 10,000 or more feet. From prehistoric times, this string of islands has stretched across the throat of the Caribbean like a chain of smoldering furnaces about to burst into flame.

It is customary to speak locally of the period from December to May as the dry season when, in fact, some lowering of precipitation and temperature occurs. Throughout the year, however, the mean temperature in the capital, Fort-de-France, varies only slightly, from a low of 76°F to a high of 81°F, while humidity ranges from 65 to 95%. The weather fluctuates from hour to hour; rain showers are quickly followed by bright and sunny weather, and the heat is almost invariably

lifted by the trade winds. The relief brought by these prevailing easterlies makes an otherwise difficult climate more comfortable, particularly in the evenings.

Because of the consistently high temperature and humidity, insects are numerous; lack of screening makes them particularly noticeable. Rust and mildew must be continually combated.

Guadeloupe is actually two islands, the mountainous Basse-Terre and the flat Grande-Terre, which together resemble the shape of a butterfly. Separated by the Rivière Salée, the islands are connected by a drawbridge. The highest point is the volcano Soufrière, which rises 4,850 feet. November through April are usually the coolest and driest months. Temperatures vary from 74°F in January to 87°F in August;

humidity varies from 77% in April to 85% in August.

French Guiana, the largest of France's overseas departments, with an area of 32,252 square miles, is situated in the northeast corner of South America. Suriname is on the west, and Brazil on the east and south. The land consists of low-lying coastal plains, with tropical forest to low hills. The climate is sub-equatorial, and the temperature averages 80°F throughout the year. Annual rainfall amounts to more than 100 inches, with the wet season extending from December through June.

Population

The population of Martinique is estimated at 412,000 (June 1999). One-third of the population lives in or near Fort-de-France, the island's only major city. Migration of young people to metropolitan France in search of career opportunities limits the annual population growth rate to about 1%. Guadeloupe, Martinique's sister island 100 miles north, has about 421,000 residents. French Guiana's population is approximately 168,000 (1999 est.), half of whom live in Cayenne area.

French is spoken by virtually everyone in all three places, although a Creole *patois* is often heard. A good knowledge of French is essential for daily living, as well as for official and social requirements. The American community is quite small, and the few Frenchmen who know English usually prefer to speak their own language.

The people of Guadeloupe and Martinique are generally friendly toward Americans and other foreigners. The islands are 90% African and African-Caucasian-Indian mixture; 5% Caucasian; and less than 5% East Indian, Lebanese, and Chinese. French Guiana is 66% black or mulatto; 12% Caucasian; 12% East Indian, Chinese, and American Indian; and 10% other. A large proportion of the administrative and military cadre is metropolitan French.

Government

Since 1946, French Guiana, Guadeloupe, and Martinique have borne the formal designation, *Départements d' Outre Mer* (overseas departments) of France. The senior French official is the prefect/commissioner of the republic, a title which replaced that of "prefect" in 1982 in all French departments under a decentralization policy. The prefect/commissioner reports to the secretary of state for Overseas Departments and Territories who, in turn, reports to the minister of the interior.

Each of the overseas departments/regions has a general council, whose members are elected from each canton, and a regional council whose members are elected by proportional representation. The policy of decentralization provides that many of the powers formerly held by the prefect will be transferred to the elected assemblies. The French military commandant for the French Antilles and French Guiana, normally a general of brigade, has headquarters in Fort-de-France, as does the French Regional Navy commandant.

The French flag, consisting of three vertical bands in blue, white, and red, is flown in Martinique, Guadeloupe, and French Guiana. Martinique and Guadeloupe also have their own territorial flags. Guadeloupe's flag consists of a broad horizontal red band, separated from green stripes at the top and bottom by narrower white stripes. In the red band there is a gold star offset toward the hoist. Martinique's flag has a light blue field with a centered white cross; a white serpent is in each of the four blue quarters.

Arts, Science, Education

Education is compulsory through age 16; literacy is about 80–90% in all three areas.

Two cultural centers in Fort-de-France present musical groups, including some American

musicians or ensembles from metropolitan France. (Many Martiniquais are well versed in the history of American jazz.) Occasionally, local groups perform plays, sometimes in Creole. An international guitar festival has been a cultural highlight in recent years. Some opportunities are available for amateur musicians to participate in local chamber music groups. The Ballet Folklorique de la Martinique performs three or more nights weekly at various tourist hotels.

Fort-de-France has a small museum that displays pre-Columbian and colonial artifacts. A small museum across the bay, La Pagerie, is devoted to Empress Josephine of France, who was born on Martinique in 1763.

Commerce and Industry

While the resources of French Guiana remain virtually unexploited, the economies of Martinique and Guadeloupe are based on sugar, bananas, rum, pineapples, tourism, and spending by the French government. Manufacturing is peripheral and in support of the agricultural base. Local markets are dominated by metropolitan France, and the prevalence of imported over locally made products contributes to the high cost of living.

Martinique's gross domestic product (GDP) is nearly \$4 billion, or about \$10,000 per capita (1995 rates). Ten percent of the labor force is engaged in agriculture, which includes bananas, pineapples, vegetables, flowers, and sugarcane for rum. Industry in Martinique includes construction, rum, cement, oil refining, and tourism. Exports include refined petroleum products, bananas, rum, and pineapples; imports are petroleum products, foodstuffs, construction materials, vehicles, clothing, and other consumer goods. France is Martinique's major trading partner.

Guadeloupe's GDP is approximately \$3.7 billion, or \$9,200 per capita. Over half of the labor force is engaged in services, commerce, and government. Guadeloupe's industry includes construction, cement, rum, and tourism. Bananas, sugar, and rum are the main exports; imports include vehicles, foodstuffs, clothing and other consumer goods, construction materials, and petroleum. Franc-zone countries are Guadeloupe's major trade partners.

French Guiana's GDP is about \$1 billion, or \$6,000 per capita. Sixty percent of the French Guianese labor force work in services, government, and commerce. Agricultural products include limited vegetables for local consumption, as well as rice, corn, manioc, cocoa, bananas, and sugar. Industries include construction, shrimp processing, forestry products, rum, and gold mining. French Guiana exports include shrimp, timber, rum, and rosewood essence. Among the imports are foodstuffs, consumer goods, producer goods, and petroleum.

Transportation

Travel among the three departments is mostly by air. American Airlines flies between New York and Fort-de-France on weekends. Air France has flights between Miami and Fort-de-France, usually with stops at Port-au-Prince, Haiti, and San Juan, Puerto Rico. Three or four ships (freighters) sail monthly between the U.S. and Martinique.

Leeward Islands Air Transport (LIAT), whose headquarters are in Barbados, and Air Guadeloupe provide scheduled service between Martinique and several neighboring islands. Air France also operates between Martinique and Guadeloupe and between each of these and French Guiana. One or two commuter airlines offer service to nearby islands, geared to the tourist trade. Except for Air France, schedules and reservations can be erratic.

The scheduled bus service in Fort-de-France is rarely patronized by Americans. Taxis are expensive. For any extended stay, a personal or rented car is the most convenient method of transportation. Since the town streets are narrow, with few available parking spaces, and roads elsewhere are equally narrow and winding, compact cars are advisable. A U.S. license may be used on the island for a visit of up to 90 days.

Communications

Local telephone service is adequate. Calls to the U.S. can be dialed directly from Martinique, but operator assistance is required for some calls in the reverse direction. Telegraph and airmail service vary in adequacy.

The local radio station, Radio-Télévision Française d'Outre-Mer (RFO) broadcasts daily from early morning until late evening. Programs are produced locally, with occasional dramatic and discussion programs produced in metropolitan France. Medium-wave receivers pick up Radio Caraïbe from the nearby island of St. Lucia, and Radio Antilles from Montserrat—both stations broadcast in English and French and, occasionally, in Creole. About a dozen small, private FM radio stations broadcast in Martinique. Some medium-wave English-language stations in St. Lucia and Barbados, and the Voice of America (VOA) station from Antigua, can often be received. A shortwave is useful and recommended for American Armed Forces Radio, VOA, and British Broadcasting Corporation (BBC) broadcasts. Shortwave reception varies from fair to good.

Television is aired on the same time schedule as is radio. Except for the locally produced daily news, most programs originate in metropolitan France.

Newspapers are barely adequate in reporting local news, and coverage of international developments is

superficial. All popular French periodicals and most Paris newspapers appear on local newsstands, usually several days to two weeks after publication. Scarcely any English-language books, either hardback or paperback, are on sale in Martinique, although some bookstores do stock standard French works, fiction and nonfiction. The public library in Fort-de-France has a few English-language books.

Health

Local doctors, dentists, oculists, and opticians are competent for normal needs. Serious or complicated medical problems may require recourse to medical services in San Juan, Puerto Rico, or in the continental U.S. Physical facilities are improving, but remain below American standards; emergency treatment and laboratory work are particularly poor. Maternity facilities are adequate for routine deliveries only; these are normally accomplished without anesthesia and without the presence of a physician.

The water supply in Fort-de-France is safe. Reconstituted, canned, and pasteurized milk is available. Raw fruits and vegetables should be thoroughly cleaned, although this precaution has limited value since it is often ignored by those who prepare food eaten outside American homes.

A yellow fever vaccination is required for travel to French Guiana. Inoculations against typhoid, tetanus, poliomyelitis, and the common infantile diseases are advisable. Common serums and vaccines are available locally.

The invariability of the tropical climate must be included among debilitating factors for those not accustomed to prolonged periods in this type of climate.

The government public health machinery is adequate, but tropical conditions and human indolence encourage diseases and unhealthy conditions. Unsanitary conditions

in most eating places, the questionable standard of food preparation, and prevalence of insects encourage disease. A person of generally good health can expect to build up an immunity to most health hazards. Although filariasis, leprosy, bilharzia, and venereal diseases are present among the local population, only dysentery, skin infections, kidney and liver ailments, flu, mononucleosis, and dengue fever have affected Americans.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Fort-de-France can be reached on flights scheduled by American carriers out of New York, Miami, and San Juan.

Passports are required of U.S. citizens entering the French West Indies. Visitors who arrive on a commercial air carrier with a round-trip ticket may enter for up to 90 days without a visa. For further information, travelers can contact the Embassy of France at 4101 Reservoir Road, N.W., Washington, DC 20007; telephone 1 202 944-6000; or the nearest French consulate in Atlanta, Boston, Chicago, Houston, Los Angeles, Miami, New York, New Orleans or San Francisco; Internet: <http://www.info-france-usa.org>.

There is no U.S. Embassy or Consulate in the French West Indies. For assistance in the French West Indies, U.S. citizens may contact the U.S. Consular Agency at 9 Rue Des Alpinias, Dedier, Fort de France, Martinique, Monday-Friday from 9:00 a.m. to 12:30 p.m., except local and U.S. holidays; telephone (011) (596) 71-96-90 or fax (596) 71-96-89. The mailing address is P.O. Box 975, CEDEX 97246, Fort de France, Martinique. For after-hours service, American citizens may contact the U.S. Embassy in Bridgetown, Barbados, telephone 1-246-436-4950. U.S. citizens living in or visiting the French West Indies are encouraged to register at the Consular Section

of the U.S. Embassy in Bridgetown, and obtain updated information on travel and security within the French West Indies. The Consular Section is located in the American Life Insurance Company (ALICO) Building, Cheapside; telephone 1-246-431-0225; fax 1-246-431-0179; Internet: <http://usembassy.state.gov/posts/bb1/wwwhemb1.html>. The Consular Section is open for American Citizens Services from 7:30 a.m. to 4:30 p.m., Monday-Friday, except local and U.S. holidays.

Passports are required of U.S. citizens entering French Guiana. Visitors who arrive on a commercial air carrier with a return ticket may enter for up to 90 days without a visa. For further information on entry requirements, travelers can contact the Embassy of France at 4101 Reservoir Road, N.W., Washington, DC 20007; telephone 1-202-944-6000; or the nearest French Consulate in Atlanta, Boston, Chicago, Houston, Los Angeles, Miami, New York, New Orleans or San Francisco. Internet: <http://www.info-france-usa.org>.

There is no U.S. Embassy or Consulate in French Guiana. Americans living in or visiting French Guiana are encouraged to register at the Consular Section of the U.S. Embassy in Paramaribo, Suriname, and obtain updated information on travel and security within French Guiana. The U.S. Embassy is located at Dr. Sophie Redmondstraat 129, Paramaribo; telephone (011) (597) 472-900. The Consular Section is open for American Citizens Services from 8:00 a.m. to 10:00 a.m., Mondays and Wednesdays, except local and U.S. holidays, or by appointment. In an emergency after normal business hours, American citizens may contact the duty officer by pager at (011)(597) 088-0338.

Pets

Pets may be imported provided they have health certificates and documentation of recent vaccination against rabies. No quarantine

restrictions are imposed on dogs and cats.

Currency, Banking & Weights and Measures

The local currency is the French franc. Chase Manhattan Bank has offices in Martinique.

The metric system of weights and measures is used.

The time in Martinique and Guadeloupe is Greenwich Mean Time (GMT) minus four hours (or equivalent to U.S. Eastern Daylight Saving Time, year round). The time in French Guiana is Greenwich Mean Time minus five hours (the same as U.S. Eastern Standard Time).

Disaster Preparedness

The French West Indies can be affected by hurricanes. The hurricane season normally runs from June to the end of November, but there have been hurricanes in December in recent years. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>.

LOCAL HOLIDAYS

INTRODUCTION

Mexico's rich past offers a visitor's backdrop of enchantment. Pyramids where Aztec priests performed human sacrifices still stand, approaching in bulk Egypt's largest. Monuments recall the exploits of a handful of Spaniards who toppled a mighty empire in a conquest unparalleled in history. Towns retain the flavor of a Spanish colony that flourished—even boasted a university—half a century before Jamestown began.

Mexico City, a metropolis of delightful climate and modern buildings amid historic charm, lies ringed by snow-capped volcanoes that slope down to pine forests, deserts, and balmy tropical beaches.

The first people to inhabit this land may have arrived 20,000 years before Columbus. Their descendants, including the Mayan and Aztecs, built a succession of highly developed civilizations that flourished from 1200 B.C.E. to C.E. 1521.

Hernán Cortez landed near modern day Vera Cruz in 1519. King Montezuma II invited the Spaniards into his palace and they promptly took him hostage. After the Spanish conquistadors destroyed the Aztec Empire, the position of the conquered peoples deteriorated rapidly. The Indian population fell from an estimated 25 million at the time of conquest to 1 million by 1605.

From the 16th to 19th centuries, a new colonial society emerged, stratified by race and wealth. The upper echelon was European, in the middle were people of mixed European-indigenous heritage, and at the bottom were the descendants of the native peoples.

Mexico began agitating for independence in the late 1700s and early 1800s. The struggle for independence was long and fitful, however, and freedom from Spain was not finally realized until 1821.

Culturally, politically, and economically, Mexico is experiencing rapid change. For a country composed

mostly of peasants before the Revolution (1910-20), Mexico has undergone broad and rapid urbanization. Mexico City emerged as one of the world's largest cities at the end of the 20th century. The economy has dramatically about-faced, embracing open-market policies and free-trade links with the U.S. and countries throughout the Americas.

MAJOR CITIES

Mexico City

Mexico City, formally known as Mexico, Distrito Federal (D.F.), is a cosmopolitan capital. The glass-walled sky-scrapers lining the Paseo de la Reforma, the stunning architecture of the Museum of Anthropology, the variety of international restaurants, deluxe hotels, the Lomas residential area with its stylish homes, and modern department stores and supermarkets are all signs of a world metropolitan center. But surrounding this glittering center are mass housing developments and barrios typical of the rapidly growing capital of a developing country. Heavy industry and millions of motor vehicles make the city one of most polluted in the world.

Cityscape of Mexico City, Mexico

© Nik Wheeler/Corbis. Reproduced by permission.

Mexico City lies in a long, flat valley on the high plateau of central Mexico. Many of the peaks encircling the city are volcanic-including glacier topped Popocateped, “The Warrior,” and Iztacchihautl, “The Sleeping Lady.” “Pogo” and “Izta” provide a spectacular setting for the city on the days when a drop in air pollution makes them visible.

Although Mexico City is only 19 degrees N. of the Equator, the high altitude (7,350 feet) creates a fall-like climate all year. Thus, despite its tropical latitude, the city has a pleasant average temperature range of 53 to 79°F in the warmest month (May), and 42 to 70°F in the coolest month (January). The two seasons are dry and rainy. The latter lasts from June through September when several hours of rain fall daily, usually in the afternoon and evening; but mornings are sunny. Nights and evenings after the storms are cool and damp. The weather is coolest November

through February when night and early morning temperatures can drop to freezing. March through May are the warm and dusty. These months are at the end of the dry season. Average humidity range is 44%-73% and annual rainfall averages 30 inches, 90% of which falls between May and October.

Utilities

Electricity is the same as in the U.S.: 110 volt, 60 hertz, alternating current. Buildings use liquid propane gas for hot water and cooking.

Water pressure varies and is often low; so many residences have reserve storage tanks to occasionally supply water when the city water is off for several hours or days.

Mexico uses the same two-prong outlets as in the U.S., but many residences have been upgraded with standard three-prong, polarized, and grounded outlets that are more

common in the U.S. Electrical blackouts of several hours are not unusual during the rainy season. Voltage fluctuations are common; so surge suppressors, voltage regulators, and uninterruptible power supplies for electronic equipment are useful. Kitchen and bathroom outlets are rarely found with ground fault circuit interrupters, which are required by most U.S. electrical codes.

Food

A variety of groceries, including fresh fruits and vegetables, packaged foods (both domestic and imported), dairy products, and meats are available. Supermarkets stock fresh or frozen meat and fish, dairy products, fresh produce, and canned or packaged goods. Major U.S. food packagers produce such goods in Mexico as cereals, bakery products, and beverages-but sometimes with a slightly different taste than what you may be accustomed to. Widely available fresh fruits

include pineapple, papaya, watermelon, and cantaloupe year round; as well as seasonal mango. Several large markets have unusual and common Mexican and tropical fruits and vegetables. Many specialty shops sell ethnic foods-including Middle-Eastern locally produced fresh kosher meats, and imported frozen foods. Most food items are available at reasonable prices, but imported items are only available at prices higher than in the United States. Most of the larger supermarkets feature sections devoted to imported goods. Smaller shops specializing in U.S. products are located in Lomas, Polanco, and a few other areas. All necessities and many other items are available.

Locally produced mixes and canned foods are of varying quality and very limited variety. Prepared frozen and packaged meals are imported and expensive. A large variety of Mexican cheeses are available. Many of the available cheeses are similar to common European and American types. Strained baby foods are expensive and of lower quality.

Mexican beer is good and very reasonably priced. Bottled soft drinks (including diet sodas or "lite" as they are known locally) are available at modest prices.

Clothing

Clothing needs in Mexico City do not vary a great deal throughout the year. Warm clothing is useful for cold spells in the winter (November to February) and rainy season (June to September). Temperatures can vary anywhere from 70°F to 40°F It is suggested that you take a few sweaters, a raincoat, and an umbrella.

Lightweight summer clothes are essential for travel to low-altitude areas where the climate is hot and humid, but are only needed in Mexico City from March through June when temperatures may reach up to 90°F. Remember that Mexico is approximately 7,300 feet above sea level; so mornings and evenings can be cool and even though it may

reach into the 90s in the sun, it can still be on the cool side in the shade.

Clothing of all kinds is available at prices comparable to the U.S., but the quality varies. Mexico City has large shopping malls, several different department store chains, and a large variety of small boutiques. Sears, Liverpool, and Palacio de Hierro are among the larger department stores. A wide variety of locally made and imported clothing is available.

Take U.S. swimsuits and underwear for children and adults. Some Mexican-made clothing, particularly stockings and pantyhose, often do not fit tall women (approx. 5'6" and taller). Mexican shoes are stylish and well made, however shoes do not go beyond American size eight for women. Narrow shoe sizes are very scarce.

Men: In Mexico City, men wear light- to medium weight business suits. The darker colors (black, brown, charcoal gray) are the most popular. Lightweight suits are comfortable in the spring and for traveling to low altitudes. Mexican shoes are stylish and well made, but do not go beyond American 10 for men. Narrow shoe sizes are very scarce. Take or order from the U.S. any sportswear, shirts, shoes, pajamas, underwear, and socks that you will need. These items are sold locally; but the quality and variety may not appeal to American tastes. It is suggested that you take along a supply of buttons (for suits) and thread. Buttons very frequently 'pop-off' at the most inconvenient time and thread sold locally may not be of very good quality.

Good tailors are available varying with prices. Hats or shorts are rarely worn in Mexico City, except for sports activities. A dark suit is appropriate.

Women: Take wool or cotton suits and dresses with jackets. Mexico City temperatures can change rapidly during the day, particularly during the rainy season. Long-sleeved blouses, sweaters, jackets,

and layered clothing are very useful; homes and offices are rarely heated. Pantsuits are very popular.

The dress for receptions, cocktail parties, dinners, and similar events varies according to rank and representational activity. Most Mexican women wear current U.S. fashions for both afternoon and evening social events. Shorts are not worn except for recreation, or at resorts. Locally made dresses are available in a variety of styles, including both current fashions and Mexican ethnic. Imported clothing from the U.S. and Europe is available. Good Mexican textiles are available; but some are not pre-shrunk, colorfast, or drip-dry.

Patterns sold locally cost twice as much as those in the U.S. The selection of such sewing accessories as thread is limited and the quality is often poor. Well-crafted silver, brass, and copper jewelry is less expensive than in the U.S. Native semi-precious stones such as turquoise, opals, and topaz in silver or gold mountings-are also available.

Children: Children's clothes are available in great variety. Price and quality vary, depending upon the store. Some parents take children's clothes from the U.S. or order from catalogs. Dress for all ages is similar to that in the U.S., although teenagers in Mexico seem very fashion conscious. Some schools require uniforms. European-style baby clothing is readily available, but American style clothing is not. Disposable diapers are available in the commissary and on the local economy; however some locally made disposable diapers have been known to cause severe diaper rash on some children. Children's shoes and sneakers are available at both a satisfactory price and quality.

Supplies and Services

A variety of both domestic and imported supplies and services are available on the local economy. Many U.S. brands of health or beauty aids are manufactured and sold locally. Most medications can

be bought at local drugstores and may cost less than in the U.S.

Film and developing are readily available, including 45-minute processing. Prices, quality, and service compare favorably with the U.S. Quality engraving and printing can be done locally.

Dry-cleaners and commercial laundries are slower, but competitive in price to those in the U.S. Pick-up and delivery from your residence is also available. Beauty shops and barbershops are numerous and compare favorably with those in the U.S. in price and service. Reasonably priced shoe repair is available. Audio, video, and personal computer equipment repair services are satisfactory; however, some parts are scarce and the work can be expensive. Service and repair on U.S. cars are fair. Dealer service is available for Chrysler, Ford, GM, Nissan, and VW models that are assembled in Mexico. It is suggested that you contact your local dealer in the U.S. to verify all warranty information.

Most stores and markets are located close to such tourist centers as the Zona Rosa (Pink Zone), Polanco (very popular neighborhood), and the Zocalo (Historic Center). The real bargains are in handcrafted silver, gold, copper, tin, onyx, leather, textiles, pottery, blown-glass, and paintings. Stores usually open at 10 am or 11 am, but the time may vary according to the owner's whim. They usually remain open until 7 pm or 8 pm. Many specialized stores open only half-days on Saturday and most stores close on Sunday, except for those stores located in the malls.

Domestic Help

Many U.S. expatriates have such domestic help as maids, gardeners or chauffeurs; however, few speak English. Truly skilled cooks are hard to find. Almost all domestic employees hired locally are Mexican. The Government of Mexico is strict about visas and work permits for foreign domestics because of the large number of Mexicans available.

Although many domestics live in, they can also be hired on a part-time "live-out" basis for laundry and cleaning purposes. Families with small children may find it helpful to have a live-in domestic to look after children, since good babysitters are very scarce. Most homes and many apartments have separate servants quarters. The cost of a domestic employee's salary, Christmas bonus, meals, uniform, severance pay, and Social Security has increased in recent years; but it is still significantly less expensive than in the U.S. An employer is liable for three months of severance pay upon departure once an employee has completed 30 days of employment. It increases at the rate of 20 days a year. One-third of the wage is retained to cover costs of room and board for live-in domestics. Domestic employees are entitled to one day off a week, Mexican holidays, and six to twelve days, paid vacation days a year. Employers have the option of enrolling servants in the IMSS health program or paying their medical expenses directly.

Religious Activities

Mexico City's large English-speaking community is served by several English language religious institutions, including but not limited to Catholic, Baptist, Christian Science, Church of Christ, Greek Orthodox, Jewish (Conservative), Latter-day Saints, Lutheran, Methodist, Quaker, Seventh-day Adventist, Union Evangelical, Interdenominational, and Unitarian religions/beliefs. Announcements for the times of services appear regularly in the English-language daily newspaper, *The Mexico City News*.

Education

The following schools offer programs from pre-school through sixth grade: Lomas Altas, Sierra Nevada, and Eaton. These schools are located in the Lomas de Chapultepec neighborhood.

The American School Foundation (ASF) (Address: Bondojito 215, Colonia Las Americas, Delegacion

Alvaro Obregon, 01120 Mexico, Distrito Federal, Mexico)

As a bicultural and bilingual school, its program is different than the U.S. schools. It offers accredited co-educational programs in pre-primary, primary (first to fifth), middle school (sixth to eighth), and high school (ninth to twelfth) levels. The SACS in the U.S. accredits the ASR. The school also has Mexican accreditation, by the Secretariat of Public Education (SEP) for all grade levels and the National Autonomous University of Mexico (UNAM), Mexico City, for the high school program.

ASF receives some grant aid from the Office of Overseas Schools (A/OS); but, it is not affiliated with the U.S. Embassy. Under the terms of the Government's grant to the school, AFS must accept all children who meet admission standards. AFS has about 2,200 students—approximately 50% of whom are Mexican, 25% American, and 25% other nationalities. Classes in primary school are conducted half-day in Spanish and half-day in English. However, children with little-to no Spanish attend "Special Spanish" classes. In middle school, Spanish is taught as a second language. The ASF campus includes indoor and outdoor play areas, tennis courts, and an indoor swimming pool. An intramural sports program includes American football, soccer, and basketball.

The school year starts in mid-August and ends in late June. Two-week vacations occur both at Christmas and Easter. Uniforms are not required.

Children coming from schools with other than an American curriculum and children with poor academic records may be required to take an admission exam.

Summer activities include remedial and enrichment programs, in addition to a half-day Summer Camp Program. Extracurricular activities include drama, Model United Nations, a variety of sports,

National Honor Society (NHS), and various clubs.

Greengates: (Address: Avenida Circunvalacion Poniente 102, Balcones de San Mateo, 53200 Naucalpan, Estado de Mexico, Mexico). A private, coeducational school based on the British system that offers kindergarten through high school. Applicants are tested for acceptance and placement. The school year is from mid-August through late June. Classes are taught in English. Spanish is required as a second language and French is offered beginning in grade six.

The school requires elementary and junior high students to wear uniforms. An after-school activity program includes art, drama, music, chess, and photography. About 30 nationalities are represented. Summer programs include remedial education, arts, crafts, and sports. Expenses are within the education allowance.

Lomas Altas: (Address: Montanas Calizas 305, Lomas de Chapultepec, Mexico 11000 D.F. Tels 520-5375, 2027986, fax: 520-2276.) Lomas Alias is growing in popularity for younger children (up to the sixth grade). The school is a private, coeducational school for children from pre-school through sixth grade. There are regularly long waiting lists for spaces. Early registration is recommended. No uniform is required. The school year is from mid-August through to the end of June. The majority of children attending the school are Mexican. Beginning in the first grade, half the day's curriculum is conducted in Spanish and half in English. For younger children, the classes are all in English.

Westhill Institute: (Address: Monies Carpatos, No. 940, 11000 Mexico D.F.) Westhill is a private, coeducational school, founded in 1992. The school has two campuses. Kindergarten through grade 6 is located in Lomas de Chapultepec. Older children go to the campus in Santa Fe. Uniforms are required.

The standard curriculum includes some class work in Spanish and French.

In addition, numerous other schools—such as Montessori, French, German, and religious—are available. Many nursery schools and kindergartens are available and one or two have summer programs. Most schools have bus service.

Except for Greengates School, most schools must conform to the Government of Mexico requirements to teach Spanish at least half of every school day in elementary grades and follow the approved curriculum.

Special Educational Opportunities

UNAM has a school for foreign students, that offers programs in Latin American Studies and intensive Spanish. Most courses are in English, including those in Mexican history and culture. The university offers many degrees—including economics, dentistry, engineering, and the humanities.

A wide range of courses and programs is offered at The Ibero-American University (Universidad Ibero Americana) and the University of the Americas, Mexico City (Universidad de Las Americas).

Universidad Internacional de Mexico, located in Mexico City, is part of the U.S. International University of San Diego, California. The U.S. campus is accredited by the Western Association of Schools and Colleges. It offers undergraduate degrees in business administration, general studies, and psychology as well as graduate programs in management and organizational development, psychology, international business administration, and business administration. All course work is in English.

Sports

The athletic facilities at numerous private clubs are open. The ASF campus includes lighted tennis courts and an indoor swimming pool, available for community use for a nominal fee. A swimming pool

at the YMCA is available for a small charge. Gold's Gym, located in Mexico City, offers various types of equipment and personal trainers for variable membership dues.

The Maria Isabel Sheraton Hotel has some athletic club facilities, including exercise classes. The Camino Real Hotel rents tennis courts by the hour.

Runners must take time to adapt to Mexico City's higher altitude. Heavy traffic and air pollution dampen some runners' enthusiasm, but Chapultepec Park and other locations provide pleasant surroundings for running. Runners must remember that crime is relatively high in Mexico City; so you must be cautious of where and when you choose to run.

As in most Latin countries, soccer is a favorite spectator sport. Other sports include horse racing, jai-alai, American football, baseball, softball, basketball, and polo. Bullfights are held almost every Sunday. Horseback riding is popular among Mexicans. Few riding clubs are available in Mexico City and its environs. You may rent horses to ride "Mexican saddle" in the countryside around Mexico City.

The Government of Mexico requires special permits to possess firearms or to use them for hunting.

Freshwater fishing for trout and bass is good.

Some of the world's best deep-sea fishing and beaches are at such Pacific coast resorts, as Acapulco and Ixtapa Zihuatanejo (Guerrero), Puerto Vallarta (Jalisco), Puerto Escondido and Huatulco (Oaxaca) near the Gulf of Tehuantepec, Mazatlan (Sinaloa), and Los Cabos (at the southern tip of the 1,000-mile-long Baja California Peninsula). The Gulf of California (also known as the Sea of Cortes) resorts include Guaymas (Sonora). The Gulf of Mexico resorts include Veracruz and Tampico (Veracruz). Caribbean resorts include Cancun and Cozumel (Quintana Roo). Mountain

climbing is popular at the nearby volcanoes of Popocateped ("Pogo" is the second-highest mountain in Mexico) and Iztacchihautli; and at the Pico de Orizaba (the highest mountain in Mexico and the third highest in North America, on the Puebla/Veracruz border) it is popular with the hardy who are also accustomed to high altitudes (17,000 feet above sea level). The lower slopes provide extraordinary beauty and offer an attractive alternative of hiking and scenery. The city of Puebla (altitude 7,030 feet), located on the eastern side of "Pogo" and "Izta," was one of the first Hispanic cities in Mexico. It has museums and buildings reflecting the Spanish colonial period. The Battle of Puebla, which marked Mexican victory over

French forces on May 5, 1862, is celebrated in today's Cinco de Mayo festivities.

Touring and Outdoor Activities

Touring and sightseeing possibilities are excellent. Mexico abounds in archeological sites from the indigenous, meso-American civilizations of the pre-Hispanic era.

The Great Temple, the seat of the Aztec civilization, is in the Zocalo (or central plaza), in downtown Mexico City. Founded in 1325 as Tenochtitlan, it was conquered by Hernando Cortes in 1521. An adjacent museum displays artifacts found at the site. The pyramids of the Sun and the Moon, dating from C.E. 500, are found at Teotihuacan (also known as the City of the Gods), about a 45 minute ride northeast of Mexico City. Tula (Hidalgo), the capital of the Toltec civilization, is a one-hour drive northwest of Mexico City, off the toll road to Queretaro. Mayan sites are everywhere when you visit the Yucatan Peninsula.

The downtown Mexico City area includes excellent museums, the Cathedral, the National Palace with murals by Diego Rivera, glass factories, old churches, convents, and colorful markets. Chapultepec Park is a popular, lake-centered woodland.

It is several miles square and located near the Polanco and Lomas areas of Mexico City. It has a zoo, bridle paths, picnic areas, playgrounds, miniature trains, botanical gardens, bicycle paths, row boats, a colorful amusement park, fine restaurants, and Atlantis-an aquatic animal park.

Mexico City's central location makes weekend trips easy to low altitudes, scenic resorts, and towns by car, train, bus, or plane. Many old haciendas have been converted into beautiful hotels and resorts. Located within a day's excursion, south of Mexico City is Cuernavaca, Morelos (altitude 5,060 feet), known as the City of Perpetual Springtime; and Taxco, Guerrero (altitude 5,760 feet), a colonial town noted for silver manufacturing.

The Spanish colonial town of San Miguel de Allende, Guanajuato (altitude 6,140 feet) is two hours to the north. Toll roads fan out from Mexico City to these and other areas of interest.

Summer activities for children are somewhat limited. Summer jobs are not always available for high school and college-age students; so many families spend a few weeks traveling during summer.

Entertainment

Mexico City's performing and visual arts programs are international in scope. The National Institute of Fine Arts (INBA) offers a broad range of cultural activities at its numerous concert halls, theaters, museums, and other facilities. The Palacio de Bellas Artes and the National Auditorium are the traditional venues for performing arts programs. In recent years, newer facilities have suffered in various parts of the city. World class symphony orchestras, chamber orchestras, chamber ensembles, opera companies, jazz groups, modern dance companies and ballet companies perform periodically at Bellas Artes. Superb art exhibits, are held frequently.

The National Museum of Anthropology hosts programs of dance and music from Mexico's indigenous cultures.

Mexico's famed Ballet Folklórico performs each Wednesday and Sunday a Bellas Artes. UNAM administers an extensive cultural program, which often includes American activities held at their Centro Cultural, in the southern part of the city. Tickets for INBA and UNAM programs are moderately priced.

There are several amateur theater groups in addition to commercial theater groups. Movie theaters show first-run American movies about three months after their release in the U.S. at inexpensive prices.

Video clubs feature a selection of movies, most of which are in VHS format. DVD is sometimes available.

Dining out is reasonably priced and varied. The cosmopolitan nature of the city is nowhere more evident than in the variety of restaurants, with specialties ranging from the various regions of Mexico (Yucatan, Veracruz, etc.) to countries and cultures around the world. Mexican food in Mexico is very different from the Mexican-style food that has become so popular in the U.S. International restaurant offerings include anything from the Argentine-style "parrilla" to Middle Eastern cuisine. Good caterers are available throughout Mexico.

Mexicans normally eat their main meal as early as 2:00 pm and then have light dinner after about 9:00 pm. It is always better to make a restaurant reservation for parties larger than six. Nightclubs are everywhere you look in Mexico City.

Chapultepec Park boasts the National Museum of Anthropology, a handsome building housing one of the world's most extensive collection of pre-Hispanic artifacts from cultures indigenous to Mexico.

Church in Guadalajara, Mexico

© Danny Lehman/Corbis. Reproduced by permission.

Lecture tours in English are available. The Museum of Modern Art provides an overview of 80 years of Mexican art, as well as numerous excellent foreign and Mexican exhibits. The Rufino Tamayo Museum, includes collections of paintings and sculptures by 20th-century artists from Mexico, the U.S., and Europe. Chapultepec Castle and museum, the residence of the Austrian Archduke Maximilian (1864-67), overlooks the eastern end of the park and Paseo de la Reforma.

Other fine museums include the San Carlos, the Pinacoteca Virreinal, the Frida Kalo, the National Museum of the Viceroyalty (the Spanish Colonial Period), and the Anahuacali Museum which features Diego Rivera's pre-Hispanic collection.

For those interested in Mexico City's active art scene, the city offers more than a dozen fine com-

mercial art galleries, which periodically show the best of Mexican and to a lesser extent-foreign artists. Artists also regularly exhibit in several out-door parks.

Social Activities

Well-known organizations with branches in Mexico City include: the American Benevolence Society, the American Legion, Boy Scouts, Girl Guides, Daughters of the American Revolution, Junior League, Lions, Navy League, Kiwanis, Knights of Columbus, Shriners, Hash House Harriers, St. Andrews, and various U.S. college alumni clubs. The American Society offers a wide variety of social activities.

A good knowledge of Spanish and a real effort to make friends helps to develop friendships. Many clubs within Mexico, such as Damas Diplomaticas and The Newcomers' Club, offer monthly meetings, speakers, tours to various sites in Mexico, dinners, and dances.

Guadalajara

Metropolitan Guadalajara, with a population of more than five million inhabitants, including approximately 50,000 resident U.S citizens, sits 5,092 feet above sea level on a broad plateau. A dramatic canyon, "La Barranca," forms the city's natural northern boundary; picturesque mountains rise to the east and west and Lake Chapala lies to the south.

Guadalajara enjoys a temperate climate year round. Dry, sunny days are interrupted by brief thunder-showers during the summer rainy season (June through October). Ninety percent of the average annual rainfall of 35 inches falls during these five months. Because of its altitude, Guadalajara escapes coastal heat and humidity. The average temperature range varies from 45 to 75°F in January and 55 to 90°F in May. The climate which is comparable to that of San Diego

except for the greater rainfall, has been instrumental in attracting thousands of tourists as well as American retirees.

A city of brightly colored tropical flowers, Guadalajara proudly blends its historic past with modern development. The Cathedral, government buildings, and expansive plazas of the city center stand as impressive remnants of Mexico's colonial heritage. Plaza Tapatia, a downtown pedestrian mall, offers hours of pleasant strolling amidst greenery, fountains, shops, and restaurants in the city's historic center. It is also the location of the Cultural Cabanas Institute, which houses the world-famous Orozco ceiling murals.

Utilities

Electric service is the same as in the U.S.: 110 volt, 60 hertz, AC. Voltage regulators or surge suppressors can protect televisions, stereos, and computers from electrical surges. Both are available locally. It is advisable to unplug the equipment when not in use and to not use the equipment in the middle of thunder and lightning storms.

Food

Guadalajara is home to such American chains as Wal-Mart Super-Center, Sam's Club, and Costco in addition to Mexican chain super-center-type stores. Many American products manufactured in either the U.S. or in Mexico can be found in these stores. However, those products made in the U.S. may not be routinely stocked by the store. It is best to stock up on desired goods when you find them in local stores. Additionally, there are innumerable specialty food stores, bakeries, and outdoor markets that offer a wide variety of products.

Frozen foods are readily available, and low-calorie, low-fat products are becoming more widely available. Pasteurized milk (whole and skim), cheeses, and heavy cream may be safely purchased in supermarkets.

City tap water is safe for bathing and cleaning, but not for drinking.

Bottled drinking water is sold in virtually all stores and delivery service may be established such that the water is delivered to your home on a set schedule.

It is necessary to disinfect fruits and vegetables before eating them. Disinfectant drops and powder are readily available in all local grocery stores.

Clothing

Guadalajara boasts an enviable spring and summer climate year round. Light and medium weight clothing is comfortable in all seasons. Heavy winter clothing is not needed. Take a raincoat and umbrella for the mid-June to October rainy season. Summer clothes are perfect for travel to low-altitude, warmer areas. Take your bathing suit for use at local pools and for the enjoyment of nearby beaches. Formal social occasions are rare; most functions are informal. A plain, dark suit for men or cocktail dresses for women is appropriate attire.

Guadalajara has several large, American-style shopping malls, and a variety of clothing styles is available in the many boutiques and department stores. Leather jackets, shoes and boots are available at reasonable prices as there are many manufacturers of leather goods in the area. Large sized shoes and clothing are scarce.

Supplies and Services

Housekeepers are available on apart-time or live-in basis. Wages are very reasonable in comparison to U.S. rates.

Gardeners are also available at a reasonable fee. Their services are generally needed every two weeks during the rainy season and less frequently for the remainder of the year. Medical care, furniture design, and construction, automobile and appliance repair, and other services can be found at a lower cost than in the U.S.

Religious Activities

Several churches, including Catholic, Lutheran, Episcopal, and Pres-

byterian churches offer English services. A Jewish community offers services in Spanish and Hebrew.

Education

Guadalajara is home to five private and two public universities as well as several smaller institutions of higher learning. Also, a good number of excellent high schools and grammar schools exist where the language of instruction is Spanish.

The American School offers a coeducational, bilingual program from pre-kindergarten through high school. The student body consists of nearly 1,300 students, more than 80% of whom are Mexican. Children with special educational needs may not be well served there or by any other school in Guadalajara. The teaching staff is multinational, but predominantly Mexican. Most of the remainder is from the U.S. or Canada. It is accredited by the Southern Association of Colleges of Schools. The school year runs from late August to late June with two-week vacations at Easter and Christmas.

Pre-kindergarten, elementary, and high school level courses have summer sessions. Uniforms are not required.

The John F. Kennedy School offers instruction from kindergarten through grade six. Kindergarten is taught completely in English; pre-first grade for six year-olds offers two subjects in Spanish and the rest in English; and primary school beginning at age seven is taught in Spanish and English on alternating days. Bus service is not available.

The Lincoln School, which offers prekindergarten through grade 12, has two different teaching programs: the bilingual program is taught half in Spanish and half in English; the traditional, bicultural program offers 90% of material in English, with the remaining 10% in Spanish. The school is built on Christian principles, with mandatory 20-minute devotions each morning. Bus service is not offered.

Sports

Guadalajara's climate encourages a wide variety of outdoor sports. Swimming, tennis, hiking, and horseback riding are popular. Five 18-hole golf courses, a nine-hole course and one practice range are available in Guadalajara. Both private clubs and city recreation facilities offer swimming, tennis, racquetball, basketball, and other sports.

Touring and Outdoor Activities

Guadalajara is situated in close proximity to many areas worth visiting. The neighboring towns of Tonalá and Tlaquepaque offer an enormous selection of artisan crafts at very affordable prices. Tonalá hosts exciting market days every Thursday and Sunday for additional shopping pleasure.

Lake Chapala and the lakeside village of Ajijic are only an hour away. Beyond the lake are the picturesque towns of Mazamitla and Tapalpa.

For beach lovers, there are many options within about four hours' driving from Guadalajara. Puerto Vallarta, the principal beach resort in the consular district, is 25 minutes away by plane or approximately four hours by car. Manzanillo, another important beach town, is three hours away by car and home to great fishing as well as the largest seaport on Mexico's Pacific coast. Additional beaches include Barra de Navidad, Nueva Vallarta, and Tenacatita.

The neighboring states of Michoacán, Guanajuato, and Zacatecas are also, easy-to-reach destinations for vacations or long weekends.

Entertainment

Touring musical and dance companies from Mexico and other countries are often featured in the stately Degollad Theater or Cultural Cabanas Institute. Additionally, the University of Guadalajara presents an exceptional Ballet Folclórico every Sunday morning at the Degollado Theater.

Busy downtown street, Tijuana

Susan Rock. Reproduced by permission.

There is a large and active American Society to welcome new American residents. The Mexican American Cultural Institute also sponsors program, of interest.

Depending on the neighborhood in which they live, families either have cable television or a satellite television service on which various American television shows are shown, and such Popular cable channels, as ESPN, and CNN are widely available.

Monterrey

Monterrey stretches from the arid plains near the U.S. border south to the northern tier of traditional, colo-

nial Mexico. The most distant major city in the district, Durango, is a six-hour drive from Monterrey. The total population of the district is estimated at nearly 12 million, of which an estimated 3.8 million live in the Monterrey metropolitan area. About 57,000 U.S. citizens live within the district, with 28,000 residing in greater Monterrey.

Monterrey is Mexico's third largest city and second most important industrial and financial metropolis. The capital of the state of Nuevo León It is located in the northeastern part of Mexico, about 150 miles from the Texas border. Monterrey is the hub of the most prosperous urban area in all of Mexico.

The area's geography and history have given the people of Monterrey, otherwise known as "Regiomontanos," an individualistic-reserved character. The trend setting business community is conservative in its politics, religion, and social structure. Monterrey is advanced in its approach to technical innovation and economic opportunities; closer to American than traditional Latin concepts in business practices; and devoted to the family, hard work and the expansion of the family enterprise. The "Group of Ten," are 10 large industrial conglomerates that play a crucial role in Mexico's economy.

Monterrey is situated in a semi-arid valley at an altitude of 1,766 feet and is bounded on three sides by rugged mountains. About two hours to the southeast of the city is one of Mexico's most important citrus-producing areas. Most of the surrounding countryside, however, is semi-arid and covered with brush.

While only minimal rainfall occurs during the November to April dry season, the average rainfall is 20 inches a year. Half the rain falls during August, September, and October. Summer temperatures usually begin in mid-March and last through October. Spring-like weather with warm days and cool nights occurs from November to March, but the cooler weather worsens the seemingly omnipresent smog. The average monthly temperatures vary from 50-74°F in January to 74-98°F in June and July. Summer highs regularly top 100°F for several weeks at a time; from mid-November through January, the mercury can sporadically plunge into the 30s overnight.

Dust can be an irritant year round, especially during the dry season, and chronic respiratory problems are aggravated by frequent thermal inversions. The phenomenal growth Monterrey experienced during the last decade has threatened the fragile ecology of the semi-arid region. Government efforts to reduce pollution have thus far had little effect.

Utilities

Piped natural gas is commonly used for stoves and water heaters. Electric current is the same as in the U.S.: 110 volt, 60 hertz, AC. Power outages are rare but fluctuations are common, making voltage regulators or surge protectors for PC's essential. Due to scarce rainfall, many houses are equipped with water tanks and some with cistern systems, which ensure water 24 hours daily.

Transportation

Public transportation within the suburbs and in Monterrey is adequate; nevertheless, you may want to bring a personally owned vehicle for a longer stay.

Driving in this area is not for the faint-hearted. Regulations concerning driver's licenses are loosely enforced and locals are known for their aggressive driving habits.

Food

Fish, seafood, and poultry are also regularly available. Most fresh fruits and vegetables familiar to Americans, plus a wide variety of tropical fruits, are sold here. The arrival of the South Texas grocery chain H.E.B. in Monterrey in 1997 elevated the food shopping experience to U.S. standards. Baby food, low fat, sugarfree and numerous ethnic foods are available year round. Most Americans make occasional trips to the Texas border towns to purchase hard-to-find specialty items or to take advantage of the lower prices. All cuts of good quality meat are available, but at prices higher than those in the U.S.

Clothing

Although clothes are often more expensive in Monterrey than in the U.S., tailors are a bargain.

Hats are seldom worn by men, except with sport clothes or for protection from the sun and rain. In summer, men often wear cotton suits; men's fashions are conservative, with business suits universal among government and private sector contacts. A variety of women's

clothing is worn. Slacks are often seen, but shorts are appropriate only for sporting activities. Women should bring what they would wear for the office, parties, or at home in the U.S. Although Mexican shoes are stylish and reasonably priced, many Americans have difficulty finding their shoe sizes. Attractive sandals for summer are available.

Religious Activities

English-speaking services are held at the Fatima (Roman Catholic), All Souls (Anglican) and Union Churches, the latter serving a broad based Protestant congregation. The independent Castillo del Rey offers English language Bible study. There are also services for Jewish (Orthodox), LDS, Baptist, Presbyterian, Methodist, Pentecostal, and independent congregations, some of whose services may be translated into English upon request.

Education

The American School Foundation of Monterrey, a private, coeducational school offering classes from nursery through grade 12. Instruction is in English with Spanish courses for American children. The school is accredited by SACS.

The school year runs from mid August to mid June. Current enrollment exceeds 2,000 students-of whom more than 10% are American. The preschool and elementary school operate at the Rio Missouri Campus and serve more than 1,000 children. A beautiful state-of-the art middle school and high school opened on a separate campus in August 1996. Students in high school have the opportunity to earn both a U.S. high school diploma and its Mexican equivalent. The school offers a rigorous college preparatory program and includes support services for children with mild learning difficulties.

Several children also attend the American Institute of Monterrey, a smaller bilingual school that is not accredited in the U.S.

Medical Facilities

Monterrey is known as the Houston of Mexico, boasting the best medical care facilities in all of Mexico. A full range of U.S. trained, English-speaking specialists is readily available to assist with virtually any medical problem. Nevertheless, some patients, in consultation with MED, would be advised to seek treatment in the U.S.-particularly expectant mothers. For dental and orthodontic needs, local professionals offer competent service at only a fraction of the stateside cost.

Sports

Public soccer fields and a jogging course are located in a long section of a dry riverbed. Few public tennis courts are in the city. Residents can join a number of reasonably priced gyms with weight rooms, aerobics, tennis courts, and small pools. The better equipped sports clubs in Monterrey are more costly. Two expensive equestrian clubs in the area offer riding and jumping. The city has a few bowling alleys, roller skating rinks, and small ice skating rinks. There are three private golf courses, but only one club offers membership-which is costly. Unfortunately, the heat and pollution limit the number of outdoor activities that can be enjoyed safely and comfortably.

Hiking and rock climbing are popular diversions in the nearby Chipinque and La Huasteca Parks, and in other nearby mountainous areas as well. The State of Nuevo Leon is actively encouraging adventure and ecotourism. Fishing is possible in several lakes in the region, although a boat is essential in most and rentals are unavailable. Lake Guerrero, a five-hour drive away in the neighboring state of Tamaulipas, allows bass fishing, although guides and lodging are expensive. Tamaulipas and Nuevo Leon allow dove, quail, duck, and/or goose hunting. Finally, the northern border region allows whitetail deer hunting, although most of this takes place on private ranches and can cost hundreds of dollars per day. Hunting weapons are subject to

strict control and to cumbersome, expensive licensing requirements.

Touring and Outdoor Activities

Nearby attractions and their facilities include: Chipinque (picnic area, a restaurant, beautiful hiking trails, and a scenic view); Horsetail Falls (picnic area, waterfall, and burro riding); Presa de la Boca (picnic area, boating, and water skiing); the Grutas de Garcia (caverns); Huasteca Canyon (picnics and hiking); and Plaza Sésamo an amusement and water park for children.

The city of Saltillo, Coahuila, is about an hour's drive from Monterrey. Situated at a higher elevation than

Monterrey, Saltillo offers a slightly cooler climate, a smattering of Spanish colonial architecture, and shopping for serapes. Most other handicrafts come from central or southern Mexico. Dog and horse shows (including "charreadas"), are announced in advance in the newspaper. Bullfighting is a popular spectator sport in Monterrey. During the October - May season, bullfights are held on Sunday afternoons and holidays. Monterrey boasts two professional soccer teams and two Mexican baseball teams similar to the AAA class in the U.S. The baseball season lasts from March through August.

Entertainment

Monterrey has many good, moderately priced to expensive restaurants offering Mexican, German, French, Italian, Arab, and Asian cuisine. A full range of fast food shops is available, including many U.S. chain restaurants. Several modern movie theaters show current U.S. films at reasonable prices. Younger adults frequent a few nightclubs. Although known more as an industrial center than a cultural center, Monterrey offers a growing and varied bill of fare for the performing and plastic arts-including sporadic performances by the symphony, ballet, and opera. The city boasts such art galleries and museums as El Museo de

Monterrey, the Glass Museum, and the Museum of Contemporary Art. The Museum of Mexican History is also worth a visit.

Social Activities

Many Americans participate in the American Society of Monterrey [ASOMO], which sponsors a Fourth of July party, Christmas dance, Halloween party, Easter egg hunt for children, and other social events.

Opportunities for socializing with the local people are limited, particularly for single adults, since social events usually are for families and often take place at expensive private clubs.

Ciudad Juárez

Ciudad Juarez (commonly called Juarez) is Mexico's fourth largest city with a population of more than 1.5 million. It is the largest of all cities along the U.S.-Mexico border. Juarez is a blend of old and new. Because of its proximity to El Paso, it has strong cultural and economic ties to the U.S. Many families in Juarez have U.S. citizen relatives on the other side of the border. Still, Juarez is proud of its heritage and its history as the chief city of the state of Chihuahua, "Cradle of the Mexican Revolution." Although Juarez Mexicans are very friendly in a social or business setting, they rarely welcome new friends into the close family circle. Invitations to dine at someone's home are rare.

Many industrial plants have been established in Ciudad Juarez to take advantage of low labor costs. The "twin plant" or "maquiladora" concept, with labor-intensive plants in Juarez and El Paso, creates an appearance of one city separated only by long lines at the immigration checkpoints over the Rio Grande. It is responsible for the extremely low unemployment rate and the rapid growth of the city. El Paso, on the other hand, has not coped well with the changes brought by NAFTA. Unemployment is high. Good jobs are scarce.

Ciudad Juarez is located 3,700 feet above sea level in an arid desert region surrounded by treeless mountains. The region enjoys cloudless days, low humidity, and an average rainfall of less than 10 inches a year. Rainfall is less than an inch per month, except for July through September, when Juarez receives one to two inches a month. The average temperature range varies from 30 to 67°F in January to 67 to 100 °F in July. Both temperatures and humidity have been rising in the last several years. Juarez enjoys a change of seasons similar to that of Washington, D.C. Dust storms, Juarez's most unpleasant climatic feature, can occur at any time of the year and can cause difficulties for persons suffering from allergies.

Food

Modern supermarkets abound in both Ciudad Juarez and El Paso. Shopping for food and other daily necessities presents no problem. Food costs are lower than in Washington, D.C., especially for plentiful fresh fruits and vegetables. Locally produced alcoholic beverages are inexpensive and of good quality. Anything that cannot be obtained in Juarez is available in El Paso.

Clothing

A seasonal wardrobe is necessary in Juarez, with emphasis on lightweight clothing in view of the long summer. In winter, medium-weight suits for men and women are appropriate. Although subfreezing temperatures are rare, penetrating winds make hats, gloves, and lined coats useful. Rain is infrequent, so little rainwear is needed; but take umbrellas.

Fashion trends in Juarez follow those in the southwestern U.S., except that shorts are seldom worn in public. Suits and dresses are appropriate for work but after hours dress is casual. Formal dress is rarely required. Several representational functions require informal dress (suit and tie).

Women in Juarez dress more formally than American women for

luncheons and the like. El Paso is one of the best places in the U.S. to buy boots. Many manufacturers are head-quartered in El Paso and factory outlets are numerous. Western wear is popular on both sides of the border.

Supplies and Services

Domestic servants speak only Spanish. Full time, live-in maids have proven impossible to find. Part-time maids are available and charge \$25 to \$30 per day. If you need a full-time maid or nanny, the wisest course would be to take one with you.

Religious Activities

Protestant and Roman Catholic churches are located in Ciudad Juarez and in El Paso. All services in Juarez are held in Spanish. El Paso offers a Synagogue and temple. Evangelical groups are well represented on both sides of the border.

Education

Americans with school-age children may use any of El Paso's public or private schools. The public schools are overcrowded.

Juarez has at least four Montessori preschools. The University of Texas at El Paso (UTEP), with an enrollment of 13,000, grants bachelor and masters degrees. Night and summer courses are available.

Voice and music lessons are available at El Paso Community College. The Universidad Autonoma de Chihuahua maintains a branch in Juarez, where evening courses are offered.

Sports

Such sports as golf, tennis, and horseback riding represent popular forms of entertainment. Other enjoyable activities available on the border are hiking and camping. Many excellent campsites are within driving distance. Whitewater rafting is also available. Snow skiing is available in the Ruidoso-Cloudcroft highlands. Spectator sports events include UTEP basketball and football. UTEP hosts the

NCAA John Hancock Sun Bowl in winter. El Paso has a good minor league baseball team, the Diablos.

Touring and Outdoor Activities

Touring attractions include day trips to White Sands National Monument, the Carlsbad Caverns, Hueco Tanks State Park, and Elephant Butte Lake. Manageable in a day is Silver City, New Mexico, with its nearby ghost town and the Gila Cliff Dwellings. Some of the more interesting weekend trips include the city of Chihuahua, capital of the state of Chihuahua, about four hours south by train or car. The Mennonite Community in Cuauhtemoc, Chihuahua, about 220 miles south of Juarez, is fascinating.

Big Bend National Park; Santa Fe, Taos, and Albuquerque, New Mexico; Houston, Dallas, Phoenix, and Las Vegas are frequent U.S. destinations made more appealing by fares to Los Angeles and San Diego that can be found as low as \$99 on Southwest.

Entertainment

Juarez boasts many good restaurants in all price ranges, including Chinese, Mexican and seafood. Tacos, burritos, and hamburgers are local favorites. Brown bag lunches are also popular. El Paso and nearby Las Cruces, New Mexico, also have good restaurants. Gourmet restaurants are rare. The best discotheques and nightclubs that are open until dawn in the area are in Juarez.

Mariachi clubs abound and bands can be hired for private functions. The downtown area has many bars and clubs with live entertainment. El Paso has country/western clubs in abundance, as well as top forties nightclubs. A comedy club occasionally attracts nationally known comedians. Movie theaters on both sides of the border show the most recent U.S. releases. Video clubs are numerous and inexpensive. The El Paso YMCA, YWCA, El Paso Community College, and UTEP offer various art classes for both adults and children. The unusual scenery

inspires painters and photographers. Other cultural activities include the El Paso Symphony Orchestra, touring dance groups, plays, lectures, and rock concerts.

Tijuana

Tijuana lies just south of San Diego, California. Its vegetation and terrain are identical to that of southern California. The city is 75 feet above sea level and about 5 miles from the ocean. It is built on and around a group of large hills, which are part of the Pacific coast range of mountains.

The climate is similar to that of San Diego. The temperature range in Tijuana varies from 42 to 68°F in January and 63 to 82 °F in August. Sunny days and low humidity help maintain comfortable conditions year round.

More than 80% of the rainfall occurs from November to March and averages only eight inches a year. Thus, vegetation on the hills surrounding the city is sparse, leading to dusty conditions year round. During periods of heavy rains, mud slides and clogged gutters often occur. Several minor earthquakes have shaken but have caused no damage to Tijuana.

Food

Foods available in California are also sold in Tijuana, but Americans normally shop in California supermarkets.

Clothing

Take warm sweaters, woolen clothing, and raincoats for winter-which is the rainy season. Formal wear is seldom needed. The women of Tijuana are fashion conscious and are always well dressed.

Religious Activities

Although Roman Catholicism is predominant among the general population, Tijuana has several Protestant churches and a Jewish Synagogue. However, no English-language services are available. Those wishing to attend services in the U.S. usually must cross the bor-

der before 9:00 am to avoid long lines on weekends.

Education

Most American children are enrolled in U.S. schools in the San Diego area. Parents often spend considerable time shuttling their children to and from afterschool activities.

Recreation & Entertainment

Because of Tijuana's proximity to the U.S., take advantage of the many recreational activities offered on both sides of the border. Although downtown San Diego is only a 25-minute drive from Tijuana, unpredictable waits at the border, varying from five minutes to one hour, make planning activities in the U.S. more complicated. Camping, fishing, hunting, swimming, and sailing take place on both sides of the border. The Tijuana Country Club has an 18-hole golf course that nonmembers may use for a nominal fee. Tijuana offers horse racing, dog racing, jai alai, and bullfights. San Diego has professional football, baseball, and indoor soccer teams.

The Tijuana Cultural Center offers the full range of theater arts, art galleries, exhibits, and musical events. A wide variety of theater and concerts are also available in San Diego. Located near the Cultural Center is the Rio de Tijuana Plaza-a large complex of department stores, boutiques, and specialty shops. Most Americans shop in San Diego. Tijuana has many excellent restaurants. Tijuana's nightlife consists of bars and hotels with live entertainment, several discotheques, and downtown bars designed for young U.S. tourists.

Other recreational activities include the San Diego Zoo, Wild Animal Park, and Sea World. Disneyland is an approximately three-hour drive from Tijuana.

Hermosillo

Hermosillo, though named for one of the early explorers of the region, is

in fact the "pretty little place" its name implies in Spanish. It is a city of modern houses, broad, tree-lined streets, pleasant parks, and several universities, with a population of nearly 700,000. The town is located near a river in the middle of the Sonoran desert, 800 feet above sea level, 180 miles south of Nogales, Arizona, and 60 miles inland from the Gulf of California.

Hermosillo is the hub of a small transportation network that provides the city with adequate bus, and air transportation north to the U.S. and south to central Mexico. Both Aeromexico and Mexicana offer daily flights to Mexico City, Guadalajara, Tijuana, Mexicali, and other destinations in Mexico. Tucson, Phoenix, Los Angeles, Las Vegas, and Houston are also served by non-stop flights from Hermosillo's international airport 7 miles west of town.

Thousands of Americans pass through the city en route to the seaside resorts of Bahia Kino and Guaymas/San Carlos on the shore of the Sea of Cortez, as well as to points farther south. Traditionally, the American colony was so small and well integrated into the local community that it was not recognizable as a group. However, the opening of a major Ford Motor Company plant, several maquiladora factories, and mining operations over the last two decades have expanded the size of the American community. This has had considerable influence on housing, schools, and social life in the community.

Hermosillo is the capital city of Sonora, the second-largest state of Mexico, which is part of the great southwest desert of the North American Continent. Geographically, the state has the same soil and climate as southern Arizona, New Mexico, western Texas, and the desert regions of California.

The relative prosperity of Sonora acts as a magnet to draw people here from other parts of Mexico (two of the state's largest cities-San Luis and Nogales-are situated on the

border and in the new Nogales consular district). The railroad passes through Hermosillo, providing freight service from Mexico City and Guadalajara to the U.S.

Sonora's relative prosperity has, as noted, been attracting new residents from other parts of Mexico, fostering a substantial middle class. Visitors are often astonished by the number of new cars and pickups on the roads, by the well-dressed matrons and teenagers thronging the sidewalks in town, and by the often elegant houses in the better residential neighborhoods.

The climate is hot and dry, yet healthful.

Summer, from May to October, brings daily temperatures of more than 100°F; rainfall averages less than 8 inches a year concentrated in two rainy seasons, one in July and August, the other in December and January. Winter months, from November to April, are cool and spring-like. Sinaloa, which includes the world famous beach resort of Mazatlan, has a more moderate climate, with considerably more rainfall.

The consular district, which covers the southern two-thirds of Sonora and all of the State of Sinaloa, has increased rapidly with respect to both population and output. The economy is farm based in the large, irrigated lowlands of western and southern Sonora, and rain-fed agriculture in Sinaloa. Cotton and wheat are the most important crops. The region is also a major producer of cattle, shrimp, poultry, oranges, grapes, and winter vegetables. Industrial output is increasing, and copper mining has always been important. The district has traditionally had close economic ties with Arizona.

Utilities

Electric service is the same as in the U.S.: 110 volt, 60 hertz, AC. Voltage regulators or surge suppressors to protect televisions, stereos, and computers from electrical surges are available locally. However,

houses are not grounded for electrical purposes like they are in the U.S., so surge suppressors may not offer adequate protection. In order to better protect expensive electrical equipment, especially during the rainy season, it is advisable to unplug the equipment when not in use and to not use the equipment in the middle of thunder and lightning storms.

Food

Hermosillo is home to American chains like Wal-Mart SuperCenter, Sam's Club, and Costco, as well as Mexican chain super center-type stores. Many American products and brand names can be found in these stores, whether they are manufactured in the U.S. or in Mexico. However, those products made in the U.S. may not be routinely stocked by the store, so it is best to stock up on desired goods when you find them in local stores.

Frozen foods are readily available, and low-calorie, low-fat products are becoming more widely available. Pasteurized milk (whole and skim), cheeses, and heavy cream may be safely purchased in supermarkets.

City tap water is safe for bathing and cleaning, but not recommended for drinking.

It is advisable to disinfect fruits and vegetables before eating them. Disinfectant drops and powder are readily available in all local grocery stores.

Clothing

During the summer months, daytime temperatures can reach 115°F, and summer weight clothing is a must. Light-to medium-weight clothing is comfortable the rest of the year, with a sweater sometimes necessary on winter evenings. Heavy winter clothing is not needed. Formal social occasions are rare; most functions are informal.

Hermosillo currently has no large, American-style shopping malls. Although the city center has many shops with all varieties of shoes and clothing, many residents (Mexican

and American alike) go to Tucson for major shopping.

Supplies and Services

Housekeepers are available on apart-time or live-in basis. Wages are very reasonable in comparison to U.S. rates.

Gardeners are also available at a reasonable fee. Their services are generally needed every two weeks during the rainy season and less frequently for the remainder of the year.

Generally all services, including competent medical care, furniture design and construction, automobile and appliance repair, etc., can be found at lower than U.S. prices.

Education

Hermosillo is home to three large universities (one private and two public) as well as several smaller institutions of higher learning. The language of instruction in the public schools is Spanish, with English instruction introduced at the secondary level.

The Instituto Irlandes offers a bilingual program from prekindergarten through high school, with boys and girls in separate classes in the upper grades. The Instituto Mexicano Americano de Relaciones Culturales (IMARC) offers bilingual instruction, on the American model, from pre-kindergarten through grade 6. However, since the overwhelming majority of the students are native speakers of Spanish, the bilingual schools are not geared to students who enter with no knowledge of that language. While this does not seem to present too much difficulty at the preschool and kindergarten level, it could be problematic for children entering at a higher grade.

At the secondary level, the Instituto Tecnológico y de Estudios Superiores de Monterrey (perhaps Mexico's best private university, with campuses across the country) has a college preparatory school (grades 10 and up) and offers the international baccalaureate program.

Sports

Although summer can be too hot, Hermosillo's climate during the rest of the year encourages a wide variety of outdoor sports. Swimming, tennis, hiking, and horseback riding are popular. There is a country club with an 18-hole golf course, various hunting clubs, a shooting and archery range, horse and auto racing facilities, and a Mexican winter-league baseball team.

Touring and Outdoor Activities

The immediate vicinity of Hermosillo offers ample opportunity to explore the Arizona-Sonora Desert, with many petroglyph sites. To the east are the mountains of the Sierra Madre Occidental, which can offer some respite from the heat of the lower elevations. In the south of Sonora is the colonial town of Alamos.

For beach lovers, there are two options within about an hour and a half drive from Hermosillo. San Carlos (about 80 miles to the south), with a growing American community, has several resort hotels, two marinas, fine beaches, and a Club Med, as well as shops that carry articles from all over Mexico. Bahia Kino (about 70 miles to the west) is more of a traditional beach town, with a large fishing fleet and fewer tourist services. Mazatlan, in Sinaloa, is about eight hours away by car, but can also be reached by direct flights from Hermosillo, as can the resort areas of lower Baja California.

Los Mochis, in northern Sinaloa, is the western terminus of the Copper Canyon Railroad, which goes into the neighboring state of Chihuahua.

Entertainment

The entertainment scene, apart from the many movie theaters showing both English and Spanish language films, consists of small clubs with a variety of musical formats. Touring theater and

dance companies from around the country are often featured in the

Casa de Cultura, the Municipal Auditorium, or at the University of Sonora.

Matamoros

Matamoros is located on the south bank of the Rio Grande, about 20 miles inland from the Gulf of Mexico. With Brownsville, its sister city in Texas, Matamoros forms a metropolitan area of around 600,000 inhabitants. Matamoros, the larger of the two cities, has more than 400,000 residents.

The Rio Grande Valley, or the Valle, as it is called locally, comprises a population of about 1.5 million and includes the city of Reynosa in Mexico (approximately 65 miles upriver from Matamoros), and the cities of Harlingen and McAllen in Texas. Gulf sea breezes temper the tropical climate. The temperature range in Matamoros varies from 78 to 98°F in July and 50 to 60°F in January. The rainfall varies from one half inch in March to five inches in September. Temperatures at mid-day in summer can range well above 90°F with high humidity. Spring and autumn days are mild and brilliant. Winter is sunny and warm, except for an occasional "norther" when temperatures can drop suddenly to near freezing.

The Matamoros and Reynosa areas are home to more than 250 border industries, or "maquiladoras" These factories import parts duty free into Mexico, assemble them, and send them back to the U.S. or other countries, again duty free. A wide range of U.S. and foreign companies have plants, including Zenith, General Motors, AT&T, and Converse, among others. The area also has a large "agribusiness" center.

Matamoros has a thriving tourist industry, providing facilities to American winter visitors and retirees. Thousands of college students spending spring break at nearby South Padre Island visit Matamoros during March of each year. Shopping and restaurants are among Matamoros' chief attractions.

Domestic Help

Maids, both live-in and daily, are available but the cost has risen due to competition in the labor market surrounded by the rapidly expanding maquiladora sector. Day maids earn \$15 to \$20 per day. Live-in maids are available but tend to be younger, less experienced, and requiring of more supervision.

Food

All food needs can be met at modern supermarkets in Brownsville and Matamoros. Local produce is of excellent quality. U.S. produce is abundant in Brownsville, and most vegetables are available fresh, year round. Seafood, especially gulf shrimp, is also of high quality. Matamoros city water is not potable but inexpensive, sterilized drinking water is readily available.

Clothing

Business dress is informal and sports wear is acceptable year round. During the summer, an open-necked shirt and jacket are popular. Light spring and fall weight clothing is worn during the short winter season, although occasional cold spells make heavier clothing practical for a few weeks each year. Few social events will require black tie or formal attire; black tie dress can be rented in Brownsville.

Religious Activities

Most faiths are represented in Brownsville, which has many Catholic or Protestant churches and a Synagogue. Although Roman Catholic churches predominate in Matamoros, congregations of evangelical and Protestant denominations also exist.

Education

There are no English schools in Matamoros. Public schools are available in Brownsville free of charge to dependents, but most dependents attend private schools in Brownsville. The cost per pupil of private education is \$2,000 to \$3,000 per year. A full range of classes and subjects is available to more

© Kelly-Mooney Photography/Corbis. Reproduced by permission.

Street in Mazatlan, Mexico

advanced students at The University of Texas Southwest College in Brownsville, which has a modern library with an excellent selection of periodicals and journals.

Recreation and Social Life

Most social activities revolve around civic organizations, business luncheons, Rotary, Lions, etc. The State of Tamaulipas organizes a cultural festival in the fall and the University of Texas at Brownsville offers cultural programs throughout the academic year.

The Texas Rio Grande Valley is becoming famous as a recreational area for winter and summer tourists. South Padre Island, about 25 miles from Brownsville, offers excellent swimming, surfing, sailing, and deep-sea fishing. Golf is popular and can be played year round at the numerous public and private courses. The Rio Grande Valley also offers restaurants and first run movies.

Mazatlán

Mazatlán is an old, Mediterranean-style port city on Mexico's west coast. Located 780 miles south of Nogales, Arizona, it is situated on a picturesque peninsula. At the harbor's entrance, the highest recorded

lighthouse in the Western Hemisphere, El Faro, rests atop one of Mazatlán's few hills. The city's history goes back to the early part of the 19th century, but its growth is relatively recent. The population numbers approximately 400,000 full-time residents, increased by large numbers of Americans and other tourists who visit throughout the year.

The weather in Mazatlán is excellent, particularly during the winter season, November through March. In these months, temperatures range from 85°F in the daytime to 65°F at night. The tropical summer, lasting from April to October, is hot and humid with frequent thunderstorms.

Mazatlán's economy is influenced most directly by the commercial fishing dock, which makes it a shrimp capital of the world, and by the Pacífico Brewery. Agriculture is also an important industry; the northern part of the State of Sinaloa has become the chief supplier of winter vegetables for the United States. Since Mazatlán is the biggest and busiest seaport between San Diego and Panama, U.S. Navy ships make it a port of call.

Mazatlán itself actually is more than 300 years old, but it was not

incorporated until 1837. A few remnants of the colonial section remain, and they can be seen on a walking tour of the town's streets and alleys.

Most foods are available, and prices are less than or compare favorably with U.S. prices. Fish and seafood abound. Drug store items are, generally, not expensive, but some items cost more than U.S. equivalents, and some cost less. Special medications should be brought from the U.S.

Schools for Foreigners

Mazatlán has no American schools, but the Instituto Anglo-American (grade one through high school) teaches in both English and Spanish. Enrollment is small, and American students are often the children of U.S. citizens who are part-time residents during the winter. Other schools attended by American children are ICO (Instituto Cultural de Occidente), a private, coeducational school run by Italian priests (grades one through 12); Colegio Remington (girls only, run by nuns for grades one through nine); and Colegio El Pacífico (nonsectarian, grades one through 12). Most American children in Mazatlán attend boarding schools in the U.S.

Recreation

Mazatlán's beaches are beautiful, and ocean temperatures seldom dip below 65°F; the surf is well-suited for swimming and surfing. North Beach and Las Gaviotas (the sea gulls) are considered the best spots. Fishing for marlin, sailfish, and other large fighters is popular. Hunters may move through the nearby foothills in search of duck, dove, goose, and quail. Mazatlán means "place of the deer" in the Nahuatl language, and deer still abound in the area.

The Club Campestre and El Cid both have fine golf courses, with memberships available. El Cid also has tennis courts and a swimming pool.

There are several air-conditioned theaters, a large baseball stadium, and a bullring in the city. Three

television channels and seven radio stations provide news and entertainment in Spanish. Social events are informal, but both the American and Mexican communities are active.

Mazatlán's pre-Lenten *carnaval* is famous throughout Mexico.

Mérida

The Yucatan is noted for the friendliness of its inhabitants and its impressive archeological remains. Home of the Maya, it is strewn with ruins and relics of their culture. Merida itself is built on the site of the old Mayan ceremonial center of T'Ho. The area has a long history of separatism from the rest of Mexico. The Yucatecan habits, culture, and outlook differ from those of the rest of the country. It is home to three million people, the majority of whom live in the state of Yucatan, with smaller populations in the States of Campeche and Quintana Roo. Merida's population exceeds 600,000 and is mostly of mixed Maya or Spanish descent. English is widely understood in the metropolitan areas. Thousands of American tourists visit the district annually. New resorts on the Caribbean coast have become increasingly popular with U.S. tourists.

Merida is about 19 miles from the sea and 25 feet above sea level. The climate is tropical, with average humidity of 72% year round. There are three seasons: rainy season, May through October with more than 80% of the 38 inches of annual rainfall; cool or winter season, November through February; and dry season, March and April. The average temperature in Merida ranges from 73 to 93°F in June and 64 to 83°F in January.

Supplies and Services

Electricity is the same as in the U.S. It is subject to spikes, so surge protectors are strongly recommended. Satellite and cable TV are available.

Domestic help is reasonably priced. Live-in as well as daytime or hourly help is available.

Local authorities are concerned with growing water and automobile pollution and are beginning to monitor growth and contamination.

Food

Food is readily available in the several large supermarket chains that operate in Merida. The central market downtown is also available for those who love chaos and olfactory challenges. Most U.S. goods are available, but sometimes irregularly. Locally all kinds of meats, fresh fruit, and vegetables can be found at reasonable prices.

Clothing

U.S. type clothing is available in Merida. There are a variety of local department store chains and small shops. These all carry some U.S. brands.

There are also a few upscale department stores that have recently been constructed. American made products can be more expensive than in the U.S. Locally made clothing can be of poorer quality than in the U.S., as well. Extra care should be taken with leather goods and clothing in storage to avoid the ravages of humidity and mildew.

Coat and tie or formal dress is rarely worn at work. Men wear slacks and a shirt. Women wear cotton or lightweight dresses.

Religious Activities

Both Catholic and Protestant services are found within the consular district. One Catholic parish offers English-language services on Sunday.

Education

There are two bilingual schools operating in Merida. One is a Catholic institution, which is open to all; the other is secular. Both are considered suitable up to junior high level. All other schools are conducted in Spanish. Most other private schools are run by Catholic religious orders.

Limited special education is available.

Recreation and Social Life

Tennis, fishing, boating and golf are common in the area. The Club Campestre has tennis courts and a swimming pool. Cancun and Merida both have 18-hole golf courses. The beach at Progreso, where cottages may be rented, is about a 20-minute drive by car. Scuba diving and snorkeling are popular at Isla Mujeres, Cancun and Cozumel. All sports equipment, including tennis balls, is expensive. Many people take their own.

Merida has a few air-conditioned movie theaters, a large baseball stadium, a bullring and a few small museums. Social life is informal. Membership to the Club Campestre, the Golf Club, the Rotary Club and the Lions Club is open. Members of the international community sponsor events from time to time. The International Women's Club is actively involved with charitable events.

Nearby attractions include the archeological sites at Uxmal, Chichen Itza, and Palenque, among others.

All kinds of sports, summer schools, and summer camps are available for children or youngsters of any age. These activities are, for the most part, organized by their schools or church communities. Merida has several parks, a zoo, and programs for children (in Spanish).

Nogales

Nogales has been a border pass through the mountains since the middle 1800s, with a U.S. Consulate first established in 1886. The Consulate was closed in 1970 but reopened in 1998. Visitors are often surprised after expecting sand hills and finding a mountainous and pleasant countryside instead. The name refers to a now disappeared stand of black walnut trees, although the hills are still covered with a native scrub oak. The river

valleys glisten with the leaves of huge cottonwoods, green in the summer and golden in the fall. The riverbeds are usually dry; but torrential summer rains often fill them to overflowing, closing roads and washing out bridges. The weather in the western deserts can be dramatic. Nogales is located 60 miles south of Tucson, Arizona and 140 miles to the north of Hermosillo, Sonora, on the U.S./Arizona-Sonora, Mexico border.

Long a vital entry point into the U.S. from western and northern Mexico, Nogales has grown in the past 20 years from a pleasant, small town to a booming factory town with growth fueled by NAFTA maquiladora factories that assemble primarily U.S. made parts into goods exported around the world. There are approximately 90 factories in Nogales and another 50 to 100 in other border communities along the Arizona/Sonora border. These factories have caused tremendous growth, with many residents of central and southern Mexico moving north to seek employment. These factories account for 35,000 jobs in Nogales and another 35,000 jobs elsewhere in the consular district. The produce industry has also grown tremendously with 60% of all winter produce consumed in the U.S. and Canada passing through Nogales, Sonora, and processed in Nogales, Arizona. Most of the produce comes from areas in Sonora and Sinaloa. Cattle ranching, mining, and small farms still comprise an important part of the economy of the region. Nogales is also a major border crossing for Americans going south for the winter into Mexico and to the Pacific beaches year round.

Sonora has traditionally been a relatively prosperous state with a well-developed middle class. The capital of Sonora, Hermosillo, is a bustling and growing commercial and industrial center of almost a million. Unofficial estimates put the population of Nogales at 250,000. Agua Prieta and San Luis Rio Colorado, two other important border cities in this consular district, are also large and growing. Puerto

Penasco, a shrimp fishing port and vacation destination for Arizonans located at the top of the Gulf of California, has become a major resort and residence for Americans. The history of northern Sonora is inextricably linked to that of Southern Arizona. It begins with Father Eusebio Kino, a Jesuit priest who first brought European farming ideas and Christianity to the region. The churches he established are still functioning and form a tour route for those interested in Spanish colonial churches. The pleasant towns that have grown up around these churches (two of which are in Southern Arizona) form the heart of the region. Commercial and family ties between Northern Sonora and Southern Arizona are very strong and make this a unique region united culturally and historically.

The climate has dramatic temperature changes but can usually be described in two phrases: warm and sunny in the day, cool at night. The summers are hot but the nights cool off. Winter nighttime temperatures dip into the 20s and 30s but the days usually warm up to the 60s and 70s. It is very dry except in the summer rainy season in July and August. Shorts and tee shirts are the summer dress. Sweaters and jackets are appropriate for the winter. It snows on occasion, although old timers say less and less due to the increase in cars and concrete.

Utilities

Electricity is the same as in the U.S. (110v, 60 hertz, AC). Voltage regulators or surge protectors are recommended for sensitive, electronic equipment. Satellite and cable are both options for television.

Food

All food needs can be met at modern supermarkets on either side of the border. Nogales, Sonora, water is not potable; but drinking water can be purchased at reasonable cost and is plentiful.

Domestic Help

Domestic help is available at a reasonable cost. Live-in maids, as well as daytime or hourly help are available.

Religious Activities

Roman Catholic churches predominate in Nogales, Sonora. However, there are small Protestant congregations and both Catholic and Protestant denominations may be found in Nogales, Arizona. Jewish and other religious communities are very limited in "ambos nogales." However, Tucson has a large and active Jewish community, as well as other religious groups.

Education

Although there are a few, self-described bilingual schools in Nogales, Sonora, instruction in these and all schools is predominantly in Spanish.

Recreation & Social Life

Tennis courts and bowling alleys are available in Nogales, Sonora. Golf is popular and can be played throughout the year at several public and private courses in Nogales, Arizona.

Entertainment in Nogales, Sonora and Arizona is limited mainly to dining; although there is also a modern movie theater in Nogales, Sonora. Southern Arizona, especially Tucson, offers a limitless variety of city and country cultural and shopping opportunities. Tucson has an opera, active theatre, a ballet, and a variety of sports events. Northern and central Sonora offer beaches, beautiful countryside, and Kino mission churches.)

Nuevo Laredo

Nuevo Laredo combines the convenience of shopping in the U.S. with the attractions of living abroad. Nuevo Laredo is the most important port of entry on the U.S.-Mexican border for shipping and for travelers to the interior of Mexico. Of its estimated 300,000 inhabitants, only about 10% speak English.

Nuevo Laredo is located on a gently rolling plain, with mountains skirting the southwestern boundary of the consular district. Brush, cactus and scrub vegetation abounds, as do more tropical plants. The city itself is 542 feet above sea level; and the climate is sunny and hotter than Washington, D.C., but much less humid. The daily temperature range averages 78 to 96°F in August and occasional high temperatures in winter are not uncommon. The average daily temperature range in January is 44 to 64°F. Annual rainfall is 18 inches. May, June, and September usually have the greatest rainfall.

Food

Adequate food supplies are available locally and at supermarkets in Laredo, Texas. Gourmet food items are not readily available.

Clothing

During the hot season, lightweight clothing is a must. Office attire for men is usually the traditional Mexican guayabera or sport shirts with slacks. Suits are worn occasionally. The guayabera is also appropriate for informal evening wear. Women wear cotton or linen dresses, blouses, skirts, and slacks. Men often wear sport shirts and slacks at social gatherings while women favor airy cottons. For more formal occasions, men wear black or white dinner jackets; women may wear either long or short cocktail dress in a wide array of fabrics and styles. During winter, custom occasionally requires formal attire (dinner jackets for men, gowns for women). Fall and spring weight suits, dresses, overcoats, and rain boots are used during winter when temperatures can drop into the 30s. All wearing apparel needed for this climate is available in Laredo, Texas.

Supplies and Services

Necessary supplies and services are available in both Laredos. In Laredo, Texas, there are two large shopping centers featuring nationally known department stores and boutiques.

Religious Activities

Roman Catholicism is the predominant religion in both Laredos. Most Christian denominations are represented in Laredo, Texas and services in English are available.

Education

Schools in Nuevo Laredo are overcrowded and instruction is in Spanish. Children are usually enrolled in public or private schools in Laredo, Texas. Full curriculums for undergraduate and some graduate level degrees are offered at Texas A&M International University and Laredo City College.

Puebla

Puebla, capital of the state whose name it bears, is a city of over one million about 75 miles southeast of Mexico City. Its official name is *Heróica Puebla de Zaragoza*, in honor of Gen. Ignacio Zaragoza, who defeated the French here in 1862 in their attempt to establish Maximilian's empire.

Aside from the renown for its cotton mills and onyx quarries, and as a major commercial center, Puebla is known for the colorful Talavera tiles which adorn its buildings and churches. The cathedral on the main plaza, built during the 16th and 17th centuries, is one of the finest in Mexico. The city also claims to have the oldest theater in North America.

Puebla has several other notable buildings, among them the 340-year-old Biblioteca Polafoxiana, with 50,000 priceless volumes; the regional museum, dating from the 17th century; and the university founded in 1578 by Jesuit priests.

Founded by the Spanish in 1532 as Puebla de los Ángeles, the city early served as a link between the coast and the capital. It was taken by Winfield Scott in the Mexican War in 1847.

OTHER CITIES

ACAPULCO, in Guerrero State, southwest Mexico, is a fashionable international resort on the Pacific Ocean. Its fine natural harbors, surrounded by cliffs and promontories, once served as a base for Spanish explorers. Acapulco played an important role in the development of the Philippines between the years 1565 and 1815, when Spanish galleons made commercial voyages across the Pacific to Manila. After Mexican independence was achieved, the city lost its status as a major port. In the 1920s, a road was constructed to Mexico City, and Acapulco became a tourist center and, again, an important port during World War II. This city of 462,000, whose full name is *Acapulco de Juárez*, stretches out along bays and cliffs, and its many fine beaches attract thousands of swimmers and sunbathers. In the evenings, high divers can be seen at La Quebrada, performing for enthusiastic crowds. Acapulco's economy is heavily dependent on tourism, with the copra (coconut oil) industry second in importance. In its amphitheater, overlooking the sea, the city plays host to art exhibits and to musical and theatrical productions. A historic spot in Acapulco is San Diego Fortress (*Fuerte de San Diego*), where Mexico's last battle for independence was fought. The star-shaped fortress, which once defended the town and harbor against pirate raids, is now a museum. A summer school for foreigners, founded in 1955, provides tourists with courses on Mexican arts and archaeology.

AGUASCALIENTES is the capital of Aguascalientes State, 100 miles northwest of León in central Mexico. The city (whose name means "hot waters" in Spanish) is also known as "the perforated city," because of its extensive network of tunnels. These were dug in pre-Columbian times and have never been fully explored. City records date to 1522, when Cortés sent Pedro de Alvarado to conquer western territories; native tribal

Pyramid in Chichen Itza, Mexico

Courtesy of Andrea Henderson

attacks forced Alvarado to retreat. The city was founded in 1575 by a royal decree of Philip II, surviving in the early years as a wilderness outpost besieged by Indians. Modern Aguascalientes is a railroad center, known also for its orchards and vineyards, and for the ranches which breed bulls for *corridos*. An important native industry is drawn linen work. The broad-based economy includes railroad repair shops, textile factories, potteries, tobacco factories, and distilleries. Aguascalientes boasts lovely churches, especially San Juan de Dios, San Francisco, and La Parroquia; they contain excellent examples of colonial art. The annual San Marcos Fair features fireworks, parades, and an art exposition. Rail, highway, and air connections from Aguascalientes to other areas are good. The city has an estimated 643,360 residents.

CAMPECHE, the capital of Campeche State, is situated on the west coast of the Yucatán peninsula, 550 miles east of Mexico City. The largest city between Villahermosa and Mérida, Campeche is the first landing place (1517) in Mexico of Cortés and his *conquistadors*. Founded as a settlement by Don Francisco de Montejo in 1540, the old city wall and remains of 11 fortifications built in the 17th and 18th

centuries for protection from pirate raids attract tourists. Today, the city produces alligator leather and Panama hats (*campeche* is the Spanish word); logwood, mahogany, cigars, rice, sugarcane, tobacco, and cotton are exported. A university was founded here in 1756. Campeche's population is currently 217,000.

CHIHUAHUA, 100 miles south of the Rio Grande River in the northern region, is a state capital with a population of about 670,000. It was first settled in the 1500s, prospering late in the colonial period as a mining center. Chihuahua was twice captured by American forces during the short but fierce Mexican-American War of 1846–48. The city enjoys good transportation links to other areas, allowing easy access to its university, as well as to adjacent cattle ranches. Notable public buildings here number among Mexico's architectural treasures. The church of San Francisco is arguably the best example of 18th-century Mexican architecture. Chihuahua's plaza contains a monument to the religious leader, Miguel Hidalgo y Costilla, and his companions in the war for independence (1821), who were executed here. Center of a rich silver-mining, timber, and ranching district, the city is famous for the *chihuahuitas* (miniature dogs) bred in the area. From Chihuahua, inter-

esting side trips may be taken to the old mining town of Aquiles Sérdan, and to Aldama in the center of an important fruit-producing area.

CIUDAD OBREGÓN is located in northwest Mexico, 65 miles southeast of Guaymas. Situated in the fertile Yaqui Valley, the city is known for its contemporary buildings and complexes of storage elevators, grain mills, cotton gins, and numerous other industries. Agricultural products grown in the valley are irrigated by the Alvaro Obregón Dam, 35 miles northeast of the city. Cotton, wheat, rice, sesame, and corn are grown here. Boating and fishing are possible in the area. Sportsmen come here to hunt duck, dove, and quail; turkey, wild boar, deer, and bear may be found in the mountains to the east. Ciudad Obregón's population is 181,700.

COYOACÁN, a southern suburb of Mexico City, was settled by Cortés in 1521 and was the initial seat of Spanish government in New Spain. Cortés' palace stands in the city's main square and is now the Palacio Municipal. Russian communist leader Leon Trotsky was assassinated here in 1940. Landmarks include the Dominican Monastery (built in 1530) and the Church of San Juan Bautista (built in 1583). The Frida Kahlo Museum, the house occupied for more than a quarter-century by the artist and her husband, muralist Diego Rivera, is located here. Coyoacán's current population is approximately 360,000.

Located 120 miles south of Mexico City is **CUERNAVACA**, an internationally famous resort, with facilities for golf, horseback riding, tennis, and water sports. Spanish conquistador Hernán Cortés seized the Indian settlement here in 1521; it later became a seat of a marquesate and finally, a state capital. Cortés' palace was decorated with murals by Diego Rivera (1886–1957) in 1929. Along with the Franciscan cathedral and nearby ruins (at Alpuyecá, 23 miles southwest), the city is a fascinating tourist stop today. Cuernavaca's Borda Gar-

dens—Emperor Maximilian’s retreat—has attracted many wealthy Mexicans and foreigners; the mansion was built by José de la Borda, who made his fortune in silver mining in the Taxco area. Besides tourism, agriculture and industry are important. Crops include fruit, corn, beans, and wheat. Various plants, mills, and factories constitute the industrial base. Furniture, fine silver, and leather goods may be purchased here; on market days, Indians sell their wares in the streets and plazas. There is a university here, and a modern expressway links the area with Mexico City. Cuernavaca’s approximate population is 338,000.

Situated at the base of the Sierra Madre Occidental Mountains, 30 miles from the Gulf of California, **CULIACÁN** (Culiacán Rosales) served as a base for Spanish expeditions in the early colonial era. The center of an important agricultural area, the city’s surrounding farms raise corn, sugarcane, tobacco, and many varieties of fruit, which are irrigated by a sophisticated water system. Culiacán’s location on the west-coast artery of the Pan-American Highway provides outstanding transportation for its approximately 307,000 residents.

DURANGO (officially called Victoria de Durango), an important political and religious center in early history, is located in northwest-central Mexico, 250 miles north of Guadalajara. Situated at an altitude of 6,314 feet on a level plain formed by foothills of the Sierra Madre Occidental, Durango is in a region known for its rich iron, gold, and silver deposits. Irrigated by surrounding mountain streams and by the water of the Río Tunal, the area produces cotton, corn, barley, and wheat; it is also a lumbering center. Several industries are located in the city, including cotton and wool mills, glassworks, iron foundries, sugar refineries, flour mills, and tobacco factories. Durango is the capital of Durango State, and was founded by Don Francisco de Ibarra in 1563. The main plaza, with an attractive garden, is the site of thrice-weekly

band concerts. Durango has also been the scene of location filming for some Hollywood studios; a number of the movie sets are permanent fixtures here. Durango’s population is about 258,000.

GUANAJUATO, the capital of Guanajuato State in central Mexico, was founded in 1554 in the Cañada de Marfil (“ivory ravine”). It is a city of narrow, steep, winding, cobblestone streets (some with rough stone steps), veined underneath with silver-mine shafts. For a while, the mine at La Valenciana, high above the town, filled the silver vaults of Spain. Silver, gold, and lead deposits are still being mined nearby. Guanajuato has so many important colonial churches and buildings—many showing a Moorish influence brought by the Andalusians who were among Guanajuato’s early settlers—that the city has been declared a colonial monument. The city, now home to the International Cervantes Festival each spring, figured prominently in the wars and revolutions of the 19th and early 20th centuries because of its geographical location. The royalist garrison of Alhóndiga de Granaditas, originally a granary in Guanajuato, was besieged and captured by Hidalgo y Costilla at the outbreak of the war against Spain. Guanajuato is a resort center today. The painter Diego Rivera was born here in 1886, and his house (with sketches for murals) is now a museum. Running nearly the entire length of the main street of Guanajuato is the Calle Subterráneo, an underground road which was constructed after a devastating flash flood in 1905. The University of Guanajuato was established there in 1945. Guanajuato’s estimated population is 141,215.

GUAYMAS, located in northwest Mexico 90 miles southwest of Hermosillo, is one of the country’s best seaports. Situated on the Gulf of California, Guaymas was originally settled by Indians in 1760. The settlement was a Spanish-Mexican free port and opened to common trade in 1841. Guaymas is actually two communities; the city, with its

shrimp docks, freighters, and tankers in the harbor, is separated from the resort area along Bocochoibampo Bay by a hilly peninsula. Swimming, skin diving, water-skiing, tennis, hunting, and horseback riding are popular resort activities. The city is also popular among fishermen. Big runs of marlin and sailfish usually occur in late June, July, and August. The Fiesta de la Pesca (Fishing Festival) is held in May; an international fishing tournament is held in July. San Carlos, about 13 miles northeast, is another popular vacation center. In 2000, Guaymas had an estimated population of 130,000.

Situated in a central Mexican farming district known for strawberries, **IRAPUATO** is 140 miles east of Guadalajara. A rapidly expanding industrial center, Irapuato was founded in 1547 and was the scene of many battles during the colonial era. The city’s central mall, a renovated shopping area surrounding the plaza and cathedral, prohibits motor vehicles. The current population of Irapuato is 440,000.

IXTAPALAPA, a southeastern suburb of Mexico City, was once a flourishing Aztec town. The Aztecs lighted new fires at the beginning of each 52-year cycle atop nearby Cerro de Estrella (Star Hill). The fertile land surrounding Ixtapalapa produces corn, alfalfa, wheat, beans, and vegetables. A number of industries are becoming an important economic asset. Ixtapalapa has a population exceeding 1.2 million.

JALAPA (Enríquez), capital of Veracruz State, is situated 150 miles east of Mexico City, just a few miles inland from the Bay of Campeche. Built on the fifth tier of a hill called Macuiltepec at an altitude of 4,500 feet, the city was once a Spanish stronghold and a stagecoach stop. Today, Jalapa is a mountain resort and an important commercial center for coffee and tobacco. Much of the city’s colonial atmosphere is evident in the red tile roofs, balconies, carved doors, and window grills along the narrow, cobblestone streets. In contrast, modern build-

View of Acapulco, Mexico

Courtesy of Paul Droste

ings line wide streets in the newer section of town. Often called the “Flower Garden of Mexico,” Jalapa is known for its mild climate. The University of Veracruz, founded here in 1944, has a well-known dance company and symphony. The estimated population is about 212,000.

LA PAZ is situated on La Paz Bay about 90 miles north of the southern tip of the Baja Peninsula, and 720 miles south of San Diego, California. With fine port facilities, La Paz is the capital of Baja California Sur State as well as the commercial center of the area. Isolation prevented permanent settlement of La Paz for three centuries; the area’s only regular inhabitants were privateers who dropped anchor in the bay. The Spanish finally settled La Paz in 1811. Mining and pearl diving provided growth and the city soon replaced Loreto as the territorial capital. Both industries declined about 1930, and La Paz faded until it was rediscovered by tourists and sportsmen. Now, La Paz boasts a growing number of fine resorts and fleets of pleasure craft. The city is linked to the Mexican mainland by air-conditioned, automobile-passenger ferries. Luxury crafts make the overnight run from Mazatlán six times weekly; sailings are twice

weekly from Topolobampo near Los Mochis. Flights regularly depart from the jet-capacity airport. La Paz’s population is about 196,000.

LEÓN, also in Guanajuato State, was once the second largest city in Mexico. Founded in 1576, it was almost washed away by floods (most notably in 1888), diminishing its prominence. A dam was later built as protection from such disasters. León lies in a river valley on the main rail line between Mexico City and El Paso, Texas, and is a commercial, agricultural, and mining center with a population of over one million. It is known especially for its production of gold and silver embroidery and silver-trimmed leather goods. Steel products, textiles, and soap are manufactured in the city, which contains tanneries and flour mills. The area also produces serapes, spurs, and knives. Most of León’s buildings are of colonial architecture. Adding to the charm of the city are flowering plazas, fine old portals around the central square, and the colorful market. Cathedrals and churches are of additional interest, and sulphur baths are nearby.

MANZANILLO, with a population of 124,000, is Mexico’s leading Pacific port. Situated in the south-

western part of the country, the city is 350 miles west of Mexico City and 130 miles southwest of Guadalajara. A bronze bell is rung from a high point west of the city to announce approaching vessels. Manzanillo has a spacious waterfront, and narrow streets ascend the hillside of the city. The tropical climate allows the banana and coconut plantations that line the shoreline to flourish. Manzanillo is a haven for fishermen (especially from November through March) who flock here to catch sailfish, marlin, red snapper, yellow-tail, shark, and other tropical varieties. Skin diving and water-skiing are among the popular water sports. The best still-water beaches are near Bahía de Santiago, eight miles north. Beaches near Coco and Las Ventanas have heavy surf and strong currents. The beach close to Cuyutlan, about 26 miles southeast, is known for the “green wave,” a mountainous swell that crests during April or May.

The city of **MEXICALI**, at the northern extremity of Baja California State, is adjacent to Calexico, California. It is a duty-free port, with customs offices open 24 hours. Irrigation programs have helped this desert region to flourish. Mexicali is now a focus for commerce, and also has gained wealth and note as a gaudy border resort. The city market, in an arcaded building, sells everything from handicrafts to food. A university is located here. The city is accessible by highway, railroad, and air from the southwestern United States and from many points in Mexico. The population is currently about 765,000.

MORELIA, 150 miles west of Mexico City, is a major intellectual and art center of about 620,000 residents. The country’s oldest institution of higher learning, Colegio San Nicolás, is located here, as are a classic baroque cathedral and colonial governor’s palace. Since the late 1500s, Morelia has also been Michoacán State’s capital and agricultural hub, processing the vegetables and cattle grown nearby. An unusual three-mile-long aqueduct

was built near Morelia in 1785 for famine assistance. Transportation here is good.

NEZAHUALCÓYOTL is Mexico's second largest municipality after Mexico City, located directly east of the Federal District (Distrito Federal). This suburb of approximately 2.5 million is tied to Mexico City by a highway and shared bus lines; its residents are greatly dependent on the capital for their jobs. A new city in Mexican terms, Nezhualcóyotl was marshland, considered uninhabitable, at the beginning of the 20th century. However, the tremendous growth of the Federal District's population made the area attractive by the late 1940s. The agglomeration of numerous area cities formalized municipal administration in 1963.

OAXACA, the capital of Oaxaca State, is situated at an altitude of 5,000 feet in a semi-tropical valley, surrounded by the summits of the Sierra Madre del Sur, 230 miles south of Mexico City. Once the center of the Mixtec and Zapotec civilizations, Oaxaca was founded as an Aztec garrison post in 1486 and was conquered by the Spanish in 1521. Oaxaca is the center of a noted handicrafts market; the area produces leather goods, hand-loomed cottons, tempered machetes and daggers, and carved idols. The nearby village of San Bartolo Coyotepec is known for its black pottery; the towns of Teotitlán and Ocotlán are weaving and pottery centers. Oaxaca is a mixture of colonial and modern periods and has a great many 16th-century buildings. The city's market is colorful on Saturdays when the Indians visit town to sell their merchandise. Original costumes of the state are worn here during July and December fiestas. Guides in the city are available for tours to nearby Monte Albán (a major religious city, with ruins of the Zapotec Indians), Mitla, and Zaachila. Oaxaca's population is about 170,000.

A major manufacturing city, **ORIZABA** is situated at an altitude of 4,211 feet in eastern Mexico, 150

miles east of Mexico City. The 18,000-foot volcano, Citlaltépetl, looms over the far reaches of the landscape here. Once an Aztec garrison post, Orizaba was chartered as a city in 1774. Today, it has some of the country's largest cotton mills. Other industries include breweries, cement plants, marble quarries, and coffee and fruit plantations. There are also important textile centers in the nearby towns of Río Blanco, Ciudad Mendoza, and Nogales. The city was nearly leveled by a strong earthquake in August 1973, but has since been rebuilt. Orizaba has a pleasant climate and an estimated population of 125,000.

Founded by the Spanish in 1534, the city of **PACHUCA** is the center of an area that produces about 15 percent of the world's silver. The capital of Hidalgo State in central Mexico, Pachuca is 50 miles north of Mexico City at an altitude of 8,150 feet. The surrounding hills are extensively tunneled and heaped with slag piles; smelters and ore-reduction plants are also located in the area. Landmarks of interest in Pachuca are the Church of San Francisco (built in 1596) and the Monument to Independence. There is also a university, founded in 1869. The mining town of Mineral del Monte overlooks Pachuca, at a distance of about seven miles. It has narrow, almost vertical cobblestone streets and houses. Pachuca's population is about 110,000.

POZA RICA is Mexico's chief petroleum-producing center. Located 150 miles northeast of Mexico City, the city pipes crude oil and gas to refineries in distant cities. Oil derricks, refineries, storage tanks, and oil wells dot the landscape around Poza Rica. The city itself features wide boulevards, modern buildings, and a population of about 196,000. Eleven miles south of Poza Rica is the ceremonial city of El Tajin, which reached its peak about A.D. 800. The city is accessible by highway and is served by Mexico's domestic airlines.

PUERTO VALLARTA, a coastal town in west-central Mexico, 100

miles west of Guadalajara, is a thriving resort combining a scenic locale with extensive recreational facilities. Situated on the Bahía de Banderas, Puerto Vallarta's older buildings with red tile roofs on narrow, stony streets are in counterpoint with more modern structures on the upper slopes of the mountains that surround the bay. Popular daytime activities include swimming and surfing at nearby beaches, deep-sea fishing, tennis, golf, and horseback riding. Hunting for deer, quail, iguana, and jaguar is excellent in the mountains to the east. Aquatic sports fishing is also extremely popular in Puerto Vallarta. Sight-seeing craft are available along the shoreline, and boats for sport fishing may be chartered. Puerto Vallarta's nightlife is lively, and includes nightclubs, hotel bars, and discotheques. Cruise ships stop here regularly; a ferryboat service operates twice weekly between Puerto Vallarta and Cabo San Lucas, at the southern tip of the Baja Peninsula. The city is a major port through which bananas, coconut oil, hides, and fine woods are exported. The current population is about 183,700.

QUERÉTARO lies in a valley 160 miles northwest of Mexico City at an altitude of 5,900 feet. The capital of Querétaro State, the city was already an Otomí Indian settlement before the Spaniards discovered the New World, and was absorbed as part of the Aztec Empire in the 15th century. Captured by the Spanish in 1531, Querétaro was the headquarters for Franciscan monks who established missions in Central America and California. Emperor Maximilian was executed here on June 19, 1867. Querétaro today is known for its exquisite parks, squares, and gardens. An aqueduct, built by the Spanish more than 200 years ago, is still in use. Opals are mined in the area and sold by sidewalk vendors. There are several churches of interest in Querétaro. A university, founded here in 1775, was elevated to its present status in 1951. Querétaro is the site of one of Mexico's oldest and largest cotton factories. The factory also produces

textiles, pottery, and processes food crops grown near the city. Querétaro's population is about 640,000.

SALTILLO is the capital and leading industrial city in Coahuila State. It lies at an altitude of 5,244 feet in a broad valley surrounded by imposing mountains, about 660 miles north of Mexico City. Founded in 1575, Saltillo is a modern city of 577,000 residents, but retains much of its Spanish colonial heritage. In the early part of the 17th century, Saltillo was headquarters for explorations to the northern part of the country. Between 1824 and 1836, it was the capital of a territory that included present-day Texas northward to the region of Colorado. Saltillo's altitude and dry climate make it a popular summer resort. Golf, tennis, swimming, polo, and hunting are available. Saltillo produces textiles in its numerous mills, and is especially known for the serapes woven here in brilliant hues and striking patterns. Gold, silver, lead, and coal mines are in the area. Educational institutions include the 15,000-student University of Coahuila, an institute of technology, an agricultural college, and the Institute for Iberoamerican Studies. Saltillo's market sells local products and handicrafts.

SAN LUIS POTOSÍ, a major industrial center, is located 250 miles northwest of Mexico City in an agricultural region. Founded as a Franciscan mission in 1583, the city was twice the seat of the national government under Juárez, in 1863 and 1867. The economy of San Luis Potosí depends mainly on the production of gold, silver, and industrial metals. A number of other industries are located here. Livestock raising is important, and hides, tallow, and wool are exported. Some of Mexico's richest silver mines are located in the city. The city is also a railroad hub and distribution center. Landmarks in San Luis Potosí include several notable churches and a cathedral. Its university, established in 1859, was elevated to university status in 1923. A pedestrian mall, with some of the

city's finest shops, is located on Hidalgo Street. The population of San Luis Potosí is 670,000.

A seaport and petroleum center, **TAMPICO** is located in east-central Mexico on the north bank of the Río Pánuco, six miles inland from the Gulf of Mexico and about 200 miles northeast of Mexico City. The city developed around a monastery founded in 1532. It was abandoned in 1683 following its destruction by pirates, and resettled again in 1823. Tampico today is a transportation center and one of Mexico's principal seaports. Exports include oil, copper ore, sugar, coffee, hides, livestock, and agricultural products. Oil tanks and refineries extend for miles along the south bank of the river. The city is also a tourist center and seaside resort known for its hunting, golfing, and fishing. The popular Miramar Beach is nearby. Tampico's current population is about 295,000.

TAXCO (formerly called Taxco de Alarcón), situated 50 miles southwest of Mexico City, is a world-famous silver capital. Perhaps the oldest mining center on the continent, it was originally an Indian town called Tlacho in the 1400s. Spanish conquest a century later brought silver-mine development, which has been constant to this day. Taxco, with some 60,000 residents, treasures its colonial past and atmosphere to the extent that the entire city has been declared a national monument. New construction must conform to old architectural styles; even the cobblestone streets may not be altered. The charm of this community has brought tourists from all over the world to sight-see and to buy unique handmade silver items from countless shops and vendors. Sundays in Taxco are market days. Indians sell their wares in the plaza, where licensed guides are available. The city's many spectacular fiestas draw visitors from across the country. Eighteenth-century landmarks include the magnificent Church of Santa Prisca and Sebastián—a richly decorated edifice built by José de la Borda, one of Taxco's most cel-

ebrated and prosperous citizens; Figuera House, finished in 1767 and restored in 1943 as an artist's studio; and Humbolt House (Casa de Villanueva), a restored Moorish-inspired masterpiece. Built on a hill in the middle of the Sierra Madre Mountains, Taxco is considered a difficult city for drivers. Its narrow, twisting streets—often without street signs—encourage use of the plentiful taxis, as well as leisurely walking.

TEPIC is located near Mexico's west coast, about 110 miles northwest of Guadalajara at the foot of an extinct volcano, Sängangüey. Dating back to the 16th century, Tepic's isolated position contributed to its slow development. Today, it is a fascinating combination of old and new, with busy streets and broad plazas. Tobacco is grown on plantations in the area and processed in local factories. Processing plants, refineries, and rice mills are located in Tepic. Several shops in the city offer Indian handicrafts. The cathedral in Tepic, built about 1750, has two Gothic towers. Ingenio de Jala Falls, which flow only in the rainy season, are in this area; El Salto, a beautiful waterfall, is west of the city. Tepic, with an estimated population of 305,000, is the capital of Nayarit State.

The commercial city of **TOLUCA** is 35 miles west of Mexico City at an altitude of 8,500 feet. Founded in 1530, it is, today, a community with many beautiful gardens, cooler in climate than Mexico City because of its higher elevation. Toluca produces dried meats, sausage, wine, dairy products, and native handicraft. The city's industries include brewing and distilling, textile manufacturing, and food processing. The extinct volcano, Nevada de Toluca, towers above the city 27 miles to the southwest. At 15,000 feet, its peak is snow-capped most of the year; the beautiful Lake of the Moon and Sun in the crater are formed by melting snow. With a guide, it is possible to drive to the top of the volcano and then down into the crater. Also near Toluca are several interesting Indian villages. Toluca, whose for-

mal designation is Toluca de Lerdo, has a population of 666,000. The city is the capital of México State.

One of Mexico's chief ports, **VERACRUZ** (full name is Veracruz Llave) is situated on the Gulf of Mexico, 260 miles east of Mexico City. The original settlement, Mexico's oldest, was founded in 1519 by Cortés and named La Villa Rica de la Vera Cruz (Rich Town of the True Cross). The present city and port date from 1599. Veracruz was the principal Mexican port for Spanish trade fleets from the 16th through 18th centuries, even though it was frequently sacked by pirates. The city was captured twice by the French, in 1838 and 1861, and by U.S. troops under Winfield Scott in 1847. Veracruz is the main port of entry from eastern and gulf ports; its port facilities were expanded and modernized after 1946. The city is also the terminus of two railroads and produces most of the country's cigars. In town, Veracruz's old buildings on cobbled streets contrast with modern structures. The area of old lighthouses is particularly interesting. Swimming, fishing, and boating are popular here. Band concerts are regularly held at the Plaza de la Constitución. The Mexican Naval Academy is located in the nearby coastal village of Antón Lizardo. Villa del Mar and Mocambo beaches are just south of Veracruz; they are often muddy and, sometimes, sharks lurk offshore. Veracruz's population is 460,000.

XOCHIMILCO, situated on the western shore of the lake whose name it bears, is 10 miles south of Mexico City. The city is intertwined with numerous waterways which are all that remain of what once was an extensive lake. The famous *chinampas*, or "floating gardens," were originally rafts woven of twigs, covered with earth, and planted with flowers; the rafts usually contained small huts and moved through the lake with oars. Through time, the roots of the vegetation on the rafts attached themselves to the lake bottom, and each "garden" became an "island." The number of these artificial islands increased until they

formed a vast meadow interspersed with waterways. Flat-bottomed boats filled with flowers are today's floating gardens. Xochimilco is a prime tourist attraction, as well as a Sunday-outing spot for the natives. The Convent and Church of San Bernardino predate 1535. A campus of the Autonomous Metropolitan University of Mexico City is located in the city. The estimated population of Xochimilco is 170,000.

The mining town of **ZACATECAS** in central Mexico, 160 miles north-east of Guadalajara, is the capital of Zacatecas State. The town was built on the slopes of Cerro de la Bufa at an altitude of 8,075 feet. Zacatecas was taken by the Spanish in 1548 and vast quantities of silver found here were shipped to Spain. Until the 19th century, the mines around Zacatecas yielded one-fifth of the world's silver. Although surrounded by agricultural and cattle-raising regions, Zacatecas is principally a center for silver mining. Zacatecas is characterized by closely built houses, an aqueduct, stone steps, and steeply inclined streets, all of which give the city a medieval look. In contrast are the modern facilities housing the University of Zacatecas and its museums of anthropology and mining. Colonial buildings include the Municipal Palace, Theater of Calderón, and Church of Santo Domingo; an 18th-century convent is located in the suburb of Guadalupe. Zacatecas' population is 123,700.

COUNTRY PROFILE

Geography and Climate

Mexico is located in North America. It borders the Caribbean Sea and the Gulf of Mexico between Belize and the U.S. and borders the North Pacific Ocean between Guatemala and the U.S. Its land mass covers approximately 1.9 million sq. kms, or slightly less than three times the size of Texas, and has approxi-

mately 9,330 sq. kms of beachfront property. In July 1999, the population was estimated at 100.3 million.

Within Mexico, there are 31 states and one Federal District-Distrito Federal, the country's capital. Independence Day for Mexico was September 16, 1810. It is celebrated widely throughout the country. The flag has three equal vertical bands of green, white, and red with a coat of arms-in the form of an eagle perched on a cactus with a snake in its beak-centered on a white band.

With a climate that varies from tropical to desert, the terrain ranges from high rugged mountains to low coastal plains and high plateaus to desert. Its lowest elevation point is at Laguna Salada at -10 meters. The highest point is the Volcano, Pico de Orizaba, at 5,700 meters.

Mexico has such natural hazards as tsunamis on the Pacific coast, volcanoes and destructive earthquakes at the center and south, and hurricanes on the Gulf of Mexico and Caribbean coasts.

The main agricultural products are corn, wheat, soybeans, rice, beans, cotton, coffee, fruit, tomatoes, beef, poultry, dairy and wood products. The Mexican currency is in pesos. The June 2000 exchange rate is 9.84 pesos=US\$1; but periodic fluctuations occur.

Population

Mexico has an estimated population of 100 million. It is the world's most populous Spanish-speaking country and the second most populous Latin American country.

Contemporary Mexico is an urban society, with close to 70% of the total population living in cities and 23% (18 million) in the Mexico City metropolitan area. Mexico is also a young nation. Almost 40% of Mexicans are less than 15 years old. Nearly 50% of the population lives in the high plateau central region (14% of the country).

About two-thirds are “mestizo” (mixed indigenous and Spanish blood). Mexican customs and traditions are an intricate mixture of the Spanish and the indigenous. Mexico has largely avoided racial divisions by proudly considering its population a distinct Mexican race, celebrated as *Día de la Raza* on the October 12 annual holiday. Economic conditions determine social class.

Roman Catholicism is the predominant religion. Small groups of Protestant Christians are often related to and supported by U.S. churches.

Mexico began an aggressive and far reaching national family planning effort in 1973 to reduce the population growth rate from its all-time high of 3.5% then to 1% for the year 2000.

Spanish is the national language, spoken by 97% of the population. In some remote areas, only Indian dialects are spoken. The literacy rate is about 75%.

Public Institutions

The country's official name is the United Mexican States (*Estados Unidos Mexicanos*). The 1917 constitution provided for a federal republic, which is now composed of 31 states and the Federal District where the capital is located. The government is made up of executive, legislative, and judicial branches.

The military forces are small and have stayed out of politics since 1946. The Cabinet is politically important; from the 1930s through the 1990s, all Mexican presidents had come directly from the Cabinet. The President, elected for a single six-year-term (“sexenio”), proposes and executes laws that are passed by Mexico's congress; and has the power to govern by decree in many economic and financial areas. No Vice President is elected; if an incumbent dies or leaves office before a term has been completed, the Congress elects a provisional President.

Until the National Action Party's victory in Mexico's 2000 presidential election, the Institutional Revolutionary Party (PRI) had been in power since its founding in 1929. It had won every presidential election and controlled the Congress by overwhelming majorities.

The Congress is composed of two houses: a 128 seat Senate, and a 500 seat Chamber of Deputies. Through a complex formula of proportional representation, the opposition parties are guaranteed at least 150 seats in the Chamber.

The judicial system, which is based on Roman civil law, consists of a Supreme Court and Federal and local courts. The President appoints Supreme Court justices with Senate approval.

The unicameral legislatures of the state governments are headed by elected governors, who serve for six years. In the absence of a county government system, there are only local governments at the municipal level. Mayors and city council members are popularly elected for three year terms.

Arts, Science and Education

Mexico City is the cultural hub of the country. The arts play an important role in national life and are heavily subsidized by the government. Influences of indigenous cultures, the Spanish colonial period, as well as North American contemporary culture are evident in architecture, literature, and art.

The richness and diversity of Mexico's cultural heritage and reflected by murals of Diego Rivera, Jose Clemente Orozco, and David Alfaro Siqueiros; paintings by Rufino Tamayo; and writings by Octavio Paz, Juan Rulfo, Carlos Fuentes, and Carlos Monsiváis.

Major arts festivals include the Cervantino International Festival in Guanajuato and Mexico City; the Festival of Mexico City's Historical

Center; the International Music Festival in Morelia, Michoacán; the International Festival of Contemporary Art in León, Guanajuato; the Jose Limón International Dance Festival in Mazatlán; and the Festival of the Borders in Mexicali and Tijuana.

Nine U.S.-Mexico binational centers from Hermosillo to Merida promote understanding between “*Estadounidenses*” and Mexicans through the teaching of English to more than 30,000 Mexicans annually; teaching Spanish to foreigners; and sponsoring cultural and educational activities. Benjamin Franklin libraries, which receive support from the Public Affairs Section of the U.S. Embassy, are located in Mexico City, Guadalajara, and Monterrey.

Education is highly centralized under the Federal Secretariat of Public Education (SEP). Mexicans who can afford to send their children to private schools almost always choose to do so. More than 90% are educated under public SEP auspices. Teachers comprise half of the Federal workforce. Some 70% of Mexicans complete only primary school; about 10% finish some higher education, including university, teaching training colleges, or two-year technical institutes. The main teacher training institutions are the *Universidad Pedagógica Nacional* and the *Escuela Normal Superior*.

Traditionally, Mexican students have attended public universities—the most prestigious of which was the National Autonomous University of Mexico (UNAM), one of the oldest institutions of higher education in the Americas. Two-thirds of the older Mexican political leaders are UNAM alumni. Government-subsidized tuition fees of approximately two cents per year have limited UNAM's resources. An attempt by the rector to raise tuition to approximately US\$200 provoked a student strike that began in April 1999 and ended in February 2000 when police retook control of the UNAM installations.

Other options for public education include: the Instituto Politecnico Nacional, the alma mater of President Zedillo (the first President not to have graduated from UNAM); the Universidad Autónoma Metropolitana with its three campuses in the Mexico City metropolitan area, and 31 autonomous universities, many of which have multiple campuses located in the various states.

Today, about 25% of university students are enrolled in private universities. The Instituto Tecnológico y de Estudios Superiores de Monterrey has 27 campuses linked by satellite across the country. Other recognized institutions of higher learning are the four campuses of Iberoamericana University; Instituto Tecnológico Autónomo de México (ITAM), where most of the technocrats from the Salinas and Zedillo administrations studied; and the University of the Americas in Puebla. El Colegio de México also has an excellent research reputation.

Given the interest among Mexicans in continuing their studies in the U.S., the U.S. Department of State has facilitated 12 U.S. educational advising centers across the country. A 13th center was inaugurated in Chiapas in January 2000. There are currently more than 9,600 Mexicans studying in the U.S., making Mexico the 10th largest source country for foreign students in the U.S.

Commerce and Industry

During the last 20 years, the Mexican economy has undergone a dramatic reorientation away from protectionist policies. After decades of import-substitution practices and extensive state intervention, Mexico is now cited as a model for countries intent on pursuing outward-looking and market-oriented economic policies. In 1994, Mexico entered into a comprehensive free trade agreement with the United States and Canada—the North American Free Trade Agreement, or NAFTA; and in 1999, Mexico concluded a similar agreement with the European

Union. Tariff levels, as high as 100% before Mexico's 1986 accession to GATT (now WTO), currently average about 4% on a trade-weighted basis. The Mexican Government's divestiture then of airlines, banks, the telephone company, mines, and steel plants were major elements of a successful privatization program that has continued. Reduction and elimination of subsidies made a major contribution toward transforming a fiscal deficit that had reached a height of 16.0% of Gross Domestic Product (GDP) in 1987. It resulted in a very manageable 1.2% deficit in 1998. By turning increasingly to private capital for such basic infrastructure investment as toll roads and ports, the government has been able to expand budget outlays on education, health, and agricultural development.

GDP growth for 2000 was at the start of the year set to be around 3.6%. Inflation closed 1999 at less than 13%, and the central bank targeted an inflation rate of 10% for 2000. At more than \$30 billion, in late 1999, foreign exchange reserves stand near their all-time high.

NAFTA significantly expanded U.S.-Mexican economic ties. In 1999, Mexico overtook Japan as the second largest trading partner of the United States. NAFTA also raised Mexico's attractiveness as a recipient of foreign direct investment (FDI). During the first five years of NAFTA, the country cumulatively received \$36 billion in FDI, twice the amount received during the five years prior to the signing of the accord. FDI reached \$10 billion in 1998 alone, and is on target to exceed that level by 2000. About 54% of that investment comes from the U.S., which is further evidence of the two countries, increasing commercial integration. Awards of major projects to American firms are common and American companies comment frequently on the greatly improved business climate.

Mexico has a number of strengths empowering it to embark on a period of sustained economic growth. It is the world's seventh

largest oil producer; is ranked ninth globally in proven petroleum reserves; and is well endowed with such minerals as silver-of which Mexico is the world's number one producer—copper, and zinc. Its manufacturing sector continues to grow. Automotive parts and textiles are its most significant products. Mexico is also an important producer of steel, glass, cement, and petrochemicals. Manufactured products account for about 90% of its exports compared to 80% in 1993 and only 14% in 1982. In-bond assembly and manufacturing is the fastest growing sector in Mexico contributing to export growth. It employs more than one million workers.

To achieve its ultimate economic aspirations, Mexico must overcome a 24-year history of economic collapses brought about mostly by fiscal mismanagement. Mexico exhibits extreme regional differences in development. The richer, more vibrant and dynamic North contains the country's most modern industrial plants and is tightly integrated with the U.S. economy. The poorer, lagging South contains outdated plants and an inadequate infrastructure. Central Mexico shows signs of both regions. There also are extreme differences within some sectors, particularly agriculture. Modern and efficient export-oriented industrial estates coexist with poor and inefficient subsistence farms. The banking sector, which collapsed with devaluation of the peso, is undercapitalized and leaves businesses with little access to credit. As a result, the formal economy cannot generate sufficient jobs to absorb all of the new entrants into the labor market, pushing many of them into the informal sector. Other problems plague income distribution, nutrition, health care, education, and public services. Forty million people live under the poverty line; 26 million live in abject poverty. Of Mexico's 7.5 million unionized workers, 3.5 million belong to the Confederation of Mexican Workers and 1.5 million to the Confederation of Independent Unions.

Transportation

Automobiles

Traffic and parking make power steering and automatic transmissions desirable. In Mexico City, drive with closed windows to keep out pollution. In the more temperate climates, such as Guadalajara, air-conditioning is optional but desirable.

General Motors, Ford, Chrysler, Nissan, Honda, and Volkswagen cars are made in Mexico. Adequate repair services are available for those makes and for the American Motors Jeep and Renault, which were made in Mexico until 1986. Basic model cars are the easiest to service. The cost of parts is slightly higher than in the U.S., and parts for late model American cars—even though a vehicle with the same model name is manufactured in Mexico—may not be available in Mexico and must be ordered from the U.S.

Some cars, especially large ones with optional equipment, can lose up to 25% of their power in Mexico City's high altitude. Tune vehicles for high altitude driving to ensure efficient operation.

Petroleos Mexicanos (PEMEX), the national petroleum company, sells vehicle fuel. Two grades (both unleaded): Premium (93 octane) in a red pump and Magna (87 octane) in a green pump. Therefore, retain catalytic converters on your vehicle. A few stations in cities and along major highways sell diesel. Keep fuel tanks at least half full, as stations are fewer and farther between than in the U.S. and may occasionally run out. Fuel is sold by the liter (3.785 liters equal 1 gallon). Use a locking gas cap.

Gasoline prices in Mexico are established by authorities in Mexico City and not by individual franchises.

Since 1991, all cars manufactured in Mexico are equipped with catalytic converters to reduce vehicle emissions that contribute to an acute air pollution problem in the

Valley of Mexico—which includes Mexico City and adjacent areas in the State of Mexico.

Driving is on the right. Traffic congestion is common in cities. Mexico honors a valid drivers license, regardless of origin. Dependents who are more than 16 years of age can obtain a drivers permit for a small fee. The Mexican Department of Tourism provides a reliable highway emergency assistance patrol called "Angeles Verdes" (Green Angels), easily identifiable in a green truck. Toll roads ("cuota") are designated by the letter "D" after the highway number and are faster and safer than free ("libre") routes. The toll roads en route to the border are more expensive than comparable roads (interstates and highways) in the U.S. But it is worth the extra cost for the excellent roadbeds and uncrowded conditions.

Wandering livestock, unlighted vehicles, and unmarked road hazards make nighttime driving dangerous on all highways.

Road courtesies in Mexico, particularly on the long stretches of two-lane highway between Mexico City and the border, are different than in the U.S. 2-way traffic will often move over to the shoulders to allow vehicles to pass in the center of the road. Unwary U.S. drivers risk head on collisions if they do not pick up on this quickly. Also, drivers wanting to pass will turn on their left turn signal and leave it on until the pass is completed. Large trucks, as well as cars, often use the same signal to inform a vehicle behind them that it is safe to pass.

Mexican law requires drivers entering Mexico to have liability insurance issued by a Mexican company. Several U.S. and Mexican insurance companies offer plans that cover a driver for 30 days after crossing the border. Comprehensive and collision insurance are available from both U.S. and Mexican companies.

Cars purchased in Mexico come with temporary registration, but no temporary registration is available

for imported cars. Therefore, all imported cars should have foreign registration and plates, preferably valid for at least four months from date of arrival to avoid being stopped by the police until Mexican plates are obtained.

Mexican vehicles may be sold locally, and Mexico has no restrictions on types of cars that may be imported.

Local

Licensed taxi service is readily available and inexpensive; a small tip is customary. The taxis are painted in various distinctive colors, include the word "taxi," have distinctive license plates, and either have meters or display rates. Airports often have buses or special taxi service ("transporte terrestre"), which is preferred. When using city buses and the metro subway system, observe security precautions that are appropriate for a large city.

"Combis" (or "peseros") are vans, smaller than buses, that carry passengers over assigned routes, to provide a convenient service. Licensed, chauffeured rental cars are also available, at prices comparable to taxi service in the U.S.

Mexico has extensive, inexpensive bus service throughout the country. Quality of service ranges from air-conditioned, luxury buses with reserved seats, that serve tourist destinations to often overcrowded buses providing the basics.

Regional

Railroad passenger service within Mexico is inexpensive, but covers only a few routes—including a few connections with the U.S.—and is being improved with new equipment.

Air service is good between major Mexican and U.S. cities. Within Mexico, air routes fan out from Mexico City. Domestic air travel however is expensive. Air travel between Mexican cities along the border is accomplished more easily by using U.S. airports.

Communications

Telephone and Telegraph

Local and international services are adequate, and both domestic and international calls may be dialed directly. TelMex, the former Mexican national phone company and currently the leading private phone company in Mexico, provides the connection for a reasonable fee. Calls to the U.S. from Mexico are comparable in cost to calls from the U.S. to Mexico. International calls outside of North America are expensive. Telephone service within Mexico is inexpensive. Telegrams are accepted in English and may be billed to home telephone numbers. Domestic and international FAX service is available.

Long distance is feasible by several carriers other than TelMex; Alestra (AT&T-Bancomer), Avantel (MCI-Banamex), and Miditel. Local service is still provided by TelMex.

Along with standard landlines, Mexico has two major providers of cellular phone services - TelCel and USACell. Both are affiliated with major telecommunications companies: TelCel with TelMex (Telefonos de Mexico) and USACell with Avantel, a division of MCI. Prices are very competitive between the two providers and only slightly higher than that which is available in the U.S. Both suppliers offer contracts that provide the phone, "free minutes," and access to the cellular network. At the end of the contract, the purchaser owns the cell phone. Typical contracts run for 18 months. TelCel also offers an alternative to a contract called the Amigo phone, where one buys the phone and pays for the minutes separately to be used as needed. The cell phone units offered for both contract and the Amigo plan are the same phones available in the U.S. They include, but are not limited to: Motorola, Nokia, Ericsson, and Philips with both digital and analog features. GSM technology is not supported in Mexico.

Telephone calls made with a credit card offer a wide variety of applica-

tions. Unfortunately, security is not up to the same standards as the U.S., and caution is recommended when using credit cards to place calls.

Mail

The most direct means for mail service is via post office boxes in U.S. border cities or international mail.

Radio and TV

Mexican television (TV) broadcasts on the same standard (NTSC) as in the U.S. and Mexican TV companies generally operate with state-of-the-art equipment. Two networks dominate Mexican television. Televisa is the older and highest rated one, but TV Azteca-privatized in 1994-has proven itself to be a worthy adversary. Each network broadcasts on three or four channels, featuring soap operas ("telenovelas"), series, variety shows, children's programs, sports (including major U.S. broadcasts), movies, and news coverage. Although most programs are produced or dubbed in Spanish, some movies are shown in the original language with subtitles. The UHF spectrum is not as occupied as in the U.S. That is mostly due to the fact that pay television became available in most major market neighborhoods and in hundreds of small towns at reasonable prices before smaller companies resorted to UHF frequencies. Though "pay TV" companies initially simply passed through U.S. network signals, they now relay the "Latin" services that many U.S. companies have set up. There are also cable-only programs (including an all news service in Spanish) produced nationally. C-Band dishes enjoyed an early heyday, but direct-to home broadcasts on the Ku-Band are taking a greater market share.

The radio spectrum in Mexico City is saturated by radio stations operating mostly with state-of-the-art equipment. All companies, some of which own as many as 12 stations, have at least one morning news magazine program that runs 3 to 4 hours. The leading stations include live reports from the U.S. and other world capitals, though they empha-

size local and national events. Many Spanish-language AM and FM broadcasts feature music in English. Along the border, U.S. broadcasts are also available.

Newspapers, Magazines, and Technical Journals

Although sold at prices substantially higher than in the U.S. -a wide selection of U.S. magazines and newspapers and a limited selection of books can be found in most Mexican cities. The international editions of Time and Newsweek are sold locally, as are the editions of such major magazines as U.S. News & World Report, Popular Science, People, The Economist. The News, an English-language paper published in Mexico City, covers local events in eastern and central Mexico including Monterrey, with state-side and international coverage taken from major U.S. newspapers. The Guadalajara Colony Reporter has similar coverage for the Guadalajara area. Delivery of local Mexican papers, as well as a selection of U.S. papers (The New York Times, The Miami Herald, The Los Angeles Times and The Wall Street Journal), is available in Mexico City and at the nine U.S. Consulates throughout the country. USA Today, the Miami edition of the International Herald Tribune, and papers from neighboring U.S. states are also available. El Financiero also publishes a weekly international edition in English, that focuses on economic and financial issues. It is sent to U.S. subscribers.

Mexico has specialized magazines in English on such subjects as computers, cars, scientific innovations, medical journals, and women that are sold in major cities at bookstores and popular restaurants.

Health and Medicine

Medical Facilities

Pharmacies in the cities carry most drugs at reasonable prices, but occasional shortages occur. Although many prescription and over-the-counter medications that are manu-

factured in Mexico are manufactured by Mexican affiliates of U.S. firms, there may be some minor differences in formulation; thus, consult with a health practitioner before purchasing locally manufactured medications. Take prescriptions and an adequate supply of prescription medications. If you plan to have refills sent from the U.S., make arrangements beforehand. A supply of basic medicine chest items should also be taken.

The American-British Cowdray (ABC) Hospital in Mexico City, staffed partially by English speaking, U.S. trained physicians, is recommended for emergencies and routine hospitalizations. There are other well-equipped private hospitals available with similar staff. Mexico City has many English speaking U.S. trained physicians, including medical and dental specialists. For major medical and surgical problems, patients may be evacuated to the U.S. The designated evacuation point is Miami, Florida.

Ciudad Juarez: The full range of medical services is available in El Paso, Texas.

Guadalajara: English-speaking, U.S.-trained physicians and several well equipped hospitals and clinics are available and provide adequate medical care.

Hermosillo: Hospitals and clinics in Hermosillo are adequate for routine and emergency care. Many doctors are U.S. trained and certified. A full range of medical services is available in Tucson, Arizona, a four-hour drive or a one-hour flight away.

Matamoros: The full range of medical services is available across the river in Brownsville, Texas, and other nearby cities in the Rio Grande Valley.

Merida: The incidence of diarrheal diseases and hepatitis is high. Malaria is rare; but there are incidents of other diseases transmitted by mosquitoes. Medical facilities are inadequate despite the presence of

competent doctors and dentists. In the event of serious illness, the patient will be evacuated to Mexico City or Miami, Florida.

Monterrey: Medical facilities in Monterrey are modern and adequate. Two large, well-equipped private hospitals have been approved for routine and emergency care. U.S. trained and highly specialized physicians and dentists are available. Difficult or unusual cases may be evacuated to Texas.

Nuevo Laredo: Use the medical and dental facilities in Laredo, Texas, or the medical center in San Antonio, Texas.

Tijuana: Complete health care is available across the border in the San Diego or Chula Vista area.

Tuxtla Gutierrez: A USDA installation is in this southern Mexico region. Private clinics and hospitals are minimally adequate, despite many well trained physicians. In the event of serious medical problems, evacuation to Mexico City or to Miami, Florida, will be authorized.

Community Health

Air pollution is widely recognized as a problem in Mexico City. In a study published in the spring of 1999, the World Resources Institute rated Mexico City as the number one city in the world for health risks to children age 5 and under due to air pollution. This pollution is due in part to rapid urbanization and industrialization, but mostly to the huge and ever growing number of vehicles. The air quality has improved in some categories since the early 1990s. According to the Mexican Government, the lead and sulfur dioxide levels are consistently within the acceptable levels, as defined by the World Health Organization; and the nitrogen dioxide and carbon monoxide levels are rarely above them. The levels for declaring environmental emergencies were recently tightened in response to evidence of negative health effects from ozone and particulate matter. Although there

were fewer ozone peaks above 330 parts per million annually in the past few years, it is still above acceptable levels over 85% of the year. Suspended particulate matter (PM 10) exceeds the standards 20% to 30% annually. Because of the continuing concerns about pollution, the standard length of tour remains at two years.

Tap water is not safe to drink. Boiling, iodine, or chlorine treatment is necessary.

Tuberculosis is still present in the general population; thus domestic employees should be screened for it. Malaria and other serious tropical diseases are present only in southern rural areas of Mexico. Persons who will reside or travel in southern Mexico should be vaccinated for yellow fever before departing the U.S. because of a yellow fever is endemic in parts of southern Mexico and Central America.

Intestinal infections are prevalent in Mexico. Most infections are due solely to the fact that Mexican bacteria are different from U.S. bacteria. Nevertheless, parasitic infections (including ameba and giardia) are common. Therefore, select food sources and restaurants carefully. Clean and treat raw vegetables and fruits with iodine. Unpasteurized dairy products may carry brucellosis and tuberculosis. Therefore, purchase only reliably pasteurized and refrigerated products.

Marijuana and cocaine and other addictive drugs are readily available, despite Mexican efforts to control drug trafficking. Drug offenders, including teenagers, are often jailed for lengthy periods.

Preventive Measures

Cigarette smokers should be particularly aware that they risk increased cardiopulmonary problems due to the altitude and pollution. The combination of altitude in Mexico's high plateau and pollution in the Valley of Mexico with smoking may be dangerous for pregnant women and the fetus. Numerous health clubs are available through-

out the city. Those who wish to exercise outdoors should do so in the morning, when the pollution levels are lowest.

Rabies is endemic in Mexico, thus keep pet immunizations current. Rabies vaccine is available in the Health Unit for all who wish to be vaccinated. It may be especially advisable for children, joggers, and rural workers to be vaccinated.

Recommended immunizations for Mexico include diphtheria, tetanus, polio, MMR, and yellow fever. Infectious (viral) hepatitis is endemic in Mexico; therefore gamma globulin injections every four to six months are recommended for those over 12 years old.

Newcomers to high altitude should allow time for acclimatization. In the first several weeks, you should avoid overeating, alcoholic beverages, and excessive physical exertion. Light-headedness, insomnia, slight headaches, and shortness of breath are common initial reactions to the altitude. Adequate rest and fluids help alleviate the discomfort.

NOTES FOR TRAVELERS

Passage, Customs & Duties

The Government of Mexico requires that all U.S. citizens present proof of citizenship and photo identification for entry into Mexico. A U.S. passport is recommended, but other U.S. citizenship documents such as a certified copy of a U.S. birth certificate, a Naturalization Certificate, a Consular Report of Birth Abroad, or a Certificate of Citizenship are acceptable. U.S. citizens boarding flights to Mexico should be prepared to present one of these documents as proof of U.S. citizenship, along with photo identification. Driver's permits, voter registration cards, affidavits and similar documents are not sufficient to prove citizenship for readmission into the United States.

Travelers should be aware that Mexican entry regulations require Spanish translations of all legal documents, including notarized consent decrees and court agreements. Enforcement of this provision is not always consistent, and English-language documents are almost always sufficient.

A visa is not required for a tourist/transit stay up to 180 days. A tourist card, also known as a FM-T, available from Mexican consulates and most airlines serving Mexico, is issued instead. Travelers entering Mexico for purposes other than tourism require a visa and must carry a valid U.S. passport. The Government of Mexico charges an entry fee to U.S. citizens traveling to Mexico's interior.

Upon arrival in Mexico, business travelers must complete a form (Form FM-N 30 days) authorizing the conduct of business, but not employment, for a 30-day period. U.S. citizens planning to work or live in Mexico should apply for the appropriate Mexican visa (Form FM-2 or 3) at the Mexican Embassy in Washington, DC or nearest Mexican consulate in the United States. U.S. citizens planning to participate in humanitarian aid missions, human rights advocacy groups or international observer delegations also should contact the Mexican Embassy or nearest Mexican consulate for guidance on how to obtain the appropriate visa before traveling to Mexico. Such activities, undertaken while on a tourist visa, may draw unfavorable attention from Mexican authorities because Mexican immigration law prohibits foreigners from engaging in political activity. U.S. citizens have been detained or deported for violating their tourist visa status. Therefore, tourists should avoid demonstrations and other activities that may be deemed political by Mexican authorities. This is particularly relevant in light of the tension and polarization in the state of Chiapas. U.S. citizens and other foreigners have been detained in Chiapas and expelled from Mexico for allegedly violating their visa status or for

interfering in Mexican internal politics.

Mexican regulations limit the value of goods brought into Mexico by U.S. citizens arriving by air or sea to \$300 per person and by land to \$50 per person. Amounts exceeding the duty-free limit are subject to a 32.8 percent tax. For further information concerning entry and visa requirements, travelers may contact the Embassy of Mexico at 1911 Pennsylvania Avenue N.W., Washington, D.C. 20006, telephone (202) 736-1000, or its web site at <http://embassyofmexico.org>, or any Mexican consulate in the United States.

Americans living in or visiting Mexico are encouraged to register at the U.S. Embassy or at one of the U.S. Consulates, in order to obtain updated information on travel and security within Mexico. The U.S. Embassy is located in Mexico City at Paseo de la Reforma 305, Colonia Cuauhtemoc, telephone from the United States: 011-525-080-2000; telephone within Mexico City: 5-080-2000; telephone long distance within Mexico 01-5-080-2000. You may also contact the Embassy by e-mail at: ccs@usembassy.net.mx.

U.S. Consulates General are located in:

Ciudad Juarez: Avenida Lopez Mateos 924-N, telephone (52)(1) 611-3000.

Guadalajara: Progreso 175, telephone (52)(3) 825-2998.

Monterrey: Avenida Constitucion 411 Poniente 64000, telephone (52)(8) 345-2120.

Tijuana: Tapachula 96, telephone (52)(6) 681-7400.

U.S. Consulates are located in:

Hermosillo: Avenida Monterrey 141, telephone (52)(6) 217-2375.

Matamoros: Avenida Primera 2002, telephone (52)(8) 812-4402.

Merida: Paseo Montejo 453, telephone (52)(9) 925-5011.

Nogales: Calle San Jose, Nogales, Sonora, telephone (52)(6) 313-4820.

Nuevo Laredo: Calle Allende 3330, Col. Jardin, telephone (52)(8) 714-0512.

U.S. Consular Agencies are located in:

Acapulco: Hotel Continental Plaza, Costera Miguel Aleman 121 - Local 14, telephone (52)(7) 484-03-00 or (52)(7) 469-0556.

Cabo San Lucas: Blvd. Marina y Pedregal #1, Local No. 3, Zona Centro, telephone (52)(1) 143-3566.

Cancun: Plaza Caracol Two, Third Level, No. 320-323, Boulevard Kukulcan, km. 8.5, Zona Hotelera, telephone (52)(9) 883-0272.

Cozumel: Plaza Villa Mar in the Main Square - El Centro, 2nd floor right rear, Locale #8, Avenida Juarez and 5th Ave. Norte, telephone (52)(9) 872-4574.

Ixtapa/Zihuatanejo: Local 9, Plaza Ambiente, telephone (52)(7) 553-2100.

Mazatlan: Hotel Playa Mazatlan, Rodolfo T. Loaiza #202, Zona Dorada, telephone (52)(6) 916-5889.

Oaxaca: Macedonio Alcalá No. 407, Interior 20, telephone (52)(9) 514-3054 (52)(9) 516-2853.

Puerto Vallarta: Edif. Vallarta, Plaza Zaragoza 160-Piso 2 Int-18, telephone (52)(3) 222-0069.

San Luis Potosi: Edificio "Las Terrazas", Avenida Venustiano Carranza 2076-41, (52)(4) 811-7802.

San Miguel de Allende: Dr. Hernandez Macias #72, telephone (52)(4)152-2357 or (52)(4)152-0068.

Pets

There are no quarantine requirements for pets, but they require specific documents issued by an

officially recognized veterinarian, and authenticated ("visado") by the Mexican consul with jurisdiction over the place of issue.

All Pets entering Mexico require a certificate that they were examined and found free of evidence of infectious or parasitic disease; this should be done within 10 days of arrival in Mexico. Dogs require proof of vaccination against rabies, viral hepatitis, leptospirosis, and distemper not less than 15 days or more than one year before arrival, and of parvo-virus vaccination not less than 15 days or more than 150 days before arrival.

Cats require proof of vaccination against rabies and feline panleucopenia not less than 15 days or more than 1 year before arrival.

Prior to travel, the Mexican consul in the U.S. requires certification from the U.S. Department of Agriculture (USDA), Animal and Plant Health Inspection Service-Veterinary Services (APHISVS), that the veterinarian issuing the documents is officially recognized.

Pets traveling with their owners are cleared into Mexico with only these documents. Those pets who are shipped to Mexico require a free entry permit, which takes a month or more to obtain after the owner has arrived in Mexico. Pets shipped to Mexico must arrive in the morning to allow time for same-day customs clearance, as there are no pet storage facilities at airports.

Firearms and Ammunition

The Mexican Government has significant restrictions on the types of firearms and ammunition that may be imported into the country. Generally, the Mexican government prohibits the importation of .357 and .45 caliber handguns, rifles with a caliber of .30 and larger, and shotguns with barrels shorter than 25 inches.

Currency, Banking, and Weights and Measures

The monetary unit in Mexico is the peso. The symbol used to designate

pesos is the same as the dollar symbol, except that it has only one vertical line. The peso-dollar exchange rate is subject to change. Current currency notes include the following denominations: 500, 200, 100, 50, and 20. Coins in circulation include: 10, 5, 2, 1 peso, and .50, .20, .10, and .05 centavos.

The current exchange rate is approximately 9.4 Pesos=US \$1.

Mexican banking facilities are similar to those in the U.S.

Carry U.S. dollar travelers checks. Travelers already in Mexico may obtain travelers checks from the travel agency at the U.S. Embassy. U.S. dollars in cash or travelers checks are accepted widely, and can be exchanged at most banks or cambios (foreign exchange dealer), including those at border crossing points and international airports. Dollars and travelers checks are accepted at most hotels and many stores and restaurants, but at a less favorable rate of exchange. Major U.S. credit cards, e.g., American Express, Master Card, and Visa, are widely accepted in Mexico. Sears stores in Mexico accept Sears cards from the U.S. Credit cards can also be obtained locally with a peso account. The majority of gasoline stations in Mexico do not accept credit cards.

Taxes, Exchange, and Sale of Property

A 15% value-added sales tax is applied to most goods and services. Hotels charge an additional 2% lodging tax that is not required to be itemized separately on your bill. Rather, it is usually included in the retail price of goods. It is always smart to ask if the price includes IVA (taxes); It is customary to leave a tip for baggage handlers, porters, chambermaids, tour guides, and drivers. Avoid leaving U.S. coins. Taxi drivers expect a tip only when an extra service is provided.

Hunting licenses are required. There is a value-added tax (IVA-impuesto al valor agregado) averaging 15% on most goods and services

except on food, medicines, newspapers, residential rents, and physicians' fees.

Security Precautions

The Department of State rates Mexico City's crime situation as CRITICAL (its highest designator). Walking in an isolated area anywhere in the city, especially after dark, raises a real risk of armed robbery. The use of roving taxis, those with green and white license plates, is discouraged because of the threat of robbery by the drivers or their criminal accomplices.

Disaster Preparedness - Earthquakes & Volcanos

Since December 1994, the Popocatepetl Volcano, situated 38 miles southeast of Mexico City, has registered varying levels of seismic activity, including the release of vapor, gas, ash, and incendiary material. Depending on the levels of activity, the Mexican National Center for Disaster Prevention restricts access or closes parks and hiking trails on the mountain's slopes. U.S. citizens planning to hike in the area should be alert to any warnings or signs posted, and should contact the U.S. Embassy for the latest information about seismic activity.

Civil defense officials in the states of Jalisco and Colima are closely monitoring activity at the Volcan de Colima, (also known as Volcan de Fuego), located in south-central Jalisco. The volcano produced a number of gas exhalations, explosions and ash falls in February 1999. There is also active lava flow on the south side of the mountain. A major eruption is possible. U.S. citizens should exercise caution if planning to travel to the area surrounding the volcano. They should contact the U.S. Consulate General in Guadalajara, Mexico, at telephone 011-523-825-3429 for the latest information. Updated information may also be obtained in Spanish and in English at web site <http://www.ucol.mx/volcan>.

Willemstad (Curaçao), Netherlands Antilles

NETHERLANDS ANTILLES

(including Aruba)

Major City:

Curaçao (Willemstad)

Other Cities:

The Bottom, Kralendijk, Oranjestad, Philipsburg, Sint Nicolaas

This chapter was adapted from the Department of State Post Report 2000 for Netherlands Antilles. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

THE NETHERLANDS ANTILLES, a Dutch colonial possession for the greater part of three centuries, and once a center for slave trade in the Caribbean, has been an autonomous territory of the Kingdom of the Netherlands since 1954. Aruba, one of the three largest islands (the others are Curaçao and Bonaire) withdrew from the federation in January 1986 to form its own domestic government. In 1990, however, Aruba requested and received from the Netherlands a cancellation of the agreement that would have granted independence in 1996. It remains under Dutch protection and, unofficially at least, is still referred to as an integral part of the Antilles group.

The islands are a fascinating blend of Afro-Spanish-Dutch culture—a tapestry of sites, peoples, and languages. The countryside is rich in history, and in natural marvels which draw increasing numbers of tourists each year to these jewels in the sun.

MAJOR CITY

Curaçao

During the colonial period Curaçao was a center of slave trade in the Caribbean. After emancipation of the slaves in 1863, Curaçao lost much of its economic importance until 1916 when Royal Dutch Shell built an oil refinery on the shores of Schottegat Harbor. Shell pulled out in 1985, and the Venezuelan petroleum company took over operation of the refinery. Curaçao also has the largest repair dry-dock in the Caribbean, a container port, an important offshore financial sector and several resort hotels.

The total number of American citizens residing on the island fluctuates but is in the neighborhood of 1,000. The overall "foreign colony", including Dutch nationals, makes up about 10% of the total population. Curaçao has as many as 40

nationalities represented, including a large percentage of Indians, Chinese and Indonesians.

Although Curaçao has been associated with the Netherlands for about 300 years, visitors to Curaçao find that a knowledge of Spanish is as helpful as Dutch. English is spoken and understood to one degree or another by a large percentage of the local population; Papiamentu is the language of daily life.

The town of Willemstad contains most of Curaçao's 150,000 population. Dutch architecture predominates in the older sections of the city. Homes in the suburbs are more modern and spacious.

Utilities

The city water supply consists exclusively of distilled, potable seawater. Electric current in Curaçao is 110v-130v, 50-cycle, single-phase AC.

Any American appliance, which relies on 60-cycle current for its timing (such as clocks, record players and tape recorders) must be converted for 50-cycle current in order to operate properly. If possible, have this done in the U.S. before shipment (transformers can only convert voltage, not cycles). Transformers and all types of electrical equipment and appliances are

Wathey Square in Philipsburg, Netherlands Antilles

AP/Wide World Photos, Inc. Reproduced by permission.

available locally but at high prices. Most major brands can be serviced locally. The local power supply sometimes experiences surges, spikes and/or brownouts.

UPS's and/or surge protectors are recommended for computers, TV's, VCR's, stereos and other sensitive electronic equipment. They can be purchased locally but are less expensive in the States.

Food

Almost all food is imported. A good variety of canned and frozen foods, including baby foods, of U.S. and Dutch origin are available in modern supermarkets. Fresh produce is flown in regularly, mostly from the U.S. and Venezuela, but are not necessarily in stock at all times. Boats from Venezuela sell produce and fish at a central area in Willemstad called the "floating market."

Curaçao imports all its meat, mostly from Argentina, the Netherlands,

New Zealand, Denmark and the U.S. Quality is satisfactory although sometimes tougher than we are accustomed to in the U.S. and special cuts, particularly beef and veal, are often unavailable. Most frozen poultry is of U.S. origin. Eggs of good size and quality come from local sources. Butter and cheese are imported from the U.S. and the Netherlands. Frozen fish and seafood products come from as far away as Norway and Iceland. Fresh fish from South American and Caribbean sources is available and safe.

Since transportation costs are included, food prices are comparatively high.

Clothing

Men: At work, clothing suitable for summer in Washington is appropriate. Casual dress is typical at other times. Both European and American men's clothing is available but relatively expensive. A dark suit is

necessary and suitable for most representational purposes.

Women: Curaçao really has only one season-summer. Bring summer wear. Light cotton is preferable to polyester blends. Women wear short dresses at most evening social affairs not identified as "casual" or "sport." All kinds of women's clothes are available in Curaçao at prices higher than those in the U.S. A fair selection of women's shoes is usually, but not always, available; some American women have found excellent buys in European brand shoes.

Children: Infant and children's clothes are available at prices much higher than those in the U.S. but the selection is limited in size and style and the quality is sometimes inferior. Children's shoes are available in American sizes. Baby items (such as diapers) are much more expensive than in the U.S.

Supplies and Services

Nearly all well known brands of American and European toiletries, cosmetics, personal hygiene supplies, home medicines and drugs are available on Curaçao. Prices range from less than those in the U.S. to up to 50% higher on some items. A good range of liquor and tobacco items is available through duty-free suppliers.

Most basic services found in a small community can be found on Curaçao but the quality varies widely. Tailors and dressmakers charge reasonable prices and their work can range from fair to excellent. A wide assortment of cottons and dress fabrics are available but sewing notions offer a limited selection.

Dry-cleaning facilities are available and the services provided are acceptable. Beauty shops compare with those in the U.S. and those in major tourist hotels have good operators and service. Costs are comparable with those in the U.S. Barbershops also have reasonable prices.

Radio and TV repair is adequate and reasonable but parts are not always available locally. Simple plumbing and electrical maintenance repair is available at reasonable prices. Automobile repair is satisfactory but, once again, parts are not always available locally.

Curaçao has a public library with a modest collection of books and publications in English. Several hotels and restaurants maintain a "swap" shelf of English language paperbacks.

Domestic Help

Domestics from English-speaking Caribbean islands are available but require permission from the Curaçao government to live and work here. Local law entitles maids to a three-week paid vacation annually, with supplementary pay for meals is not taken in the employer's home. Employers are obliged to provide health insurance for maids; the premium is about \$360 a year. Wages for part-time help are about

\$2 per hour, plus transportation, or about \$150 a month for house servants. The rate for gardeners is from \$2 to \$3 per hour.

Religious Activities

Curaçao prides itself on having the oldest continuously operating synagogue in the Western Hemisphere. Services are in English and Hebrew. Several Roman Catholic Churches offer services in Dutch and Papiamentu and at least one offers Mass in English. A Dutch Reformed Church holds services in Dutch; a Methodist Church and an Anglican Church hold services in English; and a Seventh-day Adventist Chapel and a few evangelical churches hold services in Papiamentu and English. The Protestant Church of Curaçao, with several locations in the city, holds services in Dutch and English.

Education

The International School was started in Curaçao in September 1968. The school is open to children of Curaçao residents. Grade levels include K-12. All subjects are taught in English, the curriculum is American and the school is accredited in the U.S. There are extensive extracurricular activities available for all ages, even some for adults. School enrollment for the last few years has averaged over 200 students. Parents are responsible for transportation. Tuition varies depending on grade and ranges from approximately \$4,500 to \$8,000 per year.

The local government supports a complete system of elementary and high schools equivalent to 12 grades or more in the U.S. Local schools are parochial (Catholic or Protestant) or public, with classes conducted in Dutch and Papiamentu. All schools have the same basic curriculum. Academic standards are good. The school year runs from August 15 to July 15, with 60 holidays during the year, including a one-month summer vacation. American children attending a local school above first grade will have difficulty adjusting to schooling in a foreign language. Intensive language training of sev-

eral months is often necessary. Children are usually put back one or two grades and then promoted grade-by-grade to their regular level as they learn Dutch. Reasonable tuition fees are charged.

Special Educational Opportunities

Papiamentu lessons are available locally but are expensive. Individual language training in Dutch, Spanish and Papiamentu is available through tutors at reasonable rates. Textbooks are available at the local bookstores.

The Curaçao Music School offers classes and individualized instruction in piano, rhythm instruments, orchestral instruments, guitar, accordion and choral group singing. Individual tutoring in both music and art is also available through independent tutors.

Sports

Water sports of all kinds are popular. Curaçao has numerous small beaches, some public and others that can be used for a small fee. Swimming, snorkeling, scuba diving, water skiing, sailing and windsurfing are possible year round. Curaçao has an extensive number of dive sites, as well as an underwater park, for scuba divers; equipment rental and instruction are available from several Dive Shops. Other sports are available through clubs.

Membership in local clubs, or private membership at local resorts, provides for the use of swimming pools, bar and restaurants, as well as tennis, basketball, Ping Pong, soccer, yachting, sailing, water sports and horseback riding.

The Curaçao Golf and Squash Club has the island's only golf course. It has nine holes with oiled sand greens. The club sponsors weekend tournaments and has a small clubhouse where refreshments are served. A squash court is located near clubhouse.

The Curaçao Yacht Club and other private marinas offer facilities for sail and powerboats.

Susan Rock. Reproduced by permission.

Harbor and Haystack Mts., Netherlands Antilles

For those interested in flying, a small flying club offers small plane rentals and flight instruction but the rates are high.

Baseball and soccer games are played enthusiastically with local and inter-island competition. A large sports stadium with facilities for various spectator sports is located at Brievengat.

Both U.S. and European sports clothing and equipment can be purchased locally but usually at prices higher than those in the U.S.

Touring and Outdoor Activities

The Curaçao Museum has a permanent exhibition of antiques, paintings and artifacts.

Periodic art exhibits are held there and at the Centro Pro Arte and Centro Cultural de Curaçao. A museum of Jewish history is associated with

the synagogue. A commercial Seaquarium displays local marine life and there is a small botanical garden and zoo located in one of Willemstad's suburbs.

A national park surrounds Mt. Christoffel, which provides a panoramic view of the west end of the island to climbers. On a high ridge near the airport are the Hato Caverns, the grottos of Curaçao. Near the west end of the island is Boca Tabla, an unusual sea cave.

Entertainment

In addition to a local cinema that shows current U.S. and European movies, several video rental stores offer recent video releases. The Centro Pro Arte has facilities for ballet, symphony orchestras, operas and plays but offerings are limited and infrequent. Most of the theatrical events are in Dutch or Papiamentu. Several tourist hotels in Curaçao offer entertainment with orches-

tras, dancing and floorshows. Many have casinos and one has a discotheque. Several private discotheques are open as well.

The period between Christmas and Carnival is full of special events. A fireworks display and late night partying celebrate the New Year. Carnival time in February brings out street processions with flamboyant costumes, floats, and street dancing. Several bridge clubs are available for the enthusiast.

Social Activities

Private entertaining and official contacts provide the main source of contact with the American community. An American Women's Club holds regular meetings and sponsors social activities several times a year. A local chapter of the U.S. Navy League sponsors receptions for U.S. Navy and Coast Guard ships during port calls.

Daily opportunities exist to meet host country nationals through work and socially. Local branches of Rotary, Kiwanis and Lions Clubs provide social contact with the Antillean and international communities.

OTHER CITIES

Saba's main town, **THE BOTTOM**, is home to about half of the island's total population of 1,000. Saba is just five square miles in area, and is an extinct volcano that rises 3,000 feet above sea level. Vegetation here is lush and there are many gardens and fruit trees. The island's four villages are connected by a single crossroad.

KRALENDIJK, the capital and chief town of Bonaire, lies on the west coast of the island, and has a population of close to 3,000. It is directly opposite the tiny island called Klein (small) Bonaire, noted for its choice snorkeling and scuba diving. Bonaire proper is casual and unspoiled, and is known as one of the best diving areas in the world. There are more than 50 choice diving spots; the average water temperature is 80°F. The beaches are secluded and several of them have sea-carved grottoes. Bonaire has six hotels and resorts, including two casinos. The island is nicknamed Flamingo Island and is home for a flamingo sanctuary, a breeding ground for 10,000 birds of that species. Washington National Park, on the northwestern shore, is a game preserve. Other interesting sites are the salt pans (solar salt works) and slave huts in the south; Rincon, the island's oldest village; and Willemstoren, Bonaire's 150-year-old light-house.

ORANJESTAD is the capital of Aruba and has about one-third of that island's 68,000 inhabitants. It is situated on the western side of the island. Aruba has an unusually flat landscape and interesting rock formations. Vegetation includes a wide variety of cacti and *divi-divi* trees, which are shaped by the cool-

ing trade winds. Its beautiful beaches, most notably seven-mile-long Palm Beach, are where most of the hotels are located. Aruba has more than 1,500 hotel rooms, 15 nightclubs, 60 restaurants, five casinos, and 51 low-duty stores on its main street. The Aruba Historical Museum opened in 1984 and displays Arawak Indian implements as well as furniture made by the island's early settlers. A betting facility located in the Aruba Holiday Inn and Casino, allows tourists to bet on football and other sports events. Aruba also has an annual carnival, which runs from mid-January through mid-March.

The principal town of St. Eustatius is **ORANJESTAD** (the same name as Aruba's capital), with a population of about 1,600. The island is undeveloped and has several small plantations.

PHILIPSBURG, with a population of about 11,000, is the capital of the Dutch portion of St. Maarten. As with all of the Netherlands Antilles, tourists can enjoy the beaches and water sports, as well as shopping along Front Street in Philipsburg.

SINT NICOLAAS is the former capital of Aruba, located 12 miles southeast of Oranjestad. A refinery closed here recently, seriously depressing the economy. The area has not developed a reputation as a tourist stop, but the adjacent beaches are considered attractive. No resort hotels are in the vicinity. The Aruba Golf Club, however, has accommodations just north of Sint Nicolaas. The community is also known by its Spanish designation, San Nicolás.

COUNTRY PROFILE

Geography and Climate

Curaçao is the largest of the "ABC" islands (Aruba, Bonaire and Curaçao) which lie just off the coast

of Venezuela. Curaçao is 38 miles long, 7 miles wide at its widest point, and 2-1/2 miles wide at its narrowest point. Sint Christoffelberg, at 1,260 feet on the western end of the island and Tafelberg, at about 600 feet near the eastern end are the most prominent geographical features. Tafelberg has provided limestone for the construction industry for several years and now resembles a stepped mesa. Numerous small and large bays indent the island's southern coast. The largest of these, which comprises the inner harbor known as the Schottegat, is surrounded by the city of Willemstad.

Curaçao and the other ABC islands are hot year round. Temperatures seldom exceed 90°F during the day or fall below 80°F at night. Relative humidity averages 70% annually and seldom varies far from that average. The effect of the heat and the humidity, however, is lessened by the almost constant northeast trade winds. The ocean temperature averages 80°F and only varies a few degrees between summer and winter. Rainfall averages only 22 inches annually, most of which falls during the months of November and December, and the islands are below the hurricane belt so that particular danger is absent. Drought resistant plants, such as cactus, thorn tree; and succulents predominate. August, September and October are the warmest months; December, January and February are the coolest.

Mildew can occur when dehumidifying air-conditioning is not used, especially during the "rainy" season (October to January). Outdoors, items rust and fade quickly in the salt air and harsh sun. Lizards, roaches, flies, ants, rodents and mosquitoes are common.

In addition to the ABC Islands, the consular district includes the Windward Islands of Saba, St. Eustatius (or Statia and Sint Maarten. They are located south east of Puerto Rico and about five hundred miles north-east from Curaçao. Also of volcanic origin, they differ from the ABC

Islands primarily in that they have more annual rainfall and lush vegetation. The most populous and economically developed of the Windward group, Sint Maarten, shares its island with the French Department of Saint Martin.

Population

The population of the Netherlands Antilles is approximately 185,000. Curaçao has about 150,000; Sint Maarten, 23,000; Bonaire, 10,000; St. Eustatius, 1,500; Saba, 1,000. Aruba's population is around 90,000. About 85% of Curaçao's population is of African derivation. The remaining 15% is made up of various races and nationalities, including Dutch, Portuguese, North Americans, natives from other Caribbean islands, Latin Americans, Sephardic Jews, Lebanese and Asians.

Four languages are in common use. Papiamentu is the native vernacular in Curaçao, Bonaire and Aruba. Dutch is the official language, though both English and Spanish are widely used on the ABC Islands. English is the predominant language in the Windward Islands.

Roman Catholicism predominates but several other churches are represented, these include Anglican, Jewish, Muslim, Protestant, Mormon and Baptist. The Jewish community is the oldest in the Western Hemisphere, dating from 1634.

Public Institutions

Willemstad, Curaçao, is the capital of the Netherlands Antilles, which is a separate entity in the Kingdom of the Netherlands. The Antilles are governed by a popularly elected unicameral "Staten" (parliament) of 22 members. It chooses the Prime Minister (called Minister President) and a Council of Ministers, consisting of six to eight other ministers. The Governor, who serves a 6-year term, represents the Queen of the Netherlands. Defense and foreign affairs are the responsibility of the Neth-

erlands but, otherwise, the islands are largely self-governing.

Local government is in the hands of each island. Under the direction of a Kingdom-appointed Island Governor, these local governments have a "Bestuurscollege" (administrative body) made up of Commissioners who head the separate government departments.

Aruba separated from the Netherlands Antilles on January 1, 1986, and now enjoys equal status (status aparte) with the Antilles within the Kingdom of the Netherlands. Its government structure is similar to that of the Netherlands Antilles.

Aruba, Bonaire, Curaçao and Sint Maarten have quasi-governmental chambers of commerce, which are, among other things, the official registries of business firms on those islands. They also have trade and industry functions, which are comparable to an American Chamber of Commerce.

Arts, Science, and Education

The educational system is based on the Dutch model, with upper grades split into academic and vocational tracks. The University of the Netherlands Antilles, with law, business and technical faculties, is located on Curaçao. Many students also pursue higher education in the Netherlands or the United States.

Commerce and Industry

Oil refining, tourism, and offshore financial activities are the mainstays of the Curaçao economy. The Netherlands and the European Economic Community provide financial and development aid annually. Local agriculture and manufacturing is very limited. Most consumer goods are imported, often from the U.S. but also from the Netherlands and other European countries.

Transportation

Automobiles

Curaçao has well over 50,000 vehicles. Driving is on the right. Gasoline prices are currently approximately US\$3.80 per gallon. Routine service station maintenance is adequate and reasonable but spare parts and body repair work are expensive. The high humidity, salt air and intense sunlight cause automobile tires and bodies to deteriorate rapidly. Undercoating is recommended and may be done locally at reasonable prices. Overall, roads are fair to good but some parts of Curaçao can only be reached by rough dirt tracks.

Curaçao has no restrictions on automobiles other than normal traffic regulations and compulsory automobile insurance. Third-party liability insurance as well as property damage, collision, and fire and theft insurance can be obtained locally from several Dutch firms. If you present a statement from a previous insurance company stating that you have made no claims in the last five years, a discount of up to 50% is offered; or for each consecutive accident-free year a 10% discount will apply. Full coverage collision insurance is recommended for more expensive vehicles. Several car rental agencies operate on the island at tourist prices.

Local

Three types of public transportation are available: buses, privately owned vans operating as buses and taxicabs. Buses are crowded and run irregularly. The private vehicles operating as buses pick up passengers at specific locations for a flat fee. Taxi fares are fixed (no meters) but are geared to tourists and are relatively expensive.

Regional

American and United (through an ALM code-share) Airlines offer daily service between Curaçao and the U.S. Aruba and Sint Maarten also have daily U.S. connections via U.S. carriers. The Netherlands, Venezuela, Colombia, Trinidad and the Dominican Republic have direct

connections with Curaçao. Regional airlines provide service between the islands within the consular district. Several local travel agencies are equipped to arrange personal travel anywhere in the world.

Communications

Telephone and Telegraph

Local telephone service is usually reliable although not always of the best quality and outages are not unexpected. The monthly charge is \$10 plus 10 cents for each four minutes of use for local calls. Long distance calls may be dialed direct to anywhere in the world at any hour but are very expensive.

Internet

Several local companies provide internet access on Curaçao; however, service is very expensive compared to the U.S. Access currently ranges from \$60 per month for unlimited access to three times that. The less expensive service provider has oversubscribed and it is very hard to connect during peak hours. In addition to the Internet access fees, you still have to pay the local per-minute phone charges that can effectively double your costs if you are a heavy user.

Mail

UPS-International, Federal Express and DHL also serve Curaçao.

Radio and TV

Curaçao has one TV station (Tele-Curaçao), which broadcasts in color. Most shows are in Papiamentu. Venezuelan TV can also be received on Curaçao. Cable TV is available, and presently CNN, ESPN, BBC World, HBO Ole, Cinemax, A&E, TBS, ABC, CBS, NBC and others are featured. Major American and European sporting events are generally carried via cable. Television sets are available locally at prices higher than in the U.S. Local television broadcasts on NTSC format and an U.S. television set works with no conversion necessary.

Local radio stations provide a wide range of music choices. Most radio

stations broadcast news in Papiamentu and Dutch; however, periodic English news broadcasts are transmitted by some of the stations.

Newspapers, Magazines, and Technical Journals

U.S. newspapers from New York and Miami are available the day after publication. Daily newspapers are printed in Curaçao in Dutch and in Papiamentu. Magazines in English, Dutch and Spanish are available at newsstands but are more expensive than in the U.S. It is less expensive to subscribe to magazines than to pay local newsstand prices, even for airmail editions. Magazines can be pouched but take from three weeks to one month to arrive. Many popular books are available in English at local bookstores but, once again, are more expensive than in the U.S.

Health and Medicine

Medical Facilities

There are two private hospitals and one public hospital available on-island which provide adequate services for most any medical problem. The doctors are trained in Europe and in the U.S. and overall their quality is good to excellent. Many dentists practice in Curaçao; some have been trained in the U.S. and many in Europe. Specialists, both medical and dental, are either available locally or visit the island periodically from the U.S. or Europe.

Community Health

Community health standards are good. Tap water is distilled from seawater and is of good quality, although turbidity (suspended particles) is frequently high. Fresh foods are safe to eat.

Preventive Measures

Normal health precautions are in order, but some potential dangers warrant special mention. Precautions should be taken against the strong sun and heat, which can cause dehydration. Swimmers should be cautious of sea urchins and other stinging creatures on the

sea floor. Some common trees at Curaçao beaches have a poisonous sap (irritating) which rain can wash onto the unwary. Dengue fever has been reported in Curaçao.

Most medicines are available, but local pharmacy prices tend to be higher than in the U.S. Some over-the-counter medicines available in the U.S. are not available in Curaçao or are available by prescription only. You may wish to bring a supply for special needs.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Travel to Curaçao is by air.

A valid U.S. passport or a U.S. birth certificate accompanied by a valid photo identification must be presented. While a U.S. passport is not mandatory, it is recommended since it is more readily recognized as positive proof of citizenship. Tourists may be asked to show onward/return tickets or proof of sufficient funds for their stay. Visitors may enter for two weeks, extendable for 90 days by the Head Office of Immigration. For further information, travelers may contact The Royal Netherlands Embassy, 4200 Linn Avenue, N.W., Washington, D.C. 20008, telephone (202) 244-5300, Internet: <http://www.netherlands-embassy.org>, or the Dutch consulates in Los Angeles, Chicago, New York, and Houston.

The Netherlands Antilles, like most Caribbean territories, are subject to the threat of hurricanes. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>.

U.S. citizens living in or visiting the Netherlands Antilles are encouraged to register with the U.S. Consulate General in Curaçao located at J.B. Gorsiraweg #1, Willemstad, Curaçao, telephone (599-9)461-

3066; fax (599-9)461-6489; e-mail address: cgCuraçao@interneeds.net.

Pets

Pets are admitted duty free and are not placed in quarantine. Dogs and cats must have rabies inoculations and certificates of good health issued within ten days of their arrival. Pet foods, medications and veterinary services are available locally. Fleas, ticks, heartworms and other infestations are a constant problem on the island.

Firearms and Ammunition

The Netherlands Antilles Government maintains strict control over the number of firearms and amount of ammunition on the islands and requires that a permit be issued prior to importation. As a further means of control, local authorities limit the number of authorized dealers in firearms. Sales to individuals can be made only to those licensed to own weapons, and the dealers must register all sales with the government.

Currency, Banking, and Weights and Measures

The medium of exchange in the Netherlands Antilles is the Netherlands Antilles florin, also called the "guilder." The exchange rate is currently fixed at US\$1 = NAF 1.78. Local banks cash U.S. Treasury checks and exchange U.S. currency; however, a service fee is frequently charged. You do not need to buy Netherlands Antilles florins before arrival in Curaçao; US dollars are widely used and accepted. Have a supply of small bills with you for tips and taxi fares.

Local banking facilities are comparable to those in the U.S. and arrangements can be made to cash U.S. checks. U.S. ATM/Debit Cards can be used in some local automatic tellers and will allow you to withdraw either US\$ or NAF. Many local stores accept VISA and/or MasterCard.

No limit is placed on the amount of money (dollars or other currency) brought into the Netherlands Anti-

les. Nor are limits placed on amounts taken out. Reporting procedures are in effect for large or unusual monetary transactions. Local bank accounts may be useful but are not necessary.

The metric system is the official standard for weights and measures.

Managua, Nicaragua

NICARAGUA

Republic of Nicaragua

Major Cities:

Managua, León

Minor Cities:

Bluefields, Chinandega, Corinto, Diriamba, Estelí, Granada, Jinotega, Jinotepe, Masaya, Matagalpa

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Nicaragua. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

NICARAGUA, which has suffered relentless exploitation by dictators and foreign interests since its discovery in 1502, emerged from a decade-long civil war in the early 1990s. In 1996 the nation achieved its first peaceful transition of power in 100 years. However, it must still overcome a turbulent history of political strife and natural disasters as it struggles to achieve and maintain political and economic stability.

MAJOR CITIES

Managua

The capital, Managua, with a rapidly growing population of about 1

million, is the largest city and the commercial and political center of Nicaragua. It is located on the southern shore of severely polluted Lake Managua in western Nicaragua at latitude 121, longitude 861, and 110 feet above sea level.

Earthquakes destroyed Managua twice, once in 1931 and again in 1972. The earthquake on December 23, 1972, reduced the city's downtown to rubble. Businesses and residents relocated to the outskirts of the city, and there has been no reconstruction in the once bustling center. Therefore, Managua has no real business or commercial district. Offices and shops are often housed in residences and scattered throughout the city. Hostilities in 1978 and 1979 caused additional destruction, especially in the industrial section, along the north highway to the airport.

Construction during the Sandinista regime came almost to a standstill except for the burgeoning shanty towns. As the rural poor have poured into the city looking for work, this substandard housing, with no sanitary facilities of any type, has literally sprouted in every neighborhood and has replaced earthquake ruins as the dominant scene in Managua.

Food

Shopping for food in Nicaragua requires patience and flexibility; but, with perseverance, you can maintain a balanced, varied diet. A variety of goods is now readily available in local supermarkets.

Open markets, such as the Huembes Market off the Masaya Highway, offer the best selection of fresh fruits and vegetables. Seasonal fruits and vegetables common to the tropics are usually good quality and cost less than in the U.S. Mangoes, bananas, papaya, cantaloupe, watermelon, pineapple, nispero, citrus, and jocote are typical fruit selections, while vegetables are limited to potatoes, yucca, beets, lettuce, cabbage, onions, cilantro, garlic, parsley, tomatoes, celery, peppers, cucumbers, carrots, squash, broccoli, avocado, green beans, and occasionally asparagus, mushrooms, cauliflower, and eggplant. Imported apples, grapes, pears, and strawberries are sometimes available in supermarkets. Open markets also sell dried beans, rice, and some spices. You may also find staples such as flour, sugar, and oil as well as some packaged and canned goods, toiletries, and sundries. However, the commissary sells such items in better quality, if higher prices.

Courtesy of United Nations

Market in Managua, Nicaragua

Good selections of meat and fish can be found at supermarkets, butcher shops, and delicatessens. Processed pork products such as luncheon meat, ham, and smoked chops are subject to questionable handling, and therefore, not recommended for purchase except at Delikatessen Bavaria. Local chickens are small and, currently, more expensive than those the commissary sells. Various distributors sell lobster, shrimp, and other seafood, frozen for export.

Shoppers in the open markets provide their own bags. Young boys will besiege you to guard your car or to help carry your groceries for a small tip.

Milk products are readily available. The commissary sells long-shelf-life whole milk; canned, condensed, and evaporated milk; and assorted cheeses, cream, cottage cheese, and sour cream. One reliable source for local cheese, the La Perfecta Company, produces about six varieties of fresh and aged cheeses, but not

every type is available at one time. The factory, where the best selection can be found, is on the North Highway. The Eskimo Factory produces good-quality ice cream in several flavors.

There are bakeries where whole wheat bread, French bread, rolls, etc., can be found. An Italian-style pasta shop will prepare carry-out meals if you provide the casserole dish. Local beer and soft drinks are good and inexpensive if you buy refill bottles.

Generally, Nicaraguan production and handling methods fall short of U.S. sanitary standards; therefore, wash all raw vegetables and fruits properly. Washing in detergent, soaking in a bleach solution, and then rinsing thoroughly is recommended. However, this will not kill amebic dysentery spores or other types of contamination. The surest ways to avoid food contamination and food-borne illness are peel or cook fruits and vegetables, cook

meat and seafood well, and avoid raw seafood.

Those with babies should bring in their hand luggage, or mail ahead, a large initial supply of formula (powdered keeps better in the heat) or baby food they may need. Baby food produced in Central America is not always up to U.S. standards.

Clothing

Informal attire is acceptable on most occasions, including in the office. Open-collar dress shirts or locally made guayaberas and slacks are worn by men for both work and social events. Ties, suits, and sport jackets are occasionally worn. An event requiring a suit will usually indicate as much on the invitation. At the office, women wear short dresses, skirts, or slacks. Nylons are often seen but are a matter of choice. At dinners and receptions attended by Nicaraguans or the diplomatic community, women dress somewhat more formally than the men; however, at the same function you may see sequins and cotton dresses. Being improperly attired is almost impossible.

Warm-weather clothes are necessary, especially washable cottons. Avoid "dry clean only" apparel, because local dry cleaners are not always reliable. In addition, long sleeves are often useful at outdoor receptions during the first three months of the dry season, especially on the South Highway, which is cooler than the rest of the city. Lightweight sweaters and jackets are also useful for trips to cooler countries in the region. Local shoes, sandals, and cowboy boots are available. Some shoes are imported from the U.S. or Europe, but selection is limited, and prices are high.

Men: Men's clothing can be made at are reasonable cost. Tailors can copy styles, but quality material is scarce. If you are interested, bring all fabric and notions.

Women: Dressmakers are available at low prices, though they may not be reliable. Some can skillfully copy designs from fashion magazines or

from an existing model. They rarely use patterns. You must furnish fabric and notions, which, if available here, are very expensive. Many Nicaraguans do beautiful hand or machine embroidery as well.

Children: Children's clothes can be made at a reasonable cost from bright cotton bought locally or in the U.S. A limited ready-made supply is available here, but quality is mixed.

Supplies and Services

Bring all contact lenses supplies from the U.S. Few medicines are available in Nicaragua.

Household items bought here can cost two or three times the U.S. price. La Galeria sells electric appliances, radios, cameras, TV's, video machines, perfumes, clothing, liquor, and toys-all at high prices.

Good-quality wicker and wooden porch furniture can be ordered to specification. Several well-known Nicaraguan artists' works may be purchased. Lovely machine embroidered linens are made in Masaya and Granada. Finely woven, decorative hammocks are a Nicaraguan trademark; and woodcrafters, basketweavers, and potters make gift items in various parts of the country. Although these items are not the bargain they once were, they are usually reasonably priced when compared to buying them in the U.S.

Managua has several good restaurants, including two pizza and two sandwich shops. Restaurant prices are high, especially, if you order imported liquor or wine.

A maid will do almost all laundry. Drycleaning establishments exist, but they get mixed reviews. Some have been known to lose or ruin clothing. Some people save dry cleaning for trips to Costa Rica or the U.S.-thus, the need for washable clothing. Garment bags are useful during the dry season, when dust permeates the air. Bring extra hangers. Plastic ones are best as metal ones may rust in the rainy season.

Managua has several beauty and barber shops. Some have relatively modern equipment, but few have sufficient supplies or trained personnel. Some people take advantage of trips outside Nicaragua to have their hair cut and styled, though this industry in Managua is improving.

Dealers in radio and electric appliances, including General Electric, Westinghouse, Philco, and Sony, provide repair service, but replacement parts are scarce. Parts catalogs, which usually come with appliances when purchased, are valuable for ordering parts from the U.S. Bring parts that you feel you may have to replace.

Simple picture framing is available at a reasonable cost. Some people take items to Costa Rica to be framed. At numerous hardware stores, stock is limited and prices for quality, imported goods are high.

Domestic Help

Domestic help is loosely defined as employees engaged in household, gardening, guard, and similar services. They may, or may not, live in. Live-in help is entitled to room, board, and three uniforms as well as salary. Live-out help receives only salary and, perhaps, uniforms. The first month of employment is a trial period for both employer and employee. Either party can then terminate employment for any reason without incurring additional legal obligations. A work contract with employees is not required, but recommended.

Domestics specialize in cooking ("cocinera"), caring for children ("china"), laundry ("lavandera"), gardening ("jardinero"), guards ("celador"), and cleaning ("limpieza"), etc. Most employees combine various specialties required by the family. Because of the high crime rate, all homes should have at least one employee, or family member, home at all times. Potential loss from break-ins outweighs the cost of a competent, honest employee.

After each six-month period, domestic employees get 15 days of paid vacation, but most employees prefer double pay (for the 15 days) in lieu of time off. In December, local law requires the payment of a Christmas bonus equal to a month's salary. Keep a written record, signed by the employee, of wage payments to prevent complications over the amount of Christmas bonus or severance payments due when employment is terminated. Additional provisions regulate days off, sick leave, severance pay, and other matters.

Religious Activities

Most Nicaraguans are Roman Catholic. Catholic Churches in Managua celebrate Masses on Saturdays, Sundays, and Holy Days at various hours from 5 am or 6 am through noon and in the evenings. Mass is celebrated in English at the Lincoln School every Sunday at 9:30 am.

Nondenominational English services are held on Sundays at 8 am at the Nicaragua Christian Academy. Baptist, Mormon, Seventh-Day Adventist, Jehovah's Witnesses, and other missionary congregations conduct services in Spanish at various times during the week. Managua has no synagogues.

Education

For primary and secondary students, the American-Nicaraguan School (ANS), established in 1944, offers English instruction from the nursery and kindergarten levels through grade 12 by American, Nicaraguan, and some third-country national teachers. The school is accredited by the Southern Association of Schools and Colleges. Graduates have successfully attended many U.S. colleges and universities. The school has about 1,250 students and 104 teachers. The school year for all students roughly follows the U.S. system: first semester, early August to mid-December; second semester, early January to early June.

Bus service is available for a monthly fee. Preschool students attend from 7:30 am to 11:30 am; all

other students from 7:40 am to 2:10 pm. Uniforms, consisting of dark blue pants or skirts with white shirts or blouses, are required for all grades here, as they are for all schools in Managua. You may bring shirts or blouses and sew the school patch (available in the business office) on to them. Books are provided. The school offers a standard U.S. college preparatory course, a business course, and a "bachillerato" program in Spanish. One honors course is offered. Spanish-as-a-second language is required at all levels, beginning at grade 2. Advanced placement classes are also available to students, beginning in their sophomore year. These classes are first-year college courses that students can take for college credit. ANS has five science labs, a full computer laboratory, a 5,000-volume library, new gym, outdoor sports facilities, a covered outdoor stage, and counseling quarters. Afterschool sports, drama, and community service activities are offered.

The Nicaraguan Christian Academy (NCA), established in 1991, has grown rapidly. Its current enrollment is 106 with 13 teachers (ten Americans, two Nicaraguans, and one third-country national). NCA has a 40% native English-speaking student body. Its out of the city location, just off the South Highway, makes it all the more appealing to those who live on that side of town. What it lacks in facilities, it makes up for in personal attention in its small classes. Pre-kindergarten hours are 8:30 am to noon; kindergarten, 7:30 am to noon; and grades 1 to 12, 7:30 am to 2:15 pm. NCA's classes begin early September and continue until mid-June.

The Lincoln International School, a Catholic school established in 1991, is located across the highway from NCA and currently has 500 students taught by 40 teachers. The percentage of native-English speakers is unknown. Hours are 7:45 am to 3 pm, and classes start in mid-August.

Notre Dame School, a Catholic school established in 1992, currently has 290 students enrolled (10% of whom are native English speakers) with 24 teachers. The hours are 7:45 am to 2:15 pm and the school year begins mid-August. It offers three diplomas: Nicaraguan, U.S., and International Baccalaureate. Although the last three newly established schools have limited facilities, they offer quality education.

Special Educational Opportunities

Nicaragua has numerous institutions of higher education including the National Autonomous University of Nicaragua (UNAN), the Jesuit-run Central American University (UCA), the Harvard-affiliated Central American Institute of Business Administration (INCAE), the University of Mobile, the American Autonomous University (UAM), the National Agrarian University (UNA), the Polytechnical University (UPOLI), the National Engineering University (UNI), and the Catholic University (UNICA). (See Arts, Science, and Education.)

Some private or small group classes are offered in tennis, swimming, dancing, art, music, and bridge. Instruction in Spanish and other foreign languages is available. Anyone with a skill to teach will find that the community is receptive to new activities. Very limited special educational opportunities are available.

Managua does not have adequate teaching facilities for children with physical or emotional handicaps or learning disabilities.

Sports

The Intercontinental Hotel, the Camino Real Hotel, the Casa de Espana, and the Casa Grande have swimming pools. "Cabana Club" memberships are available at the Intercontinental. Swimming can be enjoyed at various Pacific Ocean beaches, at Lake Xilola, and Laguna de Apoyo. Montelimar, a private beach on the Pacific, has the only first-class overnight accom-

modations in Nicaragua outside Managua.

The Camino Real and Casa de Espana each have two night-lit tennis courts. Casa Grande has one court with night-lighting; the Ticomo Apartments has two day courts. For a minimum fee, Casa de Espana accepts temporary members and offers swimming, tennis, bar, and restaurant facilities.

A modern eight-lane bowling alley, with a sandwich shop, outdoor roller skating rink, and a video gameroom is located off the Masaya Highway.

Nicaragua has many areas for boating, but boats are expensive. For those with access, small-boat sailing is available and popular. Lake Managua, however, is not used for water sports because it is both shallow and contaminated. Rental boats are not generally available, except for fishing areas like San Juan del Sur, where rates are expensive and safe boating measures (such as providing life preservers) are not always practiced. Lake Nicaragua has tarpon, shark, and sawfish. (Lake Nicaragua is the only freshwater lake in the world where sharks have been found.) Guapote, a fish similar to bass, is found in many lakes and streams.

Baseball is the national sport; soccer is number two. Basketball is played in schools, colleges, and is sponsored commercially. Professional and amateur boxing is popular and a source of national pride.

Riding stables featuring Western-style riding lessons are available. Horses can be purchased, but few houses have sufficient grounds to stable a horse. Bring special riding equipment or clothing. Saddles are available locally.

Several regularly scheduled sports events take place at the Casa Grande, such as volleyball, basketball, softball, and exercise classes. Everyone is invited to join. Many people are involved in the local chapter of the Hash House Harriers, a running and walking club.

Touring and Outdoor Activities

Nicaragua has panoramic natural beauty; and its mountains, volcanoes, and lakes offer many new experiences to visitors. Fine hunting, fishing, hiking, bird watching, and boating are available, if you are the rugged outdoor type. However, few package trips exist. You have to make your own arrangements and provide all your own equipment. Hotels, lodges, sanitary facilities, and potable water are nonexistent; and a four-wheel-drive vehicle is essential. Managua has little tourist activity, but local travel agencies offer trips throughout Nicaragua. Cities outside the capital have retained their colonial flavor with low one-story houses, built around an inner patio, lining the sidewalks. The church always faces the main square park and together they usually form the geographic and social center of the town.

Located about an hour's drive from Managua, past the town of Masachapa, southwest of Managua, Montelimar, was once the private hideaway of the Somoza family. Converted to a tourist complex by the Sandinista government and now owned by a Spanish firm, it boasts the best accommodations outside of Managua. You can go for the day and take a picnic or eat at one of the restaurants. Comfortable rooms and cabins are available for overnight guests.

On the Pacific, Pochimil Beach is ½ miles from the town of Masachapa (37 miles southwest of Managua). It has a wide, gently sloping beach. The Nicaraguan Government opened a tourist center with picnic facilities at Pochimil in 1982. The beach is usually quiet on Saturdays and crowded on Sundays or during the Easter season. The undertow and cross currents can be hazardous.

Poneloya beach is 12 miles beyond Leon on a paved road. A hotel is available where you can change clothes and buy food and drinks; however, the accommodations do not appeal to most for an overnight

Aerial view of Managua, Nicaragua

stay. The undertow and cross currents are also hazardous.

San Juan del Sur, located about 95 miles southwest of Managua on the Pacific, can be reached via a poorly paved side road from the Pan-American Highway. It has excellent deep-sea fishing, and you can rent fishing boats by making arrangements in advance.

Lake Xiloa is a crater lake 10 miles from Managua offers swimming, boating, and water skiing. An extensive tourist complex has been built, and the spot is popular as a nearby recreation area. Snacks and drinks are available.

The semiactive Masaya Volcano is 13 miles from Managua on the Masaya Highway. The park has paved roads, observation areas, picnic locations, a museum with a restaurant, and excellent views of the smoking volcano with molten lava in the crater. On the Atlantic coast, the Caribbean seaport of Bluefields can be reached by Nica or Costena Airlines or by poor roads and boat. English is the predominant language in this deeply tropical region. Its West Indies atmosphere differentiates it from the rest of the country.

There are two Corn Islands, both typical tropical isles with waving palms and broad beaches. The larger one is about three miles long and located 40 miles off the coast of Bluefields. Overnight facilities can be obtained in private homes on the islands, but they are primitive. There are no hotels.

Travel to neighboring countries by car is possible, and many people take advantage of the opportunity to escape Managua's heat, shop, and become acquainted with other Central American cultures. San Jose, Costa Rica (about a 7-hour drive), at an altitude of over 3,000 feet, is a modern city with a cool climate. Tegucigalpa, Honduras (about a 5-hour drive), is also over 3,000 feet. The drive to San Salvador takes some 10 hours and to Guatemala City, almost 14 hours. Major roads within Nicaragua are generally in fair condition, depending on the season and money available to patch them; however, the Pan-American Highway is usually passable year round.

All Central American capitals, and Mexico City, can be reached quickly by air on the many regional and U.S. airlines that serve Managua. (See Transportation Regional.) For cur-

rent information, contact the airlines. Approximate round-trip fares from Managua as of April 1997 were: San Jose, \$196; Tegucigalpa, \$200; Guatemala City, \$350; San Salvador, \$240; Mexico City, \$490; Miami, \$574; Houston \$788.

Entertainment

Managua has limited entertainment. Most There is one modern movie theater with two screens. First-run movies arrive within a few months of their U.S. release date. The four cable companies receive 40-65 channels. Rates range from \$20-\$30 a month.

A few foreign cultural groups perform in Managua each year, usually in the Ruben Dario Theater, which is one of the finest in the region. Local folk-dance groups perform there as well. There are usually a couple of major popular music festivals, with artists from other Latin American countries. The Ministry of Culture sponsors some events in the Ruins of the Grand Hotel where a theater has been built.

There are local disco-type nightclubs, as well as clubs that feature Nicaraguan and Latin American musical groups. Some restaurants, including Los Ranchos and the Lobster's Inn, are available for large parties. The Intercontinental and Camino Real Hotels have party, banquet, and conference rooms. However, entertaining is usually done at home. Caterers are available, as well as small musical groups, although prices are high.

Social Activities

The American-Nicaraguan Society, open to all members of the U.S. community, sponsors several events during the year. There is also the relatively new Christian Ladies Tea Group, which meets monthly at the Casa Grande.

The International Women's Club consists of women who are native Nicaraguans, some who married Nicaraguans and settled here, those who came to Nicaragua with their husbands to live, and women living here for only a short time. Their

meetings are conducted in English. The Nicaraguan English Speaking Theater (NEST) is composed of members from throughout the community and offers two productions a year which are highly attended.

Nicaraguans are usually open and hospitable. As the country has attained normalcy, so have relations between our two governments. Even though foreign investment is starting to return after having plummeted during the Sandinista years, there is still only a small foreign business community.

The Alliance Francaise offers language classes and a variety of entertainment, including movies, lectures, plays, and social dances year round.

León

Nicaragua's former capital, and second largest city, can be reached by paved highway, 42 miles from Managua, and has a population of 147,000. It is the seat of part of the University of Nicaragua (UNAN), and several of its faculties are located there. Leon's large 18th-century cathedral contains the tomb of Ruben Dario, Nicaragua's world-renowned poet.

OTHER CITIES

BLUEFIELDS is located in southeast Nicaragua on Bluefields Bay, about 170 miles east of Managua. Situated at the mouth of the Escondido River, it is Nicaragua's chief port on the Caribbean Sea. From here, bananas, coconuts, shrimp, lobsters, and hardwoods are exported. In the 16th and 17th centuries, Bluefields was a meeting point for English and Dutch pirates. In 1678, it became the capital of the British protectorate over the Mosquito Coast. Today, Bluefields is the capital of Yelaya Department and has a population of about 25,000.

Situated in the Pacific coastlands about 70 miles northwest of Managua, **CHINANDEGA** is a thriving

industrial city. It is the capital of Chinandega Department as well as a processing point for the hinterland. Revolutionary battles took place here in 1927, and again in 1978-1979. Crops grown near the city include bananas, sugarcane, and cotton. Chinandega's industries produce furniture, perfume, and toilet water. Several sawmills, metalworks, and tanneries are located in Chinandega. Its 1995 population was about 67,800. A line of the Pacific Railway passes through Chinandega; the city is connected to Managua by highway.

CORINTO, located on the Pacific Ocean about 75 miles northwest of Managua, is Nicaragua's chief port. Sugar, hides, coffee, cotton, and wood are exported from here. With a population of approximately 20,000, Corinto is also a railroad terminus.

DIRIAMBÁ is a 26 miles southwest of Managua, on the Pan-American Highway, and lies in the heart of a coffee-growing region. Limestone quarries and saltworks are also located near the city. It is situated at an altitude of 2,000 feet and has a pleasant climate. Diriamba was heavily damaged during the 1978-79 civil war. Casares and La Boquita are two undeveloped black sand beaches on the Pacific out of Diriamba.

ESTELÍ is an agricultural hub on the Estelí River, 70 miles north of Managua. The downtown area was virtually ruined in the heavy fighting of the revolution in 1978-1979. The Spanish settled Estelí near prehistoric stone figures; today, it is a commercial center on the Pan-American Highway. Industries in Estelí include hat manufacturing, sawmilling, and tanning. Several crops are grown near the city, among them tobacco, cotton, fruit, vegetables, and sesame. The estimated population of this departmental capital is 30,600.

GRANADA, Nicaragua's oldest city, formerly the country's commercial center, was founded by Hernandez de Cordoba, Nicaragua's colonizer in 1523. Its population is

about 75,000. The epitaphs on the marble tombs of Granada's cemetery provide a fascinating history of the city's turbulent past. The city is on the northwestern shore of the country's large freshwater Lake Nicaragua, 28 miles over paved highway from Managua. Here tourists are attracted to a group of beautiful lake islands, "Las Isletas." Ometepe and Zapatera, volcanic-formed islands in the lakes, are well-known sites for pre-Colombian artifacts.

JINOTEGA is a departmental capital in northern Nicaragua, 70 miles north-northwest of Managua. Coffee, tobacco, corn, beans, potatoes, wheat, and fruits are grown here. Several industries, including coffee processing, tanning, hat manufacturing, and flour milling are located in the city. A highway connects the city to Matagalpa. Jinotega's estimated population is 17,000.

JINOTEPE lies in the Diriamba Highlands, about 25 miles south of Managua. It is the capital of Carazo Department in addition to being an important commercial and manufacturing point. Quarries are located nearby and coffee, rice, sugarcane, and sesame are grown in surrounding farmland. The city's church contains a rare reliquary of precious gems. The area honors St. James the Great, its patron, with an annual festival. The city was heavily damaged during the 1978-79 civil war. An estimated 18,000 people live in Jinotepe, which is situated on the Pan-American Highway.

MASAYA, the "City of Flowers," 16 miles from Managua, has a population of 95,000. The town is well known to natives, and tourists as well, as Nicaragua's handicrafts center. Embroidered dresses and shirts, shoes, handbags, fiber floor-mats, hand fans, hammocks, black coral jewelry, wicker furniture, small gifts crafted of wood, and filigree-gold- and - silver work are available. One of the country's better-known restaurants, the Tip Top, which specializes in chicken dishes, is nearby.

MATAGALPA. This town is 81 miles north of Managua on a paved branch of the Pan American Highway and has a population of about 63,000. The city, at an altitude of 2,100 feet and consequently a cooler climate, is set in hilly country and surrounded by beautiful coffee plantations. The Selva Negra (Schwarzwald) Mountain Hotel has a restaurant. Near Matagalpa on the Dariense Cordillera.

COUNTRY PROFILE

Geography and Climate

The largest of the Central American Republics, Nicaragua borders Costa Rica to the south and Honduras to the north. It covers 57,143 square miles (about the size of Wisconsin) including the region's largest fresh water lakes-Lake Nicaragua and Lake Managua which total 3,500 square miles. The country is divided into three geographic sections: the drier Pacific coastal plain to the west with its low mountain ranges near the sea; the wetter and cooler mountainous extension of the Central American Highlands which runs from northwest to southeast across the middle of the country; and the hot and humid flat Atlantic lowlands along the east coast.

Most of the population is located in western Nicaragua on the fertile lowland Pacific Plains which surround the lakes and extend north to the Gulf of Fonseca. This region is the political and commercial heart of the country. Lake Managua and Lake Nicaragua dominate the map of this area, and a series of young volcanoes, many still active, dot the coastal plain paralleling the Central American Highlands. The tallest volcanoes reach 5,700 feet, and two are visible from Managua.

The mountain highland provinces of Matagalpa and Jinotega, northeast of the volcanoes and lakes, are more sparsely populated and Nicaragua's

major coffee producing areas. The easternmost section of the highlands receives the warm, wet Caribbean winds and is mainly sparsely settled rain forest, with a few operating gold mines near the town of Bonanza.

Eastern Nicaragua, with one-third of the total national territory which is an area about the size of El Salvador, has about 10% of the population and is tropical rain forests and pine-flats. The region, largely ignored by the Spanish, was a British protectorate until 1860. Even today, many of the people along the Atlantic coast prefer to speak English.

Nicaragua's climate varies with altitude and season. The summer, or dry season, from mid-November to mid-May, is hot and dry, with cooler nights. Winter, better described as the rainy season, from mid-May to mid-November, is hot and humid, with short, heavy tropical showers that may occur daily, often accompanied by violent electrical storms. Streams flood in the rainy season and dry up the rest of the year. The average daily high temperature in Managua ranges from 79°F to 93°F. Nights are usually temperate. Temperatures in the mountains can dip as low as 61°F, while the east coast high may be a humid 84°F.

Nicaragua offers appealing landscapes from the primitive Caribbean island beauty of Corn Island, to the lovely lake views near the colonial city of Granada, to the stark beauty of the semiactive volcano located between Managua and Masaya. Volcanic Lakes Xiloa and Apoyo, near Managua, are excellent for swimming and day sailing, and provide relief from the heat. Pacific Ocean beaches are nearby, and the cooler rainforest mountains of Esteli and Matagalpa are just a few hours drive away. (Note: Accommodations outside Managua are limited. See Recreation and Social Life.)

Managua never fully recovered from the 1972 earthquake, in which the entire city center was destroyed, and suffered further neglect

through the 1980s. Today, it remains mostly deserted, with visible earthquake ruins. Managua is now a widely scattered collection of neighborhoods that rim an empty hub, with no centrally located business or shopping district. However, the area near the recently inaugurated Cathedral appears to be becoming the city's new focal point.

Population

In 1995, the Government of Nicaragua conducted a census of the country's population, but the final results of this census have not been published. In 1996, however, voter registration predictions, based on preliminary results of the 1995 census, were found to be underestimated across the board. Observers, therefore, suspect that the 1995 census was flawed, particularly in remote rural areas of north and central Nicaragua, where conditions make it extremely difficult to conduct an accurate census. The national estimate is 4.4 million, with almost 1 million in Managua alone.

Nicaragua's history of political centralism, and geographic and ethnic diversity, has led to the development of three distinct societies. In the western one-third, known as the Pacific and where the bulk of the population, wealth, and political power is concentrated, the people are Spanish-speaking, predominantly Catholic mestizos.

Despite its minute population, the east coast has more ethnic diversity—primarily Caribbean black and Miskito, Sumo, and Rama Indians. These groups differ culturally and linguistically from each other, and, from their Spanish-speaking countrymen in the west and center. The foreign influence in this region, primarily from England but also from the U.S., shares dominance with the Hispanic culture. Caribbean English and Spanish are spoken by many communities of the Caribbean coast, but in the indigenous communities Miskito, Rama, and Sumo predominate.

The central corridor of Nicaragua, where most fighting occurred in the 1980s, has registered tremendous growth, both in terms of population and economic activity, since 1990. This growth is due in part to Nicaraguans returning to their country since the end of the war in 1990. In this region, a largely mestizo, Spanish-speaking population is pushing into areas populated almost exclusively by the indigenous peoples who predominate in the east coast.

Public Institutions

The election held October 20, 1996, culminated Nicaragua's transition to democracy that began with the 1990 election of President Violeta Chamorro. President Chamorro's tenure followed over 10 years of Sandinista rule and armed conflict between the Sandinista Popular Army (EPS) and the Nicaragua Resistance (RN). During President Chamorro's nearly seven years in office, the government achieved major progress toward consolidating democratic institutions, advancing national reconciliation, stabilizing the economy, privatizing state-owned enterprises, and reducing human rights violations.

In all, Nicaragua's 35 political parties participated in the 1996 elections, independently or as part of one of five electoral coalitions. With nearly 52% of the vote the center-right Liberal Alliance, a coalition of five political parties and sectors of another two, won the presidency for its leader, Armoldo Aleman, a plurality in the national legislature, and a large majority of the mayoral races. The Sandinista National Liberation Front (FSLN) ended in second place with 38%. Only two out of 14 mayors belong to third parties. The first transfer of power in recent Nicaraguan history from one democratically elected president to another occurred January 10, 1997 with the Aleman administration's inauguration.

Nicaragua is a constitutional democracy with executive, legislative, judicial and electoral branches of government. In 1995, the executive

and legislative branches negotiated a reform of the 1987 Sandinista constitution, giving the National Assembly impressive new powers and independence, including over taxation (formerly, an exclusive executive branch power) and the power to elect Supreme Court judges and other important public officials.

Both the President and the Member; of the unicameral National Assembly (legislature) are elected to concurrent five-year terms. The President is head of state, as well as the head of government.

The National Assembly consists of 90 deputies elected from party lists, draws at the department and national level, plus, those defeated presidential candidates who obtained a minimal quotient of votes. In the 1996 elections, the Liberal Alliance won a plurality of 42 seats, the FSLN won 36 seats, and nine other parties won the remaining 15 seats.

The Supreme Court supervises functioning of a still largely ineffective, and overburdened, judicial system. As part of 1995 constitutional reforms, the Supreme Court's independence was strengthened by increasing the number of magistrates from organizing and conducting elections, plebiscites, and referendums. Magistrates and their alternates are elected to five-year terms by the National Assembly.

Freedom of speech is a right, guaranteed by the Nicaraguan constitution, and vigorously exercised by its people. Diverse viewpoints are freely and openly discussed in the media and in academia. Nicaragua does not use state censorship. Other constitutional freedoms include peaceful assembly and association, freedom of religion, and freedom of movement within the country, as well as foreign travel, emigration, and repatriation. Domestic and international human rights monitors operate freely within the country.

Both the military and police are increasingly professional and apolitical. In February 1995, General Joaquin Cuadra replaced then-Sandinista army commander General Humberto Ortega, in accordance with a new military code, enacted in 1994. He has espoused greater professionalism in the renamed Army of Nicaragua.

President Aleman has established a civilian-led Ministry of Defense to ensure that civilians assume their appropriate role in setting national defense and security policies. A new police organization law, passed by the National Assembly and signed into law in August 1996, further codified civilian control and professionalizing of that law enforcement agency.

Arts, Science, and Education

The Sandinista regime encouraged the arts, and the current government continues to support them, within budget constraints. There are a National School of Dance, National School of Fine Arts, and a National Conservatory of Music, along with several private schools dedicated to the arts.

Although the works of Nicaraguan plastic artists and artisans are internationally known, the nation's true pride is its poets. Indeed, it has been said that every Nicaraguan is a poet. Ruben Dario, a late 19th-century Nicaraguan poet, is credited with introducing modernism to Spanish poetry. He is internationally known and highly honored in his native land. A museum dedicated to his memory is located in Leon, and the impressive National Theater is named after him.

The national university scene continues to develop, as private universities continue to grow and prosper alongside Nicaragua's traditional, state-funded universities.

The Central American University, UCA, has a law school, social sci-

ences/humanities faculties, and the only journalism program in the country. The National Autonomous University of Nicaragua in Leon (UNAN-Leon, enrollment: 7,000 students), was founded in 1812. This state-run university has the most prestigious law and medical schools in Nicaragua. The state-run National Autonomous University of Nicaragua in Managua, UNAN Managua, was founded in 1941 as the Central University of Managua. It was officially part of UNAN-Leon until 1982. Its enrollment is 15,000 students and its degree programs include strong business and economics programs. It is the only university that trains the nation's primary and secondary schoolteachers, including teachers of English.

The Central American Business Administration Institute, INCAS (enrollment: 200 students), offers a solid, U.S.-style graduate business program. In 1996, the MBA program was reinstated after a 13-year absence. The Business School of Harvard University financially supports and exchanges faculty with INCAS.

The private Catholic University, UNICA (enrollment: 1,500 students), opened in 1993 on land donated by the Managua mayor's office. It is openly aligned with the Catholic Church and has right-of-center political interests, but it accepts students (with good grades) of all faiths and political leanings. It is now retrenching after an initial, ambitious growth spurt and has trimmed its course offerings and cut engineering as a major.

The American University, UAM (enrollment: 1,500 students), opened in 1993 in four small buildings, but has expanded dramatically since then. It runs one of only two international relations/diplomacy programs in Nicaragua, has a medical school, and recently established a dentistry program. UAM has recently been concentrating on its business course offerings and developing its computer science program. The University of Mobile Latin American campus (enrollment: 300

students), was founded in San Marcos in 1993. It is a private, U.S.-accredited, English-language branch of the Alabama university of the same name. This campus boasts the most modern facilities in Nicaragua. Each professor reportedly has a Ph.D. or Master's degree. It offers computer science, English literature, marine biology, biology, environmental technology, finance, accounting, business administration, economics, marketing, and tourism degrees. It owns and operates the University Hotel in Jinotepe as part of its hotel and restaurant management program.

The Polytechnical University, UPOLI (enrollment: 2,500 students), is a technical and scientific institution founded in 1967. It is administered by the Baptist Convention, with some government funding. The National Engineering University, UNI (enrollment: 8,000 students), was founded in 1982. Curriculums cover all engineering fields, except agriculture and forestry. UNI does a good job of selling services to the private sector and also receives assistance from European governments. The quality of instruction and equipment is fair but improving. Until SPRINT recently appeared on the scene, UNI served as Nicaragua's hub for Internet users.

The National Agrarian University, UNA (enrollment: 1,500 students), founded in 1990, was previously the Agricultural College of UNAN-Managua. UNA works closely with the Ministry of Agriculture and the Ministry of Natural Resources.

The Centro Cultural Nicaraguense-Norteamericano (CCNN), a non-profit binational center, offers English- and Spanish-language instruction, a 6,000-volume library of American books, and a wide assortment of U.S. periodicals.

Commerce and Industry

Nicaragua began to institute free market reforms in 1991 after 12

years of economic free fall under the Sandinista regime. Despite some setbacks, the country has made dramatic progress: privatizing almost 350 state enterprises, reducing inflation from 13,490% to 12%, and cutting the foreign debt by 50%. The economy began expanding in 1994 and grew a very strong 5.5% in 1996 (its best performance since 1977). As a result, total GDP reached \$2.029 billion.

Despite this growing economy, Nicaragua remains the second poorest nation in the hemisphere with a per capita GDP of \$476 (below where it stood before the Sandinista takeover in 1979). Unemployment, although falling, is 16%, and another 36% are underemployed. Nicaragua suffers from persistent trade deficits. That, along with a high-debt service burden and government fiscal deficit, leaves the nation highly dependent on foreign assistance (which equaled 22% of GDP in 1996).

One of the key engines of economic growth has been production for export. Exports rose to \$70 million in 1996, up 28% from 1995. Although traditional products such as coffee, meat, and sugar continued to lead the list of Nicaraguan exports, during 1996 the total value of nontraditional exports surpassed that of traditional goods for the first time. The fastest growing of these new products were "maquila" goods (apparel), bananas, gold, seafood, and new agricultural products such as sesame, melons, and onions. Rapid expansion of the tourist industry in 1996 made it the nation's third largest source of foreign exchange. The U.S. is the largest trading partner by far; the source of 26% of Nicaragua's imports, and the destination of 45% of its exports.

Nicaragua is primarily an agricultural country, but construction, mining, fisheries, and general commerce have also been expanding strongly during the last few years. The economy in 1996 saw increasing net inflows of foreign private capital, which totaled about \$190

million. The private banking sector continued to expand and strengthen. Private banks, which did not exist six years ago, currently hold 70% of the nation's deposit base.

Nicaragua now appears poised for rapid economic growth. However, long-term success at attracting investment, creating jobs, and reducing poverty depend on the Nicaraguan Government's ability to stay on track with an International Monetary Fund Program, resolve the thousands of Sandinista-era property confiscation cases, and continue to open its economy to foreign trade.

Transportation

Automobiles

Because of unreliable public transportation, a car is essential in Managua. The most popular cars are small-sized, four- or six-cylinder, U.S., or Japanese models. Many people, especially those who like to explore off-the-beaten track, have found four-wheel-drive vehicles very useful on Nicaragua's poor road system. High ground clearance for speed bumps and potholes is also an asset, and the high cost of gasoline (some \$2.50 a gallon) makes fuel economy a priority. Several Japanese and American (GM and Ford) distributorships have vehicles that sell above U.S. prices, but they do not meet U.S. specifications. Several car rental agencies, including Budget and Avis, have vehicles available at higher U.S. prices.

At Managua's several garages, repair quality varies. Labor is cheaper than in the U.S., but parts and tires cost much more than U.S. prices; and, most parts are not available locally at any price.

Cars shipped to the U.S. Despatch Agent in Miami are surface shipped to Puerto Cortes, Honduras, and transported overland to Managua. Send your car in good mechanical condition with good tires and undercoating. The tropical climate, humidity, rain, dust, and rough road

conditions all contribute to heavy wear-and-tear on tires and vehicles. Don't bring a convertible—they offer less protection from the elements and are more susceptible to vandalism.

Unleaded gasoline, including super and diesel, is readily available, but expensive.

All vehicles must have local third party-liability insurance coverage (cost \$107) before you receive license plates. Driving, especially at night, is often hazardous due to poor local driving habits, a lack of streetlights, and the rundown condition of vehicles and roads. In addition, pedestrians, vendors, beggars, and animals often wander in the driving lanes with no idea of the dangers they cause to themselves and to others.

Local

Local transportation is crowded with unsafe conditions. Most taxis are mid 70s Japanese models or Soviet-made Ladas in poor condition. Cabdrivers can, and do, pick up additional passengers; therefore, routes are usually indirect. The local bus system connects all parts of the city for a low fare but buses are scarce, uncomfortable, overcrowded (as much as triple the capacity), and in need of repair. Numerous pickup trucks, "camionetas," carry passengers as well. At rush hour, the crowded camionetas resemble cattle trucks.

Drivers who frequently fail to observe traffic rules are at fault in a large percentage of the traffic accidents. The disorderly driving of buses and taxis aggravates the already difficult driving conditions.

Regional

Augusto Cesar Sandino Airport, 11 kilometers from Managua, handles international traffic, including jet service.

Managua is currently served by several airlines, including Continental, American, Nica, Aviateca, TACA, COPA, Iberia, and LACSA. American carriers offer daily direct flights

to Miami and three times a week to Houston. The national airline, Nica, is the only major airline that provides both domestic and international service. Tickets for all airlines are purchased in U.S. currency, and credit cards are accepted.

Nicaragua has a primary highway system connecting principal cities by paved but poorly maintained roads. The highway network is mostly confined to the populous western part of the country. One paved road extends east to Rama, and an unpaved road goes to Puerto Cabezas; the latter is often impassable in the rainy season. The Pan American Highway (all paved but poorly maintained) is the country's major travel artery. It enters Nicaragua in the north at El Espino and exits in the south at Penas Blancas on the Costa Rican border.

Various privately owned bus companies have lines connecting Managua with all of western Nicaragua. Many are vans. Buses also run on a limited schedule to Costa Rica and Honduras.

Communications

Telephone and Telegraph

Local- and long-distance telephone service is available in Managua. International telephone and telegraph are handled by the Nicaraguan Telecommunications and Post Office Company (TELCOR). Direct dialing to the U.S. costs about \$1.15 a minute. If you have AT&T, SPRINT, and MCI cards you can make direct calls. The number of telephone lines is severely limited, new phones are hard to obtain, malfunctions occur frequently, and repairs are slow. Local and in-country calls are often difficult to make; overseas calls are more easily made.

Radio and TV

Managua has 120 radio stations broadcasting on both AM and FM. With the return to democracy, censorship has been lifted, and news programs have proliferated. Other offerings are usually limited to music and some religious program-

ming. For best FM reception, bring an external antenna (indoor or outdoor).

Shortwave radio reception is fairly good using built-in antennas. Broadcasts in English by VOA, BBC, and others are common and offer a variety of programs. To operate a ham radio, you must request and receive a license from the Radio Club of Nicaragua. If you are approved, TELCOR issues you permission to go on the air.

The eight TV stations currently on the air include privately run channel 2; Sandinista-affiliated Channel 4; private, conservative, channel 8; privately owned business-oriented channel 10 and channel 12, privately owned channel 19; channel 21, a religious broadcaster, and private music and youth-oriented channel 23. Almost all offer a mix of Latin soap operas, sports, and movies, some of which are dubbed, and some, subtitled. Several cable TV operators are active in the areas in and offer a full range of U.S. programming for about \$20-\$30 a month.

Newspapers, Magazines, and Technical Journals

Nicaragua's print media are no longer subject to censorship. Managua has four daily newspapers: La Prensa is an independent newspaper owned by former President Chamorro's family; Barricada, no longer the official organ of the FSLN, still favorably reports the Sandinista's programs and views; El Nuevo Diario, which has the largest circulation, is supportive of the Sandinistas but highly critical of the U.S.; La Tribuna, privately owned, conservative, and independent, began publishing in 1993.

Several weekly magazines are published; best known among them are: El Semanario-political news and commentary, generally pro-Sandinista and Confidential-left-of-center news and commentary.

Several U.S. news and business magazines such as Time, Newsweek, and Fortune, as well as the

Miami Herald and the New York Times are available, but slightly delayed, at local newsstands.

Health and Medicine

Medical Facilities

Local hospitals are far below U.S. standards; however, considerable improvements have been noted in the Baptist and military hospitals since 1990. Most medicines are available. X-ray, ultrasound, and endoscopy equipment is new. No elective surgery is done incountry. Some emergencies, however, can be, and have been, properly handled. Serious cases can be stabilized and evacuated either by Air Ambulance or commercial airline. Medical evacuations are authorized to Miami. Expectant mothers return to the U.S. for delivery. Many local laboratories are now equipped to perform almost all tests.

Community Health

Reports on local dental care are mixed. Some have had good experiences, but others have not. Some local dentists are well trained, but even those find it difficult to acquire high-quality equipment, which is expensive in a practice setting that will not financially support such purchases. In general, basic dental care (i.e., cleaning, polishing, and fillings) can be done locally. Have more complicated procedures, such as root canals, done elsewhere. Orthodontic care is available and at a lower cost than in the U.S.

Opticians and optometrists are available, and lens-grinding facilities exist and can be used if needed. Prices are higher than the level of quality warrants and, if you need glasses, bring them. Bring sunglasses also.

Public sanitation measures are rudimentary at best with resulting health and hygiene hazards. Garbage collection is erratic and collection areas are usually strewn with refuse, which is scattered by impoverished individuals "dumpster diving" in search of usable items and

feral dogs and rodents foraging for something edible.

Shanty towns, without water or sewage systems, have sprung up in every neighborhood. These areas are a reservoir of contagious illnesses such as typhoid, cholera, infectious hepatitis, and mosquito-borne illnesses.

Despite local government efforts to maintain the water system, and even chlorinate the water supply, the water system is aging and has been a victim of earthquakes, illegal tapping into the water mains by shanty town residents that increases the risk of contamination, and frequent water shortages in the dry season that leave stagnant water in the system that appears at faucets when the flow is restored. For these reasons, regard suspiciously any water that has not been boiled, or otherwise treated. Carry bottled water when you travel outside Managua.

Mosquito-borne illnesses are endemic. Malaria, in the form of vivax malaria, is present in most parts of the country, and dengue-fever infection rates are the hemisphere's highest. Budget restrictions severely hinder mosquito spraying to limited times and areas, which is only minimally effective.

Most food sold in public markets is handled and stored in unsanitary conditions. Perishable items in these markets are not well refrigerated, and erratic power supplies make proper storage impossible even in those shops that have refrigeration.

Suitable facilities are not available for the handicapped.

Preventive Measures

Typhoid, polio, tetanus, and diphtheria vaccinations are recommended before leaving the U.S. Incidents of infectious hepatitis are increasing in Nicaragua, and Hepatitis A and Hepatitis B vaccine are recommended as a preventive measure.

Intestinal diseases affect everyone at one time or another, but you can experience fewer episodes if you take suitable precautions with food, your personal hygiene, and your household help. Boil or filter drinking water and water for ice. Fruits and vegetables should be washed thoroughly, peeled, or soaked in chlorine (chlorox) or iodine solution. Cook meats and seafood well before eating. If intestinal diseases occur, you can find medications to deal with them at local pharmacies.

During the dry season, dust and wind make life uncomfortable for those who suffer from sinusitis, allergies, and other respiratory ailments. Asthmatics must also contend with mold that forms during the rainy season; however, using a room dehumidifier can help relieve the problem.

The most hazardous insects in Managua are houseflies, mosquitoes, spiders, and scorpions. Roaches, ants, and other common household insects can be controlled with aerosol bombs. Regular fumigation is necessary. Poisonous snakes are seen occasionally.

Malaria is a hazard. It is recommended that chloroquine, a malaria suppressant, is taken weekly. Several U.S. travelers have been affected by dengue fever which, at times, reaches epidemic proportions. Keeping bedroom windows screened, or closed with air-conditioning, cuts down on possibility of mosquito bites. Mosquito netting is a good idea, especially for small children, and you can purchase it locally.

NOTES FOR TRAVELERS

Passage, Customs & Duties

A U.S. passport, valid for six months beyond the duration of the visit, is required to enter Nicaragua. Tourists must also have an onward or return ticket and evidence of sufficient funds to support themselves

during their stay. U.S. citizens do not require a visa, but a tourist card valid for 90 days must be purchased upon arrival. Tourist card fees and airport departure taxes must be paid in U.S. dollars. Visitors remaining more than 90 days must obtain an extension from Nicaraguan immigration. Failure to do so prevents departure until a fine is paid. For further information regarding entry, departure, and customs requirements, travelers should contact the Embassy of Nicaragua at 1627 New Hampshire Avenue, N.W., Washington D.C. 20009; telephone (202) 939-6570 or (202) 939-6531; e-mail at embanic_prensa@andyne.net; or a Nicaraguan consulate in Atlanta, Houston, Los Angeles, Milwaukee, Miami, New Orleans, New York, Pittsburgh, San Francisco, or San Juan, Puerto Rico.

Although many restaurants and hotels now accept credit cards, especially in Managua, acceptance is not as widespread as in the U.S. Travelers checks are accepted at a few major hotels and may be exchanged for local currency at authorized exchange facilities ("casas de cambio"). There are few automatic teller machines, particularly outside Managua. English is not widely spoken.

Nicaragua is prone to a wide variety of natural disasters, including earthquakes, hurricanes and volcanic eruptions. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov>.

U.S. citizens living in or visiting Nicaragua are encouraged to register at the Consular Section of the U.S. Embassy in Managua and obtain updated information on travel and security in Nicaragua. The U.S. Embassy is located at Kilometer 4½ (4.5) Carretera Sur, Managua; telephone (505) 266-6010 or 268-0123; after hours telephone (505) 266-6038; Consular Section fax (505)266-9943; e-mail: consular-

managu@state.gov; web page http://usembassy.state.gov/managua

Pets

Pets must have a certificate of rabies vaccine, health certificate, and certificate of origin (pet shop receipt, veterinarian's proof of origin, etc.) The health certificate must be certified by the Nicaraguan Embassy or Consulate before departing for Managua. Send the following information in advance of arrival: a) pet's species, b) breed, c) name, d) color, e) weight, f) sex, and g) height (in inches).

Firearms and Ammunition

Government of Nicaragua regulations require clear proof of ownership during customs inspection. A Government of Nicaragua firearms permit application must be filled out (with accompanying photos of the applicant).

Currency, Banking, and Weights and Measures

All currency transactions are regulated by the Government of Nicaragua. The official unit of money is the cordoba, exchanged (September 1999) at a rate of 012.04 (cordobas) to US\$1. Local currency can be obtained at licensed money exchangers (Casas de Cambio) or local banks. All other currency transactions are illegal and should be avoided. U.S. currency can be obtained and personal checks may be cashed at Bancentro.

Nicaragua is partially on the metric system; weight is normally measured in pounds rather than kilograms, but distance is measured in kilometers.

No limitation is placed on amount of dollars or traveler's checks you can bring into the country. Traveler's checks are accepted by local banks, but the rate is likely to be below that available at a Casa de Cambio.

RECOMMENDED READING

The following titles are provided as a general indication of the material published on this country:

Most current literature on Nicaragua was written in 1980s. Many of these books are biased toward one side or the other of the civil war that ravaged Nicaragua during that decade. A few books of a general nature on Nicaragua and its people are listed here. Most information on Nicaragua is included in larger studies on Central America.

Federal Research Division Library of Congress. *Nicaragua: A Country Study*. (Area Handbook Series.) 1994.

Barrios de Chamorro, Violeta. *Dreams of the Heart*. (1996). The autobiography of President Violeta Barrios de Chamorro.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated August 1996. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

PANAMA, because of its strategic position on the isthmus connecting the North and South American continents, was a major center for exploration and expansion during the 16th and 17th centuries. In 1821, some years after the decline of Spanish colonial power in the Western Hemisphere, the territory became part of Greater Colombia.

The question of a waterway across the isthmus, linking the Atlantic and Pacific oceans, and Colombia's refusal to ratify a treaty allowing construction, led to Panama's revolt and secession. The United States supported Panama with military forces, and recognized the new state on November 6, 1903. A treaty was

signed, giving the U.S. perpetual control over what came to be known as the Canal Zone, a designation that no longer applies. The covenant was amended in 1977, and implemented in 1979, with provision for ending U.S. military presence in Panama on the last day of this century, and for turning over responsibility and operation of the canal to the Panamanians.

MAJOR CITY

Panama City

Panama City, the capital and principal city of the Republic of Panama, is situated on the Pacific side of the country. In 2000, it had an approximate population of 1,088,000. Often called the "Crossroads of the World," it offers a uniquely international ambience and an active life with modern shopping centers, art exhibitions and many excellent NSrestaurants.

Food

A wide variety of American and ethnic foods are available at modern supermarkets in Panama City. Seafood, meat, fruits, vegetables, and canned and packaged goods are readily available in Panamanian

shops, although prepared foods which are imported from the U.S. or elsewhere can be expensive. Restaurants vary widely in both cost and cuisine. A full lunch can be had for seven dollars. There are also numerous top quality restaurants specializing in seafood, or any type of ethnic food, around the city. Pizza Hut, Dominos Pizza and other vendors offer home and office delivery.

Clothing

Summer clothes are worn year round in Panama. Cottons are the most comfortable, but cotton blends are satisfactory. Fabrics that are 100% synthetic neither absorb moisture nor "breathe" and are uncomfortable in Panama's humid climate. Many office buildings are overly air-conditioned so a light jacket or sweater can come in handy.

All types of clothing suitable for the Panamanian climate are available in retail shops in the Canal area, although selection may be limited at any given time. Prices in the local retail stores can be higher than U.S. prices, and size ranges are limited.

Men: Normal attire for male staff during working hours is a suit and tie. It is also preferred by many Panamanians. Some men use either the "guayabera" or a short-sleeved shirt. Casual sports attire is the

rule outside the office. The guayabera, a long, untucked embroidered shirt, is frequently worn for daytime or evening social functions and can be purchased locally.

Women: Female officers and staff members are most comfortable in lightweight suits or tailored or otherwise professional-looking one or two-piece dresses. A blazer, whether in a traditional color or something more tropical, is a useful addition to a working wardrobe. Casual outfits should be brought for general use, and beachwear, shorts, and slacks for recreational purposes. Shorts are not generally worn on the streets, but pants are acceptable. Sun hats are useful when outdoors. In recent years, the trend in female formal wear in Panama has been towards street-length rather than long gowns.

Children: Department of Defense schools do not enforce a dress code. Girls wear mostly shirts or blouses with slacks, jeans or skirts. Boys wear long pants (mostly jeans) or shorts with T-shirts or sport shirts. Private schools require school uniforms, which vary from school to school.

Supplies and Services

American brands of toilet articles, cosmetics, home medicines, drugs, tobacco products, cleaning materials, and household and entertainment accessories are readily available in retail stores in Panama City, but at prices higher than in the United States. Local brands are available at retail stores for very reasonable prices.

Panama City has good facilities for shoe repair, laundry and dry-cleaning, and radio and automobile repair. Beauty and barbershops are also available. You can take advantage of competent tailoring and dressmaking services here.

Religious Activities

Although Panama is a predominantly Catholic country (approximately 85%), places of worship of all denominations—with services in both English and Spanish—are

City view in Panama

Cory Langley. Reproduced by permission.

located in Panama City and the Canal area. Sunday schools and church-related activities are numerous.

Education

Department of Defense Dependent Schools (DODDS) operates a school system in the canal area including grades K-12, as well as a two-year college curriculum. The schools are modeled on the U.S. public school system and are accredited by the Middle States Association of Colleges and Secondary Schools. Instruction is in English. The schools are modern and well-equipped. Special education is available for children ages three and older. DODDS also has a talented and gifted program. Bus transportation is available for students in grades Kindergarten through twelfth grade. The school year runs from late August until mid June.

La Escuela Internacional de Panama (the International School of Panama) is the alternative school most often attended by American students, and is increasingly used due to the gradual closure of the DODDS system in Panama. Classes presently include grades K-12. The school's academic program meets the requirements of the Panama-

nian Ministry of Education and it has been accredited by the Southern Association of Colleges and Schools of the United States. Instruction is in English except for a 40-minute class in Spanish each day.

Applications for admission to the International School are accepted at any time during the year. Classes are limited to a maximum of 24 students. All students are tested by the school counselor or other qualified staff member at the time of registration. If you would like to initiate the admission process before arriving in Panama, you may send your child's Iowa Test (ITBS) results or the equivalent. Following testing, the school's Admissions Committee will review the completed application to evaluate the student's potential and to determine whether acceptance will contribute to a balance of nationalities, transient vs. local population, language capability, personal interests, and personalities. The school year runs from early August to late June, with approximately seven weeks of vacation from just before Christmas until the end of January.

There are two other private schools: St. Mary's Parochial School and the Episcopal School of Panama both schools are well regarded in Pan-

ama. St. Mary's Parochial School, located in the canal area, offers classes for pre-school through the twelfth grade. Instruction is in English and Spanish. Registration is held one day during the first week of March. Preregistration is not possible.

The Episcopal School of Panama (Colegio Episcopal de Panama) is a small college preparatory school. Both English and Spanish are taught as first languages. This school has a waiting list. Both of these schools are in session from April through December.

There are several good nursery schools on the military bases, in the canal area, and in Panama City. Those located on the military bases conduct classes in English from September through June. All others, as a general rule, are bilingual with a preference toward Spanish, and are in session from April through December. It is best to postpone any decision until parents can visit the schools to determine which will best suit the needs and personality of their child.

For most schools you will need proof of age (for pre-kindergarten and kindergarten), a copy of the student's last report card, and an up-to-date immunization record. All schools that comply with the regulations set forth by the Panamanian Ministry of Education (all but DODDS) require that the birth certificate or a photocopy of the passport, and the previous year's school record be translated into Spanish and notarized.

Special Educational Opportunities

The Panama Canal College, part of the Department of Defense School system, offers a two-year college course with Associate degrees available in Business Administration, Accounting, Business Data Processing, and others, including Secretarial skills. Current full-time tuition is \$716 per semester for sponsored dependents under the age of 21. Dependent spouses may attend on a part-time basis (up to

eleven credits), at a charge of \$65.00 per credit hour.

The Panama Canal branch of Florida State University is located at Albrook Air Force Base. The university offers Bachelor of Arts degrees in Interamerican Studies, International Affairs and Social Science. In addition, students may complete up to 90 semester credit hours towards the 120 required for a degree in Business Administration. The last thirty credit hours must be taken in Florida. Tuition at Florida State is \$90.00 per semester credit hour.

Florida-based Nova University offers several degrees at the Panama Learning Center, which was founded in 1977. These include a Bachelor of Science degree in Professional Management, a Master of Arts degree in Applied Linguistics and Teaching English as a Second Language, and a Master's degree in Business Administration, and Computer Programs. The cost per credit hour ranges from \$125.00 for undergraduates to \$200.00 for graduate courses.

The University of Oklahoma has an extension campus at Albrook, offering a Master of Educational Psychology and a Master of Public Administration. Current tuition is \$203.75 per credit hour.

The above institutions are fully accredited. For additional information, they may be contacted at the following addresses:

Nova University
Panama Center
Unit 0924
APO, AA 34002

The University of Panama is located in Panama City. In general, you must successfully complete a five-year course to obtain a degree. The University will accept certificates from recognized secondary schools. Many classes are held in the evening and all instruction is in Spanish. For further information contact the University of Panama at Urbanizacion El Cangrejo, Republic of Panama.

The YMCA in the Canal area holds classes in Spanish, cooking, art, oil painting, ceramics, design, jewelry making, bridge, swimming, scuba diving and a variety of other subjects.

Sports

Organized athletic programs for adults are limited, but you can participate on an individual basis in almost any warm-weather sport. A number of swimming pools, tennis courts, golf courses, and stables are found throughout the city and the canal area. You can purchase athletic equipment of all types locally or at the sport shops on the bases.

Several hotels offer memberships to use their pools and other recreational facilities. There are also several quality health clubs in the city, as well as the gymnasiums on the bases, that offer aerobics and weightlifting. A variety of private social athletic clubs in Panama include the Club de Golf de Panama, the Club de Montana Altos del Lago, the Club de Yates y Pesca, and the Club Union.

Canal area facilities for children (organized by the Youth Recreation Program) include swimming, bowling leagues, league baseball and softball (December through April), soccer (in the Spring), Little League football (August through October), and lessons in judo, scuba diving, karate, and gymnastics.

Deep-sea and fresh-water fishing in the waters in and around Panama are among the best in the world. You can use most types of fresh-water and saltwater tackle. Fishing in Gatun Lake for Peacock Bass is a

popular pastime. Private boat skiing, fishing, and cruising is facilitated by the availability of various water crafts from several different locations for modest fees.

For the hunter, a variety of wild fowl, small game animals, and some larger animals such as deer abound. Most hunters in Panama use a shotgun, but air rifles are also used occasionally. Panama has a trapshoot club, as well as several rifle ranges in the canal area. Neither a hunting nor a fishing license is required in the Republic of Panama. The Panamanian Government does require a gun permit. The canal area has some easily-met licensing requirements, although there are some restrictions.

Horse racing, boxing and baseball are the favorite spectator sports in Panama. A local track holds races each week.

Baseball, basketball, softball and soccer are played extensively on the amateur level, and facilities are available for squash, racquetball, volleyball, and weight training.

Touring and Outdoor Activities

One small zoo is located in the Canal area. The Panama Canal Experimental Gardens are a popular spot for visits or picnics. Barro Colorado Island is a biological research center and forest preserve that is located in Gatun Lake within the canal system; day trips are made to explore this site where the Smithsonian Institute researches local flora and fauna.

Museums include the Canal Area Museum, Museum of Contemporary Art, the National Museum of Panama, and the Museum of the Panamanian Man, with its interesting collection of pre-Columbian pottery and gold artifacts.

Another point of interest is the ruins of "Panama La Vieja," the first Panamanian city on the Pacific side of the isthmus, which was founded by the Spaniards in 1519. It was destroyed by the pirate Henry Mor-

gan in 1671. The Church of San Jose, with its famous Golden Altar, is another well-known site located in the colonial sector of Panama City. According to legend, the altar was saved from the assaults of Morgan the Pirate in the year 1671 when it was painted with white-wash to look like wood.

You can find a moderate change of climate in El Valle (2,000 feet) in the Cordillera de Veraguas, 80 miles from Panama, where a fair hotel is available. Boquete and Volcan are 350 miles away. At elevations of 4,000 and 7,000 feet, they offer spectacular mountain scenery, a cool climate, and good hotels. Contadora Island in the Las Perlas Archipelago is seventeen minutes by air from Panama City. The resort-like island offers a hotel, private homes that may be rented, and beautiful beaches.

San Jose, Costa Rica, is accessible by air at a reasonable price. The Colombian island of San Andres, as well as Bogota, Medellin, Cali, Barranquilla, and Cartagena in Colombia are also within easy reach by air. Country clearance must be obtained from the U.S. Embassy in Bogota prior to any travel to Colombia. By car, San Jose, Costa Rica is about thirteen hours from Panama City.

Beaches are available on the Pacific side (Panama Bay) approximately 60-90 minutes from Panama City. Beaches on the Atlantic side (Caribbean Sea) can be reached in a two-to three-hour drive. Both areas provide a number of good beaches and varied facilities.

Entertainment

Panama City has a number of fine indoor theaters, as well as those in the canal area, where first-run American films are shown. Those shown in the city are in English with Spanish subtitles. Video stores also abound. No professional theater exists, but a few small theater groups produce plays periodically in Spanish and English. The Ancon Theater Guild has an active production schedule and there has been high interest and involvement from

the mission community. The Balboa High School drama department presents two productions per year.

Concerts are presented by visiting musical artists and dance groups, either under the sponsorship of the National Concert Association, The National Institute of Culture or various Embassies. The national symphony and the ballet company also perform periodically.

A few cocktail lounges feature small combos and the major hotels have Happy Hours with local variety artists.

During the dry season, folk dancing in native costumes can be seen at the picturesque ruins of Old Panama and in some interior towns. A number of small fairs and festivals are held in the provinces at various times during the year. The ATLAPA Convention Center attracts a few big name musical and dance groups; most of the productions charge big-city prices for tickets.

Social Activities

Ample opportunities exist for social contact with both Panamanians and American residents of Panama and the American civilian and military population in the canal area. Many resident Americans play important roles in business and professional circles.

There are a number of social, vocational and fraternal organizations in the canal area. The Panama Audubon Society offers unique bird and nature study opportunities, and a Junior Audubon Society was established in 1986 to sponsor monthly outings and activities for children ages nine and over. The "Who's New" is another active and well-organized club where Americans may meet and mix with people of other nationalities. This club offers a book study group, children's play groups, bridge, tennis and a variety of other activities in addition to monthly coffees.

Extracurricular activities for school age children include Boy and Girl Scouts and Little League sports as

well as the activities organized by the Youth Recreation Centers on the military bases.

Apply the same techniques here to get to know people that you would to develop social contacts in any overseas community. While knowledge of Spanish helps considerably, many Panamanians speak English. Memberships in local international fraternal organizations such as the Lions Club and Rotary Club are available.

OTHER CITIES

BALBOA, at the Panama Canal's Pacific entrance, is the largest town in the area formerly designated as the Canal Zone. It has a population of only 3,000, but is the administrative headquarters of the new joint Panama Canal Commission, which replaced the U.S. governing body in October 1979. An American naval base remains here, with military forces of more than 10,000. Balboa is the port for Panama City.

Situated 90 miles southwest of Panama City, **CHITRÉ** is the capital of Herrera Province. The Río de la Villa flows by, nourishing locally grown livestock and agricultural products. Chitré is a marketing center that produces ice and beverages. Transportation facilities for this city of approximately 34,700 include a road link to the Pan-American Highway and an airfield.

COLÓN is the second largest city in Panama, with a population of 141,000 (2000 est.) Located at the Caribbean entrance to the Panama Canal, Colón is situated at the northern terminus of the trans-Panama railroad. The city was founded in 1850 by Americans constructing the railroad, and was originally named Aspinwall after William H. Aspinwall, one of the builders. The name was changed to Colón ("Columbus" in Spanish), in honor of Christopher Columbus, in 1890. An important port and commercial center, Colón was made a free trade zone in 1953.

CRISTÓBAL, a suburb of Colón, is also an important port in this area. It has a population of about 12,000. Rainbow City, formerly called Silver City, with a population of 3,000, adjoins Cristóbal.

DAVID, 200 miles west of Panama City, is the fourth largest city in the country and the capital of mountainous Chiriquí Province. It dates to 1738, when gold prospectors set up camp here. David, though modern, maintains old traditions. San José Church has two bell towers—one to call to worship, another to warn against Indian attack. This major commercial area's economy depends on industries such as meat-packing, food processing, and tanning. David may be best known for the saddles and harnesses made here. The city is located near Enrique Malek Airport and had a population of roughly 103,000 in 2000.

PORTOBELLO (also called Porto Bello and Puerto Bello) is located on the Caribbean side of Panama, about 20 miles northeast of Colón. Founded in 1597 just west of Christopher Columbus' earlier colony of Nombre de Dios, Portobello lies in a banana-growing region and has an excellent harbor. Once a thriving colonial city, Portobello was linked to Panama City by a stone highway. As a port, it sent out and received the royal Spanish fleets and was a transshipment point for Spanish Pacific riches. Portobello declined with the building of the trans-Panama railroad and the Panama Canal, and has a population of just under 3,000 (1992 est.) Sir Francis Drake died aboard ship near here in 1596, and was buried at sea.

SANTIAGO is one of Panama's oldest cities, situated about 110 miles southwest of Panama City. The capital of Veraguas Province, it thrived in colonial times, as many historic buildings indicate. Santiago is an agricultural marketing center with local gold deposits. The municipality has an airfield and is on the Pan-American Highway. Approximately 61,000 people live in Santiago.

COUNTRY PROFILE

Geography and Climate

The Republic of Panama, occupying the isthmus connecting the North and South American continents, is situated between 77° and 83° west longitude and 7° and °30' north latitude. Covering an area of some 29,208 square miles, the Republic of Panama is slightly smaller than South Carolina. It is bounded on the north by the Caribbean Sea, on the south by the Pacific Ocean, on the east by Colombia, and on the west by Costa Rica. Due to the configuration of the isthmus, in Panama City the sun rises over the Pacific.

The Panama Canal Commission, in conjunction with a binational board of directors, operates the 43-mile canal which passes through the isthmus between the Atlantic (Caribbean) and Pacific oceans. Under the Panama Canal Treaty of 1977, the Commission will remain a U.S. Government agency until December 31, 1999, at which time the canal comes under total Panamanian control.

Panama has two well-defined regions: the Atlantic Watershed, which is covered by tropical rain forest, and the Pacific Watershed, whose narrow valleys and coastal plains receive less rainfall. Mountain ranges form the backbone of the Isthmus. Although some peaks reach 11,000 feet, the "cordillera" descends in the canal area to a height of only 290 feet.

Panama has a year-round tropical climate. During the dry season, which runs from January through April, there is only sporadic rainfall. The rainy season extends from May through December, with heaviest precipitation between September and November. The average annual rainfall in Panama City, on the Pacific side, is 69 inches; in Colon, on the Atlantic side, 128 inches. Temperatures and humidity vary

only slightly between the two seasons. During the rainy months, average relative humidity is 85%; in the dry season, only 55 to 75%. The average annual temperature in Panama City is 26°C (80°F), with an average maximum of 30°C (87°F) and an average minimum of 22°C (3°F). Colon's temperature and humidity are about the same. Nearly constant year-round breezes provide some relief from the heat, especially at night.

Population

In 2000 Panama's estimated population was 2,821,085. Nearly half of the country's population is located in the province of Panama, with the next largest concentrations located in the provinces of Chiriqui and Colon. Approximately two-thirds of the population is located in these three of the country's nine provinces.

Rodrigo de Bastidas, one of the captains accompanying Columbus on his second voyage to America, discovered the Isthmus of Panama in 1502. Columbus visited Portobelo, a small bay on the Atlantic, on his fourth voyage in 1502. Panama City was founded in 1519, about 5 miles east of its present site. Because of its strategic position, Panama City became the crossroads of Spanish exploration and expansion in America.

At the time of Columbus, more than sixty Indian tribes were living on the isthmus. Today, however, Indians comprise only 6% of the population. While the majority of these are Kuna and Guaymi, a small group of Chocoe Indians remain in the southeastern part of the Darien Province.

Direct descendants of the Spaniards who colonized the country remain influential, but no longer dominate Panama's social, economic, and political life. Mixed-blooded Panamanians share prominent political and professional status with the Spanish-descendant group, and participate fully in Panama's diverse and influential social circles. Much of Panama's population is a mix of

Spanish-Indian and black Hispanic ancestry. Immigrants from China, India, Europe, the Middle East, and South and Central America can be found in the growing middle class. Blacks of West Indian descent, whose ancestors provided most of the labor in digging the canal, tend to be concentrated in the provinces of Panama and Colon. While North American influence on Panama's basically Hispanic culture is evident in Panama City and Colon, the history and heritage of these distinct ethnic groups have combined to form the modern Panamanian way of life.

In the interior provinces, the ethnic makeup is more homogenous. The Spanish-Indian mixture is preponderant, and North American influence on customs and mores is relatively minor.

Spanish is the official language of the country. Although many Panamanians speak English, a working knowledge of Spanish is useful for shopping, communicating with servants, taking taxis, speaking with neighbors, and, especially, traveling in the interior.

Public Institutions

On November 28, 1821, the country declared its secession from Spain and associated itself with Colombia. This alliance existed in one form or another until November 3, 1903, when Panama was established as an independent republic.

Panama's constitution, which was adopted in 1972, provides for a representative democracy with direct popular election of the president and legislators, an independent judiciary, and a broad range of individual and civil rights. The constitution delineates the respective powers of the three branches of government, and contains extensive sections establishing broad economic, social and cultural rights and objectives for all its citizens. There have been several notable amendments. The last two, passed in 1994, abolished the Panamanian military and created an agency of

the Panamanian government to deal with the reverted areas of the Panama Canal zone.

Operation Just Cause, which began on December 19th, 1989, ended years of political instability in Panama with the reinstatement of President Guillermo Endara's administration and the removal of Manuel Noriega as national leader. 1994 saw a return to free, fair, and violence-free elections for Panama, in which Ernesto Perez Balladares won the Presidency as the head of a multi-party coalition. Balladares won with only 33% of the popular vote, but his party, the Revolutionary Democratic Party (PRD), regained a near-majority in the Legislature. One of the first moves of this administration was to amend the Constitution to abolish the military, breaking with the tainted past of the Noriega era.

Legislators are chosen in a complicated process. Certain seats are granted to the party winning the plurality of the popular vote in the electoral circuits, while others are awarded by proportional representation in the more populous areas, and still others are reserved for Indian minorities. Legislators are nominated by a party and are subject to its discipline.

The 1983 constitutional reforms significantly increased the powers of the Legislative Assembly relative to the other branches of government. In contrast to the situation that prevailed between 1968 and 1984, the legislature now has a significant hand in budget matters and in establishing public institutions. Legislators are able to interpellate and censor Ministers and to impeach and try Presidents and Supreme Court justices. They may override a presidential veto of approved legislation with a two-thirds majority vote. The Assembly also has the power to declare war and to grant amnesty for political crimes. In addition, it must approve the appointment of Supreme Court justices, the Attorney General, the Solicitor General or Prosecutor, and other high administrative officials.

The Executive Branch is comprised of the President of the Republic, two Vice-Presidents, and the Ministers of State, or Cabinet Secretaries. The President and Vice Presidents and other elected authorities serve five-year terms. Voting is by direct and secret ballot, and a plurality is needed for election.

The President is responsible for appointing the Cabinet, coordinating the government, and maintaining public order. Along with the Cabinet, the President approves and promulgates laws passed by the Legislature and ensures their enforcement; appoints police, provincial governors and heads of various public agencies; prepares the national budget for submission to the legislature and conducts the country's foreign affairs.

The President, Vice Presidents, and Ministers of State together form the Cabinet Council, which appoints the Magistrates of the Supreme Court of Justice, the Attorney General, and the Solicitor General, or Prosecutor, subject to legislative approval.

The President and Vice Presidents may be removed from office for abusing their constitutional duties, for violent actions or coercion during an electoral process, or for preventing the meeting of the Legislative Assembly. The President and Vice Presidents need not belong to the same political party.

The Judicial Branch is comprised of the Supreme Court of Justice, the Electoral- and other Tribunals. The latter are created by the Legislature, while the first two are constitutionally decreed.

Under the 1983 constitutional amendments, Supreme Court Magistrates are appointed by the Cabinet Council and confirmed by the Legislature for staggered ten-year terms, with two magistrates appointed every other year, or as present magistrates resign or retire. The nine-member court is divided into three-judge panels for civil, criminal and administrative cases.

Its decisions are final and binding. The Judicial Branch is the ultimate interpreter of the Panamanian constitution and of the constitutionality of the laws and decrees of the Executive and Legislative Branches.

A separate three-judge Electoral Tribunal oversees elections, with one member chosen by the Supreme Court, the Legislature, and the Executive, respectively. Supreme Court justices choose the magistrates who sit on other tribunals, and the magistrates in turn choose the judges who sit on the lower courts. All sitting judges are prohibited from engaging in any other employment except as law professors, and from participating in political activities, except as voters. Although the Constitution provides for the right to trial by jury, the Legislative Assembly is empowered to determine whether this right will apply in cases against the President, Supreme Court Justices or members of the Legislative Assembly.

The Public Ministry, or Attorney General's office, is separate from the Ministry of Government and Justice and is constitutionally a part of the Judicial Branch. The Attorney General is appointed for a 10-year term. The Constitution mandates setting aside at least 2% of the annual government income for the Judicial Branch, thereby establishing its financial independence from the Legislature and the Executive. The Attorney General also oversees Panama's criminal police investigative agency, the Judicial Technical Police (PTJ).

Panama is a civil law country, with most law created by legislative codes rather than judicial decision. In 1983, the Legislature enacted new criminal and administrative codes. Implementation of some of these reforms has been delayed, however, for budgetary reasons.

Panamanian Public Forces. On December 20, 1989, the former Panamanian Defense Forces (PDF) were neutralized by U.S. armed

forces during Operation Just Cause and, over the next several days, were diminished as an effective military force. As a result, the PDF was disbanded.

Panama no longer desires a military, and in 1994 the Constitution was amended, abolishing the standing army. The Panamanian Public Forces (PPF), a civilian law enforcement organization comprised of police, air, and sea services was created in the wake of Operation Just Cause. It drew heavily on the ranks of the former PDF because of the urgent requirement to reestablish law and order throughout Panama.

The PPF, the Panamanian civil police force, remains Panama's national security force. Challenged by rising international crime and narco-trafficking activity, the PPF continues to adapt to Panama's security concerns. Its efforts in this direction are aided by the U.S. Department of Justice, as well as other agencies. Resource limits are placing financial constraints on the PPF's ability to face up to dynamic crime challenges.

The Panamanian National Police (PNP) is charged with maintaining law and order nationwide. Directed by a civilian attorney, the PNP falls under the control of the Minister of Government and Justice. The police draw heavy criticism from opposition groups and the media for a variety of reasons related to its own transitional problems. The PNP still has no organic law upon which to establish itself firmly. In the meantime, and with U.S. assistance, it strives to build confidence, establish institutional roots, and—most importantly—serve the Panamanian public.

The Panama Canal Treaty. The Panama Canal Treaty was negotiated by four different U.S. Administrations over a period of thirteen years. This treaty, along with a separate treaty pertaining to the neutrality of the Canal, and a host of ancillary agreements, was signed on September 7, 1977. The U.S. Senate

gave its consent to ratification of the Canal Treaty on April 18, 1978.

As a result of the treaties, control of the Canal is presently in the process of being turned over to the Government of Panama. On December 31, 1999 Panama assumed ownership of and full operational responsibility for the Canal. The Panama Canal Commission, which operates the Canal, is a U.S. Government agency; however, its administrator is Panamanian.

The Department of Defense, under the terms of the Carter-Torrijos Treaty of 1977, is in the process of withdrawing U.S. forces from Panama. This process is scheduled to be completed by the year 2000. The U.S. military drawdown will include the closure of U.S. Military PX and Commissary facilities, Gorgas Hospital, DODDS schools and other social facilities and services to which embassy personnel now have access.

In 1994 the newly elected government amended the Constitution to create the Inter-oceanic Regional Authority (ARI) to plan for and implement the reversion of all lands formerly belonging to the U.S.

The U.S. Embassy in Panama has the responsibility of ensuring that the treaties and their related agreements are carried out smoothly and effectively and to ensure that the rights of the U.S. Government and of American citizens in Panama are respected.

Arts, Science, and Education

Panama's intellectual and cultural life largely revolves around activities sponsored by the Instituto Nacional de Cultura (INAC), the National Concert Association, and, from time to time, the University of Panama. INAC sponsors the National Theater, School of Dance, School of Plastic Arts, Symphony Orchestra, and Ballet.

Architecture is rich and varied, ranging from colonial to modern in private homes, public buildings, commercial office buildings, and high rise condominiums.

A fairly active art colony is to be found here, and several Panamanian artists have achieved international recognition. Accomplishments in music, drama, dance, and literature have been less notable in the last few years.

In the Canal area, research projects conducted at Gorgas Hospital (renowned for its work in tropical medicine), by the Middle America Research Unit of the National Institutes of Health, the Smithsonian Institution's Tropical Research Institute on Barro Colorado Island, and the Gorgas Memorial Institute are of international import. And, of course, the Panama Canal represents one of the greatest engineering feats of modern times.

Panamanians have historically attached great importance to education. This is reflected in its literacy rate of 83%—one of the highest in Latin America. There are a number of very good private schools in the country. Many graduates of the Instituto Nacional, a public school known throughout the country, have subsequently entered Panamanian political life. The Ministry of Education is working hard to improve instructional facilities and teacher preparation throughout the country.

The University of Panama consists of a main campus in Panama City and branches in three provincial capitals. Total enrollment is approximately 45,000. The Technological University of Panama, also based in Panama City, has branches in seven provinces and an enrollment of 8,000. A private Catholic university, Santa Maria la Antigua, has an enrollment of 4,500. American officers receive a cordial welcome at these universities, and many opportunities exist for exchanges and cooperative programs. Instruction is in Spanish.

The Panama Canal College, a two-year institution linked to the U.S. Department of Defense, is open to all qualified individuals. Several other U.S. institutions, including Nova, Florida State and Oklahoma universities, also offer courses in Panama. Instruction in these universities and at the Panama Canal College is in English, and course credits can be transferred to institutions in the United States.

Commerce and Industry

Panama's economy is based primarily on a well-developed services sector that accounts for 76.5% of GDP. Services include the Panama Canal, banking, insurance, government, the Colon Free Zone, and the transisthmian oil pipeline. Manufacturing, mining, utilities, and construction together account for 16.5% of GDP. Manufacturing is principally geared to production of items such as processed foods, clothing, chemical products, and construction materials for the domestic market. Agriculture, forestry, and fisheries account for the remaining 7% of GDP. Principal primary products include bananas, shrimp, sugar, coffee, meat, dairy products, tropical fruits, rice, corn, and beans. The sectors of the Panamanian economy with the greatest potential for substantial growth are mining, tourism, and maritime services.

From 1968 until 1989, Panama was governed by a military regime which implemented a statist plan of economic development. The government nationalized various private enterprises and instituted price controls on many goods, some of which still exist today. In 1990 the newly reinstated democratic government embarked on a reform program to liberalize trade and modernize government operations. These reforms were diluted, however, by entrenched special interest groups.

In 1994 a new government was elected and took office with an even more ambitious program of reforms, including GATT/WTO accession and

labor code reforms. The Government of Panama has recently taken initial steps toward privatization of the state-owned telecommunications company and has revoked the government-owned electricity utility's monopoly on electricity generation. Reform of the national labor code, although one of this administration's top priorities, is being met with strong opposition by the various labor organizations.

The use of the U.S. dollar as Panama's currency means that fiscal policy is the government's principal macroeconomic policy instrument. Because Panama does not issue its own currency, government spending and investment are strictly bound by tax and non-tax revenues and the government's ability to borrow.

Panama Canal business rose in 1994 over the previous year. Ocean-going transits increased 2.6% to 12,671 or 34.7 vessels daily, and net tonnage, on which tolls are assessed, jumped 7.9%. Toll revenues rose 3.1% to US\$425 million. The near-term outlook is for continued moderate to strong growth in both tonnage and toll revenue projected for 1995 and 1996. Work on expanding the canal's capacity by widening the Gaillard Cut through the continental divide continues and numerous other maintenance and upgrade projects are constantly in progress.

The development of areas reverting to Panama under the Panama Canal Treaties will present many opportunities for the Government of Panama, as well as investors. Projects in tourism, industry, and environmental areas will be possible. The exact nature of these projects will be determined by a development plan which is being prepared by Panama's Interoceanic Regional Authority (ARI).

The Colon Free Zone is the largest of its kind in Latin America and rivals Hong Kong in overall activity. Total imports to the Free Zone reached US\$5.0 billion in 1994, an increase of 11.5% per 1993. Free Zone trade is expected to show solid

Ships in Moraflores Locks, Panama

Susan Rock. Reproduced by permission.

growth during 1995 as it has already made many of the adjustments necessary to deal with market liberalization in Latin America. U.S. exports to the free zone totaled approximately US\$370 million in 1994. The free zone's contribution to real GDP increased to 9.2% in 1994.

Transportation

Local

Taxi service is readily available and generally adequate. City buses are often very poorly maintained however, and riding them is not recommended for safety and security reasons.

Regional

Panama has two major highways. The Transisthmian Highway links Panama City to Colon. A Branch of the Inter-American Highway extends from the Costa Rican border to the town of Chepo, about 35 miles beyond Panama City. Both roads are two-lane and paved. There is also a recently finished road between Chepo and Colombia. Streets within Panama City and Colon are adequate. Many are subject to flooding during the rainy season.

American Airlines and Continental Airlines, COPA, and other major foreign carriers operate daily flights

to the United States and other parts of the world from Panama's Tocumen International Airport. All flights to or from Panama enter and exit the U.S. from either Houston or Miami. AERO-PERLAS and ALAS-CHIRICANAS are local carriers that provide service to Panama's provinces, Contadora and the San Blas Islands. These flights operate from Paitilla Airport, a ten-minute drive from the city center.

Communications

Telephone and Telegraph

Telephone service in Panama City is good, although in some sections of the city residents must wait long periods for initial installation of a telephone.

Long-distance service is available to all parts of the country. Facilities are excellent for overseas calls to the United States (with direct dialing from Panama City) and to other parts of the world via radio or satellite. Rates vary depending on country and time zone.

Telegram facilities are excellent and provide worldwide service.

Radio and TV

There are both English and Spanish-language AM and FM radio programs and commercial TV stations

(including one educational channel), some of which broadcast sporting events and reruns of American feature programs and movies (all dubbed).

The Southern Command Network (SCN), an affiliate of the Armed Forces Radio and Television Service, broadcasts on AM and FM radio in English on a 24-hour basis. SCN-TV presents news programs, sports events, old movies, reruns of U.S. feature programs and Saturday-morning children's programs in English. SCN-TV broadcasts daily: the weekly schedule is published in the base newspaper, *The Tropic Times*. American variety and series programs are broadcast in English. Live TV coverage via satellite of some news programs or sporting and special events is also provided. The station broadcasts Monday through Sunday from 6:00 a.m. until midnight, plus additional late night movies on weekends.

Cable TV is available in Panama City and provides a variety of satellite programming, including the Disney Channel, HBO/Showtime, CNN, and ESPN. There is usually an installation fee; monthly fees are upwards of \$40.

Local cinemas are comparable in quality to those in the U.S., yet prices are much lower. First run movies are shown in English with Spanish subtitles. Local video stores rent both VHS and Beta tapes at reasonable prices comparable to stateside, usually with Spanish subtitles.

Newspapers, Magazines, and Technical Journals

Six Spanish-language newspapers (including three tabloids) are published on a daily basis. The English-language international edition of *The Miami Herald* is published locally.

Airmail editions of *USA Today* are available on the bases. Copies of the *New York Times* and the *Wall Street Journal* are occasionally available at the major hotels. Along with the *Washington Post*, they are also

available through subscription, but rates are higher than in the U.S. Home delivery of U.S. newspapers is available, but delivery is one day late.

The Latin American issues of *Time* and *Newsweek* are sold at most newsstands, drug stores, and in major hotels, usually within days of their domestic editions in the United States. Other U.S. magazines (on topics such as cars, sports, and outdoor hobbies) are available on the bases. Prices are comparable to those in the United States, although tax must be paid when purchased off the bases.

Health and Medicine

Medical Facilities

Health care services for U.S. citizens residing in Panama are generally excellent. Nearly all medical and surgical specialties are represented. Many of the local dentists and orthodontists are considered to be on a par with those in the United States, and prices are slightly lower than U.S. prices.

In conjunction with the U.S. military drawdown in Panama Gorgas Hospital is scheduled to close in 1998; however Paitilla Hospital is up to U.S. standards. Many Americans have been very pleased with the quality of care received there.

Many standard medications are available from Gorgas Hospital or from local pharmacies in Panama.

Community Health

For a tropical region, Panama's community health standards are good. With normal precautions one can avoid most health hazards. The cities of Panama and Colon have potable and fluoridated water supplies, although water should be boiled before drinking for 24 hours following water cutoffs. Travelers to more remote parts of the country should boil their water or use a water purifier. Milk is pasteurized and bottled under sanitary conditions, as are locally produced beers and other

beverages. Domestically produced meats are packaged and sold under generally sanitary conditions in the larger grocery stores. Local fruits and vegetables should be thoroughly washed before eating. Fresh fish and seafood are plentiful and inexpensive. Between the local markets and bakeries there is little one cannot find in Panama.

Trash is collected daily in most areas of Panama City. Roaches, ants, and other insects as well as mice and rats are ever present in this tropical climate, but, with vigilance, they can be kept under control. Until recently, Panama City had an active mosquito control program.

Common medical complaints include colds and other upper respiratory infections. Sinus and asthmatic conditions may be aggravated by the humidity, molds, and pollens. Swimmer's ear is a common complaint among both children and adults.

More serious illnesses such as malaria and yellow fever are virtually nonexistent in Panama City, but persons travelling to the interior of the country may be at risk. Hepatitis is considered a significant health threat, and individuals are encouraged to keep their gamma globulin inoculations current. Tuberculosis is endemic and common among residents of the poorer areas. Dengue fever cases are on the increase.

Preventive Measures

Persons being assigned to Panama should ensure that their Yellow Fever, Typhoid, and Tetanus/ Diphtheria immunizations, as well as a TB skin test are current. Hepatitis-A vaccine or gamma globulin is also recommended.

Immunization requirements for Panamanian schools vary. The Department of Defense schools require the following immunizations:

Oral Polio Vaccine—3 doses of Trivalent, at least one of which was

administered after the fourth birthday.

Diphtheria/Tetanus/Pertussis*—3 doses, given singly or in combination, at least one dose of which was administered after fourth birthday and the last dose was given within ten years.

**Measles (Rubeola)
Mumps**

Rubella—1 dose of live attenuated vaccine given singly or in combination on or after 15 months of age. Individuals immunized after one year of age but before 15 months need not be reimmunized.

*Pertussis immunization is not required for individuals after their seventh birthday.

NOTES FOR TRAVELERS

Passage, Customs & Duties

U.S. citizens are encouraged to obtain a U.S. passport before traveling to Panama. Although entry into Panama is permitted with any proof of U.S. citizenship (such as a certified birth certificate or a Naturalization Certificate) and official photo identification (such as a driver's license), travelers may experience difficulties entering and/or exiting Panama when not in possession of a valid U.S. passport. Panamanian law requires that travelers must either purchase a tourist card from the airline serving Panama or obtain a visa from a Panamanian embassy or consulate before traveling to Panama. Further information may be obtained from the Embassy of Panama, 2862 McGill Terrace, N.W., Washington, D.C. 20009, tel. (202) 483-1407, or the Panamanian consulates in Atlanta, Chicago, Houston, Los Angeles, Miami, New Orleans, New York, Philadelphia or Tampa.

U.S. citizens transiting the Panama Canal as passengers do not need to obtain visas, report to customs, or pay any fees. U.S. citizens piloting

private craft through the canal should contact the U.S. Embassy in Panama City for details on required procedures.

Panamanian customs authorities may enforce strict regulations concerning temporary importation into or export from Panama of items such as firearms and ammunition, cultural property, endangered wildlife species, narcotics, biological material, and food products. It is advisable to contact the Embassy of Panama in Washington or one of Panama's consulates in the United States for specific information regarding customs requirements.

U.S. citizens living in or visiting Panama are encouraged to register at the Consular Section of the U.S. Embassy in Panama and obtain updated information on travel and security within Panama. The Consular Section of the U.S. Embassy is located on Panama Bay, Panama City, at Balboa Avenue and 39th Street. The international mailing address is Apartado 6959, Panama 5, Republic of Panama. The U.S. mailing address is U.S. Embassy Panama, Department of State, Washington, D.C. 20521-9100. The telephone number of the Consular Section is 011-507-207-7000/7030 (after hours, 011-507-207-7000); fax 011-507-207-7278; web site <http://www.orbi.net/usispan/> and e-mail is usispan@pty.com.

Pets

Panama requires a veterinary certificate of health and certification of vaccination against rabies, distemper, hepatitis, leptospirosis, parvovirus (dogs) and feline panleucopenia (cats) for each arriving pet. Each certificate must be authenticated by a Panamanian consul to be acceptable. This can be done by sending your pet's health certification to the following address for a consular stamp. There is a fee for this service.

Consulate General of Panama
2862 McGill Terrace NW
Washington, D.C. 20008
202-483-8413/8416(fax)

All incoming pets are placed in quarantine. If your pet arrives on a commercial flight to Tocumen Airport it must be examined by a Panamanian vet at the airport prior to being moved to quarantine. If your pet arrives on Friday it may not be examined and released until Monday. There is a transportation fee of \$13.50, as well as admission and importation permit fees.

The following documents are required for your pet to enter Panama: a health certificate for the animal (good for only ten days), a rabies vaccination certificate, a stamp from a Panamanian Consulate as outlined above, and a copy of your travel orders. These documents are to be attached, in an envelope, to the outside of the animal's cage.

Currency, Banking, and Weights and Measures

The official currency of Panama is the Balboa (B/) which is on par value to the U.S. dollar. The Balboa exists only in coin form and, in Panama, is interchangeable with U.S. coins. The official paper currency of Panama are U.S. dollar bills.

Both the U.S. system of weights and measures and the metric system are used in Panama. Speed limits are posted in miles per hour in some places, kilometers per hour in other places, some signs give both miles and kilometers per hour, and in many areas the limits are not posted.

Complete banking facilities are available at many banks in Panama City, including branches of Chase Manhattan, Citibank, Bank of Boston and American Express. Many local retail outlets accept personal checks drawn on U.S. banks.

You can purchase or cash travelers checks locally without difficulty. To deposit or cash U.S. checks in Panamanian banks, a service charge is assessed. Major U.S. credit cards are widely accepted in shops, hotels and restaurants.

Asunción, Paraguay

PARAGUAY

Republic of Paraguay

Major Cities:

Asunción, Encarnación

Minor Cities:

Caacupé, Caazapá, Ciudad Del Este, Concepción, Coronel Oviedo, Luque, Pedro Juan Caballero, Pilar, Villarrica

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 2000 for Paraguay. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Located in the heart of South America, Paraguay is a landlocked, agricultural country about the size of California. The Parana-Paraguay River system is Paraguay's commercial access to the outside world. The eastern section of Paraguay, where most of the population lives, consists of rolling, fertile, farming areas and grasslands. The western section, called the Chaco, is a low lying plateau covered with grassy meadows, bogs, spiny bushes, palms, and small trees. Lack of roads and navigable rivers makes much of this region inaccessible. Paraguay's climate is variable and unpredictable. It is subtropical, with summer and winter seasons opposite those in the U.S.

Older than Buenos Aires, Asuncion, the capital, has not yet lost its aura of provincialism and isolation. With profuse, colorful year-round blossoms in residential gardens and along tree-lined avenues, Asuncion retains a quiet charm. Entertainment is diverse, with ready access to the nearby countries of Brazil, Argentina, and Uruguay. Paraguayans are generally well-disposed toward Americans, and informal acquaintances can easily be made with coworkers, neighbors, and at school events. Social life, however, centers on the family and contact with outsiders is somewhat limited. The people do appreciate it when someone takes the trouble to learn their native language, Guarani.

MAJOR CITIES

Asunción

Older than Buenos Aires, Asuncion has not yet lost its aura of provincialism and isolation. Founded on August 15, 1537, and once the capital of the colonial River Plata Vice-royalty, it remains the center of Paraguayan activity. Increasing numbers of visitors (mostly from Argentina and Brazil) are attracted to Paraguay during the Southern Hemisphere winter. Modern hotels

and office buildings are springing up beside weathered structures of an earlier vintage in Asuncion's bustling downtown shopping and business area. With profuse, colorful year-round blossoms in residential gardens and along tree-lined avenues, Asuncion retains a quiet charm.

Utilities

Short water outages occur occasionally in Asuncion. Laundry areas and kitchens do not always have hot water. Showers are much more common than bathtubs.

Short power outages occur occasionally. Electrical current is 220v, 50-cycle, AC. Appliances using 110v current in the U.S. need transformers. A 1,500w transformer is necessary for high wattage appliances. Do not bring electric clocks as they require an impractical conversion.

Food

As an agricultural country, Paraguay offers ample locally produced fruits and vegetables as well as beef, pork, and poultry. Staple items and processed foods are not offered in the variety found in the U.S. Foods that are imported or not produced in large quantities can be expensive.

Several large markets in the city sell a variety of seasonal fresh fruits and vegetables, beef, pork, chicken,

freshwater fish, flowers, plants, herbs, and a jumble of household items.

Meat is also sold in small butcher shops and supermarkets. It is inspected but not always refrigerated and is sold freshly butchered. Beef is plentiful, but the variety of cuts is limited. Poultry, pork, hot dogs, cold cuts, and some good freshwater fish are available. Veal is uncommon, and lamb is rare. Supermarkets sell some pre-cut, packaged meat and poultry.

Good-sized supermarkets, scattered throughout the city, compare on a smaller scale to U.S. supermarkets. They also carry wines and liquors, and depending on size, some kitchenware, hardware, toys, stationery supplies, and clothing.

Most processed food is imported. Since Paraguayans depend primarily on fresh foods, the selection of canned fruits, vegetables, soups, or meals-in-a-can is small. Similarly, their tastes do not demand great variety in snack foods, convenience foods, sauces, and salad dressings. Paraguayan cheeses and those most commonly imported are bland types. More robust and highly flavored cheeses are imported in small amounts. Either skim or whole milk is available with a long shelf life and does not need refrigeration until ready to use. Yogurt is available in limited flavors and cottage cheese and cream cheese are available at times.

No canned pet food is sold, although dry pet food is available. You can buy liver and kidneys from local neighborhood pickup trucks or butcher shops. Mix it with kitchen scraps, for an inexpensive, yet nourishing, pet food.

The selection of vegetables has expanded over the years due to the influxes of agricultural technologies brought in by Japanese and Taiwanese immigrants. You can find a good selection of fresh green vegetables in local oriental markets or the Tuesday agro shopping fair in the Mariscal Lopez Shopping Center.

No home is more than a couple of blocks from a neighborhood grocery store ("dispensa"), which stocks a little of everything. Bakeries offer a good assortment of white and brown bread and rolls. Specialty shops sell cakes and pastries, cold cuts and sausages, and ice cream. Yard area permitting, a home garden can add diversity to seasonal menus. Insects can be a minor problem, but most plants grow quickly and well.

Frozen foods are not normally available in Asuncion.

Clothing

Styles are much the same as in the U.S., but are influenced by the long, hot summers and short, cold winters. Although almost any article of clothing can be found in Asuncion, the choice is somewhat limited by U.S. standards. The search can be time-consuming for those unfamiliar with Asuncion's local shops. Children's clothing is also available here. Bring underwear, socks and hosiery, diapers and baby clothes, and bathing suits. Jeans are popular for school and casual wear.

Dressmakers and tailors can make formal gowns, dresses, skirts, and blouses for women; shorts, sunsuits, and other clothing for children; suits, slacks, and jackets for men. A good selection of fine wool, cotton, and dressy fabrics can be found locally, whereas greater diversity in synthetic and wash-and-wear fabrics is available in the U.S. Asuncion's cobblestone streets are hard on all footwear; women's shoes with low or thick heels are practical. Sandals are popular in summer, when stockings are not usually worn.

Woolen or other warm clothing is needed during the June to September winter for the many cold, damp days and nights. Sweaters or jackets that can be layered or removed are particularly useful. Bring cotton flannel sleepwear and warm slippers. Umbrellas and raincoats are necessary.

Locally made embroidered shirts, blouses, and dresses of fine cotton

fabric called "aho-poi" are a good and useful buy in Asuncion.

Men: Bring a good supply of lightweight suits, sport coats, slacks, and shirts. Casual clothes may be worn to all restaurants and to some cultural events. In Paraguay's short cold season, some winter weight wool suits, sport coats, and slacks will be useful.

Women: Loose fitting cotton daytime dresses are more comfortable in summer heat than nylon and certain other synthetics such as polyester knit. Dressy cottons or other washable fabrics are suitable for casual evening wear. For more formal events, simple to elaborate cocktail dresses are appropriate. Heavier weight dresses are needed for winter wear; jackets or stoles are useful. Hats or gloves are seldom worn, but occasionally a hat to shield the sun's rays or leather gloves to ward off the morning cold are practical.

Supplies and Services

Imported medicines, drugs, toiletries, and cosmetics are available locally, but can be expensive. Certain U.S. brand toiletries, such as Johnson's Baby Powder, are made under license in Argentina and Brazil and are less expensive than those produced in the U.S. If generic brands satisfy you, you will find most everything here.

U.S.-type hardware items and tools, including garden tools, are available locally but are higher in price and limited in variety. Lovely nanduti lace or "aho-poi" embroidered placemats and tablecloths, guest towels, and doilies are handmade in Paraguay and sold at reasonable prices. Items difficult to find or expensive locally are: books, stationery, greeting cards in English, cocktail napkins, party supplies, special sewing or craft materials, games, toys, sports equipment, fishing gear, pool supplies, flashlights, anti-mildew products, and airtight storage containers.

Tailors and dressmakers, cobblers, and barbershops offer satisfactory

services at reasonable prices. Most hairdressers are small-scale neighborhood establishments unlike U.S.-style salons. Several higher quality salons offer many services at better prices than those in the U.S. Prices and quality vary. Drycleaning is acceptable. Laundry is generally done at home; hotel laundry facilities are expensive. Inexpensive, good quality work is done on picture framing, furniture upholstery, and drapery making. Attractive wicker and rattan furniture is made locally. Appliance and auto repair shops are reasonable but often do not meet U.S. standards and may not have parts. When thinking of items to bring with you for your car, remember filters, belts, spark plugs, and extra tires. Caterers supply food and equipment for large parties.

Domestic Help

Well-trained domestic help is rare, and good cooks are hard to find. Any help will probably speak Spanish and Guarani, rarely English.

Large families may have a maid and a nursemaid. Laundresses, cleaning ladies, or gardeners usually come once or twice a week. Wages do not represent the total expense to the employer. Food is provided to day workers, and live-in servants may receive food or allowances. Most houses have quarters for one live-in servant; the employer supplies furniture, bed, and bath linens. Work dresses, uniforms, and routine medical aid may also be provided. After completing 1 continuous year of service, servants receive a 13th-month bonus (Christmas bonus). For employees who work less than 1 year, a bonus will be established taking 1/12 of the total amount of all salaries paid during the calendar year. Under Paraguayan Law 1085, domestics-including regularly employed cooks, maids, laundresses, gardeners, chauffeurs, and nursemaids-must be covered by social security. It is not elective with either the employer or the domestic. All servants must have a medical examination at the employer's expense.

Religious Activities

Since most Paraguayans are Roman Catholic, Spanish-language Catholic churches abound. Mass is regularly held in English on Sundays and holidays for English-speaking Catholics by American priests of the Redemptorist Order. The Anglican (Episcopal) Church and Baptist Fellowship hold services and Sunday school in English every Sunday. Anglican and Baptist churches also have services in Spanish, as do the Free Will Methodists, Assemblies of God, and Seventh-day Adventist. The Lutheran and Mennonite churches offer German-language services. Services in Spanish can also be found at the Church of Jesus Christ of the Latter-day Saints (Mormon), Jewish Synagogue (which also has a social club), and the Russian Orthodox Church.

Education

Many primary age school children attend the American School of Asuncion, accredited by the Southern Association of Colleges and Schools. The American School offers kindergarten through grade 12. Separate kindergartens for 4- and 5-year olds are available, but the education allowance only pays for the latter. First graders must have turned 6 before the opening of school in August.

Instruction is in English, but Spanish is taught as a native language, beginning with K-5. Both the U.S. standard and the Paraguayan curriculums are offered. Almost all teachers, except Spanish instructors, are U.S. citizens and U.S. certified. The school has no speech therapist. Some remedial tutoring is provided.

The school teaches standard U.S. curriculum subjects-language arts, math, science, and social science. General electives include French, Italian, special Spanish, Latin, German, economics, computer, creative writing, photography, government, sociology, biology, music appreciation, art, typing, and PE. Home economics and shop courses are not offered. The school has occupied its building since 1963 and has been

expanding and improving the facilities since then. The school has a library, a science lab, a dark room, a tennis court, an art room, locker/shower facilities, a canteen, and a computer room.

Hours are 8 am to 3 pm for all grades. Hot lunches are available in the canteen for children who do not bring their lunches. Lunch boxes and vacuum bottles are sometimes available locally.

The two-semester school year ends in July and begins in August, with a 2-week break between school years. A 2 1/2-month midterm vacation lasts from December through mid-February. The school observes all Paraguayan and some U.S. holidays.

The Asuncion Christian Academy is an interdenominational school sponsored by the evangelical missions in Paraguay. It provides Christian academic education to English-speaking children from pre-kindergarten through grade 12. Instruction is in English, but Spanish is also taught. The school calendar is similar to that of the American School. Classes are from 7:15 am to 12:30 pm. Teachers must have U.S. certification; materials and methods are U.S. based.

Another option is the Pan American International School, also accredited by the Southern Association of Colleges and Schools. The PAIS offers education to students in grades K through 12. Instruction is in English. In addition to the required curriculum at PAIS, classes in drivers education and industrial arts are also available. Classes are from 8:00 am to 3:30 pm for grades 5 to 12 and 8 am to noon for kindergarten through grade 4.

Neither the American School nor the Christian Academy has a dress code.

Attendance at any other local school requires Spanish-language fluency. In some subjects, standards of the Paraguayan institutions are high, and Paraguayan students may be ahead of their American contempo-

raries. Curriculums naturally are geared to the local education system, with emphasis on Paraguayan history and geography. Teaching stresses rote memorization. English is sometimes taught as a foreign language.

The best private Spanish-language institution is the well-regarded Colegio Internacional. Established by the American Disciples of Christ Church, the school offers kindergarten, primary, and secondary classes. Instruction is by local teachers. English is taught as a foreign language. The extracurricular program, which includes music and sports, is excellent. The most prestigious Catholic boys school, San Jose, and the leading Catholic girls school, Santa Clara de Jesus, offer 12-year academic programs. The Santa Clara School, run by Catholic nuns, has coeducational kindergarten and primary classes, and a 4-year secondary school for girls only. The Goethe Institute, subsidized by the German Government, offers instruction in German and Spanish.

The University of Alabama at Tuscaloosa offers a Masters of Education program in the American School of Asuncion campus..

Special Educational Opportunities

Private instruction in Paraguayan harps and guitars is available. The instruments themselves are inexpensive and available locally. Piano lessons, and group ballet and Spanish dancing classes are available for children and adults.

With permission from local authorities, foreigners may attend lectures at the National University, gratis. All instruction is in Spanish. No academic credits are awarded.

Several nursery schools are available for preschool children. Only two are conducted in English, however, and the number of places in these are limited. Parents who wish to enroll their children should make a reservation well in advance. The names of some of the nursery schools are: Maria's Pre-School

(English-speaking), English Playgroup (English-speaking), and Casita de Sandy (Spanish speaking).

No special educational facilities for handicapped and learning-disabled English-speaking children exist.

Sports

Participant and spectator sports are available year-round in Asuncion. Some clubs, such as the Yacht and Golf Club and Asuncion Golf offer special rates for diplomats or waive initiation fees. The Yacht and Golf Club includes swimming, tennis, weight lifting, and squash. The American School has outdoor facilities for soccer, basketball, volleyball, and baseball, which are available to the community.

Asuncion has one bowling center with 12 automatic lanes. Rates are reasonable. Shoes may be rented for a small additional fee.

The main spectator sport in Paraguay is, of course, soccer. Rugby, basketball, volleyball, tennis, and boxing are also popular. Motorcycle and cross-country automobile races are held from time to time.

Fishing on the Paraguay River is principally for dorado, a large, fighting game fish, and several large varieties of catfish. Paraguay sponsors international fishing competitions in spring.

Popular fishing areas are Guraty, a 20-25-minute drive from Asuncion, where you can rent boats; Santa Rosa, 85 kilometers down river by boat; and Ayolas (300 kilometers south), which has a modern hotel and boat rentals. Villa Florida, a small town on the Tebicuary, a tributary of the Paraguay River, has hotel or camping facilities and boat rentals. Swift currents and an abundance of small piranas make swimming unsafe in these rivers. Fishing equipment brought with you and should include a heavy-duty rod, combination of trolling and bait-casting reel capable of holding 200 yards of 40-pound test line, large spoons, and plugs and wire leaders,

as both surubi (catfish) and dorado sometimes exceed 30-40 pounds. Motors are not usually available for rental and are expensive locally. Small boats (3-8-passenger motor launches) may be purchased locally. Garages service them. Dock-and-storage facilities are available near Asuncion, as well as at the Sajonia Club.

Most hunting is for game birds such as duck, perdiz (South American tinamdu), and doves. Crocodiles, wild boar, deer, jaguar, and puma are found in remote regions of the Chaco, but their status as endangered species means they are generally illegal to hunt. Although hunting on public land has been banned for several years to allow stocks to increase, hunting continues on many private lands. Paraguay does not require either hunting season or fishing licenses. To hunt, you must have access to private land.

For all practical purposes, big game hunting is impossible, since access to the Chaco is difficult. Bird shooting, especially perdiz, is very popular and easily accomplished, providing one gains access to a nearby "Estancia." Usually, any of the cattle ranches within 1 hour of Asuncion will have a large population of perdiz. A bird dog is a must for perdiz. The perdiz, a quail-like bird, prefers to run whenever possible. Without a dog, chasing perdiz could be futile in some areas. If you are a bird shooter, bring all your equipment, including reloading components. Although U.S.-made ammunition is very expensive, it is possible to buy Brazilian ammunition at lower cost, about like U.S. prices. Bird dogs, although available, are expensive and difficult to find. Bring your own. A 12-gauge shotgun will probably be most versatile; however, keep it light and chokes open. If you are a die-hard bird shooter, then the traditional lightweight 20 would be ideal.

Touring and Outdoor Activities

Museums and buildings of interest in Asuncion include the Ethnologi-

cal and Archeological Museum, the Military History Museum, the National Pantheon, and the Casa de la Independencia. Near the Cathedral is the first seminary in Asuncion, which has several exhibits of religious artifacts, memorabilia from both wars, and some personal effects of Monsignor Bogarin, former Archbishop of Asuncion. The Bank of Asuncion has restored the former home of one of Mariscal Lopez's brothers, Benigno, and it contains an interesting historical exhibit of currency used in Paraguay. The Botanical Garden contains the Museum of Natural History and a small Indian museum as well as picnic areas, sports fields, and the zoo.

Not far from Asuncion, the town of San Lorenzo has an Indian artifacts museum and shop near the only Gothic style church in Paraguay. Capiata boasts a private mythological museum, which also has a display from the Triple Alliance and Chaco wars, and a collection of religious wooden statues carved by Indians, who had been instructed by the Franciscans. San Bernardino is Lake Ypacarai's most developed resort town with hotels, a casino, and concerts. On the other side of the lake is Aregua, which has picnic facilities and rowboat rentals. The town of Itaugua is the home of nanduti, a lace product found only in Paraguay. Every year in December pilgrims trek the 50+ km walk from Asuncion to Caacupe to see the Shrine of the Blue Virgin. Capiata also has a private mythological museum, which has a display from the Triple Alliance and Chaco wars.

Full day or weekend camping trips can be made to Pirareta Falls, Chololo Falls, and Cristal Falls, all less than 100 kilometers from Asuncion. All three have camping areas, and Chololo has a restaurant.

You will need 2 or 3 days to visit the ruins of several Jesuit mission towns in southern Paraguay. Some of the travel is on secondary, unpaved roads. Hotel accommodations are available at Encarnacion or Tirol del Paraguay, a hillside

resort. A comfortable, round-trip, 2-day ship excursion can be taken upriver to Concepcion.

The sprawling Chaco begins almost immediately northwest of Asuncion. For longer trips beyond all-weather roads, you need a four-wheel-drive vehicle, as well as camping gear, mosquito netting, and insect repellent. This area is reminiscent of the early American West with its vast open spaces, herds of cattle, and colorful cowboys. It is also a bird-watcher's paradise, and game animals abound here.

The world-famous Iguazu Falls are spectacular. The falls are located at

the juncture of the Parana and Iguazu Rivers where the Paraguayan border meets with those of Brazil and Argentina. The falls can be reached in 5 hours by car. An overnight bus can also be taken for those who wish to see the falls and return the same day. It is here that the International Friendship Bridge crosses the Parana to Brazil. At the falls, accommodations in all three countries range from camping areas to luxury hotels.

In planning road travel, you must consider high gas prices as well as the type and conditions of roads to be traveled. Hotels and restaurants are found in larger towns and on

both sides of the borders with Argentina and Brazil, but make reservations in advance. Prices are comparable to those in Asuncion.

To have a real change of scene, you must travel to one of the more developed neighboring countries. Visits to cosmopolitan centers such as Buenos Aires, Montevideo, Cordoba, Sao Paulo, Rio de Janeiro, or Santiago offer shopping, cultural, and entertainment diversions not found in Asuncion. Ocean beach resorts in Brazil and Uruguay provide a refreshingly different ambiance.

Entertainment

Commercial entertainment in Asuncion consists of films, plays, concerts, discos, a hotel gambling casino, karaoke bars, and hotels and restaurants with dancing and/or floor shows. Asuncion has several movie theaters that offer a fair selection of American and foreign films (mostly double features), including older action films and juvenile favorites. Shopping del Sol, Villa Mora Shopping Center, Excelsior Shopping Center, the Hiperseis Shopping Center and Multiplaza Shopping Center all have modern movie theaters showing relatively new movies.

Modern and classical plays are presented (in Spanish or Guaraní) at the Arlequin Teatro. The Centro Cultural Paraguayo-Americano (which boasts the best theater in town) and the cultural centers of other foreign missions also present plays and host film presentations, gallery shows, and concerts by musicians from their respective countries. Argentine, Uruguayan, and American professional groups bring occasional theater or music to Asuncion.

Entertainment at clubs and restaurants is principally local talent, with folkloric presentations such as the guaraní, the polka, and the bottle dance performed regularly. Asuncion has a variety of good restaurants, many of which offer ethnic menus such as Brazilian, Chinese, French, German, Japanese, Korean, and Lebanese.

Local festivals, all comparatively low-key and subdued, include a pre-Lenten carnival and the Festival of St. John's Eve featuring demonstrations of faith or bravado by people walking barefoot on hot coals. Most towns have processions on their patron saint's name day, and festivals in artisan towns near Asuncion are held during the winter tourist season. Photography is unrestricted at these events. Paraguayans are generally quite willing to have their pictures taken, although Indians expect to receive a tip or may set a price themselves.

Social Activities

American women, some years ago, organized a club known as Las Amigas Norteamericanas del Paraguay. Among its social activities are monthly meetings, visits to nearby places of interest, handicraft work, coffees, and luncheons. Its charitable activities include welfare work, participation in fund raising projects of other organizations, and an annual fair.

Paraguayans are generally well-disposed toward Americans, and informal acquaintances can easily be made with coworkers, neighbors, and at school events. As with many Latin societies, however, social life centers on the family and contact with outsiders is somewhat limited.

Church or cultural center activities, where shared interests form a common bond, provide some opportunities for meeting Paraguayans and other foreigners. Several business clubs, including Lions and Rotary, exist throughout the country. Charitable groups in which Americans participate besides Las Amigas and missionary organizations include: Damas Diplomáticas, a group of women from the diplomatic community who meet socially to raise money for charity; the International Women's group organizes different activities including visits to cultural centers and talks on diverse subjects; and the Red Cross, whose activities include sewing and conducting charity sales. The American School PTA sponsors various activities and events. The Damas Britan-

icas annual Caledonian Ball is popular with many Americans.

Encarnación

Encarnación, in the deep, southeastern part of Paraguay, is the country's second largest city (in terms of stable population figures) and an important port on the Alto Paraná, across from the Argentine city of Posadas. It serves as a major rail terminus for passengers, goods, and livestock; trains are ferried from there into Argentina and on to Buenos Aires.

Encarnación, with a population of about 31,000, is a busy commercial and manufacturing center, whose products from the surrounding rich agricultural area include lumber, tobacco, tea, rice, and maize. Several Japanese farm colonies nearby contribute heavily to agricultural production.

Founded in 1614, Encarnación was originally named Itapúa. It is now the capital of Itapúa Province. In 1926, the city was severely damaged by a tornado, but over the past half-century has rebuilt and expanded into an active community. Its people speak either Spanish or *Guaraní*; there are few hotels or shops where English is heard. British or other European newspapers occasionally are available at the airport outside the city. The library in Encarnación has some titles in English. No English-language schools are in operation.

Encarnación has a television station (Channel 7, Itapúa), which serves the southeastern part of the country. It is a subsidiary of one of the major channels in Asuncion.

OTHER CITIES

CAACUPÉ serves as the capital of La Cordillera Department, 30 miles east of Asuncion. Surrounded by the Cordillera de los Altos Mountains, Caacupé is the destination of pilgrims from all over the continent. Its central plaza contains the

Shrine of the Blue Virgin of the Miracles, whose feast day is December 8th. The city is an important agricultural processing center; tile manufacturing is another economic activity. The National Agronomic Institute is located here and does crop research. Caacupé is an important resort center. This community of approximately 10,000 people is linked to Asunción by a paved highway.

Founded in the early 1600s, **CAAZAPÁ** is a departmental capital on the edge of the Brazilian Highlands in the south. The economy depends on lumbering, agriculture, and tanneries. A regional hospital, several educational institutions, and an agricultural college are situated here. A monument to the city's founder, Friar Bolaños, stands in the city of about 3,000. A railway and highway provide transportation to Asunción, 50 miles northwest.

The city of **CIUDAD DEL ESTE**, formerly Puerto Presidente Stroessner, is a river port on the Brazilian border which grew from a small village to a population of 90,000 during its boom years, when the Itaipú Dam was being constructed across the Paraná River. The city was carved out of the jungle in 1957, and when work began on the dam in the mid-1970s, the population exploded. Now, with the completion of the dam, which was formally opened in November 1982, Ciudad del Este's fortunes have begun to regress. Thousands of families whose livelihood depended on the dam construction and attendant businesses, have left the area seeking other means of support. During the city's flourishing years, it was a black-market haven, and people from neighboring Brazil flocked across the border to buy cheap contraband. Some of this illegal activity continues, but not in the same bold proportions as during the boom years. The city is linked to Brazil by the 1,600-foot Puente de la Armistad Bridge. One of the principal tourist attractions is the Iguazu Falls, which are located outside of the city. Its population is approximately 111,000.

CONCEPCIÓN is an eastern trading port on the Paraguay River about 125 miles north of the capital. The city, founded in 1773, is also called Villa Concepción. Several banks and commercial establishments are located here. Several industries are located here, including sawmills, flour mills, tanneries, cotton gins, and sugar refineries. The 1995 population was approximately 25,600.

CORONEL OVIEDO, also in eastern Paraguay, is a town of 22,700 residents. It serves as the administrative center of Caaguacú Department. Oranges, sugarcane, and tobacco are grown near the town. The town has a hospital and a Catholic cathedral.

LUQUE, 10 miles outside of Asunción, made history in the late 1860s when war erupted with Argentina, Brazil, and Uruguay. For six years it was the national capital. Luque's produce and industry supply Asunción. Its population is estimated at 25,000.

PEDRO JUAN CABALLERO is on the Brazilian border in eastern Paraguay. It is the capital of the Amambay Department and one of the largest towns in the region. Cattle ranching and coffee growing are primary economic pursuits.

PILAR, capital of Ñeembucú Department, lies 60 miles south of Asunción. This port on the Paraguay River handles most of the agricultural products of the adjacent districts. It is also important in manufacturing. Manufacturing industries in Pilar include sawmills, textile mills, and distilleries. The city is linked with the rest of the country via the Asunción-Encarnación highway. Approximately 13,000 live in Pilar, which has an airport.

VILLARRICA, in south-central Paraguay, is a long-established commercial center about 70 miles southeast of the capital. Founded in 1570, it is the capital of Guairá Department, and the shipping point for a region producing cattle, tobacco,

sugarcane, wine, fruit, and *yerba maté* (Paraguayan tea). It is also known for its sugar refineries, textile mills, shoe factories, flour mills, distilleries, and sawmills. The population, which has a large percentage of people of German descent, is about 21,200. Villarrica's cathedral is a pilgrimage center.

COUNTRY PROFILE

Geography and Climate

Located in the heart of South America, Paraguay is a landlocked, agricultural country about the size of California. It shares its borders with Brazil, Argentina, and Bolivia.

The Parana-Paraguay River system is Paraguay's commercial access to the outside world. Rivers and their tributaries largely define Paraguay's boundaries, and the Paraguay River divides the country into two dissimilar sections, east and west.

The eastern section consists of rolling, fertile farming areas and grasslands, together with large, wooded areas and jungle patches near the Brazilian border. Most of the country's population live in the east and engage in small-scale agriculture. Asunción and other commercially important towns-Encarnación, Ciudad del Este, Pedro Juan Caballero, Concepción, Coronel Oviedo, and Villarrica-are in this area, and most are accessible by paved roads. The western section, nearly two-thirds of Paraguay's total area, is called the Chaco. It is a low lying plateau covered with grassy meadows, bogs, spiny bushes, palms, and small trees. Lacking roads and navigable rivers, much of the region is inaccessible. Only 3% of the population live in this area.

The riverfront elevation of Asunción is 177 feet above sea level. Residential areas are situated on low hills that rise another 200 feet. Eleva-

Government palace in Asuncion, Paraguay

tions throughout Paraguay are moderate, the highest range of hills, located in the eastern region, rises to about 2,000 feet.

Paraguay's climate is seasonal and subject to abrupt changes. It is subtropical, with summer and winter seasons opposite those in the U.S. Winds are generally moderate, but high winds accompanied by thunder and electrical storms are common, especially in summer. The long, hot summer lasts from October through March, with January average maximum temperature 91°F and mean temperature 81°F. Severe hot spells with very high humidity are common. Temperatures often exceed 100°F during the day from December to February (the official record high temperature is 109°F), with little relief at night.

Winter extends from June through August. Cold snaps of 4 or 5 days with temperatures in the low 40s and high 30s are interspersed with several days in the upper 70s and low 80s. Frosts occur rarely. The official record low in Asuncion is 32°F, although the damp air and improper ventilation make it seem much colder. With frequent and abrupt changes, from winter to summer-like weather and back again (temperature changes of

20°F-50°F are common), a high incidence of respiratory and bronchial illness occurs in winter.

Relative humidity ranges between 67% and 78% (monthly averages) year round and is particularly high in summer. This causes problems in keeping certain foods crisp, and clothes and shoes may mildew.

Asuncion's average 59-inch annual rainfall is well distributed seasonally. Slightly greater amounts fall in hotter months. Torrential rains cause annual floods in riverside communities. The Chaco, which receives little rainfall, becomes semiarid in its western most reaches. During rainy periods, however, water covers large areas due to the impermeable clay subsoil.

Mosquitoes and a tiny gnat-like insect called "Mbarigui" are the most troublesome insects. Cockroaches appear at times in even the cleanest kitchens; but fast, good exterminators are available. Flies, ants, spiders, crickets, silverfish, and moths also prevail. Store woolen clothing in naphthalene during summer. Less common are rats, mice, bats, scorpions, and tarantulas. Depending on how developed a neighborhood is, animals in residential areas can include numerous

stray dogs, cows, grazing mules and horses, and a few snakes. Children should avoid any unfamiliar animal.

Population

Much of Paraguay is sparsely populated. Most of its 5.2 million people are concentrated in the smaller eastern half of the country. About 600,000 people live in Asuncion, the political, economic, and cultural center of the country. Asuncion's population triples during the day with the influx of workers from surrounding cities. Nearly 35% of the country's population reside in the greater Asuncion metropolitan area.

Almost complete assimilation of the early Spanish settlers by the native Guarani Indians has developed a distinctive racially homogeneous Paraguayan strain, which makes up most of the population. The important minority groups include some 100,000 unassimilated Indians, representing 17 different ethnic groups.

As a result of the expansion of the Brazilian economy up to and across its border with Paraguay, about 300,000 Brazilians live in the border area where many engage in mechanized farming. This phenomenon continues on and has begun to cause some border tensions. Most of these immigrants are from southern Brazil, which is predominantly European. About 20,000 Argentines live along the Argentine border. Other minority groups include 40,000 Germans, 10,000 Koreans, 8,000 Japanese, 2,000 Chinese, 1,000 Poles, 300 French, and 300 English. Some 20,000 Russian, Canadian, Mexican, and U.S. Mennonites live in agricultural communities scattered throughout the country. Paraguay has traditionally welcomed immigrants.

The official U.S. community (including dependents and Peace Corps volunteers) numbers 290. Of the 2,836 nonofficial Americans registered at the Embassy, many are missionaries and business rep-

representatives and their dependents, along with some students and retired persons.

The Paraguayan population is predominantly Roman Catholic. The 1992 constitution recognizes religious freedom and states that no confession will have official character. The constitution also states that relations between the state and the Catholic Church are based on independence, cooperation, and autonomy. Although all religious groups had been tolerated, in 1979 the Paraguayan Government took legal action against groups such as the Jehovah's Witnesses, the Children of God, and the Hare Krishna movement, whose teachings on patriotic and family allegiances conflicted with Paraguayan law and custom. In a related attempt to restrict the growth of religious cults, recent legislation has prohibited the conferring of legal status on any new religious groups. Spanish is the language of government, business, and education and is used among the educated. Paraguayans are proud of their native heritage and of the Guaraní language, also recognized as an official language.

Guaraní is used almost exclusively in rural areas and is widely spoken in urban areas. Anyone learning even a few words of Guaraní will find it greatly appreciated by Paraguayans.

Paraguayans are not as class conscious as some Latin Americans. All share a pride in their ethnic heritage and a fierce patriotism born of devastating, protracted wars with neighboring countries. Although extremes of wealth and want exist, display of great wealth is still uncommon; and conversely, abject poverty is less visible here than in many Latin American countries. Life, particularly in rural areas, can be hard, but social differences that divide groups are neither deeply felt nor well defined. This is due, in part, to the availability of land for those willing to homestead, to the almost total elimination of the landed Spanish aristocracy under the dictatorship of José Gaspar Rod-

riguez de Francia in the early 1800s, and to the leveling effect of the War of the Triple Alliance (1864-70), in which up to 70% of the male population was killed.

Public Institutions

Paraguay has had a turbulent political history. The area, first colonized in the early 16th century, achieved independence from Spain in 1811. Left with a legacy of authoritarian rule by its early leaders and nearly destroyed by the War of the Triple Alliance (1864-70), it has been plagued by a major conflict with Bolivia (Chaco War, 1932-35), periods of near anarchy, and civil wars interspersed with several prolonged periods of relative tranquility. The last major conflict was the 6-month civil war of 1947.

On February 3, 1989, a coup d'état overthrew 34 years of authoritarian rule. In May 1989, under the new President of the Republic, Paraguay began the long process of transition from authoritarianism to democracy. A new constitution took effect in June 1992, providing for a stronger Parliament, an independent judiciary, municipal autonomy, and limited decentralization of administrative authority.

Paraguay's two major, traditional political organizations, the Colorado and Liberal Parties, have each ruled the country for prolonged periods. Few ideological differences separate them. In 1991, a third party, the Encuentro Nacional, was formed. The Colorado Party, the dominant political force during the authoritarian years and the democratic transition, is likely to remain so for some time.

The traditional Liberal Party is split into several fragments. The largest of these, the Authentic Radical Liberal Party (PLRA), was the principal opposition party in the later years of authoritarian rule. The Liberals and "Encuentristas" hold a sizable minority of congressional seats. A small Christian Democratic Party (PDC) also participated in nationwide municipal

elections in the early 1990s, but has had little active role since then.

In March 1999, the Vice President of Paraguay was assassinated in a plot widely attributed to a disaffected former Army commander who enjoyed the protection of Paraguay's President. After mass public protests several days later, in which several protesters were killed, both the President and the former Army commander fled the country. The then-Senate President became President of the Republic, in accordance with the Constitution, and formed a "national unity" government with members of the Liberal and Encuentro Nacional parties.

Although the military was highly politicized during the first years of the democratic transition, it remains an influential institution in Paraguay and has been supportive of the attempt to transform Paraguay into a modern democracy. The army (10,000 troops), navy, and air force (1,000 each) lack modern equipment and training in many areas, but remain receptive to civilian control. In many isolated areas, the armed forces are the sole representative of government.

Arts, Science, and Education

The Centro Cultural Paraguayo Americano (BNC) sponsors numerous cultural activities and has a 12,000-volume library with both Spanish and English titles, including one of the country's most complete collections of Paraguayan works. As well as teaching at average of 6,000 students English, the center offers concerts, theater, gallery shows, and lectures and seminars on various topics. The Center opened a second branch in 1998.

Of the fine arts, painting and graphics are the most developed in Paraguay. The Contemporary Arts Museum, the Ceramics Museum, the Museo del Barro Manzanera de la Rivera, and the U.S.

Cultural Center gallery, as well as other binational institutions, exhibit Paraguayan and foreign artwork throughout the year. Asuncion has a part-time symphony that performs during winter in various auditoriums. Paraguayan folk musicians perform at various sites throughout the year. Paraguay's most popular theater groups present Spanish and Guarani comedies at the city's several theaters. Ballet troupes perform occasionally at the Municipal Theater or other locales. Cultural missions of France, the E.R.G., Argentina, Brazil, Japan, and the U.K. present music, theater, and films at their institutions.

Paraguay's two institutions of higher education are the National University of Asuncion and the Catholic University of Asuncion. Both have adjunct faculties in the larger cities of the interior.

Little scientific activity exists beyond instruction at the National University. Scientific museums include the Ethnographic Museum and the Museum of Natural Science.

Commerce and Industry

Paraguay is predominantly an agricultural country with vast hydroelectric potential but no known significant mineral or petroleum resources. The Paraguayan economy is extremely vulnerable to the vagaries of weather. It exports cotton, soybeans, cattle, and electricity. It also has a fairly lucrative business of reexporting products made elsewhere. Paraguay imports foodstuffs, machinery, transportation equipment, fuels and lubricants, and textiles. Its principal trade partners are Brazil, Argentina, Chile, U.S., and Western European countries. The U.S. maintains a healthy trade surplus with Paraguay. From a base of \$375 million in 1991, U.S. exports to Paraguay rose to \$913 million at the end of 1997. This represents a 24% annual increase. In 1998, Paraguay's total

registered exports amounted to \$1,002 million and total registered imports were \$2,377 million.

Since the 1980s, the economy has experienced a series of peaks and valleys. The decade of the 80s began with the final 2 years of rapid construction of the Itaipu Dam (with the largest hydroelectric-generating capacity in the world) fueling annual growth of 10%. From this peak, the economy alternated periods of recession with modest growth. The 1988-89 period saw solid economic growth averaging 5% a year. During 1990 and 1991, the pace of expansion sustained by the Paraguayan economy in the preceding 2 years began to slow. From 1992-98 the economy has grown at an anemic 2.5% per year. The year 1999 was the second consecutive year of negative economic growth.

The February 1989 coup d'etat marked the end of 34 years of repressive regime and the beginning of a transition process to democracy in Paraguay. Since then, successive administrations have implemented modest economic reform packages and have flirted with privatization of state-run telephone, electrical, and water companies. Some reforms include the unification of the exchange rate, the elimination of preferential foreign exchange rates and foreign exchange controls, expenditure reductions, and implementation of a new tax code. In the financial sector, interest rates were freed, and new savings instruments were authorized. Price controls on some basic products were also eliminated, and tax incentives to encourage investment and attract foreign investors were provided. The Government is now studying privatization of state-run enterprises and modernization of the state. Paraguay continues to have one of the lowest foreign debts in Latin America.

Since ending the 34-year Stroessner dictatorship in 1989, the Government of Paraguay has made significant progress in reinserting the country into the world community. On March 26, 1991, Paraguay

joined Argentina, Brazil, and Uruguay in signing the Treaty of Asuncion, to create Mercosur, a common market and customs union that went into effect in January 1995. Mercosur signed free trade agreements with Chile and Bolivia in 1996, and similar arrangements are under negotiation with Mexico, Peru, and the European Union. Paraguay became a member of the World Trade Organization (WTO) in January 1995.

Transportation

Automobiles

Driving is on the right. Although distances traveled within Asuncion are not great and travel into the countryside is not extensive or frequent, most find a car necessary here. Unleaded gasoline is available countrywide. Fuel prices vary considerably due to fluctuating exchange rates. Unleaded (97 octane) costs about \$2.73 a gallon; regular gasoline (95 octane, unleaded with alcohol) \$2.53 a gallon; regular gasoline (85 octane, unleaded with alcohol) \$2.15 a gallon; and diesel fuel \$0.92 a gallon (April 2000). Currently, unleaded gasoline is sold without alcohol additives; regular gasoline does contain some alcohol. Various U.S., Japanese, Brazilian, and European-origin cars are driven here. Many vehicles are available locally; costs are higher than vehicles from the U.S. Brazilian and Japanese vehicles are the most common, but none sold locally meet U.S. safety requirements and smog control specifications.

Sport cars with low-road clearance are unsuitable for local cobblestone streets and unpaved roads. A diesel-powered car or low-consumption compact would be most economical and would probably have fewer maintenance problems. U.S. cars hold up well, although obtaining spare parts can involve long delays when repairs are needed as many are not available locally. Most parts purchased here are expensive. Service is fair-to-good.

Local

Of Paraguay's 28,000-kilometer road network, 2,700 kilometers are paved. Some roads are graded earth or gravel and are susceptible to closure from rains and flooding for considerable periods of time. The southeast portion of the country, east of the Paraguay River, where the major economic activity of the country is concentrated, has the best roads. Most of the main towns in this area, and from Asuncion to Rio de Janeiro, Sao Paulo, Montevideo, and Buenos Aires, are linked by paved or all-weather roads. Considerable highway expansion and improvement is planned or in the construction stage. Emphasis is on making the Chaco more accessible year round, routing truck transport of agricultural products to the Brazilian Port of Paranagua, and integrating the hydroelectric projects at Itaipu and Yacyreta into the national economy.

Road travel is the most common transportation for domestic freight and passenger travel. More than 50% of road traffic consists of trucks and buses. Excellent bus service is available to Rio de Janeiro and Buenos Aires, but distances and travel times are long.

Public transportation in Asuncion consists of taxis and buses. Radio taxis are available and reliable either by phone or at stands throughout the city; they are more scarce at night. City bus routes are extensive, with fullest and most frequent service downtown. Unfortunately, bus stops and routes are not well marked. Buses are noisy, uncomfortable, and in ill-repair. During rush hours they are dangerously over-crowded. To add to the adventure, buses often slow down rather than stop to discharge and pick up passengers. Bus travel is not recommended.

Regional

Paraguay's external ties are mainly through air, road, and river transport. Great distances and poor and sometimes impassable roads limit overland travel. Most travel in the

interior is for business, not pleasure.

Paraguay's most important transportation system is the inland waterway that connects Paraguay's inland ports with the Atlantic Ocean. It begins with the Paraguay River that runs north-south across the country and the Parana River that serves as a border with Brazil and Argentina, and continues past the Argentine Port of Rosario to Buenos Aires. Together with the Rio de la Plata, it constitutes a 3,170-kilometer system of transport, handling over 60% of the international traffic in the area.

Asuncion, the largest port, serves Paraguay's most important productive areas and is the only port with modern berthing facilities and cargo-handling equipment. Facilities are limited, however, and transit areas are very congested. With completion of the Itaipu, Yacyreta, and Corpus hydroelectric projects, water levels on the Parana River should increase from Encarnacion to Salto del Guaira. This will open the Parana River to oceangoing vessels and increase the importance of both Encarnacion and Ciudad del Este as inland ports.

For other than leisure sightseeing, air transportation is the only practical means of international travel to and from Asuncion. Asuncion is served by Silvio Pettirosi International Airport, a Category 3 airport. As such, there are no direct flights via U.S. carriers to the U.S. TAM offers daily flights between the U.S. and Asuncion. American Airlines offers daily flights to Miami, New York, and Dallas through Sao Paulo, Brazil. Varig also offers daily flights to Miami or New York through Sao Paulo. Airlines connecting Asuncion with other capitals and major cities include: American Airlines, Aerolineas Argentinas, Varig, PLUNA, LAN Chile, Lloyd Aereo Boliviano, Iberia, and TAM. The internal airline, ARPA, operates with a Cessna Caravan from Monday to Friday. Domestic air traffic is small but important, as it is often the only means into other sections of the

country, especially during bad weather. Airfields range from an all-weather airport under construction at Mariscal Estigarribia (halfway between Asuncion and Santa Cruz, Bolivia), where only military flights operate; to a restricted all-weather airport under the control of the Itaipu Binational Authority, north of Ciudad del Estate; to an International Airport named Guarani located in Minga Guazu, and to a few concrete strips in the more remote interior.

There is also daily bus service between Asuncion and Buenos Aires, Sao Paulo and Foz de Iguazu. There are very comfortable, air-conditioned executive buses, in addition to the regular buses.

Communications

Telephone and Telegraph

Asuncion's telephone system is good but suffers from maintenance and repair problems. Long-distance service is available almost worldwide, with good connections. Calls to the U.S. are normally of excellent quality. Costs for a long distance call to anywhere in the continental U.S. are: weekdays (Monday through Saturday) \$2.23 a minute; Sunday, \$2 a minute.

Access to AT&T's USA Direct is now available. Also, you can join MCI and U.S. Sprint calling systems.

An ordinary telegram to the U.S. costs about 31 cents a word (with a 7-word minimum). Night letter (telegram): 7-word minimum and 21-word maximum costs 16 cents a word.

All costs listed above and throughout this report change considerably, depending on the prevailing exchange rate.

Mail

The Paraguayan mail system is becoming more reliable, but do not send money or valuables through the mail.

Radio and TV

Asuncion has four TV stations and two cable TV stations: Channel 2, Channel 4, Channel 9, and Channel 13. Channel 9 and Channel 13 have their national networks on subsidiary channels. Cable TV is growing. The main cable companies, CVC/TVD and CMM, carry channels from Argentina, Brazil, Chile, Germany, Italy, Mexico, Spain, Venezuela, and the U.S. (ESPN, CMM carries HBO Ole, CVC carries CNN in English and Spanish).

The main news programs are transmitted by Channels 4, 9, and 13 at noon and at 8 pm and cover news from around the world. Most of the series shown come from the U.S. and are dubbed into Spanish.

The color system used in Paraguay is PAL-N (similar to Uruguay and Argentina). A bistandard set NTSC/PAL-N will allow you to watch TV and view American video movies. A good 20-inch bistandard (or "binorma") TV set currently costs about \$350 if purchased here. U.S. color TV sets are not compatible with the PAL-N system. A bistandard video recorder would allow you to tape from local TV.

Several video-cassette clubs operate in Asuncion. These clubs do not operate with the same standards found in the U.S., and selection of tapes is not as varied.

Paraguayan TV stations may be received on indoor antennas.

In Asuncion, some 10 AM stations and 12 FM stations are available. There are some 30 other stations outside of Asuncion. All broadcast popular and traditional Latin music, local news, and sports. Most of the FM stations transmit music in stereo, including the latest U.S. and British popular music.

For English-language broadcasts, bring a shortwave radio, or you can buy one locally. A simple longwire outdoor antenna can help to bring in shortwave stations.

Bring stereo equipment. The 50 cycle current means that in addition to the 110v-220v transformer, however, phonographs and tape recorders without DC motors require modification. Phonographs may require a different pulley; tape recorders may need a different capstan. Both can usually be bought from the manufacturer. If possible, have these adjustments made before arrival. Newer equipment, however, is multivoltage and multi-cycle (as is computer equipment). Please check before departure.

Newspapers, Magazines, and Technical Journals

Six independent daily newspapers are printed in Asuncion; one of them, *Ultima Hora*, has morning and afternoon editions. *Ultima Hora* and *ABC Color* have the largest circulations. Papers can be purchased from newsboys at street corners or at kiosks. Home delivery can also be arranged.

The following newspapers are located on the worldwide web as indicated: *Ultima Hora* at <http://www.ultimahora.com.py>; *ABC Color* at <http://www.abc.com.py>; *Noticias El Diario* at <http://www.diaionoticias.com.py>. *Time*, *Newsweek*, and *People* are sold at newsstands. The only English-language newspaper available is the *Buenos Aires Herald*, which usually arrives in Asuncion on the day of publication. Subscriptions from the U.S. arrive from 1 day to 2 weeks after being sent.

Many English-language periodicals may be read at the Roosevelt Library of the Centro Cultural Paraguayo-Americano, Asuncion's BNC.

Health and Medicine

Medical Facilities

Although several well-trained physicians and surgeons practice in the city and several hospitals are adequately staffed and equipped to handle most emergency medical and surgical problems, persons

requiring complicated diagnostic work and all but minor surgery cases are normally evacuated to Miami. Many doctors are U.S. trained, including dentists, orthodontists, ophthalmologists, obstetricians, pediatricians, and surgeons. There are four hospitals used often by U.S. citizens and military personnel in the country. They are the Baptist Hospital with 44 beds, the Hospital Privado Frances with 55 beds, the Migone Hospital with 34 beds, and the Sanatorio San Roque with 66 beds. The four hospitals provide emergency rooms, intensive care units, lab and x-ray facilities, and doctors on 24-hour call.

Community Health

Most of Asuncion (73%) has a modern municipal water supply, and unfluoridated tap water connected to the system (CORPOSANA) is considered safe to drink. As a health precaution, however, all drinking water should be boiled and/or treated. Most hotels and larger homes are connected to the system. When contracting for a house, determine whether the CORPOSANA system has been installed. If not, note that well water, in and outside the city, must be boiled at least 10 minutes to ensure potability. Asuncion's sewers empty untreated waste into the Paraguay River. Many restaurants observe acceptable standards of health. Routine inspections are not considered to be reliable, however.

Milk is available in several forms. It is very safe to use long life milk which is available in all stores. The quality is good and it is sold at a good price. Powdered milk is also available.

Preventive Measures

Regional endemic diseases include measles, rabies, hepatitis, typhoid fever, tetanus, diphtheria, polio, parasitic diseases, and tuberculosis. Immunized healthy Americans taking normal sanitary precautions, however, are relatively safe from most diseases. Malaria suppressants are unnecessary. Be sure to have your Hepatitis A vaccine

and other routine immunizations up to date before departing.

Certain precautions are important. Wash all vegetables and fruits thoroughly, and have yearly physical exams for all household help. Since hookworm is prevalent, wear shoes or sandals outdoors. Fungi infections are common during the hot summers, and allergies aggravated by the many lovely flowering trees are common. Frequent climatic changes, particularly in winter, cause colds and other upper respiratory infections.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Travel time by air from the east coast to Asuncion is about 12 hours. American Airlines flies from New York, Washington, D.C Dulles, and Miami to Asuncion through Sao Paulo. Since delays are common, allow for adequate transit time where travel involves changes from one flight to another.

Ship travel from U.S. ports to Buenos Aires does not have regular service. From Buenos Aires, passengers for Asuncion can continue by plane or bus; however, air travel is more practical.

For entry into Paraguay by road, you will need all essential vehicle documents such as ownership and registration, certified in the form of a vehicle transit pass (Libreta de Paso) obtained from the automobile club of the country from which entry into Paraguay is made.

Travelers without Brazilian or Peruvian visas are not allowed out of the airport even if they have missed their connection. Peru requires visas in diplomatic and official passports, not in tourist passports.

Unaccompanied air baggage may take 6-8 weeks to arrive and be cleared in Asuncion. Include all

essential items in your accompanied luggage.

A passport is required. U.S. citizens traveling as tourists or for business do not need a visa for stays up to three months. Persons planning on working, formally or informally, or staying longer than three months, may require a visa and should seek information from the Paraguayan Embassy or consulate on the corresponding visas prior to travel. Although Paraguayan law allows changes in visa status, the procedure is lengthy and can be cumbersome. In addition, individuals wishing to reside in Paraguay for any length of time should have their civil documents (birth and marriage certificates, etc.) certified and authenticated by the Paraguayan Embassy or Consulate in the U.S. as well as translated into Spanish. For current information concerning entry and customs requirements for Paraguay, travelers may contact the Paraguayan Embassy at 2400 Massachusetts Avenue N.W., Washington, D.C. 20008, telephone (202) 483-6960. Internet: <http://www.embassy.org/embassies/py.html>; or the Paraguayan consulate in Los Angeles, Miami, or New York.

Americans living in or visiting Paraguay are encouraged to register at the Consular Section of the U.S. Embassy in Asuncion and obtain updated information on travel and security in Paraguay. The U.S. Embassy is located at 1776 Mariscal Lopez Avenue; telephone (011-595-21) 213-715. The Consular Section is open for U.S. citizens services, including registration, Monday through Thursday from 1-5 pm and Friday from 7:30 am to 11:30 am, except for U.S. and Paraguayan holidays. The Consular Section's Internet e-mail address is: usaconsulasuncion@hotmail.com. (This e-mail address is not checked on a regular basis.)

Pets

All types of pets may be imported. A USDA veterinary certificate of good health and certificate of inoculation against rabies (at least 15 days

prior to travel) are the only required documents. If you are staying overnight or transiting along the way before reaching Asuncion, permission to have your pet enter that country will be needed. All pets may be exported as well, except birds and wild animals indigenous to Paraguay. Pets purchased locally should be inoculated against distemper and rabies every 6 months.

Firearms and Ammunition

All firearms must be registered in country with the local government.

Currency, Banking, and Weights and Measures

The monetary unit of Paraguay is the Guarani and can be purchased with dollar instruments in the fluctuating free market through licensed banks and exchange houses. The rate of exchange (ROE) is about US\$1=G3,503 (June 2000). Currently, only one U.S. bank remains active in Paraguay and that is Citibank N.A. Paraguay officially uses the metric system of weights and measures.

RECOMMENDED READING

The following titles are provided as a general indication of the material published on this country:

- Abou, Selim. *Jesuit Republic of the Guaranis (1609-1768) and Its Heritage*. Crossroad Pub. Co.: New York, 1997.
- American University. *Area Handbook for Paraguay*. U.S. Government Printing Office: Washington, D.C., 1990.
- Arnold, Adlai E. *Foundations of an Agricultural Policy in Paraguay*. Praeger: 1971.
- Attenborough, David. *The Zoo Quest Expeditions*. Penguin Books: New York, 1982. This paperback reedition of three of Attenborough's books includes his Zoo Quest in Paraguay. Anecdotes about filming and collecting animals.
- Barrett, William E. *Women on Horseback: The Story of Francisco S. Lopez and Elisa Lynch*. Doubleday: Garden City, 1969. A novel about Francisco Solano Lopez and the famous Madame Lynch.
- Brodsky, Ayn. *Madame Lynch and Friend*. Harper & Row: New York, 1975. A biographical account of the lives of Irish adventurer Elisa Lynch and Francisco Lopez.
- Durrell, Gerald. *The Drunken Forest*. Rupert Hart-Davis: London, 1956. Amusing account of animal collecting in Argentina and the Paraguayan Chaco Region.
- Fretz, Joseph Winfield. *Immigrant Group Settlements in Paraguay*. Bethel College Press: North Newton, Kansas, 1962.
- Fretz, Joseph Winfield. *Pilgrims in Paraguay*. Bethel College Press: North Newton, Kansas, 1953. Both are studies of colonization by Mennonite and other immigrant groups, mainly European and Asiatic in Paraguay by an American Mennonite scholar.
- Frings, Paul. *Paracuaria: Art Treasures of the Jesuit Republic of Paraguay*. Matthias-Gronewald-Verlag: Mainz, Germany, 1982. This book, with texts in English, Spanish, and German, contains information about the Jesuit ruins in Paraguay and efforts to restore the ruins. Includes background information on the Jesuit republic and photographs of the art works.
- Garner, William. *The Chaco Dispute: A Study of Prestige Diplomacy*. Public Affairs Press: Washington, D.C., 1966. The only English-language diplomatic history of the Chaco War. (1928-1938).
- Greene, Graham. *The Honorary Consul*. Simon & Schuster: New York, 1973. (Also available in paperback from Pocket Books, a subsidiary of Simon & Schuster.) A popular novel about a British Honorary Consul who is mistaken for an American Ambassador and is abducted and held by Paraguayan revolutionaries.
- Greene, Graham. *Travels With My Aunt*. Bantam Books: New York, 1971. In this comic novel, Henry and his aunt Augusta travel to Paraguay.
- Hay, James Eston. *Tobati: Tradicion y cambio en un pueblo paraguayo*. CERI/Universidad Catolica, Pilar: Asuncion, 1999. An analysis of the change and development of a small Paraguayan town, Tobati. [This book should be available in English by 2002. English language copies may be obtained at research libraries, through University Microfilms or through Inter-Library Loan: Hay, James Eston, Tobati: Tradition and Change in a Paraguayan Town. Ph.D. Dissertation, University of Florida, 1993.]
- Kolinski, Charles J. *Independence or Death*. University of Florida Press: Gainesville, Florida, 1965. A history of the War of the Triple Alliance, 1865-70.
- Lambert, Peter and Nickson, Andrew, Eds. *The Transition to Democracy in Paraguay*. St. Martin's Press, Inc.: New York, NY, 1997. The most up-to-date assessment of Paraguay after the transition from the Stroessner dictatorship.
- Land of Lace and Legend, An Informal Guide to Paraguay*. Compiled by Las Amigas Norteamericanas del Paraguay, 1977. It describes many features of life in Paraguay.
- Lewis, Paul. *Socialism, Liberalism, and Dictatorship in Paraguay*. Praeger: New York, 1982. This book places General Stroessner and his regime into the context of Paraguay's political culture. It deals with the struggles between Liberals and those who represented an indigenous socialism, shows how Stroessner rose to power, and describes his regime's structure and organizational support. Stroessner's policies with respect to economic development and foreign affairs are described and the state of the opposition under Stroessner is discussed.
- Lewis, Paul H. *Paraguay Under Stroessner*. The University of North Carolina Press: Chapel Hill, 1980. A political biography of the President of Paraguay that is rich in historical background and anecdotal detail. An excellent and educational book on contemporary politics of Paraguay.
- McNaspy, C. J. *Lost Cities of Paraguay: Art and Architecture of the Jesuit Reductions, 1607-1767*. Loyola University Press: Chicago, 1982. Gives an account of the Jesuit Reductions (missions) and describes sites in Paraguay, Argentina, and Brazil. The best book in English to date on this subject.
- Miranda, Carlos R. *The Stroessner Era: Authoritarian Rule in Paraguay*. Westview: Boulder, 1990. The author describes the political culture of, and the history of authoritarianism, in Paraguay before embarking on an in-depth study of the ideological bases of the Stroessner era, the politics of control of the Stroessner regime, and economic development and the pattern of co-optation during his dictatorship. He also exam-

ines the reasons for the demise of the Stroessner regime.

Pendle, George. *Paraguay, A Riverside Nation*. Third Edition, Royal Institute of International Affairs: 1967. This short volume reads like an extended encyclopedia article. Recommended as the best single book dealing with the historical, economic, and sociological aspects of Paraguayan life. Includes a comprehensive annotated bibliography.

Raine, Philip. *Paraguay*. Scarecrow Press: New Brunswick, New Jersey, 1956. An informative, comprehensive treatment by a U.S. Foreign Service officer.

Sergice, Elman R. and Helen S. Tobati. *A Paraguayan Town*. University of Chicago Press: Chicago, 1954. A detailed study of life in a representative rural town.

Warren, Harris G. *Paraguay, An Informal History*. University of Oklahoma Press: 1949. Probably the best book in English for a historical overall view of the country.

Stover, Richard. *Six Silver Moonbeams: The Life and times of Augustin Barrios Mangore*. Quercus Pubs.: Clovis, CA, 1992. This book is a comprehensive and authoritative biography of the world's greatest guitarist/composer, Agustin Pio Barrios (1885-1944), also known as Nitsuga

Mangore. This extensive treatment of Barrios' life and music brings to light many facts about the amazing "Paganini of the guitar from the jungles of Paraguay."

Paraguay and the Triple Alliance: The Post-war Decade, 1869-1878. University of Texas Press: Austin, Texas, 1978. A well-written, well-researched study of the years after Paraguay's disastrous war with Brazil, Argentina, and Uruguay.

Warren, Harris Gaylord. *Rebirth of the Paraguayan Republic: The First Colorado Era, 1878-1904*. University of Pittsburgh Press: Pittsburgh, 1985. Warren writes a comprehensive history of Paraguay, based primarily on archival sources, from the watershed years of 1869-1870 to the Colorado defeat in 1904.

Washburn, Charles A. *The History of Paraguay*. Two volumes, 1871. An interesting autobiographical and historical account by an American diplomat in Paraguay at the time of the War of the Triple Alliance.

Whigham, Thomas. *The Politics of River Trade, Tradition and Development in The Upper Plata, 1780-1870*. University of New Mexico Press: 1991.

White, Edward Lucas. *El Supremo*. Durrón: New York, 1934. A good

historical novel of Paraguay under Dr. de Francia.

White, Richard Alan. *Paraguay's Autonomous Revolution: 1810-1840*. University of New Mexico Press: Albuquerque, 1978. A new look at the revolution carried out by Dr. de Francia following independence.

Williams, John Hoyt. *The Rise and Fall of the Paraguayan Republic, 1800-1870*. University of Texas Press: Austin, Texas, 1979. Examines this critical period of Paraguayan history as a period rather than a study of personalities.

Zook, David H., Jr. *The Conduct of the Chaco War*. Bookman Associates: New Haven, Connecticut, 1960. An interesting, in-depth treatment of this little-understood war from a politico-military viewpoint.

PERU

Republic of Peru

Major Cities:

Lima, Arequipa

Other Cities:

Cajamarca, Callao, Cerro de Pasco, Chiclayo, Chimbote, Cuzco, Huancayo, Ica, Iquitos, Pisco, Piura, Pucallpa, Trujillo

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Peru. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

PERU is a nation of diversity and contrast. Historically, it was the nucleus of the great Inca civilization and, subsequently, the administrative center of the Spanish colonial empire in South America. Geographically, Peru includes the desert coastal region with its populous cities of Lima, Arequipa, Trujillo, Chiclayo, and Piura; the mountainous central area of the Andean chain; and the jungle region forming the headwaters of the Amazon Basin.

Situated on the Pacific coast of the continent, Peru shares frontiers with five South American republics—Ecuador and Colombia to the

north, Chile to the south, and Brazil and Bolivia to the east.

MAJOR CITIES

Lima

Lima lies in the center of Peru's coastal desert area on the Rimac River, 8 miles from the Pacific Port of Callao and about 475 feet above sea level. Its coordinates are 12 degrees south latitude and 77 degrees west longitude, the same longitude as New York City, 3,500 miles north. The Pan American Highway links Lima with Ecuador (600 miles north) and with Chile (720 miles south).

Although only 12 degrees south of the Equator, Lima is not tropical. The Pacific Ocean's cool Humboldt Current moderates the Peruvian coastal climate. Two distinct seasons occur: summer and winter. Winter is cool and damp with overcast skies; summer is moderate and generally pleasant. Rain is practically nonexistent in the area though light mist and drizzle persist throughout the winter.

Lima was founded by Francisco Pizarro on January 18, 1535, and named the "City of Kings," probably

because the site was discovered on Epiphany. The seat of the viceroy was established here in 1542 with jurisdiction over all Spanish territory in South America except Venezuela.

The City of Kings has changed in the past 25 years from a quiet city of Spanish colonial charm into a modern-day metropolis. Although many colonial landmarks still stand, new office buildings and hotels tower over the dignified mansions and churches of the 17th and 18th centuries. Greater Lima with its suburbs covers roughly 400 square miles and has a population of over 7 million, making it the fourth-largest city in South America. By day the city teems with business and traffic; at night it assumes a typical Latin American cosmopolitan appearance, offering excellent restaurants, nightclubs, discotheques, concert halls, and movie theaters.

The area is rich in centuries-old plazas and churches. Inca and pre-Inca ruins are nearby, and artisan objects of silver, leather, and alpaca wool are available. Many modern entertainment and sports facilities are also available.

Utilities

Electricity in Lima is 220v, 60 cycles, but the voltage varies. Some houses and apartments are wired

Courthouse and plaza in Lima, Peru

Susan Rock. Reproduced by permission.

for both 110 and 220. Keep in mind that 110v appliances require a transformer. Most areas have enough water, but severe shortages can occur, particularly in summer. Telephone, electricity and water service are reliable in Lima.

Food

American-style supermarkets are abundant in most residential areas. Markets offer a variety of locally produced and processed goods. Many small specialty shops can be found throughout greater Lima, but imported foodstuffs are expensive.

Delicious fresh domestic and imported fruits and vegetables, both tropical and temperate, are sold in Lima year-round. Bananas, melons, oranges, and such tropical fruits as papayas, mangoes, and maracuya (passion fruit) are of good quality and reasonably priced. Apples, plums, peaches, strawberries, watermelon, pears, etc., are also available in season. Small limes are used for drinks and in cooking. Fresh fruit juices including strawberry and melon are popular. Many fresh herbs and spices are sold in the supermarkets.

Fish, fresh meat, and chicken are generally available. Beef, pork, and some cuts of lamb are good, but

quality varies. Cook pork thoroughly.

Fresh, pasteurized milk is available at some local supermarkets (La Molina brand is preferred but sometimes hard to find). Many Americans buy boxed, long-life milk. Powdered or canned milk is available. Local and imported cheeses are plentiful and varied. There is no lack of good cheeses in Lima. Ice cream is not very expensive and may also easily be made at home.

Seven brands of beer are brewed in Peru and good Chilean wines are available locally. World-famous "pisco" brandy (distilled from grapes) is widely served and "pisco sours" are traditionally offered as a gesture of hospitality. Locally bottled soft drinks include Coca-Cola, Pepsi Cola, Canada Dry Ginger Ale, Seven-Up, and tonic. The bright yellow Inka Cola is a favorite Peruvian soft drink.

Peruvian cuisine excites the palate and is imaginative and varied, with many dishes based on fresh fish and seafood. Corn, potatoes, and chicken are combined with such fresh herbs as basil and coriander (Chinese parsley) to make delicious soups. Rich desserts are popular. Restau-

rants are exceptionally good, though expensive.

Clothing

All items of apparel are sold locally but imported items are expensive. The style and fit of locally produced apparel are different. Local tailoring and dressmaking services are good. Excellent fabrics may be purchased here. Peru is famous for export of a high-quality cotton.

Attractive, good-quality shoes are available, but expensive, and large, half-size, and narrow sizes are hard to find.

Men: Most Peruvian men dress conservatively, wearing shirts and ties to both office and social gatherings. In summer, sport shirts and slacks are acceptable for day and evening wear.

Women: Women will find woolen and other medium-weight warm dresses or suits practical for office or social wear during winter. Evening jackets and wraps are necessary in winter and frequently lightweight shawls are needed in summer. Shorts are rarely seen in public in the city, but are common at clubs, picnics, and at home.

Dress slacks are generally acceptable, depending upon style and fabric, and are suitable for coffees, luncheons, teas, meetings, and cocktail parties. Street-length dresses or separates are worn more frequently.

Children: Uniforms required for various schools should be purchased locally. Black athletic shoes are acceptable to uniform standards and could be purchased in the U.S. Although kindergarten-age children do not wear uniforms, they will need them when they enter first grade. During March, school children are not required to wear uniforms because of the heat.

Supplies and Services

American and European brands of toilet articles and cosmetics are expensive here; domestic brands are

more reasonably priced and some are satisfactory.

Pharmacies are well stocked with antibiotics, vitamins, and U.S.-patented medicines at controlled prices comparable to those in the U.S.

Photography enthusiasts could bring a supply of film, but remember that it deteriorates if stored in a humid climate for long. Most film types are sold locally.

Tailoring, dressmaking, shoe repair, hairdressing, barbering, laundry, dry-cleaning, and other services are available at reasonable prices.

Domestic Help

A maid's salary is currently about \$150 to \$200 per month. For full-time help, the employer also must pay a social security tax of about 18% of monthly salary. Both live-in maid and day maids are easy to find. Besides monthly pay, the employer must provide uniforms, food, and for daily domestics, transportation money. Live-in servants need a simple bed and chest of drawers, available locally at modest prices. Some find that to have domestic help is essential because their presence helps improve home security and because air pollution and dust create constant cleaning problems.

Gardeners, and ironing persons, are available as day workers, who can be hired to wash and wax floors, clean windows, and polish furniture (jobs maids generally do not do). Gardeners generally have their own lawn mowers. Good caterers are available for special entertaining at reasonable prices.

Peruvian law requires employers to give servants 15 days vacation when they complete a year of continuous service. Also, 15 days indemnity will be due domestic workers for each full year of service.

Religious Activities

The Lima Cathedral, originally built in the 16th century, has been almost entirely reconstructed and is currently used primarily as a

museum. Lima has many other Catholic churches, some of considerable historic and artistic interest. Masses in English are conducted at the Santa Maria Reina Chapel, Avenida Sta. Cruz, Ovalo Gutierrez, in Miraflores.

Three Protestant churches have Sunday services in English: the Anglican Church of the Good Shepherd at Av. Santa Cruz 491, Miraflores. Sunday services include Holy Communion at 8:00 a.m. with Morning Service at 10:00 (Creche and Sunday school available). The International Union Church at Av. Angamos 1155, Miraflores offers interdenominational Worship Services in English on Sundays at 10:30 and Sunday school at 9:30 (adults) and at 10:15 (children). The Union Church also offers Bible Studies on Friday, March to November. The New Life Bible Fellowship at Av. La Molina Este, 142 Rinconada del Lago, offers an interdenominational English Worship Service on Sunday at 11:00 a.m. in Iglesia Vida Nueva en Cristo. Nursery is available. Several Jewish congregations offer services in Hebrew and Spanish, with many English-speaking members of the congregation. Asociacion Judia de Beneficencia Eculto de 1870 is located at Jose Galvez 282, Miraflores (4451089), Central Social y Cultura Sharon at Dos de Mayo (440-0290) and Union Israelita del Peru can be contacted at 4400290. Mormon services in English are also offered. Lima has missionaries from many Protestant denominations, but their church services are usually in Spanish. The YMCA and YWCA are active in the Lima community.

Education

School-age children usually attend the Colegio Franklin D. Roosevelt, an international school in Lima. Instruction is in English and programs are offered for preschool age children (3 and 4-year old), as well as kindergarten through grade 12. Colegio Roosevelt is accredited by the U.S. Southern Association of Colleges and Secondary Schools. This private, coeducational, nondenominational school, was

established in 1946 to provide schooling for dependents of major U.S. companies in Peru. Its curriculum is primarily designed to prepare students for future enrollment in universities. The school has about 1,300 students (kindergarten through grade 12). The student population is currently 1,337 with U.S. citizens making up 26%, 52% Peruvian, and the remaining 22% of the students are third country nationals.

The large campus is quite impressive. Separate buildings are used for the high school, middle school, elementary school, multipurpose media facility, and the gymnasium. Many faculty and administrative personnel are U.S. citizens. School begins the first week in August and continues until early July, with a 2-1/2 month holiday from mid December through February. The school does not have a cafeteria. Children either carry their lunches or purchase snack food.

Guidance counselor interviews of secondary students assist in class scheduling. To assist administrators, the school recommends that copies of official transcripts, standardized tests, report cards, letters of recommendation and any additional information that would be helpful, be forwarded to FDR prior to your arrival. English, history, social studies, Spanish, science, math, and physical education are standard offerings in the high school as well as elective courses. International Baccalaureate (IB) courses and diploma as well as Advanced Placement (AP) are available. Additionally, Roosevelt offers a strong computer education program. Extracurricular activities include sports (baseball, basketball, soccer, field hockey, tennis, softball and volleyball). Photography Club, Drama Club, National Honor Society, student government and Varsity Club. Gifted and talented children programs are offered. Students with diagnosed mild learning disabilities are included in regular classes with support from a specialist. However, it should be noted that Colegio Roosevelt has limited

Town square in Arequipa, Peru

© Barnabas Bosshart/Corbis. Reproduced by permission.

resources for special needs students. Programs for students with learning difficulties or those in advanced curriculums do not compare with those offered in U.S. public school systems. It is important to contact the school before enrollment to discuss how best your child can be accommodated. All relevant information should be forwarded, along with academic and health records, before arrival to enable the school to better evaluate individual students. More detailed information regarding resources for special needs students at FDR can be obtained from the Overseas Briefing Center.

The school offers a short summer activities program. Colegio Franklin Delano Roosevelt can be contacted at: (phone) 51-1-435-0890, (fax) 51-1-4360927 or (e-mail) fdr@amersol.edu.pe.

Their web site address to be contacted is: www.amersol.edu.pe.

Peru has many national and private universities, including 14 in Lima. One semester courses like those given in U.S. colleges and universities are generally not offered here. Agriculture and engineering are taught at national universities in Lima. All courses are in Spanish and enrollment is restricted.

The University of San Marcos in Lima is the oldest in the Americas (founded May 13, 1551) and the largest in Peru. Its faculties include humanities, law, medicine, sciences, economics, education, and veterinary medicine. But this university has been plagued with student disturbances and is suffering an economic crisis.

The Catholic University is the largest private university in Lima. During July and August it sponsors a

special program for U.S. students, as does the University of Lima, which has an excellent School of Communications. The University of the Pacific specializes in business education and other related programs.

Special Educational Opportunities

The Binational Centers offer a language program to teach Spanish to foreigners in Peru. In addition, English language classes are available. You can also arrange inexpensive private language tutoring.

Sports

Sports facilities, aside from various spectator sports, are primarily limited to private clubs, gymnasiums, or health studios. Lima has many popular, but expensive, sporting clubs and several tennis, golf, swimming, and riding facilities. Some

clubs have almost impossible admission requirements, but others have memberships available that range from expensive to moderate. Clubs usually require initiation fees or shares (some of which can be sold on departure) plus monthly or quarterly dues. Several modern, well-equipped health studios and gymnasiums in the area provide exercise facilities, boxing, wrestling, weight lifting, etc. An active softball league operates on weekends at Roosevelt School.

The American Association is a social/charitable membership organization for U.S. citizens and Canadians living in Lima. Among its activities are group trips to outlying areas, a monthly restaurant night, and other social events. It sponsors a community picnic each year on Labor Day and a joint Canadian/U.S. Independence Day celebration in July.

Touring and Outdoor Activities

Almost every area and town in Peru has its own unique festivals and celebrations. These are mostly colorful religious events. Comfortable, clean tourist hotels operate in the most frequently visited towns. Reservations for all in-country travel can be made through several local travel agencies. The South American Explorers' Club has an office in Lima with extensive files on trips within Peru. Membership costs \$30 per year.

Nearby Pacific Ocean beaches offer swimming and surfing, but the undertow and currents are sometimes dangerous, and many nearby beaches are contaminated by raw sewage. About 20 to 30 miles south of Lima are clean, pleasant beaches that are also safe for children. These include the Punta Hermosa and Santa Maria beaches. Surfing in Peru deserves special mention. The many coastal beaches provide a variety of waves rarely seen in other localities. However, the water is usually quite cold, so surfers require wetsuits as well as surfboards. Both are expensive in Peru. A group of sailing enthusiasts in

Lima holds regattas during the summer for Lightning class craft.

Both expensive surf and small boat fishing are available at Pucusana (30 miles south) and Ancon, though it is hard to get small boats in summer. Trout fishing is available at Lake Titicaca, on the Altiplano in southeast Peru about 810 miles from Lima, and in neighboring mountain streams, but not in the vicinity of the city.

Three aviation clubs are located about 12 miles from the city center. These include a flying club, a gliding club, and a parachute club. Fees vary and at times have been high by U.S. standards. A good working knowledge of Spanish is needed to participate in the activities of these clubs.

Lima has facilities for target, skeet, and trap shooting. You may rent or board horses at several stables and riding clubs. Inter-Club riding competition is well organized and competition keen. Spectator sports include horse races (held on Tuesday, Thursday, Saturday, and Sunday), polo, colorful bullfights (October–November), soccer, basketball, cockfights, and professional boxing and wrestling.

Bring any sports equipment you plan to use here, particularly tennis and squash racquets, scuba equipment, surfboards, golf clubs, badminton sets, ping-pong, volleyball, hunting and fishing equipment, bicycles, yard equipment for children, baseball gloves, balls and bats. Local equipment is expensive. A game known as "fronton" is also popular and is similar to outdoor paddle ball.

Lima offers a wide choice of good restaurants for business lunches and social dining. Sidewalk cafes and drive-in restaurants abound in the city. Some snack bars feature American-type services and food. Certain tourist areas offer more elegant dining. Many popular restaurants specialize in Chinese food, pizza, fried chicken, or Peruvian Creole food. Many U.S. fast-food

franchises such as Burger King, Kentucky Fried Chicken, and Domino's Pizza operate in Lima.

Entertainment

Several theaters in Lima show first-run movies. American films are popular and are widely shown with original soundtracks and Spanish subtitles. Lima also has live theaters with most performances in Spanish. An active amateur theater group, sponsored by the British community, regularly presents plays in English.

The National Symphony Orchestra offers concerts during winter, at times featuring vocal or instrumental artists from Europe, the U.S., or other Latin American countries. The city has a local ballet company, and international ballet companies occasionally perform. International soloists participate in the elegant Municipal Theater's annual opera season.

Lima has several nightclubs with dance orchestras and floorshows, discos, and good jazz bars. These clubs are expensive and prices vary according to the entertainment offered.

Peruvians celebrate their country's independence on July 28 and 29 with military parades, official receptions, and religious ceremonies.

Social Activities

Most entertaining in Lima is done in private homes, clubs, or hotels.

Peruvians are conservative and reserved about admitting outsiders to their social and family circles, but they are friendly to Americans. With a little time and effort you can make valuable and pleasant friendships. It is a good idea to reconfirm appointments, particularly social engagements, the same day or the day before.

Social organizations open to membership by Americans (some by invitation only, others by application) include the American Society of Peru, the Toastmasters, the American Women's Literary Club,

the Lima Women's Chorale, Good Companions (British theater group), Lions, Rotary, and several sport clubs. For children, Lima has active affiliates of Cub Scouts, Boy Scouts, and Girl Guides. Bring transfer cards if you wish to enroll your children in one of these groups.

Arequipa

Arequipa is 475 miles southeast of Lima, at the foot of the dormant volcano, *El Misti*, one of Peru's highest points (19,031 feet). The city proper, at an altitude of 7,550 feet, is the capital of Arequipa Department and had a metropolitan population of about 635,000 in 1990.

Arequipa was founded in 1540 by Francisco Pizarro on the site of an Inca town. It is situated on an oasis, in an arid region that grows crops for local consumption. The city is an important commercial center for southern Peru and northern Bolivia, producing leather, nylon, textiles, and foodstuffs. A steel mill and textile plants also are in operation.

Tourism is an important industry here. Incan ruins, hot springs, and bathing resorts are among Arequipa's tourist attractions. Examples of Spanish colonial architecture, almost completely destroyed in an 1868 earthquake, have been restored. Santa Catalina, a cloistered convent, is said to be an architectural marvel. Arequipa has been called the "white city" because of the light-colored *sillar* (building stone) which dominates the area.

There has been a university in Arequipa since 1821. The city is the seat of a Catholic diocese, the publishing center for two newspapers, and the site of several provincial banks and a Chamber of Commerce. One of Peru's three seismological stations is located here; the others are in Lima and Huancayo. The city is prone to severe earthquakes. The latest earthquake in the 1960s devastated the city.

Prescott Anglo-American School in Arequipa is a coeducational day

school for pre-kindergarten through grade 12. It was founded in 1965 and is accredited by the country's Ministry of Education. Its curriculum is Peruvian, with Spanish a required language. Six members of its staff of 70 are U.S. citizens. Enrollment is about 1,140. Prescott is located a few miles from the center of the city; the mailing address is Apartado 1036, Arequipa, Peru.

OTHER CITIES

The ancient Inca city of **CAJAMARCA** is situated 350 miles north of Lima in Cajamarca Province. Conquistador Francisco Pizarro captured and executed Inca chief Atahualpa here in 1532. The colonial presence is evident in the cathedral and San Francisco Belén Church. Cajamarca relies on mining, agriculture, and manufacturing for its economic well-being; tourism is increasing in importance. The thermal springs known as "Baths of the Incas" are near this provincial capital of approximately 93,000. A main trading hub of the northern Andes, Cajamarca has adequate transportation via road and air.

CALLAO, on the doorstep of the capital city, is the chief seaport of Peru. It is situated on Callao Bay, only eight miles west of Lima. The city is the capital of Lima Department, and had a metropolitan population of approximately 575,000 in 1989. Founded in 1537, at the same time that Francisco Pizarro established Lima, Callao was incorporated as a town in 1671. As the gateway to Lima, it was frequently attacked. Sir Francis Drake captured the town in 1578. It later was held by Spanish loyalists until 1825, even though Peru had gained its independence in 1821; the Spanish also bombarded the city in 1866. Callao was occupied by Chile from 1881 to 1883 during the War of the Pacific. Major expansion of its harbor was undertaken in 1958. The harbor, which is sheltered by a small peninsula and an island, handles more than half of the nation's imports and exports. Metallurgical

industries, shipbuilding factories, breweries, and sugar refineries are found in Callao. Exports include minerals, wool, refined metals, fish oil, and fish meal. Callao was totally destroyed in 1746 by an earthquake and a tidal wave, and again severely damaged in 1940; however, many colonial landmarks survive.

CERRO DE PASCO rests in Peru's central highlands 112 miles northeast of Lima. One of the highest cities in the world at an altitude of 14,436 feet, it gained renown for its mining in the mid-1630s. Silver dominated the industry for 200 years. Today the original silver deposits are long depleted, replaced by gold, copper, lead, zinc, and other minerals. Cerro de Pasco is the capital of Pasco Province and has an estimated population of 70,000.

CHICLAYO, with a 2000 population of about 517,000, is a maritime city in northwestern Peru, 400 miles north of Lima. The capital of Lambayeque Department, it is situated on the coastal desert between the Pacific Ocean and the Andes Mountains. Chiclayo gets little rainfall and may go years at a time without receiving any, but Andean streams are used for irrigation. The artificial watering enables the area to raise sugarcane and the greatest part of the country's rice. Chiclayo has a university, founded in 1962, and an agricultural college, established in 1963. The city has many parks and gardens and a large marketplace.

CHIMBOTE, one of Peru's fastest-growing urban areas, was reconstructed as a model city less than 20 years ago. The city, 225 miles northwest of Lima on the Pacific coast, made international headlines in 1970 when a massive earthquake struck. The unique natural harbor accounts for the important import/export business here. This involves agriculture, manufactured goods, and bulk materials. Excellent transportation for this community of 253,000 is provided by an airport and by the city's location on the Pan-American Highway. Chimbote is also the terminus of a local railroad.

CUZCO (also spelled Cusco) is 300 miles southeast of Lima at the junction of the Huatanay and Tullamayo rivers. Situated at an altitude of 11,200 feet, Cuzco's population, close to 300,000, is predominantly Indian. Cuzco once was the capital of a vast Inca empire, known as the "City of the Sun." It is thought to have been founded in the 11th century by Manco Capac, the first ruler of the Incas. At that time, the city had massive temples, fortresses, walls, and beautiful palaces. Today, the Temple of the Sun is the site of a Dominican convent. Ruins of some of the Inca buildings survive, notably the fortress of Sacsahuaman. Francisco Pizarro took Cuzco for the Spanish in 1522, destroyed much of the ancient city, and constructed a colonial city, using many of the old walls as foundations for new buildings. The Renaissance cathedral of La Merced is the most noteworthy of the many churches in Cuzco. An earthquake destroyed a broad area of the city in 1950, but most of the historical buildings have been restored, and Cuzco still is considered the "archaeological capital of South America." The National University of Cuzco was built in 1597. The Feast of Into Raymi is the important festival here. Close to Cuzco is the ancient, terraced, "lost city" of Machu Picchu. Cuzco is a commercial and industrial center. Among the industries are textile, beer, and rug production. The city is linked by air, highway, and railroad with Lima.

HUANCAYO, a city whose metropolitan-area population was estimated at 327,000 in 2000, is situated in central Peru, on the Montaro River. A university, founded in 1962, and a national seismological station are located here. Huancayo is the hub of a large Indian district. Many Indians come to Huancayo to trade at the city's central market. The city has many beautiful examples of modern and religious architecture. Huancayo is a major commercial and tourist center for Peru's Central Andes region. In 1966, the Museo Cabrera was opened. It contains pottery and

engraved stones from the ancient Nazca culture.

ICA, on the river whose name it bears, is 170 miles southeast of Lima. The capital of Ica Department, this city of 161,400 (1993 est.) is located next to the Pan-American Highway. The Spanish settled here in 1563. Ica, twice destroyed by earthquakes, is today a commercial center for the cotton, wool, and wine produced in the region, and is also a summer resort. A university was founded in Ica in 1961. The shrine of Our Lord of Luren, site of many pilgrimages, is located here.

IQUITOS is in northeastern Peru, 1,270 miles northeast of Lima. The capital of Loreto Department, it lies on the Amazon, approximately 2,300 miles from the river's mouth. Founded in 1863, Iquitos, with a 2000 population of 367,000, is the farthest inland port of appreciable size in the world. The city became important early in the 20th century with the boom in rubber, but declined soon afterward when the market collapsed. Today, rubber, coffee, cotton, and timber are exported from Iquitos. The Andes Mountains are a barrier to the transport of commercial goods to the Pacific, so Iquitos' products are exported via the Atlantic Ocean. A university was founded here in 1961. Iquitos is the cultural, religious, and tourist center of eastern Peru.

PISCO is a port on the Pacific Ocean, about 130 miles south of Lima, with a population of about 56,000. Large vineyards surround the city, and one of its major industries is the production of Pisco brandy. Cotton is also cultivated and processed in the area. Other industries in Pisco include textile manufacturing and cotton seed milling. Subsistence farming and fishing are also pursued. Adjacent to Pisco, on the Paracus Peninsula, are ruins from a pre-Incan civilization.

PIURA, 425 miles northeast of Lima, is situated in the Piura valley of the Peruvian coastal desert. San Miguel de Piura, originally situated

on the coast, was the first Spanish settlement in Peru, founded by Francisco Pizarro in 1532. Because of unhealthy conditions, the city was moved to the present inland site of Piura, about 35 miles southeast of its port, Paita. Sebastián de Benalcázar set out from here to conquer Ecuador. Severely damaged by an earthquake in 1912, this city of 325,000 (2000 est.) residents has developed into a commercial center for corn, rice, cotton, and sugarcane produced in the region. The cotton market in Piura is extensive; several cotton gins and cottonseed oil mills are located in the immediate area. A technical university opened here in 1961.

In east-central Peru about 80 miles from the Brazil border sits **PUCALLPA**, half civilized, half rain forest frontier town. This city of approximately 172,300 (1993 est.) residents was opened to the outside world in 1945 upon the completion of the Lima-Pucallpa highway. First settled in the early 1530s, Pucallpa is the largest city in Ucayali Department, as well as a market center and industrial district. Primary industries in Pucallpa include sawmills and plants for extracting rosewood oil. It is accessible by air or river traffic; there are no paved roads. This area has become headquarters for several missionaries and colonizers.

TRUJILLO is a coastal city in northwestern Peru, about 300 miles north of Lima. Its port, Salaverry, is nine miles to the west. The capital of La Libertad Department, Trujillo has a metropolitan population of about 652,500. The city was founded in 1534 and played an important role in the fight against Spanish rule. Independence was declared in 1820 and, in 1825, Trujillo served as Peru's provisional capital, as well as main headquarters for Simón Bolívar. In 1617, a wall was built to protect the city from English pirates; today, the wall is one of the principal points of interest. Situated in a fertile oasis of the coastal desert, Trujillo is a thriving commercial and industrial center. Rice and sugar are processed here, and the

city also produces textiles, leather goods, and food products. The University of La Libertad was founded in Trujillo in 1824. Four miles west are the ruins of the pre-Incan city of Chan-Chan, believed to have been established between 800 and 1000. Chan-Chan is recognized as the capital of the pre-Incan civilization of Chium, and once had 200,000 inhabitants. Walls, decorated in relief designs, are part of the ruins today. In 1990, Trujillo had an estimated population of 532,000.

COUNTRY PROFILE

Geography and Climate

Peru is on the west coast of South America, south of the Equator, between 0 and 18 degrees south latitude and 70 degrees and 81 degrees west longitude. It is the fifth most populated country in Latin America, and it is three times the geographic size of California.

The country has four distinct geographic areas: the narrow coastal desert region (about 25 to 40 miles wide), barren except for irrigated valleys; the Andean highlands or sierra, containing some of the world's highest mountains; the "ceja de montana" (eyebrow of the mountain), a long narrow strip of mountainous jungle on the eastern slope of the Andes; and the selva or rain forest area, which covers over half the country, including the vast Amazon River Basin and the Madre de Dios River Basin.

The sierra, which makes up over one-fourth of Peru, is an area of uneven population distribution, rich in mineral wealth. Many of its inhabitants live at elevations above 10,000 feet. The selva region is sparsely populated and only partially explored. The climate in the ceja de montana varies with the elevation from temperate to tropical.

Because Lima lies on an axis of instability in the Earth's crust, seismic activity is common. Light earthquakes called "temblores" occur but seldom cause damage. For example, between May 1998 and May 1999, 85 light earthquakes occurred. A strong earthquake occurred in Lima, Callao, and environs on May 24, 1940, causing major damage and claiming over 2,000 lives. Also, serious earthquakes occurred in Cuzco (1950), Arequipa (1958 and 1960), the Lima-Callao area (1966-74), and Chimbote and the Callejon de Huaylas (1970).

Peru lies below the Equator; therefore its seasons along the Pacific Coast are the reverse of those in the Northern Hemisphere. Summer lasts from about mid-December through April in that region and is generally pleasant, with warm, sunny days and cool, comfortable nights. February is usually the warmest, with an average temperature of about 79°F, but humidity averages 83 percent. Temperatures rarely range above the mid-80s. Only two distinct seasons occur in the highlands: the rainy season from December to April and a dry period the rest of the year. Temperatures in the sierra fluctuate considerably with the weather and altitude.

Winter along the coast lasts from May or June to November. The weather is chilly and damp. Sunny days in Lima's winter are rare, particularly in July, August, and September. Rain is virtually unknown; however, a fine mist often falls and fog is common. The coolest, dampest months are July and August, with average temperatures about 60°F and rarely falling below the low 50s. Humidity is high all year, especially in winter, requiring constant vigilance against mildew and mold.

Population

Peru's 1999 population was estimated at 25.23 million, with a population growth rate of about 1.7 percent per year. The nation's population consists of many ethnic groups, of which about one-third

live in the Lima metropolitan area. Indigenous peoples constitute about 35 percent of the population, while Peruvian of mixed indigenous and European descent ("mestizo") comprise almost 50 percent. Whites comprise almost 10 percent of the population, while Asians and Blacks make up less than 5 percent of the total population. In the Lima metropolitan area, the population is overwhelmingly mestizo and white, with relatively large Japanese and Chinese communities.

Peru has two official languages - Spanish and the foremost indigenous language, Quechua. Spanish is used by the government and the media, and in most forms of education and commerce. English is spoken by many educated Peruvians, and is understood in most major hotels and in many restaurants and shops catering to tourists. Amerindians who live in the Andean highlands speak Quechua or Aymara and are ethnically distinct from the diverse indigenous groups, who live on the eastern side of the Andes and in the tropical lowlands adjacent to the Amazon basin. All of the indigenous languages are losing ground with increases in indigenous people moving to the largest cities, where Spanish is the most commonly used language.

Public Institutions

When the Spanish arrived in the early 16th century, the territory now known as Peru was part of the Inca Empire that extended from southwestern Colombia to central Chile. Its conquest by a handful of adventurers led by Francisco Pizarro (who founded Lima, which he called the "City of Kings") was facilitated by the aftereffects of the succession struggle in the Inca Empire between two half-brothers, Atahualpa and Huascar.

Peru was part of Spain's American empire for almost 300 years. Several prominent leaders of South American wars of independence played a role in Peru's liberation: San Martin proclaimed Peru's independence on July 28, 1821; and Boli-

var was President of Peru from 1824 to 1826. Sucre won the battle of Ayacucho in 1824 (generally considered the last major engagement of the wars of independence).

Since becoming independent, Peru and its neighbors have been engaged in intermittent territorial disputes. Chile's victory over Peru and Bolivia in the War of the Pacific (1879–83) resulted in a territorial settlement in which Peru lost Arica and Tarapaca Provinces to Chile. Following a serious clash between Peru and Ecuador in 1941, the Rio Protocol (of which the U.S. is guarantor) established the current boundary between the two countries. Occasional brief skirmishes have occurred over the years along a part of the border area still undemarcated. Major fighting broke out on the Peru-Ecuador border (limited to a sparsely populated jungle area) in January 1995 until a cease-fire was brokered by the four Rio Protocol guarantors in March. The U.S. participated in observing the cease-fire, and along with Brazil, Argentina and Chile, helped facilitate the signing of a global and definitive peace agreement on October 26, 1998.

Throughout Peruvian history, the military has played a prominent role. Coups have repeatedly interrupted civilian, constitutional government. The last period of military rule lasted from 1968 to 1980.

For centuries, the Peruvian Indian population has cultivated the coca plant (*Erythroxylum coca vas coca*), whose leaf is chewed as a mild stimulant and specific against altitude sickness, used as an herbal tea, or used for some traditional or religious ceremonies. In the 1870s, the pharmaceutical industry isolated the cocaine alkaloid, a powerful local anesthetic, but also a highly addictive stimulant with significant potential for abuse.

An initial burst of cocaine abuse in Europe and the U. S. subsided at the time of World War I, but in the 1970s, escalating demand for

cocaine in the U.S. again led to vast expansion in the limited traditional coca crops by much greater cultivation destined for illicit drug production. Since that time, cocaine has become the most significant illicit substance of abuse in the U.S., and is a growing problem for the rest of the world.

Peru is overwhelmingly the world's largest producer of raw material for cocaine, and the illegal drug trafficking industry has since the 1980s become recognized by the Peruvian people as one of their greatest domestic problems, a source of financing for terrorist groups, corruption of democratic political and judicial institutions, economic and social distortion, and devastation of the Amazon environment.

Peru returned to democratic rule in 1980 when Accion Popular led by American-educated Fernando Belaunde Terry came to power. In the 1985 elections, Alan Garcia of the center-left American Popular Revolutionary Party (APRA) won the presidency and a controlled majority of the two Houses of Congress. American-educated Alberto Fujimori, an independent candidate, was elected President in 1990. On April 5, 1992, with the support of the armed forces, President Fujimori suspended the constitution and closed down the country's congress and courts in what became known as "the auto-coup." Following pressure by the international community, Fujimori called national elections to choose a new unicameral congress in November 1992 to draft a new constitution. Fujimori's political movement, Cambio 90/Nueva Mayoria, won a majority of seats; several traditional political parties boycotted the election.

The new constitution, which the congress drafted, was narrowly approved in a nationwide referendum in October 1993. Unlike the previous constitution, the new one allowed a sitting president to run for reelection, which Fujimori did and won by a landslide in April 1995. In 1996, the Congress passed legislation interpreting the consti-

tutional term limits for president, that made it possible for Fujimori to seek reelection in the 2000 national elections. The new legislative body is a unicameral congress with 120 members elected at large. President Fujimori's party holds 71 seats, and a variety of other groups, the largest of which is Union Por El Peru, hold the rest.

Under President Fujimori, many of the problems that haunted his predecessors—including terrorism, significant human rights violations, and hyperinflation—have been eliminated or greatly reduced. Some 30,000 persons, including thousands of noncombatants, died between 1980 and 1995 as two insurgencies challenged the government. A turning point was the September 1992 capture by police of Abimael Guzman, the founder and leader of Peru's largest terrorist group, Sendero Luminoso (Shining Path). However, other serious problems remain, including poverty, high unemployment, the illicit drug industry, and a controversial judicial branch.

Peru is divided into 24 departments and the Constitutional Province of Callao (the country's chief port, adjacent to Lima). The departments are subdivided into provinces that in turn are composed of districts. Municipal government is a distant second in power to the central government, with regional government a mere appendage of the latter.

Arts, Science, and Education

As Spain's most important viceroyalty in South America, Peru was an art-producing center. Art continues to be appreciated in Lima, where numerous commercial art galleries and museums exist. During the last three decades, painters such as Gerardo Chavez, Alberto Quintanilla, and Jose Carlos Ramos have gained international stature along with Peru's renowned painter Fernando de Syszlo and sculptor Victor Delfin. A younger generation of promising artists has also sprung up at a time

when Peru's economy provides more opportunity to promote the arts.

Peru is well known for its writers and poets. Mario Vargas Llosa is one of the world's most renowned contemporary novelists. His novels and essays are read abroad and have been widely translated. His bestselling titles include *Green House*, *Conversation in the Cathedral*, *Aunt Julia and the Scriptwriter*, and *The War of the End of the World*. His most recent is *A Fish in the Water*. Other poets and writers are Julio Ramon Ribeyro, Alfredo Bryce Echenique, Antonio Cisneros, and Blanca Varela.

With the recovering economy and the strengthened internal security situation in Peru, the country is resuming its cultural life. Musical offerings, including opera, are also available in Lima. Internationally known soloists, ensembles, and conductors perform with either the National Symphony Orchestra or under the sponsorship of the Philharmonic of Lima. The three famous tenors Luciano Pavarotti, Placido Domingo, and Jose Carreras, for example, all visited Peru during 1995. Top foreign singers, folk dancers, and ballet groups perform in Lima every year, and quality chamber groups present concerts during the May–December season. U.S. artists perform under the auspices of USIS and Peru's Binational Centers (BNC's) in Lima or in provincial cities.

The Peruvian theater has had a long and colorful history. Today, it is a popular national institution, with many active professional and amateur university groups. An increasing number of professional companies continue performing regularly, with several specializing in modern theater. USIS and the Lima BNC recently staged the Tennessee Williams play *The Night of the Iguana* with great success.

The Good Companions, a nonprofessional theater group sponsored by the British community, performs in English several times yearly at the

British Theater under the auspices of the British Council.

Spanish and English classes, a varied program of cultural presentations, and a modest bilingual library are available to Americans and Peruvians at the Lima Binational Center and its branch in Miraflores (Instituto Cultural Peruano Norteamericano-ICPNA), where more than 10,000 Peruvians study English. Other Binational Centers, also supported by English teaching, are located in Arequipa, Cuzco, Trujillo, Chiclayo, Piura, and Huancaayo. Americans are encouraged to request the monthly activities bulletin of the Lima ICPNA's and to visit the provincial centers, where they are assured of a cordial welcome.

Commerce and Industry

Peru is a developing country blessed with extensive natural resources that enhance its potential for development. Rich mineral deposits in the Andes, abundant timber resources in the Amazon region, and an unusually bountiful supply of fish along the country's long coastline form a solid base of natural wealth. The arable lands along the coast offer the potential for considerable growth in agriculture, with sufficient investment in irrigation and other agricultural technologies.

In 1997, Peru's Economy grew by 7.2 percent, while inflation, at only 6.5 percent, fell to its lowest level in a quarter century. Peru's economy faltered in 1998, however, as the combined adverse effects of the Asian crisis (which depressed metal prices), the El Niño weather phenomenon (which hurt the important fishing industry) and the Russian crisis (which caused foreign investors to withdraw portfolio investments and foreign banks to suspend lines of credit to Peruvian banks) took their toll. The 1998 Gross Domestic Product grew by 0.7 percent while the inflation rate fell to 6.5 percent. The following year saw

an estimated growth of about 3 percent.

Confidence in the Peruvian economy stems from the program of fiscal discipline undertaken by President Alberto Fujimori since his first term in office (1990). His policies halted the hyperinflation of the 1980s and put Peru on an unprecedented growth path. He succeeded in reinserting Peru into the global financial community by committing to repay official debt to foreign creditors, and by his efforts to stem terrorist activity.

The Peruvian Government actively seeks to attract both foreign and domestic investment in all sectors of the economy. In 1991, the Peruvian government began an extensive privatization program, encouraging foreign investors to participate. From 1991 through 1998, privatization sales totaled about \$7 billion, of which foreign investors purchased the vast majority. Foreign investors have the same rights as national investors to benefit from any investment incentives, such as tax exemptions. Foreign direct investment has been spurred by the significant progress Peru has made over the last eight years toward economic, social, and political stability.

The Peruvian economy was not as hard hit during 1998 and early 1999 as some other Latin American economies (such as Brazil's which was forced to devalue its currency at the beginning of 1999). Most observers attribute the relative calm in Peruvian financial markets to its fiscal and monetary discipline, the size of its international reserves, and its floating exchange rate. Nevertheless, at the start of 1999 business leaders in Peru and others were calling for the government to spur domestic demand by increasing government spending.

The U.S. government advises the American Business Community that the best prospects for investment include mining, oil, and gas, construction, telecommunications, food processing, food packaging, and personal security equipment. Tour-

Cory Langley. Reproduced by permission.

Marketplace in Peru

ism-related products (such as hotel and restaurant supplies) are also promising. In the services sector, consulting services (especially in the areas of finance and tourism) and licensing of franchises are also good prospects.

Transportation

Automobiles

General traffic and driving practices differ greatly from those in the U.S. Traffic signs are widely disregarded. Improper signaling, failure to signal, and excessive speeding are frequent. Traffic signals frequently fail, compounding congestion and confusion. Lima's traffic can be nerve racking at first, but most people soon adjust to the improvised driving patterns. Traffic in Peru moves on the right as in the U.S.

Leaded gasoline is available in 84 and 95 octane and unleaded at 90

and 97 octane. The latter grades are most commonly used by those with American cars but do not give the same performance as U.S. high test. The cost of a gallon of gasoline in 1995 was almost double U.S. rates. Nowadays the cost of a gallon is between 6 and 7.87 new soles. Your catalytic converter may be removed here to accommodate the local leaded gasoline at more reasonable prices.

Local

Taxis, buses and smaller micro-buses abound. Buses are crowded but inexpensive. Regular taxi service is available at reasonable prices but the condition of most taxis is poor. Passengers should agree upon a price before entering the vehicle. Telephone dispatched taxi service is also available at higher rates.

Regional

Lima, an important air hub of South America, has a large, fairly modern

airport, served by American Airlines, Delta Airlines, United Airlines and Continental Airlines. Other international airlines serving Lima include Air France, Lan-Chile, Viasa (Venezuela), Avianca (Colombia), Varig (Brazil), Aero Peru, Iberia (Spain), LAB (Bolivia), Lufthansa (Germany), Alitalia (Italy), and others.

The ships that regularly service Callao Port and offer passenger transportation are from the Crowley American Transport and Maersk Lines. Their ships depart every 15 days or so from Miami, New Orleans, Houston, and New York.

Communications

Telephone and Telegraph

Long-distance telephone and telegraph services to and from the U.S. and other countries are good and getting better.

All services are routed via satellite. AT&T, MCI and Sprint direct dialing to the U.S. is available through the Peruvian telephone company (Telefonica, a member of the ITU). It is possible to dial direct to almost any country in the world.

Radio and TV

Lima has 32 AM and 36 FM radio stations that provide news and popular Latin American, classical, contemporary, European, American, and Peruvian music. World news coverage in Spanish is adequate, and reception is good. Peru's leading news radio station is Radio Programas del Peru (RPP): BO 730 AM and 89.7 FM. VOA shortwave reception is good, and VOA Spanish programs are regularly rebroadcast on Radio Miraflores (1250 AM), RPP, and others.

Seven TV stations operate in Lima. One of them, Channel 5, transmits 24 hours daily, while the others start in the morning or at midday and broadcast until late at night. All broadcasts are in color and use the standard American television (NTSC) system. Most programs are the same as in the U.S. - soap operas, Westerns, audience participation, domestic comedies, old movies, and dubbed U.S. shows. All are commercial with 8 to 22 minutes of advertising an hour. Two Peruvian companies provide cable TV service to metropolitan Lima. The monthly fee is approximately \$40 for about 50 channels including some from Europe, Chile, Mexico, Brazil, Argentina, and the U.S. (CNN, ABC, NBC and CBS, but ESPN, TNT, FOX, and HBO are not the U.S. premium channels).

Recent enacted Peruvian telecommunications laws aim to make the content of Peruvian TV more educational and cultural. American TVs with a transformer to convert 220v current to 110v will receive local programs. However, cables, rabbit ears or access to an external antenna is required. Bring radio, TV equipment, VCRs, and TV cassettes from the U.S. as they are expensive here.

Ham radio operators, who hold a valid U.S. license, are entitled to operate in Lima.

Licenses also can be obtained locally. Prior notice and payment of a small fee must be given to the Ministerio de Transportes y Comunicaciones, Direccion General de Telecomunicaciones.

In the past few years, VCRs have become very popular. Many places rent English-language films, both current and classic, as well as U.S. TV shows. Tapes, the majority of these available for VHS systems at moderate prices, are often pirated so the quality is poor. However, a U.S. video chain (Blockbuster Video) has opened several stores.

Several local Internet Service Providers (ISPs) offer standard dial up services for those bringing personal computers. Surge protectors are advisable. 28.8 kbps to 54 kbps modem speeds are available depending on the telephone lines servicing the area where the user resides. ISPs provide communications and browser software for most standard operating systems. ISP subscription fees vary but closely parallel those in the U.S. ranging from \$10.50 to \$19 per month. Red Cientifica Peruana (RCP) is the longest established and perhaps the best known ISP with full, 24-hour dial-up service. America On Line (AOL) and other U.S. Internet services are available, but users must pay a per-minute charge for connect time via long distance telephone lines.

Newspapers, Magazines, and Technical Journals

Lima has a competitive press with 16 daily newspapers. The most influential is the 159 year-old paper of record, conservative *El Comercio*. Well-informed readers often also consult center-right *Expreso* and center-left *La Republica*.

Gestion tries to be Peru's version of *The Wall Street Journal*. *El Peruano*, the government gazette, is the only medium that publishes the text of official communications. Other

dailies are more or less sensationalistic and colorful.

Three political magazines are published in Lima. The most influential is centrist *Caretas*; followed by independent, center-left *Si*; and the more popularly oriented *Gente*. Two respected intellectual bimonthlies, *Debate* and moderate leftist *Quehacer*, are published along with a wide range of specialized periodicals on economics and other fields.

Newspapers are relatively expensive. Newsstands sell copies at 58 cents to 88 cents daily and 66 cents to \$1.11 on Sundays with home delivery costing more. The official daily *El Peruano* costs a hefty 88 cents. Magazines have become quite expensive (at about \$3).

Lima has distributors of most major U.S. dailies. At one of them, Durlar, at Tiziano 205, San Borja, phone 475-8025, you can buy or arrange for delivery of the *Wall Street Journal*, the *New York Times*, the *Washington Post*, and the *International Herald Tribune*, all 1 or 2 days old. They may also be ordered by mail. The international edition of the *Miami Herald*, which has been printed in Lima and available for same-day sale, including home delivery, is being renegotiated at the time of this writing. Newsstands sell *Time*, *Newsweek*, and a few other popular American magazines. Prices are higher than those in the U.S. Some bookstores, mostly in Miraflores and San Isidro, sell English-language books.

Health and Medicine

Medical Facilities

Lima has several good private hospitals called "clinicas." These clinics lack some of the high-tech equipment found in the U.S. but are more than adequate for emergency situations and stabilizing patients. The physicians are trained in Peru, Europe, and in the U.S. Many are U.S.-board certified.

Individuals should have planned elective surgery done in the U.S. In general U.S. health insurance is not accepted and payment is expected at the time of the visit (expenses generally are reimbursable as allowed through your specific insurance plan). Dental care including orthodontia is available by both U.S.- and Peruvian-trained dentists. Individuals should have a general dental examination prior to arrival.

Community Health

Lima has a high incidence of hepatitis A, measles, typhoid, diarrheal disease, and tuberculosis. Poverty, overcrowding, and malnutrition are common. Malaria, yellow fever, dengue, and rabies are common in the jungle.

Expatriate families are generally healthy. They experience the same illnesses as in the U.S. in addition to gastro-intestinal infections, usually from contaminated food or water. Winter (May through November) is cool and humid. The cool, sunless weather increases the number of colds, bronchitis, asthma, and allergy-related complaints. Due to many factors, e.g., terrorism, high crime, need for increased residential security, and periodic water shortages, and the long, sunless, gray winter, many individuals experience stress-related symptoms and occasional depression.

Preventive Measures

The following are suggestions for staying healthy in Peru:

- Use bottled water, as tap-water is not potable. Commercially prepared soft drinks and beer are considered safe.
- Vegetables and fruit require disinfection with a chlorine solution before eating. Avoid salads and raw vegetables and fruits in restaurants. Do not buy from “ambulantes” (street vendors).
- It is recommended that you start the hepatitis A and the hepatitis B series before coming. Yellow fever immunization is required for jungle

travel and for travel into some other countries (such as Brazil) from Peru. Have this vaccine before you come to Peru. The following immunizations should be kept current: typhoid; diphtheria; tetanus; polio; measles, mumps, and rubella; and HIB.

- Individuals who will be working in the jungles and/or traveling or living in outlying areas should take the pre-exposure rabies and hepatitis B vaccines prior to arrival.
- Hand-carry your immunization record as you would your passport.
- Bottled drinking water is not adequately fluoridated.
- Automobile accidents commonly occur. Seat belts and child-restraint systems are strongly recommended.
- Before traveling outside Lima, check for malaria precautions, as the malaria prophylaxis medication recommended depends on the area of jungle travel within Peru. Generally, Mefloquine or Doxycycline are recommended. Notes for Travelers

NOTES FOR TRAVELERS

Passage, Customs & Duties

A valid U.S. passport is required to enter and depart Peru. Tourists must also provide evidence of return or onward travel. U.S. citizens do not need a visa for a tourist stay of 90 days or less. U.S. citizens remaining in Peru more than 90 days must pay a monthly fee to extend their visa for up to three additional months, for a total of six months. U.S. citizens, including children, who remain in Peru over six months without obtaining a residence visa will have to pay a fine in order to depart Peru.

Visitors for other than tourist or family visit purposes must obtain a Peruvian visa in advance. Business

visitors should ascertain the tax and exit regulations that apply to the specific visa that they are granted. U.S. citizens whose passports are lost or stolen in Peru must obtain a new passport and present it, together with a police report of the loss or theft, to the main immigration office in the capital city of Lima to obtain permission to depart. An airport tax of \$25 per person must be paid in U.S. currency when departing Peru. There is also a small airport fee for domestic flights. For further information regarding entry requirements, travelers should contact the Peruvian Embassy at 1625 Massachusetts Avenue, NW, Suite 605, Washington, DC 20036; telephone (202) 462-1084 or 462-1085; Internet <http://www.peruemb.org>; or the Peruvian Consulate in Chicago, Houston, Los Angeles, Miami, New York, Patterson (NJ), San Francisco, or San Juan.

You can fly to Peru from most sections of the U.S. in less than 16 hours (6 hours nonstop from Miami).

Remember that the seasons are the reverse of those in the U.S., so pack your luggage accordingly.

The Government of Peru prohibits the exportation of ancient Indian artifacts and colonial art. The U.S. Government supports this policy and, in accordance with the GOP Law No. 12958 of February 22, 1958, and Decree of Law 18780 of February 4, 1971 (available in General Services Office). The packing companies in Lima are prohibited from packing and shipping items that appear to be antiques. Due to the large number of facsimiles, the packing companies cannot differentiate between the real item and a copy. In order to avoid delays, acquire in advance a certification from the Instituto Nacional de Cultura verifying that the item is a copy and may be exported.

U.S. citizens living in or visiting Peru are encouraged to register at the Consular Section of the U.S. Embassy in Lima and obtain

updated information on travel and security in Peru. The Consular Section is open for American Citizen Services, including registration, from 8:00 a.m. to 12:00 noon weekdays, excluding U.S. and Peruvian holidays. The U.S. Embassy is located in Monterrico, a suburb of Lima, at Avenida Encalada, Block Seventeen; telephone (51-1) 434-3000 during business hours (8:00 a.m. To 5:00 p.m.), Or (51-1) 434-3032 for after-hours emergencies; fax (51-1) 434-3065 or 434-3037; Internet web site - <http://usembassy.state.gov/lima>. This web site provides information but does not yet have interactive capability to respond to specific inquiries. The U.S. Consular Agency in Cusco is located in the Binational Center (Instituto Cultural Peruana Norte Americano, ICPNA) at Avenida Tulumayo 125; telephone (51-8) 24-51-02; fax (51-8) 23-35-41; Internet address consagent-cuzco@terra.com.pe. The Consular Agency can provide information and assistance to U.S. citizen travelers who are victims of crime or need other assistance, but it cannot replace U.S. passports. U.S. passports are issued at the U.S. Embassy in Lima

Pets

Pets must have a certificate of good health issued by a registered U.S. or foreign veterinarian. A Peruvian consul must then notarize this document. A certificate of rabies inoculation is also necessary for dogs and cats. Dog owners are especially cautioned that Lima has high infestations of fleas and mites that are difficult to control. Owners should bring appropriate pesticides and shampoos to aid in treatment.

Firearms & Ammunition

Local law provides that law enforcement and military personnel are authorized to import handguns in calibers up to .45 (pistol) and .357 (revolver). All others are limited to 9mm and .38 calibers respectively. Shotguns up to 16 gauge and rifles up to .44 caliber are permitted. Personal full automatic weapons are not allowed. All firearms brought

into Peru must be taken out of the country when you leave.

Currency, Banking & Weights and Measures

Peru's currency changed on January 1, 1986, from the sol to the inti. On January 1, 1991, the currency changed from the inti to the new sol. In December 1999, the exchange rate is new soles 3.49 = \$1.

A legacy from the years of hyperinflation is that many businesses price items in U.S. dollars. Payment is usually made in the sol equivalent value but many stores readily accept U.S. dollars as well. Counterfeiting, both of U.S. dollars and soles, is a problem and caution should be exercised when conducting transactions.

Peru uses the metric system of weights and measures, except for gasoline, which is sold by the gallon.

Specific Health Risks

Visitors to high-altitude Andean destinations such as Cusco (11,000 feet), Machu Picchu (8,000 feet), or Lake Titicaca (13,000 feet) should discuss the trip with their personal physician prior to departing the United States. Travel to high altitudes could pose a serious risk of illness, hospitalization, and even death, particularly if the traveler has a medical condition that affects blood circulation or breathing. Several U.S. citizens have died in Peru from medical conditions exacerbated by the high altitude. All people, even healthy and fit persons, will feel symptoms of hypoxia (lack of oxygen) upon arrival at high-altitude. Most people will have increased respiration and increased heart rate. Many people will have headaches, difficulty sleeping, lack of appetite, minor gastric and intestinal upsets, and mood changes. Most people may need time to adjust to the altitude. To help prevent these complications, consider taking acetazolamide (Diamox) after consulting your personal physician, avoid alcohol and smoking for at least one week after arrival at high altitudes, and limit physical

activity for the first 36 to 48 hours after arrival at high altitudes.

ST. KITTS AND NEVIS

Federation of St. Kitts and Nevis

Major City:

Basseterre

Other City:

Charlestown

INTRODUCTION

Christopher Columbus landed on St. Christopher in 1493, naming the island after his patron saint. French and English colonists settled in the region in the 1600s, and the colonists shortened the name to “**ST. KITTS** island.” The settlers fought and eliminated the native Carib people. Sugar was the mainstay of the economy until well into the 20th century. St. Kitts-Nevis-Anguilla became part of the Leeward Islands Federation in 1871. In 1967, the three islands became an associated state. In 1969, Anguilla islanders rebelled and that island was permitted to secede in 1971. St. Kitts and Nevis became an independent federated state within the Commonwealth on September 19, 1983. In 1996, the premier of Nevis announced plans for the island to eventually secede from the federation and return to British control.

MAJOR CITY

Basseterre

Basseterre is the capital of St. Kitts and Nevis, with a population of 12,000. The city lies along the southern coast of St. Kitts’s central

region. The economy of St. Kitts was traditionally based on growing and processing sugarcane, but tourism and export-oriented manufacturing have assumed larger roles. The government-owned St. Kitts Sugar Manufacturing Corp. is still the largest industrial enterprise in the country.

Port Zante is Basseterre’s new cruise ship port. Thirty acres of land have recently been reclaimed from the sea and added to Basseterre, which has building codes that encourage an 18th-century architectural style. The cruiseship terminal can handle vessels of up to 75,000 tons with a draft of 30 feet, and a marina takes yachts up to 70 feet long with a draft of 12 feet. Bradshaw International Airport (scheduled for completion in mid-1998) has one of the largest runways in the Caribbean and can handle jumbo jet traffic.

Recreation and Entertainment

Popular local team sports include basketball, cricket, soccer, netball, and volleyball. Mountain biking, horseback riding, and scuba diving and snorkeling over the coral reefs are popular tourist activities. The most popular dive sights on St. Kitts are Monkey Shoals, Coconut Tree Reef, Nags Head, Sandy Point, and the shipwrecked freighter of the

River Taw. Local dive operators can provide instruction and equipment. There is a championship 18-hole golf on Nevis where PGA professionals offer private lessons.

The St. Kitts Sugar Manufacturing Corporation’s sugar conducts factory tours, as does the St. Kitts Breweries Ltd.

Basseterre’s Georgian architectural style attracts tourists. St. George’s Anglican Church was originally built in 1670 as a French Catholic church, and it has been destroyed both intentionally and accidentally several times over the centuries. The present building dates from 1869. Independence Square, in the center of Basseterre, was once a slave market. Brimstone Hill has a massive old fortress that took 100 years to build. The fortress covers 38 acres and rises almost 800 feet above the Caribbean.

The St. Christopher Heritage Society has a display of photos that shows the history, culture, and marine life of the island.

OTHER CITY

CHARLESTOWN is the main town on Nevis. The Museum of Nevis History is located at the birthplace of

US statesman Alexander Hamilton. The museum features displays of rare pre-Columbian artifacts and colonial-era objects. Several resorts offer golden beaches, hiking trails, water sports, golf, tennis with accommodations ranging from modest plantation inns to luxury hotels.

COUNTRY PROFILE

Geography and Climate

St. Kitts lies about 5 miles southeast of the Netherlands Antilles and 45 miles northwest of Antigua in the Leeward Islands chain of the Caribbean Sea. Nevis lies two miles off the southeast coast of St. Kitts. The total area of St. Kitts is 104 square miles, and Nevis covers 36 square miles. Both islands are of volcanic origin. In the northwest of St. Kitts is the country's highest peak, Mt. Liamuiga (3,793 feet), and on the southern peninsula lies the Great Salt Pond. The highest point on Nevis is Mt. Nevis, at 3,232 feet. Temperatures stay between 68°F and 84°F throughout the year. The average annual rainfall is 43 inches, with the wet season lasting between May and November.

History

At the time of European discovery, the islands of St. Kitts and Nevis were inhabited by Carib Indians. Christopher Columbus landed on the larger island in 1493 on his second voyage and named it after St. Christopher, his patron saint. Columbus also discovered Nevis on his second voyage, reportedly calling it Nevis because of its resemblance to a snowcapped mountain (in Spanish, *nuestra senora de las nieves* or our lady of the snows). European colonization did not begin until 1623-24, when first English, then French colonists arrived on St. Christopher's island, whose name the English shortened to St. Kitt's island. As the first English colony in

Clock Tower and town square in Basseterre, St. Kitts

the Caribbean, St. Kitts served as a base for further colonization in the region.

St. Kitts was held jointly by the English and French from 1628-1713. During the 17th century, intermittent warfare between French and English settlers ravaged its economy. Meanwhile Nevis, settled by English settlers in 1628, grew prosperous under English rule. St. Kitts was ceded to Great Britain by the treaty of Utrecht in 1713. Both St. Kitts and Nevis were seized by the French in 1782.

The Treaty of Paris in 1783 definitively awarded both islands to Britain. They were part of the colony of the Leeward Islands from 1871-1956, and of the West Indies Federation from 1958-62. In 1967, together with Anguilla, they became a self-governing state in association with Great Britain; Anguilla seceded late that year and remains a British dependency. The federation of St. Kitts and Nevis attained full independence on September 19, 1983.

Population

St. Kitts and Nevis has a population of 43,400. There are about 298 per-

sons per square mile, but the density on St. Kitts is twice that of Nevis. Over 90% of the population is of black African descent. There are minorities of mixed race persons, Indo-Pakistanis, and Europeans. The largest religious groups are the Anglican Church, the Church of God, the Methodist Church, the Moravians, the Baptists, Seventh-Day Adventists, the Pilgrim Holiness Church, and the Roman Catholic Church. English, spoken with local expressions, is the country's language.

Government

As head of state, Queen Elizabeth II is represented in St. Kitts and Nevis by a governor general, who acts on the advice of the prime minister and the cabinet. The prime minister is the leader of the majority party of the house, and the cabinet conducts affairs of state. St. Kitts and Nevis has a bicameral legislature: An 11-member senate appointed by the governor general (mainly on the advice of the prime minister and the leader of the opposition) and an 11-member popularly elected house of representatives which has eight St. Kitts seats and three Nevis seats. The prime minister and the cabinet are responsible to the Parliament.

St. Kitts and Nevis has enjoyed a long history of free and fair elections, although the outcome of elections in 1993 was strongly protested by the opposition, and the RSS was briefly deployed to restore order. The elections in 1995 were contested by the two major parties, the ruling People's Action Movement (PAM) and the St. Kitts and Nevis Labor Party. Labor won seven of the 11 seats, with Dr. Denzil Douglas becoming prime minister. In March 2000 elections, Denzil Douglas and the Labour Party were returned to power, winning eight of the 11 seats in Parliament. The Nevis-based Concerned Citizens Movement (CCM) won two seats and the Nevis Reformation Party (NRP) won one seat. The PAM party was unable to obtain a seat.

Under the constitution, Nevis has considerable autonomy and has an island assembly, a premier, and a deputy governor general. Under certain specified conditions, it may secede from the federation. In June 1996, the Nevis Island Administration under the concerned citizens movement of Premier Vance Amory announced its intention to do so. Secession requires approval by two-thirds of the assembly's five elected members and also by two-thirds of voters in a referendum. After the Nevis Reformation Party blocked the bill of secession, the premier called for elections for February 24, 1997. Although the elections produced no change in the composition of the assembly, Premier Amory pledged to continue his efforts toward Nevis' independence. In August 1998, a referendum on the question of independence for Nevis failed and Nevis presently remains in the Federation. The March 2000 election results placed Vance Amory, as head of the CCM, the leader of the country's opposition party.

Constitutional safeguards include freedom of speech, press, worship, movement, and association. Like its neighbors in the English-speaking Caribbean, St. Kitts and Nevis has an excellent human rights record.

Its judicial system is modeled on British practice and procedure and its jurisprudence on English common law. The Royal St. Kitts and Nevis police force has about 340 members.

Two thin diagonal yellow bands flanking a wide black diagonal band separate a green triangle at the hoist from a red triangle at the fly. On the black band are two white five-pointed stars.

Arts, Science, Education

Education is provided by the government and compulsory for 12 years. The Clarence Fitzroy Bryant College in Basseterre, completed in 1996, offers courses in vocational fields, the arts, sciences, and general studies, with plans to offer associate degrees as well as classes in conjunction with the University of the West Indies. The College of Further Education also provides higher education.

Commerce and Industry

St. Kitts and Nevis was the last sugar monoculture in the Eastern Caribbean. Faced with a sugar industry, which was finding it increasingly difficult to earn a profit, the Government of St. Kitts and Nevis embarked on a program to diversify the agricultural sector and stimulate the development of other sectors of the economy.

The government instituted a program of investment incentives for businesses considering locating in St. Kitts or Nevis, encouraging both domestic and foreign private investment. Government policies provide liberal tax holidays, duty-free import of equipment and materials, and subsidies for training provided to local personnel. Tourism has shown the greatest growth. By 1987, tourism had surpassed sugar as the major foreign exchange earner for St. Kitts and Nevis.

The economy of St. Kitts and Nevis experienced strong growth for most of the 1990s, but hurricanes in 1998 and 1999 contributed to a sharp slowdown in growth. Growth was only 1% in 1998 and 2.8% in 1999, compared to 7.3% in 1997. Tourism in particular suffered in 1998 and 1999 as a result of the hurricanes which forced the closure of one of the major hotels and heavily damaged the cruiseship pier. Significant new investment in tourism as well as continued government efforts to diversify the economy are expected to improve economic performance. Consumer prices have risen marginally over the past few years. The inflation rate was 3%-4% for most of the 1990s.

St. Kitts and Nevis is a member of the Eastern Caribbean Currency Union (ECCU). All members of the ECCU, The Eastern Caribbean Central Bank (ECCB) issues a common currency for all members of the ECCU. The ECCB also manages monetary policy, and regulates and supervises commercial banking activities in its member countries.

Transportation

The only railway on St. Kitts is a small line used by the government to transport sugarcane and processed sugar. Main roads circle each island. A state-run motorboat service shuttles passengers between the two islands. There is regular freight service to St. Kitts and Nevis from the US and Europe. Most ocean freight is now fully containerized. The deepwater harbor handles ships which service the islands. Smaller carriers sail between St. Kitts and Nevis and Puerto Rico, the US Virgin Islands, and St. Maarten.

Driving on St. Kitts and Nevis is on the left-hand side of the road. Seventy-five percent of the main road is in reasonably good condition, having been recently resurfaced, and secondary roads are also fairly good. The islands have good police enforcement of traffic regulations. More detailed information on roads

and traffic safety can be obtained from the Ministry of Tourism, Culture and the Environment, Bay Road, Pelican Mall, P.O. Box 132, Basse Terre, St. Kitts, tel. (869) 465-8970.

Communications

The telephone system is operated by the government and international telecommunications services are privately operated. St. Kitts has one AM/FM radio station, and Nevis has two other AM stations. There is also one television broadcast station and two cable television systems. St. Kitts and Nevis has three newspapers: *The Democrat* (published by the opposition Peoples Action Movement), *The Observer* (independent), and *The Labour Spokesman* (affiliated with the governing Labour Party).

Health

There are over 40 physicians and 190 nurses in the country.

Medical care is limited. Doctors and hospitals often expect immediate cash payment for health services. U.S. medical insurance is not always valid outside the U.S. In some cases, supplementary medical insurance with specific overseas coverage, including provision for medical evacuation, has proved useful. For additional health information, travelers may contact the Centers for Disease Control and Prevention's international travelers hotline at (404) 332-4559; Internet <http://www.cdc.gov>.

NOTES FOR TRAVELERS

A valid U.S. passport or certified U.S. birth certificate and a picture identification that contains both name and date of birth are required of U.S. citizens entering St. Kitts and Nevis. Visitors should also have

a valid return ticket. St. Kitts and Nevis immigration recommends that visitors put their full home address in the U.S. on their arrival cards in order to facilitate the entry process. Stays of up to one month are granted at immigration. Anyone requiring an extension must apply to the Ministry of National Security. There is an airport departure tax. For further information, travelers can contact the Embassy of St. Kitts and Nevis, 3216 New Mexico Avenue, N.W., OECS Building, Washington, D.C. 20016, telephone (202) 686-2636, the Permanent Mission to the UN in New York at (212) 535-1934, or the Internet at <http://www.stkittsnevis.org>.

U.S. citizens living in or visiting St. Kitts and Nevis are encouraged to register at the Consular Section of the U.S. Embassy in Bridgetown, Barbados and obtain updated information on travel and security within St. Kitts and Nevis. Consular Section hours are 9:00 am-12 noon and 2:00 pm-4:00 pm, Monday-Friday except local and U.S. holidays. The U.S. Embassy is located in the American Life Insurance (ALICO) building, Cheapside, Bridgetown, Barbados, telephone 1-246-431-0225, fax 1-246-431-0179, e-mail address: Consular-Bridge@state.gov or Internet home page: <http://usembassy.state.gov/posts/bb1/wwwhcons.html>.

Disaster Preparedness

St. Kitts and Nevis is a hurricane-prone country. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov>.

ST. LUCIA

Saint Lucia

Major City:

Castries

INTRODUCTION

The second largest of the four Windward Islands, the Arawaks migrated to **ST. LUCIA** from South America during AD 200–400. The Caribs gradually replaced the Arawaks during AD 800–1000. Tradition has it that Columbus sighted the island on St. Lucy's Day (December 13) in 1498. The Dutch, English, and French all tried to establish trading posts on St. Lucia during the 17th century but the Caribs successfully defended their island for many years. Possession of the island changed between the British and French several times until 1814, when Britain took permanent possession. Unlike other islands in the area, sugarcane monoculture did not dominate the island's economy. Sugar was grown, along with tobacco, ginger, and cotton. Bananas became the main cash crop in the 20th century. Slavery was abolished in 1834 and indentured East Indian workers were brought to the island during the late 1800s. St. Lucia became an associated state with full internal self-government in 1967 and on February 22, 1979 it became an independent member of the Commonwealth of Nations.

MAJOR CITY

Castries

Castries, located along the harbor of Port Castries on the northwestern coast, is the capital of St. Lucia. Port Castries has been the hub of St. Lucia's economic activity for over a century. During the early 20th century, the port was an important coaling station in the Caribbean for ships crossing the Atlantic to and from South America. The town has a population of approximately 53,000, or about one-third of St. Lucia's population. Vigie Airport on the outskirts of Castries provides service to neighboring Caribbean islands. The port of Castries is a deepwater harbor with six berths and a cargo handling capacity of 365,000 tons per year. The main commodities shipped from the port include bananas, sugarcane, rum, molasses, cocoa, coconuts, limes, and various tropical fruits and vegetables. The Castries Market has operated for over 100 years and features hundreds of vendors selling tropical fruit and vegetables, spices, and local crafts.

Recreation

A fortress on Mt. Fortune (852 feet) overlooks Castries, and Vigie Beach is nearby. Coral reefs with colorful

marine life attract divers. Since the island is volcanic, there are also some spectacular steep drop-off dive sites. The most popular dive sites include Anse Chastanet reef, the Key Hole Pinnacles, Superman's Flight, the Coral Gardens, Fairy Land, and Anse La Raye. There are also two wreck dives to explore. There are dive operators that provide equipment and training. Sulphur Springs in nearby Soufrière is a drive-through volcano and features a 7-acre crater lake and pools of bubbling sulfur-laden steam. The National Forest covers 19,000 acres and is a favorite of birdwatchers and hikers.

The Diamond Botanical Gardens dates back to the 1700s, when France's King Louis XIV wanted a place for his troops to enjoy the natural hot springs. The gardens feature a variety of tropical fruit trees, shrubs, vines, and flowers. Pigeon Island National Park contains the old barracks, magazines, and ramparts of Fort Rodney, which dates from the era when the British and French battled over control of the island. The museum at the fort used to be the British officers' dining area and was restored to show how it looked in 1808.

St. Lucia has several smaller hotels that allow visitors the chance to

experience the authentic culture and cuisine of the island.

Entertainment

Jump Up is a weekly street fair and dance held Friday nights in Gros Islet, a small village north of Castries. St. Lucians and tourists alike pack the town's single street to enjoy Caribbean soca and reggae music, food, and drink. The Carnival celebration occurs every February and features a traditional Caribbean parade of colorful costumes and calypso music. The finals of the calypso competition and the naming of the Carnival King and Queen are held over the weekend, followed by a party in the streets that begins at 4:00 AM on Monday morning. The international Atlantic Rally for Cruises is a yacht race held in December that finishes in Rodney Bay. The St. Lucia Jazz Festival occurs in May and includes Caribbean and Cajun music shows, rhythm and blues, and contemporary and traditional jazz.

COUNTRY PROFILE

Geography and Climate

St. Lucia is a part of the Windward Islands group of the Lesser Antilles in the Caribbean sea. The island's total area is 239 square miles, or 3.5 times the size of Washington, D.C. The island is situated between Martinique to the north and St. Vincent to the southwest. The island is volcanic; the southern part is younger and more mountainous than the hilly and more level northern half. The highest mountain is Mt. Gimie, at 3,145 feet above sea level. Better known are the two peaks on the southern coast, Grand Piton (2,619 feet) and Petit Piton (2,461 feet), which together form one of the scenic highlights of the West Indies. The average yearly temperature is 79°F, with the warmest temperatures in September and the coolest in January. The average annual rainfall along the coast is 91 inches,

View of Soufriere, St. Lucia

© Wolfgang Kaehler. Reproduced by permission.

but more than 150 inches on the mountains.

History

St. Lucia's first known inhabitants were Arawaks, believed to have come from northern South America 200-400 A.D. Numerous archaeological sites on the island have produced specimens of the Arawaks' well-developed pottery. Caribs gradually replaced Arawaks during the period 800-1000 A.D.

Europeans first landed on the island in either 1492 or 1502 during Spain's early exploration of the Caribbean. The Dutch, English, and French all tried to establish trading

outposts on St. Lucia in the 17th century but faced opposition from hostile Caribs.

The English, with their headquarters in Barbados, and the French, centered on Martinique, found St. Lucia attractive after the sugar industry developed in 1765. Britain eventually triumphed, with France permanently ceding St. Lucia in 1815. In 1838, St. Lucia was incorporated into the British windward islands administration, headquartered in Barbados. This lasted until 1885, when the capital was moved to Grenada.

St. Lucia's 20th-century history has been marked by increasing self-gov-

ernment. A 1924 constitution gave the island its first form of representative government, with a minority of elected members in the previously all-nominated legislative council. Universal adult suffrage was introduced in 1951, and elected members became a majority of the council. Ministerial government was introduced in 1956, and in 1958 St. Lucia joined the short-lived West Indies Federation, a semi-autonomous dependency of the United Kingdom. When the federation collapsed in 1962, following Jamaica's withdrawal, a smaller federation was briefly attempted. After the second failure, the United Kingdom and the six windward and leeward islands--Grenada, St. Vincent, Dominica, Antigua, St. Kitts-Nevis-Anguilla, and St. Lucia--developed a novel form of cooperation called associated statehood.

As an associated state of the United Kingdom from 1967 to 1979, St. Lucia had full responsibility for internal self-government but left its external affairs and defense responsibilities to the United Kingdom. This interim arrangement ended on February 22, 1979, when St. Lucia achieved full independence. St. Lucia continues to recognize Queen Elizabeth II as titular head of state and is an active member of the Commonwealth. The island continues to cooperate with its neighbors through the Caribbean community and common market (CARICOM), the East Caribbean Common Market (ECCM), and the Organization of Eastern Caribbean States (OECS).

Population

St. Lucia has a population of about 156,000, about one-third of which lives in Castries. The population density is about 669 persons per square mile. About 90% of the population consists of descendants of slaves brought from Africa in the 17th and 18th centuries. There are small numbers of mixed race persons, East Indians, and descendants of Europeans. About 80% of the population is Roman Catholic; there are also Anglican, Methodist, Baptist,

and Seventh-Day Adventist churches. English is the official language, spoken by 80% of the population. Almost all the islanders speak a French patois based on a mixture of African and French grammar and a vocabulary of mostly French with some English and Spanish words.

Government

In 1814, Britain took permanent possession of St. Lucia, after having changed hands several times between Britain and France. St. Lucia's democratic tradition began in 1924, when a few elected positions were added to the appointed legislative council. St. Lucia became an associated state with full internal self government in 1967 and an independent member of the Commonwealth in 1979.

St. Lucia is a parliamentary democracy modeled on the Westminster system. The head of state is Queen Elizabeth II, represented by a Governor General, appointed by the Queen as her representative. The Governor General exercises basically ceremonial functions, but residual powers, under the constitution, can be used at the governor general's discretion. The actual power in St. Lucia lies with the prime minister and the cabinet, usually representing the majority party in parliament.

The bicameral parliament consists of a 17-member House of Assembly whose members are elected by universal adult suffrage for 5-year terms and an 11-member senate appointed by the governor general. The parliament may be dissolved by the governor general at any point during its 5-year term, either at the request of the prime minister--in order to take the nation into early elections--or at the governor general's own discretion, if the house passes a vote of no confidence in the government.

St. Lucia has an independent judiciary composed of district courts and a high court. Cases may be appealed to the Eastern Caribbean Court of Appeals and, ultimately, to

the Judicial Committee of the Privy Council in London. The island is divided into 10 administrative divisions, including the capital, Castries. Popularly elected local governments in most towns and villages perform such tasks as regulation of sanitation and markets and maintenance of cemeteries and secondary roads.

St. Lucia has no army but maintains a paramilitary Special Service Unit within its police force and a coast guard.

Politics in St. Lucia has been dominated by the United Workers Party (UWP), which has governed the country for all but 3 years since independence.

The flag has a blue background. In the middle is a yellow triangle surmounted by a black arrowhead whose outer edges are bordered in white.

Arts, Science, Education

Education is compulsory and provided by the government for ten years. An education complex in Castries has a teacher-training center, a technical school, a secretarial school, and a branch of the University of the West Indies. There is a research laboratory on the island serving the needs of banana growers in the region.

Commerce and Industry

St. Lucia's economy depends primarily on revenue from banana production and tourism with some input from smallscale manufacturing. There are numerous small and medium-sized agricultural enterprises. Revenue from agriculture has supported the noticeable socioeconomic changes that have taken place in St. Lucia since the 1960s. Eighty percent of merchandise trade earnings came from banana exports to the United Kingdom in the 1960s.

In view of the European Union's announced phase-out of preferred access to its markets by Windward Island bananas by 2006, agricultural diversification is a priority. An attempt is being made to diversify production by encouraging the establishment of tree crops such as mangos and avocados. A variety of vegetables are produced for local consumption. Recently, St. Lucia added small computer-driven information technology and financial services as development objectives.

St. Lucia's leading revenue producers--agriculture, tourism and small-scale manufacturing -- benefited from a focus on infrastructure improvements in roads, communications, water supply, sewerage, and port facilities. Foreign investors also have been attracted by the infrastructure improvements as well as by the educated and skilled work force and relatively stable political conditions. The largest investment is in a petroleum storage and transshipment terminal built by Hess Oil. The Caribbean Development Bank (CDB) funded and airport expansion project.

The tourism sector has made significant gains, experiencing a boom during the last few years despite some untimely and destructive hurricanes. In 1999, 50% more tourists visited the island than in 1996, including 261,000 stayover tourists and 423,000 cruise- ship visitors. The development of the tourism sector has been helped by the government's commitment to providing a favorable investment environment. Incentives are available for building and upgrading tourism facilities. There has been liberal use of public funds to improve the physical infrastructure of the island, and the government has made efforts to attract cultural and sporting events and develop historical sites.

St. Lucia is a member of the Eastern Caribbean Currency Union (ECCU). The Eastern Caribbean Central Bank (ECCB) issues a common currency for all members of the ECCU. The ECCB also manages monetary policy, and regulates and supervises

commercial banking activities in its member countries.

St. Lucia is a beneficiary of the U.S. Caribbean Basin Initiative and is a member of the Caribbean Community and Common Market (CARICOM) and the Organization of Eastern Caribbean States (OECS)

Transportation

The Hewanorra International Airport on the southern tip of the island has direct flights to New York, Toronto, London, and Frankfurt. Ferries from Port Vieux on the southern coast link St. Lucia with St. Vincent and the Grenadines. All of the island's towns and villages are linked by all-purpose roads.

Vehicles travel on the left, traffic approaches from the right. Roads are narrow with steep inclines/ declines throughout the island. Road conditions vary from fair to poor with few guard rails in areas that have precipitous drop-offs from the road.

Communications

There is a fully automatic telephone system. St. Lucia has 4 AM and an FM radio stations and a television station. Television programs are usually local programming, videotapes, and broadcasts from Barbados and Martinique. *The Voice of St. Lucia* is published twice a week, while *Crusader* and *Star* are weeklies.

Health

St. Lucia has five hospitals with over 500 beds. The Victoria Hospital provides a range of medical treatment, while the Golden Hope Hospital specializes in psychiatric cases. There are also over two dozen health centers scattered throughout the island. Malnutrition and intestinal difficulties are the main health problems.

Doctors and hospitals often expect immediate cash payment for health services. U.S. medical insurance is

not always valid outside the U.S. In some cases, supplementary medical insurance with specific overseas coverage, including medical evacuation, has proved useful. For additional health information, travelers can contact the Centers for Disease Control and Prevention's international travelers hotline at 1888-232-3228, via CDC's toll-free autofax service, 1-888-232-3299, or via the Internet <http://www.cdc.gov>.

NOTES FOR TRAVELERS

For stays up to six months, U.S. citizens may enter St. Lucia without a passport, but must carry an original document proving U.S. citizenship (U.S. passport, Certificate of Naturalization, Certificate of Citizenship or certified copy of a U.S. birth certificate), photo identification, and a return or onward ticket. For further information concerning entry requirements, travelers can contact the Embassy of St. Lucia, 3216 New

Mexico Avenue, N.W., Washington, D.C. 20015; telephone (202) 364-6792; or St. Lucia's Permanent Mission to the UN in New York. Internet: slunestop.com.

The U.S. does not maintain an embassy in St. Lucia. U.S. citizens requiring assistance can contact the U.S. Embassy in Bridgetown, Barbados; telephone 1 (246) 436-4950. The Consular Section of the Embassy is located in the American Life Insurance Company (ALICO) building, Cheapside, Bridgetown; telephone 1 (246) 431-0225. Hours of operation are Monday-Friday,

8:00 a.m. to 4:00 p.m. except local and U.S. holidays. U.S. citizens may register in the Consular Section of the Embassy at Bridgetown and obtain updated information on travel and security in St. Lucia and within the region.

Disaster Preparedness

St. Lucia is a hurricane-prone area. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>.

ST. VINCENT AND THE GRENADINES

St. Vincent and the Grenadines

Major City:
Kingstown

INTRODUCTION

ST. VINCENT may have been inhabited as early as 5000 BC. Agrarian Arawaks immigrated from South America. The Caribs eventually conquered the Arawaks, killing all the men and incorporating the women into their group. Christopher Columbus allegedly sighted the island on January 22, 1498, the feast day of the island's namesake. European settlers later arrived with African slaves. In 1675, slaves from a Dutch shipwreck made it to the island of Bequia and were given shelter by the native, or Yellow Caribs. Slaves from Barbados and St. Lucia later managed to escape to the island. The mixture of slaves and Yellow Caribs created a new group known as the Black Caribs. The Caribs ardently fought off European settlement on St. Vincent until the 18th century. Tensions between the Yellow Caribs and the Black Caribs led to conflict and territorial division. The perpetual hostilities delayed colonial development of the island, while several nearby islands already had an advanced sugar industry. In 1700 the French divided St. Vincent, with the west going to the Yellow Caribs and the east going to the Black Caribs. French settlers began cultivating coffee, tobacco, indigo, cotton, and sugar on plantations worked by

African slaves starting in 1719. Great Britain controlled St. Vincent from 1763 until French rule was restored in 1779. The British got control back in 1783. Under the British, sugar production fell throughout the 1800s, and arrowroot became the leading cash crop by 1900. St. Vincent is still the world's leading producer of arrowroot, which is used to make starch. St. Vincent became a crown colony in 1877, and a legislative council was created in 1925. The island was granted associate statehood status in 1969 and became the last of the Windward Islands to gain independence on October 27, 1979.

MAJOR CITY

Kingstown

Kingstown, the capital, is located on the southwestern coast of the island of St. Vincent and has a population of about 27,000. The town overlooks Kingstown Harbour and is protected by Berkshire Hill to the north and Cane Garden Point to the south. Cruise ships put into Kingstown Harbour. The E.T. Joshua Airport is located on the southern tip of St. Vincent near Kingstown. Local transportation is provided by open-air buses and small minibus

taxis sporting colorful hand-painted names and designs. Campden Industrial Park, about three miles west of the city, is a 30-acre enclave that serves as the principal industrial area of the country. The East Caribbean Group of Companies has operations there that handle animal feed processing, bag production, and flour and rice milling. In 1989 a fire destroyed much of Kingstown's center, but reconstruction in 1990 emphasized increasing tourism.

Recreation and Entertainment

St. Vincent has numerous beaches for swimming and surfing. The waters along the black sand beaches of the Atlantic coast are choppy and conducive to surfing and windsurfing, while the waters along the golden sand beaches of the Caribbean coast are calm and more pleasant for swimming. Cricket is played throughout the islands, and several local players have gone on to represent the West Indies at the international level. International sports are played at the Arnos Vale Playing Field. Soccer, netball, volleyball, and basketball are also popular. Soccer is the most widely played sport, and there are 14 local leagues that organize team play. Indoor sports such as squash and table tennis are played in the suburbs of Kingstown. Weight training, karate, and taekwondo are also becoming

© Wolfgang Kaehler. Reproduced by permission.

Harbor view, St. Vincent

popular. Swimming, sailing, and windsurfing are popular aquatic activities. Dominoes is a popular game among groups of men.

Bay Street is Kingstown's waterfront district, with shops and a few hotels. The Cobblestone Inn was built in 1814 as a sugar warehouse and was restored to its original Georgian style. St. George's Anglican Cathedral also is an example of Georgian architecture, and contains several Kempe and Munich stained glass windows. St. Mary's Roman Catholic Cathedral originally was built in 1823, and was most recently renovated in the 1940s. The cathedral is a mixture of Romanesque, Gothic, and Moorish designs.

The General Post Office in Kingstown features stamps produced by the government that are prized by international collectors. St. Vincent Philatelic Services, Ltd. in Kingstown works with an agency in New

York to produce nine collectible issues per year. Kingstown's vegetable market is one of the island's main commercial centers.

The St. Vincent Botanic Gardens and Museum on the outskirts of Kingstown features tropical foliage and brightly colored songbirds. It is the most ornate garden in the Caribbean and the oldest of its kind in the Western Hemisphere. The gardens occupy 20 acres and were founded in 1765 as a nursery for plants useful to medicine and commerce. The French introduced exotic Asian spices (such as cinnamon) to the gardens. Cloves were brought from Martinique and nutmeg and black pepper plants from French Guiana. Breadfruit trees brought from the South Pacific by Captain Bligh were introduced in 1793. The St. Vincent National Museum at the gardens contains stone, ceramic, and shell artifacts dating from 500 BC to AD 1200 left

behind by the pre-Columbian inhabitants of St. Vincent and some of the other islands in the Grenadines. The Parrot Breeding Center at the Botanic Gardens is trying to increase the population of the islands' national bird, the St. Vincent parrot (*Amazona guildingi*). Fort Charlotte, west of Kingstown, sits atop a ridge 600 feet above sea level and was completed in 1806. A museum at the fort depicts the history of the Black Caribs on the island.

Cultural activities on St. Vincent include several festivals, arts and crafts exhibitions, dancing, and folksinging. The national carnival festival, known as Vincy Mas, is celebrated in early July. Costumed, steel, and calypso bands give performances, and there are beauty shows. The Music Festival has been held every other year since 1956 and features vocal, choral, and instrumental performances. There

is also an annual school drama festival. There are plans to build a performing arts center in Kingstown. The Kingstown Free Library has a display of Carib artifacts.

COUNTRY PROFILE

Geography and Climate

St. Vincent and the Grenadines is located 21 miles southwest of St. Lucia and about 100 miles west of Barbados in the Caribbean Sea. Scattered between St. Vincent and Grenada are more than 100 small islands called the Grenadines, half of which belong to St. Vincent and the other half to Grenada. The Grenadines belonging to St. Vincent include Union Island, Mayreau, Canouan, Mustique, Bequia, and many other uninhabited cays, rocks, and reefs. St. Vincent has an area of 134 square miles, with a coastline of 52 miles. Bequia, the largest of the Grenadines, has an area of 7 square miles. St. Vincent is a rugged island with dark volcanic sand beaches. Its highest point is Soufrière, an active volcano that rises 4,048 feet above sea level. Only 5% of St. Vincent's surface has slopes of less than 5°. The low-lying Grenadines have wide beaches and shallow bays and harbors. The islands have a pleasant tropical climate throughout the year, with the average temperature ranging from 77°F in January to 81°F in September. The rainfall on St. Vincent averages about 91 inches per year, but more than 150 inches may fall in the mountains. The islands lie in the Caribbean hurricane belt and were devastated in 1780, 1898, and 1980.

Population

St. Vincent and the Grenadines has a population of about 122,000, with over 90% living on the main island. Only about a dozen of the country's 120 islands are populated. About 66% of the islanders are descen-

dants of slaves brought from Africa. About 20% is of mixed origins and about 3.5% is of European descent. Some 5.5% of the islanders are descendants of 19th-century East Indian indentured laborers. About 2% of the people are indigenous Caribs. The mixture of Africans and the native Caribs (Yellow Caribs) created an ethnicity known as the Black Caribs. Some scholars believe that the African origin of the Black Caribs came from escaped slaves, while others believe they descended from a stranded group of 13th-century West African explorers. Today, the few remaining descendants of the Yellow Caribs live at Sandy Bay. The majority of the population is Anglican or Methodist. There is also a significant Roman Catholic minority. English is the official language of the country. Some islanders speak a French patois, which uses a mixture of African and French grammar, with a vocabulary using mostly French words, with some English and a few Spanish words. A minority of the islanders speak French as a first language.

Government

St. Vincent was one of the last of the West Indies to be settled by Europeans. The British and French agreed to leave the island to the native Caribs in 1660, and the island had a sizable Carib population until the 1720s. The island was formally taken by the British in 1763, who ruled thereafter except during 1779–83, when it was under French control. St. Vincent was administered as a crown colony from 1833 until 1960. Upon independence in 1979, St. Vincent and the Grenadines kept the British monarch as the nominal head of state, represented by a governor-general.

St. Vincent and the Grenadines is a parliamentary democracy within the Commonwealth of Nations. Queen Elizabeth II is head of state and is represented on the island by a governor general, an office with mostly ceremonial functions. Con-

trol of the government rests with the prime minister and the cabinet.

The parliament is a unicameral body with a 15-member elected house of assembly and a six-member appointed senate. The governor general appoints senators, four on the advice of the prime minister and two on the advice of the leader of the opposition. The parliamentary term of office is 5 years, although the prime minister may call elections at any time.

As in other English-speaking Caribbean countries, the judiciary in St. Vincent is rooted in British common law. There are 11 courts in three magisterial districts. The Eastern Caribbean Supreme Court, comprising a high court and a court of appeals, is known in St. Vincent as the St. Vincent and the Grenadines supreme court. The court of last resort is the judicial committee of Her Majesty's Privy Council in London.

There is no local government in St. Vincent, and all six parishes are administered by the central government.

The flag consists of three vertical bands of blue, yellow and green; centered on the yellow band are three green diamonds arranged in a V-pattern.

Arts, Science, Education

Primary education lasts for seven years and is provided by the government but not compulsory. There are about 65 primary schools. The government-assisted School for Children with Special Needs serves handicapped students. At the secondary level, there are a teachers' training college and a technical college. Government agencies sponsor adult education, vocational training, and agricultural training.

Commerce and Industry

The St. Vincent economy has traditionally been dependent on agriculture, but the government has attempted to diversify the economy in recent years. Agriculture now accounts for about 9% of GDP compared to 11% in 1996 and 13% in 1993. Bananas account for more than 80% of agricultural output, and account for upwards of 60% of the work force and about 35% of merchandise exports. Such reliance on a single crop makes the economy vulnerable to external factors. St. Vincent's banana growers benefit from preferential access to the European market. In view of the European Union's announced phase-out of this preferred access, economic diversification is a priority.

Tourism has become a very important part of the economy. In 1993, tourism supplanted banana exports as the chief source of foreign exchange. The Grenadines have become a favorite of the up-market yachting crowd. The trend toward increasing tourism revenues will likely continue. In 1996, new cruise-ship and ferry berths came on-line, sharply increasing the number of passenger arrivals. In 2000, total visitor arrivals were about 280,700. A relatively small number of Americans--under 1,000--reside on the islands.

St. Vincent is a member of the Eastern Caribbean Currency Union (ECCU). Eastern Caribbean Central Bank (ECCB) issues a common currency for all members of the ECCU. The ECCB also manages monetary policy and regulates and supervises commercial banking activities in its member countries.

St. Vincent and the Grenadines is a beneficiary of the U.S. Caribbean Basin Initiative. The country belongs to the Caribbean Community and Common Market (CARICOM), which has signed a framework agreement with the United States to promote trade and

investment in the region. St. Vincent also is a member of the Organization of Eastern Caribbean States (OECS).

Transportation

St. Vincent is on the main air routes of the Caribbean, with direct flights to Trinidad and Barbados as well as other islands to the north. The international airport is located on St. Vincent near Kingstown and there is another on the east coast, near Georgetown. There are also small airports on Bequia, Canouan, Mustique, and Union Island. All of the Grenadines have excellent harbors served by a ferry service out of Kingstown.

Harbors in the Grenadines are being expanded to increase potential tourism. There is a road on St. Vincent that connects all of the main towns with the capital.

Vehicles travel on the left, and traffic approaches from the right. Roads are narrow, with steep inclines/declines throughout the island. Taxis and buses tend to be relatively safe, but the buses are often overcrowded. Vans are generally overcrowded and frequently travel at high rates of speed. Rural mountainous roads are the more dangerous areas for road travel. Night driving should be done with great caution and is discouraged in mountainous areas because the roads are not well marked, there are few, if any, guardrails, and the roads are often steep and winding.

Communications

Cable and Wireless (West Indies) operates the islands' telecommunications services. There are two AM radio stations, one television station, and four weekly newspapers.

Health

The general hospital in Kingstown has over 200 beds and is equipped with x-ray, dental, and eye clinics. There are three rural hospitals, two

on St. Vincent and another on Bequia.

Clothing and Services

Sandals are an important beach accessory, as the sand can become very hot. Comfortable, casual clothing is the norm, but it is considered improper to wear swimwear when in town. A raincoat and light sweater may be needed for the higher altitudes of St. Vincent, where it can get wet, windy, and cool.

NOTES FOR TRAVELLERS

For stays up to six months, U.S. citizens may enter St. Vincent and The Grenadines without a passport. U.S. citizens must carry an original document proving U.S. citizenship (a U.S. passport, certificate of naturalization, certificate of citizenship or a certified copy of a U.S. birth certificate).

Photo identification, a return/onward ticket and/or proof of sufficient funds are also required.

For further information concerning entry requirements, travelers can contact the Embassy of St. Vincent and The Grenadines, 3216 New Mexico Ave., N.W., Washington, D.C. 20016, telephone (202) 364-6730, or the consulates in Los Angeles, New Orleans, and New York.

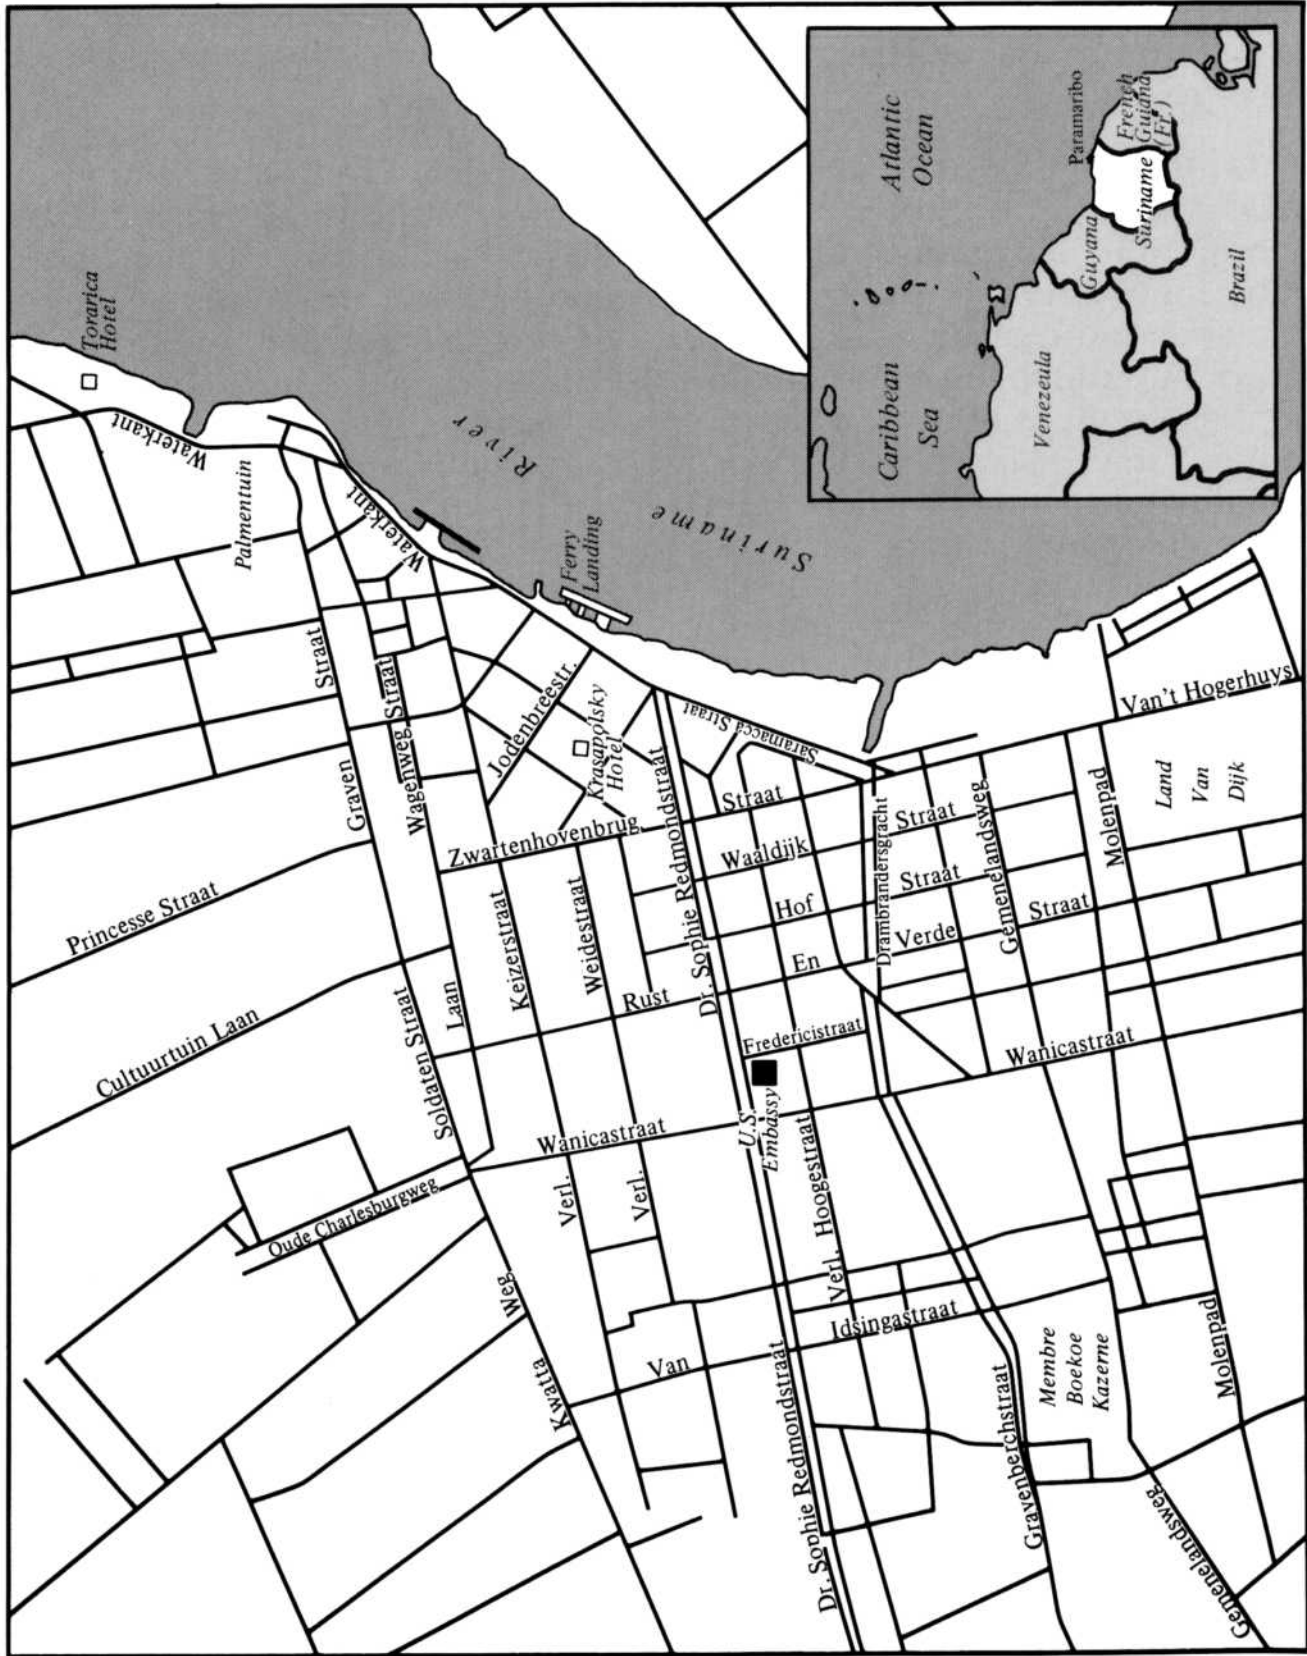

The United States does not maintain an Embassy in St. Vincent and

The Grenadines. U.S. citizens requiring assistance may contact the U.S. Embassy in Bridgetown, Barbados; telephone 1 (246) 436-4950. The Consular Section is located in the American Life Insurance Company (ALICO) building, Cheapside, Bridgetown; telephone 1 (246) 431-0225. Americans are encouraged to register at the Consular Section of the Embassy in Bridgetown and obtain updated information on travel and security in St. Vincent and The Grenadines and within the area.

Paramaribo, Suriname

SURINAME

Republic of Suriname

Major City:

Paramaribo

Other Cities:

Albina, Moengo, Nieuw-nickerie, Totness, Wageningen

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated July 1993. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

SURINAME, which, as Dutch Guiana, was an autonomous territory within the Kingdom of the Netherlands until 1975, is an independent, racially and ethnically mixed country on the northeast coast of South America. It retains much of its Dutch heritage in language and culture, while striving to develop an identity within the context of its geographical environment.

Suriname is currently pursuing institutional changes in a concerted effort to recover from a 1980 military coup and an escalating austerity alien to this once prosperous colony. From the beginning, it has been faced with a small population and an economic development

largely restricted to a narrow coastal band, and the suspension of Dutch aid in the wake of the military takeover has created additional hardships. Growing inflation and foreign exchange restrictions continue to strain immediate plans for development.

MAJOR CITY

Paramaribo

Suriname's capital city, Paramaribo, is located 12 miles inland, on the west bank of the Suriname River. Founded in 1613 as a trading post with the Indians it was, at various times, subject to alternating British and Dutch administration. The city expanded and developed greatly during the 18th century, but declined somewhat during the next century after two damaging fires. At present, many of Paramaribo's structures date from the early and mid-20th century, and exhibit a characteristic Dutch-colonial, tropical style of architecture. The canals are reminiscent of the Netherlands.

Some 180,000 people live in Paramaribo and its immediate suburbs. The city is the heart of Suriname's political, cultural, and intellectual life, serving not only its own popula-

tion, but also that of the entire country. Older cultural traditions prevail in isolated jungle villages.

Paramaribo is not generally afflicted by floods, although heavy rains can, at times, exceed the city's drainage capabilities and create isolated flooding on some streets and in low-lying areas.

About 350 American citizens live in Suriname. Most are connected with the U.S. Embassy, or are in Protestant missionary work.

Resident foreign embassies include those of the U.S., the Netherlands, India, Brazil, Venezuela, the former U.S.S.R., the People's Republic of China, Indonesia, South Korea, Japan, Libya, France, and Guyana. A number of other countries are represented by honorary consular officers. Cuba established a trade mission in 1981, but its advisers were expelled after the U.S. invasion of Grenada in October 1983.

Schools for Foreigners

The American Cooperative School, operated by American Protestant missionaries, provides classes in grades kindergarten through 8. Instruction is in English and meets U.S. standards. The school year runs from late August until May.

Street in Paramaribo, Suriname

© Adam Woolfitt/Corbis. Reproduced by permission.

Suriname has a dual religious and secular educational system, conducted in Dutch. Schools are run by Catholic and Moravian Churches as well as by the state. While some foreign children enroll in the Suriname schools at Paramaribo, the necessity of learning Dutch and the problems of transferring credits make this difficult (if not impossible) for Americans. Standards vary from school to school, with the best schools having an excellent record in placing students in universities here and abroad.

Suriname's Anton de Kom University (in the capital) has faculties of medicine, law, technical and social sciences, and natural resources. Other institutions of higher education also operate in Suriname.

Recreation

The most popular national sport is soccer. Basketball and cricket are also available, and adult teams play regularly. Weight lifting, badmin-

ton, horseback riding, and aerobic exercise classes are also pursued by Americans. A nine-hole golf course is four miles from Paramaribo. Formerly a rice paddy, it is flat and low, and drainage, though extensive and well planned, is a problem during the rainy season. Americans have found Paramaribo an excellent place to learn to play golf under uncrowded but rustic conditions.

Hunting and fishing also evoke a great deal of interest, as neither requires any unusual equipment. Both, however, can involve hard trekking in deep forests. Stringent laws govern ownership of firearms and ammunition. Rifles and pistols are prohibited, and an individual may own only one shotgun. Guides and transportation to the best hunting areas are expensive; hunting without a guide is definitely not recommended. It may be necessary to hire a power boat and/or plane to get to the desired area. Dogs are needed for some kinds of hunting.

A gun club uses pistols (owned by the club) at a range near Paramaribo three times a week, traps at Paranam once a month, and rifles (owned by the club) at a range near Zanderij Airport, also monthly.

Fishing in the Suriname and Saracca Rivers, Afobakka Lake, and the surrounding streams is not unduly inconvenient, but trips to the interior or saltwater fishing are as difficult to organize as hunting trips. Tarpon is the principal sport fish, with catfish and other species also popular. Many excellent streams and rivers in Suriname are suitable for small boats. It is possible to do some fishing from the river banks.

Camping and hiking are difficult because of heat, insects, and lack of organized campsites and marked trails, but adventurous types might enjoy these sports at several of the national parks here. Bicycling is

popular, although heavy traffic makes it risky.

There are neither ocean beaches nor lakes suitable for swimming. Several tannic acid-colored rivers and creeks offer interesting and safe swimming and water-skiing. The city has one public swimming pool, and four private clubs maintain their own pools.

The Suriname Aero Club has a Cessna plane and operates both a ground school and a flying school. For beginners, at least a basic knowledge of Dutch is necessary, since the ground course and examination are conducted in that language. Costs are somewhat higher than those in the U.S., but not prohibitively so.

Some opportunities exist for sight-seeing. The visitor can drive to Kola Creek, Brokopondo Dam, Groningen, Joden Savanna, or Nieuw-Amsterdam for outings; some facilities for picnicking are available. It also is possible to drive to Cayenne, French Guiana, and to the border of Guyana. The scenery and climate in these places are similar to that of Suriname. French Guiana, however, offers the added attraction of French wines, cheeses, and meals, making it a popular place to visit. Trips to the interior by plane or boat are interesting, but can be expensive.

Entertainment

Paramaribo has one small museum (Fort Zeelandia), a natural history collection, a small zoo, and numerous public parks. There are 10 movie theaters, but not all of them are patronized by Americans. Films in English are popular at most of the theaters, and five establishments specialize in Indian movies. Movies are censored and may be restricted to certain age groups. A film league offers art films about every two weeks, and one drive-in theater shows an occasional movie in English.

Suriname's government-owned TV channel (STVS) broadcasts every evening and offers American variety

programs and occasional feature films. A private TV station (ATV), inaugurated in 1987, offers American, Brazilian, and European programs, mostly in English.

Videotapes in VHS or Betamax can be rented from commercial sources at low cost. The Beta format, popular here, offers the most variety.

Although the country has no legitimate theater, the Suriname Cultural Center (CCS) and Ons Erf sponsor occasional plays, concerts, and other cultural presentations. Plays are almost always in Dutch or Sranan Tongo. Modest parades and trade fairs are sometimes held on holidays.

Average-to-good Chinese, Javanese, and Korean food is served in at least five restaurants in Paramaribo. Prices are higher than those at good U.S. restaurants. A few continental-style restaurants are here.

No special or unusual etiquette is required when participating in any form of entertainment. Bush Negroes often object to being photographed in their villages.

The Torarica Hotel stages floor shows on weekends—usually a solo performance by a singer, dancer, or musician. It also has a dance band and a casino and restaurant. A few local discos and nightclubs cater to young people. Good Chinese and Javanese food is served in at least five restaurants, with prices comparable to those at good U.S. dining establishments. There is a good continental-style restaurant at the Ambassador Hotel, and a disco next to the Krasnapolsky Hotel.

Paramaribo is a friendly city. It is easy to meet people through personal introductions. Among men's and women's service clubs, Rotary, Lions, Kiwanis, Jaycees, Optimists, Soroptimists, and Toastmasters are represented in Paramaribo. Anyone interested in social work may volunteer with the Salvation Army, Red Cross, YWCA, the family planning organization (LOBI), or one of many other secular and religious groups.

The American community is too small to support exclusive social activity, even in Paramaribo. Most of the non-Surinamese middle-class expatriate community is composed of Dutch Europeans and some Belgians, with few other foreigners. Social calls and social affairs among both Surinamese and Dutch are more structured than U.S. custom requires. Close friends usually do not call on one another without prior notice.

OTHER CITIES

ALBINA is a seaport town on the west bank of the Maroni (Morowijne) River. Besides being a district capital, it is the largest city on the French Guiana border.

MOENGO lies on the Cottica River in the northeast part of the country. The local economy depends on extensive bauxite deposits.

NIEUW-NICKERIE is Suriname's major coastal town in the northwest, across from Corriverton, Guyana. It is the capital of the Nickerie District. The city is an important port through which rice, cocoa, and lumber is exported.

TOTNESS is the capital and largest village of Coronie District. Situated on the Atlantic Ocean, halfway between Nieuw-Nickerie and Paramaribo, Totness has a government guest house and bus connections to Paramaribo. The village's main road traverses a great forest of coconut palms.

The small town of **WAGENINGEN** has great status in the field of agriculture. It lies on the Nickerie River, 30 miles southeast of Nieuw-Nickerie, in the northwest. Located in the heart of the country's rice-producing area, Wageningen is the home of one of the world's largest fully mechanized rice farms. The road from Nieuw-Nickerie is newly rebuilt.

COUNTRY PROFILE

Geography and Climate

Roughly square, Suriname lies on South America's northeast coast, bounded on the east by French Guiana, on the south by Brazil, and on the west by Guyana. Most of the 220-mile shoreline on the Atlantic ocean consists of mud flats and swamps. Suriname's inland boundaries with French Guiana and Guyana are in dispute.

Suriname (this is the Dutch spelling, but the English spelling, Surinam, is often seen) has a land area of about 63,000 square miles, and is about the same size as Georgia. However, most Surinamers live in the 1,900-square mile, narrow coastal plain in and around Paramaribo, Moengo, and Nieuw-Nickerie.

Suriname's coastal area is flat. Hills and low mountains, reaching a maximum height of about 4,000 feet (1,230 meters), rise in the heavily forested interior. Between these two zones lie the savanna lands, 30 to 40 miles in width. Large rivers and streams bisect the country from the south to the north and provide major transportation routes between the coast and the interior. However, they hinder east-west land transportation.

Suriname has a tropical rainforest climate—hot and humid all year. Daytime temperatures average about 90°F (27°C), although evening and night readings are considerably lower (about 70°F, or 21°C). Interior temperatures, not moderated by coastal breezes, are slightly more extreme.

Most Americans find the climate notably more agreeable than they had anticipated. On a normal day, outdoor activities such as golfing, fishing, and jogging are pleasant except between 10 a.m. and 4 p.m. when the sun is high.

Seasons are distinguished only by more or less rain, with annual rainfall averaging 87 inches. December to February and April to August are generally the periods of heaviest rainfall. The hottest months are September and October, with temperatures averaging 89°F (35°C). Suriname lies outside the hurricane and earthquake area.

Population

Suriname's estimated population is 434,000 (2000 est.). Because of emigration to the Netherlands between 1972 and 1980, there was a significant decline in total numbers. The people are a mixture of several ethnic and racial classifications, with Hindustanis (37%) and Creoles (32%) the two largest groups. Others represented in the population include Javanese (15.3%), Bush Negroes (10.3%), Amerindians (2.7%), Chinese (1.7%), and Europeans, one percent.

The Hindustanis (East Indians) are predominately Hindu, but include a substantial Muslim minority. They are descended from contract farm laborers brought to Suriname in the latter part of the 19th century. Hindustanis are still heavily engaged in agriculture, but have become increasingly urbanized and are often active in business and commerce.

Creoles, of mixed African, European, and other ancestry, are descendants of African slave laborers emancipated in 1863. In this century, they have filled the ranks of civil service and office jobs.

The Javanese, who are descended from farm laborers brought to Suriname on contract from Java, in Indonesia, are chiefly active in agricultural life in the rural areas of Suriname. They have retained their own language. The Bush Negroes, or Maroons, are descended from escaped African slaves. Many escaped before losing their African culture, which has been maintained in some primitive villages along streams and rivers in the interior. Although such communities still

exist far removed from the developed coastal region, many Bush Negroes are now abandoning their traditional life-style to move to population centers in search of better education and job opportunities.

Amerindians, descendants of original pre-Columbian inhabitants, also live in tribal villages along interior streams and rivers. They are less hospitable and desire more privacy than Bush Negroes. Certain small Amerindian tribes in Suriname have been discovered only recently.

The Chinese, many born in China, are mostly shopkeepers, business people, and restaurateurs. They speak Chinese (Hakka and Cantonese) among themselves, and support a Chinese newspaper.

Caucasians are mainly descended from Dutch farmers who came here in the 18th and 19th centuries, though some are descended from early Jewish, French, and German immigrants. A small community of expatriate Europeans, mostly from the Netherlands, work in some local businesses.

Approximately 350 Americans reside in Suriname, mostly in Paramaribo. Mostly Protestant missionaries, they spend some of their time in the interior.

Each ethnic group maintains its identity and customs. Some wear distinctive clothing. Almost all celebrate their own holidays, observe their own religions and, except for sophisticated city dwellers, associate with members of their particular groups in exclusive or semi-exclusive social clubs and societies. Political parties are racially or ethnically oriented. The government seeks to break down such barriers and forge a national identity.

The official language of Suriname is Dutch, but *Sranan Tongo* (literally, Suriname tongue), also called Surinamese, a non-tonal English-based Creole tongue, is the lingua franca. Dutch is taught in school and used exclusively by the government; government publications and newspa-

pers are in that language, as are radio and television.

English is widely understood and almost all educated people speak it fluently. A great many Surinamers speak three or even four languages—Sranan Tongo, Dutch, and English, plus Hindi, Chinese, or Javanese. The latter three are used extensively in Paramaribo.

Freedom of religion is legally protected in Suriname. Hindus and Muslims comprise the two largest religious groups, but there are also many Roman Catholics and other Christians (primarily Moravians) and a small number of Jews and Baha'is. A significant number of Amerindians and Bush Negroes follow animistic religions, although the majority of both groups profess Christianity in either its Catholic or Moravian form.

Government

The popularly elected government that ruled Suriname after the end of Dutch colonial rule was overthrown in a military coup in February 1980. The sergeants who took power in 1980 were at first welcomed as reformers. Their gradual leftward drift, however, increasingly alienated the generally conservative middle-class Surinamese majority, and the repressive methods they employed to maintain control eventually cost them most of their popular support.

The executions of 15 opposition leaders in 1982 led to the suspension of Dutch and American development aid. Combined with a decline in world market prices for bauxite and alumina (Suriname's chief export commodities), the aid suspension led to a general economic downturn that had reached a critical stage. When an insurgent group began a series of attacks on military and economic targets in the interior, the government gave in to international and domestic pressures and announced that a new constitution would be adopted by the end of March 1987, and that

national elections would be held in November of that year.

Eighty-eight percent of Suriname's eligible voters took part in the elections, in which a coalition of traditional, ethnic-based, pre-coup parties called the Front for Development and Democracy won with an 85 percent majority.

Under the new constitution, the 51-member directly elected National Assembly is the highest authority in Suriname. The President, chosen by the Assembly, is both head of government and head of state. The Vice President, also elected by the Assembly, is chairman of the Council of Ministers that, together with the President and Vice President, makes up the government. Like the Assembly members, the President and Vice President are elected for five-year terms.

Despite the democratic elections of 1987, Suriname's political situation remained extremely unstable. Although the army had relinquished control of the government, it remained powerful and influential. The army often sharply criticized the new government's economic policies. A series of confrontations between the government and army caused relations to worsen. By 1990, the tensions between the two parties had come to a head. On December 24, 1990, the army launched a successful military coup against the government. President Ramswevak Shankar was overthrown and replaced by Johannes Samuel Kraag. A military council established shortly after the coup announced that Kraag would govern on an interim basis until new elections could be held.

The military fulfilled this promise by holding democratic elections in May 1991. Election results showed that the New Front Coalition, consisting of three ethnically-based parties and the Surinamese Labor Party, captured 30 of 51 seats. The pro-military National Democratic Party obtained only 10 seats. The rest of the seats were divided among several small opposition parties. On

September 6, 1991, the National Assembly and other elected representatives of districts and subdistricts met to select a new President. The New Front Coalition candidate, Ronald Venetiaan, became Suriname's new president after gaining 80 percent of the vote.

Economic difficulties caused Venetiaan's popularity to decline over the succeeding years, and he was replaced by NDP candidate Jules Wijdenbosch in elections held in May 1996. These elections marked the first peaceful transfer of power between democratically elected governments since Suriname gained independence.

In May 1999, after mass demonstrations protesting poor economic conditions, the government was forced to call early elections. The elections in May 2000 returned Ronald Venetiaan and his coalition to the presidency. The New Front ran its campaign on a platform to fix the faltering Surinamese economy. But while the Venetiaan administration has made progress in stabilizing the economy, tensions within the coalition and the impatience of the populace have impeded progress.

Suriname is a member of the United Nations, World Health Organization (WHO), and United Nations Educational, Scientific, and Cultural Organization (UNESCO), as well as European Communities, International Bauxite Association, Inter-American Development Bank, Nonaligned Movement, Organization of American States and Latin American Economic System.

The flag of Suriname consists of green, white, red, white, and green horizontal bands, with a yellow star in the middle of the red band.

Arts, Science, Education

Some local cultural activities are available. Occasional plays and concerts are offered at the Suriname Cultural Center, Ons Erf Cultural Center, and elsewhere. Two or three

times a year, foreign groups (Chinese acrobats, American jazz ensembles) arrive for performances. Live theater is confined to two companies which produce plays in Dutch and Surinamese. A music school offers instruction in a wide range of instruments. There are several small ballet schools in Paramaribo.

Each government cultural center maintains a public library with a limited collection of English editions. English-language paperbacks and hardcover books are available from several retail outlets in Paramaribo, but are expensive. *Ons Erf*, a Roman Catholic Church organization, maintains an arts and crafts center and sponsors activities for younger children.

Suriname's main ethnic groups—Creoles, Hindustanis, and Javanese—maintain associations which occasionally sponsor cultural activities.

Suriname has an extensive educational system, with compulsory free schooling until age 14. Its Anton de Kom University has faculties of medicine, law, natural resources, and social and technical sciences. However, transfer of individual course credit to or from the U.S. is unlikely, even when a non-Dutch-speaking person is allowed to enroll. Teacher-training institutes, secondary schools, and technical schools also provide degrees. Nurses and dental technicians are trained in conjunction with the medical faculty. The adult literacy rate was approximately 93 percent in 1995.

The government and the Roman Catholic and Moravian Churches provide education from kindergarten through secondary school. All instruction is in Dutch, except at the American Cooperative Elementary School, administered by the Suriname Aluminum Company (SURALCO), and in two private schools administered by American missionaries. Lectures in English are sometimes given at the university. Many students still attend high

schools and universities in the Netherlands; a growing number study in U.S. universities.

The Government Language Center offers courses in Dutch, English, Spanish, and Surinamese. French is offered by the Alliance Française, Spanish by the Andrés Bello Center, and Portuguese by the Brazilian Cultural Center. The Indonesian and Indian centers give instruction in their native folk art and dance.

Commerce and Industry

Approximately 70 percent of Suriname's exports by value are bauxite and its aluminum derivatives. The attractiveness of Suriname's bauxite reserves has diminished in recent years as more economical sources have been developed elsewhere in the world and the worldwide marketing of bauxite and aluminum has become more complex. SURALCO, a subsidiary of ALCOA and the biggest private firm in Suriname, has reduced its labor force as its bauxite and aluminum shipments have fallen and internal costs have risen.

Agriculture is important as a major source of employment. Rice, citrus, other tropical fruits, vegetables, seafood, and a few other commodities are available. The principal food crop is rice. Suriname also produces half of the sugar it consumes. Commercial fishing is undertaken by Japanese, Korean, and Surinamese companies using imported labor. Shrimp is a major export; the catch has diminished since 1982 as the shrimp have at least temporarily moved to grounds closer to Guyana. However, production of other foodstuffs is inadequate to meet the needs of the country. Importation of a wide variety of foods is, therefore, necessary.

Forestry is an important sector of the economy, dominated by the state-owned company, Bruynzeel, which exports products derived from tropical hardwoods.

Wheat, potatoes, some poultry, milk powder, cheese, and many other commodities must be imported. Protective tariff and nontariff barriers and import substitution plans have been put into effect, sometimes limiting the variety of foods available on the local market. Local manufacturing consists of saw mills, shrimp-packing plants, a cigarette factory, a rum distillery, a brewery, soft drink bottlers, and a few other small industries.

A rapid deterioration in the Surinamese balance of trade began in 1983. It was brought about both by reduced bauxite revenues and by termination—due to Dutch displeasure with Suriname Government actions regarding human rights—of Dutch development aid. The virtual disappearance by late 1984 of freely available foreign exchange finally induced the government to impose stringent restrictions on import of consumer and industrial goods.

High wages, low foreign exchange levels, a small domestic economy, and little experience in exporting limit Suriname's competitiveness in international markets. Nonetheless, the country's GDP was an estimated \$1.48 billion in 1999. Per capita income is ten times that of the poorest Caribbean islands.

Suriname is a member of the Lome Convention and has observer status in the Caribbean Common Market (CARICOM). The U.S. has traditionally been the country's largest trading partner, accounting for approximately one-third of export-import trade. The remainder has been carried on with European nations, Japan and, to an increasing extent, neighboring countries in the Caribbean and South America. This pattern may change, however, as the Surinamese Government does more centralized procurement in bulk from lower cost sources.

The Suriname Chamber of Commerce and Industry can be reached at P.O. Box 149, Mirandastraat 10, Paramaribo.

Transportation

Suriname's extensive rivers and streams are important avenues of transportation. Some rivers are navigable by ocean freighters for 100 miles inland. Hundreds of miles of smaller rivers are navigable by smaller boats and barges, which are used widely for moving people and freight. The boats of the Amerindians and Bush Negroes are vital to them.

Surinamese Luchtvaart Maatschappij NV (SLM) offers flights between major populated areas. The only practical means of reaching some interior areas is by small plane, using the recently built "grasshopper" airstrips. Chartered flights to these small fields are very expensive. Zanderij International Airport, 25 miles south of Paramaribo, can accommodate large jets. Zanderij is served by KLM, ALM, SLM, Guyana Airways, and Brazil's Cruzeiro do Sul, which connect the country with the U.S., Europe, and major South American cities. A small airfield on the edge of the city is limited to twin-engine propeller craft.

Suriname has no passenger rail transportation. River transport is one way to visit the interior and some coastal areas.

Buses serve Paramaribo, but service is erratic and the buses are hot and usually crowded during rush hours. Motorbikes, motorcycles, scooters, and bicycles are important local means of transportation. Traffic is hazardous, especially for riders of two-wheeled vehicles. Paramaribo has several taxi companies. Cabs are hard to find, but it is possible to phone for service.

Private cars are the best means of transportation in Paramaribo, particularly small vehicles, as some streets are narrow, and good maneuverability is necessary in traffic. Cars are not used very often for trips outside the city. Traffic moves on the left (although cars for right-hand traffic are numerous), and visitors are cautioned to be

careful when crossing streets, as it is easy to forget which way traffic is coming. The bicycle and motorbike paths can be hazardous, too, as the latter have the right-of-way.

Prices of small foreign cars are comparable to U.S. prices, and spare parts for these vehicles are more readily available than for large American cars. Insurance can be purchased at reduced rates (10 percent per year up to five years) with a statement from previous insurers that no claim has been made within five years. For other than liability, it is wise to purchase additional insurance through a U.S. company, as rates are more reasonable. A driver's license can be obtained for a small fee by presenting a valid U.S. license and two photos.

Communications

Postal, telegraph, and telephone systems connect Suriname's cities with one another and with the outside world. These services are quite reliable, and the rates reasonable. Suriname has a dial telephone system; direct dialing from the U.S. is possible using country code 597. International airmail letters arrive almost daily from the U.S., with transit time averaging 15 days. Surface mail takes two months or longer. Local mail service is slow, although reasonably reliable.

Government-owned, commercial stations provide news and entertainment in local languages, Dutch and English. Shortwave radio can pick up Voice of America (VOA), Armed Forces Radio, British Broadcasting Corporation (BBC), a few U.S. stations, and numerous Spanish and Portuguese broadcasts. The television broadcasts provide many recorded programs from the U.S., with some in color. The news is reported in Dutch.

Government publications and newspapers are in Dutch. The government cultural center maintains a public library with a limited collection of English editions. A few very expensive English-language paperbacks and hardcover books are

available from one or two outlets in Paramaribo.

Health

Paramaribo has medical facilities which are satisfactory for all but the most serious health problems. Local doctors have received their training in the Netherlands, Suriname, and the U.S. Several good dentists with modern equipment practice in the city. Eyeglasses can be fitted satisfactorily, as there are several eye specialists and opticians. Some common prescription and patent medicines are available, but most prescription medications are unavailable.

The general level of sanitation and health in Paramaribo, although not up to U.S. standards, is good. Garbage is collected weekly. Government efforts have eliminated yellow fever, malaria, and rabies from the capital area. Locally produced food, milk, bottled drinks, and meat are safe.

Tap water is potable in Paramaribo, Nieuw-Nickerie, and Moengo. In small villages and in the interior, waterborne diseases are always a possibility because of various unsanitary health practices. Skin infections are fairly common. It is inadvisable to walk barefoot, since schistosomiasis and other parasites can be contracted through exposed skin. The coastal area has been free of yellow fever and malaria for many years, but these diseases are still found in the interior. The visitor should take anti-malarial drugs when traveling in those regions.

Suriname's high humidity aggravates arthritis, sinusitis, rheumatism, and bronchial asthma. The damp, warm air encourages fungus growth which can affect the skin or cause allergic reactions. Numerous plants and flowers are also sources of allergies. The climate is debilitating to many Americans, particularly those arriving from cooler climates. New arrivals may feel weak and tired and may require extra sleep during their first few weeks in Paramaribo. The tropical sun is surpris-

ingly strong, and direct exposure at midday can cause uncomfortable burns in 15 to 20 minutes.

Mosquitoes are prevalent in some lower lying parts of Paramaribo. Some people use mosquito nets when sleeping in rooms that are not air-conditioned, especially in some areas outside the capital, where mosquitoes may carry malaria. Mosquito and insect repellents are widely used. The many insects found in this tropical region result in frequent, but mild, bites, which sometimes become infected despite precautions. Outside heavier-populated sections, there are poisonous reptiles and wild animals. Caution should be exercised by wearing proper clothing and keeping alert when in forested areas.

Clothing and Services

The warm, humid climate of Suriname normally necessitates only lightweight summer clothing, except in some air-conditioned offices and buildings. Evenings in the rainy season are cooler than in the dry season. It rains almost daily, so an umbrella is necessary for each family member. Because of the high humidity, raincoats are seldom worn.

Men normally wear light cotton shirts and lightweight suits. At many social occasions, casual attire is acceptable.

Women generally wear skirts or slacks while shopping in the city. Shorts should not be worn in public. Pants and pantsuits are often seen in casual social situations. Clothing accessories can be purchased in Paramaribo, but selection is limited, and prices are higher than in the U.S.

Basic services are adequate. The city has two laundries and two dry cleaners. Work is fair, and prices are higher than to those in the U.S. A few dressmakers, tailors, hairdressers, and barbers do good work at reasonable rates. Repairs of any

kind are adequate, but slow. Qualified technicians for some repairs do not exist in Paramaribo. However, many auto garages, especially those of dealers, have modern facilities, skilled mechanics, and do adequate work, although parts are often in short supply.

Virtually all miscellaneous household items, supplies, medicines, and tobacco are difficult to find locally. Since nearly everything must be imported, prices are high. It is advisable to have on hand a supply of special or unusual medicines or toiletries.

Domestic Help

English-speaking domestics are not only hard to find, but are rarely willing to live in. A full-time maid works six hours a day, six days a week, is paid at least \$300 a month, plus food and transportation, and is paid overtime for evening work.

Part-time gardeners often will do heavy tasks when required. For entertaining, ample extra help is available.

Expatriates should be careful not to hire persons with illegal residential status in Suriname, as is often the case with Guyanese and Haitians.

NOTES FOR TRAVELERS

There are several routes from the U.S. to Paramaribo, the easiest being the SLM flight from Miami, which departs twice a week. Transit can also be through Curaçao, Netherlands Antilles, from Miami; or through Port-of-Spain, Trinidad, from either New York or Miami.

A passport, visa and, if traveling by air, return ticket are required for travel to Suriname. There is a processing fee for business and tourist visas. A business visa requires a letter from the sponsoring company detailing the reason for the visit.

There is an airport departure charge and a terminal fee. Travelers arriving from Guyana, French Guiana and Brazil are required to show proof of a yellow fever vaccination. For further information, travelers can contact the Embassy of the Republic of Suriname, 4301 Connecticut Avenue, N.W., Suite 460, Washington, D.C. 20008, telephone (202) 244-7488, e-mail: emb-sur@erols.com, or the Consulate of Suriname in Miami, 7235 NW 19th Street, Suite A, Miami, FL 33126, telephone (305) 593-2697.

While the situation in the countryside is stable at present, there is insufficient police authority over much of the interior of Suriname to offer assistance in an emergency. Unaccompanied travel to the interior, particularly the East-West highway between Paramaribo and Albina, is considered risky due to the high incidence of robberies and assaults along this route. Isolated acts of violence, particularly in but not limited to the interior, may occur. Travelers to remote areas of the interior of Suriname should be aware that they may encounter difficulties because of the lack of government authority throughout the interior and inadequate medical facilities in some areas. The ability of the U.S. Embassy to assist in an emergency situation may be hampered by limited transportation and communications in some areas.

The rate of violent crime has increased. Burglary and armed robbery are increasingly common in the capital city of Paramaribo, as well as in the outlying areas. Banditry occurs along routes in the interior of the country where police protection is inadequate. An increasing number of tourists report being attacked and robbed. Visitors may wish to exercise caution when traveling to the interior without an organized tour group, and secure their belongings carefully while staying in Paramaribo. Visitors may find it useful to carry photocopies of their passport, drivers license, credit cards and other important papers and leave the originals in a safe place.

Travelers to Suriname may experience disruptions in travel plans because of the unreliability of scheduled airline service to and from that country. Suriname Airways (SLM), operating in conjunction with Antillean Airways, serves as the only direct air link between the U.S. and Suriname. Limited flight schedules and ongoing technical problems commonly result in delays. Additionally, transportation to the interior is unreliable. Interior flights are often delayed, sometimes for days, because of mechanical difficulties, fuel shortages, and runway conditions. Dutch is the official language of Suriname; however, English is widely used, and most tourist arrangements can be made in English.

Household pets must have veterinary certificates stating that they are free from disease and have had rabies shots. Quarantine is waived if the documentation is in order. No kennels are available.

Stringent laws govern ownership of firearms and ammunition. Hunting licenses are obtained only after acquiring a permit to own a shotgun, and importing and registering a shotgun is a long, slow process. An individual may own one shotgun. Twelve and 16-gauge shotguns are used almost exclusively. Rifles or pistols are forbidden.

Travelers should note that natives object to being photographed.

Paramaribo has Roman Catholic, Southern Baptist, Dutch Reformed, Lutheran, Moravian, Baptist, Assembly of God, Jehovah's Witnesses, Pilgrim Holiness, AME, and Seventh-Day Adventist churches,

an Anglican mission, two synagogues, a Baha'i center and several Muslim mosques and Hindu temples. English services are held regularly each Sunday at the Anglican mission and the AME church. A Catholic mass in English is offered once a month. Many Americans attend an interdenominational Protestant service held each Sunday.

The time in Suriname is Greenwich Mean Time (GMT) minus three-and-a-half.

The Suriname *guilder* (Sf) is the monetary unit. Currency controls are stringent.

The metric system is used. An additional unit of weight measurement is the Dutch *pond*, which equals 500 grams, 46 more than in an American pound.

Americans living in or visiting Suriname are encouraged to register at the Consular Section of the U.S. Embassy in Paramaribo to obtain updated information on travel and security within Suriname. The Embassy is located at Dr. Sophie Redmondstraat 129, telephone (011)(597) 472-900. The Consular Section hours of operation for routine American citizen services are Mondays and Wednesdays from 8:00 a.m. - 10:00 a.m., or by appointment, except on American and Surinamese holidays. U.S. citizens requiring emergency assistance evenings, weekends, and holidays may contact an Embassy duty officer by pager at (011)(597) 088-08302. The U.S. Embassy in Paramaribo also provides consular services for French Guiana. For further information on French Guiana,

please refer to the separate Consular Information Sheet on French Guiana.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Trinidad & Tobago. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Trinidad does not conform to the stereotypes of a Caribbean resort island. In fact, while it is blessed with great natural beauty and some good beaches, it is not a premier tourist destination. Tourism is growing rapidly on the sister island of Tobago, which is only a 20-minute flight away. What Trinidad lacks in tourist infrastructure, however, it more than makes up for in its unique ethnic and cultural flavor. Its abundant natural resources (oil and gas) have provided it the means to chart its own course, politically and economically, and make it a leader in the region. First-time visitors are often surprised at the level of industrialization in the country. It is a relatively prosperous nation as

measured by per capita GDP. Its population and landmass are larger than all of the Windward Islands combined. Even its geologic origins set it apart; it was originally a part of the South American mainland before it broke off thousands of years ago. This means that its flora and fauna are as varied as those of South America, but concentrated in a much smaller area. It is one of the world's premier destinations for bird watchers, boasting several hundred species, especially hummingbirds. Trinidad includes mountain ranges with peaks as high as 3,000 ft, as well as flat lands used for agriculture, and wetlands.

The Venezuelan coastline, less than 10 miles away, is visible from Port of Spain, yet cultural and language differences mean there is relatively little contact with Venezuela. Trinidadian society is a vibrant and unique mixture of races and national origins, with the two largest groups being of African and of Indian descent. In addition, there are smaller, but significant numbers of people of Chinese, Syrian, Lebanese, English, Portuguese, Spanish, and French origin.

Life for the community is good in Port of Spain, particularly for families and those who like outdoor activities. Port of Spain is as safe as many large U.S. cities, the weather

is good, and medical care and other facilities are adequate. The people are open and friendly toward Americans, the business infrastructure is reasonably modern and efficient, and housing and schools are good. While some of the conveniences Americans take for granted are not always available, one can dial direct to family in the U.S., easily access the internet and watch many state-side channels on cable TV, or find the latest video releases as well as decent bagels. At the same time, opportunities abound to be enriched by an interesting and unique culture.

MAJOR CITY

Port-of-Spain

Port-of-Spain is located between the sheltered Gulf of Paria and the mountains of the Northern Range that rise sharply from the sea to an altitude of 3,000 feet. With a metropolitan population of over 200,000 this bustling port city is on many important air and sea routes of the eastern Caribbean.

The city itself is situated on flat land, with hills rising on three sides and the sea on the fourth. Downtown streets are narrow and con-

gested. The downtown businesses are immediately inland from the dock and waterfront. On nearby Woodford Square stands the Red House, which is the center of government and houses parliamentary offices as well as the House of Representatives, and the Senate. Many political and social functions take place at Woodford Square or on the recently refurbished Brian Lara Promenade.

Further inland is the Savannah, cultural and recreational hub of the city, with its surrounding road often called the "world's largest roundabout." This huge, grassy, oval park is the site of numerous cricket and soccer games, food vendors, and spectators on park benches. A 2-1/2 mile long paved walk around the Savannah is used by roller skaters, joggers, baby strollers, and pedestrians. Many Carnival activities take place on the Savannah.

Many of Port of Spain's cultural attractions are located around the Savannah, including Queen's Hall (used for concerts and other performances), the Botanical Gardens, a zoo, the Hilton Hotel, and historical houses, many in Victorian style architecture.

With U.S.-style shopping malls and supermarkets in many locations, Port of Spain is a growing city with many of the conveniences of the United States.

Utilities

Since electric current is the same as in the U.S. (110v, 60-cycle AC), transformers are unnecessary. Plugs and outlets are American or a locally available three-prong type.

The electrical system experiences occasional surges and outages. Line conditioners are recommended for sensitive electronic items such as computers.

During the dry season (January-June) water supplies are low, and restrictions may be placed on watering lawns and washing cars. Water pressure and supply problems can

be a serious problem in hilly suburbs.

Food

Supermarkets similar to those in the U.S. are located conveniently throughout the city. Smaller family-run groceries, vegetable-fruit stores (called greengrocers here), and roadside stands sell vegetables, fruits and fish. Well-stocked store shelves hold many familiar brands.

Food prices, except for government controlled items, are comparable or higher than in the U.S., since prices for imported food reflect freight costs and some import duties. Products come from the U.S., Canada, UK, Venezuela, Jamaica, and elsewhere. Government-controlled items are sold at below market prices and are supported by government subsidies. These include rice, sugar, flour, and some imported foods such as butter and cheese.

Some items, which are solely imports, include baby food, cake mixes, pickles, olives, and canned and dehydrated soups. Locally produced coffee is available, but stronger than U.S. coffee. American ground coffee is available. Good quality juices produced locally can be had both sweetened and unsweetened. Both local and imported candy and snacks are widely available at reasonable prices. Local and imported nuts (peanuts, cashews, walnuts, and almonds) are available, but expensive.

Staples such as eggs, bread, butter, yogurt, cream and milk (fresh, UHT and powdered) of good quality are widely available at reasonable prices. U.S.-style breakfast cereals, both local and imported, as well as rice and pasta products are also widely available.

A wide variety of fresh, canned and frozen fruits and vegetables are found in local supermarkets, neighborhood shops and roadside stands. While there are many fruits and vegetables not commonly found in the U.S., the availability of fresh herbs and the variety of vegetables

overall is less than that found in Washington, D.C. area supermarkets.

Fresh fish and shrimp can be purchased at the downtown central market, roadside stands, or from fishermen returning with their catch. Frozen fish is available at supermarkets. Local pork is good, as are New Zealand mutton and lamb. Beef cuts differ from those in the U.S. both in texture and taste and are often tougher and drier. Sausages, ham and luncheon meats are available.

Miller and Miller Genuine Draft are the only U.S. beers available locally.

Trinidadian cuisine reflects the nation's cultural diversity. "Creole" cooking includes dishes based on rice mixed with chicken, pork and various local vegetables. On their way to work, many Trinidadians enjoy a quick breakfast of fresh coconut water and jelly sold by vendors along the Savannah and Independence Square. Callaloo, a popular soup, is made from taro leaves, okra, pumpkin, coconut, and crabs. Other favorites are cow heel soup, crab backs, souse (pickled pig's feet), and pastels (ground beef wrapped in crepe-like pancakes and banana leaves). East Indian dishes include roti (usually beef, chicken, or pork with potatoes and curry spices wrapped in a large, thin bread), spicy hot curries, and chutney. Most Chinese food is Cantonese, but is prepared to suit Trinidadian taste and is somewhat different from what one finds in U.S. Chinese restaurants. Wild meats, such as maniocou (possum), armadillo, iguana, deer, and wild boar are delicacies here. Trinidadians especially enjoy fish including shark, king fish, red snapper, Spanish mackerel, flying fish, shrimp, carite, and cascadura (a fresh water fish).

Clothing

Lightweight summer clothing is worn year round by both men and women in Port of Spain. Due to Trinidad and Tobago's tropical climate, clothing made from natural fibers (cotton, linen, etc.) or a blend

© Wolfgang Kaehler. Reproduced by permission.

Carnival in Port of Spain, Trinidad

of natural and synthetic fibers is more comfortable than all synthetic materials. Clothing wears out quickly under the frequent laundering made essential by the high heat and humidity.

Men: Dress is casual and informal, although evening functions often require “lounge suits,” the local term for dark business suits. At more casual functions, sport shirts and slacks are commonly worn, as are “shirt jacks,” which are similar to the Latin American guayabera or African safari suit and are very popular among Trinidadian men. During the rainy season, showers can be expected nearly every day. Umbrellas are therefore essential. Raincoats and galoshes are not worn here due to the hot climate. Loose-fitting clothing made of natural fibers is the most comfortable.

Women: Women wear dresses, suits, or skirts to the office. Stockings are rarely worn due to the high

humidity. Plan to bring a good supply of dresses for social occasions, as parties and other social events are numerous throughout the year. Trinidadian women are generally smartly dressed no matter what dress is specified by the invitation. Casual and dressy short dresses or skirts are favored at most social functions.

More formal evening functions require long dresses or fancy short dresses.

Informal social functions require only skirts and blouses/tops.

Local boutiques sell the latest fashions, including interesting local designs, at relatively high prices. Fabric shops offer a wide variety of materials at reasonable prices. Seamstresses are numerous and many can sew without patterns; their prices vary.

Children: Clothing worn during summer in the U.S. is suitable here. Washable, lightweight materials with natural fibers are best. One sweater or feather-light jacket should be all the outer wear needed. Most children wear sandals or comfortable canvas shoes. They are available here at reasonable prices. Most schools require school uniforms, which can be purchased locally. The International School requires black or white shoes or sneakers, of which more styles are available in the U.S.

Supplies and Services

Locally made laundry soaps and cleansers are available at reasonable prices. Imported soaps, cleaners, disinfectants, fabric softeners, grease cutters, and waxes are more expensive.

Numerous name brand cosmetics and personal hygiene items are sold locally, including hair care products,

lotions, nail polish, deodorants, foot powders, and shampoos. Except for a few locally made products, they are more expensive than in the U.S. Several brands of locally made diapers are sold at reasonable prices.

Photographic equipment is expensive and limited in variety. Film and black-and white and color processing services are available at higher than U.S. cost.

Attractive shops sell most of the kitchen items found in the U.S., but at higher prices.

There are several reasonably-priced but unreliable dry cleaners. Beauty and barber shops resemble those in the U.S.

Domestic Help

Domestic help can be found and hired at rates considerably below those in the United States. Few families hire more than a full-time maid and part-time gardener. Live-in maids are hard to find, because most employees prefer day work. Some families employ maids and waiters for representational functions, at hourly or evening wages. Baby-sitters are inexpensive but sometimes hard to find. In addition to wages, employers should provide meals or cash equivalent, uniforms, and a contribution to the compulsory National Insurance plan. If the employer requires the employee to have a pre-employment medical check-up, this should be done at the employer's expense.

Religious Activities

Freedom of worship exists in Trinidad and Tobago. Most religions have places of worship. The Roman Catholic, Anglican (Episcopalian), Presbyterian, Methodist, Hindu, and Muslim faiths predominate. There are no synagogues, but a small Jewish community (mainly foreign residents) organizes activities and observances.

Education

The school year begins in early September and ends in mid-July, with Christmas and Easter vacations dividing it into three terms. The

school week is Monday-Friday except for holidays. All Trinidadian schools above nursery level require uniforms that are inexpensive and well suited for the tropics.

Good preschools for 2-5-year-olds are available and are held in the teacher's home. Teacher-pupil ratio, physical setup of the classroom, and the teacher's training and method vary widely. Drilling on numbers and alphabet is a primary activity, and children have less freedom of movement than in U.S. nursery schools. However, some Montessori-type schools exist, and other schools have teachers who include some Montessori methods in games and activities.

Primary schooling (PreK through 12) is available at The International School of Port of Spain (ISPS). In April 1999, ISPS moved into a US\$4.5 million dollar, purpose-built educational facility on the banks of the Diego Martin River. ISPS is growing rapidly and is modeled on the American educational system and reflects a college preparatory curriculum. As an accredited, private independent school, it continues to expand course offerings and extra-curricular activities.

Special Educational Opportunities

The Venezuelan Embassy and the National Institute for Higher Education (Research Science and Technology) (NIHERST) in Port of Spain conduct free courses in Spanish conversation for adults. A similar service is provided in French by the Alliance Francaise for a nominal fee. Private teachers offer special courses in crafts, music, modern dance, and arts.

The University of the West Indies is located at St. Augustine, about 12 miles east of Port of Spain. Degree courses are offered by the faculties of agriculture, engineering, social sciences, the natural sciences, and the arts. The University also offers some non-degree courses in Port of Spain and at St. Augustine. The cost for non-degree study at UWI is high, but many of the more popular

departments (engineering, sciences, and premedical) are difficult to enroll in due to enrollment limits.

Sports

Trinidad and Tobago's primary national sports are cricket and soccer. Swimming, tennis, golf, boating, and fishing are also popular and are available in and around Port of Spain. Port of Spain has several parks, including a botanical garden and a small zoo.

Beaches in Trinidad are not resorts, but they are convenient to Port of Spain and are well used all year. The most popular beach is located at Maracas Bay on the north coast, about 35 minutes from Port of Spain. The smaller, less crowded, Las Cuevas Beach is 5 miles farther. There are beach houses for rent on the East Coast (about two hours' drive from Port of Spain) and on the small islands off the northwest coast (reachable through a short water taxi ride) which are popular weekend getaway spot. Swimming can be dangerous at any beach in Trinidad because of frequent heavy surf, rip-tides, and undertows. However, Maracas and several of the other more popular beaches have lifeguards. Several sports facilities provide swimming pools in Port of Spain at lower rates than the U.S. Tobago offers resort-type facilities, including hotels on or near the beach and a golf course. Many people find weekends on "Robinson Crusoe's Island" a welcome change from Port of Spain's routine. Tennis facilities in the city are frequently crowded, but adequate; equipment and clothing are expensive. The Tranquillity Square Lawn Tennis Club has five clay courts and one all-weather court. This private club accepts member referral and tennis is quite competitive. The Trinidad Hilton has two all-weather courts, but expect a short wait for half-hour of playing time. The Trinidad Country Club in Port of Spain has a large swimming pool (and a children's pool), six tennis courts, playground (swings, slide), bar, and eating facilities. As of June 1997, the cost was approximately US\$110 initiation fee per adult and US\$150 annual

View of Speyside, Tobago

fees for families. Although these three private clubs are the most popular, smaller clubs exist. It is also possible to reserve an hour's play at a good all-weather public court.

Opportunities for scuba diving and spearfishing are fair in Trinidad and excellent in Tobago. The waters around Trinidad are generally murky and devoid of coral reefs, with dangerous currents. These conditions coupled with the lack of diving instruction and rental equipment, means divers should be experienced and outfitted before attempting dives in Trinidad. By contrast, Tobago diving is well organized with equipment and instruction available; the reefs, clear water, and tropical fish provide for excellent diving opportunities. Deep sea fishing is quite good, and there are some charter boats available.

Port of Spain has several boating clubs and marinas: the Trinidad and Tobago Yacht Club, Trinidad and Tobago Yachting Association, Island Properties, Power Boats, Crews Inn and Peake's, among others. The Yacht Club has boating facilities for members and guests. Power Boats and Island Properties, as well as Peake's, have haul-out and full service facilities for boats. The recently established Crews Inn is a world class marina for power and sail boats and includes a supermarket, hotel, bank, bookstore, and other features such as boat slips with full electrical, cable TV and telephone hookups. The Trinidad and Tobago Yachting Association, which is only for sailboats and dinghies, offers competitive sailing in a number of large and small boat categories. It also sponsors children's boating classes. Sailboats and powerboats can be purchased locally, but prices are high and selection limited.

St. Andrews Golf Club, situated in a valley 5 miles north of Port of Spain, offers an 18-hole golf course, restaurant, swimming pool, driving range, and putting green. Similar facilities and less expensive 18-hole course are located at Point-a-Pierre, 45 minutes south. A nine-hole public golf course, in an attractive valley northwest of town, is also available.

Small game hunting in the forests and duck hunting in the swamps is possible, but only with shotguns. Rifles are not legal hunting weapons here. Game is scarce and all but the most dedicated hunters find that the results are not worth the effort. The Trinidad Rifle Association and Trap and Skeet Association offer firing range facilities for shooting pistols, as well as skeet, small bore, and high-power rifles.

Good hiking opportunities are enhanced by an active Field Naturalists Club, which sponsors

monthly hikes to out-of-the-way spots. Informal group hiking is a common event. Opportunities are outstanding for bird watchers and butterfly collectors. The internationally known Asa Wright Nature Center near Arima provides overnight facilities for amateur and professional naturalists.

Other recreational opportunities include several karate schools, dancing schools, fitness centers, amateur theater, model building club, stamp club and various women's clubs.

Sports equipment and attire compare to those used in the U.S. and can be purchased locally, but prices are higher.

Port of Spain has an active Hash House Harriers Club that organizes trail runs every other week in different parts of the country. Unlike Hash groups in many other countries, the group is not dominated by ex-pats. There is a good mix of locals and foreigners. The hash is a good way for newcomers to meet people and see the country.

Touring and Outdoor Activities

Many staff members enjoy visits to nearby islands and to the Venezuelan mainland. Visitors traveling by British West Indian Airways (BWIA) to Trinidad should include Tobago on their ticket, at no extra charge and get a free trip to Tobago within a year. A quiet, peaceful island, Tobago boasts lagoons, beaches, and undersea coral gardens with tropical fish, and an 18-hole golf course.

Barbados, 200 miles away, offers more tourist infrastructure than Tobago, excellent beaches and a wide selection of good restaurants and hotels. Moderate excursion rates are available during the off season. Caracas, Venezuela is another popular destination for long weekends, offering restaurants and shopping as well as a change from the typical Caribbean atmosphere. Georgetown, Guyana is an exotic break for the adventurous, where

Amerindian villages and huge rivers and waterfalls can be visited. Grenada, 90 miles north of Trinidad, is known as the "Isle of Spice". The most southerly of the Windward Islands, it offers beautiful beaches and several good hotels. St. George's, the capital city, has excellent yacht facilities. Moderate excursion rates are available during the off-season. Grenada is the southern gateway to the Grenadines, an increasingly popular cruising and sailing ground.

Entertainment

Port of Spain has a number of reasonably priced restaurants featuring continental, Indian, Italian, Thai, American, Chinese, and local Creole cuisine.

Several hotels and three or four nightclubs offer entertainment featuring steel bands, calypso, and other local music and dance bands. For the younger crowd, several discotheques play current U.S. disco and pop music favorites, local and Jamaican dance music.

Three large-screen movie theaters and a drive-in present mostly U.S. films. Other venues sometimes offer cultural events, plays or shows. An active semi-professional theater workshop group welcomes foreigners. In addition, interested visitors might participate in other smaller theater and dance groups. Video rental stores are used by many Americans.

The entertainment highlight is the annual Carnival. Many feel that Trinidad's pre-Lenten Carnival is second only to Rio's in grandeur and twice as enjoyable, since it is safer and more informal. Many Americans each year join one of the colorful "Mas" bands (masquerade groups). There are also numerous other special cultural events, festivals and competitions. The period between Christmas and Carnival is filled with "fetes" (parties) and is characterized by local calypso and steelband competitions leading to the national finals which take place the weekend preceding Carnival. During this time, one can visit

numerous local "pan yards" in the evenings to hear the world's premier steelband rehearsing intricate arrangements of specially commissioned competition tunes.

On a year-round basis, however, entertainment possibilities are less varied in Port of Spain than in a comparable U.S. city. Bring books, records, games, and hobby materials.

Trinidad is a destination which most young families find enjoyable because of the outdoor living, the friendliness and hospitality of the Trinidadians, and the relative safety and lack of serious health and political hazards.

Social Activities

Port of Spain has many opportunities for social activity. Trinidadians are friendly and very hospitable. Americans are welcomed at the many fetes that occur throughout the year. During the Christmas and Carnival season nonstop fetes are held. Most parties are informal. Other types of home entertainment include cocktail parties, dinners, bridge parties, and buffet suppers. Club activities include films, barbecues, and dances for members.

Some other clubs include the Horticultural Society, Trinidad and Tobago German Club, the Orchid Society, the Field Naturalists Society, Living Waters Christian Community, an informal Jewish community, and other groups.

Families with small children find opportunities for social contact in such groups as Cub Scouts, Boy Scouts, Sea Scouts, Girl Guides, and Brownies. Older children and teenagers find few organized groups to join. Most American service clubs such as Rotary International and Lions, have branches in Trinidad and Tobago.

OTHER CITIES

ARIMA, the nation's other population center is on Trinidad. It is

about 15 miles east of Port-of-Spain, and many of its residents work in the capital. The population of Arima is about 24,600.

CHAGUANAS is a market center in western Trinidad, 12 miles south-east of Port-of-Spain. This town of roughly 6,100 residents is noted for its busy Saturday open-air market. Everything from produce to glassware and gadgets is offered for sale, spread out on blankets and displayed in small wooden stands.

LA BREA lies on the Gulf of Paria in the southwest, in one of Trinidad's most unusual regions. The adjoining Pitch Lake has become a major tourist attraction and the city itself has benefitted. The area is covered with pitch, so houses and buildings in La Brea tilt in all directions. Roads are full of potholes, and huge cracks. The pitch erupts and subsides quickly, even in the heart of town. Pitch Lake, referred to as "magnified elephant skin," is actually a massive field of resin, almost 300 feet deep. The lake supplies tons of asphalt from its more than 100 acres. La Brea's population is an estimated 1,500.

LOPINOT is a picturesque village tucked into a valley in north-central Trinidad, about 12 miles east of Port-of-Spain. The village dates to the 1800s, when it was founded by the Count de Lopinot. The Frenchman and his settlers were awarded the region by the British, and proceeded to carve out a thriving plantation from the dense forest. The count's estate is now a principal tourist spot, the house a museum with memorabilia and photos. The gardens are meticulously tended and are highly popular for picnickers. Residents of Lopinot are a mixture of French, Spanish, Amerindian, and African, and are known for their distinctive songs and instrumentation. Other features here include a church that was moved from a nearby town, linked caves with curious stalactites, and a dubiously interesting colony of white cockroaches—the only such species in the world—found in the caves.

SAINT JOSEPH is the former capital of Trinidad, situated seven miles east of Port-of-Spain on the main highway. Its population is approximately 4,100.

SAN FERNANDO, on the island of Trinidad, was founded in 1786. With a population of approximately 33,600 (1995 est.), it is a business and industrial center of growing importance. It is a seaport city, and several industrial plants have made their headquarters here.

One of Trinidad's most important market centers is **SANGRE GRANDE**, 25 miles southeast of Port-of-Spain. It has a population of about 9,000, and is the hub of St. Andrew County.

SCARBOROUGH is the chief town of Tobago, although it has only about 6,000 residents. It is situated near the island's Rockley Bay. Because Scarborough is in a resort area, it has hotels, several banks, and a car rental agency.

TUNAPUNA, 10 miles east of Port-of-Spain on Trinidad's main highway, is near the home of the St. Augustine campus of the University of the West Indies. The city's population is an estimated 10,000.

COUNTRY PROFILE

Population

Christopher Columbus discovered, named and claimed Trinidad for Spain in 1498. Sir Walter Raleigh made brief bids for possession of the island in 1595. The indigenous inhabitants of the islands - the warlike Caribs, who flourished in Tobago, and the more peaceful Arawaks, who outnumbered the Caribs in Trinidad - were ultimately subdued and enslaved by the Spanish. By the end of the 18th century, they were almost extinct.

Africans were brought to Trinidad as slaves in 1702 to boost cacao production. When the Spanish crown

opened the island to immigration in the last quarter of the century, French planters and their slaves came by the thousands from other Caribbean islands and France, bringing their knowledge of sugarcane cultivation.

The Spanish ceded Trinidad to the English in 1797. Tobago, after changing hands among the Dutch, French, and British several times during the 16th and 17th centuries, was finally captured by the British in 1793.

When slavery was abolished throughout the British West Indies in 1834, plantation owners turned to indentured laborers from India, and some 150,000 arrived in Trinidad between 1854 and 1917. By 1921 East Indians accounted for almost one-third of Trinidad's population; today they comprise a slim plurality.

Trinidad was the site of a large U.S. military presence during World War II, serving as a huge naval base and training site for many of the troops headed for North Africa. It also protected supply routes for oil for the allied forces. German U-boats stalked allied supply and troop ships headed for the war in Europe, sinking many in the waters surrounding Trinidad and Tobago. A small, privately run military history museum outside of Port of Spain details this and other fascinating military chapters in the history of the islands. U.S. military bases and other facilities on the island were returned by the U.S. to Trinidad and Tobago in the 1960s.

A plurality of the population is Christian (Roman Catholic 30%, Anglican 11%, also Presbyterian, Baptist and other faiths). 24% are Hindu and 6% Muslim. There are also smaller groups following African derived religions.

Trinidad and Tobago's population is just under 1.3 million, of which over 50,000 live in Tobago. Greater Port of Spain, with about 200,000 inhabitants, is by far the largest city, followed by San Fernando, Arima and

Chaguanas. The largest town in Tobago is Scarborough. Over 2,000 Americans live in Trinidad and Tobago, many of local origin. Family and cultural ties with North America are strong, with sizable Trinidadian communities resident in New York, Florida and Toronto, Canada.

Most of the rural population in Trinidad lives in small roadside agricultural villages. The larger villages usually contain a church or temple, a police station, a primary school, recreational club/bar and small grocery stores.

The two major folk traditions are Creole and East Indian. Creole is a mixture of African elements as influenced by Spanish, French, and English colonial culture. Many East Indians have retained their own way of life and Hindu traditions and religious rites such as cremation and Divali (Festival of Lights). A smaller proportion of the East Indian population is Muslim. The entire population speaks English, often flavored with expressions derived from Trinidad's cultural heritage.

The people of Trinidad and Tobago enjoy social events called 'fetes' all year. One of the world's biggest fetes - Carnival - takes place each year on the Monday and Tuesday before Lent. This festival features parades with huge groups of masqueraders dancing in spectacular costumes through the streets of Port of Spain, accompanied by large sound trucks or steel bands, and calypso singers accompanied by brass bands performing at calypso "tents." The French introduced Carnival as an urban festival and it was celebrated initially among the upper class Creoles. In time it also became a means for the Afro-Trinidadian masses to break out of their normal routine, sometimes to express ridicule or to indirectly attack their social superiors and the government. It has now become a truly national event, with most segments of the population actively participating.

Public Institutions

Trinidad and Tobago is a democratic country with a parliamentary form of government. On August 31, 1962, the United Kingdom granted independence to Trinidad and Tobago as a member of the British Commonwealth with a Governor General as the Queen's personal representative. On September 24, 1976, Trinidad and Tobago adopted a new constitution, which established the country as a republic within the British Commonwealth. The Queen was replaced as head of state by a President elected by Parliament, and the position of Governor General was abolished.

The major governmental institutions, based on the British model, remained the same as those established by the 1962 constitution. They are: A Cabinet (currently 17 Ministers appointed and led by a Prime Minister).

A bicameral Parliament consisting of a 36-member House of Representatives and a 31-member Senate. Members of the House of Representatives are elected in parliamentary elections held at least every five years. Members of the Senate are appointed by the President: 16 on the advice of the governing party, six on the advice of the opposition party, and nine at the President's discretion.

A judicial system which has a Court of Appeals as its highest level in the country. Final appeals may be taken to the Judicial Committee of the Privy Council in London.

In November 1995, the United National Congress (UNC), in coalition with the small National Alliance for Reconstruction (NAR) party, formed a government, with Basdeo Panday of the UNC as Prime Minister. The coalition took over from the People's National Movement (PNM) Government headed by Patrick Manning. The PNM was founded in 1958 under the leadership of Dr. Eric Williams. Dr. Williams in 1962 became the first Prime Minister of the newly

independent country, continuing in office until his death in 1981. In 1986 the PNM was swept out of office by the National Alliance for Reconstruction (NAR), led by A.N.R. Robinson. In 1991, the PNM returned to power only to be defeated in 1995 by the UNC/NAR coalition.

Trinidad and Tobago belongs to a number of international organizations through which it exerts some influence on world affairs. On gaining independence in 1962, Trinidad and Tobago joined the United Nations and became a member of the Commonwealth of Nations. In 1967, it was the first Commonwealth Caribbean country to seek membership in the Organization of American States (OAS) and the Inter-American Development Bank (IDB). Trinidad and Tobago was a founding member of the Caribbean Free Trade Association (CARIFTA), and its successor organization, the Caribbean Community (CARICOM). It is a member of the Non-Aligned Movement (NAM) and identifies with developing countries on many North-South economic issues.

Familiar organizations, such as the Red Cross, YMCA, YWCA, Boy Scouts, PTA, Jaycees, Lions Club, Kiwanis Club, Rotary Club, American Legion, etc., play significant roles in the community and welcome participation by foreign residents.

Arts, Science, and Education

The educational program inherited from the colonial administration was patterned on the British model, with structure and content resembling those of other Commonwealth Caribbean members. Students completing secondary school now take the Caribbean Examinations Council (CXC) examinations instead of the General Certificate of Education (GCE) exams prepared and graded in the U.K.

While Trinidad has one of the hemisphere's highest literacy rates and

has produced scholars of international renown, some educational problems persist. School facilities tend to be outdated, in poor condition and overcrowded. Teacher salaries and training are also well below the private sector. Not all teachers have university degrees; some have received pedagogical training, others have specialist diplomas, and some have general secondary education. Higher education is available in Trinidad and Tobago at the St. Augustine Campus of the University of the West Indies, located on the outskirts of Port of Spain.

In the literary field notable writers include Alfred Mendes, C.L.R. James, Samuel Selvon, Earl Lovelace and Sir Vidiandhar Surajprasad Naipaul. Selvon's work most often deals with the poor people of Trinidad at home and abroad, and his style is both humorous and sympathetic. Naipaul's novels show a deep sensitivity toward the racial and cultural complexity of Trinidadian society and an understanding of its tensions and prejudices. Trinidad's leading poet and playwright is Pulitzer Prize-winner Derek Walcott, a St. Lucian by birth, who is now teaching in the United States.

The music and dance of Trinidad and Tobago and the festivals that inspire and preserve them reflect the country's kaleidoscopic colonial heritage and its multicultural population. Each element of the social mosaic—the Spanish and English colonizers, the French immigrants, the African slaves, and the East Indian indentured laborers, as well as smaller communities of Chinese, Syrians and Lebanese—has contributed to a national folkloric tradition which is among the world's richest.

The calypso, the musical genre that has drawn international attention to Trinidad, evolved from folk culture but is considered a popular political music form. Today's calypso has been described as “witty, smutty, topical, and full of double entendre.” Stimulated by the commercialization of the music and the hotly contested annual competition for Carnival calypso monarch,

composers turn out some 40 or 50 “hit” songs each year. Soca, a high energy dance music, Indo-Trinidadian “chutney” music, Indian style “tassa” drum bands, and the limbo dance are also all of Trinidadian origin.

Trinidad's most notable contribution to world culture, however, may be the steel drum (“pan”). Several decades ago urban Afro-Trinidadians found that empty steel drums and similar objects were ideal for music making. The thousands of 55 gallon oil drums, discarded by the U.S. Naval Base at Chaguaramas during World War II, furnished an ample supply. From primitive beginnings they were slowly developed to be able to reproduce the entire chromatic scale. The bands, which can number over 100 musicians, typically have bass, guitar, and cello pans in the rhythm section, while tenor and “double second” pans play the melody. Pan music has become very refined and, aside from calypso tunes, now includes popular, jazz and classical pieces.

In the field of the visual arts, Boscoe Holder, who excels in figurative paintings, Noel Vaucrosson, a watercolorist, and Pat Chu Foon, a painter and sculptor, are well known. Peter Minshall, who designed the opening ceremonies at both the Barcelona and Atlanta Olympic Games, has become one of the stand-outs among the many talented “mas” (Carnival band) producers.

Clothing designers, producing a typical Caribbean style, have also come into their own in recent years.

Port of Spain has several small theaters and two larger auditoriums, which feature original and foreign plays and musical performances. While Trinidad and Tobago's cultural “market” is not large enough to draw many foreign acts (aside from Caribbean music shows), occasionally visits by lesser known foreign musical and dance groups liven up the local cultural scene.

Commerce and Industry

Endowed like neighboring Venezuela with rich deposits of oil and natural gas, Trinidad and Tobago became one of the most prosperous countries in the Western Hemisphere during the oil boom of the 1970s, ranking third in per-capita income behind the United States and Canada by 1981. Oil revenues enabled the nation to embark on a rapid industrial and infrastructural development program, within the framework of a “mixed economy,” in which government investment in state corporations played a major role. Oil wealth also fueled a dramatic increase in domestic consumption.

With the collapse of oil prices in the early 1980s, Trinidad and Tobago entered into a difficult period of economic recession. In mid-1988, worsening economic conditions forced the government to begin a stringent adjustment program guided by the International Monetary Fund. This included devaluing the currency, adopting strict austerity budgets, rescheduling foreign debt, and in 1990 imposing a 15% value-added tax (VAT) on most goods and services.

By 1997, the country successfully recovered from its decade of economic decline, posting three straight years of real GDP growth (3.5% in 1994, 23% in 1995 and 3.1% in 1996). Trinidad and Tobago's international debt rating and per capita income are now among the highest in the hemisphere, and the country is viewed as an economic and political leader in the Caribbean. New U.S. business investment has been running at about US\$1 billion a year since 1995.

As part of its economic restructuring, the government adopted a more welcoming attitude toward foreign investment. Since 1992 almost all investment barriers have been eliminated, and the government has aggressively and successfully courted foreign investors. U.S. firms, mostly in the hydrocarbon

sector and related downstream petrochemical industries, invested over US\$2.5 billion from 1996 - 1998, placing Trinidad second only to Canada in the hemisphere in per capita U.S. direct foreign investment. There are no currency or capital controls, and the TT dollar has been in a lightly-managed, stable float since early 1993. The government has concluded a Bilateral Investment Treaty and an Intellectual Property Rights agreement with the United States.

In moving toward a more liberalized economy based on open competition, the government has privatized many state-owned industries and reduced subsidies to those that remain in the public portfolio. Companies all or partially divested since 1994 include the National Fisheries Company, British West Indian Airways (BWIA), National Flour Mills (NFM), the Trinidad and Tobago Electricity Commission (T&TEC), and the Water and Sewerage Authority (WASA).

Inflation averaged over 12% annually during the economic downturn of the early 1980s, and over 8% a year during the restructuring period in the first half of the 1990s. Through a combination of prudent monetary policies and fiscal restraint in public-sector budgets, the government has been successful in bringing inflation under control. Consumer prices rose 5.3% in 1995, and just 3.6% in 1996.

Despite serious efforts to diversify its economy, Trinidad and Tobago remains heavily dependent on the energy sector, which accounts for one-fourth of total GDP and 20% of government revenue and a major share of foreign exchange earnings. Production of crude oil has been steadily declining over the past decade, but the discovery of large reserves of natural gas, primarily in off shore fields, has fueled the development of petrochemical and metals industries. There are now over 20 large industrial plants in Trinidad, with most dependent on natural gas as a feedstock or running on inexpensive natural gas-generated elec-

tricity. At current trends Trinidad and Tobago will become the world's largest exporter of ammonia and methanol by the year 2000.

Since 1989, Trinidad and Tobago, in partnership with many major international oil companies, has pursued an aggressive oil and gas exploration campaign. BP Amoco, the biggest player in Trinidad's energy sector, produces half of the country's crude oil and the largest share of natural gas. BP Amoco, in partnership with Cabot (Boston), Repsol (Spain), British Gas and the National Gas Company (TT) has constructed a US\$1 billion liquefied natural gas plant in southern Trinidad, the largest industrial project in the Caribbean, which began operating in early 1999.

Trinidad and Tobago is highly trade dependent, using the foreign exchange earned by its commodity and energy exports to buy consumer goods. The U.S. is by far Trinidad's most important trading partner, supplying about half of all imports and buying half of all exports.

Trinidad's exports are concentrated in a few sectors: oil, gas and downstream petrochemical products (chiefly fertilizers), and iron and steel. Thanks to its energy and commodity exports Trinidad has run a trade surplus in all but two of the last 20 years. Since the floating of the TT dollar in 1993, exports of manufactured products such as diapers, beer, soft drinks, processed foods, air conditioning equipment and plastic products have increased significantly, particularly to the country's CARICOM neighbors with whom T&T runs a ten to one trade surplus.

Trinidad and Tobago's agricultural sector is still dominated by sugar, which was introduced in colonial times. But despite preferential market access arrangements with the U.S. and the European Union, sugar production has generally been unprofitable, due to high costs and low volume. The state owned sugar company Caroni (1975) Ltd. has made attempts to diversify into

areas such as citrus production, livestock and aquaculture with limited success. Other export crops include cocoa, coffee and cut flowers, but none is currently a significant foreign exchange earner. Agriculture still only accounts for about 2% of GDP. The fishing sector is receiving increased attention both for the local market and for exports, but over fishing by commercial shrimp trawlers and coastal pollution are threatening once abundant fishing grounds.

In the oil-boom years, neither the government nor the people showed much interest in tourism. After the economic decline of the 1980s, however, Trinidad and Tobago has witnessed a positive change in attitudes toward tourism, and government has targeted the tourism industry for greater development. Currently largely confined to Tobago, tourism in Trinidad and Tobago is low-key and only accounts for 1% of GDP. Fewer than 200,000 tourists visit the islands each year, many of these during Carnival. Lack of sufficient hotel rooms and limited air transportation links are challenges in marketing T&T as a tourist destination. The marine pleasure yacht subsector has been a bright spot in the country's tourism picture in recent years. Since 1990 annual sailing yacht arrivals have increased from several hundred to well over 3,000. The government is focusing efforts on the development of ecotourism destinations, taking advantage of acclaimed diving sites off the coast of Tobago and the impressive biological diversity of both islands.

The country's labor force numbers around 521,000, according to the latest figures. In 1998, official unemployment reached its lowest level in a decade at 14%, falling from 21.1% in 1993. The largest employment sector is services, accounting for 30% of total employment. Other significant sectors are trade, restaurant and hotels (18%), construction (13.6%), and manufacturing (10.3%). The vital, but capital intensive, hydrocarbon sectors

employ only a small percentage of the labor force.

Trinidad and Tobago has an active labor movement. Although only about a quarter of the national labor force is unionized, the unions enjoy a relatively high public profile. Unionization in the industrial and public sectors is higher than in most other sectors. The Labor Ministry serves as conciliator in labor disputes, and the Industrial Court, to which disputes are referred when collective bargaining fails, has a record of fair, but slow, adjudication.

Transportation

Automobiles

Poor public transportation makes a personal car necessary in Port of Spain. Traffic moves on the left, so right-hand-drive vehicles predominate. Only right-hand-drive (RHD) cars are sold locally. There are dealers for nearly all Japanese and Korean brands and an increasing number of European models. U.S.-made right-hand drive Fords and Jeeps recently entered the market. Shipping a car to Trinidad, preferably of a make that is sold locally, is less expensive than purchasing one on the island.

A local driver's license (good for three years) is required and a valid U.S. license will facilitate its issuance.

Third-party liability insurance, required by law, is available locally at reasonable rates. A five-year claim-free statement from a previous insurer entitles you to a discount. Local auto insurance rates other than third party liability are high and vary according to the driver's age and safety record. Collision and comprehensive insurance is also available locally, but the rates are higher than U.S. firms.

Although some improvements are under way, many roads and streets (with the exception of a few major highways) are narrow, full of pot-holes, and poorly maintained. Wear and tear on cars is rapid and narrow

roads are often congested; small cars are recommended. Four-wheel-drive sport utility vehicles are also very popular, especially for those who enjoy exploring the dirt roads and secluded beaches of the island.

The typical Trinidadian driving style may surprise newcomers. Some drivers are aggressive and have little reluctance about straddling the center of the road. Driving with high beams on at night is fairly common. Taxis stop suddenly to pick up or discharge passengers. Newcomers quickly learn to drive defensively at all times but find that driving on the left is not as hard as it appears.

Local

Private cars and taxis are the primary means of local transport, but buses cover limited routes which concentrate on connecting Port-of-Spain with nearby towns and villages. The country no longer has a railway system.

Taxi stands are located in several areas of Port-of-Spain, including hotels and the airport. Taxis can also be summoned by telephone or hailed on the street. Travel by taxi on a daily basis is expensive; ask the fare beforehand, as taxis are not metered. Taxis are not identified by signs, or by uniform painting, but by the first letter "H" on the license plate. Route taxis or maxi-taxis (minibuses) are restricted to special routes. They display a sign in the windshield, but the color coding designates their area. Passengers are picked up and let off along the route. Fares are reasonable and many local residents rely on maxi-taxis for transportation.

Car rentals are higher than in the U.S. and usually require a large cash deposit or credit card. A typical compact car averages US\$45 a day when available, but long term rates are lower.

Trinidad has no school bus system. The lack of organized school transportation further congests the morning rush hour.

Regional

Popular regional destinations include Caracas, San Juan, Miami, Barbados, Grenada, and other islands. Air connections are reasonably good to all of these places. Regional airlines, British West Indian Airways (BWIA), Liat and American Airlines offer regular service from Port of Spain.

There are hourly 20-minute flights daily between Trinidad (Piarco Airport) and Tobago (Crown Point Airport). The fare is currently US\$48 round trip. Airport taxi fares on both islands are standard and are displayed at each terminal. Establish the fare before hiring a taxi.

A ferry also operates between Trinidad and Tobago. The round trip fare is US\$8 and US\$10 for economy and tourist class tickets and US\$20 for an average sized car (cost is based on car's weight). A cabin costs an additional US\$26 and must be booked early. The trip takes 5 1/2 hours from Port of Spain to Tobago, but only 5 hours return because of the favorable current. Car rentals in Tobago cost about US\$45 a day; reserve in advance in Port of Spain.

Communications

Telephone and Telegraph

A modern telephone system has been installed throughout the island. Trinidad and Tobago follows the North American Dialing Plan and uses the international area code 1-868.

You can dial international calls to the United States direct from home or office by simply dialing 1, the area code, and number. Worldwide connections are good, but costs are well above U.S. discount rates. Credit card billing to the U.S. saves money on longer calls, but costs more for short calls due to operator assistance. As of June 1997, calls to Washington, D.C., is approximately US\$1.00 per minute, if charged to a TT number.

TSTT International Cable Service offers worldwide telegram delivery,

but incoming service has not always been reliable.

Internet services are available in Trinidad through private vendors or TSTT.

Mail

International airmail from the U.S. is received about five times a week and takes from 3 to 10 days, depending on the point of origin. Airmail from Trinidad to the U.S. costs approximately US\$400 for a standard letter. There are reports, however, of lost or stolen mail, especially items such as magazines, catalogs and packages.

Radio and TV

Trinidad has fourteen local radio stations, three on AM and the balance FM, which offer almost exclusively international pop and local music. There is almost no classical, jazz, rock or world music programming. World news is broadcast regularly, but U.S. news coverage is limited.

Cable TV service is available through several companies providing about 40 or more channels, mostly from the U.S., including some network stations. The one government-owned TV station operates separate programs on two channels. Both transmit in color. Programs are mainly imported series, most of them from the U.S. Some locally produced shows as well as news programs are shown. A video cassette recorder (VCR) is useful for additional entertainment, with video stores located throughout Trinidad. Tapes, often of only fair quality, rent for approximately US \$2 each per week.

Trinidad and Tobago is on the U.S. scanning and frequency system, so TV sets manufactured for use in the U.S. will work in Trinidad without adaptation. Ship TVs, stereos, VCRs, radios, etc., from the U.S. as they are more expensive in Trinidad. Service and parts for the better known models can be obtained locally and repair work is relatively inexpensive.

Newspapers, Magazines, and Technical Journals

Three morning newspapers and several weeklies are published locally. The papers subscribe to the Caribbean News Agency (CANA), AP, etc. All give coverage to overseas news highlights, but in-depth international reporting is inadequate. The quality of the journalism varies widely.

U.S. daily newspapers are not currently available in Trinidad, except on the Internet on a limited and delayed basis at some hotels. The current Latin American editions of Time and Newsweek are available, at close to U.S. prices, at newsstands and bookstores. Popular American magazines, such as Good Housekeeping, Vogue, Glamour and House Beautiful are also available, but are often at least a month old and more expensive. Subscribe to magazines in the U.S. and have them mailed via pouch.

Port of Spain has various bookstores, stocked with books and paperbacks published locally, and in the U.K. and the U.S. However, they are not comparable in selection to U.S. bookstores and prices are considerable higher. The Port of Spain City Library has a large selection of British and American classics and popular novels.

Health and Medicine

Medical Facilities

Trinidad and Tobago has a relatively large number of competent general practitioners and specialists who have trained in the U.K., U.S., and Canada. Some doctors practice in private clinics, but most maintain private offices located throughout the country.

Government-operated clinics are open to those who cannot afford private care. The Mount Hope Medical Sciences Complex is fitted with state-of-the-art equipment but, like other government hospitals which have well-trained staff, conditions often do not meet U.S. standards.

Private clinics also offer good-quality care; such as the St. Clair Medical Centre.

In a major medical emergency, when medical evacuation is not feasible, the St. Clair Medical Clinic has been designated the facility for use. Doctors are in attendance around the clock, and life-support equipment is available. Medical care in Trinidad and Tobago is adequate for routine procedures, but the U.S. is generally preferable for specialized treatment.

Most Americans and other foreigners use local dentists trained in the U.K., U.S. or Canada. Orthodontic care is available, as are eye specialists. Eyeglass frames are imported and expensive, but locally ground lenses are relatively cheaper. Overall, the cost of medical, hospital, and dental care is much lower than in the U.S.

Prescription drugs, medicines and remedies available locally are mostly British and U.S. products. A full range of items is available from well-stocked pharmacies, but some brands may be unfamiliar. Prices are also generally higher than in the U.S. Bring a supply of any medical items you use regularly, including contact lens supplies, prescription drugs, over-the-counter remedies, first aid supplies, and cosmetics. Many items can be ordered later by pouch.

Community Health

Community sanitation in residential areas is good. Garbage is collected three times a week in most neighborhoods and garden clippings are collected weekly. Port of Spain and its suburbs are connected to a central sewage disposal system; outlying areas rely on septic tanks.

Water, for the most part, is potable. Certain residential areas (particularly elevated ones) are subjected to water shortages, however, most of these residences have water storage tanks.

Food purchased from street vendors and small restaurants can be of

mixed quality. Qualified food handlers display a "food handler's badge." Fruits and vegetables are generally safe after being washed.

Preventive Measures

Epidemics are rare in Trinidad and Tobago. However, gastroenteritis in children continues to be a problem, particularly in the rural areas. South American cholera generally does not reach Trinidad and Tobago, but precautions such as vigilant hand-washing and avoidance of food and drink from street vendors are advisable. Mosquito-borne dengue fever has increased in frequency in recent years. Yellow fever outbreaks occur roughly every ten years.

Newcomers may suffer from heat rash due to the high temperature and humidity. The weather may also affect those who suffer from hay fever, bronchial asthma, and fungal infections, and prolong other infections. Mosquitoes, sand flies and chiggers can cause discomfort outdoors.

Typhoid, gamma globulin, and yellow fever inoculations are not required for travelers coming from the U.S. to enter Trinidad and Tobago, but they are recommended for those who plan to travel to South America. Immunization can be obtained locally.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Two daily flights from Miami to Port of Spain are available on American Airlines. In addition, non-American carriers provide regular service to Port of Spain from the U.S., Canada, Venezuela, and the U.K. as well as interisland service. Reservations may be difficult to obtain during certain seasons, especially Christmas and Carnival.

A passport is required of U.S. citizens for entry to Trinidad and Tobago. U.S. citizens do not need a

visa for stays of 90 days or less. Work permits are required for certain types of compensated and non-compensated employment, including missionary work. For further information concerning entry, employment and customs requirements, travelers may contact the Embassy of Trinidad and Tobago, 1708 Massachusetts Avenue, N.W., Washington, D.C. 20036, telephone (202) 467-6490 or the consulates of Trinidad and Tobago in Miami at (305) 374-2199 or New York City at (212) 682-7272, or by email at embassyttgo@erols.com

Americans living in or visiting Trinidad and Tobago are encouraged to register at the Consular Section of the U.S. Embassy in Port-of-Spain, Trinidad and obtain updated information on travel and security. The U.S. Embassy is located at 15 Queen's Park West in Port-of-Spain, telephone 1-868-622-6371, Consular Section fax 1-868-628-5462. Hours of operation are 7:30 a.m.-12:00 noon, Monday-Friday, except U.S. and Trinidad and Tobago holidays.

Pets

All pets imported into Trinidad and Tobago except birds, are subject without exception to a six-month quarantine.

The animal must have a health certificate from a U.S. Government veterinarian, stating vaccinations received, disease history, etc. The animal must be confined in an escape-proof cage. (Dogs must have a collar and leash).

The owner must also provide all the food, two feeding bowls and a padlock with two keys for the bin in which the food will be kept and locked- the owner keeps one key.

Birds are not quarantined, but must have a similar permit and Health Certificate, along with a Species Certificate showing that the species may be imported.

Currency, Banking, and Weights and Measures

The local currency is referred to as the Trinidad and Tobago dollar, TT

dollar or just "TT". Effective April 13, 1993, the Government of Trinidad & Tobago announced the floating of the TT dollar. As of September 1999, the exchange rate was approximately TT\$6.30 to US\$1. Coins and bills have the same denomination as U.S. money, but the bills are issued in different colors.

All weights and measures were converted to the metric system in early 1982. However, you will find that both systems are used.

TURKS AND CAICOS ISLANDS

Turks and Caicos Islands

Major City:
Grand Turk

INTRODUCTION

Archeological expeditions have uncovered artifacts indicating Arawak habitation of the **TURKS AND CAICOS ISLANDS** at one time. Today, only eight of the 30 islands are inhabited. The Turks and Caicos Islands may have been the site of Columbus' landfall on his first voyage in 1492. Traditionally, however, Juan Ponce de Leon gets the credit for the European discovery of the islands in 1512. The islands then served as a hideout for pirates and as a port of call for explorers and merchants. The first European residents were Bermudians who, starting in the 1670s, came regularly to collect salt. The Caicos Islands were settled by Loyalist farmers who fled the southern states after the United States won independence from Britain. After slavery was abolished in 1838, the planters left and their former slaves remained. The islands were placed under the government of the Bahamas until 1848, and the islands were largely self-governing under the supervision of Jamaica until 1873. From 1874 until 1959, the islands were a dependency of Jamaica. The islands were under Bahamian control until the Bahamas became independent in 1973. In 1976, the Turks and Caicos Islands became a crown colony.

Independence was originally planned for 1982, but a change in government brought a reversal of that policy. The islands are still a crown colony.

MAJOR CITY

Grand Turk

Grand Turk (also known as Cockburn Town) is the main town among the islands, located on Grand Turk Island. The population of Grand Turk is about 4,000. The traditional economic activity was salt collection, but that industry ceased in 1964. Tourism and lobster fishing are the main economic activities. Offshore financial services have also become increasingly important. The main port for the Turks and Caicos Islands is at Grand Turk, and there are other ports at Salt Cay, Providenciales, and Cockburn Harbour on South Caicos. Grand Turk, South Caicos, Providenciales, and North Caicos have international airports. Cable and Wireless (West Indies) Ltd. provides national and international public telecommunications services. An Intelsat station on Grand Turk links the island to the USA, Bermuda, and the United Kingdom.

Recreation and Entertainment

The Provo Golf Club on the island of Providenciales has an 18-hole championship course. Scuba diving, snorkeling, yachting, fishing, horseback riding, tennis, and cycling are popular activities for visitors. The Turks and Caicos National Park covers 325 square miles and has 33 protected dive areas. There are organized whale-watching excursions for visitors. Grand Turk is known for its 19th-century architecture and horse carriages. There are historic windmills and salt-raking operations on nearby Salt Cay. The library in Grand Turk doubles as a museum. Its principal attraction is a display of Lucayan Indian artifacts. Churches and benevolent societies are important centers of social life throughout the Turks and Caicos Islands.

COUNTRY PROFILE

Geography and Climate

The Turks and Caicos Islands consist of two island groups separated by the Turks Island Passage, which is 22 miles across and about 7,000 feet deep. The island group consists

of 40 mostly uninhabited islands and cays. The Turks group has two inhabited islands (Grand Turk and Salt Cay), six uninhabited cays, and numerous rocks surrounded by a triangular reef. The Caicos group has six main islands (North Caicos, Middle Caicos, East Caicos, South Caicos, West Caicos, and Providenciales). The total land area of the islands is 166 square miles, or 2.5 times the size of Washington, D.C. Providenciales is the main island and has 200 miles of beaches, 200 miles of wildlife preserves, and 65 miles of coral reefs. The Turks group islands are low and flat, and surrounded by reefs and sunken coral heads. The land mass is limestone, with shallow creeks and mangrove swamps. The highest elevation is only 163 feet above sea level on Providenciales. There are limestone caves on Middle Caicos. Temperatures range from a low of 61°F to a high of 90°F, with April–November the hottest months. There are almost constant trade winds from the east. Rainfall averages 21 inches per year, and hurricanes are a frequent occurrence.

Population

The islands have a population of about 17,000, or approximately 33 persons per square mile. About half

the population lives on Grand Turk, and the other half resides primarily on South Caicos and North Caicos. Only six of the 40 islands are inhabited. Over 90% of the population is of black African descent. The remainder are of mixed, European, or North American heritage. Most islanders are Christian; the main sects are Baptist, Methodist, Anglican, and Roman Catholic. English is the official and common language spoken in the islands, interspersed with many local words and phrases.

Government

The islands experienced a great deal of autonomy under the supervision of Jamaica until 1873, and were made a dependency of Jamaica from 1874 until 1959. The Turks and Caicos were then placed under Bahamian control until the Bahamas became independent in 1973. In 1976, the islands became a crown colony. The Turks and Caicos Islands were supposed to become independent in 1982, but a change in government brought a reversal of that decision. The islands are still a crown colony. The 1976 constitution, revised in 1988, established a ministerial system in which a governor, representing the British monarch, has responsibility over external affairs, defense, and internal secu-

rity. An Executive Council consists of eight members of the Legislative Council, three nominated and five appointed by the governor. Derek H. Taylor was appointed as chief minister in January 1995 by the governor. The Legislative Council has 19 seats, of which 13 are elected. The legal system is composed of Legislative Council acts, certain laws of Britain's parliament, and a few Jamaican and Bahamian statutes. A magistrate conducts weekly hearings to administer justice.

The flag is the Blue Ensign of Great Britain with a shield of the colony in the fly; the shield is yellow with a conch, lobster, and Turk's head cactus represented in natural colors.

Arts, Science, Education

Education is provided free of charge and is compulsory for children aged 7–14. Six years of primary education are followed by five years of secondary school. There are no higher educational institutions on the islands.

Commerce and Industry

The economy is based on tourism, fishing, and offshore financial services. The US was the leading source of tourists in 1996, accounting for more than half of the 87,000 visitors; tourist arrivals had risen to 93,000 by 1998. Offshore financial services have become an increasingly important part of the islands' economy. With no direct taxation, the US dollar as the local currency, confidentiality, and a growing financial sector, there are over 10,000 offshore companies registered with the government. The Offshore Financial Center Unit was established in 1989 to promote the islands as a financial center. The government also actively tries to attract captive insurance companies from the US. An offshore registry program with the United Kingdom enables British merchant ships to register with the Turks and Caicos Islands. The pro-

gram cuts crew costs while enabling vessels to sail under the protection of the Red Ensign flag of the United Kingdom.

Transportation

The islands have about 75 miles of roads; the roads on Grand Turk and South Caicos are paved. The main seaports are Grand Turk, Cockburn Harbour on South Caicos, Providenciales, and Salt Cay. The islands have seven airports and four paved runways long enough to handle commercial jets. There are also three small unpaved landing strips on the uninhabited islands.

Communications

International telecommunications service is available through Cable and Wireless (West Indies) Ltd. There are three AM radio stations

and several cable television stations. Broadcasts are also received from the Bahamas. The *Turks and Caicos News* is a weekly newspaper published in Grand Turk.

Health

Grand Turk has a 30-bed hospital and an outpatient and dental clinic. There are 11 more outpatient and dental clinics on South, Middle, and North Caicos, Providenciales, and Salt Cay.

Punta del Este, Rivera, Salto, Treinta y Tres

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Uruguay. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

A wedge of a nation tucked between Brazil and Argentina, Uruguay is the smallest and, after Ecuador, the most densely populated republic in South America.

Rolling grasslands of black, potash rich soil make raising cattle and sheep the lifeblood of the nation's economy. Also important are tourism and financial services. Montevideo, home of 45% of Uruguay's population, gears much of its industry to processing wool, meat, and hides. White-sand beaches and luxurious resorts stretch along the Atlantic shoreline, bringing Uruguay renown as a vacation playland. It has one of the highest living stan-

dards in South America and a broad program of social welfare.

A constitution provides for a republic with three autonomous branches of government. Under it, there prospers a progressive land where beef is the national dish and soccer the national game.

On the east coast of South America, south of Brazil and east of Argentina, Uruguay is comparable in size to Oklahoma. The country consists of a low, rolling plain in the south and a low plateau in the north. It has a 120-mile Atlantic shoreline, a 235-mile frontage on the Rio de la Plata, and 270 miles on the Uruguay River, its western boundary.

Prior to European settlement, Uruguay was inhabited by groups of indigenous peoples collectively known as the Charruas. The Spanish visited Uruguay in 1516, but the Portuguese were first to settle it. After a long struggle, Spain wrested the country from Portugal in 1778, by which time almost all of the indigenous people had been exterminated. Uruguay revolted against Spain in 1811, only to be conquered in 1817 by the Portuguese from Brazil. Independence was reasserted with Argentine help in 1825, and the republic was set up in 1828.

A military coup ousted the civilian government in 1973. The military dictatorship that followed used fear and terror to demoralize the population. After ruling for 12 years, the military regime permitted election of a civilian government in November 1984 and relinquished rule in March 1985; full political and civil rights were then restored.

Subsequent leaders have contended with high inflation and a mammoth national debt. Uruguay has pushed for constitutional and economic reforms aimed at reducing inflation, partially through tax increases and privatization.

MAJOR CITY

Montevideo

The southernmost capital in the hemisphere, Montevideo is the industrial, commercial, educational, and cultural center of Uruguay. It is situated on the northern shore of the estuary formed by the Uruguay and Paran Rivers, known as Rio de la Plata, 120 miles east-southeast of Buenos Aires.

Like most Latin American cities, Montevideo has the "Ciudad Vieja," (Old Quarter) characterized by nar-

© Dave G. Houser/Corbis. Reproduced by permission.

Downtown plaza in Montevideo, Uruguay

row streets and colonial buildings. There stands the city's oldest church (Basilica Metropolitana), the first city hall (Cabildo), and remnants of the original walled settlement (Ciudadela). Across the harbor rises a 435-foot hill, El Cerro, with an old fortress at its peak commanding a view of the greater part of Montevideo. It is believed the city was named after the hill—Monte Video—from "I see a hill" - uttered by a Portuguese sailor aboard a ship of one of the earliest explorers.

The old city contains much of Montevideo's commerce and banking. In the newer section are "galerias," housing many small shops under

one roof, often connecting two streets in midblock. Many wide, tree-lined avenues, along with numerous plazas and monuments, give the city a parklike atmosphere, although poor maintenance of streets and buildings detract from the city's overall beauty. Among the more attractive areas to the east are the residential suburbs of Pocitos, Punta Gorda, and Carrasco. The architectural diversity, terra cotta roofs, and ironwork balconies, and beaches make Montevideo's suburbs pleasant.

In its time, Montevideo was the pearl of Latin American cities, well planned and designed to take advantage of the riverside. The city

took pride in its architecture, boulevards, and boardwalk. The architectural tradition has been diluted with multistoried buildings, however, and is tarnished by poor maintenance and rubbish collection.

Utilities

Electrical current is 220v, 50 cycles, single phase throughout Uruguay. U.S.-made 110v, 60 cycle appliances, except for clock radios or timers, can be used with stepdown transformers.

Voltage fluctuations often occur during peak periods with occasional power failures. Battery operated radios and clocks, several flashlights, candles and a camping lantern are useful.

The telephone system functions well.

Food

Beef, the staple of the Uruguayan diet, is abundant, of good quality, and inexpensive. Pork and poultry are more expensive than in the U.S. Veal is difficult to find, and lamb (mutton) is only available at certain times of the year (August–January). Local cold-cuts are tasty and of good quality. Purchase freshly-baked bread daily. A wide variety of pastries and cookies is also available. A good selection of fish from the Rio de la Plata is often sold at reasonable prices along the river front and in local outdoor markets. Shellfish is expensive and available occasionally.

Fresh milk, cream, and milk products such as yogurt, ice cream, and cheese are one of the advantages of living here. Ice cream is good but about twice the U.S. cost. Long-life milk in cartons is also available.

Fruit and vegetables abound in season and become more available each year. Wash green leafy vegetables and fruits that are not peeled thoroughly before eating.

Many Americans enjoy buying produce and variety foods at outdoor markets (ferias) that are set up daily in different parts of the city

and dismantled in early afternoon. Most neighborhoods are served by a feria at least twice a week. Also, many permanent vegetable and fruit stands are available, some of which sell select produce and hard-to-find items. Also, some companies deliver milk, cheese, fresh bread, and pastry to your house daily.

Uruguayan supermarkets are smaller and have fewer items than in the U.S. Some supermarkets and many smaller stores stock imported foods.

Montevideo's typical restaurant is the "parillada." (A parillada has a huge grill where meat is slowly barbecued over coals of a wood fire.) The food is very good and prices are reasonable. A few restaurants offer Italian, German, Chinese, French, and Swiss cuisines. A few seafood restaurants are in Punta del Este and other coastal towns.

Rarely do restaurants open before 8 p.m. Because of the late dinner hour, tea is fashionable in Uruguay. Several tea shops offer a variety of sandwiches and pastries. Also many snack shops and sidewalk cafes are open throughout the day and into the night. These serve pizza, "chivitos" (the delicious Uruguayan variation of a steak sandwich), and other foods from snacks to full meals. The atmosphere is informal. A McDonald's has recently opened restaurants in Montevideo, Atlántida, and Punta del Este. Pizza Hut, Burger King, and Subway are also present in Montevideo.

Clothing

Clothing needed in Uruguay is similar to clothing worn during equivalent U.S. seasons.

Men: Local tastes in menswear are like those in the U.S. and Western Europe. Office and commercial workers wear suits and ties year round. For informal occasions, Uruguayans follow the latest fashions in sportswear. Shirts are available in common neck and sleeve lengths. Topcoats, heavy sweaters, scarves, and hats are worn in winter. Most foreign residents limit their pur-

chases of local menswear to wool sweaters, leather jackets, and high quality fabrics that they have made into custom-tailored suits (at reasonable prices).

Although quality varies considerably, shoes are available in most sizes at higher-than-U.S. prices. Those with narrow feet will have difficulty finding shoes. Uruguay's export lines are not available on the local market.

Women: Clothing for women in Montevideo is surprisingly fashionable and similar to that worn in the U.S. and Western Europe. Currently, short or cocktail length dresses are being worn for dinners, parties, and receptions. Suits, jackets with skirts and blouses, or dresses are appropriate office wear as well as for luncheons or teas. Casual outfits are needed for asados. No restrictions on the use of pants or shorts exist. Hats are rarely worn.

Warm clothes are needed in winter. Include some wool garments against the penetrating damp cold of Montevideo (indoors and out). As Montevideo's social life is much more active in fall, winter, and spring (March–November) than in summer, you will need a number of dressy, but warm outfits. Summer days can be humid and air-conditioning is rare so cotton, cotton blends, and rayon fabrics are suitable.

A variety of ready-made women's clothing is available locally; prices are higher than in the U.S. Some export-quality wool clothing is available locally. Quality knitwear is available; prices on wool and orlon products are reasonable. Quality hosiery and undergarments are expensive; selection is limited. Leather, suede, otter, fox, and nutria coats are available in many styles at popular prices.

A limited selection of apparel fabrics is available but very expensive. Good jewelry, especially amethyst and topaz, is available at reasonable prices.

Children: Ready-made clothing is attractive, but with the exception of knitwear, expensive, wears out quickly, and is difficult to clean.

All Uruguayan school children wear uniforms that must be purchased locally. The Uruguayan-American School does not require uniforms. The British, Scottish, and Italian schools, which are open to Americans, do require uniforms.

Jackets and coats for children are available at higher-than-U.S. prices. Children's shoes, including tennis shoes, are attractive and expensive, but not durable. Corrective shoes may be satisfactorily custom made here.

Infant wear in local stores is almost entirely wool or orlon knit; few terry-cloth suits are available. Under-shirts, polo shirts, and overalls are found, but prices are high and styles are not practical. Infant shoes are readily available.

Teenage clothing is limited and expensive.

Supplies and Services

Prescription drugs are generally available. Bring a supply of nonprescription medicines with you, including, but not limited to, acetaminophen, aspirin, antacids, and cold medicines.

Bring cosmetics, home perms, nail polish, and hair coloring from the U.S. Paper products such as toilet paper, tissues, sanitary products, and paper towels are sold locally, but are of poor quality and expensive.

Cameras cost two to three times U.S. prices. Most types of film can be purchased and developed locally at high prices. Families find film ordered and developed through U.S. film mail-order companies satisfactory.

Children's toys are very expensive. Those not imported from the U.S. seldom meet American safety standards. Bring toys for your children and for gifts. Also bring lunch boxes,

book bags, and school supplies for schoolchildren.

Most household appliances can be repaired locally but not always quickly or cheaply, especially if new parts are needed. TV service is good. Watch repair is of good quality. Shoe repairs are done quickly. Auto maintenance is adequate and reasonable, but spare parts are expensive and sometimes difficult to obtain. Bodywork is done well at reasonable prices.

Both beauty shops and barbershops are good. Adequate dry cleaning is available, but expensive; dry cleaning service is available through the commissary.

Diaper services are nonexistent. Laundry is normally done at home. Laundry service is Laundromat style: clothing is washed and pressed. Iron-on mending tape is useful to repair clothes and is available here.

Domestic Help

It is easier to find daily or part-time, rather than live-in, domestic help. Domestic help is relatively expensive. A few families with small children have a live-in servant. Other families and single people hire a daily housekeeper, part-time cleaning woman, or housekeeper/cook. It is easy to find someone to prepare party food, and good waiters are reasonable.

Employer obligations regarding time off, vacation, year-end bonus, severance pay, social benefits, etc., tied to regularly rising salaries, have sharply increased costs for domestic help.

Religious Activities

Montevideo has four churches that have English-language services: Christian Brothers (Roman Catholic), Christ Church (interdenominational Protestant), the Cathedral of the Most Holy Trinity (Episcopal), and the Church of Christ Science. Many other Christian sects are represented, holding services in Spanish.

Skyline of Montevideo, Uruguay

With a fairly large Jewish population, Montevideo also has two synagogues, one conservative congregation and the other, orthodox.

The Church of Jesus Christ of the Latter Day Saints also holds weekly sacrament meetings in Spanish. There are approximately 55,000 church members and 365 missionaries throughout the country.

Education

Uruguay has free public education from kindergarten through university. Many private and parochial schools also exist. Instruction is in Spanish, and private schools that do not provide instruction in Spanish must offer it as a second language. The local school year runs from March to mid December, with a mid-term vacation in June/July and a spring vacation in September. Montevideo's public schools, some of which offer good education and excellent facilities, are generally overcrowded and work on two or three shifts, 5-6 days a week. The private British and St. Andrew's Schools and a Christian school also offer instruction in English.

The Uruguayan-American School (UAS), founded in 1958, moved to its Carrasco location in 1978. It ful-

fills the requirements of an American school abroad. Sufficient classroom space is available in three separate buildings located on a spacious campus. The school offers food service (optional), and bus transportation can be arranged.

UAS provides classes in English from nursery school through grade 12. The school uses an American curriculum, methodology, textbooks, and American or bilingual teachers. All classes are coeducational. The school is accredited by the Southern Association of Colleges and Schools. The school capitalizes on its overseas location to provide instruction in Spanish as well as other regional studies for U.S. and international students.

The student body numbers about 160, of which 60% is American; 20% Uruguayan; and the remainder come from various countries. The small high-school student population (50-65 students) does not enable the school to provide many extracurricular activities. Classes in art, music, computer science, and physical education are included in the curriculum. However, because of its size, the school offers limited electives/materials and sports facilities. The school has an 8,000-volume library and offers complete counseling services.

The school's first semester runs from early August through December, followed by a 10-week summer vacation. The second semester starts in late February and ends late June. UAS is the official testing center in Uruguay for the Scholastic Aptitude Test and the American College Test.

The British School is coeducational for kindergarten through grade 12. Located in a large attractive complex in Carrasco, the student population is primarily Uruguayan, with some British and a few Americans. It uses a British curriculum, but American history and government are also taught. American children accustomed to the American system may have difficulty adjusting to the British system, particularly in adjusting to the different way of teaching mathematics. However, the school offers excellent sports.

Coeducational St. Andrew's (Scottish) School has students from kindergarten through grade 8. Located in Pocitos, with adequate play facilities, it uses a U.K. curriculum.

The British School and St. Andrew's School have first semester from March to June and second semester from late July to early December.

Special Educational Opportunities

The University of the Republic and the Catholic University of the Republic Damaso Antonio Larrañaga, both located in Montevideo, are the country's only universities. Instruction at the University of the Republic is free and facilities are open to all foreign residents. However, courses seldom are transferable for credit at U.S. colleges and universities. Uruguay does have the University of Maryland, European Division. All courses are taught in English, and the professors are local, American, and British.

Sports

Uruguay's national pastime is soccer, locally called football (futbol). Teams enjoy fanatical support, especially the rivalry between the two best clubs, Nacional and Pe

arol. Montevideo's Centenario Stadium holds about 70,000 people and games are frequent. Tickets are reasonably priced.

Five-a-side soccer is currently the most popular sport among Uruguayans. Uruguayans and Americans alike can participate in informal league play.

Swimming is popular and enjoyed 4 to 5 months every year. Uruguay's beaches extend from Montevideo to the Brazilian border. The river and beach front in Montevideo are polluted and unsafe for swimming. Bathing and surfing is possible beyond Atlantida (28 miles east of Montevideo). Several private clubs with swimming pools are available in Montevideo.

Tennis is popular and some municipal courts are available. Several private clubs offer membership with reasonable entrance fees and monthly dues.

Golfers will find two challenging 18-hole courses in Montevideo. The Golf Club of Uruguay has a beautiful course in Punta Carretas, a residential area bordering the Rio de la Plata. Facilities include a large dining room, snack bar, swimming pool, and tennis and paddleball courts.

The Cerro Golf Club is across the bay from the downtown area, about 40 minutes by car. Less crowded than Punta Carretas, neither is crowded in the U.S. sense. The Cerro Golf Club offers light luncheons and its bar/gameroom is open Wednesday afternoons, weekends, and national holidays.

Riding is also popular. The Hipico and the Polo Club (which also has two tennis courts and a large swimming pool) offer all facilities needed for the care and maintenance of horses. Fees for horse rentals, including jumpers, are reasonable.

Horse racing is a popular diversion, and Montevideo has a good track in the northern part of the city. Bullfighting and cockfighting, popular

in many Latin American countries, were outlawed here many years ago.

Montevideo has three sailing clubs: Montevideo Yacht Club, Nautilus Yacht Club, and Montevideo Rowing Club. The Montevideo Yacht Club has several Marconi-rigged fin keelboats for members. Water sports other than swimming are just beginning to develop in Montevideo. Water skiing, surfing, and sailboarding are popular in Punta del Este.

Uruguay offers good freshwater fishing in the interior and surfcasting along the coast. The Rio Negro is famous for its large dorado, an excellent game fish. The best fishing is in Punta del Este where weakfish, blackdrum, and bluefish are most often caught. Boat rentals are expensive, particularly during summer. Bring your own tackle for shoreline and freshwater angling.

Good hunting is available within a relatively short drive of the city. Partridge, plover, dove, pigeon, and duck are among the game birds available. A permit and permission from the property owner to hunt on private property are required. Guns and ammunition are available in Montevideo, but at very high prices.

Almost all sporting equipment available in Montevideo is imported and expensive. Tennis balls are especially expensive. Bicycles are popular with both children and adults. Bicycles sold here are expensive.

Paddleball is the new rage. Squash courts are available through several inexpensive clubs. Racquetball is relatively new to Montevideo, though two clubs have opened with several courts.

Touring and Outdoor Activities

Montevideo has a number of historic sites that are worth visiting, including the Cabildo (city hall) and El Cerro fortress. A planetarium offers scheduled shows.

The city has several parks and plazas, many with play facilities, and a botanical garden. The Legislative Palace boasts 47 kinds of native marble and is interesting to visit when either house is in session. A short drive into the country will take you into cattle and sheep country, land of the Uruguayan gaucho. Traffic in the interior is usually light and a Sunday drive can be relaxing.

Uruguay is unique in South America in that practically any point of the country is within a day's drive of the capital. Popular tourist attractions are the resort towns of Atlantida, Piriapolis, and Punta del Este. Beyond Punta del Este are many worthwhile sights on the way to the Brazilian border. Punta del Este's popularity with wealthy Argentines and Brazilians has pushed prices well past an official American's normal budget.

The town of Colonia, founded by the Portuguese in 1680, lies 100 miles west of Montevideo along the coast, and has several museums and restored 17th-century colonial buildings. Colonia is 1 hour from Buenos Aires by hydrofoil.

The city of Minas is 78 miles north of Montevideo in the interior. Known for its quarries of high-grade marble and mineral water springs, its lakes and hills present a change from the seaside. The pleasant interior towns of Salto and Paysandu, located along the Uruguay River, can also be reached in less than a day's drive. The Termas (hot springs) del Arapey, especially nice in winter, are less than 30 miles from Salto.

To the north, on the Brazilian border, are the towns of Rivera and Artigas. Located in the area between these cities are geological fields where amethyst and topaz are found. The Brazilian border town of Chuy, just 140 miles northeast of Punta del Este, offers a popular duty-free shopping area. Brazilian coffee and other consumer goods are available at advantageous prices. Also near the border are two

restored old forts, Santa Teresa and San Miguel, and the lovely small beach resort of La Coronilla. Near both forts are charming government-run inns (paradores), which are worth an overnight stay or even an extended vacation. Comfortable, reasonably priced hotels and several good restaurants are also in the area.

Brazil, Argentina, and Chile offer a multitude of tourist attractions. One of the most popular is Iguazu Falls, which most travelers consider a must. You can reach this series of unharnessed falls on the Brazilian-Paraguayan-Argentine border by automobile, bus, or air.

Entertainment

Montevideo has many movie theaters showing recent American and European films. Movies in English have Spanish subtitles. Admission prices are comparable to the U.S.

Montevideo has two casinos, the Parque Casino and the Carrasco Casino. Another is in Atlantida, a half-hour drive from Carrasco. No nightclubs exist; however, some restaurants with floor shows and a few lively late hour discotheques are available for teenagers and the twenties crowd.

Social Activities

The American Association holds monthly luncheon meetings. Membership enables you to meet Americans and Uruguayans representing business interests and other organizations in Uruguay. The association sponsors an annual golf tournament.

The American Women's Club is an active community service and social group composed principally of the spouses of Americans in Montevideo. The club holds monthly meetings at its Carrasco clubhouse, except during summer. Among its activities are a thrift shop, which sells used articles to raise funds for charity, and a number of social events.

Both the Lions and the Rotarians welcome Americans as guests or

members of their numerous Montevideo chapters.

Membership in a tennis, golf, or yacht club can be another excellent way of meeting people.

An English-language Cub Scout pack operates at the Uruguayan-American School, and scouting is also widespread among Uruguayans. Spanish-speaking Boy Scout troops meet at the British School.

Private entertaining usually takes the form of luncheons, cocktail parties, coffees, teas, buffet suppers, and small dinner parties. Uruguayans are open to social contacts, and representational activities are frequent.

OTHER CITIES

COLONIA DEL SACRAMENTO (also called Colonia), about 80 miles west of Montevideo in the far southwest, is Uruguay's most colonial-flavored city. Situated on the Río Plata across from Buenos Aires, Argentina, it was settled by the Portuguese in the late 17th century, and later by the Spanish. Tourism plays a big role in the local economy, and sites such as the parochial church, museum, viceroy's mansion, and lighthouse, are favorites. The ruins of the city's bullring, visited by throngs of Argentines until bullfighting was outlawed in the 1930s, can be viewed. Colonia del Sacramento serves as a commercial and manufacturing center for adjacent hinterlands. Its location makes it an important border crossing and trade zone. Connections to Buenos Aires are available via hydrofoil, ferry, and airplane. Travel to Montevideo is possible via highway and railway. Uruguay's main agricultural research center and a dairy industry school are located here. Colonia del Sacramento has roughly 17,000 residents.

FRAY BENTOS houses the largest meat packing plant in a country that once outstripped Argentina in beef exports. Situated in the south-

west about 160 miles northwest of Montevideo, the city is the capital of Río Negro Department. In 1969, the Puerto Unzué bridge was constructed in Fray Bentos. This bridge has greatly facilitated trade between Uruguay and Argentina. Fray Bentos was founded in 1859 as Independencia, but later was renamed for a religious hermit who lived nearby. It has a population of about 20,000.

MINAS is a mining city of about 35,000, situated in thickly forested hills 75 miles north of Montevideo. Its name, meaning “mines” in Spanish, was given in recognition of the nearby marble and granite deposits which support this picturesque spot. Juan Antonio Lavalleja (1786-1853), a leader of Uruguayan independence, was born here. He directed the *Treinta y Tres*, or “Thirty-Three Immortals,” who declared the country’s independence from Brazil in 1825 under the motto “liberty or death.” After three years of war, a British-mediated treaty confirmed Uruguay’s status as a sovereign state. The thirty-three revolutionaries, meanwhile, became politicians. Lavalleja’s equestrian statue has a prominent place. Considered interesting for the visitor are the church, nearby caves, and the local park—Parque Salus. The Cascada de Agua del Penitente waterfall also is a local attraction. The city is noted for its bottled mineral waters.

PAYSANDÚ, an often-used crossing point to Argentina on the Río Uruguay, gives the visitor a sense of history with its major attractions. The cathedral has cannonballs still embedded in its walls from the 1865 War of the Triple Alliance, when Paraguayans briefly held the town. In the next building is a museum in the Silesian college. Paysandú features several budget hotels, and a local tourist information office. Many industries are located in Paysandú, among them tanneries, breweries, distilleries, flour mills, meat processing plants, and textile factories. The city is a busy port through which goods are shipped to northwestern Uruguay. This

departmental capital has a population of about 75,000.

PUNTA DEL ESTE has emerged as one of South America’s most popular resort and conference centers. Located about 70 miles due east of Montevideo on the Atlantic coast, the city hosted several important political conferences in the 1960s, including the 1961 meeting which proclaimed the Alliance for Progress and a 1967 meeting of the presidents of the American republics. Foreigners, principally Argentines, Brazilians, and Chileans, vacation here regularly, visiting the many restaurants, casinos, and recreational facilities. Fishing is a popular pastime. Punta del Este, linked to Montevideo by a major road, has a population of over 10,000.

RIVERA is a city of 57,000 people on the Brazilian frontier, about 270 miles north of Montevideo. A street separates it from the Brazilian city of Santa Ana do Livramento. Rivera serves as capital of Rivera Department, as well as being the largest Uruguayan city on the border. Nearby are the Cuchilla de Santa Ana Mountains and livestock-growing regions. The city is home to several industries which manufacture mosaics, brooms, cigars and cigarettes, and textiles. Rivera is a trading center for the fruits, grains, and vegetables grown in the region. There is a local airport and good road connections.

SALTO is the last of the major population centers to be found when traveling up the Río Uruguay. The capital of Salto Department in the northwestern part of the country, it is a city of about 77,000, known as a rail and shipping center for agricultural products and livestock.

It is situated in the midst of a large area of vineyards and citrus orchards. The vineyards near Salto are considered the best in Uruguay. Many of these vineyards produce tomatoes, corn, wheat, and strawberries. For many years, a boat-building industry has operated here. Meat processing and wine production are also important indus-

tries. Salto lies opposite Concordia, Argentina. Salto is linked by rail, river, highway, and air services with Montevideo.

TREINTA Y TRES lies 150 miles northeast of Montevideo, near the Olivar River. This departmental capital takes its name from the *Treinta y Tres*, or “Thirty-Three Immortals,” who led the successful revolt for independence from Brazil in 1825. The city’s approximately 26,000 residents enjoy the Quebrada de los Cuervos National Park about 25 miles outside of town.

COUNTRY PROFILE

Geography and Climate

La Republica Oriental del Uruguay (the Oriental Republic of Uruguay, or literally translated, the Republic East of the River Uruguay) covers an area of 72,200 square miles, slightly larger than North Dakota.

Topographically, the country is divided into three parts. The southern area is a belt of gently undulating alluvial plains; the western part, an extension of Argentina’s flat pampas; and the northern area, an extension of southern Brazil’s low regions and broad valleys. Maximum elevation above sea level is about 2,000 feet; the average being about 490 feet. Few natural forests exist, but extensive forestation has been undertaken.

Except for a small subtropical area in the northwest, the climate is even throughout Uruguay. Temperatures are generally mild but seasons are distinct: summer daytime temperatures average 70°F and rarely exceed the mid-90s; autumn (March–May) is mild; and spring (September–November) is often damp, cold, and windy. In winter, monthly temperatures range from 44°F to 60°F with occasional frost, although humidity, averaging 75 percent year round, intensifies the

cold. Average annual rainfall is 39.5 inches.

Population

Uruguay's population (2.97 million) is composed primarily of Spanish and Italian ancestry. The native Indians were killed or forced to migrate during colonization in the last century. Some 4 percent of the population is of African descent, mostly Brazilian immigrants. Small colonies of German, East European, Armenian, and British citizens also live here. Most of the elderly "anglos," who speak English as their primary language, are second and third generation dual-nationals whose ancestors came in the last century to work in the many British-founded companies. A small colony of Swiss lives in an area called Colonia Suiza located about 100 miles west of Montevideo. The various languages of their former country are still spoken and they retain the customs of their forebears as well.

About 45 percent of Uruguay's total population lives in Montevideo. Salto and Paysandu, with about 100,000 inhabitants each, vie for the honor of being the second largest city. Several other cities are in the 25,000–40,000 population range. Uruguay does not share Latin America's concern with the population explosion; a low birth rate and emigration result in an annual growth rate of less than 1 percent. Families are small and close.

Life expectancy in Uruguay is 70 years and the literacy rate is about 94 percent, the highest in Latin America. Spanish is the official language. Religion does not play a dominant role in the lives of Uruguayans, many of whom classify themselves as agnostics. Roman Catholicism is the predominant faith but many are Protestants. Montevideo has a relatively large Jewish and Mormon communities as well.

Public Institutions

Traditionally one of the strongest democracies in Latin America, Uruguay, in the early 1970s, experienced a gradual transfer of power to the Uruguayan military because of the government's inability to cope with a violent leftist urban guerrilla group, known as the Tupamaros. The process culminated in the dissolution of parliament in 1973 and the ouster of the elected President in 1976. Civilian, democratic rule returned to Uruguay on March 1, 1985, after the military agreed to hold parliamentary and presidential elections in November 1984. The military banned several leading politicians from participating in the 1984 elections, a proscription that was removed by the new civilian government before the 1989 elections. National elections were held without incident in 1989, 1994 and 1999.

Uruguay's constitution, adopted in 1967 and partially suspended during military rule, provides for a republic with three autonomous branches of government. The President and vice-president, elected by popular vote, serve a single 5-year term but can be reelected after an interval of 5 years. They are assisted by a cabinet, made up of 12 ministers and the heads of various state entities, appointed by the President.

The legislative branch consists of two houses, a Senate (30 members) elected at large, and a Chamber of Deputies (99 members) elected proportionally from the 19 provinces (departamentos). Although each province has at least two deputies, most come from Montevideo, where about 45 percent of the country's population resides. It takes a two-thirds vote of Parliament to overturn vetoes or remove executive branch officials. In special cases, such as national crises, Parliament can also be called into session as a unicameral General Assembly.

The judicial branch consists of a five-person Supreme Court, whose primary duties are interpreting the

Constitution and dealing with claims against the government. Appeals courts, criminal courts, and justices of the peace deal with other matters of law. Supreme Court justices are appointed by the President and must retire at age 70. Special courts oversee the election process, audit government departments, and arbitrate appeals against administrative acts.

Uruguay's 19 departments (provinces) are organized similarly to the national government. An "intendente," or departmental governor, is elected by popular vote and is assisted by a departmental council or "junta departamental," chosen on a proportional basis. Montevideo, the capital city, is treated as a one of the 19 departments and has a similar governmental structure.

The major political parties, the National ("Blanco") and Colorado parties, in the past embraced about 90 percent of the electorate. The two parties have seen their share of the vote decline to approximately 65 percent of the electorate. The "Broad Front" a coalition of the Communist Party, Socialist Party, and various leftist factions, is now a major force in Uruguayan politics. A fourth political force, the New Space Coalition, is a social democratic grouping that consists primarily of two social democratic parties that split from the Broad Front in 1989.

Uruguayan politics value consensus and compromise over confrontation. The Colorado and Blanco parties share the administration of the independent state enterprises, and political agreements to split Cabinet posts are not uncommon. Almost all politicians pride themselves on their refusal to let ideological differences result in personal animosity.

Arts, Science, and Education

Montevideo is the cultural center of the country and activities are varied and continuous. Most, however, occur during the school year,

March–November. Cultural mainstays are the S.O.D.R.E. (Servicio Oficial de Difusion Radiotelevision y Espectaculos), the official government radio and television network; the Intendencia Municipal; and the Centro Cultural de Musica, a local nonprofit organization that organizes international events.

S.O.D.R.E. offers a 15–18 week symphony season featuring Uruguayan and internationally famous conductors and performers. Concerts are broadcast on the government TV channel. Short opera and ballet seasons usually follow the symphony season. Since the S.O.D.R.E. theater was destroyed by fire in 1971, most of its programs are held at the Sala Brunet, a smaller hall, which has recently been refurbished. S.O.D.R.E. also sponsors events at the Teatro Solis (1,300 seats). SODRE is building a new cultural center that should be completed soon.

The Centro Cultural de Musica offers 8 to 10 cultural events during the year. Tickets for season and individual performances are less expensive than in the U.S. Expect to wait in line overnight when the season subscriptions go on sale. Except for extraordinary occasions, all events take place at the Teatro Solis.

The Intendencia Municipal sponsors the Comedia Nacional, the national repertory company, which plays at the Teatro Solis and Sala Verdi. In addition, the municipal government has a popular and varied program of cultural activities. For instance, the municipal symphony (Orquesta Filarmonica de Montevideo) repeats its weekly Teatro Solis concerts in different neighborhoods and all programs are free.

Other theaters presenting professional productions are the Teatro Circular, El Galpon, Teatro del Centro, and the Teatro del Notariado. The Montevideo Players, an amateur acting society with English and American participants, produces two or three plays a year in English.

The U.S. established binational center, known as the Alianza Cultural Uruguay-Estados Unidos de America is a large complex in downtown Montevideo. It houses an English teaching center (over 4,000 students), one of the city's most prestigious galleries, and one of its most sought after theater spaces. The Biblioteca Artigas-Washington, a USIS library, is located in the same complex and is considered to be the most up-to-date library in the country. The Alianza encourages Americans to participate in all of its programs and invites licensed English teachers to join the teaching staff.

Public education in Uruguay is free through the university level, and many people receive advanced degrees in numerous disciplines. Since 1985, a number of private, fee-charging universities have also begun operating. In 1993, the University of Maryland began offering courses at Alianza.

Commerce and Industry

Uruguay's economy is based on services (mostly tourism and financial services), along with exploitation of renewable natural resources and related industries. Natural-resources exploitation and related activities benefit from Uruguay's level terrain, temperate climate, abundant rainfall, and natural pastures. Although Uruguay exported mainly cattle hides during colonial times, the principal export products have been beef and wool for more than a century, and Uruguay has developed such additional exports as textiles, garments, shoes, and rice.

In the last decade, the most dynamic sectors of the economy have been transport and communications, construction, commerce, and tourism; industry and financial services have the lowest growth rates. Although Uruguay has no-known hydrocarbon deposits, it is generously endowed with hydroelectric resources, now mostly devel-

oped. Electric production from the world's fourth largest hydroelectric complex, at Salto Grande (a joint venture with Argentina), began in late 1979. Social indicators place Uruguay among Latin America's most advanced countries. Uruguay has long had one of the highest literacy rates in Latin America, and the income distribution is much more equitable than in most Latin American countries. Between 1990 and 1994, urban poverty was reduced by 50% to only 6%, the lowest in Latin America (Latin American average is 40%). Moreover, Uruguay's income distribution resembles that of industrialized countries; a per capita income of US\$6,000 places it among the upper middle income bracket in the World Bank classification. However, despite good social indicators, unemployment has been slightly lower - 10% in recent years. During the 1950s, with good export performance from farm and cattle products fueled by World War II and the Korean war, Uruguay provided incomes that were among the highest in Latin America, gaining the nickname "The South American Switzerland." However, as in many Latin American countries, Uruguay shifted its economic interests inward in the early 1960s, following an import-substitution model. For the next decade, Uruguay shut its doors to the world, protecting its industries with high import tariffs. Results were disastrous; export growth was low, inflation was high and volatile, and productivity performance and GDP growth were substandard. At the same time, with the creation of the European Economic Community which cut off traditional agricultural markets in Europe, Uruguay's agricultural sector suffered a serious setback. General stagflation ensued. These factors contributed to political instability during the 1960s and early 1970s.

In the early 1970s, the government adopted a program of gradual economic liberalization, loosened control over the economy, reduced public sector employment, and opened the economy to international trade. Exports of processed

items, including leather goods, foods, textiles, fish, marble, and granite, surged. By 1981, the dollar value of Uruguay's exports had more than doubled from their worth a few years earlier.

Even before the advent of global recession in the early 1980s, the Uruguayan economy suffered from an artificially high fiscal exchange rate and chronic public sector deficits. To finance its deficit and to maintain the exchange rate, and because of readily available international funds, the government borrowed heavily from abroad. By 1982, the total external debt was more than three times the amount at the end of 1978. Global recession compounded Uruguay's woes as exports and investment inflows declined and capital flight accelerated.

In November 1982, with the country well into a serious recession, the fixed-exchange rate was abandoned, and the peso was devalued almost 100% from 14 to 28 pesos per US\$. The GDP declined by 9.4% in 1982, 5% in 1983, and a further 1.8% in 1984. Unemployment peaked at more than 16% in 1983.

However, since 1985, Uruguay's growth trend has recovered. It has maintained an open-capital account in that interest rates are market determined, and there are neither price controls nor restraints on currency exchange. Between 1985 and 1990, the average annual growth was 3.4%; it reached 4% between 1991 and 1996. The GDP in 1999 was about \$21 billion, and most estimates indicate that Uruguay will continue to have annual growth unless external shocks arise.

The LaCalle and Sanguinetti administrations affirmed Uruguay's commitment to the economic liberalization process, which had begun in the 1970s. Furthermore, they have implemented some important structural reforms. First, the social security system was modified to convert the highly deficit-ridden public system into a mixed system of both public and private providers;

combined with laws passed on capital market and investment funds, this change should stimulate capital market operations and national savings. Second, educational reforms in progress are expected to have a positive impact on future human capital. Despite the setback of privatization by a 1992 referendum, private-sector access to previously state owned activities continues. Controlled by moderate and left-of-center parties, respectively, both the national and the Montevideo state governments encourage the private sector's growing economic role.

Managed by the government, the Uruguayan exchange system is based on a band inside, within which the exchange rate can float. As of December 1990, the estimated rate was 11.7 pesos to the dollar. The annual inflation rate has steadily declined for the past 6 years, decreasing from 130% in 1990 to about 4% in 1999.

Uruguay is a member of Mercosur, a regional common market, with Argentina, Brazil, and Paraguay. Argentina is Uruguay's largest trading partner, followed by Brazil, the U.S., and Germany. With Mercosur integration into the economies, duties among Mercosur's members were exchanged for a common external tariff applying to most products. Chile and Bolivia are associate members of Mercosur in that they do not belong to the Common Market, but rather, to the free trade area; negotiations with other countries are being held.

Transportation

Automobiles

Roads in and around the capital are fair-to-poor with many potholes. Many streets are poorly identified and illuminated. Intercity highways are well maintained and generally excellent, but the all weather aspect of some of these roads requires caution. More traveled routes, such as the highway between Punta del Este and Montevideo, have service

stations, tow trucks, and other facilities.

Gasoline is sold by a government company, ANCAP, as well as by ESSO, Texaco, Shell, and other international oil companies. The better grade of gas is of lower octane than that used in the U.S., but American cars operate adequately with it. Moderate detergent oil is used.

Local

Bus service is cheap and extensive within Montevideo. Taxis are readily available at reasonable fares.

Intercity bus service, the most popular transportation method, is frequent to most parts of the interior. Modern buses, including sleepers, connect Montevideo with Brazil and Argentina. Bus tickets are cheaper than in the U.S.

Regional

Several international airlines fly from Uruguay to other parts of Latin America, North America, and Europe. Many international flights board in Buenos Aires, only 25 minutes by air from Montevideo, but some flights require a wait of several hours and an expensive and time-consuming change of airports. Pluna, the government-operated airline, and others offer flights to Argentina, Chile, Paraguay, and Brazil.

Communications

Telephone and Telegraph

The telephone network works reasonably well. Cellular phones are available in Montevideo and Punta del Este. Telephone connections outside Uruguay, especially to the U.S., are good but very expensive. English-speaking, long distance operators are usually on duty.

USA Direct service through MCI, AT&T, and Sprint is available and much less expensive than regular international operator-assisted calls to the U.S. Telegraph and fax facilities connecting Montevideo with

North America and Europe are good but expensive.

Radio and TV

Montevideo has some 35 radio stations including 12 FM. Radio programming consists of music, news programs, and soap operas. The tango, the music of the Rio de la Plata area, is heard on many stations, but modern rock from the U.S., Brazil, and Europe is more popular.

Shortwave reception is quite good in Montevideo, outside the downtown area. Listeners can pick up VOA, BBC, and the Armed Forces Radio Service. The best reception is from 8 p.m. to midnight. Uruguay has four TV stations that offer color TV transmission, and five cable channels provide additional programming. American TV's can be used here but will receive only black-and-white images unless they are converted to the PAL-N color system.

Newspapers, Magazines, and Technical Journals

Newspapers, as well as several weekly papers, are published in Montevideo. The Buenos Aires Herald, an English-language daily, is expensive.

Time and Newsweek are regularly available. Some technical journals from the U.S. and Europe are sold in two or three bookshops specializing in foreign literature. Many bookstores sell paperbacks in English.

The Artigas-Washington Library at the Uruguayan-American Alianza is colorful, attractive, and modern. In addition to a selection of about 12,000 books in both English and Spanish, it provides members with an extensive audiovisual section, which includes audio cassettes, tapes, records, video tapes, and films, plus a broad selection of U.S. magazines and journals.

Health and Medicine

Community Health

Montevideo experiences few health problems. In rural Uruguay where livestock is raised, hydatid disease (echinococcosis) can be contracted by humans via food contaminated with dog feces. Avoid contact with strange dogs anywhere in South America. Other intestinal parasites and worms are uncommon in Uruguay.

Hepatitis A occurs occasionally in Montevideo. Have gamma globulin injections every 4-6 months or get the Hepatitis A vaccine.

Montevideo has four seasons. Spring and summer are very pleasant. Winter is cold, wet, and windy; hence, frequent colds and sore throats occur. Upper respiratory tract allergies and lower tract allergies may be aggravated.

Tap water is safe to drink in Montevideo and in most urban areas; it does not have to be filtered or boiled. Occasional breaks in the city water lines do occur. Since the water is low in fluoride, children under age 12 should take fluoride supplements.

Montevideo is located on the River Plate, and there are beaches along the river from the city to the Atlantic Ocean, about 45 miles up the coast. Beaches within the city limits are polluted. Most sports clubs have swimming pools that are usually well cared for and safe.

Except for seasonal mosquitoes, few insects are of concern in Montevideo. Parents should caution children against touching the "bicho peludo" (green or black hairy caterpillar) which inhabits gardens, trees, and plants. This caterpillar may be poisonous, causing an allergic skin reaction when touched.

Good dental care is available in the city of Montevideo and currently costs about one-third less than in the U.S.

Most Uruguayan doctors are graduates of the local medical school, although many have received further training in the U.S. and in countries in Europe. Many speak English.

Well-trained, qualified nurses usually have attended at least 3 years of nursing school. Nurses aides, who have on-the-job training, handle most of the floor duty. Hospitals. The British Hospital is adequate for routine medical care. Advanced procedures may involve medical evacuation to the U.S. Pharmacies. Most drugs, except tranquilizers and stimulants, certain antibiotics, hormones, and cardiac drugs are available without a prescription. One can usually find American drugs or good-quality equivalents. Bring special prescriptions from the U.S.

Thousands of babies are born each year in Montevideo without incident. Because of adequate hospital care and facilities, Uruguay has one of the lowest infant mortality rates in the Hemisphere. State Department policy, however, now recommends medical evacuation to Miami, Florida, for labor and delivery.

In an emergency, call the Servicio de Emergencia Medico Movil (SEMM). This service dispatches an ambulance and physician to anywhere within the limits of Montevideo. Their care extends to accident victims as well as to people with chronic illnesses.

The British Hospital has an emergency room.

For children: Vaccines standard in the U.S. are recommended for Uruguay.

Adults: The only recommended immunization is tetanus-diphtheria (every 10 years). Yellow fever, typhoid, and cholera vaccines are neither required nor recommended. Adults born after 1956 may need a measles vaccination. Although not absolutely necessary, Hepatitis A and B vaccinations should be considered.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Carrasco Airport is about 13 miles from downtown Montevideo. The airport building has a currency exchange booth that is open during business hours only. The port where oceangoing vessels dock is near downtown Montevideo, just a few minutes from the better hotels.

A passport is required. U.S. citizens do not need a visa for a visit of less than three months. For further information on entry requirements, contact the Embassy of Uruguay at 2715 M Street, N.W. Third Floor, Washington, D.C. 20007, tel. (202) 331-1313; E-mail: uruwashi@iamdigex.net; Embassy home page: <http://www.embassy.org/uruguay/>. Travelers may also contact the Consulate of Uruguay or the Honorary Consul in: Boston, Chicago, Honolulu, Los Angeles, Miami, New Orleans, New York, Reno, Salt Lake City, San Francisco, San Juan, Puerto Rico or Seattle.

Americans living in or visiting Uruguay are encouraged to register at the Consular Section of the U.S. Embassy in Montevideo and obtain updated information on travel and security within Uruguay. The U.S. Embassy is located at Lauro Muller 1776; telephone (598)(2) 408-7777; fax (598)(2)408-4110 or -8611. Internet: <http://www.embeeuu.gub.uy/>. Consular Section hours are Monday, Wednesday, and Friday, 9:00 a.m. to 11:00 p.m. and 2:00 p.m. to 4:00 p.m.

Pets

Pets with a certificate of good health may be imported into Uruguay. Dogs and cats require also a certificate of rabies vaccinations. These certificates should be endorsed and authenticated by an Uruguayan consul in the U.S. or other point of departure before shipment.

Travelers with pets may find it more convenient to fly to Montevideo via Brazil rather than Argen-

tina, since a delay in Buenos Aires may be experienced if they must change airports to take a connecting flight. Pets leaving the area of the Buenos Aires international airport (Ezeiza) are considered as having entered Argentina and must be examined by an Argentine veterinarian. If a veterinarian is not immediately available, long delays may result. Since U.S. health and rabies certificates are valid in Argentina, travelers with pets should continue on to Montevideo on the same plane or change to a connecting flight that departs only from Ezeiza Airport.

Another consideration is the requirement that no pets are allowed in the cabin of any plane departing from Argentina. All pets are placed in the freight compartment. Since some planes do not have pressurized freight compartments, you may have to spend a number of hours in Ezeiza Airport waiting for a suitable plane.

Firearms and Ammunition

Only the following nonautomatic firearms and ammunitions may be brought to Uruguay:

Semiautomatic Pistol or Revolver, 1; Rifle, 1; Shotguns, 2. Ammunition for above firearms, 1,000 rounds. Uruguayan Government approval of a revolver may be more easily obtained than for semiautomatic pistols, as the latter are generally reserved for police and military use.

Currency, Banking, and Weights and Measures

Since March 1, 1993, the basic currency unit in Uruguay is the Uruguayan peso. The current rate of exchange is \$11.84 as of March 31, 2000.

Uruguay has many banks, some with numerous branches throughout the country. Some foreign banks, including Citibank, First National City Bank of New York, American Express Bank, and Bank of Boston, have branches in Montevideo. Travelers checks may be purchased through banking facilities at the Chancery. Please note that they

are not readily accepted at local retail facilities, which prefer cash.

Adequate banking facilities exist in Montevideo, but long lines and short banking hours make it impractical to have peso checking accounts. The metric system of weights and measures is used.

Caracas, Venezuela

VENEZUELA

Major Cities:

Caracas, Maracaibo

Other Cities:

Barquisimeto, Ciudad Bolívar, Colonia Tovar, Cumaná, Maracay, Mérida, San Cristóbal, Valencia

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated September 1994. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Venezuela is important to the U.S. Venezuelans have practiced democracy successfully since 1958, and their success is an example for others in Latin America. Moreover, Venezuela is a principal trading partner for the U.S., ranking among the top 20 markets for U.S. exports. It traditionally has been a reliable supplier of petroleum products to the U.S. and currently is the second largest exporter to the U.S. of oil and its derivatives.

Caracas is at times a challenging place to live. It is crowded, noisy, and jostling, and it is often difficult to get services performed that are routine at home. But it can be exciting, and close at hand are oases of

beauty and tranquility that make the city livable: the rugged wilderness of the Avila mountain range ranging up to 6,000 feet over the city, the jewellike Los Chorros park, and the Parque del Este where early risers jog among hundreds of tropical birds. And, when long weekends or vacations permit, there is a varied universe of natural beauty ranging from the desert of Falcon State, to the spectacular high Andes; from the mesa country of the east with the world's highest waterfall, to the still largely unexplored Amazon jungle. Venezuela has over 1,300 varieties of birds and extraordinary flora, including magnificent orchids and frailejones.

Venezuela's varied beauty, strategic location, and natural resources, as well as its varied social structure, combine to make a tour here challenging and interesting.

MAJOR CITIES

Caracas

Caracas occupies a garden-like valley rimmed by the majestic Avila Mountain that forms a rugged barrier between the valley and the Caribbean. It is the political, cultural, and economic center of the nation.

Its architecture is a mixture of colonial and mainly modern styles. In the older western part of the city, some of the old world Spanish colonial charm has been retained. To the east are the newer areas, characterized by skyscrapers and freeways with modern, comfortable residential areas dotting the valley floor and spreading up the mountain sides.

In contrast with the modernity of much of Caracas and the genteel charm of the historical sections are the "ranchitos" or shack settlements built by the poor immigrants from the interior regions and immigrants from neighboring countries.

Justifiably, the Caraquenos refer to Caracas as "The City of Eternal Spring." Caracas has a mean average temperature of 71 degrees F. Daytime temperatures range from 60 degrees to 80 degrees during the dry season to a maximum of 80 degrees to 90 degrees during the hot parts of the summer rainy season. Nights are cool and pleasant year round. Winter temperatures have even dropped to the low 50s. A consistent east-west wind blows almost every day, keeping the atmosphere of the valley clear. There is no daylight savings time in Caracas, therefore it becomes dark every night at about 7 pm.

The eastern part of the city has many familiar American features: major arteries ablaze with neon signs advertising U.S. products, supermarkets, some department stores, air-conditioned theaters showing American films, and even soda fountains and drive-in restaurants. Late-model American cars literally congest the streets and nearly every home displays a TV antenna to receive one of the Spanish-language TV stations.

The American appearance, however, is superficial. Caracas is a distinctively Latin city. The dominant culture is Spanish with the vitality and zest of a Caribbean orientation to the world. The combination is not Venezuelan, but Caraqueno. Caracas has the amenities of a large, cosmopolitan city. It boasts a number of excellent restaurants, a good selection of movies, and a variety of theatrical and musical productions. The city has many nightclubs and discotheques, a concert and symphony series, several museums, a thriving art market, a zoo, and an ultramodern racetrack.

Food

Generally, Caracas offers a broad range of quality food products though you may have to search for certain imported items. Recent government-imposed restrictions will probably lessen the availability of many imported items. Shopping is done at the large, American-style supermarkets that abound, at convenient corner stores (*abastos*), and at the farmers' markets (*mercado libre*).

Supermarkets are generally well stocked, but some items are unavailable for months at a time. Cleanliness in supermarkets is not up to U.S. standards. Due to uncertainty about the effects of import prohibitions, it is not clear whether speciality shops will continue to carry unusual imported items.

Many Americans find the "mercado libre" both fun and economical. Arrive early to get the best quality fresh fruits and vegetables.

There is a wide variety of locally grown vegetables that are quite good, though not consistently up to U.S. standards. Some Americans take advantage of the excellent quality of fresh fruits and vegetables sold by vendors from trucks. Some deliver. Bananas, papaya (locally called *lechosa*), coconuts, pineapples, mangoes, melons, and citrus fruits are abundant. Local peaches and apricots are disappointing. Fresh-squeezed fruit juices, sold everywhere, are excellent and cheap.

Bread, meat, and fish are available in supermarkets. Bakery goods are generally excellent. Many Americans prefer to buy these items at the bakeries, at the butcher, and at the fish shops that dot the residential areas. Some deliver. Good quality beef is available. Venezuelan beef is range-fed and not normally aged. It is less tasty and less fatty than the U.S. corn-fed animal. Pork is excellent and reasonably priced. Local lamb is sometimes available. Veal is almost never available. Seafood is always obtainable and of good quality, with prices less than those in the Washington area. Shrimp, which is relatively inexpensive, and red snapper (*pargo*) are especially popular. Cold-cuts and sausage are varied and plentiful.

Fresh pasteurized and homogenized milk is available throughout the year.

Canned foods are expensive compared to fresh foods available on the local market. Most stores carry a variety of canned food imported from the U.S. or made locally under license. Neither the selection nor the quality of baby foods is comparable to what is available in the U.S. Infant formula is available, although all brands are not in stock at the same time.

Local cheeses are acceptable, but sometimes lack flavor and may be more salty than in the U.S. A few imported European cheeses are available, in particular Gouda and Edam from Holland. Good quality eggs are plentiful.

Venezuelan ice cream is excellent. It is available in the usual flavors plus some tropical fruit flavors not found in the U.S.

Paper products are available but some are of inferior quality. Imported paper towels, toilet tissue, Kleenex, etc. are available in the commissary.

Frozen vegetables, fruits and fruit juices are sometimes available, but variety is limited and in some cases products may have been thawed and refrozen.

Some American fast food chains, such as McDonald's, Burger King, Pizza Hut, Domino's Pizza and Baskin & Robbins, have locations in Caracas.

There is a MAKRO Superstore in Caracas that is similar to the PACE Warehouse stores in the U.S. Membership is required. There are American products as well as Venezuelan products and many items are sold in bulk.

Clothing

General: Caracas' climate can be quite warm from April through September, and pleasant and cooler in December and January. Therefore, you will need a summer-weight wardrobe the year round although spring-weight clothes can be worn December through February. Bring a good umbrella for the rainy season. Raincoats are seldom seen here as they are usually too hot to wear. Sunglasses are necessary. Sportswear and beachwear suitable for the U.S. are fine for the clubs and beaches.

There is a wide selection of formal clothing for women in Caracas. Larger men's and women's sizes are not normally available. Good casual clothing is expensive and hard to find. Shoes are of good quality and reasonably priced.

Men: Summer-weight suits are more comfortable in Caracas' warm climate, therefore highly recommended. The quality of dry-cleaning is good and reasonably priced.

Sport shirts, guayaberas, and slacks are worn for informal occasions everywhere in Venezuela. Shorts are seldom seen on the streets except for joggers, cyclists, and other sports enthusiasts.

Dark suits will suffice for almost all occasions in the evening. Business and professional men rarely wear hats in Caracas.

Women: Women should bring what they would wear in late spring or summer in Washington or New York. Normal daytime wear is cotton, linen and other light fabrics. Blue jeans are popular for casual wear. You will need dressier cotton dresses and skirts and blouses for luncheons and coffees. Women dress up for evening occasions and follow the latest European and U.S. fashions. Cocktail dresses or nice evening dresses are normally worn to cocktail parties and dinners. Evening pants are permissible. Silk, satin, sheer knits and jerseys are popular fabrics. Fur stoles are seldom seen but a light sweater, shawl, or dressy jacket is useful for the cooler evenings. Hats are not currently being worn.

Beautiful and expensive fabrics are available. Women's shoes are stylish and of good quality with prices comparable to similar quality shoes in the U.S. Large size women's shoes (over size 9) or extra wide women's shoes are virtually impossible to find in Caracas.

Children: Durable summer wear is the best clothing for children in Caracas. Blue jeans are very popular among all ages. Bring light sweaters for cool evenings and mornings. Heavy pajamas or sleepers with feet are needed for infants in winter (December-February).

Venezuelan law requires that all school children wear uniforms.

Some American-style shoes are made and sold in Caracas. They are somewhat wider than standard American shoes. The quality of children's shoes varies.

For teenagers, one dressy outfit for occasional parties or school functions may be required. Jeans are universal wear for day-to-day activities. T-shirts are very popular.

Supplies and Services

Supplies: Popular American brand name, but locally produced toiletries, cosmetics, and household supplies can be found in Caracas. Drugs and medicines are price controlled and can often be bought at prices below those in the U.S., many without prescriptions.

Basic Services: Tailoring, dry-cleaning, laundry, shoe repair, radio and TV repair, electrical work, plumbing, fumigation, and auto repair are available and generally adequate. Standards of workmanship and cost vary considerably. Good hairdressers and barbers are available at prices substantially lower than in major cities in the U.S.

Keep in mind that it is the custom here for stores to be closed anywhere between 12:30 pm and 3:00 pm in the afternoon, and to close in the evening at about 7:00 pm, even in the malls. Note: many establishments in Caracas close during the Christmas holidays from about December 15 to January 15.

Religious Activities

There are several major English-speaking church communities in Caracas: St. Thomas More, a Roman Catholic parish, is served by an Italian priest. The United Christian Church, an interdenominational Protestant Church; the Bethel Baptist Church; and the El Salvador Lutheran Church all have American ministers. St. Mary's Anglican Cathedral (Anglican-Episcopal) has a British bishop. There is also the First Church of Christ Scientist and the Centro Evangelico Pentecostal. They all have services in addition to religious instructions and Sunday school or Bible studies for the children on Sunday mornings. The Mormon community has several wards throughout the city. The Jewish (orthodox and conserva-

tive) congregations have several synagogues: Jabad-Lubavitch Yeshiva Gedola of Venezuela, or Shalom Synagogue and Union Israelita de Caracas. Services are conducted in Spanish and Hebrew. There is also an outstanding and beautiful mosque that has been completed recently that is the tallest in South America.

These congregations offer a variety of social activities that provide good opportunities to meet others from the international community. Church announcements are printed in the English-language newspaper.

Education

Dependent Education. Good schools are available in Venezuela. Most American children attend one of two schools: Campo Alegre (Campo) which ranges from pre-kindergarten through grade 12 and Colegio Internacional de Caracas (CIC) which also ranges from kindergarten through grade 12. Documentation required for enrollment is a school transcript, transfers, grade cards, or school records. Entrance placement examinations are always given to assure correct placement. A certificate of medical examination and immunization record is also required. It is best obtained before arrival, but can be obtained in Venezuela.

Both schools are private. They require a registration fee, tuition payments, and transportation fees.

By Venezuelan decree, uniforms are required at all schools in all grades.

The school year extends from late August through early June. The program of instruction closely parallels the American system. Both schools use a contained classroom system at the elementary level and departmentalized classes in middle and secondary school. Students or graduates from these schools are qualified to enroll in public or private schools and colleges and universities in the U.S. since they both are accredited by the U.S. Southern Association of Schools and Colleges. Instruction is in English. A majority

City of Caracas, Venezuela

David Johnson. Reproduced by permission.

of teachers are recruited from the U.S. and are U.S. certified. The Venezuelan Ministry of Education requires that all students receive some instruction in Spanish and certain civics and history courses. Library, science labs, and computer facilities are all considered more than adequate when compared with U.S. averages.

Each of these schools has a full-time administrative staff that operates under the direction of an annually elected Board of Directors. The schools also sponsor Parent-Teacher-Student Associations (PTA) and provide ample opportunities for formal consultation and informal exchanges between parents and

teachers. A full-time nurse is on duty at both schools.

Both schools offer honors, advanced placement and International Baccalaureate courses for talented students, as well as physical education programs, although varsity sports are not emphasized as they are in most U.S. schools. Varsity teams offer basketball, soccer, volleyball and softball. They have limited schedules, but an advantage is that a higher percentage of students have an opportunity to participate in sports than in large U.S. schools. CIC has athletic facilities that include a full-sized football field, a tennis court and swimming activities. Campo has a gymnasium, out-

door courts and a playing field used for softball and soccer.

There are some extracurricular activities and periodic evening social activities for the older children. Bus transportation is available to both schools from most neighborhoods where Americans live. The consensus here is that both schools offer a solid education. Most children tend to have to work harder than in U.S. schools, unless they were in a specialized, accelerated program in the U.S. Special resources for children with learning disabilities are available at the schools, but are limited.

Campo Alegre is situated in a residential area of Las Mercedes and has an excellent but crowded physical plant including a gymnasium, many science labs, Macintosh computer labs and a cafeteria. It is centrally located and access is easy. Enrollment is currently just over 1000 with 52 nationalities represented. Class sizes range from 13-22. The well-qualified and dedicated staff has written Essential Agreements in all curricular areas to enhance and reinforce the basic educational beliefs on which the school's philosophy is written.

Campo's programs are driven by 23 student outcomes and based on a belief that an international school setting is an enriching and positive factor in the education of children who will live and work in a global society. The school's curriculum includes Advanced Placement and International Baccalaureate at the secondary level. Computer studies begin in kindergarten and continue through high school. There is an excellent physical education program that engages students in gymnastics, dance, ball skills and track and field.

Campo's physical education department recently hosted the first Caribbean Volleyball Tournament with participants from Costa Rica, Bolivia, Dominican Republic and other schools in the Caribbean area. A school psychologist directs a program of intervention for students

needing special help, both educationally and socially. Counselors at all levels are available for students and parents. Parents are kept well informed through regular reporting, conferences, a weekly newsletter (Campo News), and a program of parent forums on key instructional progress and issues (Parents Ask and Family Nights).

A comprehensive "English as a Second Language" program is well articulated with the other curriculum within the school. All elementary students have one period each day of Spanish. Spanish and French are offered at the secondary levels. A new middle school offers a program specifically designed to meet the needs of students from 12-14 years of age. Over 95 percent of the graduating classes enroll in college and the school offers a full range of placement and achievement tests (PSAT, SAT, ACT, AP). The school has a 650-seat auditorium with stage and orchestra pit that is well used by the Drama Program provided for Campo students and staff alike.

Campo is also a center for many English-speaking community functions. Art, music and cultural events are available for all students. Campo also has a chapter of the Junior and Senior Honor Society. Escuela Campo Alegre participates in the Merit Scholar program and the annual International Schools Model United Nations Assembly in The Hague, Holland. Cub and Boy Scouts, Brownies and Girl Scouts are popular as after school activities. A school-sponsored Activities Program offers a wide range of activities from a weekend adventure program at the secondary school to an elementary cooking class. The school is a member of the National Association of Independent Schools, the Association of South American Schools and the European Council of International Schools.

Colegio Internacional de Caracas has a large campus on a hilltop commanding a sweeping view of the valley with ample space for sports

activities, as well as special events for students and their parents. On campus a canteen serves full lunches or snacks, and supplies food and drink for special get-togethers. Present enrollment of CIC is about 550, in grades nursery through 12, the largest single group being North American. The balance of the students are from around 40 other countries. Students enjoy relatively small classes and a high degree of individual instruction.

Clubs and after school activities are available for all students varying with student interest and adult supervisor availability. Art, music, drama, cultural development and global awareness are stressed in the elementary school and supported with classroom instruction at almost every level. CIC has a chapter of the Junior and Senior National Honor Society and presently offers a program for gifted and talented students at the elementary level. This program will be extended in 1994-95 or earlier, although the Advanced Placement and International Baccalaureate programs already present challenging opportunities for the able students in the secondary school. The school also provides Resource Center services for children with mild learning disabilities, mild emotional handicaps, and attention deficit disorders. Tutoring services are also available at the Center through the Boost Program. The school participates in the National Merit Scholar program, the Close Up educational visit to Washington, and sponsors the yearly South American Model United Nations Conference attended by more than 200 students. CIC students also participate in the Model United Nations Assembly in The Hague, Holland. Over 95 percent of the graduating classes enroll in college, and the school offers a comprehensive guidance and counseling program, including the services of a psychologist. Achievement, college entrance and placements tests such as Metropolitan Achievement Tests, PSAT, SAT, and ACT are offered on campus, as are Advanced Placement

courses and the full International Baccalaureate Program.

Advanced programs are offered in English, French, Spanish, Italian, History, Math, and Science. Two modern media centers support the learning needs of the faculty and students. A laboratory and classroom-based comprehensive computer literacy program in the elementary school, and two computer laboratories in the secondary school, provide students access to these skills. CIC also offers summer school and summer day camp programs for students. A school-to-school program with a sister district in Bremerton, Washington, provides CIC faculty with opportunities to receive in-service and other professional development experiences.

Several other good, private schools in the Caracas area have been used by some North American families. However, none are accredited. The Washington Academy, located in Valle Arriba, offers bilingual education for kindergarten through eighth grade. The Jefferson Academy, also located in Valle Arriba, offers bilingual education for pre-kindergarten through sixth grade.

Caracas has many good, private nursery schools, some English speaking, some bilingual. A list can be obtained from the CLO coordinator. Neighborhood Spanish-speaking nurseries are numerous.

Other international community schools

Escuela Britanica offers kindergarten through grade six. The curriculum closely follows the British system. Uniforms are required. The education is excellent, but application must be made early.

Colegio Francia has a complete elementary school with instruction in French and Spanish. At the Colegio Humbolt, instruction is in German and Spanish for both elementary and high school grades.

Venezuelan Schools

There are numerous private elementary and secondary schools in

Caracas, many of which are Catholic.

Special Educational Opportunities

For Spanish-speaking students, college classes are available at several universities. Universidad Simon Bolivar is free but entrance is very difficult for foreigners. Universidad Andres Bello and Universidad Metropolitana are private and charge tuition. Another private university, IESA, the Institute of Higher Studies in Administration, offers post-graduate studies in business administration and management. Due to the general difficulty of transferring foreign credits to the U.S., many have chosen to audit classes. International House offers graduate degree work in English for M.E. degrees through Marymount College and is initiating a Masters degree program in Business.

The Audubon Society (La Sociedad Conservacionista Audubon de Venezuela), maintains an environmental reference library, holds meetings and has various excursions. The office is located in the Paseo las Mercedes shopping center. The Caracas Circulating Library maintains a collection of current best sellers in English, both fiction and nonfiction, as well as a children's library. It is open 3 days a week, 1 day being Saturday mornings. The cost is about \$5 to join and \$5 per month.

The Caracas Playhouse, an English-language theater group, produces plays and musicals with the purpose of developing amateur theater in Caracas. Previous experience is not required for participation.

Spanish and English instructions are available through the Centro Venezolano Americano. The CVA also has a lending library and sponsors a wide variety of cultural programs. Other languages may be studied through various institutions such as the Centro Venezolano Italiano and Alianza Francesa. English and Spanish language lessons are also offered through Instituto Cultural Venezolano Britanico.

The Venezuelan-American Association of University Women offers a biannual study group program that is open to nonmembers as well as members. Courses are offered in drawing, painting, sculpture, photography, calligraphy, interior design, batik, education (including Venezuelan Field Study), bridge, mini-lectures on countries of the world, world religions, shorthand and typing, Indians of Venezuela, music, languages, cooking, and physical fitness.

Classes in music, dance, physical fitness, arts and crafts, languages, and many other subjects are available at commercial institutions and from individuals.

Sports

Sports activities in the immediate Caracas area are limited, principally because of the lack of public facilities. There are few public swimming pools in Caracas. One of them, Parque Miranda, has swimming instructions in an olympic-size pool and offers swim team competition.

Clubs in Caracas are excellent, fully equipped and provide a wide range of facilities. Many are also very expensive. There are no public golf courses in Venezuela. There are also no public tennis courts, but at least one semi-public court exists and there is a tennis club that some Americans have joined.

Jogging is a popular sport here, particularly since the climate allows this activity year round; however, jogging is usually done in daylight hours at Parque del Este. The Hash House Harriers has a run twice monthly on Sunday afternoons in different neighborhoods of Caracas. Everyone does not run, and many people walk the route. Hiking is another popular activity. Excellent but steep trails lead up the sides of the Avila Range, and the varieties of flora are unbelievable. The plateaus offer opportunities for sports such as softball, volleyball, soccer, etc., and picnicking is also popular. The physically fit can hike to the top and view the Caribbean Sea and port

city of La Guaria on one side and on the other side have an airplane's view of Caracas. There is no charge for climbing the Avila and overnight camping is easily accommodated, however there are no facilities except for running water in some places.

Venezuela offers a range of challenges for every kind of fisherman. One can troll for monster marlin, tuna, wahoo, sailfish and other salt-water prizes along Venezuela's Caribbean coast, angle for trout in pristine Andean lakes or land peacock bass, catfish, and other freshwater game fish in the country's many rivers. The second major draw for any angler is the abundance and large size of fish in Venezuela's waters that have not been "fished out" as have many areas of the world that have long been popular for this sport. Side by side with offers for beach, jungle and Andean tours, one now finds that nearly all major travel and tourism agencies offer fishing packages for both salt and freshwater. A license is not required.

Hunting is not popular here and the rules and regulations are vague and unenforced. There is a hunting season, however, and all endangered species are off limits to hunters at all times. A hunting license is not required, however guns must be registered.

Spectator sports are as popular among Caraqueños of all ages as they are among Americans. Professional baseball leagues, often featuring major league American and Venezuelan players, have a full schedule of games after the U.S. season ends. The general level is that of a triple A league in the U.S. Soccer is followed by many Venezuelans. Some of the finest teams in the world tour here occasionally and are worth seeing. A major bullfight season is held annually in Caracas' Nuevo Circo with well-known bullfighters from Spain, Mexico, Venezuela, etc. Tickets are reasonably priced, but seldom advertised. Horseraces are held every Saturday and Sunday year round at a

superbly designed and equipped track. The spacious stands are nearly always filled. A large percentage of the city's residents bet the weekly "5 and 6" (Cinco y Seis) ticket (picking five or six winners out of the last six races). Bi-weekly night races are held.

Touring and Outdoor Activities

Caracas has several historical churches and museums, including the birthplace of Simon Bolivar, a museum of fine arts, a museum of natural history, a science museum, and a museum of contemporary art. There is also a lovely colonial museum, the Quinta Anauco, which features evening concerts during certain times of the year, and a unique and interesting Children's Museum. There are also some fine parks within the city. Strollers may enjoy Parque del Este or Parque Los Chorros, which is located at the base of the Avila, and offers a pleasant escape from the traffic and the noise. Parque del Este also has a small zoo and is a popular spot for early morning joggers. The suburb of El Hatillo on the outskirts of Caracas offers quaint colonial style shops, houses and restaurants. There are many shops in El Hatillo but one, Hannsi's, sells handicrafts from all over South America.

Beaches within a short drive from Caracas are crowded on weekends and unfortunately the water is polluted. For longer trips, the beach at Cata to the west of Caracas or Rio Chico to the east are popular on weekends. The islands in the Morrocoy National Park, 3-5 hours from Caracas by car, and then reachable only by boat, offer beautiful beaches and great snorkeling. Camping is allowed on these islands although there are no facilities. The islands of Los Roques, reachable only by air (30 minutes from Caracas), are beautiful and offer excellent snorkeling, too. Camping is allowed there also, but again, no facilities. Beaches in Venezuela are not like the beaches of Florida and California. They are generally very short in length and width and are not the

© Yann Arthus-Bertrand/Corbis. Reproduced by permission.

Church and museum in Maracaibo, Venezuela

type of beaches where one can take a nice long walk. However, some are beautiful and some have very crystal clear water.

There are several offshore islands that offer wonderful opportunities for snorkeling. Bonaire, one of the islands in the Netherland Antilles, is perhaps the best example. Scuba diving is also quite popular and there are certified diving instructors in Caracas who offer classes in English on a regular basis.

An interesting 1-day excursion from Caracas over winding but paved roads is to Colonia Tovar, a settlement of German immigrants about 40 miles from Caracas. The picturesque houses and cuisine remind one of the Bavarian Alps. Another pleasant day trip out of Caracas is to Los Teques where one can ride a narrow gauge train to El Encanto Park. When the train is operating, the trip affords lovely scenery and a chance to enjoy a picnic lunch at the end of the line. It is also near the Arte Murano glass factory, a favorite spot for buying Venetian style glass.

In the Andean region of Venezuela one can enjoy spectacular and beautiful scenery. The teleferico in Merida, when working, gives one a sweeping view of the mountains,

while the Hotel Los Frailes, once a monastery, offers charm and beauty. Popular activities in this area are mountain climbing, trout fishing, and horseback riding. On the opposite side of Venezuela is the tropical jungle in the State of Bolivar. Canaima is a small settlement in the jungle at the base of the spectacular falls of the Carrao River. This place of imposing beauty is a perfect trip for those who admire adventure and is accessible only by air. An added attraction is an aerial view of Angel Falls, highest in the world (3,312 feet). It was named for an American aviator, Jimmy Angel, who landed above them in 1937. It rivals the Grand Canyon in the U.S.

For birdwatchers and anyone interested in exploring the countryside, the local Audubon Society organizes outings regularly. The most interesting require a four-wheel drive vehicle and overnight camping.

Trips to nearby Caribbean islands are also popular. The Venezuelan island of Margarita combines the charm of old Spanish colonial forts and churches with some nice beaches. Curacao, Aruba, Bonaire, Barbados, Trinidad and Tobago are other interesting islands to visit. Trinidad is especially exciting during Carnival when the entire island closes down and "jumps up" for 4

days to the music of hundreds of steel bands.

For the really adventurous traveler, there are canoe trips to the base of Angel Falls that require a few days, trips into the interior to visit missionaries working among primitive Indians (which require special permission), flights over the Grand Sabana area near the Brazilian frontier, boat trips down the Orinoco from Puerto Ayacucho to Ciudad Bolívar, and camping on the llanos (plains).

Traveling in Venezuela is often disorganized. Planes often get overbooked and sometimes trips don't go as planned. The best approach to this is to arrive very early at the airport and to have lots of patience.

Many apartments have nice window boxes for plants, herbs or flowers. There are numerous nurseries in Caracas and the climate is excellent for gardening. Most plants flourish here. Orchids are especially popular and are the national flower.

Entertainment

Caracas enjoys a diversity of international cuisine with Argentine-style steak houses, Italian, Spanish, Chinese and French restaurants being the most popular. Some restaurants provide music and dinner dancing. Caracas is truly a city of spectacular restaurants. Caraqueños love to dine out and it shows in the atmosphere, ambiance and diversity of their restaurants. The city also has many night clubs, and private discotheques and jazz clubs are becoming increasingly popular. A woman should have a male escort to enter clubs in Caracas at night.

Modern movie theaters, including several drive-ins, are located throughout the city. The majority of films shown are American with Spanish subtitles, but French, Italian and Mexican movies are also presented. Venezuela does not yet have a highly developed feature length film industry but sophisticated "soap operas", aired during prime-time by local TV stations are avidly followed by many.

Sports fans can expect to see regular season major league baseball games weekly in addition to the playoffs and the World Series. Professional basketball and the Super Bowl have also aired here in the past.

Social Activities

Caracas is a cosmopolitan city, offering opportunities to get involved. The extent and direction of social activities depends largely on your initiative. There are a number of organizations to help newcomers get introduced.

Groups and activities within the American community include the Venezuelan-American Chamber of Commerce, Rotary Club International, Lions Club International, the Audubon Society, a hiking club, "Circulo Excursionistas" and scouting. The Centro Venezolano-Americano sponsors social and cultural events.

The Venezuelan-American Association of University Women (VAAUW) offers membership to university graduates only. Those who attended college for two years may join as associate members. However, their excellent and varied courses and many of their programs and activities are open to nonmembers.

The Children's Service League is a volunteer organization that works with children and young adults, raises money for hospitalized and handicapped children, and annually helps 20 institutions and hospitals. CSL activities include sewing workshops, a mini-bookstore, a bridge competition and a bowling league, as well as the design, preparation and sale of its annual collection of Christmas and note cards. The CSL holds a Christmas Bazaar at which these cards and handicrafts are sold.

The Newcomer's Club emphasizes welcoming you to Caracas with tips on how to adapt to its culture and social life. It is a good place to meet other newcomers who live in your own area.

Maracaibo

Maracaibo, the capital of Zulia State and Venezuela's second largest city (population was estimated at 1.9 million in 2000), is situated in the coastal lowlands, on the western shore of Lake Maracaibo. The lake, South America's largest, bounds the city on the east and south. The six-mile-long Rafael Urdaneta Bridge, which is the longest prestressed concrete span in the world, spans the narrow, northern neck of the lake and connects Maracaibo with the eastern shore. To the north, the lake opens into the Gulf of Venezuela and in the south, beyond the lake, rise the Andes.

Although 170 miles away, Pico Bolívar, the country's highest point, is visible from the city on a clear day. Called both the Bolívar Coast and Costa Oriental del Lago, this area is the center of Venezuela's petroleum industry. Scattered all along this coast and on the waters offshore are thousands of wells tapping the extensive deposits of the Maracaibo Basin, which provides 80 percent of the nation's oil.

Maracaibo was founded in 1571 and soon became an inland trading center. The city and the surrounding area underwent tremendous expansion following the discovery of oil in 1917. Production of Venezuela's three largest national oil companies is headquartered in the Maracaibo area. Directly across the lake from the city is El Tablazo, a huge petrochemical complex, and up the gulf coast on the Paraguaná Peninsula at Amuay is the world's largest oil refinery. Numerous petroleum-related companies, many of them U.S. firms, operate in and around Maracaibo.

Clustered around the port are the colonial-style buildings and narrow streets of the old city. This is the site of the Cathedral of Maracaibo and the Palacio de las Águilas, which serves as the seat of state government. Farther from the port, the architecture is more modern, with many multistory apartment and office buildings. Nearer the out-

skirts of the city, prosperity is less obvious, and modern buildings give way to brick and corrugated tin shacks.

The U.S. consular district of Maracaibo serves the coastal states of Zulia and Falcon and the Andean states of Táchira, Mérida, and Trujillo. An estimated 4,000 Americans live in this district—mostly in Maracaibo and across the lake on the Bolívar Coast in the oil towns of Cabimas, Las Morochas, Tia Juana, and Lagunillas. Because of the long history of American business participation in the area, Americans are generally well regarded, and many mixed-nationality families live here.

Maracaibo is hot and humid throughout the year, although winter months are slightly cooler. Daytime temperatures are usually 90°F or above, with 75 percent humidity. Annual rainfall is about 20 inches. The moderate rainy season begins in May, with rain becoming more frequent toward November.

Schools for Foreigners

Schooling in English is available from pre-kindergarten to 12th grade at Escuela Bella Vista, which is accredited by the Southern Association of Colleges and Schools. Some 30 nationalities are represented among the approximately 300 students; most are American and Venezuelan. There are approximately 40 full-time teachers, half of which are American. Although academic classes are conducted in English, Spanish-language courses are required at all grade levels. The quality of teaching is good, and students in the upper grades can choose from a variety of electives.

Bella Vista has good facilities, including an air-conditioned 14,500-volume library, cafeteria, two gymnasiums, science lab, computer lab, covered play area, a ball field, and tennis courts. Extracurricular activities include instrumental music, drama, school newspaper, yearbook, computers, gymnastics, soccer, volleyball, basketball, softball, track and field, tennis, and field trips. The school has neither special facilities

for teaching children with learning disabilities, nor any programs for gifted students.

The school year runs from late August to mid-June. Venezuelan holidays are observed. Bella Vista is located at Calle 67, entre Avenue 3D y 3E, La Lago, Maracaibo. Mail can be addressed to Apartado 290, Maracaibo, Venezuela.

Special educational opportunities are offered at the University of Zulia, where those competent in Spanish can audit courses. Medicine, dentistry, law, engineering, and the humanities are taught at the university.

El Centro de Bellas Artes, established by Venezuelans and foreigners interested in fine arts, sponsors moderately priced classes and individual instruction in painting, sculpture, ceramics, leather work, and metalwork. The Spanish-speaking instructors are competent. Fees are moderate. Academia de Música, run by the State of Zulia, offers instruction in voice and various musical instruments. Private music and ballet instruction are also available.

Recreation

Boating and other water sports on Lake Maracaibo are available, but limited by the lake's pollution. The majority of beaches in the immediate area are neither attractive nor well maintained. Good beaches are several hours away. Several professional sports stadiums host soccer and baseball, which are very popular. During the annual Feria de La Chinita, bullfights are presented in the Plaza de Toros.

Recreational facilities for children and teenagers are virtually nonexistent outside of private clubs, causing some problems for families. Most sports activities take place during evening hours when it is slightly cooler. A public park, Paseo del Lago, has been constructed on the lake shore, and facilities there include a jogging course, baseball diamonds, soccer fields, and children's play equipment. The popular

Paseo often draws Maracuchos for evening recreation, but upkeep of the facilities is inadequate.

Maracaibo has only limited hunting opportunities; most hunting is for fowl and takes place on privately owned haciendas. Opportunities for fishing are more plentiful. This sport is possible in some parts of the lake, as well as in the Gulf of Venezuela. In the Andes, trout fishing is available.

An informal group of English-speaking men meet at Escuela Bella Vista for mixed sports once a week, alternating among basketball, soccer, and other games. Most other sports activities require membership in clubs, which are expensive. Among these private clubs are Los Andes Yacht Club, Maracaibo Country Club, Club Náutico, and the German Club; many English-speaking expatriates belong to the latter.

The nearest place of interest outside of town is the Río Limón area, about 30 miles north of the city. From there, the visitor may take a boat trip up-river to see the Paraguana Indian villages built on stilts over the water. A bridge crosses the river for car trips to the Indian villages of Sinamaica and Paraguaipoa farther up the coast from Río Limón. A modest beach resort, Caimara Chico (Balneario) on the Gulf of Venezuela, is near Sinamaica.

A pleasant change of scenery and climate is possible by visiting the Andean villages of La Puerta and Timotes, about 160 miles (three to four hours by car) from Maracaibo. Many Maracuchos have vacation cabins there, and some small inns cater to tourists. Valera and Mérida, farther down the Andean chain, are the nearest Andean cities accessible by air (about 45 minutes flying time). Alternatively, Mérida, a charming university town, is about a nine-hour drive, and from there one can travel into the Andes.

Aruba, a popular resort island, is less than an hour's flight from Maracaibo, and Caracas is about one hour by air or nine hours by car.

Entertainment

Maracaibo has many movie theaters, but few of them show first-run films. American movies are popular and are usually screened with Spanish subtitles. British, French, and Latin American films are also shown. Prices are reasonable.

Occasionally, it is possible to attend live performances presented by touring Venezuelan and international groups. Additionally, the binational center presents a full cultural program during the year. The Maracaibo Players, an amateur English-speaking dramatic group, stages two annual plays. The Maracaibo Symphony Orchestra, with several American members, gives reasonably priced Thursday evening concerts at Teatro Bellas Artes. Ticket prices are reasonable.

Maracaibo has several good restaurants. Steak is popular with Venezuelan diners, and this popularity is reflected in the number of good steak houses in town. Traditional Venezuelan cuisine—or *criollo*—is featured in several restaurants. The city also has a variety of Chinese, Italian, Spanish, and French dining spots. Numerous soda fountains and tea shops serve American-style sandwiches and ice cream. There also are a few American-style fast food restaurants.

For those interested in history, Maracaibo offers the Urdaneta Museum. This museum chronicles the history of Spanish settlement in the Maracaibo area.

The ability to communicate in Spanish is essential to a full social life. American men sometimes join the local Rotary, Lions, Jaycees, Toastmasters, or Masonic organizations; women join various church-connected groups or the Maracaibo Women's Tennis Club or Ladies Club. Maracaibo has an active North American Association.

Special Information

Maracaibo is located only about 50 miles from the Colombian border. The Guajira Peninsula, shared by the two countries, is north of Mara-

caibo, and this area (particularly the Colombian side) is known as a drug-trafficking center where law enforcement resources are extremely limited. Border areas south and southwest of Maracaibo are lightly populated, largely wilderness regions from which come sporadic reports of Colombian guerrilla activity and kidnappings. Travel to any border area should be carefully considered.

OTHER CITIES

BARQUISIMETO, established in 1552, a few years before the founding of Valencia, is the capital of Lara State in northwestern Venezuela. It is situated at an altitude of 1,856 feet at the northern end of the Cordillera Mérida, 170 miles southwest of Caracas. Barquisimeto is situated in a productive agricultural area. Cacao, sugarcane, sisal, and coffee are grown near the city. Several industries in the city produce cement, twine, and food products. A 230-foot tower built in 1952 to commemorate the city's 400th anniversary is a well-known landmark. Barquisimeto is the home of Central-Western University. In 2000, the city had an estimated population of 914,000.

CIUDAD BOLÍVAR is the commercial hub of the plains (*llanos*) region of the east. It lies on the south bank of the Orinoco River, 280 miles southeast of Caracas. The city dates to 1764, when it was called San Tomás de la Nueva Guayana de la Angostura. Simón Bolívar, the South American liberator, declared Gran Colombia's independence from Spain here in 1819; the city was renamed in 1846 in his honor. Ciudad Bolívar is a river port and the principal docking area on the Orinoco. Exports include gold, diamonds, cattle, horses, skins, hides, timber, and agricultural products. Fishing and tourism also are important in Ciudad Bolívar; the late June catches of the *sapoara* fish are popular, and gold trinkets made here—especially charms—are considered the best in Venezuela. The

city is home to the Jesus Soto Museum, which features works by Venezuelan and European artists. This state capital has an estimated population of 308,000. The planned city of Ciudad Guayana (or Santo Tomé de Guayana) is situated 60 miles to the east at the juncture of the Orinoco and Caroní rivers. It has a population of about 692,000.

The small "Black Forest" village of **COLONIA TOVAR** lies in the mountains 40 miles west of Caracas. Known for its German sausage, flowers, and jams, the town becomes congested with visitors from Caracas on Sundays. German immigrants founded Colonia Tovar in 1843; it remained virtually isolated until modern roads were built in the vicinity in the 1940s.

CUMANÁ is South America's oldest Hispanic community, located 200 miles east of Caracas on the main highway. Dating to 1521, the city of approximately 208,115 people (2000 est.) is known for Fort Antonio and other colonial-era churches and houses. Beset by earthquakes, especially the massive devastations of 1766 and 1929, Cumaná lies near large salt beds and sandy beaches. Sardine canning supports many here. Cumaná is nestled in a rich agricultural area. Sugarcane, beans, tobacco, coffee, cacao, and fruits are grown here. The city is the home of Eastern University.

MARACAY, with a population of 460,000 in 2000, is the capital of Aragua State in the north, 50 miles southwest of Caracas. The center of Venezuela's cattle industry, it was, during the early years of this century, headquarters for the military government which ruled the country. The city is home to many industries which produce textiles, rayon, sugar, rubber, paper, cement, and food stuffs. Maracay is linked to Caracas via the Pan-American Highway.

MÉRIDA is the capital of Mérida State, 325 miles southwest of Caracas. Situated deep in the Cordillera Mérida Mountains at an altitude of

5,400 feet, this is an agricultural hub for neighboring hinterlands producing coffee, tobacco, and vegetable oils. Mérida is the highest city in Venezuela. The “Five White Eagles,” a local name for looming mountain peaks, provide a stunning backdrop for Mérida’s 21 parks, most notably the Park of the Five Republics. This park has the world’s first Simón Bolívar monument (erected in 1842) and contains soil from each of the countries he freed. Recreational activities in the area include mountaineering and fishing. Andean tourists enjoy Mérida’s cathedral, zoo, colonial museum, university campus, and unusual cable car. The cable car is the highest and longest in the world, climbing to above 15,000 feet. There are several hotels here. Mérida is known for its candied fruits and *ruanas* (Andean poncho-like woolen cloaks). Mérida’s current population is approximately 230,000 (2000 est.).

SAN CRISTÓBAL, founded in 1561, is the capital of Tachira State in western Venezuela. A mountain city situated at the end of the Cordillera Mérida, it suffered great human loss and property damage in an earthquake which shook that part of the country in 1875. The 2000 population was estimated at 329,000. San Cristóbal is a commercial center for the cassava, corn, sugarcane, coffee, and pineapples grown near the city. The city’s industries include factories which produce textiles, leather goods, shoes, cement, and cigarettes.

VALENCIA, the capital of Carabobo State in northern Venezuela, is one of the principal industrial and transportation centers in the country. It is situated at the western end of Lake Valencia, approximately 80 miles west of the capital. The city dates to the mid-16th century. It is an important producer of automobiles and parts, pharmaceuticals, food and dairy products, garments, cement, furniture, rubber goods, fertilizers, paper, textiles, soap, and vegetable oils. Colegio Internacional de Carabobo, offering a U.S. curriculum for pre-kindergarten through

grade 12, is located five miles from the center of Valencia. The school has two computer labs, a science lab, an auditorium, cafeteria, recreational area, athletic field, and a library with nearly 13,500 volumes. Extracurricular activities include drama, dance, yearbook, literary magazine, field trips, and various trips. The school has approximately 25 full-time and 10 part-time teachers. Half of those teachers were American. Of the school’s approximately 260 students, about 80 are American. Further information may be obtained by writing to the school at Apartado 103, Valencia. Valencia’s population was estimated at 832,000 in 2000.

COUNTRY PROFILE

Geography and Climate

Venezuela is located on the north coast of South America, and covers 352,150 square miles—about the size of Texas and Oklahoma combined. Caracas’ altitude is about 2,700 feet above sea level, giving the city a permanent springtime climate.

The Orinoco River and the various mountain ranges, all branches of the Andes chain, divide the country into four distinct regions:

South of the Orinoco River are the wild and largely unexplored Guyana Highlands, rich in mineral resources and in developed and potential hydroelectric power. They are characterized by rugged relief and mesa-like formations. The climate ranges from temperate in the Gran Sabana to tropical on the fringes of the plateau.

North of the Orinoco are the “llanos” or plains. During the dry season (December-April) the entire area is almost desert-like. But during the rainy season, flooding rivers make the area muddy and practically impassable.

Spurs of the Andes Mountains run along each side of the Maracaibo basin and part of the seacoast. The bulk of Venezuela’s population traditionally has lived in these highlands attracted by the temperate weather and fertile soil.

A tropical coastal plain stretches along most of Venezuela’s 1,750-mile coastline. This narrow strip of land between mountains and sea widens in the west to form the Maracaibo basin. The climate is uniformly hot and humid.

Population

Venezuela’s population in 2000 was 18,105,000. Over 38 percent of the population was under 15 years of age, and 66 percent was under 30. Rapid population growth and migration from rural areas have produced densely populated cities containing over 84 percent of the population, while vast areas of the interior are sparsely populated.

Venezuela proudly regards itself as being a melting pot. About 20 percent of the population are Caucasian, 9 percent are black, 2 percent are Indian, and the remaining 69 percent are mixed race (mestizo).

Caracas is especially cosmopolitan. Around a quarter of its residents are immigrants and their descendants from Spain, Portugal, and Italy, most of whom came after the World War II. Smaller numbers of immigrants from other European countries also play an important role in the city’s commercial and professional life. In the 1970s, the booming Venezuelan economy attracted large numbers of people from the other Caribbean and Andean countries. There are about 24,000 Americans in Venezuela, many of whom live in Caracas.

Public Institutions

Discovered by Columbus in 1498 on his third voyage to the New World, Venezuela was first explored by Alonso de Ojeda in 1499. According to legend, Ojeda named the country

Venezuela (Little Venice) after seeing the Indian houses on stilts in Lake Maracaibo. It was one of the first New World colonies to revolt against Spain (1810), but it was not until 1821 that independence was achieved. Francisco de Miranda began the task. It was completed by the great hero and statesman of Latin America, Simon Bolivar, Venezuela's national hero and native son.

Venezuela, together with what are now Colombia, Panama, and Ecuador, was part of the Union Gran Colombiana until 1830, when it withdrew and began its own existence as a sovereign state.

Until as recently as 1958, Venezuela's political history as an independent nation could be characterized as rule by a series of military dictators.

During General Juan Vicente Gomez' rule (1908-35), oil was discovered in the Maracaibo Basin, and Venezuela changed from a poor, largely agrarian country to one of the richest nations in Latin America.

The modern political forces set in motion by the new oil economy produced a brief experiment in democracy 1945-48, a military coup followed by a 10-year period of dictatorship under General Marcos Perez Jimenez, and finally the restoration of democracy in 1958. Former Presidents are Romulo Betancourt from the Accion Democratica (AD) Social Democratic party 1959-64; Raul Leoni (AD) 1964-69; Rafael Caldera from the Social Christian COPEI party 1969-74; Carlos Andres Perez (AD) 1974-79; Luis Herrera Campins (COPEI) 1979-84; Jaime Lusinchi (AD) 1984-89; Carlos Andres Perez (AD) 1989-93. Perez was removed peacefully after he was indicted by the Supreme Court. Ramon Velasquez became interim president until February 1994, when Rafael Caldera was once again inaugurated. President Hugo Chavez Frias came into office in February 1999.

Venezuela is a representative democracy. The constitution of 1999 provides for the direct election of the President every 6 years. The President is chief of state and head of the national executive branch, and he or she appoints the Vice-President. The President is assisted by Cabinet Members with the rank of Minister. State governors, legislators and municipal councilmen are elected locally.

The legislative branch consists of a unicameral National Assembly. The 165 representatives are elected by popular vote to serve 5-year terms.

The judicial branch consists of a Supreme Court and other courts on all different levels of government. The Republic of Venezuela is composed of 23 states and the Federal District that includes much of the Caracas metropolitan area.

Arts, Science, and Education

Venezuelan cultural life is centered in Caracas, a reflection of the capital's overwhelming political and financial influence. A quarter of the country's population lives in Caracas, a dramatic shift from the situation at the end of World War II when the city's population was about 250,000. In response to the petroleum boom and this population shift, numerous cultural and artistic institutions have been established. The luxurious Teresa Carreno performing arts complex opened in 1983 and is one of the most architecturally dramatic in the world. The Venezuelan Government has made a strong commitment to fostering culture, education, and the arts, backing these efforts with considerable state funding.

The National Cultural Council (CONAC), the major government funding source, actively promotes the arts and culture outside of Caracas as do individual state arts councils. Regional development councils, large state industries and private foundations also contribute

to the arts. Foreign embassies sponsor performing artists on tour and the U.S.-Venezuelan binational centers also promote cultural and artistic activities.

Music is perhaps the best developed of Venezuela's cultural attractions. There are four major orchestras in Caracas alone. The National Symphony gives regular concerts at the Teresa Carreno Theater and often has visiting conductors and soloists. World-renowned musicians have performed with the National Symphony. The newer Municipal Orchestra was established to accompany the Municipal Opera and a variety of ballet and dance groups.

The Philharmonic Orchestra also has a regular concert season. Additionally, there is an active and excellent youth orchestra with several other youth orchestras around the country that nurture provincial talent and send their best students to Caracas for membership in the national youth orchestra. Also, choral music is pervasive with many groups each devoted to a particular choral speciality (baroque, modern, etc.). Popular music—jazz and rock—is popular in Venezuela, and occasionally well-known entertainers come to Caracas. Most recently, Kenny G., Guns N' Roses, Robert Plant, and the B-52's have performed here. However, salsa and merengue remain the most popular among Venezuelans.

The Caracas Metropolitan Opera has a regular season in June and July, performing the standard repertoire with a mixture of artists from their own opera school as well as from Europe and the U.S. The opera school also gives workshop productions throughout the year, and independent entrepreneurs sponsor ad hoc performances.

Ballet has received enormous stature and impetus with the great success of the now world-renowned New World Ballet of Caracas which has two regular seasons, spring and fall. Many experimental groups are being spawned, founded by Venezu-

elans trained abroad. There are well-established ballet schools in Caracas as well as major cities of the interior, which give recitals. Many accept non-Venezuelan students. Baryshnikov has performed in Caracas as recently as 1993. Caracas is an active theater city with several plays being performed at any given time. Additionally, there are experimental groups, University players, children's theater, a black theater group near Caracas (Teatro Negro de Barlovento), the well-established Caracas Players who perform in English, and a venerable tradition of puppetry. Caracas has an annual theater festival, and is also the host of a biennial international theater festival. The International Theater Institute (ITI) has an office in Caracas.

The Venezuelan Institute of Folklore sponsors traditional festivals, regional fairs and dance groups in an effort to foster and preserve traditional Venezuelan culture. Such festival and other activities are often associated with local saints' days. For example, a popular dance known as Los Diablos Danzantes de Yare (the Dancing Devils of Yare) is performed on the feast of Corpus Christi. The village is approximately 50 miles from Caracas and the event draws a considerable crowd from the capital. Although this festival represents African influence on Venezuela, other festivals reflect the dominant Spanish influence on the country's folklore.

Private sector scientific activity is generally limited to instruction and some research, primarily in the social sciences. However, the Government's National Council for Scientific and Technological Investigations (CONICIT) plays a major role in developing science and technology in Venezuela. A bilateral agreement in science and technology between the U.S. and Venezuela provides the framework for mutually advantageous cooperative endeavors by our two countries in this field.

The arts flourish in Venezuela. The capital alone has three major muse-

ums: one devoted to Venezuelan painters, another to contemporary art beginning in the late 19th century and the third to fine arts with representations of all periods and all countries. Art galleries dot the city and are numerous, some with international connections. Provincial capitals also support local art museums. Venezuela's internationally known artists include Jesus Soto, Carlos Cruz, Hector Poleo, Alejandro Otero and his wife, Mercedes Pardo, and Cornelis Zitman. Art shows and auctions sponsored by such public service organizations as the Venezuelan American Association of University Women, the North American Association and Hadassah as fund-raising events, are very well attended.

The Venezuelan education system currently finds itself in a state of crisis. Educational planning was based on the premise of ever-increasing oil wealth, although petroleum revenues have, in fact, decreased in recent years. The oil boom's legacy, therefore, is an educational system that is overextended and underfunded. Yet the government remains committed to the notion that every citizen is entitled to a free education. The result is a student population that has increased more than seven times since 1958, including a university population that has risen more than 30 times in this period, and a Ministry of Education budget that has increased more than two-fold, yet is still considered inadequate.

There have been significant gains since the 1950s as a result of the government's policy of "Massification" of education. The adult literacy rate, for example, was 91% in 1995. In 1950, there were only four universities in Venezuela; today there are over 90 institutions of higher education. In 1958, there were 853,683 students in the entire system; today there are over 6 million.

The issue today in Venezuela is not quantity, but quality. The Ministry of Education has one of the largest budgets of any government depart-

ment and its efforts now lie in adapting the curriculum to the demands of an increasingly technological society, in expanding compulsory education, and in upgrading teacher qualifications. However, the current financial difficulties and a demographic bulge (75 percent of the population is under 35 years of age) are likely to cause some dissatisfaction in the future.

Commerce and Industry

Venezuela is one of the wealthier nations in the hemisphere. In 1992, its GDP, measured at the official exchange rate, was \$146.2 billion (2000 est.), or \$6,200 per capita. The Government dominates the economy; State companies control the petroleum, minerals and basic industries. However, in 1989, an economic adjustment program was started in order to provide Venezuela with a market-oriented, diversified, and export-competitive economy.

Petroleum is and has been the cornerstone of the Venezuelan economy for over 50 years. The petroleum sector dominates the economy, accounting for roughly a third of GDP, around 80% of export earnings, and more than half of government operating revenues in 2000. A strong rebound in international oil prices fueled the recovery from the steep recession in 1999. Nevertheless, a weak nonoil sector and capital flight undercut the recovery. Venezuela is the fourth-leading supplier of imported crude and refined petroleum products to the U.S. This takes into account crude oil and refined products, as well as indirect imports via Caribbean refineries. Venezuela is one of the founding members of the Organization of Petroleum Exporting Countries (OPEC). Venezuela's huge oil reserves will keep it a major oil producer for at least the next hundred years.

Venezuela's total exports in 2000 were \$32.8 billion. Its most important nonpetroleum exports include

aluminum, steel, iron ore, petrochemicals, seafood, cement, coffee, cacao, and fruit. More than half of Venezuela's exports are to the U.S. It imported \$14.7 billion worth of merchandise in 2000. Principal imports include machinery, transportation equipment, semi-manufactured goods and agricultural commodities. The U.S. supplies 53 percent of all imports.

In contrast to the highly concentrated pattern of Venezuela's exports, the internal economy is quite diversified. Hundreds of small- and medium-sized industries provide many of the products needed by a growing local market for consumer goods. In the late 1950s and early 1960s, Venezuela encouraged foreign and domestic investment in the automobile, tire, and food production industries to reduce imports of consumer goods. During the boom years of the 1970s, Venezuela allowed more imports to satisfy growing domestic demand, while restricting foreign investment in line with general Andean Pact policy. Recently, however, Venezuela has liberalized foreign investment rules, and the Government has embarked on an ambitious privatization program.

Transportation

Local

Many consider a car to be essential in Caracas, although taxis and por puestos are plentiful. Traffic is usually heavy both during the week and on weekends leaving the city. Parking can be very difficult, particularly in older sections, but parking garages exist in many areas of the city. Bicycles and motorbikes are not safe due to the steep hills and heavy traffic. Most apartment buildings provide lockable parking for their tenants. Traffic moves on the right side of the road.

Public transportation in Caracas consists of buses, taxis, collective taxis (por puestos) and the clean and modern Metro system. All are overcrowded during morning, noon and evening rush hours. Buses are

sometimes used by Americans, but they are slow and not always clean, comfortable or safe. Por puestos, which are cheap and travel fixed routes, are quite dependable.

The Metro system is clean and efficient though the network has not yet been fully completed. It runs through most major parts of town but service is not available to a few of the better parts of Caracas.

Taxis can be found on most main streets although they are scarce during rush hours and late at night. Several taxi companies have dispatcher service. Fares are currently inexpensive compared to the rates in major U.S. cities. There is a minimum charge and tips are not generally expected, although tipping is becoming more expected than previously. Prices increase with the lateness of the hour, the holiday seasons and out-of-town destinations. Take a map along, since many drivers are unfamiliar with the city.

International and Regional

The primary highway system is good, but often poorly marked, particularly in residential areas of cities. All major routes and connecting roads are paved. Mountain roads and some main roads suffer from landslides and washouts during the rainy season. Gas stations and garages can be found throughout the country.

All commercial flights, both domestic and international, use Maiquetia airport, about 15 miles from Caracas. American Airlines has daily flights to the U.S.—through Miami, San Juan and JFK in New York. United has daily flights—through Miami and New York. Two Venezuelan airlines, Avensa and Viasa, also have daily flights to the U.S.

Two national airlines, Avensa and Linea Aeropostal Venezolana (LAV), serve the principal cities of the country and many outlying areas not accessible by road. Both airlines have jet service between Caracas and the main cities of Venezuela.

Many carriers from Central and South American countries fly into Caracas, making travel to these countries relatively easy. There are also airlines from the United Kingdom, Spain, Germany and Holland that fly into Caracas regularly.

Travel to some of the Caribbean islands may be complicated because of limited flight schedules.

Reservations to and from the U.S., particularly during the summer, Christmas and Easter seasons, are difficult to obtain on short notice. Personnel planning on arriving during these periods should request reservations well in advance.

Communications

Telecommunications

Local telephone service is relatively reliable when the phone lines are working; however, some people have problems with the phone lines going totally dead for weeks and sometimes even months. Long-distance calls within Venezuela may be dialed directly. Some sections of Caracas also have direct dialing to the U.S. and such calls take little time. If it is necessary to go through the long-distance operator, delays may be expected during peak periods. AT&T and MCI calling cards can be used in Caracas to call the U.S. direct, and collect calls can be made as well. The American company, GTE, acquired a controlling interest in the Venezuelan phone company in 1992. Service has improved dramatically and is expected to continue to do so.

Radio-telegraph service between the U.S. and Venezuela is very good. Local telegrams within Venezuela, however, are unreliable and sometimes slower than regular mail.

Radio and TV

Caracas has a variety of TV programs in Spanish and English. There are satellite dishes on many of the buildings that capture HBO, Showtime, USA, Disney and news channels such as CNN. Cable is also available from two cable TV compa-

nies in Caracas at a cost comparable to the same service in the U.S. The Super Bowl, World Series, U.S. Open, and other major American sporting events are telecast here. Spanish soap operas are popular here along with game shows and sitcoms. Some American series are dubbed in Spanish.

Radio stations in Caracas are similar to those in the U.S. There are stations broadcasting Latin American music, U.S. rock, jazz and classical, in the same broadcast bands (FM and AM) as in the U.S.

Newspapers, Magazines, and Technical Journals

Caracas has a lively and competitive press with seven daily newspapers. There are three major papers: conservative, business-orientated El Universal; center-left El Nacional, and centrist El Diario de Caracas, which feature in-depth coverage of Caracas and foreign news. Caracas also has an English-language newspaper, The Daily Journal, which publishes opinions of well-known U.S. columnists and uses wire services as its principal source of news. There are also two good daily financial newspapers. In addition, The Miami Herald and the The Wall Street Journal can be purchased at Caracas newsstands a day or two late, or received via mail subscriptions. Some 20 magazines are published in Venezuela. Among the more prominent news magazines are Bohemia, Zeta, Autentico, Momento, and Elite, Numero, Veneconomia and Venezuelan Economic Review are good sources of local economic news.

Health and Medicine

Medical Facilities

Caracas has many highly respected general practitioners and specialists of all types, many of whom have had U.S. training and speak English fluently. There are several clinics organized by groups of doctors that include facilities similar to well-equipped hospitals in the U.S. The

quality of nursing care is generally below U.S. standards.

Caracas also has many U.S.-trained dentists, and many dental offices measure up to a great degree to the standards in the U.S., although some Americans have encountered problems. The cost of dental work in Caracas is generally lower than in the U.S.

Eye examinations by U.S.-trained specialists are available at reasonable prices, as are lenses and frames for glasses.

Selected pharmacies are open 24 hours daily on a rotational basis for use in case of emergencies. The schedule is printed in newspapers.

Community Health

Since 1936, a national health program has made Venezuela the largest relatively malaria-free tropical area in the world, although some resistant strains have shown up in the southern and eastern parts of the country. Many other diseases, including rabies, once endemic to the country, have been controlled.

Although health standards among the upper- and middle-classes are good, overall health conditions suffer from poor sanitation in the shack communities that surround the cities. Infectious hepatitis, amebiasis, and other intestinal problems, such as diarrhea caused by virus, bacteria or parasites, are health problems that may affect Americans. Gastroenteritis is one of the principal public health problems in Venezuela. Dengue fever, spread by mosquitos, is a rapidly expanding disease in most tropical areas. Individuals are advised to wear protective clothing and use insect repellent.

The climate in Caracas favors some allergy sufferers. However, the altitude, climate, and prevalence of tropical pollens during all seasons aggravate asthma and hay fever conditions. Sinus problems may also be aggravated. The frequency of respiratory infections such as colds is similar to that in the U.S.

Preventive Measures

The yellow immunization card is normally not checked when entering the country, but yellow fever vaccination is required for entry into many of the surrounding countries and islands. Because the vaccine is inconvenient to obtain locally, it is essential that visitors be vaccinated before arriving. Typhoid and tetanus immunizations are recommended. Immunizations against cholera are considered unnecessary. Gamma globulin has reduced the incidence of hepatitis A and personnel should take this injection every 3-6 months. Malaria is a problem in only a few areas. Mefloquine (lariam) or doxycycline is the recommended prophylaxis against malaria. The incidence of polio is similar to that of the U.S.

Sunburns are a common problem due to the close proximity of the equator, and you should use a good sunscreen to protect your skin. Sunscreens and suntan products are available in local pharmacies.

The city's faulty water pumping system has resulted in intermittent interruptions of the water supply in parts of the city. Tap water is not safe to drink and should be boiled before consumption. Nonfluoridated bottled water is available, and most apartments have bottled water delivered.

Caution should be used in eating tossed salads, slaws, raw or rare meat, and other possible sources of parasites. Cooking, boiling, or peeling is recommended. It is recommended not to eat raw seafood in the smaller towns outside Caracas.

NOTES FOR TRAVELERS

Caracas has many flights from the U.S. arriving daily. United Airlines has daily flights from New York and Miami. American Airlines has daily flights from New York, Miami and San Juan. Viasa, a Venezuelan airline has daily flights from New

York, Miami, Houston and San Juan. Avensa, another Venezuelan airline has daily flights from New York and Miami, and Aeropostal has a daily flight from Orlando.

A valid passport and a visa or tourist card are required. Tourist cards are issued on flights from the U.S. to Venezuela for persons staying less than ninety days. For current information concerning entry, tax, and customs requirements for Venezuela, travelers may contact the Venezuelan Embassy at 1099 30th St. N.W., Washington D.C. 20007, tel: (202) 342-2214, Internet: <http://www.embavenez-us.org>. Travelers may also contact the Venezuelan consulates in New York, Miami, Chicago, New Orleans, Boston, Houston, San Francisco or San Juan.

U.S. citizens living in or visiting Venezuela are strongly encouraged to register at the consular section of the U.S. Embassy in Caracas or the Consular Agency in Maracaibo and obtain updated information on travel and security within Venezuela. The U.S. Embassy is located at Calle Suapure and Calle F, Colinas de Valle Arriba, Caracas. The Embassy is open from 8:00 a.m. to 5:00 p.m., Monday-Friday, telephone (011)(58)(212) 975-6411. In case of an after-hours emergency, callers should dial (011)(58)(212) 975-9821.

Cross-border violence occurs frequently in remote areas along the Colombian border in Zulia, Tachira, Apure and Amazonas states. U.S. citizens should consult the U.S. Embassy if they plan to visit these areas. Kidnapping, smuggling, and drug trafficking are common along the border between Venezuela and Colombia.

Most crime is economically motivated. Pickpockets concentrate in and around crowded bus and subway stations, along with the area around "Parque Simon Bolivar" near the "Capitolio" area in downtown Caracas. There have been cases of theft from hotel rooms and safe deposit boxes. The "barrios"

(the poor neighborhoods that cover the hills around Caracas) and isolated urban parks, such as "El Calvario" in the "El Silencio" area of Caracas, can be very dangerous. Most criminals are armed with guns or knives, and will use force. Theft of unattended valuables on the beach and from rental cars parked in isolated areas or on city streets is common. A guarded garage is not always a guarantee against theft. Travelers are advised not to leave valuables or belongings in open view even in locked vehicles. There have been incidents on Margarita Island where tourists have been targeted for robbery and theft.

Armed robberies are common in urban and tourist areas and travelers should exercise caution in displaying money and valuables. Also, four-wheel drive vehicles have been targeted in several recent carjackings.

Sporadic political demonstrations occur in urban centers. These tend to focus primarily on or near university campuses or secondary schools, and sometimes turn violent. Most tourist destinations, however, remain unaffected. The number and intensity of demonstrations have fluctuated widely. Merida, a major tourist destination in the Andes, is the scene of frequent student demonstrations.

Travelers may keep informed of local developments by following the local press (including "The Daily Journal," an English-language newspaper), radio and TV, and by consulting their local hosts, including U.S. and Venezuelan business contacts, hotels, tour guides, and travel organizers for current information on demonstrations, the purpose and location of which are often announced in advance.

U.S. citizens visiting certain areas along the border with Colombia may be subject to search and seizure. For further information regarding travel to these areas, contact the U.S. Embassy in Caracas.

A number of U.S. citizens have reported that Venezuelan officials at airports, immigration offices, and police stations have demanded bribes. U.S. citizens should report immediately to the U.S. Embassy any such demand.

U.S. citizens who do not have Venezuelan cedulas (national identity cards) must carry their passports with them at all times. Photocopies of passports prove valuable in facilitating their replacement if lost or stolen.

All pets entering Venezuela require a health certificate and a rabies certificate, issued by a veterinarian within the last 12 months, certifying that the animal is free from infections or contagious diseases, including rabies. For pets entering from the U.S., these certificates must be accompanied by a letter from the U.S. Department of Agriculture, certifying that the person signing the health certificate is a veterinarian. A Venezuelan consul must stamp and sign the health certificate and rabies certificate (and letter, if applicable). These documents must accompany the pet when shipped. Inquiries should be directed to the Venezuelan Embassy in Washington, D.C. Pets must not arrive as cargo; they must accompany the owner.

An exit permit is necessary to take a pet out of Venezuela. It is obtained from the Venezuelan Ministry of Agriculture. A rabies vaccine certificate and health certificate must be obtained from a veterinarian and these certificates must then be taken to the Ministry of Agriculture to obtain the exit permit. This must be done 15 days before actual departure. Pets must leave accompanied.

The basic Venezuelan currency unit is the Bolivar (abbreviated "Bs.") and is divided into 100 centimos. The bolivar is widely believed to be overvalued by as much as 50%.

Foreign exchange transactions must take place through commercial banks or exchange houses at the official rate. Hotels and banks often

restrict transactions to their clients only. Money exchange by tourists is most easily arranged at "casas de cambio" (exchange houses). Credit cards are accepted at most upscale tourist establishments. Visa, MasterCard and American Express have representatives in Venezuela.

Bills are printed in denominations of Bs. 5, 10, 20, 50, 100, 500, and 1000. Venezuelan coins, followed by their local names, are: Bs. .25 (medio); or Bs. .50 (real); Bs. 1.00 (bolivar, bolo, or "B" as pronounced in English); Bs. 2.00 (dos bolivares); and Bs. 5.00 (cinco bolivares).

The metric system is used in all local weights and measures.

LOCAL HOLIDAYS

- Jan. 1. New Year's Day
 - Jan. 6. La Paradura del Niño (Parade of Baby Jesus)

PREFACE

Cities of the World represents a compilation of government reports and original research on the social, cultural, political, and industrial aspects of the nations and cities of the world. Most of the country profiles included here are based on official personnel briefings issued as *Post Reports* by the U.S. Department of State. The *Post Reports* are designed to acquaint embassy personnel with life in the host country. Consequently, the reports concentrate on cities in which the U.S. government has embassies or consulates. To increase coverage of other important cities, the editors have added information on a large number of cities—31 of which are new to this edition—not reported on by the Department of State.

Since the fifth edition of *Cities of the World*, the Department of State has issued 62 new or revised *Post Reports*, all of which have been incorporated into this sixth edition. Selected data in *Post Reports* not revised by the Department of State since the last edition of *Cities of the World* have been updated by the editors with revised statistics acquired through independent research. In addition, articles have been written on thirty-three countries for which no *Post Report* exists.

Readers familiar with the fourth edition of this publication will notice that with the fifth edition the page size was enlarged to accommodate more information. This sixth edition includes new photographs selected by the Gale editors. The photographs depict scenes found in a city and countryside and, in many cases, reveal the cultural flavor of the area as well. As in the prior edition, many chapters feature a map of that country's capital or major city, with a superimposed locator map indicating the nation's geographic location in relation to its regional neighbors.

Volumes in This Series

This series includes four volumes:

- Volume 1: Africa;
- Volume 2: The Western Hemisphere (exclusive of the United States);
- Volume 3: Europe and the Mediterranean Middle East;
- Volume 4: Asia, the Pacific, and the Asiatic Middle East.

In all, this set provides coverage of over 2,000 cities in 193 countries.

Format and Arrangement of Entries

Cities of the World is arranged alphabetically by country name. Its chapters are divided into two basic sections, Major Cities and Country Profile, each of these with several subdivisions. A Major City listing might comprise information on Education, Recreation, and Entertainment. Other Cities, smaller cities and towns which are designated as other than major, are discussed in brief paragraphs at the end of the Major City section. Country Profile sections are subdivided into: Geography and Climate; Population; Government; Arts, Science, Education; Commerce and Industry; Transportation; Communications; Health; Clothing and Services; Local Holidays; Recommended Reading; and Notes for Travelers. Thus, *Cities of the World* presents not only basic information, but also comprehensive data on local customs, political conditions, community services, and educational and commercial facilities.

Contents and Index

The Contents and Index in each volume provide easy access to these reports. Listed under each country in the Contents are the cities that appear in its Major Cities section, as well as listings for the Other Cities and Country Profile sections. A Cumulative Index, combining the four individual volumes is found at the end of each volume. The Index is arranged alphabetically by city name, including listings for both major and minor cities that are mentioned in each volume; as well as by country name with names of cities indented below.

Acknowledgments

The editors would like to thank the U.S. Department of State for providing copies of *Post Reports* to aid in the compilation of these volumes. The editors would also like to thank Adam A. Gall and Marlon C. Tussel for their editorial assistance.

Suggestions Welcome

The editors invite comments and suggestions concerning *Cities of the World*. Please write to: Editors, *Cities of the World*, The Gale Group, Inc., 27500 Drake Road, Farmington Hills, MI 48331-3535; fax (248) 699-8074; or call toll-free (800) 877-4253.

CITIES OF THE WORLD

**Volume 3:
Europe and the
Mediterranean Middle East**

ALBANIA

Republic of Albania

Major Cities:

Tiranë, Durrës, Shkodër

Other Cities:

Berat, Elbasan, Gjirokastrë, Korçë, Vlorë

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated January 1995. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Albania is a country in the midst of tremendous change. From 1944 until 1990, Albania was a hard-line communist state whose leaders effectively sealed the country off from the rest of the world. The fall of communism throughout Eastern Europe in 1989 led to dramatic political changes within Albania. Massive anti-government demonstrations in 1990 forced Albania's communist leadership to make dramatic concessions, including renouncing its monopoly on power and agreeing to hold democratic elections. Democratic elections swept the communists from power in March 1992. Albania is now a democratic nation and is slowly opening itself to the outside world.

The country faces many daunting challenges, among them a collapsing economy, grinding poverty, and social unrest.

MAJOR CITIES

Tiranë

Tiranë (Tirana) is the capital of Albania and its largest city, with a population of over 245,000. Founded by a Turkish pasha in 1614, Tiranë became a crafts center with a lively bazaar. In 1920, the city was made the capital of Albania; Italianate government buildings went up in the 1930s.

The general atmosphere of Tiranë is reminiscent of 19th-century European living.

Most of Tiranë's housing consists of loose-brick apartment buildings. There are many narrow streets with old adobe one-story homes between them. Most of the city's housing is in poor condition.

Food

The local food supply has been inadequate by Western standards in availability and variety; however, there have been marked improvements recently. Availability of vege-

tables and fruits is seasonal, but prices for most items are relatively low. Local salt, sugar, rice, flour, cooking oil, and other basic items are now usually available. Milk, eggs, and good quality meat are often scarce. Soft drinks, bottled water, fruit juice, several varieties of imported beer, wine, and spirits are available.

There are several "supermarkets" in Tiranë but their stocks are usually quite limited. Locally produced wines and spirits are available.

Clothing

You will need the same kinds of clothing worn in the Mid-Atlantic. Winters are shorter and milder, and summers are longer and hot. Local ready-to-wear clothing is not of Western standards.

Albanian women usually wear skirts, trousers, or culottes, and sometimes shorts.

Supplies and Services

Supplies: Western-quality toiletries, cosmetics, and soaps are expensive, and limited in supply. American cigarettes are available but cigars are not. Local pipe tobacco is not to American taste.

Basic Services: Dry-cleaning is available but generally not up to Western standards. Local shoe

Cory Langley. Reproduced by permission.

Reconstructed Christian church in Tirana

repair also does not meet Western standards. Dressmakers are available; however, quality material is not. Beauty parlors and barber shops are substandard in cleanliness.

Religious Activities

The newly established Interdenominational Protestant Assembly holds English-language services. The call-to-worship at the mosques is in Arabic, but the services are in Albanian. Masses at the Catholic and Albanian Orthodox churches are held in the Albanian language. In a few cases, Orthodox services are held in the Greek language.

Education

The Tirana International School, a private nonprofit institution that opened in September 1991, offers high-quality education in English for elementary students from 5–12 years of age. The enrollment for the school has been increasing since 1991.

Touring and Outdoor Activities

Tourist areas in Albania include two “museum cities”—Berat and Gjirokastër—and archaeological sites at Apollonia, Butrint, Durrës, Bylis, and Koman. There are also

several medieval castle ruins of note.

Durrës

Durrës, with a population of approximately 85,000, is located west of Tiranë and is Albania’s second largest city. The city’s origins date back to roughly 627 B.C., making Durrës one of Europe’s oldest cities. Today, it is Albania’s principal seaport. Most of Albania’s imports enter through Durrës. Several industries are located in the city. These industries manufacture cigarettes, leather products, rubber, and plastics. Durrës location on the Adriatic Sea has led to the development of a large shipbuilding industry. An extensive railway system links Durrës to Tiranë and the cities of Lezhë, Shkodër, Elbasan, and Vlorë.

In 1991, Durrës was a point of departure for 18,000 Albanians who fled the country’s dismal economic and social conditions. Many of these persons sailed across the Adriatic Sea to Italy.

Recreation

Although Durrës is an ancient city, it has suffered many severe earthquakes and was invaded and conquered repeatedly over the

centuries. Consequently, much of its ancient architecture has been destroyed. However, visitors can still view remnants of the towns ancient walls. These walls were built during various periods by the Romans, Turks, and Venetians. An amphitheater built by the Romans in the second century has also been partially excavated and is open to tourists. North of Durrës, it is possible to visit the remains of the Porta Romana, a sixth century Roman fortification. Only a small section of its brick walls and a gateway with two towers remain standing.

One of Durrës primary attractions is the Archaeological Museum. This museum offers visitors an informative look at the history of the city. Each room in the museum is dedicated to a particular historical period. Prehistoric and Greek vases and coins can be viewed, along with artifacts from the Roman, Koman, Byzantine, Venetian, and Turkish periods. Outside of the museum are displays containing fragments of Greek and Roman sculpture.

Entertainment

Entertainment activities within Durrës are very limited. South of the city, many visitors flock to the beautiful beaches located on the Adriatic Sea. Several hotels on the waterfront offer excellent views of the Adriatic Sea and the surrounding area. Durrës is Albania’s principal holiday resort.

Shkodër

The city of Shkodër, with a population of approximately 84,000 is located in northwestern Albania on a plain surrounded by high mountains. Like Durrës Shkodër is an ancient city whose origins can be traced to the first millennium B.C. Throughout history, Shkodër has been occupied at various times by the Illyrians, Romans, Byzantines, Bulgars, Serbs, Turks, and Austrians. In the 19th century, the city became an important Roman Catholic religious center. Jesuits and Franciscan convents, schools, libraries, and churches were con-

structed. Following the communist takeover of Albania in 1944, the city became a center of resistance to the communist campaign against religion. Many Roman Catholics still live in Shkodër today, along with a large community of Muslims and a small minority of Eastern Orthodox Christians.

The city has always been one of Albania's major cultural centers. The country's first printing press was established in Shkodër in the 16th century. Also, Albania's first theatrical productions were performed in the city in the 1800s. Several noted Albanian artists have lived in Shkodër, including the poet Migjemi and Kolë Idromeno, a noted painter, architect, and photographer.

Shkodër is the main economic and marketing center of northern Albania. The city exports the grains, fruits, potatoes, and tobacco grown in fertile regions nearby. Several manufacturing industries are located in Shkodër. These factories produce processed foods, copper wire products, and textiles. Many of these factories are powered by a large hydroelectric plant located near the city.

Recreation

Shkodër has museums and mosques that are of interest to visitors. Many museums in Shkodër are located in old houses, which give visitors a flavor for the architecture of the city. The Migjeni House Museum honors one of Albania's famous poets and features personal mementos and manuscripts of Migjeni's work. Another museum, The Folk Museum, has been established in one of the city's largest houses. The museum offers beautiful displays of regional costumes and paintings of Albanian artists Kolë Idromeno and Simon Rrota. One of the city's principal mosques, the Mosque of Mehmet Pasha (Lead Mosque), is open to visitors. The interior of the mosque, with its grill-covered windows and beautiful frescoes, is of particular interest.

Enver Hoxha Street, one of Shkodër's main thoroughfares, attracts many visitors. Shops on this street are adorned with displays featuring objects from all over Albania. An exhibit on Enver Hoxha Street showcases products made and used by past and present residents of the city. The products include costumes, old weapons, fine jewelry, embroidered goods, and items made of wood, reeds, and straw. For those who want to learn about the life-styles of average Shkodër residents, Enver Hoxha Street offers a valuable educational experience.

OTHER CITIES

A city built on the slopes of Mt. Tomorr (2400m) and surrounded by fig and olive trees, **BERAT** is widely known as Albania's "Museum City." It has also been called the "City of a Thousand Windows" in reference to the many large windows of the cities red-roofed houses. The history of the site dates back to the 6th century BC, when it was home to the ancient Illyrian Dasaretas tribe. In the 9th century the town was captured by the Bulgarians, who renamed it, Beligrad (White City), from which the present name is derived. The museums, mosques, and monuments of Berat tell the stories of subsequent conquests and the will of the city to survive.

The Fortress of Berat, though considerably damaged, is still one of the most magnificent historic sites. Nearly the entire population of the town was able to live within its walls during times of distress. During the 13th century, nearly 20 Christian churches and one mosque were built inside. Those that remain include the Orthodox Cathedral of Our Lady, the Church of the Holy Trinity, the Church of St. Michael, and the Church of the Evangelists. The Church of St. Mary of Vllaherna includes 16th century mural paintings by Nikolla, son of Albania's most famous medieval painter, Onufri. The Church of St. Theodore,

located near one of the fortress entrances, has wall paintings by Onufri himself.

Art history buffs will want to visit the Cathedral of St. Nicholas, which has been meticulously restored and now houses a museum dedicated to Onufri. Works by Nikolla and other painters are also displayed, as are several icons and other religious artwork and crafts. A copy of the Berat Gospels (4th century) is here too. Points of interest in Mangalem include the Muslim quarter, the Leaden Mosque, the King's Mosque, the Bachelor's Mosque and Alveti Tekke, a small shrine where Islamic sects like the Dervishes once practiced.

Berat has a population of about 37,000 inhabitants and is 76 miles southeast of Tirana.

The city of **ELBASAN** is located in central Albania on the shores of the Shkumbin River. It was founded by the Ottomans in 1466 as a military base. It has since developed as a trading center for the corn, olives, and tobacco grown near the city. Elbasan is the home of several manufacturing industries. The industries produce oil, cement, and soap. The population of Elbasan is predominantly Muslim and numbers approximately 85,000.

Nestled on the eastern slope of the Gjere Mountains, **GJIROKASTËR** is one of southern Albania's smaller cities. During the Ottoman Turks occupation in the early 1800s, Gjirokastër became the home of the Turkish grand vizier, Ali Pasha. Pasha's palace, constructed in 1811, is still in existence today. The city was also the birthplace of Enver Hoxha, Albania's communist leader who died in 1985. Several factories in Gjirokastër produce chemicals, cigarettes, tobacco, shoes, and leather. The city is noted for its yogurt, cheese, and *hashaf*, a dish consisting of junket and figs. Gjirokastër has a population of 22,000.

KORÇË is located in southeastern Albania and is nestled in a fertile

mountain valley. The city was a major trading and commercial center during the 17th through 19th centuries. During World War II, Korçë was occupied at various times by the Italians, Greeks, and Germans.

Today, the city is a productive agricultural center for the wheat, apples, grapes, and sugar beets. In addition to agriculture, Korçë has several small industries. These industries manufacture beer, carpets, and knitted products. Korçë has a population of approximately 62,000.

The southern city of **VLORE** is Albania's second largest port city. The city was established by the Greeks around 400 B.C. Throughout history, Vlorë has been occupied by the Romans, Normans, Byzantines, Venetians, Serbs, Turks, Italians, and Germans. The former Soviet Union modernized and upgraded the city's port and used it as a naval base. Several small industries are located in the city. These industries include an olive-oil refinery, a distillery, and a fish canning plant. The city's primary attractions are the Archaeological-Ethnographic Museum and the Museum of Independence. Vlorë's population, which was composed of Muslims, Greek Orthodox, and Roman Catholics, is approximately 71,000.

COUNTRY PROFILE

Geography and Climate

The Republic of Albania is a small country located on the coast of southeastern Europe. It occupies an area of approximately 11,097 square miles, slightly larger than Maryland. Albania is bordered on the north by Serbia and Montenegro, on the east by Macedonia, on the south by Greece, and on the west by the Adriatic Sea.

A little over 20 percent of Albania is flat to rolling coastal plain, poorly drained in some areas. Most of the country consists of hills and mountains, often covered with scrub forest. Major cities are located in the coastal plain or in the larger upland valleys. Primary rivers are not large and flow generally east and west. The only navigable river is the Buene (Bojana), which forms the outlet for Lake Scutari along the Albanian border with Montenegro.

Coastal areas of Albania enjoy a Mediterranean climate. Summers are dry and hot, while winters are mild and wet. Most of Albania's rainfall occurs during the winter months, although severe thunderstorms are common during the summer. Interior portions of the country experience a cooler, rainier climate. Heavy snows and bitter cold are prevalent in mountain regions.

Population

The estimated population in Albania in 2001 was 3.5 million. Approximately 95 percent of the population are ethnic Albanian. Albanians are divided into two distinct groups. Northern parts of the country are inhabited by Gegs, while southern Albania is home to the Tosks. Both groups of Albanians have similar dialects, social customs, and religion. Greeks comprise three percent of Albania's population. Small minorities of Macedonians, Roma (Gypsies), Vlachs, Bulgarians, and Serbs reside in Albania.

Albania had declared that it was the first official atheist state in the world. The government banned all public religious services in 1967. All churches and mosques throughout the country were closed. In 1990, after several antigovernment protests, the Albanian government re-instituted the right to religious expression. Traditionally, about 70 percent of Albanians were Muslim, while approximately 20 percent were Eastern Orthodox Christians and about 10 percent were Roman Catholic. However, decades of official atheism distorted these historical percentages. Following the

collapse of communism, a religious revival of sorts began, with many evangelical Christian denominations gaining new adherents.

The national language of the country is Albanian, with Tosk as the official dialect. Greek is also spoken.

In 2001, the estimated life expectancy at birth was 69 years for males, 75 years for females.

History

Throughout its history, Albania has been invaded and occupied by various foreign powers. The Ottoman Turks governed Albania from 1478 until 1912, bringing with them their Muslim faith. In 1912, Albania declared its independence from Turkey. The new country was admitted to the League of Nations in 1920 and remained independent until Italian troops invaded during World War II.

In 1943, Italy surrendered and withdrew its forces. They were quickly replaced by German troops. Small partisan groups, led by the communist National Liberation Front (NLF), launched a guerrilla campaign to oust the Germans from Albania. The Germans finally retreated on November 29, 1944. Albania was independent once more.

A provisional government was set up under the leadership of General Enver Hoxha. The United States and Great Britain formally recognized the new government with the understanding that free elections would be held. Instead, Hoxha consolidated his control of the country. On January 11, 1946, Albania became a republic with a communist government closely tied to the Soviet Union. The United States and Great Britain responded by breaking off diplomatic relations with Albania.

By 1960, Albania's close relationship with the Soviet Union had soured. Albania's leaders believed that the Soviet government under Nikita Krushchev was turning away

from strict communist doctrines. They also resented Soviet interference in Albania's economic and internal affairs. Tensions between the two nations reached a breaking point in 1961. The Soviet Union and Albania severed diplomatic relations. Also, Albania ordered all Soviet troops and naval personnel to leave the country.

Albania soon embraced the world's other communist nation, the People's Republic of China. By late 1961, the Chinese had provided massive amounts of military and financial aid to Albania. China quickly became Albania's staunchest ally and benefactor. This close relationship began to unravel in the early 1970s. Albania strongly criticized China's decision to improve relations with the United States as an affront to Marxist-Leninist traditions. China responded by drastically reducing all trade and financial assistance. In 1978, the Chinese informed Albanian officials that because of Albania's continued hostility toward its policies, China would end all trade and economic aid. Diplomatic ties were not severed, although relations between the two countries are tense. China and Albania agreed to resume trade in 1983.

In April 1985 Enver Hoxha, Albania's leader since 1946, died. He was replaced by a longtime protege, Ramiz Alia. Alia continued Hoxha's isolationist, anti-Western policies. However, Albania's hard-line government would soon be touched by the winds of reform sweeping Eastern Europe.

Massive antigovernment protest erupted throughout Albania in 1990. Seeking to end the unrest, Alia issued a number of reforms. Albanians were granted the freedom to travel abroad and a restoration of the right to practice religion, which had been abolished in 1967. Despite these changes, many Albanians remain unsatisfied or have left the country. Chronic food shortages, rampant crime, and government corruption remain a problem.

In early 1997, Albania dissolved into chaos when financial pyramid investment schemes collapsed and wiped out the life savings of thousands.irate citizens blamed President Sali Berisha for the collapse of the popular schemes and took to the streets, looting stores, homes, and armories. Thousands fled the country. The situation improved later that year, with the help of 6,000 UN-backed foreign troops to restore order.

Government

At the present time, Albania's governmental structure is undergoing many changes. Massive antigovernment protest erupted in Albania during 1990 and early 1991. In response to the unrest, the communist Albanian Workers' Party decided to give up its 45-year domination of Albania and allow other political groups to exist. The Albanian Workers' Party renounced its Marxist doctrines.

On March 22, 1992, Albania held national parliamentary and presidential elections. The Communist Albanian Workers' Party, which had renamed itself the Albanian Socialist Party, was trounced by the opposition Democratic Party (DP). Following the elections, Democratic Party leader Sali Berisha was sworn in as Albania's new president on April 9, 1992. President Berisha is Albania's first non-communist leader since the end of World War II. In the 1996 parliamentary elections, the DP won 122 of 140 possible seats, but in the 2001 elections the Socialist Party gained a parliamentary majority.

The flag of Albania is red with a black two-headed eagle in the center.

Arts, Science, Education

All children ages seven through 15 receive primary education at government expense. Secondary education is available in professional and vocational schools. In 1995, there

were an estimated 1,782 primary schools with over 550,000 students.

The University of Albania and the Albanian Academy offer opportunities for higher education.

The estimated literacy rate in Albania is 93 percent.

Commerce and Industry

Albania is considered to be one of the poorest counties in Europe. The economy has been stagnant after years of outdated economic practices and an unwillingness to seek financial help from other countries. The Albanian government has begun to implement various reforms to spur economic growth. In July 1990, the government gave up sole control of Albanian industries and allowed private citizens to start their own businesses. However, the government stipulated that owners of private businesses could only employ members of their immediate family. In mid-1992, the new Albanian government implemented a series of measures in an attempt to improve the economy. Unemployment benefits were cut dramatically and price controls on most essential commodities were removed. The result led to anti-government sentiments among many Albanians. However, the economy improved after 1993. In 1995, the government began privatizing large state enterprises.

Albania has a very small industrial base. Its main industries include cement, textiles, oil products, and food processing. The government is in the process of developing Albania's chemical and engineering industries.

Rich mineral deposits can be found in Albania, especially chromium, coal, oil, chrome, copper, and nickel. Many of these deposits lie undeveloped. In recent years, the Albanian government has intensified its efforts to exploit the country's mineral wealth.

Because of its rugged, mountainous terrain, Albanian has limited arable land. Most of the suitable farmland is located along the Adriatic sea-coast. Over one-half of Albania's work force is engaged in farming. Principal crops include wheat, corn, cotton, fruits, vegetables, and tobacco.

The majority of Albania's trade is with European countries. Italy and Greece are the major trading partners. Other trading partners include the U.S., Macedonia, Bulgaria, and Turkey. Albania imports large amounts of chemicals, pharmaceuticals, textiles, machinery, and iron and steel products. Its primary exports are petroleum products, tobacco, fruits, vegetables, metal ores, and asphalt.

Albania's estimated purchasing power parity of its gross domestic product (GDP) was \$10.5 billion dollars in 2000, or about \$3,000 per capita. The unit of currency is the *lek*.

Transportation

In 1998, Albania had approximately 11,460 miles (18,450 kilometers) of roadway. Most mountainous regions, however, have poor roads that are unsuitable for cars. Since February 1991, the Albanian government has allowed private citizens to have their own vehicles. Bicycles and donkeys are common forms of transportation.

Regular flights are available from Albania's capital, Tiranë, to Belgrade, Zurich, Berlin, Budapest, and Bucharest. The Greek airline, Olympic Airways, offers a weekly flight from Athens to Tiranë. In 1990, Albania opened its airspace to all foreign commercial airlines.

Because of its location on the Adriatic Sea, Albania has several excellent deep-water ports. The main ports are located in the cities of Durrës, Vlorë, Shengjih, and Sarande. Also, a passenger ferry service is available from Durrës to the Italian city of Trieste.

It is possible to travel around Albania by rail. Railroads connect the cities of Tiranë, Durrës, Shkodër, and Vlorë. Another rail line is available between Durrës and Titograd, Montenegro.

Communications

Albania's main radio station is Radio Tiranë. Foreign broadcasts are available on shortwave frequencies in 18 languages, including English. Seventeen AM and five FM stations carry domestic radio programs.

Regular television programs became available in 1971. There are nine television stations in the country.

Telephone service in Albania is inadequate. In 1997, the country had only 87,000 telephones. Some small villages may not have telephone service.

Internet usage is limited but available via internet cafes or by contracting with one of the seven available Internet Service Providers.

NOTES FOR TRAVELERS

The most direct and frequently used route to Tiranë is via Zürich or Rome. Alitalia operates one flight daily between Rome and Tiranë. Swiss Air has several flights weekly to Zurich. For travelers arriving via automobile, the recommended route is from Greece via Ioannina or Kastoria. Ferry service is also available from Bari and Trieste, Italy, to Durrës, Albania, which is about 45 minutes by car to Tiranë.

There are no restrictions or controls on the import of pets into Albania at this time. A quarantine is not required for pets, and there is no fee for incoming pets. However, travelers coming to Tiranë with pets should insure that shots are up-to-

date and their animals are in good health, as veterinary care is not always up to U.S. standards. All pets should be neutered, if desired, before coming to Albania. Very limited dog and cat food and pet supplies are available on the local market. Pets transiting European capitals (such as Rome) to and from post must comply with health standards for those countries.

Travelers are advised to exercise caution and avoid crowds due to security problems. All American citizens in Albania are strongly urged to register at the U.S. Embassy located at Rruga e Elbasanit 103, Tirana.

The monetary unit in Albania is the lek. Albania is a cash economy with virtually no acceptance of credit cards.

Albania uses the metric system.

ANDORRA

Principality of Andorra

Major City:

Andorra la Vella

Other Cities:

Encamp

INTRODUCTION

ANDORRA is the last of the independent March states—buffer states originally created by Charlemagne to keep the Muslim Moors out of Christian France. Tradition has it that Charlemagne granted a charter to the Andorran people in return for their fighting the Moors. A dispute between the Spanish bishop of Urgel and the French counts of Foix over the control of Andorra led to a *paréage*—a feudal institution recognizing equal rights of two rulers over a territory. On its secure mountain citadel, Andorra has existed outside the mainstream of European history, with few ties to countries other than France and Spain. This condition remained until the 1930s, when improvements in transportation and communications helped create a foundation for the country's tourist industry after World War II.

MAJOR CITY

Andorra la Vella

Andorra la Vella is the capital and the largest city, with a population of about 22,000. The city is located near the Riu Valira valley. A north-

south highway links Andorra la Vella with the Spanish and French borders. Buses are the most common means of mass transit, providing regular service to Seo de Urgel and Barcelona in Spain, and to Perpignan in France. There are no railways or commercial airports, but the airport at Seo de Urgel is only about 12 miles from Andorra la Vella. Roads provide passenger and freight transport routes, and there are several cable cars in operation. Trade and tourism form the basis of the economy, with a growing financial services sector. Andorra is a tax haven because there are no direct taxes. Prior to the creation of the European Union, Andorra la Vella was an active commercial center for trade in consumer goods, which were duty-free. Andorran manufactured goods still remain tariff-free, but agricultural products are subject to EU tariffs.

Recreation and Entertainment

Andorra's location high in the Pyrenees makes it a prime ski area. There is snowcover for six months, usually with clear and sunny skies, and resorts attract skiers from France, Spain, and elsewhere around Europe. Once ski season is over, hikers, mountaineers, and rock climbers visit Andorra's mountains. Hunting, fishing, cycling, and horse-

back riding are also popular outdoor activities.

Folk dancing is a popular form of entertainment among Andorrans. The national dance is the *sardana*, but there are various regional dances, such as the *contrapas* in Andorra la Vella. Folk singing is a popular pastime, and traditional pantomimes are still performed as well.

Visitors, mostly from France and Spain, come for summer holidays to enjoy the pleasant climate and scenery. There is skiing at Pas de la Casa and Soldeu in the winter.

Romanesque churches and old houses of interest are located in Ordino, Encamp, Sant Julià de Lòria Les Escaldes, Santa Coloma, and other villages. The best known is the shrine of Our Lady of Meritxell, Andorra's patroness, between Camilo and Encamp. The church houses a statue (the Virgin of Meritxell) that, according to legend, was found hundreds of years ago on a snowy hillside surrounded by blooming plants.

Many people from France and Spain make an annual trek to Andorra every September 8 for the festival day of Our Lady of Meritxell. Each of the larger villages has its own festival for the celebration.

The National Library and National Archives of Andorra are both located in Andorra la Vella. The country also has a general interest museum in Escaldes-Engordany, a decorative arts museum, and a science and technical museum focusing on the history of transportation in Encomp.

OTHER CITIES

Automobile enthusiasts will want to take a trip to **ENCAMP**, where you can see the Museu Nacional de l'Automòbil which exhibits about 100 cars dating from 1898 to 1950, as well as a number of antique motorcycles and bicycles.

The best skiing spots in the country are here, at the Soldeu-El Tarter and Pas de la Casa-Grau Roig resorts. Those who prefer a quiet afternoon of sightseeing can walk across town to see the beautiful Romanesque frescoes of the Església Sant Romà de les Bons (12th century), or the art and architecture of Sant Miquel de la Mosquera, situated in the center of the town, and the church of Santa Eulàlia, with the highest bell tower in Andorra.

Encamp, with a population of about 10,600 (1999 est.), is located about 3 miles from Andorra la Vella.

COUNTRY PROFILE

Geography and Climate

Andorra is landlocked along the southern slopes of the Pyrenees Mountains between the French departments of Ariège and Pyrénées-Orientales to the north and the Spanish provinces of Gerona and Lérida to the south. The country has a total area of 174 square miles, or about 2.5 times the size of Washington, D.C.

Andorra's main river basin is the Riu Valira, with two distinct branches and six open basins. Most of the country is rough and mountainous, and there is little level surface. The valleys have an elevation of at least 3,000 feet, and the average altitude is over 6,000 feet. The country's highest point is Coma Pedrosa (9,665 feet).

Andorra's high elevation causes severe winters, and the northern valleys have snow on the ground for several months. Rain falls mainly in April and October, and the humidity is generally low. Summer temperatures depend largely on the altitude.

Population

Andorra's population is approximately 68,000, with a density of 374 persons per square mile. The population lives mainly in the seven valleys that form Andorra's political districts. About one-third of the population consists of ethnic Andorrans, whose origins are Catalan. Almost half the population is Spanish, and there are smaller numbers of French and Portuguese. Over 92% of the population in Roman Catholic, and Roman Catholicism is the official religion of the state. There are small numbers of Protestants and Jews.

The official language is Catalan, but French and Spanish are also spoken.

Government

Andorra has a unique form of government. In 1607, an edict established the head of the French state and Spain's Bishop of Urgel as co-princes of Andorra. Andorra pays a token tribute of Fr960 to the president of France and P460 to the bishop. Each year the bishop also receives cheese, capons, partridges, and hams as part of the tribute.

In 1997, Marc Forné Molné won the general election to become president of the General Council. The council designates as its head a first syndic (syndic procureur général) and a second syndic for the conduct of administration.

The General Council consists of four councilors from each of the seven parishes, for a total of 28. Half of the seats are based on a national list and half are elected. In 1992, the voting age was lowered to 18 and broadened to include spouses of Andorran citizens and long-term residents. The Superior Council of Justice oversees and administers the legal system. Courts apply the customary law of Andorra and supplement it with Roman law and customary Catalan law.

The national flag is a tricolor of blue, yellow, and red vertical stripes. On the state flag the yellow stripe bears the coat of arms.

Arts, Science, Education

Education is provided by both French- and Spanish-language schools and is required of students until age 16. The French-language schools are partially subsidized by France, while some of the Spanish-language schools are supported by the church. Higher education for

secondary school graduates is available in France and Spain.

Commerce and Industry

The government encourages private investment in local companies. In addition to handicrafts, manufacturing includes cigars and cigarettes, distilled liquors, frozen food, and furniture.

Andorra's economy is based mainly on trade and tourism. There are over 240 hotels and 50 restaurants, making the tourist trade an important part of the economy. Andorra's government is trying to attract tourists from countries other than Spain and France. The banking industry is also important, because Andorra is a tax haven for foreign financial transactions and investments.

Transportation

A north-south highway links Andorra la Vella with the Spanish and French borders. Secondary roads also cross the border, but many are closed during the winter. Buses are the main means of transportation and provide regular service to Seo de Urgel and Barcelona in Spain, and to Perpignan in France. From the airport at Barcelona, Spain, it takes 2-3 hours by bus or taxi to reach Andorra. There is daily bus service to Barcelona and to Toulouse, France. Andorra has no commercial airports or railways.

Communications

Postal and telecommunications services are handled by the Spanish and French administrations. There are two radio stations, and Andorra has the highest transmitter in Europe. Radio and television are also provided through agreements with the Spanish and French government networks. There are two daily newspapers, the *Diari D'Andorra* and *Poble Andorra*. There are also some smaller Andor-

ran newspapers, and French and Spanish papers are widely available.

Health

Andorra has over a 100 hospital beds and a few dozen physicians. Catholic priests and lay personnel take an active role in administering the country's medical facilities.

NOTES FOR TRAVELERS

A passport is necessary but a visa is not required for tourist or business stays of up to three months. For further information concerning entry requirements for Spain, travelers may contact the Embassy of Spain at 2375 Pennsylvania Avenue NW, Washington, D.C. 20037 tel.: (202) 728-2330, or the nearest Spanish consulate in Boston, Chicago, Houston, Los Angeles, Miami, New Orleans, New York, San Francisco, or San Juan. Further information on Andorra can also be obtained from the Andorran Mission to the U.N., 2 U.N. Plaza, 25th Floor, New York NY 10018, tel. (212) 750-8064.

Vienna, Austria

AUSTRIA

Republic of Austria

Major Cities:

Vienna, Salzburg, Innsbruck, Graz, Linz

Other Cities:

Baden, Bregenz, Dornbirn, Eisenstadt, Enns, Klagenfurt, Leoben, Steyr, Villach, Wels, Wiener Neustadt

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Austria. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Nature heaved mountains to the sky and gouged deep green valleys in Austria; the Alps and their foothills cross from west to east and cover three-fourths of the pear-shaped republic.

Its nine provinces shape a nation of diverse charm. In the Tirol, winter sees garlanded cattle return to valley farms from summer pasture on meadow heights, and skiers claim the slopes. Neighboring Salzburg, too, is a paradise of winter sports and summer hiking; its namesake city holds a famed festival rich with the music of a land that gave the world such greats as Mozart, Schubert, Strauss, and Haydn. Pine-forested and rocky peaks of these

provinces contrast with the blue lakes of Carinthia and the green vineyards of Styria.

Vienna, capital and once the core of the far-flung Austro-Hungarian domain, lifts its baroque silhouette above the plains of a brown river-immortalized as the beautiful Blue Danube waltz.

A quarter of Austria's population lives in Vienna along the winding streets of a past grand age or in one of the many modern apartment houses built by a booming economy. Steady expansion of mining, metalworking, and hydroelectric power has more than doubled Austria's industrial output since 1938, though one of six Austrians still farms the mountainous land. Hard work has not changed Austria's *Gemutlichkeit*, the gay, relaxed outlook that runs through its life like the swirling lilt of a Viennese waltz.

Vienna is one of Europe's oldest capitals. Noted for its physical beauty and rich culture life, Vienna is a cosmopolitan city that has historically served as a bridge between East and West. It is host to several important United Nations agencies. The dramatic changes in Eastern Europe since 1989 and Austria's entry into the European Union have highlighted the country's role in Europe's rapidly evolving political

and economic institutions, including the Organization for Security and Cooperation in Europe (OSCE), based in Vienna. An assignment to Vienna offers a challenging, professional environment as well as attractive recreational and travel opportunities

MAJOR CITIES

Vienna

Vienna, Austria's capital and largest city, is located in the Danube basin at the eastern end of the European Alpine range, near the borders of Hungary, the Czech Republic, and Slovakia. Initially established as a Roman outpost and trading center on the banks of the Danube, Vienna evolved, under centuries of Habsburg rule, into one of the world's most important capitals.

In the 19th Century the city was the leading capital in Central Europe. After the Habsburg Empire was dissolved in late 1918, however, the imperial city became the capital of a state unsure of its own identity. The political and economic crises of the 1920's and 1930's, World War II, and the postwar occupation stifled progress and reduced the city to an impoverished remnant of its once

great past. It was sometimes referred to as “a head without a body.”

Since 1966, however, the city has undergone a rejuvenation. The newcomer's first impressions are those of activity—new construction, renovation, street repairs, and traffic. The city's center lies within the First District, surrounded by the Ring (site of the old city walls, but now a broad thoroughfare). The main shopping area, fine hotels and restaurants, as well as many historic palaces and churches, are located in or very near to this district.

Knowledge of German is very important and helpful for professional effectiveness and full enjoyment of Austrian culture, although English is widely spoken.

Food

The Austrian market provide adequate quality and quantities of virtually all foods.

Local Austrian stores and markets are well stocked and are widely patronized by the U.S. community. Fresh vegetables, fruits, chicken, pork, veal, and beef are in good supply. Meat prices are higher than those in Washington. Cuts of meat differ, and meat is not aged.

Clothing

Clothing worn in Vienna is much like that worn in the northeastern U.S. Most Austrians dress conservatively. No special requirements or taboos exist.

Men: Ready-made suits are more limited in size and style than in the U.S. Tailors are good and materials are plentiful, but again, very expensive. Men may not find the style and fit of Austrian shoes entirely to their taste.

Women: The more expensive women's shops carry a wide variety of clothing of good style and quality. Generally, however, the selection of ready-made clothing is more limited than in the U.S. and much more

expensive. Fabrics of all types are available, and dressmakers are generally good, but both are expensive.

Women will find low-heeled shoes indispensable for Vienna's many cobblestone streets. Good quality women's shoes are readily available here, but narrow widths and small sizes are hard to find and are expensive. It is best to buy shoes before leaving the U.S. Warm, thick-soled boots are a necessity.

Women may wish to bring ball gowns to wear at any of Vienna's many balls held during Fasching season (between January 1 and Mardi Gras).

Children: Although expensive and somewhat limited, local children's clothing is attractive and of excellent quality. Rainboots bought here are worn without shoes. Many parents have difficulty finding shoes to fit their children's feet.

Supplies and Services

Cosmetics are available on the local market. Many women bring or order their favorite brands of cosmetics from the U.S. Most sundry supplies are sold on the local market, but are quite expensive.

Mothers may wish to bring a supply of baby bottles, nipples, and sterilizers. Baby furniture is sold locally but is expensive.

All basic community services such as dressmaking, tailoring, shoe repair, dry-cleaning, laundries, beauty shops, etc., are available locally, but expensive. Repair service for radios, phonographs, and electrical appliances is adequate but usually slow. Remember that most Austrians take a month's vacation in summer, and many shops, laundries, dry-cleaners, etc., are closed during that time.

Domestic Help

The rising Austrian living standard and low employment rate have led to a severe shortage of domestic help, and domestics are increasingly expensive. The basic monthly salary for a general, full-time, live-in ser-

vant is normally can be somewhat high, since the cost of food, health, and social insurance, vacation, and Christmas bonus must also be considered. Specific wage information may be obtained from the Vienna Retail Price Schedule, DSP-33. Extra catering help is available for entertaining, but is expensive.

Employers should insist that their servants have medical exams and chest X-rays before hiring them.

Religious Activities

The Vienna Community Church, an English-speaking interdenominational church with Sunday school and an American pastor, was established in 1957 by English-speaking Protestants in Vienna. Roman Catholic services in English are held at the Votive Kirche and confessions are heard in English. An Anglican-Episcopal Church, Christ Church (affiliated with the British Embassy), a Church of Christ Scientist, a Baptist Chapel, and a Methodist Church also have services in English.

German language Catholic masses are conducted daily and German services are conducted in several Lutheran churches, the Church of Jesus Christ of Latter Day Saints, the Reformed Church, several Methodist churches, several Baptist churches, and a Greek Orthodox church. A Quaker meeting is held weekly. Services at a Jewish Synagogue are conducted in Hebrew.

Education

The American International School (A.I.S.), operated under the sponsorship of the American and Canadian Ambassadors, offers a full curriculum from nursery school through grade 12. Over 50 nationalities are represented from among the school's 800 students. The director, the majority of the faculty, and about one-third of the student body are American.

While using the latest American teaching techniques, the school also takes advantage of local cultural resources. The result is an intellec-

Street scene in Vienna

Courtesy of Mira Bossowska

tually stimulating program which makes maximum use of the advantages afforded by the school's international staff and student body.

The elementary grades program includes art, music, Austrian studies and culture, and physical education, as well as a traditional U.S. curriculum. A daily course in German is compulsory for Grades 1-12 and four times a week in kindergarten. The high school college-preparatory program is designed to meet the admission requirements of the best American colleges and universities. The regular U.S.-style curriculum is complemented by the International Baccalaureate Program, a course of studies leading to

a diploma recognized by universities around the world. Academic standards are high. Children returning to the U.S. have been accepted at leading colleges and universities.

The physical plant of the school, built in 1964, is designed to provide an educational environment like that in the U.S. The buildings include a library, science labs, cafeteria, and new (1987) gymnasium. Athletic fields and a large wooded area are part of the 17-acre complex.

If you have received firm notice of an assignment here and are planning to enroll your children, write

directly to the school, giving the ages and grades of the children. The address is Salmansdorferstrasse 47, A-1190 Vienna, Austria.

Applicants for the first grade must be 6 years old by September 1 in the year of their entry; for the kindergarten they must be 5 by the same date. The school presently has no boarding facilities.

The Vienna International School (V.I.S.), located at Strasse der Menschenrechte 1, A-1220 Vienna, Austria, offers instruction in all grades, but follows a predominantly British curriculum, and has a more international faculty and student body than the A.I.S.

The Vienna Bilingual School (VBS) incorporates German/English bilingual teaching from Kindergarten to upper secondary school. VBS is a state school program and no fee is required. Inquiries can be addressed to VS 10, Selma-Lagerloef-Gasse 20, 1100 Vienna, Austria.

The French school, le Lycee Francais, is located at Liechtensteinstrasse 37a, A-1090 Vienna, Austria and has classes from kindergarten through high school. A branch of the worldwide Sacred Heart Schools, operated by the Sacred Heart Catholic Order, has a German-language curriculum and is coordinated with other Sacred Heart schools.

The Danube International School (D.I.S.) is an independent, nondenominational co-educational day school with courses designed for students seeking an international education in Vienna. The school was founded in 1992 by parents of the Vienna business community. Students are drawn from the diplomatic, international and local business communities and consists of grades K - 12 with an approximate enrollment of 280 students from over 30 different countries. At the elementary level, the International Schools Curriculum Project forms the basis of the curriculum, while the Middle School is strongly

influenced by the International Baccalaureate Middle Years Programs. In the High School the curriculum enables students to be accepted by a range of colleges and universities throughout the world, including the U.S. Contact the registrar for further information: Gudrunstrasse 184, A-1100 Vienna, Austria, Tel: 043-1-603-02-46, Fax: 043-1-603-02-48.

The Vienna Christian School (V.C.S.) was founded in 1986 and is a private Christian school for grades 1-12. VC.S. has joined with the Network of International Christian Schools (NICS). NICS is an International Network of Christian Schools whose goal is to provide excellent academic training in a non-denominational setting. VC.S. serves children from a broad range of backgrounds, including business, diplomatic, United Nations, and missionary communities. VC.S. follows a basic American curriculum taught by certified teachers (in English), which leads to a fully recognized High School diploma. The full program included middle and high school art, sports, music, and drama. In 1996-1997 school year enrollment was 130 representing 23 different countries. The VC.S. consists of 2 buildings, 20 classrooms, and 1 library. The faculty at VC.S. is made up of U.S., U.K., Canada, and Austrian backgrounds. The VC.S. is located in Vienna's 19th District in the north part of the city; Kreilplatz 1/2, A-1190 Vienna. The phone number when calling from the U.S. is: 01143-1-318-82-11.

There are many private and state run nursery schools for ages 3-6.

Sports

Tourism is extremely important in Austria and the quality and number of the country's sports facilities are undoubtedly among the principal reasons.

The ski slopes at Kitzbuehel and on the Arlberg (Lech, Zuers), only 6-8 hours from Vienna, are among the best in the world. Good skiing can also be found less than 2 hours from Vienna at Semmering. Excellent ski

equipment can be purchased or rented in Vienna or at the ski resorts, although at a higher cost than in the U.S.

Hunting in Austria is varied and excellent. It is, however, quite expensive. The overall season for all game is long. Game is abundant, e.g., roebuck, stag, snipe, pheasant, etc.

Both a hunting license, "Jagdkarte," and hunting permission card, "Jagderlaubnis," are necessary before taking part in a hunt. Hunting premiums are charged in accordance with the type of game taken. These charges vary, but are generally very high by U.S. standards. Hunting is by invitation only and always done on game preserves. Contacts can be arranged to secure invitations through local tourist agencies.

To secure a hunting license, the applicant must present proof of his hunting ability, usually a valid certificate from a hunting organization in another country. Lacking a valid license, a hunting proficiency exam is administered by local authorities. Two sporting guns (unloaded) can be imported. Ammunition is available locally.

Fishing in Austria is also excellent. One can obtain permits to fish by invitation or by joining the Austrian Fishing Association "Oesterreichische Fischerei Gesellschaft," which assigns specific sections of a stream. To save money, bring your own fishing equipment; however, all types of equipment including spinners and flies may be purchased locally.

Vienna has several riding stables and many tennis and squash courts. A number of health clubs exist throughout the city. Ice skating is available all year round at the Stadthalle and from October through March at three other locations around Vienna. Three 18-hole golf courses are within 20 miles of Vienna; one is located at Prater Park.

Memberships at any of these golf courses can be arranged through the UNIDO Golf Club at reduced prices. By joining the Austrian Golf Association, one may also gain entrance to play on some of the finest courses in Europe. Sailboating and swimming on the Old Danube (now a beautiful lake) or at one of the many indoor or outdoor pools, biking, and hiking in the Vienna Woods are other favorite pastimes. Jogging is becoming increasingly popular in Vienna.

Touring and Outdoor Activities

The beauty of its rustic landscape, the network of good highways, and the comfortable accommodations of its "Gasthaeuser" (inns) make Austria a paradise for those who love the outdoors.

The "Wachau", an area between Melk and Krems along the Danube, is famous for its vineyards, fruit trees, castles, and churches. The monastery at Melk contains one of the world's finest old libraries and a wealth of paintings, tapestries, and art objects.

The Province of Burgenland (an hour's drive southeast from Vienna) is an area of gently rolling hills dotted with vineyards, spas, and castles. Lake Neusiedl, a favorite Viennese resort area on the Austro-Hungarian border, has gained worldwide fame as a bird sanctuary; it also provides good sailing.

The central part of Austria, the "Salzkammergut", a beautiful recreation area with high mountains, lakes, hunting, fishing, ski resorts, old castles, and churches, is about 3 hours from Vienna.

Eastern European points accessible by car include Budapest (4 hours), Prague (5 hours), and Bratislava (1 hour). Visas are no longer required for visits to these cities by U.S. passport holders.

People generally travel to vacation areas by private car, but the daily trains and buses throughout the country are excellent and inexpen-

Skyline view from St. Stephen's Cathedral in Vienna

sive. The Salzburg-Vienna autobahn affords rapid, easy access to Munich and the rest of southern Germany.

Entertainment

Vienna is the musical capital of Europe. The Vienna State Opera, the Vienna Philharmonic, the Vienna Symphony, and the Volksooper are outstanding. The talents of world-famous conductors and virtuosos are on display throughout the year, although the opera houses close for July and August of each year. Tickets are very expensive. The Vienna Festival, held annually from mid-May to mid-June, is one of the high points of Viennese cultural life.

The Vienna theater also enjoys a worldwide reputation. Paced by the famed Burgtheater, the many theaters present the classical works of Goethe and Schiller (in German) as well as the most recent Broadway hits.

There are 3 theaters in Vienna presenting stage plays in English, the Fundus, the International Theatre, and the English Theatre. In addition, there are 4 movie theaters which offer original language movies (primarily in English).

Except for July and August and a short period during the winter, Sunday morning dawns with a special treat for the Viennese: the famous "Lipizzaner" white horses of the Spanish Riding School perform in the Riding Hall of the Hofburg, and the Vienna Boys' Choir sings in the Hofburg Chapel. During the summer, "Lipizzaner" performances are also shown on Wednesday afternoons. Tickets must be ordered by mail 6 to 8 weeks in advance or purchased through a Viennese ticket agent.

Vienna has many good restaurants with varying prices. Restaurants in the hills overlooking the city are popular, especially in summer. The

wine drinking cellars and gardens in Grinzing and Neustift are famous for their "Heurigen" (new wine) and folk song atmosphere. (The typically Viennese word, "Heurige", refers not only to the new wine itself, but also to the establishments in which it is served and to special occasions celebrated in those establishments.)

Social Activities

The American community in Vienna is not a tightly knit, highly organized social group. This is understandable when one considers that a metropolis like Vienna offers so much in the way of recreation, entertainment, and varied social contacts. Social recreation generally takes the form of cocktail parties, buffet suppers, dinners, receptions and "Heurigen."

The American Women's Association, open to all American women in Vienna, meets from September to June. They publish "Living in Vienna," which many find to be a

useful guide for daily survival in the city.

The American International School has a limited extracurricular program for students, including athletic teams. The U.S. Embassy sponsors Boy Scout Troop 427 and Cub Scout Pack 427, both of which are official members of the Transatlantic Council of Boy Scouts of America. The American International Baseball Club, Little League, is open to 6–15 year olds.

An English-speaking, mixed bowling league competes once a week for about 9 months of the year.

Salzburg

Salzburg, “*die schöne Stadt*,” is one of the world’s most beautiful cities, both in its surroundings and in its architecture. It lies at an altitude of 1,400 feet, and is divided by the Salzach River into the “new” and “old” parts. While the city itself has a population of only 138,000, it is visited yearly by more than a million-and-a-half tourists.

Archaeological finds date the founding of the city to the Stone Age. During the Roman period to about A.D. 500, the Old City, then called Juvavum, was important as the center of administrative government. Early in the eighth century, Salzburg began to develop around the monastery of St. Peter. In the year 800 (approximately), it became the seat of an archbishopric and was an ecclesiastical residence for almost one thousand years. Following the city’s secularization in 1802, it was given to Archduke Ferdinand, and then, between 1805 and 1815, Salzburg fell successively to Austria, France, and Bavaria. The Congress of Vienna (1814–1815) returned the city to Austria. The city of Salzburg is the capital of the province of the same name (population approximately 441,500).

The dominant architectural feature of Salzburg is the Hohensalzburg, an 11th-century fortress some 400 feet above the city. The views from

the ramparts are spectacular. Below the fortress are many examples of baroque architecture, including the ancient palaces of medieval archbishops, domed churches, and spacious squares with some of the most remarkable fountains in Europe. The tall, narrow, and well-kept houses lining the streets of the Old City testify to the pride the Salzburgers have in their tradition. The Residenz, built late in the 16th century for Archbishop Wolf Dietrich, opens its state apartment to view.

Next to the Residenz is Salzburg’s huge cathedral, and nearby is St. Peter’s Romanesque basilica, with its adjoining burial ground. The lovely old Mirabell gardens lie across the river.

Schools for Foreigners

Some American children attend schools in Salzburg, but classes are taught only in German. A small, two-room school at the U.S. base in Berchtesgaden teaches grades one through eight (staff dependents), and commuting is by bus.

Two American-style boarding schools at the secondary level are in the area: International Preparatory School at Moostrasse 106, A-5020, Salzburg; and Sea Pines Abroad at A-5324, Faistenau bei Salzburg.

Arrangements for students to attend the American International School (AIS) in Vienna must be made in advance. No established boarding facilities are at the AIS and living arrangements must be approved by the school before admission is granted.

Special Educational Opportunities

The University of Salzburg is open to students of all nationalities, and many U.S. students attend. In addition, the world-renowned Mozarteum offers advanced instruction to students of music. The Orff Institute, administratively connected to the Mozarteum, offers combined instruction in music and rhythmic, according to the musical education principles of the com-

poser Carl Orff. The Institute is open to all age levels. The Summer Academy of the Mozarteum offers music instruction for advanced students during the summer months.

Recreation and Entertainment

Vacationers generally travel by private car, but the daily trains and buses throughout Austria are excellent and inexpensive. The Salzburg-Vienna *autobahn* affords rapid, easy access to Munich and southern Germany.

A trip from Salzburg to Bregenz on Lake Constance (the Bodensee) provides one of the most spectacular drives in Europe, passing the length of Salzburg, Tyrol, and Vorarlberg. Quiet mountain valleys, particularly in the Langau area, afford a glimpse of native customs and dress unchanged by modern fashions. The area is rarely visited by tourists.

Skiing opportunities near Salzburg are practically limitless, with slopes ranging from beginners to competition only a short distance away. For those wishing to go to better known ski areas, Innsbruck is two hours ways, and both Kitzbühel and Zell am See are even closer.

Salzburg offers good tennis (indoor and outdoor) and golf. A small but picturesque golf course is located at Klessheim, on the outskirts of the city, and a rugged nine-hole course is operated by the Berchtesgaden center. Sailing is a popular summer sport on the lakes within a short distance from the city.

Salzburg, the birthplace and home of Wolfgang Amadeus Mozart, is one of the most music-oriented cities of the world. Part of the house on Getreidegasse where Mozart was born is now a museum and there is a commemorative statue on the Mozart Platz. The *Festspiele*, celebrated here annually from mid-July through August since 1925, draws thousands of music-loving tourists from all over the world and features widely known conductors and performers. The Berlin Philharmonic Orchestra and its conductor, are

Skyline view of Salzburg from Hohensalzburg

Susan Rock. Reproduced by permission.

special favorites, and the highlight of the season is the open-air performance of the medieval play, *Jedermann* (Everyman). Since 1920, this morality play by Hugo Von Hofmannsthal, has been performed in the cathedral square.

Music festivals are not confined to summer, however. Throughout the year, various programs are given. The Mozart Festival is held in the last week of January and during Easter week, when it again features the Berlin Philharmonic Orchestra in opera and concert performances. At the time of Whitsunday, concerts are also featured as separate festivals. The Salzburg Marionettes are a special attraction all year.

Salzburg's restaurants are good, although rather expensive, and many offer sweeping panoramic views of the surrounding area.

There is no American community here as such, but an Austro-American Society has periodic meetings to

discuss matters of mutual interest. The American Chamber of Commerce in Austria holds one or two functions each year in Salzburg or its immediate vicinity. Discussions, for the most part, are in German.

A tourist office is located at Sigmund-Haffner-Gasse 16/1/2, A-5010 Salzburg.

Innsbruck

Innsbruck, a famous winter and summer resort, is also a market and transportation center. With a population of 117,000, it is the capital of the Tyrol (or Tirol) Province (pop. 586,000), and is situated on the Inn River amidst soaring alpine ranges. Its main street, the Maria-Theresien-Strasse, offers a breathtaking view of the surrounding snow-capped mountain peaks.

Innsbruck, meaning "bridge over the Inn," was named for the bridge first built in the 12th century.

Established as a fortified town by 1180, Innsbruck supplanted Merano as the capital of the Tyrol in 1420. Today, a visitor may walk down arcaded streets and cobbled passages lined with shops displaying beautiful embroidery, leather work, and carvings made by hand in the surrounding countryside. Innsbruck's university was founded in 1677. The city hosted the Winter Olympic Games in 1964 and 1976, and a museum shows videos of highlights from these games.

There are many interesting sites in Innsbruck. The Hofkirche, or Court Church, built between 1553 and 1563, is an architectural marvel. There is a memorial tomb to Emperor Maximilian I; 24 scenes in marble high-relief cover the sides and depict the emperor's life. Around the tomb stand 28 bronze figures which portray his real and legendary ancestors and relatives. The grave of Andreas Hofer and other 1809 freedom fighters may be found here. The tomb of Archduke

Ferdinand II and his morganatic wife are in the Silver Chapel. The wooden organ, dating to 1600, is still played today.

The Fürstenburg, a 15th-century house, has a balcony with a gilded copper roof—the Goldenes Dachl. The late-Gothic structure, built under Maximilian in 1500, has 2,657 gold-plated tiles. Annasäule, St. Ann's Column, located on Maria-Theresien-Strasse, was erected in 1706 in thanksgiving for the successful defense against Bavarian invasion during the War of the Spanish Succession. Innsbruck has many museums, including the Ferdinandeum, containing the largest Gothic collection in Austria; and the Tyrolean Regional Museum, containing a history of mining and field sports.

The nearby Alps offer the visitor to Innsbruck another form of entertainment. Hiking, fishing, and swimming may be done in the mountains. Unforgettable views of these mountains can be seen by train, aerial cable cars, bus, gondola lifts, or by walking.

A tourist office is located at Bozner Platz 6, A-6010, Innsbruck.

Graz

Graz is Austria's second largest city (242,000), and capital of Styria (Steiermark) Province (1,118,000). It is both an industrial and cultural center and lies on the Mur River, 35 miles north of the Slovenia border and 120 miles southwest of Vienna.

Graz, derived from the Slavic word for fortress, was probably founded in the 12th century. At that time, a fortress was constructed on the mountain peak, Schlossberg, overlooking the Mur River. In the following century, the settlement was enclosed within fortifications, which later served as a bulwark against Turkish invasions. The city's glory days were during the 15th and 17th centuries when it was the seat of the Hapsburg emperors and the imperial capital of an empire reaching to the Adriatic Sea. The original part

of the city is built along the eastern bank of the Mur, overshadowed by Castle Hill, where the famous 16th-century Uhrtrum, or clock tower, stands as a symbol of the city.

Graz is usually forgotten by tourists who tend to visit Vienna, Salzburg, Innsbruck, and the alpine resorts. Its lack of public attention, however, seems to be part of its charm, as the Old World lives on in a way that has long since disappeared in other parts of the continent. The city today exhibits many examples of late Gothic, Renaissance, and early baroque architecture. Spires, towers, and green copper domes overlook sharply peaked, rust-brown roofs. Special decorative touches include painted facades on old buildings, delicate statuary, and ornate rococo trim. There are beautiful parks and gardens, accessible via wide, tree-lined boulevards.

A medieval cathedral and several churches from the 15th century are among Graz's main attractions. The city's square, the Hauptplatz, laid out in 1164, faces the neo-Renaissance city hall. Cobblestone streets lined with 17th-century buildings fan out from the square. Most mornings, a bustling open-air market is set up around the statue of Archduke Johann.

The main thoroughfare, the Herrengasse, is closed to all traffic except streetcars. Here on the Herrengasse is the Landhaus, or Styrian parliament, designed in 1557 by Italian architect Domenico dell'Allio. The Landhaus has a vast inner courtyard resembling the architect's native Florence. Close by is an armory which displays 30,000 medieval weapons and armor, the largest collection of its kind in the world.

The state university at Graz dates from the 16th century, and it was here that Johannes Kepler (1571–1630), the German astronomer, taught for several years. The new university, constructed between 1890 and 1895, is known for medical studies.

There are many fine restaurants in Graz, and especially interesting are the low-vaulted cellar (*Keller*) restaurants. Menus usually feature authentic peasant specialties. Graz is known for its wine as well as its beer. The Graz Festival of drama, music, and dance takes place in late June and early July. Styrian Autumn, in October, is a month-long festival of the performing and graphic arts.

The tourist office in Graz is located at Landhaus, Herrngasse 16, A-8010.

Linz

Linz, the nation's largest port, is a Danube city in northwest Austria, 120 miles west of Vienna and 60 miles east of Passau, Germany. It is the capital of Upper Austria (*Oberösterreich*, population 1,270,000), as well as the country's third largest city, with a population of approximately 204,000. Important commercially and industrially, Linz manufactures iron, steel, machinery, and textiles.

Originally a Roman trading settlement called Lentia, Linz's history is varied and colorful, mainly because of its location at the crossroads of Europe's main north-south and east-west travel routes. Linz grew from a small market village in the ninth century, to the provincial capital of the Holy Roman Empire in 1489. It became a center of technological pioneering late in the 19th century. The first railway line on the continent connected Linz with České Budějovice in southern Bohemia.

At the beginning of the 20th century, the world's first metal airplane was built in Linz. Here, too, Johannes Kepler completed his main work, *Harmonices Mundi*, which laid the foundation for space exploration. The university in Linz is named in his honor. The city suffered considerable damage during World War II and was occupied by U.S. troops on May 6, 1945.

Street scene in Innsbruck

© Wolfgang Kaehler. Reproduced by permission.

Linz today combines past and present, culture and industry. Architecturally, all styles can be seen in the city. Austria's oldest church, the Martinskirche (Church of St. Martin), was built in the eighth century in Romanesque style. Here also is St. Florian, the 17th-century baroque cathedral where the composer Anton Bruckner was organist; today the city's congress center and concert hall, the Brucknerhaus, is named for him, and the Bruckner Festival, held each September, has earned the hall and the city an international reputation in the music world. A neo-Gothic cathedral, the Neuer Dom, was built between 1862 and 1924. The tower is 145 feet high; the cathedral can hold 20,000 people.

The old marketplace is surrounded by baroque and rococo facades, while the main square with its Trinity Column is one of the largest and most beautiful town squares in Europe. The Provincial Museum gives a representative picture of the history and folklore of the city and surrounding countryside, as well as housing collections of indigenous and international art.

The restaurants in Linz offer a fresh and wide variety of food, since the city lies in the center of a fertile,

arable, and market gardening region. Wine is the only commodity not produced locally.

Linz offers a broad variety of leisure-time activities. The Pöstlingberg, the hill overlooking the city, is more than a place of pilgrimage; the grotto railway is a fairy tale world for children, and the terraces are decked with botanical specimens. The railway was built in 1898 and is Europe's steepest mountain track, making the trip from the suburb of Urfahr to the top of Pöstlingberg in 16 minutes. Linz also offers facilities for golf, horseback riding, tennis, swimming, and skating.

The official tourist office in Linz is located at Schillenstr. 50, A-4010. There is also an office in the main train station.

OTHER CITIES

BADEN (also called Baden bei Wien) is located in eastern Austria 15 miles southwest of Vienna, on the Schwechat River. Since Roman times, when it was called Aquae Pannonicae, Baden has been a popular spa resort. Lush villas and fashionable hotels adorn the city. There are parks, a museum, and a summer theater here. Architectural

reminders of when Baden was a Roman settlement are prevalent. The city served as Soviet headquarters during the occupation of Austria, 1945–55. The population here is about 23,000.

BREGENZ, the capital of Vorarlberg Province (306,000), is located in extreme western Austria. Situated on Lake Constance (in German, the Bodensee), 78 miles northwest of Innsbruck, Bregenz is a lake port and a winter sports resort. An ancient Celtic settlement and an important Roman station, Bregenz was chartered as a city around 1200. Ruled by the counts of Montfort and later the Hapsburgs, Bregenz became the administrative center of Vorarlberg in 1726. Today, with a population of 27,000, Bregenz is the site of a hydroelectric plant. Its industries include chemicals, electronic equipment, and textiles. A museum of Roman and Celtic artifacts is located in the city. Bregenz Forest, the densely wooded highland known for its scenic beauty, is nearby. The Bregenz Lake Festival, in July and August, is held on the wharf amphitheater.

Six miles south of Bregenz is the manufacturing town of **DORN-BIRN**. With a population of nearly 40,000, Dornbirn manufactures electrical equipment, machinery, and textiles.

EISENSTADT, situated in eastern Austria near the Hungarian border, is the capital of Burgenland (272,000). Composer Joseph Haydn (1732–1809), who lived in Eisenstadt from 1760 to 1790 under the patronage of the Esterházy family, is buried in the 18th-century church, Bergkirche. The Esterházy palace, built in the 14th century and restored in 17th-century baroque style, still stands. Until 1921, Eisenstadt was a part of Hungary and it maintains a distinct Hungarian atmosphere. With a population of approximately 10,000 today, the city produces wine and manufactures textiles. Every five years (the most recent in 1991), passion plays are staged on Saturday and Sunday at the nearby St. Margarethen stone

quarry from mid-June through early September. The plays are performed on the country's largest outdoor stage, in a quarry that the Romans used 2,000 years ago.

The town of **ENNS** is situated in the north halfway between Linz and Steyr. Enns is one of the oldest towns in Austria, having received a charter in 1212. It is located on an old trade route across the Danube, and was a prosperous market town during the Middle Ages.

KLagenfurt, the capital of Carinthia (Kärnten) Province (537,000), is a popular winter resort, surrounded by the mountain lakes of southern Austria near the Italian border. Chartered as a city in 1279, Klagenfurt reached the height of its commercial importance in the 18th century. Its current population is 90,000. A theological seminary and a large cathedral are located here. Austria's warmest lake, Wörther See, and the surrounding beaches are nearby. Near Klagenfurt, the Austrian Alpine International Academy at A-9161 Maria Rain is open to American students (kindergarten through grade 12) interested in English-language classes.

LEOBEN is located in Styria, southeastern Austria, on the Mur River, about 27 miles northwest of Graz. Situated in a coal mining region, Leoben is an industrial center with large ironworks, textile mills, and breweries. A preliminary peace treaty, superseding the Treaty of Campo Formio, was signed between France and Austria in Leoben on April 18, 1797. The population today is about 35,000. Less than 10 miles northeast is Bruck, or Bruck an der Mur. Bruck has a population of 18,000 and manufactures paper and iron goods. Knittelfeld, 12 miles southwest of Leoben, with a population of 14,000, is also an industrial city. It dates to the early 13th century.

STEYR (Steier), situated in northern Austria 20 miles south of Linz, has been an iron working center since the Middle Ages. An industrial

center located on the Steyr River at its confluence with the Enns, the city produces motor vehicles, tractors, sporting firearms, and iron goods. With a current population of nearly 40,000, Steyr has many well-preserved historic buildings. Among them are Lamberg Castle, built in the 10th century and restored in the 18th century; a 15th-century Gothic parish church; and an 18th-century town hall.

Situated on the Drau River, 21 miles west of Klagenfurt, in southwest Austria, **VILLACH** is the commercial and trade center of Carinthia Province. Lead from mines in Bleiburg is used here for manufacturing. Villach also trades timber. Among the city's sites is the 15th-century St. Jacob's Church, in Gothic style with a tall detached tower. The population is approximately 88,000 here. Nearby Warmbad Villach is known for its mineral baths.

Just west of Enns in Oberösterreich (Upper Austria) is **WELS**. With a population of 51,000, it is the second largest city in the province, located about 120 miles east of Vienna. Situated on a site occupied since prehistoric times, Wels is a manufacturing and commercial city producing agricultural machinery and textiles. There are natural-gas deposits and hydroelectric power in Wels. Architecture here is in the late Gothic and baroque styles. The castle where Emperor Maximilian I died in 1519 is located in Wels. Founded in 15 B.C., the city's ancient name was Ovilava.

WIENER NEUSTADT, located 35 miles southwest of Vienna, has a current population of 35,500. An industrial city that is also a railroad junction, Wiener Neustadt manufactures textiles and leather goods, and brews beer. Founded about 1193, the city was at the height of its prosperity in the 15th century. Severely damaged during World War II, Wiener Neustadt was occupied by Soviet troops on April 3, 1945. A visitor to the city may see a 13th-century cathedral, a 13th-cen-

tury castle, and three towers of medieval fortifications.

COUNTRY PROFILE

Geography and Climate

Austria, located in the heart of Europe, is about the size of Maine. It shares a common border with two members of NATO: the Federal Republic of Germany and Italy; three former East Bloc countries: Hungary, the Czech Republic, and Slovakia; neutral Switzerland; recently independent Slovenia; and the Principality of Liechtenstein. Austria is primarily mountainous, with the Alps and their approaches dominating the western and southern provinces. The eastern provinces and Vienna are located in the Danube basin.

Temperature extremes in Vienna vary between summer highs of 85°F and -4°F in winter. October may be damp and rainy, and light snowfalls occur in November and December. Snow, sometimes heavy, and frost can occur from January until mid-March. April, May, and early June offer pleasant spring weather, and summers are often delightful.

Vienna sometimes becomes uncomfortably hot in July and August, especially in the city's center, but the suburbs, particularly those which are elevated, are pleasant. The city is subject to rapid and marked changes in atmospheric pressures with accompanying winds. One such wind, the Foehn, carries warm air from the south. It has a special meaning for the Viennese since many people blame it for peculiar human behavior. Average annual precipitation in Vienna is 26.89 inches.

The mountainous regions have long, cold winters with heavy snowfall and bright, crisp days. The Danube basin usually has less snow, is more damp, and therefore has more gray

Austrians walking in front of the Schönbrunn in Vienna

Courtesy of Jolen Gedridge

and overcast days than the higher altitudes.

Population

Austria's population is 8.0 million; about 1.6 million live in Vienna. As opposed to the ethnic diversity of the old empire, the present-day population is fairly homogenous. Of the six officially recognized minorities, only 2 show significant numbers: about 18,000 Croats in Burgenland and some 15,000 Slovenes in Carinthia. In addition, significant numbers of individuals of Turkish, North African, and East European origin have recently settled in the country, residing mostly in Vienna. An estimated 40,000 Bosnian refugees are residing in Austria. Many Austrians, particularly in the Vienna area, have relatives in the neighboring Czech Republic, Slovakia, and Hungary. German is the first language of about 92% of the population.

Approximately 78% of the Austrian population is Roman Catholic. In contrast to the clericalism which strongly influenced Austrian affairs as late as the 1930s, the present church hierarchy is not politically active.

Public Institutions

The Republic of Austria is a federal state with nine provinces, one of which is Vienna. The government is parliamentary. A Council of Ministers headed by the Chancellor is responsible to the legislature. The directly elected President has predominately ceremonial responsibilities.

The legislature is bicameral with the Nationalrat (lower house) exercising real legislative authority. The Bundesrat (upper house) only reviews legislation passed by the Nationalrat and has delaying, not absolute veto, powers.

Since World War II, Austria has been politically stable. The two coalition parties - Social Democrats (SPO) and People's Party (ÖVP) have the support of about 66% of the electorate. The remaining 34% is divided among the Freedom Party (FPÖ), the Liberal Forum (LIF), and the Greens. Extremist parties have virtually no influence on government policy.

The Social Democratic Party traditionally draws its constituency from blue and white-collar workers, so that much of its strength lies in the urban and industrialized areas. In the past, the party advocated heavy state involvement in Austria's key industries, the extension of social security benefits, and a full-employment policy. In the mid-1980s, the party began to swing toward free market-oriented economic policies and balancing the federal budget.

The traditional constituency of the People's Party has been among farmers and businesses. Its centers

of strength are the rural regions of Austria. In economic matters, the party advocates conservative financial policies and privatization of much of Austria's nationalized industry. It advocates Austrian membership in NATO.

The Freedom Party has been the major opposition party. Recently, the party's mixture of populism and antiestablishment themes has won increased support. In provincial elections in Vienna in 1996 the Freedom Party moved into second position in city government with 28%. Nationally, it attracts approximately 22% of the vote. In February 1993 the Liberal Forum was established as a result of a split from the Freedom Party.

The Austrian parliamentary elections, held in December 1995, produced an SPOOVP coalition government. The Social Democratic Party under its former chairman, Chancellor Franz Vranitzky, reached 38%. The People's Party, however, dropped to 28% of the vote. The Freedom Party, under Joerg Haider, increased its share of the electorate from 5% in 1986 to 22% in 1995. The LIF and Greens each polled 5%. National Parliamentary elections were held in October, 1999.

The Austrian State Treaty of 1955 ended the four-power occupation and recognized Austria as an independent and sovereign state. The Federal Assembly passed a constitutional law declaring Austria's "perpetual neutrality." Austrian neutrality prohibits membership in military alliances and the establishment of foreign military bases on Austrian soil. Over the years, neutrality came to symbolize much more than the law stated. With its decision to join the European Union January 1, 1995 - and following the demise of the Warsaw Pact - Austria has begun reassessing its definition of neutrality.

Austrian foreign policy is shaped by neutrality and the concept of "solidarity" under UN mandates. For example, Austrians serve in Bosnia

(IFOR/SFOR), and in UN peace-keeping missions in Golan, Cyprus, etc. Austrian leaders also emphasize the unique role the country plays as a link between East and West and between the industrialized and developing countries. Austria is active in the UN; several UN agencies, including the International Atomic Energy Agency and the UN Drug Control Programs, Space Program, and Center for International Crime Prevention, are headquartered in the Vienna International Center, which opened in 1979. The U.S. has a Mission (UNVIE) to these organizations headed by an American Ambassador, who also represents the U.S. at the organization charged with the implementation of the Comprehensive Test Ban Treaty. In addition, the Organization for Security and Cooperation in Europe (OSCE) operates from Vienna and the Austrians play an active role. The U.S. Mission to OSCE is also headed by an Ambassador. USOSCE is also responsible for covering the Wassenaar Arrangement on Export Controls for Conventional Arms and Dual-Use Goods and Technologies, which is headquartered in Vienna. The International Institute for Applied Systems Analysis (IIASA) and the Organization of Petroleum Exporting Countries (OPEC) have their headquarters in Vienna.

Arts, Science, and Education

Austria is a paradise for the arts. The Vienna State Opera, "Staatsooper," the Burgtheater, and the "Volksoper" rank among the world's leading cultural organizations.

The great Vienna orchestras include the Vienna Philharmonic Orchestra and the Vienna Symphony Orchestra. The "Musikverein" and the "Konzerthaus" present special concerts and recitals by internationally famous artists.

Visitors from all over the world are attracted to Austria each year by a variety of festivals: the Vienna Fes-

tival in May/June; the Salzburg Mozart week in January; the Salzburg Festivals at Easter, Pentecost, and in August; the "Sound of Easter" concerts in Vienna; the Carinthian Summer Festival; the Bregenz Festival; and the avant garde Styrian Fall Festival in Graz. Vienna is the home of the Vienna Boys' Choir and the celebrated Spanish Riding School which features the beautiful white Lipizzaner horses.

Interest in science and research is promoted by the universities, the Austrian Institute for Historical Research, and a number of think tanks, among them the Institute for Human Sciences and the Institute for Culture Studies, "IFK." The Institute for Advanced Studies is also located here.

Austria has 18 institutions of higher learning with university status, 6 of which are music and fine arts colleges. Recently, a number of polytechnics, so-called "Fachhochschulen," have been added. The total student body in Austrian universities is about 266,000, about 29,000 of whom are foreigners. Austrian universities are free for Austrian citizens. Foreigners in most cases have to pay a tuition fee of approximately US\$325.00 per semester. Austria's institutions of higher learning are open to qualified Americans in most departments. However, some fields - varying from university to university - have restricted access due to limited study and laboratory facilities. In these cases admission will be granted on a competition basis. American citizens planning to study in Austria should therefore check with the pertinent department prior to planning their studies abroad.

With the exception of the various language departments, most courses at Austrian universities are given in German. Therefore, a good knowledge of the language is one of the prerequisites for studying at an Austrian institution of higher learning. The other requirement relevant for American citizens is a high school diploma. For instruction in

the arts, particularly music and voice, excellent private teachers are available.

Also, a considerable number of American colleges and universities have branches in Austria with programs varying from 3 weeks to an academic year. Webster University offers a full undergraduate program with courses in art, history, political science, economics, management, international relations, German, and English. The internationally renown Salzburg Seminar at Schloss Leopoldskron, Salzburg, each year attracts young scholars and professionals in a variety of fields from Europe, the U.S., and around the world.

Austrian education follows the traditional European system. School attendance is mandatory from 6 years until the age of 15, when students either continue their education or enter an apprenticeship program.

Commerce and Industry

Austria's economy since 1945 has been characterized by steady growth rates, low inflation, a stable currency, and increasing integration into the European economy. Key features of the economic landscape include the "social partnership," a consensus-building mechanism among government, business (represented by the Federal Economic Chamber) and labor (represented by the Labor Chamber and the Austrian Trade Union Federation). This partnership has helped bring about a high level of social services, wage increases in line with productivity, peaceful labor/management relations, and relatively low unemployment.

Most sectors of the economy have undergone important structural changes in the past few years, in response to Austria's entry into the European Union on January 1, 1995. This brought both new opportunities and new competition. Currently, exports of goods and ser-

vices account for about 42% of Gross Domestic Product. Some 35% of Austria's total trade is with Germany; another 25% is with other members of the EU, and 17% with Central Eastern Europe.

As a traditional gateway to Eastern Europe, Austria is an important center for the U.S. and other Western companies. About 150 of the 380 American firms in Austria base their Eastern European activities in Vienna. Austrian companies are also among the top investors in the East, especially in Hungary, the Czech Republic, and Slovakia.

Transportation

Automobiles

Austrian law requires liability insurance in the legal minimum amounts for all motor vehicles with Austrian registration, including motor vehicles belonging to diplomatic missions and to all personnel of diplomatic missions. The law also requires that motor vehicles be insured with companies approved by the Austrian Ministry of Finance.

Local

Public transportation in Vienna is excellent. A network of streetcars, buses, and subways which maintain dependable service at reasonable fares, covers the city. Public transportation operates from 5:30a.m. until about midnight, thereafter there is a special "night service."

Many taxis are available 24 hours a day at stands in Vienna. Prices are relatively high, and drivers expect a tip of 10% beyond the meter price.

Regional

Rail transportation to most parts of Europe is frequent, fast, and reliable.

Many major international airlines have regular direct or connecting service to and from Vienna. Almost all of Europe's principal cities are easily accessible by air and rail.

Communications

Telephone and Telegraph

Telephone and telegraph service to all countries is available through the Austrian post at standard international rates.

Monthly telephone charges are more expensive than in the U.S. as all calls are metered. An international station-to-station telephone call from Austria to the U.S. is normally more expensive than a call of the same duration placed from the U.S.

Mail

International mail deliveries to and from the U.S. are reliable and frequent; transit time varies between 5 and 15 days for airmail and 3-5 weeks for surface mail. Parcel post services are available at international rates, and delivery to the U.S. takes 4-6 weeks.

Customs declarations are required on all outgoing packages. Customs clearances are required on all incoming packages.

Radio and TV

The Austrian Broadcasting Corporation, ORF, is financed out of user fees and advertisement and governed by a board ("Kuratorium") of representatives from the broadcast industry, the government, and the public sector. ORF is known for its excellent news coverage, produced in Austria. Entertainment programming relies heavily on German series and U.S. and German movies. News and information programming is not overtly censored and the executive board has the obligation to see to it that all political voices are heard. ORF does exercise censorship on excessive violence in entertainment programs. The international community relies heavily on ORF's foreign language "Blue Danube Radio" which operates primarily in English and has community service programs and music tailored to the tastes of the English speaking community.

ORF continues to have a de facto monopoly on local broadcasting,

despite large-scale privatization of radio frequencies which began in April 1998. Several out of a planned 53 private radio stations licensed by a new "Regional Radio Authority" instituted under the Office of the Austrian Chancellor are now operating. The new stations are a long-term result of a liberalization process of the Austrian broadcast media scene which started in 1993, when the European Court of Justice ruled against Austria's broadcasting monopoly. A law permitting private regional radio stations came into effect in 1994 and limited the participation of print-media owners to 26 percent in one radio station and 10 percent in each of two other stations, to avoid media concentration. Laws permitting the introduction of private (terrestrial) television are planned for the near future. Cable television provides a broad variety of foreign television broadcast, including CNN, and there are several avenues of procuring direct TV or satellite system reception for monthly fees.

American radios will work with voltage transformers, but the television broadcasting system is different from that of the U.S. Compatible European television sets are sold locally, as are multisystem receivers, which can also be obtained at military shopping facilities in Germany.

Newspapers, Magazines, and Technical Journals

The International Herald Tribune, The Wall Street Journal, and USA Today are sold at newsstands and hotels throughout Vienna's First District, usually the same day they are published. Austria Today, a local newspaper in English, is published weekly. Six general circulation daily German-language newspapers are published in Vienna. Three, Der Standard, Kurier and Die Presse, offer serious coverage of international and local news, as does the Salzburger Nachrichten, published in Salzburg but widely available in Vienna. Other European newspapers are available at local newsstands, as are some popular

American magazines. Imported publications are expensive.

A fairly good supply of books in English may be purchased at leading bookstores, but they are expensive. The facilities of Amerika Haus and the British Council Library are also available to the TriMission community. Since children's English-language books are in short supply, families should bring them from the U.S. or order them from the U.S. or British publishing firms.

Health and Medicine

Medical Facilities

Primary medical and dental care in Austria, while somewhat more expensive than in the US, is excellent. Austrian hospitals are well staffed and well equipped. Most patients requiring hospitalization (including deliveries) remain in Vienna.

Local pharmacies are well stocked with European pharmaceuticals, many of which are the same as their U.S. equivalent. Prices are similar to those in the U.S.

Community Health

Disease prevalence in Vienna is similar to that of any major American city. All milk is pasteurized and all water is safe and pure. No special precautions/immunizations need be taken for a tour in Vienna. However, please ensure that your standard immunizations/boosters are valid.

Preventive Measures

In certain parts of Austria and Central Europe, there is a danger of contracting an encephalitis from viruses carried by several common tick species. While not all ticks carry the tick-borne Encephalitis virus (FSME-viren), those that do are frequently found in wooded, low-lying areas, such as the Vienna Woods. An excellent and effective vaccine, developed in Austria, is highly recommended for all persons living in Vienna who expect to enjoy

outdoor activities, such as walking and jogging.

Drinking water in Vienna has an inadequate level of natural fluoride and none is added.

NOTES FOR TRAVELERS

Passage, Customs & Duties

If driving a car from any other part of Europe or the Middle East, a traveler should get a copy of the International Road signs and learn them; the signs are standard throughout Western Europe.

Roads in Austria are generally good to excellent. But one should not drive over Alpine passes in midwinter unless the car is equipped with chains and is in excellent condition; even then the roads are hazardous.

Vehicles must be covered by liability insurance valid in Austria as evidenced by an international (green) insurance card. If the car is not already insured, temporary insurance must be bought at the border. U.S. or international license plates may be used for up to 2 months or until Austrian plates are issued.

A passport required. A visa is not required for business or tourist stays up to three months. For further information concerning entry requirements for Austria, travelers should contact the Embassy of Austria at 3524 International Court, NW., Washington, D.C. 20008, Tel: (202) 895-6767, or the nearest Austrian Consulate General in Chicago, Los Angeles, or New York. The Austrian Embassy to the United States maintains a webpage in English that answers in detail, questions concerning the laws and regulations of Austria, including residency, driver's license requirements, and permission to work. For additional information visit <http://www.austria.org/index.html>.

U.S. citizens are encouraged to register at the Consular Section of the

U.S. Embassy in Vienna or at the Consular Agency in Salzburg and obtain updated information on travel and security within Austria. The U.S. Embassy in Vienna is located at Boltzmannngasse 16 in the Ninth District. The Consular Section of the U.S. Embassy is located in the Marriott Building, on the fourth floor of Gartenbaupromenade 2, in the First District. The telephone number for both the Embassy and the Consular Section is (43)(1) 31-339. There is also a Consular Agency in Salzburg at Alter Markt 1, Telephone (43) (662) 84-87-76, open Monday, Wednesday, and Thursday from 9:00 A.M. to 12:00 noon. U.S. citizens in Salzburg who require assistance outside of these hours may contact the U.S. Embassy in Vienna. The Embassy also maintains a website, at <http://www.usembassy-vienna.at> with security updates and other information helpful to American citizens.

Pets

The Austrian Veterinary Service has strict rules about the entry of pets shipped by air to Vienna. The following requirements apply: rabies shots must be current; a valid veterinarian's certificate must be furnished with a statement that there has been no rabies among domestic or wild animals in the original municipality of the animals concerned or in the neighboring municipalities within the last 14 days before shipment; and permission must be obtained by the carrier from the Austrian Government (Ministry for Health and Environmental Protection).

Kennels are available locally.

No quarantine restrictions for household pets exist in Austria as long as the pets have the above documentation.

Currency, Banking, & Weights and Measures

As a member of the European Community, the Austrian monetary unit is the euro, which is divided into 100 cent. Coins in circulation are 1, 2, 5, 10, 20, 50 cent and 1 & 2 Euro. Bank notes are 5, 10, 20, 50, 100, 200 and 500 euros. The exchange rate approximates 1.15 euro to \$1 US.

ATMs that accept U.S. credit and bank cards can be found throughout Austria. Austria has no currency restrictions on the import of reasonable amounts of foreign currency; export is limited.

Austria uses the metric system.

There is no exemption from paying the value-added tax (VAT) which is included in the price of most goods and services.

RECOMMENDED READING

These titles are presented as a general indication of the material published on this country. The Department of State does not endorse unofficial publications.

Barea, Ilsa. *Vienna, Legend and Reality*. The Camelot Press Ltd.: London, 1967.

Crankshaw, Edward. *The Fall of the House of Habsburg*. (Cardinal Books) Sphere: London, 1974.

Janik, Allan and Stephen Toulmin. *Wittgenstein's Vienna*. Touchstone-Clarion, Paperback. Simon & Schuster, 1974.

Jelavich, Barbara. *Modern Austria: Empire and Republic, 1815-1986*. Cambridge University Press: New York, 1987.

Johnson, Lonnie. *Introducing Austria*. Osterreichischer Bundesverlag: Vienna, 1987.

Johnston, William M. *The Austrian Mind: An Intellectual and Social History*. University of California Press: Berkeley, 1972.

Jones, J. Sidney. *Vienna Inside-Out*. Vienna: Jugend und Volk Verlag, 1979.

Schorske, Carl. *Findesiecle Vienna: Politics and Culture*. Knopf: New York, 1980.

Waldheim, Kurt. *Austrian Example*. Macmillan, 1973.

It is recommended that travel books be purchased in the U.S. since English language books are not always available and are very expensive in Vienna.

BELARUS

Republic of Belarus

Major Cities:

Minsk

Other Cities:

Brest, Gomel, Grodno, Mogilëv, Vitebsk

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated May 1997. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Settled originally by East Slavs in the 6th to 8th centuries, the Republic of Belarus is a historic borderland between western and eastern Europe. Because of its location, Belarus endured occupation by numerous regional powers over the centuries, such as Poland, Lithuania, and Russia. The former Soviet republic suffered its greatest destruction during World War II, when it bore the brunt of the Nazi occupation. One in four Belarusians was killed. Then in 1986, the republic encountered a modern-day foe, when 70 percent of the nuclear fallout from the disaster at Ukraine's Chernobyl nuclear power plant landed on Belarusian territory, contaminating one-fifth of its area.

With the breakup of the Soviet Union, Belarus declared independence on August 25, 1991. The United States recognized the Republic of Belarus on December 25, 1991.

MAJOR CITY

Minsk

Minsk, the capital of Belarus and the administrative capital of the Commonwealth of Independent States, is one of the "hero cities" of the Great Patriotic War (World War II). Situated halfway between Warsaw and Moscow and between Vilnius and Kiev, Minsk was almost completely destroyed during the fighting. It was rebuilt in pure Soviet style and has wide streets and large parks. In the past three decades, the population of Minsk has more than tripled to reach 1.9 million people.

Skorina Avenue (formerly Lenin Avenue) and Masherova Avenue are the primary thoroughfares dividing the city. Although few historic buildings remain, the 17th century Russian Orthodox cathedral of the Bernadine Convent is undergoing renovation, and the "Trinity Embankment," along the Svislach

River has been reconstructed in the 17th and 18th century styles.

Food

The availability of food is constantly improving, but the selection is never wide nor consistent. Shipping certain consumables, such as spices, food items associated with ethnic cuisines, and items necessary for special diets, is recommended.

There are stores in Minsk that best can be described as hybrids that fall somewhere between the local *gastronomes* and small Western-style supermarkets. Goods for sale mainly are imported and are displayed on open shelves from which customers make their own selections, and customers pay for everything at one time at checkout counters. A few of these shops operate around the clock. As well, more and more *gastronomes* stock imported foodstuffs and beverages. Shoppers usually can find canned goods, cheeses, pasta, juices, some fruits and vegetables, processed and cured meats, cleaning supplies, toiletries, packaged foods, soft drinks, snacks, liquor, sweets, and other goods at random. Food also can be ordered from a department store based in Helsinki. Deliveries are made weekly.

A large farmer's market is open all year in Minsk, and its merchants

sell fresh fruits and vegetables in season and imported items at higher prices all year.

Kitchen supplies such as trash bags, foil and plastic wraps, reclosable storage bags, ice trays, and egg cartons are not readily available.

Clothing

Clothing requirements in Minsk are relatively informal.

Western clothing styles and brands are beginning to be available in Belarus; several popular clothing and shoe manufacturers have opened retail outlets in Minsk. It is also possible to find a small selection of imported clothing in local department stores. Prices for such merchandise tend to be two or three times higher than in the West, and the choices are very limited.

Although Minsk is one of the cleaner former Soviet cities, it is still pretty grimy, and clothes are easily soiled. Easily cleaned garments in dark colors are preferable. A supply of warm winter clothing is necessary. This should include rain gear, warm hats, scarves, gloves, socks, and sturdy boots with nonslip soles.

Summers are usually mild, but temperatures can rise above 90°F. Spring and the short autumn are characterized by rain. Winter comes early, spring late.

Supplies and Services

Supplies: Personal toiletries, cosmetics, and feminine hygiene products are available in local stores, though the availability is never guaranteed and the quality is not necessarily up to American standards.

Although a German pharmacy has opened in Minsk, a very limited selection of contact lens solutions is available through local contact lens clinics.

Paper goods, such as toilet paper and disposable diapers, are available locally, but supplies can never be guaranteed. Other paper prod-

ucts such as wrapping paper, stationery, or greeting cards are not sold locally. Also, most local stores do not supply bags for your purchases. Local people carry their purchases home in large plastic or canvas bags. These bags are inexpensive and widely available.

Basic art supplies for children, such as markers and paints, are available locally. Fabric and yarns are available, but the selection and quality are not always good. Western sporting goods are beginning to make an appearance, but the prices are prohibitive. Film and photo developing is available locally, and the service is quick and basically reliable for about the same price as in the U.S.

There are several firms specializing in computer sales and repair, from which it is possible to purchase basic computer supplies and software.

Western tobacco and alcohol products are sold locally; prices are approaching or exceeding Western levels. Other entertainment supplies such as music cassettes and compact disks are available, but the quality and adherence to copyright law is never guaranteed. Some videos are sold, but they are on the East European system, Secam-D/K. They do not play in Western VCRs.

There is not a great selection of pet food and supplies, but adequate products usually can be found.

Basic Services: There are several beauty shops, which are satisfactory and inexpensive, that give both men's and women's haircuts. Some hair products are available locally.

Tailoring, dressmaking, and shoe repair are available, but not to Western standards. Fabrics and other materials are available, but the selection is limited.

Several garages that repair foreign-made automobiles have opened in Minsk, but spare parts for Western automobiles still are hard to come by.

Religious Activities

There are a variety of religious societies in Belarus. Among them are Russian Orthodox, Roman Catholic, Evangelical Baptist, Seventh-Day Adventist, Jewish, Muslim, Baha'i, and Krishna congregations. Roman Catholic services are conducted in Polish and Russian.

A nondenominational Christian fellowship that holds services in English meets each Sunday.

Education

The private, nonprofit Minsk International School, operated by Quality Schools International, opened in September 1993. The school holds classes in a Belarusian kindergarten about a block from the embassy. Instruction is offered in English for students in kindergarten through 7th grade.

437

Special Educational Opportunities

Russian and Belarusian language tutors are readily available. Arts and sports instruction (in Russian) is available through local government-sponsored institutions.

French and German government cultural facilities with language training are being established.

Sports

A tennis complex in the city is available for use, and the a nearby recreation area is a popular cross-country skiing location. There also are several swimming pools, weightlifting facilities, and an ice skating rink.

Minsk has many parks and jogging trails. Soccer is very popular, as is volleyball. Belarusians are avid chess players, and organized championships occur year-round.

On the outskirts of Minsk are several former Soviet Olympic training centers, including the winter sports center at Raubichi and the equestrian center at Ratomka.

The Minsk Yacht Club, catering to sailing and wind-surfing enthusiasts, is situated on the shores of the huge Minsk reservoir known as the Minsk Sea. Fishermen, campers, hikers, and nature-lovers will enjoy Belarus' many lakes and forests. Hunting and fishing are regulated and require licenses.

Touring and Outdoor Activities

Most attractions within an hour of Minsk are historical structures, museums, and war memorials. These include the World War II Khatyn Memorial; the city of Zaslavl, site of a 13th-century Catholic church; or the 15th-century Mir Castle.

Belarus has a relatively good system of roads, and it is possible to travel to any corner of the country in three or four hours. Vilnius, Lithuania, is a two- to three-hour drive north, Warsaw and Kiev are eight hours away by car, and Moscow is a full day's drive.

Crimea, on the Black Sea in southern Ukraine, is the closest warm-weather destination.

Entertainment

Minsk offers a wide variety of live entertainment, including concerts, theater, opera, and ballet. The opera and ballet are excellent and have wide repertoires. A puppet theater and an experimental theater require a good command of Russian to be enjoyed. The indoor circus arena hosts many traveling troupes. Tickets are very affordable.

New restaurants open every month in Minsk, though there is not great variety in cuisines. As of August

1995, restaurant patrons could dine in Western style at a steak house and establishments featuring Spanish and Italian cooking. Service and menu selection are not up to Western standards, and prices tend to be very high. There is no "fast food" in Minsk, but several pizza restaurants and a cafe with some Arab-style dishes have opened in late 1994.

Travelers should subscribe to favorite periodicals and bring plenty of books to post. Western newspapers are rarely received in Minsk on a timely basis.

Social Activities

Travelers tend to socialize informally, sharing meals and going out to restaurants and Minsk's three nightclubs.

The international community in Minsk is small but growing rapidly. There is an English-language theater group that stages semiannual musical productions.

Organized opportunities for meeting host-country nationals are limited, and Russian language skills are necessary for contact beyond the diplomatic community.

Special Information

The southeastern corner of Belarus is officially a "no man's land" because of contamination from the Chernobyl incident. The residents of that area were relocated, but main roads through the area remain open for travel through it.

People traveling to Belarus by car may encounter long delays at the Belarusian-Polish border or the Polish-German border.

OTHER CITIES

On the right bank of the Bug River in southwest Belarus, less than two miles from the Polish border, **BREST** is an important railroad junction. Its population is 294,000. Brest was taken by the Germans during World War I and was the site

for the signing of the Brest-Litovsk Treaty between Germany and Russia in 1918. During World War II, the city once again came under German occupation from 1941 until 1944, when it was retaken by the Soviets.

GOMEL, a city with a population of about 504,000, is located in southeast Belarus. First accounts of the city date from 1142. Gomel has been a cultural and historical center since the Middle Ages. The city was controlled alternatively by Poland and Russia until 1772, when it finally became Russian. A rail and water transportation center, Gomel trades in flax, wool, and lumber.

Located in a western corner of Belarus between the Polish and Lithuanian borders, **GRODNO**, at various times during its history, has been under Lithuanian, Polish, and Russian rule. During the 14th century the city was the capital of Lithuania; in 1795 it was the seat of the Polish *Sejm* which ratified the third partition of Poland, at which time Grodno became Russian. The city was occupied by German forces during both World Wars. Today, this city of 295,000 is an industrial and agricultural center.

MOGILĚV was founded in the 13th century and is located on the banks of the Dnieper River, 112 miles east of Minsk. Its current population is 356,000. Through its history, the city was controlled by Russia, Poland, and Sweden. It was partly destroyed by Peter the Great in 1708. In 1772 MogilĚv was annexed to Russia from Poland. Between August of 1941 and June of 1944, MogilĚv was occupied by German forces.

VITEBSK, 140 miles northeast of Minsk, is on the Western Dvina River. This city of 360,000 is an important industrial center that produces machine tools, furniture, and radios. Vitebsk was first mentioned in historical chronicles in 1021 and was the trading center of an independent principality for about two centuries. It came under Lithuanian rule in 1320 and then

under Poland in the 16th century. After the First Partition of Poland in 1772, Vitebsk became a Russian city. Occupied by the Germans between August, 1941 and June, 1944, Vitebsk was heavily damaged during this period.

COUNTRY PROFILE

Geography and Climate

Historically known as Byelorussia (White Russia), Belarus occupies 80,154 square miles (207,600 sq. km.), bounded on the north and east by Russia, on the south by Ukraine, on the west by Poland, and on the northwest by Lithuania and Latvia. The country is roughly the size of Great Britain or the U. S. state of Kansas.

Approximately one-third of the land area is forested, and 13 percent is uninhabitable marshland. The majority of the landscape is flat farmland, drained by the Dnieper, the Western Dvina, the Pripyat, and the Nieman rivers. Of the 10,000 lakes in the country, the largest is Lake Naroch in the northwestern part of the country, just east of Vilnius, Lithuania. The Bialavezhia Forest, on the Polish border north of Brest, is a nature preserve and popular tourist attraction.

Nuclear fallout from the 1986 disaster at Ukraine's Chernobyl nuclear power plant, just seven and a half miles (12 km) from the southeast border of Belarus, contaminated 23 percent of its farmland. Implementation of Belarusian laws regarding resettlement and medical care for the people and decontamination of the territories most affected by radiation has been difficult due to lack of adequate financing. However, in December 1993, the U.N. General Assembly, led by the efforts of the U.S., Japan, and Canada, adopted a resolution to study and attempt to minimize the consequences of the Chernobyl disaster.

At an altitude of 656 ft. (200 m.) above sea level, Belarus has a mild continental climate, with an average temperature in winter of 20°F (-6°C) and in summer of 62°F (17°C). Annual precipitation averages 22-28 inches. Belarus is on the 53rd latitude, the same as Hamburg, Germany; Dublin, Ireland; and Edmonton, Canada.

Population

The population of Belarus is 10.4 million, of whom 81 percent are Belarusian, 11 percent Russian, 4 percent Polish, 3 percent Ukrainian, and 1 percent Jewish.

Approximately 68 percent of the population lives in urban areas, concentrated primarily in Minsk, the capital, and the other major cities along the route from Warsaw to Moscow. Life expectancy is 62 years for men, 75 for women.

There is no state religion, though the majority of Belarusians are Orthodox Christians. Roman Catholics make up about 15 percent of the population, and 16 other religious sects are registered in Belarus.

The Belarusian Constitution, adopted in 1994, established Belarusian as the official language of the republic, and many public-place and street names were changed from Russian to Belarusian. Broadcast and print news media use Belarusian as does the government for official documents; however, Russian, still considered the language of communication, continues to be used widely. Belarusian is closely related to Russian and Polish. It is written using the Cyrillic alphabet, with two letters different from the Russian alphabet.

In May 1995, during parliamentary elections, referendums were passed that granted Russian equal status with Belarusian as the official language of Belarus and replaced the republic's post-independence coat of arms (a knight on horseback in a field of red) and red and white flag with ones nearly identical to

Belarus's Soviet emblem and flag. Although the modified Soviet-era flag flies above government buildings, the knight-on-horseback emblem is still much in evidence elsewhere.

Public Institutions

Belarus is a presidential republic, with a three-tiered structure of power: executive, legislative, and judicial.

The first constitution of the newly independent republic of Belarus was adopted on March 15, 1994, and its first popularly elected president, Alexander Lukashenko, won his seat on July 10, 1994 and was re-elected in 2001. The president selects a cabinet of ministers, headed by a prime minister, currently Gennady Novitsky.

The Parliament (Supreme Council) of the Republic of Belarus acts as the highest legislative body, and local governments are administered by Councils of Deputies, led by mayors.

In the judicial branch, a procurator general oversees the Constitutional Court of the Republic and a series of subordinate local procurators and courts.

There are a wide variety of political parties, but party designations are meaningless under current political conditions.

There are more than 600 nonpolitical public unions and associations, among them industrial trade unions, philanthropic foundations, sports and recreations groups, and associations for the disabled.

Arts, Science and Education

The Belarusian cultural presence is exemplified by the well-known Belarusian ballet; the artwork of Marc Chagall; the 16th century printing and translations of the scholar Francisk Skorina; handicrafts including carvings, straw

View of Minsk, Belarus

© Nik Wheeler/Corbis. Reproduced by permission.

weavings, and embroidered linens; and the popular traditions of folk music and literature.

Countless folklore groups perform Belarusian music and dances, and every year the Union of Belarusian Writers sponsors literary festivals. The poet Yakub Kolas is honored all over Belarus.

The Belarusian Bolshoi Theater of Opera and Ballet was founded in

1933, and the best-known composers include Yuri Semenyako and Evgeni Glebov.

Famous Belarusian scientists include Kazimir Semenovich, inventor of the multistage missile; Yakub Narkevich-Yedka, inventor of electrography and wireless transmission of electric signals; Sofia Kovalevskaya, a mathematician; and Pavel Sukhoi, an aircraft designer. The Academy of Sciences,

which was opened in 1929, unites 46 research, design, and technology divisions and is the forum for the republic's highest-level research and scholarly activities.

Belarus has many state-run institutions of higher learning, with about half in the capital city of Minsk. Belarus State University and the Minsk Institute of Foreign Languages are among the most prestigious. After independence, several

non-state universities, oriented toward such fields as the humanities and business, were established.

Children begin school at age six and continue through the 10th and 11th forms, at age 17.

Commerce and Industry

During the Soviet period, Belarus was the assembly line of the USSR, importing raw materials and exporting manufactured goods. Since the dissolution of the Soviet Union, Belarus no longer has access to subsidized raw materials or energy products, and its as yet unreconstructed economy is floundering. Energy-inefficient factories make Belarusian manufactured goods, particularly heavy machinery, non-competitive on world markets. The defense industry, which played a significant role in the Belarusian economy, continues to experience difficulty converting to the production of civilian goods. However, with its highly qualified work-force, strategic location in the center of Europe, and well-established infrastructure, Belarus has good potential for economic growth.

Belarus is heavily energy-dependent, importing most of its oil and natural gas from Russia. As 2000, the republic was carrying a debt of approximately \$1 billion. The country's few natural resources include peat reserves, iron ore deposits, coal reserves and timber. The textile industry, also dependent on imported raw materials, includes flax, cotton, and wool processing and weaving, and the manufacture of linen, cotton, silk, and wool fabrics and products.

Belarus's agricultural sector remains largely unreformed, with state-owned and collective farms still in the majority. Private plots, however, produce most of the vegetables for sale in markets. The primary agricultural products in Belarus are potatoes, cereal grains, sugar beets, flax, and vegetables.

The republic completely satisfies its needs in (and is, in fact, a net exporter of) meat, dairy products, eggs, and potatoes.

Belarus's main trade relationships are with countries of the former Soviet Union, mainly with Russia. A customs union with Russia was signed in January 1995. Germany, Poland, the U.S., and Austria are Belarus's primary Western partners. Many joint ventures had been registered in Belarus, mostly with partners from Poland, Germany, and the U.S.; investors from these countries also account for the majority of wholly foreign-owned enterprises in Belarus.

Transportation

Local

Public transportation in the post city of Minsk is inexpensive and reliable, though usually extremely overcrowded. The metro and buses run from early morning until after midnight. Monthly passes, which provide access to all forms of public transportation, may be purchased.

Taxis are generally easy to find, either at the many taxi stands or by calling one of two companies. They are inexpensive by Western standards, though not always very clean or well maintained. Fares are calculated by multiplying the price indicated in Soviet rubles on the meter by an inflation factor. Tipping taxi drivers is not customary, and if one takes a private taxi as opposed to a state taxi, a "tip" is certainly included in the fare.

Regional

As in the U.S., Belarusians drive on the right side of the road. Belarusian driving regulations and traffic signals are somewhat different than those in the U.S.; American drivers should be aware of these differences. Signage is like that used in Europe, but road signs and traffic signals often are located in unexpected places. Belarusian drivers tend to be more aggressive than is customary in the U.S. and often dis-

regard the rules of the road. American drivers should be prepared to be pulled over often by the traffic police (GAI). Because of car thieves' preference for foreign vehicles, the traffic police are very conscientious about stopping foreign cars to verify their ownership.

Minsk has two airports. One is within the city limits and mostly serves domestic flights. The other is about a forty-minute drive from Minsk and serves international flights. The primary international airlines are Lufthansa, Swiss Air, Austrian Airlines, Estonian Airlines, and Lot (Polish). El Al recently initiated service to Minsk. Belavia is the Belarusian branch of Aeroflot and also serves international passengers, primarily to other cities in the former Soviet Union, though it has twice weekly flights to Shannon, Ireland.

Because Minsk lies on the direct route between Warsaw and Moscow, daily trains serve such major cities as Berlin, Kiev, Koln, Moscow, Odessa, Paris, Prague, Riga, St. Petersburg, Warsaw, and Vilnius and are often the fastest and easiest way to travel outside Belarus. To ensure their safety and comfort, Western passengers are advised to reserve entire full first-class compartments, even when traveling alone. By Western standards, fares (even in first-class) are relatively low, though foreigners must pay more than local people.

Communications

Telephone and Telegraph

Belarusian telephone service is often slow and not very reliable. Much of the telephone system has not been updated since it was installed after World War II. Touch-tone service may not be available in all areas.

Radio and TV

Local television offers channels in Russian and Belarusian, and European Satellite television service, which during certain parts of the

day includes NBC Super Channel and CNN, is available for a fee. There is a commercial channel that shows some Western films in English with Russian dubbing.

Newspapers, Magazines, Books, and Technical Journals

Several daily newspapers, printed in Russian or Belarusian, are published in Belarus. No foreign newspapers are readily available, and even newspapers from Russia are difficult to find. A bi-weekly eight-page tabloid, the Minsk Economic News, is published in English.

Health and Medicine

Medical Facilities

Medical care in Belarus is below U.S. standards.

Community Health

The accident at the Chernobyl nuclear power plant affected Belarus more than any other Soviet republic. Northwesterly winds carried radioactive particles from the destroyed reactor, located just 12 km south of the Belarusian border, across Belarus and beyond. In the days immediately following the disaster, gamma radiation in Minsk exceeded safe levels by a factor of 25. However, after a decade, radiation levels in Minsk have returned to normal. A significant portion of Belarus's territory remains heavily contaminated (maps available in local bookstores show the location of the contaminated areas), and certain regions in the south of the country were evacuated; it is, however, safe to travel through the contaminated areas. In general, individuals are advised to avoid eating wild mushrooms and berries (which absorb and retain radiation longer than other vegetation) and to refrain from drinking locally produced milk.

Minsk was rebuilt entirely after World War II, and therefore has the newest fresh water and sewer infrastructure of any capital city of the

former Soviet Union. Rivers and streams, however, are considered unsafe for bathing and swimming due to sewage and agricultural runoff. The post provides tap water purifiers for residences.

Compared to other Eastern European cities, Minsk has little pollution, but levels are rising due to the increasing number of privately owned cars. Although municipal authorities are operating on very tight budgets, efforts are made to keep the streets clean, and there is regular trash pick up in most residential areas. Cockroaches are common in summer.

Preventive Measures

Tap water is not safe to drink, because of possible bacterial contamination and dirt in the pipes. Boiling the water for five minutes and then filtering it is recommended. Many Americans prefer to buy bottled water.

Meat and milk are of dubious quality. Food handling is not up to American standards. All meat should be washed and cooked thoroughly. Boxed UHT milk can be purchased in local stores.

While Belarus is relatively disease-free, there have been reports of TB and hepatitis. Cholera, diphtheria, malaria, and TB cases are on the rise in neighboring countries. No immunizations are required, but Hepatitis-B and Immune Globulin are recommended. As well, routine vaccinations such as measles, tetanus, and diphtheria should be updated. A fluoride supplement also is recommended.

NOTES TO TRAVELERS

There are no local entry or departure fees at the Minsk airport. There is no restriction on the amount of money that can be imported or exported in Belarus,

but amounts in excess of \$500 must be declared.

Export of art must be approved by customs inspectors. People buying art always should obtain an itemized receipt at the time of purchase or importation.

Single-entry visas may be obtained from the Belarusian Embassy in Washington, D.C. (1619 New Hampshire Avenue NW, 20009, 202/986-1606). Multiple-entry visas can be obtained only at the Ministry of Foreign Affairs in Minsk and will be issued upon arrival.

There is no quarantine requirement for pets coming into Belarus, but dogs and cats must have all rabies shots up to date within thirty days of departure. An international health certificate is required and must be obtained within ten days of the pet's arrival in Belarus.

Veterinary care is limited but available. Pet food and supplies, such as cat litter, are not readily available. Employees should carry enough pet food to last until air freight arrives.

Pets may be transported on Lufthansa Airlines for a fee.

Western-style boarding kennels are not available.

The Belarusian ruble is the official currency in the Republic of Belarus. Inflation is high in Belarus, but it has been artificially stabilized since January 1995. Belarus redenominated its currency in January 2000, with one new ruble equivalent to 2,000 old rubles. At the end of 2000, the exchange rate was 1,180 rubles per U.S. dollar. Virtually all transactions are in cash, though a few large stores and restaurants accept VISA cards. Money changing booths, which accept German marks or dollars, are located in all big stores and on most major streets. Traveler's checks are not widely accepted.

The metric system of weights and measures is used in Belarus.

Brussels, Belgium

BELGIUM

Kingdom of Belgium

Major Cities:

Brussels, Antwerp, Liège, Ghent, Bruges

Other Cities:

Aalst, Anderlecht, Charleroi, Geel, Kortrijk, Louvain, Mechlin, Mons, Namur, Ostend, Tournai, Verviers, Waterloo

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated July 1996. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

BELGIUM, whose name comes from a courageous Celtic tribe, the Belgae, once flourished as a province of ancient Rome. It was successively ruled by the Franks, the dukes of Burgundy, the Hapsburgs, and the Spanish; it was annexed by France; it endured an unhappy union with the Netherlands through the Congress of Vienna; and finally, in 1830, it achieved independence. In spite of proclaimed neutrality, Belgium was twice occupied by the Germans, in 1914 and again in 1940. Its own colonial empire in Africa collapsed in the postwar era, yet this small kingdom astonished the world with its resiliency and enterprise.

Through the centuries, Belgium has witnessed an ebb and flow of cultures, and an appealing blend of these diverse elements are found here today. The picturesque cities of Bruges, Ghent, and Antwerp are renowned for their medieval architecture and splendid Flemish art collections; theater-goers, music lovers, gourmets, and sports fans find ample occasion to pursue their interests; outdoor enthusiasts are drawn to the wooded countryside of the Ardennes and the charming beach resorts on the North Sea—and, adding their own special color to this tableau, are the profusion of flowers, the open-air markets, and the ubiquitous festivals.

MAJOR CITIES

Brussels

The origins of Brussels date back to the first centuries of the Christian era. On the banks of the Senne, a small stream long since covered and lost from view, Brussels grew as a crossroads and trading center. By the 10th century, Brussels was a principal stop en route from Cologne through France to the Channel ports. In 1402, the cornerstone of the Hotel de Ville, the central building of Brussels'

magnificent Grand Place, was laid. During the next five centuries Brussels experienced Burgundian, Spanish, Austrian, French, and Dutch foreign rule. In 1830, Belgium won its independence from the Dutch, the Belgian monarchy was founded, and Brussels became the capital of the new Kingdom of the Belgians.

Though retaining vivid architectural and cultural traces of its deep involvement in European history, Brussels today has all the excitement, activity, and comfort of a modern European capital. It is headquarters for the European Union and the North Atlantic Treaty Organization, as well as the European home for many leading multinational businesses. Brussels is legally bilingual in French and Dutch. English also is widely known and used, particularly in business circles.

Food

Generally, food prices in Belgian stores are higher than in the U.S. Fresh fruits and vegetables are abundant locally year round, with seasonal selections and variations. In winter, potatoes, carrots, brussels sprouts, endives, celery, turnips, cabbages, cauliflower, beets, apples, oranges, and grapefruit are in particularly ample supply. Many other choices are available in the large supermarkets.

Supermarkets and many smaller stores carry a wide selection of frozen fruits and vegetables at prices usually higher than those in the U.S. Local foods are safe, raw as well as cooked. All kinds of fresh fish and a variety of meats are available. Pasteurized milk is standard. An incredible variety of delicious breads and bakery items are sold at local bakeries and supermarkets. American brands of baby food are available at larger supermarkets.

Clothing

Clothing and shoe requirements in Belgium are similar to those for New England, the Middle Atlantic States, and the Pacific Northwest. In Belgium, however, more raincoats, umbrellas, and low-heeled, thick-soled walking shoes are needed. Winters, as a rule, are less severe than in Washington, D.C., with little or no snow. On the other hand, summers are not as warm. Lightweight summer clothing is not usually necessary, but at times can be useful for vacationing or on the rare occasion when the weather in Brussels is unseasonably hot. Summer clothing sold locally is usually of a heavier weight, often fully lined, and relatively expensive.

Men: The local market offers a wide choice of both ready-made and tailored clothing, but prices are often high.

Women: Women wear warm, often wool or wool-blend, dresses and suits most of the year. In July and August cotton or silk dresses are appropriate, but a sweater, blazer, or light wrap is often required. Lightweight suits are ideal for the changeable summer weather. An adequate wardrobe for Brussels includes sweaters, scarves, gloves, raincoats, rain boots, umbrellas, and good walking shoes. Women planning to attend private parties, theatrical and musical events, and other social events will occasionally need cocktail and short evening dresses, and less frequently, long evening dresses or skirts.

Ready-made suits and dresses sold in Brussels are more expensive than

garments of similar quality in the United States and may require alterations to fit properly. The semi-annual sales provide an opportunity to purchase items at less than normal prices, but often more expensive than comparable U.S. purchases. Tall women sometimes have difficulty finding suits and dresses in their sizes. Half-sizes do not exist in Belgium.

Excellent Belgian, French, Italian, Swiss, and English fabrics can be purchased. Good dressmakers are available. Custom-made suits and dresses compare in price and quality to American equivalents. Clothing shops in London, Amsterdam, Cologne, and Paris offer alternative shopping options within a reasonable distance from Brussels.

Women are advised to bring at least one warm winter coat. Fur coats and jackets can be worn comfortably, but are not essential for warmth during the mild Belgian winters. Raincoats in varying weights are strongly recommended.

Children: For children, warm comfortable clothing or layered outfits are advisable. Sweatshirts or sweaters in natural fabrics, tights for girls, warm pajamas, turtlenecks, hooded coats, and jackets are needed. Both boys and girls will want warm coats, scarves, gloves and mittens, sturdy shoes with rubber or composition soles, rain boots, raincoats, and hats.

Uniforms are worn in grades 1–5 at St. John's International School. For teenagers, the fashion trend is definitely American. American professional and collegiate sports logo items are the European fashion trend and are available in local shops at highly inflated prices. Baseball caps are very popular. Jeans are the norm for both girls and boys at all of the local schools. Children's clothing purchased here costs much more than in the U.S., but quality is good. Infant and baby clothing available locally is of German, English, French, and Belgian manufacture and is expensive.

Many styles of rain boots and shoes are found in Brussels shops. Warm fleece-lined boots are recommended for raw winter days. Many of the sidewalks and streets are cobblestone, which is slippery when wet and a menace to high heels. Belgian shoes are stylish, but are not always comfortable for American women. Small sizes and shoes narrower than "B" width are hard to find. French, Italian, and Swiss shoes are popular but expensive; they are normally unavailable in narrow widths.

Supplies and Services

Supplies: Both American and foreign toiletries and cosmetics are available locally at prices higher than those in the U.S. Since the local water is hard, water softeners are often required for bathing and laundry.

Basic Services: Laundry, shoe repair, and dry-cleaning services are satisfactory and fast. One-day service is available. Laundromats can be found throughout Brussels and its suburbs. Coin-operated dry-cleaning shops are also available. Local dry-cleaning is more expensive than in the U.S.

Beauty shops abound, from reasonably priced neighborhood shops to "name" salons with accompanying high prices.

Religious Activities

Many religious denominations are represented in Brussels. The following English-language services are available:

Anglican/Episcopal:

Pro-Cathedral of the Holy Trinity, Rue Capitaine Crespel 29, 1050 Brussels.

All Saints' Church, Centre Notre Dame d'Argenteuil, Chaussee de Louvain 563, 1380 Ohain.

St. Paul's English Speaking Church-Tervuren, Saint Paulus Church, Dorpsplein, 3080 Vossem.

Assembly of God:

Christian Center, Chaussée de Waterloo 47, 1640 Rhode St. Genese.

Baptist:

International Baptist Church, Lange Eikstraat 76-78, 1970 Wezembeek-Oppem.

Christian Scientist:

First Church of Christ Scientist, Chaussée de Vleurgat 96, 1050 Brussels.

Church of Christ:

Church of Christ, Rue de la Brasserie 78, 1050 Brussels.

Jewish:

Synagogue Beth Hillel and Religious School (reform), Avenue Kersbeek 96, 1190 Brussels.

Jewish Synagogue of Brussels, (orthodox) Rue de la Règence 32, 1000 Brussels.

Mormon:

Church of Jesus Christ of Latter-day Saints, Strombeeklinde 110, 1820 Grimbergen.

Presbyterian:

St. Andrew's Church of Scotland, Chaussée de Vleurgat 181, 1050 Brussels.

Protestant:

The International Protestant Church, Kattenberg 19, Boitsfort, 1170 Brussels.

Religious Society of Friends:

Quaker House, Square Ambiorix 50, 1040 Brussels.

Roman Catholic:

Our Lady of Mercy, Place de la Sainte Alliance 10, 1180 Brussels.

Parish of St. Anthony, Avenue des Anciens Combattants 23-25, 1950 Kraainem.

Church of St. Nicolas (Bourse), Rue du Tabora 6, 1000 Brussels.

Education

English-language schools in the Brussels area offer comprehensive

educational programs for school-age children according to the American or British systems.

Belgian public schools offer viable educational programs and provide an opportunity for American children to learn French and Dutch. The 1993 Schools in Brussels: A Guide for U.S. Government Families contains detailed information on the educational options available in Brussels.

Brussels American School (BAS)
12 John F. Kennedylaan, 1960 Sterrebeek
Tel: 32 (2) 731-5626
FAX: 32 (2) 782-0230

BAS is a Department of Defense Dependents School (DODDS) sponsored institution serving the families of U.S. Government personnel, NATO personnel, embassies of NATO countries, and, on a space-available basis, American citizens working for private firms. It is located on the same campus as the NATO Health Clinic, in the commune of Sterrebeek, 5 miles east of central Brussels. Several AP programs are offered in the high school.

The school complex, constructed in 1967, is situated on 17 acres. It includes an administrative building, an elementary and middle school building, a high school building, a gymnasium, playing fields and tennis courts. BAS is accredited by the North Central Association of Colleges and Schools (NCA). There is a full-time guidance counselor at the school as well as a Parent-Teacher-Student Organization. Free bus service is available for students who live within the BAS bus routes.

International School of Brussels (ISB)
Kattenberg 19, 1170 Brussels
Tel: 32 (2) 672-2788
FAX: 32 (2) 675-1178

ISB, a private school on 40 acres of woodland, is located in the commune of Watermael-Boitsfort, just within Brussels city limits. The students and faculty are international. The school is divided into an early

childhood, elementary, middle, and high school, each with its own library. There is a full-day kindergarten program as well as a nursery school for 3- to 4-year-old children. An International Baccalaureate (IB) program is available at the high school. A few AP courses also are offered. Bus service is available throughout greater Brussels for an annual fee.

ISB is accredited by the Middle States Association of Colleges and Secondary Schools in the U.S., and the European Council of International Schools (ECIS).

St. John's International School
Drève Richelle 146, 1410 Waterloo
Tel: 32 (2) 354-1138
FAX: 32 (2) 353-0495

St. John's is situated near the famous Waterloo battlefield, 30 minutes from the center of Brussels by car. It is an ecumenical Catholic institution with students of all faiths. St. John's offers programs to 900 students from preschool to high school. Basically the curriculum is American, but the British General Certificate of Secondary Education and the International Baccalaureate are also offered. A limited number of AP courses are taught. Bus service is available throughout greater Brussels and is covered by the educational allowance.

There is a one-time registration fee for new students.

The British School of Brussels (BSB)
19 Leuvensesteenweg, 3080 Teruren
Tel: 32 (2) 767-4700
FAX: 32 (2) 767-8070

BSB follows the British national curriculum leading to the General Certificate of Secondary Education. The school is located 6 miles east of the city center. It has strong programs in the sciences, languages and arts, and offers a wide range of science and technology programs. Students from preschool to Form 13 are on one campus.

The European School I
46 Vert Chasseur
1180 Brussels
Tel: 32 (2) 373-8611

The European School II
75 Avenue Oscar Jespers
1200 Brussels
Tel: 32 (2) 774-2211

The European Schools serve families of the European Union. There are two locations in Brussels and one in Mol, north of Brussels. The same curriculum is taught in six language sections. Some subjects are taught to composite classes of the same level. The school considers languages and its international character its biggest advantages. Primary school is a 5-year program and secondary school is 7. The European Schools charge fees to all non-EU employees. In recent years, because of severe overcrowding, the European Schools have been unable to accommodate applicants from non-EU countries.

The British Primary School
6 Stationstraat, 1981 Tervuren
Tel: 32 (2) 767-3098

The school is located in the rural suburb of Vossem, near Tervuren, about 20 minutes from central Brussels by car. It is housed in a contemporary brick building and has a large garden with playground equipment and a closed veranda for the nursery classes. Play, music, and art go hand-in-hand with organized free play.

Brussels English Primary School (BEPS)
23 Avenue Franklin Roosevelt
1050 Brussels
Tel: 32 (2) 648-4311
FAX: 32 (2) 687-2968

Brussels English Primary School (BEPS II)
Rue L. Deladriere 13
1300 Limal
Tel: 32 (10) 417-227
FAX: Same as BEPS I

BEPS provides education according to the traditional British primary school structure. The school is

Courtesy of Melissa Doig

Norton House in Brussels

located in Ixelles near the Bois de la Cambre, 15 minutes from the center of Brussels by car. The Nursery School provides a full range of pre-school activities and the children have access to a garden at the rear of the school.

BEPS II is located in Limal, about 20 miles southeast of Brussels, near the city of Wavre.

Other national groups operating schools in Brussels include the French, Germans, Scandinavians, and Japanese. Older students whose French or Dutch capability permits may attend many Belgian schools of high academic standing. Whether supported by private, city,

state, or religious funds, nearly all receive state subsidies and follow a standard curriculum. People enrolling their children in neighborhood schools pay either nominal tuition or none at all.

No documents or certificates are required to enroll a child in a Belgian primary school (grades 1 to 6). Enrollment in secondary education (grades 7 to 12) requires an "Attestation d'Etudes." This document, which must be signed by the principal of the American school the student last attended, should indicate the grade level completed and subjects taken during the last 3 years. The last report card is also required. The application for a statement of

academic course equivalence is normally made by the parents, who may apply directly to the following address: Administration de l'Enseignement Secondaire, Service des Equivalences, Cite Administrative de l'Etat (Arcades), Bloc D, 5 ème ètage, bureau 55222, 1010 Brussels.

Adjustment to a European school varies with the individual student's aptitude, personality, and previous educational background. To obtain a resume of Belgian curricula, write:

The Office des Publications
Administration des Etudes
Ministere de l'Education Nationale
Cite Administrative de l'Etat
(Arcades)
1010 Brussels.

Brussels has good preschool facilities. Most communes have nursery school programs for which there is little or no tuition. Excellent private nursery schools charge a nominal tuition. All programs provide excellent opportunities for children to enjoy supervised play and exposure to French or Dutch.

Special Educational Opportunities

There are a number of university level programs available in Belgium. Those who are interested in pursuing studies should write directly to the educational institution to request information.

Vesalius College of the Free University of Brussels (VUB) offers an English-language curriculum leading to the B.A. degree, with 15 majors offered. Vesalius College is located at:

2 Pleinlaan
1050 Brussels
tel: 32 (2) 629-3626
FAX: 32 (2) 629-3627

The historic Katholieke Universiteit Leuven, founded in 1425, has a wide choice of courses taught in English in several fields leading to B.A., M.A., and Ph.D. degrees. Specialized programs for post law degree

candidates are also available. Write or call:

KU Leuven
Dienst Internationale Relaties
Universiteitshal
Naamsestraat 22
3000 Leuven
tel: 32 (16) 284-025 or
32 (16) 284-027

Boston University Brussels is an integral part of Boston University and offers academic programs of the Metropolitan College and Graduate School. An M.A. in International Relations and an M.S. in Management are currently offered in English. Established in 1972, the school shares the facilities of the Dutch-speaking Free University, Brussels (VUB). Write or call:

Boston University Brussels
Font St. Landry 6
1120 Brussels
tel: 32 (2) 268-0037

Local communal art and music schools offer instruction for adults and children. Advanced students might enroll at the Royal Conservatory of Music or at the High School for Architecture and Decorative Arts. Private instruction in music and art also is available in Brussels.

Sports

Americans play golf at: Royal Waterloo Golf Club in Ohain; the Royal Golf Club of Belgium in Tervuren; the Golf and Business Club at Kampenhout; and the Keerbergen Golf Course at Keerbergen. Fees and dues are expensive at the first two; Kampenhout and Keerbergen are less expensive. Many golf courses in Europe restrict play to those who have a Golf Federation Card, which reflects current membership in a European golf club. If one does not have membership in a golf club, it is usually possible to play as a guest of a member. Most courses are not generally open to the public, but golf has become very popular and several new courses have opened in recent years, some with more liberal playing policies.

Soccer, field hockey, basketball, and horse racing are popular Belgian sports. But game shooting remains the traditional sport, with boar, deer, pheasant, partridge, duck, and other small game hunted. Hunting areas are strictly controlled, either by individuals or by clubs, and shooting is by invitation or by membership. Opportunities exist for camping, boating and sailing, fishing, and skiing in the Ardennes.

Brussels has many indoor and outdoor tennis clubs; fees and dues vary according to the facilities. Handball courts, indoor swimming pools, new indoor rock climbing walls, and modern bowling alleys are all available and enjoy considerable popularity with Americans. For horseback riders, there are bridle paths in the Bois de la Cambre and nearby forests.

The Brussels Sports Association, an English-speaking organization operated by parent volunteers, offers soccer, basketball, softball, and sanctioned Little League baseball for girls and boys, ages 6 through 15.

The Brussels American School (BAS), International School of Brussels (ISB), and St. John's International School provide junior varsity and varsity interscholastic sports programs. American football is offered only at BAS and ISB. St. John's and ISB offer baseball. All schools have basketball and soccer programs.

Skating enthusiasts enjoy roller skating in the Bois de la Cambre and ice skating at Foret National and Poseidon indoor ice rinks. Skates may be rented.

Touring and Outdoor Activities

Many fine parks in Brussels offer a variety of outdoor activities. The Bois de la Cambre, a large green haven, features pleasant vistas for strolling, rowing, bicycling, horseback riding, roller skating, and miniature golf. The Parc de Tervuren has beautiful walks around lovely

lakes, boating, and play areas for children.

A pleasant spring and summer pastime in Belgium is "petanque" or "boule," an outdoor game played with weighted balls in a marked-off court. It originated in the south of France and reminds Americans of a mixture of bowling and horseshoes.

Swimming in indoor pools is a year-round activity in Brussels. The cool summers encourage only the hardy to venture into outdoor swimming areas. But beachcombers find the North Sea coast with its wide, sandy beaches well worth the 2-hour drive from Brussels. There are many resort areas; Ostend and Het Zoute are probably the best known and the most expensive. The season at the seashore is usually short and the water temperatures compare with those along the northern New England coast. Modern, comfortable summer cottages and apartments, as well as many reasonably priced pensions, are available in seacoast towns.

In addition to the many museums and attractions found in Brussels, its central location offers unlimited sight-seeing and travel opportunities, not only in Belgium but throughout Europe.

Entertainment

Brussels offers a full spectrum of entertainment. Opera, concerts, ballets, stage presentations (in French or Dutch), and visiting international performers provide an interesting range of cultural activities. British and American theater clubs present several productions yearly. Numerous movie theaters show films in French, English, Italian, and other languages. Usually a dozen or more American films are playing in Brussels at any one time. Most films are shown in the original language with subtitles.

Inexpensive discotheques with dancing and recorded music abound in the city. The few nightclubs offering floor shows are expensive.

Brussels' many good restaurants offer Belgian cooking (based on French cuisine), as well as Italian, Chinese, Serbian, Spanish, Middle Eastern, African, and other specialties. Prices range from very expensive at some outstanding restaurants to reasonable at smaller establishments. Dining out is a Belgian national pastime. Numerous small cafes do a brisk beer business day and night, and sidewalk cafes flourish in good weather. Belgian folk festival traditions with celebrations of every kind are some of Europe's richest. Especially colorful and exciting are those of the pre-Lenten season. The Carnival of the Gilles in Binche, a Shrove Tuesday event, dates from the 16th century when Spain ruled Belgium. It features the Gilles, those men and boys of the town entitled to wear the brilliant costumes topped with towering Inca-inspired feathered hats. With carnival enthusiasm, the Gilles dance through the town in Indian rhythm, beating drums, shaking bells, and tossing fresh oranges to the spectators. The Ommegang in Brussels and the Procession of the Holy Blood in Bruges are other internationally famous Belgian festivals.

Certain Brussels communes have public lending libraries, some of which carry a few books in English. Brussels also has excellent research and professional libraries. The Royal Library, in particular, has some valuable possessions, including manuscripts, prints, and miniatures. The British Council Library is a good source for English-language fiction and non-fiction. There is also a well-stocked library at the NATO Support Activity. There are several English-language bookstores. There are many other bookstores which carry some English-language materials. Books can be checked out from most libraries.

Social Activities

Among Americans: Organizations within the American community include the American Club of Brussels, the American Women's

Club, the American Chamber of Commerce, the Cub Scouts, Boy Scouts, Brownies, and Girl Scouts.

All women are invited to join the American Women's Club of Brussels (AWCB). In addition to charitable work and other community services, the AWCB organizes excursions, lectures, luncheons, and activities classes, including bridge, yoga, and Japanese flower arranging. Participating in the club and its activities provides an opportunity to meet members of the expatriate American community. Within the AWCB are international members who have been sponsored by an American. There is also an active international group within the club which meets for various activities and for cultural exchange.

International Contacts: The Association Belgo-Americaine offers Americans a chance to meet Belgians interested in America and in knowing Americans through luncheons, lectures, and film showings. It promotes understanding and good will.

The Cercle Gaulois is a pleasant and sociable men's club with a good restaurant. Another club is De Warande.

Other organizations that welcome Americans include the Red Cross, Toastmasters, the American Theater Company, local scouting, sports and musical groups. Rotary, Lions, Kiwanis, and other service clubs are also active. Brussels has an extraordinary range of clubs and organizations, both American and international, which afford individuals an opportunity to pursue almost any type of interest during their tour here.

Special Information

Belgian Telephone Numbers: The telephone numbers assigned to subscribers in Belgium by the servicing telecommunications companies consist of either a 6- or 7- digit configuration. Larger metropolitan areas normally issue 7- digit numbers; many rural and suburban

Gilded houses on Grote Market in Antwerp

Susan Rock. Reproduced by permission.

areas utilize phone numbers consisting of 6 digits.

Exchanges with 7- digit phone numbers use a single digit city/local code; localities with 6- digit phone numbers have a 2- digit city/local code. The country code for all of Belgium is 32.

The phone/fax numbers listed are configured to reflect the following pattern:

country code (city/local code)
local number

For 7 digit numbers, the configuration is:

32 (##) ###-####

For 6 digit numbers, the configuration is:

32 (##) ###-###

Antwerp

The European Logistical Support Office personnel (ELSO) is located in the Flemish speaking city of Antwerp in the Flanders region. Antwerp is known for both its historic and artistic legacy (the home of Rubens) as well as for its large, modern seaport. It is about 45 minutes north of Brussels by car or train, and the climate is about the same.

Religious Activities

Catholic and Protestant religious services are held in English in Antwerp. Although no Jewish services are held in English in Antwerp, they are available in Brussels.

Education

The Antwerp International School is located 10 km north of Antwerp in the suburb of Ekeren. It offers an American program pre-kindergarten through grade 12 culminating in either a U.S. High School accredited

diploma or the International Baccalaureate diploma.

The EEC International School offers an English-language program from pre-kindergarten to grade 12 culminating in an American high school diploma of the University of Cambridge IGCSE and advanced level examinations.

Recreation and Social Life

A variety of recreational opportunities exist on the local economy. A limited number of social and recreational opportunities also exist with English speaking organizations such as the American Women's Club of Antwerp, the British Theater Arts Society, the Belgian-American Association, the international schools, and the churches.

Liège

Liège, whose Flemish name is Luik and German name Lüttich, is situ-

ated in eastern Belgium at the confluence of the Meuse and Ourthe Rivers, near the borders of both the Netherlands and Germany. Close to the Ardennes Plateau region, and 54 miles southwest of Brussels, Liège is the largest French-speaking city in Belgium. The city proper has about 185,000 residents. A major commercial, industrial, and transportation hub, Liège manufactures chemicals, textiles, furniture, motor vehicles, electrical and electronic equipment, and armaments.

Liège was established as a bishopric in the eighth century and, by the 10th century, it was the capital of an extensive ecclesiastical state, which was part of the Holy Roman Empire until 1792. During the Middle Ages, it was an important cultural city, as well as a center for the textile and metal industries. Liège was seized by Napoleon in 1794 and was a part of France until 1815, when it was assigned to the Netherlands by the Congress of Vienna. In the 19th century, the city was the center of Walloon culture and development, which included rapid industrial growth and social unrest.

The fortifications of Liège were reportedly among the strongest in Europe, but the city fell to the Germans after a 12-day siege in 1914. It suffered defeat again in World War II (May 1940). Although it was liberated by U.S. forces four years later, it had suffered extensive damage from German rockets during the Battle of the Bulge, December 1944 to January 1945.

Today, Liège is, for the most part, a modern city with some splendid historic churches, houses, and museums which contribute to its popularity as a tourist spot. The Walloon Museum depicts everyday life in the 19th century, and is housed in a 17th-century convent. Among the city's ancient buildings are two 10th-century churches and a cathedral, also built in that period. The Palais de Justice is the 16th-century palace of the bishop-princes, and has magnificent interior decorations. Liège has a university (founded in 1816), concert halls,

theaters, and an opera house where productions are presented from September to May.

Twenty-five miles northwest of Liège is the secluded reserve, Bokrijk, which has a park, arboretum, rose garden, several lakes, and an open-air museum. Here at the museum is a re-creation of a typical Kempen village, with farms, stables, and one of Belgium's oldest windmills. There are also a 12th-century church, and 17th-century thatched-roofed homes that contain period furnishings. The Ardennes Cemetery is 11 miles southwest of Liège, near the village of Neuville-en-Condroz. Thousands of Americans killed in the Battle of the Bulge are buried here.

Schools for Foreigners

The International School of Liège is a coeducational school covering kindergarten through ninth grade. It was founded in 1967.

Aspects of the U.S. and U.K. curricula are combined at International School. French is offered as a foreign language. The school year extends from September through June, with vacations at Christmas, Easter, and midterm. Currently, there are six teachers and 17 students (capacity is between 40 and 60).

International School is located north of central Liège. It has five classrooms, a gymnasium, playing fields, swimming pool, and a 5,000-volume library. The mailing address is boulevard Leon Philippet 7, Xhovemont, 4000 Liège, Belgium.

Ghent

Ghent (Gent in Flemish, Gand in French) is the capital of East Flanders Province. It is situated at the confluence of the Schelde and Lys Rivers, about 35 miles northwest of Brussels. Connected with the North Sea by the Gent-Terneuzen Canal and a network of other canals, Ghent is a major port as well as the chief textile, clothing, and steel manufacturing center of

Belgium. Called the "city of flowers," it is also the trade center of a bulb producing region. With a current population of 224,000, Ghent is Belgium's third largest city.

First mentioned in the seventh century, Ghent is one of the country's oldest cities, developing around a fortress built by the first count of Flanders on a small island early in the 10th century. The town spread to nearby islets and today is still connected by many bridges. In medieval times, the city was a major commercial center and the seat of the counts of Flanders. Ghent had become one of Europe's largest cities and a major wool-producing center by the 13th century; the work force was comprised primarily of weavers, fullers, shearers, and dyers at that time. Social conflicts between the workers and the upper classes were frequent. The city was the site on November 8, 1576, of the Pacification of Gent which was an alliance of the provinces of the Netherlands to drive the Spanish from the area. The modern industrialization of Ghent began with the development of its port and the establishment of textile factories early in the 19th century. The city was also the site of a treaty signed December 24, 1814, marking the end of the War of 1812. German forces occupied Ghent in both World Wars.

Ghent has more historic buildings than any other city in Belgium. The landmark is the famous belfry, erected in 1300 as a symbol of freedom. Standing about 300 feet tall, the tower also has an equally famous 52-bell carillon. Despite the symbolic nature of the belfry, more travelers visit St. Bavo's Cathedral. Built sometime between the 10th and 16th centuries, the cathedral's architecture has both Romanesque and Gothic additions. St. Bavo's houses several art treasures, including Hubert and Jan van Eyck's polyptych "Adoration of the Mystic Lamb," in a side chapel. The painting, which dates from the 15th century, is an extraordinary example of Renaissance-style use of detail and vivid color. The masterpiece is also one of the great

Cory Langley. Reproduced by permission.

Street scene in Bruges

mysteries of the art world, as experts cannot differentiate between the various parts painted by each of the brothers. Other works of art found in the cathedral are Rubens' "Conversion of St. Bavo" and various crowns and jewels. St. Bavo's is open daily.

The architecture of Ghent blends the medieval and Renaissance styles. Narrow streets and houses built close together make the city very picturesque. Famous structures include the ruins of the Abbey of St. Bavo, dating to the seventh century; and the guild houses, located on the Graslei, built between the 12th and 16th centuries, and reflecting Gothic, Romanesque, and Renaissance styles. The city's town hall was so long under construction that it combines Gothic and Renaissance architecture. Ghent has several other cathedrals (St. Nicholas, St. James), parks (Citadel Park), palaces (Floralia), and castles (Kasteel D'Ooidonk, castle of Laarne) of interest. St. Jorishof, built in the 15th century, is Europe's oldest hotel; today it is widely known for its restaurant. All historic buildings are illuminated nightly from May through October.

Ghent has an opera company and many fine museums. The city can be

toured by boat, leaving from Vleeshuisbridge and Korenlei, and by horse-drawn cart, leaving from Korenlei and St. Baafsplein. Ghent is surrounded by begonia fields, in bloom from late July through late September.

Bruges

Bruges (Brugge), situated in northwest Belgium, is the capital of West Flanders Province. Located nine miles inland, it is connected by canals to Zeebrugge and Ostend, outer ports on the North Sea. A commercial, industrial, and tourist center as well as a rail junction, Bruges manufactures textiles, lace, ships, railroad cars, electronic equipment, chemicals, and processed food. With a population of about 116,000, Bruges, known as the "city of bridges," is 55 miles northwest of Brussels.

The town was founded in the ninth century on an inlet of the North Sea and, by the 11th century, it had become a major trading center with England. In the 13th century, Bruges was one of the chief wool-producing centers in Flanders. One hundred years later, at its peak of prosperity, it was among the great commercial and financial cities of Europe, as well as the residence of the dukes of Burgundy.

The decline of Bruges began when the Flemish wool industry faltered because of foreign competition early in the 15th century. In 1490, the inlet on which the city is located became clogged with silt, and Bruges lost its access to the sea and its outer ports. Also contributing to what would be a 300-year decline was Antwerp's rise to prominence as a major port. The revival of Bruges began in 1895 when repairs to the port were begun; in 1907, the canal to Zeebrugge (or Brugge-on-the-Sea) was completed.

Bruges was occupied by the Germans during both World Wars. Today, although its chief income comes from tourism, lace making, and horticulture, it has regained importance as a port, and new prospects in industry, technology, and commerce are now underway.

A visitor to Bruges may absorb the medieval aura of the city by various modes of transportation. The sights may be viewed from a boat on one of the many canals, from a horse-drawn carriage, or from walking the ancient cobblestone streets. Most of the interesting sites are clustered around the city's main square, the Markt. Noted structures here reflect a variety of architectural styles and include the Basilica of the Holy Blood, the town hall (Europe's oldest, 1376), the old recorder's house, and the baroque provost's house. The Romanesque architecture found in the Basilica of the Holy Blood is evident in the chapel's crypt; built between 1139 and 1149, its upper chapel was rebuilt in Gothic style in the 15th century. What are claimed to be a few drops of Christ's blood, enclosed in a gold reliquary, were presented to the city by Derek of Alsace, count of Flanders, in 1150. On Ascension Day in Bruges, there is a procession of the Holy Blood through the city streets, along with characters and scenes from the Bible. The Church of Our Lady, although primarily Gothic, actually combines several different architectural styles. Paintings by Gérard David and a white Carrara marble statue by Michelangelo

entitled “Mother and Child” are displayed. The sculpture was purchased from the artist by a wealthy Flemish burglar and is the only statue of Michelangelo’s to remain permanently outside of Italy. The 16th-century mausoleums of Charles the Bold and Mary of Burgundy are also found in this church.

Bruges offers other interesting buildings, museums, and art galleries: Belfort en Hall, the market hall or clothworkers hall, was active from the 13th through the 15th centuries. Its belfry offers visitors an excellent view of the city. A 49-bell carillon entertains here with concerts on Monday, Wednesday, and Saturday evenings and on Sunday morning from mid-June through September. At the Groeningemuseum, paintings by artists of the Flemish primitive school, accounting for about 30 masterworks, as well as collections of later and contemporary art, are displayed. The Gruuthusemuseum, housed in a 15th-century palace, has interesting exhibits of Flemish lace, pottery, and furniture. The Hans Memling Museum was the medieval St. John’s Hospital, which accommodated travellers beginning in the 12th Century. Memling (1435–1494) was a painter who studied under Rogier Van der Weyden and lived in Bruges from 1465 until his death. His works exhibited at the museum include the triptych altarpiece, “The Marriage of St. Catherine” and “Shrine of St. Ursula,” which is considered one of the seven marvels of Belgium. Beautiful handmade lace is a centuries-old industry in Bruges; the intricacies of creating this openwork can be studied here, and it is possible to watch the students at work with their bobbins. A profusion of small shops cater to the ever-increasing tourist demand for lace made in Bruges.

From June to September, the canals and buildings in Bruges are flooded with light at night, reminding the visitor of Venice, Italy.

Just seven miles beyond the city is the North Sea port of Zeebrugge,

which offers lovely beaches and water sports activities. Zeebrugge, where the ferry crosses to and from England, drew international attention in March 1987 with the tragic sinking of a passenger vessel less than a mile from the harbor. A valiant rescue effort saved many lives, but 185 are known dead, either in the frigid waters of the North Sea or trapped in the overturned boat.

In the same area is the picturesque village of Lissewege. Medieval culture has been preserved here; there are windmills, a canal, low houses, a 13th-century church, and a 12th-century abbey.

OTHER CITIES

AALST, with a population of about 76,000, is situated on the Dender River, 15 miles northwest of Brussels, in western Belgium. Founded in the ninth century, the city has been occupied by the Spanish, Germans, French, and Dutch from 1056 until Belgium’s independence in 1830. Historical sites in town include the unfinished, Gothic style, 14th-century St. Martin Church and a statue of Thierry Martens, who established the first Belgian printing press here in 1473.

ANDERLECHT, with a population of 93,000, is a residential and industrial suburb of Brussels. Situated on the Charleroi-Brussels Canal, Anderlecht was the home of Erasmus, philosopher and scholar, from 1517 to 1521. His house is now a museum.

CHARLEROI is Belgium’s fifth city in size, with a population of 208,000 (greater area). It is located in southern Belgium, on the Sambre River and Charleroi-Brussels Canal. Founded in 1666 and named for Charles II of Spain, it is the center of an area that produces iron and coal. Metal, glass, and other industries are also present. An important strategic position during the 17th- and 18th-century wars, Charleroi was the site of a victorious German battle in World War I.

Today, the city has modern buildings and a technical university. Places of interest include the Industrial Exhibition Halls and the Palace of Fine Arts. Eleven miles southwest of Charleroi is the medieval village of Thuin, featuring old abbeys, hanging gardens, and a thousand-year-old tower. Six miles west of Thuin is Binche, known for its pre-Lenten Carnival and museum of carnival masks.

GEEL, located about 35 miles north of the capital, is known for its home-care system for the mentally ill. It has been a treatment center for the mentally impaired since the Middle Ages. When the tomb of St. Dymphna became associated with the cure of insanity, people came to Geel in large numbers. The townspeople began to board the pilgrims in their houses. In 1850, the government assumed responsibility for the system. Industries in Geel include textile and cigar factories and breweries. The city’s population is approximately 33,000.

KORTRIJK (in French, Courtrai) lies on the Leie (Lys) River, about 47 miles southwest of Brussels. By the 14th century, Kortrijk was the most important cloth manufacturing town in medieval Flanders. Today, with a population of close to 76,000, Kortrijk is an important linen and textile manufacturing center. The Church of Notre Dame here contains Rubens’ “Elevation of the Cross.” The Gothic town hall dates from 1526 and currently houses the tourist office. Ten miles northeast of Kortrijk, near the town of Waregem, is Flanders Field, the cemetery where Americans killed in World War I are buried—and touchingly remembered by grateful Belgians who still honor them with floral tributes and prayers.

LOUVAIN (in Flemish, Leuven), 17 miles east of Brussels on the Dijle River, was an important center of wool trade and of the cloth industry during the Middle Ages. It was the seat of the dukes of Brabant for centuries, but is best known for its university. Founded in 1425 by Pope Martin V, the university rapidly

14th century bridge in Bruges

Cory Langley. Reproduced by permission.

became renowned as a center for Catholic learning. Its 800,000-volume library is considered one of the finest in the world; it was destroyed in both World Wars, and restored twice. A long-standing dispute between Belgium's Flemish and French-speaking (Walloon) sectors resulted in the division of the university into two separate units in 1968. The Flemish-speaking University of Leuven is in the city; the French-speaking Université Catholique de Louvain is at Ottignies. Noted churches in Louvain are the 15th-century Gothic St. Pierre's and the baroque St. Michel's. The town hall, built in 1459 in flamboyant Gothic style, is one of the most attractive buildings in Belgium; it houses the local tourist office. Louvain's population is about 75,000.

MECHLIN (Mechelen in Flemish, Malines in French) is located on the

Dijle River in north-central Belgium, about 12 miles south of Brussels. Once a center of Flemish clothweaving and known for its lace, Mechlin today is a commercial, industrial, and transportation center, manufacturing textiles, steel, and motor vehicles. It has 77,000 residents. The city was founded early in the Middle Ages, and was a fief for the prince-bishops of Liège until 1356. Although it has been damaged several times in wars, Mechlin retains many noteworthy buildings. The Gothic cathedral of St. Rombaut is considered one of the most beautiful churches in Belgium; built in the 13th century, it has a 319-foot tower and a 49-bell carillon. Concerts are performed on Sunday, Monday, and Saturday. A bell-ringing school attracts carillonneurs from all over the world. The cathedral houses Van Dyke's painting, "Crucifixion," and paintings by Rubens. The tourist office is located

in the town hall, built in the 14th century and rebuilt in the 18th century.

MONS (also called Bergen) is located in southwest Belgium near the French border. With a population of 94,000, it is the capital of Hainaut Province and the processing and shipping center of the Borinage coal mining district, as well as a manufacturing center. Charlemagne made Mons the capital of Hainaut in 840; in 1295, it was the seat of the counts of Hainaut. Mons was occupied by Dutch, Spanish, and French forces in wars of the 16th through the 18th centuries, and was the site of several battles in both World Wars. A visitor today finds winding streets, quaint buildings, and magnificent mansions, remnants of the city's long history. The castle of the counts of Hainaut is mostly in ruins, except for some subterranean passages and the

chapel of St. Calixte, whose belfry contains a 47-bell carillon. Collegiate Church of St. Waudru, a late Gothic structure, has 28 chapels, 16th-century stained glass windows, and the alabaster "Annunciation" by Dubrecq. Mons is the site of an annual pageant and festival of St. George. During winter, about three or four visiting ballet and opera companies and symphony orchestras perform monthly. Excellent shopping facilities, especially food stores, are available here. The town of Casteau, near Mons, is the site of Supreme Headquarters, Allied Powers in Europe (SHAPE).

NAMUR, or Namen, the capital of the eponymous province, is situated at the confluence of the Meuse and Sambre Rivers in south-central Belgium. About 35 miles southeast of Brussels, and with a population of 106,000, Namur is a rail junction as well as a commercial and industrial center, producing leather goods and porcelain. Pink brick houses, baroque churches, and lovely gardens add charm to the city. The 11th-century citadel and castle of the counts of Namur overlooks the town and may be reached by road or cable car. Other nearby castles include Corroy-le-Château, a military fortress; Mielmont (16th century); and Franc-Waret (18th century). The baroque St. Aubin Cathedral, built in the 18th century, contains paintings by Van Dyke and Jordaens and has copies of Rubens' work. Namur's archaeological museum is considered one of the richest in Belgium. During summer, boat excursions may be made to Dinant in the Ardennes. The tourist office is located on Leopold Square.

OSTEND (Oostende) is the largest and oldest of the Belgian cities on the North Sea coast. With a population of about 69,000, it is a major commercial and fishing port, industrial center, and seaside resort, connected by canals with Bruges and Ghent. Ostend was a port as early as the 11th century and played an important role in the Dutch struggle for independence. From May to October, it is the country's most popular seaside resort, with a three-

mile beach, race track, casino, golf course, and facilities for other sports. Concerts, ballet, and other entertainment are presented at the casino during summer. Steamer trips across the channel to Dover, England, leave from Ostend's harbor.

TOURNAI (also called Doornik, in Flemish, and Tournay) is located in southwest Belgium on the Schelde River, nine miles from the French border and 43 miles from Brussels. A commercial and industrial center with a population of 68,000, Tournai manufactures textiles, carpets, and cement. One of the oldest cities in Belgium, Tournai was founded by the Romans in the third century and was destroyed in 881 by the Normans. It was part of France from 1187 to 1521, part of the Spanish Netherlands until 1714, and then was under Austrian rule. A cultural center since the 12th century, Tournai is also noted for its tapestries, china, and earthenware. The Museum of Fine Arts here displays works by Rubens, Brueghel, Manet, and others. The 13th-century belfry is the oldest in Belgium, and offers a fine view of the city. The Romanesque Cathedral of Notre Dame was built in 1171, and contains many sculptures, murals, and paintings. Château de Beloeil, 17 miles southeast of Tournai, is one of the finest castles in the province. It is complete with a moat and a garden-park. The Tournai tourist office is located at 14 rue du Vieux Marché aux Poteries, opposite the belfry.

VERVIERS, located east of Liège at the foot of the Ardennes, is an industrial center manufacturing textiles and machinery. Its population is about 54,000. Surrounded by lush countryside, Verviers has an 18th-century town hall and Church of Our Lady. The castle of Franchimont, in nearby Theux, is said to be one of the oldest in Belgium. Henri-Chapelle Cemetery is about 12 miles north, and here, over 8,000 American military personnel killed in World War II are buried.

WATERLOO, situated south of Brussels in central Belgium, is important historically. The Battle of Waterloo, fought just to the south on June 18, 1815, was where Napoleon was defeated. Visitors may explore the battlefield; there are also several monuments and memorials to those killed in this battle. The headquarters of the duke of Wellington, who led the British forces against Napoleon, may be visited by the public. The current population of this Brabant provincial city is close to 29,000.

COUNTRY PROFILE

Geography and Climate

Belgium is small, about the size of Maryland, with an area of 11,799 square miles. Thirty-nine miles of Belgian seacoast line the North Sea, and 896 miles of frontier border the Netherlands, Germany, Luxembourg, and France. The Meuse River and its tributary, the Sambre, divide the country into two distinct geographic regions: a level, fertile area to the north and west, and the hilly, wooded region, the Ardennes, to the south and east. The capital, Brussels, is in the center of the Kingdom. With Ghent and Antwerp, it forms a triangle enclosing the most heavily built-up and densely populated area of Belgium. More than 50 percent (4 million acres) of Belgium is still farmland; forest covers another 18 percent.

Belgium's climate is characterized by moderate temperatures, prevailing westerly winds, cloudy skies, regular but not abundant rainfall, and little snow. The weather is variable. Summer temperatures average 60°F (16°C). Rare annual extremes are 10°F (-12°C) and 90°F (33°C).

Population

Belgium has 10.3 million inhabitants. The principal cities are Brus-

sels (population about 959,000 for the 19 municipalities of the capital region), Antwerp (447,000), Ghent (224,000), Charleroi (201,000), Liège (186,000), Bruges (116,000), and Namur (105,000). Geographically and culturally, Belgium is at the crossroads of Europe. During the past 2,000 years, it has witnessed a constant ebb and flow of different peoples and cultures. As a result, Belgium has people of Celtic, Roman, German, French, Dutch, Spanish, and Austrian origins.

Public Institutions

Belgium is a parliamentary democracy with a constitutional monarch. Although the King, Albert II, is technically the executive authority, the Council of Ministers (Cabinet) makes governmental decisions. The Council of Ministers, led by the Prime Minister, Guy Verhofstadt, holds office as long as it retains parliamentary confidence. Elections are held at least every 4 years by universal suffrage with obligatory voting and a form of proportional representation.

The bicameral Parliament consists of a Chamber of Representatives and a Senate. The 150-member Chamber of Representatives is elected directly. The government ministers are responsible before the Chamber of Representatives. The Senate consists of 71 members; 40 are directly elected, 21 are appointed by the regional legislatures and 10 by fellow senators. The Senate has the right to review draft bills of the Chamber.

The 1993 amended Constitution and Devolution Acts have turned Belgium into a federal state composed of three economic regions (Flanders, Wallonia, and Brussels) and three cultural communities (Flemish, French, and German-language). The present government consists of a coalition of Flemish and Francophone Social Christians (CVP/PSC) and Socialists.

The judiciary is modeled after the French system. The King appoints court magistrates and court judges.

The highest court is the “Cour de Cassation.” There are 5 courts of appeal and 27 district courts. Courts do not pass on the constitutionality of legislation, but a special body, the Arbitration Court, rules in jurisdictional disputes opposing federal and regional legislatures.

Belgium is divided into 10 provinces, with executive power in each exercised by a Governor appointed by the King.

Arts, Science, and Education

Belgium is justly proud of its centuries-old artistic tradition. The country’s past is studded with the names of masters—Rubens, Brueghel, Hieronymous Bosch, Van Eyck—whose works are displayed in museums and churches throughout the country. Equally famous are such Belgian art cities as Antwerp, Bruges, Ghent, and Leuven. Belgium’s art tradition does not end with the masters. James Ensor, Permeke, surrealists Rene Magritte, and Paul Delvaux are among the many considered to be outstanding 20th-century artists.

Brussels is a major center for the performing arts. Its Palais des Beaux-Arts offers a wide range of dance and music programs each season. The Theater Royal de la Monnaie is home of the opera. The Festival of Flanders, organized every summer in various Belgian cities, features concerts, theater, and dance performances. Brussels also hosts the Queen Elisabeth International Music Competition. Begun in 1951, it offers material and moral support to talented young artists: pianists, violinists, and composers.

Since the Middle Ages, Belgian educational institutions have been famous centers of learning. The Belgian Constitution guarantees absolute freedom of choice of education. Most schooling is state-financed from primary school to the university level. Belgian universities attract large numbers of foreign stu-

dents, including many Americans. However, since 1977 foreign students must pay higher tuition than Belgian students.

The cost of this tuition varies according to the type of education (university or non-university) and even within these two subdivisions. Some exemptions from tuition exist: for the student whose parents work in Belgium and pay taxes, for the student whose parents work in an Embassy or with the European Union, for example. For those students who do have to pay, the fee varies. One should contact the educational institution to determine the charges applicable to the course of study one wishes to pursue.

Also well known are Belgium’s cultural and scientific institutions, such as the Royal Observatory, the Royal Library, and the Institute of Tropical Medicine. Their valuable collections range from precious medieval manuscripts to specialized scientific collections.

Commerce and Industry

Belgium is the one of the largest trading nations in the world and belongs to the G-10 group of leading financial powers. Because of the long-standing importance of trade to its economic prosperity, Belgium has been a strong supporter of liberal trade policies and participates actively in international cooperation through the Belgium-Luxembourg Economic Union (BLEU), the European Union (EU), the Organization for Economic Cooperation and Development (OECD), and the World Trade Organization (successor to the GATT). Exports are equivalent to about two-thirds percent of gross national product (GNP) making Belgium not only one of the highest per capita exporters in the world, but also highly dependent on the economic health of its trading partners. Belgium imports many basic or intermediate goods, adds value, and then exports final products. Most of Belgium’s foreign trade is with other EU countries,

pointing up the country's importance as a commercial axis in Europe. Lying in the heart of the European Union, Belgium stands to benefit greatly from the developing single market.

Belgium and the U.S. have strong reciprocal trade relations.

Belgium is blessed with an excellent transportation network of ports, railroads, and highways. Major U.S. air cargo carriers have created one of the first and perhaps only European hub operation. Belgium has three linguistic communities: French, Dutch, and German. This diversity, combined with its history, location, and small, manageable size, makes the country an excellent test market and subsequent launching pad for the European operations of U.S. businesses. The Belgian market is highly competitive. Generous social payments help maintain a high standard of living but contribute to an unemployment level stuck at about 8 percent for several years.

The Belgian Government believes that the country's future economic prosperity is tied closely to the European Economic and Monetary Union (EMU). Belgium became a first-tier member of the EMU on May 1, 1998. It introduced the euro as common currency in 1999. First used mainly by financial institutions, the euro became the country's only currency in 2002.

Transportation

Local

Brussels has an extensive public transportation network comprised of buses, trams (streetcars), and an underground rapid transit (metro) system. Special 10-ride and monthly or yearly tickets for combined Brussels transport facilities are available and afford great savings over the cost of one-ride tickets. Trains run frequently and on schedule. Taxis are fairly expensive, but the service charge or tip is included in the metered fare.

Regional

Brussels National Airport (in Zaventem) is a major international air terminal. American carriers and Sabena fly between Brussels and several major U.S. cities. Additional air connections to anywhere in the world can be made through London, Frankfurt, Amsterdam, and Paris, which are all less than an hour's flight from Brussels.

Excellent rail and highway systems link Belgium to adjoining countries and provide direct routes to major European cities. There are numerous "auto routes" (limited-access divided highways) which cross Belgium, connecting it to the main cities of Europe. There are no toll roads in Belgium and it is particularly easy to drive after dark because all major highways are illuminated at night, in part because of frequent fog.

Communications

Telephone and Telegraph

Telephone and telegraph services to and from Belgium are comparable to those in the U.S. Direct-dial service is available to the U.S. and most European countries. All Tri-Mission leased housing is equipped with one telephone. Additional extensions are at personal expense. Portable phones can be used but U.S. models require a transformer, which can be purchased locally. Monthly costs and long-distance rates are generally more expensive than in the U.S., as are charges for trans-Atlantic calls. Rates through U.S.-based telephone companies and call-back services may be cheaper than local carrier rates. Competition among carriers and services is driving prices downward.

Radio and TV

Belgian radio and TV systems are government-owned with a few commercial channels. French- and Dutch-language stations are separate. Dutch-language TV often carries American and British programs in English with Dutch subtitles. Most American and British pro-

grams on French TV are dubbed. BBC has two channels available on most cable systems.

Cable TV provides a variety of programs in French, Dutch, German, Italian, and English.

The Armed Forces Network (AFN) broadcasts television and radio programs 24 hours a day in Belgium. Stations are located in Everberg (near NATO headquarters) and at SHAPE. Transmitted live by satellite, AFN television features popular sporting events and current American TV programs. A special antenna, which can be purchased locally, is required to receive AFN.

Newspapers, Magazines, and Technical Journals

La Libre Belgique, *Le Soir*, and *La Dernière Heure* are the most widely read French-language dailies published in Brussels. *Het Laatste Nieuws* and *De Standaard* are the most popular Dutch-language newspapers published in Brussels.

London and Paris papers, including *The Times*, *Daily Telegraph*, *Le Monde*, and *Le Figaro*, are sold in Brussels on the day of publication. *The Bulletin*, an English-language magazine catering to the substantial Anglophone community, appears every Thursday. *Prospects* is a monthly English magazine covering Belgian business topics.

The *International Herald Tribune* and the European editions of the *Wall Street Journal* and *USA Today* are sold the day of publication at Brussels newsstands or by subscription.

Several American periodicals, many of them European editions, are available on Brussels newsstands.

Health and Medicine

Medical Facilities

Many Belgian hospitals compare very favorably with good American

hospitals. They are well-equipped to handle emergency situations, as well as long-term care.

Community Health

Public health standards are equal to those in the U.S. Brussels has modern sewage and refuse disposal systems and water purification facilities. Tap water has a high calcium content, but is safe to drink. Dairy, meat, and other food products are safe.

Preventive Measures

Individuals should keep their immunizations current against typhoid, tetanus, diphtheria, and polio.

The climate is sometimes uncomfortable for those who suffer from sinus conditions or respiratory ailments. Colds are common in winter. Epidemic diseases are rare and are treated efficiently by Belgian public health authorities.

NOTES FOR TRAVELERS

Most travelers from the U.S. arrive at the Brussels National Airport at Zaventem.

Visas are not required for Americans transiting or visiting Belgium, as long as the stay is less than 3 months. Travelers who will remain in Belgium more than 3 months must obtain a visa from a Belgian consulate in the country in which they reside prior to entering Belgium.

Dogs or cats entering Belgium from the U.S. are not quarantined. Belgian law requires a certificate of good health and a valid rabies certificate dated not less than 1 month and not more than 12 months before departure from the U.S. Transportation of pets, including birds of the parrot order, from other geographical areas is subject to various frequently changing regulations.

Belgium's currency is the euro. No currency restrictions affect the import, export, purchase, sale, or use of American or European currencies. Purchases on the local economy are made with the euro. VISA and Mastercard are accepted by many local businesses, and ATM's are found throughout Belgium.

Belgium uses the metric system.

BOSNIA AND HERZEGOVINA

Major City:

Sarajevo

Other Cities:

Banja Luka, Bihać, Jajce, Mostar, Tuzla

INTRODUCTION

BOSNIA AND HERZEGOVINA is one of the former republics in the old six-member Socialist Federal Republic of Yugoslavia. Beginning in late March 1992, a civil war erupted throughout Bosnia with ethnic Serb guerrillas and allies in the Serb-dominated Yugoslav National Army fighting Moslem Slavs and ethnic Croats over proposed independence from Yugoslavia. Ethnic Serbs living in Bosnia feared that Serb political and civil rights would be violated in an independent Bosnian state. In early April 1992, Bosnia and Herzegovina declared its independence from Yugoslavia. Throughout 1992 and early 1993, vicious ethnic warfare continued in Bosnia. By early 1993, Serbian forces controlled roughly 70 percent of Bosnia. Although all sides have committed atrocities against civilians, the Serbs were accused by the United Nations, the European Community, and the United States of the rape of thousands of non-Serbian women and creating large prison camps where prisoners were tortured and executed. The Serbs also implemented a policy of “ethnic cleansing,” which involves the forcible deportation of non-Serbs from Serbian-controlled areas. All of these actions by the Serbs led to widespread condemna-

tion from the world community. In March 1993, the United States air-dropped relief supplies to Muslim towns under siege by Serbian forces. Also in March 1993, the United Nations Security Council authorized the imposition of a no-fly zone over Bosnia and Herzegovina. In July 1995, Bosnian Serbs overran UN-protected “safe areas.” NATO leaders initiated air raids, and Serbs lifted their siege of Sarajevo. In September 1995, leaders of Serbia, Croatia, and Bosnia agreed to a new governmental structure for Bosnia and Herzegovina. In November 1995, the presidents of Bosnia, Croatia, and Serbia signed a U.S.-sponsored peace agreement in Dayton, Ohio. The first elections under the Dayton accord were held in December 1996.

Editor’s Note: The city and country profile information contained in this entry reflect the conditions in Bosnia and Herzegovina prior to the outbreak of civil war in 1992.

MAJOR CITY

Sarajevo

Sarajevo, the capital of Bosnia and Herzegovina, is situated in a valley near the Miljacka River. In 1998,

Sarajevo and its metropolitan area had a combined population of estimated at 496,000. However, data dealing with population numbers has been subject to error because of dislocation from the civil war.

Sarajevo is the government, commercial, and cultural center of Bosnia and Herzegovina. Several major industrial firms are located either in or near the city. Industries in Sarajevo include communications plants, a furniture factory, a brewery, a tobacco factory, and a sugar beet refinery. The University of Sarajevo is here, as are the Bosnian Assembly and the republic’s government, and both the Bosnian National Theater and National Museum.

Socially and culturally, Sarajevo still maintains much of the flavor of its Turkish past—the area was occupied by Turkey for almost 500 years. Among the more than 70 mosques in the city, the largest is the Gazi Husref Bey Mosque. Constructed in the 16th century, the Gazi Husref Bey Mosque is a beautiful structure adorned with tiled walls, exquisite Persian carpets and prayer rugs, and a large domed ceiling. The Gazi Husref Bey Mosque also has one of oldest known copies of the Koran.

Courtesy of Melissa Doig

Principov Most (Princip's Bridge in Sarajevo)

During much of the year, Sarajevo is covered in a gray mist, and its dark, cobblestone streets and winding river give it an Old World feeling. The fascinating central bazaar and ubiquitous coffee houses add to the atmosphere.

Awarded to Austria-Hungary in 1878 by the Congress of Berlin, Sarajevo remained under Austrian rule until 1918, when it became part of Yugoslavia. It was the scene of the street-corner assassination of Archduke Franz Ferdinand on June 28, 1914—an act which precipitated World War I. During the Second World War, the city was occupied for four years by the Germans. Sarajevo was heavily damaged during World War II, but was extensively rebuilt.

Sarajevo was the site of the 1984 Winter Olympics.

No English-language education is available in Sarajevo. Association with other Americans is not exten-

sive, since only a few U.S. citizens live here. There is an authorized source of foreign information. In Serbo-Croatian, it is known as the *Američki Center*.

During the civil war, Sarajevo was under siege by Serbian forces. Artillery and sniper attacks were launched almost daily against Sarajevo from the surrounding hillsides, causing heavy civilian casualties and destroying many buildings. The city's electrical, transportation, sanitation, and telecommunications systems were decimated.

Recreation and Entertainment

Travelers can use three tennis courts in the summer. No other public recreational facilities are available, but hiking and horseback riding can be arranged. The mountains of Bosnia offer extensive opportunities for touring, fishing, hiking, and hunting. Overnight camping is allowed only in designated camping areas. Hunting and

fishing permits are required, and big-game hunting (deer, bear, etc.) can be expensive. The Adriatic coast, only four hours from Sarajevo by car, offers excellent resorts. Ocean fishing is allowed without permit.

The National Theater of Bosnia provides a full season (September to May) of opera, drama, and symphony concerts. Movie theaters show late-release films from many countries, with about 60 percent of the films in English.

Sarajevo has a number of museums that are of interest to visitors. The Museum of the Young Bosnia Movement (*Muzej mlade Bosne*) contains exhibits of photographs and personal artifacts of Gavrilo Princip, the man responsible for the assassination of Archduke Franz Ferdinand. Princip and his colleagues have long been regarded as national heroes in Bosnia. Two footprints, believed to mark the spot from which Princip shot the Archduke,

are located outside of the museum. Another museum, the Regional Museum (*Zemaljski Muzej*), contains Roman relics, medieval tombstones, and ethnographic exhibits which chronicle the folklore of Bosnia. The Regional Museum also has excellent natural history and archaeological exhibits and a beautiful botanical garden. The Jewish Museum (*Muzej Jevreja*) details the arrival of Jews in Sarajevo in 1550 and has several exhibits of Jewish life in Bosnia. The museum contains a book entitled “Twelve Thousand Dead,” which lists the names of Jews killed during World War II by the Nazis and their collaborators.

OTHER CITIES

BANJA LUKA is situated on the Vrbas River in northern Bosnia-Herzegovina. The city is thought to date back to a Roman fort, but was historically important during the sixteenth through eighteenth centuries when it was the site of several battles between the Turks and the Austrians. Although Banja Luka was struck by an earthquake in 1969, the city retains several of its Turkish vestiges. The old fortress, Kastel, is of special interest; Džamija Ferhadija, the mosque of Ferhat-Beg, is one of Bosnia’s best examples of Turkish architecture, with its decorative arabesques and inscriptions from the Koran. Today, Banja Luka manufactures leather goods; industries include an iron factory. The city has wide, tree-lined streets and attractive parks. There are thermal springs in the area. Banja Luka is a good starting point for trips through the scenic Vrbas Valley, south of the town of Jajce. Banja Luka had an estimated population of 179,000 in 2002.

The city of **BIHAĆ** is situated in northwestern Bosnia and Herzegovina on the banks of the Una River. Bihać was founded in 1260 and was controlled at various times in history by Hungarians and Turks. Today, Bihać is the home of productive textile and timber industries.

JAJCE, located in north-central Bosnia and Herzegovina, has been occupied at various times in history by the Turks, Hungarians, and Austrians. The city is now a tourist center with Turkish wooden water mills, medieval fortifications, mosques, and Oriental-style houses that are of interest to visitors. Jajce has an important chemical manufacturing industry.

Situated 50 miles southwest of Sarajevo, **MOSTAR** is on the Neretva River in western Bosnia and Herzegovina. Formerly the capital of Bosnia and Herzegovina (Sarajevo is its capital today), Mostar is the chief town in the area, surrounded by vineyards. The city produces wine, textiles, and tobacco. Mostar has many examples of Turkish architecture, built in 1566. It features a tower on each end and a stone bridge that arches nearly 30 yards across Neretva River. Mostar is a good starting point for excursions into the surrounding countryside. At Pocitelj, 19 miles southwest, there is an interesting combination of Mediterranean and Turkish buildings. In Radimlja, 25 miles southeast, is the necropolis of the heretical Bogomils, an orthodox sect, whose elaborately carved tombstones—*stecci*—are among the most beautiful of their kind. In 2002, Mostar had an estimated population of 120,000.

TUZLA, located 50 miles north-northeast of Sarajevo, is noted for its salt mines. The city was founded in the 10th century and was controlled throughout history by the Turks and Hungarians and became a part of Yugoslavia in 1918. Tuzla is a transportation and trading center for the surrounding region.

COUNTRY PROFILE

Geography and Climate

Bosnia and Herzegovina is a triangular-shaped land located in the

heart of the old Yugoslav federation. The country is surrounded on three sides by Croatia and is bordered on the east by Serbia and the southeast by Montenegro. Bosnia and Herzegovina is nearly landlocked and has a coastline of only 12 miles (20 kilometers).

The topography of Bosnia and Herzegovina consists primarily of mountains and forests. However, the country also has fertile valleys which contain arable land. Several rivers, the Drina, Bosna, Una, and Vrbas, are located within Bosnia and Herzegovina. The country is subject to frequent and destructive earthquakes.

Bosnia and Herzegovina’s climate is generally characterized by hot summers and cold winters. In areas of high elevation, summers tend to be short and cold while winters are long and severe. Along Bosnia and Herzegovina’s small Adriatic coast, winters are mild and rainy.

Population

In 2001, Bosnia and Herzegovina had an estimated population of 3,922,000. Of this total, approximately 31 percent were Serb, 44 percent were Bosniak, and 17 percent were ethnic Croat. All three ethnic groups speak Serbo-Croatian (often called Bosnian), which is Bosnia and Herzegovina’s official language.

Three different religions are practiced within Bosnia and Herzegovina. Bosnian Croats are predominantly Roman Catholic, while Bosnian Serbs are typically adherents of the Serbian Orthodox Church. Bosnian Muslims are generally members of the Sunni sect. Approximately four percent of Bosnians belong to Protestant denominations.

Government

Under the Dayton accords of 1995, a constitution for Bosnia and Herzegovina was established that recognized a single state with two

Courtesy of Melissa Doig

Homes on hillside in Mostar

constituent entities. The Federation of Bosnia and Herzegovina (FBH) incorporates the 51 percent of the country with a Bosnian Muslim and Bosnian Croat majority, while the Republika Srpska (RS) occupies the 49 percent of the country with a Bosnian Serb majority.

The constitution calls for a central government with a bicameral legislature and a three-member presidency comprised of a member of each ethnic group. The constituent government of the FBH utilizes a parliament and a presidentially-appointed prime minister, currently Zlatko Lagumdžija, while the RS has a proportionally-elected parliament and two vice-presidents who serve under the president.

The flag of Bosnia and Herzegovina consists of a yellow triangle on a royal blue field, with a row of white stars arranged on the diagonal.

Commerce and Industry

Bosnia and Herzegovina ranked next to Macedonia as the poorest component in the old Yugoslav federation. Traditionally, agriculture has been the mainstay of Bosnia and Herzegovina's economy. The foothills of northern Bosnia support orchards, vineyards, livestock, and some wheat and corn production. Although agriculture has been almost all in private hands, farms have been small and inefficient. Therefore, Bosnia has been forced over the years to import roughly half of its food needs.

Several manufacturing industries are located in Bosnia and Herzegovina. These industries produce wooden furniture, textiles, carpets, tobacco products, and automobiles. Bosnia and Herzegovina had a large armaments industry. Bosnia and Herzegovina is rich in minerals, particularly coal, iron ore, zinc,

manganese, lead, and bauxite. This mineral wealth led to the development of a productive mining industry.

The war's destruction caused the gross domestic product (GDP) to drop 75 percent. Since 1995, trade has increased in the Croat and Muslim areas. Reconstruction programs initiated by the international community have financed the construction of infrastructure and provided loans to the manufacturing sector.

Transportation

The quality of roadways in Bosnia and Herzegovina ranges from generally good to poor. Bosnia and Herzegovina's principal highway stretches 113 miles (183 kilometers) from Sarajevo to the Adriatic coast. Trips to Zagreb (Croatia) and Belgrade (Serbia) can be made only on rough secondary roads. Bus service is available between Sarajevo and

Mostar. In 2000, Bosnia and Herzegovina had a total of 13,569 miles (21,846 kilometers) of roadway. Of this total, 64 percent were paved.

Train service is available between Sarajevo and Mostar, and between Mostar and the Croatian city of Kardeljevo. Railway links connect Sarajevo with Belgrade and Zagreb.

Sarajevo has an international airport located approximately six miles (10 kilometers) southwest of the city.

Communications

Bosnia's telephone and telegraph network is in need of modernization and expansion, with many urban areas being below average compared with services in other former Yugoslav republics. Communications and capabilities in Sarajevo and other Bosnian cities were nearly destroyed during the country's civil war.

There are no English-language newspapers, periodicals, or books published in Bosnia and Herzegovina.

Radio and television broadcasts are controlled by Radio-Television Sarajevo. All broadcasts are in Serbo-Croatian.

Bosnia and Herzegovina uses the metric system.

NOTES FOR TRAVELERS

Although the U.S. government recognized the independence of Bosnia and Herzegovina on April 7, 1992, the Department of State continues to warn U.S. citizens not to travel to Bosnia and Herzegovina at this

time because of widespread fighting throughout the country. The Department of State strongly recommends that U.S. citizens in Bosnia and Herzegovina consider leaving the country as soon as possible. A state of violence resulting in deaths, destruction, food shortages, and travel disruptions affecting roads, airports, and railways make travel anywhere in the country extremely hazardous. In particular, the Department of State advises against travel to western Herzegovina, including West Mostar, Livno, and Grude, all of which are located in areas which have seen heavy fighting. An estimated one million unmarked landmines still remain throughout Bosnia and Herzegovina. Special care should be taken near former confrontation lines.

Travelers should be aware that there is no direct air service between the U.S. and Bosnia and Herzegovina. Commercial service is limited, and travelers should be prepared for delayed and canceled flights.

An increased number of cases of the disease "Q Fever" has been reported recently in various areas of Bosnia and Herzegovina. This is an animal disease which can infect humans through raw or undercooked meat, unpasteurized dairy products, and dust from areas where infected animals, mostly sheep, goats and cattle, are found.

Bosnia and Herzegovina has a cash economy; credit cards are rarely accepted. Traveler's checks may be cashed at major banks, but often with a delay of three to four weeks. The official currency is the convertible mark, but German marks are accepted in most shops.

The U.S. has recently opened an Embassy in Sarajevo, the capital of Bosnia and Herzegovina. U.S. citi-

zens experiencing difficulties in Bosnia and Herzegovina should contact the U.S. Embassy for assistance. All U.S. citizens who remain in Bosnia and Herzegovina despite this warning are urged to register their whereabouts with the U.S. Embassy, including an emergency telephone number so that attempts can be made to contact them if necessary.

The U.S. Embassy in Sarajevo is located at Alipasina 43; telephone: 445-700.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 2000 for Bulgaria. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The Bulgarian lands are an historic crossroads that to this day preserve evidence of many ancient civilizations and peoples: bronze and iron spears and arrows, ruins of classical temples, palaces, and cities, wise words carved on rocks and stone columns or written on parchment and leather. In the mid-17th century, early Slavic tribes came from the north, crossing the Danube river and reaching as far as the Black Sea and the Adriatic. They were followed by the Bulgars of Khan Asparuh. The first Bulgar state was founded in 681 A.D. as an alliance between the Bulgars and the Slavs.

In 862 the Saints Cyril and Methodius created the first Slavic alphabet-

the Glagolitsa. At the end of the 9th century another Bulgarian alphabet was created—the Cyrillic alphabet, which later was spread beyond the boundaries of Bulgaria. The Cyrillic script is still used in Bulgaria, Serbia, Ukraine, Russia, and other Slavic nations.

In 865, under the reign of Prince Boris I, the Bulgarians converted to Orthodox Christianity, which consolidated the country. The first Bulgarian kingdom reached its height during the reign of Tsar Simeon I (893-927). This era is known as the "Golden Age of Bulgaria" and is associated with the flourishing of literature, arts, and handicrafts. After a period of 167 years under Byzantine control (11th-12th centuries), Bulgaria reestablished itself as a state under the reign of Tsar Peter. During the 13th century, the Bulgarian state stabilized and its boundaries expanded to the Black, White, and Adriatic seas. In the middle of the 14th century, armies of the Ottoman Empire began raids into Bulgaria and finally conquered it in 1396. For the next five centuries Bulgaria remained under Ottoman rule. During this period over 400 uprisings broke out across the country, but all were suppressed.

The second half of the 18th century marked the beginning of a Bulgarian national renaissance, which

extended through the next century. Numerous schools were opened, textbooks in Bulgarian were printed, and teachers were trained. The Bulgarian Church regained its independence from the Greek Orthodox Church, replaced the clergy, and established an independent exarchate. The revolutionary movement organized across Bulgaria culminated in an uprising in 1876. The subsequent Russo-Turkish war led to the liberation of Bulgaria and the signing of the San Stefano Peace Treaty on March 3, 1878. Bulgaria became a principality which was nominally under Ottoman control, but in fact acted as an independent state. The Berlin Congress of the Great Powers, held in June-July 1878, annulled the San Stefano Peace Treaty and split up Bulgaria. The northern region (Principality of Bulgaria) and southern region (East Rumalia) were unified in 1885 by Prince Alexander Batenberg.

In 1908 Bulgaria became a fully independent constitutional monarchy, which survived to the end of WW II. Bulgaria fell under the Soviet sphere of influence, became a People's Republic, and a loyal Soviet satellite beginning in 1946. Communist domination ended in 1989. In the early 1990s, Bulgaria began the contentious process of moving

toward political democracy and a market economy.

MAJOR CITIES

Sofia

Sofia, the political, economic, cultural, and administrative center of the country, is a city where large parks and attractive older buildings blend with modern high-rises. Sofia is situated on a plain 1,830 feet high. Ten miles to the north lie the Balkan Mountains (Stara Planina), and just to the south is Mount Vitosha (7,000 feet), which is a national park and a popular hiking and skiing area. Behind Mt. Vitosha, near the resort town of Borovetz, lies Mt. Musala, the highest peak in Bulgaria (9,650 feet).

Utilities

Electricity is 220v, 50-cycle, single phase. The current is erratic, with frequent voltage fluctuations (as much as 10%) and occasional breaks in service. When repairs are taking place at the power station, regular power breaks occur, which are announced in advance. The city water supply, to which all apartments are connected, has frequent interruptions. Water pressure often fluctuates or is low on upper floors. Many buildings have an insufficient or inconsistent hot water supply that is centrally controlled. Each summer for about 3 weeks, sometimes less in the diplomatic apartments, the hot water is turned off to clean the water pipes. This is announced in advance. Heating is supplied through a centralized city-wide system, which means that one cannot regulate one's own apartment temperatures.

Food

There has been a great improvement in food availability in Bulgaria following economic liberalization. Seasonal fruits and vegetables are always offered at the markets, as well as some hardy, less seasonal imports. Meat and poultry are always available but are not cut and

prepackaged American-style. Frozen vegetables on the local market do not look particularly appetizing, but American and Turkish brands are available at the commissary. Finding good fresh or frozen fish is still a problem, but some people report that they have found sources.

The present exchange rate makes local produce reasonable for foreigners, and the sources of supply have increased. Many private shops and small supermarkets have opened recently, stocking a good variety of imported items as well as local products. There are now two "Metro" stores in Sofia that are of the size and variety of a Price Club-type store. These stores are more like warehouses and sell everything from wine to lawn furniture. This is pretty close to a one-stop-shop, since you can buy food, household appliances and furnishing, clothing, diapers, products for your office, and even automotive supplies.

Open or covered farmers' markets offer a rich assortment of local and imported produce all year around, although you may not be able to find your favorite fruits or vegetables. The larger vegetable markets are open every day of the week. Local dairy products, meats, and dry goods are found in corner groceries.

Clothing

You will need approximately the same kinds of clothing here as for the U.S. Winters are generally long and cold while summers are shorter, cooler, and dry. You should bring warm winter clothing, especially if you intend to take advantage of the winter sports opportunities available here.

The cobblestone streets can be hard on shoes. For women, closed-toe shoes with low or moderate heels are better than sandals or high-heeled shoes for most of the year, although many young Bulgarian women wear the latest platform high heels even on the cobblestones. Bulgarians are quite proud of their locally made shoes and boots, which are available all over town, and imported shoes and boots are also

easy to find for adults. For children's shoes and boots most people still either shop in Greece or Turkey or buy from American catalogs.

Office clothing is similar to that of the U.S., though those who regularly use public transportation may dress slightly less formally. More and more upscale sports and fashion shops are opening, and the Bulgarian clothing industry produces many attractive items. But in general it is still difficult to find what you want with regards to style and fabric in the size you want, so most people buy clothing at home or from catalogs.

In the last few years it has become much easier to find baby clothing, but parents with 10-12-year-olds report that

Domestic Help

Both full-time and part-time Bulgarian servants are available. All live out, and few speak English well. Normal work hours are Monday through Friday, with special arrangements made for weekends and holidays. Rates vary widely depending on the contract, 36.7% of that amount is given in addition for social security, unemployment and health insurance. It is also customary to give servants a gift at the end of the year; an extra month's wages is expected. For extra help at cocktails, lunches, and dinner parties, you can hire cooks, bartenders, and waiters. Evening babysitters cost about \$2 an hour, plus taxi fare.

Religious Activities

Most churches in Bulgaria are Bulgarian Orthodox. Anyone may attend services at these churches, including the

Alexander Nevski Cathedral, to hear the famous unaccompanied choir. This is especially interesting at Christmas and Easter. The former regime encouraged atheism; this is no longer the case, and now

Street in Sofia, Bulgaria

many foreign missionary groups are active.

There is a resident chaplain at the British Embassy in Bucharest who holds Episcopal services periodically in the Fox Club, in the British Embassy residence building. The papal nunciature holds Roman Catholic services in English Sundays at 11:00 am, and St. Joseph's Catholic Church holds services in Polish, Bulgarian, and Latin at different times on Sundays. The International Baptist Church holds English services Sunday at 11:00 am in the basement of the World Trade Center; Sunday School at 10:00 am; and Bible study and prayer group meetings, as well as nursery service, during the 11:00 am service. Branches of the Church of Jesus Christ of the Latter Day Saints and a Sephardic Jewish Synagogue with worship are also present in Sofia.

Education

The Anglo-American School in Sofia (AAS), a PK-8 school established by the American and British to the south of Sofia. Embassies in 1967, takes children primarily of the two embassies; other international children and a limited number of Bulgarians are given places as space permits. The school is accredited by the New England Association of Schools and Colleges and the European Council of International Schools. The school has a specific commitment to focus on curricula, resources, and methodologies that relate to the mainstreams of education in the U.S. and the United Kingdom. The director is British, and the teachers are mostly American or British.

The AAS of Sofia is governed by a Board of Directors, consisting of nine members; four members are appointed by the British Ambassador, and four by the American Ambassador, with the PTO presi-

dent serving as a full board member. The AAS is located on the campus of the American College of Sofia in Mladost. At present, about 140 children from 30 different countries are enrolled.

The school operates a preschool for children who are already 4 years old; it also offers an intensive ESL program, remedial reading and writing, a study skills program, a standardized testing program, French, music, art, after-school activities, field trips inside and outside Bulgaria, and an annual ski week on Mount Vitoshka. There are classroom computers and an extensive library. The school does not have any special separate provision for children designated as gifted and talented or as learning-disabled beyond what is listed above. Provision is made for individual differences by the teachers within the normal favorable classroom situation. Classes on average have 20 or fewer pupils. The annual edu-

cational allowance covers tuition and bus service. Classes begin in late August and end in mid-June.

Places are limited, so if you wish to enter a child, write as early as possible. The school will hold seats open. The address is: The Director, The Anglo-American School of Sofia American Embassy Sofia Department of State, 5740 Sofia Place Washington, DC 20521-5740.

The American College of Sofia, a private high school blending aspects of the Bulgarian and American educational systems, graduated its first class in 1997 after being shut down for 50 years under the Communist government. Most students are Bulgarian, with a minority of Americans and other internationals. A preparatory year, equivalent to the 8th grade, is used almost entirely to teach the entering Bulgarians English. In subsequent years students are taught math, philosophy, four sciences, including computer science, and languages and arts.

American teens have attended ACS and have received an excellent education there. Also, in the past, a few American teenagers have studied in the Bulgarian special-language high schools, where the language of instruction is either English, French, Russian, or German. Not all classes are held in the designated language and, of those classes given in English, the level is naturally most suitable for ESL students. Students beyond the 8th grade also have taken the University of Nebraska home study program. This requires active parent participation.

Special Educational Opportunities

Besides the Anglo-American School of Sofia, there are other opportunities for young children. The International Children's Creativity Centre (ICCC) is open to children aged 2 to 4, who attend the Centre two, three, or five mornings a week to play and learn using the English language. The ICCC Board is made up of five members, some of whom are parents of children registered at the

Centre. The Centre has enjoyed a good reputation since its inception.

The American English Academy offers courses in English for prekindergarten through 12th grade. The academy is accredited by ACSI in Colorado Springs, and the parents of children attending the academy are very pleased with the education their children are receiving. There is a religious affiliation, but no religion is taught. The textbooks and curriculum are American, and the president and at least half the teachers are American.

The American University of Bulgaria is located just 100 kilometers south of the capital city of Sofia. All instruction is in English, and the faculty is over 60% American. The University of Maine, the U.S. partner, provides accreditation and assists with curriculum development.

There is a French Government Lycee which welcomes children of all nationalities. Its students are eligible to specialize in baccalaureates in the sciences, literature, or social sciences. The program is rigorous and highly valued at American Universities, which often offer 1 year or more of advanced credit to holders of the Baccalaureate.

Sports

Skiing is a very popular winter sport, and prices for rental equipment and lift tickets are well below those in Western Europe. Sledding and winter hiking are also popular, with Vitosha Mountain right at the doorstep. There is a Hash House Harrier group, which organizes regular weekend runs and walks. Hiking on the Vitosha Mountain is popular. For the more adventurous sports enthusiasts, Bulgaria has a selection of mountain ranges from which to choose. Hiking, spelunking, hang gliding, kayaking and rock climbing opportunities exist.

Fitness centers are becoming more popular and there are several indoor and outdoor swimming pools in the city. There are several reputa-

ble good stables on the outskirts of Sofia.

Good locally produced and imported sports equipment and clothing is becoming more available in shops all over Sofia, although for the newest styles and equipment you may still have to shop elsewhere.

Touring and Outdoor Activities

Within the city there are many fascinating museums to visit as well as several buildings of historical and cultural significance. Organized tours are available from Sofia to visit the many delightful points of interest in the country, including the nearby Rila Monastery and the town of Koprivshitsa, one of 14 designated museum towns. The Boyana Church, one site not to be missed, is located just outside of Sofia. This church contains frescoes that date from the 12th and 13th centuries and are of unusual interest to art in- and out-of-country travel opportunities. Many families drive fairly regularly to the Greek and Turkish coastal resorts and/or to Thessaloniki and Istanbul for shopping and pleasure. Bucharest is an eight-hour drive from Sofia via the Bulgarian city of Ruse on the Danube.

Entertainment

Several movie theaters in Sofia show American and European films. American films are usually shown in English with Bulgarian subtitles. The English titles are published weekly in the private newspaper, *The Sophia Echo*.

There are many theaters in Sofia offering a rich variety of performances from the classical to avant garde, with performances in Bulgarian. In the last couple of years there has been an English play performed by volunteers from the English-speaking community. Children's puppet theaters occasionally have pantomime shows, and there is a musical theater, which frequently performs musicals such as "Hello, Dolly."

The Sofia Philharmonic runs several cycles of performances at reasonable prices.

Sofia also boasts a young private orchestra, the New Symphony Orchestra, whose director is Rossen Milanov, also the director of the Chicago Youth Orchestra.

Numerous other musical events take place in the National Palace of Culture, a monstrosity of a building left from the days of communism. Pop, rock, jazz, and classical groups perform there.

The many and ever-changing assortment of restaurants, cafes, and pubs offer varied opportunities for exploration. Most restaurants are fairly inexpensive by American standards but have improved considerably in the last few years. Food and service are greatly improved, and excellent Bulgarian wines with dinner are well within an FS officer's budget. Besides a variety of international restaurants -Korean, Chinese, Indonesian, French, Spanish, Indian, and Italian - there are folkloric restaurants with floorshows, a restaurant that sells the antiques surrounding your table, restaurants with a view, and the usual assortment of American fast food restaurants.

Plovdiv

Plovdiv, rich in both ancient and modern history, is Bulgaria's second largest city, with a population of about 375,000. Situated on the cliffs overlooking the Maritsa River, it is about 100 miles east of Sofia, on the international highway to Istanbul. For more than 2,000 years, it has been a crossroads for east-west trade, and today is the site of the Plovdiv International Sample Fair, where tradespeople from both capitalist and communist countries gather each September to show their wares.

The ancient city was known as Philippolis, for Philip II of Macedon, father of Alexander the Great, who made it a military post in 341 B.C. Under the Romans, who took the

city in 46 B.C., it was the capital of Thrace (or Thracia), and known as Trimontium. It was razed by the Goths, but recovered after Constantine V of Byzantine settled the Armenian Paulicians here. Again destroyed in the 13th century by Bulgarian raids, it revived as a center of the Bogomils, who were part of a religious movement of the Middle Ages. The Greeks retook the city in 1262, then lost it to the Turks in 1364. It became the capital of Eastern Rumelia when it passed to Russia in 1877. It was not until 1885 that it became part of Bulgaria.

The Plovdiv of today retains the color of its history in the town walls and gate, the old quarter, the Eastern Orthodox churches, and the Roman architecture. Many places of historical interest are a short drive from Plovdiv, most notably the Bachkovo monastery, second only to Rila in interest and beauty. Plovdiv has a 4,000-student university and several other institutions of higher learning, as well as a number of notable museums.

Varna

Varna is Bulgaria's principal seaport, and is also a beautiful resort with fine beaches on the western shores of the Black Sea. It has a thriving tourist industry, and its museums, galleries, and good theaters contribute to the economic health of the city. Varna supports its own symphony orchestra and also an opera house. During the resort season, its hotels are both busy and expensive. One of the major attractions of this city of more than 311,000 residents is its international music festival. Every three years, a ballet competition is also held here. From Varna, throngs of visitors take excursion boats up and down the coast.

Varna was founded in 580 B.C. as Odessus, a Greek colony. It passed to the Roman Empire in the first century A.D., and remained part of the Byzantine Empire until the Bulgarians defeated Constantine IV here in the year 679. Captured by the Turks in 1391, it became an

important seaport and, in the 19th century, a crucial railroad terminus. The Turks used Varna for almost five centuries as an outpost against the Christian Crusaders. In a turn-about, the British and the French made it their naval base in the Crimean War. The city was ceded to Bulgaria in 1878 by the Treaty of Berlin.

For eight years after World War II (1949–1957), Varna was known as Stalin.

OTHER CITIES

BURGAS, situated on the Gulf of Burgas, an inlet of the Black Sea, is one of the country's major ports. A city of about 200,000 people, it has several industries, including fish canneries, an oil refinery, and engineering plants. It also is the site of an institute of chemical technology. Burgas (also spelled Bourgas) was founded in the 18th century on the site of a fortified town which had existed four centuries earlier.

PLEVEN, with a population of about 140,400, is located 80 miles northeast of Sofia in north-central Bulgaria. The city lies near the Vit River in a small agricultural region surrounded by limestone hills. Pleven is a trading hub for the nearby farm districts and vineyards. Industries include those producing rubber goods, ceramic articles, tobacco, and cloth. A historical city since pre-Roman times, there are a number of museums and a school of viticulture here. A major battle of the Russo-Turkish War of 1877-78 was fought in Pleven, and a mausoleum commemorating the Turkish surrender in December 1877 is in the center of the city.

RUSE (sometimes spelled Roussé), a city of close to 185,500, lies in northeast Bulgaria on the Danube, across from the Romanian city of Giurgiu (Giurgevo). It is Bulgaria's chief river port and an industrial and communications center which developed after 1878. Founded in the second century B.C. as Prista, it

later became a Roman naval base. The Turks ruled the city from the 15th to the 19th centuries, called it Ruschuk, and made it a military base. Ruse, noted for its old churches and mosques, houses a large technical university, Angel Kancev.

Founded in 927, **SHUMEN** is located in northeastern Bulgaria, about 500 miles west of Varna. Under Turkish rule during the 15th through 19th centuries, the city was strategically an important stronghold during the Turkish wars in the 18th and 19th centuries. Today, Shumen is a manufacturing city whose chief industries include flour milling, brewing, canning, and motor vehicle assembling. It is also a railway junction and a market for grains and other agricultural products. The city was originally called Shumen or Shumla, but was renamed Kolarovgrad in 1950 in honor of the communist leader Kolarov, who was born here. It reverted to Shumen in 1965. The current population is about 104,000.

SLIVEN (also called Slivno) is situated 155 miles east of Sofia at the foot of the Balkan Mountains in east-central Bulgaria. The city has long been considered strategically important due to its location at the entrance to the Balkan passes and has, consequently, been the center of conflict—in medieval times between Bulgaria and the Byzantine Empire, and between the Russians and the Turks in the 19th century. Today, Sliven is a textile center that also produces foodstuffs, wine, machinery, glass, and electrical goods. Coal is mined in the nearby region. Several churches and mosques, and the ruins of a medieval fortress may be found in Sliven. The capital of Sliven Province, the city has a population of 102,000.

STARA ZAGORA is the capital of the district with the same name; it is approximately 110 miles southeast of Sofia and 50 miles northeast of Plovdiv. The city, with a population of about 145,000, is near the famous Shipka Pass in the Balkan Mountains. Stara Zagora produces

furniture, chemicals, textiles, and tobacco, and is known particularly for its vast fields of roses which provide oils for the perfume industry. It had to be rebuilt after the Russo-Turkish War and, as a result, several Roman and Turkish antiquities were found. A spa called Stara Zagora is located near the city.

TOLBUKHIN is a cultural and commercial center located 25 miles north of Varna in northeastern Bulgaria. The capital of the province of the same name, Tolbukhin produces cotton textiles, farm machinery, metal goods, and foodstuffs. Tolbukhin was formally called Dobrich; when it was occupied by Romania, from 1913-40, it was called Bazar-gic. It was officially renamed Tolbukhin in 1949 to honor the Soviet marshal who had liberated the city in 1944. Tolbukhin's population is about 102,300.

COUNTRY PROFILE

Geography and Climate

Bulgaria is a country of mountains, plains, and seacoast, occupying 110,000 square kilometers (43,000 square miles) of the Balkan Peninsula. It measures roughly 260 miles from east to west and about 150 miles from north to south. Much of the country is rugged and mountainous, and only about 40 percent is cultivated. The Danube River, Black Sea, and Pirin-Rhodope Mountains provide natural borders on the north, east, and south. Flowing south into Greece are the non-navigable Struma, Maritsa, Mesta, and Arda Rivers, important sources of water for irrigation. The Balkan range extends across the north-central part of the country, separating the wheat-growing Dobrudzha region from the Thracian plain, where vegetables, fruits, grapes, and tobacco are cultivated.

The climate is usually designated as "continental, with many microcli-

mates." From May to November, the climate is pleasantly warm and sunny. Sofia, though approximately on the same latitude as Rome, is about 1,500 feet up; it therefore, has a climate similar to, for example, Frankfurt. All plants, flowers, and fruits common in Britain and France grow well here, and the climate is too cold for citruses. November through April are cold, with snow and temperatures hovering near 32°F (0°C) but often falling lower, sometimes to 5°F (-15°C) in Sofia. Summer temperatures rarely exceed 90°F, and humidity is moderate. During July, the mean temperature is 68.7°F (20.4°C); during January, 30.6°F (-8°C). Mildew and insects are not significant factors.

Sofia's main climatic problem is winter smog, which is caused by industrial air pollution, soft-coal smoke, vehicle exhaust emissions, fog, and surrounding mountains that keep winds from blowing the smog away. Gray-brown dirt or coal-dust, as well as sand, is scattered on Sofia's snow-covered streets in winter. In Sofia, winters may often be gray, but they are quite beautiful in the nearby mountains. Mount Vitosha (altitude 2,290 m.), with its ski resorts and runs and walking paths, overlooks the city. Abundant trees and flowers make Sofia a more colorful city the rest of the year. Rainfall is moderate, averaging 25 inches a year.

Population

Bulgaria's National Statistics Institute reported the 1996 population at just over 8 million. Roughly 1.2 million, or 13%, live in and around Sofia, the nation's capital. Plovdiv, the second largest city and cultural center, has a population of about 350,000, while the Black Sea coast town of Varna, the third largest, has just over 300,000. Few of the other cities have populations greater than 100,000.

Recent years have seen a negative growth in the population, a condition also present in the early 1980s. The number of abortions exceeds live births, and in 1996 the country

Alexander Nevski Square in Sofia, Bulgaria

Cory Langley. Reproduced by permission.

had an infant mortality rate of 15.6 deaths per 1,000 live births. Death and illness rates have increased since the early 1980s. The “squared” population profile is projected to lead to a population of 6 million by the year 2030. The population is aging, with nearly 30% of the people over the retirement age of 55; 48% representing those of working age (20-54 years); and a relative few remaining to address the needs of a hoped for economic expansion. A doubling of the percentage of severely handicapped further complicates this condition.

About 85% of the population is Bulgarian—a designation that includes people with numerous regional folklore traditions—and 9% is of ethnic Turkish origin. About 6% of the population is Roma, some of whom claim to be of Turkish descent. The country also has small numbers of Armenian, Jewish, Greek, and other minorities. The Bulgarian Orthodox Church, which belongs to the family of Eastern Churches that also

includes Greek, Serbian, Romanian, and Russian Orthodoxy, is the principal religious denomination. Today, Bulgaria has one of the highest levels of true literacy in the world.

The Bulgarian language, like Russian and Serbian, is based on the Cyrillic alphabet, the founders of which were two Greek brothers, Cyril and Methodius, who worked among the Slavs, and is a source of great pride for Bulgarians. The Cyrillic alphabet spread from Bulgaria to Russia. Knowledge of other Slavic languages (particularly Russian) is helpful in learning Bulgarian, in spite of significant differences in vocabulary, grammar, and pronunciation. Learning foreign languages has always been stressed in Bulgaria, and the systems developed for learning language are quite effective. The levels of fluency in languages such as English, French, and German, often without the benefit of travel, is noteworthy.

Public Institutions

The 1991 constitution includes the following provisions: that there be separation of powers, political pluralism, free economic enterprise, inviolability of private property, and protection of the investments and businesses of Bulgarians and of foreigners. Human rights are generally well protected, and Bulgarian domestic laws are being brought into conformity with international agreements.

The President is commander-in-chief of the army and appoints and dismisses ambassadors. He has a staff of advisers. When in office, he officially relinquishes partisan allegiances and is the leader of all the Bulgarian people. He cannot initiate legislation, but has a qualified veto. Elected by direct popular election for five-year term, he can be reelected once.

The Narodno Sobranie, or National Assembly, consists of 240 members,

each elected for a 4-year term with no term limit. They have public sittings that are extensively broadcast and televised. Both the Assembly and the Council of Ministers initiate legislation. The executive function rests with the Prime Minister and the Council of Ministers, including chairmen of functional committees. They are responsible for internal and foreign affairs. The judiciary does not check the actions of the executive or legislative sections; however, the new constitution provides for an independent judiciary.

A two-tier local government system is specified: regions and municipalities. Regional governors are appointed by the council of ministers, and the municipalities elect councils and mayors. Bulgaria became a member of the UN in 1955 and belongs to most UN-related agencies. It is a member of the World Bank, the IMF, and is a candidate for membership of the European Community and NATO.

Arts, Science, and Education

Full state support for the arts ended with the fall of the communist regime; however, the art scene remains vibrant, and one can pick from a rich variety of offerings: art and craft galleries; museums; theater (for those whose Bulgarian is good enough); opera; and classical, jazz, rock, and folk concerts.

Sofia has six full-time theaters whose offerings range from Bulgarian and European classics to modern works of world drama. The Sofia Opera features standards of classic grand opera as well as ballet, while operettas and musicals can be seen at the Musical Theater. There are three full symphonic orchestras, the Sofia Philharmonic, the National Radio Orchestra, and the New Symphony Orchestra, which exists and performs completely without subsidy from the state. Fans of popular music can enjoy live bands at many of the clubs around town and at the several commercial concerts throughout the year. Bulgaria also has international festivals of dance, classical music, folk, jazz, and rock during the spring, summer, and fall.

By U.S. standards, tickets to all cultural events are inexpensive and are readily available.

There are excellent state museums of Bulgarian and foreign art, an historical museum, an ethnographic museum, and a natural history museum, all with interesting exhibits. In addition, private art galleries have proliferated in recent years, and one can see (and purchase) works ranging from icons through modern abstract work.

For those interested in folk culture, Bulgaria offers a wealth of possibilities. Throughout the year one can see festivals of dance and folk music, and there are opportunities to attend traditional events such as the parades of mummers (*kukeri*). Several world-renowned troupes perform on occasion (when not traveling abroad), and the chance to hear troupes such as the Pirin Ensemble, the Filip Koutev Ensemble, and the famous part-singing women's choir, "Les Mysteres des Voix Bulgares," should not be passed up.

Bulgaria has had an excellent reputation in the world of science and education for years, and the recent economic troubles notwithstanding, it continues to educate students, particularly in math and science, whose test scores rank among the best in the world. Compulsory schooling ends at age 15, but more than 80% of students go farther. Bulgaria's literacy rate is greater than 98%, considerably higher than that in the U.S. With the political reforms of the last several years has come educational reform as well, and the entire educational system from primary school through graduate school is being reconstituted along Western lines.

The Ministry of Education has overall responsibility for maintaining standards and prescribing curricula for all public schools and any private educational institutions qualified to offer recognized diplomas. Secondary education in Bulgaria, despite serious economic problems, continues to offer a large variety of

educational choices ranging from vocational programs (often closely associated with factories) to special science and math high schools. Very popular also are the foreign-language high schools, which like the math and science schools, are "entrance by examination" institutions.

Bulgaria has 43 universities and other institutes of higher education and 45 colleges and technical schools. ("College" refers to semi-higher learning institutions for nursing, paramedical training, teaching, and technical education.) A new feature on the Bulgarian educational scene are the recently (re)established private schools. While these are governed by the various laws on education and are subject to a greater or lesser amount of oversight by the Ministry of Education, they receive no financial support from the state budget. Most notable among these private institutions are the American University of Bulgaria in Blagoevgrad, an American liberal arts college with a strong business school; the New Bulgarian University in Sofia; and the American College of Sofia, an English-language high school that was founded in the middle of the last century and reopened in 1992 after being closed for nearly 50 years. There is also a private English-language primary through middle school with American accreditation, the Anglo-American School of Sofia.

Unlike the situation in America, most basic research is not carried out in universities but rather in one of the more than 160 institutes and laboratories of the Bulgarian Academies of Science, Medicine and Agriculture. The Academies, which are not teaching institutions, have suffered even more than the school system from the economic hardships of the last years, and this has inhibited the exploitation of Bulgaria's scientific talent.

All educational and scientific institutions are eagerly seeking partnerships with Western institutions, and American programs spon-

sored by the Fulbright Commission and IREX have contributed significantly to linking Bulgarian scholars and scientists with their counterparts in the U.S.

Commerce and Industry

Following a severe economic crisis, the newly elected Union of Democratic Forces (UDF) Government adopted a currency board arrangement (CBA) in 1997. The CBA and its associated IMF program have provided the framework for cutting inflation from nearly 600% in 1997 to 6.2% in 1999. Fiscal discipline has kept budget deficits small and led to successive increases in Bulgaria's credit ratings. Despite the conflict in Kosovo, GDP grew by 2.4% in 1999 and is projected to grow by 4% in 2000. However, in the wake of large-scale restructuring of state-owned enterprises (SOEs), unemployment increased to 19% of the labor force in April 2000.

The UDF Government made considerable progress in privatizing SOEs last year. As of the end of 1999, about 71% of state-owned assets destined for privatization had actually been sold. The privatization process was to have been substantially completed in 2000, but difficulties in some sales make it increasingly likely that several large state-owned companies will not be sold until 2001.

Bulgaria joined the World Trade Organization (WTO) in December 1996 and became a full member of the Central European Free Trade Agreement (CEFTA) in July 1998. Bulgaria trades with European countries under preferential terms according to the European Union Association Agreement, effective February 1, 1995, and an agreement with the European Free Trade Association (EFTA), effective 1993. Bulgaria signed free-trade agreements with Turkey (effective January 1, 1999) and Macedonia (effective January 1, 2000).

In 1999, according to preliminary estimates, Bulgaria attracted \$755.3 million in foreign direct investment; during the period 1992-1999; foreign direct investment totaled \$2.8 billion. The U.S. is the fourth largest source of foreign direct investment (\$198.4 million, or 7% of the total). Among the largest foreign investors are the following U.S. companies: American Standard, AIG/ALICO,

McDonald's, Entergy Power Group, Hilton International, Seaboard Overseas, World Trade Company, Kraft Foods International, Bulgarian-American Enterprise Fund (BASF), Caresbac, DTS, Investments Corporation, Eurotech, Kontrako, and Eagle.

Germany is the top foreign investor, with \$425.9 million, or 15% of total foreign investment, followed by Belgium, with \$373 million, or 13% of total foreign investment, and Cyprus, with \$249 million, or 9% of total foreign investment.

The government seeks to improve the country's infrastructure. Many roads and railways have been reconstructed by the Phare Cross Border Program, but much remains to be done. Despite the ongoing modernization of the telephone system, the quality is below international standards. There are two cellular radiotelephone networks—one analogue and one digital. A second GSM (the Global System for Mobile communications) license will be issued later this year; the Bulgarian Telecommunication Company (BTC) is also to be privatized in the near future.

Transportation

Automobiles

Road conditions in Bulgaria can be poor, especially in winter, as only the major roads are cleared of ice and snow. Four-wheel or all-wheel-drive vehicles are recommended. Shell gas stations can be found in larger cities and along most major highways.

In Sofia and along the main highways, super (96 octane), and regular (91 octane) and unleaded (95H) gasoline is available. Diesel fuel is available at major gas stations only.

An International Driver's License is recommended, but not required, and can be obtained through AAA or an equivalent organization.

Traffic moves on the right as in the U.S. The following rules may be unfamiliar to people new to Europe: You must stop 3 meters behind and to the right of a tramway car stopping to discharge or pick up passengers. Speed limits are 120 kph on divided highways; 90 kph on regular main roads; and 50 kph in populated areas, unless there are signs to the contrary. Priority is given to the driver entering from the right on any equal junction.

You should strictly observe the priority of a pedestrian who has stepped onto a painted pedestrian crossing. It is illegal to drive with more than 0.05 parts per thousand of alcohol in the blood or when alcohol in any quantity has been consumed immediately before taking the wheel. If you have an accident, you must call the police, and both drivers should wait at the scene, even if there has been no personal injury. The police will issue a *protokol za proizshestvie* (police protocol). Without this piece of paper, you cannot make a claim on your insurance.

"Green Card" short-term, the overseas third-party liability, is mandatory for auto travel in Europe. When you arrive in Bulgaria, take out this policy for Bulgaria and for all of Europe through the local Insurance Corporation. It has also recently become possible to obtain this policy from Clements & Co. and other American firms.

Local

Sofia is served by a network of tram, trolley bus, and auto lines. A one-month pass cost \$14 (August 2000). Vehicles are often crowded but are handy, frequent, and very cheap—an important point now that parking is

very tight around the center of town. Taxis are legion. There are many taxi stands; taxis cruise, and you can also get taxi service by telephone.

Frequent air and railway service link Sofia with the Black Sea resorts of Varna and Burgas, as well as with other major Bulgarian cities.

Regional

No American air carrier serves Sofia. The Western European cities with frequent service by American carriers are Frankfurt, Paris, London, Zurich, Munich, and Vienna, but connections to and from Sofia vary in convenience according to the day of the week. The Bulgarian airline, Balkan, and other foreign carriers provide regular service between Sofia and Western European cities. In late fall and winter, fog or heavy snow may occasionally close Sofia Airport for several days at a time.

There are many rail and bus lines to/from major European cities, and to resort areas in Greece and Turkey. Travelers should be cautious about theft, especially when crossing borders on land transportation. The preferred route for coming to Sofia from Europe by car is via Vidin/Kalafat.

Communications

Telephone and Telegraph

Direct dialing is available from the U.S. to Bulgaria. International connections with the U.S. vary from quick and clear to slow and unsatisfactory. The cost of calling the U.S. in early 1999 was about \$1.50 per minute when using the Bulgarian Telecommunications Company and dialing direct. Telephone charges begin when the connection is made with the U.S. operator, not with your party. From your home, you may dial direct to most Eastern and Western countries. Some people have had success with Internet telephony.

Several service providers offer connection to the Internet and also permit the use of American-based services. Prices are relatively reasonable in comparison to telephone costs and assist in maintaining contact with other Internet users on a considerably faster basis than "snail mail."

Radio and TV

Bulgarian TV broadcasts nationwide on two channels, Channel 1, which is broadcast in SECAM, and Channel 2, which broadcasts in PAL. Local broadcast stations exist in many cities. In Sofia the two local (and private) stations are New TV (PAL) and Seven Days TV (SECAM). Currently, there are two stations that have broadcast capability nationwide, one public-Channel 1, and the other private-BTV (Bulgarian TV).

In addition to broadcast TV, satellite reception is possible for those having a dish, and there are a number of cable operations as well. Satellite and cable offerings make available CNN, CNBC, BBC, SKY NEWS, MTV, and SKY SPORTS, and a large variety of other European channels. European-system and Multi-system television receivers are widely available for sale. Programming runs the gamut of news, entertainment, business news, film, and the like. Broadcast TV is almost exclusively in Bulgarian, while cable and satellite offerings feature programming in English, Spanish, French, German, Portuguese, Greek, and Arabic.

Radio has both private and public (state) stations, with the latter having the only truly nationwide coverage. Deutsche Welle, BBC Radio, Radio France International, and Radio Free Europe have local FM broadcasting arrangements and are easily and clearly received. All but RFE do programs in both Bulgarian and their respective national languages (RFE does Bulgarian language news only). Bulgarian radio of both the private and state varieties offer some very good news, talk show, and music programming; however, a good grasp of Bulgarian

is required for all but the music programs.

Newspapers, Magazines, and Technical Journals

Many general-interest publications, including English-, French-, and German-language newspapers and magazines are widely available in Sofia, though they tend to arrive a day late and are quite expensive. These, as well as a large variety of Bulgarian periodicals, are available in hotels and at street kiosks throughout the downtown area in Sofia.

Community Health

Apart from smog, coal dust, and pollen, which particularly affect people with sinus and respiratory problems (asthma sufferers in particular), Sofia has no special health hazards. Water, although deemed generally safe, should be distilled to remove heavy metals, mineral deposits, unusual taste, and color. Fluoride supplements are recommended for children up to age 16. Milk and butter are of uneven quality. Vegetables, fruits, and eggs should be thoroughly washed, but no other special treatment is necessary. Local pottery should not be used for cooking, storing, or serving food, as it may leach lead from local paints and glazes. Municipal services generally collect garbage and trash regularly, and there is a regimen of sweeping the city streets.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Flights on American carriers from the U.S. fly to Frankfurt, Paris, London, Vienna, Zurich, and Munich. From these cities, foreign airlines provide reasonably good connections to Sofia. To avoid possible conflict with the Fly America Act, consider Frankfurt, Munich, Zurich, or Vienna as the nearest points to Sofia served by an American carrier. Note that Sofia time is Greenwich Mean Time (GMT)/Coordinated

Universal Time (UTC) + 2, whereas Yugoslavia and the countries of central and Western Europe are on GMT/UTC + 1.

A passport is required. A visa is not required for U.S. citizen visitors using regular passports for stays up to 30 days. Travelers who intend to stay more than 30 days, or travelers using official or diplomatic passports, must obtain a special 30 day visa from a Bulgarian embassy or consulate. Once in Bulgaria, this visa gives them grounds to apply for a residence permit. Travelers who have a 1-year multiple-entry visa for Bulgaria may stay up to 90 days altogether within six months. If a traveler comes to Bulgaria, stays in the country 90 days and then goes out, he or she will not be able to enter the country within the next 90 days.

All travelers are required to register with the regional passport office for foreigners or the police within 48 hours after their arrival in the country and to inform the office about any change in their address. For those staying at a hotel, a private boarding house or an apartment rented through an accommodation company, registration is taken care of by the proprietor. Visitors should carry their passport with them at all times. The Bulgarian authorities do not consider presentation of a copy of one's passport to be sufficient. For further information concerning entry requirements, travelers should contact the Embassy of the Republic of Bulgaria at 1621 22nd St. N.W., Washington, D.C. 20008; Internet <http://www.bulgaria-embassy.org>, tel. (202) 483-5885 (main switchboard (202) 387-7969) or the Bulgarian Consulate in New York City.

Travelers carrying cash equivalent to 5,000 Bulgarian leva (about \$2,200) or more must declare the amount they are carrying on a customs declaration upon arrival or departure. Failure to declare currency and jewelry or improper exit from the customs area through the "green" (nothing to declare) line have resulted in confiscation of the

currency or the jewelry and, in some cases, arrest. Travelers who have with them the equivalent of 20,000 Bulgarian leva or more upon departure must have a permit to export the money issued by the Bulgarian National Bank's Headquarters, if they had less than the equivalent of 20,000 Bulgarian leva upon entry in the country. Travelers should also declare jewelry, cameras, computers, and other valuables to avoid difficulties on departure. Please contact the Embassy of Bulgaria in Washington, D.C. or one of Bulgaria's consulates in the United States for specific information regarding customs regulations.

Americans living in or visiting Bulgaria are encouraged to register at the Consular Section of the U.S. Embassy in Bulgaria and obtain updated information on travel and security within Bulgaria. The U.S. Embassy is located in Sofia at 1 Suborna (formerly 1 A. Stamboliyski Boulevard); tel. (359) (2) 937-5100; fax (359) (2) 981-8977. The Consular Section of the Embassy is located at 1 Kapitan Andreev Street in Sofia; tel. (359) (2) 963-2022; fax (359) (2) 963-2859. The Embassy's web site address is <http://www.usis.bg>. Questions regarding consular services may be directed via e-mail to: niv@usconsulate.bg, iv@usconsulate.bg and acs@usconsulate.bg.

Pets

Dogs and cats are admitted to Bulgaria with proof of current rabies shot and health certificate that should be obtained before arrival. Examination by a Bulgarian veterinarian is required upon arrival. Dogs should be licensed. Satisfactory veterinary care is available in Sofia, as well as most vaccines and medications.

Currency, Banking, and Weights and Measures

The unit of currency is the lev (plural: leva). Currency notes are available in the following denominations: 1, 2, 5, 10, 20, and 50 leva. Coinage includes 1, 2, 5, 10, 20, and 50 stotinki (100 stotinki = 1 lev).

The lev is pegged to the euro at 1.956 leva per euro.

Bulgaria is still a largely cash economy. Visitors should exchange cash at banks or Change Bureaus. Some Change Bureaus charge commissions on both cash and travelers' check transactions that are not clearly posted. People on the street who offer high rates of exchange are usually con artists intent on swindling the unwary traveler. Damaged or very worn U.S. dollar bank notes are often not accepted at banks or Change Bureaus. Major branches of the following Bulgarian banks will cash travelers' checks on the spot for leva, the Bulgarian currency, or other desired currency: Bulbank, Bulgarian Postbank, Biochim, First Investment Bank and United Bulgarian Bank (UBB). UBB also serves as a Western Union agent and provides direct transfer of money to travelers in need. ATM cash machines are increasing in numbers in Sofia and other major cities. Major credit cards (MC, VISA, AMEX, etc.) can be used at a few establishments in and around Bulgaria (hotels, restaurants, and other tourist establishments), but usage is very low and is not recommended due to the risk of credit card fraud. Credit cards are useful when ordering goods from mail order houses in the States and from overseas duty-free supply companies like Peter Justesen.

CROATIA

Major City:
Zagreb

Other Cities:
Dubrovnik, Karlovac, Osijek, Pula, Rijeka, Split, Zadar

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Croatia. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Croatia, located in the middle of Europe, declared independence from Communist Yugoslavia in 1991, making it one of Europe's youngest nations. The capital, Zagreb, has all the characteristics of a historic and modern central European city.

MAJOR CITY

Zagreb

Zagreb, a city of some 1 million people, is the political, cultural, scientific, industrial, and commercial center of Croatia. The city is located

between the green hillsides of Medvednica in the north and the Sava River in the south. Sljeme (3,354 feet) is a mountain park on the north part of town. It is easily accessible from the city by public transportation. It has many hiking trails and during the winter some skiing is possible if there is enough snow. Zagreb is an ancient trading center with an old European look to it. Narrow streets slip between the walls of former houses of 18th-century nobility, and gardens bloom in the center. In the spring and summer the streets are lined with outside cafes that are always full of people enjoying coffee or a beer. In the winter, poorly maintained houses and buildings combine with gray skies and fog to give it a drab and gloomy look.

Medieval Zagreb developed from the 11th-13th centuries in the twin towns of "Kaptol" and "Gradec." In "Kaptol" the oldest part of town, is found the cathedral Sveti Stjepan, the Bishop's Palace, and remains of the towers from an 11th century fortress. On an adjoining hill of the upper city called "Gradec," there are the ancient city gates, St. Mark's Church (which sports a distinctive multicolored tiled roof), several museums, the Parliament building, and other government offices. Kaptol was the seat of the diocese, but Gradec was the free royal city. They

often fought one another, particularly during the 15th and 16th centuries.

In the late 19th century, the city spread out onto the flat area between the hills and river. Since WWII extensive high-rise construction has occurred in "New Zagreb" across the Sava to the south. Fortunately, the city weathered the chaotic period that followed Yugoslavia's breakup without sustaining much damage.

Utilities

All quarters have central heating and hot water. Window-unit air-conditioners are installed in some properties' bedrooms. Most cooking is by electric range oven, but a few units have gas ranges. Standard electric power is 220v, 50 cycles. Receptacles are standard mainland European-type with 2 round prongs.

Transformers are not readily available in Croatia, but Aviano AFB, Italy, sometimes has them in stock. Adapter plugs can be found at most U.S. military bases and travel stores in the U.S. Bring transformers, or dual-voltage, or 220v appliances, since transformers are limited in quantity. (Note that 110v/60Hz appliances such as record players, clocks, etc., often will not operate correctly even when used with a transformer unless other adjust-

Neo-gothic cathedral in Zagreb

Courtesy of the Croatian Embassy

ments are made. These adjustments usually must be performed by a trained technician and can be expensive.) A power surge regulator is recommended for personal computers.

Food

Zagreb's food supply has improved in the last couple of years in terms

of quality and variety. Many fruit and vegetable markets in town sell varied and fresh selections. Several new large supermarkets with parking areas have opened recently. It is becoming possible to find fruits and vegetables that are not in season, but prices are high. Generally, fruits and vegetables do not require extra

sanitation procedures, such as soaking them in iodine.

Around or near the market there are places in which to buy meat. Pork and chicken are particularly good, and cold cuts with prices comparable to those in the U.S. are sold. There is a variety of dairy products. Cheese and yogurt are good and

inexpensive. Fresh and long-life milk is available.

Local bread is delicious and inexpensive, but no preservatives are used, so you must buy it daily.

Some supermarkets offer what you would normally find in a small supermarket in the U.S., but with a much smaller selection of brands. Some imported products from Germany and Italy are available regularly. Numerous small neighborhood stores sell mainstays—milk, eggs, flour, juice, etc. The selection is always subject to change, and the assortment can be bewildering at times! You'll probably find one within walking distance of your home.

Zagreb has one very complete spice shop in town. Anyone fond of a particular cuisine should bring spices and be ready to substitute.

For the most part, everything is available. Nonetheless, many Croatians shop in Austria, Italy, and Hungary because they believe products are cheaper and of a better quality than in Croatia.

Local specialties will please your palate. Croatia's Dalmatian coast excels in seafood, including scampi and shellfish. A Zagreb specialty that sticks to your ribs is "strukli," a type of cheese strudel. Homemade Slavonian "kulen," a paprika-flavored salami, is widely available. Croatia is also famous for its plum brandies ("sljivovica"), herbal brandies ("travarica"), cognacs ("vinjak"), and liqueurs such as maraschino, a cherry liqueur made in Zadar. Italian-style espresso coffee is popular, as are Ozujsko and Karlovacko beers ("pivos"). Several good ice cream parlors in Zagreb make their own gelato-style flavors.

Clothing

Although some good-quality clothing is available, prices are generally much higher than those in the U.S., and fabrics generally don't hold up too well.

Men: Most entertaining is informal (coat and tie). Seasonal clothing needs are similar to those of New York or Washington, D.C. Zagreb has several very nice, but expensive, tie shops with designs which incorporate ancient Croatian motifs and symbols.

Women: Professional dresses are the normal dress for women. Women's suits, dress pants, and knitwear are practical and often worn to lunches, receptions, and cocktail parties.

Children: Bring a supply of children's clothes. Snowsuits, heavy jackets, coats, hats, mittens, ski pants, and warm boots are necessary for winter when temperatures dip below freezing and snow and ice can linger on the ground for weeks at a time. For summer, bring clothes for sports such as tennis and swimming. Temperatures reach the 90°F range in summer, so bring shorts and T-shirts. Bring special items like Halloween costumes, soccer cleats, ballet shoes, etc., with you.

Supplies & Services

Local stores seldom stock U.S. products, but several Croatian brands of shampoo, laundry detergent, lip balm, creams, and cleaning supplies are satisfactory and reasonably priced. In general, although you can find most anything you need here, it will be more expensive, and the shopping is not efficient, as parking is always difficult downtown and shops often run out of products on a weekly basis. High-quality brand-name cosmetics and toiletries locally will cost almost three times the U.S. price.

An English-language bookstore sells some children's books and cassettes, but most parents subscribe to children's book clubs or order books from catalogs. Parents of children at the American School of Zagreb can order books from the Scholastic Book Club every 2 months or so.

Tailors, dressmakers, and cobblers are available locally and offer excellent service at fair prices. Cloth is

available at bargain prices, and all you need is a picture from a catalog, and most clothing items can be duplicated. Local dry cleaners, beauty and barbershops, radio and small electronics repair shops, and other service facilities are adequate and reasonably priced. Such beauty treatments as facials, waxing, and pedicures are available by appointment. Photo developing is quite expensive here, so many people send film to the U.S. (Mystic Photo) for developing through the mail, but the drawback is that it takes weeks to get your pictures.

Domestic Help

Domestic help is available. Many English-speaking young university students in Zagreb like to babysit. The average wage for childcare is \$4-\$5 a hour.

If you plan to bring a domestic employee, the Government of Croatia requires the individual to be declared through the local police (Department for Foreigners). If domestic help is employed full time (40 hours a week), your total gross monthly expenses would be about: Maid, from \$800-\$1,000; cook, \$1,200-\$1,400; driver, \$1,000-\$1,200; gardener, \$1,000-\$1,200.

The employee is responsible to report and to pay social security contributions and personal income tax.

The employer is responsible for: Signing a written contract (to include effective date, brief job description, expiration date, probationary period, annual leave, notice period, salary and benefits, work schedule); Ensuring secure working conditions (the employer is responsible for work injuries and damages as a result of working conditions that are not in accordance with Croatian regulations); Providing at least 18 working days of annual leave each calendar year; Providing maternity leave from 6 months to 1 year (compensation during maternity leave is paid with Croatian Social Security Funds); Paying for sick leave for a period of up to 42 calendar days (an authorized physi-

cian's approval is necessary); and Providing a separation notice in writing giving 2 weeks' notice if employed for less than 1 year, 1 month's notice if employed 1 year with the same employer, and 2 months' notice if employed 2 years with the same employer, etc.

If employees are employed from time to time, or just a few hours/week, there is no employer-employee relationship, and employees are paid hourly. Hourly rates vary.

Religious Activities

Zagreb is predominantly Roman Catholic, but the Serbian-Orthodox, Lutheran, Baptist, Church of Christ, Seventh-day Adventist, Mormon, Moslem, and Jewish faiths are represented. Although there is no Rabbi, Jewish services are held in the Community Center on Friday evenings.

A small English-speaking Catholic group says regular Sunday Mass and offers a First Communion and CCD program for children. A Baptist Church offers a service with translation into English.

Education

The Department of State partially supports the American School of Zagreb (ASZ), founded in 1966, but most income is through tuition. It is a private, nonprofit school that provides complete coeducational and nonsectarian instruction (from kindergarten through grade 8) based on a U.S. curriculum, principles, and standards for children of Americans and foreigners temporarily living in Zagreb. ASZ is not legally recognized by the Croatian Government. Although not incorporated with any state in the U.S., it is fully accredited by the Middle States Association of Schools and is a member of the European Council of International Schools.

ASZ is governed by a school board. The board has the authority to develop policy and to make regulations for the conduct of school business and to administer school affairs. The school occupies a pri-

Harbor with pier on the Adriatic Sea

Susan Rock. Reproduced by permission.

ivate home for the lower school (kindergarten through grade 4) and two apartments next door for the upper school (grades 5 to 8) in a nice neighborhood in the north hills of Zagreb. The school has nine classrooms, a library, a computer laboratory, an art room, and three workrooms. The school has no athletic facilities, so students go to a local gym twice a week for physical education. Enrollment during the 1997-98 school year was about 90 children. School usually opens the first week of September and dismisses the second week in June, with vacations comparable to those ordinarily observed in the U.S. (Christmas and spring break).

Children who are 5 years old by October 31 of the year of entrance are eligible to enroll in kindergarten, which runs for the full school day (8:15 am to 2:30 pm).

The school has witnessed incredible growth in the last few years, and a new facility is being sought in Zagreb.

The curriculum is that of the U.S. general academic, public schools. Instruction is in English. English-as-a-Second Language instruction is offered to students with limited English proficiency. Special education programs are not available. The foreign-language program includes

German and French. Croatian is not taught at the school.

The children take the ITBS (Iowa) test annually.

For preschoolers there are privately owned playschools for children ages 2-5 (potty-training is necessary). There are several English-speaking preschools as well as a newly opened French preschool and Montessori School. The preschools generally run from 9 a.m. to 1 p.m., but for working parents, some have hours until 4 p.m. Costs range from \$100-\$250 a month, depending on the program.

Special Educational Opportunities

Mirogoj, Zagreb's main cemetery, is a beautiful place to take a walk. Built in 1876 in the Renaissance style, the cemetery walls look almost like a fortress. Inside there are quiet wooded walking paths. It's interesting to see how burial places have been arranged according to religion. All Saint's Day is a fascinating time to visit the cemetery and see the thousands of burning candles and bunches of flowers placed on the graves of loved ones.

Extracurricular activities for children include karate, Tae Kwon Do, ice skating, tennis, swimming, piano, guitar, ballet and modern dance, and soccer. Costs for children to participate with a private instructor, or in a club, are comparable to, or less than, U.S. prices. Private tutoring in various languages is also available.

Sports

Zagreb has a variety of recreational facilities. The following sports are popular: skiing, ice hockey, hunting, water polo, handball, basketball, tennis, soccer, and sailing. For swimming, Zagreb has several indoor/ outdoor swimming pools with lap lanes, diving platforms, and baby pools. There are many private tennis clubs. The cost to play once a week is about \$150 a year. Indoor courts are available in winter. At Maksimir Park, tennis courts can be rented for \$4 an hour. Squash

courts are available at certain clubs and can be rented by the hour.

Basketball is popular in Zagreb, and from October to April games take place at the Cibona Centar. On Saturday afternoons soccer games are held at the Maksimir Stadium.

Yoga and aerobics classes are available in Zagreb through health clubs and private lessons.

Outdoor sports possibilities in Zagreb during winter are limited to skiing, horseback riding, skating, and sledding. Sledding is very popular in hilly Zagreb and its many parks. There are many natural hot springs (Toplice) with indoor/outdoor swimming facilities. Skiing in Sljeme is popular and easily accessible; however, most people drive to Slovenia, Italy, or Austria to ski. There are excellent downhill and cross-country trails for experts and beginners. Several ice-skating rinks offer skates to rent and children's lessons.

Foreigners in Croatia can hunt deer, birds, etc., as guests of Croatians. Without such an invitation, you must belong to a hunting club. Fishing licenses cost 40 kuna a day.

On Croatia's Dalmatian coast, sailing, wind surfing, and other water sports are very popular. Scuba diving certification is available in Zagreb. The rugged islands off Croatia's mountainous coast from Istria to Dubrovnik provide a yachting paradise. The channels are deep, and the winds are steady. Of the some 39 modern marinas dotting the coast, the Adriatic Croatia International Club (ACI) operates 19 of them. Yacht rentals can be arranged. You can hire a "bare boat" (no crew) for your party and set out on your own (you must prove your competence), or join a "flotilla" of yachts sailing along a fixed route. Crewed yacht charters are also available. All charters are for at least 1 week. Prices range from US\$1,350 to US\$5,375 a week, depending on the type of yacht, plus US\$100 a day for the skipper.

Sea kayaking is popular around the Kornati Islands. There are package tours available.

Touring and Outdoor Activities

Pleasant excursions can be taken within the city of Zagreb and the surrounding areas. The hills and wooded areas around Zagreb are great for weekend walks and picnics. The Germans built and donated a particularly nice children's playground to Zagreb in Odranska, but otherwise children's playground equipment is substandard and does not conform to international safety standards. Good hiking trails go up to Medvedgrad, a medieval fortress on the southwestern part of Mount Medvednica, above western Zagreb. It was built in the mid-13th century to protect Zagreb from Tartar attacks. It has been partly restored. You can enjoy good hiking trails up and down Sljeme Mountain-and a cable car to ride-in case you get tired! There is also a paved road running to the top of Sljeme from Zagreb for those who want to drive.

Maksimir is Zagreb's largest and most beautiful park. The park has a zoo, several artificial lakes, and nice areas for biking and walking. Jarun is a lake with water slides, bike riding areas, picnic barbecue areas, and swimming. The Botanical Gardens were planted over a century ago and boast a wide variety of alpine and Mediterranean plants.

Though it may seem a strange destination, Mirogoj, Zagreb's main cemetery, is a beautiful place to take a walk. Built in 1876 in the neo-Renaissance style, the cemetery walls look almost like a fortress. Inside there are quiet wooded walking paths. It's interesting to see how the burial places have been arranged according to religion. All Saints' Day is a fascinating time to visit the cemetery and see the thousands of burning candles and bunches of flowers placed on the graves of loved ones.

There are nice "day trips" within a few hours' drive of Zagreb. Zagarje

is a region north of Zagreb known for its rolling hills, vineyards, orchards, small villages, streams, ancient castles, spas, and health resorts. Of Zagorje's castles, Trakoscan, Miljana, and Veliki Tabor are the most beautiful. The scenery is reminiscent of West Virginia's Appalachian region in the U.S. In Zagorje, Varazdin is a pleasant little town with a few Baroque churches and a medieval castle that now contains the municipal museum.

Risnjak National Park at Crni Lug, between Zagreb and Rijeka, is a good hiking area in the summer. There's a small park-operated hotel at Crni Lug with rooms at US\$20 per person. It's a 9-km, 2½-hour-climb from the park entrance at Bijela Vodica to Veliki Risnjak.

Kurnovec is the birthplace of Josip Tito. His house was built in 1860 in the center of town. Today, it is a memorial museum with furniture and household implements from the time of Tito's childhood. Around Tito's house about 30 village houses and farm buildings from the turn-of-the-century have been preserved. They were restored and reconstructed to form the Staro Selo (Old Village).

Samobor is a small town west of Zagreb with a tradition in crafts and inn keeping. It's a nice area for fishing, swimming, and Carnival festivities. Many people enjoy shopping in a crystal factory there.

Krapina is a small town situated in Zagorje only 50 km from Zagreb. Krapina became famous in 1899, when the remains of an early human settlement 30,000-40,000 years old were discovered at this site. Today, an archeological park features sculptures of early humans and animals. The Plitvice Lakes National Park occupies 195 km of forests, lakes, and meadows. There are hiking trails along the waterfalls and lakes. The color of the lakes depends on the plankton density—they range from a dark blue to a strikingly bright emerald color. The park, established in 1929, is on UNESCO's World Heritage List. It

is a nice day trip, or the hotel is reasonable if you wish to stay longer.

The Adriatic coast is famous for its Mediterranean landscapes and climate. Istria, the peninsula just south of Trieste, Italy, offers many lovely weekend getaways (4-5 hour-drive from Zagreb). Porec, even after the fall of Rome, remained important as a center of early Christianity, with a bishop and a famous Basilica. There are many places to swim in the clear water by the old town. Rovinj is an active fishing port with a large Italian community. Its high peninsula is topped by the 57-meter high tower of St. Euphemia Cathedral. The 13 green offshore islands of the Rovinj Archipelago offer pleasant, varied views. The cobbled, inclined streets in the old town are where local artists sell their works. Each year in mid-August Rovinj's painters stage a big open-air art show. Pula is a large commercial harbor. The old town has many well-preserved Roman ruins such as the first-century AD Roman amphitheater overlooking the harbor. The rocky-wooded peninsulas overlooking the Adriatic waters are dotted with resort hotels and campgrounds. Brijuni is a fascinating group of islands. Each year from 1949 until his death in 1980, Marshal Tito spent 6 months at his summer residences on Brijuni.

Brijuni is a national park with some 680 species of plants, including many exotic subtropical species planted at Tito's request. In Brijuni, visitors can see Tito's three palaces, the luxury hotels where his guests once stayed, St. German Church—now a gallery of copies of medieval frescoes—and an exhibit of Tito photos.

The Gulf of Kvarner is also a nice part of the coast for weekend getaways (a 3-4 hour-drive). South of Rijeka, between the Istrian Peninsula and the Croatian mainland, are many islands, including Krk, Cres, and Pag. Many people frequent Opatija, once a fashionable bathing resort of the Hapsburg elite until WW I. Many grand old hotels

remain from this time, and the promenade along the water affords a fine view. A massive concrete arch bridge links Island Krk to the mainland. It has many tourist hotels and many medieval churches and walls built in the 12th-15th centuries. Medieval Rab was an outpost of Venice for hundreds of years until the Austrians took over in the 19th century. Tall church towers rise above the red-roofed mass of houses on Rab's high peninsula. Places to stay in Istria range from private rooms for as little as \$30/night to hotels that can cost up to \$150/night. Prices vary according to the time of year (May-September is high season). Most of the nearly 100 campgrounds along the Croatian coast operate from mid-May to September only.

Dalmatia is Croatia's most famous vacation area. Historical relics abound in towns like Zadar, Trogir, Split, Hvar, Korcula, and Dubrovnik. These towns are framed by a striking natural beauty of barren slopes, green valleys, and clear water. A warm current flowing north up the coast keeps the climate mild. You can swim in the sea right up until the end of September. Unfortunately, Dalmatia was not spared the damages of the former Yugoslavia's civil war, and many historic sights suffered shelling. Although most damages have been repaired, many hotels and restaurants are still closed because of fewer tourists. On the bright side, Dalmatia is not as crowded or expensive as it was before the war. The drive from Zagreb to Dubrovnik takes longer than 9 hours and the winding, two-lane coastal highway is scenic, but slow going, especially if you're behind trucks and buses. Daily flights from Zagreb to Dubrovnik cost about \$100 one way but prices vary according to the time of year. There are ferries from Rijeka and Split to Dubrovnik as well.

Croatia's oldest tour company is the Atlas Travel Agency. Its "adventure" tours feature bird watching, canoeing, caving, cycling, diving, fishing, hiking, riding, sailing, sea

Courtesy of the Croatian Embassy

Croatians at outdoor café in Ban Jelacic square in Zagreb

kayaking, and white-water rafting in both Croatia and Slovenia.

Zagreb is accessible to Italy, Slovenia, Austria, and Germany. Ljubljana (a 2-hour drive from Zagreb) is near the mountain and lake resort district. Lake Bled is a resort area, which features an excellent golf course as well as the full range of winter sports. Trieste, Italy, and Graze, Austria, are favorite shopping towns-both about 2-3 hours' drive from Zagreb. Budapest and Vienna are about 5-6 hours' drive away. Venice is 4 hours' drive away. From Zagreb it is easy to explore and enjoy other European cities.

Entertainment

Zagreb's cultural life is rich: operas, concerts, chamber music, ballet, and theater are presented regularly. A monthly guide to events and performances in Zagreb is published by the Tourist Association, and copies can be obtained from the Tourist Information Center on the main square Trg Ban Jelacica. The guide

is packed with useful information on museums, galleries, sports and recreational activities, restaurants, entertainment, etc.

Opera season runs from September to April and offers a wide variety of German, Italian, and Croatian operas, usually sung in their original languages.

Numerous concerts by orchestras and chamber music groups are presented throughout the year. Stage plays are performed in many theaters, but most theater is presented in Croatian.

The Zagreb Puppet Theater for children (of all ages) presents shows in Croatian, but for English speakers the stories are often familiar, such as "The Three Little Pigs," or "Hansel & Gretel."

Movie theaters (kinos) are popular around Zagreb and show feature films from all over the world-many of them recent U.S. films. Admission

fees are low. Most cinemas show films in the original language with Croatian subtitles.

Zagreb has discos, casinos, and nightclubs as well. The B.P. Club is the best known jazz club in town. It is run by Bosko Petrovic, one of Croatia's best known jazz artists. Dance clubs such as Saloon and Kulusic are popular among the younger set.

In Croatia there are different types of restaurants: Restaurants, which offer international cuisine; Gostionica, which serves regional Croatian cuisine, i.e., dalmatinska; Bistro, which serves sandwiches, pizza, and snacks; Cafe Bar, which serves drinks and coffee only; and Slati-carna, which serves cakes, pastries, and baked goods.

Dining in the local restaurants is a popular pastime. Zagreb is full of small cafes where you can order drinks, pizza, or ice cream. In summer and fall, tables are set up out-

doors, providing some relief from the ever-present haze of cigarette smoke indoors. McDonald's opened its first restaurant in Zagreb last year, and the chain is spreading around town, including a drive-in at one. Ethnic restaurants are becoming more popular. There are newly opened Chinese, Turkish, Indian, Mexican, and Italian restaurants in town. Many Zagreb restaurants offer similar menus, with roasted and grilled pork and lamb, also some veal and beef as the mainstay specialties. Prices at several good restaurants range in price from \$20-\$40 per person. Eating out in Zagreb at a nice restaurant is not a child-friendly experience. Home delivery of fast food is not available, but a few pizza and Chinese places offer takeout.

Social Activities

The American community in Zagreb is small. In addition to U.S. employees and their families at the Embassy, you can meet other U.S. citizens who work for humanitarian relief organizations, the American School, the UN, as missionaries, American citizens married to Croatians, and journalists.

A friendly and active international community exists in Zagreb. Frequent social events revolve around the various embassies represented here, but no one has special facilities. The American School of Zagreb has annual picnics and holiday parties for families as well as spring and Christmas programs which the children present for parents.

The International Women's Club (IWC) is open to wives of business and diplomatic personnel, as well as Croatians. The IWC sponsors tennis, yoga classes, nights at the opera, a mother and toddler group, and language groups. The IWC also supports many charities. Their major fund raising event is the annual Christmas bazaar. Monthly meetings are held to exchange news and views over coffee.

The active chapter of the "Hash House Harriers" gathers for a run and barbecue every month or so.

The Harriers, founded originally by British diplomats in Kuala Lumpur, are popular all over the world.

OTHER CITIES

DUBROVNIK, established by the Greeks in the seventh century and virtually independent through its long history, is a lovely seaport on the Adriatic, and a major Croatian resort. Arts and literature flourished in Dubrovnik during medieval times. Traces of its early architecture remain—parts of the original city walls; a historic palace; the customs house and the mint; and several monasteries, one of which housed an ancient apothecary. Dubrovnik's independence ended when Napoleon took the city in 1808 and made it part of the Illyrian provinces. It was assigned to Austria from 1815 until 1918, the year it was claimed by Yugoslavia. Today, Dubrovnik's residents annually play host to thousands of European tourists who come to enjoy the climate and beauty of the Dalmatian coast. Swimming is excellent from April to October. At an annual festival, held in mid-summer, operas, ballets, and plays are presented in the city's palaces, squares, and fortifications. An excellent view of the city is found at the summit of Mount Srđ, which is reached by cable car. During Croatia's 1991 civil war, Dubrovnik was shelled by Yugoslav Federal Army tanks, artillery battalions, and gunboats. Many ancient buildings, monuments, and hotels were heavily damaged or destroyed.

The city of **KARLOVAC**, located 33 miles (53 kilometers) southwest of Zagreb, is situated at the confluence of the Korana and Kopa Rivers. During the 16th and 17th centuries, the city was unsuccessfully attacked several times by the Turks. A fortress, built in the 16th century, still stands today as a reminder of Karlovac's past. Karlovac is one of Croatia's important industrial centers. Industries in the city produce chemicals, footwear, and wool. The city is linked by rail with Zagreb

and serves as a transit point for wine, grain, and timber. Karlovac is also the home of Croatia's oldest public library.

The industrial city of **OSIJEK** lies along the banks of the Drava River in eastern Croatia. A fortress dominates the upper, or old, town, while the lower is the city's commercial and industrial heart. Textiles, tanneries, and manufacturing provide employment for Osijek's residents. The nearby town of Borovo has a large footwear factory, as well as a rubber-producing plant. Osijek received heavy damage during the Croatian civil war after Serbian forces shelled and besieged the city.

Considerable Roman remains can be found in the Croatian port city of **PULA**, which is situated on the Istrian peninsula in northwestern Croatia. Located about 50 miles south of Trieste, Italy, Pula is a naval base and shipbuilding center. Historically, the city was established in 178 B.C. as a Roman military and naval base. It has been destroyed and rebuilt many times and has seen the passing armies of the Byzantines, Franks, and Venetians. Pula became part of Austria via the 1797 Peace of Campoformio, part of Italy via the Treaty of St. Germain in 1919, and was assigned to Yugoslavia in 1947. Roman remains include the Temple of Diana; a triumphal arch; and a three-tiered amphitheater with 72 arches that seats 23,000 people. Roman and Byzantine mosaics may be found in Pula's archeological museum. Pula is also the site of many medieval churches and old palaces. Several beautiful, sandy beaches also attract tourists. The city is an important economic and industrial center. Industries in Pula produce textiles, glass, cement, and machinery.

RIJEKA, a seaport in northwestern Croatia, was known to the Italians as Fiume during the years of domination by that country after World War I. Early in its history, the city was part of the Byzantine Empire, later came under the domination of Croatian dukes and, in succeeding

years, passed to Austria, France, and Hungary. Italy, which had occupied the city in 1918, left the Paris Peace Conference the next year in a dispute over the area. Rijeka became a free city-state in 1920 in the Treaty of Rapallo, but fascist troops overthrew its government, and the city was divided—Rijeka (or Fiume) went to Italy, and the Suo Barros, to Yugoslavia. It was not until 1947 that the two parts were reunited in a formal transfer to the latter country. The old section of Rijeka has buildings dating from the Renaissance and Baroque periods. Numerous museums, art galleries, theaters, and a library are located in the city. Rijeka is an important port and a departure point for cruises along Croatia's Adriatic coast. Several major industries are located in Rijeka, among them are oil refining and shipbuilding.

SPLIT is an important Croatian commercial center on the Adriatic. Its superb location on the Dalmatian coast has made it one of Croatia's leading resorts, with modern beaches and good hotels. Split's history began in the seventh century, when residents of the nearby colony of Salona fled from Avar invaders and took refuge at the palace of Diocletian, a Roman emperor of earlier centuries. A new settlement, Spalatum (now Split) grew within the palace walls. For hundreds of years, the town existed under a succession of rulers—Byzantine, Venetian, and Austrian—until it was claimed in 1918 by Yugoslavia. During World War II, the city was occupied by German troops. Some ruins of the destroyed colony of Salona are still found close by. Split itself has numerous monuments and a cathedral of note, once the mausoleum of Diocletian. Split is a major cultural center, with a number of museums and art galleries. One gallery honors Jan Mestrovic, one of Croatia's greatest sculptors. There are frequent presentations of opera, concerts, and ballet. Five miles northeast of Split are the ruins of Salona, a major Roman port.

The city of **ZADAR** is situated on Croatia's Adriatic coast. Zadar was founded in the ninth century and today is an important cultural and economic center. Cultural activities in the city are centered around museums, theater, and art galleries. Zadar has many historical buildings and monuments that are of interest to visitors. The historic sites include the remains of a Roman forum, an Arch of Triumph built in honor of the Roman emperor Trajan, a ninth-century church (St. Donat), a thirteenth-century cathedral (St. Anastasia), a Franciscan church and monastery, and many medieval churches. During the summer, St. Donat's hold classical music concerts. Zadar is the home of several industries and is noted for the production of *Maraska* cherry liqueur. Other industries in Zadar manufacture rope, cotton and synthetic textiles, leather, processed fish, cigarettes, and plastics.

COUNTRY PROFILE

Geography and Climate

Croatia is situated at the intersection between central Europe and the Balkans. Croatia covers 56,500 square kilometers (21,829 square miles) of mainland and somewhat less than 32,000 square kilometers (12,316 square miles) of sea. The Adriatic coastline, which includes 1,185 islands, islets, and reefs, is 5,740 kilometers (3,566 miles) long and famed for its clear waters. The republic swings around like a boomerang from the Pannonian Plains of Slavonia between the Sava, Drava, and Danube Rivers, across hilly central Croatia to the Istrian Peninsula, then south through Dalmatia along the rugged Adriatic coast. Croatia is about the size of West Virginia. It is bordered by Slovenia to the north, Hungary to the northeast, Serbia to the east, Bosnia and Herzegovina to the south, and Montenegro to the southeast.

Croatia's geography is diverse with its rocky coastline, densely wooded mountains, plains, lakes, and rolling hills. In an effort to preserve its environment, Croatia maintains seven national parks.

Zagreb's climate is predominately continental, with hot and dry summers and cold winters. Rainy weather, with accompanying fog and smog, is common in the fall from October through December. In winter, from December to March, snowfalls can be frequent, occasionally heavy, and temperatures sometimes fall below zero. The sun may not appear for weeks on end. Mean minimum and maximum temperatures are 20 °F-38 °F in January; 60 °F-81 °F in July. On the coast, the climate is typically Mediterranean with long, hot summers and moderate winters.

Population

According to the State Statistics Bureau 1995 estimate, Croatia's population is 4.78 million. The population of Zagreb is 930,550. There has been no census since 1991 because of the war in the former Yugoslavia. However the last census split the population as follows: 3.7 million Croats, 580,000 Serbs, 43,500 Moslems, and 113,000 others (Slovenes, Italians, Czechs, Albanians, Montenegrins, Gypsies, and Macedonians). Some 2.3 million ethnic Croats live abroad, including almost 1.5 million in the U.S. Pittsburgh and Buenos Aires have the largest Croatian communities outside Europe.

Roman Catholics account for 77% of the population. The Serbian-Orthodox represent 11%, Moslem 1.1%, and 633 Jews (0.01%). The remainder includes Greek Catholics, Protestants, and others. Croatian is a South-Slavic language. Before 1991, both Croatian and Serbian were considered dialects of Serbo-Croatian. However, since the war this term is no longer used. Croatian uses Roman script and spelling is phonetic. Because

Croatia was historically part of the Austro-Hungarian Empire, German is the most commonly spoken second language in Croatia. Many people in Istria understand Italian, and English is widely spoken among the youth in Zagreb.

Public Institutions

Croatia first emerged as a nation-state in 925 A.D. and later became a semi autonomous province of Hungary, a status that lasted until the collapse of the Austro-Hungarian Empire following World War I. In the intervening years, Croatia faced wave after wave of would-be conquerors, principally from the Venetian and Ottoman Empires.

With the defeat of the Austro-Hungarian empire in WW I, Croatia became part of the Kingdom of Serbs, Croats, and Slovenes (called Yugoslavia after 1929) with a centralized government in the Serbian capital Belgrade. In 1939, an administrative reorganization granted Croatia some regional autonomy.

After the German invasion of Yugoslavia in March 1941, a puppet government dominated by the fascist Ustasa movement was set up in Croatia and Bosnia-Herzegovina under the leadership of Ante Pavelic. Pavelic proclaimed the Independent State of Croatia (NDH). The Ustasa launched an extermination campaign that surpassed even that of the Nazis in scale, murdering perhaps as many as 350,000 ethnic Serbs, Jews, and Gypsies and Croats who disagreed with the regime.

At the end of WWII, Croatia became one of six federal republics of the new socialist Yugoslavia, under the control of the Communist and former partisan leader Josip Broz-Tito. Tito's ruthlessness and political skill built a union which, despite unresolved underlying ethnic conflicts, lasted until well after his death.

In 1989, with political changes sweeping Eastern Europe, many Croats felt the time had come to end more than four decades of Communist rule and attain complete autonomy. In the April 1990 free elections, Franjo Tudjman's Croatian Democratic Union (Hrvatska Demokratska Zajednica) easily defeated the old Communist Party. On May 30, the new Croatian Parliament was formally established, and on December 22, 1990, a new Croatian Constitution was promulgated.

On June 25, 1991, Croatia declared independence from Yugoslavia. The Serb minority opposed its secession and started a rebellion, backed by the Serbian-led Yugoslav army. During 6 months of fighting in Croatia, 10,000 people died, hundreds of thousands fled, and tens of thousands of homes were destroyed. By January 1992, when a U.N. cease-fire was agreed to, one-third of Croatia was under the control of the Serbs, who proclaimed their own republic of Krajina comprising three enclaves.

Croatia was formally recognized by the European Community (now European Union) on January 15, 1992. The U.S. recognized the new nation on April 7, 1992. Croatia became a U.N. member in May 1992. In August 1992, Tudjman was elected President and his HDZ party won an absolute majority in the Lower House of Parliament.

In two blitz offensives in May and August 1995, the Croatian army reconquered the largest chunks of the Krajina, prompting an exodus of Serbs. In November 1995, Zagreb agreed to peacefully reintegrate the last Serb enclave of Eastern Slavonia (located along the Danube River border with Serbia). According to the Erdut Agreement, reintegration was projected in 1998. Until that time, a transitional U.N. administration is present. In December 1995, Croatia signed the Dayton Peace Agreement, committing itself to a permanent cease-fire and the return of all refugees.

The Government in Croatia is divided among three branches: executive (President and Cabinet), legislative (Parliament), and judicial. The supreme executive power in Croatia is the President. The current President was reelected in June 1997 for a second 5-year term. The President appoints the Prime Minister and other members of the government. All executive appointments require confirmation by the Chamber of Representatives. The ruling HDZ party continued to dominate by winning the October 1995 elections for Parliament's lower house and the April 1997 vote for the upper house of Parliament and local administrative bodies.

The Parliament, the highest legislative body, consists of two Chambers: The Chamber of Representatives and the Chamber of Provinces. Legislation mandates that national minorities be represented in Parliament.

The following political parties in Croatia are represented in Parliament: Croatian Democratic Union (HDZ) Croatian Social Liberal Party (HSL) Croatian People's Party (FINS)

Croatian Peasant's Party (HSS)

Social Democratic Party of Croatia (SDP) Croatian Party of Right (HSP)

Istrian Democratic Parliament (IDS) Serbian National Party (SNS)

Croatian Independent Democrats (FIND) Croatian Christian Democratic Union (HKDU)

Croatian Independent Democratic (FIND) Action of Social Democrats (ASH) Independent Serb Democratic Party (SDSS)

Slavonia-Baranja Party (SBHS)

The Chamber of Representatives nominates and confirms the 15 members of the Supreme Court, Croatia's highest judicial body.

Arts, Science, and Education

Croatia has 219 museums, galleries, and museum collections, as well as 60 ecclesiastical and numerous private collections. There are 659 specialists, curators, restorers and researchers who oversee about five million objects in 1,100 various collections, a treasury of the cultural and natural heritage of Croatia.

The Mimara, one of Zagreb's most prominent museums, contains the works of Rafael, Rubens, Velazquez, Goya, Rembrandt, Hals, Degas, and Pissaro. The Mimara has 42 exhibition halls and a multimedia center. The diverse collection also contains large sections of glassware, sculpture, and oriental art. The Strossmayer Gallery houses many of the Old Master works such as Botticelli, Bellini, Tintoretto, Veronese, and El Greco. The Archeological Museum contains one of Europe's richest numismatic collections including some 260,000 samples of old coins, medals, medallions, and decorations. There are also Roman stone monuments dating back to the period from the first to the fourth centuries B.C. The Ethnographic Museum has collections of Croatian folk costumes, delicate pieces of lace from the Island of Pag, gold embroidered scarves from Slavonia, and the jewelry of Konavle. Also popular in Zagreb are the Museum of Contemporary Art and the Croatian Museum of Naive Art.

The works of Croatia's most famous sculptors, Antun Augustincic and Ivan Mestrovic, are renowned beyond Croatia's borders. Mestrovic's works can be seen all around Croatia. His sculpture and architecture display a powerful classical style he learned from Rodin. His Zagreb studio and his retirement home in Split have been turned into galleries displaying his work. Croatian naive art has also gained an international reputation. The most celebrated painters in the naive style are Ivan and Josip Generalic, Ivan Vecenaj, Mijo Kovacic, and

Ivan Rabuzin. The newly opened "Cudo Hrvatske Naive" exhibits and sells naive art. It also organizes exhibitions of Croatian naive artists abroad.

Zagreb has 20 theaters, the oldest of which is the Croatian National Theater, founded more than a century ago and built in the neo-Baroque style. Culture was heavily subsidized by the Communists, and admission to operas, ballets, and concerts is still reasonable. Season opera tickets in Zagreb (October-May) can be purchased for \$15-\$60. Operas are presented in their original languages, though the quality of performances is hit and miss. Visiting opera companies from the region perform as well. Zagreb has a popular children's puppet theater. Most theater is performed in Croatian. The Vatroslav Lisinski Concert Hall is the favorite place to hear the Zagreb Philharmonic Orchestra and various holiday musical concerts. Among those who started their artistic careers in Zagreb and went on to achieve international fame are pianist No Pogorelic, opera diva Ruza Pospis-Baldani, and conductor Vjekoslav Sutej.

Croatian folk music has had many influences. The kolo, a lovely Slavic round dance in which men and women alternate in the circle, is accompanied by Gypsy style violinists or players of the tambura, a three- or five-string mandolin popular throughout Croatia. The measured guitar playing or rhythmic accordions of Dalmatia have a gentle Italian air. The Croatian folkloric ensemble "Lado" perform lively Mediterranean dance rhythms and sing folk songs with haunting voices.

Zagreb hosts many international cultural events such as the International Folklore Festival, International Competition of Young Conductors, International Jazz Fair, Musical Biennial Zagreb, International Festival of Avant-garde Theaters, International Festival of Puppet Theaters, and the International Garden Exhibition. During

summer many coastal cities stage international festivals such as the Dubrovnik Summer Festival, the Split Summer Festival, and Zadar Music Evenings.

Zagreb is a university center-home to some 40 graduate and undergraduate schools and over 80,000 students. Its first secular school was founded in the mid-14th century. The first secondary school was established at the beginning of the 16th century, and the university opened its doors in the second half of the same century. Zagreb University is one of the oldest universities in Europe. The roots of higher education began with the establishment of the Jesuit Gymnasium in 1632 to teach moral theology. Thirty years later, in 1662, the Academy for Philosophy was introduced. In 1669, Emperor Leopold granted the school the right to award doctorates. The cities of Split, Zadar, Osijek, and Rijeka also have universities.

Croatia has about 2,000 libraries: 160 rank as scientific libraries, 4 of which are university libraries. The University of Zagreb Library is also considered the National Library. There are 91 faculty libraries, 60 libraries attached to research institutes, and 1 central library (attached to the Croatian Academy of Arts and Sciences).

The Academy of Arts and Sciences was founded in 1860. Zagreb has the following cultural institutes:

The French Institute has a library and reading room. CD's and videos can be borrowed. Cultural activities include theater, films, dance, lectures, and concerts.

The American Embassy's Peace Memorial Library, open to everyone, has more than 6,000 books by American authors and 200 magazines and journals in its stacks. A reference librarian is on staff. The Austrian Cultural Institute sponsors such activities as concerts, exhibitions, seminars, lectures, and courses for preschoolers in German.

The British Council has a large selection of books, periodicals, reviews, and videos. The Council promotes cultural, educational, and technical cooperation between Britain and other countries.

The Italian Cultural Institute in Zagreb has various cultural activities including films, concerts, shows, literary meetings, scholarships, and research assistance for students.

The Goethe Institute has a large public library with books, magazines, newspapers, CD's, and videos.

Commerce and Industry

The former Communist government of Yugoslavia emphasized heavy industry, especially in aluminum, chemicals, petroleum and shipbuilding. Today, Croatia is the world's third-largest shipbuilder, with most of the output from the shipyards of Pula, Rijeka, and Split intended for export. The following industries are centered in Zagreb and surrounding areas: chemical, machine tool manufacture, electrical engineering, and textiles. About 80% of Croatia's petroleum comes from local oil wells. Most of the wells in the former Yugoslavia were in Croatia, north and east of Zagreb. In the past, one-third of Croatia's national income has come from tourism, but in 1991 and 1992 Croatia received few visitors on account of the war. By 1993 Germans, Austrians, and some Italians had returned to Istria, but Dalmatia has had a slower recovery.

The collectivization of agriculture just after WW II failed and private farmers with small plots continue to work most of the land. The interior plains produce fruit, vegetables, and grains (especially corn and wheat), while olives and grapes are cultivated along the coast.

Croatia is negotiating admission to the World Trade Organization and the Central European Free Trade Organization (CEFTA) with member countries. It is also one of sev-

eral post-Communist countries seeking to become part of the European Union. Three international rating agencies gave Croatia investment grade ratings of BBB-and-equivalent in January 1997. Standard and Poor's placed it just behind Poland and ahead of Slovakia and Greece.

Since independence, Croatia has had to completely reorient its trade after the loss of markets in the southern regions of former Yugoslavia. In 1992 Italy, Germany, and Slovenia together accounted for well over 50% of Croatia's imports and exports. The average wage decreased during the war to US\$125 a month. Most Croats only manage to make ends meet because they still receive subsidized housing, health care, education, etc., and many hold down two or three jobs. Relatives abroad send money home and much of the rural population grows its own food. Others have savings from the good years before 1991.

An austerity program introduced in 1993 curbed inflation, which was running at 3 8% a month. In 1996 it was 3.5%. Although the inflation rate has stabilized, prices are noticeably increasing and are comparable with costs in large, urban U.S. areas. The IMF estimates GDP rose by 5% in 1996. In 1995 industry accounted for 20% of GDP, public sector services 24%, agriculture 11%, trade 9%, and tourism 4%-5%. Unemployment in 1997 was high at 16.6%.

Croatia is in the intermediate phase of the implementation of a complete economic reform program under agreement with the IMF. This 3-year program, to last until the end of 1999, worked to achieve an economic growth level with low inflation (3%-4% annually), maintain a stable exchange rate and low budget deficit, implement basic and structural reforms, and ensure an adequate social security network. There are detailed studies about the development of payment transactions and the introduction of high-liability systems to increase surveil-

lance over bank bonds. Croatia decided it would not take up the second and third branches of this \$486 million 3-year loan agreed by the IMF earlier this year.

U.S. policy supports strengthening bilateral economic ties particularly business relations. Croatia is included in the Generalized System of Preferences. The Overseas Private Investment Corporation covers political and war risk for U.S. firms investing in Croatia. Croatia is a member of the International Monetary Fund, IBRD, and EBRD and is seeking to be a party to the General Agreement on Tariffs and Trade (GATT). The U.S. Business Council for Southeastern Europe (formerly the U.S.-Yugoslav Economic Council) and its Croatian counterpart, the Croatian Chamber of Commerce, work to stimulate economic cooperation and to develop further business opportunities. Croatia signed an agreement for a \$5 million PL-480 Title I loan for the purchase of U.S. sunflower seed oil in 1997. Bilateral agreements on investment and double taxation were also concluded in 1997. Throughout the war, U.S. trade and investment in Croatia was minimal, although it is increasing.

In May 1994, Croatia replaced its currency, the dinar, with the kuna, which takes its name from the marten, an animal whose pelt served as a means of exchange in the Middle Ages.

Transportation

Automobiles

The large car rental chains represented in Croatia are Avis, Budget, Euro car, and Hertz. Independent local companies are often less expensive than the international chains. At all agencies, the cheapest car is the Renault 4 and prices begin around US\$125 a day plus US\$0.20 per km (100 km minimum), or US\$300 to US\$350 a week with unlimited km. Full collision insurance is US\$8 a day extra and theft

insurance is another US\$8 a day. Add 20% tax to all charges.

Local

Public transportation is cheap and reliable with trams and buses leaving every 30 minutes from stops all around the city and surrounding hills. Taxis are available at taxi stands throughout the city, or may be ordered by phone. Taxis are safe, but quite expensive with meters that begin at

US\$1.25 and ring up US\$0.65 a kilometer. Rates are higher after 10 pm and on Sunday. For convenience, bring your own transportation. Although local transportation is readily available, it is usually very crowded, especially during rush hour.

Roads throughout Croatia are narrow—certainly not as wide as by Western standards—and parking is often tight in Zagreb, so consider a mid- to compact sized vehicle. Roads are in fair shape and are maintained and cleaned regularly. Of course, there are still numerous potholes to be avoided. Main roads are plowed in winter, but secondary and side roads are not always cleared. The hills and twisting roads outside the center of Zagreb are often treacherous in bad weather. Bring snow tires for your car. Croatians drive more recklessly than the average American, so defensive driving is a must. Motorists must also pay special attention to the trams (streetcars).

Since independence, Croatia has seen increasing numbers of cars. Now, roads toward the coast on weekends and in major cities experience heavy congestion on weekends and during rush hour. Primary roads are generally adequate, but most have only one lane in each direction, including roads to and from the coast. If you travel through former conflict areas, stay on paved roads to reduce the risk of encountering leftover mines. Emergency road help and information may be reached by dialing 987. For additional road condition and safety information, contact the Croatian

Automobile Association (HAK) at telephone (385) (1) 455-4433.

Regional

From the main railway station there are daily international lines for Munich, Vienna, Venice, Budapest, Paris, Geneva, Graz, and Moscow. There are daily international bus lines to: Graz, Munich, Stuttgart, Frankfurt, Dortmund, Cologne, Zurich, and Barcs. Twice weekly buses leave for Berlin and Istanbul.

Zagreb Airport is located in the village Pleso, 17 kilometers from the center of the city, about a 25-minute drive. Airlines servicing Zagreb include Croatia Airlines, KLM, Lufthansa, Pan Avia, Swissair, Aeroflot, Air France, Austrian Airlines, Air Canada, and British Airways. Croatia Airlines has flights from Zagreb to Amsterdam (1 hour and 45 minutes), Berlin (2 hours and 15 minutes), Brussels (2 hours and 30 minutes), Budapest, Copenhagen (1 hour and 40 minutes), Dusseldorf, Frankfurt (1 hour and 30 minutes), Hamburg, London (2 hours and 10 minutes), Madrid, Manchester, Moscow (3 hours and 15 minutes), Munich, Paris (1 hour and 50 minutes), Prague, Rome (2 hours and 30 minutes), Skopje, Stuttgart, Tirana, Vienna (1 hour), and Zurich (1 hour and 15 minutes).

Communications

Telephone and Telegraph

Telephone service in Zagreb is good and reliable. Personal e-mail and Internet accounts can be established with America On-line or the Croatian telephone company. Expect to pay higher user rates than you would in the U.S. Long-distance calls to the U.S. are expensive (two to three times higher than calls placed from the U.S.) but relatively inexpensive to continental Europe. International operators can be accessed directly for AT&T, MCI, and SPRINT. The Croatian Post Office's telegram service is inexpensive and reliable.

Radio and TV

Broadcasting in Croatia is dominated by Croatian Radio and Television (HRT). Croatia passed legislation on private TV and radio stations in July 1994 and has begun granting licenses and frequencies for local and regional radio and television. Several small local radio stations emerged after independence. State-controlled HRT broadcasts daily on three television channels and three radio channels. HRT radio programs reach more than 96% of the population. TV programs reach 93% of the population. The prominent, semi-independent station, OTV Youth Television, reaches only the greater Zagreb area.

Croatian radio broadcasts are similar in format to Western European stations lectures and talk shows—and the music is largely Western. The stations are diverse, playing classical, pop (Top 40), and jazz music. European “club techno” music is popular with Croatia's youth. Croatian radio broadcasts the news in English every day at 8 am, 10 am, 2 pm, and 11 pm. Various radio stations are accessible on the Astra Satellite (19.2 degrees E), such as Virgin (UK), SKY (Holland), BBC 1-5, Radio France International, and America One (NPR).

American TV (NTSC) is incompatible with the local Croatian transmission system (PAL). A PAL TV or a multisystem TV with PAL capacity is necessary if you want to view Croatian/European TV. Three Croatian channels show a lot of American movies and sitcoms with subtitles. Most employees purchase a satellite dish. A 1½-2-meter dish will bring most anything you would desire to view such as: NBC Super Channel, CNN, SKY, TNT, MTV, etc.

It is a good idea to have a multisystem VCR, as many new video stores opening in Zagreb have a decent selection of movies.

Newspapers, Magazines, and Technical Journals

Foreign newspapers and magazines can be found at newspaper kiosks all around the center of Zagreb. The

International Herald Tribune, international editions of American and European news periodicals such as Time, Newsweek, or Paris Match, are available. Daily newspapers and some reviews can be read in the reading rooms of the various cultural centers and libraries in town. Permanent foreign media bureaus in Zagreb include the New York Times, Associated Press, AFP and Reuters. There are also stringers and visiting correspondents for various bureaus.

There are three national and three regional dailies in Croatia: Vjesnik (Zagreb), government; Vecernji list (Zagreb), government; Novi list (Rijeka), private; Slobodna Dalmacija (Split), private; Glas Slavonije (Osijek), private; and La Voce Del Popolo (Rijeka), private; with a combined circulation of 375,000. The print media is under severe scrutiny by the government, which owns the majority shares of two of the three largest national news dailies. The Croatian news agency HINA serves all dailies. Popular weeklies include the tabloids Globus and Feral Tribune. Several weeklies and monthlies contain serious coverage of political, financial, and cultural events.

A new English-language bookstore in the center of Zagreb sells paperbacks, technical and educational materials, children's books, and computer software, all at considerably higher prices than in the U.S. Recent books in English on the war in Croatia and maps are widely available. Magazine subscriptions from the U.S. by mail are more economical, and the selection of books is much greater through a book-buying service on the internet or a book club/catalog.

Health and Medicine

Community Health

The public water supply is considered safe in all major cities in Croatia. Naturally carbonated mineral water ("mineralna voda") is

customarily sold in restaurants and stores. Sterilized long-life milk is available and has a shelf-life of 6 months. Fresh milk spoils quickly. Raw fruits and vegetables are of good quality, plentiful in season, and safe to eat using washing precautions normally followed in the U.S. Fish, meats, and poultry should be cooked well. Sewage and garbage disposal is adequate.

Preventive Measures

Travelers should have their shot records up to date and be immunized against tick-borne encephalitis. A flu shot is also recommended before winter. Sinus and respiratory ailments are aggravated by wintertime smog, and springtime provokes allergy problems.

NOTES FOR TRAVELERS

Passage, Customs & Duties

A passport is required for travel to Croatia. A visa is not required for U.S. passport holders for tourist or business trips of less than 90 days. Visas are required for all other types of stays and must be obtained prior to arrival in the country. Unless the traveler is staying at a hotel, all foreign citizens must register with the local police within 48 hours of arrival. Failure to register is a misdemeanor offense: some Americans have been fined and/or expelled as a result of their failure to register. Additional information on entry requirements may be obtained from the Embassy of Croatia at 2343 Massachusetts Ave., N.W., Washington, D.C. 20008, tel. (202) 588-5899 or from the Croatian consulates in New York City, Cleveland, Chicago or Los Angeles. Overseas, inquiries may be made at the nearest Croatian embassy or consulate. The Internet home page of the Croatian Embassy in Washington is <http://www.croatiaemb.org>.

U.S. citizens are encouraged to register at the U.S. Embassy and

obtain updated information on travel and security within Croatia. The U.S. Embassy in Zagreb is located at Andrije Hebranga 2, tel. (385)(1) 455-5500, Internet home page: <http://www.usembassy.hr>. On weekends, holidays, and after hours, an Embassy duty officer can be reached at tel. (385)(1) 455-5281 or (385)(91)455-2384.

Special Information

Relatively speaking, Croatia has a low crime rate, and violent crime is rare. Many people can be seen walking on the streets and riding public transportation after dark. Foreigners do not appear to be singled out; however, as in many cities, displays of wealth increase chances of becoming the victim of a pickpocket or mugger. Such crimes are more likely to occur in bus or railroad stations. There have been several incidents of petty crime in residences, and car theft is on the rise (Note: Most of the cars which have been stolen are 4 x 4 utility-type vehicles). Restrictions on movements exist within Croatia and precautions must be taken in areas of instability.

In 1995, Croatian Government forces recaptured territory formerly controlled by rebel Serb forces. This area includes Western Slavonia and the Krajina Region. Although you can travel there, considerable risk of bodily harm caused by mines and unexploded ordnance continues to exist. The Dayton and Erdut Peace Accords ended fighting and reduced regional tensions. The remaining formerly Serb-held area of Eastern Slavonia is currently under UN administration. The region will be reintegrated into Croatia gradually. There continues to be isolated incidents of civil unrest, and you cannot enter the UN-administered part of Eastern Slavonia without prior UN authorization.

The following titles are provided as a general indication of the material published on this country:

Dedijer, Vladimir. *The Yugoslav Auschwitz & the Vatican: The Croation Massacre of the Serbs During WWII*. Translated by Harvey Kendall. Buffalo, NY: Prometheus Books, 10992.

Eastern Europe and the Commonwealth of Independent States, 1992. London: Europa Publications, Ltd., 1992.

Nicosia, Cyprus

CYPRUS

Republic of Cyprus

Major Cities:

Nicosia, Limasso

Other Cities:

Famagusta, Kyrenia, Larnaca, Paphos, Salamis

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated September 1994. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Cyprus has been divided since July 1974, when Turkey intervened militarily following a coup d'etat instigated by the military junta in Greece. The two Cypriot communities have lived separate existences since the outbreak of intercommunal trouble in 1963. Nearly all members of the Turkish Cypriot community live in the northern section of the island, while almost all Greek Cypriots are located in the south which is under the control of the Government of Cyprus. The 108-mile east-to-west "green line" between the two communities constitutes a buffer zone under the control of the United Nations Forces in Cyprus (UNFICYP). There is essentially no movement of goods, per-

sons, or services between the two parts of the island.

Since the 1960's, the United States has supported efforts under U.N. auspices for a negotiated settlement of the Cyprus problem. Several sets of negotiations and initiations have been proposed. Because of changes in Cyprus developments, travelers going to Nicosia may want to update the more pertinent parts of this report by contacting either the State Department's Office of Southern European Affairs (EUR/SE), or the Embassy.

MAJOR CITIES

Nicosia

Nicosia, estimated combined population 195,000, has been the capital of Cyprus since the 7th century A.D., and is the political and administrative center of the island. It is also located in the geographic center of the island on a broad plain, at the site of one of the "city-kingdoms" of antiquity, Ledra, which today lends its name to the town's main shopping area.

Nicosia has spread far outside its ancient but still intact city walls. Modern flats and offices and attrac-

tive villas characterize the newer parts of the town.

Food

Local food shops are well stocked with domestic products and imports from Great Britain, Western Europe, and some from the United States. Imported items are more expensive than comparable items in the United States.

Beef, veal, pork, mutton, lamb, and chicken are always available. Domestic meats are sold freshly butchered. Since meat is not graded, careful selection of cuts is necessary. Fresh fish is surprisingly limited in supply; mullet, sea bass, swordfish and squid are the principal varieties on the market.

Frozen fish, shrimp and cod, as well as canned seafood such as oil or water-packed tuna, salmon and mussels are sold. Trout farms in the Troodos Mountains produce fresh and smoked fish, which is sold in stores in the city. There are numerous fish taverns and restaurants which offer both domestic and imported fish. Imported butter and margarine are stocked, as are fresh, powdered, evaporated, and condensed milk, and fresh cream. Pasteurized fresh milk is readily obtainable. Domestic olive oil is of good quality and not expensive. Cyprus cheeses, in most cases from

goat's milk, are popular with Americans. The selection of imported cheeses is limited and often unpredictable in supply. English and Irish Cheddar and English Stilton are good and inexpensive. Imported French cheeses are expensive.

Fruits are varied, delicious, and reasonably priced in season. Cyprus grows an abundant winter-long supply of oranges, grapefruit, tangerines, lemons, and, to a lesser extent, avocados and apples. During the long summer, a variety of fresh fruit is available, such as watermelons, cantaloupes, cherries, apricots, plums, figs, pears, peaches, strawberries, nectarines, apples, pomegranates, and grapes. Good stocks of spinach, lettuce, cabbage, green beans, broad beans, chard, carrots, broccoli, mushrooms, celery, and green peppers are usually available.

Eggplant and artichokes in season are abundant and inexpensive. Asparagus is available in season but is expensive. Onions, tomatoes, summer squash, zucchini, and potatoes are almost always available. Various fresh herbs and prepared spices are also sold. American made spices such as Durkee and McCormick are available but a bit expensive.

Clothing

General: Cypriots, either officially or socially, dress well. Most Cypriot women prefer to be fashionably dressed. Cypriot men follow British custom in business dress and casual attire.

Women's Clothing: A normal year-round wardrobe, with perhaps fewer winter and more summer clothes, will do. Women wear either spring coats, blazers, and topcoats or light winter coats throughout the winter. Although some Cypriot women wear fur coats, there are no reliable fur storage facilities here. Lightweight dresses are needed in summer; daytime dresses with the slightest shoulder cover are acceptable. Imports from Europe are usually up-to-date but expensive.

Bathing suits and beach accessories can be purchased locally. Shoes produced locally are plentiful but can be more expensive than those made in the states. Shoes are also imported from Europe. Quality ranges from fine to poor; styles are current. Good quality leather goods are made here.

Men's Clothing: Men wear cotton or wool suits all year round. Sweaters or jackets are useful in the winter. Suits made of washable cotton or cotton-synthetic mixtures are the most practical for summer. Short sleeved shirts are also worn in the summer months. In summer, shorts are worn at home, for sports, and on informal social occasions. Men's custom-made business suits of fine British worsteds, are moderately expensive. Factory-made suits are cheaper, but are not always well-tailored. A variety of shirts, neckties, socks and underwear is available at fairly reasonable prices. There are good quality shoes available, but they are expensive. Men needing wider or narrower than average sizes may have difficulty being fitted.

Children's Clothing: Fine cotton or woolen fabrics cost more here than in the U.S. Children need warm indoor clothing and night-wear because houses and tile floors may be chilly. Clothing, shoes, and accessories for infants are much more expensive than in the United States, but all necessary items are obtainable here. However, local cribs, playpens and car seats do not meet U.S. safety standards.

Supplies and Services

Supplies: Among the better known cosmetics sold on the island are Clinique, Elizabeth Arden, Revlon, Helena Rubenstein, Lancome and Lancaster. American brands sold here are not made in the United States and are not always of the same quality. Cosmetics are more expensive here than in the United States.

Retail markets carry a good selection of very reasonably priced local

wines and liquors. Imported liquors are expensive.

Local pharmacies, open day and night, carry complete stocks of medical supplies and drugs, including children's pharmaceuticals. These items are normally British brand name pharmaceuticals.

Basic Services: Good quality shoe repair and dry cleaning services are available and moderately priced. Although laundries do acceptable work, they are expensive. You will find a good choice of barber and beauty shops.

Religious Activities

The principal Christian religion of Cyprus is Greek Orthodox. The Turkish Cypriot community is predominately Sunni Moslem. The following churches conduct services in English and are attended by the American and other communities:

- Nicosia Community Church (Interdenominational Protestant)
- St. Paul's Anglican Church
- Holy Cross Roman Catholic Church
- Seventh Day Adventist Church
- Interdenominational Congregation (Russian Cultural Center Building)
- The Church of Jesus Christ (L.D.S.)
- Even though the Jewish community numbers about 200, a synagogue has not been established. In Nicosia, services celebrating Jewish high holidays are held at the Israeli Embassy.

There are other church services, both Protestant and Catholic, on the U.N. base.

Education

The Montessori Centre: The Montessori Centre, opened in September 1993, is a preschool for ages 2 through 6. The school utilizes Dr.

Maria Montessori's philosophies, methods and materials. The two teachers received their Montessori training in London. Winter and summer uniforms are encouraged. The school charges CP 60 per month and operates from September through July. The school is located at 20 Dorieon St. Ayias Andreas, Nicosia. Tel. 454038..

The Romanos Nursery School:

The Romanos Nursery School is a private English speaking nursery school in Nicosia. They accept children ages 2 through 6. The school has good quality instructional supplies and a nice area for playing. The older children are taught numbers, letters and are prepared for reading. The school is located at 15 Romanos St. Tel. 454878

Wee Care Nursery School: The Wee Care Nursery School was founded by an American in 1983. Affiliated with the American Academy school in Nicosia, Wee Care offers a full preschool curriculum with Christian religious values and beliefs. The school is located at 17 Delphon St., Nicosia. Tel. 462863.

Highgate Primary School: The Highgate Primary School is an English school, offering programs for children two to eleven. The school has special programs for gifted learners and children with learning disabilities. Winter and summer uniforms are required. Some grades have a waiting list. The school is located at 17 Heroes Ave., Ayios Andreas, Nicosia. Tel. 462027/499145.

American International School In Cyprus: The American International School in Cyprus was established by International Schools Services in September 1987. An American based curriculum is offered to students in pre-kindergarten through grade twelve, with a boarding unit for students in grades nine through twelve. In 1992, the school was purchased by the owner of American schools in Cairo and Kuwait.

The facilities of the school include a modern library, computer and science laboratories, art, ceramics and photography rooms, a swimming pool, tennis and volleyball courts, and recreation, dining, audiovisual areas, and boarding facilities.

- **Calendar:** The 180 day school year commences in late August, ends in mid-June, and is divided into two semesters. The school is closed during a two to three week winter holiday and a one week spring break in March.

- **Academic Program:** The academic program of AISC is organized into three divisions, the elementary school (pre-kindergarten through grade 4), the middle school (grades 5-8), and the high school (grades 9-12).

- **Elementary School:** The curriculum at the elementary level is integrated through a single homeroom teacher for reading, English, math, science, and social studies. Additional instruction is provided by specialists in physical education, music, art, computers, and foreign language. The style of instruction is hands-on, exploratory, and participatory.

- **Middle School:** The curriculum at the middle school level is delivered through a semi-departmentalized structure. The English and social studies classes are integrated and usually are taught by the same teacher. In addition to English/social studies, all middle school students are enrolled in mathematics, science, and physical education. Each student is also enrolled in either a foreign language, one of the special classes in ESL or the learning center.

- **High School:** A selection of required and elective courses are designed to prepare students for a wide range of options upon graduation. AISC requires 22 units of credit for either a college prep or general high school diploma.

- **Faculty:** All teachers are experienced in American and interna-

tional education. Many teachers are recruited from the United States to fill selected vacancies and hold advanced degrees. All faculty are active, participating members of the school community and sponsor after school and weekend activities.

- **Library:** The school library contains over 10,000 volumes and periodicals. Word processing, CD ROM electronic references, and a reference library room are available for student use before, during and after school hours.

- **International Baccalaureate:** The International Baccalaureate program, initiated in 1993, is a two year pre-university course, designed to facilitate the mobility of students and to promote international understanding. The comprehensive course of study for the Diploma is designed to provide students with a balanced education. Students holding the IB Diploma can be accepted by universities and other institutions of higher education in more than 65 countries.

- **ESL (English as a Second Language):** The objective of the ESL program is to provide intensive English instruction in speaking, listening, reading, and writing, allowing non-English speaking students to attend the school and to quickly become a part of everyday learning and activities.

- **Activities:** A variety of after school activities is available for students in grades 1-12. Students choose from such activities as volleyball, bowling, swimming, soccer, basketball, cross country, track and field, tennis, fine arts festival, student council, yearbook, Boy Scouts, weight training, charity fashion show, academic games, chess club, talent show, geography club, drama, ice skating, arts and crafts, gymnastics, horseback riding, newspaper, choir, and band.

- **Computers:** All students, grades 1-12, use computers. The newest technology allows the students to use computers as an everyday tool.

The school's library uses CD ROM information access.

AISC is a member of the Middle States Accreditation Association, EMAC (Eastern Mediterranean Activities Conference), the Near East South Asia (NESA) Council of Overseas Schools, and the National Honor Society of Secondary Schools. It is also affiliated with the International Baccalaureate organization.

Senior Seminar is a required course for all seniors. A Senior Research Project is required for graduation.

The following must be completed before admission to the school is granted:

- Complete and return an application form
- Furnish records/transcript from previous school
- Present themselves for a formal interview with the headmaster
- Sit for placement exams, if requested
- Boarding students must complete a separate application form, which includes recommendations from previous teachers

If there are any other questions, you may address them to:

Headmaster, AISC
PO Box 3947
Nicosia, Cyprus

The English School: The English School was founded in 1900. The school is similar to a "selective grammar school" in England in its academic and out-of-class programs. It is coeducational with students aged 11-18, all pupils being admitted by selective and competitive examination.

The school year is from mid September to late June, with 2-week holidays at Christmas and Greek Orthodox Easter. The mailing address is:

The English School
P.O. Box 3575
Nicosia, Cyprus

The Falcon School: The Falcon School is an educational foundation offering a continuous education for girls and boys aged 4½-18. It has facilities for studying languages, the Sciences, the Arts, music and a wide range of sports. The language of instruction is English.

The school year begins in Early September and ends in late June. An entrance test and an interview is required prior to admission. The mailing address is:

The Falcon School
P.O. Box 3640
Nicosia, Cyprus

The Junior School: The Junior School was established in 1944. Children are admitted to the school between the ages of 4 and 12. The curriculum and teaching methods are the same as would be found in the United Kingdom. There is a British Headmaster and the teachers are trained and qualified in the United Kingdom.

The school year begins in September and ends in June. School uniforms are required. The mailing address is:

The Junior School
P.O. Box 3903
Nicosia, Cyprus

Sports

Cyprus offers a variety of opportunities for participant and spectator sports. Beaches can easily be reached from Nicosia by private car. Bus transportation to the beaches is available, and "service taxis" may be shared at a nominal cost. Taxi service between Nicosia and other cities on the island is regularly available. Sports equipment and clothing of all kinds is available but expensive.

Swimming: The proximity of the sea and the very hot summers drive most people in Cyprus to the water. The south coast is less than an hour

away from Nicosia and has good beaches. It is also possible to join sports clubs or health clubs at some hotels in Nicosia which includes use of their swimming pools.

Scuba Diving: Scuba tanks and equipment can be rented and filled locally, but if you have your own, bring them. Cost of locally made equipment is comparable to that in the United States.

Water Skiing: Water skiing is becoming more popular in Cyprus. It is best at Larnaca (45 minutes from Nicosia), but the sea is sometimes very choppy. Water skis are sold in Cyprus but at prices higher than in the United States.

Horseback Riding: The Lapatsa sports complex, a 15-20 minute drive south of Nicosia, offers horseback riding lessons and trail riding. A hard hat and riding boots are required.

Windsurfing: One of the most challenging and interesting sports in Cyprus is windsurfing. There are numerous beaches around the island with suitable conditions. Windsurfing is a good family sport. It is easily learned and requires few facilities. Equipment is available locally, but at prices higher than the United States.

Skiing: Snow skiing in Cyprus has developed in recent years. Simple skiing is done from the beginning of January to the end of March on the slopes of Mount Olympus, a one and one-half hour drive from Nicosia. Several short trails, one of which is groomed, are available for cross-country skiing.

The Cyprus Ski Club, located at Mount Olympus, offers the following facilities:

- Permanent and temporary memberships
- Four electrically driven "T"-bar ski lifts
- A cross-country skiing track

- A ski shop with ski equipment
- Ski instruction by qualified instructors

Golf: A new golf course opened in 1993, near the town of Paphos about 2 hours from Nicosia, but is extremely expensive. Golf may be played at the British bases if you join the golf course.

Tennis: Tennis is popular and facilities are good. Periodic tournaments are held at local clubs.

Hunting: Hunting is limited to hares and partridges. The hunting season established by the government varies from year to year. During the season, hunting is permitted only on Wednesdays and Sundays. The number of licensed Cypriot hunters is quite large in proportion to the amount of game available.

Fishing: Although fish are extremely scarce in the coastal waters, fishing with spear and snorkel can be most interesting. At some distance from the coast, there is good deep sea fishing; boats can be rented. Shoreline fishing would not satisfy the serious angler. There is no river or stream fishing, but shoreline fishing in some reservoirs has been reported to be good.

Spectator sports include:

Horseracing: The Nicosia horseracing season is nearly year round. Associate membership is open to Americans for a modest fee. The track has photo finish and an automatic tote board.

Basketball: There are several American basketball players on teams here in Cyprus. Local as well as visiting teams are popular.

Soccer: There are four divisions of soccer teams playing all over the island of Cyprus. Soccer is the most popular sport among Cypriots.

Gymnasiums: Several well-equipped gyms, offering both weightlifting and aerobics programs, are present and have reasonable prices.

Touring and Outdoor Activities

Picnics, sight-seeing, and camping are popular pastimes in Cyprus. A wide variety of old castles, monasteries, and ancient ruins are available to be explored.

Kyrenia lies 16 miles north of Nicosia. A 7th century Byzantine castle, which also served the Venetians in the 15th century, overlooks the picturesque harbor. There are three castles on the Kyrenia Mountain Range which provide a beautiful view of the northern coast of Cyprus.

Famagusta, once one of the main port cities of Cyprus, is about 40 miles east of Nicosia on Famagusta Bay. Its center is in a well-preserved Venetian walled city. Legend has it that the citadel which overlooks the Bay of Famagusta was the setting of Shakespeare's "Othello."

To the north of Famagusta is the biblical port of Salamis where St. Paul entered Cyprus on his evangelical tour. Most of this ancient port is now submerged and the site offers a challenge to the snorkeler who might be interested in underwater archaeology.

Larnaca is an active seaport located on Larnaca Bay about 30 miles southeast of Nicosia. Its salt lake is a winter haven for large flocks of flamingos. There is a monastery, churches and museums located in and around Larnaca.

Limassol lies approximately 50 miles southwest of Nicosia on Akrotiri Bay. Seven miles west of Limassol is the tower of Kolossi built in the 15th Century by the Knights of St. John Hospitaler. The ruins of Curium, an Achaean religious and political center of the 2nd century B.C., include remains of the Temple of Apollo and a beautiful stadium. It houses some Roman administrative and bathing facilities, fine mosaics and other ruins, including a fairly well-preserved Roman theater, sometimes put to contemporary use.

Paphos, off whose shores legend says Aphrodite arose from the sea foam, lies on the west coast. The scenic route to Paphos from Nicosia along the south shore comprises the grand tour of many of the archaeological high spots in Cyprus. The "Fontana Amorosa" (Love's Spring), in the north part of Paphos, was a source of poetic inspiration during the classical age. It was said that whoever drank from it would fall in love.

The cool, pine-forested Troodos Mountains, a 90-minute drive from Nicosia, offer relief from the heat in the summer and skiing in the winter. In the Troodos Mountains in the Paphos district, lies Kykko Monastery. It contains the cherished icon of the Virgin Mary painted by St. Luke. Not far from the monastery is a beautiful valley of 30,000 cedars.

Archaeological Sites: The numerous archaeological sites on Cyprus are nearly all open to the public. All digs are under the jurisdiction and supervision of the Cyprus Department of Antiquities, and expeditions from other nations are often at work there. Some sites charge a nominal entrance fee; at others, you may wander at will, picnic on or near the site, and enjoy a freedom unknown at archaeological sites in other countries. Guidebooks available in Cyprus and brochures published by the Cyprus Museum give details of all the antiquities.

Entertainment

Most cinemas in Nicosia are air-conditioned. They generally show first-run U.S. or British films. Admission is reasonably priced.

The Nicosia Municipal Theater has operas, concerts, plays and ballets.

Cyprus has a permanent, Government-sponsored national theater whose repertory consists of international and Greek plays, the vast majority performed in Greek. There are also private theatrical companies with a similar repertory. No opera or professional symphony orchestra exists, but occasionally foreign concert artists, symphony

Seascape of Kyrenia, Cyprus

orchestras, or popular music ensembles visit the island.

Night club entertainment exists in limited scope with a number of popular discotheques.

In addition to the restaurants offering standard and European cooking and atmosphere, less expensive and simpler tavernas serve Cypriot dishes, as well as those typical of the Near East. Most Americans like Cypriot food.

Most types of photographic film are sold locally, although it is rather expensive. Facilities for developing and printing black-and-white and color film are adequate for all but color slides. Camera and photographic equipment sold in local shops is reasonably priced. The amateur photographer will find interesting subject matter in the varied landscape and local color of the island. During seven or eight

months of the year, light conditions are excellent.

Social Activities

The American Women's Club is an active body open to all women in Cyprus. Its purpose is to promote friendship among American, Cypriot, and other foreign women.

It sponsors monthly programs of interest to the membership and organizes parties and fund-raising activities for charity. Activities include informal discussion groups, craft demonstrations, cooking classes, and tours to archaeological sites. This group is active in welcoming new arrivals, providing information on local shopping, sight-seeing, schools, and any additional information helpful to settling in.

Limassol

Limassol, with a population of 155,000, is on Akrotiri Bay, about 50

miles southwest of Nicosia. In this seaport city, the marriage of Richard the Lion-Hearted and his hard-won Berengaria of Navarre was celebrated with her coronation and dancing in the streets. Seven miles west of Limassol is the tower of Kolossi, built in the 15th century by the Knights of St. John Hospitale. The ruins of Curium, an Achaean religious and political center of the second century B.C., are a few miles west of Kolossi. This site includes remains of the Temple of Apollo and a stadium. Curium, with its superb Greco-Roman theater, is thought to have been founded by the Greeks; in the early centuries A.D., it housed some Roman administrative and bathing facilities, found in recent excavations. Some fine mosaics and other ruins, including a fairly well-preserved Roman theater sometimes put to contemporary use, have been unearthed.

Limassol is famed for its traditions and celebrations—an annual wine

festival, the pre-Lenten carnival—and is rapidly developing as a tourist center. Hotels and apartment structures are being built close to the new harbor, and restaurants, *tavernas*, and nightclubs are opening up here in ever-increasing numbers.

The Logos School of English Education is a coeducational institution in Limassol for grades kindergarten through 12. Founded in 1973, the school employs a combined U.S. and U.K. curriculum. There are also facilities for boarding and a planned seven-day program for boarders. The mailing address is P.O. Box 1075, Limassol, Cyprus.

OTHER CITIES

FAMAGUSTA, once one of the main port cities of Cyprus, with a population of about 28,000, is 40 miles east of Nicosia on Famagusta Bay. Its center is in a well-preserved Venetian walled city. Legend has it that the citadel which overlooks the bay was the setting for Shakespeare's *Othello*. The beautiful sand beaches and good hotels all along the shore give Famagusta (in Greek, Ammochostos) its name, which means "sand-hidden." New Famagusta (Varasha) is now deserted, in the middle of a Turkish military zone.

Further north from Famagusta and Salamis in the Kyrenia Range is Kantara Castle, 2,068 feet above sea level. "Kantara" means bridge in Arabic. The castle was named either by the Arab invaders or by Maronites from Lebanon who allegedly settled in that part of the island. Some say it was so named because its setting looks like an arch. This beautiful spot commands excellent views of the sea on both sides and long stretches of plain all around it. Both the summer resort, two miles from the castle, and the young forest in the district are called Kantara after the castle.

KYRENIA, a city of 14,000 inhabitants, is 15 miles north of Nicosia. A

seventh-century Byzantine castle, which also served the Venetians in the 15th century, overlooks the picturesque harbor. The city is dominated by the Kyrenia Range and the Castle of St. Hilarion, built in 1228 on a mountain peak 2,200 feet above sea level and said to have been a source of inspiration for Walt Disney's *Snow White*.

LARNACA is an active seaport with a population of approximately 69,000, situated on Larnaca Bay, about 30 miles southeast of Nicosia. Its salt lake is a winter haven for large flocks of flamingos. Belief here is that Lazarus came to Larnaca after his resurrection, and was later consecrated as the district's first bishop. The nearby Tekke of Umm Haram, a beautiful mosque built on the spot where the Prophet Mohammed's stepmother is said to have died, is a holy place to all Muslims. A new international airport near the city, and the reconstructed harbor, with its deep-water berths, have increased the popularity of Larnaca as a resort. Hotels and apartment buildings are continually under construction here. The American Academy on Gregory Afxentiou Avenue, in operation since 1908, serves an international student body and follows a U.S., U.K., and Greek Cypriot curriculum.

Twenty-five miles east of Larnaca is Ayia Napa, a small town with some of the best beaches in Cyprus. The town centers around a fine old monastery. Nearby are several coves with white sand beaches. The area is well developed for tourism. Good hotels abound and there are many apartments hotels and vacation apartments that can be rented short term. Aquatic sports facilities are good.

PAPHOS, from whose shores Aphrodite, the Greek goddess of love, is said to have risen from the sea foam, lies on the west littoral. It has about 40,000 inhabitants. The scenic route to Paphos from Nicosia, along the south shore, comprises the grand tour of many of the principal archaeological spots in Cyprus. The Fontana Amorosa (Love's Spring),

also known as the Baths of Aphrodite, in the north part of Paphos, is about half a mile from the sea. The spring was a source of poetic inspiration during the classical age, and it was claimed that whoever drank from it would fall in love. At Paphos, Christianity was introduced to Cyprus with the conversion by St. Paul of the Roman governor, Sergius Paulus. The pillar on which Paul was tied to receive the 39 lashes still stands in Paphos. In the Troodos Mountains in the Paphos district, Kykko Monastery contains the cherished icon of the Virgin Mary painted by St. Luke. Warm hospitality is always extended to visitors. Not far from the monastery is a beautiful valley of 30,000 cedars.

The Anglo American International School, for pre-kindergarten through grade 13, is located in Paphos. A coeducational day school with boarding facilities, Anglo American was founded in 1980 and is accredited by the Cypriot Ministry of Education. The school offers a U.S. and U.K. curriculum. The mailing address is 22-26 Hellas Avenue, Paphos, Cyprus.

Just north of Famagusta, also on the bay, is the biblical port of **SALAMIS**, where St. Paul entered Cyprus on his evangelical tour. Most of this ancient port is now submerged, and the site, a fine swimming location, offers a challenge to the snorkeler who might be interested in underwater archaeology. The Greco-Roman ruins here include excellently preserved Corinthian pillars and some fine, although headless, caryatids and statues.

COUNTRY PROFILE

Geography and Climate

Cyprus is the third largest island in the Mediterranean, after Sicily and Sardinia, with an area of 3,572

square miles. It is in the eastern Mediterranean basin, 44 miles south of Turkey, 64 miles west of Syria, and 150 miles north of the Nile Delta. The island has a maximum length of 150 miles from northeast to southwest and a maximum width of 60 miles from north to south. Two mountain ranges dominate the landscape. The narrow and largely barren Kyrenia Range in the north (maximum elevation 3,360 feet) rises almost directly up from the northern coastline and follows it from east to west for some 80 miles. The forest covered Troodos Range rises in the southwestern sector of the island, culminating in Mount Olympus at an altitude of 6,400 feet. Between the two ranges, extending from Morphou Bay in the west to Famagusta Bay in the east, lies the Mesaoria ("between the mountains")—a broad, fertile, coastal plain which produces most of the island's cereal grains and other crops. Nicosia, the capital of Cyprus, is on the Mesaoria. Throughout the long summer the plain is arid and parched, but in the winter and spring it is carpeted with a lush growth of young wheat and barley.

The climate of Cyprus may be compared to that of South Central Texas. Cyprus has hot, dry, dusty summers and fairly cool, damp winters. Nicosia's maximum mean temperature is approximately 80°F, while the minimum mean temperature is 50°F. From mid-June to mid-September, the temperature sometimes exceeds 100°F. After sundown, it usually falls to 60°F to 70°F. The summer heat is tolerable because humidity is usually low and high temperatures are often tempered by westerly winds. Nicosia's summer weather is generally more comfortable than in the seaside towns, where humidity is higher though temperatures are lower. Because rain falls almost exclusively from December through March, water may be rationed in Nicosia in the summer. Winters are usually cool and damp. On the whole, the climate can be characterized as Mediterranean, healthy, and quite enjoyable.

Population

Cyprus has had no official census since 1973. Before 1974, its population was estimated at 630,000 persons, of whom almost 80 percent were ethnic Greek and 18 percent ethnic Turk. The remainder were mainly Armenians and Maronites, with a few Latins. The population estimate for July 2001 is 763,000. The foreign population in Cyprus includes some 1,200 U.N. troops, a resident British presence of over 13,000 (including retired persons and troops in the Sovereign Base Areas), and some 1,000 American citizens.

The population is divided physically and culturally into two quite different societies—Greek Cypriot and Turkish Cypriot. Each maintains its distinct identity based on customs, religion, language, and ethnic allegiance. Historically, this population was intermingled among six larger towns and over 600 small villages. One of the results of intercommunal violence during the 1960's was the enclavement of most Turkish Cypriots and, after the 1974 war, the physical separation of the two communities by the present cease-fire line.

Communal Institutions

The 1960 Constitution created a presidential system, with a Greek Cypriot President and Turkish Cypriot Vice President elected by their respective communities. As part of a number of safeguards designed to protect the rights of the Turkish Cypriot minority, the Vice President was given veto rights over defense, foreign affairs, and security matters. The Turkish Cypriots were also assured a representation of 30 percent in the civil service, and in the unicameral legislature which was to consist of 35 Greek Cypriot and 15 Turkish Cypriot members. The same ratio obtained in the 10-member Council of Ministers, three of whose members were Turk-

ish Cypriots, and one of whom had to hold the Defense, Interior, or Foreign Affairs portfolio. The constitutional system broke down with the outbreak of intercommunal fighting in late 1963, which led to the establishment of Turkish Cypriot enclaves.

In the summer of 1974, a coup d'état backed by the military junta in Athens led to Turkey intervening militarily and the occupation of some 37 percent of the island's territory by the Turkish Army. In November, 1983, the Turkish Cypriot Administration declared itself the "Turkish Republic of Northern Cyprus". The "TRNC" is recognized only by Turkey.

Under the auspices of the U.N. Secretary General, intercommunal negotiations have been conducted at various stages since 1968, with the goal of trying to resolve differences between the Greek and Turkish Cypriot communities. The latest round of talks led to a draft "Set of Ideas." There is also a focus on developing ways of building confidence between the two communities. The basic issues in the talks center around security, the nature and structure of the federal constitution, territory, refugees, and settlers.

The Government of Cyprus has a Presidential system with a unicameral legislature, the House of Representatives. The President, Glafkos Ioannou Klirides, elected for a five-year term, was last elected in February 1998. The House was last elected in May 2001. The Greek Cypriot political scene is dominated by four main parliamentary parties. The oldest established Greek Cypriot party is the Communist party (AKEL), which currently has 20 of the 56 elected members of the legislature. The center-right Democratic Rally Party (DISY) holds 19 seats, the centrist Democratic Party (DIKO) holds 9 seats, and the Socialist party (EDEK) has 4 seats. The current President was a founding member of DISY party. The Democratic Party supported his

candidacy in the final round of the elections.

There are also four main Turkish Cypriot political parties. The Democratic Party (center-right) and the Republican Turkish Party (left-wing) formed a coalition following the December 12, 1993 election. Together the two parties have 19 seats in the 50-seat "assembly." The National Unity Party (right-wing), has 24 seats, and the Communal Liberation Party (center-left) has 7 seats. The "TRNC President," Rauf Denktas, was last elected in April 2000. Although the "constitution" nominally gives him little power, he is generally considered the most important and powerful political figure in northern Cyprus.

Arts, Science, and Education

Prehistoric pottery and sculpture have been excavated throughout Cyprus. The making of pottery and other folk arts are still practiced on the island. Embroidery is one of the most developed of these arts.

The revival of Cypriot painting began toward the end of the British rule. Many artists still show the effects of classical European training, although others reflect the Byzantine tradition. Younger artists show a definite leaning to American "hard edge" and other modern schools.

Cypriots generally attend universities in Greece, the United Kingdom, Turkey, and the United States. There are many local colleges targeting foreign students and the new University of Cyprus opened its doors in Fall 1993.

Commerce and Industry

The island's division into two economic areas disrupted the country's economic unity and overall productive capacity. While the economy in the area controlled by the Government of Cyprus (GOC) has devel-

oped and grown, the economy in the Turkish Cypriot-controlled north has been much weaker. A lack of technical expertise, foreign exchange reserves, and international financing have been inhibiting factors in this part of the island.

Care of the refugee population took first priority in the years immediately after 1974. Satisfactory housing facilities were provided to displaced persons under the GOC low-cost housing and self-help schemes, partially financed by the U.S. Government through the United Nations High Commissioner for Refugees (UNHCR). U.S. grant assistance for refugee programs between 1974 and 1992 totalled over 200 million dollars. Another 65 million dollars has been provided through the Cyprus-America Scholarship Program, which was established in 1981.

In 2000, about 3.6 percent of the economically active population were unemployed and economic growth was identified at 2.2 percent. A political settlement of the Cyprus problem would likely greatly enhance the viability of the island and begin to bridge the disparity of economic opportunity between the two major communities. In 2000, estimated per-capita GDP was \$16,000 in the Greek Cypriot community and \$5,300 in the Turkish Cypriot community.

Clothing, citrus fruit, potatoes, vegetables, footwear, and vine products make up the bulk of exports. Main imports include food and feed grains, transport and industrial machinery, electronic equipment, and petroleum products. "Invisible" foreign exchange earnings, especially from tourism, remain strong and the Cyprus pound has been relatively stable. Although economic problems are by no means completely solved, economic prosperity is evident in all sectors of the Greek Cypriot economy. In 1988, Cyprus began a 15-year transition to a Customs Union with the European Union (EU).

Transportation

Local

Bus and taxi service are the only forms of local public transportation. Buses service is not developed in many localities and can be inconvenient and crowded. In the major towns of Cyprus, excellent taxi service is always available at moderate prices.

Scheduled taxi transportation between cities, on a shared-occupancy basis, is offered at a reasonable fixed charge per passenger. Automobiles, with or without chauffeurs, can be rented reasonably by the day, week, or month.

Regional

Cyprus Airways, Olympic Airways, British Airways and many other national airlines operate flights in and out of Larnaca International Airport to Athens, Tel. Aviv, Cairo, Frankfurt, and London, as well as to most other major European cities. Ships carrying cargo and passengers to Cyprus call at Larnaca and Limassol. Auto ferries are available between Piraeus (Athens port) and Limassol.

Communications

Telephone and Telegraph

Telephone service is very reliable. Dial calls can be made to all the cities and villages. Cyprus has telephone, telegraph, and telex communications with all parts of the globe, as well as telephone and telegraph service with ships at sea. The International Subscriber Dialing (ISD) system was installed in 1976 and services the United States, Greece, and 104 other countries. Telephone calls to Europe, the United States, and other countries served are clear and uninterrupted. A satellite station has been installed in the south and is operational. The Turkish Cypriot telephone system is entirely separate from the CYTA (Cyprus Telecommunications Authority) network. Telephone calls to the north can only be made to a very few stations still linked to CYTA lines.

Radio and TV

Radio and TV reception is good. BBC broadcasts daily in the regular medium wave (AM) band. A short-wave radio is recommended for picking up other foreign and VOA broadcasts. The British Forces Broadcasting Service offers news, popular music, and some BBC programs. Cyprus Radio broadcasts in Greek, Turkish, and English. It offers news in English and some BBC programs from London.

Television service covers the entire island, and transmissions are in color. News and current events programs are broadcast in Greek, Turkish, and English. The news in English is limited to a 5 minute telecast once every evening. Many TV features are U.S. or British movies or series with Greek subtitles.

Newspapers, Magazines, and Technical Journals

Nicosia's one English-language daily (except Monday) is the 12-15 page *Cyprus Mail*. The *International Herald Tribune* reaches Nicosia readers a day after publication. Subscriptions to the European edition of the *Stars and Stripes* are also available. Many local bookshops carry foreign periodicals, technical journals, and novels in English. The *Cyprus Weekly* newspaper appears every Friday in English. There is also a weekly English-language newspaper published in the Turkish Cypriot community, *Cyprus Today*.

Health and Medicine

Medical Facilities

Nicosia has specialists in obstetrics; surgery; ear, nose and throat; urology; orthopedics; and internal medicine. Nicosia has a number of small, private clinics in which Americans have been hospitalized or delivered babies. Cases requiring unusual diagnostic facilities may be evacuated to London or the United States. Medicine and laboratory services can usually be obtained locally. If you require special medication, however, bring a supply.

Optical care is generally quite good in Cyprus. Most lens prescriptions can be filled here. If your prescription is unusually complicated, bring spare glasses. Both hard and soft contact lenses are available at lower than U.S. prices.

Several good dentists, trained in Europe and America, practice in Nicosia. They use modern equipment and are highly recommended by Americans who have been treated by them. Fees are reasonable.

Community Health

Community and public sanitation standards, although lower than in the United States, are much higher than in many countries in the area. They may be compared favorably to those in most countries of southern Europe. Sanitary inspection laws are not always stringently enforced, however. Except at the top restaurants and markets, standards of sanitation can be suspect.

Window screening is generally uncommon. Flies and mosquitoes are common pests and can sometimes interfere with outdoor activities. Garbage is collected twice weekly.

Local health authorities consider the island one of the more healthful areas of the world because of the infrequency of serious diseases. Although the ordinary diseases usually found in most countries bordering the Mediterranean do occur here, Cyprus has no unusual health problems. Some cases of typhoid are reported occasionally.

The Cyprus Government conducts energetic campaigns to encourage immunization of young persons. Pollen and dust during the hot, dry summers can be a source of discomfort to those suffering from hay fever, asthma, allergy to dust or pollen, or from any chronic condition of the upper respiratory system. Rabies is nonexistent on the island. However, hydatid disease or echinococcosis, attributed to a tapeworm harbored by dogs, occurs among local inhabitants. There are no

known cases of Americans having been infected while in Cyprus.

Preventive Measures

Children should have the DPT and measles, mumps, and rubella (MMR) inoculations.

Several local dairies pasteurize milk, making it safe to drink without further treatment.

Nicosia's water is treated and considered potable, but is sometimes rationed. Most homes have storage tanks on the roofs, which are a potential source of airborne disease contamination. For this reason, most kitchen sinks have a third water tap connected directly to the city main. This water tap should be used for all drinking, ice making, and vegetable rinsing. Bottled mountain spring water is available in supermarkets at reasonable prices, or large quantities can be delivered to one's home. Fresh fruits and vegetables should be washed thoroughly, especially when they are eaten raw.

NOTES FOR TRAVELLERS

The Cyprus Government carefully controls the exportation of antiquities. Before such items can be removed from the island, an export authorization must be obtained from the office of the Department of Antiquities at the Cyprus Museum.

No U.S. citizen needs a visa to enter Cyprus.

Regulations concerning the entry of dogs and cats include, as a general rule, a 6-month quarantine period. Exceptions to this requirement in the form of early release to home quarantine, are possible, but expensive. Dogs should be inoculated against rabies prior to arrival on Cyprus.

The unit of currency on the island is the Cyprus pound which is divided into 100 cents. Currency notes are

issued in denominations of Cyp. Pds. 20, 10, 5, and 1. Coins are minted in the value of Cyp. Pds. .50, .20, .10, .05, .02, and .01. Adequate British and Cypriot banks are on the island. The Cyprus Pound trades at around \$1.60 (January 2001) and is well backed by foreign exchange. In the north, although the Cyprus Pound and U.S. dollar are accepted in most places, the Turkish lira (TL) has been the *de-facto* medium of exchange since 1975. Commercial banking is well developed.

The metric system is now in common use in Cyprus, though more traditional forms of measurement are still encountered.

LOCAL HOLIDAYS

Greek Community Holidays

Jan.1	New Year's Day
Jan 6	Epiphany Day

CZECH REPUBLIC

Major Cities:

Prague, Brno, Ostrava, Plzeň, Olomouc

Minor Cities:

České Budějovice, Frýdek-Místek, Hradec Kráové, Liberec, Pardubice, Ústí Nad Labem, Zlín

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 2000 for the Czech Republic. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The Czech Republic has a rich treasure in its own history, with much of it still visible in the bridges, palaces, and streets of Prague. The legacies of Charles IV, the Holy Roman Emperor; of Jan Hus, the religious reformer; of Comenius, the educator; of King George of Podebrady, the one Czech Hussite king; of Hasek and Capek and other writers; of the composers Dvorak and Smetana; of Tomas Masaryk, the philosopher and statesman, are still alive in Prague. Few world capitals have preserved their past so visibly, and few are so picturesque.

Politically, the Czechs have endured centuries of storms and trials. The Czech Republic's people, property,

and institutions were decimated by the Thirty Years' War; were dominated by the Hapsburg Austrian Empire for 300 years; experienced a brief but brilliant period of democracy and independence from 1918 to 1938; were occupied by Hitler after the signing of the Munich Pact; had an even briefer period of independence after World War II; came under Communist control in 1948; were invaded by the Warsaw Pact in 1968 after a brief burst of freedom during the "Prague Spring"; threw off communist leadership in 1989 and elected Alexander Dubcek and Vaclav Havel to top governmental posts in the country; and welcomed 1993 by officially splitting their country into two independent states, the Czech Republic and Slovakia.

The political, social, and economic situations here are dynamic as the country completes the dismantlement of old structures and joins the NATO alliance and prepares for EU membership, thereby consolidating the transition to a free market democracy along Western lines.

From 1918 to 1938, the U.S. was intimately involved with Czechoslovak affairs. The millions of Americans of Czech and Slovak ancestry created a special bond, and former President Woodrow Wilson played a vital role in the creation of the

Czechoslovak state. Czechoslovakia's first president, Tomas Masaryk, married an American and was a great friend of the U.S. During the Cold War, the U.S. provided political and moral support for the Charter 77 dissidents. Today, the U.S. is an active partner of the young democracy that has been reborn in this ancient land.

MAJOR CITIES

Prague

Prague is an old city; a medley of Gothic, Renaissance, baroque, and art deco architecture gives the city its particular charm and makes it one of Europe's most beautiful cities. The green of Prague's numerous parks and hills sets off its many historic buildings, making it particularly attractive in late spring, summer, and early autumn.

Prague has a population of about 1.2 million. German and English are the most widely understood foreign languages. Within the Western foreign and diplomatic communities, English, French, and German are spoken in addition to Czech. Americans are currently popular among Czechs, and the opinion that Czechs have of our culture is high.

English is rapidly becoming the most-learned language.

History

The history of Prague began in the ninth century around the castles situated atop the Hradčany and Vysehrad hills, on the left and right banks of the Vltava, that still dominate the city's skyline. A major trade center a century later, Prague achieved real prominence when King Wenceslaus I of Bohemia founded a German settlement here in 1232. As the capital of Bohemia, Prague grew in size and prosperity and became one of the most splendid cities of Europe under Emperor Charles IV in the 14th century.

For the next 300 years, Prague was the residence of the emperors of the Holy Roman Empire; in the late 16th and 17th centuries, it was an important center for science, and the home of astronomers Tycho Brahe (1546–1601) and Johannes Kepler (1571–1630). In the mid-18th century, the city was occupied by the French and Prussians and, although Prague had lost much of its importance, it remained a major cultural center. The buildings constructed at that time gave the city a distinct baroque and rococo character.

Prague was the center of Czech revival in the 19th century, and played an important role in the 1848 revolution until it was bombarded and captured by Austria. In 1918, Prague was named the capital of the newly created Czechoslovak Republic. During World War II, the city was occupied by Germans, but was liberated by Soviet troops in May 1945.

The cultural aspects of the city developed extensively between the two World Wars. The center of Prague, the city's old section, is an architectural treasure characterized by the beauty of its location on the rolling banks of the Vltava. Hradčany Castle, on the river's left bank, dominates the city. A grand structure with many wings, the castle was the former royal residence and the seat of the Czech presi-

dents. The Gothic Cathedral of St. Vitus, next to the castle, was begun in the 10th century and finally completed in 1929; it contains the tombs of many kings and emperors. There are numerous other churches and palaces in the Hradčany quarter of the city.

The best-preserved part of Old Prague is Mala Strana (lesser town), situated on the slope extending from Hradčany Castle to the river. Mala Strana is connected with Staré Město (Old Town), on the right bank of the Vltava, by the 14th-century Charles Bridge, the most beautiful of Prague's water spans. Staré Město contains the Stavovske Theater; the Clementinum Library; the Carolinum, dating to 1348 and the oldest part of Prague University; and other historic structures. Adjacent to Staré Město is the Old Synagogue, built in the 13th century, and once part of the city's Jewish ghetto. In all, Prague has 77 palaces, about 150 ancient town houses, seven summer palaces, 20 mansion homes, over 100 churches, and more than 33 former monasteries.

A number of interesting towns surround Prague. Kutná Hora is known for its architectural beauty, including the Italian Court and several buildings which are examples of medieval stone mansions. There are a castle and a spa at Poděbrady. Mladá Boleslav is the center of Czech's automobile industry, but the town also boasts a castle in its old Renaissance section. Mělník, situated at the confluence of the Vltava and Elbe Rivers, is known for its vineyards and wine harvests, as well as a baroque-adapted mansion which features a picture gallery. The town of Kladno, known for the production of iron and steel, had modernized and expanded so that it nearly reaches the village of Lidice, which was destroyed by the Nazis in 1942 and is now a memorial. Příbram, a mining town, has an outdoor mining museum and baroque buildings which are part of its famous pilgrimage.

Several towns surrounding Prague are known for their mansions. Near the town of Benešov is the impressive mansion Konopiště; there is also a baroque mansion at Veltrusy that is situated in a park; a Renaissance mansion at Nelahozeves which houses a collection of modern Czech art; and a mansion at Žleby that exhibits arts and crafts. Other towns surrounding Prague have interesting examples of homes typical of certain eras or geographic locations. The stone cottages at Trébíz near Slaný have baroque influence; typical central Bohemian wooden cottages are found in Přerov; farm buildings in Kouřim are characteristic of the Kolín district; and the wooden mill at Bláhová Lhota, preserved in its original surroundings, is now a museum. The landscape of the area surrounding Prague has inspired many composers, and the towns of Jabkenice, Vysoká, Krčovice, and Všebořice all have landmarks to this effect. Numerous battlefields also dot the area. There is a memorial at Milín which marks the place where the final shots of World War II in Europe were fired on May 11, 1945.

Utilities

Electric current is 220v, 50-cycle, AC. Voltage stabilizers are useful but not usually required for delicate electronic equipment. Surge protectors for computers and TVs/ VCRs are recommended and can be purchased locally. Cycles may vary slightly.

Food

Basic foods are regularly available in Prague. Fresh fruits and vegetables have been a problem at times, but large supermarkets offer a wide assortment of groceries, vegetables, and fruits, both local and imported. Local food stores are beginning to have a wider assortment and a more reliable supply of groceries. But don't expect to find all fruits and vegetables all the time. Items will be available for a while, then disappear, only to reappear later. The quality of both meat and vegetables may vary; milk may spoil quickly

Three bridges in Prague

Courtesy of Mira Bossowska

because it is not refrigerated during distribution.

Clothing

Though acceptable clothing can be found, and both quality and selection are getting better, you may still wish to purchase or order outside of the Czech Republic. Prices of products on the German economy are higher than in the U.S.

No unusual clothing is required for Prague. A fall and winter wardrobe suitable for damp New York weather should be satisfactory. Bring many pairs of low-heeled, perhaps crepe-soled, shoes or boots for Prague's cobblestone pavements. Overshoes, galoshes or boots, raincoats, and umbrellas are needed. Because of the soft coal used for heating in the Czech Republic, light-colored clothing requires frequent cleaning in the winter.

Supplies and Services

Basic toiletries, cosmetics, tobacco products, medicines, and household

supplies are available, either from the duty-free shops, or local stores.

Good, reasonably priced tailors and dressmakers are available in Prague. Local dry cleaning, laundry, and shoe repair services are adequate. Beauty and barbershops provide adequate service, although some women prefer to supply their own hair care products.

Repair facilities for many makes of newer automobiles, audio and video equipment, and household appliances are available. However, parts may be unavailable. Repairs can take a long time, and the quality of the work varies.

Domestic Help

Household help is particularly useful for local shopping or various errands if you know there will be a language barrier.

Qualified personnel are available, but it can sometimes be difficult to find someone who has satisfactory English skills. Minimum wages are

set by Czech regulations and are still not high by U.S. standards. In addition to wages, the employer must provide meals (or a fixed payment in lieu of them) during working hours, and must pay a 36-percent Social Security tax to cover Social Security, medical care, and sick pay. Live-in help is unusual for Prague. Employees get two to four weeks of annual leave per year, which they usually prefer to take during summer. Cash can be paid instead of vacation, by agreement. A month's probation follows hiring, and an employer or employee must give two months' notice before termination.

Religious Activities

Prague now has services in English for those of the Anglican, Baptist, Interdenominational Christian, Lutheran, Roman Catholic, and Jewish faiths. There are also several discussion groups in English for various religions. A listing of times and places for services can be found in the English-language weekly, the Prague Post. Czech-lan-

guage Protestant services are held in local churches. Roman Catholic Mass is said regularly in Czech in local churches, including St. Vitus Cathedral in the Prague Castle, and traditional Czech Masses are sung for religious holidays. Jewish services are held in the Old-New Synagogue in the Jewish Quarter, the Jerusalem Synagogue, and Bejt Simcha.

Education

The International School of Prague (ISP), founded in 1948, was for many years located in the U.S. Embassy. Now it is housed on a beautiful new campus in Prague 6 (an administrative district in the northwestern part of the city),

The school is governed by a nine-member board, most of which is elected by parents, but with an Embassy representative as well. The school is fully accredited by the Middle States Association in the U.S. and the European Council of International Schools. The school employs an American director, and most of the teachers are recruited from the U.S. The enrollment has grown rapidly in the last few years and now has about 600 students representing more than 60 nationalities. Grade levels offered are pre-school through grade 12 with the U.S. and the International Baccalaureate diplomas offered. Children must be 4 by September 1 to be enrolled in preschool.

The school follows a U.S.-based curriculum, enriched by international perspective and content. Re-entry into U.S. schools is generally not a problem. Facilities include a large library, two computer labs, four science labs, two gymnasiums, and a theater as well as outdoor playgrounds, sports fields, and basketball and tennis courts. No boarding facilities are available. The school has a full extracurricular activity program, which includes intramural and interscholastic sports (soccer, volleyball, basketball, softball, and swimming), drama productions, student newspapers, student government, literary magazines, band, and choir. Transport to and from

school is a parental responsibility via private car, taxi, or public transportation. The school year is divided into trimesters and runs from late August to the second week of June, with a one-week vacation in October, a two- to three-week Christmas/New Year's break, a one-week winter break in February, and a week off at Easter.

An elementary school, including nursery and kindergarten, is run by the French Cultural Center in Prague. The demand for enrollment in the nursery and kindergarten often exceeds available space. Instruction is in French and follows a standard French curriculum.

There is at least one Montessori preschool.

Other options for younger children include a number of privately run English language schools, some recently opened. These schools take children as young as 18 months old until 6 or 9 years of age; others enroll children at 3 or 4 years of age until they are 18.

Special Educational Opportunities

Adults may attend Charles University in Prague. Private instruction in art and music can be arranged.

Sports

Golf courses are available. There is an excellent golf facility near Karlstejn, a beautiful palace, about 30 minutes from Prague. Outside of Prague, there are first-class 18-hole courses at Mariánské Lázně and Karlovy Vary, though they are two hours away. There is a nine-hole course at Pobebrady, and, in town, the Motol course, located on a side of a hill, is small, but challenging.

Skiing and ice skating are popular winter sports. The nearest ski slopes can be reached in a day's outing. Small hotels can accommodate overnight trips, but reservations must be made well in advance.

Skis, boots, clothing, and other equipment can be obtained both locally and from outside sources.

Used equipment is available in local markets that sell previously owned equipment.

Indoor ice skating rinks are open to the public in Prague. Weather permitting, skaters use outdoor rinks and ponds, though indoor facilities are also available and inexpensive. Skating instruction is readily available and inexpensive. Through the auspices of a local skating club, an ice skating rink is made available to the foreigners for two hours on Sundays during winter months for a reasonable fee.

Hunting and fishing have long traditions in the Czech Republic and can be excellent. Pheasants, ducks, red deer, wild boar, stag and other game is plentiful. Membership in hunting clubs, as well as individual hunts for big game, can be expensive, and those wishing to hunt must pass appropriate firearms tests. Fly fishing in the Czech Republic is very good, and licenses and permits can be arranged. Well-marked hiking trails cover the countryside. Riding horses are available. Boating on both rivers and lakes, camping with tents or trailers, and outdoor bathing are popular. Particularly for those interested in architecture, photography can be rewarding. Cycling can be very enjoyable, once you learn how to avoid the cobblestone streets. Equipment for sports and outdoor activities is available locally.

Children's sports are most easily pursued through intramural and interscholastic school programs. Some American children have participated in Czech youth sports programs, such as ice hockey, basketball, and baseball. The Czech programs tend to require almost year-round practice and can be very intense with little possibility of pursuing more than one sport in a year.

Touring and Outdoor Activities

Prague is an architectural and historical gem-walking is a pleasure. Parks, both large and small, public gardens, and a zoo add to the variety of things to be admired.

© Cordaiy Photo Library Ltd./Corbis. Reproduced by permission.

Square of Liberty in Brno, Czech Republic

Many sightseeing and picnic areas are in the immediate vicinity of Prague, and weekend excursions to castles and historic cities and sites are popular. Vienna, Berlin, Budapest, Munich, and Nuremberg are each within five to six hours by car. Other European centers can be easily reached by air.

Entertainment

Prague provides a varied and entertaining musical diet. The Czech Philharmonic, one of Europe's outstanding musical organizations, performs twice a week, except in summer. During summer, the philharmonic has outdoor concerts. Light classical music is performed in Prague's public gardens. Both Western and Czechoslovak operas are performed, and some foreign operas Czech. In addition, numerous recitals and performances by the Prague Symphony, the country's second most famous orchestra, are given. The famous Prague Spring Music festival in

May boasts performers from around the world.

Numerous theatrical presentations, classical and modern, are performed, usually in Czech. Puppet shows, pantomime, and operettas are performed, as are some world-renowned theatrical performances unique to Prague, including the Black Light Theater and Magic Lantern.

Prague also has several movie theaters showing U.S., British, French, and Italian films in the original language, with Czech subtitles or dubbing. The Italian and French cultural centers have regular film programs in Italian and French.

Prague has many museums and a fine National Gallery of Art.

Spectator events include horse racing, including the famous steeplechase at Pardubice, tennis, basketball, softball, soccer, and ice

hockey. Occasionally, American athletes participate in international competitions, and some exhibition teams visit Prague.

Although it is not known for its fine cuisine, Prague has good restaurants, as do other large cities, such as Brno. Prices are considerably lower than in the U.S. and Western Europe. Although variety can be limited, new restaurants are opening seemingly every day. The variety of ethnic restaurants ranges from Indonesian to vegetarian to Thai to Chinese and Tex-Mex. In less expensive restaurants, food may be rich in fat and high in carbohydrates. Pubs also provide good food; local specialties include goulash with dumplings or potato pancakes and fried cheese or pork with rice. Several restaurants have picturesque interiors. Some provide dinner music.

Western jazz and country music are popular. Good dance music can be

found in nightclubs. Czech beer is excellent and inexpensive. Native wine is fair, and the local sparkling wines are good, but both are reasonably priced.

Social Activities

There are several American-owned restaurants and clubs in Prague that provide natural gathering places for Americans.

There is an International Women's Group, begun in 1991, that now has more than 600 members. They have a coffee meeting the last Tuesday of every month and a newcomer's coffee the second Tuesday of every month, either in the morning or the evening to accommodate members' working schedules. Membership is Kc 1,000/year. A monthly newsletter is distributed to members. The club is advertised in the local English weekly, the Prague Post.

Brno

Brno, the second largest city in the Czech Republic, is located in the eastern part of the country, about 120 miles southeast of Prague. Situated at the confluence of the Svatka and Svitava Rivers, it is Moravia's chief city, with a population of 392,300.

A thriving industrial center since the completion of the Brno-Vienna railway line in 1839, the city is known chiefly for its woolen industry and for the manufacture of textiles. Machinery, mostly tractors, machine tools, and armaments are also produced. The well-known Bren gun, later manufactured in England, was developed in Brno.

Tourism is important to the economy. A large international engineering trade fair is held annually in September, and other exhibitions are sponsored in winter and spring.

Brno has several institutions of higher education, including Masaryk University (founded in 1919), Beneš College of Science and Technology, the Janáček Music Conservatory, and colleges of agricul-

ture and veterinary science. Research institutes are connected with these schools.

Landmarks in the city include a 15th-century cathedral, several Gothic and baroque churches, and the old and new town halls. The Moravian Museum has an archaeological collection which is among the finest in Czech. The city also boasts an outstanding library, the Janáček Theater, a large zoo, and an ice skating stadium. Near Brno is the town of Slivovice, known for its plum brandy.

Historically, Brno was a Celtic settlement which grew up between two hills. It was part of the Bohemian kingdom until declared an imperial free city by King Wenceslaus I in 1243. Brno flourished in the 13th and 14th centuries, was besieged by the Swedes in 1645, and served as Napoleon I's headquarters during the 1805 Battle of Austerlitz. The Spielberg Castle, captured by Hapsburg forces during the Thirty Years War, became their most notorious political prison from 1740 until 1855.

Ostrava

Ostrava, located in the heart of the Czech Republic's mining and industrial regions, is 175 miles east of Prague, near the Polish border. It is the capital of the North Moravian Region. Situated near the junction of the Oder and Opava Rivers, Ostrava's major products are anthracite and bituminous coal, iron and steel, rolling stock, machinery, and ship and bridge parts. Ostrava is a regional administrative center, a road and rail hub, and the site of a large chemical industry and several hydroelectric stations.

Ostrava, founded in 1267, was formerly called Moravská. It became prominent in the Middle Ages, mostly because of its strategic location at the entrance to the Moravian lowlands. The opening of the first coal mine and the coming of the railroad brought Ostrava industrial prominence early in the 19th cen-

ture. From 1939 until 1945, Ostrava was occupied by German forces, but soon after the war ended, rapid development began. Suburbs have built up around the city, and the population has grown to 332,000.

Also a cultural and educational center, Ostrava is the site of the renowned Academy of Mining Engineering, a university, and several other technical colleges. It also has a philharmonic orchestra, professional opera, and several theaters.

Plzeň

Plzeň is another of the Czech Republic's well-known industrial cities. Located in Bohemia near the German border, Plzeň is 60 miles west of Prague. It is situated near a region of coal fields in an area where sugar beets and hops are grown. Plzeň's beer—Pilsner—has been brewed here for 700 years; it is internationally famous, and exported throughout the world. The city is also the site of the huge Skoda Works, which, under Communist rule, were nationalized and renamed the Lenin Works, and where heavy machinery, tools, automobiles, locomotives, and armaments are produced. Other industries include distilling, sugar refining, and papermaking, as well as pottery and cement production.

Plzeň's educational and cultural facilities include a medical school, a technical university, museums, and theaters. The 13th-century Gothic church of St. Bartholomew and a 16th-century Renaissance town hall are some of the historic landmarks found in the city.

Plzeň was founded in 1290 and was an important trade center. The industrialization of the city dates back to the late 19th century with the establishment of the Skoda Works. Plzeň belonged to the Austro-Hungarian monarchy until 1918, when it became part of the newly independent Czechoslovakia. Taken by German forces in 1939, it was Germany's leading armament producer during World War II, and was consequently heavily bombed

Royal Palace in Prague

by the Allies. Plzeň was liberated and returned to Czechoslovakia in 1945.

Today, Plzeň's population is close to 175,000.

Olomouc

Olomouc, in the northeast section of the Czech Republic, 125 miles east of Prague, was the country's second largest town until the 17th century. Although it is set in lush, green countryside, it is now an industrial city whose factories produce steel, machinery, electrical equipment, and food products—especially chocolate and candy. Olomouc is home to 105,000 residents.

The city has a university, founded in 1566, the Cyril-Methodius Theological faculty, and several libraries. Notable landmarks in Olomouc include the Cathedral of St. Wenceslaus, dating from 1109, when it was built as part of Přemyslid Castle; a magnificent 600-year-old town hall; and two Gothic ecclesiastical structures, the Churches of St. Catherine and St. Maurice. The folklore and art of the region are displayed in an open-air museum in the nearby town of Rožnov pod Radhoštěm.

Olomouc was a strongly fortified ancient town and, from 1187 to 1641, the capital of Moravia. The city was the site of the Bohemian victory over the Mongols in 1242. It was held by the Swedes from 1642

until 1650. The Marquis de Lafayette was imprisoned in the fortress in Olomouc. Today, parks and gardens decorate the former site of the fortress.

An annual flower show is the major attraction of the region.

OTHER CITIES

ČESKÉ BUDĚJOVICE is the place from which the first horse-drawn railway in continental Europe ran to Linz, Austria, beginning in 1827. The city lies on the Vltava River, 80 miles south of Prague, and is capital of South Bohemia and a large industrial center with a population of more than 92,000.

České Budějovice's impressive town square, its Dominican monastery built in 1265, its 13th-century Cathedral of St. Nicholas, and numerous other old and magnificent buildings are of particular interest. The city, whose German name is Budweis, has been designated a historical town reserve by the Czech Government. Major enterprises in České Budějovice are a brewery (producing Pilsener beer for which Bohemia is famous), and factories making such diversified products as pencils, furniture, and processed foods.

FRÝDEK-MÍSTEK, set in the midst of the deep forests of the eastern Czech Republic, south of Ostrava, is an industrial center with about 60,000 residents. The city's baroque chateau exhibits collections of folk art in its museum, and also houses an institute of ethnography. Other points of interest include a small Renaissance church, and a town hall which was built in 1602. For many years, the famous Czech poet and "Bard of Silesia," Petr Bezruč, made his home here.

HRADEC KRÁOVÉ is a large and important city on the Elbe River 60 miles east of Prague. Founded in the 10th century, it is one of the oldest Bohemian towns, and many of its historical buildings erected in the Middle Ages have been preserved, including a cathedral, a town hall, and two large marketplaces. One of the bloodiest battles of the Austro-Prussian War was fought near Hradec Králové in 1866. The city underwent sweeping architectural modernization in the years between 1900 and 1930, and is now a thriving industrial center whose factories produce ship engines, chemicals, musical instruments, glass, and processed foods. The population is approximately 100,000.

LIBEREC is situated in the north central section of the Czech Republic, on the Neisse River, 55 miles northeast of Prague. Founded in the late 13th century, destroyed by war in the 15th century, and reestablished in 1449, Liberec has a population of about 100,000. Its most

important industry—textiles—has steadily developed since 1579.

PARDUBICE, the main cultural and administrative center of the Elbe valley, is noted both as an industrial city and historical reserve. Now home to a population of roughly 95,000, it was a large (for the times) settlement in the 13th century. After a devastating fire in 1507, many of the structures of Pardubice were rebuilt, but few of these survived the Thirty Years War and the siege of the Swedish armies during the first half of the 17th century. Some notable examples remain, including a 13th-century church, a Renaissance royal castle, and part of the town fortifications. On the outskirts of the city is a museum devoted to the national resistance movement. A museum of history and archaeology and the East Bohemian Gallery are located in the city, which is 60 miles east of Prague.

ÚSTÍ NAD LABEM is a city of 90,000 on the Elbe River in the northwest Bohemian Region of the Czech Republic, 45 miles from Prague. It is a major tourist spot which annually draws thousands of visitors to its historical buildings, sports center, and nearby chalets and thermal springs. Overlooking the city is Strékov Castle, said to have inspired Richard Wagner's *Tannhäuser*. A Dominican monastery, built in 1731, is of major interest; it was erected on the site of an older church, dating from 1186, and part of which is now a concert and exhibition hall. Anton Raphael Mengs, the Bohemian painter, was born in Ústí nad Labem in 1728. A river port and industrial center that became part of Germany in the 1938 Munich Pact but reverted seven years later to Czechoslovakia, Ústí nad Labem today produces chemicals, iron and machines, and processes food.

ZLÍN, in southern Moravia, is the center of the country's shoe industry, founded here in 1913 by Tomáš Bat'a. A factory community grew in the area, eventually spreading Bata manufacturing plants (spelled without the apostrophe) throughout the

world. Nationalized after World War II, the company in the Czech Republic is now called Svit National Corporation; it maintains a museum dedicated to shoemaking over the past six centuries. The city, with a population of about 85,000, was originally called Zlín, was named Gottwaldov in 1949 in honor of Klement Gottwaldt, the country's first Communist president, but was renamed Zlín after the "Velvet Revolution." The International Festival of Children's Films is held here.

COUNTRY PROFILE

Geography and Climate

The Czech Republic lies in the heartland of Central Europe. It has fair to moderate summers, lush springs, and pleasant autumns. Winters can be wet, gray, and cold; Prague gets occasional but light snowfalls.

The main geographic subdivisions are the Czech lands of Bohemia and Moravia. At an altitude of about 500 feet, Moravia lies east of Bohemia and rises from the north of the Danube Valley. The remainder of Moravia consists of valleys and forested mountains and is bordered on the east and south by Slovakia and on the north by Poland. Prague lies on the Vltava River (Moldau in German), which flows northward and joins the Labe (Elbe) north of Prague. Prague, with an altitude of 800 feet, lies at the center of the gently rolling Bohemian Plain, which is surrounded on three sides (the German and Polish frontiers) by mountains 5,000 feet high. These mountains protect the country from the extremes of western and northern European winters. Nevertheless, high humidity makes the winter cold penetrating.

Prague's climate is temperate, with pleasant weather between May and August. Temperatures range from January's average daily high of

32°F (0°C) and low of 22° F (-4°C) to July's average daily high of 76°F (24.5°C) and low of 56°F (14°C). From November through March, the reduced hours of daylight (on cloudy days, for example, drivers feel compelled to turn their headlights on about 3:30 in the afternoon) combined with smog and raw weather create a gloomy atmosphere. Average annual rainfall is about 30 inches, distributed throughout the year. Humidity averages about 80 percent. Light to moderately heavy snow can be expected during January and February. Pollution can be severe during the winter months because of soft burning coal.

Population

The Czech Republic's population of more than 10 million includes 8.3 million Czechs, 1.3 million Moravians, and approximately 300,000 Slovaks. Minorities include Poles, Germans, Silesians, Romany (Gypsies), and Hungarians. Before World War 11, about 3.5 million Germans lived in Czechoslovakia, but most were expelled in 1945. Of the pre-war Czechoslovak population of 360,000 Jews, fewer than 10,000 remain.

Czechs are predominately Roman Catholic, although much of the population considers itself agnostic. There is a large Protestant minority.

A generation of Socialist rule has had no lasting effect on the traditional cultural ties of Czechs to Western Europe-France, Italy, Germany, and Austria. Czechs are proud of their earlier role in European cultural and political history. Many Americans (including Secretary of State Madeleine Albright) are of Czech descent, and the bond between the Czech lands and the U.S. remains strong.

Public Institutions

The Czech Republic, the western two-thirds of the former Czech and Slovak Federal Republic, is a parlia-

mentary democracy. On January 1, 1993, the Czechs and Slovaks divided their common state of more than 75 years.

The Czech Parliament is bicameral, consisting of the Chamber of Deputies and the Senate. The Senate comprises 81 members elected to two-, four- and six-year terms. The 200-seat Chamber of Deputies includes delegates elected from seven districts and the capital for four-year terms, on the basis of proportional representation.

The prime minister, who traditionally has represented the majority party of coalition, has considerable power. These powers include the right to set the agenda for most foreign and domestic policies, to mobilize a parliamentary majority, and to choose the governmental ministers. The president of the republic, as the formal head of state, is granted specific powers to nominate constitutional court judges, to dissolve parliament under certain conditions, and to enact a suspensive veto on legislation.

The Czech political scene supports a broad spectrum of parties ranging from the semi-reformed Communist Party on the far left to the nationalist Republican Party on the extreme right. However, Czech governments since the fall of communism in 1989 have been coalitions of right-of-center and centrist parties, which have derived most of their popular support from the swift, free market reforms they have advocated.

Arts, Science, and Education

A long tradition of devotion to the theatrical arts and the musical heritage of Mozart, Smetana, Dvorak, and Janacek is reflected in the Czech cultural scene. The leading theatrical institution, the National Theater, produces opera, ballet, and drama. Numerous theaters in Prague and the provincial cities are well-attended. The Czech Philharmonic Orchestra has a worldwide reputation, and many other excel-

lent musical organizations exist. The annual Prague Spring Festival is the cultural highlight of the year. Western popular musicians now include Prague in their tour schedules. Several theatrical groups have gained international recognition. Czechoslovak movies of the 1960s are world-renowned and many American movies play in Prague with Czech subtitles.

Prague's Charles University, founded in 1348, is the oldest university in central Europe. Czech science, education, and technology, once compared with the best in the world, suffered from the heavy hand of political control under the Communists.

Commerce and Industry

The Czech Republic has a well-diversified and highly industrial economy. Its reform process did not start until after the November 1989 Velvet Revolution somewhat later than in Poland and Hungary. The government has a strong focus on economic issues and has moved rapidly since 1990 to adopt free-market, Western-oriented business policies and practices.

The Czech Republic's economic transformation started shortly after the 1989 Velvet Revolution with measures to privatize the economy through property restitution and the transfer of state-owned businesses to the private sector, the liberalization of foreign trade and foreign currency restrictions, and the lifting of price controls. It has now largely consolidated its economic transition to a Western market economy with about 75 percent of the enterprises now in private hands. State control, however, persists in energy, banking, and infrastructure firms. The country enjoys a smoothly functioning democracy with moderate levels of deficits, strong foreign currency reserves, single-digit inflation, and moderate, though rising, levels of unemployment.

Due to a lack of microeconomic restructuring coupled with recent austerity measures, the country is now undergoing needed economic retrenchment after high, but unsustainable, levels of growth in recent years. Following a period of economic contraction in the late 1990s, the Czech economy has recently shown signs of renewed growth.

The country has since 1989 pursued balanced budgets, incurring small deficits in recent years. That policy orientation, however, looks set to change with the current recession and the new social democratic government's pledge to support a wide range of social welfare and investment programs.

These programs were promised by the new government, which was elected by capitalizing on citizens' anxiety about their economic future. Wage levels average \$200/month and are still only 10-20 percent of those in neighboring Germany and Austria. Productivity is also substantially lower because of chronic under-investment and the long absence of a competitive market environment. The state retains control of household energy prices, rents, and certain utilities. These prices will gradually increase to market levels at which point they will be liberalized entirely.

While the Czech Republic retains many hallmarks of macroeconomic stability, unfinished elements in the transition have produced strains in trade balances, competitiveness, and company restructuring. A strong legal and institutional framework for a market economy is needed to consolidate the transition. Lack of strong ownership, a weakly regulated and opaque stock market, scant threat of bankruptcy, and relaxed credit policies have allowed firms to put off fundamental restructuring.

The Czechs have continued work on reforms, such as the creation of a Czech securities commission, privatization of the three large state-controlled banks, and stricter rules on investment funds and bank lending,

to encourage restructuring and help realize the potential in the private sector.

While there are still economic ties to the former East Bloc trading partners, such as oil and gas imports from Russia, trade with the former East Bloc has fallen off substantially since 1990. In recent years, the Czech Republic has successfully reoriented its economy to the West. Its main export market is now the European Union, and the majority of foreign investment comes from EU member states.

As a member of the OECD, the Czech Republic remains open to foreign investment in virtually all sectors. The Czech Republic's economic stability has attracted an estimated \$7 billion in foreign investment. The U.S. holds 13% About 500 U.S. companies are represented in Prague-of foreign investment, the third largest portion after Germany and the Netherlands, respectively. The Czech Republic has an open investment climate and particularly welcomes U.S. investment as a counterbalance to the strong economic influence of Western Europe.

Machinery and transport equipment comprise leading Czech exports. Enforcement of intellectual property protection, lack of transparency in capital market transactions, and the need for modern commercial laws and judicial system remain key concerns of businesses operating in the Czech Republic.

The country is a member of the OECD, the Central Europe Free Trade Agreement, and has applied for membership in the European Union, membership in which is the country's leading foreign policy goal. Formal negotiations toward EU accession began in November 1998, but as yet, have not been accepted.

Transportation

Automobiles

Public transportation within Prague is excellent, but you will need a car to see the region easily.

All vehicles must pass a technical inspection and emissions test before they can be registered. They need to have a factory-installed catalytic converter.

Changes to Czech vehicle registration laws have made it much more difficult to register cars that do not meet EU specifications. It is possible to get a waiver for registration of a nonconforming vehicle (i.e., U.S. or other non-EU specification vehicle), but the process can be complicated.

Individuals should bring with them as much technical information about their vehicles as possible, such as fuel consumption, top speed, load weight, etc.

Third-party liability automobile insurance from the Czech Insurance Company is compulsory. Once the vehicle registration process officially starts, the local liability insurance, which is inexpensive, can be bought. Collision and theft insurance are also available locally.

Compact or smaller cars are preferred because of narrow city streets, fuel economy, and resale value. Any standard make car is suitable. Cobblestone streets and poor secondary roads are common and can be hard on a vehicle's suspension. Service facilities for most makes of European and

Asian cars are adequate. In addition, there are at least three facilities in Prague that can service many U.S.-made, U.S.-model cars that are not sold in Europe.

Several Western auto firms have sales and service outlets in Prague. Registration fees are nominal. Czech law requires that cars be equipped with catalytic converters, left and right outside rearview mirrors, mud flaps for rear tires, a rear fog light, a European first-aid kit

and “triangle” emergency breakdown marker, a set of spare fuses and bulbs, one spare wheel screw, and one spare spark plug. Snow tires are recommended for winter driving and radials provide better traction in cities. Austrian and German authorities often require that vehicles entering their territory in winter have tire chains.

Traffic moves on the right, and road signs and traffic conventions are similar to those used throughout Europe. The Czech Republic's main roads are adequate and in winter are salted or “sanded” (actually heavily covered with cinders), although not thoroughly plowed. Compared

to the U.S. or Western Europe, traffic on the highways is light, although the traffic situation in Prague during working hours and throughout the Czech Republic continues to worsen as more vehicles take to the roads.

Gas station facilities are excellent, with newly built, modern stations almost everywhere. Many stations are open 24 hours. Czech gasoline is sold in four grades: normal, 86 octane; special, 90 octane; 95 octane natural (lead-free); and super, 96 octane. Gasoline in the Czech Republic is about \$2.50/gallon.

A U.S. drivers license is valid in the Czech Republic, but an international license is required for some neighboring countries; it is recommended that all drivers obtain one before arrival. International licenses can be obtained locally, but only on the basis of a Czech license. Czech licenses can be obtained, though a brief test is required, even for holders of valid U.S. licenses. Without a valid U.S. license, a lengthy and expensive driver-training course and a thorough exam are required.

Local

Subway, trams, and buses are used in the city and suburbs. Frequent service is available up to midnight, after which trams and buses continue on a reduced schedule. Night

trams-indicated at stops by a white number on a dark blue background-run every 40 minutes. There are also five night buses that run out to some of the farther reaches of the city. The metro does not operate at all from midnight to 5 a.m. Public transportation is inexpensive, but prices are increasing. A single ticket costs about \$0.40 and a monthly pass about \$15. Yearlong passes are also available, but you must buy them in January.

Taxis are usually found at stands in the central part of town and at the airport. In outlying sections, you must call for a taxi. Outside of the tourist season, service is reasonably prompt up to 10 or 11 p.m. Many expats, use one or two companies that are dependable and charge fair, reasonable rates. Caution is advised for the many self-employed drivers, which have the reputation of practicing price-gouging.

Regional

The Czech Republic is served by a comprehensive network of bus, rail, and air transport; however, reservations are difficult to get during the holidays, music festivals, and trade fairs.

Train service is good, and there are several modern international express train services. Rail transport within the Czech Republic and to other nearby European countries is inexpensive, though prices continue to increase. Daily flights operate between Prague and other major European capitals.

Communications

Telephone and Telegraph

Local and long-distance telephone, telegraph, fax, and telex services are available at reasonable cost within the Czech Republic. However, service outside the country, and particularly outside Europe, is much more expensive. USA Direct or similar American credit card services can substantially reduce the cost of personal calls to the United States. Callback services, which are another option for moderate long-

distance calls, can also be used. Although improving, the quality of local telephone service is still erratic by U.S. standards, and line quality is often poor. This is particularly troublesome to those using modems and personal computers at home for Internet access. There are several Internet Service Providers (ISPs) in Prague of varying quality, reliability, and cost. Prices differ by almost an order of magnitude, so comparison-shopping is recommended for new arrivals wishing the service. Some international ISPs, Compuserve, and ibm.net, for example, also have points of presence in Prague.

Radio and TV

There are many AM and FM radio stations, including the BBC (101.1 FM). Czech FM stations have play lists similar to many American pop and country stations. Occasionally, there are special programs in English. Some or parts of advertisements are even in English. Short-wave radios can pick up BBC day and night, VOA morning and evening, and other European stations in English and other languages. VOA may also be heard in English at various times in the day on 1197 AM.

There are four TV channels, with most broadcasts in Czech. One channel carries a mixture of foreign broadcasting. Broadcasts are sometimes dubbed or subtitled, but often are in English, German, French, Russian, and Spanish. American (NTSC) TVs can be converted to the PAL system used in the Czech Republic, but with difficulty. Multi-system TVs capable of processing both local PAL broadcasts and the NTSC system used by American VCRs are available in Germany or they can be mail-ordered. Viewing is invaluable for studying the Czech language. Some employees have installed satellite dishes that enable them to receive English-language news programs and other broadcasts-also using the PAL system from one or more European satellites. Dishes are available locally and in Germany.

VCRs are also popular. There is also at least one video rental business, with thousands of English-language tapes, that caters to the large American and British expatriate community.

Newspapers, Magazines, and Technical Journals

International editions of news magazines, such as Time, Newsweek, and The Economist, are available at local newsstands, as are a wide variety of other popular magazines.

Another good source of local information is the Prague Post, an English-language weekly, that provides news of the Czech Republic and surrounding countries as well as lists of restaurants and cultural events.

Health and Medicine

Medical services are provided to resident foreigners in Prague at the foreigner section of Na Homolce Hospital, staffed by English-speaking general practitioners, pediatricians, and dentists. A doctor is on call at all times. The foreigner section refers patients to specialists for laboratory tests and hospitalization, as necessary. Privatization of health care facilities is gradually taking place in Prague in some specialties, such as OB/GYN, dentistry, and ophthalmology. Routine and emergency care in Prague is adequate, but local differences in the organization of medical care, a limited choice of physicians, cultural differences, and the language barrier can create problems.

Community Health

Community sanitation in the Czech Republic is high. Public health controls help to prevent outbreaks of serious diseases. Milk products are pasteurized and generally safe as long as they are stored properly.

The water in Prague is not fluoridated, and supplements, available from the health unit, should be given to children up to the age of 13. Generally, the water in Prague is

safe to drink and meets acceptable standards according to World Health Organization guidelines for adults and children over one year of age. The nitrate level in the water is potentially hazardous to small infants (under one year of age). Bottled or distilled water is recommended for this age group.

Preventive Measures

The most prevalent local diseases are hepatitis, measles, whooping cough, and respiratory diseases, such as bronchitis and pneumonia. Upper respiratory ailments are common during the winter months. Prague's damp and sooty winter often brings on or aggravates bronchitis, viral influenza, head and chest colds, asthma, sinus trouble, and other respiratory difficulties. Coughs, hoarseness, and bronchial irritations seem to last longer, and people with a history of asthma may experience flare-ups, probably due to chronic irritation from the pollution. Vitamin supplements are recommended during the winter months when local markets have fewer fresh fruits and vegetables. Ticks in the Czech Republic can transmit a viral infection known as tick-borne encephalitis.

LOCAL HOLIDAYS

NOTES FOR TRAVELERS

Passage, Customs & Duties

No immunizations are required, unless the traveler comes from areas where yellow fever or cholera is endemic.

A valid passport is required, but a visa is not necessary for U.S. citizens for tourism, short study or business visits up to 90 days. Visas are required for longer stays and for any gainful activity; application can be made at any Czech embassy or consulate (outside the Czech Republic). For further information concerning entry requirements for the Czech Republic, travelers can contact the Embassy of the Czech Republic at 3900 Spring of Freedom Street, N.W., Washington, D.C. 20008, telephone (202)274-9103 or visit the Embassy's web site at <http://www.mzv.cz/washington>

Americans living in or visiting the Czech Republic are encouraged to register at the Consular Section of the U.S. Embassy in the Czech Republic and obtain updated information on travel and security within the Czech Republic. Information is also available on the Embassy's web site at <http://www.usembassy.cz>. The U.S. Embassy in Prague is located at Trziste 15; tel. (420) (2) 5753-0663; for after hours emergencies only - tel. (420) (2) 5753-2716.

Pets

Pets may be taken into and out of the Czech Republic without major problems. Dogs must be licensed, on a leash, and if large or unreliable, muzzled when in public. When taking a pet into or out of the Czech Republic, a recent veterinary certificate (not more than three days old) attesting to the animal's health is required, as well as an international certificate with proof of current vaccinations. Rabies and distemper immunizations are necessary, and it is recommended that immunization against the local parvovirus be

given to dogs and cats soon after arrival.

Firearms and Ammunition

The Czech government revised the firearms laws in 1997 to come into line with EU norms. Importation of firearms (both shoulder arms and hand guns) is permitted. Individuals wishing to bring firearms into the Czech Republic must obtain written permission from a Czech Embassy or Consulate before shipping the weapons. All firearms brought into the Czech Republic must be re-exported.

All firearms imported to the Czech Republic must be registered with the police presidium. Shipping and customs can help with the registration process.

All individuals wishing to use firearms for any purpose must pass an examination. The test has both a written section and a practicum, which is held at a shooting range. The test is administered in Czech, but individuals are permitted to employ a certified translator. There are fees for both the test and the translation services.

Currency, Banking & Weights and Measures

The official unit of currency of the Czech Republic is the crown (kruna), abbreviated "Kc," which is divided into 100 hellers. Exchange rates vary but have been about US\$1=35.24Kc (December 1999).

U.S. and foreign currencies may be obtained from the local banks or exchange dealers for a commission. ATMs are readily available throughout Prague, and many

American residents obtain Czech crowns through these machines, which take CIRRUS, PLUS, MOST and leading credit cards. However, there is usually a charge for these transactions.

The metric system of weights and measures is used.

DENMARK

Kingdom of Denmark

Major Cities:

Copenhagen, Århus, Odense

Other Cities:

Ålborg, Esbjerg, Fredericia, Gentofte, Helsingør, Horsens, Kolding, Naestved, Randers, Ribe, Roskilde, Vejle

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated December 1992. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

DENMARK is the oldest kingdom in Europe, tracing its written history as far back as the Viking period of the eighth and ninth centuries. A country of gentle beauty, friendly people, and cosmopolitan life-style, modern Denmark is an industrialized nation with a high standard of living and one of the world's most advanced social welfare societies. The homogeneity of culture, breadth of economic activity, and variety of political opinion make it a stimulating place to visit.

A nation of rich cultural and intellectual heritage, Denmark continues to contribute to achievements of the modern world. Writers, scientists, philosophers, musicians, art-

ists—all with international recognition—are indicative of the range of accomplishments that have been reached in this fairy-tale kingdom so honored by its most-beloved son, Hans Christian Andersen.

MAJOR CITIES

Copenhagen

Copenhagen, the capital of Denmark, lies on the eastern coast of the island of Zealand on the straits connecting the Baltic Sea to the North Sea. Between Zealand and mainland Denmark lie the island of Fyn and two channels—the Great Belt and the Little Belt. Copenhagen's strategic location on a main trade route between the Baltic and northern countries has made it one of the great transit ports of northern Europe.

With over 1 million people, Copenhagen is Denmark's largest city. Starting as a small fishing village more than 1,000 years ago, the city has grown into a major European commercial and cultural center. Its name (Kobenhavn or Merchant's Harbor) reflects its historical association with shipping and international trade. Copenhagen's busy harbor and shipyards confirm the

significant role these activities continue to play in the city's economic life.

Despite the modern pace of its commercial activity, Copenhagen maintains its Old World charm. The skyline is dominated by stately towers, their copper roofs green with age; thus its popular name, "city of beautiful towers."

Many buildings in the city's center date back hundreds of years, some as far back as the 16th and 17th centuries. The old houses that line the canals and cobblestone streets provide a sharp contrast to modern, high-rise apartment complexes that dominate the fast-growing suburbs and newer parts of the city.

The high standard of living of its citizens is reflected in the clean, well-maintained appearance of the city. Despite its size, many wooded parks and small lakes give Copenhagen an almost provincial quality. Copenhagen is a favorite of tourists, and thousands of Americans visit the city each year.

Food

Most types of food are available on the local market year round.

Clothing

Woolen clothing is worn most of the year. Even in summer, a light wrap

or sweater is usually needed after sundown. Rainwear is a necessity. Ready-made clothing for men, women, and children is available at prices often higher than those in the U.S. Shoes for men, women, and children are imported from all over Europe, but narrow widths are not readily available.

Supplies and Services

Supplies: All major brands of toilet articles and cosmetics are available, but taxes on cosmetics are high. Few American patent medicines are available in Danish drugstores, since most medicines are sold only by prescription.

Basic Services: Tailors and dress-makers are available but increasingly rare. Laundries, Laundromats, dry-cleaners, and shoe repair shops do work comparable to that in the U.S. Adequate electronics repair is available, but usually slow. Spare parts for U.S. makes are in limited supply. Denmark has many good barbershops and excellent beauty shops. Most basic services are more costly than in the U.S.

Religious Activities

The Lutheran Church is the state church of Denmark. Roman Catholic, Reformist, Unitarian, Methodist, Baptist, Seventh-day Adventist, and the Church of Jesus Christ of Latter-day Saints also hold services here. A minister of the Evangelical Lutheran Church of America holds services for the International Church of Copenhagen. Services in English are also held at the Anglican Episcopal Church of St. Albans and the International Baptist Church. Catholic services in English are held at two churches in greater Copenhagen. Jewish services are held at the synagogue weekday mornings, Saturday morning, and every evening at sunset.

Education

The three English-language schools listed below are recommended for children of American travelers. Request admittance as far in advance as possible due to possible

lack of vacancies in certain classes. The school year runs from mid-August to June. Use the following addresses:

Copenhagen International Schools
Copenhagen International School (CIS)
Gammel Kongevej 15
1610 Copenhagen V
Tel.: 31 21 46 33

Copenhagen International Junior School (CIJS)
Stenosgade 4C
1616 Copenhagen V
Tel.: 31 22 33 03

Rygaards School
International Division
54 Bernstorffsvej
2900 Hellerup
Tel.: 31 62 10 53

The Copenhagen International Schools (Senior and Junior) are housed adjacently in a downtown location near public transportation.

The Senior School (CIS) was founded in 1963 to provide English-language secondary education for children of the international community (grades 10 to 13). The CIS curriculum is that of a U.S. general academic, college-preparatory public school. The school also prepares students for the international baccalaureate. English, German, French, and advanced Danish are taught as foreign languages, and all students must participate in a program of study of the Danish language and culture. The school's testing program includes the PSAT, SAT, and Achievement tests; ACT tests can be arranged.

The Copenhagen International Junior School (CIJS) was founded in 1973 to meet the growing demand for a school for younger children. It comprises pre-kindergarten and kindergarten (4- and 5-year-olds, with 3-year-olds who will be 4 before the end of December), primary school (grades 1 to 6), and middle school (grades 7 to 9). Pupils through grade 6 are taught in self-contained classrooms; those in grades 7 to 9 have a departmental-

ized curriculum taught by specialists in their fields.

The curriculum is international, combining the best of American and British education. The international school's curriculum will be followed as it becomes available.

The school is accredited by the European Council of International Schools and the New England Association of Schools and Colleges. Iowa tests of basic skills are available in grades 4, 6, and 8.

Rygaards School is located in a residential suburb of Copenhagen accessible by train and bus. The school was founded in 1909 by Catholic Sisters of the Assumption and is now recognized and supported by the Danish State. Children of all faiths are accepted.

The International Division consists of a preschool (4- to 6-year olds), a junior department (6- to 11-year-olds), and a senior department (12- to 16-year-olds). In addition to the International Division, Rygaards has a Danish Division. These two divisions function independently but in collaboration under one board and one headmaster.

The students at Rygaards come from 40 or more nations. Most of the teachers are British, and the academic instruction follows the British system, culminating in London University "O" level examinations in the final year. This corresponds to American kindergarten through grade 11.

Rygaards has an active Parents' Association. After-school activities are available for many age groups.

Special Educational Opportunities

Copenhagen has many nursery schools and kindergartens, both public and private. They are operated independently of the elementary schools, and completion of kindergarten is not a prerequisite for entrance to elementary school.

Shops on a pedestrian shopping street in Copenhagen

Susan Rock. Reproduced by permission.

Musical instruction is readily available for adults and children. Excellent contemporary and abstract art and dancing instruction are available.

Many municipalities (kommune) in the greater Copenhagen area offer extensive and inexpensive adult education programs with a wide variety of subjects, some taught in English. Several such courses are offered for the study of Danish. These courses usually begin in September and end in February. Pamphlets listing the courses are widely distributed in the Copenhagen area.

Sports

Facilities are available for most popular sports. Many neighborhood gymnasiums in Copenhagen have indoor swimming pools. Tennis and badminton are popular, and several

clubs have indoor and outdoor courts. Squash clubs are also available. A number of 18-hole, private golf courses are located near Copenhagen. Bowling, flying, gliding, and hang gliding are also available. Sports equipment is more expensive than in the U.S. but is available everywhere.

Touring and Outdoor Activities

Summer sports are popular during the short, warm season. Yacht clubs are located along the coast, and sailing is enjoyed from May to October. Many swim in the sea in the summer, despite the chilly water temperature. Fishing on small, private lakes is available. Bicycling and hiking are popular, and hiking and biking clubs sponsor trips to some charming rural areas close to Copenhagen. You may hire horses

at lower rates than in the U.S. Several reputable riding schools have indoor rings for winter riding.

Excellent pheasant and duck shooting and some deer hunting is possible, but a game license is required. To obtain one, you must pass a test or hold a U.S. hunting license.

Winter sports are limited to ice skating and occasionally some cross-country skiing north of Copenhagen. Serious skiers must travel north to Norway, or south to France, Germany, Austria, Italy, or Switzerland. Oslo is 8 hours away by train, or overnight by the excellent sleep ferry from Copenhagen. The Bavarian and Swiss Alps are 18–24 hours away by train. Copenhagen travel agencies offer excellent, modestly priced, 8-day package ski trips to these areas.

Many guided tours of Copenhagen are available. One popular tour takes you by boat through the canals of Copenhagen into the harbor and past the famous statue of the Little Mermaid.

The airline charter industry is highly developed and competitive here, providing inexpensive vacation packages to all parts of Europe and many other points abroad.

Entertainment

Copenhagen's movie theaters show the latest American and European films. Most feature films are shown in their original language, with Danish subtitles.

This *Week in Copenhagen* (which, despite its name, is a monthly publication) lists a wide variety of events of interest.

Copenhagen has symphony orchestras, a ballet (one of the world's finest), and a national opera company. The most famous of the orchestras is the Radio Denmark Symphony, which gives weekly concerts in winter and often features leading American and European artists. The ballet and opera each offer several performances a week from September through May. Ticket prices are reasonable. Half-price tickets are often available after 5 pm on the day of the performance.

Many fine museums are located in or near Copenhagen, including the National Museum of Art and the Carlsberg Glyptotek (with an excellent Rodin collection).

The world-famous Tivoli amusement park, in the heart of the city, is synonymous with the spirit of Copenhagen. Open from May 1 to early September, Tivoli features arcades, rides, restaurants, and light and serious music in an atmosphere for children and adults.

Copenhagen has many fine restaurants. Traditional Danish cuisine is good, though often bland. Modern Danish cuisine is modeled on that of France. Hard liquor and wine are expensive; a bottle of the house

table wine can double the price of a meal. Most Danes stick to beer and snaps (a Danish drink made from potatoes and flavored with caraway) with their meals. Danish beer is deservedly world renowned.

Clubs

The American Club of Copenhagen holds monthly luncheon meetings, with guest speakers talking on topics of interest to the membership, which consists of American and Danish business and professional men and women.

The American Women's Club in Denmark, founded in 1934, is a philanthropic and social organization whose membership is predominantly American, but also includes many Danes and women of other nationalities.

This is an active social club with both daytime and evening groups for bridge, handicrafts, sports, and cultural/educational activities. The club is actively engaged in projects to raise money for scholarships, art awards, and charities. The club meets monthly on the second Tuesday.

The International Women's Club of Copenhagen (IWC), a nonprofit organization founded in 1977, was formed to welcome and assist newcomers and their families to Denmark, to further goodwill and friendship, and to give financial and material support to philanthropic projects.

A regular, monthly luncheon is held on the fourth Thursday of each month. A program is presented at each luncheon, either with an international theme or on some aspect of life in Denmark. Also, a wide range of activities is offered, giving members an opportunity to meet in smaller groups. Sports, language, and cultural interests are catered to so that there is something for everyone.

Copenhagen also has local chapters of Rotary International, Free Masons, Odd Fellows, and American Legion.

Århus

Århus (also spelled Aarhus) is Denmark's second largest city. Located on the east coast of central Jutland on Århus Bay, the city has a population of over 217,000. A commercial, industrial, and shipping center, Århus is also one of Denmark's oldest cities, developing rapidly after becoming an episcopal see in the 11th century. A decline followed the Reformation of the 16th century, but Århus began to prosper again in the 18th century.

Århus is also an important cultural center, with a university, a theater, a large library, and restored-town museum consisting of several old Danish houses. Other buildings of note include the Cathedral of St. Clemens, built in the 12th century, and the town hall, constructed in 1942 of Norwegian marble.

Århus' museum of prehistory, Mosegård, contains a fascinating exhibition which includes the "Grauballe Man," a mummified person of two millennia ago. The city also is the site of the world's largest fire-engine museum, and of a fine aquarium.

Tivoli Friheden, Århus' large amusement park, is open daily from late April to mid-August; concert performances are frequent features.

Odense

Odense, Denmark's third largest city with a population of 145,000, is located in the north-central part of Fyn Island. Linked by canal with the Odense Fjord, the city is an important commercial, industrial, and cultural center, as well as a rail junction. Odense, meaning "Shrine of Odin" (the supreme Norse god), has large shipyards which export agricultural produce. Machinery, textiles, beer, electrical equipment, and motor vehicles are manufactured.

One of the oldest cities in northern Europe, Odense was founded in the 10th century and became an episcopal see in 1020. Its Cathedral of St.

Sankt Clemens Torv Mall in Århus

Susan Rock. Reproduced by permission.

Knud, built in the 13th century, is one of the finest examples of Danish Gothic architecture. Odense is perhaps best known as the birthplace (in 1805) of Hans Christian Andersen, author of such fairy tales as *The Ugly Duckling*, *The Emperor's New Clothes*, *The Snow Queen*, *The Little Mermaid*, and more than 160 others. A small, red-tiled house at the corner of Han Jensensstraded and Bangs Boder, near downtown Odense, is Andersen's birthplace. The neighborhood has been restored to its 19th-century appearance and the Andersen home is now part of an impressive museum devoted to the Danish writer.

Other cities of importance on Fyn Island are Nyborg, with a population of 16,000, a seaside resort, known for its shipyards and textile mills; and Svendborg (population of 28,000), with its shipyards and breweries.

OTHER CITIES

ÅLBORG (spelled Aalborg until 1948) is located on Jutland in northern Denmark. Jutland, the peninsula that divides the North Sea from the Baltic Sea, is the only part of Denmark attached to mainland Europe. It has unspoiled beaches, medieval hamlets, lush countryside, and an English-speaking population that is quite hospitable. Ålborg, the capital of Nordjylland County, is situated on the Lim Fjord and is a major industrial and cultural center, as well as a commercial seaport. With a current population of about 120,000, Ålborg manufactures machinery, chemicals, cement, liquor, ships, and textiles. Known since the 11th century, the city was chartered in 1342. Of interest here is the 12th-century Cathedral of St. Botolph and a 16th-century castle. The local museum was designed by

the Finnish architect Alvar Aalto. Scandinavia's largest festival of drama, dance, and music is held annually in Ålborg in September. Near the city is Rebild National Park, where American Independence Day is celebrated each year by Danes and Danish-Americans. Nearby, too, is Legoland, with its miniature cities, Mount Rushmore and Statue of Liberty replicas, and other wonders built from Lego blocks. Ålborg is also known for its oysters, both succulent and plentiful, from the Lim Fjord.

ESBJERG, Denmark's largest fishing port, is located in southwest Jutland on the North Sea. With a current population of 73,000, Esbjerg is a commercial and industrial center whose main development came after the construction of its port in the late 19th century. It was chartered as a city in 1899. Esbjerg's harbor, the best on the penin-

sula's west coast, exports meats and dairy products.

FREDERICIA, a seaport on the southeastern Jutland, has a population of close to 37,000. An important industrial center and rail junction, as well as a port of Lille Baelt, Fredericia manufactures textiles and chemicals and also has an oil refinery. Frederick III built the town as the main fortress on Jutland in 1650, and there was no expansion beyond the ramparts. Fredericia was the scene of the battle in which the Danes defeated the Prussians on July 6, 1849. Modern development began when the fortress was closed in 1909.

GENTOFTE, a suburb north of Copenhagen with a population of more than 77,000, is situated in eastern Denmark, less than 10 miles north of Frederiksberg. Many of the country's foreign embassies are located here. Gentofte has a horse-trotting course and is the home of the famous Tuborg breweries.

HELISINGØR (also called Elsinore) is located in northwestern Sjaelland directly across the Øresund Strait (or Sound) from Hälsingborg, Sweden. About 25 miles north of Copenhagen, Helsingør experienced its greatest growth from the 15th to the mid-17th century, when Danish kings collected tolls from the ships passing through the straits. Today, Helsingør is a fishing port, summer resort, and industrial center, manufacturing ships, machinery, textiles, and beer. Helsingør is probably best known as the site of Kronborg Castle, built between 1554 and 1585 and completely restored in the years 1925 to 1937. Considered the most secure fortress in the country, it was captured by Sweden in 1660. However, the castle is most famous as the scene of Shakespeare's *Hamlet*; although Hamlet never lived at the castle, it is often the site of performances of the play. A maritime museum also is housed at Kronborg. The city is home to 35,000 residents.

HORSENS is a port on Horsens Fjord, on the east coast of central

Jutland. With a population of 49,000, the city is a commercial and industrial center 23 miles south of Århus. It exports dairy products and manufactures tobacco products, textiles, and electrical equipment. A fortified town in the Middle Ages, the 13th-century monastery and church within its ramparts may be visited in Horsens today.

KOLDING is located in south-central Jutland on the eponymous fjord, an inlet of Lille Baelt. A seaport which exports cattle, fish, and grain, Kolding has a population of 53,000. Dating back to the 10th century, the city is the site of two important battles in Danish history; in 1644, the Danes defeated the Swedes here and, on April 12, 1849, the Danes were defeated in the Schleswig-Holstein conflict. Historical buildings include the oldest stone church in Denmark, built in the 13th century, and Koldinghus, a royal castle built in 1248.

Situated in southeastern Denmark, **NAESTVED** is about 35 miles south of the capital. Built around a Benedictine monastery which was founded in 1135, Naestved developed into a market center after the monks moved in the 12th century. The city's landmarks include St. Peder Kirke, the only reminder of the monastery; St. Morten's Kirke; and the remains of a medieval hospital, which is now a museum. The city manufactures textiles, glass, pottery, and paper. With a population of about 40,000, Naestved also has a fishing port.

RANDERS is a seaport on east Jutland, at the mouth of the Gudenå River. Located 22 miles north of Århus, Randers, whose population is 56,000, is a commercial and industrial center that produces dairy products. The city was founded in the 11th century and was an important trade center in the Middle Ages. Noted for its salmon fishing today, Randers has a 15th-century edifice—Church of St. Morton—and an 18th-century town hall.

About 15 miles south of Esbjerg is the town of **RIBE**, the capital of Ribe County. With a population of 8,000, the city is known for its architecture. Its cathedral, built about 1130, and restored in the late 19th century, is an excellent example of Dutch Romanesque design. Ribe prospered in the Middle Ages; the Black Friar's Abbey (built 1228), St. Catherine's Church (built about 1230), and the city hall (14th century) are examples of architecture from that period. There is also a wealth of 16th- and 17th-century houses.

ROSKILDE is a residential suburb 20 miles west of Copenhagen. A port on the Roskilde Fjord, it is one of the oldest cities in Denmark, serving as the country's capital from the 10th century until 1443, when it was replaced by Copenhagen. Roskilde was Denmark's ecclesiastical center from 1020 to 1536; then, during the Reformation, it was suppressed. The Treaty of Roskilde, signed in 1658, ceded Denmark's lands in southern Sweden to Charles X of Sweden. The city's cathedral, built late in the 12th century, contains about 40 royal tombs, including those of most Danish kings. There is also a museum of Viking ships and an atomic research center nearby. The city's current population is approximately 43,000.

VEJLE, in central Jutland, is a seaport on the fjord which bears its name. A commercial and industrial center and a rail junction, with a population of nearly 48,000, Vejle manufactures soap, textiles, and leather goods. St. Nicholas Church, built in the 13th century and later restored, is among the interesting local sights.

COUNTRY PROFILE

Geography and Climate

Denmark lies directly north of Germany and south of Norway. The

European part of the country proper is slightly smaller than Vermont and New Hampshire combined. Denmark consists of the Jutland Peninsula and 406 islands, of which 100 are inhabited. The straits between these islands connect the Baltic and the North Seas.

About 40 percent of the population is located on the island of Zealand, the largest island in Denmark proper. Here, the capital, Copenhagen, can be found.

Greenland and the Faroe Islands, although self-governing, are parts of Denmark. Greenland is the largest island in the world.

Denmark is regarded as an agricultural country. However, dramatic changes have occurred in recent years, and today only about 5 percent of the population is employed in agriculture.

The coastline is irregular and dotted with inlets, breaks, gently sloping fjords, and impressive cliffs. The public has access, as a right, to all the beaches of the country, including right of passage along privately owned shore.

Because Denmark is almost entirely surrounded by sea, it has a moderate, maritime climate. This, however, produces changeable weather, which makes forecasting an imperfect art. The average temperatures range from 32°F in February to 61°F in July. Temperatures vary slightly from day to night. Average annual rainfall is 24 inches. August and October are the wettest months. Days are short in winter, with about 6 hours of daylight in December and January. Daylight in summer lasts 18-20 hours.

Population

Denmark's population is about 5.4 million. About one-fourth live in Copenhagen and its suburbs.

The Danes, a homogenous Gothic-Germanic people, have inhabited Denmark since prehistoric times. Danish, the principal language, is

one of the more difficult European languages to speak; a reading knowledge is more easily acquired. Most Danes speak English.

Education is compulsory from ages 7 to 16 and is free through the university level on the basis of competitive exams.

The Lutheran Church is state supported and accounts for about 95 percent of Denmark's religious affiliation. Several other Protestant denominations and other religions exist.

Public Institutions

Denmark is the oldest kingdom in Europe. During the Viking period (9th-11th centuries), Denmark was a great power, based on the Jutland Peninsula, the island of Zealand, and the southern part of Sweden.

It became a constitutional monarchy with the adoption of the Constitution of 1849, which removed the King's absolute power and provided for separate administrative, legislative, and judicial agencies. This system was retained in the Constitution of 1953, now in force.

The Danish royal family is the oldest dynasty in Europe. The present Queen, Margrethe II, ascended to the throne in 1972.

The Queen, as head of the government, holds formal executive power, but her authority is mostly symbolic. She governs through the Prime Minister, Anders Fogh Rasmussen, who is chosen by the government party (or parties, in cases of coalitions) in the Parliament. The Prime Minister, in turn, appoints the Ministers, who implement government policy.

The Parliament, or Folketing, is unicameral. Its 179 members are popularly elected by universal suffrage. The usual term for the Folketing is 4 years, but the Prime Minister may call for national elections at any time. Eight parties are represented in Parliament, but none

has enough seats to form a majority government alone.

The judicial branch of government is an appointed and independent Supreme Court.

Arts, Science, and Education

Denmark has a rich cultural and intellectual heritage and continues to contribute to the cultural achievements of the modern world. The astronomical discoveries of Tycho Brahe and the brilliant contributions to atomic physics of Niels Bohr are indicative of the range of Danish scientific achievement.

The "fairy tales" of Hans Christian Andersen (1805-75), the philosophical essays of Soren Kierkegaard, and the short stories of Karen Blixen (pen name Isak Dinesen) have earned international recognition, as have the symphonies of Carl Nielsen.

Danish applied art and industrial design have won awards for excellence. The name Georg Jensen is famous for outstanding modern design in silver, and "Royal Copenhagen" is among the best of fine porcelains.

The Royal Danish Ballet is an exceptional company, specializing in the work of the great Danish choreographer August Bournonville. Danes have distinguished themselves as jazz musicians, and the Copenhagen Jazz Festival has acquired an international reputation.

International collections of modern art enjoy unusually attractive settings at the Louisiana Museum, north of Copenhagen, and at the North Jutland Art Museum in Aalborg. The State Museum of Art and the Glyptotek, both in Copenhagen, contain treasures of Danish and international art. The Museum of Applied Art and Industrial Design in Copenhagen holds exhibits, featuring the best in Danish design.

Among Danish writers today, probably the most prolific is Klaus Rifbjerg—poet, novelist, playwright, and screenwriter. Benny Andersen writes poems, short stories, and music. Poems by both writers have been translated into English by Curbstone Press. Kirsten Thorup's *Baby*, winner of the 1980 Pegasus Prize, is printed in English by the University of Louisiana Press. The psychological thrillers of Anders Bodelsen also appear in English.

In music, Hans Abrahamsen and Per Norgaard are the two most famous living composers. Hans Abrahamsen's works have been performed by the National Symphony Orchestra in Washington, D.C.

Two Danish films, "Babette's Feast" and "Pelle the Conqueror," won Academy Awards as Best Foreign Film in 1988 and 1989, respectively.

Danish education follows the traditional European system. School attendance is mandatory through age 15, when most students either continue their education or enter an apprenticeship program. Danes take great pride in achieving the status of skilled workers. Great emphasis is placed on adult education. Many evening courses are offered at Copenhagen University and in high schools.

Higher education is offered at commercial and technical colleges and universities. Denmark's universities are at Copenhagen, Aarhus, Odense, Roskilde, and Aalborg. The University of Copenhagen, the oldest and largest, has five faculties: theology, law and economics, medicine, arts, and science. Other seats of higher learning include the Technical University of Denmark, Academy of Engineers, Dental Colleges, and School of Pharmacy. In addition to academic requirements, foreign students must be fluent in the Danish language.

Interest in science and the arts is promoted by universities and special foundations such as the Carlsberg/Tuborg Foundation. Other research is financed by the State.

One of Denmark's best known institutes is the Niels Bohr Institute of Theoretical Physics in Copenhagen.

Commerce and Industry

An agricultural economy until World War II, in the postwar period, initially assisted by the Marshall Plan, Denmark rapidly developed into a modern industry and services society. Agriculture and fishing today account for 3 percent of the economy, services 72 percent, and industry 25 percent. Metal working and food processing are the most important industries.

Denmark's few natural resources are farmland, fish, and oil and natural gas in the North Sea. The Danish economy is, therefore, based on adding value to domestic and imported raw materials. Its living standard is one of the highest in the world. It has a highly unionized, well-paid, and skilled labor force. Denmark is heavily dependent on foreign trade. About 73 percent of total commodity exports are manufactured products and 17 percent agricultural and fish products.

2000 saw a 2.8% increase in the economy, assisted by continued strong exports, but also by a recovery in domestic demand. The present inflation rate, 2.9 percent, is low among the OECD countries. Following more than a quarter of a century of recurring balance-of-payments deficits, resulting in a large foreign debt and consequently large interest payments, the balance shifted into a surplus in 1990 and 1991, where it has remained, with the exception of a temporary deficit in 1998.

The U.S., in 2000, ranked number seven among Denmark's trading partners, accounting for more than 4 percent of total Danish commodity trade worth \$68 billion. The EU accounts for more than half of the trade, Germany alone for 22 percent. Major U.S. exports to Denmark are aircraft, machinery and EDP equipment. Major Danish

exports to the U.S. are machinery and equipment, foodstuffs (mostly canned ham and pork), and furniture.

Denmark is a major shipbuilding and shipping nation. A large share of shipping earnings stem from liner trade to and from the U.S. Danish shipbuilding.

Transportation

Local

Traffic moves on the right. Copenhagen's public transportation system is excellent. It includes bus and train service that is quick, clean, safe, and convenient. Fares are reasonable and monthly passes are available at reduced rates. Trains provide quick service to the suburbs, but little between midnight and 5 am.

Taxis are usually plentiful. All taxis have meters for calculating fares. They are not expensive.

Regional

Copenhagen is connected to all major European centers by rail and air. Both TWA and Delta Air Lines have daily service between the U.S. and Copenhagen. Tower Air operates flights twice weekly. Scandinavian Air Lines and other international airlines also provide service between Copenhagen and major U.S. cities.

Daily rail service is available to most European capitals. Ferries travel to Norway, Sweden, Germany, Poland, and England.

Many Danes use bicycles, not only for recreation, but also as a primary means of transportation. Designated bicycle lanes exist on most major thoroughfares. They are situated between the street and the sidewalk. Bicycles are required to have reflectors and, at night, are required to display a white light in front and a red light on the rear. Insurance is recommended. New bicycles are more expensive in Denmark than in the U.S.

Bicycles have the right-of-way and cars must yield to them. The only time a bicycle must yield to a pedestrian or a motor vehicle is when a pedestrian exits a city bus or when a motor vehicle is turning with a protected turn green light.

Pedestrians and motorists must not walk or turn into a bicycle lane.

Communications

Telephone and Telegraph

Local and long-distance telephone services are good. International telephone and telegraph service is available from Copenhagen to all parts of the world. AT&T credit card "USA Direct" service, MCI, and Sprint are available for calls to the U.S. and result in significant savings. Local telephone bills are received quarterly. No itemized breakdown of charge per call is available, even for long-distance calls, unless an operator is used.

Radio and TV

Denmark has two national TV channels and three national radio stations. Two Swedish TV channels can be received in Copenhagen with a good antenna. American and British programs and movies are often shown on all four TV channels in the original English, with Danish/Swedish subtitles. Color transmission is excellent. The PAL standard is used for broadcasting by Danish TV. Cable TV is available in most areas. Both CNN International and BBC are available on cable, as well as French, German, and Norwegian stations. Where cable is not available, satellite reception is available. Both systems have costs similar to those in the U.S.

Radio reception from Swedish, German, and British stations, as well as the German-based American Forces network, is possible with a good receiver and antenna.

Newspapers, Magazines, and Technical Journals

Time, *Newsweek*, the *Wall Street Journal*, and the *International Herald Tribune* are sold locally. These

and other English-language newspapers are sold at the main train station and in lobbies of large hotels. Danish libraries are good and have English sections. Books in English are also available at the British Council library.

Copenhagen bookstores sell the latest American and British books at about double the U.S. price.

Health and Medicine

Danish medical care is of high quality and is comparable to the medical care one finds throughout Western Europe. However, despite its high quality, the system for providing care in Denmark is different from that in the U.S. Waiting periods are common for routine, non-emergency surgery. Diagnostic tests take longer to schedule than in the U.S.

Medical Facilities

Diagnostic laboratories and specialists in all fields of medicine are available. Hospitals are well-equipped and reasonably priced. Maternity hospitals and many clinics are available. Most doctors and dentists speak English.

Most medicines are available locally. They may not, however, be the same brand names as those used in the U.S. Prices are higher than in the U.S., even though the prices are state controlled. Bring a supply of medicine that you know you will need.

Community Health

Sanitary conditions in Denmark are excellent. Danish law is strict about commercial processing, cooking, handling, and serving of foods. All dairies in the city supply pasteurized milk from tubercular-tested cows. All milk is safe to drink. Copenhagen is cleaner than most U.S. cities of comparable size.

Denmark has had no serious epidemics in years. Colds, influenza, and throat infections may be aggravated in winter by dampness and lack of sunshine. Persons with

arthritis, rheumatism, and sinus troubles may find winter uncomfortable.

Preventive Measures

No special health risks occur in Denmark, and no special inoculations are required. Any needed immunization is available in Copenhagen.

NOTES FOR TRAVELERS

Travel to Copenhagen involves no special problems. Danish weather is variable, so bring clothing for cold and rain, whatever the season.

A valid passport is the only document needed for entry into Denmark. Neither a visa nor a

vaccination certificate is required for entry.

U.S. visitors to Greenland and the Faroes require visas.

Cats and dogs imported from Australia, Faroe Islands, Finland, Iceland, Ireland, Japan, New Zealand, Norway, Sweden, and the U.K. require no veterinary certificates. No stay is allowed outside these countries during travel to Denmark. The animals must be accompanied by their owner or other person.

Cats and dogs imported from other countries and Greenland require a special form, stating all relevant information, and certifying that the animal has been vaccinated against rabies, which must be presented to Customs. The certificate must further state that vaccination has taken place within the time limit of 1-12 months from the date of presentation. The pets must be accompanied by their owner or other person.

Import of other animals is subject to a special permit from the Danish Veterinary Authorities (contact Danish Consul).

A bilingual Danish-English certificate should be used if possible. A Veterinary Health Certificate, executed between 1 and 10 days before arrival in Copenhagen, is recommended.

The key to avoiding problems on arrival is to have the vaccination certificate, the health certificate, and the pet(s) accompany the traveler.

Denmark has decided not to convert to the euro. The Danish monetary units are kroner and ore, with 100 ore equaling 1 kroner. Coins are issued in 25 and 50 ore pieces, and 1, 5, 10, and 20 kroner pieces. Notes are issued in 50, 100, 500, and 1,000 kroner denominations. The current exchange rate is DKr 7.95=US\$1.

The metric system of weights and measures is used in Denmark.

ESTONIA

Republic of Estonia

Major City:

Tallinn

Other Cities and Regions:

Hiiumaa, Narva, Saaremaa, Tartu

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Estonia. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

ESTONIA has had a history of domination by other countries. Ruled at times by Germans, Swedes, Russians, and finally the Soviets, Estonia had a brief period of independence from 1920 to 1940, when it was forcibly annexed by the Soviets. Occupied by German forces between 1941 and 1944, Estonia was once again claimed by the Soviets after World War II and remained a Soviet republic until its independence was declared in August 1991.

Tallinn

Built in a naturally formed harbor on the Baltic Sea, Tallinn is a picturesque capital city with a long

maritime tradition. The Old Town and the adjacent Toompea (Castle Hill) contain Tallinn's oldest buildings that reflect the city's history as an important point on the east-west trade route from the Middle Ages and later. The 13th century fortress on Toompea and several church spires on Toompea and in the Old Town, built from the 13th to 16th centuries, dominate Tallinn's skyline. Near the lower town, where the artisans and merchants traditionally lived, remnants of the town wall begun in the 13th century remain. Cobble streets wind around the Old Town, passing houses once belonging to wealthy merchants and the guildhalls from where these merchants controlled trade in agricultural commodities and artisanship during the days when Tallinn was a member of the Hanseatic League. These days the Old Town is filled with tourists and Estonians frequenting the many cafes, restaurants, and shops.

Modern Tallinn has a vibrant business and arts community. Immediately east of the Old Town is the more modern center of Tallinn (Kesklinn). Theaters and museums are located in both the Kesklinn and Old Town, as are many apartment buildings.

Utilities

Standard electric power in Estonia is 220v and runs at 50 cycles, but voltage may run lower than that. Electricity is generally reliable. Any appliances or other electrical items that run at 110v must be used simultaneously with a step-down transformer. Also, bring, and use, surge protectors and step-down transformers for 110v computer equipment.

Food

A wide variety of shops and markets in Tallinn supply basic food needs, and the number of larger supermarket-type stores continues to grow. Availability and variety of imported fruits, vegetables, locally produced meats, dairy products, and various foods imported from Western Europe have increased dramatically since independence. Many American convenience type foods and specialty items are not available in Tallinn (boxed brownie and cake mixes, chocolate chips, Crisco, boxed macaroni and cheese, pop tarts, frozen waffles, etc.).

Clothing

Men: Business suits and slack/blazer combinations are recommended for work. Various weights of wool can be worn throughout the year. Few social occasions in Tallinn require a tuxedo. For casual fall and winter wear, wool, corduroy and

other heavier weight slacks are appropriate. Turtlenecks, sweaters, and clothes from various outdoor outfitters are best for keeping warm. However, you may not want to bring too many sweaters, as Estonian knitwear is of excellent quality, affordable, and readily available.

Women: Wool suits and separates are recommended, as are long-sleeved blouses, turtlenecks, and sweaters. Bring a large supply of heavier weight stockings or tights in addition to regular nylons. For some affairs, dressier cocktail-length dresses are appropriate. Heavier weight fabrics such as wool or corduroy are recommended. In general, more subdued colors are most common, but women in Estonia often wear bright colors to formal events. For social events, the fashion trend in Tallinn is stylish and follows that in any Western or northern European capital city.

Children: Good-quality, reasonably priced snowsuits and winter children's outerwear are available locally. Children, as well as adults, need to wear hats and gloves from October through May.

Both men and women should bring warm coats suitable for work and casual wear. A raincoat with a liner and umbrella is also useful throughout the year, but especially from March to October. Both men and women wear hats and gloves or mittens from October through March. Warm, breathable raingear is recommended for wet autumn months.

Winter clothes should include the warmest clothes you would wear in Washington, D.C., during January and February. These may be appropriate for fall and spring in Tallinn as well. You should count on layering and wearing sweaters and heavier dress clothes from October until May. In addition, bring several pairs of long underwear. Lightweight silk or synthetic long underwear is recommended.

In the summer, clothes worn in the fall or spring in Washington, D.C., are appropriate. Women will find

separates useful, especially jackets and cardigans, because the weather is cooler in the morning and late evening during summer. As for casual clothes, those that you would wear during a northern New England summer are best. Shorts are appropriate for sports, picnics, and casual outings. It should be noted that air-conditioning is almost nonexistent in Estonia. Office buildings, stores, shops, and homes can become quite warm for short periods in the summer months, so bring a small supply of short-sleeve dress shirts or blouses suitable for work.

Footwear throughout the year should be sturdy. The cobblestone streets of the Old Town, not to mention the damp, cold winter weather, are particularly hard on shoes. For winter, bring waterproof boots with soles that will not slip on the icy sidewalks and streets. From November through April, most women wear boots because shoes are not warm enough for walking on the cold, wet, and icy sidewalks. For men, thickly soled shoes or a pair of boots is recommended. Overshoes are also a useful wardrobe addition. Generally, footwear here is slightly more expensive than in the U.S.

Supplies and Services

Since 1991, the types of goods and supplies available in Tallinn have increased week by week. The general rule of thumb is that almost any item can be obtained in Estonia's capital, but some items are prone to sporadic availability. In addition, a 18% value-added tax is placed on imported goods.

Western European and American toiletries, cosmetics, and feminine personal supplies are available in Tallinn as are cleaning supplies, food products, items for pets, clothes washing needs, contact lens supplies, and basic first-aid items. Not all brands are available, so if you are partial to a specific brand, bring it with you. Good-quality items are expensive but not prohibitively so.

Cooks interested in preparing various international or ethnic foods

should bring a basic supply of what they need, such as specialty spices and condiments. Some items for international cooking (especially Tex-Mex) can be found, but they are not always available.

There are a wide variety of basic services available in Tallinn, and increasingly, the quality of these services is similar to that offered in other Western European capitals.

Everyday services such as shoe, watch, and eyeglass repair are available in Tallinn. In addition to beauty- and barbershops at the major hotels, Tallinn has many smaller salons for men's and women's haircuts. Many individuals work as dressmakers out of their own homes.

Reliable drycleaning facilities, at prices similar to or slightly lower than in the U.S. are also available.

Kodak, Fuji, and Agfa franchises are located in Tallinn and have excellent machine-assisted developing processes. The quality of color prints is high, but the cost is higher than that in the Washington, D.C., area. Kodak, Fuji, and Agfa color print and slide film, as well as black-and-white print film, are readily available for prices similar to those in Washington, D.C. Camera batteries and other smaller batteries are also readily available.

In general, most local services are similar in quality and less expensive than in Washington, D.C.

Domestic Help

Domestic help, including childcare, is available in Tallinn. Most domestics are not trained household staff, per se. Rather, they are more often under- or unemployed people, often just out of school, or with grown children who have basic cleaning, cooking, and childcare skills who are attracted by the above-average wages paid by the international community (EEK2550/hour [\$2-\$3.50] depending on the tasks required). Generally, younger household help will speak at least some English, will be familiar with

Susan Rock. Reproduced by permission.

Estonian Orthodox church with three onion-dome towers

modern appliances, and will be easier to train. However, younger staff may not be committed to more than short-term or occasional work. Older domestic staff are more likely to commit to longer, full-time work, but are less likely to speak English, less likely to be familiar with Western appliances, and less likely to adhere to Western cleanliness and hygiene standards. Generally, domestic help is employed during business hours, and on evenings and weekends as needed. Live-in domestic staff is rare in Estonia. The best way to hire help is to find someone through word of mouth. The community liaison

By law, the employer must pay the employee's social security and ill-

ness compensation coverage at a rate of 33% of the employee's salary.

Religious Activities

Tallinn has Lutheran, Catholic, Baptist, and Russian Orthodox churches. There is a service in English once a month and on holidays at a Lutheran church. The Catholic church holds services in English the first Sunday of every month. A Jewish community center, with a provisional synagogue, holds services in Russian on Saturdays and Jewish holidays.

Education

The International Elementary School of Estonia (I.E.S.E) was established in 1995 and has steadily increased its enrollment since then.

Under direction of an American, classes (preschool through grade 8) are taught in English. The curriculum follows Western education standards. Most teachers are native English speakers. Aside from the basic curriculum, German, Estonian, computer, art, music, and physical education are also taught. In fall 1997, the school moved to a new facility, sharing a wing of the Tallinn Medical School. This provided students with larger classrooms, use of a cafeteria, gymnasium, and auditorium, and a large outdoor play area. Currently, I.E.S.E. cannot accommodate children with special needs. The Tallinn International English Kindergarten, established in September 1997, is another option for preschool children.

Sports

Tallinn has a good range of sporting opportunities, including modern indoor and outdoor sports facilities. Most sports facilities and clubs cost less than in metropolitan Washington, D.C.

Indoor sports are particularly popular and, in winter, often a necessary diversion. Several sports clubs offer aerobics classes and weight lifting equipment. In addition, these clubs often have showering, sauna, massage, and solarium facilities. A couple of squash clubs have opened in Tallinn. Tallinn has several indoor swimming facilities, and a few of the large health clubs have small lap pools. Estonia's favorite team sport is basketball.

Tallinn has a bowling alley similar in quality and price to a U.S. bowling facility. Tennis players will find a tennis center in Kadriorg Park, as well as two other smaller outdoor facilities near downtown Tallinn. Some indoor courts exist, but outdoor courts offer late evening tennis during late spring and summer. Lessons with English-speaking coaches for children and adults can be arranged. Court fees are inexpensive.

Summer picnicking spots abound along the Estonian seacoast and

lakes, but they make for chilly bathing, even in the midsummer. Windsurfing, kayaking, and canoeing are possible on the Baltic as well as on Estonia's many lakes and rivers. The Tallinn Yachting Center, the site of the 1980 Olympic sailing events, is Estonia's premier sailing center. Sailboats (with or without crew) can be rented at slightly below U.S. rates. Boating equipment, particularly safety equipment, may be limited.

As soon as the first snow falls, Estonians begin to plan cross-country skiing outings. There are numerous skiing spots in wooded areas of Tallinn and at places in the countryside close enough to drive for a day trip. More adventurous skiers can plan overnight trips as well. Tallinn has two skating rinks, including a modern indoor facility. Good-quality cross-country skiing equipment and skates in all sizes are purchased easily and inexpensively.

Running is popular in Estonia, but cold temperatures, darkness, and icy sidewalks require that runners bring appropriate cold weather attire and wear safety reflectors. Sidewalks are often too icy for safe winter running. Rollerblading is increasingly popular in Estonia. Rollerblade equipment is readily available locally, at prices similar to or slightly below Washington, D.C. prices.

Estonia has one golf course, located about 12.5 kilometers from downtown. It is open to the public, well maintained, and offers a complete range of golfing services including a driving range, a pro shop, and a clubhouse. Greens fees are slightly higher than in the U.S.

Bicycling enthusiasts will find many possibilities for biking around Estonia. Rural roads just outside Tallinn and around the country are uncrowded, and the topography is usually flat. The hilly southeastern region resembles western Maryland and is also good for bike trips. Although main roads are surfaced, they are often rough. Bikes with wider tires such as "mountain

bikes" are more comfortable on rough surfaces. Tallinn's many bike shops sell a variety of brands and styles at prices similar to, or less expensive, than in Washington, D.C.

Horseback riding and lessons are available in Tallinn and at several other locations near the city.

Spectators can watch many sporting events and exhibitions during the year. For example, basketball, soccer, and handball games are played at various locations in Tallinn.

Touring and Outdoor Activities

There is much to do and see while touring Tallinn, the countryside, and the Baltic Sea coastline.

With many shops, restaurants, and cafes, Tallinn is well setup for visitors, most of whom are day- or short-term travelers arriving by boat from Helsinki. In the Old Town, you can take a walking tour (on your own or with a guide) of the cobblestone streets while looking at finely preserved examples of Gothic and Hanseatic architecture. The Old Town has a heavy concentration of shops, restaurants, cafes, museums, and other diversions. In Kadriorg Park, on the eastern edge of the city center, a walk in a peaceful wooded setting leads to the baroque Kadriorg Palace, built for Catherine I, wife of Tsar Peter I. The ruins of a cloister and convent dating from 1436 located near Pirita (about 2 kilometers east of the city center) provide another picturesque and interesting place to visit. In summer, Pirita Beach is popular for swimming, sunbathing, and boating.

Possibilities for day trips within a 3- to 4-hour round-trip drive from Tallinn abound, as Estonia is filled with pine forests and shoreline waiting to be explored. The Lahemaa National Forest, 40 kilometers east of Tallinn on the Gulf of Finland, is a good place to picnic and walk in naturally beautiful surroundings. Numerous well-preserved German manor houses are found in and around Lahemaa Park.

Matsalu, a 2½-hour drive from Tallinn, is a nature preserve and waterbird sanctuary on the coast south and west of the capital. It, too, is a good place to picnic and walk. A hilly inland spot with beautiful forests and lakes is Aegviidu, a 75-minute drive from Tallinn. Aegviidu is especially popular among cross-country skiers.

Interesting overnight trips from Tallinn can easily be arranged, as overnight accommodations have existed for a long time but are just beginning to be renovated for tourists and be advertised. Tartu, a 2½-hour drive from Tallinn, is close enough for a day trip, but there is enough to do there to make it an overnight excursion. It is worth seeing Tartu's several museums, art galleries, and historical buildings, including two red-brick Gothic churches (the remains of a 13th-century church and a standing 14th century church) and Tartu University. Hotels in Tartu offer comfortable accommodations. Near Tartu is the hilly region of southeastern Estonia, and the resort town of Otepää. Since there is generally more snow in southeastern Estonia than in other parts of the country, Otepää is popular with cross-country skiers. Several guesthouse-type accommodations are available in the area. Parnu is a 2-hour drive south of Tallinn and is a picturesque seaside resort town with many new cafes, restaurants, and several nicely renovated hotels. Narva, a 3½-hour drive northeast of Tallinn, is located on the border with Russia. Narva Castle, built when Narva was an important Hanseatic port, dates from the 13th century and now houses a historical museum well worth visiting. The castle's setting is unique because it sits across the Narva

River from the castle in Ivangorod, Russia. Residents of Narva claim that these two fortresses are the closest, once-warring castles in the world.

Estonia's many islands offer restful vacation places. The largest of the islands, Saaremaa, is a 3½-hour

drive-and-ferry ride from Tallinn. Kuressaare, the island's largest town, is quaint. The Kuressaare Episcopal Castle dates from the 14th century and is considered Estonia's best preserved castle. Like the castle at Narva, it houses a good historical museum. Saaremaa has many beaches, forests, and two wildlife preserves, including one with an established bird sanctuary. Hiiumaa Island, Estonia's second largest island, is also about a 3½-hour drive-and-ferry ride from Tallinn, and well worth a visit. Many of Estonia's islands offer over-night accommodations.

This is by no means an exhaustive list of Estonia's touring possibilities. Like most European cities, in order to decide where to go, you must consult guidebooks, various locally published newspapers and periodicals (in Estonian and English), travel agents, the Tallinn City Tourist Office, and Estonian friends. Estonia has a reasonably good road system that makes it easy to travel, and touring Estonia never disappoints the resourceful traveler.

Entertainment

Music is a central aspect of Estonian culture, and, therefore, entertainment in Tallinn usually centers around various kinds of musical productions. The Estonia Opera and Ballet Theater's Concert Hall and other venues offer classical concerts, recitals, and choir performances almost daily during the winter season. Likewise, very good opera and ballet performances take place at the Estonia Opera and Ballet Theater's Opera House. Occasionally, musicals are performed at the Opera House or Linnahall. Compared to the price for attending such kinds of cultural programs in the U.S., cultural events in Estonia are inexpensive. During summer many special dance and music festivals are in Tallinn and around Estonia. Every 4 years the National Song Festival takes place near Tallinn. During summer, there are also outdoor rock concerts in Tallinn featuring Estonian, Western European, and U.S. rock bands.

View of Tallinn, Estonia

© Jack Fields/Corbis. Reproduced by permission.

Restaurants, bars, and cafes often have live music during dining hours or later in the evening, and some nightspots have dance floors. Usually local bands play rock, blues, or jazz. You can expect a small cover charge to enter when there is music.

Foreign films are featured at a few of Tallinn's theaters. Occasional foreign film festivals and special showings of lesser known "art films" are held at the Kinomaja in Tallinn's Old Town. The Kosmos and Soprouse theaters show American films in English with Estonian and Russian subtitles. New movies arrive all the time. Employees can also purchase satellite TV that offers a wide array of programs.

Many of Tallinn's museums have very good art and historic collections that are worth seeing. The Eesti Kunstimuseum (Art Museum of Estonia) exhibits Estonian art from the 19th century to 1940 and other Baltic painters' works. The Tarbekunstimuseum (Museum of Decorative and Applied Art) exhibits 20th century crafts and decorative arts from Estonia. At Kiek in de Kok there are usually photography exhibitions. Just outside Tallinn is the Vabaõhmuuseum (Open-Air Museum) where 18th- to 20th-century rural build-

ings are on display throughout the year in a wooded park land. Historical artifacts are exhibited at the Linnamuseum (City Museum) and Meremuuseum (Maritime Museum), among other museums in Tallinn.

Other activities in the Old Town include shopping for Estonian hand-crafts and souvenirs, as well as eating and drinking at Tallinn's increasing number of cafes and restaurants located in renovated medieval buildings. Antique shopping is also popular, and Estonia has some genuine bargains (cut glass, silver, and amber jewelry, wooden objects and furniture).

International trade shows, special exhibitions, and presentations can be seen regularly at the Eesti Naitused (Estonian Exhibitions) Hall in Pirit. In 1997, exhibitions included a car show, a job fair, a trade fair for businesswomen, a travel fair, and a computer exposition and sale. Shows are often held through the weekends and are open to the public.

An important holiday in Estonia is on Jaanipäev (St. John's Day), or Midsummer's Eve. It is celebrated in every city, town, and village. Tallinn's big festival, Hanseatic

Days, is in early summer and features folk music and dancing. Most other local festivals are celebrated by folk dancing and singing with performers and participants in traditional dress.

Social Activities

The American Chamber of Commerce is very active in Tallinn. It brings together the overgrowing American corporate community and occasionally sponsors happy hours, fund raisers, athletic activities, and other fun activities.

The international community is quite varied, but the Americans, British, Germans, Swedes, Danes, and, most of all, the Finns, are most heavily represented. There is no central meeting place for the international community, so most activities revolve around dinner parties at home, going to concerts, the opera or theater, going to restaurants, or participating in school socials/activities. For women, the International Women's Club offers many interesting activities as well as a chance to chat and socialize. The International Women's Club has a children's playgroup that meets once a week.

Security

The most prevalent problem for residents in Tallinn is cart theft. Prudence should be exercised to park in well-lit safe areas and to use any security features available (e.g., the Club, engine cutoff switches, alarms, etc.).

Personal crime is primarily nonviolent and opportunity driven. Pickpocketing and purse snatchings are not uncommon in any crowded area but are most likely to affect visitors in Old Town, Kadaka Market, and other tourist areas. The use of violence is low by U.S. standards. Credit-card fraud can be a problem, and standard precautions should be taken when using credit cards in Estonia.

Generally, organized crime activity is more subdued in Estonia than elsewhere in the former Soviet

Union. Juvenile crime, however, is on the rise.

Life in Tallinn is safe when compared to large U.S. cities. Estonians, although generally reserved, are pro-American. If people exercise the same caution and use the same common sense that they would in any large city, they can expect to have a safe and rewarding tour or visit...

OTHER CITIES

HIUMAA, the second-largest island of Estonia, is located about 14 miles west of the mainland. The main town, Kärđla, offers beautiful coastline and gardens and often serves as a gateway point to the Tahkuna Peninsula. A lighthouse built in 1874 sits at the northern tip of the peninsula. At Ristimägi, the southern base of the peninsula, lies the Hill of Crosses. Handmade crosses cover the dune marking the spot where the last Swedes living here performed their last act of worship before being deported in 1781. Traditionally, first-time visitors to the island go to place a cross on the hill.

Käina, at the south end of Hiiumaa near the shore of Käina Bay, offers a major bird reserve. The ruins of a 15th century stone church are here as well.

NARVA, located in northeast Estonia on a river of the same name, less than 10 miles from the Gulf of Finland, has a population of 82,500. The city was founded by the Danes in 1223 and was a seat of the Livonian Knights and a member of the Hanseatic League. It was captured in 1558 by Ivan the Terrible of Russia, then in 1581 was taken by the Swedes. In 1700, Narva was the scene of a battle in which the Swedes, under Charles XII, successfully defended the city against the Russians, led by Peter the Great. In 1704, Narva was recaptured by Russia. During World War I, Narva was the site of many battles. In January 1919, the city was occupied by Communist forces who had also tried to

occupy, but were driven out of, Latvia and Finland. During World War II, German forces occupied the city. Today, Narva is a milling center, producing cotton, jute, wool, and flax. A hydroelectric power plant was built here in the mid-1950s. At the mouth of the Narva River on the Gulf of Finland is the city's port and a summer resort, Narva-Jõesuu.

SAAREMAA, the largest island of Estonia, consists mainly of farmland and forests. Those looking for a quiet, gentle vacation spot will enjoy the quaint features of the island, including many windmills, stone churches and fishing villages. Kuressaare, the capital of the island, is the site of a 13th century castle open for tourists. Viidumäe, about 16 miles west of Kuressaare, is the site of a beautiful botanical reserve that is home to such rare plant species such as the blunt-flowered rush, the Saaremaa yellow rattle and the white-beam.

From Kuressaare, nature buffs can take a boat to Abruksa, located four miles off the southern coast of Saaremaa. A botanical-zoological reservation is open here in the summer, offering classes, horseback riding and overnight stays in a rustic farmhouse. If you happen to be on Saaremaa in the winter, you can walk to Abruksa over the frozen strait.

TARTU, Estonia's second-largest city with a population of 115,500, is the site of an important university founded in 1632 by King Gustavus Adolphus II of Sweden. The university has several specialized institutes, a good library, and a botanical garden. Tartu was founded as a castle in 1030 by a Kiev prince. It was captured by the Teutonic Knights in 1224 and was a member of the Hanseatic League. Through the centuries, the city was under Russian, Polish, and Swedish authority. It became Russian in 1704. Tartu was the scene of considerable fighting during the Russian Revolution. Two important peace treaties were signed here: the first between the U.S.S.R. and Estonia in February of 1920, and the other between

U.S.S.R. and Finland in October of 1920. During World War II, Tartu was occupied by the Germans and was considerably damaged.

COUNTRY PROFILE

Geography and Climate

Estonia is the northernmost of the three Baltic States. West of Estonia is the Baltic Sea, north is the Gulf of Finland, and to the east is Russia. Estonia borders Latvia on the south. The smallest of the Baltic States, Estonia covers 18,086 square miles (45,226 square kilometers), and is roughly the size of New Hampshire and Vermont combined.

Estonia is located on the Great Northern European Plain. Its topography is typically flat in coastal regions and hilly in the inland southeastern part of the country. The elevation in northwestern Estonia averages 160 feet (49 meters), but rises to 320 feet (98 meters) in the southeast. The highest point in Estonia, at 1,040 feet (317 meters) high, is a hill called Suur Munämagi in the southeast.

Estonia's inland waters include 1,400 lakes and many shallow rivers. The largest lakes are Lake Peipus in eastern Estonia on the Russian border and Lake Võrts in south-central Estonia. Estonia's two major rivers are the Emajõgi, running east-west from Lake Was to Lake Peipus, and the Narva, that connects Lake Peipus to the Gulf of Finland. Estonia has substantial areas of bogs and wetlands, particularly in western regions. Forest and woodland, which is usually a mixture of coniferous spruce, pine, white birch, ash, maple, and aspen, cover 31% of Estonia.

Off the coast of Estonia are 1,520 islands that account for nearly 8% of the country's total land area. The largest islands are Saaremaa and Hiiumaa.

The climate is northern continental, with long winters and short summers. Winter begins in October and lasts often well into April. Snow cover is common from mid- or late November to the latter half of March. Cloud cover and slate gray skies are typical between October and early February, when drier and sunnier days arrive. Mean January temperatures are 22°F-25°F (-4°C-6°C). The Gulfs of Finland and Riga only freeze over during the coldest winters.

In addition to being cold and snowy, winter months are characterized by shortened daylight, a result of Estonia's northern latitude (59°N, about the same latitude as Juneau, Alaska). When days are at their shortest, daylight is present only between 9 a.m. and 3:30 p.m. Prevailing gray skies from November through January make daylight seem even more fleeting. The sun, when it shines, hugs the horizon, thus giving the impression that it is early morning or late afternoon even at midday.

It is often difficult to say exactly when winter ends and spring begins. After the Vernal Equinox (March 21), daylight increases dramatically. Most days in late March, April, and May are sunny. Daytime temperatures, however, may still remain in the 30°F-45°F range into late April, and it is not safe to put winter clothing in storage until late May. Occasional snow flurries and light snow are possible through May.

Summer in Estonia is a short, magical season. Temperatures and humidity are generally cooler and lower than summer in the U.S. July and August temperatures are the warmest, averaging 67°F-75°F (19°C-24°C). Mornings are cooler and the late afternoon can warm up to the low 80s. The surface water temperature in the Baltic Sea is from 60°F-78°F (16°C-26°C). The heaviest rains occur in July and August, but they are usually passing showers. During summer months, Estonia benefits from its northern latitude, with daylight

extending long into evening hours, and reappearing well before earliest risers are out of bed. From early June to mid July, there is no real "nighttime."

The short autumn can start as early as late August, and is generally cool and rainy. Autumn colors are pleasant, but not as varied or spectacular as in the northeastern U.S.

Population

Estonia has some 1,475,000 inhabitants. Throughout Estonia's modern history, people from several ethnic groups have entered the country as immigrants to work in the industrial sector. The last major influx of immigrants, primarily ethnic Russians sent to live in Estonia during the Soviet era, occurred after World War II. Ethnic groups present in Estonia include 64% Estonian, 29% Russian-speaking, 3% Ukrainians, and 2% Belarussians. The urban population of Estonia is 71% of the total population, according to the census. Tallinn is the largest city with 420,470 residents, followed by Tartu with 101,901, and Narva with 75,211. Residents of Tallinn are 47.4% Estonian and 41.2% Russian. The rural population, including the islands, is 87% Estonian.

There is no state religion in Estonia. Currently, major denominations include Lutheran, Russian Orthodox, Baptist, and Catholic. The small Jewish community consists mainly of native Russian speakers.

History

A small nation located between East and West, Estonia has spent much of its history under foreign domination. In spite of this fact, the Estonian people have preserved their language and culture. In August 1991 the Republic of Estonia regained its independence, and, thus, began the challenging tasks of nation-building and the reorientation of Estonian public institutions toward those characteristic of a parliamentary democracy.

From the 13th- to the 18th-century, Estonia was ruled by the Danes, an order of German Teutonic Knights, the Poles, and the Swedes. In 1710, during the Great Northern War, Russia defeated Sweden, and the first era of Russian rule over Estonia began. Russian rule lasted until the Russian Empire collapsed with the Bolshevik Revolution at the end of World War I. Estonia declared its independence from Russia on February 24, 1918, but a war with Russia for this independence followed. Two years later, the two sides concluded the 1920 Tartu Peace Treaty in which Soviet Russia recognized the independence and sovereignty of Estonia.

On the eve of World War II, Estonian sovereignty was again undermined. On August 23, 1939, Estonia's two powerful neighbor states, the Soviet Union and Nazi Germany, concluded a mutual defense pact (the Molotov-Ribbentrop Pact), which contained secret protocols dividing Eastern Europe into spheres of influence, with Estonia falling into the Soviet sphere. The same autumn, the Soviet Union demanded Estonia for military bases. Confronted with the threat of annihilation, Estonia acceded to this demand. This led to the forcible incorporation of Estonia into the Soviet Union in the summer of 1940. After the German invasion of the Soviet Union in 1941, Estonia fell under Nazi control. In 1944, the Soviets regained the country and remained in control until the August 1991 failed coup in Moscow. Amid the coup, Estonia declared its independence reestablished. In early September 1991, the U.S. reestablished diplomatic relations with Estonia, which had been suspended in 1940.

Before Estonia's August 1991 declaration of independence, the period from 1985 to 1991 was marked by a gradual movement toward economic, social, and political independence. Two primary issues engendered public demonstrations and meetings in 1987 and 1988. The first issue was a proposed phosphate mine which opponents argued

would pollute the ground water and air near the facility. Demonstrations against the mining caused Moscow to abandon the plan the same year. The second issue was that of the secret protocols to the Molotov-Ribbentrop Pact, the existence of which Soviet authorities still denied. In a dramatic public demonstration, well-known dissidents organized a public meeting on August 23, 1987, demanding the pact's publication in Estonia to prove that Estonia did not join the Soviet Union voluntarily.

In 1988, several prominent Estonians began to publicly criticize Communist leaders and call for sovereign Soviet republics. The Estonian "Popular Front" was founded and organized a rally where Estonians listened to nationalist songs and political speeches in an unprecedented show of support for national independence. This rally contributed to the independence movement's mystique and resulted in its being called "The Singing Revolution." The following autumn, the Estonian Supreme Soviet declared sovereignty.

During 1989, ethnic Estonians increasingly pushed for complete independence instead of sovereignty within the U.S.S.R. They established Estonian citizens committees throughout the country. The committees planned the first public recognition of Estonia's declaration of independence for February 24, 1989. On that day, the blue, black, and white flag of the First Republic era flew once again over Estonia. In the summer of 1989, the Popular Front organized a Baltic-wide demonstration on the 50th anniversary of the signing of the Molotov-Ribbentrop Pact to call attention to the consequences of its secret protocols. A 400-mile-long chain of people held hands from Tallinn, Estonia, through Latvia to Vilnius, Lithuania, to demonstrate Baltic solidarity.

After nearly 50 years of occupation by the Soviet Union, the Republic of Estonia regained its independence and immediately began the difficult

task of reestablishing a democratic government. A constitutional assembly was convened in the fall of 1991. By the spring of 1992, the assembly completed a draft constitution that provided for a parliamentary democracy. This constitution was adopted by referendum in June 1992.

Public Institutions

The Republic of Estonia is a parliamentary democracy with a prime minister as head of government and a president as head of state. The Riigikogu, Estonia's Parliament, is a unicameral body with 101 members elected by proportional representation. The first post-Soviet elections were held in September 1992, and the new Parliament, government, and President took office in October. The Members of Parliament are elected for 4 years and the President for 5. The President nominates the Prime Minister. Parliament then authorizes the nominated Prime Minister to form a government. The authorized nominee then presents the proposed government to the President, who formally submits their names for office. Parliament then votes the Prime Minister into office. The constitution establishes an independent judiciary composed of the National Court, district courts, and county and city courts.

Each of Estonia's 15 provinces (Maakond) has its own provincial government.

Arts, Science, and Education

Culture and language have historically been reflected in the arts. Estonian society continues its high regard for music, literature, fine arts, and traditional crafts. Science and education are also highly valued and have a long tradition in the history of modern Estonia.

As Estonia prepared for its first period of independence, the first National Song Festival occurred in Tartu in 1869. Choruses sung in the

Estonian language during the first song festival set the tone for future festivals that further defined the Estonian sense of national identity. The choral music tradition continues today in modern Estonia with two primary choral groups and many smaller choruses. The two nationally known choruses are the National Male Choir and the Philharmonic Chamber Choir. The National Song Festival is now held every 4 years at the outdoor Song Festival Amphitheater near Tallinn. An international choir festival is held annually in Tallinn.

The modern musical tradition in Estonia includes classical and contemporary Estonian and foreign composers' music played by symphony and chamber orchestras. Estonia's two main orchestras are the Estonian National Symphony Orchestra and the Estonian Opera and Ballet Theater Orchestra, which is conducted by well-known conductor Eri Klas. These orchestras play at the Estonia Opera and Ballet Theater's Concert Hall and Opera House, respectively. The theater has an 800-seat Concert Hall and a 700-seat Opera House. Many smaller ensembles perform in Tallinn at restored medieval and modern venues around the city. Even small Estonian towns boast well-appointed concert halls.

Several Estonian composers, choir directors, and conductors are known internationally. These include composers Arvo Part, Lepo Sumera, Veljo Tormis, and Erki Sven-Tuur, as well as the late choir director and composer Gustav Ernesaks. Especially cherished in Estonia, Ernesaks composed music set to national poet Lydia Koidula's poem *My Fatherland Is My Love*, which became the unofficial anthem of the recent independence movement.

Kaljuste is another well-known choir director. Occasionally, foreign conductors and musicians collaborate with their Estonian counterparts on musical productions, thus bringing outstanding musical performances to Estonia from abroad.

Opera, dance, and dramatic theater productions are also plentiful in Tallinn and around Estonia. Operas in Tallinn are performed at the Estonian Opera and Ballet Theater's Opera House and are usually sung in Estonian. Larger dramatic productions are performed at either the Estonian Drama Theater or Russian Drama Theater. The plays are written by playwrights of various nationalities and are performed in Estonian or Russian. Recent performances have included "Hello Dolly," "Nicholas Nickleby," "My Fair Lady," "Hamlet," "A Streetcar Named Desire," and others. Smaller theaters often stage more avant-garde works. Musicals are often performed at the Linnahall, a modern 4,200-seat theater with a separate 3,000 seat arena for sports and other events. Rock and pop concerts are becoming more frequent on the song festival grounds. In August 1997, Michael Jackson performed there.

The Estonian people have a strong appreciation for literary figures who have contributed to the nation's sense of identity in literature and other writings. The literature will become more widely known as more works are translated. One contributor to Estonia's early literary history was Friedrich Reinhold Kreutzwald, author of the national epic *Kalevipoeg*, which tells of Estonia's mythical hero. Poet Lydia Koidula wrote poems that defined the independence movement called the "National Awakening" in the mid-1880s. Koidula's father, J.V. Jannsen, helped establish the Estonian-language newspaper tradition by founding the ancestor of today's *Postimees* daily newspaper in 1857. Modern literary figures that have added to Estonian literature include Jaan Kross. Paul-Erik Rummo, Jaan Kaplinski, and poet Doris Kareva.

Several Estonian filmmakers have gained international reputations. Two animation filmmakers, Priit Parn and Rein Raamat, have produced excellent works. Dramatic film director Leida Laius made *Naerata Ometi* (*Smile Please*) and

Varastatud Kohtumine (*A Stolen Meeting*), both known outside of Estonia.

The Estonian national character and sense of identity have also been preserved in Estonian fine art and traditional crafts. The primary types of Estonian fine arts are painting, print-making, and sculpture. Traditional crafts include leatherwork (especially jewelry), woodwork, and knitwear. The Art Museum of Estonia has an extensive collection of paintings by Estonian and other artists from the Baltics. Modern paintings, prints, photography, glassware, and textiles are exhibited at many private galleries in Tallinn, which usually sell artists' work. Traditional and modern crafts are also sold in shops belonging to an artists' cooperative.

Centers for scientific studies in Estonia include the Estonian Academy of Sciences in Tallinn, Tartu University, and the Tallinn Technical University. Wilhelm Ostwald, a scientist who received his doctorate from Tartu University, was responsible for defining physical chemistry as a separate discipline within chemistry. Ostwald was awarded the Nobel Prize in chemistry in 1909 for his research on catalysis, chemical equilibrium, and reaction velocities. Contemporary scientists are gaining worldwide attention for genetic research.

The first primary schools to teach in the Estonian language were established during the period of Swedish rule, in the 1680s. Tartu University, Estonia's first university, was founded in Tartu by King Gustav Adolf of Sweden in 1632. Tartu University has highly accomplished faculties in the hard sciences, medicine, and Russian literature. It is also the site of several ongoing U.S.-sponsored educational exchanges and training programs in public administration, political science, American studies, and English-teacher training. Estonia's Binational Center for North American Studies, which offers a minor in North American Studies through an interdisciplinary program, is

located at the university. Fulbright scholars to Estonia are posted at University Tartu in Tallinn. The other major institutions of higher learning that educate Estonia's highly literate and skilled society include the Tallinn Technical University, the Tallinn Pedagogical University, the Tallinn Music Academy, the Tallinn Art University, and the Estonian Agricultural University in Tartu. Several private schools, including the prestigious Humanities Institute, and business colleges including Concordia International University, The Estonian Business School, and others, have emerged in Tallinn.

Estonia has many libraries for research and general reading purposes. The newly constructed National Library opened its 4.2 million volume collection to the public in 1993. The Library of the Estonian Academy of Sciences was established in 1947 and currently holds a 3.5 million-volume collection. This collection emphasizes materials for research in the hard and social sciences. It includes the oldest books published in Tallinn (1631) and Tartu (1634) in a special Baltic collection, as well as a substantial collection of books about Estonia published in foreign languages and many reference materials for scholars. The Academy's library has exchange relationships with libraries in 38 countries. The Tartu University and Tallinn Technical University libraries also have large research collections.

Commerce and Industry

Estonia is evolving rapidly to meet the challenges it faces as a country with a liberal, open market economy. Change is the watchword for all aspects of the Estonian economy, from market orientation and trading partners to defining the private sector and reforming financial policies.

Traditionally, Estonia had a prosperous agrarian-based economy, but it was also a crossroads for

trade goods from the East and West. All of Estonia's major cities and towns were members of the Hanseatic League during the 13th century. Guildhouses in each city controlled trade in agricultural goods and artisanship. Swedish and Danish rulers also benefited from Estonia's agrarian economy and excellent geographic position for trade. In later years Estonia was industrialized by Imperial Russia. During the first period of Estonian independence from 1918 to 1940, the Estonian economy grew rapidly. By 1940, its standard of living was comparable to Finland. After annexation by the Soviet Union, its economy was fully controlled by central planners in Moscow.

After World War II, Estonia's industrial sector surpassed the agrarian sector in terms of national output.

Economic planners focused on developing Estonia's extensive oil-shale resource as a means to produce energy for domestic consumption and export to other Soviet Union republics. The planners also stressed development of industrial uses for phosphorite, Estonia's second most important natural resource. Meanwhile, in other economic sectors, there was large-scale nationalization of the banking and transportation systems, and 97% of the farms were collectivized by 1952.

The push toward industrialization continued; and, thus, the proportion of agrarian to industrial sector workers decreased throughout the 1960s and 1970s. Also, the number of Russians coming to Estonia to work in industry steadily increased during this period and into the 1980s. As one of the Soviet Union's most industrialized republics, with high employment levels and a skilled workforce, the standard of living in Estonia was higher than in the other republics.

Starting in the 1970s, there was a general sense of economic stagnation that lasted until 1987, when a loosening of the Estonian economy seemed within reach with Gor-

batchev's introduction of "perestroika." In 1987, Edgar Savisaar and several other prominent Estonians publicly suggested that Estonia be designated an autonomous economic zone under a plan called "Isemajandav Eesti (IME)." Although IME did not materialize, Savisaar's suggestion began a public debate on Estonia's autonomous economic and political future. In December 1989, banking legislation called for monetary reform and for the Bank of Estonia to prepare for issuing a new national currency. However, reform-minded economists held back, realizing in the late 1980s that substantive political changes were necessary before any meaningful economic reforms could happen.

With the 1991 return of independence came a new social, political, and economic era for the Republic of Estonia. Traditionally, Estonian industrial producers depended on raw materials from the former Soviet republics and Eastern Europe, and likewise finished products were sent to those republics and countries. This trend began to change in 1990 and has continued, so that Estonia has shifted its trade orientation toward Nordic countries and other Western European nations. At the same time, Estonia is pursuing widespread economic reform.

Monetary reform proposed in 1989 became a reality on June 20, 1992, when Estonia was the first of the former Soviet republics to issue its own currency. The Estonian "kroon" (EEK) was introduced with the full backing of gold and foreign exchange reserves and was pegged to the Deutsche Mark (at $EEK8=DM1$) with a 3% fluctuation rate. The new currency was a source of national pride from the day it was introduced and has proven to be a successful and stabilizing influence on the economy.

In addition to introducing the new currency, Estonia also implemented price reforms. In January 1992, major price reform legislation was enacted. Prices of more than 90% of

Estonia's goods and services are no longer controlled. In the 1980s, subsidies represented 13% of Estonia's gross domestic product (GDP), but as early as 1991, they represented only 2.2% of GDP. However, the cut in price subsidies hurt the average Estonian consumer, and consumers' purchasing power declined by 70% between 1989 and the end of 1992. Although the inflation rate rose dramatically just after price controls were lifted, it stabilized during 1992 and averaged about 2% a month in 1993. The economy appeared to bottom out in early 1993, and purchasing power has begun to increase modestly. The annual 1996 inflation rate decreased to 15%. Between January and June 1997, Estonia's total exports were \$1.3 billion and imports totaled \$1.8 billion. The republic's major trading partners are Finland, which accounts for 32% of its exports and 21% of its imports, Russia for 16% of its exports and 18% of its imports, and Sweden for 9% of its exports and 11% of its imports.

Estonia's major export goods are textiles/clothes, machinery/equipment, food, wood/wood products, and chemicals. The major import goods include machinery/equipment, minerals, vehicles, textiles/clothes, and food. Estonia has liberalized its import restrictions so that duties are levied only on tobacco products, alcohol, and luxury items (including automobiles). All other import items are duty free. Export licenses are only required for a handful of natural resources, such as oil shale. The lack of nontariff barriers, the favorable exchange rate of the Estonian currency, and Estonia's positive attitude toward free trade contribute to the republic's reputation as a respected trading nation.

Privatization and development of the private sector represents a significant area of reform in Estonia. The primary obstacle to privatization continues to be issues surrounding property law. Many joint ventures with Estonian and Nordic partners have established themselves in Estonia since indepen-

dence. The most successful ventures are in wholesale and retail trade, industry, the service sector, construction, food service, and hotels.

A strong banking sector has developed rapidly in Estonia since independence. Unlike other newly independent countries in the region, Estonia did not provide state support to unhealthy or unstable financial institutions. The result of this sink-or-swim strategy was a significant number of bank failures and mergers of smaller banks, followed by the emergence of several large, stable banks, offering the full range of Western banking services. The largest bank in the Baltics is Estonia's Hansapank. With the emergence of easier mortgage credit in 1997, banking in Estonia is now comparable to banking in Western Europe or the U.S. Estonia has a healthy, thriving stock market. In mid-July 1997, prices of bluechip shares jumped from between 10% and 20% on average, spurred in part by the announcement that Estonia would be asked to start negotiations on the EU membership. Until October 1997, share prices of several leading stocks rose by 1,000% or more. In the wake of economic turmoil in Asia, there have been several sharp downturns in the market. However, these drops have been viewed more as needed "corrections" which have removed many inexperienced, marginal, and speculative investors from the market. Estonians pay personal and corporate income, profit, and value-added taxes. The highest personal income bracket is 33%; corporate tax stands at 36%; and the value-added tax is 18% on services and imported goods. Employers pay social taxes equal to 33% of an employee's salary. These social taxes include a 20% tax for social security and a 13% tax for the medical insurance fund. Compliance with local tax law is high compared with other newly independent countries in the region. By law, the Estonian Government must have a balanced budget.

Workers in Estonia have the constitutionally guaranteed right to

join a union or employee association. They can also participate in collective bargaining. In April 1990, the Estonian Trade Union (EAKL), the largest employee organization, replaced the Labor Confederation from the Soviet period. Estonia joined the International Labor Organization in January 1992.

Estonia became a member of the European Bank for Reconstruction and Development in December 1991, a member of the International Monetary Fund in May 1992, and a member of the World Bank in June of the same year. Estonia has received substantial monetary assistance from the IMF, the European Bank for Reconstruction and Development, the European Union (EU), and from individual countries including Finland, Sweden, Denmark, Germany, and Norway.

In 1997, Estonia received the green light by the EU to start negotiations for membership. Many observers noted that the main reason was Estonia's strong well-cultivated reputation for reform. Full membership in the EU will probably be granted in the middle of the next decade.

To say that the business environment has changed for the better in the last 5 years is an understatement. Although business-to-customer services have improved, some remnants of Soviet-era business practices (mainly brusque or indifferent service) remain. However, compared to elsewhere in the former Soviet bloc, doing business in Estonia is generally a positive, pleasant experience.

The U.S. aided Estonia significantly in its drive to develop a free market economy. Between 1991 and 1996, U.S. assistance to Estonia, administered through the U.S. Agency for International Development (USAID) program, concentrated on three main areas: economic reform and privatization; democratic pluralism and local government; and environmental protection and health. In September 1996, Estonia became the first country in central and Eastern Europe to successfully

“graduate” from USAID assistance. The U.S. Peace Corps, in Estonia since 1992, still sends volunteers to teach English and to assist with small business development.

A variety of U.S. technical advisers from private and public sectors have played a central role in helping Estonia establish its legal framework for reform. The fields in which U.S. technical advisers worked most extensively include privatization, constitutional and judicial reform, energy efficiency, banking, education, local government reform, national and local elections, municipal administration, taxation, national and local budget systems, cooperatives, agricultural production and agribusiness, small business development, bankruptcy issues, and environmental reform.

Transportation

Automobiles

All major car dealers are represented in Tallinn. Dealerships are able to sell, service, and obtain spare parts for American, Japanese, and Western European cars and minivans. Any model can be ordered by the dealer and shipped to Tallinn. European cars are generally cheaper than they would be in the U.S.

Dealership services in Tallinn are similar to those in the U.S. Most dealerships have maintenance facilities, and independent garage repairs are of good quality. Labor, especially at independent garages, is relatively inexpensive. Spare parts for American cars can be expensive and occasionally must be special ordered. Service and parts are readily available at reasonable prices for Russian and European cars. Quality auto bodywork for all cars is available in Tallinn.

Unleaded gas is readily available at modern, clean service stations. Many of these have convenience shops that sell Western auto-related items at prices similar to, or somewhat higher than, those in the U.S.

Estonia has the highest rate of car ownership growth in Europe. Correspondingly, many new drivers are on the road. This, combined with the fact that there are still many older Soviet cars on the road, has meant a substantial increase in traffic (similar now to a major U.S. metropolitan area) and a large number of fender-benders. Aggressive driving is the norm.

The speed limit on open roads is 90km/h (55 mph), but 50km/h (30mph) in residential areas. Car headlights must be on at all times, year round. The driver and front seat passenger must wear seat belts. Police enforce and most drivers take driving-under-the-influence-of-alcohol laws seriously. Car seats for babies and small children are mandatory and available locally. A first-aid kit, fire extinguisher, and safety reflectors in case of breakdown are mandatory. Winter tires, available locally at prices similar to or slightly lower than in the U.S., are mandatory between December and March. Studded snow tires are allowable and recommended. Estonia is a left-hand-drive country.

The Estonian Government requires that all drivers carry third-party-liability car insurance. Stiff fines are imposed on those who do not comply with this law. Third-party-liability insurance that is considered valid under Estonian law may be purchased in Estonia. However, drivers should note that valid third-party-liability coverage in Estonia may not be valid in neighboring countries, and therefore supplemental insurance must be purchased for travel to the neighboring countries. Some American insurers, such as Clements, will provide coverage that satisfies local requirements. Drivers intending car travel (via ferry) to Sweden or Finland should ensure that their liability insurance provides them with a green international insurance card.

State and private car insurance policies in Estonia offer minimal coverage compared to that in the U.S. They generally cover only damage to the driver's car and nominal

personal injury coverage. The local prevailing practice is that damages to another driver's car are covered out-of-pocket, but it can be difficult to get any settlement from a delinquent driver.

Estonia's main roads are adequate for daytime, fair-weather driving, but night driving and winter driving can be difficult. Roads outside Tallinn are not lighted and often poorly marked. Road construction is not well marked. During winter months, when roads are sanded and plowed sporadically or, more often, not at all.

On the other hand, summer driving in Estonia, and throughout the Baltic States, can be pleasant. The almost endless daylight, the reasonable quality of most roads (when not wet, dark, or icy), the relatively light traffic outside the cities, and the increasing availability of tourist and roadside services will do much to counter the cabin fever that results from the lack of winter mobility. Excellent road maps are readily available in Tallinn for all of Estonia and the other Baltic countries.

Local

Public transportation in the Tallinn area is generally convenient and reliable. All forms of public transportation are more crowded than in the U.S. One can travel easily, if not always comfortably, around the city and to the outskirts of Tallinn using the extensive public transportation system.

Tallinn has many taxis, all of which must use a meter. Taxis generally fall into two categories: those from larger taxi companies with clean, modern fleets (Tulika and several others), and those from smaller firms or independents using Soviet, Russian, and older Western cars. You can either get a taxi at a taxi stand or request one by phone, for an extra fee. If they do not do so immediately, remind drivers to turn on their meters. Taxi rates are generally cheaper than in Washington, D.C. Some modern taxi companies take credit cards. Passengers usu-

ally tip the driver a small amount (5%-10%), but tipping is not considered mandatory. Overall, using taxis in Tallinn is easier and more pleasant than in most U.S. cities.

Regional

There is regular intercity travel from Tallinn to other points in Estonia, the other two Baltic capitals, points in Russia and other republics of the former Soviet Union, and major Western European cities.

Bus travel within and beyond Estonia is extensive. You can take a bus to all of Estonia's major cities and towns from Tallinn and can at least make a connection to many smaller towns not directly serviced by buses from Tallinn. You can also travel by bus and ferry to Estonia's larger islands. Buses travel regularly to Riga and Vilnius, as well as Klaipeda, St. Petersburg, Kaliningrad, and cities in Germany. Bus service is faster and usually more convenient than train travel. Many buses on the longer routes meet Western standards (i.e., with bathroom and small TV), but older buses are often used on routes within Estonia. Bus travel is cheap, compared with that in the U.S.

Trains from Tallinn service all major regional cities, including Narva and Tartu in Estonia and the following cities in other countries: St. Petersburg, Moscow, Riga, Vilnius, Minsk, and Warsaw. For longer trips, an overnight sleeper car provides both for safety and comfort. Overnight train is a good way to travel to Moscow or St. Petersburg, but is substantially slower than the bus to Riga and Vilnius.

Tallinn offers frequent flights to cities in Western Europe and the former Soviet Union. Finnair flies daily to Helsinki and SAS flies to both Copenhagen and Stockholm. In addition, there is regular, nonstop, service to Riga, Vilnius, Hamburg, Amsterdam, London, Vienna, Moscow, St. Petersburg, Kiev, and Minsk.

There is regular ferry service between Helsinki and Tallinn (several times daily) and Stockholm and Tallinn (daily), as well as hydrofoil service between Helsinki and Tallinn from April through October. Ferries can carry motor vehicles, but hydrofoils are for passengers only. All ferries have restaurants, bars, shops, and other diversions. Passage by ferry to Helsinki takes about 3½ hours; the hydrofoil takes 1½ hours. Although the hydrofoil is faster, it is more expensive, and sometimes stormy weather and/or rough seas cancel trips. The trip from Tallinn to Helsinki by ferry is cheaper than flying and then taking a taxi or bus into the Finnish capital. The ferry to Stockholm sails from Tallinn every second day and takes 14½ hours. Although this is the most direct ferry route between Tallinn and Stockholm, it is also possible and less expensive to sail to Stockholm via Helsinki.

As noted above, car travel around Estonia and the Baltics, or to cities in the Nordic countries, Russia, and Eastern Europe, is feasible. Avis, Hertz, National (Eurorent), and other Western and local rental car firms have outlets in Tallinn and the other Baltic capitals, with rates somewhat higher than in the U.S. Most borders you would cross in the region cause no problem, except the border between Lithuania and Poland and the border between Estonia and Russia, where delays are frequent.

Communications

Telephone and Telegraph

Currently, Estonia has three types of telephone systems, including an analog system, a digital system, and several cellular systems. Tallinn has upgraded 90% of the city's telephone system to digital. The rest of the country is undergoing gradual digital upgrades. Phone service in the capital is good but can be sporadic outside Tallinn.

Tallinn residents can dial international calls directly from their residential telephones or book them

through the operator. It is slightly cheaper to call the U.S. from Estonia than vice versa. Calls to Eastern and Western European countries from Estonia are cheaper than calling those countries from the U.S.

Local digital calls have per-call charges, but long-distance and international-call charges are the same as those for the older system. Many individuals and businesses use cellular systems for phone calls and fax machine transmissions. Cellular systems are more expensive than the other systems for local and long-distance calls. International calls made with cellular phones currently cost 30% more than those made with digital systems.

Computer usage in Estonia is widespread. The entire range of computer software and hardware is available locally at reasonable prices. Internet hookups are reasonably priced and easy to arrange. Microlink, Gateway, and several other familiar computer firms are present in Tallinn. All major computer companies and computer stores have knowledgeable staff people, most of whom speak at least some English. As occasional fluctuations in electrical voltage occur, bring surge protectors for all computer equipment.

Mail

The international mail system for letters and packages to and from Estonia is reliable. No difficulties concerning customs, pilferage, or damage to sent or received items has been reported. Currently, mailing letters and packages from Estonia costs more than from the U.S.

Many international courier services can send small packets and larger boxes to and from Tallinn including Federal Express, DHL, and UPS. Courier firms charge prices comparable to those in the U.S. for the same service. It usually takes smaller packets 3-5 days to/from the U.S. You can use most major credit cards for the fee.

Radio and TV

Several radio stations broadcast on AM and FM in Estonia. The state-operated Eesti Raadio (Estonian Radio) airs the BBC World Service in English from noon to 5 p.m. daily. In Tallinn, Raadio KuKu was the first independent station; it has primarily a music format that includes an eclectic mix of American rock, jazz, blues, and country music, as well as European contemporary popular and classical music. Raadio Tallinn, another independent station, broadcasts music and news in Russian. Love Radio plays easy-listening pop with hits from the 1970s and 1980s and has news in English every hour. Since 1991, the number of independent stations on AM and FM has increased, and this trend is expected to continue. Shortwave reception in Tallinn is good and includes broadcasts in various languages.

From Tallinn you can watch Eesti Televisioon (Estonian Television), three independent Estonian stations, one Russian channel, and four Finnish channels. Satellite dishes, increasingly popular in Estonia, enable you to receive more programming from abroad. Full satellite-dish receiving equipment sets and installation services are available in Tallinn at reasonable prices. English-language programs and movies are subtitled rather than dubbed on most channels.

A TV should be able to receive both SECAM and PAL systems in Estonia, because Finnish and Western European channels require SECAM and Estonian and Russian channels use PAL. Multisystem TV's, recommended for local viewing, are available in Tallinn. Selection is limited and they can be expensive. To receive Finnish channels you will need a special antenna. Bring a multisystem VCR to watch videos. A limited selection of VCR's are available in Tallinn at generally higher than U.S. prices.

Newspapers, Magazines, and Technical Journals

American and European newspapers and magazines are increas-

ingly available in Tallinn at the major hotels and some other shops. You can buy *The Herald Tribune*, *USA Today*, *Time*, and *Newsweek* regularly, but the newspapers are usually a day old.

Other popular American and English-language magazines (primarily fashion and women's magazines) are sold in Tallinn, but newsstand prices are higher here. Major newspapers and magazines in German and French are also available.

Several English-language publications written and published in the Baltics are sold regularly in Estonia. *The City Paper* is a bimonthly magazine and travel guide with interesting articles about current issues and politics in Estonia. *The Baltic Times*, a weekly newspaper published in Riga, covers the current events of the three Baltic States. *Tallinn This Week*, a booklet published six times a year, is a guide to Tallinn's restaurants, shopping, cafes, nightlife, and cultural events. Several Estonian-language papers and magazines also include special English pages or columns.

Health and Medicine

Medical Facilities

Health care facilities in Estonia are improving, but still fall somewhat below the Western standard. Most health care providers, however, are well-trained professionals and many are conversant in English.

Community Health

Food-handling procedures, although improving, are not yet entirely reliable here. Some food bought at older markets and the (rapidly disappearing) Soviet-style food stores may be poorly refrigerated. Although the public water supply in Tallinn is chlorinated, water treatment facilities and distribution pipes are often in disrepair. Therefore, the water supply could be contaminated. High-quality local and imported bottled water is available in all food shops and convenience stores.

NOTES FOR TRAVELERS

Customs, Duties, and Passage

A passport is required. Tourists and business travelers may stay in Estonia for up to 90 days without a visa. U.S. citizens who wish to work in Estonia or remain longer than 90 days must obtain a visa or residence permit. For further information concerning entry requirements and residency permits, please contact the Estonian Embassy, 2131 Massachusetts Avenue, N.W., Washington, D.C. 20008, telephone (202) 588-0101, or the Consulate General of Estonia in New York City at telephone (212) 883-0636. Also, please see the Estonian Embassy's Internet home page at <http://www.estemb.org>.

Customs restrictions on Estonian cultural artifacts exported from Estonia by anyone require a 100% duty on the purchase price of the item. Special permits are also required and may be obtained from the Cultural Values Export Board.

U.S. citizens living in or visiting Estonia are encouraged to register at the Consular Section of the U.S. Embassy and obtain updated information on travel and security within Estonia. The U.S. Embassy in Tallinn is located at Kentmanni 20, telephone (372) 668-8100; fax (372) 668-8267; emergency cell phone (011)(372)509-2129, if dialed from the U.S., and 0-509-2129 if dialed from within Estonia. The Embassy's home page on the Internet is at <http://www.usemb.ee>.

Pets

The pet should have a health certificate which is less than 10 days old and a documented rabies vaccination given more than 30 days, but less than 1 year, before arrival in Estonia. Dogs should also have recent distemper and parvovirus shots. There is no quarantine restriction for household pets brought to Estonia.

Competent veterinarians, many of whom speak English, practice in Tallinn. Most veterinarians will commonly obtain pet vaccines and medicines in Finland or elsewhere in Europe. Veterinarians often make house calls to vaccinate and care for sick pets. Veterinarians' fees in Estonia are low by U.S. standards. Although pet medical care is inexpensive, pet food is more expensive compared to Washington, D.C., prices.

Currency, Banking, and Weights and Measures

The only currency that can be used legally in Estonia is the Estonian kroon (EEK). The kroon was introduced as Estonia's national currency in June 1992, nearly a year after Estonian independence. It is backed by gold and foreign currency reserves and is fully convertible. The current exchange rate is about 15.9 EEK=U. S. \$1. The value of the kroon is pegged to the value of the Deutsche Mark at EEK8/DM1 with a fluctuation rate of 3%. Estonia's currency is issued in notes of the following denominations: 1, 2, 5, 10, 25, 50, 100, and 500. The coins include 5-, 10-, 20- and 50-cent coins.

Credit cards are now widely accepted in Estonia. Traveler's checks are also accepted by many major hotels and restaurants.

Travelers checks may be cashed for kroons in any bank in Tallinn. Currency may be exchanged for kroons at most banks, hotels, and many foreign exchange counters around Tallinn and other parts of Estonia. The kroon is fully convertible and therefore can be exchanged for foreign currency. However, except for those arriving via Finland, it may be difficult or impossible to obtain kroons before arrival.

Credit cards can be used at the major hotels and department stores and most restaurants throughout Estonia. The most common cards used in Tallinn are American Express, Visa, and Mastercard (Eurocard). It is possible to get a cash advance in kroons with a major credit card. Advances are available for a commission fee to the bank.

A value-added tax (VAT) of 18% is placed on goods imported into Estonia and services performed in Estonia.

The weight and measurement system in Estonia is the metric system.

LOCAL HOLIDAYS

- Jan. 1 New Year's Day
 - Feb. 24 Estonian Independence Day
 - Mar/Apr. Good Friday*
 - Mar/Apr. Easter Sunday*
 - May 1 May Day
 - May/June Whitsunday/Pentecost*
 - June 23 Victory Day
 - June 24 Midsummer

Helsinki, Finland

FINLAND

Republic of Finland

Major Cities:

Helsinki, Tampere, Turku

Other Cities:

Espoo, Jyväskylä, Kotka, Kuopio, Lahti, Oulu, Pori, Vaasa, Vantaa

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated February 1992. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

FINLAND is a modern, progressive, Scandinavian country, rich in contrast between city and wilderness. The character of its people has been forged by the severity of life in this northern corner of Europe, and the challenge of existing between contending powers has produced a vigorous individualism and inspired a national culture.

Migrant groups from the south and southwest settled the region that is now Finland in the eighth century, driving the indigenous Lapps northward toward the Arctic Circle. Eventually Swedes moved onto the land and, in 1155, introduced Christianity. Sweden controlled Finland for hundreds of years until forced to

cede it, as a grand duchy, to Russia in the early part of the 19th century. A spirit of nationalism grew until, in the chaos of the Russian Revolution, Finland was created.

During World War II, the nation fought with Germany against the Soviet Union and, after tragic human and geographical losses and eventual reparation payments, signed an agreement of cooperation and friendship with its former ruling power. Finland's official policy of neutrality and nonalignment has led to the establishment of relations with other countries regardless of their political systems.

MAJOR CITIES

Helsinki

Helsinki, the capital and principal city, is a Baltic port on Finland's southern coast with an estimated population of 551,000. It lies north of such cities as Juneau, Alaska, and Churchill, Canada, and is the second most northerly capital in the world, after Iceland's Reykjavik. Helsinki is a modern city, yet it has areas which give a genuine and comprehensive picture of the atmosphere and architecture of the past.

The city was founded in 1550 by the Swedish king, Gustav Vasa. Great fires destroyed the old wooden Helsinki many times, but it was always rebuilt. The massive walls of the Suomenlinna Island fortress remain from the 18th century. Helsinki became Finland's capital in 1812. Many of its historically interesting sights date from the beginning of the 19th century, when the administrative center was built around Senate Square. The Cathedral of St. Nicholas, the National University, and Government Palace, for example, are among the finest of its architectural achievements. It has been said of the Helsinki of the Empire period that it was the last European city designed as an entity and created as a work of art. Historic Senate Square is one of the most remarkable achievements of neoclassicism at its height; many of its buildings reflect the genius of architect Carl Engel.

Helsinki today has a modern look, with some buildings designed by internationally known contemporary Finnish architects Eliel Saarinen and Alvar Aalto. In planning new areas and developing old ones, the aim has been to make the city a balanced whole with several regional centers, each with its own schools, sports fields, libraries, and shopping centers. The ideal is to combine the advantages of urban

living with those of rural life. Approximately 500,000 people reside in the city, which is the administrative, cultural, commercial, and industrial center of Finland. Including the suburbs of Espoo, Vantaa, and others, the population of Greater Helsinki was over one million in 1995.

Helsinki, whose name in Swedish (one of the two official languages) is Helsingfors, has many points of interest. Among the most popular are the harbor area and Market Square, where the Havis Amanda fountain symbolizes Helsinki rising out of the waves. Other attractions include the Olympic Stadium (site of the 1952 Summer Games), the Sibelius monument, the "Church in the Rock," Finlandia Hall, City Museum, National Museum, and Seurasaari Island.

Helsinki offers a wide and interesting variety of cultural activities, recreation, entertainment, and shopping, and it enjoys an unusually high standard of living.

Schools for Foreigners

The International School of Helsinki, based on American and British standards, offers an education from kindergarten through tenth grade. Several different nationalities are represented both in the student body and on the school board. The full-time staff consists of American and British teachers. The school has initiated a joint accreditation process with the New England Association of Schools and the European Council of International Schools.

International School comprises one wing of an established Finnish school, and can take advantage of some of the Finnish teachers for physical education and special activities.

The English School, Catholic-affiliated, receives support from the Finnish Government since it is primarily intended for Finnish students who wish to learn and maintain English. Religious studies are not part of the curriculum.

Classes range from kindergarten through grade 10.

A small, private school, L'École Française d'Helsinki, is run by the French Embassy. Schooling is assured for all ages, including kindergarten, and follows the studies prescribed by the French Ministry of Education. The staff is composed of French teachers provided by the sponsoring government or recruited locally.

The German School, long established in Helsinki, offers classes from kindergarten through high school, leading to a choice of either a German or Finnish diploma. The school is German-oriented, and has the reputation of providing a fine education. The teachers are German and Finnish; instruction is entirely in German. Books and materials are up-to-date and attractively presented. The school is part of the Finnish system, with similar semesters, holidays, and regulations. The staff welcomes children with no knowledge of German in the first few grades, but discourages those at higher levels because of the difficulty of catching up to classmates in the language.

Special Opportunities

The University of Helsinki is the largest university in the Nordic area. Courses in the English department may be taken at the university, but language restrictions in other departments make it difficult for most students to carry a full academic load.

The University of Helsinki offers courses in Finnish and Swedish for foreigners. Classes are taught at all levels of proficiency, during the day and after working hours.

Special educational opportunities are available for children with learning disabilities or physical handicaps, but all instruction is either in Finnish or Swedish.

Recreation

Finland first rose to prominence in sports at the 1912 Olympics, where it took first place in wrestling and

second place in track and field. In succeeding years, the country has become famous for long-distance running, ski jumping, speed skating, and target shooting. Sports unique to Finland are *bandy*, a form of ice hockey, and *pesapallo*, a game vaguely resembling American baseball. Soccer, hockey, and basketball are popular spectator sports.

From the first of June until late August, daylight hours are long and outdoor activities such as boating, sailing, bathing, swimming, hiking, picnicking, and motor trips may be enjoyed in the immediate vicinity of Helsinki. The time for golf and outdoor tennis is relatively short. Helsinki has four golf courses (two of which have 18 holes) and a few excellent outdoor clay tennis courts, as well as several indoor year-round tennis courts. It is not easy to obtain golf club memberships, and tennis courts usually must be booked in advance and, sometimes, at inconvenient hours.

Squash is also popular; court time is booked on a half-hour basis. Cycling possibilities are good in the Helsinki suburbs during the warmer months. Trails for jogging and walking abound. Boating begins in May/June and extends into September. Swimming and sunbathing at the several municipal beaches and in outside pools are popular for only about two months in the summer, but are possible year round at several indoor pools.

Winter sports include skiing and skating. Excellent trails for cross-country skiing are available in and around the city, and many of these are lighted for evening use. Several smaller towns within a few hours' ride offer good weekend skiing; spring skiing trips to Lapland are popular. Downhill skiing is possible, but facilities are limited. Although there are several small hills near Helsinki, the better locations are farther north. The city has many good outdoor skating rinks and some indoor rinks. Figure skating lessons are available.

Lutheran Cathedral and square in Helsinki

Susan Rock. Reproduced by permission.

There are a number of horseback riding schools in the capital and its immediate vicinity. Helsinki also has one indoor riding hall.

Salmon fishing is found in northern Lapland. Ice fishing is quite popular throughout Finland during the long winter months. Game hunting is possible, but on a limited basis.

The sauna, a national institution in Finland, has existed for a thousand years. Finns normally indulge in a sauna once a week, and it is a custom that most Americans quickly learn to enjoy. Saunas are particularly enjoyable after physical exercise, especially cross-country skiing, and as a means of socializing, although mixed saunas are not customary.

The purpose of a sauna is to completely cleanse the body and soul by being subjected to great changes of

temperatures. After the heat of the sauna, there is either a shower or a swim in a pool, a lake, or the sea. The bravest participants roll in winter snow or plunge through a hole in the ice. After the sauna, a cold beer or soda before a warm fireplace is a necessary thirst quencher. Most Finnish apartment buildings and houses have saunas, some with pools. Summer houses, although quite modest, also have saunas, usually on a lake or the sea.

Outdoor recreation and touring opportunities are plentiful, particularly in Lapland and the lake district. Lapland—the land of the midnight sun, northern lights, and reindeer—is Finland's northernmost province. The principal towns are Rovaniemi, the capital, and Kemi, both accessible by air (two hours) and rail (nine hours), and about 500 miles (800 kilometers) from Helsinki. The overnight train

with space for cars is a popular way to get to Rovaniemi, a transit point to the tourist and resort areas of Pallastunturi, Kilpisjärvi, and Inari farther north. The traveler can also drive north into Norway and view the fjords. Lapland is especially popular in early April, when the days are longer and skiing is excellent; for midsummer's night to view the fires and festivities; and in September, when the leaves change colors.

The lake district, comprising most of southeast central Finland, provides excellent opportunities for scenic travel by car and steamer ship. A wood-burning steamer offers an unusually scenic 12-hour trip from Savonlinna to Kuopio, with its colorful market and interesting Orthodox Church museum. The 15th-century Olavinlinna Castle, a compact towering fortress built on an island near Savonlinna, is the

site of an international open-air opera festival each July.

Day trips to Turku, Hanko, and Porvoo are popular. Turku, Finland's oldest city and its capital until 1812, is two-and-a-half hours west of Helsinki by car. Hanko, a coastal city two hours west of Helsinki, is one of the best Finnish saltwater bathing resorts during July and August. At this time, yachting regattas and tennis matches are held. En route to Hanko, many travelers stop at Tammissaari, a charming seaside town with narrow lanes bordered by Empire-style wooden houses. Porvoo is an idyllic old coastal town one hour east of Helsinki by car. It was the home of Johan Ludvig Runeberg, the national poet of Finland, and is the site of an ancient granite cathedral.

A visit or business assignment to Helsinki provides excellent opportunities to travel to Sweden and Russia. Two shipping lines have overnight service between Stockholm and Helsinki. During summer, ships also travel to Tallinn (Estonia) and Travemünde (Germany). Daily flights are available on Finnair or Aeroflot, and daily trains serve St. Petersburg and Moscow. All excursions to Russia require a Russian visa. Since accommodations must be booked before a visa is issued, it is best to have a travel agent in Helsinki handle arrangements. Visa processing takes from 10 days to two weeks.

Entertainment

Since its designation as the nation's capital in 1812, Helsinki has developed into a cultural center. It is the home of many of Finland's most important museums. The largest of these is the National Museum, with its extensive prehistoric, historic, and ethnographic collections. The large Art Museum of the Athenaeum, located across the street from the railroad station, contains Finnish art from the 18th century to the present, and foreign works of art. Occasionally, large foreign exhibits are shown here. The Art Collections of the City of Helsinki and the Amos Anderson Museum of

Art are also noted institutions which often have exhibitions in addition to their regular collections.

Many good movie theaters in the city and suburbs offer the latest American, British, Italian, French, German, and other foreign films in their original versions, as well as locally produced films in Finnish. Strict regulations prevent children from attending films featuring violence, whether or not the children are accompanied by parents.

Helsinki has two permanent symphony orchestras, the Helsinki Philharmonic and the Radio Symphony. It also is home to the National Opera, with both opera and ballet companies, and the government-sponsored National Theater. Concerts and recitals are performed in the renowned Finlandia Hall, the Taivallahti Church, Sibelius Academy, and the House of Nobility, among others, providing a rich and varied musical life. During summer, Finnish and international artists and musicians are featured at special performances throughout the country. These events include the Kuopio Dance and Music Festival in June, the Jyväskylä Arts Festival, the Savonlinna Opera Festival, the Pori Jazz Festival, the Turku Music Festival, the Kuhmo Chamber Music Festival, the Lahti International Organ Festival, the Tampere Summer Theater, and the Helsinki Festival.

Many Helsinki residents leave for the country in midsummer, and much of the city's cultural life closes down; however, restaurants and cinemas remain open.

The Finnish-American Society (Helsinki chapter) is a cultural and social organization linked to the League of Finnish-American Societies. All Americans are eligible to join for a nominal membership fee. Other clubs include the American Women's Club, the Finnish-American Chamber of Commerce, the Club of '32, and Rotary, Lions, consular, and diplomatic associations.

Special Note

In Finland, both men and women shake hands on meeting one another. Children also shake hands, and should not be excluded from this courtesy. Punctuality is a must, and guests are expected to arrive within five minutes of the stated arrival time for a dinner or other party. When visiting a Finnish home, it is the custom to take flowers to the hostess, or to send flowers preceding or following the visit. Flowers are usually given to the hostess unwrapped and in uneven numbers. In lieu of flowers, other small gifts may be presented.

At a dinner party, it is customary to make a welcoming speech as soon as the first course is served and all the wine glasses filled. No one touches his or her glass until this ritual has been performed. The honored guest makes a toast and thanks the host and hostess as soon as the dessert wine or dessert has been served.

Finns observe the name day as well as the birthday of close friends, relatives, and prominent people personally known. The really important birthday celebrations are the 50th and 60th, which are recognized by extending best wishes either by phone or telegram, or by sending flowers. Names for the day are published in local newspapers.

Tampere

Tampere, in Finland's southwestern province of Häme, is the third largest city in the country (population, 193,000) and one of the leading textile centers of northern Europe. It lies on an isthmus between Lakes Näsijärvi and Pyhäjärvi. In Swedish, the city is called Tammerfors.

Tampere has been a trade center since the 11th century, and today is known for its many industries which include paper, shoes, and machinery, as well as its famous textiles. It was here in 1918 that the country's White forces defeated the Finnish Bolsheviks.

Downtown street in Turku, Finland

Particular points of interest in the city are the Sarkänniemi Tourist Center, with its aquarium, amusement park, planetarium, children's zoo, and the Näsinneula Observation Tower; the university; the town cathedral; the city hall; and the many fine old churches in the surrounding countryside, including

Messukylä Stone Church, the oldest in the area.

The Häme Museum is known for its collection of folk art, rugs, and ecclesiastical pieces that show the ethnography and cultural history of Tampere and the Häme province. The Sara Hildén Art Museum dis-

plays Finnish and international art, primarily post-war painting, sculpture, and graphics. Bus and boat excursions can be arranged to the lakes and forests.

Tampere is known for the Pyyrikki Summer Theatre, the world's first with a revolving auditorium, and for

the warm-weather concerts in Koskipuisto Park. The city has a golf course, tennis courts, swimming pools, and nearby beaches. There also are first-class hotels and restaurants (one on the observation tower).

Turku

Turku (in Swedish, Åbo), capital of Turun-Porin Province in southwestern Finland, is a large port and industrial city at the mouth of the Aurajohi River, on the Baltic Sea. There are steel mills, shipyards, textile mills, and machine shops, but Turku is also the center of an agricultural region. Its population is approximately 172,000.

Turku is called “the cradle of Finnish culture.” It was the seat of the first bishop of Finland in 1229, and the home of the National University from 1640 to 1827; the following year, after a disastrous fire destroyed most of the city, the university was moved to Helsinki. Turku was the country’s capital until 1812. The Treaty of Åbo, in which Sweden ceded part of southeastern Finland to Russia, was signed here in 1743.

The city’s great 13th-century cathedral, consumed by fire the same year that the city was destroyed, has been restored. Its beautiful ceiling and the tombs and icons housed within the structure are particularly impressive reminders of Finland’s ancient past. Also rebuilt and now a museum is Turku’s castle, which dates from the 13th century; it was burned in 1614 and bombed during World War II.

Turku’s open-air handicraft museum is one of Finland’s most popular summer attractions. Tourists throng to the area to view the displays, and to patronize the hotels and restaurants. The city is interesting both for its history and for its cultural atmosphere. It supports three newspapers.

The picturesque old town of Naantali (in Swedish, Nådendal), with a population of 14,000, is close to

Turku, and serves as the city’s port. It dates from 1445 and is known for its picturesque wooden houses. The presidential summer residence is on nearby Luonnon-maa Island. Naantali hosts a celebrated chamber music festival each June.

OTHER CITIES

ESPOO (Esbo in Swedish), is the home of the Institute of Technology, with campus and buildings designed by famed architect Alvar Aalto. With a population of 210,000, it is located 11 miles west of Helsinki. Espoo has five regional centers and one of them, Tapiola, is a pioneer work of Finnish town planning, combining comfortable living with up-to-date services and blending into the natural surroundings. Prehistoric finds show that the area of Espoo was settled about 3,500 B.C. The Espoo Granite Church, completed early in the 15th century, contains medieval frescoes.

JYVÄSKYLÄ (population 78,000) is located amid the hills and lakes of south-central Finland. It was previously known primarily as a town of schools and culture, and today is famous for its modern university with buildings designed by Alvar Aalto. Jyväskylä has several museums, including the Alvar Aalto Museum, which displays Aalto’s sketches, drawings, designs, and furniture, the Jyväskylä town art collection, and temporary art exhibits.

The city of **KOTKA** is located in southeastern Finland, about 70 miles northeast of the capital. The main part of the town is situated on the peninsula between the two eastern tributaries of the mouth of the Kymi River and on the island of Kotka (Kotkansaari). Founded in 1878 by Czar Alexander II of Russia, Kotka began to grow during the late 1930s. Today, it is one of Finland’s major eastern ports and handles petroleum importation. The city, with an estimated population of 55,000, has a flour mill and a sugar refinery. The Ruotsinsalmi naval

fortifications, built by Catherine II of Russia, stood here from 1795 to 1855, when the English navy completely destroyed the fortification, except for the Orthodox church. That church, St. Nicholas, still stands, and is the city’s oldest building. Another historical site is a Lutheran church, built in 1898. The Kymenlaakso Museum, originally built for Alexander III, is 10 miles northwest. It houses objects connected with the naval battle of Ruotsinsalmi, textiles, porcelain, a numismatic collection, and ethnography and cultural history displays.

KUOPIO was founded by King Gustav III of Sweden in 1782. Today, with a population of 87,000, it is the capital of the province of Kuopio. Its location in south-central Finland on the western shore of Lake Kallavesi makes it a center of lake traffic. Museums include the Kuopio Art Museum, the Kuopio Museum, and the Orthodox Church Museum, with Western Europe’s most extensive collection relating to the Orthodox Church.

LAHTI is located approximately 65 miles northeast of Helsinki. With a population of 97,000, it is Finland’s seventh largest city. Built between two mountain ridges on the shore of Lake Vesijärvi, Lahti is a winter sports center that hosted the 1978 and 1989 World Ski Championships and the 1981 and 1991 World Biathlon Championships. It is also an industrial center for furniture, textiles, window glass, foodstuffs, and beer.

The capital of Oulu Province, **OULU** (Uleåborg in Swedish) is located in west-central Finland, about 325 miles north of Helsinki. The city was established as a trading post during the Middle Ages. It became a town in 1610 and was later the victim of several misfortunes. An explosion destroyed its fortress in 1793, a fire severely damaged the city in 1822, its depots and harbor were destroyed during the Crimean War, and many sections of the city were ruined during World War II. Today, Oulu is a modern city with universities and a dis-

trict hospital. Its industries include lumber, shipyards, tanneries, and fisheries. A hydroelectric power source, the Merikoski rapids, is also a major tourist highlight. The Oulu Music Festival is held each February. Oulu has a population of about 118,000 and is linked to other Finland cities by sea, air, and rail.

PORI (Björneborg is situated less than 70 miles north of Turku, in southwestern Finland. Settled farther north in the 12th century, and called Ulvila in 1365, Pori was moved to its present location in 1558. After a major fire in 1852, the town plan was modernized. Kirjurinluoto Islet is a natural park on the Kokemäenjoki River in the middle of town. It is the site of a summer theatre and the annual Pori International Jazz Festival, held in July. The city exports lumber and other products from the port on the Kokemäenjoki River. Located in the city are a 17th-century theater and a museum. Finland's largest short-wave wireless transmitting station is located here. Pori's population is around 76,000.

VAASA, the capital of Vaasa Province, has an estimated population of 57,000, with two-thirds Finnish-speaking and one-third Swedish-speaking. It lies on the Gulf of Bothnia in western Finland. The Swedish king, Charles IX, founded Vaasa in 1606. The country's second Court of Appeal was established here in 1776. After the fire of 1852 which destroyed almost the whole town, a new town plan was drawn up and built closer to the coast. Vaasa exports timber; industries include machinery and soap factories, textile mills, and a sugar refinery. There is regular ferry service to Sweden, along with rail and air facilities linking Vaasa with numerous Finnish cities.

Located less than 10 miles north of Helsinki, **VANTAA** was incorporated as a city in 1974. It is linked with the capital and Lahti by rail and highways. The city is a commercial and tourist hub and is the location of the Helsinki-Vantaa Airport. Points of interest include the Finn-

ish Aviation Museum and the 13th-century St. Lauri Church. Vantaa's population is approximately 176,000.

COUNTRY PROFILE

Geography and Climate

Finland, the sixth largest country in Europe, occupies an area of 130,160 square miles (338,312 square kilometers) about twice the size of the United Kingdom. Its coastline, excluding indentations, is 688 miles (1,100 kilometers) long. Finland is bordered on the east and southeast by Russia, on the west by Sweden and the Gulf of Bothnia, on the north by Norway, and on the south by the Gulf of Finland.

Most of the country is low, but not necessarily flat. Because the soil, mainly moraine deposits from Ice Age glaciers, is very thin, the topography reflects the contours of the Archean bedrock. Elevations greater than 2100 feet (650 meters) are found along the northwestern frontier with Norway and in the extreme northern region of Lapland. The majority of Finland's 60,000 lakes, comprising 10 percent of the total area, lie in the southern half of the country and provide important waterways and log-floating routes. An extensive and imposing archipelago, extending from the Russian border on the south, westward to the Aland Islands, and from there northward, provides an important fishing and vacation area noted for its magnitude and grandeur.

Apart from the lakes and archipelagos, the outstanding physical feature and natural resource of Finland is its forest, covering about 65 percent of the land area, the highest percentage in Europe. The forests of Finland are mainly coniferous; a limited area in the south and southwest contains hardwood deciduous trees. In Lapland, the

spruce and pines disappear, and dwarf birch usually forms the timber line.

Virtually all of Finland lies between latitudes 60° and 70°N, with one-third of its length north of the Arctic Circle, but the Gulf Stream current and the prevalence of warm westerly winds make the climate several degrees warmer than the average elsewhere at the same latitude. Summers are short (in southern Finland from June 1 to September 1) and mild, with daylight extending well into the night hours. In June and July, only a two- or three-hour period of twilight separates sunset and sunrise. In the extreme north, the sun does not set for 73 days during the midsummer period.

Precipitation, averaging 23 to 25 inches annually, is distributed over all seasons of the year. Winters are long and cold. Snow is possible from October through April, with January through March having the heaviest accumulations. Temperatures may vary from north to south, as does the snow coverage from one winter to the next.

Helsinki's location on the Gulf of Finland accounts for its high humidity level. The city's average temperature is 41°F (5°C). The average mean temperatures in January and July are 26°F and 71°F. The nearness of the sea also affects the city's weather. The mean temperature of 25°F during February, the coldest month, is considerably higher than the average for the country as a whole and, in July, the warmest month, constant sea breezes keep it cooler. During the coldest days of winter, the mercury might dip as low as -20°F, and on the hottest days of summer rise to 85°F, but the weather tends to be more temperate than that of the United States' northern midwest. Helsinki's maritime location also means frequent rain and high humidity.

Average temperatures in Lapland are 10°F (-12°C) in January, and 63°F (17°C) in July.

Population

Finland's population of 5.2 million includes some 3,000 Lapps. Since World War II, rapid industrialization, the growth of service industries, and expanded educational opportunities have fostered a continuous movement to urban centers. In recent years, however, this decline/growth cycle has stabilized.

Finland has two official languages—Finnish and Swedish. Under the constitution, the government must meet equally the cultural and economic requirements of both language groups. Finnish is spoken by 93 percent of the population, and Swedish by six percent. There is a small Lapp and Russian-speaking minority.

After Finnish and Swedish, English is the language most commonly used, followed by German. Foreign-language study is an important part of the secondary school curriculum, and more than 90 percent of all students choose to study English. Most business firms are able to correspond in English, and English-speaking tourists have little difficulty communicating in Helsinki.

Finns are generally of light complexion, with fair hair and blue or grey eyes. Racially the Finns are mixed, as are most European peoples. The main racial characteristics are derived from the East-Baltic and Nordic races. At the beginning of the Christian era, Finland was occupied by a semi-nomadic people, the Lapps. Gradually, the ancestors of the present-day Finns moved the Lapps northward to the Arctic.

The early Finns are believed to have come from Central Asia. Their language, unlike that of their neighbors, is not Indo-European. Like Estonian, Hungarian, and the languages of certain minorities in central and northern Russia, Finnish forms part of the Finno-Ugric family. Characteristics of the Finnish language include the use of case endings, post-positions instead of prepositions, a great wealth of ver-

bal forms, and a highly phonetic orthography. Finns never have trouble spelling.

Christianity was introduced to Finland in 1155 by King Eric of Sweden. For 300 years, the Catholic Church was influential but, during the Reformation, the Protestant religion became predominant. Today, some 89 percent of the population belongs to the state church, the Finnish Evangelical Lutheran Church. The Finnish Orthodox congregation, with 1 percent of the population as members, is also a state church, but it owes allegiance to the Ecumenical Patriarch of Constantinople. Bishops of the eight dioceses of the Evangelical Church are appointed by the president of the republic on the basis of elections held in each diocese. The bishop of the Turku diocese is the archbishop of the Church of Finland.

Finland has complete freedom of worship, and several smaller church organizations have congregations totaling 1 percent of the population. 9 percent of the population claim to have no religious affiliation.

History

Historically, Finland was controlled for long periods of time by both Sweden and Russia. From its first conquests in the 12th century until the surrender of Finland to Russia in 1809, during the Napoleonic wars, Sweden ruled. Then, Finland was annexed and became a grand duchy of Russia. Assurance given by Alexander I that Finnish laws and constitutional rights would be respected became obsolete under increasingly reactionary czars.

The cultural and political awakening of Finland in literature and in resistance to "Russification" quickened the pace towards creation of an independent state. On December 6, 1917, Finland declared its independence and was immediately plunged into a civil war between the "Reds" and the eventually victorious "Whites." A new constitution was proclaimed in 1919. The violence of the three-month struggle left

wounds that are still not entirely healed. Both the left and right in Finnish politics have their own version of the events. Political affiliation could still reflect a family choice of sides in 1918.

During World War II, Finland twice fought the Soviet Union: in the Winter War of 1939–40, and again in the Continuation War of 1941–44. Finland suffered heavy casualties, lost 11 percent of its territory to the Soviet Union, and over 400,000 Finns had to be resettled. The Treaty of Peace between Finland and the U.S.S.R., signed at Paris on February 10, 1947, provided for the cession to the Soviet Union of the Petsamo area on the Arctic coast and the Karelian Isthmus in southeast Finland, for the lease of the Porkkala area near Helsinki to Russia for use as a naval base, and for free access to this area across Finnish territory. In late 1955, the Soviets returned the Porkkala area to Finland. The treaty also provided that Finland pay Russia reparation in goods valued at an estimated \$570 million (completed in 1952). Finland's defense forces are limited by the Peace Treaty to 41,900 men (Army, 34,400; Navy, 4,500; Air Force, 3,000).

In the United Nations, which it joined in 1955, Finland favors membership for all nations, usually takes no stand on major East-West issues, stresses neutrality as policy of active participation in international life, and channels the bulk of its foreign assistance to developing countries through various U.N. agencies. Finland supports and actively participates in the U.N.'s peacekeeping activities.

An official policy of neutrality and nonalignment has led to the establishment of relations with other countries regardless of their political systems. Finland worked for the convening of the Conference on European Security and Cooperation in July 1973, involving the U.S.S.R., countries of Eastern and Western Europe, Canada, and the U.S. This conference culminated in a summit meeting of 35 heads of state and the

signing of the Final Act—often called the Helsinki Accords—on August 1, 1975. Finland has also supported the Strategic Arms Limitation Talks (SALT), which began in Helsinki in 1969. In the Nordic Council, an inter-parliamentary organ of cooperation among Nordic nations, Finland works closely with its neighbors on matters of intra-Nordic concern.

Government

Finland is a Western-oriented republic. Under the constitution of 1919, the president, elected for a six-year term, has powers stronger than those of European counterparts, although not as great as U.S. presidential powers. The president, currently Tarja Halonen, has full powers over foreign affairs, is the commander-in-chief of the armed forces, and can dissolve parliament.

The Council of State Cabinet is appointed by the president and includes the prime minister, currently Paavo Lipponen, and usually about 16 ministers and associate ministers in charge of the 11 government departments. The Parliament (Eduskunta) is unicameral and consists of 200 members directly elected every four years through proportional representation. Under the constitution, the Eduskunta is the supreme authority in Finland. It has the power to amend the constitution, force the resignation of the Council of State, and override presidential vetoes without judicial review. Suffrage is equal and universal; all citizens over the age of 18 have the right to vote. Finland was the first country in Europe to grant full political rights to women (1906), well before the U.S.

Finnish policies on most basic domestic and foreign issues have been consistent, notwithstanding a relatively rapid turnover of cabinets and periods when no government commanded a parliamentary majority.

Nine political parties are represented in Parliament. Most Finnish

governments are multi-party coalitions, although at times it has been necessary to form cabinets composed of non-party technical experts. The average life of Finnish cabinets has been 12 months. By contrast, Finland has had only five presidents since 1946. Recently, however, the duration of cabinets has lengthened considerably.

Justice is administered by independent courts. The public courts of justice try both civil and criminal cases. In rural areas, courts of the first instance are known as circuit courts, the judicial authority resting in a legally trained judge and a jury of lay members. Cities have municipal courts, each presided over by a legally trained magistrate and two counselors. Other courts are the Courts of Appeal and the highest judicial authority, the Supreme Court, to which appeals may be made against the judgments of the former.

Judicial procedure differs from that in Anglo-Saxon countries; Finnish law is codified and does not provide for writ of habeas corpus or bail. Formal charges must be brought within seven days of detention on suspicion and, in practice, charges are usually brought within three to four days. Courts of first instance must hear a case within 30 days of arrest. Civil rights are deeply entrenched and strictly observed by the police and courts.

The 12 Finnish provinces are divided into cities and communes and are administered by municipal and communal council elected every four years. The eleven mainland provinces each have a governor appointed by the president. The governors report to the Ministry of the Interior. The island province of Aland, located between Finland and Sweden in the southern part of the Gulf of Bothnia operates under local autonomy under a 1921 international convention.

The flag of Finland is white with a blue cross.

Arts, Science, Education

Much of the richness of Finnish culture derives from the folk element. A wealth of songs, buildings, costumes, and traditions has been carefully preserved over the years. Finnish literature in its oldest form is comprised of the epic poems and tales passed from generation to generation by word of mouth. Since the first half of the 19th century, a determined effort has been made to preserve the national culture through creation of a Finnish-language literature. Many of the resulting masterpieces, both in poetry and prose, reflect a historical context and regional spirit. Publication in 1835 of the Finnish national epic, *The Kalevala*, a collection of traditional myths and legends, first stirred the nationalism that led to independence in 1917.

Finnish architecture is justly famous, from the earliest achievements seen in medieval castles, through the elaborate wooden buildings of the 18th century, to the innovative and functional design prevalent today. Alvo Aalto (1898–1976), the modern Finnish architect, influenced urban and regional planning, interior decoration, and industrial art. Finlandia Hall, the National Pensions Institute, Aalto's Enso-Gutzeit Building, and the Helsinki Railway Station of Eliel Saarinen are only four of many buildings which attract students of architecture from all over the world.

In the fields of music, painting, and sculpture are found many examples of Finnish genius. Glass (Nuutajarvi, Iittala, Humppila, etc.), porcelain (Arabia), textiles (Marimekko, Vuokko, and Pentik), jewelry (Laponia and Kalevala Koru), and furniture (Alvar Aalto and Ilmari Tapiovaara) are some of the many items that bear the unique stamp of Finnish handiwork and design.

Finland, with virtually no illiteracy, has an advanced educational system, which is free and includes all textbooks and a broad medical-care program. Pupils receive a hot meal

each day at school. Special schools have been established in the larger cities for children who are handicapped or have learning disabilities. Four basic levels comprise the school system: preschool education, compulsory education (the nine-year comprehensive school), upper secondary education, and the universities and similar institutions.

Finland has a strong state-subsidized adult education program, with classes held at community schools or workers' institutes. This program supplements and/or completes the basic education and provides for advanced vocational training or cultural and intellectual pursuits.

The largest university is the state-supported University of Helsinki, which has spearheaded the country's intellectual life since the 17th century. Founded in 1640 as the State University of Turku, it was moved to Helsinki in 1828. Another important state school of advanced education is the Institute of Technology, established in 1908, and now located at Otaniemi in Espoo. The entire campus was designed by architect Alvar Aalto.

State-supported higher education facilities have undergone major expansion since 1958. Jyväskylä Teachers College, founded in 1934, was enlarged to university status. In 1959, a new university was established at Oulu in the north. It was followed by universities in Joensuu and Kuopio. The latest in Rovaniemi (Lapin Province), established in 1979, is the world's most northerly university.

Commerce and Industry

Finland has become a modern industrialized nation. The prevailing standard of living is at the same high level which characterizes the other Scandinavian countries, with Finland ranking in the top dozen or so nations in terms of per-

sonal-income levels. Economic development has taken place in the face of many obstacles. At the time of independence from Russia in 1917, Finland's economy was that of an undeveloped, remote Russian province; about 20 years after independence, Finland was thrust into a series of three destructive wars—two against the U.S.S.R. and one against German armed forces. Wartime damage was heavy and peace terms imposed on Finland included heavy "reparations" payments to the Soviet Union.

Today, Finland is an essentially private economy. Most businesses are privately owned; however, some larger industrial enterprises are government owned in areas such as steel and mining. Railroads are state owned and the Finnair airline is majority state owned. The telephone system is split between government and private companies. Oil refining is a government monopoly, but retail gas stations are both state and privately held; all sales of high alcohol-content beverages are in government-owned stores.

Overall, the country's economic situation is impressive. Finland has been a leader in Europe in terms of economic growth. Inflation has been at higher than prevailing European levels, but has recently been better controlled. Still, for various reasons, prices are high by current U.S. standards.

Finland's main economic force is in manufacturing—often for export. Forest industries are still strong, but they are shrinking. Agriculture has, over the years, been declining, but farmers continue to be encouraged by government support to maintain national self-sufficiency in basic food production, the quality of which is very high. Only eight percent of Finland is under cultivation. The service industries are enjoying healthy growth in fields such as banking, insurance, and engineering/design services.

Foreign trade is extremely important; Finland must import all of its

oil, as well as some metals, chemicals, and food products. Machinery imports are high, but are balanced by a high number of machinery exports. Forestry products, such as paper, are a primary export, as are ships, furs, clothing, and glassware. Germany, Britain, Sweden, Russia, and the U.S. are the primary source of product imports. Finland participates in international economic organizations; supports free trade policies; and is a member of the World Bank, the International Finance Corporation, the Asian Development Bank and the Inter-American Development Bank. Investment abroad is increasing as well, with nearly 200 Finnish-owned firms in the U.S., including four banks in New York City.

Finland donates foreign aid to less developed countries, particularly in Africa and Asia. Finnish citizens actively support Finland's aid policies.

The Helsinki Chamber of Commerce is located at Kalevanketu 12, 00100 Helsinki 10.

Transportation

The Finnish State Railways has a vast operating track (5,580 miles), with links to Sweden and the Russia. The northernmost point accessible by train is Kemijärvi, north of Rovaniemi.

The highway system is constantly being expanded; public roads cover 48,320 miles (77,796 kilometers), of which about half are paved. Trucking and bus services are steadily gaining in importance as carriers of passengers and goods. However, although highways are well maintained, they are not as efficient at transporting traffic as might be expected for a modern industrial nation; travel time is frequently longer than anticipated.

Finnair Oy (with the state as major stockholder) maintains regular air service to locales within Finland; to major European capitals; and to Seattle, Los Angeles, New York, and

Montreal, among cities on other continents. Most freight and much of the passenger traffic is via sea. Harbors are kept open even during the coldest winter periods, with ferry links available to Sweden, Germany, and Estonia on a regularly scheduled basis.

Helsinki offers excellent bus and tram service. Taxis, readily available at many stands throughout the city, may be reached by calling the widely publicized numbers for these taxi centers. Fares are not excessive and drivers are not tipped. Certain suburbs are efficiently served by commuter trains. A subway line was recently opened to suburbs in the east, with further expansion planned. Public transportation is used by many people for getting to work and to recreational and social activities; however, a car is still extremely useful.

In winter, main roads are kept open, but winter driving, even in Helsinki and its outskirts, can be hazardous because of frequent icy conditions.

Communications

The government operates the domestic telegraph and most of the country's telephone facilities. Direct dialing is available to many foreign locations, including the U.S. In Helsinki to contact emergency systems, dial 000. A privately owned telegraph cable extends between Sweden and Finland, and nearly all cable communications to overseas destinations are transmitted by this route. International airmail normally takes five days in transit from Helsinki to New York. Postal rates are expensive.

Broadcasting is done by Oy Yleisradio Ab, the Finnish Broadcasting Company, and by MTV Oy, an independent commercial company. Yleisradio, however, is the only licensed corporation. A fair selection of musical programs is available throughout the day on Finnish AM and FM radio. Many radio channels can be received from other European countries. Good Voice of Amer-

ica (VOA) and British Broadcasting Corporation (BBC) reception is possible with a shortwave radio.

Television channels operate during the afternoon and evening hours. Some foreign programs (including American, British, and Canadian) are offered in the original language with Finnish or Swedish subtitles. Finnish TV, which broadcasts mostly color programs, has the same technical standards as Germany. Private cable service, offering a wide selection of movies and serials, is available at various locations within the city of Helsinki.

The first Finnish newspaper was printed in 1771. Now, more than 300 papers are published at least four times each week. Ten newspapers are regarded as national dailies, although none of these has a truly nationwide coverage.

Time, *Newsweek*, *The Wall Street Journal*, *USA Today*, and the *International Herald Tribune* are sold locally, although the *Herald Tribune* usually arrives one or two days after publication. English-language books and magazines are sold at Helsinki's main train station, in lobbies of larger hotels, and at the city's two principal bookstores. A good selection of other foreign-language books and magazines can also be found at the two main bookstores—standard works in Swedish, French, Italian, German, and Spanish. All imported publications are more expensive than in the country of origin.

Health

The standards of the Finnish medical profession are high. Most physicians are educated at the University of Helsinki, and many study or do research abroad as well. A large number of doctors speak English and German, in addition to Finnish and Swedish. Specialists in most medical fields serve the major communities.

Hospitals are modern and well equipped, and the treatment is

good. Ophthalmologists are available and opticians can fill prescriptions promptly. Dentists and orthodontists are competent. A listing of area hospitals and doctors is available from the U.S. Embassy's administrative section in Helsinki.

Most medicines are available locally at reasonable, state-controlled prices. They may not, however, be the same compositions or brand names prescribed by U.S. physicians. Those planning an extended stay should arrive with a supply of necessary medications; this will allow time to consult with a doctor to determine the proper Finnish equivalent. Medicine is sold only at pharmacies ("apteekki"), while chemists ("Kemikaalikauppa") sell cosmetics only. Some pharmacies are open 24 hours and all pharmacies display a notice in their windows with the address of the nearest pharmacy on night duty.

The general level of community sanitation is high. Public cleanliness and controls are adequate to prevent serious outbreaks of disease, and there are no pest or vermin problems. Helsinki water is dependable, but not fluoridated; fluoride tablets for children can be obtained locally. Pasteurized milk is available, and the processing of fresh milk is closely controlled. The general sanitation and safety of local goods are comparable to those in the U.S. Sewage and garbage arrangements are excellent.

Helsinki's winter climate is cold and damp and may aggravate conditions such as neuralgia, rheumatism, and sinus disorders. Since long periods pass without much sunshine, vitamins are strongly recommended.

Clothing and Services

In preparing a wardrobe for Finland, one should remember that winters are long and cold, springs and autumns are rainy and cool, and summers are short. Layered outfits are ideal for differences in

seasonal temperatures, as well as for changes from indoors to outdoors. All clothing items can be purchased locally at prices which tend to be higher than in the U.S.; good sales occur during January and August, and it is worthwhile to shop at these times. Winter outer-garments and boots for all family members are well made, ideally suited to the climate, and generally worth the extra expense. Those who are difficult to fit in respect to shoe size or other wearing apparel are advised to bring extra items from home.

Men wear medium-weight suits throughout the year in Finland but, from October to May, heavier suits are often needed. Rain gear, overcoats, boots, and overshoes are necessary items, and fur hats are found to be very warm as well as popular locally. Tuxedos are appropriate for many social occasions during the year. "Informal" on a dinner invitation usually means coat and tie.

A useful wardrobe for a woman will include one long dress or skirt; several short dinner dresses; sports attire; and suits, casual dresses or skirts, sweaters, and blouses. Rain gear and heavy winter coats are needed also. Beautiful fur and leather coats are available locally.

Children's needs include warm, water-resistant snowsuits and boots, and lighter-weight coats and jackets for spring and fall. Rubber overalls, readily purchased in local department stores, are useful during both rainy and thawing periods. It may be advisable to have an extra set of outdoor clothes for children who actively participate in winter sports.

Laundry and dry cleaning are expensive, making it advisable to include cleaning compounds for spot removals in one's household effects. Certain neighborhood dry cleaners offer *kilo pesu*, or cleaning of items with the charge based on weight; these items are not steam pressed.

Local and European brands of toiletries, cosmetics, and patent medicines are available, but costly.

NOTES FOR TRAVELERS

Helsinki is served by daily flights from many European cities, and Finnair flies from New York, Los Angeles, Miami, and Tampa. Northwest Airlines serves Stockholm, Sweden and, from there, the traveler has the option of taking the ferry boat to Helsinki.

Visas are not necessary for entry into Finland, but those planning to stay for more than 90 days must obtain residence permits after arrival. No inoculation certificates are required.

Dogs and cats can be imported to Finland; however, they must be vaccinated against rabies. A certificate issued by a veterinarian must state that the animal has been vaccinated at least 30 days and not more than 12 months prior to importation. Cats and dogs imported to Finland cannot be taken to Sweden or Norway without a quarantine period of four months in either country.

Only nonautomatic sport and hunting firearms may be imported, and local requirements for hunting licenses are handled by the police. No military or police-type firearms are permitted. Fishing licenses also are required.

Many religious affiliations are represented in Helsinki. Services in English are offered on a weekly basis by the Anglican Church at the Cathedral Chapel, Saalem Free Gospel Church, and the Tempe-liaukio Lutheran Church; St. Henrik's Catholic Church offers English services two Sundays a month. Other places of worship include: Uspensky Russian Orthodox Cathedral; two churches of Jesus Christ of Latter-Day Saints; Helsinki's synagogue; and Islam House.

The time in Finland is Greenwich Mean Time (GMT) plus two.

The *markka*, or *Finnmark* (FIM), ceased being legal currency on 1 March 2002, and was replaced by the euro. One euro is equivalent to US\$1.08 (22 May 2002).

Finland uses the metric system of weights and measures.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated January 1995. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

MAJOR CITIES

Paris

Paris lies in north-central France in the Seine River Valley within the Department of the Seine. Climatic conditions in Paris are moderate. Winters are damp, but not severe. Snowfall is light, sunshine is rare in winter, and gray, foggy days are frequent. Summer temperatures are rarely oppressive, but rain is heavy at times. Hot weather may come as early as May and last as late as October. Conversely, June and July

can be cool or rainy. Winds are not excessive. The famous "April in Paris" is traditionally cold, wet, and windy, although autumn can be ideal.

The Paris region has a population of almost 9.7 million and Paris itself has about 2.1 million inhabitants. About 4,000 to 6,000 American students are enrolled in university-level education in Paris and the provinces. Paris receives about 1.8 million American tourists each year.

The Paris Embassy has the distinction of being the first American diplomatic mission overseas. Benjamin Franklin was appointed the first diplomatic agent in 1778, followed by Thomas Jefferson.

Food

Each neighborhood of Paris has an open-air market several days a week, where fresh produce, cheese, meat, and fish are sold at prices usually cheaper than the supermarkets. The French do their food shopping daily and therefore need to have an array of shops close to home, so each neighborhood also has a variety of specialty stores and

small grocery stores, some of which are part of a larger chain.

Throughout the city are larger chain supermarkets, some with underground parking. These are a little cheaper for most things than the neighborhood shops, but items are bulk packaged. On the outskirts of the city are even larger supermarkets with slightly lower prices and goods packaged in larger quantities.

Most people do their regular shopping on foot in their own neighborhood using their neighborhood butcher, cheese store, and bake shop with occasional forays to the big stores. However, shopping for milk at one store, bread in another, and meat in still another can be time consuming.

Scattered throughout Paris are several small specialty shops, such as The General Store and Thanksgiving, which stock only American import goods at higher than U.S. prices.

Prepared food is available from "charcuteries" or delicatessens, where a hot meal can be purchased

on a carry-out basis at midday, or fine pate, cheeses, cold meats, and salads can be purchased for a quick, cold meal. Stores specializing in frozen food, ready for the microwave or oven, abound. American-style carry-outs have sprung up all over the city, with hamburgers and french fries readily available.

Clothing

French summers are cooler and winters slightly milder than those in Washington, D.C., meaning that a full range of seasonal clothing is needed. A raincoat and umbrella are necessities, as are comfortable walking shoes, sturdy enough to withstand wet streets. Most Americans do more walking in Paris than in the U.S., and even use of the metro and bus often involves walking substantial distances. Comfortable shoes suitable for sight-seeing are essential. Local shoe stores carry excellent quality shoes, but at high prices.

Although Paris has a reputation as a mecca for shopping, prices for almost everything are higher than in the U.S. There are some discount and outlet stores, and the major January and July sales offer some bargains. There are a few second-hand or consignment shops, but most clothing is designer-labeled and expensive, even at half price.

Men: Business suits are worn to most social functions.

Women: Paris clothing needs are similar to those of any big city in the U.S. French women wear dresses, suits, and shirts, rather than slacks, to events. Colors are dark—black is a favorite. Sweaters, shawls, and blazers of all weights are useful.

Children: Prices are almost 50 percent higher than U.S. prices for similar quality goods. Low-priced outlets exist.

Supplies and Services

There are few supplies and services found in the U.S. that can not be found in Paris, but prices are higher.

Men's and women's haircuts cost slightly more than in the U.S.

Laundry, dry-cleaning, and shoe repair services are available, but at prices higher than in the U.S.

Religious Activities

Most faiths have a congregation in Paris. The American Cathedral (Episcopalian) and the American Church in Paris (interdenominational) have American pastors and a predominantly American congregation.

St. Joseph's Roman Catholic Church offers services in English for the English-speaking community. Some Catholic parishes, where English-speaking foreigners ordinarily reside, have an English-speaking French priest. All congregations have affiliated social and religious organizations, such as Sunday school, choir, women's groups, etc. Several Jewish synagogues in the Paris area hold services in French and Hebrew.

Education

The Paris area has a number of schools that offer American curriculum instruction from kindergarten through high school. Several private French schools offer a bilingual French-English curriculum program. The majority of American children attend the American-curriculum schools. The French public school system offers a high standard of education, but classes are crowded and no provision is made for non-French speakers. In addition, French schools are zoned, making application difficult in advance of arrival.

Detailed information on the following schools may be obtained by writing directly to each school.

The American School of Paris
41, rue Pasteur
92210 Saint-Cloud
France
Tel: (1) 46.02.54.43

The American School of Paris, an independent, coeducational day school, offers an American educa-

tional program from pre-kindergarten through grade 12, including a strong college preparatory and the International Baccalaureate curriculum. Although the Upper School has an honors program, the Middle School does not. Located in the suburb of St. Cloud, the school has bus service to most parts of Paris and to the nearby suburbs.

Marymount International School
72, blvd. de la Saussaye
92200 Neuilly-sur-Seine
France
Tel: (1) 46.24.10.51

Marymount School of Paris is an independent, coeducational day school run by the religious order of the Sacred Heart of Mary. It offers an American educational program from pre-kindergarten through grade 8. Located in the suburb of Neuilly, the school offers bus service to most parts of Paris and the suburbs.

International School of Paris
Elementary School
96 bis, rue du Ranelagh
75016 Paris
Middle School
7, rue Chardin
75016 Paris
High School
6, rue Beethoven
75016 Paris
Tel: (1) 42.24.09.54

The International School of Paris is an independent, coeducational day school, which offers an Anglo-American program to students of all nationalities from pre-kindergarten through grade 12.

Various options exist for pre-kindergarten children. Children not attending preschool at any of the schools listed above usually go to either one of the two Montessori schools or to the U.N. nursery school. Detailed information on these schools may be obtained by writing to them directly:

United Nations Nursery School
40, rue Pierre-Guerin
75016 Paris

France
Tel: (1) 45.27.20.24

The Bilingual Montessori School
of Paris
65, quai d'Orsay
75007 Paris
France
Tel: (1) 45.55.13.27

Both state-run and private nursery schools have large classes averaging 25–30 children, and teaching is more formal than in American nursery schools. French children ages 3 to 6 attend neighborhood “*écoles maternelles*.” The state-run “*maternelles*” are free, but apply in May or June for the following academic year to secure a place. Schools are zoned within each neighborhood.

Special Educational Opportunities

Excellent French-language programs are offered by the Sorbonne, the Alliance Francaise, the Institute Catholique, and the British Institute. Private tutors charge about 100 francs an hour.

You can enroll in courses for college credit at the American University in Paris and through New York University. The American University is an independent college of arts and sciences that offers the Bachelor of Arts degree and is accredited by the Middle States Association of Colleges and Secondary Schools.

Other special education opportunities include the art appreciation courses offered to the public on a non-examination basis at the Louvre, cooking classes at the Cordon Blue and Ritz-Escoffier cooking schools, and a wine appreciation course. Short courses are offered through various organizations on such subjects as French antiques, art, history, the architecture of Paris, etc. Those with a good knowledge of French can attend evening courses offered by arrondissement civic centers.

Sports

Facilities for a variety of sports are available in Paris, but participation often requires membership in a pri-

Overview of Paris, Eiffel Tower in the distance

Courtesy of MaryBeth Mailloux

vate club with high costs. The many public swimming pools in Paris offer excellent facilities at reasonable cost. Facilities for bowling, ice skating, and roller-skating are all numerous.

Public and private golf courses are located within a short drive from Paris.

Tennis is popular with the French, but the number of courts available does not match demand. It is impossible to find a free court on short notice and those who choose to wait may spend up to 2 hours in line. To play regularly, you can book court time on a long-term basis, but the fee is high.

Horseback riding is a major national sport. Riding is available for the most casual and the most serious of riders throughout France. Opportunities exist for riding vacations, even promenades of several days. For spectators, riding shows, dressage and jumping competitions, races and horse auctions abound.

Other recreational activities within the Paris area include jogging and biking in the Bois de Boulogne (a large, wooded park on the western periphery of the city) and hikes and picnics in the surrounding forests.

The numerous city parks offer many activities for children, often with excellent playground equipment. Carousels, pony rides, boat sailing, and puppet shows are found in the major parks at reasonable cost.

Hunting and fishing are popular in France. Most areas require permits.

Many of Europe’s most renowned ski slopes are within easy reach of Paris. Group arrangements make week-long or weekend skiing inexpensive. The schools, and some congregations, organize a ski week in February for their students at reasonable rates.

Touring

Paris provides a wealth of activities ranging from traditional museum visiting to picnicking in the parks. Besides the well-known touristic spots—Louvre, Eiffel Tower, Arc de Triomphe, etc.—there are day and half-day barge cruises on local canals, tours through Paris’ sewers and catacombs, flea markets to explore, antique shopping, and cafe sitting. Possibilities for day trips or overnight excursions are endless. Within an hour of Paris are many famous chateaux and cathedrals, including Versailles, Fontainebleu, and Chartres. The Loire Valley with its chateaux to the southwest, the

sandy beaches and quaint towns of Normandy to the north, and the Champagne region to the east, can all be reached within 3 hours. An hour away from Paris is EuroDisney.

Entertainment

Paris has a wide variety of every imaginable type of entertainment, both French and imported. All events are well publicized in newspapers, street and metro ads, and in weekly publications that list not only theater, opera, and dance, but also museums, exhibitions, and films.

Paris produces grand opera, exciting ballet, and plays. During the season there is a constant stream of visiting talent—singers, orchestras, dance groups, theater, etc. Ticket prices for top events are high and sell out quickly for popular shows. Several locations sell tickets for half price, if any remain the day of the event. Subscriptions are available for ballet, opera, and theater.

Movies are popular and there is a wide selection of both French and foreign, old and new, dubbed in French, or in the movie's original language with French subtitles. Prices are slightly higher than in the U.S., but there are discounts on Monday, student reductions, and reduced fares for holders of movie cards available through the major movie houses.

Bordeaux

About 754,000 people live in Greater Bordeaux, the capital of both the department of Gironde and the Aquitaine region. Located 35 miles inland from the Atlantic Ocean, Bordeaux remains an important seaport.

Reigning over the Garonne River, which flows through its center, Bordeaux recalls the grandeur of 18th-century France. Beautiful, intricate stone facades mark the majesty of an era when the city served as a gateway to Europe. Wine flowed from Bordeaux to the rest of the

Street in Bordeaux, France

world. Montesquieu pondered the significance of the human spirit here. Visitors flocked to absorb the Bordelais version of the famous French *joie-de-vivre*.

Now, as before in its long history, the city maintains its charm. Modern buildings mix with the monuments of the past. Cars roll where carriages used to rattle, but the city preserves the essence of tradition. Visitors, many from the U.S., spend weekend after weekend exploring the beautiful vineyards and chateaux that surround Bordeaux. While enjoying nature, they drink great wines and learn about the colorful wine-making process. The city also lies within easy reach of the mountains and the sea.

U.S. representation in Bordeaux dates from 1778 when France formally recognized the independence of the 13 colonies and the Continental Congress appointed commercial agent John Bondfield as a political liaison. In 1790 President George

Washington commissioned Joseph Fenwick of Maryland as the first American consul to Bordeaux, and the post has been in continuous existence ever since (except during the Franco-American "cold war" of 1798–1800 and the Nazi occupation of 1941–44). In 1962 this oldest known American diplomatic station became a Consulate General.

Due to long-term cultural exchanges between this region of France and the U.S., thousands of people apply annually for appropriate visas at the Bordeaux Consulate General. The Consulate General also serves the significant number of Americans visiting or resident in the area.

The Bordeaux consular district includes 24 departments (five regions) in southwestern France and covers almost one-third of continental France. The district contains France's most famous prehistorical caves, many ancient forts and castles, exquisite churches, and most of

France's ultramodern aerospace industry—civil and military. The Basque region, with its mystifying ancient language, is 2 hours south of Bordeaux toward the Spanish border. Notable other cities in the consular district are Toulouse, Limoges, and Poitiers.

About 4,000 American citizens residing in the consular district have registered at the Consulate General (and approximately three times that number are estimated to reside in the district). Of the 4,000 registered, about 450 live in the immediate Bordeaux area.

Food

Food of excellent quality and variety is available. Prepared baby foods are expensive, as are some canned or frozen goods. Certain products used in the U.S. are not available here.

Clothing

Winters are mild in Bordeaux, but summers range from sweltering to cool. Although generally pleasant, the weather changes frequently. Heavyweight wool suits and dresses are practical in winter under lightweight topcoats. Conservative men's clothing suitable is fine for Bordeaux. Bring rain gear for all members of the family.

The Bordelais dress conservatively and formally by American standards. Business suits are worn by men at weekday social events. White tie is not worn and sports coats are usually suitable for weekend events.

Conservative women's clothing for daytime is the same in Bordeaux as in Washington, D.C. Women rarely wear pants to work. For evening women need several cocktail dresses and at least one long dress. French shoes are beautiful, but expensive, and do not always fit American feet.

Since most Americans walk more in Bordeaux than they do in the U.S., bring a good supply of comfortable shoes, especially those practical for wet weather and rough sidewalks.

Most French clothing is expensive. Moderately priced clothes do not sometimes meet U.S. standards of style or fit.

Supplies and Services

Supplies: A wide variety of toiletries for men and women is available, but prices are high. Travelers should bring any special home medications or drugs. Most basic household needs are available locally.

There is a bookstore specializing in English-language paperbacks and several French-language bookstores also have English-language paperbacks for sale, although highly priced.

Basic Services: Laundry, dry-cleaning, and shoe repair are available at prices higher than those in the U.S. The city has no diaper service.

Americans use local French doctors and dentists (rarely English-speaking, however) and local doctors' prescriptions can be easily filled as necessary.

Religious Activities

Besides many Catholic churches, Bordeaux has several French Protestant churches, a synagogue, and an Anglican (Episcopal) church that holds services in English.

Education

Facilities for elementary, secondary, and university education are good quality. Most school teaching is in French. Children up to age 12 learn the fundamentals of the language quickly and are able to take up work at their proper level after 6 months. Older children usually require supplementary language lessons to enable them to keep up with their schoolwork.

Among the public schools are those operated by the municipality and those by the national government (the lycees). Most private schools are run by religious orders.

In both public and private schools, hours of attendance and the amount

of homework greatly exceed U.S. standards. Normally classes are not held on Wednesday afternoon but are on Saturday morning. Tuition costs at private schools are reasonable by U.S. standards. State schools are free.

One English-language instruction school exists in Bordeaux which places children from kindergarten to high school level. The Bordeaux International School was founded with the intention of following the standard British educational program through the GCSE level. It is privately run and funded exclusively by tuition fees. It is suitable for most children who have studied in the U.S. and who prefer not to attempt French-language instruction by immersion. You can request a catalog by writing directly to the school at 53 rue de Laseppe, 33000 Bordeaux.

Special Educational Opportunities

The University of Bordeaux has faculties in law, medicine, science, and letters as well as an institute of fine arts, politics, and music. Tuition fees are modest. Their French for foreigners course is particularly recommended for older dependents and spouses who are not French speakers.

Adults can study French with private tutors, through a university audiovisual course or at a Berlitz School. Textbooks are readily available in the stores.

Sports

Public swimming pools and a gym are available, although sometimes they are reserved for private athletic associations or school groups. The city has several private tennis clubs and a private golf club. Membership dues and initiation fees are high, and club facilities are limited. The area has several private clubs for flying, sailing, riding, fencing, archery, judo, sculling, and gymnastics; for team sports such as basketball, soccer, rugby, and hockey; and for organized activities such as bicycle touring and skiing. Sports equip-

© Gail Mooney/Corbis. Reproduced by permission.

Vieux Port, Marseille, France

ment and clothing are sold locally at U.S. prices or slightly higher.

The most interesting local spectator sports are basketball, soccer, and rugby. There are local (U.S.-type) ice hockey, football, and baseball teams, however, with almost 100 percent French participation.

Classic European-type parks are available for children near the office and residences. Neighborhood kindergartens and two public parks have playgrounds with swings and seesaws. Organized sports and activities for children are available (afterhours) at schools or clubs.

Touring and Outdoor Activities

Boating, fishing, swimming, or other water sports abound at regional coastal resorts. A broad, sandy beach stretches southward 150 miles from the mouth of Gironde to the Spanish border. Principal resort areas are Arcachon (40

miles), Biarritz (113 miles), and St. Jean de Luz (120 miles).

The Basque country near the Spanish border is popular for hiking, cycling, and camping.

Skiing in the Pyrénées (3 hours by car) sometimes begins as early as December and can continue until April. These ski resorts are expanding rapidly and facilities are good, but the snow is unreliable.

The picturesque Dordogne River Valley has wonderful castles to visit and good hunting, fishing, and camping facilities.

Entertainment

During the regular season (October to April) there are plays, operas, ballet, and symphony concerts in Bordeaux and Toulouse. Since 1950, a 3-week music festival in May has brought instrumentalists of world rank, chamber music groups, choruses, orchestras, and theatrical companies to the city. Several mod-

ern movie houses show French, U.S., British, and other films, most dubbed in French. Bordeaux has several excellent small museums. Hobbyists devoted to bridge, chess, photography, the cinema, art, and other activities will be able to find groups sharing their interest.

Social Activities

Local residents usually entertain at home with teas, small dinners, or lunch parties. Cocktail parties in homes are infrequent, but cocktail-receptions given outside the home by institutions and organizations are common. Regional cultural patterns require frequent representation to develop and maintain professional and social contacts. Fluent French is essential for professional and social success.

Among the business service organizations present in Bordeaux are branches of Lions and Rotary. Chapters of France-Etats Unis (a French association devoted to bettering relations between the two coun-

tries) are in Bordeaux and many of the district's larger cities.

The Bordeaux Women's Club, which meets for lunch monthly, is open to all English-speaking women, as is the Bordeaux-Los Angeles Club, an active friendship associations with a young French membership.

Marseille

Marseille, the first and oldest port in France, is a busy industrial and shipping center. It has a population over 1.3 million and is one of the largest cities in France. Founded in 600 B.C. by Greek traders from Asia Minor, Marseille became the first Christian metropolis in France. It is a contrast of old and new. Modern buildings and conveniences exist alongside narrow, winding streets and centuries-old structures. The city is colorful, with its picturesque harbor, cliff drive along the sea, and tree-lined boulevards—a typical Mediterranean port city, full of life and vitality, dependent largely on maritime traffic.

Situated in the Department of the Bouches du Rhone, Marseille is located 20 miles east of the mouth of the Rhone River. The old city surrounds a small natural harbor which, for 25 centuries, handled all of Marseille's maritime traffic, but which today is little more than a picturesque marina for fishing boats and yachts at the foot of the Canebierre, the city's main street. In 1854 new docks were built outside the Old Port, which today extend north of the city. As France's largest port (the third largest in Europe), it accommodates U.S. aircraft carriers and handles more cargo than any other Mediterranean port. Together with the deep-water port in nearby Fos, Marseille constitutes the largest petroleum port and refinery center in France.

About 6,000 Americans, mostly retirees and students, reside in the Marseille consular district, which covers the 16 Departments of Ardeches, Aude, Bouches du Rhone, Drome, Gard, Herault, Isère Lozere, Pyrénées Orientales, Var, Vaucluse,

Hautes-Alpes, Alpes-de-Haute-Provence, Alpes-Maritimes, Haute-Corse, and Corse-du-Sud, as well as the Principality of Monaco. About 50 Americans live in Marseille proper. Thousands of American tourists transit Marseille each year, but few stop over because the city is not an important tourist attraction.

The hills around Marseille rise to 1,000 feet over the rocky coastline. The city recently completed a municipal beachfront development that provides ample space for swimming and windsurfing.

The local climate resembles that of Los Angeles, but with little or no smog. The prevailing northerly wind, the Mistral, sometimes blows at gale strength, making winters seem much colder, but also alleviating summer heat and problems of pollution.

Principal officers assigned to Marseille are accredited also to the Principality of Monaco, an area of 447 acres, roughly the size of New York City's Central Park, with 25,000 inhabitants. France conducts the Principality's foreign relations in most areas abroad and provides a French citizen to act as Minister of State. The relations are based on an 1861 treaty signed by Napoleon III and the Prince of Monaco, and last renegotiated on July 17, 1981. The present sovereign is Prince Rainier III of the Grimaldi family, the oldest reigning dynasty in Europe.

Food

Fresh fruits and vegetables are abundant and of good quality.

Buy or eat fish and shellfish only at reputable places. Carefully wash all raw vegetables and fruit.

Clothing

Gabardine, tropical-worsted, or wash-and-wear suits and light summer dresses are recommended for summer. Clothing for a Washington, D.C. winter is fine for Marseille's cold weather. A medium-weight coat will suffice on the coldest days.

Local shops and department stores can be relied on for small items such as scarves, gloves, socks, and underwear.

Supplies and Services

Basic Services: Good dressmakers are available, but prices are high. Shoe repair, dry-cleaning, and laundry facilities are adequate, but expensive. Prices at many beauty shops are somewhat less than in the U.S.

Religious Activities

The city has many Roman Catholic churches, three French Protestant churches, a Greek Orthodox church, an Armenian Gregorian church, a synagogue, and several foreign churches, including the Swiss Protestant church. The Anglican church holds services in English.

Education

Three English-language schools are in the area—the American International School in Nice, the Anglo-American School in Mougins, and CIPEC, a bilingual English-French school in Aix-en-Provence.

Many other schools, public and private, from kindergarten through high school, are available. Instruction is in French. Teachers are good and academic standards high. Most schools have no playground equipment or sports facilities. The school day is longer than in the U.S. Classes are held on Saturday morning (in primary schools) but not on Wednesday in most schools.

Public schools accept U.S. children without tuition fees, but students pay for books and supplies. Tuition at Catholic schools varies according to the grades.

The undergraduate school, the faculty of letters, and faculty of law of the University of Aix-Marseille are in nearby Aix-en-Provence. The faculties of science and medicine of the University are in Marseille; the schools of architecture, fine arts, and business administration are just east of Marseille at Luminy.

Sports

Public sports facilities in and near Marseille are good. A large public sports center has two indoor swimming pools. Several private clubs have pools. Rowing, yachting, and tennis clubs also exist. A golf club is located near Aix-en-Provence, about a 30-minute drive from the city. Hunting, fishing, skin diving, windsurfing, and spearfishing are available; and horseback riding, rugby, soccer, volleyball, and basketball are other popular sports. American football and baseball are becoming increasingly popular.

French sporting equipment can be expensive. However, French skin diving and fishing gear (masks, spears, etc.) is less expensive than U.S. brands. Camping equipment is of excellent quality and reasonably priced, but sports clothing is expensive.

Hunting weapons or the use of animals in hunting is not restricted. Hunters must buy annual licenses. Each community maintaining a hunting preserve charges a yearly fee for its use.

Touring and Outdoor Activities

Marseille is convenient to many large cities: Paris (500 miles), Rome (600 miles), and Barcelona (325 miles). The consular district boasts varied scenery and points of interest.

Marseille is linked to Lyon, Paris, and the north by an excellent highway and by the high speed (TGV) train. To the east at Toulon is the French Navy Mediterranean Headquarters, which is visited regularly by units of the U.S. Sixth Fleet. The university cities of Montpellier and Perpignan on the Spanish border are located to the west.

The region near Marseille offers excellent opportunities for touring, sight-seeing, hiking, and picnicking. Also available in the district are skiing and mountain climbing in the Alps, as well as fine seaside amusement and recreation on the Cote d'Azur.

The historic cities of Arles, Avignon, Nimes, and Orange are easily reached by train, bus, or car, and the old university town of Aix-en-Provence is only 30 minutes away.

Entertainment

Several cinemas in Marseille show European and U.S. films with French soundtracks. On occasion, an English-language film with French subtitles is shown. Frequent plays, operas, operettas, ballets, and concerts are performed during the winter. The July music festival of Aix-en-Provence is internationally famous. Plays and operas are held in the Roman theater at Orange and in many other cities.

There are many restaurants in Marseille, but they are expensive. American-type nightclubs are few and expensive.

Marseille has several worthwhile museums and art galleries. Several trade fairs are held during the year. Local hobby clubs include photography, aviation, Ping-pong, and bridge.

During the summer, Sunday bullfights are held at the ancient Roman amphitheaters in Arles and Nimes. Except in winter, horse races are held at tracks in Marseille and Aix-en-Provence.

The nearby Riviera handles thousands of tourists each year and has ample entertainment facilities. Carnivals, flower shows, film festivals, auto shows, and open-air theaters are operated in various municipalities and by private groups. Many movie theaters show American films with French soundtracks. Art exhibits and concerts are frequent. Large casinos at Nice, Cannes, Monte Carlo, and Juan les Pins sponsor dances, concerts, and theatrical attractions, in addition to gambling.

Social Activities

Among Americans: Social activities include dinner parties, luncheons, and receptions. Most entertaining is informal, and buffet dinners are common. Outdoor bar-

becues are popular, so bring the necessary equipment.

International Contacts: The Marseillais are friendly and easy to know, but can be reserved about inviting others to their homes.

Special Information

The former USIS library has some reference material in English and French. A few Marseille bookstores have small selections of English books, mostly classics. Aix-en-Provence has an English bookshop and the British Consulate operates a large English library.

Strasbourg

A proud and historic city, Strasbourg is located at the confluence of the Ill and Rhine Rivers on the Franco-German border. The surrounding countryside is picturesque and abounds with recreational opportunities. Like other cities in the Rhine Valley, Strasbourg enjoys a moderate climate, although temperature changes can be abrupt. For most Americans, sunny days are scarce.

Although Strasbourg has been an important Rhine River port and European crossroad for more than 2,000 years and is now a dynamic metropolitan area of 427,000 people, the city has retained a pleasing provincial character without the hectic atmosphere of a large capital. Yet, as the seat of the 27-nation Council of Europe and host for the monthly sessions of the European Community's (EC) directly elected European Parliament, the European Commission, and Court of Human Rights, Strasbourg has a cosmopolitan dimension often lacking in much larger cities. The Council of Europe, with its Ambassador-rank Permanent Representatives, the monthly sessions of the European Parliament, the 15 professional Consulates, and the 17 honorary consuls, give the city the second-largest diplomatic community in France. The frequent meetings of the European Parliament and the Council's Parliamentary

Assembly bring parliamentarians, ministers, and heads of state and government to Strasbourg from all over Europe, as well as from non-European countries.

But the city is not only a capital for European political institutions. Cultural opportunities include the outstanding Opera du Rhine, an excellent orchestra, and the only French national theater outside Paris. The University of Strasbourg, with 45,000 students from all over the world, is a recognized leader in the fields science of medicine, law, and economics. Eleven American universities have yearlong study programs here. For the tourist or resident, the historic sections of Strasbourg offer charming walks and almost unlimited gastronomic opportunities. Most newcomers find Strasbourg's attractions, a unique blend of French and Germanic traditions, and proximity to several other European countries more than compensation for its weather.

The regions near Strasbourg, including Alsace, Lorraine, and Franche Compte, have a diversified export-oriented economy. Major sectors include: manufacturing, automobile, textile, chemicals, agriculture, and financial services. With more than 12,000 scientists and researchers, the area hosts about 15 percent of the total French scientific resources. Thus, many laboratories and research organizations specializing in biological and electronic technologies are headquartered in the area.

More than 72 U.S. multinational corporations have investments in the area, of which the largest are Powertrain, General Motors, Eli-Lilly, Warner-Lambert/Capsugel, Timken, Rohm and Hass, Mars, Wrigley, and Trane.

Three of the largest American military cemeteries in France are within the area.

Food

All kinds of foods are available in Strasbourg with seasonal limitations. Fresh vegetables in winter

are sometimes scarce, but you can buy frozen foods in the larger markets. Frozen foods, meats, poultry, and ice cream are more expensive than in the U.S.

Clothing

A four-season wardrobe is needed in Strasbourg. Tailors, dressmakers, and quality ready-made clothing are all available, but prices are higher than in the U.S. Footwear is attractive and competitively priced, but many Americans find French sizes a problem. Do not overlook rain gear.

Supplies and Services

Supplies: All items normally required for housekeeping and household repairs are found here.

Basic Services: Dry-cleaning is about double U.S. prices. Laundries and shoe repair shops are plentiful, and prices are reasonable. The many good beauty shops are cheaper than in the U.S.

Several bookstores carry a limited number of books in English. Membership in the American Library in Paris is inexpensive and books can be mailed to members. The *International Herald Tribune* is available in Strasbourg on the day of publication. Local newsstands also carry *Time*, *Newsweek*, and *McCall's*. *Les Dernieres Nouvelle d'Alsace*, Strasbourg's principal newspaper, is published in French and German, and a number of other leading French papers are available.

Religious Activities

The population of Strasbourg is 45 percent Catholic, 35 percent Protestant (Lutherans and Calvinists), 10 percent Jewish, and 10 percent all other faiths. People of all three major faiths attend services regularly. Catholic and Protestant services are held both in French and German. An Anglican Episcopal service in English is held every Sunday. Protestant interdenominational services in English are held twice a month at the Temple Neuf Chapel.

Education

Although Strasbourg has many excellent French schools of all types, no English-language elementary or secondary school now exists. The French Government, in recognition of Strasbourg's position as host city to a number of European institutions, has established a special "international" school (currently with separate primary and secondary school facilities) designed to accommodate children of the foreign community. However, basic instruction is in French.

Special Educational Opportunities

Strasbourg has universities that prepare students for degrees in letters, law, political science, economics, science, medicine, and theology. The universities have special courses for foreigners in French language and civilization.

Students may be enrolled under certain conditions at the Conservatory of Music and the School of Decorative Arts. Private instruction in music and art is available.

Sports

The city's tennis clubs have good clay courts and one club has covered courts. The Strasbourg Golf Club, about 4 miles from the city, set in the charming countryside, has a 9-hole course generally playable year round. Indoor swimming is possible at the Schiltigheim municipal pool and at the older Strasbourg municipal bath. Beautiful outdoor swimming pools are available in Strasbourg near the Rhine Bridge, in nearby Kehl across the river, and at Obernai, an attractive town in the Vosges foothills about 30 minutes away. Skiing is available in season in the Vosges and in the Black Forest within less than 50 miles of Strasbourg. The season lasts from December through March. Strasbourg has a fencing club, and a bowling alley is not far from the Consulate General.

Some trout fishing is possible in the small streams of the Vosges and the Black Forest. For hunters, Alsace

has a great deal of excellent shooting. Quail, partridge, pheasant, and hare are abundant, and deer and wild boar are in the mountains. Opportunities for horseback riding and lessons are plentiful at Strasbourg, and the surrounding areas of Alsace have numerous clubs offering both ring and trail riding. The Vosges mountains offer the serious hiker and camper invigorating air and scenic vistas. "L'Orangerie" and the "Contade" are two favorite parks for afternoon walks.

Athletic competitions of all kinds, including soccer, basketball, tennis, water polo, swimming, boxing, and wrestling, can be seen.

Touring and Outdoor Activities

The mountains and foothills of Alsace are dotted with small, picturesque villages. In spite of wartime destruction and intensive rebuilding, many houses remain from the 15th and 16th centuries, and the distinctive Alsatian architecture is attractive and interesting. Many fine examples of Romanesque and Gothic religious architecture, as well as 18th-century civil architecture, can be found all over Alsace. On the foothills and lower slopes of the Vosges are the vineyards of Alsace, which are the sources of some fine white wines and an unusual rosé. Higher up on rocky promontories, the ruins of medieval castles look out over the Rhine plain to the Black Forest in the distance.

The Alsatians are French citizens with a Germanic cultural background. Both French and Alsatian, a German dialect, are spoken by nearly everyone. In the countryside, Alsatian predominates and many older peasants do not understand more than a few words of French. German is widely understood and spoken.

Several Western European countries are easily accessible from Strasbourg. In Switzerland, Basel is about 80 miles away, Bern 170, and Geneva 219. Paris is 300 miles away. The distance to Heidelberg is 85 miles, to Munich 170, to Frank-

furt 138, to Bonn 214, to Luxembourg 130, and to Innsbruck, Austria 260. Opportunities to visit interesting places are innumerable, and exceptionally good guide books are available here. Baden-Baden, 45 minutes away, has a golf course and a famous casino with a fine restaurant and dancing.

Trains are fast, inexpensive, and reliable. Across the Rhine in Germany, the excellent, toll-free autobahn (expressway) system connects Strasbourg with Basel, Frankfurt, Stuttgart, and Munich. A newly completed French autoroute (expressway) makes Paris an easy 4- to 5-hour drive from Strasbourg, but tolls are high. Traffic on French secondary roads is intense, particularly at certain times of the day and in the summer. Gasoline prices are the highest in Europe. Unleaded gasoline is available in Strasbourg and nearby Germany.

Entertainment

Municipal theaters provide a full program of play, concerts, ballets, operas, and operettas. The city's radio-TV station gives free tickets to various concerts held throughout the year. The opera, symphony orchestra, and municipal ballet are particularly good, and many well-known chamber orchestras, quartets, and soloists come here on tour. A music festival is held every June with eminent visiting artists and first-class orchestras.

Strasbourg has about 20 cinemas. Movies are in French and occasionally in English. Most British and American pictures are shown with French soundtracks.

Social Activities

The presence of the Council of Europe, with its resident ambassadors and 1300-person secretariat composed of citizens from 44 countries, gives social life an international and cosmopolitan dimension. Social functions are frequent and tend toward sit-down dinners and receptions rather than informal affairs, although the business lunch is well established. Although no American club or organization

exists in Strasbourg, the local binational association, Alsace-Etats-Unis, organizes a number of events with an American flavor.

Special Information

Strasbourg is considered one of the best medical centers in France. Excellent doctors and surgeons are available. Hospital care is excellent. All the latest drugs are known and used, and the Hopital Civil and some of the clinics are equipped with diagnostic laboratories. Oculists and dentists are plentiful. Several good veterinarians also practice in Strasbourg.

Lyons

Lyons (Lyon), which forms the core of the second largest metropolitan area in France with a population of about 1.3 million, is the country's third largest city. It is at the confluence of the Rhône and Saône Rivers, some 300 miles southeast of Paris. Old Lyons lies between the rivers and up the hill on the west bank of the Saône. More recently, the city has grown on the east bank of the Rhône and west into the foothills bordering the Saône. The population of the city proper is about 453,000. The climate is similar to that of Washington, DC; it is humid, but snow or long hot spells are rare.

Lyons takes pride in its history, which goes back to Gallo-Roman times when it was Lugdunum, the Roman capital of Gaul. The emperors Claudius and Caracalla were born here. Many remaining buildings and artifacts remind residents and visitors alike of Lyons' origins in antiquity, including the oldest Roman amphitheater remains in France; its importance in the growth of French Catholicism; and its one-time role as the leading silk and cloth manufacturing city in the Western world.

However, the city is not all history. It has a new metro system, one of the largest shopping centers in Europe, world headquarters for Interpol and the International Congress Center, and a modern interna-

tional airport, Satolas. In October 1988, the city released a plan called "Lyon 2010," which lays the guidelines for the next decades' city growth. Included in the plan is the development of access routes into the city, 13 more miles of metro lines, expanded bus, train, and airplane service, renovations to the Musée des Beaux-Arts and a new concert hall and opera house. Lyons is a well-maintained and clean city where the old and the new are integrated into an attractive whole. Houses virtually unchanged since the 17th century, multi-storied office complexes reaching for the sky, wide tree-lined boulevards, and beautiful parks blend to make this a lovely, livable metropolis, whose residents still consider the traditional art of French cooking important enough to take a two-hour lunch. The illumination of the city's buildings and monuments was completely redesigned, making Lyons' night skyline a visual delight. And Bellencour, the geographical heart of the city, is the largest city-center square in Europe.

Lyons, a world-famous medical center, particularly in cancer research, has excellent medical facilities readily available. There are numerous fine large hospitals, but Americans have used the French Clinique or private hospitals for their needs.

The city boasts the oldest stock exchange in France (founded in 1506), a 178-year-old university, and several excellent museums. Lyons' museums are generally smaller than those in Paris and are usually dedicated to an aspect of the city's history or customs, although the Musée des Beaux-Arts is the second largest fine arts museum in France.

The first U.S. Foreign Service post in Lyons opened in 1826, when James Fenimore Cooper was appointed as its consul. The U.S. Consulate General in Lyons is located at 7, Quai General Sarrail.

Schools for Foreigners

Excellent French schools of all types abound in Lyons, but there are no

American or English schools in the district. All instruction is in French. Some children, who have been exposed to the language at home or in previous schools, enroll locally and do well in their classes, but it should be understood that French fluency is a prerequisite.

A few private bilingual schools exist and the Lycée Jean Perrin has opened international sections in English, German, and Spanish to accommodate Lyons' international community.

Accessible and desirable educational facilities can be found in Switzerland and Belgium, as well as in Paris. However, unless English-language education is a necessity, the fine schools of Lyons and other university towns in the district (Dijon, Grenoble, Clermont-Ferrand, and Saint-Étienne) should be seriously considered.

Lyons' excellent universities offer a multitude of courses. Ample cultural, artistic, and musical facilities are also available.

Recreation and Entertainment

Lyons is a convenient point for travel within France or to nearby Switzerland and Italy. An inexhaustible supply of touring sites, historical monuments, and museums is available for every taste. Virtually every known recreational activity has its followers in Lyons, and the area probably has a greater variety of recreational advantages, facilities, and resorts than any other in France.

All major European sports are popular. Most of the French Alps lie within the district and provide excellent skiing, hiking, and climbing. Lyons also offers facilities for swimming, golf, tennis, and other sports.

The 1992 Winter Olympics was centered at Albertville, approximately 75 miles east of Lyons in the Savoy Alps. Competition was spread throughout 640 square miles in the region.

There are several markets in Lyons for browsing, including an arts and crafts market held every Sunday, book markets, animal markets, and the one of the largest antique markets in Europe.

The types of entertainment found in any major U.S. city are readily available, popular, and reasonably priced in Lyons. However, the city is conservative compared to Paris, and the nightlife is surprisingly quiet.

Nice

Nice, in the Département of Alpes-Maritimes, is in the renowned Riviera resort area, 30 miles from Italy and 100 miles from Marseille. The city's international airport is two-and-a-half miles from the center of town. It handles more passenger traffic than any other airport in France outside Paris. Daily flights link Nice with all parts of the world. Work has been completed south of the airport to extend the facilities in order to meet the demands of the area.

Besides an advantageous location, Nice has an excellent climate and a stimulating variety of official, social, and cultural contacts. The population of Greater Nice, which stretches from the Var River to the independent corporation of L'Abadie, is now 889,000, making it the fifth largest city in France.

Most of Nice's labor force is employed in tourist-related occupations. Next to tourism in economic importance is the cut flower trade. The Nice wholesale flower market ships its products to distant points and to the large perfume-essence industry in nearby Grasse. Light industry, electronics, and construction are also important employers in the Nice area.

Nice was founded as Nicaea by a colony of Ionian Greeks from ancient Massilia (Marseille) in the fifth century B.C. It has had a history of domination by the Romans, the Saracens, the counts of Provence, the House of Savoy, the French, and

Bridge over Rhone River in Lyons, France

the Turks. It was ceded to France by Savoy in 1860. Nice is the birthplace of Giuseppe Garibaldi, the 19th-century Italian patriot and soldier.

As a resort town, Nice has a pleasing, well-rounded character. It has miles of lovely promenades on the sea, an opera house, theaters, casinos, and many good restaurants, and is especially lively between January and April. Nearby mountains serve as a scenic backdrop and as a protection from cold winds. Best of all, there is sunshine about 325 days a year.

Schools for Foreigners

The American International School (AIS) on the Côté d'Azur is located in Saint-Laurent-du-Var, just outside Nice. It opened in September 1977 and provides education from kindergarten through grade 12. Several U.S. companies in the area (IBM, Texas Instruments, Rohm, and Haas) have contributed to a fast-growing enrollment, and the school now is in new facilities near

the Var River, with a view of the Maritime Alps. AIS offers an American-type curriculum to its students, and provides preparation and testing for college enrollment. Individualized programs are fitted to the needs of each student. The school's address is Quartier de la Tour, La Baronne, 06700 Saint Laurent-du-Var, France. Kindergarten through grade four are also taught at the Monaco Primary School section, located at Fortvieille, Stade Louis II, Monaco 98000.

French public schools will admit American children of all ages, but courses, study methods, and procedures differ from those in the U.S. It takes the average American child a difficult period of six months to a year to become fluent in French.

There are many private day and boarding schools along the Riviera; instruction is in French.

To be admitted to the University of Nice, the applicant must be fluent

in the language and have earned the equivalent of the French baccalaureate (*baccalauréat*), about 35 credit hours of American undergraduate study. The Centre Universitaire Méditerranéen, an adjunct to the university, offers special courses for foreigners, ranging from six to 19 hours a week. Cost varies per semester.

Recreation

As a tourist site, the Riviera is justly famous. Nice, its most renowned resort, is in Provence, a region with numerous places of scenic beauty and historical and artistic interest.

Mountain resorts are nearby for winter sports. The ski stations of Valber, Auron, and Isola 2000 can be reached by car in less than two hours, and several Italian resorts are within four hours' drive. All sports equipment and attire are similar in style to those in the U.S., but prices are higher. Equipment

may be rented at the ski resorts, and lessons are available.

Ample facilities also exist for other sports. Golf courses are located within 30 to 45 minutes of the city, and there are several tennis clubs in Nice and nearby cities. The most popular outdoor activity is ocean swimming, made possible five months of the year by the moderate climate. Wind surfing is a new sport which has become very popular.

Entertainment

The Riviera hosts thousands of tourists each year and has ample entertainment facilities. Carnivals, flower shows, film festivals, auto shows, and open-air theaters are operated in various municipalities and by private groups. Many movie theaters show American films with French soundtracks.

Art exhibits and concerts are frequent. Near Nice, museums of French impressionist painters Matisse (the Matisse Museum) and Chagall (the Marc Chagall National Museum) may be enjoyed by art lovers and art critics alike. Other art museums include the Anatole Jakowsky International Museum of Naive Art and the Jules Chéret Museum of Fine Arts which houses paintings from Vanloo to Picasso.

Large casinos at Nice, Cannes, Monte Carlo, and Juan-les-Pins sponsor dances, concerts, and theatrical attractions, in addition to gambling. Many excellent restaurants offer regional French and Italian cuisine, as well as other traditional specialties. Prices for theaters, opera, and restaurants are about the same as in the U.S.

Monaco's National Day celebration on November 19, the feast of Prince Rainier's patron saint, includes a mass and *Te Deum* at the cathedral, luncheon at the palace, an afternoon football match, and a gala at the Monte Carlo Opera in the evening.

Nice offers a wide range of artistic entertainment. The National Theatrical Centre presents outstanding seasons; an Italian Film Festival

draws increasingly large crowds in December; a Choreographic Festival hosts the greatest international dancers. Opera can be enjoyed in Nice from November to April, the Holy Music Festival is in June, and the Great Jazz Parade is in July.

A number of facilities in the Nice area are geared toward the thousands of English-speaking residents and tourists. The *International Herald Tribune* and popular American magazines are sold at local newsstands. An English bookstore in Nice carries a good selection of classic and contemporary writers. An English-American library on the grounds of the English church has a varied, although somewhat dated, selection of books. The *Nice-Matin* is the most important local daily newspaper. Several weekly and biweekly papers are also published.

Nancy

Situated on the Meurth River and Marne-Rhine Canal, Nancy is the economic, administrative, and educational center of Lorraine Province. The city is located in northeastern France, about 178 miles east of Paris and 75 miles west of Strasbourg. The capital of Meurthe-et-Moselle Département, Nancy sits on the outer perimeter of the large Lorraine iron fields and, because of this, it is an industrial city known for manufacturing foundry products, boilers, electrical equipment, ironware, and machine tools.

Historically, Nancy grew up around a castle of the dukes of Lorraine, becoming the capital in the 12th century. In 1477, the gates of the city were the scene of a battle in which Charles the Bold, duke of Burgundy, was defeated and killed by René II, duke of Lorraine. Stanislaus I, duke of Lorraine from 1738 through 1766, resided in Nancy and, during that time, the city was a model of urban planning and 18th-century architecture. Nancy became part of France in 1766, and from 1870 to 1873 was occupied by the Germans following the Franco-Prussian War. An important rail-

road center in World War I, Nancy was unsuccessfully attacked by Germans in 1914, but was partially destroyed by heavy bombardment. During World War II, American forces reached the city on September 5, 1944, taking it 10 days later.

Landmarks in Nancy include an 18th-century cathedral, the Gothic church of St. Épyre, the 17th-century town hall, the 16th-century Palais Ducal (this palace contains a museum of Lorraine's rich past), and the Place de la Carrière. The 15th-century Church of Cordeliers houses the tombs of the princes of Lorraine.

In the heart of the city is the Place Stanislas. An imposing statue occupies the center of this large, paved square, enclosed by monumental buildings and decorated with green fountains and golden railings. The 18th and 20th centuries merge beneath the great statue of Stanislas, once king of Poland and the last duke of Lorraine. Stanislas built the square bearing his name in the middle of Nancy, between the 10th-century *Ville Vieille* (old city) and the 15th-century *Ville Neuve* (new city).

Nancy has an art museum, academy of fine arts, and a university, founded in 1854, that has colleges of mining, metallurgy, engineering, dairy science, chemistry, and commerce. In addition to faculties of science, law, arts and medicine, there is also an attached teaching hospital.

Nancy's current population is 106,000.

Recreation

Present-day Nancy has its science museums of geology, zoology, and scientific art. The Museum of Fine Arts, just a short walk from the Place Stanislas, houses over six centuries of canvasses of mostly French and Italian painters, including Delacroix, Manet, Vlaminck, and Modigliani. At Jarville, just outside of Nancy, is the Iron Museum, unmatched anywhere. Educational and fascinating, the museum also contains contemporary architec-

ture. There is also a Motor Museum and a zoo—Forêt de Haye.

Nancy has several stadiums, gymnasiums, and swimming pools. During winter, there is skiing in the Vosges every weekend, just an hour's drive away.

Entertainment

Nancy after dark is a little Latin and a little Oriental, and a town of measured refinement, with countless details to be enjoyed. The city has many restaurants, large and small, all of which excel in the standard French dishes as well as the local specialties of quiche, *potée*, and pike, and accompanied by beer or the local wine, *vin gris*. Discothèques, clubs, and other places for dancing, singing and enjoying oneself abound in Nancy.

The World Theatre Festival is held in the city every two years. During the 10 days of the festival, connoisseurs mingle with authors, actors with producers, and novices with specialists. In autumn, Nancy plays host to a jazz festival. The 10-day festival, featuring musicians from three continents, is a marathon of pulsating sound, explosive rhythm, and irresistible sensations. In addition to the two festivals, there is the Grand Théâtre, many cinemas, and visiting performers. Merry-go-rounds of the fair in Place Carnot bring delight to thousands of young and old for a month each summer.

Caen

Caen, in northwestern France, is situated on the Orne River, about nine miles from the English Channel coast and 126 miles northwest of Paris. With a population of nearly 117,000, Caen is a busy port canalized directly to the sea by Napoleon I. Due to improvements made to the canal, allowing present-day access to ships over 30,000 tons, it deals with millions of tons of traffic a year. A magnificent stretch of water has been adapted and reserved for sailing enthusiasts.

An industrial city with a thermal power station and extensive steel works along the Orne River, Caen is also near the country's second largest iron-ore mines. Items manufactured in Caen include automobiles, electronic gear, heavy equipment, textiles, and lace.

Historically, Caen was a favorite residence of William the Conqueror, and was under English rule in 1346 and from 1417 to 1450. During World War II, it was one of the main objects of the Allied invasion of Normandy. Attacked by the British on June 6, 1944 (D-Day), Caen became part of the German defense line. It was attacked again on June 25, taken by British and Canadian forces on July 9, and consequently, many of its architectural landmarks were almost totally destroyed. The 14th-century Church of St. Peter's lost its spire, while the Castle of William the Conqueror and the 17th-century town hall were both destroyed beyond repair. Some examples of 11th-century Norman architecture did survive and include the Abbaye aux Hommes where William the Conqueror is buried; Abbaye aux Dames, founded by Queen Matilda, wife of William the Conqueror, in 1066; and the Church of St. Nicholas.

The city has a university, founded by Henry VI of England in 1432, which was destroyed and later rebuilt. The University of Caen has about 15,500 students. With its new theater, the Museum of Arts, and Museum of Normandy, Caen remains the cultural, intellectual, and artistic center it has been since the Middle Ages.

From Caen, it is easy to reach the large seaside resorts along the Channel coast (Côte Fleurie, from Franceville to Honfleur) and also to the famous beaches where the Allied Forces landed in 1944 (Côte de Nacre and Bessin, from Riva-Bella to Isigny).

Le Havre

Le Havre is France's most important port for transatlantic passen-

ger liners. A city of 193,000, it is in the Seine-Maritime Département of northern France, at the mouth of the Seine on the English Channel. Le Havre is also a major port for exports from the Paris region as well as northwestern France.

An important industrial center, its industries include sugar and oil refining and shipbuilding. Heavy equipment and electrical equipment are manufactured here. Le Havre was founded in 1517 as Havre-de-Grace and, by the 18th century, had passed Rouen, Nantes, and Bordeaux in importance. The city was developed as a port from the 16th century and was a naval base under Napoleon I. It was a major Allied base during World War I and, during World War II, it was occupied by the Germans from June 1940 through September 1944. Like so many other French cities, it was heavily damaged during World War II, but is now rebuilt.

Points of interest in Le Havre include the church of Notre Dame, the round tower of Francis I, an arsenal, and a theater. The resort suburb of Ste.-Adresse adjoins Le Havre and has a fine beach. Four miles east of Le Havre is the seaport of Harfleur, once a chief port of France. Opposite Le Havre on the Seine estuary is the seaport of Honfleur. Once a center for exploration, it is today known for its tourism industry. Étretat is another resort town near Le Havre.

Lille

Lille, formerly Lisle, is the capital of Nord Département in northern France. Situated near the Belgian border and about 130 miles northeast of Paris, Lille has a population of about 191,000, and about one million in the metropolitan area.

Lille was the center of industrial expansion in the 1960s that led to the establishment of a metropolitan community uniting nearly 90 towns. Including the cities of Tourcoing, Roubaix, Béthune, Bruay, and Lens, among others, this area is now France's richest economic region

and one of Europe's most important urban centers. A commercial, cultural, and manufacturing center, Lille is known for its textile products, but also produces iron, steel, machinery, and chemicals. There are brewing, distilling, and sugar refining facilities within the city.

Founded about 1030, Lille was the medieval capital of Flanders until given to the king of France in 1312. The city changed hands several times before it was restored to France via the Treaty of Utrecht in 1713. One of the principal fortifications in northern France at the onset of World War I, Lille was occupied by the Germans from October 1914 to October 1918. During World War II, the Germans again occupied the city, from June 1940 until September 1944.

Principal buildings in Lille include a huge citadel; a 17th-century stock exchange; two 15th-century churches; a 16th-century church; and an unfinished cathedral, begun in 1854. Lille has a large university, established in 1560, and one of the most important art museums in Europe, which includes paintings of Flemish, Dutch, French, and Spanish masters.

The seaport of Calais is located 60 miles northwest of Lille on the Strait of Dover. Known for its lace-making, Calais has a population of 77,000.

Montpellier

A great commercial center, Montpellier is located in southern France near the Mediterranean Sea. The capital of Hérault Département, Montpellier is 77 miles northwest of Marseille and has a population of 229,000. During the 10-year period from 1960 through 1970, the city's population increased nearly 70 percent, due in part to a large influx of refugees from Algeria.

Montpellier's industries include salt working, textile milling, food processing, and printing. The city manufactures metal items and

chemicals, and has a large wine, fruit, and vegetable market.

Montpellier dates from the eighth century, when it was the center of a fief under the Toulouse counts. In the 13th century it passed to the kings of Majorca and, in 1349, was purchased by Philip VI of France. As a Huguenot center, Montpellier was taken by Louis XIII in 1622.

Today, Montpellier is best known for its university, founded in 1220 by Cardinal Conrad. Suppressed by the French Revolution, it was reestablished as a university in 1896. In 1970, it was divided into three units. The university's medical school can be traced to the 10th century; its most famous student was Rabelais. Montpellier has agricultural and military schools and is the home of an international wine festival. Here also is the oldest botanical garden in France, founded in 1593.

Notable structures in the city include a château, citadel, 14th-century cathedral, palace of justice and triumphal arch in Doric architecture.

Just south of Montpellier is the seaside resort of Sète. A city of 40,000, Sète is the principal seaport of southern France, after Marseille, with a large export trade in wine.

Nantes

Nantes, with a population of 278,000, is the capital of the Loire-Maritime Département in western France. Situated on the Loire River 107 miles west of Tours, it is an important industrial and shipping center; its ocean port is Saint-Nazaire. Nantes is the home of several educational institutions, and the seat of an episcopal see.

The city (once called *Condivincum*) was the capital of ancient Namnetes before the Roman conquest of Gaul. The Huns, the Normans, and the dukes of Brittany all laid siege to Nantes throughout the centuries and, in 1499, it became part of France upon the marriage of Anne of Brittany to King Louis XII. Dur-

ing the French Revolution, it was the scene of a violent massacre and mass drownings. Nantes was a major center of resistance in World War II.

There are numerous museums, concert halls, theaters, and sports facilities located throughout Nantes. The city is known for its many festivals and fairs including a commercial fair, musical festival, pre-Lenten carnival, and several folk festivals.

The industrial *commune* of Rezé is located opposite Nantes, on the Loire. With a population of 37,000, the city manufactures hats, furniture, shoes, and rugs.

Reims

Reims (or Rheims) is one of the French cities historically connected with the heroic Joan of Arc. A city of 191,000, it is located in the Champagne region in the northeastern part of the country.

Reims was once the customary place for the crowning of kings of France. Joan of Arc stood at the side of Charles II (the dauphin) at his coronation in 1429 in the beautiful Reims cathedral—the historic structure was later extensively damaged in both the Franco-Prussian War (1870) and World War I. Restoration was made possible by a Rockefeller Foundation grant, and the cathedral was reopened in 1938. It remains the city's most renowned building.

Reims is surrounded by vineyards and, since the 18th century, has been the center of France's champagne industry. It once was equally famous for its woolen textiles. Reims was the site of the unconditional surrender of Germany on May 7, 1945. Since it was rebuilt after heavy damage in both world wars, Reims today is a new city with modern buildings. There is an extensive network of caves beneath the city, used for the storage of wines. Textiles, machinery, and glass are also produced in Reims.

Rouen

Rouen, a city of 109,000 today, is probably best known for the events that took place in 1431. Two years after her victory over the English at Orléans, Joan of Arc was tried, sentenced to death, and burned here at the stake.

The capital of Seine-Maritime Département, Rouen is located in northern France about 70 miles northwest of Paris. The city is entirely surrounded by woods and forests of an immense variety of trees. With its suburbs, Rouen numbers some 390,000 inhabitants. Situated on the right bank of the Seine River near its mouth at the English Channel, Rouen functions as the port of Paris and handles a large volume of traffic. It has 15 miles of quays equipped with every modern facility. Wine, grain, livestock, sugar, and petroleum products are shipped from Rouen. Items manufactured within the city include chemicals, drugs, textiles, paper, leather goods, and metal products. Industries include shipyards, oil refineries, and railroad shops.

Rouen was founded in pre-Roman times and was taken and burned by the Normans in the ninth century. A century later, it was the capital of Normandy and one of the leading cities of Europe. It was occupied by the English during the Hundred Years War, 1418-49, by the Huguenots in 1562, and by the Germans in 1870. Rouen suffered heavy damage from Allied bombing during World War II and was taken by the Allies on August 31, 1944; the city and much of its port had to be reconstructed.

The city has been an archiepiscopal see since the fifth century and has many churches and cathedrals. Damaged, but now restored, are the cathedral of Notre Dame (built during the 12th through 15th centuries) with its well-known *Tour de Beurre* (butter tower); the palace of justice and Church of St. Maclou (both constructed during the 15th and 16th centuries); and the

Renaissance clock tower—*Gros Horloge*.

Landmarks honoring Joan of Arc are the 14th-century Abbey of Saint Ouen, where she was sentenced to death, and the Place de la Pucelle, where she died. Conducted tours of all historical places are undertaken twice daily in the summer.

The birthplaces of dramatist Pierre Corneille (1606-1684) and author Gustave Flaubert (1821-1880) have been preserved and are currently museums. The Musée des Beaux-Arts is one of the most important in France, including masterpieces by Delacroix and Ingres. Paintings of the Italian, Flemish, and Dutch schools are found, as well as a rich collection of the French masters of the 17th and 18th centuries and the Impressionists. There is also a very important collection of *faïence*—Rouen-ware.

All major sports are represented in Rouen. Rowing and canoeing are possible on Île Lacroix and yachting may be done at Duclair and Hénouville. An 18-hole golf course is located at Mont-Saint-Aignan. Football, at the Football Club Rouennais; riding at area riding schools; and horse racing are all available in the Rouen area. Motor racing on the Rouen Les Essarts circuit, occurs in July.

Toulon

Toulon, a seaport in southeastern France on the Mediterranean Sea, has a population of 166,000. Located 30 miles southeast of Marseille, Toulon is an important industrial center and commercial port. In addition, it is the principal base of the French Mediterranean fleet, with docks, naval shipyards, and an arsenal.

Major industries include shipbuilding, ship repairing, fishing, and wine making. Figs, almonds, vegetable oils, bauxite, chemicals, machinery, furniture, and cork are produced. Toulon is also a winter resort.

Historically, Toulon was first mentioned as a Roman naval station in the third century. It became prominent during the Middle Ages as a hostel for Crusaders. Toulon was the scene of many historic naval battles, including the victory of Napoleon over French, English, and Spanish royalists in 1793. Napoleon gained prominence that same year by retaking Toulon for the French and, after 1815, the city became the center of French naval power.

During World War I, Toulon was an important naval station and port of entry. During World War II, a large part of the French Mediterranean fleet was stationed at Toulon after the French armistice of 1940. On November 27, 1942, the majority of the ships were scuttled by their crews to avoid capture by the Germans. The city suffered considerable damage before it was entered by French troops on August 22, 1944. The subsequent reconstruction retained much of Toulon's original charm.

Landmarks preserved include the Church of St. Marie Majeure, built during the 17th and 18th centuries, and a 13th-century cathedral. Toulon also has a naval museum.

Toulouse

Toulouse is one of the country's great commercial centers. It is situated on the Garonne River in southern France, and is capital of the Haute-Garonne Département. It is 133 miles southeast of Bordeaux and Metropolitan Toulouse has a population of approximately 761,000.

The city was part of Gaul, then became the Visigoth capital and, later, the capital of the Carolingian kingdom of Aquitaine (781-843). It was one of medieval Europe's cultural centers. Toulouse and the surrounding area became a separate country in 843, and did not pass to the French Crown until 1271; considerable autonomy was allowed the region until the French Revolution. In World War II, Toulouse was occu-

piated by the Germans for almost two years.

Toulouse houses the university which bears its name (founded in 1229), and the Académie des Jeux Floraux, which was chartered in 1323. The "old quarter" of the city remains much the same as it was in the 18th century.

Today, Toulouse is a center of the French aviation industry and produces fertilizer, ammunition, paper, footwear, and tobacco. It is a market for the surrounding agricultural region and a distribution center for textiles.

OTHER CITIES

AIX-EN-PROVENCE is located in southeastern France about 19 miles north of Marseille. A picturesque town of 137,000, Aix-en-Provence is a favorite sojourn for painters and was the birthplace of the artist Paul Cézanne (1839-1906). It is also an important tourist center known for the International Music Festival held here in July, as well as a commercial center in an area that produces olives, grapes, and almonds. Products manufactured in Aix-en-Provence include wine-making equipment and electrical apparatus. Historically, the city was founded as a military colony by the Romans in 123 B.C., and was the site of the defeat of the Teutons by Marius in 102 B.C. An archiepiscopal see in the fifth century, Aix-en-Provence has been the capital of Provence since the 12th century, becoming part of France in 1487. It was the seat of parliament in Provence from 1501 to 1789. Aix-en-Provence has been a cultural center, a music center, and the focus of Provençal literature since the Middle Ages. Its university, founded in 1409, was combined with one in Marseille. Aix-en-Provence's Cathedral of Saint-Sauveur was built in the 13th and 14th centuries. The city is also known for its therapeutic spa and a number of thermal treatment centers.

Situated in a fertile farm region, **ALENÇON** is a commercial center and the capital of Orne Département. Located in northwestern France on the Sarthe River, Alençon is 105 miles southwest of Paris and has a population of 29,000. The town is particularly known for its lace work, an industry that dates back to the 17th century; there is a school of lacework in town. Printing plants, sawmills, spinning mills, and ore quarries are also found in Alençon. Originally the center of the medieval territory of Alençon, the town was successively a lordship, county, and duchy. Alençon was heavily damaged during World War II, and taken by American forces in August 1944. Historic landmarks include Notre Dame Church, with 16th-century windows and porch; St. Leonard's Church, completed in Gothic style in 1505; and the 15th-century Ozé House. Northeast of Alençon is the town of Mortagne, with a population of 5,000. Its church of Notre Dame was built during the 15th and 16th centuries.

AMIENS, a manufacturing city, is situated on the Somme River in northern France, 30 miles south of the English Channel and 72 miles north of Paris. The capital of Somme Département, with a population of 139,000, Amiens has been an important textile center since the 16th century and is famous for velvet. The city also is a market and rail center for the truck farming carried on in the surrounding marshlands. Chemicals, tires, soap, and electrical equipment are manufactured in Amiens. The city was originally a Gallo-Roman town and an episcopal see since the fourth century. As the historic capital of Picardy, it was overrun and occupied by many invaders. Passed to Burgundy by the Peace of Arras in 1435, Amiens was returned to France at the death of Charles the Bold in 1477. It was captured by the Spanish in 1597 and then recovered by Henry IV. Amiens was the scene of the Treaty of Amiens, signed in 1802 between France and Britain. The city was captured by the Prussians in 1870, and was held by the Germans for a short time in 1914. The Battle of

Amiens, fought in August 1918, was part of the successful counteroffensive against Germany. In World War II, Amiens was occupied by the Germans from May 1940 through August 1944. The city was devastated during the war and, since 1945, has been rebuilt mostly in medieval style. The Cathedral of Notre Dame, begun about 1220, is the largest Gothic cathedral in France, and one of the leading representatives of Gothic architecture in Europe. It is 470 feet long and has a 140-foot-high nave. The 370-foot spire and large rose window were added in the 16th century.

Abbeville, with a population of 25,000, is 25 miles northwest of Amiens. Also nearby is the underground village of Naours, discovered in 1887.

ANGERS, with a population of approximately 156,000, is the capital of Maine-et-Loire Département. The city lies on the Maine River, 165 miles southwest of Paris, in west-central France. Angers has a number of medieval buildings including the 12th-century Cathedral of St. Maurice, the Abbey of St. Aubin, and a 13th-century castle. Industries include rope making cables, and leather goods manufacturing. There are several educational institutions here.

ANGOULÊME, with a population of 43,000, is a former river port and now a major road and rail center. It is situated in western France on the Charente River, about 64 miles northeast of Bordeaux. Angoulême is the capital of Charente Département. Paper-making is a major industry here, dating back to the 15th century; the city also has copper foundries, electric motor plants, and soap and shoe factories. The history of Angoulême dates back to A.D. 507, when it was conquered by Clovis, King of Franks; that year, Clovis also built the city's first cathedral. In the ninth century, Angoulême became the seat of the counts of Angoumois. It was ceded to England via the Peace of Bretigny in 1360 and was restored to France in 1373 by Charles V. Passing to the

house of Orléans in 1394, Angoulême was the center of the duchy created by Francis I, 1515-1844. The cathedral of St. Pierre, begun about 1110, is one of the city's landmarks.

Just west of Angoulême is the city of Cognac. It belonged to Richard the Lionhearted and later, in the latter part of the 16th century, became a Protestant stronghold. The French brandy to which the city gives its name has been manufactured and exported since the 18th century. Cognac's population is 20,000.

A popular French tourist resort, **ANNECY** is located in southeastern France, 20 miles south of Geneva, Switzerland. The town of 50,000 is situated in the northern Alps on Lake Annecy and is 63 miles northeast of Lyons. The center of the city has a distinctly medieval look, with many narrow, flower-fringed canals traversing the area. Fed by the underground springs of Lake Annecy, the canals are so clear that the bottoms are visible. Annecy has several churches, monasteries, and seminaries. Overlooking the city on a hill is the castle of the counts of Geneva, built during the 12th through 14th centuries. Besides tourism, Annecy has printing plants and factories that manufacture jewelry, leather, and wood products. The city also produces cotton yarn and linens, and a noted bell foundry is nearby.

Although today an important railroad and industrial center, **ARLES** is probably best known as the home of painters Vincent Van Gogh and Paul Gauguin. Located in southeastern France about 45 miles northwest of Marseille, Arles has a population of 52,000. Situated on the left bank of the Rhône River, the city is connected by canal to the Mediterranean Sea. Industries in Arles include shipbuilding, paper, and chemicals; grapes and olive trees are grown in the area. As Arelas, it was a flourishing Roman town and the metropolis of Gaul late in the Roman Empire era, as well as the birthplace of Constantine II. In the 12th century, Arles

became a free city ruled by an elected *podestà* (magistrate) who then appointed other officials; it retained this special status until the French Revolution. Today, Arles has many landmarks from its past. These include a Roman arena, built in the second century and now used for bullfights. There is also a Roman theater; the *Aliscamps* (Elysian Fields), a Roman cemetery; the Church of St. Trophime, built between the 11th and 15th centuries; and a 17th-century town hall. The Museon Arlaten, a museum of Provençal folklore and culture, is also in Arles. The manufacturing town of Uzès is located to the east of Arles. A ducal palace and cathedral may be found there.

ARRAS is the capital of Pas-de-Calais Département in northern France. Situated on the canalized Scarpe River, Arras is 25 miles southwest of Lille, and has a population of 41,000. An industrial, farm, and communications center, Arras has oil works and machinery and metal products factories. Historically, Arras was of Gallo-Roman origin and an episcopal see by the year 500. An important international banking and trade center by the tenth century, Arras became a center of culture and wealth in the 14th century, particularly known for tapestry. The city was the scene of the signing of two treaties in the 15th century. The latter treaty, ending the war between Maximilian I of Austria and Louis XV of France in 1482, made the city part of France. Arras was ceded to Maximilian of Austria in 1493 and was held by the Spanish branch of the Hapsburgs until 1640, when it was taken by Louis XIII. Arras was nearly destroyed by shellfire during World War I and further damaged during World War II. The city has, however, retained much of its Spanish-Flemish flavor. The town square is surrounded by 17th-century buildings in Flemish architecture. The town hall (built in the 16th century), the large bell tower, and the Abbey of St. Vaast (built in the 18th century) have all been restored. The abbey houses a museum today.

Nine miles north of Arras is the city of Avion, with a population of 23,000. It was the scene of severe fighting from April to June 1917. To the east of Arras is the industrial city of Cambrai. Known for its linen goods, especially cambric and cambresine which were named for the city, Cambrai has a population of 34,000.

AUCH is located in southwestern France on the Gers River in Gascony, about 100 miles southeast of Bordeaux. The capital of Gers Département, Auch is a commercial center and farm market known for the production and trade of Armagnac brandy, wine, and grain. Historically, Auch was one of Roman Gaul's chief towns. It was the capital of Armagnac and an archiepiscopal see in the 10th century, and the capital of Gascony in the 17th century. The old part of the town is steep and hilly and contains the city's most notable landmark, a late-Gothic cathedral, begun in 1489, known for its stained-glass windows and hand-worked choir stalls. Auch also has a museum and a library. The current population is nearly 22,000.

The picturesque town of **AURILLAC** in south-central France developed around the ninth-century abbey of St. Géraud. A famous seat of medieval learning, Aurillac is situated on the Jordanne River, about 105 miles northeast of Toulouse. The capital of Cantal Département, it is an industrial, market, and communications center known for its umbrellas, shoes, furniture, gloves, and Cantal cheese. Landmarks include an 11th-century castle and an 18th-century church. The current population is 30,000.

Important for its trade in Chablis wines, **AUXERRE** is a commercial and industrial city in north-central France. Situated 95 miles southeast of Paris, on the Yonne River, Auxerre is the capital of Yonne Département. Yonne flourished in pre-Roman and Roman times, becoming part of Burgundy via the Treaty of Arras in 1435. The city's 13th-century abbey—St. Germain—is built

on crypts that date from the sixth century. The abbey is now a hospital and has a magnificent clock tower built in Romanesque style. There is also a Gothic cathedral, built during the 13th through 16th centuries. An air force school was opened in Auxerre in 1965. The city's current population is 38,000.

AVIGNON is one of the loveliest cities in France. Surrounded by ramparts built in the 12th and 14th centuries, the city is located on the Rhône River in southeastern France, about 50 miles northwest of Marseille. The capital of Vaucluse Département, Avignon is a farm market with a wine trade and a diverse number of manufactured goods, including soap, chemicals, and leather products. Founded as a Phocaean colony, Avignon was conquered by the Romans, Goths, and Franks, among others. During Babylonian captivity (1309-1376), it was a papal see and, from 1378 to 1417, the residence of several antipopes. Avignon was an archiepiscopal see in 1475, and in 1793 it was incorporated into France. The city has many old churches, including a beautiful Gothic papal palace erected in the 14th century atop a hill. A part of the bridge that was built in the 12th century across the Rhône River still stands today. Since 1948, the Avignon Theatre Festival has presented plays, musicals, dance, cabaret, performance art, children's shows and circuses from early July through early August. During this same period, more experimental theatrical events are presented during another, unofficial festival known as Avignon Off. These two festivals draw approximately 125,000 visitors each year. The population is nearly 87,000.

Located 42 miles northwest of Paris, **BEAUVAIS** is the capital of Oise Département. It is a manufacturing town of 54,000 that produces carpets, blankets, musical instruments, ceramic tiles, and tractors. As a Roman development and early episcopal see, Beauvais flourished in the Middle Ages and again in the 17th century when the tapestry

industry was established here. During the two world wars, Beauvais was damaged extensively. The tapestry factory was destroyed in June 1940, and subsequently, the industry was moved to Paris. Among the landmarks in Beauvais are the Cathedral of St. Pierre, begun as the highest building in Christendom in 1227, but never completed; 10th- and 12th-century churches; a 12th-century palace; and ancient Roman ramparts.

BELFORT is located in eastern France, 80 miles southwest of Strasbourg and 40 miles west of the French borders with Germany and Switzerland. Since the 17th century, Belfort has been a major fortress town, commanding the Belfort Gap, or Burgundy Gate, between the Vosges and Jura mountains, and dominating the roads from France, Switzerland, and Germany. The city was an Austrian possession until passed to France in the Peace of Westphalia in 1648 and then fortified by Vauban. The garrison withstood a 108-day siege during the Franco-Prussian War; Bartholdi's statue, *The Lion of Belfort*, commemorates this siege. Due in part to this accomplishment, the Germans left Belfort and the surrounding territory to France when they annexed the rest of Alsace. Many Alsatians took refuge in Belfort at this time, and have made a significant contribution to the city's industrial growth. Today, Belfort is the capital of Territoire de Belfort and an important industrial and transportation center with large cotton mills and metalworks. The population is about 50,000.

BESANÇON, an industrial city with a population of 122,000, is the capital of Doubs Département. Situated in the Jura Mountains of eastern France, Besançon is 75 miles west of Bern, Switzerland. The city's industries include metallurgy, food processing, and textiles, but it is probably best known for its clock and watch factories, as well as a world renowned watch school. Additionally, Besançon is an important intellectual center, with a university, founded in 1422 in Dôle and

moved to Besançon in 1691. A music academy was founded in Besançon in 1726 and the city plays host to an international music festival. Historically, Besançon was of Gallo-Roman origin, was captured by Julius Caesar in 58 B.C., and was an archiepiscopal see beginning in the fifth century. As part of the kingdom of Burgundy, Besançon was a free city maintaining its independence until it came under Spanish rule in 1648 and was incorporated with Franche-Comté. When Louis XIV conquered Franche-Comté in 1674, Besançon became the capital of the new province. Besançon was heavily bombed during World War II, but many historic landmarks remain, including several Roman ruins—a triumphal arch of Marcus Aurelius, an aqueduct, and an amphitheater. There are also numerous buildings in Spanish Renaissance style, including the Palais Branvelle and a town hall. Victor Hugo, the author, was born here in 1802.

BLOIS, one of the country's most historic towns, is located on the Loire River in central France. Situated 90 miles southwest of Paris, Blois is an industrial and commercial center known for its trade in brandies and wines. Items manufactured in the city include aircraft, footwear, and precision instruments. The most powerful feudal lords of France were the counts of Blois in the 10th century. The last count of Blois was childless and heavily in debt, and he sold his fief to Louis, duc d'Orléans, in 1397. When Louis XII, grandson of the duke, became king of France in 1498, the title and jurisdiction passed to the crown. Blois then became a favorite royal residence. The city's landmarks include an ancient Roman aqueduct and a 17th-century cathedral. The current population is 49,000.

The fishing port of **BOULOGNE** (also called Boulogne-sur-Mer) is known for its herring catches from the North Sea. Situated 21 miles southwest of Calais, near the Liane River, Boulogne has daily ferry service to Dover, England. The city of 45,000 is also a favored resort with

a pleasant beach. Industries here include textile production and fish processing. As an ancient Roman port, Boulogne was known as Gesoriacum. It was the debarkation point for Roman soldiers in the conquest of Britain and was a gathering point for Napoleon's army between 1803-1805, in preparation for an attack on England. Boulogne suffered considerable damage during World War II and has since been rebuilt.

A Paris suburb, **BOULOGNE-BILLANCOURT** is less than 10 miles southwest of the capital, on the Seine River. The city of 108,000 has two sections, a residential area in the north and an industrial area in the south. Boulogne-Billancourt has one of France's largest automobile factories. Other industries include the manufacture of chemicals and electrical goods.

BOURG, or Bourg-en-Bresse, is situated in eastern France, about 40 miles northeast of Lyons and 45 miles west of Geneva, Switzerland. The capital of Ain Département and the historic capital and chief city of the Bresse region in Burgundy, Bourg is a major transportation hub, farm market, and gastronomic center that manufactures furniture, machinery, shoes, and ceramics. Tourism is also a major industry. The 16th-century Gothic cathedral is one of the finest in France, and a museum of antiquities is also located here. The current population is about 41,000.

BOURGES is located in central France, 126 miles south of Paris. The capital of Cher Département, the city is a transportation center in a rich agricultural region. Aircraft, chemicals, leather, textiles, and rubber products are manufactured here. Historically, Bourges was known as Avaricum. It was taken by Julius Caesar in 52 B.C. and, under Augustus, it became the capital of the Roman province of Aquitania. It was an early episcopal see and the residence of Charles VII when most of France was in English hands. The site of numerous medieval councils, Bourges has a French Gothic cathed-

ral—the Cathedral of St. Étienne. Built in the 13th century, the structure is unusual in that it has no transept. A university was founded there in 1463 but was abolished during the Revolution. The current population of Bourges is 71,000.

BREST, a port and naval station in Finistère Département, northwest France, has a population of 156,000. The seaport was planned by Richelieu and fortified by Vauban in the 17th century. It is known to a generation of American soldiers as a debarkation point for troops sent to fight in France during the First World War. Brest was occupied early in World War II by the Germans who used its port as a submarine base; the city itself was almost destroyed by Allied bombings, but was finally captured on September 19, 1944. Items manufactured in Brest include chemicals, shoes, and linens. The city trades in wine, coal, flour, timber, fruit, and vegetables.

CANNES, best known for the international film festival held here each spring, is located in southeastern France on the Mediterranean Sea, about 18 miles southwest of Nice. An important and fashionable French Riviera resort, Cannes also has textile and shipbuilding industries. It manufactures soap and perfume and exports fruit, anchovies, and oil. Cannes was twice destroyed by the Moors as they advanced into France in the eighth century. Napoleon landed nearby following his escape from Elba in 1815. Cannes marked the easternmost landing point of American forces on August 15, 1944, during World War II. With a current population of 66,000, Cannes' landmarks include 16th- and 17th-century churches in the old part of the city.

Just east of Cannes is the winter resort of Antibes. This city of 71,000 trades in dried fruit, olives, oil, tobacco, perfume, and wine. Saint-Raphaël, a city of 30,000, is 18 miles west of Cannes. It was the scene of heavy fighting in August 1944. Fréjus is just west of Saint-Raphaël. It was founded by Julius Caesar and has Roman remains. West of Fréjus

is the noted resort of Saint-Tropez, population 4,000.

CARCASSONNE, with a population of 44,000, is located on the Aude River in southern France, 57 miles southeast of Toulouse and 60 miles north of the Spanish border. Carcassonne is the capital of Aude Département and also a farm trade center that produces rubber, shoes, textiles, and agricultural tools. Tourism is important in Carcassonne, as the old city—a medieval fortress atop a hill—is one of the architectural marvels of Europe, with an interesting history. The Romans fortified the hilltop about the first century B.C. Towers were built by the Visigoths about the sixth century and remain intact today. The viscounts of Carcassonne fortified the structure further in the 12th century. The fortress was taken by Simon de Montfort in 1209, but was yielded to the king in 1247. At that time, Louis IX founded the new city across the Aude River. During Louis' reign, the outer ramparts of the fortress were built, and later, under Philip III, intricate defense devices were added. When completed, the fortress was considered impenetrable and proved thus when Edward the Black Prince was stopped at its walls in 1355. When the province of Roussillon was annexed to France in 1659, the fortress was no longer useful, the ramparts were gradually abandoned, and it fell into disrepair. In the 19th century, the fortress was restored by Viollet-le-Duc. Other points of interest in Carcassonne include a 12-arch bridge, a castle, and a 13th-century Gothic cathedral.

The *commune* of Castelnaudary, with a population of 9,000, is northwest of Carcassonne. The town is historically important in ancient Languedoc.

CHÂTEAUBRIANT is situated in northwestern France, 40 miles northeast of Nantes. The city has a population of over 13,000. It is an important livestock center and manufactures textiles, food products, and agricultural machinery.

The castle in Châteaubriant serves as a museum and law courts.

CHÂTEAUDUN lies on a plateau overlooking the Loir River in north-central France. Situated less than 100 miles north of Angers, the city's population exceeds 15,000. It was rebuilt in 1723 after a fire. Today, Châteaudun has a promenade which offers a view of the Loir Valley. Historical sites here include a castle and the Church of St. Valérien, both built during the 12th to 16th centuries. Factories in the city produce optical and telephone equipment, dairy products, and machine tools.

A commercial and manufacturing city, **CLERMONT-FERRAND** is located in south-central France, about 80 miles west of Lyons. Clermont-Ferrand is on the Tiretaine River and is the capital of Puy-de-Dôme Département. Picturesquely situated near Puy-de-Dôme peak, the city is built mostly of the dark volcanic rock found in the region. An industrial center, Clermont-Ferrand is the home of Michelin and other tire factories, as well as important metallurgical works. Other items produced in the city include chemicals and linen. With a current population of 132,000, the city was formed in 1731 when Clermont was united with Montferrand, a nearby town founded by the lords of Auvergne in the 11th century. The history of Clermont dates back to Roman times. It became an episcopal see in the fourth century and was the site of several church councils, including the council that gave rise to the Crusades in 1095. Landmarks in Clermont-Ferrand include the 12th-century Romanesque Church of Notre-Dame de Port and the Gothic Cathedral of Notre-Dame, built in the 13th and 14th centuries.

COLMAR, seat of the Haut-Rhin *préfecture*, is situated in the Alsatian plain of eastern France, near the foothills of the Vosges. It is one of the most picturesque spots in the Alsace, and is the wine-growing capital of an area that attracts thousands of tourists each autumn for a

captivating journey along the *Route de Vin*. The route from Colmar north to Obernai, toward Strasbourg, is a narrow road that winds through small villages and open countryside, where privately owned vineyards often reach the roadside in an effort to make optimum use of the fertile terrain. Colmar itself, with a population of nearly 66,000, is an industrial and commercial city and a cultural center. There are many buildings of medieval architecture, among them the Collegiate Church of St. Martin, which dates to 1235, less than a decade after Colmar became a free imperial city; the outstanding Unterlinden Museum, erected on the site (and still using the preserved building) of a 13th-century Dominican convent; the old Customs House, or Koïfhus; Franciscan and Dominican churches of note; and several monuments and timbered houses on the boulevard du Champ de Mars and in La Place des Six Montagnes Noires. Another treasure remaining from the 16th century is the Old Guard House, one of the Alsace's most beautiful relics of that period. The Tanners' District is a reminder of an economic activity that made Colmar well known in the Middle Ages. Among the city's native sons were Martin Schongauer, whose masterpiece, *Madonna of the Rose Arbor*, was painted for St. Martin's; and the 19th-century sculptor, Auguste Bartholdi. Nearby Kayserburg is the birthplace of the renowned Dr. Albert Schweitzer.

Épinal, with a population of 35,000, is 75 miles west of Colmar. Textile and printing industries are located here. The fortified town of Turckheim, four miles west, is a favorite resort.

The old capital of Burgundy, **DIJON** is situated in eastern France, 100 miles north of Lyons and 115 miles west of Bern, Switzerland. The capital of Côte d'Or Département, Dijon is a transportation and industrial center on the Ouche River that produces food, metal products, and electrical and optical equipment. It is probably best known for its mustard and *cas-*

sis (black currant liqueur) and is also an important shipping center for the Burgundy wine that is produced in the surrounding countryside. Surrounded by eight forts, Dijon was founded in ancient times and began to flourish when the Burgundy rulers resided here in the 11th century. Dijon was a thriving cultural center even after Burgundy was reunited with France in the late 15th century; Dijon University was founded in 1722. The city is also known for its art treasures. Funereal statues of the dukes of Burgundy are housed in a museum in the town hall that was originally the ducal palace; it was built in the 12th century and greatly rebuilt in the 17th and 18th centuries. Landmarks in Dijon include the Cathedral of St. Bénigne (built in 13th and 14th centuries), the Church of Notre Dame (13th century), St. Michael's Church, the Hôtel Aubriot (built in the 14th century and now housing a museum of Burgundian folklore), and the palace of justice (built in the 15th and 16th centuries). Dijon was also the birthplace of the writer Bossuet, the composer Rameau, and the dramatist Crebillon. The current population is 148,000. Dijon holds its annual fair in early November.

Southwest of Dijon is Dôle. Roman ruins, a 16th-century church, and a hospital in Renaissance style may be found in this city of 25,000. Also southwest of Dijon is Beaune, a formerly walled and moated town which was important during the Middle Ages. The city is known for Hôtel Dieu, or Hospital of Beaune, built in 1450. The building functioned continuously in that capacity until only a few years ago and now serves as a hospital museum. The population of Beaune is 22,000.

GRENOBLE is entirely surrounded by the Alps in southeastern France, 133 miles northeast of Marseille. It is a commercial and manufacturing city, and capital of Isère Département. The Winter Olympics were held in Grenoble in 1968. The city's famous historical buildings include a university dating to 1339, a 10th-century cathe-

dral, fine art museums, and a Renaissance palace belonging to the dauphins of France. A nuclear research center was constructed in Grenoble in 1959. The city's population is 156,000.

LE MANS, famous for its annual international auto race, is capital of the Sarthe Département and is situated on the Sarthe River, about 35 miles south of Alençon in northwestern France. An important educational, communications, commercial, and manufacturing center, Le Mans dates back to pre-Roman times. It was a Merovingian capital and was the site of frequent sieges and battles throughout its history, including defeat of the French by Prussians during the Franco-Prussian war, 1870-1871. Le Mans was the birthplace of Henry II of England and John II of France. Landmarks include the Cathedral of St. Julien du Mans, built during the 11th through 13th centuries. The cathedral is partly Romanesque and partly Gothic; it contains the most daring system of flying buttresses of any Gothic structure. Le Mans today has a population of 151,000. Items produced in the city include electrical equipment, textiles, tobacco products, automobile parts, and plastics.

LIMOGES, with a population of 138,000, is located on the Vienne River in west-central France, about 110 miles northeast of Bordeaux. The capital of Haute-Vienne Département, Limoges is a manufacturing and commercial city known for its ceramics industry. Begun in 1736, Limoges porcelain workshops employ more than 10,000 people, making use of the abundant kaolin in the area. The city also produces leather goods, paper, furniture, textiles, and precision tools. Historically, Limoges was a Gallic tribal center destroyed in the fifth century. Two separate towns developed by the ninth century and were later merged in 1792. In the 12th century, Limoges was the seat of the viscounty of Limoges. It was often the scene of war, pestilence, and famine. Richard the Lionhearted was killed in a battle near Limoges in 1199.

Edward the Black Prince burned the city and murdered its inhabitants in 1370. In the 13th century, the well-known Limoges enamel industry was developed and thrived, but declined when the city was again devastated by the Wars of Religion. Prosperity returned to Limoges when porcelain china manufacturing was introduced in 1771. Landmarks in Limoges include a cathedral, a ceramics museum, and an art gallery that contains many works by Renoir, who was born here. The city also has a university founded in 1808, suppressed in 1840, and reopened in 1965.

LOURDES, a small *commune* of about 18,000, is located in southwestern France, just south of Pau and about 30 miles north of the Spanish border. Formerly the fortress of the counts of Bigorre, and known for its slate quarries, Lourdes became internationally famous on February 11, 1858, when the Virgin Mary was said to have made her first apparition before the peasant girl, Bernadette Soubirous. There were 18 apparitions in all in the grotto. A large underground basilica was completed in 1958. This Roman Catholic shrine draws millions to Lourdes every year; the most important pilgrimage occurs annually during the week of August 18. Miraculous cures have been attributed to the waters of the shrine. The sanctuaries and pools are open throughout the year. Organized pilgrimages take place from the Sunday before Easter through mid-October. Religious ceremonies are held daily during the pilgrimage season. There are masses, stations of the Cross, a procession of the Holy Sacrament for sick pilgrims, and a torch procession each evening that always attracts a crowd. Lourdes is accessible by rail, by three main roads, and by the Lourdes-Ossun airport.

Located 178 miles northeast of Paris, **METZ** is situated at the confluence of the Seille and Moselle Rivers. The capital of Moselle Département, it has a current population of 127,000. Metz is a cultural and commercial center and an

industrial city that produces shoes, metal goods, canned fruit and vegetables, clothing, and tobacco. It is also the center of an iron-mining region. Of pre-Roman origin, Metz was one of Gaul's most important cities. Destroyed by the Vandals in 406 and the Huns in 451, Metz became the capital of Austrasia in the sixth century. It reached the height of its prosperity in the 13th century as a free, independent city. Along with Toul and Verdun, Metz was taken by the French in 1552 and, under the Treaty of Westphalia, formally ceded to France in 1648. Following a major siege in 1870, Metz was surrendered to the Germans, and remained under German rule from 1871 until 1918. The city was returned to France after World War I. It was heavily damaged in World War II during intense fighting from September to October 1944, and was captured by the Allies on November 20. There are historical landmarks in Metz from all of the city's prosperous periods. Gallo-Roman ruins include an aqueduct, thermal baths, and part of an amphitheater. From the medieval period is the Cathedral of St. Étienne, built between 1221 and 1516, and Place Sainte Croix, a square surrounded by medieval houses built between the 13th and 15th centuries. Metz also has several other churches including the oldest church in France—St. Pierre-aux-Nonnains. At St. Avold, 28 miles east of Metz, is Lorraine Cemetery, where more World War II American soldiers are buried than anyplace else in Europe.

MOULINS, a manufacturing city, is situated on the Allier River in central France. The capital of Allier Département and the ancient capital of Bourbonnais from the 10th through the 16th centuries, Moulins is 95 miles northwest of Lyons. Clothing, shoes, machine tools, beer, and furniture are manufactured within the city, which is also an agricultural market. Historically, Moulins became the capital of the duchy in the late 15th century, but was confiscated by the French crown in 1527. Here, in 1566, Charles IX held an assembly, adopt-

ing important administrative and legal reforms. Moulins is the site of several artistic and historic treasures. The 15th-century Gothic cathedral contains a triptych considered one of the best examples of French painting of the period. The tomb of Henry de Montmorency is in the former convent of the Order of Visitation, which is now a school. The ruined castle of the dukes of Bourbon and a Renaissance *pavilion* are also of historic note and located in Moulins. The modern city has a population of 21,000.

South of Moulins is Vichy, a noted spa and health resort. This city of 26,000 has many thermal alkaline springs used since Roman times. Vichy water and salts are exported in large quantities. As a result of the French armistice with Germany, Vichy was made capital of unoccupied France in July 1940 and was the seat of the French government until complete occupation by the Germans in November 1942.

MULHOUSE is an industrial city of 112,000 on the Ill River, approximately 20 miles south of Colmar. Situated at the very heart of western Europe, near the Rhine and flanked by the Vosges to the west and the Black Forest to the east, Mulhouse has always striven to make the most of its favorable geographic location close to both Germany and Switzerland. It was a free imperial city in 1308 and, from the 15th to the 18th century, was an allied member of the Swiss Confederation. It became a French town in 1798, and then was under German rule from 1871 until 1918, when it reverted to France. Its important attractions are the 16th-century town hall and a modern (and famous) car museum. There are also wallpaper and textile-printing museums, a National Railway museum, and the Mulhouse Fireman Museum. Mulhouse's zoological and botanic gardens are among the great achievements of the 19th-century ruling class. Today, the gardens are home to nearly a thousand animals.

A western suburb of Paris, **NANTERRE** has a population of 85,000. The capital of Hauts-de-Seine Département, Nanterre is situated in north-central France, on the right bank of the Seine River. It is an industrial center whose manufactures include automobiles, metals, machine tools, electrical equipment, and rolling stock. Landmarks include the National Basilica of Ste. Beneviève, with a 15th-century nave.

The commercial and manufacturing city of **NÎMES** is located in southern France, 64 miles northwest of Marseille and 30 miles north of the Gulf of Lions. The capital of Gard Département, with a population of 138,000, Nîmes produces textiles, brandy, footwear, and leather goods, and trades in wine and grain. Thought to have been founded by Greek colonists, it became Roman about 120 B.C. and, under the name of Menausus, was one of the principal cities of Roman Gaul. Nîmes came under the French crown in 1258, and later was a stronghold of the Huguenots. The Pacification of Nîmes was signed here in 1629, and when the treaty was revoked in 1685, the city greatly suffered. Nîmes is probably best known for its ancient Roman buildings and monuments. Some of these relics include a large Roman amphitheater, built in the first century A.D. and later used as a fortress by the Visigoths and Saracens against the Franks; seating 24,000, the arena is still used today. One of the finest examples of Roman architecture is the square house, or *Maison Carée*. Originally a Roman temple built in the first or second century, it was restored in 1789 and converted in 1823 into a museum that contains Roman antiquities. Other relics include the remains of an ancient tower, *Tour Magne*; two gates; ruins of a nymphaeum; and, near the town of Remoulins, 15 miles northeast, ruins of a major Roman aqueduct, *Pont de Gard*. Nîmes also has an 11th-century cathedral, built on the site of the former temple of Apollo.

Located 70 miles southwest of Paris, in north central France, **ORLÉANS** is an important transportation junction situated in a fruit and vegetable growing region. Industries in Orléans include food processing, chemicals, textiles, and pharmaceuticals. The capital of Loiret Département, Orléans has a population of 117,000 and is surrounded by modern, sprawling suburbs. Orléans was originally a Celtic city called Genabum. In a revolt against Julius Caesar, the city was burned in 52 B.C., and rebuilt under the name Aurelianum. A major cultural center in the early Middle Ages, the city was the principal residence, after Paris, of French kings in the tenth century. The siege of Orléans by the English in 1428-29 threatened to bring all of France under England's rule, but was saved by the heroics of Joan of Arc. Every May, the feast of Joan of Arc is celebrated with much spectacle in Orléans. The city was a prosperous industrial and commercial center during the 17th and 18th centuries, and its university, founded in the 14th century, was known throughout Europe. Many historic buildings in Orléans were damaged during the German invasion of France in 1940, including most of those associated with Joan of Arc. Structures that remain include the Cathedral of Sainte-Croix, rebuilt during the 17th through 19th centuries, after being destroyed by the Huguenots in 1568; a 16th-century church and town hall; a 17th-century prefecture, and an episcopal palace. One of the most famous intellectual centers of the Middle Ages, St.-Benoit-sur-Loire is 22 miles to the east, and features a noteworthy 11th-century Romanesque basilica.

A winter sports center, **PAU** is located in southwestern France 105 miles south of Bordeaux. Situated at the foot of the Pyrenees on the right bank of the Gave de Pau River, Pau is the capital of Pyrénées-Atlantiques Département. The city is a major tourist center known for its scenery. Pau has metallurgical and wool industries, and an oil refinery. Manufactured items include perfume, shoes, and cloth-

ing. Founded in the 11th century, Pau was the capital of Béarn in the 14th century and was the residence of the Navarre kings in 1512. Pau was the birthplace of Henry IV of France and of Jean-Baptiste-Jules Bernadotte, the French revolutionary general who became Charles XIV of Sweden and Norway. The city has a 12th-century castle and a university founded in 1724. Its population is currently 79,000.

A major tourist resort, **PERPIGNAN** is located in the south of France, less than 20 miles from the Spanish border and five miles from the Mediterranean Sea. Perpignan is the capital of Pyrénées-Orientales Département. There is a nearby international airport. The city is also a thoroughfare for motorists traveling to Spain. With a current population of 107,000, Perpignan is a farm trade center that handles fruits, vegetables, and wine. Industries include distilleries, factories, and canneries; items manufactured are paper, clothing, toys, chocolate, and ceramics. Perpignan was founded around the 10th century as the fortified capital of the Spanish kingdom of Roussillon; the architecture in the city today shows much Spanish influence. Perpignan was united with France in 1659. Notable landmarks include the 14th-century Loge, constructed to house the merchants' exchange; the Gothic Cathedral of St. Jean, built in the 14th and 15th centuries; and the castle of the Majorcan kings, built during the 13th through 15th centuries, which forms part of the old citadel that dominates the city. Close to Perpignan are the seaside towns of Port-Vendres, Elne, and St. Laurent.

Located in west-central France, 180 miles southwest of Paris, **POITIERS** is the capital of Vienne Département. A historic city situated at the confluence of the Clain and Boivre Rivers, Poitiers has many landmarks. They include the Baptistery of St. Jean, most likely the oldest Christian monument in the country, and Notre Dame la Grande, dating from the 11th and 12th centuries. The University of Poitiers, established by Charles VII

in 1431, is a coeducational facility funded by the state. The city's population is over 85,000.

Situated at the junction of the Vilaine and Ille Rivers in northwest France, **RENNES** is an industrial and commercial center 193 miles southwest of Paris. An archiepiscopal see as well as a railroad junction, Rennes produces a variety of items including automobiles, agricultural machinery, furniture, chemicals, textiles, honey, and lace. An important Gallo-Roman town, Rennes became the capital of Brittany in the 10th century and, from 1561 to 1675, was the seat of *parlement* (parliament, or seat of justice) in Brittany. The Norsemen ravaged the town during the Hundred Years War and, in 1720, it was destroyed by fire. It also suffered widespread destruction in 1944 during World War II. The Brittany Cemetery, 31 miles northeast in St. James, is the burial site for Americans killed during the Normandy and Brittany campaigns that year. Rennes has a university, founded in 1461 at Nantes, and transferred in 1735. Rennes is also the site of the National School of Public Health. The current population is 212,000.

Other towns in Brittany are known for their architectural treasures. Auray, Dinan, Fougères, Morlaix, Quimper, Vannes, and Vitré retain fine historic centers of interest to visitors.

ROUBAIX, a commercial and manufacturing city, is in northern France, seven miles northeast of Lille and just south of the border with Belgium. With a population of 96,000, Roubaix is the major center of the French textile industry. Chartered in 1469, it has dyeing plants and plastics and rubber factories. The textile industry developed in Roubaix in the 19th century. A national textile school is located here.

SAINT-BRIEUC, a manufacturing and commercial city of 44,000, is located on the Gouet River near the English Channel, in northwestern France. The capital of Côtes-du-

Nord Département, Saint-Brieuc is 240 miles west of Paris. A railroad junction as well as a coastal and fishing port, its industries include textiles and metallurgy. The city was founded in the fifth century, growing rapidly after the Welsh monk, St. Briomach, built a monastery here in about the sixth century. Saint-Brieuc has been an episcopal see since the ninth century. Of note in the city today is the 13th-century fortress-cathedral. Saint-Brieuc is 40 miles west of Saint-Malo, a fishing port, famous tourist resort, and yachting center situated on a rocky island in the Atlantic Ocean. Saint-Brieuc is also 60 miles west of Mont-Saint-Michel. A fortified rock in Mont-Saint-Michel Bay, a remarkable ancient abbey, and the town are located at the rock's summit.

An industrial suburb north of Paris, **SAINT-DENIS** manufactures chemicals, plastics, diesel engines, leather, pharmaceuticals, glue, and fireworks. Situated in northern France about seven miles northeast of the French capital, Saint-Denis has a current population of 134,000. The city was founded early in the Christian era, probably at the site where St. Denis fell and was buried. The abbey of Saint-Denis was built in 626 and quickly became the richest and most famous in France. Joan of Arc blessed her weapons at this abbey and Abelard lived in it as a monk in the 12th century. The abbey's banner—the oriflamme—served as the royal standard from the reign of Louis VI to Charles VI (12th to 15th centuries). The abbey was heavily damaged during the French Revolution, but was restored. Saint-Denis was the first cathedral considered Gothic in construction and became the prototype for many others. The cathedral contains the tombs of many French monarchs, including Louis XII, Henry II, Catherine de Médiçi, Louis XVI, Marie Antoinette, and Louis XIII. Today, the abbey is a school for daughters of Legion of Honor members. Saint-Denis also has a museum of gold and silver.

SAINT-ÉTIENNE, capital of the Loire Département in Lyonnaise, is

located in east-central France about 32 miles southwest of Lyons. A city of 184,000 residents, it is an industrial center with an important textile and dyeing industry. Formerly one of the country's leading steel centers, its industries today include coal mining, and the production of chemicals, government armaments, and alloy steels. A noted school of mines is located in Saint-Étienne. The city has several museums and the beautiful Gardens of Rez. A church with the same name as the city dates from the 15th century.

The port city of **SAINT-MALO** is located 47 miles north of Rennes in northwestern France. Destroyed during World War II and later rebuilt, the city is a noted tourist resort. It was here, in 1944, that German occupation forces surrendered to the Allies. The 14th-century castle in Saint-Malo now houses a museum. Jacques Cartier, the explorer, and François-René de Chateaubriand, the writer, were both born here. The current population is 52,000.

The seaport and industrial *commune* of **SAINT-NAZAIRE** is located at the mouth of the Loire River on the Bay of Biscay, in northwestern France, 33 miles northwest of Nantes. This city of 118,000 is an important seaport mainly dealing in trade with Central America and the Antilles. A major shipbuilding center and fishing port, Saint-Nazaire also has aeronautical, metallurgical, chemical, and food industries. Saint-Nazaire was believed to have been built on the site of the ancient Gallo-Roman town of Carbilo, where the Romans built a fleet in 56 B.C. From the mid-19th century, Saint-Nazaire developed as a port. In World War I, it was a major debarkation port for the American Expeditionary Force; from 1940-44, during World War II, it was a German submarine base. Surrounded by Allied forces in August 1944, the German submariners surrendered in May 1945. Saint-Nazaire was nearly destroyed by the bombing, but has been rebuilt. Near Saint-Nazaire is the joint municipality of La Baule-Escoublac, a beach resort.

The manufacturing city of **TOURCOING** is located in northern France, just south of the border with Belgium. With the adjacent city of Roubaix, it forms one of the most important textile centers in France. Soap work and sugar refineries are also found in this city whose population is 93,000. Tourcoing was granted a city charter in 1491 by Maximilian I, in recognition of its important textile industry. The city was captured by the Germans in 1914 and was seriously damaged.

TOURS is situated in west-central France on the Loire River. The capital of Indre-et-Loire Département, Tours is 130 miles southwest of Paris and has a population of 133,000. It is a commercial and industrial city that is also a wine market and a tourist center. Industries include clothing, printing, metallurgical, and chemical manufacturing. Tours was originally a pre-Roman town that grew rapidly following the death of its bishop, Saint Martin, in 397. It became the center of medieval Christian learning under Gregory of Tours and Alcuin. Tours was the scene of Charles Martel's victory over the Saracens in 732, and became an archdiocese in 853. In the 15th century, Tours developed a prosperous silk industry. The city was the headquarters of the government national defense during the Franco-Prussian War, 1870-71; during World War II in June 1940, it was briefly the seat of the French government. Historical landmarks in Tours include Gallo-Roman ruins, the Gothic Cathedral of St. Gatien (built during the 12th through 16th centuries), and two towers and the cloister of the old basilica of St. Martin of Tours. Noted literary figure, Honoré de Balzac (1799-1850), was born in Tours.

Fifteen miles to the east is the city of Amboise, with a population of 11,000. The city manufactures optical instruments and photographic equipment, but is best known for its castle.

TROYES is located in northeastern France, about 90 miles southeast of Paris, on the Seine River. The capital of Aube Département, Troyes has a population of 61,000. It is an industrial city and the center of the French hosiery industry. Other products manufactured in Troyes include textile machinery, needles, flour, automobile parts, and tires. Dating from pre-Roman times, Troyes was sacked by the Normans in 889 and became the capital of Champagne in 1019. During the 11th through the 13th centuries, Troyes prospered as a commercial town and was the site of the great Champagne fairs. These fairs attracted merchants from throughout the known world, and set standards of weights and measures for all of Europe; the troy weight has survived to the present. Troyes was the site of the 1420 treaty between Charles VI of France, Henry V of England, and Philip the Good of Burgundy. It was also the first town taken by Joan of Arc on her march to Reims in 1429. Troyes has many fine Gothic structures, including the Cathedral of St. Peter and St. Paul (constructed during the 13th through 17th centuries), the Church of St. Urban (begun in 1262), several other notable churches, a 17th-century town hall, and a 12th-century hospital.

The capital of Drôme Département, **VALENCE** is located on the Rhône River in southeastern France. A city of 65,000, and 116 miles northwest of Marseille, Valence is a trade center in a fertile farming region. Silk, furniture, footwear, leather goods, and jewelry are among the items produced here. Valence is an old Roman town that has changed hands many times; it was taken by the Visigoths in 413 and by the Arabs in 730. It became an episcopal see in the fourth century, and was ruled by its own bishops from 1150 until the 15th century. The city's 11th-century Romanesque cathedral is of interest to tourists.

A major tourist center located 10 miles southwest of Paris, **VERSAILLES** is the capital of the Yvelines Département. Items

Notre Dame cathedral in Paris

Courtesy of MaryBeth Mailloux

manufactured in the city include brandy and watches. Versailles was an insignificant village made famous by Louis XIV when he built the palace and grounds that have been synonymous with the city's name since the mid-17th century. The growth of the town, which currently has a population of 83,000, began when Louis moved his court here in 1682. The magnificent palace, built in French classical structure, was the work of three architects—Louis Le Vau, J.H. Mansart, and Charles Le Brun. The park and gardens were designed by André Le Nôtre and contain sculptures, fountains, and reservoirs by Antoin Coysevox and other artists. Water is supplied to the fountains by a huge machine built at Marly-Le-Roi. Two smaller palaces—the Grand Trianon and the Petit Trianon—are also in the park, as well as several grottoes, temples, and decorative structures. The French Revolution began in Versailles, and the palace was never again a royal residence. It became a museum and national monument under Louis Philippe. Several important treaties were signed at Versailles: negotiations between the United States and Great Britain ending the American Revolution concluded here in 1782 and a preliminary treaty was signed; the 1919 treaty between the

Allies and Germany ending World War I and establishing the League of Nations; and the Grand Trianon treaty between the Allies and Hungary, signed on June 4, 1920.

COUNTRY PROFILE

Geography and Climate

France, the largest Western European nation, covers 213,000 square miles and is about four-fifths the size of Texas. The landscape is varied: about two-thirds flat plains or gently rolling hills and the rest mountainous. A broad plain covers most of northern and western France from the Belgian border in the northeast to Bayonne in the southwest, and it rises to uplands in Normandy, Brittany, and the east. This large plain is bounded on the south by the steeply rising ridges of the Pyrénées, on the southeast by the mountainous plateau of the Massif Central, and on the east by the rugged Alps, the low ridges of the Jura, and the rounded summits of the densely forested Vosges. The principal rivers are the Rhône in the south, the Loire and the Garonne in

the west, the Seine in the north, and the Rhine, which forms part of France's eastern border with Germany.

France is bordered on the north by Belgium and the Duchy of Luxembourg, on the east by Germany; on the southeast by Switzerland, Italy, and Monaco; and on the south by Spain and Andorra.

There are cool winters and mild summers in the west and north of France, and southern France and Corsica have a Mediterranean climate with hot summers and mild winters. Precipitation is frequent year round. The average yearly rainfall in Paris for the last 30 years is 26 inches.

Population

France's population of 59.6 million consists of large elements of three basic European stocks—Celtic, Latin, and Teutonic. Over the centuries, however, these groups have blended so that today they may be referred to only in the broadest sense.

France's birthrate was among the highest in Europe from 1945 until the late 1960s, when it began to fall. The 2001 figures reveal 12.1 births per 1,000.

Traditionally, France has had a high level of immigration, and about 3 million people entered the country between the two World Wars. After the establishment of an independent Algerian state in 1962, about 1 million French citizens returned to France. By early 1982 France's population of immigrant workers and their families was estimated at 3.5 million or almost 7 percent of the population. By 1992 that figure rose to about 5 million immigrant workers (9% of the population), primarily of North African, Portuguese, Italian, and Spanish extractions with smaller groups coming from Turkey, Yugoslavia, Poland, Senegal, and Mali.

As of 2001 about 90 percent of the population is Roman Catholic, 2

percent is Protestant, and about 1 percent is Jewish. Immigration since the early 1960s from North Africa, especially Algeria, accounts for approximately 3 percent of the population, making Islam the second most practiced religion in France.

Public Institutions

The Constitution for the Fifth Republic was approved by public referendum in 1958. Under its provisions, as amended in 1962, the President of the Republic is elected directly for a 7-year term. The President, currently Jacques Chirac, names the Prime Minister, currently Jean-Pierre Raffarin, who presides over the Cabinet, commands the Armed Forces, and concludes treaties. The President may submit questions to a national referendum, can dissolve the National Assembly, and, in certain defined emergency situations, may assume full power.

The Constitution provides for a bicameral Parliament consisting of a National Assembly and a Senate. The Assembly's 577 deputies are elected directly for 5-year terms. All seats are voted on in each election. The Senate, chosen by an electoral college, has 321 members elected for 9-year terms. One-third of the Senate is renewed every 3 years.

The French political spectrum includes six distinctive political groups. From right to left, these are: the extreme right, the neo-Gaullists, the traditional center-right, the ecologists, the Socialists, and the Communists. Numerous smaller parties have variable national political impact.

A Socialist President was reelected in 1988 and, later the same year, a Socialist government replaced that of the center-right. The current president, Jacques Chirac, is a member of the conservative *Rassemblement pour la République* (Rally for the Republic) party. He was first elected in 1997 and reelected in 2002.

Arts, Science, and Education

Rich in history and steeped in tradition, France has made durable contributions, in all disciplines, to the global fund of knowledge. French philosophers, scientists, artists, and literary figures transformed the face of the world they found. Contemporary social, political, and artistic factors, however, have produced an era of redefinition in which French intellectuals are seeking new roles for their country to play on the world stage.

France's academic, artistic, and scientific communities are more open to an exchange of ideas with their U.S. counterparts than at any other time in the postwar period. Additionally, the lowering of market barriers and the open pursuit of closer political and economic ties among European neighbor states have made English the linguistic common denominator for future interaction. This turn of events will facilitate the two-way flow of ideas across the Atlantic.

The French often refer to themselves as "cartesian" (after celebrated mathematician/philosopher Renee Descartes), meaning their self-perception is one of practicality and realism. These qualities have been brought to bear on new technology as France becomes a prime European player in the esoteric world of computers, space exploration, nuclear energy, telecommunications, and high-speed rail transport. In a society where intellectuals were both seers and social arbiters, the technocrat is now finding a comfortable place of honor all his own.

Even with the thrust toward the practical, the arts and their various practitioners are solid components in the everyday lives of most French citizens. It would be hard to find someone who does not have a favorite painter or preferred film director, or who has no opinion whatsoever on the architectural integrity of new construction in any given city. Contemporary fine art-

ists, actors, musicians, and writers will always enjoy prestige and criticism.

Commerce and Industry

Since World War II, France has been transformed from a largely agrarian economy with modest mineral resources and small, fragmented industrial sectors into a diversified, integrated, and sophisticated industrial power. Still a large agricultural producer, France also has become a major producer and exporter of chemicals, motor vehicles, nuclear power stations, aircraft, electronics, telecommunications equipment, and civil engineering services and technology. This rapid industrialization was fostered by France's charter membership in the European Community (EC), and by heavy U.S. direct investment, particularly between 1955 and 1974. By 1990 U.S. investment in France reached \$15.9 billion and has continued to grow. French investment in the U.S. has grown explosively in the last few years.

Before World War II, railroads and public utilities were nationalized. In the early postwar period several major enterprises were nationalized, including the four largest banks and certain aerospace, automotive, and other manufacturers. In the early 1980s additional nationalizations occurred under a Socialist government followed by privatizations under a Conservative government. When the Socialists regained a majority in 1988, they did not reverse these privatizations.

France is determined to compete successfully in the unified European market, which began on January 1, 1993, and the French Government maintains substantial holdings in pharmaceuticals, chemicals, and electronics. Government intervention in the productive sector is greater than in the U.S., but France is mainly a free market economy, and foreign investors enjoy full national treatment. Gross

Champs-Élysées in Paris

Courtesy of Mira Bossowska

domestic product (GDP) in 2000 reached \$1,448 billion, or \$24,400 per capita (population 59.6 million). The majority of France's foreign trade is with EC partners, headed by Germany. Major imports from the U.S. included aerospace equipment, electronic components and equipment, chemicals, and pharmaceutical products.

Despite slower growth and surging unemployment, the French Government has reinforced its commitment to maintain tight fiscal and monetary control to keep inflation in hand. It is also taking measures to promote investment as a means of addressing its main areas of concern: growing unemployment and a moderate but persistent trade deficit.

Transportation

Local

Public transportation in Paris is excellent, inexpensive, and is preferred by most employees to the frustrations of rush hour driving. The metro (subway), although crowded during rush hour, is fast and trains are frequent. Trains and stations are well maintained and routes are clearly marked. Buses also are frequent and provide excellent service. A monthly pass for the

metro and bus system, taking you anywhere within Paris, may be purchased. Student rates are available.

Taxis are plentiful, though difficult to find during rush hour, holidays, and bad weather. Limited to 3 passengers, they are metered with surcharges for late rides, long rides, luggage, and use of radio.

Regional

France has an excellent system of highways, providing easy access to Belgium (3 hours), Germany (5 hours), and the Riviera (8–10 hours). Tolls are high on major roads. Heavy traffic on weekends and during holidays can cause considerable inconvenience. Secondary, two-lane roads, passing through the centers of small towns, are often more picturesque and interesting. The roads are well marked and detailed maps are readily available. The American driver may have initial difficulty adjusting to the aggressive driving habits of some French motorists. Bicyclists, motorcyclists, and pedestrians also encumber the roads both in towns and in the country.

France offers excellent rail and air transportation to all parts of the country and other European destinations. The French railway system is among the best in the world.

Train travel is fast, efficient, and inexpensive. Substantial fare reductions for use of public transportation are offered to children, students, and individuals over 60.

Frequent direct air service is available to many U.S. cities. The two airports serving Paris, Charles de Gaulle and Orly, are served by excellent bus and rail service to air terminals in the city.

Communications

Telephone and Telegraph

Telephone and telegraph services to and from Paris compare favorably with those in any large U.S. city. A direct-dial telephone system links France to the U.S. and most of the world. Phones can be purchased or rented. American-made phones can be used when fitted with the proper plug, which is available locally. Calls to the U.S. may be charged to international telephone cards such as AT&T, MCI, and Sprint.

Radio and TV

French TV can only be received on a TV with French SECAM-L. The multistandard PAL/SECAM/NTSC TV's, which can be purchased in many parts of the world, will not receive French stations.

French TV offers government run stations and private channels. All channels feature heavy doses of popular American programs dubbed into French. American films dubbed into French or French-made films, game shows, and variety shows also predominate. The nightly news is at 8 pm. Children's shows, mostly cartoons, are shown, but for considerably less time than in the U.S. Many parts of Paris are able to subscribe to cable and can receive CNN, BBC1, and several other European channels. An additional channel, Canal Plus, which can be accessed by renting a decoder box for your French TV, carries movies in English. Every morning at 7 am, even without a decoder, you can watch the previous evening's CBS news in English with French subtitles on Canal Plus.

Radio reception is good. What you receive depends upon where you are in Paris. BBC International radio service can be picked up on AM. There is no VOA Europe broadcast in the Paris area. It is illegal to ship or hand-carry a two-way CB radio transceiver. It is possible, however, to join local amateur radio operator clubs. Reciprocal amateur licenses are available.

Newspapers, Magazines, and Technical Journals

French newspapers and periodicals are expensive, but readily available at newsstands around the city. French newspapers follow a particular ideological or political bent. Editorial comment and factual reporting are not always kept separate as they are in U.S. newspapers. There is a good deal of coverage of the American political scene and of French-U.S. relations.

English-language newspapers, including the *International Herald Tribune*, the *Wall Street Journal*, *USA Today*, and British daily papers, are available throughout the city. The European editions of *Time*, *Newsweek*, and *U.S. News and World Report* are also available. U.S. fashion and special interest magazines can be purchased, but at highly inflated prices. Subscriptions to the *International Herald Tribune* and British daily papers are available, but costly.

Brentanos, Galignani, and W.H. Smith bookstores specialize in American and British books. The Village Voice and Shakespeare and Company are equally rich English-language hunting grounds, with Shakespeare featuring reduced-price, used volumes. Tea and Tattered Pages stocks only used English books (mainly American paperbacks) and also has a small tea room. Even with the cost of postage, it is cheaper to order newly published books from the U.S.

A well-stocked "American Library in Paris" at 10, rue du General Camou in the 7th Arrondissement, has good American and English literature. Library facilities are open to every-

one. The USIS Benjamin Franklin Library, located in the Talleyrand Building, serves as a documentation/reference center for a variety of American topics.

Health and Medicine

Medical Facilities

Most medications used in the U.S. are available in France. A French physician must write prescriptions for medications purchased at local pharmacies. If taking a prescription medicine, bring a supply.

Paris has good medical facilities and well-trained physicians. A good resource list of English-speaking physicians is available, and many have trained in the U.S. Outpatient medical and dental care is more expensive than in the U.S.

The American Hospital of Paris in Neuilly (a Paris suburb) is a well-equipped American-style hospital with several American physicians on its French staff. The emergency room is staffed 24 hours daily with an English-speaking physician. Although it has an outpatient pediatric clinic, it has no separate pediatric unit. The large French public hospitals are well equipped and have specialists in most medical fields, and some speak English.

Community Health

The general level of community sanitation is good. Water in large cities is safe, but not fluoridated. Many people use a water filtering pitcher (available locally) to filter out the sediments and chemical deposits, or purchase bottled water. Good pasteurized milk is available.

Most personnel encounter no unusual health problems during their tour. Upper respiratory infections and allergies resulting from dust, pollen, and pollution are the most common complaints.

Preventive Measures

Although immunizations are not necessary for France, all Foreign Travelers should have current

immunizations against diphtheria-tetanus and polio. School-age children will be required to have the same immunizations as in the U.S.

NOTES FOR TRAVELERS

Both the Charles de Gaulle and Orly Airports are about a 30-minute drive from Paris. Plan to arrive during the workweek and not on weekends, or on French or American holidays.

No vaccination or health certificate is required for entry if coming from the U.S., Canada, or Western Europe. Visas are no longer required for tourists or nonofficial business if the stay is less than 90 days.

Cats and dogs are admitted into France if their owners can provide the following documents: certificate of good health issued one month before entry into France; an antirabies vaccination certificate issued more than 1 month, but less than 1 year, before entry into France.

Medications for pets are much less expensive in the U.S. Bring supplies with you. There are many excellent

local veterinarians, several of whom have studied in the U.S.

No limit is placed on foreign cash, travelers checks, or letters of credit that may be brought in. Such currency instruments must be exchanged only at authorized banks or agencies.

Major U.S. banks with offices in France are Citibank, Chase Manhattan, Morgan Guaranty Trust, and Bank of America.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Germany. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

A stay in Germany, the heart of central Europe, means living and working in one of the most dynamic, progressive and interesting of European countries. Today, it is an opportunity to witness, and participate in, an important new phase of German and European history. In addition, Germany offers a high standard of living, extensive travel opportunities both within and outside the country, world-class cultural events and recreational facilities for everyone.

Despite its linguistic and cultural affinity and close ties with the U.S., Germany is a distinctly foreign experience and assignment to Germany requires adjusting to a differ-

ent pace and way of life. As Europeans, for example, Germans are more formal in business and social relationships than Americans. The national culture and its regional variations are shaped by patterns rooted in a long and unique central European history. Although English is a commonplace alternate language in parts of Germany, living in Germany will be more rewarding for those who speak German or who have the interest and initiative to take advantage of the many opportunities to learn the language.

As the century ends and a new millennium begins, Germany's Government and Parliament have come back to Berlin, the nation's historic capital. The immediate postwar era is over. Both Germany and Berlin are whole again. Germany today is the world's third largest economy and the economic foundation on which the euro, Europe's common currency, rests. The years ahead are certain to be filled with exciting new challenges, new issues and new opportunities for partnership with the United States as Germany and Europe reshape themselves for the future.

This country of broad variations in its geography and its culture is one that has endured a long and troubled history, often as the battlefield

for the great conflicts which have embroiled the European continent. It was not until the mid-19th century that what is now Germany became a federation; until that time, it had been a conglomeration of independent states. The empire was formed in 1871 after Prussia's victory over France, and a period of prosperity and expansion began. Bowed by the outcome of the First World War and the subsequent economic and political chaos, Germany rose again as the Third Reich, but was finally defeated in 1945 by Allied powers and divided after the war. As a democratic republic, it has rebuilt itself into an important and influential state.

MAJOR CITIES

Bonn

Greater Bonn has a population of over 300,000. It was the provisional capital from 1949–91. Although Berlin has been reinstated as Germany's capital, Bonn remains, for the time being the country's political nucleus. The city is studded with buildings that house a myriad of official government offices. Bonn is also known as a university town and as the birthplace of Beethoven. The house Beethoven was born in is now

a museum and is probably Bonn's best known attraction. Bonn has a large concert hall, the Beethovenhalle, and an opera house. Bonn's Rheinisches-Landes-Museum contains the skull of the famous Neanderthal man.

The city, badly damaged during World War II, had not been restored by 1949 when it became the provisional capital. Facilities had to be found or built to provide housing and office space for the German ministries and various embassies, foreign journalists, etc. Existing facilities were converted to government use, and new ministries were built in a simple, functional style. Most embassies found or built structures for chanceries in Bonn, but diplomatic corps residences are located throughout the area from Cologne to Remagen, a distance of some 40 miles.

Food

The availability of food on the German market is much the same as in the U.S.

Local German markets are well stocked, and open-air markets sell excellent seasonal fruits and vegetables.

German grocery stores are somewhat smaller than their American counterparts, but the selections are generally good. Most German grocery stores carry fresh fruits and vegetables. Hours of operation are somewhat restricted compared to the U.S., with most shops closing at 6:30 pm on weeknights and at 2 pm on Saturdays. No Sunday shopping is available.

Clothing

Bonn has a moderate, maritime climate. Although lightweight summer clothing is generally not needed here, warm, humid spells can be expected most years. Warm clothing and rain gear are a must. Hat, gloves and a warm winter coat are advisable. The Plittersdorf Sales Store stocks a small quantity of American and European-made clothing. Local clothing is fashionable but expensive, and sizing is dif-

ferent. Children's clothes are especially expensive. Shoes are also expensive in Germany, and half, small, and narrow sizes are difficult to find.

Supplies and Services

German stores are well stocked for all household needs.

Tailoring, shoe repair, dry-cleaning, laundry, and beauty shops are available in Plittersdorf and other nearby German areas.

Religious Activities

Roman Catholic and Protestant services are conducted in English in the American Stimson Memorial Chapel in Plittersdorf. A full-time Catholic priest and two Protestant ministers serve the community. Sunday school, CCD, youth fellowship programs, Bible study, and prayer meetings are offered.

The Latter-day Saints, Anglican-Episcopal, Baptist, and Christian Science churches hold English services outside the community. A Jewish synagogue in Bonn offers services in German.

Education

The Bonn American Schools, operated by the Department of Defense Dependents School System (DoDDS), are accredited by the North Central Association. The elementary school offers instruction in kindergarten through grade 5, and the middle/high school grades 6 to 12. Both schools comprise about 500 students. Foreign students representing 45 countries make up almost 50 percent of the student population.

School standards and curriculum equal those of U.S. public schools. In addition to the regular academic curriculum, the elementary school provides special classes in talented and gifted instruction and individualized instruction for special education students.

The high school curriculum is considered to be excellent and covers 4 years of English, science, mathematics, and social studies, as well as

5 years of German and French and 2 years of Spanish. Music and art are also offered, as well as courses in home economics, industrial arts, and business. The school has an excellent reputation, with strong departments in foreign language, science, business, television media, music, and computer science. The extracurricular program (ECP) has an especially strong Athletic Department, with teams in football, wrestling, girls and boys golf, tennis, track, basketball, cross-country, soccer, and girls volleyball. The girls teams have won many championships over the past 4 years. The school competes in the Benenor Conference (Belgian, Netherlands, and North Germany). Other ECP offerings vary from year to year, but generally the school offers a band, chorus, yearbook, and school newspaper. The video club, which was started during the 1983-84 school year, is especially strong, with two weekly closed-circuit programs within the Plittersdorf community. (Although not a DoDDS-sponsored program, the community hosts a very active swim team that competes with military schools all over Europe.)

The high school has offered the International Baccalaureate Diploma (IB) since the 1982-83 school year, and the Advanced Placement Program (AP) since February 1983. There is an active Advanced Studies Program, which includes TAG (talented and gifted), IB, AP, Independent Study, and Accelerated Middle School Program. There are also strong programs in Special Education and English-as-a-second language (ESL).

Each school has its own School Advisory Council (SAC) and an active PTSA. Though advisory in nature, these volunteer organizations are highly influential in the successful operation of the two schools.

Both schools earned the number one spot in DoDDS-Germany on the California Test of Basic Skills (CTBS) in May of 1987 and 1988,

with the high school repeating the rating for the second year. The elementary school was number 1 of about 90 schools, while the high school was ranked 1 among the 28 DoDDS high schools. Bonn American High is one of three DoDDS schools in the last 6 years to receive this award. Both schools score consistently in the top 5 percent.

Tuition at the Bonn American Schools, which ranged from \$7,200–\$7,500 for the 1992–93 school year, goes up annually at about the same rate as inflation in the U.S. For information write:

Bonn American High School
PSC 117 Box 390
APO AE 09080

or

Bonn American Elementary School
PSC 117 Box 125
APO AE 09080–0005

Some American children have attended the British Embassy Preparatory School. The tuition is about \$4,000. The school offers a British education for boys and girls in kindergarten through grade 8 (13 years of age maximum). The independent school can respond flexibly and quickly to parent-student concerns. If children are ready, they read in kindergarten. Emphasis is placed on composition, spelling, grammar, reading, and reading comprehension. American achievement tests are given by special arrangement. For information write:

The British Embassy Preparatory School
Tulpenbaumweg 42
53177 Bonn

A British secondary school is available for grades 9 to 12. For information write:

British High School, Bonn e.V.
Gotenstrasse 50
53175 Bonn
Tel. (0228) 37–40–84

The Bonn International Academy serves ages 3–16 and describes itself as offering a solid academic program based on the British School System with special consideration for the needs of the diplomatic child. For information write:

Bonn International Academy
Godesberger Allee 24
53175 Bonn
Tel. (0228) 37–77–88

The Nicolaus-Cusanus Gymnasium is an up-to-date German school which covers grades 5 to 13. The school population is one-quarter foreign and three-quarters German. Children up to age 15 who do not know German or who have inadequate classroom German are placed in “German for Foreigners” classes for up to 1 year or until their German is adequate. Tuition is free as are most of the books. There are minor expenses for extra books and supplies. Space in the foreigners’ program is limited, and parents who plan to enroll their children should correspond promptly with the school at:

The Nicolaus-Cusanus Gymnasium
Hindenbergallee 50
53175 Bonn

Other German elementary and secondary schools have been used by a few American families. Interested families should allow time to investigate the possibilities after arrival in Bonn.

The Bonn American Preschool, operated by AEA, provides a preschool program for children 3–5 years old. A typical school-day includes free play in the classroom, songs and stories, quiet activities, handicrafts, outdoor play, and cleanup. Creativity and self-expression are emphasized. Occasionally, there is a waiting list. AEA also operates a kindergarten.

Preference is given to U.S. Government dependents, but you should enroll your children by mail if you plan to arrive in Bonn late in the summer. Tuition provides the

school’s income. For preschool information write:

Bonn American Preschool
Kennedyallee 115
53175 Bonn

or

PSC 117 Box 270
APO AE 09080
(0228) 37–95–86
The Daycare Center

This facility provides a baby-sitting service for children aged 6 weeks to 5 years. It is open 5 days a week from 8 am to 6 pm. Fees are about \$2.35 per hour on a monthly basis and \$3 per hour on a drop-in basis. In addition, there is now an Infant Room which provides day-care for infants from 6 weeks to 14 months. Hours are the same as the Day Care and charges are about \$4 per hour.

Special Educational Opportunities

Bonn’s night schools, called Volkshochschulen, offer courses in German for foreigners and instruction in political science, philosophy, the arts, literature, sports, cooking, art, etc. Fees are moderate. Night schools sponsor trips to places of interest, film showings, and lectures.

The Bonn University offers the following courses: theology, law, political science, medicine, arts, mathematics, science, agriculture, economics, education, and social science. German-speaking foreign students are welcomed. Tuition is free. German universities begin at the college junior level by U.S. standards.

In Bonn, the University of Maryland offers various undergraduate courses. For American University courses at nearby military facilities.

Sports

Golfers have access to several challenging golf courses. An international riding school, German tennis clubs, swimming and rowing clubs, and athletic clubs, all with limited membership, are available in the Bonn-Bad Godesberg area. Ameri-

can children may play on local German soccer teams.

While not as extensive, there are opportunities for freshwater and deep-sea fishing.

Touring and Outdoor Activities

The beautiful countryside around Bonn invites touring. There are many castles, Roman ruins and charming villages. Bonn is situated on the navigable Rhine River, and during summer, river cruises are popular. The area has excellent opportunities for cycling and hiking. Organized hikes through the German countryside or "Volks-marching" is a German pastime.

Skiing is possible during the winter months in the nearby Eifel Mountains and in the Hartz Mountains.

Within easy range of Bonn, the Rhine, Mosel, and Ahr Valleys with their vineyards, castles, and restaurants offer extensive and intensive exploring. More distant points of cultural and historical interest are easily accessible by rail or car on weekends. Because Bonn enjoys a central European location, day trips to Belgium, Luxembourg, and Holland are possible.

Entertainment

Theater, art galleries, museums, and musical performances may be found in any German city of more than 100,000. Although Bonn provides fewer recreational and cultural facilities than most European capitals, it has excellent facilities for a city of its size. Besides art galleries and museums, Bonn has the Beethovenhalle, in which concerts are given two or three evenings a week. Theaters and the opera house present plays, ballet, or opera each evening. Düsseldorf (population 675,000) is only 45 minutes away by car, and Cologne (population 994,000) is only 30 minutes away. Operas, plays, first-rate symphony orchestras, nightclubs, and good restaurants are found in both cities. Bonn celebrated the 2,000th anniversary of its founding in 1989, with

festivities that were held throughout the year.

Social Activities

The American Women's Group sponsors cultural, educational, and welfare activities. Other activities are available through the Bonn Booster Club, the PTSA, the Teen Club, Girl and Boy Scout Troops, and a Cub Scout Pack and Brownies for boys and girls. A German-American "Friends of Music" Group arranges concerts by German and American artists in private homes. The International Stammtisch arranges speakers one night a month at the American Embassy Club.

Berlin

Berlin is a capital city with a turbulent past, the crucible of a century of history. Reduced to rubble by World War II bombing, and starkly divided by the Cold War, the city has survived and prospered through the courage, optimism and determination of its citizens. Today, Berlin has a population of nearly four million. The city is situated on the North German Plain about 100 miles south of the Baltic Sea and 50 miles west of the Oder River, the modern border between Poland and Germany. Berlin is one of three German cities that comprise a separate Land although it is completely surrounded by Land Brandenburg. The city is divided into 20 districts, each with its own name, ruling authority and history. Since 1990, but especially since a huge construction and modernization boom started in mid-decade, the city has experienced a process of radical economic and physical change as well as a significant cultural renaissance. Berlin is once again the seat of Germany's Government and Parliament and the move of ministries, offices and embassies from Bonn is continuing.

Berlin's climate is similar to the northeastern U.S. even though the city lies at a much more northerly latitude. Overcast days are not uncommon and summers tend to be cool and rainy although uncomfort-

able summer heat waves do occur. Winters are cool and temperatures between 20°F and 40°F are usual from December to February although much colder days and nights are not infrequent along with periodic snowfalls. Berlin is one of Europe's most celebrated green cities with over 20 percent of its area devoted to parks. Although completely landlocked, Berlin is also a lakeside city, with an extensive complex of forested urban parks and lakes where residents enjoy swimming, sailing, water sports and sunning.

There are several Internet sites with Berlin-specific information. A good starting point is: <http://www.berlin-info.de> with English-language information about Berlin and excellent links to scores of other Berlin-relevant sites.

to maintain their own grounds. Many yards are very large, and you may wish to check with GSO before packing out to determine if you will need to ship gardening equipment. Lawn mowers are provided to Department of State employees (other agencies have their own policies concerning furnishings and equipment).

Food

The availability of food in German food stores is much the same as in the U.S. albeit with some important differences. Retail shopping is tightly controlled in Germany and the inconvenient shopping hours present serious challenges to working couples. Most food shops are closed evenings, Sundays and holidays and are tightly shut by mid-afternoon on Saturdays. Fortunately, loosening restrictions in Berlin have resulted in many major supermarkets remaining open until 7:00 or 8:00 p.m. on weekdays, and popular "warehouse" stores are open as late as 10:00 p.m. on weekdays and 6:00 p.m. on Saturdays.

Outdoor farmers markets and neighborhood groceries are a feature of city life throughout Berlin. Fresh fruits and vegetables are excellent but availability is dis-

tinctly seasonal. The German diet usually emphasizes meat (especially pork) at the expense of fish but fresh and smoked fish along with excellent poultry and game are available in most large markets. Fine bakeries are everywhere with huge selections of fresh bread and rolls and other tempting baked goods often made on the premises. German and other European wines and cheeses are widely available. Familiar U.S. products are found in most large supermarkets although favorite breakfast cereals, for example, may be slightly altered for the European palate. Ethnic food shops are scattered throughout the city. Berlin's famous Kaufhaus des Westens Department Store (popularly known by its initials, KaDeWe, or "Kah-Day-Vay") has a specialty food hall that rivals Harrod's in London with a huge (and quite expensive) selection of gourmet-quality fresh and imported food items which can be bought for home or consumed on the premises. Generally, food prices in Germany are somewhat higher than in the U.S.

Clothing

Clothing suitable for autumn and winter wear in Washington, D.C. will be ideal for Berlin. The climate is generally much cooler than Washington's. Clothing for men and women is readily available in Berlin with shops ranging from expensive boutiques offering familiar designer labels to more moderately-priced department stores. Clothing is usually costly in Europe, especially children's clothes, but quality is high and most goods are European-made. On the other hand, good European shoes are also widely available, usually at prices lower than in the U.S. Priority mail should be requested for mail order clothing from the U.S. Internet ordering significantly lowers telephone charges when dealing with the large U.S. mail order suppliers.

Supplies and Services

As with most large European cities, Berlin offers a nearly unlimited range of supplies and services. There are differences however, between U.S. and European stan-

Street scene in Berlin

dards and practices that sometime make locating a particular item or familiar service difficult. Such services as laundry and dry cleaning, hair stylists for men and women, shoe repair and tailoring are readily available in most neighborhood at prices somewhat higher than in the U.S.

Domestic Help

Domestic help is difficult to obtain and expensive in Berlin although agencies exist to provide domestic services. Employers are expected to comply rigorously with applicable German immigration and social security laws which control legal status, working conditions and the payment of required taxes.

Religious Activities

Church services and Sunday School activities-both Protestant and Roman Catholic-are held in various Berlin Churches. English-language Protestant services are conducted in the American Church in Berlin. Berlin has a growing Jewish community, now more than 10,000 members, and Jewish services are held at locations throughout the city. The Church of Jesus Christ of Latter-Day Saints has an active community in Berlin. In addition, there are several other active Prot-

estant denominations, many of which offer services in English, and a particularly large Muslim community.

Education

The JFK School is part of the German public school system and is a special bicultural German-American community school originally established in 1960. English-speaking students are taught in English and study German until their German reaches a level of fluency to enable them to join German-language classes. The JFK School includes grades K-12 and offers a U.S. high school diploma (or a German diploma through its arbitur program which requires a 13th grade). The school currently has an enrollment of more than 1,000 students equally divided between German and foreign. The school's faculty is made up of Germans, Americans and other nationalities.

There are tutoring programs in reading and mathematics available at the JFK School. However, there are no facilities for children with special learning problems or children who have unusual physical or emotional needs. Questions about special educational issues should be addressed to the school Managing

Principal, John F. Kennedy School, 95-123 Teltower Damm, 14167 Berlin, Germany. You can also find the JFK School on the Internet at: <http://www.kennedy.beehive.de>.

Some American children attend the Berlin/Potsdam International School (BPIS), located near Potsdam. The BPIS offers the international baccalaureate program and the U.S. High School Diploma. The language of instruction is English. Other children attend the Berlin British School (BBS). The BBS offers nursery, primary and middle school programs for children between the ages of three and 13. The curriculum is based on the English national curriculum, but has been adjusted to roughly match those of other international schools. The language of instruction is English. The BBS is located in the Berlin district of Charlottenburg. Finally, some American children also attend standard Berlin public schools nearby their homes, where all instruction is in German.
