Muscat, Oman

OMAN

Sultanate of Oman

Major City:

Muscat

Other Cities:

Matrah, Salālah

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated July 1994. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

OMAN, known as Muscat and Oman before 1970, was once the most powerful of all the Arabian states. At the beginning of the 19th century, it controlled Zanzibar and much of the coast of Persia and Baluchistan, and it was only in 1958 that the last of its vast holdings, the town of Gwadar, was ceded to Pakistan. It does, however, maintain control of the Strait of Hormuz, through which flows much of the oil for the West.

The early history of Oman is obscure, but it is known that it was one of the first countries converted to Islam by Amir ibn al-As in the seventh century, during the lifetime of Mohammed (or Muhammad). In 1508, the Portuguese conquered

parts of Oman's coastal region, and that country's influence dominated the sultanate for more than a century (with a short interruption of Turkish seizure). Oman today is an absolute monarchy, which has survived periods of insurgency and tribal revolt, and which is intent on developing its economy and upgrading its social and educational standards. It maintains close relations with Great Britain, and is a reliable ally of the United States.

MAJOR CITY

Muscat

The Muscat (Masqat) capital/commercial area (including the cities of Ruwi and Qurum), with an estimated population of 635,000, consists of a series of towns and neighborhoods strung along the Gulf of Oman for more than 50 miles. Only one of these is old Muscat, the original seat of government and still the site of one of the sultan's palaces.

Old Muscat lies between the sea and stark, brown cliffs that rise to a height of 1,500 feet. The harbor is dominated by Forts Mirani and Jalali, built by the Portuguese in the 15th and 16th centuries. The wind-

ing streets and the wall surrounding the old city have retained much of their medieval style and flavor.

About three miles from Muscat is Oman's retail commercial center, the city of Matrah. It is also the site of the country's major seaport, Port Mina Qaboos.

Just beyond Matrah is Ruwi Valley. Because of Muscat's limited land area, most government ministries and commercial enterprises have established themselves here. This section also has become the site of much residential construction.

The expansion of the capital area in recent years has brought rapid development to places beyond Ruwi as well. The suburbs of Qurum and Madinat Qaboos are becoming important residential areas. Many ministries are located in the latter.

Despite new road construction and the opening of a limited-access highway from Qurum to Matrah, congestion is a problem in the capital area and, during peak hours, traffic often slows or comes to a halt.

Food

Numerous grocery stores in Oman offer a reasonably wide range of products, although seasonal variations and occasional shortages occur. Quality and freshness are

generally below U.S. standards; food is relatively expensive.

Clothing

Cotton summer clothing can be worn throughout the year. However, blends of cotton and polyester retain heat, and are comfortable only in the cooler season. One or two outfits for occasional cool winter evenings are recommended.

Although more items are becoming available locally, do not expect to buy needed clothing here, especially shoes. Some Americans have been successful in locating local tailors, but get recommendations before trying one.

Westerners find that lightweight slacks with shirt and tie (skirts and blouses for women), or single-knit safari suits are appropriate for office wear. Lightweight suits are needed for some business events or evening wear.

Women wear caftans, street-length cotton skirts, dresses, or dressy slacks to social functions in the evenings. The caftans and skirts are also recommended for *souk* shopping or beach cover-up, and simple cotton versions may be purchased locally at reasonable prices. Only a limited supply of appropriate footwear is available. Children's cloth-

ing, particularly shoes and swimwear, is in extremely short supply.

Omani men commonly wear a long straight robe called a *dishdasha*, usually white but sometimes pastel. For ceremonial occasions, the *dishdasha* is worn with a decorated belt adorned in front with a large, curved knife in an ornate, silver sheath called a *khanjar*. Affluent Omanis wear the *dishdasha* with a gold-trimmed black robe called a *bisht*. The head covering is either a small, embroidered cap or a loosely wound turban (*musarr* or *emama*).

The women of Oman generally wear brightly patterned blouses and pantaloons, covered by long, head-to-toe black capes. Some of them wear the traditional face veil, but most use no face covering. A face mask, common to women of the Batinah coast, is rarely seen in the capital area. Jewelry, usually silver, is worn in profusion.

A few Omani social customs involving dress include swimwear being worn only at hotel pools; women should wear skirts of reasonable length and avoid shorts, sundresses, and sleeveless outfits; and men should wear slacks and shirt to work and in public, never shorts or shirtless.

Supplies & Services

Most toiletries, cosmetics, nonprescription drugs, and household and entertainment items are available. However, specific brand names may not be available.

Several women's hair stylists and a few barbers are satisfactory. One or two dry cleaners do acceptable work, but shoe repair facilities are limited. The cost of services generally compares to, or exceeds, U.S. prices.

Education

The American British Academy, founded in 1987, is a coeducational day school sponsored by the American Embassy. Grades are from pre-kindergarten to grade 12.

The curriculum is designed to meet the needs of both British and American academic programs. The school offers the International Baccalaureate program, which is recognized in many countries for university entrance.

Several private English-speaking nursery schools accept children from three years of age. Space is limited and the schools usually have waiting lists, but most parents have been able to place their children in a satisfactory school.

Recreation

With the exception of outings sponsored by the Historical Association, few organized touring and sight-seeing activities are available in Oman. However, the country's interesting archaeological, historical, scenic, and cultural sights appeal to photographers and artists. Many towns have fortresses in excellent condition. Interesting sights within a day's drive of Muscat include the ancient capitals of Rustaq, Nizwa, and Sohar. Colorful Arab bazaars, called *souks*, are found in all but the smallest villages.

Four first-class local hotels have swimming pool facilities open to nonresidents for a yearly fee. Among other facilities offered at the hotels are lighted tennis courts and air-conditioned squash courts. One hotel has a bowling alley, another

has six; some have a sports club with an equipped gym and a sauna.

Soccer and field hockey are the only organized sports which Omanis regularly play. The most popular form of recreation is water sports. Swimming, snorkeling, water-skiing, windsurfing, and skin diving are available. Collectors are rewarded with an abundance of beautiful sea shells. Many beaches lie along the coast, and others are accessible by boat.

Oman offers both deep-sea and surf fishing. The sea abounds in a wide variety of fish, both large and small.

Camping and hiking are also popular; the hot weather eliminates the need for tents, particularly if mosquito netting is used.

Entertainment

Europeans and Americans frequent restaurants at the airport and at the large hotels. There also are numerous Indian restaurants as well as two Chinese, an Italian, a French, and a few Arab restaurants where Westerners meet. The hotels often provide entertainment and music for dancing.

Local movie theaters feature Indian films. Omani television has one or two English programs a week, and occasionally presents an English film.

The American Women's Club meets monthly, offering a wide range of social activities to its members. An amateur drama group occasionally produces plays, and the Muscat Singers give concerts.

For the American and European community in Muscat, the main social activity informal dinners or gatherings, primarily with other members of the non-Omani community, as well as taking advantage of the "specials" frequently offered at the major hotels. Omanis attend both formal and informal gatherings, but most Omani men are not accompanied by their wives.

The Department of Tourism is part of the Ministry of Commerce and

Industry. The mailing address is P.O. Box 550, Muscat, Oman.

OTHER CITIES

MATRAH (also spelled Mutrah and Muttrah), just west of Muscat on the Gulf of Oman, is the country's principal port and commercial center. There is an important fish market in the city, and shipbuilding is significant. Caravans to the interior begin here, carrying commodities such as fruits and fish. Oman's oil terminal is located three miles outside of town; the city opened its modern port facilities in the late 1970s. The population is more than 129,000.

SALĀLAH is the trading hub of the Dhofar area in the south, about 80 miles east of the border with the Republic of Yemen. The explorer Marco Polo (1254–1324) depicted Salālah as a prosperous city in the 13th century. It had been renowned since ancient times for its frankincense. The sultan of Oman took over the vicinity in the 1800s. Government construction has included a hotel and a hospital. A paved road links the city to the north; there also is an international airport, completed in 1978. The population in Salālah is approximately 10,000.

COUNTRY PROFILE

Geography and Climate

Oman occupies the southeastern corner of the Arabian Peninsula. It is bordered on the north by the United Arab Emirates, on the northwest by Saudi Arabia, on the southwest by the Republic of Yemen, and on the southeast by the Gulf of Oman. With an area of slightly more than 100,000 square miles, it is about the size of Colorado.

Oman has three distinct topographical features. The first consists of

two flat, relatively fertile coastal strips up to 20 miles wide—one in the north stretching from Muscat to the border with the U.A.E. (United Arab Emirates), and one surrounding the southern coastal town of Salālah. The second feature includes two mountainous regions—one in the north, with elevations ranging from several hundred feet to the craggy peaks of Jebel Akhdar at 10,000 feet, and the other bordering the Salālah plain in the south. Both are deeply scarred throughout with dry stream beds called *wadis*. The third feature is sandy wasteland, mainly in the Rub'Al Khali (the Empty Quarter) along the border with Saudi Arabia; this area is almost devoid of inhabitants.

Oman's climate is one of the hottest in the world. Temperatures reach 130°F in summer months, from April to September, and rarely drop below 65°F in the cooler season, from October to March. Rainfall averages only four or five inches annually, and occurs from December to March or April. Nevertheless, humidity averages 65 to 80%. Summer monsoons create a more tropical climate in the south.

Population

Oman's population numbers over two million, of whom 1.6 million are Omanis. Omanis are a people of two dominant ethnic stocks—the Qahtan, immigrants from southern Arabia, and the Nizar, from the north. Its long history of trading, and its former colonies on the coasts of Africa and the Indian subcontinent have produced a population of extraordinary range and diversity. Arabs predominate, but communities from India and Pakistan also inhabit Oman.

Arabic is the official and most widely spoken language, but Hindi, Urdu, Swahili, and local dialects are also used. English is spoken by many officials in the Omani Government and by the majority of merchants dealing with the expatriate community.

Most Omanis are Ibadhi or Sunni Muslims, and there is a small but influential Shi'a minority. There is also a small Hindu population.

More than 50% of the population is engaged in fishing or subsistence farming. Literacy is about 35%.

Omanis are reserved, but friendly. They have a strong sense of hospitality and often share coffee, tea, dates, or *halwa* (a sweet, honey-colored dessert) with guests. Although many Omanis observe prohibitions against alcohol and tobacco, they are seldom offended by their offer. Most abstain from eating pork.

A number of social customs are observed in Oman including using only the right hand when eating, never asking questions concerning another's family members, always dressing in modest attire, and never allowing the sole of the foot to be exposed towards a host. It is polite to accept the refreshments offered to visitors, which is a national custom.

Government

The Sultan of Oman, Qaboos bin Said, is an absolute monarch who rules with the aid of his ministers. The sultanate has no constitution, legislature, or legal political parties, although an appointed Consultative Council was formed in October 1981, and in 1991 he replaced that body with one whose members were nominated by traditional leaders from each district of the country.

Except for decrees from the sultan and recently established police and commercial courts, the legal system is based almost exclusively on the Shari'ah (The Koranic laws and oral teaching of Muhammad). Jurisdiction is exercised by *qadis* (men versed in the religious code). Petty courts have been established to deal with minor matters such as traffic offenses. In less populated areas and among the Bedouin, tribal custom often is the only law, although a system of primary courts is making inroads into the interior. In 1987, a "flying court" service was initiated to serve these isolated areas.

For administrative purposes, the country is divided into *wilayats* (districts). These are presided over by *walis* (governors), appointed by the minister of the interior, who oversees all administrative tasks in the area and provides the main link between the people and the central government.

Oman is one of the Gulf region's most stable countries and Sultan Qaboos has proven an able and popular monarch. While maintaining a low profile during the Persian Gulf War, the country allowed Western military organizations use of its air bases.

Oman became a member of the United Nations in 1971. The country is also a member of the Arab League, Gulf Cooperation Council, World Health Organization (WHO), United Nations Educational, Scientific, and Cultural Organization (UNESCO), and several other international bodies.

The flag of the Sultanate of Oman is red, white, and green. The vertical red band on the staff is embossed with a white emblem consisting of a sheathed dagger superimposed on crossed swords, and the rest of the flag has horizontal bands of white and green divided by a red stripe.

Arts, Science, Education

The Omanis have long been renowned for their craftsmanship in everything from silver- and goldsmithing to boatbuilding. Oman is perhaps most famous for its national symbol, the *khanjar*—an ornate, curved dagger embossed in silver and still worn in the interior and on special occasions. Other handicrafts include weaving, pottery, and boat-building, with the famous Omani *dhows* still being handmade in Sur.

Traditional art forms such as singing and dancing are seen mostly in the interior. Western culture has made inroads, mostly in the capital area, but Islamic and Omani culture and customs still prevail.

Oman has greatly stressed the importance of scientific and technical advance, especially since the accession of Sultan Qaboos in 1970. In 1986, Sultan Qaboos University opened its doors to both men and women students. There are five colleges within the university: Education and Islamic Sciences, Agriculture, Engineering, Science and Medicine, and Arts. It boasts modern facilities and a highly qualified staff, including American and European professors. Many Omanis also go abroad each year to further their education, often to the U.K. or U.S.

Education is not compulsory. Students may start primary school at six years of age and finish at age 12. Six years of secondary education follows. Less than 25 years ago, Oman had 16 primary and no secondary schools. By 1998, there were 411 primary schools with about 313,000 students. Teachers are primarily Egyptian, Jordanian, and Sudanese.

Commerce and Industry

Although Oman is a relatively small oil producer at 850,000 barrels of crude per day, oil revenues account for 90% of the nation's total export revenues, and 77% of total government revenues (2000 est.). Oman was the last of the Arab Gulf states to become a major producer of oil for export; it is also not a member of Organization of Petroleum Exporting Countries (OPEC), but has complied with OPEC policies.

However, analysts have predicted that Oman's oil reserves will last for only about 18 years. With this in mind, the government hopes to diversify its economy by developing natural gas sales.

Since the accession of Sultan Qaboos in 1970, Oman has concentrated on development of an infrastructure. The country now has an excellent highway system, modern airports at Seeb and Salalah, and deep-water ports at Mina Qaboos and Raysut. Large industrial

projects underway include a copper mining and smelting operation, an oil refinery, and cement plants. An industrial zone at Rusail will be the showcase for a variety of new light industries. At the same time, the government is seeking to develop the agriculture and fisheries sectors, from which about 60% of the Omani population still derive their livelihood.

Oman's prosperity was originally concentrated in the area surrounding Muscat, but an increasing number of government services are available to the inhabitants of the interior. Virtually everything in the Omani economy is imported. The U.S. trade relationship is minor. The United Kingdom and the United Arab Emirates are Oman's most important import sources; major export destinations are Japan and South Korea.

Like other countries in the region, Oman relies on imported labor to carry out its development plans. The expatriate work force is estimated at over 400,000. The majority of foreign nationals in Oman work in construction, trade, or agriculture; and the majority of expatriates are Indian or Pakistan nationals. The government has made a substantial investment in education and as a result Omanis are now employed in occupations once held only by expatriates.

In recent years, the government has attempted to diversify the economy and to emphasize private industry. Because of its limited population (and therefore a small market for goods), the intent is for industry to provide materials for export. A number of incentives have been provided by the government and foreign investment is being encouraged. While there continue to be large numbers of British and subcontinental technical advisers and managers, some Americans are finding positions in both the government and the private sector.

The Ministry of Commerce and Industry can be reached at P.O. Box 550, Muscat; the Chamber of Com-

merce and Industry, at P.O. Box 4400, Ruwi, Muscat.

Transportation

Oman's major general-cargo port is the 1.5-million-ton capacity Port Mina Qaboos, located in Matrah. Although Oman does not receive direct service from American shipping lines, it does receive regularly scheduled foreign-flag service from the U.S. east coast. Port Mina Qaboos has far less congestion than other ports in the Gulf.

Seeb International Airport is served by 18 international carriers. British Airways, Kuwait Airways, UTA, Pakistan International, Air India, Saudia, Gulf Air, MEA, KLM, Air Lanka, Thai International, Sudan Airways, Biman Bangladesh, Air Tanzania, Egyptair, Kenya Airways, Royal Jordanian, and TWA provide service to many major cities. British Airways and Gulf Air provide direct flights to London. The other carriers connect Muscat with Africa, Asia, and major Middle East cities. Connecting service is available from New York and Washington, DC on Gulf Air and TWA. An international airport also is located at Salalah. Gulf Air and Oman Aviation operate daily domestic routes to serve other towns in the country. Permission to fly to Salalah must be obtained from the Ministry of Foreign Affairs.

Bus service is available for the 25-mile trip from Muscat to Seeb Airport, and to Sohar, Nizwa, Rustaq, and several other towns in the interior. The bus trip from Muscat to Salalah takes about 12 hours.

There are taxis at the airport and at the larger hotels in Muscat. Finding an unengaged taxi at other locations in the city can be difficult. Fares are generally high; there are no meters so fares should be negotiated in advance. Most taxi drivers do not speak English. Omanis and third-country workers reduce the cost by sharing taxis with other riders.

Local bus service is available, but public transportation routes operate only along major thoroughfares

and none go into the area where most Americans and Europeans live. Fares are based on distance traveled. Women seldom use local buses. Visitors should not use the bus system.

Cars may be rented by the day or week. Both an international and valid national driver's license are necessary.

Private cars provide the only practical and dependable means of transportation within the country. Because the city is spread out over a large area and public transportation is inadequate, a car is a necessity. Air conditioning is a necessity.

Oman's more than 3,000 miles of paved roads include four roads from the capital area to the U.A.E. (United Arab Emirates) border, and others to Nizwa, Ibra, Rustaq, Salalah, Sur, and other interior towns. An additional 750 miles of graded roads may be traveled by standard passenger cars, but all other roads and trails require four-wheel-drive or high-wheel-base vehicles. Driving is on the right. Right-hand-drive vehicles are not allowed to be registered. There is no railway system here.

Communications

International telephone and telegraph facilities are available, although delays occur. International direct dialing is available. The local telephone system is quite good. Depending on the area, new subscribers may wait up to three months for telephone installation. Telex service is available at major hotels and at the Public Telex Office in Ruwi. Fax is widely used in place of mail service.

International airmail is generally reliable, and arrives in five to eight days from the U.S. However, newspapers and magazines are subject to censorship—mainly to restrict entry of pornography and items considered politically offensive—and may take considerably longer for delivery.

The local FM radio station broadcasts in English from 7 a.m. to 10 p.m. Standard broadcast-band reception is limited mostly to nearby Arab countries broadcasting in Arabic, but also includes about six hours a day in English from the British Broadcasting Corporation (BBC) in London, relayed from Masirah Island in the Arabian Sea, off the coast of Oman. A shortwave receiver is the only way of ensuring regular Voice of America (VOA) or other English-language reception. A wide range of receivers may be bought locally.

Television programs, most of them in color, are aired from 3:00 p.m. to about 11 p.m., but often run beyond midnight. Most programming is in Arabic, although a few American TV programs and one movie with Arabic subtitles are shown weekly on an irregular basis. A 15-minute English-language news program airs daily at 8 p.m.

English-language periodicals that are regularly available a few days after publication are *Time*, *Newsweek*, *The Economist*, *Events*, and *Middle East International*. London daily newspapers, such as the *Express* and the *Times*, are available in Oman about three to four days after publication. The *International Herald Tribune* arrives between one and three days after publication.

The *Oman Daily Observer* and the weekly *Times of Oman* (both in English) can be bought at newsstands. Also available is the daily *Khaleej Times* from the U.A.E.

Health and Medicine

Most resident Americans in Muscat use Al Khoula Hospital (surgical/maternity) or Al Nahdha Hospital (medical) for emergencies or for simple treatment. Those with serious ailments usually go for treatment in Europe. The Royal Hospital has recently opened and is available for obstetrical/maternity care, as well as other types of treatments. There

are several private clinics (one staffed with Swedish physicians, a second with British) that resident Americans also use for medical care.

For minor problems or treatment, Oman has several qualified physicians with advanced training in the U.S. or in the United Kingdom. These doctors, however, have long hours and a heavy work load in the Omani Government hospitals, and are not always available.

Some local medical facilities that have modern equipment often lack qualified personnel. Hygiene, in many cases, is inadequate. Oman's dental facilities generally fall below U.S. standards. However, Oman has two qualified dental facilities: a French facility that provides routine care and a British facility that provides care comparable to U.S. standards. Orthodontic care and oral surgery are available.

Oman's sanitation level is low by American standards. Incidence of bacillary dysentery, infectious hepatitis, and intestinal worms exists, although the frequency has diminished sharply in recent years, especially in the capital area.

Malaria exists; there is a 5% chance of contracting malaria in the capital area; 20% in other areas of Oman.

Many Omanis also suffer from poliomyelitis, meningococcal infection, trachoma and tuberculosis. Dust conditions aggravate respiratory ailments. Typhoid is still common.

Oman has no municipal sewage system, and the roughly constructed septic tanks are a constant threat of contamination to the water supply. Garbage is collected regularly from open cubicles in various locations throughout Muscat. Flies are somewhat controlled by periodic spraying. Mosquitoes and other insects, especially cockroaches, are common, as are rats in some areas.

Americans are strongly advised to maintain inoculation schedules for typhoid, tetanus, and poliomyelitis

prevention. Gamma globulin also is recommended. Malaria suppressants (Chloroquine) should be started two weeks before arrival, and continued for the duration of the stay and for four weeks after departure, and ending with a final two week course of Primaquine. Drinking water should be filtered and boiled, and uncooked vegetables and fruits soaked in water containing bleach or Milton (available locally). Close supervision of domestics' hygiene and kitchen routines is necessary.

Sanitation standards at the leading restaurants catering to expatriates, and in the restaurants of major hotels, appear to be adequate.

Most drugs are available locally, but often not the American equivalent. A six-month supply of regularly prescribed medication is advised for long-term visitors.

NOTES FOR TRAVELERS

Passage, Customs and Duties

A valid passport and visa are required. Omani embassies and consulates issue two-year, multiple-entry tourist and/or business visas to qualified American citizens. "No objection certificates" for entry into Oman may also be arranged through an Omani sponsor. Certain categories of visitors may qualify to obtain a visa upon arrival at a port of entry. Evidence of yellow fever immunization is required if the traveler enters from an infected area. For further information on entry requirements, contact the Embassy of the Sultanate of Oman, 2535 Belmont Road N.W., Washington, D.C., telephone (202) 387-1980, 1981 or 1982.

Travelers entering Oman may not carry with them, or bring into the country in accompanied baggage, firearms, ammunition, or pornography; all are subject to seizure if found. No more than one bottle of liquor is permitted per non-Muslim

adult. Unaccompanied baggage and shipments of household goods are subject to inspection. Books, videotapes, and audiotapes may be reviewed prior to being released to the owner. A copy of the packing list is required to clear effects through customs. It is advisable to contact the Embassy of the Sultanate of Oman in Washington for specific information regarding customs requirements.

Omani employers often ask that expatriate employees deposit their passports with the company as a condition of employment. Although customary, this practice is not required by Omani law. The U.S. Embassy in Muscat advises Americans to exercise caution in agreeing to employer confiscation of passports, since this operates as a restraint on travel and could give undue leverage to the employer in a dispute.

U.S. citizens living in or visiting Oman are encouraged to register at the Consular Section of the U.S. Embassy and obtain updated information on travel and security within Oman. The U.S. Embassy in Oman is located on Jameat A'Duwal Al Arabiya Street, Al Khuwair area, in the capital city of Muscat, P.O. Box 202, Medinat Al Sultan Qaboos 115, Sultanate of Oman, telephone (968) 698-989, fax (968) 699-189. The Embassy's e-mail address is aemctns@omantel.net.om, and its web site can be visited at <http://www.usa.gov.om/>.

Pets

Pets entering Oman require an import permit from the Ministry of Agriculture and Fisheries, Department of Animal Health, before shipment. Forms may be obtained from the Ministry through one's sponsor and must be submitted with a copy of the pet's rabies vaccination record and a health certificate. Vaccination against rabies is required no less than one month and no more than six months before the travel date. There are additional vaccination requirements for dogs and cats less than 30 days old. A second health certificate dated 48 hours

before the pet travels is also required. Pets may be subjected to a six-month quarantine, although this is usually not required when importing the pet from a rabies-free country. Pets must be manifested as cargo on an airway bill when transported by air.

Currency, Banking and Weights and Measures

The unit of currency is the Omani rial, divided into 1,000 baizas. The rial is pegged to the American dollar. American and American-affiliated banks include Citibank, Grindley's (Citibank), National Bank of Oman (Bank of America), and the Bank of Oman, Bahrain, and Kuwait (Chemical Bank).

The metric system of weights and measures is used. Highway signs are in both Arabic and English, and give distances and speeds in kilometers.

The time in Oman is Greenwich Mean Time (GMT) plus four.

LOCAL HOLIDAYS

- Jan. 1 New Year's Day
- Nov. 18 National Day
- Nov. 19 Birthday of HM Sultan Qaboos
- Id al-Adha*
- Hijra New Year*

PAKISTAN

Islamic Republic of Pakistan

Major Cities:

Islamabad, Rawalpindi, Karachi, Lahore, Peshawar

Other Cities:

Bahawalpur, Faisalabad, Gujranwala, Hyderabad, Multan, Quetta, Sargodha, Sialkot, Sukkur

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Pakistan. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

For 3,000 years, the trade routes that cross the Indus Valley linking the Middle East, India, and the Orient have attracted countless invaders and settlers from as far away as Greece and Mongolia. In one way or another, they all have contributed to the rich cultural diversity of the country that for five decades has been known as Pakistan. In 1947, millions of Muslims from India made their way to a new homeland. Since then, the heritage of Islam has been the cohesive factor enabling this ethnographic amalgam to survive and grow. Pakistan's fascinating culture is complemented by a spectacular and variegated landscape stretching from the second highest peak in the

world to the shores of the Arabian Sea. The spectacular mountainous areas are a result of the collision of the Indian subcontinent with Asia.

MAJOR CITIES

Islamabad

Islamabad is a new capital, built on a specially selected site near the older cantonment town of Rawalpindi. It consists primarily of government offices, foreign diplomatic missions, and residential areas for senior government servants and employees of foreign missions, and has a population of some 350,000. The busy bazaars and back streets common in other South Asian cities are absent, but the loss of local color is offset by Islamabad's convenient layout. Broad avenues, many lined with trees, divide Islamabad into self-sufficient quarters, each with a central shopping area and a few neighborhood markets. Islamabad is considerably greener, quieter, less crowded, and dusty than most cities in this part of the world.

Rawalpindi, 10 miles away and still the major city in the capital area, is typical of the cantonment towns built by the British in India and Pakistan during the mid-19th cen-

tury. These towns served as residential and operations centers for the British Army. Rawalpindi, located on the Grand Trunk Road that ran from Kabul to Calcutta, developed as a transportation, communications, and administrative center. The city remains an important military base and is the site of the General Headquarters of the Pakistani Army and Air Force. Rawalpindi has many narrow back streets that wind through bustling bazaars as well as the broad, tree-lined thoroughfares established by the British.

Until recently, Rawalpindi's importance rested on its strategic location for military operations. Aryan-speakers fought over it in 1400 B.C., and Alexander the Great arrived in 326 B.C. It was completely destroyed by the Mongol invasion in the 14th century. The area was part of the Moghul Empire in the 16th and 17th centuries. Later, the Sikhs conquered and controlled the area, establishing the largest Sikh military cantonment at Rawalpindi in the 18th century. The Sikhs laid down their arms in 1849 to the British 53rd Regiment, which then established its northern command headquarters in Rawalpindi. The town became one of the largest cantonment stations of the British Empire. In 1960, Rawalpindi became the interim capital of Paki-

stan until Islamabad was constructed and government offices moved there.

Utilities

Since electricity in Pakistan is 220v, 50 cycles, all U.S.-made appliances require transformers. Adapters to convert U.S.-type plugs to fit Pakistani outlets for dual voltage appliances or lamps can be purchased on the local market.

With in-town housing there are frequent power outages, especially in period of "load shedding" during winter and summer months. There are also frequent fluctuations in voltage. Therefore, voltage regulators are recommended for sensitive equipment such as personal computers, stereos, TVs, VCRs, and microwaves. They are available locally.

Pakistan's power requirements for TV sets are also 220v, 50 cycles and 625-line PAI European standard. Quality TV sets (PAI or multi-system) of English, Dutch, and Japanese origin, comparable to those in the U.S. are available for purchase in Islamabad and in Peshawar. Only PAL and multi-system TVs and VCRs can be used with tapes available at local video rental shops.

Electric typewriters may need cycle adaptation. It is easier to bring a battery operated clock than to adapt an electric one. Many 220v appliances, can be purchased in Islamabad and Peshawar. The price of items in these stores is less than those found on the open market.

Water in Pakistan is not potable.

Food

Most newcomers miss some American food items but find a fairly large range of quality food available in Islamabad supermarkets. Locally grown fruits and vegetables are of high quality and are cheaper than in the U.S. Many imported goods are available in Islamabad, although sometimes higher in price than similar items found in the Islamabad commissary. Pakistan is a Muslim country and pork and alcoholic

products cannot be found in local markets. Wild boar is available locally, if you prefer a "gamey" taste to your pork. There is one local brewery in Pakistan which sells an "export" quality beer for Christian Pakistanis and foreigners.

Many Americans shop in local markets and stores for chicken, beef, veal, lamb, mutton, goat, seafood, eggs, fresh fruits, and vegetables. Some local meats such as beef do have a "gamey" taste and may be slightly tougher than that to which Americans are accustomed. Local chicken is almost always tougher than that found in the U.S. Meats including chicken may be bought locally at prices cheaper than those in the commissary. Bakeries sell a variety of baked goods, croissants, pastries, French bread, sliced wheat or white sandwich breads, and oversized hot dog and hamburger buns. Fresh milk is never available, but long-life (UHT) milk is available locally. Yogurt and tofu are also available on the local market. Locally bottled soft drinks are both cheap and available, but the quality is uneven and the taste is sometimes not good.

Quality and availability of fruits and vegetables vary according to the seasons. Bananas, apples, mangoes, plums, cherries, pomegranates, strawberries, peaches, plums, citrus fruits, lychees, grapes, raisins, prunes, and watermelons are of good quality but seasonal. Lettuce and tomatoes are found seasonally, and when grown locally they are very good. Other local vegetables found in season are carrots, cabbages, eggplants, turnips, cucumbers, cauliflower, artichokes, parsley, green beans, green peas, onions, potatoes, spinach, bean sprouts, mushrooms, scallions, Chinese cabbage, pumpkins, peppers, and mustard and turnip greens. The variety of vegetables tend to diminish during the rainy season.

Produce is inexpensive in season, yet the duration of the season is limited. Some employees and family members have brought canning equipment and supplies and some

people freeze freshly squeezed orange juice, which is cheaper in season than the frozen varieties available in the commissary. Kitchen gardens are common here, so vegetable and flower seeds should be brought along with gardening supplies. Local seeds produce well, but U.S. varieties of herbs, lettuces, radishes, peppers, and greens fare even better.

Poor refrigeration and unhygienic handling of meat, seafood, produce, and other food items continue to be of concern in Islamabad. Most seafood is transported by air from Karachi in baskets filled with ice. Oftentimes these baskets are left to sit outdoors, allowing the ice to melt and the seafood to thaw. It is more difficult to guarantee good seafood during the summer months and care should be taken to purchase food items from established shops. All produce should be washed thoroughly and meats should be fully cooked.

Paper products bought in the local markets, including toilet paper, disposable diapers, feminine sanitary products, personal care products, and other paper items, are considerably higher in price than those found in the U.S. American tobacco products are available locally and usually at lower prices than in the U.S.

Clothing

Islamabad's weather is basically of two types: 6 months of hot summer (100°F, half dry and half monsoon rains) and about 4 months of winter (temperatures sometimes near freezing at night and 40°-60°F in the daytime). In between these seasons are about 2 months with warm days (about 80°F) and cool nights (about 40°F). As a result, you need a larger supply of light clothing than warmer winter wear, but both are necessary.

Acceptable dress for the workplace is similar to that in the U.S. For a woman, however, the necessity to wear modest clothing should be considered. During the winter months (mid-December to mid March), most

men wear long-sleeved shirts and tie. During the warmer summer months, however, short-sleeved shirts are worn.

The national dress is called a "shalwar kameez" and is a long tunic top worn over a pair of Pajama-type pants. It takes about 5-1/2 yards of material to make a shalwar kameez. Pakistani men, women, and children all wear this outfit. A good number of American women also follow this custom, especially in the hot summer months. Local tailors will make the shalwar kameez for about \$5-7.

A good tailor can copy Western clothing even from a photograph, but most tailors cannot sew from a pattern. Lightweight cottons are available in colorful profusion in summer and there is a limited supply of somber-colored light wool, sturdier cotton, and polyester in winter. Not all the local fabrics are colorfast though, and calicos, stretch fabrics, felt, and knits are unavailable. Imported silks are available. Cotton clothing is advisable for summer, as synthetics are often sticky in the hot, humid weather. Light wool and polyester is best for winter.

It is difficult to find shoes to fit American feet or tastes, although some people have been pleased with shoes they've had copied from shoes brought from home. Shoe repair is unpredictable. Bring an adequate supply of all types of shoes. This is especially important if you plan to take part in the many available sports activities. If hiking is a hobby, a good pair of hiking boots is a must.

Clothes that require dry-cleaning are not recommended. Although dry-cleaning facilities in Pakistan are improving, they are still largely unsatisfactory. While some people consider it inadvisable to send clothes made of silk or delicate fabrics to be dry-cleaned in Pakistan, others have had no problems.

Winter jackets and accessories are useful for trips to northern areas.

Many Americans in Islamabad make at least one trip to Murree during the winter to play in the snow.

Bring an adequate supply of lingerie, underwear, nylons, socks, washable sweaters for winter, sport clothes (e.g., tennis outfits). Do not forget washable lightweight raincoats, umbrellas, and swimwear (suits, goggles, caps, etc.).

However, one can find in Pakistan a large quantity of export quality ready made cotton clothing available in Islamabad and Lahore stores at prices considerably lower than U.S. department store prices. These include jogging suits, casual shirts, tops for women and children, as well as cotton, gabardine, and denim pants for boys and young men.

Men: In Pakistan men dress conservatively. Men do not wear shorts in public (although some men do while jogging), nor do they appear without a shirt. Even small boys will be embarrassed by the stares and titters they receive if they go shirtless in public.

Women: Women should not bring an abundance of halter tops, sundresses, shorts, etc. Pakistan is a Muslim country and these types of clothing are not acceptable in public. Women must dress modestly in public (including inside your own house if you have male servants). Women do not wear short skirts, shorts, or sleeveless or low-cut blouses. In addition, dress codes vary depending on the city. Islamabad is somewhat liberal in its acceptance of Western dress. When shopping at the bazaars in Rawalpindi, however, women are expected to dress modestly and usually wear the shalwar kameez with the dupatta (the long scarf draped over the shoulders).

Children: Bring plenty of clothing for babies and children, as local Western-type clothing is expensive and not always sturdy. This will, then, allow you time to determine which local suppliers are trustwor-

thy. Children's sleepers are nice for the winter nights. School dress in Pakistan is casual, similar to that worn in the U.S. except that there is a dress code based on Muslim sensibilities. Skirts for girls, and shorts for both boys and girls, must be at least knee length and shoulders must be modestly covered (e.g., no sleeveless tops, but short sleeves are acceptable). This dress code affects only the middle and high school-aged children. However, more mature-looking elementary girls are expected to adopt this dress. Jeans, casual slacks, and sweatsuits are staples in winter, and they are available locally. Girls, however, may wish to purchase these items in the U.S., since the Pakistani varieties do not always fit well. Students at ISI celebrate Halloween by wearing costumes and U.N. Day by wearing their national dress. If there is a style of dress typical of your region of the U.S., bring it with you.

Supplies and Services

Don't replace 110v appliances if you think you want to buy 220v here. Indeed, some people continue to use their American appliances exclusively. Most items can be found locally or can be ordered from the U.S.

Car parts are expensive locally, if they are available at all. Bring common extra parts. Slow delivery time for mail orders makes it important to have enough baby and children's clothes. Shoes are also difficult to find locally.

Children's toys and games sold locally are rudimentary and may be unsafe by American standards. Plastic dolls, balls, simple puzzles, etc., are easy to find. Elaborate games and educational toys are not. Imported toys such as Barbie dolls or Transformers are expensive. A limited selection of children's books are available. Local handicrafts make nice gifts, particularly for women and girls. Embroidered clothes, purses, scarves, jewelry, brass and copper articles, marble and inlaid work are all popular.

Staffan Widstrand/Corbis. Reproduced by permission.

Aerial view of Karachi, Pakistan

Bring useful miscellaneous items: bicycles (available locally but expensive and, except for the Chinese-made, of poor quality), parts and tires for U.S./European bikes.

Since most families have their washing done at home by a "dhobi" (laundryman), there is no need for commercial laundry facilities in Pakistan.

Color film can be developed and printed in Pakistan (usually with 24-hour service for prints and 7-day service for transparencies or enlargements) at prices below those in the U.S. The quality of processing varies but is generally good. It should be noted, however, that slide development in Pakistan is limited to Fujichrome and Ektachrome. Bring Kodachrome mailers from the U.S. Black and white film is available locally but printed on matte-finish paper only. B&W glossy prints are not available.

Domestic Help

Most American households employ at least one domestic employee, with the majority of families employing two or three. The quality of domestic staff in Pakistan varies depending on the length of service and the prior contact the domestic

has had with expatriates. Most domestics who have worked with foreigners have a working knowledge of English. Many claim that they are English speakers but experience has proven that they do not always understand instructions. Pakistan's labor force is extremely rigid. A cook will cook, and a dhobi washes and irons. (However, the latter will not sew on a button nor notify the employer when a button has been removed.) Most domestics will do only what they are asked to do and nothing more. Most domestics require instruction and close supervision until they have become familiar with their new employer.

The following types of domestic employees are available: a cook or cook-bearer who does the shopping, cooking, serving, some cleaning, and general supervising of the house; a nanny (ayah) who cares for young children; a bearer, who does most of the housework, helps with serving, and washes dishes; a sweeper who cleans bathrooms, verandas, walks, and driveways (usually part-time, but necessary because most indoor servants will not clean outside areas, floors, or bathrooms, as these are considered low-class chores); a gardener (mali); and a twice-a-week laundryman (dhobi).

Average monthly salaries for domestic employees are: cook - \$135; bearer - \$90; cook-bearer - \$110; dhobi - \$36; sweeper - \$30; mali - \$40; ayah - \$105. (These are U.S. Dollar equivalents, but domestics are paid in rupees.) In addition to their salaries, domestics are usually provided living quarters (at least for the main employee), a bed (charpoy), uniforms, tea, sugar, and milk (or tea money), time off (average 4 days a month), and an annual bonus (sometimes split into two bonuses). Most employers pay for medical examinations and routine medical expenses. Workmen's compensation for domestic staff is available locally at low rates.

Religious Activities

Pakistan is 97% Muslim, but religious minorities are free to practice their faiths. Proselytizing is subject to restrictions. Pakistan has about 1.6 million Christians, many of whom live in the Punjab. A number of Embassy employees also have Christian servants, especially cooks. Christian congregations may be a mixture of foreign nationals and Pakistanis. Services are in both Urdu and English.

Islamabad has an Apostolic Nunciature, a Roman Catholic church, and two interdenominational Protestant churches: The Protestant International Church (PIC), and St. Thomas (Church of Pakistan) which has an Episcopalian format. Rawalpindi has a Catholic cathedral and other Protestant congregations. Also in Islamabad is a Church of Jesus Christ of Latter-Day Saints (Mormon). Jewish services are held in private homes available in the area. International Bible Study groups also meet in homes.

Education

The International School of Islamabad (ISI) is sponsored by the Department of State. ISI offers an enriched American curriculum to students of all nationalities in grades K-12. The school also has a nursery program for children who are four years of age. The school is fully accredited by the Middle States Association of Colleges and

Schools. ISI is divided into elementary (grades K-5), middle school (grades 6-8), and high school (grades 9-12).

Total Americans in the school are 30%, Pakistanis are 18%, and nationals of 44 other countries comprise the remaining 52% of the school's population. The school year is based on a semester system which begins in the third week of August and ends the first week of June. ISI offers Advanced Placement courses but there is no IB program at ISI.

The elementary program includes specialists in art, music, PE, and host nation cultural studies. The secondary program offers instruction in science, math, social studies, foreign language (French or Spanish), English (including English as a Second Language), and electives (art, technical drawing, accounting, computer science, debate, publications, creative writing, choir, band, drama, photography). Advanced placement courses are offered in English, biology, chemistry, American history, mathematics, French and Spanish, and independent study may be arranged. Three computer labs containing approximately 60 Apple Macintosh computers and an excellent library housing almost 22,000 books, magazines, and periodicals form the backbone of the instructional program.

Full-time teachers at ISI number 49. Most of the teaching faculty are educated in the U.S., hold U.S. certificates, and have many years of teaching experience in the U.S. and/or other overseas schools. Of the 14 full-time high school teachers, 12 hold master's degrees. There are 11 Americans on the high school faculty.

The \$3 million, 20-acre ISI campus (composed of three red-brick classroom quads, a gymnasium, and auditorium) was completed in 1986 and is located in the educational sector of the city between Islamabad and Rawalpindi, about ten miles from most employee residences in Islamabad. The campus also

includes an open-air theater, a physical education center, swimming pool, track, tennis and squash courts, playing fields, music room, science labs, cafeteria, and separate libraries for elementary and secondary school. A full hot lunch program is offered. The school has several buses, and children are bused to and from school.

The ISI American High School diploma is awarded at the end of grade 12 to students who have satisfactorily met the course requirements and total of 23 credits. The following credits must be completed: English (4), math (3), science (3), social studies (4) - including 1 credit each in U.S. and world history, physical education (2), foreign languages (2), electives (5), and students must demonstrate computer literacy. A student is required to have a minimum of six classes per day. The school day is divided into eight periods, with one period for lunch.

Activities are held within the school day and after school. Included are drama, photography, student council, pep club, National Honor Society, National Junior Honor Society, Model U.N., French Club, Key Club, and a yearly trek in the mountains of northern Pakistan. In addition, the ISI supported Satellite Center organizes a variety of after school and weekend activities. Active Scouting programs also attract many ISI students.

Athletic activities include basketball, soccer, field hockey, swimming, track, volleyball, and intramural activities. ISI students participate in four sports conventions or tournaments and one cultural convention with other international schools from Pakistan, India, Sri Lanka, Bangladesh, and Nepal.

ISI's music program, including both band and chorus, is open to students in grades nursery to 12. Several musicals and plays are presented annually by the school's music department.

Children who have attained the age of five years by October 1 are eligible for admission to the kindergarten. Children with birth dates between October 1 and December 31 may be admitted if the school determines that the child is ready.

ISI administers the PSAT, NMSQT, SAT, ACT, and Achievement Tests of the College Board. The SAT mean scores for the Class of 1995 were as follows: entire class - verbal 452, math 547; native English - verbal 459, math 478. Some 98% of the Class of 1996 are attending 4-year colleges and universities. Some students of the Classes of 1995, 1996 and 1997 are currently attending The Johns Hopkins University, Northwestern University, Cornell University, Hofstra University, Babson College, Michigan State University, University of Texas, Luther College, Queens College, Marymount College, Smith College, Richmond College, The George Washington University, California Institute of Technology, Massachusetts Institute of Technology, and The College of William and Mary.

The International School of Islamabad's local address is Sector H 9/1, Post Box No. 1124, Islamabad, Pakistan. From the U.S., use this address: Superintendent's Office International School of Islamabad (ISI), Unit 62202, APO AE 09812-2202.

Some American children attend other schools. A nursery school at the British Embassy compound is used by some Americans. There is usually a waiting list.

Some other private nursery schools in Islamabad are used by Americans (including a Montessori nursery). These are less expensive than ISI and closer to residences, but they do not offer transportation, nor can they offer the range of facilities and specialists, such as music and PE teachers, that ISI can offer.

Some Americans also choose the British School for their elementary age children. The school offers education only up to age 10, after which

Parliament Square in Islamabad, Pakistan

AP/Wide World Photos, Inc. Reproduced by permission.

the British usually opt for boarding schools in England. Bear in mind that the school, educational philosophy, and vacation schedules are somewhat different from American schools.

Islamabad also has a small French school and a Japanese school.

Special Educational Opportunities

Few formal educational opportunities for adults are available. However, an Asian Study Group has monthly meetings on such topics as Asian literature, religion, music, dance, carpets, films, etc. In addition, the Asian Study Group sponsors many lectures, films, and cultural programs and frequently organizes trips to points of historical interest. The hiking and photography groups are very active.

Sports

The USEA operates the American Club in Islamabad located on the U.S. Embassy compound. For those Americans not employed by the U.S. Government or who are citizens of other nations, membership is available with some limitations and fees.

The American Club has four tennis courts (two clay and two hard) with two full-time tennis instructors, an

Olympic-size swimming pool, a children's pool, a Universal equipped exercise/weight room, a volleyball court, a basketball court, a softball diamond, a soccer field, a children's playground, and a circumferential path used as a track. Also, there is a community and youth center which is reserved for various activities. It has a pool table, a foosball table, a ping pong table, VCR, and TV.

The tennis courts are lit for night use and tournaments are held throughout the year, both within the club and in the international community. Bring your own tennis equipment and clothes. The club sells tennis balls and restrings rackets. Rackets and balls are available on the local market, tennis shoes are generally inexpensive but of low quality (unless imported).

In the hot weather the pool is a favorite place to relax and enjoy meals poolside or in the Terrace Cafe. Swimsuits are not available here and sunblock is available only in the Commissary. The pool is open for the warm summer months, usually March to late October.

The American Club sponsors softball leagues for adults and youths which are very popular. A snack bar operates at the ball field during

games. Bleachers are covered for spectators. Indoors, the International community has a weekly dart league.

The Islamabad Club offers an 18-hole golf course, tennis and squash courts, and horseback riding. Membership fees are reasonable. Capitol Stables offers horseback riding and lessons (bring a helmet, riding pants and boots - British type).

Touring and Outdoor Activities

Hunting for wild boar is available, while partridge, grouse, pigeon, and duck are scarce in the area.

Fishing is possible at nearby lakes. Trout fishing is enjoyed primarily in the northern locations, such as the Kaghan Valley. The best trout streams seem to be a long drive away over poor roads and require at least a long weekend. However, the scenery is always a reward in itself. Bring your own tackle. Rawalpindi has one tackle shop with a limited supply of equipment.

Pakistan has no developed Alpine ski areas nor is there ice skating or ice hockey. Hiking and bird watching on weekends are popular in the nearby Margalla Hills. Trails abound in these rugged hills at the edge of the city. The Asian Study Group organizes hikes with varying degrees of difficulty. Within the city, international running groups have a weekly "hash" that is both social and athletic.

A number of interesting car trips are possible from Islamabad. The old British hill stations of Murree and Nathiagali have snow in winter and are cool in summer. Murree at 7,500 feet above sea level is a 2 hour drive on a winding road. The altitude offers some relief from the hot summer weather in Islamabad. Accommodations at the few hotels may be hard to obtain during the tourist season, and are far below U.S. and European standards, except for the new five-star Pearl Continental at Bhurban. It takes another hour to reach Nathiagali at 8,200 feet. Fine views of snow-

capped mountains are possible from many points.

For the adventurous, the valleys of Swat and Kaghan have mountain streams with good fishing. Hiking and climbing are excellent in all the hill locations. A few hotels and rest houses may be found. Because of the distance from Islamabad, a long weekend is generally needed.

Camping may be prohibited in some areas, but it is often possible to tent on the grounds of a rest house. Get permission to camp wherever you stop. Always bring food and water, as local supplies may not be acceptable. You should not camp alone in any part of the country.

Near Islamabad it is not difficult to drive into the Margalla Hills and to Taxila, one of the subcontinent's most important archeological sites. The ancient city sites, only 25 miles from Islamabad, were inhabited more than 2,000 years ago. The museum at Taxila has fine examples of Gandhara sculpture from the Buddhist period.

Entertainment

The movie theaters in Islamabad usually show Urdu-speaking films.

A limited amount of entertainment is available in Pakistan, since many Pakistani activities center around the family. The Folk Heritage Center has a yearly festival, Lok Mela, that is well worth attending. Occasional meena bazaars and industrial exhibitions may be interesting. There are a number of restaurants in Islamabad and Rawalpindi, serving Continental, Pakistani, Chinese, Afghan, Tex Mex and Persian cuisine.

The Pakistan Arts Council and foreign missions sponsor musical performances and plays. The Rawalpindi Amateur Theatrical Society (RATS), an international group, has one or two productions a year and sponsors periodic play readings. The plays and musical events of the International School are well attended.

The Asian Study Group also conducts trips within Pakistan. This group has evening meetings of cultural interest, covering carpets and textiles, religion, archaeology, and other aspects of life in the subcontinent.

Apart from schools, most children play at other children's homes. There are few external facilities for youth recreation. The aforementioned is also true for teens.

Social Activities

Social life is informal and centers around the home or the American Club. Informal dinners and buffets are the most common entertainment. Parties within the American community are frequent, especially around holiday seasons. Traditional parties at Christmas, New Year, and Independence Day and for special occasions are sponsored by the American Club. Musical groups give performances during the year.

The American Women's Club (AWC) is open to all American women, women who are married to Americans, and women from the British, Canadian, Australian and New Zealand communities. The AWC offers a chance to meet Americans and other women outside the diplomatic community. The AWC sponsors social service projects, and along with other diplomatic groups, supports the Diplex, a small thrift shop.

Many Pakistanis enjoy entertaining Americans and appreciate return invitations. It is not unusual for a husband to attend without his wife, and it should not disturb the host if no advance warning is given. Should you visit a home where women are secluded, it is important for the female guests to pay their respects by visiting the women's area of the house. If you receive an invitation to a wedding celebration, you may want to ask for details as to what you will encounter. A city wedding may be an elaborate affair in a hotel, but a country wedding could mean a long walk on rough paths to a village.

Rawalpindi

Rawalpindi, 10 miles away from Islamabad and still the major city in the capital area, is typical of the cantonment towns built by the British in India and Pakistan during the mid-19th century. These towns, with a few broad tree-lined streets and sturdy brick buildings, served as residential and operational centers for the British Army along the Grand Trunk Road, that ran from Kabul to Calcutta. Rawalpindi developed as a transportation, communications, and administrative center. The city remains an important military base and is the site of the General Headquarters of the Pakistani Army and Air Force.

Besides the main thoroughfares established by the British, Rawalpindi has many narrow back streets that wind through bustling bazaars. About 928,000 Pakistanis live in Rawalpindi, a large proportion originally from other parts of the country. In the city today are locomotive works, an iron foundry, oil refinery, and textile mills.

Until recently, Rawalpindi's major importance rested on its strategic location for military operations. Aryan-speakers fought over it in 1400 B.C., and Alexander the Great arrived in 326 B.C. The city was completely destroyed by the Mogul (also written Moghul and Mughal) invasion in the 14th century. Later, the Sikhs conquered and controlled the area, only to lay down their arms (1849) to the British 53rd Regiment, which then established its northern command headquarters in what was to become one of the world's largest cantonment stations. Rawalpindi became primarily a civilian city in 1960, when it was chosen as the interim capital of Pakistan. The American Embassy moved here from Karachi in 1966, and remained until quarters were established in Islamabad in 1973.

The majority of American children in the capital area attend the International School of Islamabad, which is supervised by an American and staffed by qualified American, Paki-

stani, and third-country national teachers. Its curriculum, from nursery through grade 12, parallels that of U.S. schools.

Karachi

Karachi is Pakistan's largest and most cosmopolitan city. As the center of Pakistan's economic, commercial, and communications activity, it links areas inside the country with the rest of the world through both its port and its busy international airport.

Located northwest of the mouth of the Indus River, Karachi separates the blue waters of the Arabian Sea from the brown sands of the Sindh Desert and is the gateway to the fertile region of the Punjab, the historic Northwest Frontier, and to Afghanistan. A four-lane highway connects Karachi with Hyderabad, located 2 hours northeast on the Indus River, and continues as a narrow road 800 miles north to Lahore (a 2-3 day trip).

Karachi's excellent harbor is the source of both business and pleasure. It serves as the center of Pakistan's seaborne trade, which consists largely of textile goods, and also as a place to boat and fish. Unlike other Pakistani cities, Karachi has a short history. A hundred years ago, it was a small fishing village with a ditch called "Karachi joku." When the Suez Canal opened for international shipping in 1865, the British needed a nearby seaport. They developed the harbor and built the fishing village into a city of close to 300,000 people. However, up to partition in 1947, Bombay, now in India, served as the major harbor for the eastern region of former British India. Following independence, Karachi, as Pakistan's only major harbor, took on new significance and rapidly expanded to its present population of about 10 million people. Though Karachi has few of the architectural and historical attractions that distinguish Lahore, Peshawar, or other areas, it is the main commercial, financial, and industrial center in Pakistan. Teeming with the undisciplined traffic of

a variety of vehicles, Karachi is a vibrant place in which to live and work.

Utilities

Pakistan's electric power is 220v 50 hertz, but fluctuations between 200v and 250v are common. Voltage spikes and power outages are frequent and irregular. Appliances made for U.S. current will require a step-down transformer, and some appliances with DC motors or requiring specific rpm output, such as some tape recorders, record players, and clocks, will require conversion to 50 cycles. Parts for such conversion are scarce in Karachi. Residential power outlets vary. Common varieties include the British three-prong, grounded or the round, two-prong, ungrounded style. Parts and labor for rewiring plugs are more readily available than adapters. Water supply is frequently inadequate.

Food

Food stores in Karachi sell dry and frozen goods but are not up to Western standards of quality or variety. Imported goods are available in uncertain quantities at higher prices.

Local dairy products such as milk, yogurt, and ice cream have occasionally been found to be contaminated. Many employees use long-life products from the commissary and make home-made yogurt and ice cream.

Fresh meat, including lamb, mutton, goat, beef, and veal, is available in local markets at very reasonable prices. American cuts are not available, however, and quality is below Western standards. Local meat must be cooked thoroughly to prevent parasitic infection. Seafood is readily available. Snapper, king mackerel, promfret (a pan or grill fish), shrimp, and crab are relatively expensive staples.

Clothing

Local taste and tailoring in men's clothing are similar to that in the U.S. Coats and ties may be worn year round in the office, although

they are not required. During the long, hot summer, entertainment is usually casual and either short-sleeved or sport (bush) shirts are worn.

Women's dress is similar to that in the U.S. but more modest. In the office, within the Western community, and at social affairs with Western-educated Pakistanis, anything which would be acceptable in the U.S. would be appropriate. On the street, however, and in the bazaars or in rural areas, women are advised to wear skirts with hemlines below the knees and to avoid low necked or sleeveless dresses, or tight, revealing pants. Shorts are not appropriate. More suitable bazaar or street wear is pantsuits, slacks, or calf-length skirts; arms and shoulders should be covered. Cocktail dresses or pants outfits are worn for evening entertainment.

Karachi's winter is delightful, but unfortunately, lasts only about 8-10 weeks. From December to late February, temperatures vary from 50°F at night to 80°F in the daytime.

Summer weather is quite hot and humid and usually lasts from the end of February to November. A larger supply of light clothing is needed than in Washington. All cotton and drip-dry fabrics are the most comfortable; synthetic fibers are sticky in the hot, humid weather.

Because the winter is short and not very cold, winter suits, dresses, and coats are rarely worn, but a sweater or evening wrap is useful. Attractive shawls are available locally and are often used to keep the chill off during winter evenings. The most practical winter fabric is washable synthetic knit, but regular wash-and-wear and summer clothing may be worn throughout the year.

Except for locally embroidered things for women and children, local ready-made clothing is not satisfactory. Local dressmakers and tailors can make better clothing to order for women and girls than for men and boys, although men's casual

wear or "bush suits" are well made and attractive. Tailoring and dress-making services are available to make, alter or repair clothing. Quality of work varies, but with a little trial and error you can usually find a good tailor. Some tailors can copy from pictures, but a few have Western-style patterns and most do best by copying an existing piece of clothing. Fabrics available locally include plain wash-and-wear, washable woolen and cotton prints, and silks, all of which must be checked for color fastness.

In any case, bring an adequate supply of lingerie, underwear, hose, socks, washable sweaters, and bathing suits and caps. Bring baby supplies such as rubber pants, diapers or Pampers, underwear, and pajamas. Get as many washable things as possible, and avoid "dryclean only" clothing if possible.

Bring an adequate supply of shoes. Locally made sneakers and sandals are cheap and reasonably good. Other shoes are available, but many find the style, fit or quality unacceptable. Some people have had trouble finding properly fitting children's shoes.

Supplies and Services

See Islamabad.

Domestic Help

The comments on domestic help covered under Islamabad apply to Karachi, except that rates run somewhat higher in Karachi.

Religious Activities

Christian churches in Karachi include: Holy Trinity Church, Brooks Memorial, and St. Andrew's (all Protestant); and St. Patrick's Cathedral, St. Anthony's Church, Christ the King, and Stella Maria Chapel (Catholic). All have Sunday and Friday services and school (Saturday for Seventh Day Adventists). No Jewish services are held in Karachi.

Education

Virtually all American children attend the Karachi American

School (KAS), which offers nursery and kindergarten, elementary and junior and senior high school education. The school is accredited by the Middle States Association of Colleges and Schools based on American teaching methods and curriculum. The school has 48 full-time teachers, 31 of them Americans, and uses U.S. materials. The student body of approximately 360 includes roughly equal numbers of Pakistanis, third-country nationals and Americans. Parents of new students to KAS should be aware that the academic program is rigorous and that pupils coming from other school systems have found it challenging. There is no special education program. The Karachi American Society, a parent organization, elects a seven-member Board of Directors who develop school policy. The school year runs from mid August through May.

New students should have a thorough physical examination within six months prior to admission and should bring with them all previous school records.

Address questions (official mail only; must be 16 oz. or less) about the school to: Superintendent, American Consulate General/KAS Unit 62403, APO AE 09814-2403 Tel. (92) (21) 433557 FAX: (92) (21) 437305.

The Convent of Jesus and Mary offers instruction by Roman Catholic nuns for boys and girls in the primary grades and secondary level schooling for girls only. The school year is July-December and January-May, and studies are patterned on the English school system. The British Overseas School offers instruction in the nursery and primary grades. It admits a limited number of non-British students.

Karachi Grammar School, using the British curriculum, is one of the oldest day schools in the subcontinent, and caters to English-speaking students. It has about 1,500 pupils of many nationalities - most Pakistani, but a few Americans, and its three departments (kindergarten,

primary, and secondary) cover ages 5-18. The secondary department prepares students for the entrance requirements of English and American universities. Its school year consists of three terms: mid-January through mid-May; mid-June through mid September; and mid-September through mid-December.

The Karachi American School preschool starts at age four, the British Overseas School (BOS) accepts 3-year-olds and the Alliance Francaise (English Program) accepts two-year-olds. The BOS program is 4-1/2 hours long; KAS is three; and the Alliance Francaise is 2-1/2. All are daily morning programs. The BOS and Alliance Francaise are located in Defense and Clifton, respectively. The Goethe Institute runs a German language nursery and the Alliance Francaise also has a French language school. Other local nursery schools exist, including numerous Montessori schools.

Adult education is unavailable at the university level. Foreign language programs are available at the Goethe Institute, Alliance Francaise, and Friendship House.

Sports

Saltwater bathing is excellent throughout the year, except during the June-August monsoon, when surf at nearby beaches rises dangerously, undertow is powerful, and poisonous jellyfish abound. Some consider it a bit cold for bathing during the short winter months. Beach huts (less than an hour's drive from town) may be rented on Hawkes Bay or Sandspit beaches by people who have the time and patience to find a suitable but and go through the negotiating process.

Freshwater pools are available on a membership basis at the Sindh Club, Gymkhana Club, the Pearl Continental Hotel, the Avari Hotel, KLM pool at Midway House near the airport, the Marriott, and the Sheraton. The Karachi Recreation Association (pool, tennis courts, squash courts, walking/running course, gymnasium and weight

room) operates out of Karachi American School and is open to Americans for membership, whether they have children in the school or not.

Small boat sailing is good most of the year and especially in the summer with the monsoon winds. The Karachi Yacht Club offers excellent small boat sailing opportunities. This private club races primarily fourteen foot Enterprises, but similar size boats partake as well. Because of the club's roughly 40% ex-pat membership, there is usually a boat for sale at any given time. Boat prices run \$3,000 and up but can be paid for on monthly installments or simply rented by the day.

A 27-hole course is available at the Karachi Golf Club, although the membership cost is high.

Entertainment

The Pakistan American Cultural Center (PACC) occasionally puts on an English language play. Infrequent music concerts are sponsored by local choral groups and the various cultural centers. Occasionally, the latter import professional artists. Most Americans bring or import tape recorders, record players and accessories, and borrow or dub each other's tapes. VCRs have become a popular source of entertainment. Video rental shops are located throughout the city, but quality varies. A multi-system VCR is suggested, as U.S. tapes are usually VHS format while locally available tapes are UK-PAL format. Those wishing to take advantage of this source of entertainment should ship a VCR and compatible TV in their household effects.

Karachi has a moderate variety of restaurants, concentrated around the major hotels and the boat basin. The American Club caters to the American palate.

Lahore

Lahore is a city of 5 million people, 800 miles north-northeast of Karachi (1-1/2 hours by jet), and 170

miles south-southeast of Islamabad (35 minutes by jet). Lahore lies 17 miles west of the Indian border, 700 feet above sea level, in the middle of the Great Punjab Alluvial Plain. It is Pakistan's second largest city after Karachi.

Lahore has been the capital of several empires in the subcontinent, with a history going back at least 1,000 years. The old city and its environs have many examples of the art and architecture of the Moghul empire, such as the Lahore Fort, Badshahi Mosque, Emperor Jahangir's Tomb, and the Shalimar Gardens. The city was the capital of the Sikh empire in the late 18th and early 19th centuries. One pleasant legacy of British rule (1849-1947) is Lahore's wide, tree-lined streets. Extensive suburbs have repeated this pattern.

Today, Lahore is the capital of Pakistan's largest and most populous province. The Punjab, heartland of Pakistan, produces 69% of Pakistan's agricultural output. It is a major governmental, political, media, cultural, and economic center. Two of the country's largest engineering firms are located in Lahore, as is the headquarters of the Water and Power Development Authority (WAPDA) and the Pakistani railway system. In addition, hundreds of industrial firms produce textiles, steel products, carpets, processed food, shoes, electric motors, and a wide variety of consumer goods. Lahore has the country's two largest printing plants; newspaper circulation is the largest in the country. Six English dailies and two English weeklies are available.

Lahore has two major universities: the University of the Punjab and the Pakistan University of Engineering and Technology, along with many training institutions. The private Lahore University of Management Sciences is a leading business school. The Lahore Museum, the oldest in the country, has outstanding examples of the nation's heritage.

The city is on the Ravi River, one of the five great rivers from which the Punjab (Persian for "five rivers") takes its name. The climate is delightful from November to April. December and January are dry and almost cold with night temperatures occasionally dropping to near freezing.

Summer starts with dry, very hot days in May and becomes humid from June through August, with daytime temperatures regularly reaching 100°F for weeks and occasionally soaring to 114°F. Activities slow down markedly during summer. Monsoon showers give some relief from the hot summer breezes and dust storms, but increase the humidity to uncomfortable levels. Temperate weather returns at the beginning of October. Air quality is noticeably affected by industrial pollution, dust, and pollen in summer and smoke in winter.

Utilities

Electric power failures and scheduled outages occur frequently in Lahore. In the winter, "load shedding" is scheduled daily. The power may build up to 250-280v, and the usual step-down transformers offer U.S.-made appliances limited protection. Voltage regulators with automatic cutouts should be used for VCRs, stereos, and small appliances. These regulators are available locally in a wide variety of models. Telephone service is erratic; wrong numbers and crossed lines are frequent. Calling the U.S. direct is possible if the telephone has that facility or, if not, by booking a call via the operator.

Food

With the exception of chicken, meat is not sold in shops or restaurants on Tuesday or Wednesday in Lahore. Meat and meat cuts are different from those in the U.S. Meat must be well cooked, since markets often have no refrigeration.

High quality seasonal fruit and vegetables are available, including bananas, oranges, grapes, tangerines, mangoes, pomegranates, apples, peaches, melons, apricots,

potatoes, green beans, carrots, onions, tomatoes, green peppers, broccoli, okra, ginger, cucumbers, eggplants, and peas.

Clothing

Dress in Lahore outside the office is much more conservative than in Islamabad. American women generally wear Western clothes to work. Conservative Western dress is often acceptable outside the office, but many foreign women feel more comfortable in a shalwar kameez (Pakistani national dress) or slacks with a loose, thigh-length, long-sleeved blouse with a high neck. Either western or Pakistani dress is acceptable at evening functions, except that long dresses or skirts are rarely worn. Clothing for social functions, particularly weddings, is sometimes quite dressy. Sandals are popular for daytime and evening wear.

All-cotton clothing, including underwear, is most comfortable in hot weather. Dry cleaning service is unreliable, and clothing wears rapidly due to the need for frequent washing. Women should be well covered all year round. Tight-fitting or low-cut clothing, sleeveless or halter tops are not acceptable in Lahore. Western style ladies wear is not available in local stores, nor is there variety in children's clothes.

If you intend to use local tailors, bring a supply of buttons, interfacing, zippers, thread, and especially elastic. Locally made items of this type are often not satisfactory. Tailoring is cheap but not always of good quality. Tailors usually do not follow patterns, but can copy clothing. A woman's blouse costs about \$10 to make, pants \$15. Men's pants can be made for \$20 and a suit for \$70 to \$90.

Domestic Help

Help is plentiful, but good servants are scarce and becoming more expensive. Current monthly estimates are: cook \$100-120; bearer \$80; gardener \$60-70; laundryman \$20-30; nursemaid \$80.

Religious Activities

English-language religious services are readily available at Anglican, Roman Catholic, and Seventh-Day Adventist churches. The International Christian Fellowship, an interdenominational English language congregation that meets in the Chapel of Forman Christian College, also conducts services. Also, there is a Church of Jesus Christ of Latter-Day Saints (Mormon). No Jewish services are available in Lahore.

Education

Most American children attend the Lahore American School (LAS) operated by the Lahore American Society. LAS has about 450 students in all grades, divided among American, Pakistani, and third-country students. It is fully accredited and certified by the Middle States Association of Colleges and Schools. It follows a standard American curriculum and calendar (mid August to end of May) for kindergarten through grade 12. A nursery class is also available. The majority of faculty is American. The high school program is college preparatory, with 25 credits required for graduation: 4 credits of English, 3 of science, 2 of foreign language, 3 of social studies, 3 of mathematics, 3 of physical education (including health), and 7 credits in electives. The college placement record of LAS is excellent. For specific information write to: Superintendent, Lahore American School, c/o Principal Officer AmConsul Lahore Unit 62216, APO AE 09812-2216. Tel. 870895/873603.

The French and German Cultural Centers in Lahore offer language instruction.

Sports

Facilities for sports include golf, swimming, riding, tennis, squash, hunting, and fishing. Two local clubs offer combinations of golf, tennis, and swimming. Membership fees vary, but membership is not required to play golf. English riding instruction is offered at the Lahore Polo Club, and men's rugby by the Lahore Rugby Football Club. Amer-

icans may use the Lahore American School's pool and basketball courts for a nominal charge whenever school sports are not scheduled. Spectator sports include cricket, field hockey, world-class polo, and rugby.

Some sports equipment, when locally available, is reasonable in price, but not always of high quality. Excellent locally made squash rackets may be bought here but bring a supply of golf and tennis balls. Hobby materials are generally unavailable or expensive.

Entertainment

Dinners and parties in private homes are the most common form of entertainment.

Lahore is often said to have the best restaurants in Pakistan, offering Continental, Chinese, and Pakistani cuisine.

Ample opportunities exist to study area history and culture and to acquire folk products and art objects. Shopping, especially for Oriental/Pakistani rugs, is a favorite event.

Local cinemas are rarely attended by Americans. Video cassettes in the PAL mode, of varying quality, are readily available for rent at reasonable prices on the local market. If you decide to bring a VCR, the most suitable is the VHS-type that can show three systems (PAL, SECAM, and NTSC). The American, British, and French Cultural Centers regularly show films.

PTV, the Lahore government-run television station has a 10-minute nightly news program in English. There may also be a rerun of an English or U.S. program. A second, privately owned and operated channel began operation in 1991. STN runs many U.S. and British reruns and several hours of CNN programming around the clock. Pakistani television is on the PAL system which is not compatible with the standard U.S. system. Indian television may also be viewed in Lahore. No local FM radio exists, and

English language short-wave reception is only fair. Pre-recorded cassette tapes are readily available. CDs are difficult to obtain.

The American Women's Club is active and provides opportunities for meeting people as does the International Women's Club.

In 1977 the Government of Pakistan passed legislation dramatically restricting the consumption of alcoholic beverages. Some hotels have "bars" where foreigners and non-Muslims with the proper permits can purchase a limited selection of alcoholic beverages, but at exorbitant prices.

Peshawar

Peshawar, an ancient city in the heart of the Northwest Frontier Province (NWFP), lies 15 miles east of the famous Khyber Pass, 35 miles from the Afghanistan border, and close to the Pakhtun tribal agencies. Peshawar is a city of approximately 1,000,000 and is situated on a flat plain surrounded on three sides by mountains. The city is divided into three parts: the Old City, Cantonment area, and University Town. The Old City is a typically crowded central Asian town, with a colorful bazaar teeming with people and every kind of moving vehicle. Houses of mud bricks line the narrow twisting streets. By contrast, the Cantonment has a suburban atmosphere with spacious houses set back from quiet, tree-lined avenues. Much of the Cantonment area is occupied by military installations of the Pakistan Army and Air Force. University Town, to the west of the airport and south of the university campus is the modern section of the city, with development dating from the late 1950s. The NWFP and Peshawar host well over a million Afghan refugees, many of whom have established businesses in the Old City.

Pakhtun Culture

Pakhtuns are the dominant ethnic group of the NWFP. Although cultural mores are slowly changing,

particularly in Peshawar, Pakhtun culture is conservative, religious, and largely concerned with the notion of honor. The "Pakhtun Code of Honor" (Pakhtunwali) is usually defined in terms of three basic, and much romanticized, concepts: "melmastia" - hospitality to every guest, not only providing food and shelter but also protection; "badal" - revenge under any circumstances; and "nanawati" - obligation to protect or forgive an offender when he submits himself at the doorstep of the man from whom he is seeking forgiveness. However, Pakhtunwali is a much wider code than these three concepts. Any action taken to protect the honor, as seen by Pakhtuns, is a part of Pakhtunwali. Consequently, Pakhtun men are greatly protective of their women and their women's honor. Although education is slowly preparing Pakhtun women for a more public role, few Pakhtun women work outside of the home or participate actively in public affairs. The Pakhtun Code of Honor is especially strong in the tribal areas, the western third of the province that is not under provincial administration and where traditional rules of tribal justice are applied.

Food, Clothing, Supplies and Services

Fresh meat (no pork products), vegetables, and fruits are available year round. Frozen meat is also available locally, although a greater variety is found in Islamabad. Frozen fish and seafood is also available through local vendors.

Local tailoring shops produce western-style clothes and dresses at reasonable prices. Locally purchased thread is not strong or preshrunk; a supply of good quality thread is recommended for those who plan to sew or have garments made. Quality, durable shoes and hiking boots are not available locally.

The electrical current is 220v, 50 Hz. Computers, stereo components, VCRs, radios, televisions, and other sensitive electronic equipment require voltage regulators (available locally) due to frequent voltage fluctuations.

Laundry, dry-cleaning, film developing, and barber and hair dressing facilities are available in Peshawar. Slide film is not locally available, nor is slide developing reliable. Several book stores sell office supplies, maps, magazines, and a wide variety of hard cover and paperback English books.

Religious Activities

Peshawar has Protestant and Catholic churches but no synagogues. Services are conducted in both English and Urdu. Numerous mosques serve the Sunni, Shia, and Ismaeli communities.

Education

The International School of Peshawar was established in 1987. Offering classes from kindergarten through grade 8, ISP enrollments currently average 60 students a year from the American and European expatriate communities. All classes are taught in English by certified teachers, and standard American textbooks are used for all subjects. The school year begins mid-August and ends the last week of May. Classes are conducted Monday through Friday, 8:00 a.m. to 2:00 p.m., with a 2-1/2-week mid-year break at Christmas. The American school has no boarding facilities nor special education programs.

Other children have commuted to Islamabad to attend the International School of Islamabad (ISI) or the Murree Christian School, located 30 miles northeast of Islamabad. Murree provides boarding facilities for children of all ages and has been used extensively in the past by foreign families in Peshawar. ISI does not have boarding facilities and attendance at this school requires the cooperation of an American family in Islamabad to board the child during the week. Other possibilities include the Woodstock School about 150 miles north of Delhi, in Mussoorie, India, U.S./European boarding schools, or various home study programs as used by a number of families.

Currency dealer in Peshawar, Pakistan

AP/Wide World Photos, Inc. Reproduced by permission.

Sports

Peshawar has three clubs: the Peshawar Golf Club with an excellent 18-hole course; the Peshawar Club with its swimming, squash, and year-round tennis on grass courts; and the Peshawar American Club with two clay tennis courts, a swimming pool, as well as basketball and volleyball courts. The single international class hotel in Peshawar recently has opened a health club and also has a pool. A variety of other sports or exercise activities, including volleyball and aerobics classes, have been organized by volunteers in the expatriate community and are generally available to interested participants. Places for hunting, fishing, and

trekking are available in nearby Swat and Chitral. Arrangements can also be made for horseback riding.

Touring and Outdoor Activities

The Khyber Pass, a romantic, historical landmark 15 miles away on the main road to Afghanistan, is the pass through which conquerors of the subcontinent have come and fought over for centuries. Tourists can take advantage of a periodically scheduled steam train safari to the Khyber Pass after obtaining the required permits. The village of Darra Adam Kehl, 25 miles from Peshawar, is the site of "tribal gun factories," where handmade rifles

and shotguns are manufactured by and for the Pakhtun tribesmen. Ten miles beyond the factories is the Kohat Pass, less well-known, but more spectacular than Khyber. Currently, visits to these tourist areas are restricted because of armed conflict in nearby Afghanistan and tribal unrest.

Chitral, the northernmost mountain district in the NWFP, is accessible by scheduled air service from Peshawar, and by Jeep for about 6 months a year. Chitral offers dramatic views of 26,000-foot Tirich Mir (the "King of the Hindu Kush"), fine trout fishing, interesting visits to the exotic Kalash mountain valleys, and native polo matches among a friendly, hospitable people. Other scenic areas include the Swat and Kaghan valleys, northeast of Peshawar, where trout fishing is also available.

The Northwest Frontier Province is also home to a number of significant archaeological sites related to the 2,400-year-old Buddhist Gandhara civilization. Most important is the Buddhist monastery at Takht-I-Bhai, near Mardan, a site still revered by Buddhists. The Peshawar Museum houses what is considered the finest collection of Gandhara civilization statuary, including the famous "Starving Buddha."

Entertainment

Few English films are shown publicly and most foreigners do not frequent local cinemas. The American Club, however, has a large number of NTSC VCR movies for rent. Several local video shops rent PAL videos. VHS VCRs using the PAL, SECAM, and NTSC systems are recommended. Tapes in the Beta format are limited and not available at the Peshawar American Club.

Restaurant selection is limited to one or two good Pakistani restaurants, two Chinese restaurants, several Afghan establishments, and the Pearl Continental and Khan Club Hotel restaurants, which serve continental cuisine. The Peshawar American Club has the most popu-

lar restaurant in town among the foreign community and, perhaps, the liveliest members-only bar in Pakistan. In accordance with local law, however, Muslims and Pakistani citizens may not be served alcohol. Recommended hotels in Peshawar are the Pearl Continental and several good guest houses that have recently opened in University Town. Rooms are sometimes available at the American Club for official travelers, and the Golf Club has recently opened a limited number of rooms for guests.

Peshawar is famous to shoppers of the world for its Afghan carpets, tribal jewelry, lapis, and furniture. More than a hundred Afghan carpet stores offer a wide variety of Afghan carpets, kilims, and other woven products. In the Old City Sarafa bazaar, one can find tribal jewelry, old coins, war medals, lapis, and other semi-precious stones, as well as modern Pakistani gold jewelry. Peshawar's furniture makers craft excellent wood furniture to order at relatively inexpensive prices. Several outlet stores are operated by the volunteer agencies marketing handicrafts made by Afghan refugees.

The two main shopping areas in Peshawar are the Saddar Bazaar in the Cantonment and the various bazaars found in the Old City. Although Saddar has several gift shops and carpet stores, most visitors to Peshawar prefer to shop in the colorful, exotic environs of the Old City. Shops usually open between 9:00 a.m. and 10:00 a.m. and remain open until dark. Except for a few meat and grocery shops, businesses remain closed on Fridays.

Special Information

The people of Peshawar and the NWFP observe conservative social standards. Both men and women should dress modestly. Men should not wear running shorts and T-shirts in public. Women should cover up and, in particular, not wear shorts, tight clothing, sundresses, etc., in public. Women should avoid eye contact with men passing them

on the streets. Behavior around mosques, especially during prayer time, should be discreet.

Peshawar and the surrounding tribal areas can be fraught with unexpected dangers to uninitiated newcomers. Visitors should travel only with U.S. Government Agency officials, volunteer agency representatives, or with a reputable travel guide. Personal information and trip schedules should be given only to authorized government and hotel officials. The Government of Pakistan must approve all visits to Afghan refugee camps and tribal areas, including the Khyber Pass. Such visits are normally limited to daylight hours, and special permits are required. Do not leave vehicles unattended while traveling in the NWFP. Night travel on NWFP roads can be hazardous and is not recommended. Although the indiscriminate bombings which were a hallmark of terrorist campaigns in Peshawar at the height of the Afghan conflict have largely disappeared, Afghan-related violence in the city continues to be a problem and could threaten the security of expatriate residents and visitors.

OTHER CITIES

Ruled by the Afghans in the early 19th century, **BAHAWALPUR** joined Pakistan in 1947. It is situated about 225 miles southwest of Lahore, near the Sutlej River. The city trades in soap, cotton, and pottery. The population here is over 400,000.

FAISALABAD (also known as Lyallpur) is located in a cotton and wheat growing area about 175 miles southeast of Islamabad. With a metropolitan population of over 1.9 million, Faisalabad is an important commercial center, particularly for grains and cloth. Manufactures include textiles, textile machinery, bicycles, hosiery, flour, sugar, vegetable oil, soap, and pharmaceuticals. Founded and named for Sir James Lyall in 1892, but now usually called Faisalabad, the city is the

site of Punjab Agricultural University (founded in 1961), several colleges affiliated with the University of Punjab, and numerous experimental farms and cattle-breeding stations.

The capital city of Gujranwala District, **GUJRANWALA** has a population of approximately 1.2 million. It is situated 42 miles north of Lahore. The city trades in grain, and manufactures copper and brass utensils. Formerly the capital of Sikh power in its early period, Gujranwala is the birthplace of Ranjit Singh.

HYDERABAD, with a population of more than one million, is located in southern Pakistan on the Indus River, near the Indian border. Long known for its silk, gold, and silver embroidery, and its enamelware and pottery, Hyderabad is now an industrial city with chemical engineering, food processing, cotton, cement, cigarette, glass, and match factories. Founded by Ghulam Shah Kalhora in 1768, the city was designed by his son, Sarfaraz Khan in 1782. Hyderabad was the capital of the emirs of Sind and was occupied by the British East India Company when Sind became a British protectorate in 1839. The University of Sind, founded in 1947, is located here; there are also several other colleges in the city. Numerous mosques, palaces, and the arsenal are found in the city's fort. Umarnot, a town in the Thar Desert near Hyderabad, was the birthplace of the Mogul emperor Akbar.

MULTAN, situated on the Chenab River in east central Pakistan, is about 280 miles south of Islamabad. The city is an important road and rail junction, an agricultural center, and a market for textiles, leather goods, and other products. Industries here include metalworking, flour and oil milling, and the manufacture of cotton textiles, shoes, carpets, and glass. Pottery and enamelwork are some of the city's noteworthy handicrafts. Multan is one of the Indian subcontinent's oldest cities, deriving its name from an idol in the temple of the sun god.

Multan is thought to have been conquered by Alexander the Great about 325 B.C., and visited by the Chinese Buddhist scholar Hsüan-tsang in 641. The city was taken by the Arabs in the eighth century, captured by Muslim Turkish conqueror Mahamud of Ghazni in 1005, by Tamerlane in 1398, ruled by the emperors of Delhi from 1526 to 1779, and by the Afghans until 1818. In 1818, Multan was seized by Ranjit Singh, leader of the Sikhs. The British held Multan from 1848 until Pakistan achieved independence in 1947. Landmarks include a surrounding wall and fort enclosing the tombs of two Muslim holy men, and an ancient Hindu temple. More than a million people live in Multan.

QUETTA is located in west-central Pakistan, near the Afghanistan border and about 450 miles southwest of Islamabad. The city is situated on a plain enclosed by high mountains at an altitude of 5,500 feet, and has a population of close to 600,000. Quetta's name comes from the Pushtu word for fort—*kawatah*. The city commands the entrance through the strategic Bolan and Khojak Passes into Afghanistan, and is a trade center for Iran, Afghanistan, and much of central Asia. Chief items traded here include fruits, vegetables, hides, and wool. Cottage industries in the city produce textiles, foodstuffs, and carpets. Coal and chromite are also mined nearby. Historically, Quetta was occupied by the British during the First Afghan War, 1839–1842, and following the Second Afghan War in 1876. It became prominent as the seat of British resident Sir Robert Sandeman, and was a strongly fortified British military station. In June 1935, a severe earthquake nearly destroyed Quetta, but the city has since been rebuilt. Quetta has a military staff college, founded in 1907, and a geophysical observatory. It is also known as a summer resort town.

SARGODHA is located in east Pakistan, about 105 miles northwest of Lahore. The metropolitan area has a population of approxi-

mately 455,000. A railroad and industrial hub, Sargodha produces soap, flour, textiles, and chemicals. There is a grain market here.

The birthplace of philosopher-poet Muhammad Iqbal, **SIALKOT** is in eastern Pakistan 120 miles from Islamabad. A rail junction and a major trade and processing center, Sialkot has a population of about 420,000. Bicycles, surgical instruments, sporting goods, rubber products, and ceramics are manufactured here. Textile weaving is also an important industry. Landmarks include a fortress built in 1181 by Muhammed of Ghor and the mausoleum of Guru Nanak, founder of the Sikh religion, who died in 1538.

The city of **SUKKUR** lies in a hot, desert region, about 240 miles northeast of Karachi, near the Indus River. It is a commercial hub, manufacturing leather, cement, cigarettes, and textiles. Barley, rice, wheat, and millet are grown nearby. Major trade is conducted with neighboring Afghanistan. The town was built up by the British in 1843 when they established a garrison. Sukkur's population exceeds 300,000.

COUNTRY PROFILE

Geography and Climate

Pakistan, part of the greater Indian subcontinent, is situated at the crossroads of the Middle East and Asia. The country covers an area about the size of the states of Washington, Oregon, and California combined. It is bordered by Iran and Afghanistan on the west; China on the north; the disputed territory of Jammu and Kashmir on the northeast; India on the east; and the Arabian Sea on the south. Pakistan lies between latitudes 24 and 37 degrees north (e.g., from the southern tip of Florida to the southern border of Virginia).

The major political divisions of the country are the Provinces of Sindh, Balochistan, Punjab, Northwest Frontier, and the federally administered Northern Areas, Tribal Areas, and Azad Kashmir. The provinces roughly correspond with the country's major geographic, ethnic, and linguistic regions.

There are five distinct geographic regions: The Thar Desert and Lower Indus Valley, located in the southernmost province of Sindh, consists largely of arid valleys and rocky hills that extend into neighboring India. Farming is successful only in the irrigated areas nearest to the Indus River.

The Balochistan Plateau is a broad, arid tableland that lies between 1,000 and 3,000 feet above sea level in the western province of Balochistan. The plateau is encircled by rugged mountains and covers nearly one-half of the country's territory.

The Indus Basin features the largest contiguous irrigation system in the world. "Punjab," the name of the province in which much of the basin is located, means "five waters" in Persian, referring to the five major rivers (Indus, Jhelum, Chenab, Ravi, and Sutlej) in the basin. The province of Punjab comprises the northeastern quarter of Pakistan.

The Northwest Frontier is a region of barren mountains sheltering rich irrigated valleys. The provincial capital of Peshawar is situated on an ancient trade route that leads through the Khyber Pass and into Afghanistan.

The Far North offers Pakistan's most spectacular scenery with towering snowcapped mountains, deep narrow valleys, and glaciers. The world's second highest mountain, K-2, is located in the Far North, as are a dozen other peaks of more than 25,000 feet elevation, including Nanga Parbat, Gasherbrun, and Rakaposhi.

Seasonal temperatures vary widely in these five regions. With the

exception of the Far North, summers are hot throughout the country with temperatures ranging from 90°F to 120°F and little nighttime relief. Trade winds provide some relief during the hot and humid summers in Karachi and a brief cool season comes between December and February. In Lahore, Islamabad, and Peshawar, a distinct winter season brings daytime temperatures of 60°F or less and cold nights. Islamabad and Peshawar may have light frosts. Spring and fall are delightful seasons in these three cities. Altitude governs climate in the Far North, with pleasant summers in the lower regions and perpetual snow in the higher mountains.

The average annual rainfall varies from 6 inches in Karachi, 15 inches in Peshawar, and 18 inches in Lahore, to about 30 inches in Islamabad. Most rain falls during the summer monsoon from July to September, although parts of the Punjab and the Northwest Frontier experience a moderate winter rainy season as well.

Population

Pakistan is a relatively poor country with a rapidly growing population. Annual per capita income is approximately \$470. The population is currently estimated at 135 million, making Pakistan the seventh most populous country in the world. Conservatively estimated to be growing at an annual rate of 3.0 percent, one of the highest rates in the world, Pakistan's population could double in 27 years.

One of Pakistan's major problems is illiteracy; only 38% (1994) of the adult population is literate with the rate being significantly lower for women than men. About 47.5% of Pakistan's labor force is engaged in agriculture, while 10.9% works in industry. Pakistani society traditionally assigns a subordinate role to women with the result that 65% of boys ages 6 to 11 and only 33% of girls attend primary school. Women are reported to be only 13.1% of the labor force, but this does not include

the large number of women engaged in agricultural and household work. Substantial disparities exist in living conditions between urban areas and the countryside where over two-thirds of Pakistan's people live.

Pakistan's population is unevenly distributed throughout the country. More than 1.5 million Afghan refugees have sought refuge in its borders while employment abroad has taken 2 million Pakistanis away. Population density in parts of Sindh and Punjab is well above the average distribution of 381 persons per square mile. The barren uplands of Balochistan is the least inhabited area of the country.

Internal migration, particularly from rural to urban areas, has begun to alter the ethnic and linguistic character of each of the Provinces, but it is still generally true that Sindh is the home of the Sindhis who speak Sindhi; Balochistan is the traditional home of the Balochi-speaking Baloch; Punjabi is the language of the Punjab, home of Pakistan's largest and most influential ethnic group; and the Northwest Frontier is the tribal homeland of the Pushtu-speaking Pathan. The most notable exception to this pattern is seen in the urban areas of Sindh. Immediately after independence, a significant number of Muslim "muhajirs" or refugees of various ethnic backgrounds poured into these areas from India. More recently, internal migration has brought many job-seeking Pathans to Karachi. In addition, the movement of large numbers of Pathans and some Punjabi farmers into Balochistan over the past decades has made the Baloch a minority in their own Province. The remote valleys of the Far North are inhabited by a few smaller ethnic groups, such as the Gilgitis, Kashmiris, and the people of Hunza.

Urdu is the official language of Pakistan. Although it is the first language of only 7% of the total population and 25% of the urban population, educated Pakistanis are usually conversant in Urdu. The status of English has declined some-

what as a result of "Urduization" efforts by the government, but it is still used extensively in business and government.

Although geographically, ethnically, linguistically, and socially Pakistan is the picture of diversity, its religious homogeneity is an important unifying factor. Members of the Sunni sect constitute the largest number of the Muslims in Pakistan; most of the rest are Shia Muslims. Several hundred thousand Ismaelites live in Karachi and the northern areas. Religious minorities include Christians (1.6 million, 80% of whom live in Punjab), Hindus (1.6 million, 80% of whom live in Sindh), and Parsis (7,000, most of whom live in Karachi).

Public Institutions

The land that is now Pakistan is the site of one of the world's oldest civilizations. As a western gateway to the Indian subcontinent, this area has seen successive waves of people move down through the passes from central Asia and the Iranian Plateau, bringing new ethnic strains and a wide variety of cultural contributions. Over the past 3,000 years, it has been ruled or invaded by Aryans, Persians, Greeks, Kushans, Mongols, Afghans, Turks, Moghuls, Sikhs, British and others.

Pakistan came into being in August 1947 as a result of the Muslim League's determination, once the British rulers departed, to have its own state in the Indian subcontinent, separate from the Hindu majority. The partitioning of British India led to the migration on a massive scale of Muslims to Pakistan and Hindus to India. In the process, hundreds of thousands died and the legacy of partition remains a source of bitterness between India and Pakistan to this day.

In 1947, Pakistan faced a unique and ultimately unsolvable problem of ethnic and geographic division. The new nation was divided into two parts more than 1,000 miles from each other and on opposite sides of the Indian subcontinent.

Slightly less than half the people inhabited West Pakistan (present-day Pakistan) and the rest occupied East Pakistan (now Bangladesh) in the humid delta region of the lower Ganges in East Bengal. The two halves of the country differed greatly in language, customs, and daily life and were held together only by a common religion and mutual distrust of the Hindu majority in India.

In its early years, Pakistan faced frequent political crises. The death in 1948 of its founder and first Governor General, Mohammed Ali Jinnah, and the 1951 assassination of Prime Minister Liaquat Ali Khan deprived the country of two of its most able leaders. From 1951 to 1958, a succession of unstable governments did little to improve internal conditions. In 1958, the Army Commander-in-Chief, General Mohammed Ayub Khan, overthrew the civilian government and seized power as president. Ayub governed Pakistan for 10 years, first under martial law, and after 1962 under a constitution that provided strong executive powers and limited representative government. Ayub relinquished the presidency in early 1969 to Commander-in-Chief General Mohammed Yahya Khan, who dismissed the government, abrogated the constitution and ruled under martial law. In December 1970, however, he permitted Pakistan's first free nationwide elections to select members for both the National Assembly and provincial legislatures.

The election results profoundly affected the future of Pakistan. In the West, the Pakistan People's Party (PPP) of Zulfikar Ali Bhutto gained a majority. In the East, The Awami League of Sheikh Mujibur Rahman scored an overwhelming victory, one so great that the party gained a majority of all seats in both East Pakistan and in the National Assembly. A period of intense political maneuvering followed, with the main issue being the degree of autonomy to be accorded East Pakistan. This period ended abruptly in March 1971, when the

Army arrested Mujibur Rahman in Dhaka and attempted to suppress his followers. Resulting disorders in East Pakistan grew into a widespread insurrection, during which 10 million refugees fled into neighboring India. Growing tension between Pakistan and India over developments in East Pakistan led to the outbreak of war in December 1971. India invaded East Pakistan and after a short campaign, West Pakistan's forces in the East surrendered. Then the former East Pakistan became the independent nation of Bangladesh.

From 1971 to 1977, Bhutto was in power, first as president, and then, following the construction of a new constitution in 1973, as prime minister in a parliamentary system. Following national election, in early 1977, a major confrontation emerged between Bhutto's PPP government and a multi-party coalition called the Pakistan National Alliance (PNA). Subsequently, Prime Minister Bhutto was removed in a bloodless coup led by Chief of Army Staff, General Zia-ul-Haq. Bhutto was eventually convicted of conspiracy to commit murder and hanged.

From 1977-1985, Pakistan remained under martial law with Zia serving both as President and as Chief Martial Law Administrator. Finally, in response to domestic and international pressures, Zia allowed a return to democracy. Non-party elections to the National and Provincial Assemblies were held in 1985. The new government, led by Prime Minister Mohammed Khan Junejo, enjoyed the support of legislators associated with the Pakistan Muslim League (PML) who provided Junejo comfortable majorities in the National and Provincial Assemblies. Groups of independents and opposition forces were also formed. Local elections were held in 1987 under civilian government auspices.

In August 1988, growing tensions between President Zia and PM Junejo led Zia to dismiss Junejo's government and call for new non-

party elections. Zia's death in a plane crash, along with U.S. Ambassador Arnold Raphel later that month, however, altered the political environment. Senate Chairman Ghulam Ishaq Khan assumed the presidency and guided the nation through the elections in November of that year. The election was won by the Pakistan People's Party led by Z.A. Bhutto's daughter, Benazir Bhutto, which assumed power in December, 1988.

Although the largest party in Parliament, the PPP lacked a majority. Bhutto's administration struggled for most of its tenure and on August 6, 1990, the President, acting under the constitution, removed the Bhutto government. A caretaker regime held national and provincial elections in October 1990 which brought a coalition to power under the leadership of Nawaz Sharif, who became Prime Minister in November 1990.

Sharif's government was dismissed in April 1993 by President Ghulam Ishaq Khan, but it was later restored by the Supreme Court. The resulting constitutional crisis was resolved by the resignation of both the Prime Minister and the President. In elections held in October 1993, the PPP-led coalition won and Benazir Bhutto became Prime Minister again.

In November 1996, President Farooq Leghari dismissed Bhutto's government on the grounds of corruption and abuse of power. In the February 1997 elections, the PML won a two-thirds majority in the National Assembly and Nawaz Sharif once again became Prime Minister.

In October 1990 U.S. military assistance to Pakistan was halted and new economic aid was suspended after President Bush was unable to certify to Congress that Pakistan did not possess a nuclear explosive device. This prohibition, still in effect, is the result of the Pressler Amendment to the Foreign Assistance Act. One of the results of the suspension is a significant reduc-

tion in assistance and U.S. military direct-hire and contract personnel in Pakistan.

Arts, Science, and Education

An Islamic presence in the subcontinent introduced new outside elements of creativity. The period of Moghul rule, particularly, was marked by great achievements in architecture, examples of which are still world famous. In Lahore, the palace-fortress called the Red Fort, begun at the time of Emperor Akbar, and the Badshahi Mosque (one of the largest in the world), erected during the reign of Emperor Aurangzeb, are fine examples of Moghul buildings. Also at Lahore is Shalimar, the Garden of Bliss, a good example of a formal Moghul garden.

Because Islam prohibits pictorial likeness of the human form in art, representational art did not develop substantially among the Muslims in the subcontinent until the Mid-20th century, when declining Moghul influence and increasing Western contact resulted in less restrictive art forms. Abstract paintings and designs more in keeping with Muslim sensitivities have always been prevalent and are still popular today.

Recently, Pakistani artists, usually the young, have begun experimentation in many different media. As a result, art shows in most of the larger cities are becoming more common, and a new interest, especially in painting, is increasing. Most notable artistic expression is found in Pakistani handicrafts. The feeling for form, design, and color is best displayed in pottery, carpets, hand-woven textiles, articles made of marble, inlaid woodwork, and brass, copper, and silverware.

Strong literary traditions exist in Urdu as well as in the regional languages (Sindhi, Punjabi, and Pushtu). The largest share of popular academic and standard literary publications are in Urdu, the

national language. Technical subjects and more advanced writings in the social sciences are in English.

A wide variety of music, ranging from folk to classical to Western popular styles, is enjoyed throughout Pakistan. Pakistani folk music, particularly melodies and rhythms of mountain tribes and rural areas, is most appealing to Westerners. Country-Western, jazz and rock, although not encouraged, are also gaining popularity, especially among young people. The Government of Pakistan patronizes and encourages artistic expression, intellectual pursuits, and Islamic culture through radio, television, universities, art councils, art galleries, and academic and professional associations (Pakistan Historical Society, Pakistan Philosophical Congress, Association for the Advancement of Science, Pakistan Writers' Guild, etc.). The government-sponsored National Council of the Arts aims at coordinating all cultural, artistic, literary, and intellectual activities in the country.

The government of Pakistan works continuously to improve the quality of the country's educational system, but reform efforts are hampered by lack of financial resources and qualified personnel, outdated instructional materials and techniques, and a reluctance among some elements of Pakistani society to participate fully in the education of the nation's youth. In general, education is controlled by the provincial governments, with strong inputs from the Federal government.

The Federal and Provincial governments are working together to combat illiteracy, which is one of the most serious obstacles to economic and social development. According to comprehensive 1991 figures, the most recent available, the overall literacy rate was 34.8% (male 47.3% and female 21.1%). It has been estimated that by 2000 the overall literacy rate will have improved to 43.6% (male 56.2% and female 29.8%). Education planners consider this improvement insufficient

and are developing new programs to reduce illiteracy. These include model programs in each province and in the Capital district, and another program, called "User of Koranic Literacy for Promotion of Female Literacy," which takes advantage of the ability of many women to read the Koran in Arabic as a tool to learn to read Urdu.

Urdu is the national language and is emphasized in the official curriculum, although regional languages are used in primary school classrooms in some areas. Government authorities have stressed that English should receive prominence as a second language. English is taught at the upper levels and in private schools, and excellent knowledge of English is required for the top levels of government service and the study of science and medicine. Students also study Arabic and regional languages such as Sindhi, Punjabi, Pushtu, and Baloch.

The government is accelerating the universalization of primary education, and encouraging private sector involvement in the educational system. Improvements are also underway in technical and vocational education. In the fields of secondary and higher secondary, greater emphasis has been placed on scientific and technical education. Although expansion is under way at all levels, the educational system is not able to cope with rapid population growth. Enrollment levels are low, compared to other countries at Pakistan's stage of development. Similarly, the proportion of the budget allocated to education is very low. By the year 2002, the government expects to enroll all children in primary education (up from 73% at present) and half the children in secondary education (up from 32%).

Universalization of free primary education is being accelerated, and the private sector's participation in educational development is encouraged. Many Pakistanis who can afford the cost of private schools choose to send their children to these institutions, rather than public schools. In some areas, private

institutions are setting a standard of high quality which the public schools have yet to attain. The Government is attempting to make improvements in technical and vocational training facilities. In secondary and higher secondary education, greater emphasis is being placed on science and technical education, and many schools are introducing computers into their instructional programs.

There are 24 universities in Pakistan. Some of the more prominent private universities are the Agha Khan Medical University and Hamdard University in Karachi, and the Lahore University of Management Sciences in Lahore. The prestigious Quaid-i-Azam University in Islamabad conducts all its programs at the graduate level. The Allam Iqbal Open University, also in Islamabad, offers courses through radio, television, and correspondence. Universities are monitored and financed by the University Grants Commission. Several universities follow the American semester system. Tuition at the public universities is negligible and meets virtually none of the cost of higher education. The private universities, on the other hand, charge high fees, but also offer financial assistance to deserving students.

It must also be emphasized that during any given year there are approximately 10,000 Pakistani nationals studying abroad at American colleges and universities.

Commerce and Industry

Pakistan's per capita income of U.S. \$470 is the highest in the subcontinent, but it is still a poor country by world standards. The relative prosperity of the industrialized regions around Karachi and Lahore contrast sharply with the poverty of semi-arid Balochistan and the mountainous Northwest Frontier Province. The largest sector of the economy is service, which constitutes 49% of the gross domestic product (GDP). The economy also

relies heavily on the agricultural sector, which contributes about 24% of the GDP. Agriculture employs over half of the work force, and provides, directly or indirectly, over half of the export receipts. Cultivation of the rich alluvial soil of the Indus River Basin has always been the chief economic activity of the country. The major crops are wheat, cotton, rice, and sugarcane. However, despite developments in agriculture Pakistan still must import many major food items including wheat, consumable oil, and sugar.

Growth in the industrial sector, which accounts for about 18% of the GDP, has declined in recent years largely due to inconsistent economic policies of successive governments. However, significant progress has been made in diversification of manufacturing. Major industries include cotton textiles, fertilizer, cement, food processing, vegetable ghee, sugar, and steel. Although significant quantities of natural gas are present in Pakistan, and several major dams on the Indus River system provide a good deal of hydroelectric generating capacity, the country continues to rely on massive levels of imported oil to meet its energy requirements. In recent years, periodic power blackouts known as "load shedding" have been considerably reduced by sizable foreign investment under the Government's Private Power Policy.

Pakistan's balance-of-payments position remains weak. In recent years the dollar value of exports has stagnated at U.S. \$8.5 billion level. Substantial inflows from abroad, not only in the form of remittances from Pakistanis working in the Persian Gulf and in Europe, but also foreign assistance, have contributed to easing the imbalance. Chief exports include rice, leather goods, carpets, and cotton yarn and textiles. Major imports are petroleum, machinery, consumable oil, wheat, iron, and steel. Pakistan's principal trading partners are the U.S. and Japan.

Transportation

Automobiles

Since driving is on the left-hand side of the road, right-hand drive cars are safer, although both left-hand and right-hand drive vehicles are used. Islamabad, with its wide avenues and four lane roads, lends itself to the use of left-hand-drive vehicles. However, in other areas, because of heavy congestion and narrow streets, use of a left-hand drive car can be dangerous. A number of road hazards, both animate and inanimate, place great reliance on sound suspension, horns, and good brakes. Persons whose cars have the new small emergency spare tire should consider investing in a full size rim and spare tire. Flats are frequent and reliable repair facilities are not always close at hand.

Car maintenance is adequate. Except for Japanese vehicles, spare car parts are scarce and expensive. Cars most commonly found in Pakistan are Toyota Corollas, Coronas, Cressidas, and Land Cruisers; Honda Accords and Civics; and Mitsubishi Pajeros (though Pajeros are not recommended for Karachi where they are a favorite target of thieves).

It is possible to order a new car from Japan. These cars are right-hand-drive vehicles, which cannot be imported into the U.S. without costly safety and emissions alterations because they do not meet U.S. standards. The good news is that they cost at least 40% less than an equivalent model that is manufactured for the U.S. market.

To receive a Pakistani driver's license, you must have a valid U.S. driver's license. Temporary licenses are not sufficient. International driver's licenses are not recognized by the Government of Pakistan. Legal driving age in Pakistan is 18 years for any type of vehicle.

Local third-party liability insurance is mandatory. Costs vary depending on the size of the engine: up to 1,000 cc, the premium is about \$16 a year;

1,000-2,000 cc, about 21 a year; and over 2,000 cc, about \$24 a year. Comprehensive and collision insurance is also recommended, available locally, and less expensive than in the U.S. Bring a certificate from your U.S. insurance company, or from another country, showing a 5-year claim-free record to obtain substantial premium reductions. Some keep their U.S. insurance or, if possible, insure with an overseas specialist (Lloyds or Clements). Arrange for transit insurance, marine and rail policy, to include final destination when shipping your car.

Gasoline and diesel are available throughout the country and the price is fixed by the Pakistani Government. Octane ratings lower than in the U.S. allow low-compression, six-cylinder engines to run better. Regular gasoline averages 80 octane, and super gasoline averages 87 octane. Occasionally, 100-octane gasoline is available. Regular gasoline lacks additives that make U.S. gasoline more efficient in high-compression engines. Presently, the price of "super" gasoline is about 42¢ per liter, and diesel prices are about 21¢ per liter.

Local

Public transportation includes buses, vans, taxis, horse-drawn tongas, and motor scooter rickshaws. Buses are overcrowded, of questionable safety, and are generally not used by Westerners. Taxis are unsafe due to the poor conditions of the vehicles and the unsafe driving practices of the drivers. Motor rickshaws are available in most cities except Islamabad. They are slow, poorly protected from the weather, and dangerous because of erratic driving habits. Most public transportation is not suitable for official Americans.

Regional

Pakistan is served by Pakistan International Airlines (PIA) and a number of international carriers. However, no U.S. carriers offer service to or from Pakistan although United Airlines recently entered into a "code share" arrangement

with several other international carriers. Karachi maintains the nation's largest airport with service to and from a variety of destinations on both PIA and other international airlines. Air service is more limited in Islamabad with flights on only three carriers: PIA, Saudi, and British Airways. British Airways offers thrice weekly direct service from London. Inter-country travel is facilitated by PIA which flies to all major cities in Pakistan. However, these flights are often crowded and overbooked so take care to confirm your flight in advance.

Rail travel is also possible, though not advised. An express train from Karachi to Lahore takes about 20 hours; Rawalpindi is an additional 6 hours. Train travel can be dangerous due to a high accident rate and frequent incidents of crime.

Road transportation between major points is possible, but roads are usually crowded and in poor repair. Travel by car from Karachi to Lahore takes 2 days. However, travel outside of Karachi and into the Sindh interior must have prior approval of the Government of Pakistan due to severe law and order problems. Travel by land is therefore not advised. The drive from Lahore to Islamabad normally takes 4 hours on the modern express Motorway which was inaugurated in December 1997. The drive from Islamabad to Peshawar takes about 3 hours. Again, driving is dangerous on main trunk routes, with few clean rest stops available.

Communications

Telephone and Telegraph

Telephone service in Pakistan is adequate. Direct-dial service connects all major cities in the country, and international direct dial service is available from Pakistan to most foreign countries including the United States. Phone bills should be monitored closely to assure that you are billed only for calls placed from your phone.

Station-to-station calls to the U.S. cost Rs. 52 (U.S. \$1.26) per minute. International direct-dial may be accomplished from your residence. International calls may also be booked with the local operator, but it takes time and the call is limited. During the rainy season the telephones are sometimes out of order; however, service is normally restored within one day.

E-mail and Internet services are also available at reasonable rates. FAX service to the U.S. costs Rs. 52 per minute.

Mail

International airmail service to and from the U.S. is available and many use international aerograms.

Radio and TV

There are two television stations in Pakistan: Pakistan Television (PTV) is countrywide, and Shalimar Television Network (STN) is available in Lahore, Karachi, and Islamabad/Rawalpindi. PTV carries news, musical programs, documentaries, dramas, and sports in Urdu or other local languages. It also carries old American sitcoms and movies from time to time. News in English is broadcast at 7 p.m. daily. PTV is not regarded as an entertainment or recreation source for Americans. STN has started partial productions, airs acquired programs from many sources and carries CNN broadcasts for 8 hours per day. Acquired programs include British and American sit-coms, Urdu and English films, and Public Diplomacy-supplied documentaries on science, art, and wildlife. All programs on PTV and STN are censored to remove anything which might be objectionable.

Satellite dishes have become common here. With a dish, one can pick up CNN, Star (Hong-Kong based system featuring, BBC, MTV, sports and entertainment), and several Chinese and Arabic channels. Dishes and receivers are readily available and reasonably priced (currently from \$150 to \$500).

All television programming in Pakistan is 625 PAL standard. The American Club in Islamabad maintains a wide variety of movies in NTSC format for rental. Audio tapes are widely available in local stores but are also of uneven quality. CDs are readily available, but selection is still limited and prices are cheaper than in the U.S.

Quality English, Dutch, or Japanese television sets can be bought on the local market, but prices are sometimes higher than in the U.S. The most satisfactory sets are multi-system sets which can handle PAL and NTSC signals. Personnel can purchase multi-system VCRs at reasonable prices in Pakistan, especially in Peshawar. Prices are comparable to those available in the U.S. Converting NTSC systems to PAL is not advisable.

Most Americans bring a VCR and TV from the U.S. A multi-system TV which handles PAL as well as NTSC is advisable. Pakistan has a country-wide radio system. Most of the programming is in Urdu or other local languages. There are three short English language news broadcasts daily. Music aired is Pakistani.

A good short-wave radio can be helpful for wider coverage of world events. VOA, BBC, and other nations' broadcasts have special programs in English for this region. An outside antenna will improve reception, and a radio with push-button capability to lock-in a station makes shortwave hunting easier.

Newspapers, Magazines, and Technical Journals

Pakistani newspapers in English are readily available in major cities and may be home delivered. The International Herald Tribune and USA Today are flown in from Hong Kong and cost about \$1.75 a copy. Hotel newsstands and bookstores carry international editions of Time and Newsweek. However, while books are government subsidized magazines are not which tends to make them rather expensive. Subscriptions from the local news dealer may be available for home or

office delivery. Single copies of American magazines and comic books may also be found at newsstands and bookstores.

Health and Medicine

Medical Facilities

Pakistan has limited but usually adequate hospital facilities. Laboratory and X-ray facilities are available, but service, equipment, and cleanliness are not consistent with U.S. standards.

Bring your own supply of any medications, both prescription and over-the-counter, used on a regular basis, and make arrangements for resupply by mail. Pharmacies throughout Pakistan can fill some prescription needs and have a large variety of non-prescription drugs, some manufactured locally and some imported. Locally purchased drugs may cost less than in the U.S. Some non-prescription items are available at the commissaries. If you have specific questions about what to bring, write to the Regional Medical Officer.

Expectant mothers are advised not to deliver in Pakistan.

Although dental care is available in Pakistan, most employees prefer to have dental evaluation and treatment in the U.S. Orthodontia service is limited.

Standard prescriptions for glasses can be filled inexpensively, but no safety glass is available and standards are uncertain. Americans send eyewear to the U.S. for the filling of prescriptions. Have glasses checked before coming to post and bring a spare pair.

Islamabad: Civilian hospitals in the Islamabad/Rawalpindi area are adequate although not up to American standards. However, emergency surgery and trauma cases can be sent to Shifa International Hospital in Islamabad.

Karachi: Hospital facilities especially the modern and well-equipped Agha Khan Hospital in Karachi are occasionally used for inpatient emergency care and radiologist and laboratory services. Individuals requiring elective surgery, diagnostic tests not available in Karachi, or treatment for serious illnesses may be evacuated to London or Singapore.

Although dental care is available, have dental evaluation and treatment before reporting to post. Orthodontia service is limited. Fluoride tablets are provided for children.

Individuals taking any long-term medications are advised to bring an adequate supply from home.

Lahore: The Shaikh Zayed Hospital is used in emergencies and has a few British or U.S. trained doctors, but is not up to U.S. standards. Inpatients often need round-the-clock supervision by family or friends.

Peshawar: There are hospitals in Peshawar, but standards are far below those found in the U.S. Persons living in Peshawar often choose to drive to Islamabad to get their health care.

Community Health

Americans are commonly plagued by diarrhea of multiple causes and upper respiratory infections. Because of its higher standards of sanitation and living conditions, frequent immunizations, and preventive medicines, the American community is fairly well isolated from malaria, tuberculosis, typhoid fever, rabies, and polio. However, they still occur and reasonable precautions are necessary.

Sanitation throughout Pakistan is a constant problem, although overall health conditions where Americans live are generally good. The public water supply is unsafe everywhere and drinking water must be filtered and boiled. Sewage systems are antiquated or inadequate. Refuse collection is erratic. The burning of cow dung, leaves, and garbage often produce irritating dust and smoke.

Refrigeration and sanitary packaging of foodstuffs in public markets are rare. To avoid enteric disorders, wash all fresh produce in chlorine solution or cook it thoroughly before eating.

Preventive Measures

Check your immunization record. If you are entering (or reentering after a trip) from South American or African countries, you will need a yellow fever immunization (more easily obtained in the U.S. than in Pakistan). For your own protection, also have typhoid, tetanus, and hepatitis A and B immunizations. Rabies is endemic in Pakistan, and it is recommended that anyone planning to stay in Pakistan should have the preventive rabies immunization series. Malaria prophylaxis is recommended and should be initiated 2 weeks before arrival in Pakistan. Do not neglect your immunizations or booster shots.

It is recommended that you include first-aid supplies in their luggage or airfreight. First-aid supplies should include the following items: first-aid manual, thermometer (for small children include a rectal thermometer), tweezers, scissors, Band-aids, gauze pads, gauze roll, tape, triangle bandage, ace bandage, skin cleanser (alcohol, Betadine, peroxide), aspirin and/or acetaminophen (Tylenol), antacid (Maalox, Gelusil, Mylanta), anti-diarrheal (Pepto Bismol, Kaopectate), antibacterial ointment (Bacitracin, Neosporin), sunscreen, insect repellent (Deet), dry-skin lotion, and calamine lotion.

NOTES FOR TRAVELERS

Passage, Customs & Duties

There are some direct flights to Islamabad, but you should check your itinerary carefully. One PIA direct flight from London stops in Tehran. Anyone flying to Pakistan via the Pacific must have a Chinese visa, if the plane stops in China,

even though the traveler is only in transit and does not leave the plane.

Carry with you your valid American driver's license (a temporary one will not do), insurance papers, automobile registration if you are shipping a car, and special medicines.

A passport is required. The visa requirement may be waived for American Citizens not of Indian origin who arrive for a visit of less than 30 days. Please check with the Pakistani embassy or consulate before arrival. Information on entry requirements can be obtained from the Embassy of Pakistan, 2315 Massachusetts Avenue, N.W., Washington, DC, 20008, telephone (202)939-6295 or 6261, Internet home page: <http://www.pakistan-embassy.com>. Travelers may also contact one of the Consulates General of Pakistan located at 12 East 65th St., New York, NY 10021, telephone (212)879-5800, fax (212)517-6987, or 10850 Wilshire Blvd., Suite 1100, Los Angeles, CA 90024, telephone (310)441-5114, fax (310)441-9256. If a traveler plans to stay longer than 30 days in Pakistan, he or she must register with the local police station and obtain a residence permit. This permit must be returned to the same office for an exit visa when the traveler is preparing to leave the country. Airlines may require travelers departing the U.S. to present multiple photographs and complete copies of passports and other travel documents. Tourist facilities are available in the principal population centers of the country.

American citizens living in or visiting Pakistan are encouraged to register at the Consular Section of the U.S. Embassy or Consulate in Pakistan and obtain updated information on travel and security within Pakistan. They are located at the following addresses:

The U.S. Embassy in Islamabad is located at Diplomatic Enclave, Ramna 5, telephone (92-51) 2080-0000; consular section telephone (92-51) 2080-2700, fax (92-51) 282-2632, website <http://www.usembassy.state.gov/>

islamabad or www.usembassy.state.gov/pakistan.

The U.S. Consulate General in Karachi is located at 8 Abdullah Haroon Road, telephone (92-21) 568-5170 (after hours: 92-21-568-1606), fax (92-21) 568-0496, website <http://www.usembassy.state.gov/pakistan> or www.usembassy.state.gov/posts/pk2/wwwhamcn.html.

The U.S. Consulate in Lahore is located on 50-Empress Road near Shimla Road or Sharah-E-Abdul Hamid Bin Badees, (Old Empress Road), telephone (92-42) 636-5530, fax (92-42) 636-5177, website <http://usconsulate-lahore.org.pk/>. Email address: amconsul@brain.net.pk

The U.S. Consulate in Peshawar is located at 11 Hospital Road, Cantonment, Peshawar, telephone (92-91) 279-801 through 803, fax (92-91) 276-712, web site <http://brain.net.pk/~consul/>.

Pets

No regulations restrict importation of household pets (dogs, cats, birds); however, health and vaccination certificates may need to be presented. Certificates should be issued no more than two weeks prior to arrival in Pakistan. Rabies shots must have been given within four weeks preceding arrival. The easiest way to bring a pet into the country is to bring the pet along as accompanying air baggage. Special rules apply to the importation of pet monkeys. Be sure to check with all airlines for their specific requirements.

Rabies is endemic in Pakistan, heartworm is present, and ticks are plentiful, even in the city. Vaccinate your pets as applicable for rabies, distemper, leptospirosis, hepatitis, parvo, and feline leukemia. Bring an ample supply of special medicines for your pet, including heartworm medicine, deworming medicines, flea/tick and mange/scabies preparations, pet vitamins, rawhide bones, and grooming needs. Ship bird seed and gravel, as the

commissary only stocks dog and cat food and kitty litter.

There are a few veterinarians in Pakistan, but services and facilities are below U.S. standards. Fatal anesthesia overdosing during surgery is one risk to pets. There is one kennel of limited quality in Islamabad. There are no kennels in Karachi or Lahore. People with older animals or pets not in excellent health might want to consider leaving them behind. Between the climate and veterinary care, a tour in Pakistan can be hard on a family pet. Animals are not allowed in hotels in Pakistan.

Firearms and Ammunition

Only personnel with diplomatic or consular titles are authorized to import firearms.

Currency, Banking, and Weights and Measures

The currency of Pakistan is the rupee (Rs), which is divided into 100 paise. The rate of exchange in late 1999 was about 51 rupees to the dollar. Paper money is used in notes from Rs. 1 to Rs. 1,000. Coins are in short supply.

Travelers are restricted in the amount of rupees they can bring into and out of the country. In Pakistan the rupee is the only currency that can be used.

Pakistan uses the metric system but be prepared to figure in miles and yards as well. Gasoline is sold by the liter (1.0567 quarts), cloth by the meter (39 inches), food by the kilogram (2.2 pounds), and distance is measured by the kilometer (0.625 miles).

Special Information

In 1956, Pakistan was proclaimed an Islamic Republic; Islam is, therefore, part of Pakistan's national identity. Some understanding of Islam and the social pattern it encourages is essential for Americans living in Pakistan.

In general, good taste and common sense will tell you how to avoid

offending your Muslim acquaintances, but a few specific points may be helpful. For example, men shake hands with men without hesitation, but it is a good idea to wait for a woman to extend her hand first in greeting.

The custom of "purdah," strict seclusion and veiling of women, is gradually disappearing as more educated Pakistani women take their places in public life. Purdah is still observed, especially in small towns and rural areas, where women may still wear the traditional black veil and coat (burkah). Even among the unveiled, a certain reticence persists about socializing outside the home. In many cases, this is reinforced by the husband's attitude. A Pakistani guest may commonly appear at a dinner party without his wife whether or not she observes purdah.

This tradition also accounts for the advice that women should cover-up when in public areas. The crowd in the bazaar, for instance, is unaccustomed to seeing bare arms and short sleeves on a woman, and can lead to unwanted jostling and touching. Staring is culturally common, and while at times discomfoting it should not be considered threatening.

Propriety is particularly important when visiting a mosque. Shoes are always removed for visits to mosques and holy places.

The public consumption of alcohol is banned in Pakistan. Foreigners registered in international hotels can get a permit to be served alcoholic beverages. These drinks are expensive. In their own homes, Americans are free to follow their usual customs concerning liquor. One should not offer alcohol to a Muslim Pakistani. It is thoughtful to have an adequate supply of soft drinks and juices for your Pakistani guests.

Devout Muslims will not eat or touch pork; some cannot bear the sight of it. To avoid embarrassment, do not serve pork or foods contain-

ing pork when Muslim guests are present. Some Muslim servants object to cooking pork. Dogs are considered unclean by some Muslims. Family pets should be confined when Pakistanis are in your home. It is a good idea to keep your dog away from maintenance workers when they are in your house.

Ramadan is a religious period observed by abstaining from eating, drinking, or smoking from sunrise to sunset for one month. You will want to refrain from daytime entertaining of your Pakistani friends during this month and should be considerate of your servants' physical limitations.

Photographs should be taken with discretion to avoid giving offense. Always obtain permission before photographing people, particularly women. For security reasons, it is also forbidden to photograph military installations, airports, and bridges.

PALAU

Republic of Palau

Major City:

Koror

INTRODUCTION

Some areas of **PALAU** were settled in 1000 BC or even earlier, likely by Malays from Indonesia, Melanese from New Guinea, and by some Polynesians. Spain, Portugal, and England all laid claim to the islands at various times. In 1783 the English vessel *Antelope*, under the command of Captain Henry Wilson, was shipwrecked on one of the Rock Islands between Koror and Peleliu. With the help of the Koror high chief Ibedul, Wilson and his crew stayed for three months to rebuild the ship. Afterwards, more foreign explorers sailed through Palauan waters and the islands were open to further European contact. Germany acquired the islands around the beginning of the 20th century and then handed them over to Japan. After the defeat of Japan in World War II, the US took control over what were then called the Marshall, Caroline and Marianas Islands. The islands became part of the United Nations' Trust Territory of the Pacific Islands, with Palau administered as one of the three island groups' six districts. Palau became independent with the ratification of a Compact of Free Association with the United States that came into effect on October 1, 1994.

MAJOR CITY

Koror

Koror, on Koror Island, is the capital of Palau and has a population of about 12,000. Most Palauans and nearly 90% of Palau's 2,800 foreign residents live in Koror. The island of Koror covers only 3.5 square miles and is the center of commerce with most of the country's hotels, shops, and eating establishments. There is an ongoing migration to the capital city. A two-lane concrete bridge links Koror with the large island of Babeldaob (Babelthuap). The Koror state government provides public bus service. Beyond Koror the main road is paved up to the airport with coral and dirt roads connecting the other states. Palau's only deepwater harbor is at Malakal in Koror, and the international airport is 6 miles from the capital. Koror's economy is driven by tourism, particularly for Palau's scuba diving and snorkeling opportunities. A new capital is under construction in eastern Babeldaob, about 12 miles north-east of Koror.

Recreation and Entertainment

Palau has some of the world's most impressive dive sites, with miles of unexplored barrier reefs. The waters

provide many spectacular vertical drops, especially along the Rock Islands. Snorkeling, sea kayaking, sailing, and fishing are also popular. Blue holes, underwater caves, World War II wrecks, and diverse marine life attract tourists. Jellyfish Lake is an inland marine lake that is cut off from the rest of the ocean. The lake teems with jellyfish, and snorkelers can swim among them because they have no sting.

Tropical forests cover much of the islands, and other areas have mangrove forests and even grassland savannas. Palau has 50 species of resident birds, and the marine waters have over 1,500 species of fish and over 700 species of coral and anemones. There are also salt-water crocodiles, giant clams, and dugongs (closely related to the manatee).

Ancient village sites on the Rock Islands and the grand terraces on nearby Babeldaob date to 1000 BC. Babeldaob is Palau's biggest island, some 27 miles long and 15 miles across at its widest and it is covered in dense foliage. The terrain is varied with steep mountains, freshwater lakes, and sand dunes. There are 37 stone monoliths known as *badru-lchau* that testify to the island's early civilization. Other remnants of Palau's early history are located at Imeungs in the southwest of the

Museum Bai in Koror, Palau

island. The ruins of stone foundations and pillars are all that remain of the ancient community.

During World War II, fighting between US and Japanese forces took place on Koror, as well as on the nearby islands of Peleiu and Angaur. Peleliu is the southernmost of the Rock Islands, and in 1985 it was designated a US National Historic Landmark. Abandoned tanks, helmets, and bomb casings are still strewn about the island.

The Palau National Museum has over 1,000 relics from the islands' past, including shell money and traditional weapons. Traditional Palauan culture is noted for its intricately carved wooden storyboards and delicate weavings. The *bai* or public meeting center, offers insights into traditional Palauan society

through the painted carvings that tell a story on interior posts, beams, and gable ends. Palauan culture today has a blend of traditional, Japanese, and American influences. Koror has several open-air cocktail lounges, some offering live entertainment or karaoke.

Koror annually hosts several festivals and special events. The Youth Day Fair on March 15 features open-air concerts and sports competitions. The Palau Sport Fishing Association holds its annual fishing derby during the last week in April or the first week in May. Senior Citizens' Day on May 5 features dance competitions, handicrafts exhibitions, parades, and floats. The Palau Arts Festival falls on July 9, Constitution Day. There are also Independence Day celebrations on October

1. The third week in November is Tourism Awareness Week.

COUNTRY PROFILE

Geography and Climate

The Republic of Palau is a scattered group of islands in the westernmost part of Micronesia. The country's territory includes some 340 islands east of the Philippines that stretch out over an area 125 miles in length. The total land area of the islands is 170 square miles. Babeldaob, the largest island, covers 153 square miles.

Palau's islands include four topographic types: volcanic, high lime-

stone, low platform, and coral atoll. The Palau barrier reef encloses a lagoon on the western side that contains a large number of small elevated limestone islets known as the Rock Islands. Babeldaob and Koror have the highest elevations, at 713 feet and 2,061 feet, respectively. Several northern islands, such as Arakabesan and Malakal, are volcanic formations. There are tall mountains, lush and thick jungles, caves, waterfalls, spacious beaches, and rocky shores. The waters are clear enough in some places to see depths of 300 feet.

Palau has a maritime tropical climate, with little temperature variation by season or time of day. The average temperature is 82°F during the cooler months. High humidity and heavy precipitation occur throughout the year. The heaviest rainfalls occur between May and January. Typhoons and tropical storms occur from July through November.

Population

Palau has a population of about 19,000. The states of Koror and Airai contain about 80% of the population.

Most Palauans are Micronesian, with a mixed Polynesian, Malayan, and Melanesian background. About 10% of the population is Filipino. There are also smaller numbers of other Micronesians, Chinese, and people of European descent.

Most of the population is Christian (Catholics, Seventh-Day Adventists, Jehovah's Witnesses, the Assembly of God, the Liebenzell Mission, and Latter-Day Saints). About one-third of the population observes the Modekngei religion that is indigenous to Palau.

English is the official language in all of Palau's sixteen states. Palauan is also an official language in thirteen states. Sonsorolese is an official language in the state of Sonsoral, as is Tobi in the state of Tobi.

Angaur and Japanese are also spoken in the state of Anguar.

Government

Palauan villages were and still are ordered around 10 clans that are organized matrilineally. Once, a council of chiefs from the 10 ranking clans governed the villages, and a parallel council of their female counterparts held a significant advisory role in the division and control of land and money.

In 1978 Palau opted for a separate negotiation with the US regarding future political status, due to the expiration of the UN Trusteeship. On July 9, 1980, the Palau constitution was ratified, and its first constitutional elections were held.

Independence came on October 1, 1994 with the entry into force of the Compact of Free Association with the United States. Palau was the last Trust Territory of the Pacific Islands territories to gain its independence. Under the Compact, the U.S. will remain responsible for Palau's defense for 50 years. Otherwise, Palau is a sovereign nation and conducts its own foreign relations. Since independence, Palau has established diplomatic relations with a number of nations, including many of its Pacific neighbors. Palau was admitted to the United Nations on December 15, 1994, and has since joined several other international organizations.

Today, Palau is a democratic republic with directly elected executive and legislative branches. Presidential elections take place every four years, with the presidential and vice-presidential candidates running on separate tickets.

The Palau National Congress (Olbiil era Kelulau) has two houses. In the Senate there are nine members elected through a nationwide vote. In the House of Delegates there are 16 members, one chosen from each of Palau's 16 states. All of the legislators serve four-year terms. Each

state also elects its own governor and legislature.

In keeping with tradition, Palau has established a Council of Chiefs as an advisory body to the president. The Council is made up of the highest traditional chiefs from each of the 16 states. The Council is consulted on matters concerning traditional laws and customs.

The judicial system consists of the Supreme Court, National Court, the Court of Common Pleas, and the Land Court. The Supreme Court has trial and appellate divisions and is presided over by the Chief Justice.

Palau's flag is a yellow circle on a light blue field. The circle is slightly off center toward the hoist.

Arts, Science, Education

Elementary education is compulsory between the ages of six and fourteen and is provided by the government. The Palau High School in Koror is the country's only public high school and accounts for about two-thirds of secondary school enrollment. Postsecondary education is provided by the College of Micronesia's Micronesian Occupational College in Koror.

Commerce and Industry

Tourism is Palau's main industry, accounting for roughly half of the nation's GDP. The greatest attractions to the country are scuba diving and snorkeling among the islands' rich marine environment, including the Floating Garden Islands to the west of Koror. In 1997, the number of visitors was about 67,000, almost three times the actual population of Palau. The greatest number of tourists come from Japan, Taiwan, and the U.S.

Agriculture is mainly on a subsistence level, the principal crops

being coconuts, root crops, and bananas. Tuna fishing is also potential source of revenue.

Construction is the most important industrial activity, contributing over 9% of GDP. Several large infrastructure projects, including the rebuilding of the bridge connecting Koror and Babeldaob Islands after its collapse in 1996 and the construction of a highway around the rim of Babeldaob, boosted activity at the end of 1990s.

The government alone employs nearly 30% of workers. One of the government's main responsibilities is administering external assistance. Under the terms of the Compact of Free Association with the United States, Palau will receive more than \$450 million in assistance over 15 years. The first grant of \$142 million was made in 1994. Further annual payments in lesser

For such a small nation, the general economy does fairly well. Per capita GDP stands at over \$7,000 (1998 est.), which makes it one of the wealthier states in the Pacific Islands. However, the country is heavily reliant on imported foods, fuel, and machinery. Imports in 1999 totaled about \$126 million, whereas exports only brought in about \$14 million.

The remaining economic challenge confronting Palau is to ensure the long-term viability of its economy by reducing its reliance on foreign assistance.

Transportation

Continental Micronesia flies to Palau daily via Guam, the international air service hub for the Micronesia region. There are also three weekly flights to Manila, Philippines. The only asphalt roads are on Koror, Airai, and Melekeok. Palauans rely on small private watercraft for transportation throughout the country.

Side roads in Koror and on the Island of Babeldaob are in poor condition. Maximum speed limit is 25 miles per hour, but slower in congested areas, and passing of slow moving vehicles is prohibited.

Communications

Worldwide telephone, facsimile, telex, IDD, Internet/e-mail service, and operator-assisted dialing services are available. Phone cards are available at PNCC Office and calls can be made from most hotels in Palau.

WSZB is Koror's AM radio station, and there are also two FM stations. Island Cable TV Palau provides 12 channels, including CNN.

Tia Belau is the bi-weekly local newspaper. The government produces the *Palau Gazette*. *The Pacific Daily News* is delivered daily from Guam. Mail to and from Palau uses standard U.S. postal rates and postage.

Health and Medicine

Hospital services are provided by the 60-bed MacDonald Memorial Hospital in Koror. Koror also has the Belau Medical Clinic and the Seventh-Day Adventist Eye Clinic. Smallpox immunization is required for travelers not originating in the U. S. or its territories. Cholera and yellow fever immunizations are required for those arriving from infected areas.

NOTES FOR TRAVELERS

Passage, Customs & Duties

A valid passport or proof of U.S. citizenship and onward/return ticket for a stay up to 30 days are required. A visa is required for stays longer than 30 days. The necessary forms for obtaining an entry permit can be

obtained from airline or shipping agency servicing Palau. For more information about entry requirements of Palau, travelers may consult with the Representative Office, 1150 18th St., N.W., Suite 750, Washington, DC 20036, (202) 452-6814.

U.S. citizens living in or visiting Palau are encouraged to register at the U.S. Embassy. They may also obtain updated information on travel and security within the country at the Embassy. The U.S. Embassy is located in Koror, Palau. There is no street address. The Embassy is located in an area known as Topside, about one and one quarter miles north of the post office and downtown area of Koror on the main road towards the airport. The mailing address of the U.S. Embassy is: P.O. Box 6028, Koror, Palau 96940. The telephone number is (680) 488-2920. The fax number is (680) 488-2911. The Embassy does not issue passports; that function is performed by the Honolulu Passport Agency.

Firearms & Ammunitions

Firearms of any kind are strictly prohibited in Palau. The penalty for possession of a firearm or ammunition is up to fifteen years imprisonment.

Port Moresby, Papua New Guinea

PAPUA NEW GUINEA

Independent State of Papua New Guinea

Major City:

Port Moresby

Other Cities:

Goroka, Kerema, Lae, Madang, Rabaul, Wewak

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Papua New Guinea. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

PAPUA NEW GUINEA "The Land of the Unexpected" is one of the last windows into the Stone Age. It is a country of striking contrasts where more than 1000, diverse tribes coexist with a modern economy based on world-class copper and gold mines.

It is the largest and most diverse of the Pacific Island nations. Covering a land area of nearly 180,000 square miles, it is nearly twice as large as the United Kingdom, and the size of Oregon and Idaho combined.

The geography is dramatic and tremendously varied. The country boasts great outcroppings of mountains ranging in height up to 15,000 feet, as well as vast river systems

and some of the world's most extensive swamps. A number of Papua New Guinea's islands border the Coral and Solomon seas. The coastal waters contain live coral reefs, some rivaling Australia's Great Barrier Reef in all but size.

Much of the country's appeal lies in its people. The more than 3.7 million inhabitants are sparsely scattered throughout the country, with concentrations in a number of towns as well as in the highlands. Physical characteristics vary widely, and over 800 distinct languages have been identified, some spoken by as few as 30 to 40 individuals. This diversity, which has been the subject of intense anthropological and linguistic research, also poses unique political challenges as the government attempts to strike a balance between local autonomy and national authority, which will permit orderly political and economic development.

Independent since 1975, Papua New Guinea retains an Australian flavor and a large expatriate population in its modern sector. The tropical climate is ideal for snorkeling, scuba diving, and sailing.

Living in this island nation presents rare opportunities to observe a traditional society coping with major social, cultural, and political trans-

formations, while striving to maintain the splendor of its history.

MAJOR CITY

Port Moresby

Port Moresby, the capital of Papua New Guinea, is a sprawling town with a population of over 300,000 (1998 est.) located on hilly terrain on the southern Papua coast. Because it lies within a small rain shadow, the city's geography and climate differ substantially from other parts of Papua New Guinea. During the dry season (June-September), hills in the city dry up and turn brown. However, the climate, although hot, is usually pleasant: low humidity (60%), steady trade winds, daytime highs of 80°F, and nighttime lows in the high 60s°F.

During the rainy season, which coincides with the southern summer (October-May), daytime highs frequently reach the low 90s°F; 80% humidity is normal. However, lengthy afternoon rain showers cool things off, and nights are usually in the low to mid 70s°F. At this time of the year, the landscape in Port Moresby is green.

The old center of town is located, lies on a peninsula that helps protect the large harbor from the Coral Sea. A number of modern high rise buildings punctuate the skyline, contrasting with the traditional Motuan villages on stilts along the shoreline. The city's shipping docks and a yacht marina are located along the shore.

Next to the city center are Touaguba and Ela Makana Hills, sites of Port Moresby's best housing and the location of all the Embassy housing. Both benefit from cool ocean breezes and spectacular views of harbor and sea. Centered on a small business district by the harbor, over the years, Port Moresby has expanded via suburban developments some 11 kilometers inland. Boroko, the main shopping area, and adjacent Gordons are the largest middle-class areas of Port Moresby. Both are located 6 to 8 kilometers inland. Jackson's Airport, which can handle 747s, is 11 kilometers from downtown via a newly constructed highway.

Papua New Guinea's capital center is the suburb of Waigani, 8 kilometers from downtown. A six-lane boulevard leads to several modern high rise buildings that house government offices. Waigani is also the site of an 18-hole golf course and several diplomatic missions.

The Parliament House, National Museum and a small theater for live performances are also in Waigani, as is the Prime Minister's official residence. The University of Papua New Guinea, and the National Botanical Gardens, home of one of the world's largest orchid collections as well as a fine sample of Papua New Guinea's exotic birds, is nearby.

Utilities

Electricity is 240v, 50hz. Power can be erratic; surges and spikes are common. Employees are advised to bring voltage protectors and surge suppressors. Those who own computers should bring an uninterruptible power supply. The water supply is usually dependable.

Food

Although some imported items are significantly more expensive than in the United States, most foods used by American or Asian families are regularly available in Port Moresby. Supermarkets and pharmacies resemble their counterparts in Australia rather than those of other developing countries.

A wide variety of meats, fish, canned goods, fruits, vegetables and frozen goods is available. Quality in general is high, with the exception of imported fresh fruits and vegetables which are sometimes offered in poor condition. Most food items are imported from Australia, although limited items imported from the United States are also found in the stores. Locally produced fruits, vegetables, fish, seafood, chicken, eggs and beef are also available. Bread is baked locally. Fresh and UHT "long life" milk, both imported, are widely available. A wide range of good quality dairy products, including ice cream, is always available. Major supermarkets maintain delicatessen sections stocked with a good selection of sausage and cheeses. Coffee produced in Papua New Guinea is high quality and flavorful. However, instant coffee is imported and decaffeinated is not available in the local market. There is a bottling plant in Port Moresby and a wide variety of soft drinks are always available.

Wines available locally are primarily from Australia and New Zealand.

In general, prices of imported and processed foods are 1.5 to 2 times more expensive than in the United States. Locally produced fruits, vegetables and sea food, however, are quite inexpensive. Some all-American items which are not quite the same locally and which employees may wish to bring with them are chocolate chips, peanut butter, decaffeinated coffee and special convenience foods, like canned pumpkin or pudding mixes. Candles are expensive and not good quality.

Clothing

Lightweight, summer clothes are most useful in this tropical climate. Cotton clothes and underwear are most comfortable for activities out of doors. Locally available shoes, clothing and fabrics are limited in choice, expensive and generally not good quality.

Fashion tends to the practical and casual. During the wet season, an umbrella is most useful. Raincoats are too hot. However, raincoats, ponchos, sweaters and light-weight jackets are useful for travel in the highlands, where temperatures are significantly cooler. Light sweaters or wraps are also useful in Port Moresby after sundown during the cooler months. Hats and sunglasses are necessary even for short periods in the sun.

Men: During the day, short-sleeved, open neck shirts with slacks are customary. Tropical formal wear includes a summer-weight suit and tie, or long-sleeved white shirt and tie with slacks. Tropical informal attire (for most social events) is an open-neck sport shirt worn with slacks. Tropical floral print shirts, like those widely sold in Honolulu, are currently fashionable for informal evening wear.

Women: Lightweight dresses and short-sleeved summer suits are worn to the office. Many women find pantyhose uncomfortable in the tropical heat and do not wear them. Slacks, walking shorts, and cotton skirts and dresses are acceptable for street wear and travel. Cotton underwear and sleepwear are most comfortable. Tropical formal evening wear is generally street-length cocktail dresses or suits. Tropical informal evening wear can be summer dresses or summer evening slacks and shirts.

Children: Primary and secondary students wear uniforms to school. Shorts, blue jeans, and t-shirts worn with sandals or athletic shoes are universally popular. Girls may want cotton dresses for dressier occasions. Children too should have hats and sunglasses.

Supplies and Services

Toiletries, cosmetics, medicines and common household articles normally used by American families are available locally. Many are U.S. brand names made by Australian subsidiaries. However, prices for toiletries are high and brands of cosmetics sold in the United States are not available. Bring a supply if they have special preferences. Hardware stores are well stocked, and kitchenware and household linen is available, although more expensive than in the United States.

Most medicines are available, but sold under brand names common in Australia. Ask your doctor for the generic name of the medication they will need in Port Moresby. Common medicines are sometimes considerably cheaper than in the United States.

Most basic services are available at varying levels of reliability. Dry cleaning and shoe repair are available, but expensive. There are good unisex hair salons which offer competent service at prices similar to those in the U.S. Garage and appliance repair services are spotty in quality and parts can be expensive.

Domestic Help

Female domestic servants who do general housework, laundry and child-minding are available, although those who are English speaking and well-trained are not easy to find. Competent cooks are very scarce. Families with small children usually rely on their domestic help for babysitting services. Current weekly wages for domestic help, working five days a week, range from \$140 to \$200 a month.

Religious Activities

Most major Christian denominations are represented in Port Moresby. Anglican, Assembly of God, Baptist, Roman Catholic, Lutheran, Seventh Day Adventist, Methodist, Mormon and Jehovah's Witnesses churches all have weekly services. Congregations include Papua New Guineans and foreigners. Ministers and priests are both

expatriate and Papua New Guinean. Services are in English, pidgin or Motu. An Islamic congregation also meets weekly. There is no Jewish synagogue, or Hindu or Buddhist temple.

Education

Schools used by children of post personnel in Port Moresby include the Port Moresby International School (kindergarten through grade 12), the Ela Beach School (primary grades), and the Murray International School (primary grades). The schools employ national and expatriate teachers, many of whom are spouses of expatriates working in Papua New Guinea. The curriculum is similar to that followed in Australia. All three schools have extensive playing fields and sports programs. The Port Moresby International High School offers an International Baccalaureate program in grades 11 and 12. The school year begins at the end of January and ends in mid-December. It is broken into four terms approximately ten weeks in length, with a long vacation in December-January.

Sports

Sports available to everyone include golf, tennis, scuba diving, bush walking, jogging, softball, swimming, waterskiing, windsurfing, squash, snorkeling and sailing. Soccer and rugby are popular spectator sports. Little League Baseball is available to both boys and girls. Parents willing to help coach are always welcome.

Karate and dance schools take all ages. Diving lessons are offered on a regular basis. There are occasional theater productions by university, regional and amateur groups. The amateur theater group is open to new members. There are occasional choral presentations by church-based choirs. Exhibitions of contemporary and traditional art are organized at the National Gallery and Museum, which has a good permanent collection of traditional art as well as a small collection of live domestic birds and animals. The beautifully kept National Botanic Gardens feature an orchid exhibi-

tion and a walkthrough aviary and provide safe and beautiful picnic facilities for a small fee. There are several restaurants throughout the city, featuring both Asian and Western cuisine. Many expatriate residents are members of clubs, which run restaurants, bars and sporting facilities. The Port Moresby Yacht Club operates a marina in the city center. Another boat mooring facility is available for a fee a short distance out of town. There are also some secure night spots which offer discotheques, bars and slot machines.

There are no movie theaters, although a local hotel offers recent releases every Sunday night in a theater atmosphere. However, video tapes can be rented and satellite television is available.

Special Information

Crime is a serious problem in Port Moresby, and consists of everything from bag snatching and car jacking to armed robbery and rape. Much of the crime is committed by young men and boys who, if they have access to weapons, easily become violent. Widespread abuse of alcohol and marijuana aggravates the problem. Hijacking and highway robbery is common and makes road travel outside the towns dangerous. The few criminals notwithstanding, there have been no incidents of terrorism in PNG. Nor is xenophobia, or racial or religious animosity common.

OTHER CITIES

GOROKA, located in the central highlands 300 miles northwest of the capital, is a provincial headquarters with 22,000 residents. The center of European settlement in the region, the city has an animal husbandry station. Goroka's mile-high elevation contributes to its expanding tourist business. There is an airport here, as well as a major truck route heading east.

The port of **KEREMA** lies on Kerema Bay on the Gulf of Papua, in

south-central Papua New Guinea. This became a regional seat in 1958 when the district (now provincial) headquarters was transferred from Kikori. Kerema has a fish-processing factory; rubber and coconuts are grown near the city. There is a road link to Malalawa and an airstrip. The population is approximately 4,000.

LAE is situated on Huan Gulf on New Guinea Island, approximately 200 miles north of Port Moresby. During World War II, it was occupied by the Japanese, and became a major supply base. The city suffered heavy bombings by Allied planes in that period, and was eventually occupied in September 1943 by the Australians. Today, Lae is a commercial center, and a base for air transport lines in the area gold fields. Lae has an estimated population of 80,000.

MADANG (formerly called Friedrich-Wilhelmshafen), with some 27,000 residents, is situated on Astrolabe Bay, on the country's eastern coast. The area is a center for the timber industry based in the Gogol forest. It also is a communications point for offshore islands, as well as a distribution hub. Agricultural products are exported from Madang; industries include engineering workshops and timber milling. This was the administrative center for a German colony abandoned because of malaria in 1899. Madang was the objective of an Australian drive along the coast in World War II. It was captured by Australian and U.S. forces in April 1944. A lighthouse in the harbor commemorates coast watchers who helped the Allies in the war.

RABAUL, situated on Simpson Harbor in the northeastern part of New Britain Island, was a major Japanese air force base after occupation in 1942 and, as such, was headquarters for the projected invasion of Australia. The city, surrounded by volcanoes, was damaged by the eruption of Matupi in 1937 and, consequently, the administrative government of the Trust Territory of New Guinea was moved to

Lae. Rabaul had been the capital of German New Guinea in the early years of this century and, from 1920 to 1941, was the principal town of the Australian mandate. It is still a major port and has a population of nearly 18,000.

WEWAK is located on the country's northern coast, about 75 miles west of the mouth of the Sepik River. It was a Japanese base in World War II, bombed heavily by American forces in 1943. The Allied advance along the northern coast bypassed the city. Wewak is a port of call for coastal and Australian shipping. The economy is hindered by the primitive back-country conditions. The discovery of gold in the Sepik area in the 1930s led to the community's founding. The fields have since been abandoned. With over 23,000 residents, Wewak has an international airport and road links to Maprik and Paguwi.

COUNTRY PROFILE

Geography and Climate

Papua New Guinea lies in the southwest Pacific, just south of the equator and about 100 miles north-east of Australia. The largest of the Pacific Island nations, it includes the eastern half of the island of New Guinea which it shares with Indonesia and numerous offshore islands, the largest of which are New Britain, New Ireland, Bougainville, and Manus. Their combined surface area is 286,248 square miles, slightly larger than the state of California.

The main island comprises 85% of Papua New Guinea's total land area. A complex system of mountains extends from the eastern end of the islands to the western boundary with Indonesian Irian Jaya. Precipitous slopes, knife-sharp ridges, great outcroppings of mountains rising to heights of almost 15,000 feet, and broad upland val-

leys at altitudes of 5,000-10,000 feet characterize this area. Most of the terrain is covered by dense jungles of tropical rain forest. Large rivers comprising the world's twelfth largest riverine network flow to the south, north and east; few are navigable except by small boats in the lower reaches. The largest river, the Fly, which begins in the mountains of western Papua, flows over 700 miles, and can be navigated for 500 miles.

Between the northern and the central range of mountains lies the Central Depression, which contains the Sepik, Ramu, and Markham River valleys. Lowlands and rolling foothills of varying widths stretch along most of the coasts. Huge stretches of wetlands are common in the poorly-drained coastal areas. On the southwest littoral, the great delta plain of the Daru coast forms one of the world's most extensive swamps, exceeding 100,000 square miles.

The archipelagic areas of Papua New Guinea include three major islands—New Britain, New Ireland, and Bougainville—as well as a great variety of smaller, often very isolated island groups. The islands contain many volcanoes, both active and dormant; rich agricultural zones; and considerable mineral wealth. Thousands of coral reefs make the surrounding waters a mecca for marine biologists and scuba divers, while several of the smaller island groups, including the Trobriands and Manus Island, were the sites of classic anthropological studies.

Papua New Guinea lies wholly within the Tropics, and its climate is monsoonal. The “wet” northwest monsoon season extends from December to March and the “dry” southeast monsoon from May to October. Average annual rainfall is high, ranging from 80 to 100 inches for most districts. Although many areas have a wet and dry season, these terms are relative. Even in the so-called dry season, 2-4 inches of rain per month fall in most areas. Many areas receive more than 200

Cory Langley. Reproduced by permission.

Marketplace in Papua New Guinea

inches, but a few, like Port Moresby, lie in a rain shadow and receive 40 inches or less annually.

Although tropical, temperatures are not extreme. Most lowland, coastal, and island areas have a daily average temperature of 81°F, and seasonal variations are slight. In the highlands, temperature varies with altitude. At 6,000 feet, the average temperature is 61°F; daytime temperatures rise to 90°F and nighttime temperatures fall between 40°F and 50°F. Lowland humidity is uniformly about 80% with very little seasonal variation. Humidity fluctuates more in the highlands where temperatures are lower.

Papua New Guinea's rugged geography has hindered the development of adequate transport and communication facilities. The lack of this infrastructure continues to inhibit the development of some of the interior areas. It also has a negative impact upon the entire process of

social, political and economic integration.

Population

Papua New Guinea's population grows at about 2.3% per year and was estimated in 1998 at approximately 4.6 million. It is one of the most heterogeneous populations in the Pacific, including several thousand villages, most with only a few hundred people. Divided by language, customs, and traditions, some of these communities have engaged in tribal warfare with their neighbors for centuries. The isolation created by the mountainous terrain is so great that some groups, until recently, did not know that neighboring groups lived only a few kilometers away. Nearly 800 identified languages (20% of the world's languages) are spoken in Papua New Guinea.

Melanesian Pidgin is the lingua franca. An English cognate, Pidgin

is relatively easy for Americans to learn and understand. English, the official language, is spoken by a rapidly increasing group of educated people.

Population density varies widely from the nearly uninhabited forests of Western Province, which has an average population density of 1 person/sq. km., to the relatively crowded Western Highlands, which reports 40 persons/sq. km. Although there is considerable urban drift to the cities of PNG, there are no recent statistical studies of the phenomenon. The UN Population Fund estimates that current growth rates are no higher than those measured in a 1980-90 study which showed 4.6% annual growth for Port Moresby and 2.7% annual growth for Lae on the north coast.

Though decreasing in size, there is still a relatively large expatriate community in PNG. About 10,000 Australians, 2,000 British, 3,000

New Zealanders, 2,000-2,600 Americans (mostly missionaries), and 5,000 Filipinos make up the bulk of an expatriate population estimated at 22,600. This number is decreasing as the government pursues a program to have Papua New Guineans take on jobs now held by expatriates.

Culture

Papua New Guinea is a young nation, made up of hundreds of smaller cultural groups, which speak nearly 800 separate languages. First loyalties are to family and clan. Strong attachment to the idea of a nation or obedience to government imposed regulations is common for the most part only among the educated elite. For most Papua New Guineans, the interface between traditional and modern economic and government systems is the "wantok system." Wantok means literally "one talk," i.e., common language. It includes clansmen, relatives and friends who speak the same language. The wantok system involves people in an intricate network of rights and obligations extending well beyond the primary family. For a person who has prospered materially, the wantok system creates an obligation to assist other group members with gifts, money or jobs. To a Westerner, and occasionally to a Westernized Papua New Guinean, the wantok system may seem regressive or an impediment to modernization. However, most Papua New Guineans still regard it as part of the basic scaffolding of their social system. Forced to choose between obligations to the extended family and to their employers, many Papua New Guineans will choose the family first, which poses a problem for foreign managers.

Generally speaking traditional society in Papua New Guinea is male dominated and, in some areas, polygamous. Melanesian society generally does not have hereditary chiefs. Villages and clans are dominated by a Big Man, someone who has attained power and influence through demonstrated ability and

the acquisition and sharing of property. Although most Papua New Guinea microsociety feel that important matters should be decided by consensus, it is the Big Man who shapes the consensus. In Port Moresby, these structures are hidden, but they do exist and are important. Members of Parliament and senior government officials at both national and provincial levels often are Big Men in their own microsociety or are close relatives of Big Men. Women are traditionally expected to be subservient to their male relatives; to be seen and not heard. Fewer girls than boys attend school and the rate of literacy for women is lower than for men. Bride price, which traditionally cemented social obligations between families and clans, is frequently abused in the modern economy, particularly in areas where cash incomes are high. This makes it hard for young men to get wives legally and reduces marriage in some cases to the purchase of women. Nevertheless, with increased education and economic opportunity, the gap between male and female is slowly closing.

As in many other developing countries, there is a steady flow of economic migrants from the rural areas to Papua New Guinea's few cities. Jobs, particularly for those with little education, are generally not available, and basic needs, which in the village are either produced by the family or gathered from the forest, are expensive. Most rural migrants to the cities live in shanty towns, called "settlements," which have few, if any, public services and where crime breeds and criminals take refuge.

Public Institutions

Papua New Guinea became self-governing on December 1, 1973. The Australian Government progressively transferred political and administrative responsibilities, and Papua New Guinea gained full independence on September 16, 1975.

The Constitution provides for a national government consisting of a

Parliament and an independent Judicial system. The Parliament is a single-chamber legislature based on a modified Westminster system whose members are elected for 5-year terms under a system of universal adult suffrage. The last national election was held in June 1997.

Her Majesty Queen Elizabeth II is Head of State; she is represented in Papua New Guinea by a Governor General who must be a citizen of Papua New Guinea and is required to act under the advice of the National Executive Council. Executive power is vested in the Cabinet (National Executive Council), led by the Prime Minister (Head of Government).

The National Executive Council is made up of members of the National Legislature (Parliament) who are chosen by the leader of the political party or coalition of parties that holds the most seats in the Parliament. Party influence is weak and members of Parliament are often elected on the basis of their prominence in local communities rather than their party affiliation. Consequently, ideologies are not sharply drawn between parties, and voters frequently cross party lines. As a result, the governments since independence have been formed by different, highly fluid coalitions. Votes of no confidence are common, and debate is often vigorous.

The country is divided into 19 provinces plus the National Capital District (NCD-Port Moresby). A constitutional amendment in 1995 significantly changed the administration of the provinces. It both centralized the political control of the provinces-by appointing as governors the regional members of the national parliament and providing most provincial funding through the national government-while decentralizing to the provinces the responsibility of providing most government services for the people, such as health and education. Implementing the new system has proven to be more difficult than originally envisioned, and many

coordination problems are still being worked out.

Arts, Science, and Education

There is a system of state and private schools in Papua New Guinea which provides primary through tertiary education. However, education is neither compulsory nor free, and overall school facilities are not sufficient to meet the rapidly growing numbers of children who require education. Failure to provide education appropriate to fill the demand for skilled workers has created large groups of early school leavers among the PNG population who do not have sufficient skills to find jobs, but who have just enough education to make them dissatisfied with village life. Expatriates in Papua New Guinea and well-to-do Papua New Guineans either enroll their children in private institutions or send them abroad for schooling.

Approximately 72% of Papua New Guineans are literate. English is introduced into the school curriculum no later than second grade, and all those who complete the sixth grade or better can speak and read English. Reforms introduced in primary education in 1994 divide early education into elementary, grades prep through two, and primary, which carries the student through grade eight. Secondary schools are divided into lower secondary, grades nine through ten, and upper secondary, grades eleven through twelve. National examinations are given at grade six and grade ten. Students who cannot pass those exams, or whose parents cannot afford to pay for continued schooling, must leave school. As of 1996, a little over 90% of school age children started primary school. However, only 33% of those could expect to go on to lower secondary, and only 10% of those in lower secondary, will be able to complete 12th grade. The school reforms, which aim for universal primary education by 2004, hope to enable at least 50% of all primary school graduates to go on to lower secondary. However, shortcomings

in budgets and administration in recent years make it unlikely that the target will be met by that date.

A correspondence system, known as the College of Distance Education (CODE) covers grades 7 through 12 and is available to children who cannot find places in the high schools. As of 1996, about half the number of those enrolled in high schools were enrolled in CODE courses. There are also 14 centers for the disabled throughout PNG, which are operated by Non-Government Organizations with some support from the Government of Papua New Guinea.

There are over fifty tertiary institutions, the most important of which are the University of Papua New Guinea at Port Moresby (liberal arts, law, medicine, and business administration), the Papua New Guinea Institute of Technology at Lae, and the University of Papua New Guinea at Goroka (teacher training and business education).

Private international schools operated under the aegis of the International Education Agency (IEA) and staffed primarily by expatriate teaching staff, are found in the main population centers. Of these there are about 22 primary schools and eight high schools in the country.

Papua New Guineans express their rich cultural heritage in wood carvings, pottery, bark painting, dancing, costuming, and personal ornamentation. Oral tradition and legends, which are often surprisingly similar despite the diversity of peoples and languages, have also played an important role in the culture. They form the basis of traditional village social structure and are reenacted in song and dance. They are also depicted in carvings and bark paintings that are closely associated with clan customs and ceremonies. Magic and ancestor worship also play an integral part in everyday village life. The PNG Government promotes indigenous art and is actively sponsoring a revival of older forms of cultural expression. Artists now also work in such

modern mediums as textiles and lithographs.

Port Moresby's excellent National Museum and Art Gallery has a large permanent collection of traditional arts. The National Library also has an extensive collection of books and video tapes on aspects of life in Papua New Guinea, both traditional and modern, which Embassy personnel can borrow. The National Research Institute has a variety of publications, tapes, and records of traditional songs, stories, and legends. Other groups, including the National Theatre company, Raun Raun Travelling Theatre, and National Arts School, present cultural events periodically.

Several art shops in Port Moresby sell artifacts collected from all over the country. Hundreds of dancers from various villages, wearing elaborate headdresses and body decorations, perform annually at the world famous Highlands Sing Sing, held alternately in Mount Hagen and Goroka. The annual Hiri festival is held in Port Moresby each September with a week of traditional dancing, singing, sailing, and canoe racing. The latter commemorates old trading voyages that set out from the region when the southeast trade winds were blowing and returned with the northwesterly monsoons.

Commerce and Industry

The World Bank classifies Papua New Guinea as a middle-income country based on its estimated 1995 per capita GNP of \$1,160. However, although capital intensive exploitation of natural resources (copper, gold, oil, timber), along with tree crops (coffee, copra, palm oil, cocoa), generates significant export revenues, at least 80% of the population reside in isolated villages, engaged in subsistence agriculture and smallholder cash-crop production. Non-export private-sector activity is mainly distributive rather than productive. Thus, the living standards and standard social indicators (such

as literacy, infant and maternal mortality, and life expectancy) of the vast majority of the people are akin to those in low-income developing nations. The minimum weekly wage in 1998 was slightly less than \$11.00.

Traditional villages are still home for most of the population, but education and exposure to Western culture are leading more young people to leave the village to look for work in towns. Unfortunately, economic growth in the non-mining sector has not kept pace with population growth over the past decade. The relatively small urban-based manufacturing and service sectors are unable to provide jobs for the increasing numbers of youths who leave their villages. Consequently, centers such as Port Moresby, Lae and Mount Hagen have large, growing, squatter settlements.

In an effort to slow migration and bring villagers into the money economy, the Government encourages agricultural development. Agricultural extension services and price-support programs have encouraged the planting of export crops. In addition, the Government has supported projects including large sugar, oil palm, and rubber plantations, which are now slowly being privatized. Development of locally-owned commercial fishing and sustainable forestry ventures is also a goal.

Economic growth continues to be hampered by the geography of the country. The extremely rugged terrain inhibits road construction; and the capital and most populous city, Port Moresby, is accessible only by sea or air. In the center of the country, the Highlands Highway links the port of Lae to major towns and mining and petroleum sites in the Highlands. Additional road development has been slow since independence and maintenance of existing roads has been poor, though improving this is a major goal of the Government's development program. Some third-tier airlines and helicopter companies complement the national airline, Air Niugini, in providing cargo and passenger service

to over 400 airports and airstrips throughout the country. Coastal and inter-island shipping is expensive and often not equipped to carry passengers.

Papua New Guinea is heavily dependent on imports for manufactured goods and exports raw materials and agricultural products. In 1997 Papua New Guinea imported \$1.5 billion in machinery, transportation equipment and other manufactured goods, rice and processed foods, fuels and chemicals. Its principal suppliers are Australia, Japan, the United Kingdom, New Zealand and Malaysia. During the same year, it exported \$2.2 billion in gold, copper ore, oil, timber, palm oil, coffee, and cocoa. Its major markets are Australia, Japan, Germany, the United Kingdom, South Korea and China. U.S. trade with Papua New Guinea is limited. In 1997 U.S. goods, dominated by machinery and aircraft, accounted for about 8 percent of PNG's total imports. During the same year, the United States purchased about 3 percent of PNG's total exports, primarily oil, coffee and cocoa.

Historically, the mining and petroleum sector has contributed 25% of PNG's GDP and between 65 to 80% of export earnings. While production from older major ventures, including the Ok Tedi Copper Mine, the Porgera Gold Mine and the Kutubu oil fields, has begun to decline, new projects are under development or active exploration. The Lihir Gold Mine, one of the largest gold mines outside South Africa, commenced production in 1994 in New Ireland Province. A new oil field was also opened at Gobe in the Gulf and Southern Highlands Provinces in 1998.

U.S. companies have been active in the development of PNG's mining and petroleum sector. Chevron owns part of the Kutubu and Gobe Joint Ventures and operates those fields. The company also is spearheading a major natural gas development project. Battle Mountain Gold owns an interest in the Lihir Gold Mine. Other American companies are

exploring for oil, gas, and minerals in PNG. U.S. firms also supply services and supplies to the mining and petroleum industries. U.S. financial institutions have been involved in financing for most major resource development projects in PNG. The Bank of Hawaii has been operating in PNG since 1997.

Transportation

Automobiles

Port Moresby consists of several suburbs spread over a large area. This, combined with inadequate public transportation, makes a privately-owned vehicle a necessity. Vehicles can be imported, but all common Japanese models, Australian Ford, and Hyundai are sold and serviced in Port Moresby.

Traffic moves on the left, and right-hand drive cars are required by law. The 3-year Papua New Guinea driver's license is obtained by presenting a valid U.S. driver's license. Third-party liability insurance is mandatory. It currently costs K120.00 (\$56.00) per year. Two insurance agencies in Port Moresby provide coverage at K1,050.00 (\$494.00) per year plus 3% sales tax. Letters from former insurers indicating no insurance claims over the past 5 years can sharply reduce insurance fees.

Gasoline currently costs approximately \$1.64 per gallon. Vehicle repairs and service are expensive, often slow, and the quality of work is uneven. All sales outlets service the brands they sell, but repairs on cars not sold in Port Moresby can be hard to obtain. Considerable delay and expense can be incurred if spare parts must be imported.

Four-wheel drive vehicles are not necessary for driving in Port Moresby. Bicycles are not practical due to the extremely hilly terrain and narrow roads.

Local

Use of a private car is essential in Port Moresby. No adequate, reliable public transportation system exists.

Public Motor Vehicles (PMVs-small buses or 15-passenger vans) offer unscheduled daytime service for 50 toea (\$.24) to most parts of the city, but they are often unreliable and unsafe. Cars are available for hire, but cost more than they do in the U.S. Taxis are unsecure and not recommended.

Except for the Highland's Highway beginning in Lae, and roads around most major towns, no extensive road system exists in the country. Road networks between Port Moresby and the interior have been prevented so far by barriers of mountains, swamps and jungles. The longest road from Port Moresby extends just over 200 miles to the northwest. Another road extends 200 miles east, and a third stretches 45 miles north into the mountains past Sogeri. None of the roads reaches a town of over 1,000 inhabitants and highway banditry is common. Paved roads stop approximately 20 miles from city limits.

Papua New Guinea has no rail network. Intercoastal shipping exists but is not designed for passenger travel.

Regional

Most people travel between the main population centers by air. The national airline, Air Niugini, provides daily service to most major towns. Planes are usually full, even though domestic and international air fares are among the highest in the world. Third-level air carriers fly to more isolated towns and villages that have grass airstrips.

Air Niugini and Qantas offer several flights a week to Australia. Currently two flights a week also are available to Manila, Singapore and Honiara.

Communications

Telephone, Fax and Internet

The telephone system in Papua New Guinea is relatively efficient. Australia and most main areas of PNG can be dialed directly.

Mail

Local and international mail service is reliable. Within country, mail is delivered only to a post office box or counter, not to individual companies or residences. Mailing a letter within country costs K.25 (\$.12) for up to 50 grams. Airmail letters to the U.S. cost K1.00] (\$.47) per 20 gram. Airmail parcel rate to the U.S. is K30.50 (\$14.341 per kilogram).

Radio and TV

Radio is the most accessible communications medium in PNG where rugged terrain prevents newspapers from reaching the more remote communities and television is beyond the reach of the vast majority of citizens. Most radio stations broadcast news several times a day and most programs are in English.

There are three radio broadcasters in Papua New Guinea: the National Broadcasting Company (NBC), NauFM and Radio Kalang. NBC manages the majority of the radio broadcasting operations in the country. It operates a national non-commercial AM network that, during the evening, also broadcasts in short-wave in local languages from 19 provincial stations located throughout the country. NauFM operates two stations. It broadcasts in English featuring popular music and is targeted at a young, professional audience. As Yumi FM, it also broadcasts in Tok Pisin, a service that targets an older and more traditional audience. Radio Kalang is a commercial FM station which offers music, news and commentary.

Radio Australia, BBC, and VOA signals can be picked up on a short-wave radio. Reception is usually good with an outdoor antenna. Short-wave sets purchased locally cost about 25% more than comparable sets sold in the U.S. The local cable company also makes four Australian radio stations available to cable TV subscribers for a regular monthly charge.

The national TV station, EM-TV, broadcasts news, old American and Australian programs and movies, as well as some local programming. It

receives news via satellite from its parent network in Australia. Satellite TV can be rented at a fee of K56 (\$25.00) per month. It currently offers 14 channels, including CNNI, Cinemax, ESPN, the Discovery Channel, four Australian channels, and a local movie channel.

Newspapers, Magazines, and Technical Journals

Two English-language newspapers, the Post-Courier and The National, are published 5 days a week in Papua New Guinea. A few magazines, technical journals, and various weeklies are also published, including the Pidgin language Wantok and the English-language The Independent. Coverage is usually unbiased and accurate, although the international news is not extensive.

Australian newspapers and magazines, regionally oriented journals, and a few general interest American magazines are available at news stands. Paperback books are also available, but the selection is poor and prices are high.

The National Library in Waigani has a good collection of nonfiction, periodicals, and children's books. It also has research facilities and a lending service of some 6,000 films and 400 video cassettes, including documentaries about Papua New Guinea. The library at the University of Papua New Guinea has an extensive but outdated selection of books and audio materials. It, too, is open to the public.

Health and Medicine

Medical Facilities

Port Moresby General Hospital can handle most routine cases, however, service and hygiene are inadequate by U.S. standards. The hospital is chronically short on staff and overcrowded, while most of the employees are undertrained or untrained. Thus, personnel are advised to use the private medical clinics in Port Moresby that are staffed by Western-trained doctors. Local pharma-

cies stock a full range of medicines to meet most medical requirements. Some lab tests must be performed in Australia, causing delays which can be lengthy.

Specialized surgery and treatment for more unusual or difficult medical problems are not available in port Moresby. Cases requiring special treatment are normally evacuated to Cairns, Brisbane or Sydney, Australia. Psychiatric treatment is not available in Port Moresby.

Competent, private dentists practice in Port Moresby. General treatment is available, but costs are higher than in the U.S.

Community Health

Tap water should not be considered safe for drinking in Papua New Guinea. Garbage is collected at residences twice a week by the City Council Works Department. Sewage disposal facilities are adequate, though a fair amount is dumped into the Coral Sea 3 miles offshore from Port Moresby, so the area is not safe for swimming. Local food container and beverage sterilization facilities are considered to be adequate. Milk is safe. Meat, fish and poultry do not require special handling, but should be thoroughly cooked. Local seafood should never be eaten raw. Local vegetables and fruits should be well scrubbed and soaked in a Clorox solution.

Preventive Measures

Many of the communicable diseases found in Papua New Guinea also occur in the United States, however, some conditions are found more frequently in PNG. Intestinal problems occur, but dysentery is not common. Chloroquine-resistant malaria is endemic at lower elevations in all areas outside Port Moresby. Port Moresby has a relatively low incidence of malaria, however cases do occur, and precautions such as antimalarial tablets (Mefloquin is most commonly used) should be taken beginning 2 weeks before coming to PNG, taken during the stay in country and for 6 weeks after leaving. Because of the nocturnal feeding habits of the Anopheles

mosquito, malaria transmission occurs primarily between dusk and dawn. Personal protection measures are very important. Use of a repellent cream or spray when going out in the evenings is recommended, especially during the rainy season. Visitors should get current information from traveling into remote areas of PNG.

As in all tropical climates, sunburn, prickly heat, and various fungal infections are easy to contract. All cuts and scratches should be treated immediately with a good antiseptic to prevent infection. Snake bites can be a danger, so grass surrounding residences must be cut regularly to discourage their presence. Care should be taken when visiting uncultivated areas. Large spiders are seen occasionally, but are seldom dangerous.

For 8-9 months of the year, the climate in Port Moresby is warm and dry with some dirt and dust in the air. During the remaining 3-4 months of the year, it is hot, humid and rainy. Flu and colds can occur during the sudden change from dry to wet season and vice versa. Persons with a history of sinus allergies or asthma may find their symptoms exacerbated by the environment. Mold and mildew are a problem here, though somewhat less than in other equatorial posts due to the relatively dry weather. Air conditioned storage is recommended.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Travel to Papua New Guinea is by air. The most direct route from the United States is via Sydney, Australia. United Airlines is the only American carrier which flies to Australia. Transportation between Sydney and Port Moresby is available from Qantas four days a week and between Cairns and Port Moresby seven days a week. Air West also provides regular service from Cairns. In order to make these con-

nections it is necessary to overnight in Australia. Connections to Port Moresby are also available twice a week by Air Niugini from Manila and Singapore.

Customs clearance usually requires a minimum of five working days. Unaccompanied baggage takes about two to three weeks to reach Port Moresby by air from the United States. Surface shipments average 4 months in transit. Most surface shipments are trans-shipped at either Hong Kong, Singapore or Sydney. Customs clearance for household effects usually requires a minimum of five working days.

A valid passport, onward/return ticket, and proof of sufficient funds for the intended visit are required. Tourist visas are required for stays up to 60 days. (Visas are issued upon arrival at Jacksons International Airport in Port Moresby). Business visas require passport validity of at least one year from the date the visa is issued, two application forms, two photos, a company letter, biographical data, a recent annual report of the parent company and a fee for multiple entries. An AIDS test is required for work and residency permits (U.S. test accepted).

American citizens who remain in Papua New Guinea beyond the period authorized by immigration authorities may face fines and penalties. Papua New Guinea collects a departure tax. The departure tax is normally incorporated into airline fares at the time of ticket issuance.

For more information about entry and exit requirements, travelers may contact the Embassy of Papua New Guinea, 1615 New Hampshire Ave., NW, Suite 300, Washington DC 20009, Tel. 202-745-3680, or visit the Embassy's website at www.pngembassy.org.

Travelers may also wish to obtain entry permission from the Government of Australia for transit or other purposes (see section on Medical Facilities) before traveling to Papua New Guinea. American citi-

zens no longer need a visa to travel to Australia as tourists but must obtain an Electronic Travel Authority (ETA) through their travel agent. For further information about Australian visas or the ETA, contact the Embassy of Australia in Washington, D.C., at 1-800-242-2878 or at the Embassy of Australia's website at <http://www.austemb.org>.

U.S. citizens are encouraged to carry a copy of their U.S. passports with them at all times, so that, if questioned by local officials, proof of identity and U.S. citizenship are readily available.

U.S. citizens are encouraged to register at the Consular Section of the U.S. Embassy in Port Moresby and obtain updated information on travel and security within Papua New Guinea. The U.S. Embassy is located at Douglas Street, Port Moresby, Papua New Guinea. This address should be used for courier service deliveries. The Embassy is located adjacent to the Bank of Papua New Guinea. The mailing address is P.O. Box 1492, Port Moresby, N.C.D. 121, Papua New Guinea. The U.S. Embassy's telephone number is (675) 321-1455; fax (675) 321-1593. Americans may submit consular inquiries via e-mail to: consularportmoresby@state.gov.

Pets

All pets, except those originating in Australia or New Zealand, are prohibited entry into Papua New Guinea unless they have been quarantined for six months in either Australia or New Zealand. Pets originating in New Guinea, however, can be acquired in Port Moresby.

Currency, Banking, and Weights and Measures

Papua New Guinean and American currency may be exchanged freely through the banks. The Papua New Guinea kina and toea (100 toea = 1 kina) are the only legal currency in the country. No restrictions are placed on the amount of currency a person can bring into Papua New Guinea. Travelers may not export

more than K5,000 kina without special permission.

The exchange rate floats freely. As of December 1999, the rate was US\$1 = K2.85.

Jackson's International Airport at Port Moresby has banking and exchange facilities. Persons not traveling on a diplomatic passport are required to pay a departure tax of K30.00 (\$14.00). Most hotels, restaurants and shops accept major U.S. credit cards. Papua New Guinea uses the metric system.

Disaster Preparedness

Papua New Guinea is located in an area of high seismic activity. Although the probability of a major earthquake occurring during an individual trip is remote, earthquakes can and will continue to happen. In addition, there are two active volcanoes near the town of Rabaul on New Britain. General information regarding disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) home page at <http://www.fema.gov>.

SPECIAL INFORMATION

The Department of State has issued the following public announcement concerning safety in Papua New Guinea:

Although reliable statistics are difficult or impossible to obtain, violent crime is a serious threat in many areas of Papua New Guinea (PNG). The visitor to PNG can minimize the potential to become a victim of crime by taking appropriate precautions, for example, by taking part in organized tours run by reliable and experienced operators. This primer provides basic guidance for those who will be visiting PNG for a short period. Persons who plan to stay in PNG for more than a week or two should get in touch with the Embassy or long-time residents for additional guidance.

There are several universal ways to stay out of trouble: do not increase your vulnerability by drinking heavily or staying out after midnight; do not patronize disreputable bars; do not proposition women; do not visit squatter settlements or other economically distressed areas; do not display money or valuables; and do not verbally abuse, cheat or tempt PNG citizens. Wear modest clothes, jewelry and watches so as not to draw attention to yourself. Limit your conversations with members of the opposite sex to those persons you know or have business with.

Persons arriving at the Port Moresby Jackson's International Airport should arrange, if possible, to be met, particularly if their flight arrives at night. If no one meets you, it is possible to take a courtesy bus to the Gateway, Islander Travelodge or Port Moresby Travelodge Hotels and contact your sponsor from there. The terminal itself is not a danger zone, but thefts and assaults have occurred in the terminal parking lot. If picking up a rental vehicle, obtain a street map and review it in the office before

leaving. Do not travel by car outside Port Moresby at night, even on major highways. If you encounter a roadblock which does not appear to be manned by uniformed police, or notice a disturbance on the road ahead, turn around immediately, if possible, and use an alternative route. Police vehicles are sky-blue with red insignia.

Do not leave cash or high-value belongings in hotel rooms. Do not leave room keys on hotel counters when going out; drop them in the slot, if provided, or hand them to a clerk. Lock sliding glass doors or windows when going out.

Up-scale restaurants and stores usually have their own security guards. It is still advisable, however, to remain watchful when entering or leaving. Ask the staff to assign someone to escort you to your car if you feel uncomfortable (particularly at night). Avoid carrying a purse or briefcase in public. Do not leave anything of even minor value in sight within a parked car.

Sexual assaults are primarily crimes of opportunity. PNG women rarely wear shorts, pants or miniskirts; therefore, female visitors are advised not to wear revealing clothing in public such as swimsuits, sundresses, or similar apparel

Most expatriates avoid using public motor vehicles (PMVs) or taxis to get around, relying instead on their sponsor or a rental vehicle for transport. Visitors should inquire of colleagues or hotel employees before undertaking trips to unfamiliar neighborhoods.

Carjackings, rock-throwing and attempts to stop cars occur occasionally. Keep an eye on persons in the vicinity of your vehicle at all times, particularly when stopped at intersections or crosswalks.

Most hotels and private residences in Port Moresby have secure parking lots, i.e., fenced areas entered through gates opened by remote control or security guards. Try to

avoid parking outside secure areas at night.

Individual travelers to the PNG highlands need to exercise substantially greater caution than those taking part in organized tours. The Highlands provinces -- Enga, Chimbu, and Eastern, Southern and Western Highlands -- can be volatile. Political disputes, inter-clan fights and sudden altercations (for example, at sporting events) occur frequently. Criminals have been known to set up roadblocks on segments of the Highlands highway, which runs from Lae to Mt. Hagen, Mendi and Tari. Visitors should inquire locally concerning security before driving between towns. An extensive secondary airline network provides frequent service within the Highlands.

Due to the risk of roadblocks, avoid traveling outside of Port Moresby, even on paved highways, at night.

Driving carefully is important because many PNG citizens respond emotionally and violently to a serious incident or an injury involving relatives or fellow villagers. Such reactions can endanger the life of the person perceived to have inflicted the loss, whether or not that person would be found legally responsible by a court. Drive defensively at all times, but particularly in the afternoons and evenings of "pay Fridays," when the likelihood of encountering inebriated drivers or pedestrians is greatest. Killing a dog or pig is almost certain to trigger a demand for monetary compensation, so exercise caution when driving through rural areas. Finally, it is unwise to provoke PNG drivers by cutting them off or gesturing rudely.

Short-term visitors who take the precautions outlined above are likely to find their stay in Papua New Guinea interesting, enjoyable and rewarding. The vast majority of PNG citizens are friendly, live peacefully and are eager to learn about life in other countries. Attention to personal security will enhance your confidence in under-

taking personal and professional contacts, leading in turn, to a deeper understanding of Papua New Guinea and its people. Unfortunately, crime is a serious problem in Papua New Guinea, perhaps even more for Papua New Guineans than for visitors. The US Embassy emphasizes that there is no way to guarantee personal safety during a visit to PNG, only to minimize the chances of becoming a victim.

Manila, Philippines

THE PHILIPPINES

Republic of the Philippines

Major Cities:

Manila, Quezon City, Cebu City, Baguio, Davao City

Other Cities:

Bacolod, Batangas, Butuan, Iligan, Iloilo City, San Pablo, Zamboanga

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated August 1994. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The Republic of the **PHILIPPINES**, though Asian, bears the imprint of European and American influence. Not only is the Philippines one of the largest English-speaking countries in the world, it is the only Christian country in Asia.

This Pacific island nation was under Spanish control for nearly 400 years after it was first visited in 1521 by Ferdinand Magellan on his expedition around the world. The country eventually was named *Islas Filipinas* for the child who was to become King Philip II of Spain.

After close to a half-century of American rule, the Philippines gained its independence in 1946.

The country made great strides in achieving a national identity and a political and strategic importance in Asia.

Because of the country's strategic importance, the U.S. had for many years maintained military bases there, mainly Clark Airbase and Subic Bay Naval Base. However, disagreements over the military treaty covering the bases led to a U.S. withdrawal of forces in 1992. The departure of U.S. troops poses questions about Philippine and Southeast Asian defense, as well as the future of the Philippine economy.

MAJOR CITIES

Manila

Metropolitan Manila, located on the main island of Luzon, is the capital and the major city along the coastal lowlands of Manila Bay and the Pasig River. The bay forms one of the largest and finest landlocked harbors in the Far East, and is Manila's outstanding feature. It is rimmed by distant mountains and islands, dotted by ships, and frequently framed by flamboyant sunsets. Roxas (formerly Dewey) Boulevard, which follows the shore-

line for several miles, quickly becomes a familiar landmark. It is lined with modern office buildings, embassies, hotels, restaurants, the Philippine Cultural Center complex, and large apartment houses. This boulevard, along with the modern commercial and residential areas of suburban Makati, typifies the contrasts which exist in Manila: on one side of the street is a five-star hotel, on the other, a shanty town of squatters built on land reclaimed from Manila Bay.

The architectural styles of Manila manifest the influence of 400 years of Spanish domination, nearly 50 years of American rule, and modern trends developed in buildings erected or reconstructed since World War II.

The social habits of people in Manila are superficially Occidental and the society is cosmopolitan. Western clothes predominate, but there is some adherence to local traditional dress. The majority of Filipinos speak English.

Manila was established as a fortified colony by López de Legaspi in 1571, and was developed by Spanish missionaries. It became an important commercial center under Spanish rule. The city was taken by the English in 1762, but was recaptured for Spain two years later. The

United States won control in the Battle of Manila Bay (August 1898), during the Spanish-American War. World War II took a heavy toll on the city, reducing to rubble much of the 16th-century Spanish architecture of the old walled city, Intramuros; only the Church of San Agustín was spared. The devastation wrought is considered second only to that of Warsaw. The Japanese, who had occupied the city from 1942, were ousted in 1945. Manila Cathedral, the seat of the Catholic archdiocese, was rebuilt in 1958, as was almost the entire city during the post-war years. Manila proper, known as the "Pearl of the Orient," is now a modern metropolis with a population of 1.6 million (2000 est.).

Most streets in the city are of concrete or asphalt, but many are constantly in a state of disrepair; side streets are often narrow and hazardous. Road surfaces deteriorate rapidly during the rainy season, and are marked by potholes of all sizes. Traffic is congested, especially during rush hours. Driving is not orderly. Air pollution is a continuing problem.

More than 150 American business concerns are located in Manila, and many more have agencies or representatives here. The oldest foreign-based American Chamber of Commerce has offices on the Paseo de Roxas, Manila's famous shoreline boulevard. The expatriate community includes more than 150,000 Chinese and a large number of Americans, Spaniards, Japanese, Indians, British, Germans, Swiss, and people of other nationalities. The tourist trade has increased in recent years but, still, fewer Americans stop in Manila than at other Far East spots. Most U.S. visitors here are on business.

Greater Manila's population, which includes Quezon City, Pasay City, Caloocan City, and Pasig, is estimated at almost ten million. Although the official capital of the Philippines is Quezon City, 13 miles from downtown Manila, its development remains in the planning

stages and only a few government agencies are located here.

Clothing

Cotton and other lightweight clothing is worn year round in the Philippines; however, woolen clothing, including topcoats, is needed for visits to Baguio or travel to Hong Kong, Taipei, or Tokyo during winter. Sweaters and shawls are useful in air-conditioned rooms and at night in the cooler months. Nylon clothing is usually too warm and uncomfortable during very hot months. Cotton or cotton/synthetic mixtures are recommended.

Manila is a style-conscious city, and the latest European and American fashions are followed. There are some variations in Cebu City but, in general, members of the diplomatic and business communities are well dressed.

Clothes wear out quickly because of the climate and frequent laundering. Shoes deteriorate more rapidly during the rainy season and because of poor sidewalk conditions. Unless you store clothing in air-conditioned rooms or dry closets, air it occasionally to prevent mildew.

Women find that cotton, cotton-blend, or linen dresses are worn and acceptable everywhere and, depending on style, are suitable for almost every occasion. Shorts and slacks should be worn only for sports or at home. Cocktail dresses of silks, brocades, laces, chiffons, and fine linen also are popular and comfortable. Dressmakers can make all types of women's clothing from the casual to *haute couture*; prices and results vary accordingly. Ready-made women's shoes in sizes larger than 8 are difficult to find, but shoes can be made to order inexpensively.

Men wear tropical worsted and Palm Beach-type suits during the cooler months and, if they anticipate a full social schedule, will need black-tie attire. Washable suits are convenient and practical, but dry cleaning is readily available. Dacron and cotton blends are most useful. After arrival, most men

enjoy the practical comfort of the *Barong Tagalog*, a traditional Filipino shirt. It is loose fitting, usually made of sheer material with embroidered collar, cuffs, and front, and is worn outside the trousers both day and evening.

White daytime shirts of porous summer-weight fabric are needed. Short-sleeved shirts are acceptable in offices, and cotton sport shirts are most useful for leisure hours. Long-sleeved shirts are needed in Baguio. Locally made men's shoes are not of the best quality and U.S. made shoes are quite expensive.

Children wear the same type of clothing in the Philippines as they do in the U.S. They spend much of their time out-of-doors, and need many changes of washable, durable, play clothes. Teenage styles generally follow American fads.

Any special dress considerations for children attending school in the Philippines can be easily met after arrival. Lightweight rainwear is a necessity for small children. Students attending Brent School in Baguio need warmer clothing than is called for in Manila.

Laundry is customarily done at home by the *lavandera*, in a household which employs more than one domestic, and by the all-around maid in a small or single-person household. Dry cleaning is available at prices comparable to those in the U.S., and quality is good.

Food

Several large well-stocked supermarkets are in Manila and the suburban areas. Open markets throughout the country sell fresh fruits and vegetables; use caution when buying perishables since markets may not be refrigerated or sanitary.

Supplies & Services

The beauty salons and barbershops range from adequate to luxurious in Manila; in the other major cities, shops are simple and work is passable. Dressmaking, tailoring, shoe repair, and other personal services

Aerial view of Manila, Philippines

© Paul Almasy/Corbis. Reproduced by permission.

can be easily found and, on the whole, the work is satisfactory and the rates are reasonable.

Religious Activities

Catholics number more than 80% of the Philippine population, and have many churches in all localities. Catholic orders from Spain, Belgium, Canada, the U.S., and other countries are active here. In the capital, Protestant churches include the Union Church of Manila (nondenominational), Holy Trinity Anglican Episcopal, International Baptist, Lutheran, and Seventh Day Adventist. Manila also has a Church of Jesus Christ of Latter-Day Saints, a Unitarian congre-

gation, and a Jewish Community Center. The Saturday newspapers list worship times and places.

Domestic Help

Employing household help is the norm rather than the exception in the Philippines, not only among foreigners but also middle-income and well-to-do families.

In Manila, competent household help is easy to find, although sometimes a short trial period is necessary before settling on someone suitable. Under proper supervision, domestics are clean, honest, loyal, cooperative, and good with children. Careful and patient instructions

must be given, since their understanding of English cannot be taken for granted.

Filipino domestics are not covered under the national social security system. However, low-cost health insurance is available for domestics, and it is expected that the employer provide it. Local laws apply to, and provide for, such benefits as regular days off, payment of medical fees, adequate dismissal notice, etc. Complete physical examinations of prospective domestics and annual checkups are strongly recommended.

Education

The International School, located in nearby Makati, is a nonsectarian, college-preparatory, and general academic day school for boys and girls of all nationalities from kindergarten through grade 12.

International, formerly called the American School, was founded in 1920 by American and British residents of Manila. It was incorporated as a private, independent institution, and is registered under the laws of the Republic of the Philippines on a nonprofit, non-stock basis. In 1970, the name was changed to reflect the increasing internationality of the student population.

Instruction is in English. The curriculum is that of U.S. general academic and college preparatory schools. Spanish, French, German, Chinese, Latin, and Pilipino are offered as foreign languages.

International is accredited by the Western Association of Schools and Colleges, and its credits are accepted by American colleges and universities. High school students may earn both U.S. and International Baccalaureate diplomas. Academic standards tend to be more rigorous than those in the U.S. The school participates in, and is a center for, several American testing programs: Secondary School Admission Test (SSAT), College Entrance Examination Board (CEEB), National Merit Scholarship Pro-

gram (PSAT/NMSQT), and American College Test (ACT).

Students are encouraged to participate in the wide variety of sports and other extracurricular activities offered after class hours. International is a member of the Philippine Secondary School Athletic Association. There is active intramural competition.

Brent School of Manila was opened in August 1984. Its mother school is Brent School in Baguio City, which was founded in 1909. Located on the campus of the University of Life in Manila, this unit started with a population of 305 students enrolled in kindergarten to grade 10. An integral part of the original school in Baguio, it is doubly accredited with the Western Association of Schools and Colleges and the Philippine Association of Schools, Colleges and Universities. Brent School-Manila is an international, coeducational, day school related to the Episcopal Church in the Philippines. Brent is a small academic community that provides an atmosphere of high academic standards, Christian values, and discipline. The primary aim is to meet the educational needs of the children of the international community from kindergarten to high school, and specifically to prepare students for admission to the leading colleges and universities of all nations.

The curriculum is American with British adaptations, and is designed to provide each student with background necessary for college life. Special requirements for Filipino students are also met. Small classes permit greater dialogue between faculty and students, and pursuit of individual ideas and interests of the students is facilitated.

Sports and extracurricular activities are offered, though on a smaller scale than the International School.

Several preschools are attended by American children in Manila. Concepts vary from Montessori to social learning. All of the preschools offer a variety of activities and instruc-

tion for the child. The schools often have small classes and offer a clean and stimulating environment. The general age for acceptance in pre-school is around two-and-a-half years of age or diaper trained. There are a few exceptions to this rule.

Special Opportunities

The University of the Philippines (a half-hour drive from downtown Manila with various branches throughout the city) and the University of Santo Tomás are accredited with American colleges, especially for junior/senior level courses. Other private institutions of higher learning are also open to college-age students living in Manila. However, the Philippine system provides only 10 years (six elementary and four secondary) of preparation before college, and this must be taken into consideration prior to enrollment. Most American students choose to go to U.S. colleges because of this difference. Both discipline and scholastic requirements are less rigorous in Philippine universities, and libraries, laboratories, and other facilities are below the standards of American schools.

Very few programs are available for the handicapped child or for children with learning disorders.

Recreation

The tropical weather of the Philippines provides almost year-round opportunities for touring and outdoor recreational activities. These are somewhat curtailed, however, in the heat of April and May, and during the rains and typhoons from July to September.

Sight-seeing in Manila is highly diversified. Within the city itself, there are interesting historical sites, ancient churches, a zoo, a botanical garden, beautiful parks, and a number of small but significant museums, such as the Museo and the Ayala. The Philippine National Museum, which was almost totally destroyed during World War II, once again features permanent exhibitions, mostly scientific in nature, and periodic exhib-

its of Philippine art and artifacts. The number of small galleries of local art, predominantly modern in trend, is increasing. The Art Association of the Philippines promotes an interest in the field through seminars, lectures, and exhibits of local works.

Malacanang Palace, former home of Ferdinand and Imelda Marcos, is now a museum, housing memorabilia from Malacanang's history as the center of Philippine government, and especially memorabilia of the Marcos era. Casa Manila, situated in the heart of Intramuros (meaning within the walls), is a model of a 19th-century upper-class urban home. Intramuros contains several other places of interest including two churches, Plaza Roma with its statue to the three martyred priests, and Fort Santiago, with the Rizal Museum. Intramuros itself is a unique combination of the Orient and the Occident: an Old World medieval fortress encircled by walls of oriental materials in a tropical land. Even in their crumbling state, the walls remain today as a monument, a relic of the Spanish era of Philippine history.

Opportunities for weekend and day trips which appeal to sightseers, hikers, picnickers, and camera enthusiasts are plentiful. It is necessary to travel a considerable distance from Manila Bay for safe, unpolluted swimming. Beach resort areas are increasing, however, with the building of modern hotels and restaurants. These areas are a two-to-four-hour drive from Manila.

The closest approach to big game in the Philippines is the wild *carabao* (water buffalo). Deer is next, with open season from January to May. Wild pig is found in almost every mountain region of the country. Snipe is the most popular game bird among hunters. The hunting season for jack snipe runs from September to February. Many varieties of migratory birds, plus dove, wild chicken, partridge, quail, and other game birds are plentiful.

Among the saltwater fish available are: sea bass; barracuda; Spanish mackerel; pompano; tuna, which includes bonitos, yellowfins, skip-jacks, albacores, and bluefins; the leather jacket; sergeant fish; and swordfish. Huge marlins have been caught in Philippine waters. Freshwater fish include the giant eel, the murrel, carp, *gurami*, tilapia, and catfish. Unfortunately, inaccessibility of the areas, restrictions on use of firearms, and lack of hotel accommodations impede hunting and fishing.

Nowhere in the world is there greater profusion or wider diversity of shells than in the Philippines. Because of the uniform warmth of the tropical currents that flow around the islands, shells here have richer colors and more imaginative patterns than in any other region. A great many of the world's rarest and most highly prized specimens of marine shells have either been picked up on Philippine beaches at low tide, trawled, or dredged from the surrounding waters of some of the islands—notably Cebu, Mindanao, Sulu, Palawan, and Samar. The archipelago has been called a "mollusk paradise," and is reputedly the richest shell-collecting region in the world. Some coral forms are growing scarce, and it is illegal to export coral from the islands.

The following places of interest are usually visited at least once during an extended stay in the Philippines:

Tagaytay Ridge, about 35 miles, or an hour's drive, south of Manila. The ridge is 2,000 feet high and enjoys cool breezes throughout the year. It commands a dramatic view of rugged mountains and valleys, as well as of Lake Taal and Taal Volcano. This volcano is the lowest known in the world, and inside its crater is another lake which is again centered by a tiny peak. Few views equal the scenic beauty of Tagaytay Ridge. Overnight accommodations or meals can be obtained at the Taal Vista Lodge.

Pagsanjan Gorge and Rapids can be reached in a

Skyscrapers in the Philippines

Cory Langley. Reproduced by permission.

two-and-a-half-hour-drive from Manila. The trip up-river is made on a native *banca* (small dugout canoe) to Pagsanjan Falls through a gorge. The walls rise perpendicularly about 300 feet and are covered by luxuriant tropical growth. The return trip provides the excitement of shooting the rapids. The entire journey normally is made as a day's outing, with a picnic lunch at the falls or at one of the numerous lodges or restaurants along the river.

The Bamboo Organ at Las Pinas, a site about a 30-minute drive from Manila. This remarkable and unique organ, made of over 100 dry bamboo tubes in 1814, still has flute tones which have remained virtually unchanged in close to two centuries. The organ was completely renovated in Germany in 1975. Las Pinas Church, also renovated, is a perfect setting for this unique organ. An organist provides demonstrations. The annual Bamboo Organ Festival, held in February, features musicians from around the world.

Bataan and Corregidor, evoke memories of the gallant, but futile, stand of Philippine-American forces against the Japanese during World War II. Bataan is a peninsula jut-

ting out to the China Sea, and can be visited by car in a day's outing. Corregidor, an island at the mouth of Manila Bay, can be reached by tour boat.

Los Baños, about a one-hour drive from Manila, and famous for its hot springs. The University of the Philippines' Colleges of Agriculture and Forestry and Forest Products Laboratory, and the International Rice Research Institute—the only such institute in Southeast Asia—are located here.

Baguio, a beautiful resort situated in the mountains at approximately 5,000 feet in altitude. It has a pleasantly cool climate all year, and is the most popular vacation spot in the Philippines, especially for families. Only 155 miles north of Manila, it can be reached by car in five hours or by plane in about one hour. During the rainy season, travel to and from Baguio is interrupted by landslides on the road and poor visibility at the airport.

Banaue Rice Terraces, north of Baguio, known locally as the "Eighth Wonder of the World." The view presents an entire chain of mountains terraced to their highest peaks for the cultivation of rice. These terraces were carved out of

the mountainsides by the Ifugao Indians thousands of years ago. Because of road conditions, tourists normally hire a car with an experienced driver for the seven- to eight-hour trip, driving to Bontoc or Banaue the first day, and returning to Baguio either the second or third day. Some break the trip to or from the terraces with an overnight stop at Mount Dana Lodge, about a three-hour drive from Baguio, where a delightfully cool night can be spent at one of the Philippines' most modern guest houses. The Banaue Hotel has good accommodations.

Hundred Islands, which actually are 400 islands, islets, and rocks in Lingayen Gulf, and of particular interest to fishermen, skin divers, campers, and sightseers.

Mount Mayon, famous as the world's most nearly perfect volcanic cone. Rising 8,000 feet from the plain of Albay, it is near the city of Legaspi, which is accessible by car (a 10-hour drive), bus, or plane. To climb Mayon takes about three days, and the climb is not easy. The area of Bicol, which Mount Mayon "crowns," provides activities for everyone including beaches, adventure tours, caves, and shopping. Tiwi Hot Springs, 25 miles from Legaspi, is one of several thermal springs in the area.

The entire archipelago that comprises the Republic of the Philippines is full of private, rustic, white sandy beaches (such as Boracay) or classic, secluded, high-class beach resorts such as El Nido. For scuba divers, snorkelers, sailors, and just beach lovers, the Philippines offers an array of locations from which to choose.

Sports

Manila offers many opportunities for participation in sports. Facilities for golf, tennis, swimming, bowling, riding, scuba diving, basketball, softball, and sailing are available. Lessons, particularly in golf and tennis, can be obtained at reasonable fees.

Golf was introduced to the islands at the turn of this century, and has become one of the most popular sports. Several golf clubs and links in and around Manila attract players; there are practice driving ranges in the city.

The best known of the clubs is the Wack Wack Golf and Country Club, with two 18-hole courses on a 320-acre estate. Wack Wack has hosted international championships and attracted outstanding golfers from around the world. In addition, the following clubs are conveniently located in and around Manila: Muni Golf Links, Capitol Hills Golf Club, Manila Golf Club, University of the Philippines Club, Intramuros Golf Course, and Alabang Golf and Country Club.

Several private clubs and hotels have pools for the use of members. Tennis and *pelota* (a cross between *jai alai* and racquetball) are popular in Manila, and courts for these sports are available at private clubs. Several modern bowling alleys also are in the Manila area.

The Manila Yacht Club welcomes foreigners interested in sailing. It sponsors active one-design and cruiser-class races, and a regular, international competition with the Hong Kong Yacht Club. Sailing lessons are offered. Boats cost much less than in the U.S.

Basketball, boxing, cockfights, horse racing, track meets, and *jai alai* (the Basque game somewhat similar to handball) are popular spectator sports. Visiting sports stars give occasional exhibitions. Equipment and appropriate sports attire are not always available on the local market.

Entertainment

Movies are popular among Filipinos, and several first-class, air-conditioned theaters exist, particularly in the new suburban areas. First-run American and European films may be seen, as well as Filipino, Japanese, and Chinese films. Movies do not have long runs, however, sometimes showing only for

three days. Admission prices are reasonable.

The magnificent Cultural Center of the Philippines on Roxas Boulevard has a 2,000-seat auditorium and a smaller theater with 450 seats. The Folk Art Theater, used for concerts, bazaars, and pageants, is a covered, open-air building, where many local and foreign musical artists perform. The Cultural Center also includes the Philippine International Convention Center.

The Manila Symphony Society, with guest conductors, presents several concerts and at least one opera or operetta annually. A number of other active local orchestra groups and choral societies also perform.

The Bayanihan Dance Group, which has made several successful world tours, and several other folk dance and ballet groups present performances throughout the year.

The Thomas Jefferson Library (U.S.-sponsored) and the American Historical Collection (located in the U.S. Chancery Annex) have good libraries for public use. Private clubs maintain lending libraries. The public libraries, and those at various schools and universities, are seldom used by the foreign community.

Fiestas play an important role in Philippine life. They are a combination of religious symbolism and social life, and are held in the various *barrios* to commemorate feast days of patron saints and in remembrance of unusual local events. Almost all are based on Catholic tradition, but many also hark to earlier pre-Christian times. The fiestas are often colorful, lively, and spectacular. May is the height of the season for flowers, and numerous festivals are planned for that month.

The Philippines offers ample subject matter for photographers. Film is readily available on the local market. Printing and developing facilities for all types of film also are available locally.

Many good restaurants in all price ranges, serving Filipino, American, Chinese, Indian, Thai, Middle Eastern, Japanese, and continental food, are located in Manila. Prices vary depending on the restaurant, but are usually less than their equivalent in the U.S. Nightclubs and cocktail lounges abound, especially in the downtown areas.

The large American community provides many opportunities for social activities. In addition to school and church groups, memberships are available in several civic organizations, including the American Chamber of Commerce, Masonic Lodge and Shrine, Eastern Star, Elks, Fraternal Order of Eagles, American Association of the Philippines, Junior Chamber of Commerce, Rotary International, Knights of Columbus, Lions Club, Veterans of Foreign Wars, Toastmasters Club, YMCA, YWCA, and American Women's Club of the Philippines. Boy and Girl Scout chapters are active, as is the International Little League of Manila. All children have the opportunity to join school-sponsored programs.

Private clubs attract many Americans. Among these are the Manila Polo Club; the Manila Boat Club, on the Pasig River in Santa Ana; the Manila Yacht Club, with clubhouse and sheltered basin on Roxas Boulevard; the Manila Overseas Press Club; the Casino Español, with chiefly Spanish membership; Manila Club, primarily British; Manila Symphony Women's Auxiliary; the Manila Theater Guild; and the All Nations Women's Club.

Also, there are numerous charity and welfare organizations which welcome volunteer help.

Quezon City

Quezon City was the nation's capital from 1948 to 1976, and remains officially listed as such, but its development during those years was mainly in the planning stages, and only a few government agencies

are located here. Thirteen miles from downtown Manila, the area formerly was a private estate named for Filipino statesman Manuel Luis Quezon.

Now grown to a center with over 2.2 million residents, Quezon City is the site of the main campus of the University of the Philippines, founded in 1908. Several theaters and concert halls are located here, among them Areneta Coliseum, Abelardo Hall and Guerrero Theatre (connected with the university), the British Council Center, and the Goethe Institute. Art exhibits are mounted in a number of galleries, and are an integral part of greater Manila's cultural life.

Quezon City bustles with business and recreational establishments. Although its proximity makes it a geographical extension of Manila proper, it retains a unique identity within the metropolitan area.

Cebu City

Cebu City, with a population of more than 700,000 (metropolitan population 1.7 million) boasts of having had the earliest sustained contact with the Western world. Cebu City was the initial seat of Philippine Christendom—Ferdinand Magellan's cross, raised here in 1521, is among the many points of interest. Others include the Basilica of San Agustín, which houses an ancient religious relic, the image of Santo Niño; and the museum of the University of San Carlos, where precious artifacts from Cebu City and Mindanao are kept.

The city, commonly referred to only as Cebu, is on the island of the same name in the Visayas, those islands which comprise the Central Philippines between Luzon and Mindanao. Cebu Island is long (140 miles), narrow (22 miles at the widest point), and densely populated, with a central spine of craggy hills. The city itself is widespread and has a bustling, congested business district around the port. Because of the destruction during World War II,

the once-Spanish character of Cebu City is a recollection which finds form only in some old houses down back streets, in the exteriors of several churches, and in an 18th-century triangular fort. Colo Street is the oldest street in the Philippines.

Although most of the city was rebuilt between 1945 and 1947, it suffers today from deterioration, since many buildings were hastily constructed of low-quality materials. A large part of Cebu City consists of narrow passageways lined with crowded, frame structures. However, the number of modern office buildings, wide avenues, and substantial contemporary houses is rapidly increasing. Traffic is a hectic mixture of "jeepneys," taxis, cars, motorcycles, horse carts, and motorized tricycles.

An increasing number of people are migrating into the city from elsewhere in Cebu province, and from the neighboring islands of Bohol and Leyte, in search of work. Large numbers of Chinese are engaged in wholesale and retail trade, and there is a small Indian community. The Cebuano version of the Visayan (or Bisayan) language is generally used; Visayan is also spoken in the rest of the central Visayas and in most of Mindanao. Almost everyone in Cebu City proper understands a certain amount of English; the better-educated and business people speak it well. Spanish and Chinese are still spoken by the *mestizo* (mixed blood) groups.

The Western community is loosely defined. Most foreign businesses have Filipino managers. The American business community is small. The largest single group of Americans is the Protestant missionaries. There are also some Catholic missionaries, medical and various students, spouses of Filipinos, and a sprinkling of Europeans and Asians.

Cebu City, about 10° north of the equator, is some 350 miles from Manila. The climate is hot and humid during the entire year, with rainfall less evenly distributed by

season than it is in Manila. The hottest weather is generally from March through June. Nights are usually pleasant from August through February, with the daytime high temperature ranging between 85° and 94°F. Cebu City is considered to be just off the typhoon belt, but has occasionally been hit by storms of considerable force.

Religious Activities

Cebu City is a center for Protestant missionary activities, and English-language services are held by the United Church of Christ in the Philippines (an amalgamation of Presbyterians, Congregationalists, and others), the Missouri-Synod Lutheran, several Baptist groups, the Philippine Independent Church (a separate Philippine church in communion with Episcopalians), a variety of evangelical groups, Mormons, and Seventh-Day Adventists. Cebu City also offers Catholic masses in both English and Visayan. In Baguio, there are regular English-language services provided by Roman Catholic, Episcopal, Christian Science, Lutheran, and United Church of Christ congregations. The latter is a united church staffed by Presbyterians and Evangelical United Brethren. Baptists and Lutherans sponsor many missionaries in and around Baguio.

Education

Except for families with young children, schooling in Cebu City is cause for concern. A number of alternatives are available for elementary education. Most foreign children attend Cebu International School, a private institution founded by the American community in 1924. English instruction, using primarily American textbooks, is offered from kindergarten through grade 12. The staff is Filipino. Students coming from American schools can expect both scholastic and social adjustments. Tutors can be found for additional scholastic help, which is usually needed.

Several Catholic schools for boys and girls provide alternatives to

International, but few foreign residents attend them. Admission is by competitive examination. Classes tend to be large, learning is by rote, and competition in all aspects of school life is intense. Although in the best of these schools most instruction is in English, Pilipino is increasingly used in the lower grades, and the general level of English appears to be diminishing. Elementary school comprises kindergarten through grade six, followed by four years of high school (no junior high). Most foreign students find that these schools do not meet their long-term needs. St. Teresa's College and the College of the Immaculate Conception are considered the best schools for girls. The top boys' school, Sacred Heart, a Jesuit institution, requires the study of Chinese at all levels.

High school alternatives are local Catholic schools, considerably more satisfactory for girls than for boys; correspondence courses; or boarding school. The only boarding school of international caliber in the Philippines is Brent School in Baguio. Tutors can be found to assist with correspondence courses. There are adequate nursery schools in Cebu City.

Special Opportunities

Cebu City has a number of colleges, universities, and "diploma mills." One of the better educational institutions in the Philippines, the University of San Carlos (which is older than Harvard), is operated by German, Dutch, and American priests of the Society of the Divine Word. Undergraduate and graduate courses are offered in a variety of subjects. The University of the Philippines has a small branch in Cebu City, although its current graduate offerings are mainly in the fields of business and commerce. Cebu City is a major center for medical education, and a number of Americans and other foreigners attend school here. St. Teresa's has a college department (comparable to a junior college/finishing school) which enrolls American girls upon successful completion of the Philippine College Entrance Examination.

Special education for handicapped children or those with learning disabilities is not available.

Recreation

Although Cebu City experiences constant debilitating heat, outdoor activity is possible all year. Public sports and recreational facilities are extremely limited, so Americans rely on a variety of private clubs: the Cebu Country Club, Club Filipino, Montebello Hotel, Liloan Beach Club, and Casino Español.

There are two excellent private 18-hole golf courses at the edge of the city. Golf lessons are inexpensive. Three hotels have freshwater swimming pools, available for a membership fee. A number of small private tennis clubs, one or two of which have lighted courts, are available. *Pelota* is popular, and several clubs and private individuals have courts. Whites are worn for both tennis and *pelota*. Badminton is available at one club. The city has a number of bowling alleys (mostly duckpin). Local running clubs and other organizations sponsor races. Basketball is a popular spectator sport, and opportunities exist for playing in amateur leagues.

The seas around Cebu are clear, warm, and fish-laden. Beaches, mainly privately owned, are found both in Cebu City and Mactan, about a 45-minute drive.

Numerous coral islands and sandbars are located in the straits between Cebu and Bohol. Scuba diving opportunities are unparalleled. Attractive sea shells can still be found, but commercial shell collectors are rapidly reducing the supply. Although the area is good for small boating, no docking facilities currently exist.

Other than an often-bouncy but scenic car ride around the circumference of Cebu Island (which would take about two days) or to Mactan Island, no land touring is available. Trips to nearby islands can be rewarding, although public facilities are not up to American standards. Shipping lines run regular services

to Manila, as well as many neighboring ports. Some offer cabins, but most have only deck passage; the ships are crowded, dirty, and unsafe. Philippine Airlines offers service to many cities in the Visayas.

Entertainment

Entertainment possibilities are limited. Cebu City has about 20 movie theaters, of which only a few are acceptable. Most movies are in Tagalog, but some American films are shown. Eight to 10 restaurants serve reasonably good food, and there are a number of nightclubs or discos.

Cebu City has only one good public library, the United States Information Agency (USIA) facility. Among college libraries, only that at San Carlos University is adequate; it has a good Filipiniana collection. No children's collections, other than the small one at Cebu International School, are available. Although several stores carry reasonable selections of popular paperbacks, more serious reading matter or children's books are rarely available. Books deteriorate rapidly in this climate and anything of value should be brought to Cebu City with awareness of the risk involved. Local newspapers are inadequate for national or international news. While Asian edition of the *Wall Street Journal* is now available on the day of publication, the *International Herald Tribune* arrives one to three days after publication. *Time* and *Newsweek* may be bought at newsstands or hotels.

Four TV channels have frequent color broadcasts, with some American reruns. Shortwave radio reception is not always clear, but Voice of America (VOA), as well as Radio Australia and British Broadcasting Corporation (BBC), can be heard. Local radio programming is mostly disco and rock music, but several local FM-stereo stations broadcast more subdued music. Private satellite receivers are becoming popular among Filipinos.

Baguio

Baguio, the "summer capital," is located about 155 miles north of Manila, in the hills of northern Luzon, the main island of the Philippines. The countryside here is mountainous and rugged, with scrub growth and pines covering the slopes. Scenery and a cool climate are Baguio's chief assets. The area, however, is subject to earthquakes. More than 1,600 people died during an earthquake on July 16, 1991.

Built primarily by the Americans in the early 1900s, Baguio is a modern and thriving small-town community which has become one of the foremost vacation spots of not only the Philippines, but also of the entire Far East. A large number of well-to-do Manilans and Philippine government officials have summer homes in Baguio. Schools, business firms, and other organizations maintain summer camps and homes here for their employees.

The main economic activity is tourism. The resident population of Baguio is over 250,000, but this figure triples during the tourist season. Poor squatters make up over 50% of the population; the rest are business representatives, retired families, school teachers, missionaries, and the wealthy who can afford to commute, for weekends and extended vacations, between Baguio and Manila or other large cities.

The foreign colony is small, consisting mainly of Spaniards, Indians, Chinese, and Americans. The small Chinese community is complete with its own school and churches.

The American/European colony consists of missionaries, business representatives, teachers, miners, and their families. The Voice of America's (VOA) Philippines Relay Station is located in Baguio. English is spoken well by 75% of the local population. It is estimated that more than 3,000 Americans visit Baguio each year.

The U.S. Embassy residence in Baguio was the site of surrender

ceremonies, in September 1945, of General Yamashita to the American Forces.

Around the city, in mountain villages, live the Igorots (a generic term for various tribes). Igorots are mountain tribesmen with loyalty first to their own societies. They manage to eke a scanty subsistence from the mountainsides, and to supplement this by weaving and wood carving. Their native costumes (loin cloths and jackets for the men and bright-colored straight skirts and blouses for the women) are of interest to the foreign residents and tourists.

The Baguio business center consists of a central market, where local produce is sold, and many small shops and restaurants which line the four main streets. Around this area are found civic buildings; the impressive cathedral; lovely Burnham Park, named for the Chicago architect who designed the city; the St. Louis School of Silver; and the Easter School of Weaving.

Baguio is situated at an altitude of 4,600 feet above sea level. The climate varies between the dry and (very) wet seasons, each lasting about six months. The dry season begins in December and continues until June. Temperatures vary from the low 80s in the daytime to the 50s and 60s at night. This interval ends in June when the rains, which are light in May, become heavy. Baguio averages 176 inches of rainfall a year, with a record fall of 355 inches and a low of 99 inches. July and August are the rainiest months, averaging 42 inches each. The rains begin tapering off in September and are light in October and November.

Education

Brent School, founded in 1909 under the auspices of the Episcopal Church, is the only doubly accredited, coeducational, nonsectarian, day and boarding school in Southeast Asia. Its accreditation is with the Western Association of Schools and Colleges in the U.S. and with the Philippine Accrediting Association of Schools, Colleges, and Uni-

versities. The campus offers an invigorating and healthful climate which is conducive to study year round.

Brent's curriculum is representative of the best practices to be found in public schools in the U.S. and abroad. The school provides a seminar approach to learning. There is individually guided education and close personal contact between students and faculty. An active creative and performing arts program is a feature of the school, and participation in individual and group sports is encouraged. In-depth cultural studies, curriculum-related field trips, and specialized brief courses contribute to an educational program combining the richness of Western heritage with the experience of life in an Asian culture.

Special Opportunities

Both Baguio Colleges Foundation and St. Louis University have junior college-level courses, but all credits are not transferable to American colleges, and educational standards are considered low. No adequate facilities for post-high school education are available except correspondence courses. A few facilities are available for learning the local language. Ilocano if the local dialect, but most Filipinos speak English. Private tutoring in Spanish is available. Many local residents speak Pilipino, which has been declared the national language in the Philippines.

Recreation and Entertainment

There are good beaches at Lingayen Gulf, 32 miles from Baguio, and at Poro Point, 36 miles away. Fishing is excellent at Hundred Islands, a three-to-four-hour drive from Baguio.

Burnham Park, the "Central Park" of Baguio, has sprawling lawns around a lagoon, and walks lined with *agoho* (Australian pine) and eucalyptus trees. Adults and children alike are attracted by boating facilities, a roller skating rink, an athletic bowl, well-shaded picnic grounds, bicycling, and scooter

rides. A botanical garden with a natural area features a rich collection of Philippine flowers. A children's playground is a special attraction here.

The Crystal Caves are about 35 miles (one hour by car) from Baguio, and face the China Sea. This area is popular among visitors.

Americans patronize the two or three theaters in the city offering English-language movies, although they are screened somewhat later than U.S. showings.

No operettas, concerts, museums, or hobby club facilities are available. There are several local restaurants in Baguio, but some Americans prefer to eat only in their homes or at the Baguio Country Club, since unboiled water and unsanitary conditions may exist elsewhere.

Radio reception in Baguio is good. Direct television reception is good with an outside antenna. Four local VHF channels are on the air and a cable system is available in some parts of the city.

Baguio, with its scenic beauty, is a natural for photographers. The few local festivities, including parades and Igorot dances, as well as the festivals in the lowlands, provide interesting material for photographers. Color film can be processed in Manila, Hawaii, or Australia. Black-and-white film is processed in Baguio.

Almost all American contact with social activities are centered around the Baguio Country Club. Activities hosted at the country club and those sponsored by church and school organizations afford contact with Filipino residents, foreign nationals involved in mining, forestry, and missionary work, and Americans who have retired to Baguio.

Davao City

Davao City (officially, the City of Davao) lies on a channel leading from the Gulf of Davao on the Pacific side of Mindanao, the south-

ernmost and second largest island in the Philippines. It is geographically one of the largest cities in the world, covering 98,785 acres (244,000 hectares), and comprising mostly agricultural land. The metropolitan population is about 1.2 million (850,000 in the city proper), making it the largest city on Mindanao, although most of the people live in rural districts and on farmlands.

Davao City was founded in 1849 and, during the first half of the 20th century, developed as a Japanese colony. It served as a Japanese naval base for more than three years during World War II.

Davao City's latitude (about 7° north of the equator) and sea-level altitude result in a year-round, hot, tropical climate somewhat relieved by almost constant sea/land breezes. The average annual rainfall is about 80 inches a year. The mean daily maximum temperature is 89°F, and the mean daily minimum, 73°F. Davao City is outside the typhoon belt.

The area and city are engaged primarily in large-scale production of copra, bananas and abaca, logging, and plywood manufacturing. The city is focused upon the support of these activities and is experiencing economic and population growth. In recent years, Davao City has become a trading center serving the gold mining activities underway in a nearby province.

Mindanao was the "frontier" of the Philippines, and it retains much of the spirit of a pioneering city. Davaowenos are predominantly Cebuano speakers, revealing the origins of a city whose farmers and business representatives migrated from the Visayan Islands in the central Philippines. The region also includes large numbers of migrants who came from Luzon as well as small groups of both Christian and Muslim ethnic tribes. A large and influential Chinese-Filipino community is part of Davao City's overall population profile. The city is experiencing a steady increase in its

American community, which mostly comprises missionaries.

Education

English-language instruction is available at one or two private schools for children in preschool and kindergarten. Westerners usually rely on two or three of the best local schools for elementary and high school instruction. Some Americans in the district rely upon home instruction, using the Calvert system, or send their children to either International School or one of the boarding schools in Baguio.

Recreation and Entertainment

Swimming at the nearby beaches or the Davao Insular Hotel, and golf at either of two courses, are the primary outdoor sports in Davao City. Tennis, hiking, and picnicking are also enjoyed. Some members of the American community own boats, and opportunities abound for deep-water fishing and skin diving off the nearby islands. Because of the lack of good highways, travel to other interesting areas and cities on the island must be done by air.

Davao City does not offer a variety of entertainment. Amateur dramatic groups present performances and American participation is welcomed. A few nightclubs provide a diversion. Several excellent restaurants serve American, Chinese, and Filipino food.

Social life for the American community centers around home, church, and civic groups, and includes contact with both Filipinos and foreign residents. Most Americans belong to at least one local club, such as the Davao Beach Club, Apo Golf and Country Club, or Rotary. Membership, by invitation, usually is easily arranged.

OTHER CITIES

BACOLOD, the capital of Negros Occidental Province in the Visayan Islands, is a thriving, affluent city of 429,000 in the center of a vast

sugar-producing area. It is a modern urban area, with shopping malls, commercial districts, and art centers. A university was established here in 1957. The popular Mambucal summer resort is nearby.

The seaport of **BATANGAS** is the capital of the province of the same name. Situated in southwestern Luzon, it is near the mouth of the Calumpan River, on the northwest coast of Batangas Bay. The city is connected with Manila, which is about 58 miles to the south, by road and coastal shipping. Batangas trades in corn, sugar, and coconuts. The population here exceeds 240,000.

BUTUAN, the capital of Agusan Province, is situated in the northeastern part of Mindanao on the Agusan River. It is a port and trading center for copra and abaca. Magellan first proclaimed Spanish sovereignty over the Philippines here in 1521. Butuan has a population of about 270,000.

ILIGAN lies on the southeast shore of Iligan Bay in Mindanao. It is the chief port on the north coast and the site of a tin plate mill. The city was the scene of uprising in the Philippine Revolution of 1896. The population is about 285,000.

ILOILO CITY, both a commercial and cultural center, is the capital of its eponymous province, and lies on the southeastern part of Iloilo Strait, in one of the most populous areas of the entire archipelago. It is officially the City of Iloilo but, like so many other places in the Philippines, the simpler version of its name is commonly used. Iloilo City is a prosperous manufacturing and commercial center which has been a port for foreign trade since 1855. A Spanish settlement, it was frequently raided during the 16th and 17th centuries by the Moros (Moors). Although it suffered during the Japanese occupation in World War II, most of its old churches and buildings from the Spanish era are still intact. Iloilo City's population is estimated at 366,000 (2000 est.).

Located 17 miles southwest of Santa Cruz on Luzon, **SAN PABLO** is the largest town in the province of Laguna. It became a city in 1940 and has an estimated population of 208,000. San Pablo is a major rail and highway center in a valley near several small crater lakes. Copra is shipped from here.

ZAMBOANGA is a noted port and trade center in the province of Zamboanga del Sur, on the western tip of Mindanao. It is set at the foot of a mountain range, and its pleasant tropical climate and beautiful parks have earned for it the apt description, "city of flowers." Established in 1635 as a Spanish stronghold, Fort Pilar, the town grew and flourished during the years before World War II, when the Philippines were under U.S. control. Today, the city has a population over 600,000. A decided Moros influence remains in the area, and the local market has a wide array of Muslim artifacts and textiles.

COUNTRY PROFILE

Geography and Climate

The Philippines comprise some 7,100 islands, of which only 880 are inhabited. The two major islands are Luzon to the north, and Mindanao to the south. These and the central Visayas group are represented by the three stars in the Philippine flag.

Although generally mountainous, with peaks up to almost 10,000 feet, the country has extensive fertile coastal and central plains and rolling uplands. Large, rich valleys, traversed by rivers, lie between mountain ranges. The Philippines has many volcanoes, some of them active. The spring 1991 eruption of Mount Pinatubo was one of history's major volcanic explosions and its resulting atmospheric effects had worldwide implications. The rugged and irregular coastline, some 21,600

miles long, provides numerous harbors of all sizes. In comparison, the coastline of the continental United States is only 12,000 miles in length.

The Philippines ranks fifth among the world's countries in ratio of forest to tableland. Interesting plant life is abundant throughout the islands. The *sampaguita*, a small, multi-petaled, and exceedingly fragrant blossom is the national flower. Orchids grow in profusion—some 1,000 varieties are known.

Many interesting species of animals and birds are found in the forests and mountains. The *carabao*, or water buffalo, is indigenous.

The Philippine climate is mostly hot and humid. Manila is situated at sea level on the island of Luzon, 15° north of the equator. Three seasons are defined: the hot, dry period from March through May, ending with violent thunderstorms and torrential rains; the wet season from June into November, with daily rains during July, August, and September; and the cool, dry interval from November to February. Manila has an annual mean temperature of 80°F. The average monthly maximum temperature ranges from 86°F to 93°F, and the monthly minimum temperature from 69°F to 75°F. Average relative humidity spans a scale from 69% in April to 84% in August and September.

Typhoons, common in the Philippines during the rainy season, bring high winds and heavy rains. In November 1991, a typhoon, designated Thelma, hit an area about 340 miles southeast of Manila resulting in at least 6,500 deaths. Manila sometimes feels the full impact of these violent storms, although more often they miss the city because it is sheltered by mountains. In the rainy season, frequent floods cause delays in transportation and possible damage to automobiles. However, recent flood-control projects are alleviating this situation.

View of Baguio, Philippines

© Robert Holmes/Corbis. Reproduced by permission..

Minor earth tremors occur frequently. In 1969 and 1970, major earthquakes hit Manila, with some casualties and damage. In 1976, a devastating earthquake, followed by strong tidal waves, struck southwestern Mindanao. In January 1982, an earthquake measuring 6.8 on the Richter scale battered northern Bicol Peninsula and, in August of the following year, another hit Ilocos Norte; both of these caused extensive loss of life and property damage. In 1991, an earthquake in Baguio claimed 1,600 lives.

Population

The Philippines is inhabited by more than 80 million people of vary-

ing races, traditions, cultures, and religious beliefs who speak 87 different dialects. Culturally, the people are of three main classifications: the Christian group, comprising over 90% of the population, who inhabit the lowlands; the Muslims, comprising 4%, in the southern island of Mindanao and Sulu archipelago; and the third group, composed of the mountain people—Igorot, Ifugao, Negrito, Mangyan, etc.—living in the mountainous interiors of the islands. Some of the latter societies remain largely untouched by civilization.

The Philippines is a melting pot. The dominant race is Malay, but many Filipinos are of Chinese,

Spanish, or American descent. About 83% of the people are Roman Catholic. The remaining 9% of the Christian element belong to the Philippine Independent Church (*Aglipayan*), the indigenous *Iglesia ni Christo*, and various Protestant faiths.

Traditionally, Filipinos are noted for their friendliness and hospitality, but the past several years have witnessed a growing spirit of nationalism and some expression of anti-Americanism, particularly in Manila. However, the majority of Filipinos still welcome American friendship, and personal relationships develop more easily here than in most Asian nations.

The Filipinos have a natural reverence for women. Filipinos enjoy a status unmatched in other Oriental countries; at home and in the community, they share equal footing with Filipino men. Filipinos have strong family ties. Fiestas play a major role in their lives.

Although Tagalog is the predominant language, Pilipino (a mixture of Tagalog and other dialects) and English are the official languages. The latter is used in Manila for business, commerce, and higher education. Leading newspapers, magazines, and many television and radio programs are in English.

The use of Pilipino is increasing rapidly in schools and communications media. Nevertheless, Americans have no real language problems except, perhaps, when traveling in the more isolated areas of the country, where some knowledge of Tagalog is helpful. An adjustment becomes necessary to attune the American ear to the Filipino manner of speaking, with equivalent difficulty to be expected on the Filipino's part in understanding the American cadence.

Government

The Philippines has experienced much governmental turmoil in recent years. After 20 years of President Ferdinand Marcos' authoritar-

ian rule, Corazon Aquino was elected to the presidency in 1986. Aquino faced formidable problems, not the least of which was dealing with dissidents in the military and surviving six serious military coups. Some dissidents accused Aquino of catering to the elite of Philippine society and ignoring the poor. Several factors contributed to a sense of instability among the Filipino people: increasing economic problems, debate concerning U.S. use of military bases in the Philippines, and the perceived notion that Aquino was an indecisive and ineffective leader. Prevented by the constitution from running for a second term, Aquino backed the eventual winner, Fidel Ramos, who was elected to a six-year term in May 1992.

Ramos, however, had to deal with quite a bit of trouble concerning political corruption, a weak economy, and ongoing internal threats from Islamic extremists. He lost the election of 1998 to Joseph Estrada, his vice-president. Estrada eventually faced impeachment from charges of massive corruption and plunder. Amidst relatively peaceful rallies and demonstrations, Estrada stepped-down to be replaced by his vice-president, Gloria Macapagal-Arroyo, in January 2001.

The Philippines changed from an American-style presidential system to a modified parliamentary system during and after President Ferdinand Marcos imposed martial law from 1972 to 1981. However, after the election of Aquino, a new constitution was drafted and approved in a plebiscite in 1982. Under this constitution, an American-style presidential system was restored. The powers of the three branches of government (the president, the legislature, and the judiciary) are balanced with no one branch predominating.

Executive power is vested in the president who is elected by direct universal suffrage and is limited to one term of six years duration. The president appoints a Cabinet which oversees day to day affairs of the government. Legislative power

resides in a 24 member Senate with members elected from a nationwide constituency, and the 250 member House of Representatives. Of the number 200 are elected from individual local constituencies and 50 appointed by the president. The judicial system consists of a 15 member Supreme Court and various lower courts.

Government in the Philippines is unitary, not federal. The central government supervises administrative details for the provinces, cities, and towns, but these local jurisdictions choose their own officials and manage most of their own affairs.

Administratively, the 72 provinces are divided into 12 regions. Metropolitan Manila, which includes the city proper, Quezon City, and other jurisdictions, has its own legal status. In the south, with its substantial concentrations of Muslim Filipinos, and in northern Luzon, with its substantial numbers of cultural minorities, the government is implementing a constitutionally mandated program of regional autonomy.

The flag of the Philippines consists of equal horizontal bands of blue and red; next to the staff is a golden sun with three stars on a white triangle.

Arts, Science, Education

The Philippines has over 40,000 public and private primary, intermediate, secondary, and collegiate schools. Among the institutions of higher education are the University of the Philippines, the University of Santo Tomás, and other nationally chartered centers of higher learning. The scope of private education is impressive—171 government and 636 private colleges and universities. Although it is occasionally argued that some schools fall below the standards of learning elsewhere, the mere presence of so many schools is an achievement which few other developing nations can match. An educated electorate

is part of the Filipino's concept of democracy. Until recent years, much of the intellectual and cultural life of the country revolved around the universities. Today, expanding libraries, museums, concert halls, book shops, and art galleries provide alternate experiences.

As the Far East's only predominantly Christian country, Western ideas and values have strongly influenced Philippine art. The art world is active and diversified. Folk-dance groups enjoy the same popularity as Western modern and classical ballet companies. Two symphony orchestras in Manila have concert seasons, and drama clubs (several with international membership) perform throughout the year. Exciting and venturesome examples of modern architecture are represented in some new buildings in the Manila area.

A large scientific community is active in the Philippines. The National Science Development Board has under its jurisdiction the National Institute of Science and Technology, the Nuclear Research Institute, the Coconut Research Institute, and the Textile Research Institute. The Nuclear Research Institute operates a one-megawatt reactor, producing isotopes for medical use, and carries on research in other areas.

Philippine scientists work with their counterparts from all over the world in the International Rice Research Institute in Los Baños, which has developed new strains of "miracle rice." Another important international project is the country's affiliation with INTELSAT through two PHILCOMSAT satellite earth stations. These installations at Tanay make it possible for the Philippines to carry direct telecasts worldwide events.

Commerce and Industry

The once-promising Philippine economy declined in the early 1990s due to a variety of factors. The shut-

down of U.S. military operations resulted in the loss of thousands of civilian jobs, as well as more than one billion dollars that the bases injected into the economy. Prolonged drought and inadequate infrastructure also contributed to the country's stagnant economic growth. Growth resumed in 1993 and 1994, and inflation declined.

The economy retains many of its traditional characteristics. Almost 40% the labor force is employed in agriculture and many earn their living in the related activities of processing, transportation, and trade in agricultural products. Efforts are being made to encourage and decentralize industrial development, which is presently concentrated around Manila. In the south, Iligan City with its hydroelectric dam and steel complex, and Davao City and Cebu City are developing into industrial areas. Export-processing zones are located in Bataan, Cebu City, and Baguio, and others are planned in the provinces.

A large debt burden, and population pressure make agricultural development, industrial sector expansion, and increased export earnings critical to future development. Chief Philippine exports include coconut products, garments, and electronics. Key crops include rice and corn, primarily for domestic consumption; sugar, coconut products, abaca, pineapple, bananas, and forest products such as lumber, plywood, and veneer for export.

The private sector dominates the Philippine economy. Government economic agencies determine the policy framework within which the private sector functions and the principal directions of the economy through the Investment Priorities Plan. Economic nationalism is a potent force in the Philippines, and some government trade and investment policies reflect this sentiment. The public sector also has responsibility for much needed economic infrastructures, such as power generation, roads, and port and air terminal facilities.

A few wealthy families, which are now developing modern management practices, are very influential in the private sector. The Filipino-Chinese community is also a major force in businesses. Americans traditionally have been the principal foreign investors in the Philippines. But Japanese, European, and other Asian investments and financial interests have become increasingly important.

Unemployment in metropolitan Manila is about twice as high as in rural areas and underemployment throughout the country is a serious problem. Creating new jobs to reduce underemployment and provide employment for new workers is one of the Philippines most pressing problems. A competitive wage scale and a well-trained, English-speaking labor force are important attractions for employment-generating investment.

Trade unions have had a long history in the Philippines. However, unions are divided among a vast array of rival labor federations whose disunity seriously undermines the economic and political influence of the labor movement. The number of strikes has declined recently, but some unions pursue strikes for ideological more than economic reasons.

Transportation

Travel by air to practically any part of the world can be arranged from Manila. American-flag cargo ships, with limited passenger capacity (usually 12), have infrequent trans-Pacific sailings from Taiwan to the U.S. west coast via Hong Kong and Japan but, for all practical purposes, surface travel between the U.S. and the Philippines is not convenient.

Airlines connecting Manila with other points in the Far East include Air France, China Airlines, Cathay Pacific, KLM (Royal Dutch Airlines), Korean Airlines, Northwest, Pakistan International, Philippine Airlines, Qantas, Sabena, SAS (Scandinavian Airlines) Thai Air-

ways International, Japan Airlines, and Air Egypt. Northwest has daily scheduled flights to the U.S.

Philippine Airlines (PAL) makes scheduled flights to cities and important towns throughout the country. It is possible to arrange a one-day round trip to some places.

Inter-island ships sail almost daily, with calls at major ports within the country. Although the accommodations cannot be considered first class, those traveling on the ships find their voyages adventurous and enjoyable. Ships are often crowded and overbooked; at times ship travel may be hazardous because safety regulations may be unenforced.

Modes of city transportation vary, but taxis are most commonly used by Americans who do not have personal vehicles. Many taxi companies and individual owners and operators provide service throughout the large cities and their suburbs. Mostly, small Japanese cars are used. Many taxis are old, dirty, poorly maintained, and driven recklessly; many do not have air conditioning. Street crime in Manila often involves taxis, so care should be taken when hailing one. The most reputable taxis are found in front of hotels and other large businesses and have meters that work; fares are reasonable. A small tip is usually given.

Bus service is available throughout Manila and suburban areas. Fares are cheap and schedules frequent. However, buses are seldom used by Americans, as they are considered neither safe nor comfortable by U.S. standards. Pickpockets are quite active on the buses here. Buses are also handled recklessly, and drivers often race from one street corner to another vying for passengers, and sometimes vary the established route.

"Jeepneys," colorful vehicles built on Jeep frames, are plentiful in Manila and suburban areas. They carry up to a dozen people and are frequently overcrowded. Fare is nominal to most points in Manila; this means of

transportation, however, cannot be relied on to follow regular routes. Most vehicles have side curtains, but passengers should expect to get wet when it rains. Since "jeepneys" are preferable to city buses, Americans occasionally use them.

For an occasional "fun trip," there is the horse-drawn *carretela* or *calesa*. One should bargain with the driver (*cochero*) to set the price of the trip. These horse-drawn vehicles are banned from the main thoroughfares of Manila, as they constitute a serious traffic hazard for motorized vehicles.

Two major highways lead out of Manila, one going north to Angeles and Baguio, and one heading south. Although the roads have four-lane sections near Manila, mainly they are two-lane highways.

Train travel is not recommended, considering the unsafe condition of roadbeds, substandard cleanliness of cars, and frequent pilferage of belongings.

Although it is possible to go to almost any point on Luzon Island by bus, few Americans do so for the same reasons as given for Manila city buses. Sarkies Bus Tours may be the exception. The company has clean, air-conditioned vehicles traveling regularly between Manila and several cities, including Baguio and Banaue.

Driving in the Philippines, as in most places where traffic is highly congested, requires considerable care and patience in order to avoid accidents. Some people find it desirable to employ a full-time chauffeur for this reason, and to ensure against the danger of pilferage or theft of an unattended car.

Communications

Although local telephone service is common in the Philippines, it is far from reliable. Storms, and even showers, disrupt the service, and telephone instruments often are unusable for no apparent reason. Frequently, repairs take an inordi-

nate amount of time. Long-distance service to the U.S. is excellent—when telephones are functioning properly. Some international connections are scheduled for certain hours of the day. Although not always dependable, service between Manila and all major Philippine cities is also available.

International telegraph and cable service is provided by several companies, including RCA, ETPI, and Globe Mackay. Mail leaves for, and arrives from, the U.S. via American-flag carriers seven days a week. Transit time is usually five to six days.

Radio and television programs in the Philippines resemble those in the U.S. They are commercial and highly competitive. Many are in English. Popular American series are carried in English on TV, but many locally produced shows are in Tagalog. Local news and public affairs programs are usually in English. Movies are also popular on television, both in English and Tagalog.

Currently, the Philippines has over 300 radio stations, with about 45 of these in the metro Manila area. Radio stations carry news, music, and commercials. Music varies from the classics to rock. Many Manila stations broadcast in FM stereo, featuring a wide variety of pop and classical music. Radio/TV stations carry international and U.S. news, but these reports are inclined to be sketchy and lacking in depth. Anyone interested in comprehensive information should have a shortwave receiver. A shortwave radio will pick up broadcasts from Voice of America (VOA), British Broadcasting Corporation (BBC), and Radio Australia.

The Philippines has over 25 TV channels, about five of them (plus two cable channels) in the Manila area. All Manila stations are color-equipped. TV channel allocations are the same as those in the U.S.

Eight major English-language daily newspapers are printed in the Philippines. The *Manila Bulletin* is the largest of the three English national dailies. Other English newspapers and periodicals specialize in current business and trade affairs. The *Asian Wall Street Journal* and *International Herald Tribune* are available at newsstands and at major hotels.

More than 10 locally published weekly magazines are in English. Some have multi-interest, short articles (*Focus Philippines* and *Panorama*) and others carry articles for a specific audience. Most pieces are light features on human interest and other apolitical subjects but, occasionally, there is in-depth analysis of current events.

The Far East editions of *Time* and *Newsweek* are available by subscription or direct purchase at local newsstands. A limited supply of most American magazines, four to six weeks late, and paperback books can be purchased at local newsstands.

Health and Medicine

For most medical and surgical problems, Manila's facilities are considered satisfactory. Makati Medical Center, a 300-bed hospital opened in November 1968, has modern equipment and facilities comparable to those in a large U.S. community hospital. Many of its staff physicians and surgeons are American-trained. Other good hospitals include Manila Medical Center, Manila Doctor's Hospital, and St. Luke's Hospital in neighboring Quezon City.

Since a large number of Filipino doctors and nurses have received advanced training in the U.S., most specialties are found. A few excellent expatriate doctors practice in Manila.

Despite the availability of U.S.-trained Filipino doctors and dentists in Manila, dental work and

medical problems should be taken care of before departure for the Philippines.

There are several U.S.-trained physicians in Cebu City. For most illnesses and emergency medical problems, the facilities are considered adequate. Cebu Doctor's Hospital, opened in 1972, comes closest to meeting Western standards for cleanliness and equipment, and is preferred by most of the American community. Chong Hua and Perpetual Succour Hospitals are also acceptable. Routine dental care is available here, but orthodontic treatment and oral surgery must be done in Manila. If you use regular medication, arrange with a U.S. pharmacy to make routine shipments.

Several U.S.-trained physicians in Davao City are used extensively by the American population of that city. The Ricardo Limso Medical Center is where most of the recommended physicians admit patients. Although it does not have some of the more sophisticated equipment found in most American hospitals, the facility is considered adequate for many medical problems, including emergency surgery (e.g., appendectomy). Elective surgery or sophisticated diagnostic procedures should be performed elsewhere.

In general, common diseases may be treated in Baguio. The two hospitals considered adequate are Notre Dame de Lourdes and Pines City Doctor's Hospital. Treatment at better hospitals is recommended for illnesses requiring a prolonged hospitalization or major surgery.

The following general health advice refers to Manila, but actually applies to the entire Philippines:

The general level of sanitation is lower than that in the U.S., but is high in comparison with many other developing countries. An increase in the population of metropolitan Manila since the time of liberation has greatly overtaxed the water supply, sewage and garbage disposal, street cleaning, and utilities.

Caution must be exercised regarding the municipal water supply. At times, particularly during the dry season, pressure is low in the mains, and water in certain areas of the city cannot be considered potable. Some of the residential villages have their own deep wells and pumps, and make it a practice to monitor the purity of their water. As a general precaution, however, water used for drinking and daily dental care should be boiled.

Some open sewers still exist in Manila, and practices in the area of waste disposal, food handling, and market sanitation in some areas may not be adequate from a public health standpoint. Manila continues its effort to improve hygienic conditions in the city, and to educate its people in public health and sanitation measures. However, the program has not reached all levels of society, and caution must be exercised. Cockroaches, ants, mosquitoes, fleas, termites, rats, and mice are quite common in the Philippines. They can be controlled through home efforts and the use of commercial exterminators.

Laws require the reporting of communicable diseases. There are isolation hospitals for the treatment of typhoid, cholera, diphtheria, poliomyelitis, etc. Incoming ships and airplanes, and their passengers, are subject to quarantine inspection.

Occasional gastrointestinal upsets and colds are almost unavoidable in the Philippines. Through normal precautions and care, it should be possible to avoid serious diseases such as cholera, typhoid, bacillary dysentery, and intestinal parasites. Inoculation against typhoid, tetanus-diphtheria, poliomyelitis, and cholera is advised. Susceptible children should be vaccinated against measles, mumps, hemophilus B, and rubella, following the usual recommended schedules.

Gamma globulin is available for hepatitis prophylaxis. Tuberculosis is common in the Philippines, and periodic skin tests are recommended. It is important that all

household help and drivers have physical examinations at regular intervals.

While the areas in and around Manila, Baguio, and Cebu City are malaria-free, there is incidence of the disease in some of the rural, undeveloped parts of the country. Visitors traveling in these areas should take appropriate preventions. Chloroquine-resistant malaria may be encountered in some places.

Penicillinase-producing *Neisseria gonorrhoea* (PPNG) is common here. This type of gonorrhoea is resistant to penicillin and must be treated by other means.

Respiratory infections and irritations are also common because of atmospheric pollution and the vagaries of air conditioning.

Normal precaution must be taken in eating fresh fruits and vegetables. It is wise to eat local produce only after peeling, soaking, scrubbing, and cooking. A certain amount of salt in the daily diet is desirable.

Boiling for five minutes is the recommended method for sterilizing water. Bottled beverages sold here are usually plentiful and safe. In general, it is safer to drink bottled beverages or hot tea or coffee, rather than water, in public places. Powdered, reconstituted milk is widely used. Fresh milk and dairy products, other than Magnolia brand, are not always considered safe, even though pasteurized. Meats from local markets should be well cooked, and the freshness of fish determined before eating.

Many fine restaurants in Manila are patronized by Americans. These are quality establishments and may be patronized with reasonable confidence. However, it is not wise to eat raw food, especially raw seafood, even at the best places. Care should be taken in consuming local dairy products, and children should not be allowed to eat ice cream or other food bought from street peddlers. Ice is always suspect. It should also

be noted that alcohol does not kill bacteria.

Visitors must remember to avoid overexertion and excessive fatigue. The tropical environment is enervating, and recovery from exercise may not be as prompt in the Philippines as in a temperate climate. Serious burns may follow relatively short exposure to the sun. Heat rash responds best to frequent cool showers, air-conditioned rooms, loose clothing, and all measures to reduce perspiration. Superficial skin infections are extremely common in the tropics. Even the smallest wound should be carefully cleaned with an antibiotic disinfectant and covered.

Most standard medicines are stocked in the larger pharmacies in major cities, although brand names may be different and unfamiliar. Many major multi-national drug companies have factories and representatives in the Philippines.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Several air routes are traveled from the U.S. west coast to the Philippines; the most commonly used are those via Honolulu and Guam to Manila, or via Seattle or Anchorage, through Tokyo to Manila.

Travel within the archipelago is possible by boat, plane, bus, or car. Few tourists rent a car to drive, as the road system is crowded and drivers are undisciplined. Driving off the national highways and paved roads is particularly dangerous, especially at night. To avoid overcrowded or unsafe transport, caution is urged in planning travel by older, inter-island ferryboats or other public conveyances.

U.S. citizens are allowed to enter the Philippines without a visa upon presentation of their U.S. passport, which must be valid for at least six months after entry, and a return ticket to the U.S. or onward ticket to another country. Upon arrival, immigration authorities will annotate the U.S. passport with an entry visa valid for 21 days. If you plan to stay longer than 21 days, you will have to apply for an extension at the Philippine Bureau of Immigration and Deportation, Magallanes Drive, Intramuros, Manila, Philippines. There are special requirements for the entry of unaccompanied minors. Additional information concerning entry requirements may be obtained from the Embassy of the Philippines, 1600 Massachusetts Avenue, N.W., Washington, D.C. 20036, telephone (202) 467-9300 or from the Philippines Consulates General in Chicago, Honolulu, Los Angeles, New York, or San Francisco.

U.S. citizens living in or visiting the Philippines are encouraged to register with the Consular Section of the U.S. Embassy in Manila, located at 1201 Roxas Boulevard, Manila City; tel. (63-2) 523-1001. The Consular American Citizen Services fax num-

ber is (63-2) 522-3242 and the ACS web page is <http://usembassy.state.gov/posts/rp1/www3004.html>.

The U.S. Consular Agency in Cebu provides limited services for U.S. citizens. The Consular Agency address is: Third Floor, PCI Bank, Gorordo Avenue, Lahug, Cebu City; tel. (63-32) 231-1261.

Pets

A pet (animal or bird) may be brought to the Philippines if accompanied by a health certificate, documentation of rabies inoculation, import permit from the Philippine Bureau of Animal Industry, and certificate of tax exemption. The validation of an animal's health certificate by a Philippine embassy or consulate is not sufficient documentation to permit landing or free entry; the import permit and tax certificate are the only papers acknowledged by Philippine officials. Without proper clearance, the animal will be held at customs in quarantine.

Currency, Banking and Weights and Measures

The official currency unit is the *peso*, which is divided into 100 *centavos*.

Visitors should also be vigilant when using credit cards. One form of credit card fraud involves the illicit use of an electronic device to retrieve and record information, including the PIN, from the card's magnetic strip. The information is then used to make unauthorized purchases. To limit your vulnerability to this scam, never let your card out of your sight. Major problems have occurred at large department stores and some hotel restaurants.

The metric system of weights and measures is standard in the Philippines, but English units (pounds, gallons, and yards) often are used.

The time in the Philippines is Greenwich Mean Time (GMT) plus eight.

Disaster Preparedness

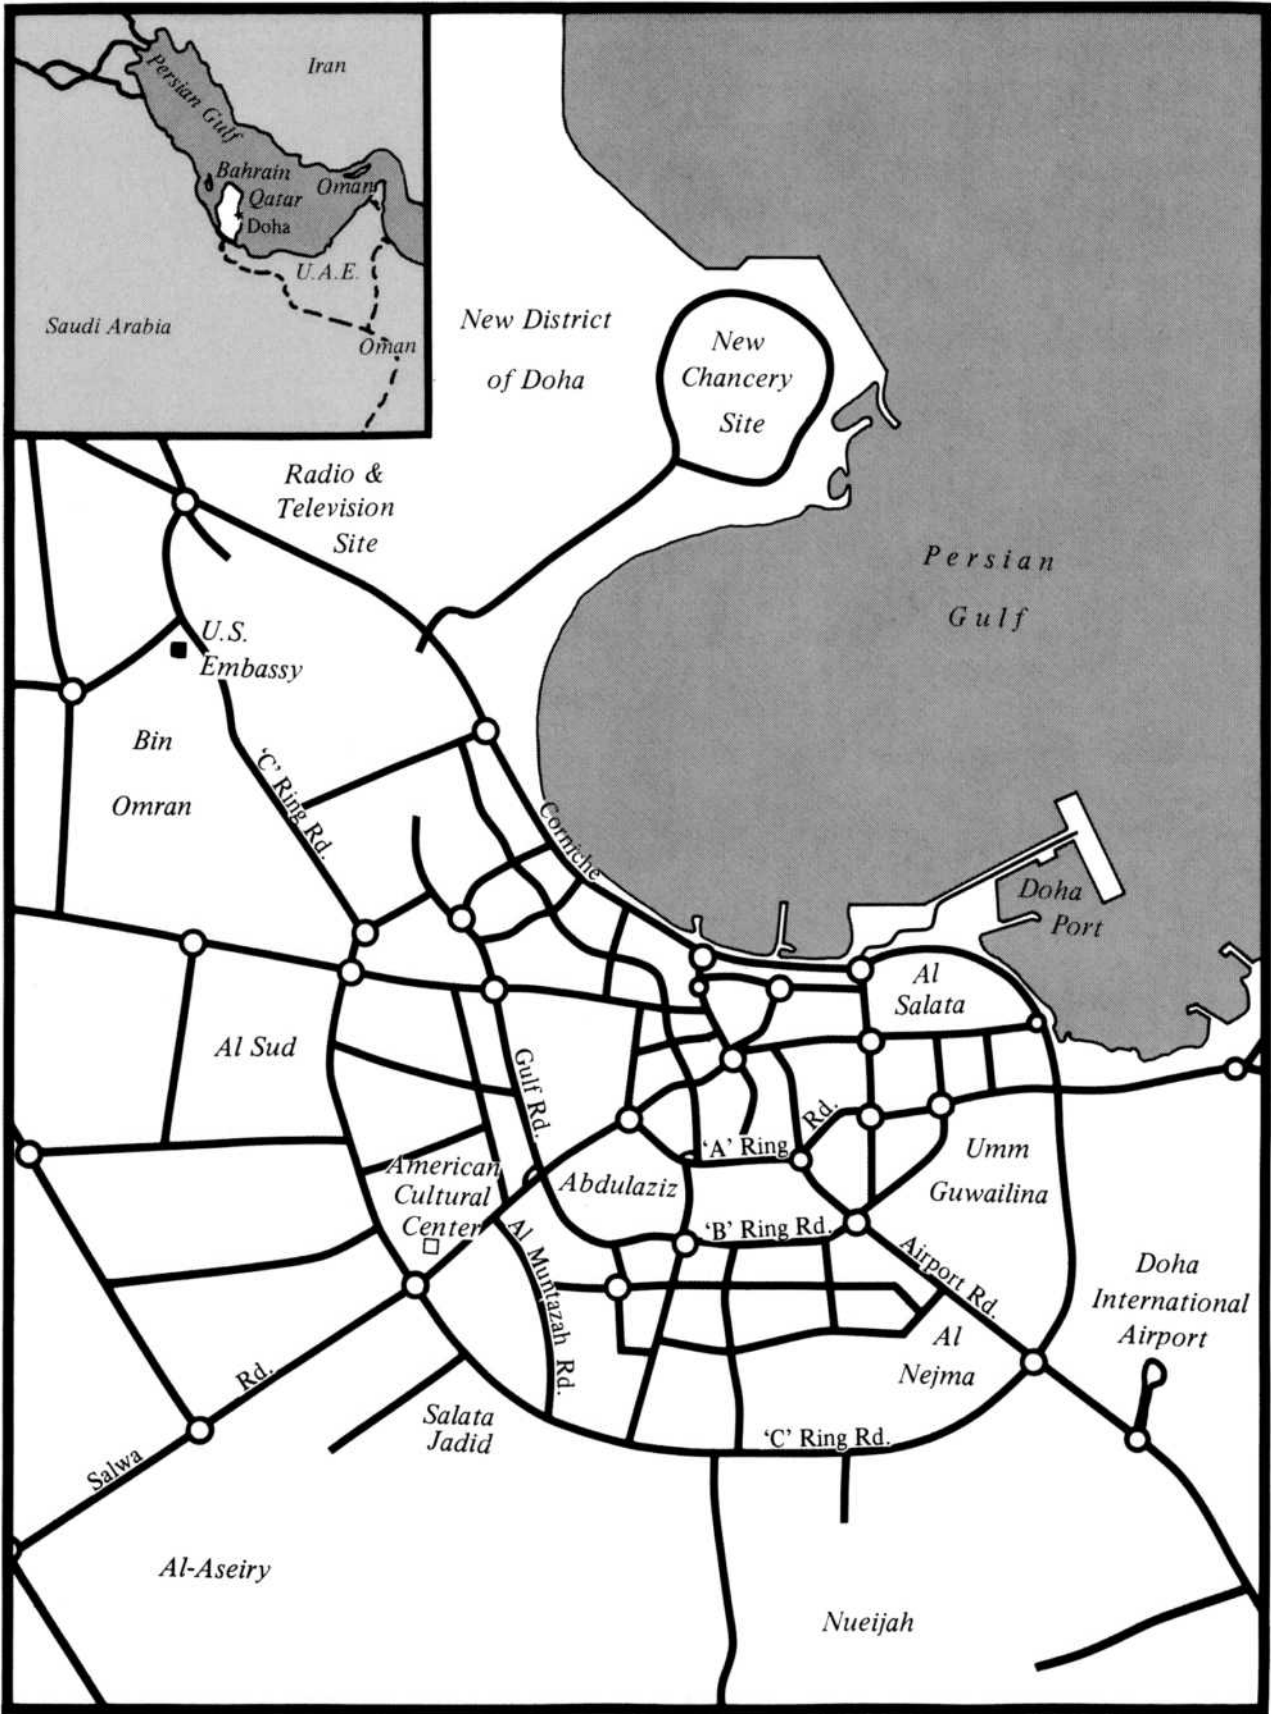

The Philippines is a volcano-, typhoon- and earthquake-prone country. During the rainy season (May to November) there are typhoons and flash floods. Flooding can cause road delays and cut off bridges. Typhoons in the vicinity of the Philippines can interrupt air and sea links within the country. Volcanic activity is frequent, and periodically the Government of the Philippines announces alerts for specific volcanoes. Earthquakes can also occur throughout the country. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov>

Other City:

Umm Said

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated March 1997. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

QATAR, a fully independent sovereign Arab state on the western shore of the Persian Gulf, was a protectorate of the United Kingdom for 75 years before proclaiming its autonomy in 1971. It had been inhabited for many centuries, as early as 4,000 B.C., and had existed under the dominance of Bahrain and the occupation of the Ottoman Turks. At the beginning of World War I, Great Britain expanded custody of Qatar, promising to protect it from all aggression by sea, and to lend its good offices in case of land attack.

High-quality oil was discovered in 1939, but exports were delayed by the second World War. During the 1950s and 1960s, gradually increasing oil income brought economic prosperity, social progress, and the beginning of modern industry. In 1968, Qatar attempted to form a federation with neighboring Gulf countries, Bahrain and the Trucial States (the present United Arab Emirates). Attempts to agree on the terms of the union failed. In September 1971 Qatar decided to become a separate entity known as the State of Qatar. (The name sounds like "catter.")

MAJOR CITY

Doha

Doha's 2000 population is about 355,000 and growing. Most have arrived in the past 15 years, as the city has expanded at an incredible rate. Although generally well maintained by municipal authorities, the city has grown faster than its basic infrastructure, resulting in a large number of ongoing renovation projects (roads, sewers, telephone cables, etc.).

Privately funded residential and office building construction is found throughout the city. Notwithstanding this large-scale development around the capital, a shortage of reasonably priced, Western-style housing persists. The majority of new living units are large, poorly designed (and expensive) European-style "villas," with high perimeter walls and very small interior gardens.

Once a sleepy seaport, Doha has come a long way since the oil boom of the mid-1970s. The modern skyline now includes a number of multistory buildings that contrast sharply with the flat, rocky plains surrounding the city. Many of the older buildings are being torn down and replaced, especially in the old "souk" area of the city center.

Streets in the old section of the city are narrow and congested, but a system of wide, high-speed parkways links the newer, suburban areas. Very few open spaces are found in the city center, but a 7-kilometer-long park system along the waterfront Corniche offers agreeable vistas and a place to walk or jog and is a popular gathering spot in the cooler months. In addition, a limited number of public parks and museums are located around the city, including the attractive Doha

Aerial view of Doha, Qatar

Zoo, the National Museum, Doha Fort, Khulaifat Park, Muntaza Park, the Airport Park, and Aladdin's Kingdom, a Western-style amusement park. Mosques appear in every neighborhood; one is never more than a few blocks from an impressive example of Muslim architecture.

Food

With the exception of fresh fish, some chicken, and seasonal, locally grown produce (cucumbers, tomatoes, melons, etc.), all food consumed in Doha is imported. Although poor supermarket inventory management results in frequent shortages, overall selection among the various retail outlets is good. U.S.-style one-stop shopping may be impossible, but one can usually find everything one needs to feed an American family. Several modern supermarkets offer a vari-

ety of fresh and frozen meat, frozen poultry, canned goods and frozen foods, some from the U.S. but most from Europe, the Middle East, and Australia.

A wholesale produce market on the outskirts of the city sells imported fruits and vegetables at Washington, D.C., area prices. An adjoining fish market offers a good selection of fresh, reasonably-priced fish and shellfish. Dairy products, including fresh and "shelf life" milk, cheese, yogurt, cream, and butter, are available at most local retail outlets. Both imported and locally manufactured soft drinks are available at reasonable prices. Local bakeries produce various types of bread, rolls, pies, and cakes; however, the quality is not quite up to U.S. standards.

Alcoholic beverages are available but carefully rationed and controlled. Using a ration card issued by the British Embassy, one can only purchase liquor once per month up to QR 500 (about \$137) per family. Prices include importation duty and are very close to U.S. retail prices for similar items.

Clothing

For 4 to 5 months of the year, Doha's temperatures exceed those of the hottest August days in Washington, D.C. Cotton and other cooler fabrics for both women and men are essential during this period. For 2 to 3 months in winter, it is cool enough for light jackets and woolen clothing in the evenings. Good-quality clothing is about twice the cost in Doha as in the U.S. By contrast, the local fabric market is reasonably priced, and local dressmakers and tailors can be hired to custom-make cloth-

ing items for significantly less than retail outlets charge for premanufactured items. However, the abilities of local tailors and dressmakers vary widely, and custom-made clothing can be a hit-or-miss proposition.

Men: Because many offices and homes are centrally air-conditioned, lightweight suits and jackets are comfortable for office and evening wear. For informal occasions, slacks and sport shirts are appropriate.

Dress shoes and some fashionable men's clothing are available in Doha. English and continental shoes average \$200 to \$300 a pair. American shirts, ties, socks, underwear, and pajamas are available, but again at very high prices. Continental suits are sold for \$700 to \$900 and sport coats for \$350. Occasionally, a reasonably priced suit or jacket is found at one of the local shops, though apparel stocked locally is inferior by U.S. standards. Even if the price is right, fit and size can present problems. Tailor-made suits and shirts are more affordable, but great care must be exercised in choosing a tailor and explaining the design requirements.

Women: Although Qatari women wear the traditional, ankle-length black cloaks (abayas), Western women wear regular Western dress. Knee-length and mid-calf-length dresses and skirts are preferable, as very short dresses, shorts, and tank tops are considered in poor taste and offend the host country's religious and cultural principles. Many women have dresses or skirts made locally.

American shoes are typically not available in Doha. European shoes in the latest styles can be purchased, but many Americans have difficulty finding the correct size, and prices are very high. The rough outdoor terrain is very damaging to shoes, and replacements will be needed more often than in the U.S. Shoe repair work is available but not always of good quality.

Children's clothing is available, but quality and style are uneven, and all items are much more costly than in the U.S.

Supplies and Services

Ample supplies of toiletries, cosmetics, shaving supplies, and home medications, mostly European brands, are available at higher than U.S. prices. Pharmacies carry a wide range of prescription and nonprescription drugs, first-aid supplies, and birth control products.

British, French, and some American cigarettes, cigars, pipe tobacco, and smoking accessories are available locally at prices comparable to those in the U.S.

Dry cleaning is available at several retail outlets. A man's business suit typically costs about \$6, a woman's suit about \$4.50. Business hours for dry-cleaning establishments are short, sometimes only a few hours per day.

Hairdressing salons for men and women are adequate by Western standards. A man's haircut costs \$3 to \$10, depending on the shop patronized. A shampoo and set, without a cut, costs about \$20.

Religious Activities

Islam is the only officially sanctioned religion in Qatar, and it is illegal to display crosses and other religious symbols on buildings or in public areas. Likewise, churches and other official places of worship are banned. Unofficially, a variety of Christian worship services are held in private schools and homes, including Catholic, Protestant, and Anglican services. There is a Christian burial ground near Dukhan, about an hour west of Doha.

Education

Expatriate schools are available for the American, British, French, Lebanese, Indian, Egyptian, Bangladeshi, Iranian, and Pakistani communities. In 1988, Doha's American International School (AIS) was founded as an independent, coeducational private school. AIS offers

an American-style educational program for students of all nationalities, from kindergarten through grade 12. AIS receives grant money from the Department of State's Office of Overseas Schools (A/OPR/OS). It is accredited by the New England Association of Schools and Colleges, Inc. The school operates on a quarter term system from the beginning of September to the middle of June. The school runs at full capacity with 400 students, about half of whom are American citizens. A new school building has been in the planning stages.

Other local schools include the Doha English Speaking School (DESS), a British-style grade school, and Doha College, a British high school. These schools are sponsored by the British Embassy and follow traditional British educational models, preparing students to pass the qualifying exams that control access to the better public and private schools and colleges in the U.K. Despite differences in goals and methods, the British schools can prepare American children to enter U.S. public schools with their age groups. Supplemental courses in areas beyond the British curriculum, such as U.S. history, must be arranged privately. The schools operate on a trimester basis from September to late June.

Sports

Organized athletic events are typically limited to soccer, although a few other sports make an occasional appearance. For those who can afford to join private clubs, a variety of sports are available, including

wind surfing, sailing, weight lifting, volleyball, etc. Fishing and boating are popular but expensive. A few bowling alleys are available, both for league play and individual play.

A new championship golf course just north of Doha will open soon. Due to the costs of maintaining grass greens and fairways in the harsh desert climate, membership fees and greens fees are expected to be very high. Two older golf courses already operate in Qatar, both with dirt fairways and oiled sand greens (browns). One is a 1-hour drive west of Doha, and the other is a 40-minute drive south. Membership at either club is less expensive, but may require a wait of several months. A few private tennis and squash clubs operate in Doha. A local rugby club is open to all reasonably skilled players. There is also a scuba club in Qatar.

A number of private clubs with sports facilities, some at hotels, offer individual and family memberships. Typically, these clubs offer swimming, squash, tennis, and weight room facilities. Membership fees are relatively high. The Al-Messilah compound also has a small weight room, a large (25 meter) swimming pool, two squash courts, two tennis courts and several children's playgrounds. These facilities are free to Al-Messilah residents and their guests.

Aside from the occasional tennis or squash match, soccer football is the only local spectator sport. Local and regional teams compete frequently on Doha's various public and private soccer fields.

Touring and Outdoor Activities

The principal outdoor activity in Doha is the weekend beach trip. The beaches which are easily reached over good roads are too noisy and litter-strewn for most Americans. The more attractive beaches in the North and West are also more remote: most are 1–2 hours away from the city and accessible only by 4 wheel-drive vehicles. The remote

beaches offer better privacy and family enjoyment for Westerners. Beachgoers travel in convoys and bring all necessary supplies with them, including food, drinking water, tents, firewood, etc.—all beaches are “primitive” (no shade, fresh water, rest rooms or concessions of any kind). At the Inland Sea south of Umm Said, sand dunes extend to the water's edge, sheltering mile after mile of beautiful, deserted beaches. However, a trip to the Inland Sea is three hours each way, much of it over salt flats, gravel flats and loose sand. It requires substantial planning and a minimum of 3–4 well-maintained 4-wheel-drive vehicles. Due to the distance involved, many visitors to the Inland Sea camp out overnight and return to Doha the next day.

Doha's National Museum is among the finest of its type in the Gulf. The facility is a treasure chest of bedouin artifacts, crafts, jewelry, and other works associated with the history of the Qatari people. It also has an aquarium and lagoon, in which local sea life and traditional fishing boats are displayed.

Arabian oryx can be seen at the Doha Zoo and on a farm at Shahaniya. These extremely rare animals were captured elsewhere on the Arabian peninsula to form a breeding herd in Qatar and to help save the strain from extinction.

Entertainment

Doha has no western-style bars or nightclubs; public drinking and dancing are prohibited. Private restaurants in the major hotels and in private clubs offer alcoholic beverages to members and paying guests only. All other liquor is sold via a local ration system controlled by the British Embassy. Most evening entertainment is either alcohol-free or takes place in private homes.

Doha has two cinemas, but they show South Asian and Arabic movies almost exclusively.

An amateur, English language theater group produces several plays

every year, including one or more musical productions. There are a few private choral, instrumental and dance groups in Doha, but no city choir, dance troupe or orchestra. The National Folklore Troupe, established to preserve Qatar's traditional music and dance, presents public performances on holidays and for special events. Qatar occasionally hosts an international sporting event, such as the Qatar Tennis Open in January.

Social Activities

Opportunities for charitable volunteer work exist but are limited. Local social services enjoy massive government support. Charities and non-governmental organizations (NGOs) have been virtually nonexistent in the past, but interest in this concept is growing—Qatar's first NGO, Friends of the Environment, has just been established.

Although Qatar is still a traditional society, opportunities exist to establish rewarding personal relationships with Qatari nationals, both men and women. Cross-cultural ties have been strengthened by the large number of young men who have been sent abroad for higher education. The size and variety of expatriate communities also present excellent opportunities for staff members to develop personal and business relationships.

OTHER CITY

UMM SAID (also called Musay'id) is an important port situated 25 miles south of Doha on the Persian (Arabian) Gulf. For over 20 years, it was the country's only deep water port. Revenue from material exported and imported here was critical in the development of the country from the city's founding in 1949. The Qatar Petroleum Company constructed a tanker terminal in the area, including an artificial deep water port. The company's headquarters was built here, as well. A deep water port was opened in the capital in the 1970s, lessen-

ing the importance of Umm Said. The city has a population of over 6,100 (1986 est.).

COUNTRY PROFILE

Geography and Climate

A sovereign Arab State on the western shore of the Arabian Gulf, Qatar occupies a 4,200-square-mile peninsula somewhat smaller than Connecticut, as well as several small offshore islands. The Qatar Peninsula projects north into the Gulf for about 100 miles and has a maximum width of about 55 miles. Halul, a permanently settled island, is an important storage center and tanker terminal for three offshore oil fields.

Doha, the capital city, is situated on the east coast, as are the country's larger towns.

In the south at the neck of the peninsula, Qatar borders the Kingdom of Saudi Arabia. Riyadh, the Saudi capital, lies 250 miles due west beyond the Jafura Desert.

The port of Abu Dhabi, capital of the United Arab Emirates, is about 150 nautical miles southeast. The vast Rub' al-Khali Desert (the Empty Quarter) extends to the shallow inlets, reefs, and shoals of the Gulf.

The nearest seaward neighbor is Bahrain to the north. Although Bahrain's capital, Manama, is 100 miles from Doha, only 20 miles separate the two countries at the narrowest part of the channel that runs between them into the Gulf of Salwa.

The eastern (Iranian) shore of the Gulf is 120 miles beyond Qatar's northern tip. The nearest Iranian port, Bushire, lies about 250 miles from Doha. The Iraqi Port of Basra, on the northern shore of the Gulf, is 350 miles away. The southern Strait

of Hormuz, 310 miles from Doha, provides access to the Gulf of Oman and the Arabian Sea. Thus, Qatar occupies a central position in the Arabian Gulf.

The overall outline of the peninsula was not defined on European maps until well into the 19th century, though Karsten Niebuhr briefly described the peninsula in his *Voyage en Arabie*, published in Switzerland in 1780. The historical appearance of Qatari place-names on European maps suggests strongly that, until recent times, international navigators were familiar only with the northern end of the country and the eastern pearling banks.

Qatar's terrain is monotonously flat, except for the Dukhan anticline in the west and some low rock outcroppings at the northern end of the east coast. Blown sand covers much of the south, and shifting dunes predominate in the southeast. The Dukhan anticline rises from the west coast as a chain of separate hills of up to 325 feet in height, about 35 miles long and 3 to 5 miles wide, covering the country's onshore oil fields.

Natural vegetation, including semi-permanent pasture, is limited to areas surrounding wells, depressions, and short drainage courses active only after the winter rains. Most flora is confined to the northern half of the country. Elsewhere, the featureless terrain is relieved only by sparse patches of camel thorn and isolated date palm plantations.

The coastline is uneven and rises gently on both sides of the peninsula. Sandy reefs abound in the surrounding shallows. Extensive salt flats at the landward end of the peninsula, between Salwa on the west coast and Khor al-Odeid in the east, support the local belief that Qatar was once an island, separated from what is now the Saudi Province of al-Hasa.

Qatar lies outside the area of the annual monsoons. Its seasons are similar to those of the Temperate Zone, although usually much hotter. The winter months from December through February are cool, considering that Qatar's latitude is about the same as that of Miami, Florida. Intense heat persists at least from May through September. March, April, October, and November normally provide the most agreeable climatic conditions. Humidity ranges from 32% in midsummer to highs of 96 to 100% in the fall and early winter. Rainfall is usually very light and averages less than 3 inches per year, mostly in the winter months. Almost no rain falls from May through October. Frequent high winds, especially from March through August, can fill the air with fine dust and create a brownish haze on the horizon.

The prevailing desert wind ("shemal") comes from the north during the spring and summer months. This constant, rather strong wind can be irritating, especially for allergy sufferers. In late summer, when the shemal dies, the humidity rises, making the climate even more unpleasant. It is not uncommon for building windows to fog up and drip moisture during the months of August and September.

Population

The population of Qatar (including large expatriate communities comprising other Arabs, Pakistanis, Bangladeshis, Indians, Baluchis, Filipinos, Sri Lankans, Iranians, and Westerners) is estimated at almost 750,000 people. Some 2,600 Britons, 2,000 other Europeans, and 3,500 Americans reside here. About 80% of the total population is concentrated in and around Doha.

The indigenous Qataris, who total around 100,000, can be traced to three main migratory movements: 1) overland, in the 1760s, by members of tribes already concentrated in Kuwait and along the shores of the Saudi Province of al-Hasa; 2) by tribal elements during the period of

the Wahhabi expansion from al-Hasa at the end of the 1700s; and 3) by sea from neighboring Gulf shores.

Those involved in the overland influx were almost entirely bedouin in origin. Their interest in the peninsula hinged on rainfall and grazing factors. Coastal wells and suitable sites for pearling and fishing ports controlled the pattern of immigration by sea from other regions of the Gulf.

Qatar appears in fifth century A.D. writings as a seafaring community, and Qataris continued to look to the sea for their communications and livelihoods until the advent of oil. The surrounding deserts and seas isolated them from their neighbors. Pearling and fishing represented the only sources of wealth. The elderly still recall a time when Qatar's 400 pearling ships constituted one-third of the entire Gulf fleet and when the pearl beds of the peninsula, Bahrain, and the lower Gulf coast were recognized as the world's most prolific. But the development of the cultured pearl by the Japanese in the 1930s almost destroyed this trade, which had flourished since Babylonian times.

Islam is the official and predominant religion of the population, indigenous and migratory alike. Most Qataris are Sunni Muslims of the Wahhabi sect; Sunnis are the more numerous and orthodox of the two main Islamic streams, and Wahhabism is the fundamentalist, puritanical school prevalent in Saudi Arabia, though more moderate in Qatar. The state is committed under the provisional constitution to "endeavor to install proper Islamic religious principles."

The official language is Arabic, although most senior Qatari officials are fluent in English, and much of the commercial and government business may be conducted in English.

Many native-born Qataris are only a generation removed from a very

simple village life. The most obvious traditional customs are the universal wearing of the "thobe" or "dishdash" and the infrequent public appearance of women. When they do appear outside their homes, virtually all Qatari women wear ankle-length black shawls ("abayas"), and many women still cover their faces or wear a face mask ("batula"). While alcohol is forbidden for Muslims, non-Muslims are allowed limited quantities under a strictly controlled licensing arrangement with the British Embassy. Qataris are somewhat shy but very polite and hospitable. Qatari social functions (such as teas and weddings) are segregated with the men and women attending separately, sometimes on different days. Most restaurants, from traditional to fast food, contain a "family section" separate from the more public areas of the establishment.

Public Institutions

Qatar became a British protectorate after the fall of the Ottoman Empire in World War I. The other Gulf emirates had come under British protection 100 years earlier. The British role in Qatari affairs was never comprehensive. In 1971, Qatar announced its intention to terminate the special treaty arrangements with Britain and to assume all responsibility for internal and external affairs.

A provisional constitution was promulgated in 1970. It specified that the rulership would be hereditary within the family of Al Thani, whose ancestry has been traced to the Bani Tamim, one of the ruling tribes of ancient Arabia. In the 18th century, members of this tribe had moved 200 miles north from the Jabrin Oasis to the western shore of the Gulf. The 1970 constitution provided for a Council of Ministers (cabinet), appointed by the Emir (head of state) to assist in the discharge of duties and the exercise of powers. It also provided for the establishment of an Advisory Council to assist the Emir and the cabinet.

In a 1999 move towards democracy, Sheikh Hamad bin Khalifa Al-Thani allowed for the election of a Central Municipal Council by universal suffrage. The same year, he appointed a committee to draft a new Constitution.

The major change will be the addition of an elected Advisory Council (Parliament). Until now, this council has had an emir-appointed membership. Through this change, citizens will be given greater opportunity to make decisions within their own government. However, the emir must always issue final approval of any legislation initiated through the parliament.

Recently, the emir has also established a new, separate position of Prime Minister. Traditionally, this office was held by the emir. The current Prime Minister is Sheikh Abdullah bin Khalifa Al-Thani, the emir's brother.

There are no political parties or labor unions in Qatar.

Five courts (the Higher Criminal Court, the Lower Criminal Court, the Civil Court, the Court of Appeals, and the Labor Court) operate on the basis of codified laws under the supervision of the Ministry of Justice. In addition, the Shari'ah Court applies religious law, based on the precepts of the Qur'an. The division between the secular and religious spheres of law is still being defined.

Arts, Science, and Education

The National Museum, dedicated June 23, 1975, contains collections illustrating the development of the state of Qatar and the way of life of its people. Intended to serve as a repository of the culture and traditions of the peoples of the Gulf, the museum occupies the restored, former Emir's palace. Prized exhibits include an aquarium, a bedouin camp, and several examples of dhows, the wooden ships that have

sailed on the Gulf and the Indian Ocean from the earliest times. These are moored in an artificial lagoon dug out of reclaimed waterfront land.

Excavation of ruins and buried cairns on the west coast and elsewhere by Danish and French archaeological expeditions between 1956 and 1982 have yielded evidence of prehistoric habitation. The finds are mainly of the Stone and Iron Ages and include artifacts dating from about 4000 B.C.

The Doha Public Library houses a collection of thousands of ancient Arabic manuscripts, as well as modern works and a small collection of books in English. Qatar also has a system of branch and school-affiliated libraries.

A public school system was established in 1956, and adult education was introduced a year later. Adult teaching centers offer basic literacy courses. Outside the public system are American, British, French, Indian, Lebanese, Pakistani, Iranian, and other private schools serving the various expatriate communities as well as some Qataris. Qatar University, established in 1977, enrolls full-time and part-time students (four-fifths women) in five departments: education, humanities, Islamic studies, science, and engineering. All public education in Qatar is free through the university level, and full scholarships are provided by the Ministry of Education to qualified Qatari students wishing to study abroad. Many educated Qataris are graduates of U.S. universities.

Active cultural centers in Doha include the British Council, the French Cultural Center, the Indian Cultural Center, and the USIS-operated American Cultural Center.

Commerce and Industry

From 1949, when the first cargo of crude was exported, the economy of

Qatar has depended on one resource—oil. In 1974, when oil revenues rocketed to \$1,928 billion (a 500% increase over 1973 earnings) the pace of economic development increased dramatically.

Qatar's oil income has since fluctuated with changes in production levels and world prices, but it remains the mainstay of the local economy. The oil sector accounts for about 80% of Qatar's export earnings and some 66% of government revenues. In recent years, production has been steady at approximately 400,000 barrels per day. The state has full control over oil production and marketing, and the Qatar General Petroleum Company (QGPC), the state-owned oil company, is one of the largest employers in the country.

At present production rates, and without application of enhanced oil recovery techniques, Qatar could deplete its oil reserves in about 25 years. However, vast offshore natural gas reserves are under development and will anchor the economy for the foreseeable future. The North Field, one of the world's largest natural gas fields, with estimated reserves of 380 trillion cubic feet, lies just off the northern tip of the Qatar Peninsula. Development projects involving billions of dollars have attracted investment from American, Japanese, French, and other international companies. In addition to gas production, much of the investment centers on construction of facilities for liquefaction the gas and shipping the liquefied natural gas (LNG) to overseas markets.

The first phase of the North Field development, funded mostly by foreign investment and orchestrated by a state-owned company known as Qatargas, will be completed in 1997. Subsequent production phases will be added later, and some are already underway. To support the development plans, a huge natural gas liquefaction plant and shipping facility is nearing completion at Ras Laffan, about one hour north of Doha.

Starting in 1969, when construction began on a fertilizer plant, Qatar embarked on an ambitious industrialization scheme. Not surprisingly, all heavy industrial projects have relied on indigenous petroleum and natural gas reserves for either fuel or feedstock. For the execution of most of these projects, the government has formed joint ventures with foreign partners under which the foreign company acquires a minority ownership while providing technical, managerial, and marketing expertise. This arrangement has been employed in establishing petrochemical, fertilizer, and steel factories and is now being used for gas development.

Thus far, the government and its foreign partners have generated most of the economic activity in Qatar. The private sector has largely limited its participation in the larger ventures to trading and construction contracting. Early in 1988, however, the government began cautiously encouraging privatization of certain activities in the areas of education, public health, and water/electricity.

Qatar has not emerged as a regional business center. Service industries and banking, while active, have focused on the domestic economy. The tourist trade is increasing but still represents only a small segment of the economy.

Per capita GDP is about \$20,300 (2000 est.).

Transportation

Local

Private cars provide the only practical and dependable transportation in Doha. Taxis may be hailed at the airport, at the main hotels, or as they cruise the streets, but they have no telephone call-out service and are poorly equipped (e.g., with no seat belts or air-conditioning), and the drivers tend to speak only Arabic. They are more or less reliable, usually have functioning meters, and are relatively cheap. A

more expensive alternative is a local limousine service, which more closely resembles taxi service in the U.S. "Limousines" are late-model Chevy Caprices, driven by English-speaking drivers, and are equipped with air-conditioning, rear seat belts, functioning meters, and telephone/radio dispatch equipment. Prices for this higher grade of service are comparable to taxi fares in New York and other large U.S. cities. Reasonably priced rental cars are available from Avis, Hertz, Budget, and other franchises.

Regional

Travel within the country is solely by car. Vehicle travel to neighboring countries is not recommended for safety reasons (long, desolate driving distances and the lack of shoulders or emergency lanes) and because of frequent border crossing difficulties. Air transportation links to neighboring countries are extensive, fairly well managed, and much more convenient. Planes are often overbooked, and travelers are advised to reconfirm reservations and arrive at the airport well in advance of posted flight times. Doha is served by Gulf Air, Emirates Air, Qatar Airways, Saudia, KLM, Air France, Air India, British Airways, Iran Air, Pakistan International Airlines, Egypt Air, and most other non-Gulf Arab airlines. No U.S. airline serves Doha directly, although several "code share" flights are available to and from European transit points. Current code share flights to and from the Gulf include selected flights on Gulf Air (American Airlines), Emirates Air (United), and KLM (Northwest).

Communications

Telephones and Telegraph

Telephone service in Doha is excellent. An unlimited number of local calls can be made for a nominal line charge of about \$30 per month. However, the local phone company makes up for any lost revenue by charging very high rates for long-distance service (calling the U.S. from Qatar costs about \$2.50 per

minute, twice as much as calling Qatar from the U.S.)

Telegram and telex facilities are readily available, but these have mostly been eclipsed by fax machines.

Mobile phones are expensive but very popular with the Qatari nationals. Personal pagers (known as "bleeps") are also pervasive and are much less expensive.

Internet service is run by the partially state-owned Qatar Telecom (Q-Tel). Access is primarily for business use.

Radio and TV

Qatar TV (QTV) broadcasts in color in Middle Eastern PAL format on two channels, English and Arabic. The English-language channel often shows American programs, but all broadcasts are heavily censored. English-language news is broadcast at 8 pm and includes up-to-the-minute film footage via commercial satellite service. The telephone company (Q-TEL) operates a limited cable TV service that includes CNN, the BBC, and several English-speaking European channels. Cable service is expensive, and all broadcasts are censored.

Radio programming on the English-language station of the Qatar Broadcasting Service (QBS) is excellent, with 19 hours a day in FM stereo. English-language news is broadcast several times daily, and a variety of programs are aired, including classic rock, contemporary rock, jazz, classical music, country music, children's shows, and a number of informational talk shows. Shortwave radio owners can pick up VOA, BBC, and other foreign radio signals.

Newspapers, Magazines, and Technical Journals

Qatar has its own English-language daily, the *Gulf Times*, which carries many major world news and feature syndicates. The *Times* weekend edition carries several popular American color comics. A selection of

state-supported and semiprivate publications are also available, but almost all are in Arabic. Many U.S. and British magazines are sold in Doha, including the *International Herald Tribune*. Photos and texts considered politically or morally objectionable are regularly censored before distribution. While low sales volume publications are marked up 300% over the original price, high-volume items (e.g., *Time*, *Newsweek*) are more reasonable.

The American Cultural Center has a small library. The British Council maintains a library, but its offerings are limited, and, as noted above, the National Library has relatively few volumes in English.

Health and Medicine

Medical Facilities

Medical and dental health facilities in Doha either belong to the Ministry of Public Health or are privately owned and operated. Public Health Ministry services include a general hospital with modern facilities, a women's obstetrics hospital, and a number of neighborhood primary care clinics. An increasing number of private clinics, staffed by foreign doctors, have opened in recent years. Several private dental clinics are also available. Although access to public facilities is currently provided free of charge to all expatriates, these clinics can be noisy and crowded, and waiting times can range from 1 to 4 hours, depending on the time of day and the number of patients to be seen. Most Americans prefer to pay a reasonable fee at the private clinics, which are quicker and more convenient. All public facilities and most private ones are segregated; separate waiting areas and treatment rooms are provided for male and female patients.

Emergency treatment is available at the local hospital, which runs a U.S.-style Emergency Medical Service. Most local physicians are

Egyptian trained, although some are European- or American-trained. Judged by Western standards, local nursing care ranges from fair to poor.

Obtain eyeglass prescriptions before traveling to Doha. If the need arises after arrival, lenses and frames are available locally at prices comparable to those in the U.S.

Most pharmacies in Doha have standard European medical supplies and drugs, though relatively few U.S. brands are stocked.

Community Health

Doha itself is one of the cleaner cities in the Gulf, but some goods are imported from high-risk areas. For this reason, proper food care and hygiene standards must be rigidly followed. Food sold at major supermarkets is of good quality and is examined by local health inspectors. Expired products are almost always removed from the shelves promptly.

The general state of public health in Qatar is fair to good. The Ministry of Public Health's veterinary section inspects animals before slaughter. The Doha municipality has a rodent control program, available when needed. The municipality also arranges for free daily garbage collection. Despite these efforts, the control of flies and other insects remains a problem, especially in the cooler months. On the positive side, Qatar has relatively few mosquitoes and no mosquito-borne diseases.

Preventive Measures

Bring typhoid, gamma globulin, tetanus toxoid, and TB skin testing up to date before arrival. Due to the crowded conditions and a continuing influx of expatriates from affected areas, outbreaks of cholera or typhoid are always possible. Children should have up-to-date DPT, polio, and MMR shots.

Tap water comes almost exclusively from desalination plants. Routine tests reveal that the water is suitable for drinking, though filtering is

advised, particularly in the summer months. Inexpensive bottled water is manufactured in Qatar and the U.A.E.; more expensive varieties come from Europe. Bottled water contains fluoride, but tap water does not. Parents may wish to administer fluoride supplements to children under age 16.

NOTES FOR TRAVELERS

Most travelers fly an American air carrier to Europe and then continue via a non-American carrier to Doha, sometimes with a stop in Bahrain. The most common transfer points are London, Paris, Amsterdam, and Frankfurt.

Travel to Doha from the continental United States takes 18-20 hours. Many travelers take an overnight rest stop at a European transit point en route.

Although it is possible to drive overland from Europe or nearby Middle Eastern States, this is not recommended. Long driving distances and strict customs/immigration requirements in neighboring countries make this a tedious and problem-ridden endeavor.

Passports and visas are required. American citizens may obtain a tourist or business visa at the airport in Doha upon arrival. These visas are valid for 14 days and may be extended for an additional 14 days. However, American citizen travelers will be able to clear Qatari immigration more quickly and be granted a longer stay in the country by obtaining visas prior to arrival. For further information, travelers may contact the Embassy of the State of Qatar, 4200 Wisconsin Ave., N.W., Suite 200, Washington, D.C. 20016, telephone (202) 274-1600, fax (202) 237-0053, or the Consulate General of the State of Qatar, 4265 San Felipe Street, Suite 1100, Houston, Texas 77027, telephone (713) 968-9840, fax (713) 968-9841. Addi-

tional information is available on the Internet at <http://www.traveldocs.com>.

Qatari customs authorities enforce strict regulations concerning importation into Qatar of items such as alcohol, narcotics, pork products, firearms, or anything deemed pornographic by Qatari authorities. While importation of religious material for personal use is acceptable, importation of religious material for the purpose of proselytizing is not. It is advisable to contact the Embassy of the State of Qatar in Washington, D.C., or the Consulate General of the State of Qatar in Houston for specific information regarding customs requirements.

U.S. citizens, particularly those of Arab descent, are encouraged to carry a copy of their U.S. passports with them at all times, so that if questioned by local officials, proof of identity and U.S. citizenship is readily available.

U.S. citizens living in or visiting Qatar are encouraged to register at the consular section of the U.S. Embassy in Qatar and obtain updated information on travel and security within Qatar. The U.S. Embassy is located in the Al-Luqta District on 22nd February Street, P.O. Box 2399, Doha, phone (974) 488-4101. For after hour emergencies, American citizens may call (974) 488-4101 extension 6600 to reach the duty officer.

On the Internet, you may reach the Embassy web site at <http://www.usembassy.org.qa>. The Embassy observes a Sunday through Thursday workweek. Many businesses and government offices in Qatar observe a Saturday through Wednesday workweek.

Pets

Pets entering Qatar require an import permit from the Ministry of Agriculture. Cats with proper documentation are allowed to enter with no difficulty, but some breeds of dogs, especially large dogs, are not admitted. Application forms for

import permits may be obtained from the Ministry of Agriculture through a sponsoring employer. A copy of the pet's health certificate and vaccination record must be submitted with the application.

Currency, Banking and Weights and Measures

The local currency is the Qatari rial (QR), worth about U.S. 28 cents and divided into 100 dirhams. The official rate of exchange is a fixed rate of US\$1 = QRs 3.64.

More than a dozen commercial banks operate in Qatar. The state imposes no restrictions on the import, export, or exchange of currencies. Travelers checks may be cashed locally without difficulty. Some ATM machines give cash for international credit cards and CIRCUS debit cards.

The metric system is used for weights and measures.

(formerly Western Samoa)*

Major City:
Apia

INTRODUCTION

Polynesians migrated from Southeast Asia to the Samoa Islands more than 2,000 years ago. Polynesian historical accounts go back to AD 1250. The Samoa Islands may have first been settled by migrants from what is now Fiji or Tonga. The first contact with Europeans began as whalers, pirates, and escaped convicts landed on the islands. In 1722, the Dutch sailor Jacob Roggeveen recorded spotting the islands. Contact with Europeans was infrequent until the arrival of English missionaries under Rev. John Williams in 1830. Between 1847 and 1861, the United Kingdom, the United States, and Germany competed to align themselves with various Samoan royal families. The entanglements resulted in a civil war in 1889. In 1900, the colonial powers created a political boundary along the 171st meridian that divided the Samoan people. Under that convention, the United States annexed Eastern Samoa and Germany took Western Samoa. Eastern Samoa became the US territory known as American Samoa. New Zealand occupied Western Samoa in 1914 at the start of World War I, and from 1919 until 1946 New Zealand administered the area as a mandate of the League of Nations. From 1947 until 1961, a

series of constitutional advances brought Western Samoa from dependent status to self-government. A constitution was produced in 1960 and it came into effect with independence on January 1, 1962.

The country dropped the “Western” from its name in 1997.

MAJOR CITY

Apia

Apia, with a population of 33,000, is Samoa’s capital and only major town. Apia is located on the northern coast of the island of Upolu. The country’s largest industry is the Samoa Breweries plant that lies to the west of Apia. The Western Samoa Trust Estates Corporation has developed a hybrid high-yield variety of cocoa on a plantation 3 miles from the city. Faleolo International Airport west of Apia handles the majority of arrivals to Samoa. The main interisland transport in the Samoas is provided by Samoa Air and Polynesian Airlines. There is also daily service to Pago Pago, American Samoa. The number of passenger cars in Apia and around Samoa significantly increased in the 1990s, and the city now has a

number of traffic lights. Apia Harbour is the only port of entry for Samoa.

Recreation and Entertainment

The most popular sport in Samoa is rugby, which is played almost year-round throughout the islands. Apia Park, the site of the 1983 South Pacific Games, is used mainly for rugby, soccer, and field hockey. Lawn bowling, netball, squash, tennis, boxing, wrestling, and American football are popular sports. Cricket is played throughout Samoa’s villages. Samoan cricket (kilikiti) is a modification of the British form, in which the bat resembles a traditional war club and teams number 30–40 per side. The Royal Samoan Country Club features an 18-hole course. Jazzercise, weight training, and aerobic classes are also available in Apia.

Samoa’s biggest commercial center is the Maketi Fou, a central market that operates around the clock. Assorted meat, fish, and produce are sold there, but the market is also a place where people meet and mingle. The Palolo Deep National Marine Reserve near Apia’s wharf is a superb site for snorkeling and picnics. The Philatelic Bureau of the Post Office offers collectors a wide selection of Samoa’s stamps. Com-

memorative and mint coins from the Treasury are available from the Treasury Department in the Central Bank.

The *fale* is a traditional oval thatched-roof structure without walls that serves as a home or a meeting house. *Fale* accommodations are available to visitors in Samoa. Foreigners who visit a traditional village will endear themselves to the people if traditional Samoan rules of etiquette are followed. There are many places in the Samoas, especially in the interiors of islands or on remote beaches, where no formal accommodation and not even village accommodations will be available, making camping the only option. In Samoa, there are four official camping areas, all on Upolu: O Le Satapuala Resort, Tafatafa Beach, Lotofaga Beach, and Return-to-Paradise Beach.

Apia has several historical monuments and colonial buildings along its waterfront. The Catholic Cathedral was constructed between 1885 and 1905, and was the most prominent building along the city's skyline for many years. The clock tower in the center of the city was built as a monument to Samoans who were killed in World War I. Apia also has a World War II monument and a memorial to missionary Rev. John Williams. The Mulinu'u Peninsula at the western end of Apia has German, British, American, and Samoan monuments. The tombs of two former Samoan chiefs are also located on the peninsula. In the cool hills above Apia lies Vailima, the estate of Robert Louis Stevenson. The house lies some 650 feet above sea level and is (in name only) the official residence of the ruling Samoan head of state. The home was recently renovated to commemorate the hundredth anniversary of Stevenson's death in 1894. Stevenson's tomb is at the summit of nearby Mt. Vaea.

The Nelson Public Library contains a wide assortment of books pertain-

ing to the South Pacific that are difficult to find elsewhere.

A *fiafia* is traditional Samoan theater or music. The *fiafias* performed today often cater to tourists. The *fiafias* offered in Apia are usually elaborate shows of singing and dancing offered by the larger hotels, the most famous of which is at Aggie Grey's Hotel.

COUNTRY PROFILE

Geography and Climate

Samoa is a group of islands in the South Pacific Ocean, about one-half of the way from Hawaii to New Zealand. The main islands are Savai'i and Upolu, separated by the 11-mile Apolima Strait. There are also several smaller islands, of which only Manono and Apolima are uninhabited. The islands have a total land area of 1,104 square miles, or slightly smaller than the state of Rhode Island. Samoa's exclusive marine economic zone covers approximately 50,000 square miles.

The islands are volcanic, with coral reefs surrounding most of them. The rugged ranges rise to 3,608 feet on Upolu and 6,094 feet on Savai'i. Apolima is a volcanic crater whose wall is pierced by a passage that connects its harbor with the sea. Manono rises to a height of 230 feet, and is composed chiefly of coral sand. The islands have active volcanoes; severe eruptions occurred on Savai'i during 1905–11.

The climate is tropical, but temperature ranges are not considerable. The hottest month is December and the coldest is July; the average daily temperature is 81°F. The highland areas of Savai'i and Upolu are cooler year-round. The dry season runs from May to October, while the wet season lasts from November to April. Rainfall averages 113 inches

per year. Leeward shore areas such as Apia are drier than the windward shores and the Manu'a Islands, which can receive up to 200 inches of rain. Samoa lies in the middle of the Pacific's notorious cyclone/typhoon belt.

Population

Samoa has an estimated population of 235,000, with a population density of about 195 people per square mile. Over 70% of the population lives on Upolu. There has been massive emigration to New Zealand, Australia, and the United States (especially Hawaii). Many Samoans also live in American Samoa. Samoans are the second-largest branch of Polynesians, and account for over 90% of the population. Most of the remaining Samoans are of mixed Samoan and European or Asian descent. Europeans, other Pacific islanders, and Asians make up less than 1% of the total. Over 99% of the population adheres to some form of Christianity. About half the population associates with the Congregational Christian Church of Western Samoa, a successor to the London Missionary Society. Other faiths include Congregational, Roman Catholic, Methodist, Latter-Day Saints, and Seventh-Day Adventist. Samoan is the universal language, but Samoan and English are official. Samoan is a Polynesian language similar to Maori, Tongan, Hawaiian, and Tahitian.

Government

During the 19th century, Great Britain, the United States, and Germany were in competition to gain control over the Samoa Islands. The three countries began to align themselves with rival Samoan factions, culminating in a civil war in 1889. After a brief reconciliation in 1898, in 1900 the governing powers split up the islands and made Western Samoa a German protectorate. New Zealand occupied the territory during World War I, and it administered the

Local market in Apia

Susan Rock. Reproduced by permission.

islands as a mandate of the League of Nations during 1919–46. In 1946, the territory was made a trusteeship of the United Nations, and New Zealand formally committed to promote the development of Western Samoa toward ultimate self-government. Legislative elections began in 1957, and a constitution was adopted in 1960. On January 1, 1962, Western Samoa became an independent nation.

Executive power is in the hands of the head of state. Chief Susuga Malietoa Tanumafili II has lifetime tenure, becoming sole chief of state in 1963. Upon his death, a new chief of state will be elected by the Legislative Assembly to serve a five-year term. The prime minister is appointed by the chief of state with approval of the Legislative Assembly, and the cabinet is appointed by the chief of state with the prime

minister's advice. The unicameral Legislative Assembly (Fono) consists of 49 seats; 47 are elected from territorial districts by ethnic Samoans districts while the other two are chosen by non-Samoans on separate electoral rolls. Universal suffrage was extended in 1990.

Only matai (chiefs or head of family) are able to run for the Legislative Assembly. There are more than 25,000 matais in the country, about 5% of whom are women.

The prime minister is chosen by a majority in the Fono and is appointed by the chief of state. The prime minister's choices for the 12 cabinet positions are appointed by the chief of state, subject to the continuing confidence of the Fono.

The judicial system is patterned after practices in British courts.

Samoa custom is taken into account in certain cases. The Supreme Court has full civil and criminal jurisdiction for the administration of justice in Samoa.

Samoa's flag is a red field with a blue canton. The canton contains five white five-rayed stars representing the Southern Cross constellation.

Arts, Science, Education

Village schools provide four years of primary education. District schools draw the brighter pupils from village schools and educate them through the upper primary level. In the Apia area, urban schools provide a lower- through upper-primary curriculum. A major educational goal is to make Samo-

ans bilingual, with English as a second language. The language of instruction in secondary schools is English.

The University of the South Pacific School of Agriculture has a campus on the outskirts of Apia. The University of Samoa has courses in the arts and sciences. New Zealand provides extensive scientific and technical aid to Samoa.

Commerce and Industry

The economy is based primarily on agriculture, which accounts for about half of the gross domestic product, two-thirds of employment, and about 90% of exports. The bulk of export earnings comes from the sale of coconut oil and copra. Tourism has become the most important growth industry. Remittances from overseas workers and foreign aid are also important sources of foreign exchange. Production of taro, the primary food export crop, dropped 97% in 1993/94 when a fungal disease threatened the country's basic food crops. Samoa has one of the highest unemployment rates and lowest wages in Oceania.

Transportation

Most major roads are tar-sealed, but secondary roads are predominantly dirt and gravel, and may be overgrown. A four-wheel drive vehicle is recommended for travel on these roads. Travellers should be aware that vehicle safety regulations are rarely enforced and traffic violations occur routinely. Night driving is dangerous and not recommended.

Most of the paved roads are on the northern coast of Upolu. Buses and taxis provide public transport, but buses may run irregular schedules. Diesel-powered launches carry passengers and freight around the islands. Small motor vessels maintain services between Apia and Pago Pago, American Samoa. Cargo and passenger connections to New Zealand are made every two weeks.

Scheduled oceangoing vessels connect Samoa with Australian, Japanese, UK, and North American ports. Apia is the main port on Upolu, and Asau is a deep-water port on Savai'i. Polynesian Airlines flies daily from Apia to Pago Pago, where there are connecting flights to New Zealand, Australia, and the United States. Air Samoa and Samoa Aviation provide internal air service between Upolu and Savai'i.

Communications

Internal and overseas telecommunications services are available; the islands have one Intelsat satellite earth station. The government-controlled Samoan Broadcasting Service in Apia transmits radio programs on two stations in Samoan and English and provides direct broadcasts from the Fono. There is no domestic television service, but broadcasts are received from American Samoa. The *Samoan Times* is the only daily newspaper; *Samoa Weekly*, *Samoa Observer*, and *South Sea Star* are bilingual weeklies.

Health and Medicine

Health care facilities in Samoa are adequate for routine medical treatment, but are limited in range and availability. A national hospital is located in Apia and district hospitals are available on Savai'i and Upolu

The increase in obesity, diabetes, and cardiovascular problems in recent decades is linked to the growing popularity of a Western diet high in processed starches, canned food, and sweets.

Medical Facilities

Health care facilities in Samoa are adequate for routine medical treatment, but are limited in range and availability. A national hospital is located in Apia and district hospitals are available on Savai'i and Upolu. Doctors and hospitals often expect immediate cash payment for

health services. U.S. medical insurance is not always valid outside the United States. The Medicare/Medicaid program does not provide payment for medical services outside the United States. Travelers to Samoa may wish to consider obtaining typhoid immunizations before arrival, because immunizations are not currently available to the public in Samoa. Supplemental medical insurance with specific overseas coverage including provision for medical evacuation may prove useful. Information on health matters can also be obtained from the Centers for Disease Control and Prevention through its international travelers hotline at (404) 332-4559 or via the CDC home page on the Internet: <http://www.cdc.gov/>.

NOTES FOR TRAVELERS

Passage, Customs & Duties

A passport and an onward/return ticket are required for travel to Samoa. Visas are not required for a stay of up to 30 days. Further infor-

mation about entry requirements may be obtained from the Samoa Mission to the United Nations at 800 2nd Avenue, Suite 400J, New York, NY 10017, telephone (212) 599-6196, fax (212) 599-0797.

Samoa's customs authorities may enforce strict regulations concerning temporary importation into or export from Samoa of items such as fruit, pets, firearms, and drugs. It is advisable to contact the Samoan Mission to the United Nations for specific information regarding customs requirements.

U.S. citizens are encouraged to register at the Embassy. The U.S. Embassy in Samoa is located in the John Williams Building, Fifth Floor, Beach Road, Apia. The Embassy is open to the public from 9:30 a.m. to 12:30 p.m. every morning and by appointment at other times. The Embassy's mailing address is U.S.

Embassy, P.O. Box 3430, Apia, Samoa. The telephone number is (685) 21-631. The fax number is (685) 22-030. Americans may obtain updated information on travel and security for Samoa at the U.S. Embassy or by visiting the Embassy's home page at <http://travel.state.gov/samoa.html>.

Currency, Banking & Weights and Measures

The Samoan *tala* (ST) is broken into 100 *sene*. Notes are available in denominations of 100, 50, 20, 10, 5 and 2 tala. Coins are in denominations of 1, 2, 4, 10, 20, and 50 sene and 1 tala. The exchange rate is about 3.34ST=US\$1 (January 2001).

Credit cards are accepted on a limited basis. Travellers checks are generally accepted in major hotels, banks and tourist shops.

Disaster Preparedness

Samoa is located in an area of high seismic activity. Although the probability of a major earthquake occurring during an individual trip is remote, earthquakes can and will continue to happen. General information regarding disaster preparedness is available via the Internet at <http://travel.state.gov/crisismg.html>, and from the U.S. Federal Emergency Management Agency (FEMA) home page at <http://www.fema.gov>.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated May 1997. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

SAUDI ARABIA, a country of romance and legend, awakens memories from Lawrence of Arabia or scenes from some dimly remembered Hollywood epic. It has, indeed, a colorful past, an exciting present, and a bright future.

Saudi Arabia is about one-third the size of the U.S., comprised mostly of gravel and sand desert. Water from deep wells makes farming possible in some areas. Saudi Arabia has 25% of the Earth's proven oil resources and is the world's largest oil exporter. Islam, the only religion legally practiced in Saudi Arabia, plays a dominant part in the country's history and daily life. Because

it is the birthplace of the prophet Mohammed and the site of the Muslim holy cities of Mecca and Medina, Saudi Arabia is considered Islam's Holy Land. It is in this context that Islamic legal traditions take precedence over all other government regulations.

For thousands of years Arabs have roamed the desert tending their herds and flocks, tilling the soil where water was plentiful, and trading goods brought by camel caravan, but the unified nation of Saudi Arabia has been in existence for little more than 50 years. The landscape is one of contrast—the visitor to Saudi Arabia will be rewarded with a visually enriching experience—an interesting blending of old and new. Oil income has enabled the country to modernize rapidly, but many of its desert customs and traditions still play an important role in day-to-day business transactions.

Saudis are a cultivated people with an ancient and glorious heritage. If you adapt to their ways, slow down, and follow their customs, you will find that living in Saudi Arabia is a rich experience.

MAJOR CITIES

Riyadh

Riyadh, the capital city with a population of over four million and an annual growth rate of 8%, is near the geographic center of Saudi Arabia. It is about 770 miles east of Jeddah and 280 miles west of Dhahran. Riyadh is connected to both cities by good highways and frequently scheduled Saudia Airlines flights. An express train runs from Riyadh to Dammam daily.

Riyadh has definite seasons with a wide range of temperatures and low humidity. From May through October, temperatures can reach 120°F to 130°F. From November through April, temperatures are mild and pleasant during the day with night temperatures sometimes falling as low as 30°F to 40°F in January and February. Some winter clothing is essential. Rainfall is minimal, but when it does occur, it is usually a downpour and city streets are quickly flooded.

About 13,000 Americans have registered with the Consular Office in Riyadh. Those not with the U.S. Government are with private business concerns or on contract with

Skyline of Riyadh, Saudi Arabia

the Saudi Government. They are scattered throughout the city and its environs in single villas or compounds.

Food

Virtually all food items may be found in Saudi Arabia, except pork and alcohol products.

Several large supermarkets and a variety of specialty shops carry a full range of American and European food items as well as fresh produce and fish, frozen items, good meats, and fresh milk. There is a large open-air fruit and vegetable market where fresh produce, eggs, and chicken are reasonably priced.

Clothing

Men: During the 5-month hot season most men wear lightweight suits with short-sleeved shirts to work. Sport jackets are popular for

casual wear and evening social occasions. Formal wear is sometimes needed, but a dark suit is usually acceptable. Wool and heavier suits and jackets are worn in winter, and a lightweight jacket may be necessary for early morning and evening hours.

Men should dress in a conservative fashion when in public. Shorts, sleeveless shirts, or offensive T-shirts should not be worn downtown.

Men's clothing is available locally, but is expensive. Tailors will make suits for under \$200, not including fabric which is available locally at fairly reasonable prices.

A good variety of shoes is available locally, but not always in larger sizes. If your feet are difficult to fit,

you should bring plenty of shoes with you.

Women: Clothing made of natural fibers (cotton, linen, silk, and light weight wools in winter) are the most comfortable regardless of the time of year. Layered clothing is practical, especially in winter when morning temperatures are cool but rise rapidly during the day. Bring sandals, sun hats and/or head scarves.

Women should dress conservatively when in public—long dresses below the knee, sleeves below the elbow, a modest neckline, and no trousers. Wearing tight or revealing clothing is unacceptable in public and risks unpleasant confrontation with the Saudi religious police, the Mutawa. Non-Muslim women are not required to wear an abaya, a black cloak that covers the wearer from head to foot, however, many western

women, particularly in Riyadh, choose to wear an abaya and carry a head scarf in order to avoid harassment by the religious police. However, even with the abaya and scarf, harassment still occurs.

There are many women's clothing stores in Riyadh, ranging from the bargain variety to designer shops. Prices are high and there are no facilities for trying on items. Clothes can be returned, but only for an exchange, not a refund.

There are many dressmakers, but unless work is done in a private home, fittings are not permitted. If work is being done in a shop, you must take your measurements with you or an item to be duplicated. Dress patterns are not available locally, but most dressmakers can duplicate an existing item or copy a photograph or drawing quite easily. A wide range of fabrics is available in all price ranges.

Children: Children's clothing is available but expensive. Inexpensive clothing from the Far East can be found, but it is often of poor quality and sized to fit only smaller children.

The dress code for the Saudi Arabian International School (SAIS-R) Elementary School requires girls to wear blouses or dresses with sleeves. Boys should wear shirts with sleeves and appropriate pants. Through grade 3, boys and girls may wear loose-fitting short pants to school, provided the pants extend at least to the knee. In junior high, girls should wear blouses or dresses with sleeves or loose-fitting pants and tops. Boys should wear shirts with sleeves and long pants. Boys and girls may only wear sweat pants or shorts for physical education classes.

Supplies and Services

Riyadh has a wealth of shops and shopping malls. Almost everything is available from tropical fish and tanks to designer clothing. A full selection of American and European cosmetics, perfumes, and toiletries are available, but are more expen-

sive than in the U.S. If you take long-term medication, bring a supply to last until you locate a local source. Most prescription medicines are in stock at local pharmacies. If bringing medication with you, have a copy of your prescription available for Saudi customs inspectors.

Adequate laundry and dry cleaning services are available. There is a dry-cleaning service available through one of the major hotels.

Barbershops and hair stylists for men are located throughout Riyadh. Prices compare with those in the U.S. Public beauty shops for women are not permitted in the Kingdom.

Basic shoe repair is available and adequate.

Religious Activities

Only Islamic services are permitted in Saudi Arabia. However, discreet Christian services are held in various private group meetings. No open advertisements or notices may be distributed regarding their existence.

Education

The Saudi Arabian International School of Riyadh-American Section (SAISR-AM) for kindergarten through grade 9 has an enrollment of 1,800 students representing more than 50 nations. SAISR-AM is licensed by the Saudi Arabian Ministry of Education and is accredited by the Middle States Association of Schools and Colleges. It is governed by a seven-member school board elected by the parents. The curriculum is American and instruction is in English. About 90% of the teachers and administrators are Americans or Canadians. The school term is from late August until the end of May with a 3-week Christmas vacation and about a 10-day spring break, not necessarily at Easter.

The school has three libraries with a total of 40,000 volumes, science labs, five fully-equipped computer laboratories, and a large, covered sports area. SAISR-AM offers art, band, music, typing, study skills, mechanical drawing, computer sciences,

English as a Second Language (ESL), French, and Arabic. Sports include boys' and girls' basketball, volleyball, softball, and soccer.

Learning Strategies classes supplement the regular curriculum for students who need additional help with organizational skills in grades 2–5. After school study labs are also offered to students in grades 3–5 who require minimal levels of remediation. A variety of after school enrichment activities are offered in grades 1–9, and often include drama, cooking, space camp, and yearbook. The number of students per class varies between 13 and 20, depending on enrollment, and all students are tested to determine classroom placement prior to beginning classes.

The school does not offer a comprehensive special education program. Programs for students with special needs are severely limited in terms of facilities, material, staffing, and community services for referrals. Students who have physical, emotional, or learning problems that cannot be appropriately remediated given the school's limitations will not be allowed to attend SAISR-AM. The school reserves the right to discontinue a student's enrollment if problems beyond the scope of the school program are discovered after initial acceptance.

The Saudi Arabian International School-British Section, for children from kindergarten through grade 8, is an alternative to the SAISR-AM. The school year extends from late September through the end of June. There is generally a waiting list. Small French and German schools also operate in Riyadh.

Sports

Tennis, swimming, and camping are the most popular outdoor sports in Riyadh. Two tennis leagues sponsor tournaments throughout the year, and several tennis pros in the city give lessons.

Several bowling alleys are located in Riyadh and some have women's

Aerial view of Mecca, Saudi Arabia

Archive Photos, Inc. Reproduced by permission.

hours. Horseback riding lessons are available at the Equestrian Club.

Two 18-hole golf courses are located on the outskirts of the city and the Intercontinental Hotel has a course in town. Fairways are shaped from sand, and golfers carry an astroturf tee mat. The greens are oiled sand.

Most public spectator sports are open to men only. The horse racing season is from October through April, and the camel races take place in March and early April and are sometimes open to women.

All health clubs and/or sports facilities for women have been closed.

A bicycle is useful for both recreation and as a quick means of transportation. A limited selection of bicycles at high prices are available locally; therefore, it is recommended that you bring a bike.

Touring and Outdoor Activities

Camping and day trips in the desert are popular during the cooler weather, from November through March. You can buy tents and camping equipment locally.

Among the more popular sites within an hour's drive from Riyadh are Diriyah, Al-Kharj, and the camel trails. Diriyah is the ruined capital of the Al-Saud state established in 1726 and destroyed in 1818 by a punitive expedition of troops sent by the Ottoman Empire. Diriyah is currently being restored by the Ministry of Education's Department of Antiquities.

The Al-Kharj agricultural area, about one hour from Riyadh, is green with date palm groves and farms. The town itself is dominated by a castle built by Abdul Aziz. The camel trails are located along the escarpment southeast of Riyadh. Climbing the trails to the top of the escarpment is worth the beautiful

view of the surrounding hills, sand dunes, and river beds.

Hunting for fossils and desert diamonds (quartz crystals formed by fusion of sand particles by lightning) is another weekend pastime. These activities require the use of a four-wheel drive vehicle. Persons interested in desert recreation should consult the book, *Desert Treks from Riyadh*, available locally. The book charts out day and weekend trips and more extensive excursions for the adventurous.

Social Activities

American Community Services (ACS), located on the U.S. Embassy annex in a wadi near the Diplomatic Quarter, is an organization offering a great variety of activities to American expatriates in Riyadh. It has tours, both in and out of the country, seminars, classes (cooking, square dancing, survival Arabic, computer skills and many others), and provides a base for many support groups. Family counseling is also

available at ACS. ACS also shows movies on Thursday nights and runs a summer day camp for children.

The American Women of Riyadh (AWR) is open to all American women in Riyadh and meets monthly at the Embassy, featuring a guest speaker.

Musical and theatrical groups meet regularly and perform during the year. These events are not advertised publicly, but only by word of mouth. CLO usually has information about the Riyadh Choral Society, the Concert Band, Theater-Goround, and others.

Riyadh has several amusement parks and a zoo for children. Unfortunately, these are not open to women. Occasionally the school will organize a tour for the children and include the mothers.

There are many parks with playground equipment on the Diplomatic Quarter. They are not always well maintained and due to the number of picnicking Saudi families on weekends, are not generally available for use.

Various ethnic restaurants (Lebanese, Saudi, Thai, Turkish, Indian, Chinese, Japanese, Korean, Philippine, and Continental) abound in Riyadh as do many American fast-food restaurants: Hardees, McDonald's, Burger King, TCBY, Taco Bell, Kentucky Fried Chicken, Dairy Queen, Pizza Hut, and Baskin-Robbins. The major hotels also have restaurant facilities. However, only those establishments with a family section will allow women - and many have restrictions on women unescorted by a male family member.

There are no cinemas in the Kingdom.

Dhahran

Dhahran is situated on the eastern coast of the Arabian Peninsula, about 280 miles from Riyadh and about 1,000 miles from Jeddah. To

the east in the Persian (Arabian) Gulf, lies the independent island state of Bahrain, accessible by a 15-mile causeway.

The term Dhahran is an Arabic word meaning two hills. It originally referred to a geological formation sighted from Bahrain in 1932 by American geologists and which looked promising for oil exploration. At this formation, the first producing oil well, number 7, was drilled in 1938. The site is today part of the Base Camp for Saudi ARAMCO, now one of the world's largest oil companies.

Dhahran is not actually a town but rather a geographic location, which includes a scattered collection of self-contained compounds in the center of the Al-Khobar-Dammam metropolitan area. These include the American Consulate General, the Dhahran International Airport, the King Abdul Aziz Royal Saudi Air Force Base, the King Fahd University of Petroleum and Minerals, and regional offices of the Ministry of Petroleum and of PETROMIN, the Saudi Government's petroleum distribution system.

Dhahran has over 50,000 people, most of them Saudi ARAMCO employees and their dependents living on the Base Camp or in the growing Doha Camp residential neighborhood. The Saudi ARAMCO Base Camp resembles, in many respects, a prosperous suburban community in the western U.S. with many of the facilities and standards of an American life style.

Al-Khobar, a thriving commercial center about 11 miles from Dammam, is the capital of the Eastern Province. Dammam has a population of about 130,000; Al-Khobar has a population of about 80,000. The two form a continuous metropolitan area. An estimated 1.6 million people reside in the Eastern Province, which is, in area, the largest of Saudi Arabia's 14 political subdivisions.

The resident American population of the Eastern Province was about

19,000 in mid-1996. Over half work for Saudi ARAMCO or for petrochemical joint ventures in Jubail, 75 miles north of Dhahran. Construction firms employ other Americans as contractors to the Saudi defense forces, the province's two universities, and various joint partnerships between Saudi and American companies. Most Americans live either on company compounds or on commercially operated housing compounds designed for foreigners. Others reside in individual homes scattered throughout the tri-city Dammam/Al-Khobar/Dhahran area, at Jubail, or in Saudi ARAMCO camps at Ras Tanoura and Abqaiq.

Food

A wide variety of food is available locally, and fresh fish, lamb, chicken, eggs, milk products, and some vegetables are produced locally. Most foodstuffs are imported, however, and food costs are somewhat higher than in Washington, D.C. Several large U.S.-style supermarkets are located in Al-Khobar, and you can find American brands.

Clothing

Merchants in both Al-Khobar and Dammam stock clothing from the U.S., Europe, and Asian countries. You can find shirts, lightweight suits, sweaters, and ties for men. Women can purchase stockings, lingerie, bathing suits, novelty, sports and lounging clothes, blouses, and dresses. Clothing supplies, however, for men and women are not constant or available in all sizes. Prices can be high and there are no facilities for women to try on clothes before purchasing.

Men: Lightweight clothing is suitable most of the year. Sportswear and business suits are acceptable at all times. In general, cotton or other natural fabrics are the most practical. Topcoats and overcoats are not required in Dhahran.

Standard summer wear for social occasions is a short-sleeved dress shirt, tie, and slacks with a blazer or summer weight suits. From Novem-

ber to April, medium-weight suits are generally worn. Cool, light-weight walking shoes with rubber soles are necessary in Saudi Arabia; leather soles wear out quickly in the sand.

Women: Women should wear non-revealing, loose-fitting clothes in public places. Long caftans are available locally and comfortable in the climate. Natural-fiber fabrics are most practical. Bring plenty of sandals, head scarves, and/or sun hats.

Entertaining at home is usually casual, although there are occasional formal dances and dinner parties. Many Saudi women dress elegantly for home entertaining, wearing expensive Paris creations. Very few days, even in winter, are cool enough to wear wool fabrics comfortably all day. Heavy and dark cottons or lightweight knits are most suitable for daytime wear. It turns much cooler in the evening, and woolen dresses, cotton knits, and silks are appropriate. A winter coat is not essential, but an in-between season coat is useful, as are sweaters and cardigans.

Saudi Arabian religious and social customs prescribe that Muslim women cover themselves completely in public. Western women, therefore, should dress conservatively when shopping in downtown Al-Khobar or Dammam and suburban markets. At a minimum, dresses should have a high neckline, sleeves that cover the elbow, and should be well below the knee. Many western women wear long-sleeved, floor-length cotton, shirtwaist dresses while shopping. Alternatively, slacks with a long over-shirt can be worn. Tight-fitting slacks and dresses, miniskirts, and shorts should not be worn in public places. To do so risks attracting unpleasant public attention and even arrest or reprimand by the Saudi religious police.

Children: School-aged children dress much as do their U.S. counterparts. Adolescent girls should wear conservative clothing similar to

their mothers' when going downtown to Al-Khobar or Dammam. Light-to-medium-heavy wool clothing for outdoor wear is needed when winter winds turn chilly and temperatures sometimes drop to near freezing at night. During the cool months children will need a medium-weight jacket or Windbreaker, prices are high and children's sizes are particularly difficult to find locally.

Supplies and Services

Standard toiletries, cosmetics, cigarettes, and tobacco are sold in Al-Khobar. You can also buy detergents, packaged water softeners, household cleaning equipment, and supplies locally.

Fabrics for both men's and women's clothing is readily found in Al-Khobar and Dammam. Tailors in these cities and in Bahrain can make both men's and women's clothing. They are adept at copying garments, although you may have to wait 2–4 weeks.

Shoe repair is fair to good for men's shoes and reasonably priced but poor for women's shoes. Two commercial laundries provide adequate services as do local dry cleaners.

Barbershops are located in Al-Khobar, at Saudi ARAMCO, and at the USMTM/NCO Club. The latter also has a good beauty shop, as does Saudi ARAMCO.

Religious Activities

Saudi Arabia is a Muslim country, and only Islam is allowed to be practiced. However, discreet arrangements exist to meet the needs of other religions.

Education

The Dhahran Academy, managed by the Saudi Arabian International School system, is an American school recognized by the Department of State's Office of Overseas Schools. It provides schooling for children from kindergarten through grade 9. Present enrollment at the Academy exceeds 1,250 children of 37 nationalities, of whom 26% are American. Most of the teaching staff

are recruited from the U.S. Two smaller private schools offer English-language, pre-kindergarten classes.

High school-aged children must be sent to boarding schools outside of Saudi Arabia. Numerous high school institutions are located in Europe, including those operated by the Defense Department's Division of Overseas Defense Dependents Schools (DODDS); DODDS also operates a high school in Bahrain, which has a boarding facility.

Sports

Swimming, boating, and picnicking are possible at three good beaches on Half Moon Bay. Fishing and snorkeling are generally good. Enthusiasts should bring skin diving, water-skiing, and fishing gear. Tennis rackets, bowling shoes, golf clubs (preferably old ones, as the sand will take its toll), and beach equipment are helpful. Camping in the desert is popular, so bring sleeping bags and other camping gear.

Tennis courts are open by invitation at Saudi ARAMCO. The King Fahd University also has tennis courts, but for men only. Saudi ARAMCO has facilities for racquetball, squash, and a bowling alley.

Some local hotels also have tennis or sports facilities open to the public for a fee, but men and women must use them at different times. Those seeking participation in team sports will find basketball and softball leagues. Saudi ARAMCO sponsors a world-class Little League softball team.

Usual sports attire is worn on the courts. Women should remember to dress modestly on the way to or from sports facilities or other compounds. Men are also discouraged from wearing shorts or bathing suits when not in a sports facility.

For children, Boy, Girl, and Cub Scouts, and Brownie troops are organized by the Dhahran Academy and by Saudi ARAMCO.

Old town, Souk Al-Alawi, in Jeddah

© Wolfgang Kaehler. Reproduced by permission.

Special interest clubs exist at Saudi ARAMCO. These include art, cooking, computers, natural history, and photography. Photographers need to be alert to local sensitivities about what can be photographed. Seek guidance before setting out with your camera.

Touring and Outdoor Activities

Dhahran is situated in the middle of a modern high-speed highway network that permits easy travel to Riyadh and to other major towns in the Eastern province. Hofuf, an ancient Arab town in one of the world's largest oases, is only 2 hours away. There is a traditional mud-walled fort, a typical Arab market, a colorful Thursday camel market, and some unique caves. Qatif, another oasis about 20 miles away, has a bustling Thursday morning outdoor market and a 16th century Portuguese fort which is now a bath house.

In contrast, the new Jubail Industrial City, some 70 miles north of Dhahran, is a magnificent example of modern industrial planning. It contains 15 primary petrochemical industries, planned residential communities, and a large industrial port. Both the Royal Commission in Jubail and Saudi ARAMCO in Dhahran have modern, well-

designed exhibition centers open to the public.

The Dhahran area also has two large amusement parks with rides and games for children. Bahrain, linked to Saudi Arabia by the 15-mile King Fahd Causeway, is about one hour away by car. Bahrain, with its nightclubs, museums, and beaches, offers a pleasant change of pace from Dhahran.

Entertainment

There are no public theaters, concert halls, or movie theaters in Dhahran. Saudi ARAMCO shows movies, and amateur dramatic groups present an occasional stage play or musical. A local group sponsors several performances each year by professional classical musicians brought from Europe.

As is the case in all of Saudi Arabia, no nightclubs or bars are located in the Eastern Province, but several local hotels and restaurants serve excellent Middle-Eastern, Oriental, and Continental cuisine. A growing number of American-style, fast-food eating places are located in Al-Khobar.

Hotels and restaurants that have family rooms allow men and women to eat together. If the restaurant has no family room, only men may

patronize it. The Dining Hall/Snack Bar at Saudi ARAMCO is an American-style restaurant.

Shopping in Al-Khobar is a frequent diversion. Gold and silver jewelry in the traditional Bedouin styles, oriental carpets, and Middle-Eastern or south-Asian brass curios are popular buys. Two well-stocked toy stores exist in Al-Khobar. Several book stores exist, but English-language selections are limited. Tapes and video tapes exist, but are censored to remove scenes regarded as objectionable.

American TV sets receive only AFRTS broadcast, but European (PAL) system sets connected to a rotor antenna will receive English-language telecasts from stations at Saudi ARAMCO, Bahrain, Qatar, and sometimes Dubai. Most TV programming begins in the mid-afternoon and ends between 10 pm and midnight. Programming on these stations is of an international character with some U.S. and British programs included.

Saudi ARAMCO also operates four FM radio stations that play a variety of music.

Social Activities

You can make social life in Dhahran as active as you wish to make it. Besides the large American community, over 9,000 British, several hundred Canadians, and smaller communities of French and Germans live in the Dhahran area. Moreover, many Saudis and other Middle-Easterners speak English, and are comfortable with Americans.

Saudi hospitality is generous and expansive. An International Women's Group, as well as an American Airport Wives Club, meets monthly. By joining the American Businessmen's Association, male newcomers are able to meet their American counterparts. The Association holds periodic evening dinners to which wives are invited.

Jeddah

Located on the Red Sea, Jeddah is the country's chief port and is about the same latitude as Calcutta, Hong Kong, and Honolulu. What began as a little fishing village in ancient times grew into an important trading center as a result of its strategic position on the Spice Route, linking Southern Arabia with the lands to the North. The future of the settlement was assured in 641 A.D., when shortly after the advent of Islam, the Caliph Othman chose it as the principal port for Mecca. The opening of the Suez Canal in 1869 consolidated Jeddah's position as a major center of trade in the Middle East. Many of the great merchant houses seen today date from this period. The old city was surrounded by a wall from 1511 to 1947. Today, only replicas of the city gates remain.

With an estimated population of two million, Jeddah is a thriving commercial center. It becomes even busier during the Hajj, the last month of the Muslim year, when about one million Muslim pilgrims from all over the world arrive en route to Mecca, 45 miles away.

About 6,000 Americans live in the Jeddah district. Most work for American firms such as Raytheon, Litton, Daniel International, Lockheed, and Mobil under contract to the Saudi Government. Americans also work in international and Saudi companies. Many live in separate company or private housing compounds, although some live in houses and apartments scattered throughout the city.

Due to the huge expatriate work force in Saudi Arabia, the city has a cosmopolitan character. In addition to Americans and West Europeans, thousands of Lebanese, Indians, Sri Lankans, Pakistanis, Bangladeshis, Syrians, Palestinians, Egyptians, and Filipinos provide the labor for the vast infrastructure, which has been built with oil revenues.

Food

Modern, well-stocked supermarkets carry a complete assortment of Western and other imported goods as well as local products. Because of the national diversity of the labor force, you will find an unusually wide variety of food items. Fruit and vegetables are plentiful both locally produced and imported. Fresh milk and other dairy products are available.

Fresh fish and shrimp are widely available. Beef, lamb, veal, and chicken are plentiful and of good quality. Chicken is either locally raised or imported from France. Some U.S. frozen chicken and turkey can be found. Bread is excellent and inexpensive. Other items are more costly than in the U.S. Pork is not available locally.

Clothing

Men: Men should dress modestly in public at all times. They should not wear clothing revealing bare arms or legs such as tank tops or shorts, nor should they wear visible gold jewelry or religious symbols. It is possible to wear summer clothes year round. Evenings in January and February may require a sweater.

Short-sleeved sport shirts and slacks are appropriate for casual wear. Tennis shoes are recommended for Red Sea swimming as protection against the sharp coral.

Suits and dress clothes in general are best purchased in the U.S., but sports clothes, shoes, and ties are available locally at reasonable prices.

Women: Women should wear clothing with sleeves at least to the elbows, reasonably high necklines, and skirts well below the knees. If pants are worn, a loose-fitting top should cover the hips. Professional, conservative, loose-fitting business attire is appropriate, although suits are not generally worn due to the climate. Hosiery is a matter of personal preference, but not generally worn to work. Bear in mind that offices and homes are well-cooled,

although outside is warm and humid.

On the beaches of the Red Sea, women can wear beach attire only when well outside of the city or on private beaches.

Some boutiques feature European clothing, but choices are limited, prices are high, and there are no facilities for trying on articles. Fabric is plentiful, but mainly polyester in bright colors and bold prints. Cottons are harder to find.

Children: Most children's wear is available, but quality varies and prices fluctuate. Short shorts, midriff blouses, tank tops and sleeveless tops are not appropriate attire for school. Baby clothes and diapers are available.

Supplies and Services

Most personal and household needs can be met here. A full selection of perfumes, cosmetics, medicines, and toiletries are available. Many prescription medicines are stocked, but bring a supply of any prescribed medicine in case it is not sold here.

Dry cleaning is reasonable and dependable. Leather shoe heels wear out quickly and shoe repair is not of satisfactory quality.

Tailors in the city do a reasonable job of copying existing garments.

Religious Activities

Only Islamic services are permitted in Saudi Arabia.

Education

The Saudia-Saudi Arabian International School (S-SAIS), owned by Saudia Airlines, offers an American curriculum. It spans pre-kindergarten through grade 9, although it is attempting to add year 10 for the school year 1996-97.

Teachers are mostly recruited in the U.S., but some American dependent teachers are hired locally. Special teachers are available for physical education, music, band and orchestra, art, and remedial reading; and English and math for advanced stu-

dents. The school's administrative staff includes a superintendent, a curriculum coordinator, and counselors.

The school has a general science lab, combination auditorium-gymnasium, homemaking lab, computer rooms, a resource center for remedial math and English, and a media center. The library has a current collection of 14,500 volumes in the main campus school and 15,000 books in the primary school.

Extracurricular activities include softball, basketball, soccer, swim team (semiprivate), and intramurals twice a week. Varsity sports include track, volleyball, softball, and basketball. Other activities such as Boy Scouts and Girl Scouts are also available.

The school term lasts from late August through early June, totaling the 180 school days required in most U.S. schools. In addition to winter and spring breaks, there is a post-Ramadan break and a Hajj break when these occur during the school year.

The Continental School follows a British system and accepts children from ages 3 to 16. The school year follows the British system, the first term being September through December, the second term January through March, and the third term from April through early July. Children are accepted on a space-available basis, and it is difficult to obtain space for students over age 13.

Another British school, Jeddah Prep, accepts children up to age 13. Small French and German schools are also in operation.

Arabic nursery schools are numerous but not acceptable for Americans. Some satisfactory American- and British-managed nursery schools are available. Costs are about \$10 per morning.

Sports

Organized sports leagues for both adults and children include volley-

ball, softball, two running clubs, tennis, squash, basketball, little league baseball, bowling, cricket, and rugby. Except for these leagues and occasional soccer matches (open to men only), no regular spectator sports exist in Jeddah.

Touring and Outdoor Activities

The area around Jeddah offers many points of interest—the Red Sea with its beautiful coral reefs, the lonely desert vistas, nearby oases, and the foothills.

Taif, in the mountains, is only a 2-hour drive from Jeddah. Located 6,000 feet above sea level, its cooler climate offers welcome relief in summer. The King and his ministers maintain summer homes and offices there to escape the searing heat of Jeddah and Riyadh. An excellent paved road winds its way up the escarpment and provides a panorama of surrounding mountains. A weekend at the Sheraton or Intercontinental Hotel in Taif makes a pleasant change.

Coastal waters around Jeddah provide exceptional deep-sea fishing. Shark, amberjack, barracuda, tuna, grouper, red snapper, sea bass, and an occasional sailfish are caught in nearby waters. If you are interested in deep-sea fishing, bring a good rod and reel. You can rent boats in Jeddah harbor, although the cost is high. Some residents enjoy sailing and boating and own wind surfing or light sailing vessels. Jeddah has two sailing clubs.

A protected inlet known as The Creek (Abhor Creek), about 30 minutes north of the city, is a popular spot for boating, swimming, snorkeling, diving, shell collecting, and picnicking.

Underwater scenes of the Red Sea are among the most beautiful in the world, making snorkeling and skin diving popular. An extraordinary variety of fish, in a stunning background of coral formations, provides a glimpse of an entirely different world. Snorkeling requires only tennis shoes, fins, snorkel, and mask.

You can buy these locally at prices slightly higher than in the U.S.

Scuba diving is also popular. You can dive in the Red Sea 9 months of the year without a wetsuit. Compressed air is readily available at a reasonable cost. Tanks, wet suits, regulators, and buoyancy compensators are available locally. If you are interested in scuba diving but not certified, instructors give lessons regularly at various locations around Jeddah. Rental diving equipment is also available, and a diving club is located in Jeddah.

Overnight desert camping trips, especially in winter, are popular. The desert provides a pleasant contrast to the bustling city and has a beauty of its own. Wadi Fatima and Wadi Khulays, oases not too far from Jeddah on the road to Mecca, offer scenic spots in the cooler months. Further away, Waba Crater, an explosion crater 1.8 miles across and 1,000 feet deep, is a unique destination for overnight camping.

Entertainment

Western forms of public entertainment do not exist in Jeddah. Since there are no cinemas, theaters, or operas, the Western community produces its own. It has two theater groups—a light opera group and a concert committee that features visiting artists and a choral society. The British Consulate General Cinema Club offers a weekly full length recent movie.

Dining out is a favorite pastime. The hotels have wonderful buffets at reasonable costs and international restaurants abound in Jeddah.

Shopping in the Jeddah souks (markets) for Arab handicrafts, old and new, is another favorite pastime. Oriental rugs, gold jewelry, and Bedouin silver are the most popular purchases.

Social Activities

Social activity in Jeddah revolves around the home, since no public entertainment or clubs exist. Buffet and sit-down dinners are typical forms of entertainment.

The American Ladies of Jeddah, a community-wide American Women's Club, meets monthly and sponsors recreational, social, and welfare projects. The group publishes a monthly newsletter. Additionally, the International Women's Group, a large organization open to all nationalities meets monthly.

Square dancing, Scottish dancing, and bridge are popular with the international community.

The Saudi Arabian Natural History Society meets monthly and features a speaker and a slide show on some aspect of Saudi Arabian natural history.

Makkah

Makkah (Mecca, to the Western world), one of Islam's greatest shrines, is certainly counted among Saudi Arabia's major cities but, by its very nature, it defies exact classification in that non-Muslims are forbidden to enter. It lies in the western part of the country, the Hijaz (or Hejaz), about 50 miles from the Red Sea coast, in a narrow valley surrounded by low hills. It is a modern city of more than 900,000 residents, and is the capital and administrative center of the province which bears its name.

The major industry of this holy city is tourism—but of a religious nature. Each year during the *Hajj* (Dhu al-Hijja), in the final month of the lunar year, more than a million worshipers from all over the world pour into Makkah for the pilgrimage which every Muslim hopes to make once in his lifetime.

Muhammad (whose name is also seen written Mohammed, or Mohamet) was born in Makkah in 570. His spiritual experiences led him to preach as a prophet here, but he eventually was forced to go to what is now Al-Madinah (Medina) to establish an Islamic state; he died there in 632. It was Muhammad who originated the practice of praying toward Makkah.

Modern Makkah is the site of the Great Mosque with its black-draped Kaaba. Here, also, is Umm Al-Qura University, which houses the faculty of Islamic studies among its other departments. There are schools and hospitals and a number of large bazaars.

Al-Madinah

The second most sacred city of Islam after Mecca, Al-Madinah (also referred to as Medinah or Medina) is located in western Saudi Arabia's Hejaz Province, about 215 miles north of Makkah. Along with agricultural products, the city's economy thrives on the pilgrim traffic and the businesses associated with it.

The city is no longer contained within walls; today there are wide avenues with luxury shops, coffeehouses, and over 40 hotels. Al-Madinah's roughly 500,000 residents have access to an airport and several roads. The Islamic University is located here.

Al-Madinah, formerly known as Yathric, was the terminus of Muhammad's journey from Makkah. He lived here until his death in 632. In 1924–25 the Hejaz Province was conquered by Ibn Saud and became part of the kingdom of Saudi Arabia.

OTHER CITY

HOFUF (also called al-Hufuf), in eastern Saudi Arabia, is about 200 miles east of the nation's capital. Its residents, mostly Muslim Arabs, make up half of the al-Hasa oasis' population. In Hofuf, the old Qaisariya bazaar coexists with modern office buildings. Hofuf's Western look is the result of the destruction of the old town walls, and of town planning. The nearby oil industry has aided in the city's commercial expansion. Farm products of the oasis are marketed here. The House of Sa'ud initially occupied Hofuf in the late 1700s. The Ottoman Turks made it their headquarters in eastern Arabia in 1871,

but were driven out by Ibn Saud in 1913. Hofuf's population is estimated at over 150,000.

COUNTRY PROFILE

Geography and Climate

Saudi Arabia lies in the area known as the Middle East—the meeting place of the continents of Asia, Africa, and Europe. It occupies much of the Arabian Peninsula and has a land area of about 830,000 square miles. The vast uninhabited Empty Quarter, al-Rub'al-Khali, is about the size of Texas and is the largest single body of sand in the world. The principal cultivated areas are in the Asir highlands in the Southwestern Province and in the Hasa Eastern Province along the Arabian Gulf.

The country is divided administratively into thirteen provinces, including the Hijaz, the Asir, the Nejd, the Al-Hasa, and the Northern Province, each headed by a governor or emir. The topography varies from vast stretches of sand to rugged mountain ranges. From the Gulf of Aqaba south to Yemen lies a dry, narrow, coastal plain bordering the Red Sea. East of the plain a narrow chain of mountains rises to 9,000 feet. This entire region, traditionally called the Hijaz, is now known as the Western Region. The same mountain chain rises to 12,000 feet and becomes more rugged in the south near Yemen. This portion, known as the Asir, has more rainfall than any other part of the country. Its dense population, villages, terraced farms, and green forests are more reminiscent of Africa than the Desert Kingdom.

The Nejd, the heartland of Saudi Arabia, is the ancestral home of the Al Sa'ud, the Kingdom's ruling family. This area contains the heaviest concentration of nomadic Bedouins who still lead their flocks of sheep, goats, and camels across the arid

land in search of pastures. But the Bedouin are modernizing and water trucks are now common sights near their tent encampments.

The Eastern Province, Al-Hasa, although largely desert, contains most of the nation's oil fields. Besides oil, two large oases, Qatif and Hofuf, support substantial agricultural production. Most activity and population are centered around the market city of Al-Khobar; Dhahran, site of the Saudi ARAMCO complex; and the busy port of Dammam.

Riyadh's climate has a greater difference between winter-summer temperatures than elsewhere in the Kingdom. Riyadh has practically no humidity, making summers especially dry and dusty. Dust, the single most disagreeable factor in Riyadh's climate both for housekeeping and for allergy sufferers, is a year-round problem. Annual rainfall averages 2-4 inches, usually concentrated in a few torrential rainfalls in early spring. Winters produce moderate daytime temperatures from November through February. Evenings are sometimes cool enough to require residential heating.

Jeddah, the commercial center, has a tropical climate—mild in winter and hot and very humid in summer. Summer lasts 8-10 months, with temperatures moderating in November. Relief from the heat often comes at sunset when sea breezes arrive. Except on the few occasions when it rains, the sun shines daily. Winter is comparable to the spring and summer seasons of resorts on the Mediterranean Sea.

Dhahran's climate, like that of Jeddah, is very humid, 60 to 90%, with summer lasting from April through October. The average maximum shade temperature in July and August is 110°F with "in sun" temperatures up to 150°F. From December to April, it is cooler and pleasant with indoor heating required at times, especially in the areas north of Dhahran.

Rainfall in both Jeddah and Dhahran is sparse, about 3-4 inches a year concentrated in a few heavy showers during fall and spring. Because of the high humidity, care should be taken in both Jeddah and Dhahran to store items in air-conditioned areas to prevent mildew.

Throughout Saudi Arabia, winds blow sand and dust into cars and homes, marring finishes and damaging unprotected equipment. Occasional full-fledged dust/sandstorms last 1-4 days and can aggravate respiratory problems.

Insect pests are not much of a problem, although flies can be bothersome during the cooler months, particularly in the desert. Mosquitoes are abundant at certain times of the year. Roaches, ants, and termites do invade the home, but insecticides control them well. Snakes are seldom seen but, along with scorpions, do exist and have been found on the compounds.

Population

In 2000, Saudi Arabia's population was estimated to be over 22 million. Until the 1960s most of the population was nomadic or semi-nomadic. Urbanization has advanced quite rapidly, and today about 95% of the population is settled.

Saudis are ethnic Arabs, but there has been some intermingling with Turkish, Iranian, Indonesian, Indian, and African peoples due mostly to pilgrims who immigrated and settled in the Hijaz along the coast of the Red Sea.

Many Arabs from nearby countries are employed in the Kingdom, as well as significant numbers of expatriate workers from North America, South Asia, Europe, and the Far East.

Arabic is, by royal decree, the official language of business. In the spoken language there are several regional variations in dialect. A knowledge of Arabic is helpful but not essential, since in urban areas and among middle- and upper-class

Saudis, English is widely used and most shopkeepers speak and understand English. English is acknowledged as a second language and is taught in secondary schools. Despite the government's emphasis on English, many older people and policemen or taxi drivers do not speak or understand it.

Islam is the official religion, and the government considers it a sacred duty to safeguard the two greatest shrines of Islam, the holy cities of Mecca and Medina. The Great Mosque of Mecca, with the cubed, black-draped Kaaba at its open-air center, is the major focal point of Islam. It is the Kaaba toward which all Muslims pray. Travel by non-Muslims into the cities of Mecca and Medina is prohibited.

Two Islamic religious observances during the year change the pace of daily life dramatically. Ramadan, the ninth month of the lunar year, is the period when Muslims abstain from eating, drinking, and smoking from sunrise to sunset. Non-Muslims are also required to refrain from eating, drinking, and smoking in public. At sunset each day, fasting ends as Muslim families gather to feast and to exchange greetings. Following Ramadan is Id Al-Fitr, a time of feasting, gift giving, and visits to homes of family members.

The second religious observance is the Hajj, the pilgrimage to the holy cities prescribed as a religious duty for Muslims. Every Muslim who can bear the expense is required to make the Hajj once during his or her lifetime. Each year, as the holy days of Hajj approach, several million Muslims from many nations arrive in Jeddah by land, sea, and air en route to Mecca and the Plain of Arafat, where the religious rites take place. They are joined by Saudis and resident expatriate Muslims in the holy cities of Mecca and Medina, making the Hajj the largest gathering of humanity at one time in the world. The last days of Hajj celebrate the feast of the sacrifice, Eid al-Adha.

Although many aspects of life in Saudi Arabia are becoming Westernized, traditional customs can make living in the Kingdom difficult. Flexibility and patience are necessary in dealing with everyday affairs as observance of local customs is usually of greater importance than one's diplomatic status.

Many social events are only for men, and, among the more conservative Saudi men, female family members are never mentioned in conversation. Although many Saudi women are educated in the West, and a great many of them are enterprising businesswomen or professionals, most of their social functions are for ladies only. Only occasionally will a Saudi woman attend a mixed function. However, it is useful to keep in mind that with over 70 diplomatic missions and many thousands of expatriates and Americans resident in the Kingdom, opportunities for socializing in a more western setting are numerous.

Saudi women appear veiled in public, wearing the "abaya," the traditional black cloak that covers the wearer from head to foot. Americans in Saudi Arabia should respect local traditions and customs and take care not to offend sensitivities. Women should wear long dresses, well below the knee, with long sleeves and avoid trousers. Non-Muslim women are not required to wear an abaya, but should dress conservatively (loose fitting dresses that cover well below the knee with long sleeves and a high neckline) when in public. However, some western women, particularly those living in the Riyadh area and in the more conservative central region, wear an abaya when in public places, and carry a head scarf in order to avoid harassment by the religious police known as the Mutawwa'in. However, even with the abaya and scarf, harassment still occurs.

The Mutawwa'in (members of the Committee for the Promotion of Virtue and the Prevention of Vice), literally translated as "enforcers" and sometimes referred to as "religious

police," comprise a special agency of the Saudi Government with specific powers to enforce religious stricture. Whatever may be written or whatever even a Mutawwa'in leader may say, individual Mutawwa'a attempt to enforce their own versions of modesty.

Under Saudi customs, it is prohibited for unmarried persons of the opposite sex to be together in public unless they are family members or close relatives. Public displays of affection, holding hands and kissing are also prohibited. Some Mutawwa'in try to enforce the rule that men and women who are beyond childhood years may not mingle in public, unless they are family or close relatives. Mutawwa'in may ask to see proof that a couple is married or related. Women who are not accompanied by a close male relative sometimes are not served at certain restaurants, particularly fast-food outlets. In addition, many restaurants no longer have a "family section" in which women are permitted to eat. Due to these restrictions, dating in the traditional sense can be problematic for single travelers.

Local custom prohibits photographing Arab women, and the Saudi Government requests that you not photograph poor areas or beggars. Excessive use of a camera may attract unfavorable attention, so take photographs discreetly. Photography of airports, ports, industrial, or military facilities is not permitted.

Except for American business representatives and official visitors, few Americans visit Saudi Arabia. The Saudi Government does not issue tourist visas and even business visit visas are difficult to obtain. Hajj visas (good for 30 days) are issued only to Muslims.

Public Institutions

The original area of Saudi Arabia ruled by the Al-Saud was the Nejd, the central and more tribal part of Saudi Arabia. During the first 30 years of the 20th century, the

regions of the Hijaz, the Asir, and the oil-rich Eastern Province (the Al-Hasa) were brought under Saudi rule. Today, Saudi Arabia is a traditional Islamic monarchy ruled by a King chosen from the direct descendants of Abdul Aziz Al-Saud.

The Council of Ministers performs executive and legislative functions, examines proposed legislation, and makes recommendations to the King. It is composed of heads of ministries, separate agencies, and other advisers appointed by the King, who is also Prime Minister. Once a recommendation is made and a course of action is decided upon, the King issues a royal decree, turning the decision into law.

Saudi Arabia's legal system, the "Shari'ah," is the body of Islamic jurisprudence derived from the Koran and from traditions of the Prophet Mohammed. It governs both civil and criminal law. Interpretations of the law are made by the Ulema, men learned in traditional jurisprudence. In cases not covered by the Shari'ah, administrative decisions are made by civil officials. Local commercial councils issue decisions based on customary commercial law or practice. The Board of Grievances, which has some of the functions of a national appeals court, hears civil and commercial cases. Every Saudi citizen has the right to have grievances heard by the King.

Saudi Arabia is divided into 14 administrative districts. The governors, or emirs, of these subdivisions report to the Minister of the Interior and often directly to the King. Lesser emirs, who function at a district or city level, report to the Interior Ministry or provincial governor. Some communities, including Jeddah, have municipal councils whose members are appointed by the Ministry of Municipal and Rural Affairs.

Commerce and Industry

Saudi Arabia's first producing oil well was completed in 1938, but full-scale commercial production did not begin until after World War II. Today, Saudi Arabia is the world's largest oil exporter. Most oil is shipped in tankers through the Arabian Gulf or through the Petroline pipeline to the Red Sea. The primary company developing the country's oil resources is the Saudi Arabian Oil Company (Saudi ARAMCO), formerly the Arabian-American Oil Company, now a wholly owned Saudi entity.

Oil accounts for 90% of export earnings, 75% of all government revenues, and 40% of the GNP. Income from the Hajj, once the mainstay of the government, continues to grow. Services provided to pilgrims now cost more than the income generated, but the pilgrimage is still a major stimulus to economic activity in the Hijaz or Western Province.

Saudi Arabia has no labor unions, but Saudi labor laws provide for worker protection. The supply of skilled Saudi workers is increasing due to improved technical education and training but still remains in short supply. Expatriates fill the gap with an estimated four-five million foreigners residing in Saudi Arabia. Most manual labor is performed by Filipinos, Sri Lankans, Bangladeshis, Egyptians, Indians, and Pakistanis. Middle- and upper-level technical and professional personnel, especially in commerce and construction, include Lebanese, Syrians, Egyptians, Palestinians, and Jordanians as well as Filipinos and Pakistanis. Large numbers of Westerners occupy technical, professional, and managerial positions.

The government continues to develop new petrochemical industries such as paints, fertilizers, and plastics. Despite increased industrial and agricultural production, Saudi Arabia still relies heavily on imports. Increasingly high customs duties have been imposed to limit the flow of imported goods. Still, the

Kingdom has achieved basic self-sufficiency in some agricultural staples, including wheat and dairy products.

The U.S. is Saudi Arabia's largest trade partner, barely edging out Japan, but European and other Asian countries are also becoming increasingly tough competitors. Major U.S. civilian exports are automobiles and parts, barley, telecommunications equipment, cigarettes, trucks, rice, air-conditioners, and aircraft.

Transportation

Local

The national bus company, Saudi Arabian Transport Company (SAPTCO), operates service within major cities. Buses have separate compartments for women and the bus stops are segregated by gender.

Taxis, also called limousines, are expensive and not always reliable. Taxi drivers may speak limited English.

Regional

Major airline carriers servicing the Kingdom are Saudia (the national airline), TWA, British Airways, Air France, Lufthansa, and most other European and Middle Eastern airlines. Direct flights are available from most major European cities. Saudia flies between New York to Riyadh via Jeddah five times a week during the summer season and two times a week during the winter season. TWA has flights three times a week between New York City and Riyadh through Cairo. Only Saudia is permitted to make domestic flights. Numerous airlines service Bahrain, a one-hour drive from Dhahran.

Saudi Arabia has more than 5,000 miles of paved roads with modern highways linking major cities. Riyadh is a 10-hour drive from Jeddah and a 4-hour drive from Dhahran. Scattered service stations en route provide gasoline and repair service. These are not, however, the Western equivalent of rest stops.

A railroad operates between Damman, on the Arabian Gulf, and Riyadh. The trip averages 4-5 hours with two stops en route. There are two trains daily on weekdays and one train daily on weekends. Private, air-conditioned compartments are available for groups of up to five people.

Communications

Telephone and Telegraph

A fax machine is very helpful for the transfer of information, especially for women who do not always have the mobility to which they are accustomed.

It is possible to have access to the popular communication bulletin board services and communication networks through a subsidiary of Saudi PTT. Charges are based on the time for which the line is used and the amount of data sent. Thus, if you are bringing a computer you may wish to consider including a modem for this or for using a computer fax program.

General phone directories are available in Arabic, but are not widely distributed. Telephone service between Riyadh, Taif, Dhahran, Jeddah, and other major cities in Saudi Arabia is good. Direct, long-distance international dialing is available. The cost to dial the U.S. via Saudi PTT is about U.S. \$2.25 per minute. Connections are excellent, but it is much cheaper to have friends and relatives call you from the U.S. or to call using a calling service.

Commercial telegrams may be sent from any city in the Kingdom.

Radio and TV

In Riyadh and Jeddah, the English service of the Saudi Radio system broadcasts news, music, features, and talk shows 6 hours daily. The Saudi Radio Service in Dhahran does not broadcast in English, but Saudi ARAMCO has four FM stereo stations featuring country, easy listening, classical, and pop music as well as Associated Press news sum-

maries. Neighboring Bahrain has English service on FM, offering 14 hours daily of music, news, and features.

Shortwave reception is not always good, but VOA and AFRTS provide music, news, sports commentary, and features. VOA broadcasts 11 hours daily in English to the Middle East. BBC reception is good 18 hours a day.

Saudi TV operates two channels: one in Arabic and the other in English, both broadcast on the European standard, ME/SECAM. The English-language channel shows many American and British programs as well as a variety of children's programs and cartoons. All programs are censored, and few current TV programs or movies are shown because of the Kingdom's strict moral codes.

Armed Forces Radio and Television Service (AFRTS) is available in Riyadh, Jeddah, and Dhahran and offers a variety of American sitcoms, sporting events, movies and news.

In Riyadh the United States Employees Recreation Association (USERA) offers a 5-channel cable TV service for a nominal yearly fee. Program broadcasting currently consists of two satellite feeds from Armed Forces Radio Television Service (AFRTS), CNN International, and two local Saudi channels. AFRTS offers a variety of American sitcoms, sports events, movies, and news. Satellite Cable service is also available for an additional monthly fee. Programs are broadcast in several different system formats—PAL, SECAM, and NTSC3.58, limiting the utility of American standard TVs.

Dhahran has access to the Saudi ARAMCO TV system, which uses the PAL European system. American-standard TVs cannot receive this transmission. In addition to American movies, serials, and programs, Saudi ARAMCO TV carries a delayed version of Saudi TV's English newscast. Bahrain TV operates an all-English channel that can

be clearly received all year round in Dhahran, offering 6-8 hours daily (longer on weekends) of American and European movies, shows, and serials as well as regular news. The U.A.E. and Qatar also have all-English channels that can be received in Dhahran much of the year. You can use a roof antenna to pick up telecasts from Kuwait and Oman.

A Saudi TV channel in English is received on SECAM. Multi-system TVs are available locally at a reasonable price.

Newspapers, Magazines, and Technical Journals

International editions of magazines such as *Time*, *Newsweek*, and the *Economist* reach newsstands only a few days late. *The International Herald Tribune*, *London Times*, *USA Today*, and three locally published English newspapers (the *Riyadh Daily*, *Arab News*, and the *Saudi Gazette*) are available in Riyadh. Foreign publications are always censored.

Health and Medicine

Medical Facilities

Good dental care is available in both Jeddah and Riyadh, although it is more expensive than in the U.S.

Pharmacies carry a wide selection of drugs. The drugs are generally European brands or American drugs listed by their European names and of a different dosage than that used in the U.S. If you are on a regularly prescribed medication (contraceptives, antihypertensives, cardiac drugs, medication for migraine headaches, etc.) or have a favorite brand, bring an adequate supply.

Saudi Arabia has strict penalties for violators of its narcotics laws. Prescription drugs in small quantities, clearly labeled, should cause no difficulties. Problems arise when they are in large quantities, unlabeled, or lack documentation, such as a copy of the prescription, or when

they are deemed illicit by Saudi authorities. Many drugs sold in nearby countries without a prescription are considered illegal here. Individuals are arrested for possession of these drugs.

Preventive Measures

Meningococcal AC vaccine is required for travelers from the U.S. All persons who are arriving in Saudi Arabia should receive this immunization to avoid having to receive it at the port of entry. Certain other immunizations are required when arriving from surrounding countries. Typhoid, tetanus, oral polio, Hepatitis B, and DPT immunizations should be up to date. The incidence of Hepatitis A is low, and gamma globulin is no longer given regularly. However, Hepatitis A vaccine is recommended for those who do not have antibodies. Malaria is only found in the southwestern section of the country and regular prophylaxis is not required.

Schistosomiasis is ever present, and all travelers should avoid swimming in freshwater lakes. Brucellosis is endemic; all dairy products consumed should be pasteurized. Although the city water in Riyadh is usually potable, bottled water is preferred for consumption. You need not soak fruits and vegetables, but thoroughly clean all produce. In the major cities, the restaurants patronized by Westerners are safe. Bottled water is readily available.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Travelers usually arrive in Saudi Arabia by plane at one of the three international airports—King Khalid International Airport in Riyadh, King Abdul Aziz International Airport in Jeddah, or Dhahran International Airport in Dhahran. All three of the airports are serviced by a great number of airlines in addition to the state-owned airline Saudia.

Travel to Makkah (Mecca) and Medina, the cities where the two holiest mosques of Islam are located, is forbidden to non-Muslims. American Muslims who are not resident in Saudi Arabia but who plan to participate in the annual Hajj pilgrimage to the holy cities of Makkah (Mecca) and Medina should pay close attention to the following:

All travel plans should be made through a travel agent in order to book accommodations in advance. Hajj visas are required and are valid only for travel to the two holy cities. Onward travel to Riyadh or other cities in Saudi Arabia is not permitted.

Foreign Muslim residents of the Kingdom may perform the Hajj once every five years. Advance approval must be obtained from an immigration office with the approval of the Saudi sponsor.

Passports valid for at least six months and visas are required for entry. Visas are issued for business and work, to visit close relatives, and for transit and religious visits. Visas for tourism are issued only for approved tour groups following organized itineraries. Airport and seaport visas are not available. All visas require a sponsor, can take several months to process, and must be obtained prior to arrival. Women visitors and residents are required to be met by their sponsor upon arrival. Women traveling alone, who are not met by sponsors, have experienced delays before being allowed to enter the country or to continue on to other flights.

Visitors to Saudi Arabia generally obtain a meningitis vaccination prior to arrival. A medical report or physical examination is required to obtain work and residence permits.

Residents working in Saudi Arabia generally must surrender their passports while in the Kingdom. The sponsor (normally the employer) obtains work and residence permits for the employee and for any family members. Family

members of those working are not required by law to surrender their passports, though they often do. Residents carry a Saudi residence permit (Iqama) for identification in place of their passports. The U.S. Embassy and Consulates General in Saudi Arabia cannot sponsor private American citizens for Saudi visas.

Foreign residents traveling within the Kingdom, even between towns in the same province, carry travel letters issued by employers and authenticated by an immigration official or a Chamber of Commerce office. Police at all airports and dozens of roadblocks routinely arrest and imprison violators.

Residents in Saudi Arabia who are departing the country must obtain an exit permit prior to leaving and an exit/reentry permit if they intend to return to Saudi Arabia. The Saudi sponsor's approval is required for exit permits. A married woman residing in Saudi Arabia with her husband must have her husband's approval to receive an exit permit. The father must approve the departure of any children. The U.S. Embassy and U.S. Consulates General cannot sponsor private U.S. citizens for an exit permit under any circumstances. Temporary visitors normally do not need an exit permit but may be prevented from departing the country if they are involved in a legal dispute.

Saudi customs authorities enforce strict regulations concerning importation into Saudi Arabia of such banned items as alcohol products, weapons and any item that is held to be contrary to the tenets of Islam. This includes non-Islamic religious materials, pork products, and pornography. Saudi customs and postal officials broadly define what is contrary to Islam, and therefore prohibited. Christmas decorations, fashion magazines, and "suggestive" videos may be confiscated and the owner subject to penalties and fines. It is advisable to contact the Embassy of Saudi Arabia in Washington or one of Saudi Arabia's consulates in the United States for specific informa-

tion regarding customs requirements.

Penalties for the import, manufacture, possession, and consumption of alcohol or illegal drugs are severe. Convicted offenders can expect jail sentences, fines, public flogging, and/or deportation. The penalty for drug trafficking in Saudi Arabia is death. Saudi officials make no exceptions. Customs inspections at ports of entry are thorough. The U.S. Embassy and Consulates General have no standing in Saudi courts to obtain leniency for an American convicted of alcohol or drug offenses.

Besides alcohol products and illicit drugs, Saudi Arabia also prohibits the import, use, or possession of any item that is held to be contrary to the tenets of Islam. The private ownership of weapons is prohibited. Imported and domestic audiovisual media and reading matter are censored.

Americans living in or visiting Saudi Arabia are encouraged to register at the Consular Section of the U.S. Embassy in Riyadh or the Consulates General in Dhahran and Jeddah. U.S. citizens who register at the U.S. Embassy or the U.S. Consulates General may obtain updated information on travel and security within Saudi Arabia and can be included in the warden network.

The U.S. Embassy in Riyadh, Saudi Arabia, is located at Collector Road M, Riyadh Diplomatic Quarter. The international mailing address is P.O. Box 94309, Riyadh 11693. Mail may also be sent via the U.S. Postal Service to: U.S. Embassy, Unit 61307, APO AE 09803-1307. The Embassy telephone number is (966) (1) 488-3800, fax (966) (1) 488-7275.

The U.S. Consulate General in Dhahran, Saudi Arabia, is located between Aramco Headquarters and the old Dhahran Airport at the King Fahd University of Petroleum and Minerals highway exit. The international mailing address is P.O. Box 38955, Doha-Dhahran 31942. Mail may also be sent via the U.S. Postal

Service to: Unit 66803, APO AE 09858-6803. The telephone number is (966) (3) 330-3200, fax (966) (3) 330-0464.

The U.S. Consulate General in Jeddah, Saudi Arabia, is located on Palestine Road, Ruwais. The international mailing address is P.O. Box 149, Jeddah. Mail may also be sent via the U.S. Postal Service to: Unit 62112, APO AE 09811-2112. The telephone number is (966) (2) 667-0080, fax (966) (2) 669-3078 or 669-3098.

Special Information

Saudi authorities do not permit criticism of Islam or the royal family. The government prohibits the public practice of religions other than Islam, although private worship by non-Muslims generally is permitted. Non-Muslims suspects of violating these restrictions have been jailed.

Currency, Banking and Weights and Measures

The Saudi Arabian monetary unit is the riyal (SR), which is divided into 100 halalahs. Notes are issued in denominations of 1, 5, 10, 50, 100, and 500. Coins are in 5, 10, 25, and 50 halalah denominations but they are being phased out. The riyal is quoted in dollars but based on Special Drawing Rights (SDR). As the SDR/dollar rate varies, the official riyal/dollar rate is revalued at intervals to keep within a narrow range around US\$1=SR 3.75.

The riyal is readily convertible and is one of the world's most stable currencies. Most foreign currencies can be converted against it.

Commercial banks are located in all the major cities. Riyadh, Jeddah, and Dhahran have many banks that were formerly foreign-owned but have been converted into joint stock companies with majority ownership by Saudi interests; e.g., Citibank has a minority interest in the Saudi American Bank.

Saudi Arabia is still a cash-oriented society, although acceptance of checks and major credit cards is growing.

The metric system is the official standard of measurement, although Saudi Arabia still uses older Arab weights and measures. Saudis use the Muslim lunar calendar, which is about 12 days shorter than the Gregorian calendar used in most other countries. Consequently, exact dates of official local holidays change each year.

SINGAPORE

Republic of Singapore

Major City:
Singapore

Other City:
Jurong

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report for Singapore. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Since the dynamic, modern metropolis of **SINGAPORE** attained its independence in August 1965, its capable leadership has been molding it into a model of social and economic progress and multi-racial harmony. A former British colony, and later a self-governing member of the British Commonwealth and (for two years) of the Federation of Malaysia, the Republic of Singapore remains a major port of the East, and one of the world's great commercial centers.

Singapore ranks with Japan and Brunei as one of the most prosperous countries in Asia. One of the busiest and cleanest ports in the world, it throbs with activity. It is a

melting pot of Chinese, Malay, Indian, and Western cultures, each endeavoring to maintain its own identity and rich heritage.

MAJOR CITY

Singapore

Singapore is both a city and a republic. The entire country is almost entirely urban and suburban in nature and, because of this, the distinction between Singapore and Singapore City is disappearing. Therefore, all national information applies to the city as well.

The modern city was established in 1819 by Sir Stamford Raffles of the British East India Company. Centuries earlier, it had been known as Temasek, or "Sea Town." According to legend, its current name was given by a prince of the Srivijaya (Hindu-Malayan) empire who, upon landing at Temasek, saw an animal resembling a lion; hence, Singa Pura, or Lion City.

The settlement begun here by Raffles attracted enterprising merchants and industrious immigrants from throughout the Malay peninsula and the islands of the Indonesian archipelago. Soon came the

Chinese, Indians, British, Arabs, and Ceylonese whose descendants comprise today's Singaporean population.

Separate areas were designated for the many and varied ethnic groups who came to seek new and better lives and, although there has been considerable assimilation and resettlement, Singapore retains areas where traditions of the past continue. Narrow roads, vibrant street activity, mosques and temples, and unique sights and sounds all add to the color and fascination of this exotic city. The harbor, the parks and gardens, and the colonial heart of Singapore create still another, but equally interesting, aspect of this Southeast Asian melange.

Singapore, which became part of the Straits Settlements (British crown colony) in 1826, was made a separate British colony in 1946. It was a Malaysian state from 1963 to 1965, when it established its independence as a republic. During World War II, Singapore was under Japanese occupation for three-and-a-half years.

Clothing

Lightweight trousers, shirt (long- or short-sleeved) and tie are appropriate office wear. Many men keep a jacket and tie on hand only for more formal events. Suitable fabrics for

trousers and suits are lightweight dacron, cotton blends, or other washable fabrics.

Ready-to-wear shorts, worn for sports, and trousers are available in Singapore. Some men have their clothing tailor-made at about the same cost as a better quality ready-to-wear suit in the U.S. Workmanship is generally good.

A variety of British and U.S. men's items, such as shirts, socks, underwear, handkerchiefs, ties, and accessories, are sold in Singapore. U.S. items are usually more expensive here—size 34 waist and above are not easily obtained. U.S.-made shoes, however, are not available. Some men, especially those with small feet, have found locally acquired shoes comfortable and well fitting; lasts tend to be wider than U.S. styles. European shoes also are available, but costlier. American sizes nine and above are scarce and at times difficult to find.

Cool and washable cottons and cotton blends are the best fabric choices for women in Singapore's heat and humidity. Frequent laundering is necessary, and clothes fade and wear more rapidly here than in the U.S. Clothing that requires dry cleaning is not recommended, as few facilities meet U.S. standards. Light colors are cooler for day, although both dark and light colors are worn. Short- or long-sleeved and sleeveless dresses can be worn, depending on air conditioning and personal preference.

In the office, women wear dresses or pantsuits; a sweater is useful because of the air conditioning. Casual, summer daytime wear is appropriate for other everyday activities. Singaporeans dress conservatively but stylishly and are not usually seen in bare-shoulder or bare-midriff dresses during the day. Shorts and pants are worn for most sports; shorts are considered inappropriate on the street or for shopping, but culottes, knee-length shorts, or slacks are popular. Skirts and blouses are comfortable for golf;

tennis outfits for tennis and squash are available or can be made.

Leather, patent leather, linen, and silk shoes are worn as in the U.S. Low-heeled sandals are most comfortable, as closed shoes may be warm. Ready-made shoes are available, but sizes eight or larger and narrow widths are available only in expensive European imports. Shoes can be made, but often with disappointing results. If proper fit is a problem for you, bring a good supply. Remember, feet might swell in tropical heat.

All schools, including the American School, require locally made uniforms for children. Play clothes for outside activities and some dress clothes for parties and church should be brought from home.

Generally, available ready-to-wear clothing includes some U.S. brands, but parents usually rely on local ready-made play clothes. Children's dress clothes can be made here inexpensively.

Food

Several major supermarkets in Singapore are comparable to small U.S. supermarkets. Most families also have a grocer who takes daily telephone orders and delivers goods to the home. These items cost more than in the supermarket but, for many, the service is timesaving and convenient.

Fresh fruits and vegetables are abundant. Local, tropical varieties, as well as those imported from either the Northern or Southern Hemisphere, depending on the season, are available. Oranges and apples shipped from the U.S. and elsewhere are of high quality. Orange juice is expensive. Canned goods are imported from Australia, New Zealand, Taiwan, the People's Republic of China, the U.S., and Europe. A limited variety of frozen foods can be purchased. Baby foods and formulas, both U.S. and Australian brands, are available but more expensive than in the U.S.

Fresh milk and other dairy products are imported from Australia and are expensive. Most resident Americans buy reconstituted, canned, or powdered milk at considerable savings.

Good meat is imported from Australia and New Zealand. Australian beef has a slightly different taste and texture, as the cattle are grass-fed rather than corn-fed. Domestic chickens are less expensive than other meats and are of good quality.

Food spoils quickly in this hot, humid climate. Airtight containers (which are available here) prolong freshness and keep ants and weevils out of flour, sugar, crackers, and cookies.

Supplies & Services

Singapore offers many types of repair services. Local craftsmanship ranks higher in quality and considerably lower in cost than that in the U.S. In the Eastern tradition, china, furniture, shoes, etc., are repaired time and again; nothing that can be salvaged is discarded.

Quality dry cleaning varies, and even a firm one has come to trust may eventually prove undependable. Prices are high.

Singapore has commercial laundries, but an *amah* (a domestic) will probably do the washing at home. *Amahs* are thorough, but not always gentle; they are among the reasons that clothes fade and wear out quickly.

Many beauty shops offer services comparable with those of an average quality U.S. shop. Some stylists and services are excellent, and most women eventually make satisfactory arrangements.

Most electronic equipment can be repaired locally; workmanship is reliable. U.S. equipment is more expensive to repair than Japanese and European brands.

One of the few genuine bargains in Singapore—picture framing—is of good quality and inexpensive. Non-

reflecting glass and acid free matting are available.

Religious Activities

Most major Christian religions are represented here. English services are held at Roman Catholic, Greek Orthodox, Anglican, Mormon, Presbyterian, Lutheran, Methodist, Baptist, Christian Scientist, or Seventh Day Adventist churches. One Sephardic synagogue conducts "Baghdad-tradition" services, which is not easily understood by most American Jews.

It is the custom for those visiting mosques and temples to remove their shoes before entering. Modest dress is expected.

Domestic Help

Household domestics are difficult to find. Increasingly, both Americans and Singaporeans are employing foreigners—Filipinos, Indonesians, Thais, Sri Lankans, Indians, Bangladeshis, and Malaysians—which often means cumbersome and expensive hiring arrangements, as they must be approved by the government before they are permitted to work or enter the country.

Americans here often employ at least one general domestic called an *amah*, whose duties usually include cooking, cleaning, washing, ironing and, sometimes, baby-sitting.

Singles or those without children need only a part-time *amah* who works a few days a week.

Some families employ more than one domestic, in varying combinations of cook, *amah*, cook/*amah*, gardener, etc. These may be live-in or live-out, and either full- or part-time.

Monthly wages vary from S\$300 for a part-time *amah* to S\$600 for a full-time live-in cook/*amah*. A foreign maid is paid less than a Singaporean maid. In addition to basic salary, a food allowance is usually paid. For a Singaporean or foreign *amah*, the employer makes a monthly payment based on salary to the Central Provident Fund (CPF),

a form of social security. No CPF payment is required for a domestic who is employed less than 14 hours per week. The employer usually gives an annual bonus of one month's salary to Chinese employees at Chinese New Year, to Malay employees at Hari Raya Puasa, and to Christian employees at Christmas.

Education

Since 1956, the Singapore American School has provided an U.S.-style education to the international community. The aim of the school is to educate and equip children of any race, religion, or nationality with academic, social and interpersonal skills to help insure success in adult life. A wide range of electives and extracurricular activities are offered.

Nonprofit and community supported, the Singapore American School has children from over 40 nationalities in attendance, although more than 60 percent of the student body are U.S. citizens. The current total enrollment is over 2,000. Classes for preschool (three year olds), pre-kindergarten through grade eight are at the Ulu Pandan Campus, grades nine through 12 use the King's Road Campus.

The school year consists of two semesters, with vacations at Christmas and spring break. Full accreditation is given by the Western Association of Schools and Colleges.

In addition to the intramural program, the school is the venue for many Singapore American Community Action Council (SACAC) programs, which include American football, gymnastics, baseball, and T-ball.

Through grade eight, the classrooms are designed for multi-age groupings with a continuous educational progress program. The high school compares to a comprehensive U.S. high school, but does not offer an extensive vocational education program. The program of study is

mainly, though not exclusively, college preparatory.

The address of Singapore American School is 60 King's Road, Singapore 1026, Republic of Singapore, (high school); 201 Ulu Pandan Road, Singapore 2159, Republic of Singapore (elementary school).

The International School of Singapore opened in September 1981 and is committed to a complete academic program stressing the basics of education. A standardized testing program, using both American and British materials, insures that students are progressing at a rate that compares to that of their peers in their homeland. English is the dominant language but, for the large number of non-English speaking students, a separate program—English as a Second Language—is offered. This program enables students of any nationality to participate in class with little difficulty. The school's educational program helps students successfully complete O- and A-level examinations as well as the Scholastic Achievement Test, which prepares them to enter American colleges and universities.

International School is located 15 minutes from downtown Singapore. Facilities include two campuses, 54 classrooms, cafeteria, playing fields, science laboratories, computer room, and a 6,000-volume library. The school is completely air-conditioned. International's mailing address is Preston Road, Singapore 0410.

Two excellent schools, the United World College of Southeast Asia and the Dover Court Preparatory School, offer a British curriculum and are highly accredited.

The United World College of South East Asia is an international day and boarding school for students in grades six through 12. It seeks to foster international understanding through education and also to provide schooling adapted to today's special needs. Its pupils represent some 40 different nationalities, but

share a common academic and activities curriculum. Equivalence agreements exist with most countries represented at the school, so that departing pupils may obtain admission to universities of their choice in their own countries. Some 1,350 students are generally enrolled; about 50 are American.

United World College was designed as the first of a number of international schools that offer students of different nationalities a two-year course of study before entering a university or starting a career. Course work is geared to the British school system, but a record of study credits is maintained for all American students and for others who may require it during grades nine through 12. Arrangements are made for students considering application to U.S. universities to take the Scholastic Aptitude and Achievement Tests set by the College Entrance Examination Board.

The school year, beginning in September, comprises three terms. An eight-week vacation begins in early July, and two shorter vacations of about two weeks each are taken in December and late March.

Queries should be directed to the school at Pasir Panjang, P.O. Box 15, Singapore 9111, Republic of Singapore.

Dover Court Preparatory School is an international boarding and day preparatory school for children in pre-kindergarten through grade nine. Current enrollment numbers some 900 students; Americans represent a small percentage.

Classrooms are large, light, airy, and well equipped. The buildings are set in 12 acres of park land, and the school has ample playing areas. A tennis court and facilities for swimming, athletics, and football are available.

The school year, comprised of three terms, begins in September and ends in July. A limited number of boarding facilities are offered to

children of all nationalities from ages six through 13.

A Child Guidance Center at the Dover Court site provides individual therapy. The center offers a full psycho-educational testing program and individual therapy for children who have learning disabilities or emotional and behavioral problems. There are some boarding facilities.

Further information is available from the school at Dover Road, Singapore 0513, Republic of Singapore.

Another institution with a British curriculum is the Tanglin Trust Schools located six miles from the city center, near the National University of Singapore. The coeducational, day school for children ages three to 11 has a definite British focus; no Americans attend. The address is Portsdown Road, Singapore 0513, Republic of Singapore.

Singapore universities enroll some foreign students. The Chinese Language and Research Center, located on the Nanyang Campus of the National University of Singapore (NUS), is popular with Chinese language specialists. American students cannot enroll in degree programs.

The National University of Singapore has a non-credit, evening lecture series on a variety of subjects. The Vocational Industrial Training Board offers a number of practical courses such as boat handling, interior decorating, Japanese flower arranging, silk screen printing, photography, and woodworking; these are open to Americans upon application.

Courses in Chinese cooking, yoga, painting, *mah-jongg*, etc., are available through the YWCA. The American Women's Association, the Pan Pacific South-East Asian Women's Association, the Chinese Women's Association, and other groups offer similar programs.

Language-study programs are available. The Alliance Française offers a complete range of courses in

French. Both the NUS and the Vocational Industrial Training Board teach several languages in evening classes. NUS offers full-time Mandarin instruction. A commercial language center features up-to-date language equipment.

Recreation

Opportunities for touring and sight-seeing in the Singapore area are nearly limitless. Some of the most interesting places are:

The Botanical Gardens. Singapore is famous for these gardens, where the first rubber saplings of South-east Asia were brought from South America and planted. Today, thousands of exotic tropical plants flourish, including rare orchid hybrids. Black swans float on a tranquil lake. It is a gorgeous park and well worth a Sunday afternoon's stroll.

The Mandai Orchid Gardens, truly a land of orchids. In these gardens alone are thousands of colorful hybrids, many of which have won acclaim in international flower shows, but commercial shipments often strip the gardens of their flowers.

Jurong Bird Park, the world's largest and most colorful aviary, inhabited by thousands of feathered creatures, including dozens of rare species. Electric tram cars take visitors around the park, and to the world's tallest man-made waterfall as well.

Singapore Zoological Gardens, one of the most modern zoos in existence. Here, most animals live in a natural setting—a promontory with lawns, trees, and shrubs. An electric train takes visitors around the gardens.

Mount Faber—Sentosa Island. If one wishes to escape from Singapore proper, the cable car at Mount Faber can be taken to the Island of Sentosa. Mount Faber is 385 feet above sea level, the perfect spot to watch the sun go down and lights come up in the city. Telescopes are provided for an excellent view of the harbor, the Southern

Islands and, on a clear day, the Indonesian Archipelago. Sentosa is a lush unspoiled island with a natural forest and a quiet village. Features include a superb 18-hole golf course on the sea, the world's first coralarium, and a swimming lagoon and picnic area. The Surrender Chamber is also located on this island; this is a replica of the site of the original surrendering of Singapore by the Japanese Occupation Forces to the Allied Forces after World War II.

The range of sight-seeing in Singapore also includes Tiger Balm Gardens, which features grotesque plaster and stone figures representing demons, grottos, and scenes from Chinese myth and legend. Chinatown lies in and around New Bridge Road and, although many of the old shop houses are being demolished, visitors can still see medicine men and fortune tellers on the sidewalk. There are more than 500 Chinese and Indian temples in Singapore, notable among them the exotic Sri Mariamman Hindu temple on South Bridge Road, the Sultan Mosque, and the Buddhist Temple of One Thousand Lights. Other interesting places to visit are Chinese and Japanese Gardens, Van Kleef Aquarium and the Kranji War Memorial. A small National Museum features a limited study of the natural history of the region and houses an impressive jade collection. The National University of Singapore maintains a small but excellent collection of Oriental ceramics which presently is on long-term loan to the National Museum. The National Art Gallery presents exhibits by local and international artists.

As a duty free port, Singapore offers many imported items below European prices. Movie cameras, calculators, watches, household appliances, sporting equipment, and leather goods are some products which may be purchased at discount, although prices can vary widely between establishments. Good, but expensive, jade and antiques from Burma, China, and Thailand may be purchased in some

of the elegant shops in the Tanglin Road area. In the North Bridge Road, Arab Street, and Serangoon Road districts, crafts such as Chinese figurines, rattan and cane furniture, batik, and silk are available. The best places for casual shopping are the large shopping centers on Orchard and Tanglin Roads and People's Park on New Bridge Road.

In general, Americans in Singapore rely on Malaysia for weekend excursions or more extended trips. The Malaysian macadam, two-lane roads are good, although narrow, and frequent congestion often results in extended delays on the causeway into Malaysia. Rest houses, run by the government, are inexpensive, usually clean and comfortable (if unglamorous), and are found throughout Malaysia. Dining facilities provide Chinese, Indian, and Malay food, as well as simple Western dishes.

The Safari Park, north of Singapore in Johore State, Malaysia, features wild animals roaming freely in an enclosed area. Visitors drive through the park in cars to observe the animals in their natural habitat.

Malaysia's east coast, up to the northern border, has roads that are passable during dry months. However, in the rainy season, allowances must be made for flooded road conditions. A few streams and rivers still have unreliable ferry systems, although modern bridges are presently being constructed. A three-hour drive up the east coast will lead to Mersing, where visitors can stay at the rest house, rent boats, and visit the uninhabited paradise-type islands with clear blue water, palm trees, and white beaches.

Instruction or participation in most sports is available, but may require membership in a club. Golf, bowling, tennis, squash, rugby, soccer, softball, swimming, sailing, horseback riding, scuba diving, judo, yoga, and ice skating are among those available here.

The Singapore Swimming Club has a large saltwater pool, and badminton is also available. The American Club is noted for its bowling lanes, and offers opportunities to join leagues; the pool here is small, but excellent for children. Tennis, squash, and racquetball facilities are available. The Cricket Club features tennis (eight grass courts), squash, and cricket.

Golf is popular. The Singapore Island Country Club has four excellent courses at two separate locations, but membership is expensive and the waiting period is usually several years. Other golf clubs are the Warren, Changi, Seletar, Koppel, Sembawang, Jurong, and Tengah. These are nine-hole courses, less expensive, and with shorter waiting periods for membership. Non-members can play on weekdays by paying greens fees.

The Singapore Tennis Center, with nine outdoor and three indoor courts operating on the principle of U.S. tennis centers, is open to the public for hourly and seasonal rental.

The Singapore Sports Council operates several swimming pools, a dozen or so squash courts, more than 30 tennis courts, and a short seven-hole golf course. All are open to the public for a nominal fee. The YMCA and YWCA offer tennis, squash, martial arts such as karate and Tai Kwon Do, yoga, and other sports and recreational activities for a nominal charge.

Boating is popular; sailboats and motor-boats are available, as are opportunities for water-skiing and scuba diving. Surprisingly, beaches are poor and scarce; the best are located offshore and in Malaysia, and can be reached only by boat. Singapore has several yacht clubs, including the Republic of Singapore Yacht Club, the Singapore Sailing Club in Changi, and the Singapore Armed Forces Yacht Club. Dinghies and motor-boats are available for daily and monthly charter at most clubs for nominal fee.

Industrial port of Singapore

Malaysia is no longer good hunting country, and game conservation efforts are being made. Wild pig is about the only game bagged, despite occasional reports in the press of tigers and rogue elephants. Import and licensing of firearms is strictly controlled, and a permit for possession is obtained only after considerable delay.

Some surf fishing is done off the Malaysian coast. Taman Negara National Park, north of Kuala Lumpur, is well stocked for stream and river fishing. The park is accessible only by river.

Because of the heat and the beating sun, hiking is not an enjoyable sport here; however, a men's cross-country running club meets in the evening. Jungle hiking is quite pleasant in the cool hill country of Malaysia.

Farther up the east coast are beaches and good accommodations. From May to September, one can see the sea turtles which come up at night to lay their eggs on most of the beaches along the east coast. However, in Malaysia, as elsewhere in the world today, some of the beaches are polluted.

Two popular spots on the west coast are Malacca, the old Dutch and Por-

tuguese trading center, once the hub of trade before Singapore was founded in 1819; and Port Dickson, a beach resort which has fishing, swimming, sailing, and water-skiing facilities. Both are five to six hours by car from Singapore and have good accommodations.

Trips to Kuala Lumpur and Penang take more than two days, except by air. Also, a longer journey is required to visit one of the hill stations in Malaysia. Fraser's Hill (about two hours' drive from Kuala Lumpur) and Cameron Highlands (five hours' drive), have a definite colonial atmosphere. A resort with high-rise hotel and gambling facilities is located at Genting Highlands (one hour). A visit to any of these places provides a refreshing climatic change, since they are 10 to 15 degrees cooler than Singapore. They offer golf and hiking.

Entertainment

Several air-conditioned, first-run movie theaters show most recent American, British, and Chinese films. High quality but less popular art films are shown at the Goethe Institut. Some private clubs and film societies offer members a wide spectrum of classic, popular films. A number of commercial video-tape rental shops exist (PAL system). All films and videos are censored.

The government-sponsored Singapore Symphony Orchestra made its debut in early 1979 and features both guest conductors and soloists. Instrumental and choral groups, and solo musicians also give public recitals. Popular artists and groups frequently appear at various hotels and in large outdoor concerts. Musical programs are contributed by Singapore's various ethnic groups, ranging from Western ensemble to traditional Malay *kronchong* (orchestra) music. Those who wish to participate in musical activities have many opportunities to do so.

A number of capable amateur groups present plays. Impresarios sponsor an occasional one-man show or small theatre troupe. Traditional Chinese opera and Indian and Malay dances are popular in Singapore.

The Singapore National Library, considered one of the best in the area, has more than 400,000 English-language books, plus a smaller number in the other official languages. The National University of Singapore's extensive library facilities may be used with permission granted on individual application. Small libraries are maintained in the American Club and the Tanglin Club for members' use, as well as a number of small specialized collections scattered throughout the city.

Singapore has many well-stocked bookstores. A good selection of both American and British paperbacks are available at prices somewhat higher than in the U.S. Selection is good at Singapore's many record and tape stores, but new releases are not always available.

Dining is a pleasure here. Singapore has a variety of inexpensive restaurants and, with concerted attempts to lure tourists and the resultant hotel boom, the number of good eating places has multiplied. Variety in style, quality, and price is infinite—from outdoor stalls to elegant continental dining.

Every type of Chinese, Indian, Malay, and Indonesian food is available in Singapore. The food at outdoor night markets and also at daytime food stalls near Telok Ayer Market is excellent, and visitors need not worry about unhygienic preparation. Curries and Indian vegetarian food can be found, and there also are establishments where *Nonya* food—a unique mixture of Chinese ingredients and Malay cooking—is served. Western food is also available. The local Tiger beer is excellent, and Singapore is one of only a few places in Asia where water can be consumed safely.

Opportunities abound to devote time to charity. Many institutions for orphans and for the handicapped welcome volunteers.

The Singapore American Community Action Council (SACAC), created in 1973, works with the American schools here to combat drug abuse and promote a healthy home environment by providing counseling and sponsoring activities for singles, families and young people.

The American Women's Association (AWA) is a large and active organization whose monthly meetings usually feature a speaker. The AWA sponsors many trips, courses, and activities, and provides outreach opportunities for volunteers.

The American Business Council, a large group of resident Americans representing most of the U.S. companies in Singapore, discusses business matters through specialized committees.

Singapore offers an interesting and varied social life; an individual's work and personal wishes determine the degree of involvement. Singaporeans are friendly and sociable; opportunities to meet members of the large and growing multi-national business community are numerous.

The Singapore Tourist Promotion Board is located at Raffles City

Tower 36-04, 250 North Bridge Road, Singapore 0617.

OTHER CITY

JURONG, in the western section of Singapore, is one of the largest industrial sites in Southeast Asia. Jurong is not a separate city, but is known as an "industrial town." Over 3,000 companies are situated in 20 industrial estates, employing almost 70 percent of the country's work force. Industries include ship-building yards, a steel pipe factory, and an oil refinery. The National Iron and Steel Mill is the city's industrial center. Jurong has a short history, dating only to the early 1960s. Singapore's secession from the Malaysia federation in 1965 slowed the suburb's growth. Jurong Bird Park, with the world's largest walk-in aviary, and the Chinese and Japanese Gardens—the Japanese being one of the largest such gardens outside of Japan—are among tourist spots. The Singapore Science Center, located here, covers physical and life sciences, specifically for younger visitors. Jurong Town has a university, and all social amenities.

COUNTRY PROFILE

Geography and Climate

Singapore is a small and almost entirely urbanized island (225 square miles at high tide). It lies 85 miles north of the equator, off the tip of the Malay Peninsula, from which it is separated by the Straits of Johore. A causeway, with both a road and a railway, crosses the three-quarters of a mile to the Malay mainland. Relatively flat (highest elevation 581 feet), the maximum distance from east to west is 26 miles and from north to south, 14 miles. The Republic of Singapore consists of Singapore Island and 54 smaller islands.

Vegetation is lush and tropical. Seasons are nonexistent. Here in the "Land of Eternal Summer," the mean high is 82°F and the mean low, 77°F. For its location, however, Singapore is not as hot as might be expected and, at times, it is surprisingly cool because of sea breezes.

Humidity is high (average 70%) and annual rainfall is 96 inches. Wet and dry seasons are somewhat indistinct, but November through February are wetter than the other months and tend to be cooler. Over a period of time, the climate can be oppressive. Depending on the length of one's stay, the lack of climatic variation coupled with the difficulty of leaving the island may cause psychological weariness. For this reason regular exercise and frequent vacations are important here.

Even in a clean city like Singapore, the tropical climate seems to foster diseases; germs and viruses thrive here. Many people who have scant history of illness complain of recurring colds and other infections. Enthusiastic air conditioning probably contributes to respiratory problems. Many restaurants and shops are uncomfortably overcooled.

Humidity makes mildew a problem—books, records, leather items, or anything that is not used or aired regularly or stored in air conditioning is vulnerable. Closets and bureau drawers take on a musty odor that is difficult to eliminate. Rust is also a problem; metal items that are not painted or tropicalized begin to rust in a short time.

Singapore, like every other tropical area, has its share of cockroaches, water bugs, small pesky ants, and termites. Flies are almost nonexistent. Mosquitoes can be annoying despite strenuous efforts to control them, but malaria is not a problem.

Population

Singapore's population is almost 4.3 million (2001 est.). The average annual growth rate is 3.5%. Most of the population (77%) is ethnically

Chinese; Malays comprise 14% of the population; and Indians 7.9%

A fascinating melange of cultures fulfills the Singapore Tourist Promotion Board promise of "Instant Asia." Because of the multi-racial character of the society, there are many sights, sounds, tastes, and smells of the East.

Chinese, English, Malay, and Tamil (the language of southeastern India) are official languages. Most Chinese are descendants of immigrants from China's southern provinces, and their main dialects are Hokkien, Teochew, and Cantonese. The government is stressing the learning of Mandarin by all Singaporeans, particularly the Chinese. English is used for administration; about 75 percent of Singapore's citizens speak and understand at least rudimentary English. A knowledge of one of the other tongues is not necessary, but Chinese and Malay can be useful—the latter, especially, for traveling in Malaysia.

Singapore is a secular state with considerable religious tolerance. The main religions are Taoism, Islam, Buddhism (mostly Mahayana), Christianity (almost equally divided between Catholic and Protestant), and Hinduism. Two holidays of each of the major groups in Singapore are set aside for national observance. Sikhs, Jews, Zoroastrians, and Jains are also represented.

The cultural patterns are equally rich in variety. In a multi-racial society, each ethnic group stresses its traditions to preserve its individuality. For example, *Thaipusam*, a Hindu religious observance, is dying out in India, but is celebrated with fervor in Singapore. Chinese New Year, in January or February, is a two-week festival marked by feasting and home celebration. Muslims celebrate *Hari Raya Puasa* and *Hari Raya Haji* with equal enthusiasm.

Multi-racial, multi-religious, multi-cultural—herein lies some of the fascination of Singapore. Except for Muslim or Hindu dietary restric-

tions, which generally must be honored when entertaining Malays or Indians, few taboos differ markedly from those in America.

Government

Singapore's parliamentary democracy government is based on full adult suffrage. Voting is compulsory.

Parliament's 83 members are elected for a maximum of five years. Members usually speak English but may speak in any of the four official languages, and simultaneous translation is provided.

Before the constitution was amended in 1991, Singapore's largely ceremonial president was elected to a four-year term by the Parliament. The amended constitution retains the term length, but the president is now elected by the people. In addition, the president gained control over the spending of the country's significant monetary reserves and over certain civil service appointments. In 1996, however, the Parliament enacted governmental reforms that curtailed the president's veto power. Ong Teng Cheong was elected in 1993 in Singapore's first popular presidential election. The current president is Sellapan Ramanathan (1999).

The president appoints as new prime minister the member of Parliament with the most support. The cabinet is also chosen by the president, but with the advice of the prime minister. Most governmental affairs are handled by the prime minister and cabinet. Lee Kuan Yew had been the only prime minister in the country's history when he left office (1959–1990). Goh Chok Tong succeeded him.

The three major political parties are the People's Action Party (authoritarian), the Workers' Party of Singapore (social-democratic) and the Singapore Democratic Alliance.

Singapore's government has long been known as restrictive, with social stability often taking prece-

dence over individual liberty. Examples of this government authoritarianism include: the management and control of all television and radio broadcasting, control over news publications, and maintaining the power to interfere with the activities of opposition political parties. The government's policy of flogging criminals received international attention in 1993 when an American was sentenced for vandalism and receiving stolen goods.

Singapore is a land of the entrepreneur, a free port, and a significant importer of food and agricultural products. However, as the major trading center for Southeast Asia, it trades or transships 75 percent of its imports to neighboring markets. The government is committed to a mixed policy allowing a high degree of free enterprise, but also is heavily involved in commerce and industry. In addition, an extensive social development program of education, housing, medical care, and social welfare has been instituted. One of the most impressive achievements is low-cost public housing. Some 86 percent of Singapore's population live in high-rise apartments built by the government.

The flag of Singapore consists of red and white horizontal divisions; in the upper left canton are a white crescent and five white stars.

Arts, Science, Education

Education is not compulsory, but primary education is free for the children of Singapore citizens, and is universally available. The government endeavors to provide at least 10 years of education for each child. Literacy is at 93.5% (1999).

In line with the government policy on bilingualism, each child must learn two languages, English and a choice of one of the other official languages—Chinese, Malay, or Tamil. Thus, the multi-lingual aspect of Singapore is being preserved.

The cost of secondary education is nominal. The government promotes technical and vocational education at the secondary level to enhance employment opportunities for the younger generation. The Vocational and Industrial Training Board (VITB) was established in 1979 to provide vocational training and to conduct continuing education and training. It offers about 50 courses to approximately 20,000 students in applied arts, commercial, industrial, and service skills at its 15 training institutes.

Singapore has six institutions of higher learning: the National University of Singapore (NUS), Nanyang Technological Institute, Singapore Polytechnic, Ngee Ann Polytechnic, the Institute of Education, and the College of Physical Education.

The NUS offers courses leading to bachelor degrees in eight faculties; namely, arts and social sciences, law, science, medicine, dentistry, engineering, architecture and building, accounting and business administration. Graduate degrees are available in most faculties. The Nanyang Technological Institute conducts practice-oriented engineering courses at university level. The Institute of Education, in conjunction with the NUS, offers graduate-degree programs in education.

Singapore Polytechnic and Ngee Ann Polytechnic are two institutions that provide courses mainly at technician level. These institutions offer courses comparable to those at U.S. junior colleges.

Each year, a large number of Singaporean students go abroad to the U.S., Canada, Australia, New Zealand, or Great Britain for higher studies.

Government policy is to preserve and nurture the traditions of the various ethnic communities. Hence, the arts in Singapore are as varied as its cultural heritage. Amateur organizations regularly use dance, drama, and musical performances to reflect the diverse cultures of var-

ious ethnic groups. In addition, foreign troupes and companies and popular recording artists have performed to full houses and appreciative audiences. The Cultural Affairs Unit of the Ministry of Community Development, and, to a lesser extent, the National Theater Trust, are the principal impresarios, with sponsorship from the government, diplomatic missions, the business community, and foundations.

The premier cultural event is the Festival of Arts, held biennially since 1977. The month-long festival features outstanding local, regional, and international productions, representing all facets of the performing arts. The Houston Ballet, Merce Cunningham Dance Company, Magic Theater of San Francisco, and jazz greats Ellis Marsalis, Billy Taylor, and Herbie Mann are some of the American groups that have participated in previous festivals. The Ministry organizes annual jazz, drama, and choral festivals.

The Singapore Symphony Orchestra (SSO), a full-time professional orchestra, performs regularly at the Victoria Concert Hall and occasionally gives outdoor performances at parks and community centers. The Symphony's season is divided into four quarterly series, each consisting of six to eight pairs of concerts. The SSO also performs familiar favorites concerts, featuring lighter music. The Orchestra often features renowned conductors and soloists as guest performers.

The National Museum offers handsome displays of Singapore's social and culture history, and an audiovisual show to bring it all up to date. The National Museum Art Gallery, which houses a permanent collection of contemporary works by local and Malaysian artists, regularly organizes short-term exhibitions by Singaporean artists, and hosts quality exhibitions from abroad. The Young People's Gallery displays students' arts and crafts and holds workshops for schoolchildren.

The Singapore Science Centre, established in 1970, is rated as one

of the most outstanding institutions of its kind in the world. Its five exhibition galleries contain over 500 exhibits, many of them "participatory," which are regularly updated. The center has research facilities and hosts public lectures and scientific conferences. Its Omni-Theater, opened in 1987, houses a 274-seat omniplanetarium where images are projected onto a curved viewing area, extending over the audience's heads and beyond their peripheral vision, giving the illusion of a ride through space.

Commerce and Industry

Singapore is one of the world's smallest nations and also one of the most prosperous. Factors responsible for this prosperity include: a strategic location; availability of skilled, well-paid labor; tax and other financial incentives; and up-to-date telecommunications.

Singapore is a free trading country and a significant importer of food and agricultural products. The government is committed to a policy of free enterprise but is involved in commerce and industry.

During the past 20 years, Singapore's economic growth has been rapid. Per capita gross domestic product (GDP) was \$26,500 in 2000, one of the highest in Asia. The commercial and industrial structure has diversified from a primarily entrepôt trading base to include a wide range of manufacturing services and financial activities. Today, Singapore ranks as a significant oil refining center, one of the world's busiest ports, and a major financial, communications, transportation, and medical services center.

The government is making a concerted effort to move the economy away from labor-intensive manufacturing to a more high tech and service orientation. The service sector accounts for 70% of the GDP, with 35% of the workforce involved; industry is 30% of the GDP with over 20% of the workforce involved.

Singapore's economic policies are attractive to foreign investors and have led to a significant multinational business presence here. The U.S. is the largest foreign investor in Singapore, accounting for about 54% of investment commitments. U.S. interests are primarily in petroleum refining, offshore oil exploration, diversified manufacturing, and electronics. The activities of U.S. firms also include shipping, banking, hotels, insurance, importing, and exporting. The resident American community numbers over 7,000.

The European Union and Japan are next in line in terms foreign investors. The U.S., Japan and Malaysia are Singapore's major trading partners. Trade with Indonesia is also substantial. Entrepôt trade, Singapore's traditional role in the region, now provides a smaller percentage of the Gross National Product (GNP), but has continued to increase in value.

Singapore imports mainly capital goods and raw materials for industry, and exports a variety of locally manufactured products, crude rubber, electrical machinery, and finished textile goods.

The American Business Council of Singapore is located at 354 Orchard Road, #10-12 Shaw House, Singapore 0923; the telephone number is (65) 235-0077. The Singapore Federation of Chamber of Commerce and Industry is at 03-01 Chinese Chamber of Commerce Building, 47 Hill Street, Singapore 0617; telephone: (65) 338-9761.

Transportation

Singapore, a hub of air and sea transportation, is served by more than 40 airlines and about 250 shipping lines. Air flights link neighboring countries, and distances are thought of in terms of air miles (e.g., Kuala Lumpur, Malaysia, 204; Jakarta, Indonesia, 557; Bangkok, Thailand, 897; Manila, Philippines, 1,481; Hong Kong, 1,607). Air travel between Singapore and other cities in the region is expensive by U.S.

standards. United and Northwest have connecting flights from the U.S. via either Hong Kong or Tokyo. Singapore's Changi International Airport is one of the best airports in the world.

The Singapore terminus of the Malayan National Railroad has service to Kuala Lumpur and Penang, and connections through to Bangkok and other points in Thailand. Service is good, and cars are clean and sometimes air-conditioned. Second- and third-class travel is recommended to only the hardiest of souls. The trip from Singapore to Penang takes 20 to 22 hours.

Taxis are plentiful, except during rush hour and when it rains. Taxis are affordable, clean, and safe. Bus service is frequent and cheap; however, many buses are not air conditioned.

MRT, the underground rapid transit system, is one of the world's best. Recently completed, the central city is well served by this inexpensive, fast transportation.

Singapore's major roads and streets are, by Asian standards, excellent. They are continually being widened to accommodate increasing traffic. A causeway connects Singapore with western Malaysia, which also has a good road system and many interesting places to visit. However, extended delays are encountered on weekends and holidays, and driving in Malaysia is frequently hazardous.

As a result of increasing traffic congestion on the island, several restrictive measures have been imposed in an effort to control private ownership of automobiles. Road taxes have been raised, an Area License Scheme placed into effect, and a surcharge imposed on cars over 10 years old. These road taxes are levied on motor cubic-centimeter capacity.

Driving is on the left, and right-hand-drive cars are used universally. A Singapore driver's

license may be obtained on presentation of a valid license and a passport. Third party liability insurance is mandatory.

Small cars are easier to maneuver in Singapore's traffic and on Malaysia's narrow roads. European, Japanese, and Australian models are available. U.S. made cars are practically nonexistent in Singapore. The used car market is substantial.

Auto repairs generally cost about the same as in the U.S. Spare parts for U.S. manufactured cars are not available.

Cars may be rented daily, weekly, or monthly.

Communications

Telephone service is better in Singapore than in other major Southeast Asian cities. Direct dialing is available to most major cities. It is easy to call the U.S. from Singapore; connections are usually excellent and rates are relatively inexpensive. Commercial telegraph service to the U.S. is available and reliable.

International mail service is efficient. Airmail between Singapore and the U.S. is less than a week in transit. Mail within Southeast Asia is sometimes less dependable.

The state-owned Singapore Broadcasting Corporation (SBC) operates nine radio channels and broadcasts daily on AM and FM from 6 a.m. to midnight, with programs in English, Mandarin, Malay, and Tamil on separate frequencies. Programs are varied and news is reported on the hour. A 24-hour FM (stereo) popular music station broadcasts in English. Voice of America (VOA) morning and evening newscasts can be heard on shortwave; British Broadcasting Corporation (BBC) "World Service" broadcasts are relayed on FM 24 hours a day. Listeners can also receive a 24-hour FM (stereo) popular music station from a nearby Indonesian island that broadcasts in English and Indonesian.

Three Singaporean (government controlled) and three Malaysian color television channels are received here. Weekday telecasts begin in late afternoon and end about midnight. Sunday and holiday telecasts begin at 9 a.m.; Saturday telecasts start at 1 p.m. Programming is in English, Mandarin, Tamil, and Malay. Many American programs are shown, including popular series and documentaries, although they are generally a year or so old. Channel 12, which shows cultural, educational, and informational programs (mainly in English), begins transmission at 7:30 p.m. daily for four hours.

The TV system is 625 PAL; American sets will not operate in Singapore without expensive, and sometimes unsuccessful, alterations. TV rentals are available. TVs, video players, and all types of radios can be purchased locally at reasonable prices.

Three English-language daily newspapers are published in Singapore: the *Straits Times*, the *Business Times*, and the *New Paper*, an afternoon tabloid. International news coverage in the *Straits Times* is excellent. The *International Herald Tribune* and *USA Today* are printed in Singapore via satellite and are available on newsstands the same day of U.S. distribution. The *Asian Wall Street Journal* and the *Far Eastern Economic Review* are not sold in Singapore. In 1987, the government accused both of interfering in local politics and sales were curbed. Later, the publications ceased distribution altogether. International editions of *Time* and *Newsweek* are on the stands every Thursday, and the Asian edition of *Reader's Digest* is also available.

American magazines are available on newsstands, but are a month or so late and cost two or three times their U.S. price; highly specialized and most general interest magazines are not available. Often U.K. or Australian magazines are more readily available.

Health and Medicine

Facilities are adequate for most health problems. For outpatient care, Americans usually go to doctors at commercial clinics. Competent specialists in almost every field can be found in Singapore. Most doctors have been trained in Singapore, England, Australia, the U.S., or Canada. Adequate pediatric and obstetric services also are available.

Most Americans use Mt. Elizabeth, Gleneagles, Mt. Alvernia, American Hospital, Thomson Medical Center, Youngberg Memorial Adventist, or Jurong Hospitals. All are well managed and efficient. Excellent dental and ophthalmologic care is available. Prescriptions can be filled locally.

Singapore is probably the cleanest city in Asia. Sewage and garbage disposal is never a problem. Daily trash collection is efficient. Water is potable and normally in good supply, although rationing may be imposed during prolonged drought.

The government keeps up a constant battle against mosquitoes and other insects. Flies have been all but eradicated. Ants and cockroaches are more of a problem here than in temperate climates.

Americans have found the typical overseas precautions in food preparation unnecessary in Singapore. Locally packaged food causes no ill effects. Most local restaurants, including hawker stalls, are safe.

Singapore has few health hazards. Malaria has been eradicated, although it may be picked up in Malaysia or Indonesia. Dengue fever is more of a problem. It, too, is transmitted by mosquitoes and is enervating, lasting two or three months. Occasionally, there is a case of cholera, but such cases are few and are immediately isolated.

Children sometimes contract tropical fevers of unknown origin which may last from one to three days but,

in general, Singapore provides a good environment for young children. Serious dysentery is rare. Respiratory ailments, however, are quite common. The heat and humidity increase the incidence of skin problems; treatment should be sought at the first sign of trouble, since infections spread quickly.

The yellow fever shot is the only vaccination required for entry into Singapore, and only for those arriving from infected areas. Cholera and smallpox immunizations are not necessary.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Singapore is about halfway around the world from Washington, DC, and is served by numerous air and shipping lines. Two American carriers, Northwest and United, provide service between the U.S. and Singapore.

A valid passport is required. U.S. citizens do not need a visa if their visit is for business or pleasure and their stay is for 90 days or less. The Government of Singapore generally allows Americans to enter with less than six months of validity remaining on their passport, but some neighboring countries, particularly Indonesia, do not. Specific information about entry requirements for Singapore may be sought from the Embassy of the Republic of Singapore at 3501 International Place, N.W. Washington, D.C. 20008, tel. (202) 537-3100. Please see also the Singapore Government home page on the Internet at <http://www.gov.sg/>.

Singapore customs authorities may enforce strict regulations concerning temporary importation into or export from Singapore of items such as firearms, illegal drugs, certain religious materials, chewing gum, videotapes, CD's, and software (for censorship or pirating reasons). It is advisable to contact the Embassy of

Singapore in Washington, D.C. for specific information regarding customs requirements. Singapore customs officials encourage the use of an ATA (Admission Temporaire/Temporary Admission) carnet for the temporary admission of professional equipment, commercial samples, and/or goods for exhibitions and fair purposes. ATA carnet headquarters, located at the U.S. Council for International Business, 1212 Avenue of the Americas, New York, N.Y. 10036, issues and guarantees the ATA carnet in the United States. For additional information, please call (212) 354-4480, or send e-mail to atacarnet@uscib.org or visit <http://www.uscib.org> for details.

Visitors should be aware of Singapore's strict laws and penalties for a variety of actions that might not be illegal or might be considered minor offenses in the United States, including jaywalking, littering and spitting, failure to flush at public toilets, and the importation, sale or personal use of chewing gum. Singapore has a mandatory caning sentence for vandalism offenses. Caning may also be imposed for immigration violations and other offenses. Penalties for possession, use, or trafficking in illegal drugs are strict, and convicted offenders can expect jail sentences and fines. Singapore has a mandatory death penalty for many narcotics offenses. Commercial disputes that may be handled as civil suits in the United States can escalate to criminal cases in Singapore and result in heavy fines and prison sentences. There are no jury trials in Singapore. Judges hear cases and decide sentencing. The Government of Singapore does not provide legal assistance except in capital cases.

Pets

The Immigration Department of the Government of Singapore requests six weeks' notice of intent to import a cat or dog. Dogs and cats are quarantined for a minimum of 30 days from the date of arrival and regardless of certificate of rabies immunization will be given a rabies vaccination upon arrival. Other ani-

mals are classified differently. Quarantine facilities are modern and adequate. Visiting hours are liberal, and pet owners may see their animals at the Animal Quarantine Station, 51 Jalan Buroh, Jurong Town, from 2 p.m. to 4 p.m. Monday through Friday, and 10 a.m. to noon on Saturday. The station is closed on Sundays and public holidays.

Firearms & Ammunition

Stringent controls are imposed on the importation of firearms. Licenses are issued only to members of the Singapore Gun Club or the Singapore Rifle Association.

Currency, Banking and Weights and Measures

The Singapore dollar currency is based on the decimal system.

Singapore uses the metric system of weights and measures.

The time in Singapore is Greenwich Mean Time (GMT) plus eight.

SOLOMON ISLANDS

Solomon Islands

Major City:

Honiara

Other Cities:

Auki

INTRODUCTION

People have inhabited the **SOLOMON ISLANDS** since at least 1000 BC. The Spanish explorer Alvaro de Mendaña y Neyra of Peru first visited the islands in 1567, seeking the legendary Isles of Solomon. The name “Solomon Islands” and the promise of gold helped lure settlers to the region starting in 1595. The first European settlers were killed by the islanders and by disease. Other attempts to colonize the islands failed. Missionaries arrived in the mid-1800s. The United Kingdom declared a protectorate over the southern Solomons in 1893, which gradually encompassed the entire archipelago by 1900. Commercial coconut farming began in the 20th century. During World War II, most planters and traders were evacuated to Australia. The Japanese occupied the islands during the war, and they were almost constantly a scene of combat. As a result, abandoned war equipment littered the islands, some of which remains today. After the war, the islands returned to British rule, but nationalistic movements emerged. US forces remained on the islands until 1950. The post-war generation moved closer towards self-determination, and an elected governing council was created in 1970. The Solomon Islands

became independent on July 7, 1978.

MAJOR CITY

Honiara

Honiara is located on the island of Guadalcanal, the site of bloody fighting between US and Japanese forces during World War II. Honiara derives its name from *nahoniara*, or “place of the northeast wind.” The adjacent high mountains deflect rain away, so it has a relatively low amount of rainfall compared to the rest of the island. The city itself was established after the war on the site of the original American military base that was constructed of Quonset huts between Kukum and Point Cruz in order to utilize existing roads, waterfront facilities, and buildings.

Honiara, with a population of 53,000, is the major commercial center of the Solomon Islands and has a developed port and support services. The town originally was confined to the narrow east-west seashore area, but it later grew to cover inland areas and several ridges that were once World War II battle sites. Some of the newer communities along the ridges started

out as squatters’ camps. Construction in Honiara still occasionally unearths human remains or even live munitions from the war.

There is a bomb disposal unit that detonates unexploded wartime munitions about 8 miles outside the city. A mile-long stretch of Honiara along Mendaña Avenue (between the Mendana Hotel and Chinatown) is the nation’s primary commercial and business district, with government offices, the port facility, the main shopping area, hotels, banks, restaurants, and churches. The Central Market there is the nation’s main food market, with produce arriving from all areas of the country.

Recreation

Soccer, rugby, volleyball, softball, and cricket are played at sport grounds in or around Honiara. Tennis and squash are played at clubs in Honiara, and boxing matches are held in Kukum. The Solomon Islands’ only golf course is located at Ranadi, less than 3 miles from Honiara. The golf course is located next to the remnants of a US wartime airstrip. Scuba diving and snorkeling are popular tourist activities.

The Central Bank in Honiara has a display of traditional local currency that includes money made from feathers, dolphin teeth, shells, and

clams. The governor general's residence and a memorial to the US soldiers killed at Guadalcanal are also in Honiara. The Botanical Gardens contains an orchid garden, a creek, and a greenhouse used for growing herbs.

Guadalcanal saw heavy combat during World War II, as the US and Japanese fought for control over Henderson Field, the islands' airstrip. One of the most furious sea battles ever fought took place off Savo Island, near Guadalcanal in August 1942. The naval battles between Guadalcanal and Savo during 1942–43 sent dozens of ships to the ocean floor and the channel became known as Iron Bottom Sound. Many were beached or sank close to shore, and these are possibly the most accessible shipwrecks in the world. They now provide many popular dive sites near Honiara for both experienced and beginner divers. Two popular dive sights are at the mouth of the Bonegi River, and feature sunken Japanese transport ships encrusted in coral and teeming with tropical fish.

About 12 miles from Honiara, divers can also explore an American B-17 bomber lies that lies intact under 50 feet of water. The scattered remains of aircraft, artillery, tanks, guns, and vehicles from the war also attract US and Japanese servicemen to revisit battlefield sites on Guadalcanal (such as Bloody Ridge, Tenaru, and Red Beach) and New Georgia. Six of the original Quonset huts built by the US still remain in Honiara, just west of the Mataniko River. The provincial government of Guadalcanal still uses the buildings. Honiara's Central Hospital is still known by its wartime designation of "No. 9."

South of the capital is Skyline Ridge, the site of the decisive American victory at the Battle of Mataniko River. The Skyline Memorial there honors all the US troops that served in the Solomon Islands. There are Japanese memorials atop Mt. Austen and east of the airfield at the mouth of Alligator Creek (Ilu River). The Vilu Village War

Museum, 15 miles west of Honiara, has a wide range of war artifacts, including Japanese and American aircraft.

The National Museum and Cultural Center in Honiara contains exhibits covering archeology, dance, currency, weaponry, and body ornamentation. The cultural center is in a park-like setting of traditional leaf houses that exhibit the different building customs of Solomon Islanders.

OTHER CITY

AUKI is the provincial capital on the island of Malaita. The island (population 87,000, 1992 est.) is home to many Melanesian tribes, each with different languages and customs. Auki serves as a central location from which to explore many villages and experience a variety of cultures. One of the most popular modes of exploration is a motorized canoe tour. A one hour tour will take you to Langa Langa Lagoon, where very little has changed over the centuries for the natives who worship sharks as deities. Natives will often share a performance of the traditional warriors' welcome dances or witch doctor rituals. Some may demonstrate the ancient art of making shell-money or the local custom of fortune telling. The ancient custom of shark calling is also practiced here. Day trips and tours of other local villages can be arranged. Auki is also the site of the Bush Cultural Village, a unique area where visitors can arrange to see cultural demonstrations.

COUNTRY PROFILE

Geography and Climate

The Solomon Islands is a chain of six large and numerous small islands in the South Pacific, about 1,200 miles northeast of Australia

and 300 miles east of Papua New Guinea. The largest island is Guadalcanal, covering some 2,047 square miles; other major islands are Makira, San Christobal, Vella Lavella, Choiseul, Rennell, New Georgia, and the Santa Cruz group. The topography varies from rugged mountains on Guadalcanal to low coral atolls. The highest peak is Mt. Makarakomburu on Guadalcanal, at 8,127 feet. The climate is tropical, with hot northwest equatorial winds bringing heavy rainfall from December to March. From April to November, the islands are cooled by drier southeast trade winds. The annual average temperature is 81°F; annual rainfall is 120 inches.

Population

The population in 2000 was estimated at 470,000 with a density of only 39 persons per square mile. Population density varies significantly from island to island, as most mountainous and heavily wooded areas are inaccessible. Most of the population is concentrated along coastal areas. Melanesians account for about 93% of the population; Polynesians, 4%; Micronesians, 1.5%; Europeans, Chinese, and others, 1.5%. Melanesians tend to live on the larger islands, while Polynesians inhabit the smaller islands and the atolls. Honiara is the Solomon Islands' most ethnically diverse area, with people of Melanesian, Polynesian, Gilbertese, European, and Chinese origins. Christianity is the principal organized religion; the leading sects are Anglican, Roman Catholic, Baptist, United (Methodist/Presbyterian), and Seventh-Day Adventist. Melanesian pidgin English in much of the country is *lingua franca*, and English is spoken by 1–2% of population. There are also 120 indigenous languages.

Government

In 1893, the British government established a protectorate over Guadalcanal, Malaita, San Christobal, and the New Georgia group. The remainder of the islands were

Street scene in the Solomon Islands

© Wolfgang Kaehler. Reproduced by permission.

under German control. Some of those islands were transferred to the United Kingdom in 1900 and the area became known as the British Solomon Islands Protectorate. During World War II, many battles between Japan and the United States were fought on or near the islands. The impact the war made on society gave impetus to a pro-independence movement in the 1950s.

In 1970, the Solomon Islands' first general election was held, and a new constitution was introduced in 1974. On June 22, 1975, the islands officially ceased being a protectorate, and by 1976 the government was acting on its own.

The Solomon Islands became a member of the Commonwealth in July 1978. Under its independence constitution of 1978, the government is a parliamentary democracy

with a ministerial system and a unicameral National Parliament. The parliament has 47 seats. The prime minister is selected from the parliamentary majority party. The head of state is the British monarch, represented by a governor-general.

'The judicial system is a blend of British and traditional systems and consists of the High Court, magistrate's courts, and local courts.

The flag consists of two triangles, the upper one blue and the lower one green, separated by a diagonal gold stripe; on the blue triangle are five white five-pointed stars arranged in a quincunx.

Arts, Science, Education

Education is not compulsory, and many schools charge fees. Christian

missions (mainly Anglican) supported by government grants, continue to provide some primary schooling. In 1994, there were about 60,500 primary school students, but only 7,800 secondary school students. Higher education is available at the Solomon Islands Teacher College, the Honiara Technical Institute, and the University of the South Pacific Solomon Islands Center.

Commerce and Industry

The economy relies on the exports of copra, timber, and fish. At least 50% of the workforce depends on subsistence agriculture, fishing, and forestry for at least part of their livelihood. Cocoa, spices, and palm oil are also important export commodities.

The islands are rich in undeveloped mineral resources such as lead, zinc, nickel, and gold. In 1998 Ross Mining of Australia began producing gold at Gold Ridge on Guadalcanal. Minerals exploration in other areas continues, and there are hopes for further gold production.

Tourism could prove to be an important service industry for Solomon Islands, especially for marine activities such as diving. However, limitations of public roads and transportation systems are the biggest deterrents to building on tourism.

Foreign aid accounts for about 13% of Solomon Islands GDP. Principal aid donors are Australia, Japan, and the Republic of China and New Zealand.

Transportation

There are no railways, but the islands do have about 800 miles of roads and another 500 miles of private logging and plantation roads. Shipping services link the Solomon Islands with other Pacific islands, Australia, Japan, and Europe. Honiara and Rini Cove are the two main ports. Government vessels provide interisland transport and handle about one-third of the country's shipping. Henderson Field on Guadalcanal is the main civil airport.

Solomon Airlines has provided flights between the islands and to nearby Papua New Guinea and Vanuatu; however, the service was suspended in Fall of 2001 by Australia's Civil Aviation Safety Authority (CASA) for not meeting safety requirements. Service may return once safety codes are met.

In the Solomon Islands, vehicular traffic moves on the left. Surfaced roads are found only around Honiara, located on Guadalcanal Island. These surfaced roads are two lane, not well marked, and are poorly lit at night. The remaining roads in the Solomon Islands are made of coral or gravel or are dirt tracks. Travelers must take care when driving off

main roads to avoid trespassing on communal land.

Communications

About 6,000 telephones operate on the islands, and radiotelephone service provides overseas links. The government operates five radio transmitters; there are no television broadcasts but satellite television from Australia is available at some hotels. Local weekly papers include *Solomons Star* and *Solomons Voice*.

Health

Hospitals and pharmacies in the Solomon Islands are limited to population centers and missions. The nearest reliable medical facilities are in Australia or New Zealand. Medical conditions resulting from diving accidents may require medical evacuation to Australia or New Zealand.

Malaria, tuberculosis, and hookworm are still health problems. Some urban children suffer from malnutrition due to a steady Western diet of processed starches and sugar. An outbreak of Dengue fever occurred in Spring 2002.

NOTES FOR TRAVELERS

Passage, Customs & Duties

U.S. passport holders do not require visas to enter the Solomon Islands. Passports, onward/return tickets and proof of sufficient funds are required. Visitor permits are granted upon arrival at Henderson International Airport in Honiara. Visitors may enter any number of times provided the total period in the Solomon Islands does not exceed 90 days in a 12-month period. The Solomon Islands government strictly enforces immigration laws, and travelers may face fines and other penalties if they remain in the country beyond the authorized period.

Persons arriving on yachts should call the nearest immigration office to complete arrival forms for issuance of visitors permits. Travelers who anticipate the possibility of transiting or visiting Australia are advised to obtain an electronic travel authority (ETA) or visa for Australia before leaving the United States. The ETA is available to eligible U.S. citizens at time of ticket purchase through travel agents and airlines. For more information about entry requirements, travelers may contact the Solomon Islands Mission to the United Nations at 800 Second Avenue 4th Floor, New York, NY 10017-4709; Tel: (212) 599?6192.

The Solomon Islands' customs authorities may enforce strict regulations concerning temporary importation into or export from the Solomon Islands of items such as firearms and ammunition, sexually explicit material and certain prescription drugs. Other items may be subject to quarantine regulations or import duty. The Solomon Islands' government prohibits the export of military artifacts from World War II. It is advisable to contact the Solomon Islands' Mission to the United Nations for specific informa-

tion regarding customs requirements.

There is no U.S. Embassy in the Solomon Islands. However, there is a U.S. Consular Agency in Honiara. The Consular Agent, who has general information and forms (such as passport applications for forwarding to Port Moresby) may be contacted at B.J.S. Agencies Limited in Honiara, Tel (677) 23426; Fax (677) 21-027. Primary assistance for U.S. citizens is provided by the U.S. Embassy in Papua New Guinea, which is located on Douglas Street, adjacent to the Bank of Papua New Guinea, in Port Moresby. Use this address for courier service deliveries. The mailing address is P.O. Box

1492, Port Moresby, N.C.D. 121, Papua New Guinea; tel (675) 321-1455; fax (675) 321-1593.

U.S. citizens are encouraged to register with the U.S. Embassy in Port Moresby, Papua New Guinea, and to obtain updated information on travel and security from the Embassy. Information may also be obtained from the Consular Agent in Honiara. American citizens may submit consular inquiries via e-mail to consularportmoresby@state.gov.

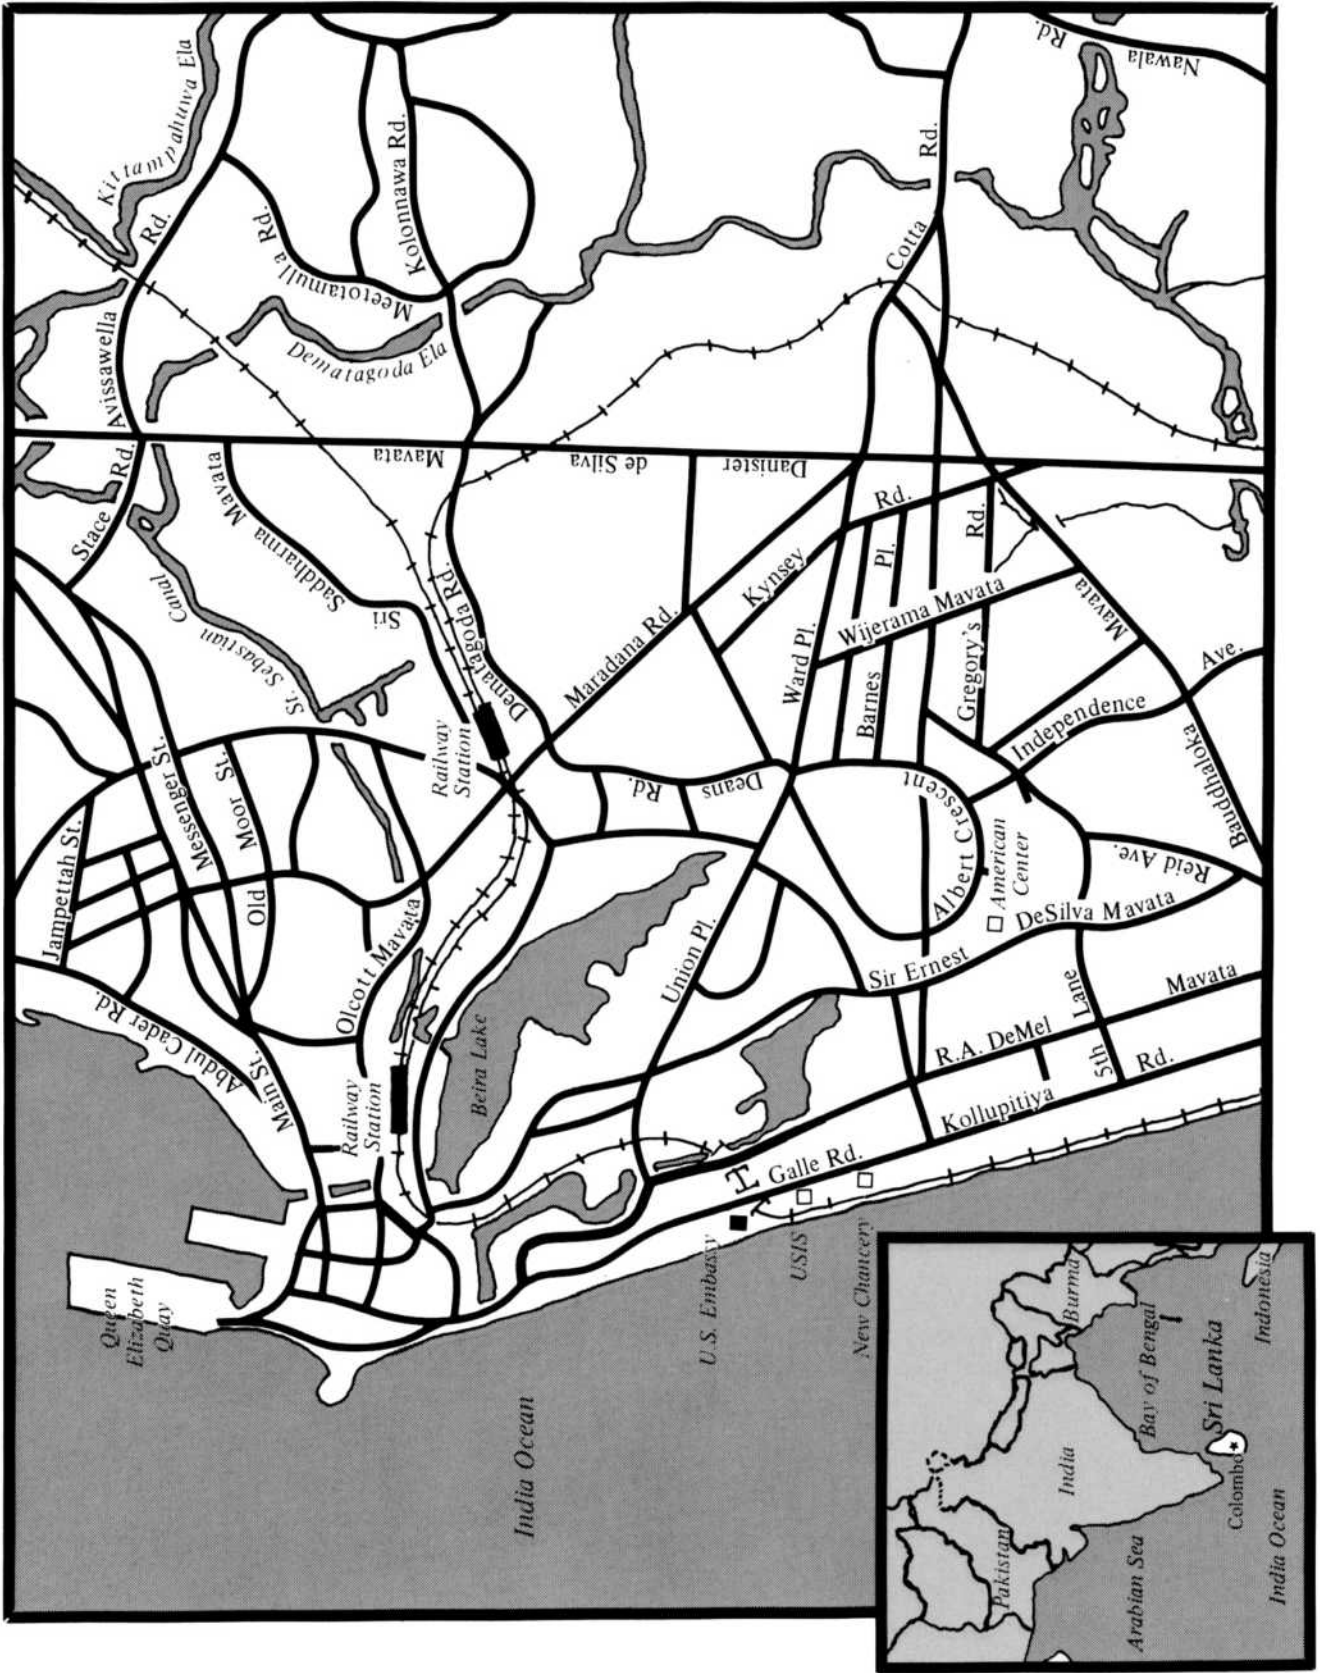

Disaster Preparedness

The Solomon Islands lie in the South Pacific cyclonic trajectory, and is vulnerable to earthquakes, volcanic eruptions and sudden tidal

movements. The Pacific Cyclone season extends from November through March. General information regarding disaster preparedness is available via the Internet at <http://travel.state.gov/crisismg.html>, and from the U.S. Federal Emergency Management Agency (FEMA) home page at <http://www.fema.gov>.

Colombo, Sri Lanka

SRI LANKA

Democratic Socialist Republic of Sri Lanka

Major Cities:

Colombo, Kandy

Other Cities:

Anuradhapura, Galle, Jaffna, Matara, Negombo, Ratnapura, Trincomalee

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report for Sri Lanka. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

SRI LANKA has often been described as a tropical paradise. The vegetation of the coastal belt is lush and dramatic, and the mountainous areas of the interior are spectacular. Pleasant sea breezes temper the coast's tropical climate through most of the year; the hills and mountains in the island's center are cool at night. Arab traders of long ago knew the island as Serendib, which is the origin of the word serendipity, reflecting the unexpected pleasures of the land.

Sri Lanka, once known as the British Crown Colony of Ceylon, became independent in 1948, although it remained under dominion status. Its 1972 constitution proclaimed it

an independent republic, and changed the country's name. Finally, in 1978, a new constitution officially declared the island the Democratic Socialist Republic of Sri Lanka.

MAJOR CITIES

Colombo

Colombo, the capital city, lies on a flat coastal plain on the southwestern side of the island. It grew up around the harbor, which has been expanded by a breakwater. The main business section is near the port in what is known as the Fort (the old fort walls no longer remain). The buildings in this area are typically British and Dutch colonial, and the streets are generally congested. Parking is a problem. The *Pettah*, or traditional bazaar, adjoins the main business area. It consists of narrow, crowded streets and small shops and stalls.

The original Sinhalese name, Kalantotla (meaning Kelani ferry) was corrupted to Kolambu by Arab traders, and was changed to Colombo by the Portuguese.

Main residential sections of the city are south and southeast of the busi-

ness area and are generally pleasant. Flowering trees line the streets, and old mansions with lovely gardens lend an exotic tropical air. Cinnamon Gardens is a wealthy residential and recreational area.

The country's first free trade zone is near Colombo International Airport, Katunayake. Its success prompted the establishment of additional zones at Biyagama, 15 miles from the capital, and near the southern port of Galle.

Colombo's port is one of the world's largest man-made harbors. It is a popular port of call for passenger ships and has become a major cargo transshipment hub.

The population of Sri Lanka's capital was estimated at 645,000 in 2000.

Colombo is known for its gem cutting and ivory carving. Other industries include food and tobacco processing, metal fabrication, engineering, and the manufacture of chemicals, textiles, glass, cement, leather goods, clothing, jewelry, and furniture. An oil refinery is located nearby.

Historically, Colombo has been known for over two thousand years, in its early days as an open anchorage for oceangoing ships of

Greco-Roman, Arab, and Chinese traders. Muslims settled here in the eighth century, and the Portuguese arrived in the 16th century, building a fort to protect their spice trade. The Dutch, also interested in the spice trade, gained control of the city in the 17th century. Colombo passed to the British in 1796, and it became capital of the Crown Colony of Ceylon in 1802. Colombo replaced Galle (Point de Galle) as the country's chief port in the 1880s, becoming a major refueling and supply center for merchant ships on the Europe-Far East route. During World War II, Colombo served as an Allied naval base, and became the capital of independent Ceylon in 1948.

Clothing

Clothing worn in Washington, DC, during the hottest summer weeks is suitable year round in Colombo, although men's office attire is more casual than that in Washington, DC. A short-sleeved shirt, with or without a tie, or a bush suit are most frequently worn by expatriate men here. A sports jacket or suit are suitable for business calls.

For up-country wear, light wool suits, wool slacks, sweaters, and flannel shirts may be needed. In Nuwara Eliya, the privately owned Hill Club requires men to wear jackets and ties to dinner and will provide these items for a small rental fee for those who arrive without.

Locally made shirts, shorts, ties, and socks are generally unsatisfactory, and should be brought from the U.S. Local tailoring of bush shirts, suits, and trousers is good, but fabric is generally not as satisfactory as that available in the U.S.

Women's office attire is the same as that worn in a southern American city during the summer months. As in the U.S., many of the air-conditioned offices can be cool. Women are not expected to wear hosiery at any functions, but this is a matter of personal choice and comfort. Casual clothing for women can be made locally either with imported or local batik material.

Sewing fabrics, with the exception of some batiks and polyesters, are limited. A good supply of wash-and-wear fabric, thread, zippers, buttons, trim, elastic, etc., should be brought from home.

Children's clothing needs are simple but, whenever possible, should be brought or ordered from the U.S. The fit of shoes is a particular problem, except for sandals.

Garment bags are useful for clothing protection. Extreme dampness during the monsoon season can cause clothes and shoes to mildew unless kept in air-conditioned rooms. Lightweight shoes and sandals are particularly desirable here. Sports shoes should be brought from home.

Clothing will not last as long here as in the U.S. The tropical climate and frequent laundering shortens the useful life of most items. Underwear, particularly with elastic, tends to wear out quickly.

Food

A variety of seasonal, fresh tropical fruits and vegetables is available at reasonable prices. Some vegetables are similar to those in temperate climates but may not have a familiar flavor. All raw or unpeeled vegetables and fruits must be soaked in disinfectant to reduce the danger of amoeba or other parasite infestation. Milton, a satisfactory brand-name disinfectant, is sometimes available. Clorox also may be used.

Because the local market is unpredictable, and food quality is not usually up to U.S. standards, most families prefer to have a stock of imported foods and frozen meats on hand, particularly basic cooking items.

Supplies & Services

In general, local dry cleaning is mediocre, although some Colombo hotels offer fairly good service. Because of the limited dry cleaning services and the warm climate, lightweight washable clothing

(including men's suits and ties) is preferable.

Dressmakers are available at reasonable fees for making women's and children's clothing and men's shirts. Normally, dressmakers prefer to work in their customers' homes and do not supply their own sewing machines or notions. Shoe repair is done by hand and is adequate and inexpensive. Shoes, particularly sandals, also can be made inexpensively.

In Colombo, many beauticians are familiar with Western styling. European or Australian products are generally used.

Religious Activities

English is spoken in many of the larger Colombo churches: Roman Catholic, Church of Sri Lanka (Episcopalian), Scots (Presbyterian), Baptist, Methodist, Christian Science, Mormon, and Dutch Reformed. No Orthodox churches are available. Sri Lanka has no synagogue. In Kandy, English services are held in Anglican, Roman Catholic, Baptist, and other churches. Most have Sunday school programs. Many churches also have services in Sinhala and Tamil.

Footwear and headgear should be removed before entering Buddhist shrines. Photographing statues of the Buddha is acceptable, but posing beside them is not. Discreet dress in public places is appreciated.

Domestic Help

Most Americans here employ domestic help, usually a combination cook-houseperson, or a cook and a houseperson and a part-time gardener. Total wages for these domestics average about \$100-\$150 a month. Uniforms and medical bills are added expenses. A nursemaid (nanny) charges about \$60 a month. Occasionally, a driver also is hired (about \$50 monthly).

A single person ordinarily would have a combination cook-houseperson and a part-time gardener. Some singles employ sewing nannies and

laundry people on a weekly basis at an added cost of \$10 to \$20 a month.

Education

Younger children of most foreigners resident in Colombo attend the Overseas Childrens School (OCS). At present, the school has an enrollment of over 450, representing more than 40 nations. Americans represent eight to 12% of the student. Originally established to cater to the needs of the British business community, this school has strong Western orientation, with most of the textbooks in the primary and middle school now coming from the United Kingdom and the United States. OCS, offering classes from nursery through 12th grade, has 75 teachers, of whom more than one-third are expatriates, with most being British and American.

The school, which at one time operated on an extremely limited budget, has made remarkable academic and financial strides since 1981. The school is self-funding from fees. In addition, it receives grants from the U.S. State Department's Office of Overseas Schools. It is located on a five-acre campus; more expatriate teachers are being recruited; teacher evaluations and training and curriculum development receive priority attention; and the supply of books, computers, and other teaching aids is expanding. The school is an active member of the Near East/South Asia Council of Overseas Schools and also of the European Council of International Schools and the Association for Advancement of International Education.

Students completing school at OCS can be expected to compete favorably with their peers for entrance into college, with International Baccalaureate (IB) diploma graduates likely to have access to the top colleges. Transfer students are generally not accepted into grade 12 unless they have successfully completed grade 11 in an IB program elsewhere.

The school offers French, Spanish, and Sinhala as the main foreign

languages in grades seven through 10, and students are able to follow mother-tongue courses for the IB diploma in grades 11 and 12. OCS also offers an extensive English course as a second-language program for nonnative speakers. OCS follows a two-semester school year starting at the beginning of September and ending in June. Parents should bring as detailed records as possible from their children's previous school(s), and a health record is required at the time of admission. Placement at grade level is based on an internally administered test.

Although the school provides guidance by learning and disability specialists, the physical layout of the campus makes it impossible for the school to accept children whose physical handicaps confine them to a wheel chair. Although the school does not require a specific uniform attire, a dress code exists, and students should look presentable. For physical education, white shorts and a T-shirt (available from the school) are required.

OSC has a good sports program and numerous other extracurricular activities.

Overseas Children's School's address is: Pelawatte, P.O. Box 9, Battaramulla, Sri Lanka.

A few American children attend the Colombo International School (CIS), a private British curriculum school with over 800 students. CIS was founded in 1982 and offers classes for students ages two to 18. The teacher student ratio is 1 to 9.

CIS offers the Scholastic Aptitude Test (SAT), the Test of English as a Foreign Language (TOEFL), and achievement test classes to prepare students for admission to U.S. universities.

Extracurricular activities are an important part of school life, and sports, music, and drama are included in the school program.

The address of the Colombo International School is 28, Gregory's Road, Colombo 7, Sri Lanka.

Universities in Sri Lanka offer courses leading to bachelor's and master's degrees in Buddhism, Oriental studies, arts, science, law, engineering, agriculture, and medicine. Instructions are in Sinhala, Tamil, or English, depending on student demand. Courses are based on the British university system, which concentrates on a major subject and allows few outside studies. Although foreigners are officially welcomed, few if any Americans have attended in recent years.

Recreation

Colombo is the only large city in Sri Lanka. Bombay and Madras, the closest large cities abroad, are about one to two hours away by air. New Delhi can be reached by air via Madras or Bombay. Plane service is not available directly between Colombo and New Delhi. The Maldiv Islands are easily accessible by air and offer many resorts.

Sri Lanka has many interesting places for weekend outings or longer holiday trips. The principal spots in the hill country are Kandy, about 70 miles away (two-and-a-half hours by car, altitude 1,674 feet); Nuwara Eliya, about 110 miles away (five hours by car, altitude 6,185 feet); and Bandarawela, about 125 miles away (five hours by car, altitude 4,017 feet).

The Cultural Triangle of Sri Lanka's ancient cities is well worth seeing. Sigiriya (three-and-a-half hours from Colombo by car) is a rock fortress with famous frescoes. Sightseers also will enjoy the ancient ruins at Anuradhapura and Polonnaruwa (five to six hours by car) and the Yala and Wilpatu wildlife sanctuaries (seven and three hours respectively, by car).

Perhaps the most awesome and forbidding region of Sri Lanka is Horton Plains, hard to reach but well worth the effort. Located about an hour's drive from Nuwara Eliya, Horton Plains is part of the Peak

Wilderness Sanctuary. One of the major attractions here is World's End, considered by many the finest view in all of Sri Lanka. For those who enjoy trout fishing and hiking, this is the place. Also, the Sinharaja Forest is one of the few tropical rain forests left in the world.

Hotel accommodations at tourist destinations outside Colombo are excellent. The government operates a large number of rest houses and, in certain areas (notably Nuwara Eliya, Horton Plains, and the game parks), bungalows are available for rent. The rest houses vary widely in quality; all are reasonably priced.

The Colombo Zoological Gardens has a fine and large collection of animals, birds, and reptiles housed in a beautiful setting. A special feature of the zoo is an exhibition of trained elephants every evening.

Sri Lanka has beaches on both east and west coasts; but the east coast beaches may not be accessible due to ethnic conflict. Swimming is unsafe at certain times of the year because of the strong currents generated by the monsoons. Scuba diving is good during the season. The most popular beaches on the west coast, which are safe from about November to May, are Mt. Lavinia (20 minutes from the city) and Bentota (about a one-hour drive). Hikkaduwa, near Bentota, features a coral garden.

Sports commonly found in other tropical areas are also found in Sri Lanka. The most popular sports available to foreign residents are tennis, golf, and swimming. Others are snorkeling, scuba diving, soccer, cricket, rugby, badminton, squash, fishing, and sailing. Instruction in karate is also available. Many of the sports require club membership.

Some of the clubs open to membership are the Royal Colombo Golf Club, Nuwara Eliya Golf Club (rated among the best in South Asia, in the mountains at 6,200 feet), Royal Colombo Yacht Club, Colombo Rowing Club, Otter Aquatic Club, Colombo Motor Yacht

Club, Gymkana Club, and the Colombo Swimming Club. In addition, the hotels offer yearly pool memberships. The Galle Face Hotel has a saltwater pool, and the Intercontinental, Lanka Oberoi, Hilton, Ramada Renaissance, and the Taj Samudra offer memberships in their sport centers.

Entertainment

A few movie theaters show Western movies, but most films are Indian or Sinhalese. Amateur dramatic groups and symphony, chamber, and choral groups give regular performances. Occasionally, entertainers from foreign countries (including the U.S.) also perform. Indian movie and dance concerts are fairly frequent.

Colombo has a few nightclubs, a range of restaurants serving ethnic foods (Italian, Chinese, French, Korean, German, Japanese, and Indian), and several hotels. Menu selection, culinary expertise, and musical entertainment are limited. Both Eastern and Western menus are available at major hotels.

The American Women's Association conducts charitable and social activities, and introduces new arrivals to other Americans and to local customs and shopping. All resident American women may join the association. Branches of the YMCA, YWCA, and the Salvation Army are also active. Some American women join the International Women's Club, which has tennis courts as well as social activities.

The national tourist agency—Ceylon Tourist Board—is located at 78, Steuart Place, P.O. Box 1504, Colombo 3.

Kandy

Kandy is the capital of the hill country. It is 1,674 feet above sea level, and 72 miles from Colombo. The average temperature here is 77°F, with pleasantly warm days and cool nights. Kandy is a mountain resort and the market center for an area producing tea, rubber, rice and

cacao. The main part of the city overlooks a scenic artificial lake built by Kandy's last king in 1806.

Kandy is noted for local handicrafts such as reed and lacquer work and silver and brassware. The population here is over 100,000.

Clothing

Although Kandy is cooler than Colombo, the same type of clothing is generally appropriate for both. A sweater may be necessary in the evening, especially in December and January. Ready-made clothing, except for batiks, is not readily available in Kandy. Tailoring is good, but some fabrics are available.

Food

Staples are generally available here. The local beef is quite good. Chicken, ham, pork, and bacon—available at Cargills, Elephant House, and almost all grocery stores—are also good. The imported food generally is expensive.

Supplies & Services

Some foreign and local toiletries, cosmetics, perfumes, etc., are available. A limited supply of medicines can be found at Cargills and at Lanka Medicals. Shoes, as well as most mechanical and electrical items, can be repaired. Beauty shops and dry cleaning facilities offer adequate services. Domestic help is available and is well trained. Salaries for domestic help are generally lower than in Colombo.

Kandy has a general hospital, seldom used by Americans, and the Lakeside Medical Center (a Seventh Day Adventist institution), which has acceptable facilities. Local specialists may be called in for consultation at the center or seen at the Channeled Practice Services, a facility permitting government physicians to have private patients. The Japanese have built and equipped a teaching hospital on the campus of the School of Medicine at Peradeniya. This provides additional services and facilities. For major medical and hospitalization problems, facilities are better in Colombo.

Recreation

The Temple of the Tooth, visited by Buddhist pilgrims from all over the world, is in Kandy. The sacred tooth relic of the Buddha is said to have been brought to Sri Lanka early in the fourth century, hidden in the hair of an Indian princess. The temple, which is Sri Lanka's holiest Buddhist shrine, was bombed in early 1998. The government accused the Tamil Tigers of committing the bombing.

Kandy, the island's chief city in medieval times, was the final stronghold of the Sinhala kings and the last place to fall under foreign rule. Things to see include the kings' audience hall, the four *devales* (temples), the artificial lake constructed by Sri Wickrema Rajasinghe (last king of Kandy) in 1806, the elephants' bathing place in Katugastota, the botanical gardens and university at Peradeniya, and the Kandyan Art Association.

The most spectacular religious festival, the Esala Perahera, generally takes place in July or August, depending on the astrologically auspicious moment, and ends on the day following the night of the full moon. By the last night, as many as 80 to 100 elephants, caparisoned in velvet, satin, and silk with silver ornaments, move in the procession. Chief of all elephants is the Maligawa (district where Kandy is located) tusker, bearing a replica of the casket which holds the sacred tooth relic. Temples in the Kandy area are Lankatilaka Vihare, Gadalendeniya Vihare, Galmadawa Vihare, and Degalkoruwa Vihare.

In Kandy, active sports may be enjoyed either at the Garden Club, which has tennis courts, or at the Hotel Suisse, which opens its pool and tennis courts to membership by monthly subscription and entrance fee. Newer hotels, e.g., Citadel, Mahaweli Reach, and Topaz, also have similar pool facilities. Nuwara Eliya, 48 miles (three hours) from Kandy, in Sri Lanka's beautiful tea country at an elevation of 6,000 feet, has an 18-hole golf course. Rugby,

Buddhist monks in Kandy, Sri Lanka

AP/Wide World Photos, Inc. Reproduced by permission.

soccer, and cricket matches are held in season.

Occasionally, English-language movies are shown in Kandy cinemas. French movies with English subtitles can be seen at the Kandy branch of Alliance Française. Classic American movies, shown periodically at the Kandy American Center, are open to a limited number of Americans. Occasionally, movies also are shown at the British Council Library.

Concerts by local or foreign artists, sponsored by various Kandy organizations, are scheduled about every two months. A local dance band plays on alternate nights at two Kandy hotels. The Kandy Lake Club is a gambling casino.

There are a few nice picnic spots near the city, particularly the Victoria Dam area. Mountains, beaches, and wildlife parks are from three to seven hours from Kandy by car.

OTHER CITIES

Situated 106 miles northeast of Colombo, **ANURADHAPURA** is near the Aruvi River. The city was founded in 437 B.C. and was the capital of the ancient Sinhalese

kings of Ceylon for four centuries. Today, it is one of the world's leading Buddhist centers. An ancient pipal tree here is thought to have grown from a piece of the Bo Tree at Buddha Gaya (in India), under which Guatama Buddha attained enlightenment. Interesting sites include a palace, ruins of a rock-hewn temple, large stupas, and other relics.

GALLE (formerly Point de Galle) is located at the extreme southern end of Sri Lanka on the Indian Ocean. With a population of over 168,000, Galle is an agricultural market center, exporting tea, rubber, coconut oil, cloves, and other products from the surrounding region. Known as early as 100 B.C. as a trade center for the Chinese and Arabs, Galle became important under Portuguese rule, 1057–1640, when it was the island's chief port. Under the Dutch, it was the capital of Ceylon from 1640 to 1656. The Dutch built a fort here to guard the harbor and it still stands today. The city came under British rule in 1796, and its commercial importance continued until the Suez Canal was opened in 1869. It further declined when the British built the modern harbor at Colombo in 1885.

JAFFNA is situated on a peninsula in the northernmost part of Sri Lanka. Separated from India by the

Palk Strait, Jaffna and the peninsula are densely populated. There are approximately 130,000 inhabitants here, most of whom are Tamil-speaking people. Tobacco, rice, coconuts, palmyra palm, and vegetables are grown in the region, and fishing is an important occupation. Industries include those for salt, cement, chemical, and tobacco production, as well as textile weaving and gold filigree work. Elephants, peppers, and other commodities are traded. Remains of the ancient Tamil culture, as well as traditions from the Portuguese and Dutch occupations in the 17th and 18th centuries, are found here.

Located in southern Sri Lanka, on the Indian Ocean, **MATARA** is 24 miles east of Galle. It has a population of more than 125,000. Matara is centered in a region rich with coconut palms and cinnamon trees. An old Portuguese fort is among the sites located here.

NEGOMBO, with a population of over 120,000, is located on the west coast of Sri Lanka at the mouth of the Negombo Lagoon, just north of Colombo. The city is a fishing center and a market for coconut products and cinnamon; handicrafts include ceramics and brassware. Many 17th-century Dutch buildings still stand in Negombo. Sri Lanka's international airport is located just outside the city.

Situated in southwest-central Sri Lanka, **RATNAPURA** is 42 miles southeast of Colombo. It is the center of the precious-stone industry. The Buddhist temple, Maha Saman Dewale, is nearby. Ratnapura has a population of over 40,000.

TRINCOMALEE is situated on Sri Lanka's east coast, on the Bay of Bengal. With a population exceeding 52,000, Trincomalee has one of the world's finest natural harbors. Exports traded here include tea, hides, and dried fish. A railroad terminus and an important road junction, Trincomalee (sometimes written Trinkomali) is also known for its coconut and rice plantations, and some pearl fishing. Early Tamil

settlers from south India built the Hindu Temple of a Thousand Columns in Trincomalee, but it was destroyed by the Portuguese in 1622. On its site, the Dutch built Fort Frederick in 1676. Captured by the British in 1795, the city was British naval headquarters in the Pacific theater during World War II. U.S. planes used its airfield for operations against the Japanese in Burma and Malaya (now part of Federation of Malaysia).

COUNTRY PROFILE

Geography and Climate

Sri Lanka is a pear-shaped island in the Indian Ocean—18 miles from India at its closest point. The country, roughly the size of West Virginia, is 270 miles long and 140 miles wide at its extremities, and comprises 25,332 square miles. It lies in the tropical zone between 5° and 9°N and between 79° and 82°S.

Sri Lanka has many spots of scenic beauty and historic interest. Topographically, the island consists of two main sections: the mountainous south-central region which rises to more than 8,200 feet above sea level, and the low-lying northern, eastern, and southwestern coastal plains. Dense vegetation covers a large part of Sri Lanka, particularly the southern and western coasts. Rubber and coconut trees grow in the midlands and lowlands, and there are vast tea estates in the highlands.

Sri Lanka has a varied effect on Westerners who remain on the island a considerable time without a break. People who like hot weather and are active in sports usually enjoy themselves and keep physically fit and mentally alert. Those accustomed to seasonal changes find the tropical climate monotonous and enervating. The climate, except in the mountains, is hot and humid. In Colombo, the capital,

temperatures rarely rise above 90°F or drop below 70°F. Humidity is always high, often in the 90s. In the mountainous districts, the average temperature is about 60°F during the day but, at night, it cools off rapidly, sometimes dropping to near freezing in places like Nuwara Eliya (at an altitude of 6,200 feet).

The monsoons produce two main rainy seasons. The southwest monsoon lasts roughly from mid-May into early fall. During this period the southwestern part of the island, including Colombo, receives much of its average annual rainfall of 100 inches. The northeast monsoon lasts from about October or November through February. The northern and eastern parts of the island receive virtually all of their average annual rainfall of 60 inches at this time.

Monsoon showers range from gentle to torrential in the Colombo area. December through March are usually the driest months. Because of the massive Mahaweli hydroelectric and irrigation scheme, water shortages and interruptions of electricity during the dry months are less frequent than in the past.

Colombo's climate compares to the hot, humid summers in Washington, DC. Even during the cooler period (December and January), most Americans depend on electric fans or air-conditioning to keep comfortable.

Population

The population of Sri Lanka is 19.4 million (2000 est.) and, although it has more than doubled over the past 30 years, the overall growth rate is slowing. Currently it stands at 87%; this is somewhat understated since it takes into account outward migration to the Middle East.

Ethnically, 74% of the population is Sinhalese and speaks Sinhala, the national language; 18% is Tamil (people of South Indian origin) and speaks Tamil, an official language since 1978. About 70% of the Tamils are "Ceylon Tamils"—citizens

whose ancestors have lived in Sri Lanka for many generations and who have full voting rights. Most live in the northern and eastern provinces, but many Ceylon Tamils live in Colombo and throughout the island. The other 30% of the Tamil population are the so-called "Indian Tamils," whose ancestors were brought from South India in the late 19th and early 20th centuries to work on tea and rubber plantations. Most were disenfranchised in Sri Lanka by legislation passed in 1948. Because India also refused to recognize them as citizens, the Indian Tamils were considered stateless.

A 1964 agreement with India provided for repatriation of many to India and the granting of Sri Lankan citizenship to others on a 60-40 ratio. In 1988, Sri Lankan citizenship was extended to 230,000 stateless Indian Tamils.

Other minority groups include Sri Lankan Muslims (including both Moors and Malays and totaling 7% of the population) and Eurasians. Most Sinhalese are Buddhists, most Tamils are Hindu, and Moors and Malays are Muslims. Christians constitute 8% of the population, most of whom are Roman Catholic. Christians can be found in both the Sinhalese and Tamil communities.

Racial tension between the Sinhalese and Tamil communities erupted into violence in 1983 and continued in varying degrees of intensity until 1995, when the government and Tamil rebels announced a cease-fire. The peace only lasted a few months, however, before Tamil rebels renewed their attacks on government installations. Since 1983, over 51,000 people have been killed, and more than 300,000 Tamils have fled the island.

Government

The 450-year foreign presence on the island (Portuguese, Dutch, and British) has influenced Sri Lanka's government, jurisprudence, and administration. Sri Lanka became independent in 1948 after being a British colony for over 100 years. It

initially opted for dominion status in the Commonwealth, like nearby India and Pakistan. But, unlike India and Pakistan, it retained dominion status only until 1972 when the island was formally proclaimed a democratic republic and a unitary state with the office of governor-general converting to a ceremonial presidency. During that period, real power was vested in Parliament and in a prime minister under the British pattern. The 1972 constitution proclaimed Sinhala the official language (with some provision for the use of Tamil) and Buddhism the foremost religion (with religious freedom guaranteed to all).

Following the overwhelming 1977 electoral victory of the United National Party (UNP), a decision was made to revamp the constitutional system more along continental than British lines. The result was the 1978 constitution which established an executive (and active) presidency, abolished the upper house of legislature, and established a system of proportional representation as the basis for future parliamentary elections. The constitution also elevated Tamil to the status of an official national language.

An executive president, elected for a six-year term, serves as commander-in-chief of the armed forces, chief of state, and head of government. The position is based largely on the French model. The president appoints and heads a cabinet of ministers who are responsible to a 225-seat unicameral legislature. The president's chief lieutenant is the prime minister, who is the leader of the ruling party in Parliament.

Communal tension in Sri Lanka has remained high since July 1983, when the worst communal violence in the country's post-independence history occurred. Following the killing of 13 members of an army patrol (all Sinhalese) by Tamil terrorists fighting for a separate Tamil state in the north and east, Sinhalese mobs took to the streets of Colombo

and then throughout Sinhalese-majority areas, attacking Tamils and their property. Hundreds of Tamils were killed in the ensuing violence and tens of thousands were left homeless, as mobs attacked Tamils and their property throughout much of the island. The riots led to a burgeoning of Tamil militant groups in the north and east and to continued military and political confrontation between the Sri Lankan Government and the Tamil militants.

By mid-1987, the situation had reached an impasse. The government's policy of pressing the insurgents militarily, although attempting to negotiate with Tamil moderates, had not succeeded. In an attempt to break the deadlock, Sri Lanka brought India directly into its communal dispute. Under a July 29, 1987, accord signed by the President and the Indian Prime Minister, Sri Lanka made many concessions to Tamil demands, including devolution of some powers to the provinces, merger (subject to later referendum) of northern and eastern provinces, and official status for the Tamil language. India agreed to establish order in the north and east and to cease assisting Tamil insurgents.

A key element of the accord soon fell apart. The major Tamil militant group, the Liberation Tigers of Tamil Eelam (LTTE), within weeks declared its intent to continue its armed struggle for an independent Tamil Eelam. The 50,000-strong Indian Peace Keeping Force (IPKF) found itself engaged in a bloody police action against the LTTE. After two-and-a-half years of conflict between the IPKF and LTTE, with over 1,000 deaths on each side, the situation had not completely resolved. By late 1989, the Indian troops were being withdrawn, but the army and LTTE continued to have confrontations.

In 1995 a cease-fire between the Tamil rebels and the Sri Lankan government was announced, with government promises to send an \$816-million aid package to the

northern part of the island. The peace process fell apart after a few months, when additional demands by the rebels went unfulfilled. After Tamil terrorists attacked two gunboats and an army base, the government went on the offensive by blockading the Tamil stronghold of Jaffna and attacking rebel positions. By the end of 1996 the death toll from almost 15 years of civil war had surpassed 50,000.

Presidential elections were held in December 1988 and Ranasinghe Premadasa won with just over 50% of the votes cast in an election marked by considerable violence instigated mostly by the radical revolutionary Janatha Vimukthi Peramuna (JVP). Despite JVP violence, a parliamentary general election was held in February 1989. President Premadasa's United National Party won 125 of the 225 seats in Parliament in the first national election held under the system of proportional representation, which had been established by the 1978 constitution.

The JVP began asserting itself in mid-1987, capitalizing on opposition in the Sinhala community to the Indo-Sri Lanka Accord, it launched an intimidation campaign. Using terrorist tactics, including assassinations, strikes, and other weapons of intimidation, it brought the country to a virtual standstill several times in 1988 and 1989. Several thousand people died in JVP-instigated violence and much property, particularly government-owned property, was destroyed. The deaths included government officials, members of political parties who supported the Accord, and innocent civilians. The government fought back, killing another several thousand people suspected to be JVP party members, supporters, or their families. In late 1989, the JVP party leaders had virtually all been killed or arrested, and the JVP threat appeared to have failed.

On May 1, 1993, President Premadasa was killed in a May Day Parade bombing. Prime Minister Wijetunga succeeded him, and

called for early elections in August 1994. Voters, however, chose a leftist coalition led by the Sri Lanka Freedom Party. Chandrika Bandaranaike Kumaratunga became president. She was reelected in 1999.

Sri Lanka's legal system reflects the interplay of cultural influences. The criminal law is fundamentally of British origin. The basic system of civil law, a legacy of the Dutch, is Roman-Dutch; but personal law (marriage, divorce, inheritance, etc.) is unique to each ethnic community. Thus Hindus, Christians, Muslims, and Buddhists have their own family codes. The judiciary is based on the British model.

Sri Lanka's judiciary consists of a Supreme Court which is also authorized to give advisory opinions, a Court of Appeals, a High Court, and a number of subordinate courts. The Supreme Court, composed of a chief justice and six to 10 associate justices, has original jurisdiction on all constitutional matters, as well as on such other matters as election petitions, breach of parliamentary privilege, protection of fundamental rights, and other matters over which Parliament has legislative power.

The Sri Lanka Administrative Service is a direct descendent of the highly regarded colonial Ceylon Civil Service. Each ministry has a secretary, usually a career civil servant, who provides continuity as ministers and governments change. The country is divided into 25 districts, each headed by a government agent (GA) responsible for regional government activities. In colonial days, the GA was virtually overlord of a district; today, democracy has brought an increased concern for mass public opinion and socially responsive administration. An innovation of the government elected in 1977 was the introduction of a system of district ministers, senior members of Parliament usually not from the district, who oversee development efforts in the region.

Sri Lanka is a member of the United Nations, World Health Organization (WHO), and United Nations Educational, Scientific, and Cultural Organization (UNESCO), as well as the following international bodies: Asian Development Bank, Colombo Plan, Economic and Social Commission for Asia and the Pacific, Group of 77, International Telecommunications Satellite Organization (INTELSAT), Nonaligned Movement, World Bank, and World Tourism Organization. The Sri Lankan capital is the home of the international headquarters of the Colombo Plan, a program to aid the economic development of Asian nations, which was launched at a conference in Colombo in 1950. The address is 12 Melbourne Avenue, P.O. Box 596, Colombo.

Sri Lanka maintains diplomatic relations abroad in over 30 foreign countries, including Iraq, the People's Republic of China, Bangladesh, Pakistan, the Philippines, Germany, Kenya, India, and the United States. There are over 30 foreign embassies in Colombo, including those of Australia, Canada, Cuba, Egypt, France, Germany, the Holy See, Japan, the Maldives, Myanmar, the Netherlands, Thailand, the United Kingdom and the United States.

The outer two-thirds of the flag of Sri Lanka has a dark red background with a gold lion, sword, and bo leaves (from the former Kingdom of Kandy). The inner third of the flag has vertical green and saffron bands (for the Muslims and Tamils). The flag is bordered and divided in gold.

Arts, Science, Education

Sri Lanka's artistic and intellectual life is lively in some areas. There are eight universities, one open university, and two university colleges; both arts and sciences are taught. Facilities include four medical schools. The Institute of Aesthetic Studies is a department of the University of Kelaniya, near Colombo.

Susan Rock. Reproduced by permission.

Street in the commercial district of Colombo

Instruction includes art, crafts, music, and dance.

The Ministry of Education operates 21 teacher training colleges; of these, four train instructors to teach English as a second language and 17 cover other areas. The Ministry of Higher Education directs 13 polytechnics and eight junior technical institutes. Curricula and direction at all educational levels are increasingly related to Sri Lanka's development.

The Natural Resources, Energy, and Science Authority, established in 1968 as the National Science Council, implements central government science policies. The Sri Lanka Institute of Scientific and Industrial Research (CISIR) is an autonomous, non-profit, industrial research institute, established by the government in 1955.

The Tea Research Institute established in 1925, the Rubber Research Institute (1910), and the Coconut Research Institute (1971) are all government non-profit organizations.

Private schools teach Eastern and Western dance and music. The country has several theaters, a major museum, and many special-

ized societies. Few art galleries exist, but interest is active in painting, batik, jewelry, sculpture, and indigenous handicrafts. A national dance troupe performs, and interest in a national theater, and national culture in general, is strong.

An active and healthy interest also flourishes in Western music, art, and drama. English-language plays are performed by a few amateur groups in Colombo, and drama groups welcome foreign members. Concerts of Eastern and Western music also are given occasionally, and Colombo has an amateur symphony orchestra; many foreigners have joined this latter group. Visiting artists regularly perform with the orchestra or give solo performances.

Commerce and Industry

Compared with the many developing countries in the region, Sri Lanka's economic potential is high. The island has rich agricultural and mineral resources and is surrounded by a bountiful sea. Population pressures are less severe than in neighboring areas, and the per capita gross domestic product (GDP) is about \$3,500 (2000 est.).

Agriculture accounts for about 21% of the GDP and employs about 38% of the population. Tea, rubber, and coconuts are the principal crops and the source of about 50% of export earnings. Rice is the major domestic food grain crop; improved seeds and yields have significantly reduced the need for rice imports.

Industrial production has grown substantially in recent years and now accounts for about 20% of the GDP. Garments, many of which are assembled in the free trade zone located just outside Colombo, account for most of Sri Lanka's exports of manufactured goods. Roughly 75% of the apparel exported is sent to the U.S. Other industrial exports include refined petroleum products and precious and semi-precious gems.

Services (i.e., transportation and tourism) and remittances from Sri Lankans working abroad are of increasing importance to the economy. Colombo's efficient port has become a major cargo transshipment hub and a significant foreign exchange earner. Tourism, which has been hurt by the security situation, remains an important source of employment and one of the best hopes for future economic growth.

The United National Party government has undertaken to reverse many basic economic policies followed by all previous governments since independence. Most significantly, the government has reduced its rice subsidy program and is placing greater reliance on the private sector in promoting economic development. The country relies on considerable international assistance from both multilateral and bilateral aid donors. Increased foreign investment, the huge Mahaweli irrigation development scheme now beginning to yield results, the successful free trade zones, and the growth of the tourist industry, have helped to reduce the country's serious unemployment problem. However, the economy has suffered in recent years due to the continuing ethnic conflict and political instability.

Sri Lanka has chronic, current account and government budget deficits. Foreign aid has helped to cover these gaps somewhat, but foreign borrowing also has been significant. External debt is estimated at about \$9.9 billion (2000 est.).

Import liberalization, part of the 1977–78 economic reforms, eliminated the scarcities and black-market activities which once plagued the island. The government's economic priorities are now to bring prices under better control, diversify and expand exports, increase national savings, and maintain the quality of life of its people. Although shortages of basic food items no longer occur, imported products on the local market are often expensive.

The address of the National Chamber of Commerce of Sri Lanka is P.O. Box 1375, Second Floor, YMBA Building, Colombo, Sri Lanka. The Federation of Chambers of Commerce and Industry of Sri Lanka is located at the People's Bank Bldg., 220 Deans Rd., Colombo 10.

Transportation

Air Lanka offers domestic service. Charter planes and helicopters are also available. The railway system, also a government enterprise, provides a reasonably satisfactory means of reaching a few points of interest on the island. First-class travel, although somewhat rigorous, should be used whenever possible; second-class accommodations frequently are the best available. The government-owned bus system, which is overcrowded and poorly maintained, normally is not used by foreign residents. Private buses offer little improvement.

Rental vehicles with a driver, although relatively expensive, may be engaged for excursion trips. Satisfactory and inexpensive three- and four-wheeled metered taxi service is available in Colombo.

Despite such problems as heavy traffic (bicycles, bullock carts, other vehicles, and pedestrians), lack of

spare parts, and indifferent servicing, most resident Americans rely on automobiles for transportation within and outside Colombo. Sri Lankan roads are generally narrow and inadequately maintained. The island has an extensive network of paved surfaces.

Small, right-hand-drive cars are recommended because of the narrow roads. The highest rated gasoline is about 93 octane. The most popular cars include Peugeot, Volkswagen, Mitsubishi, Nissan, Ford, (Australia, Germany, U.K.), and British Leyland. Parts and servicing are most readily available for Japanese vehicles. Heavy-duty tires and batteries, air-conditioning, tropical radiators, and extra undercoating against rust are worthwhile investments. Catalytic converters on newer models should be removed, since lead-free gasoline is not available.

As in England, traffic moves on the left side of the road. Sri Lanka permits import of left-hand-drive vehicles, but for safety and resale value, it is wise to import only right-hand-drive vehicles.

Third-party liability insurance is compulsory in Sri Lanka. Insurance policies are available only through the government-owned and -operated Sri Lanka Insurance Corporation and the National Insurance Corporation.

Communications

Local telephone service often is interrupted by breakdowns caused by age and weather conditions. Long-distance and international direct-dial services are available to all points in Sri Lanka, India, Malaysia, Singapore, Thailand, Australia, Japan, Europe, and the U.S., provided an advance deposit has been made. Telegraph and cable service, available day and night, is satisfactory. Telex facilities are available at most good hotels.

Airmail service to and from the U.S. is generally satisfactory. The average transit time is eight to 10 days.

Radio broadcasting operates 17 and one-half hours daily, seven days a week. Programs offered by the Sri Lanka Broadcasting Corporation cover local and international subjects and include a substantial amount of Western music, especially on FM. Programming and schedules follow British format, and some British Broadcasting Corporation (BBC) programs and news features are relayed on local channels. Broadcasting is in English, Sinhala, and Tamil on shortwave, AM, and FM frequencies. Many interesting and informative programs are presented. Reasonably good worldwide radio reception is available on shortwave.

Sri Lanka initiated television transmission in 1978 and now has two stations. Each station operates from 5 p.m. until after 11 p.m. The programs on both channels consist of locally produced shows in English, Sinhala, and Tamil, and reruns of U.S. and U.K. serials in English. Regular, nightly news programs are broadcast in all three languages at different times.

Sri Lanka uses the PAL system of color TV; therefore, U.S. sets cannot operate here. Color sets are available locally through the duty-free complex; however it is a time-consuming process and purchases require Sri Lankan Foreign Ministry approval. Prices compare favorably with those in the U.S.

Most Americans bring videotape equipment to Sri Lanka. Many belong to local tape clubs which rent tapes (VHS/PAL system only) at reasonable prices.

Colombo newsstands sell current international editions of *Time* and *Newsweek*. The *International Herald Tribune*, *USA Today*, and *Asian Wall Street Journal* also are available.

Library facilities in Colombo are limited, but improving. The American Center library is designed to meet the needs of Sri Lankan students and academics. The Colombo municipal library system has

approximately 123,000 titles in English at any one time, and subscribes to some 400 English-language journals and newspapers. The British Council's large, 52,000-volume library includes a good selection of fiction. It subscribes to about 150 periodicals and newspapers. The Colombo Swimming Club operates a small library offering book selections to both children and adult members. A modest number of expensive current paperbacks are available at the large hotel bookshops.

Mildew, termites, and silverfish are a serious threat to books not kept in air-conditioned rooms. Valuable volumes should not be brought to Sri Lanka.

Health and Medicine

Privately owned hospitals, with 24-hour English-speaking Sri Lankan-trained physicians on duty, have outpatient departments, intensive care units, operating rooms, and diagnostic facilities. However, the hospitals are not up to American standards and are utilized rarely, except for routine lab work. Medical problems requiring sophisticated treatment are sent to the nearest adequate medical facility (in Bangkok).

The U.S. Embassy maintains a health unit in Colombo for official personnel and dependents. Some limited care is occasionally provided to unofficial Americans on a fee-for-service basis.

Private physicians are the primary source of medical assistance. Specialists from the government hospitals assist when needed. Some specialists are board-certified in the U.K. Fees for medical care and treatment are reasonable.

All dental work should be done prior to arrival in Sri Lanka. Local dentists have been consulted, with satisfactory results, by some members of the American community. However, dental care is substandard,

and no major dental work can be done.

Pharmaceutical supplies are not always available locally, so one should have an adequate supply of first aid materials, aspirin, or other necessary items; this includes vitamins and birth control pills.

Gastrointestinal disease is the major health problem here. Hepatitis A is common in the local population. Diarrhea is the most common illness among Americans living in the subcontinent, mainly because of contaminated food and water. City water is not potable and should be filtered and boiled for 10 minutes before using. One should thoroughly cook all meat and wash and disinfect all fruits and vegetables.

Sri Lanka has many kinds of insects. Mosquitoes carry malaria, Japanese B encephalitis, dengue fever, and filariasis. Flies carry filth that cause such endemic diseases as cholera and typhoid. Those coming here for an extended stay should bring a good supply of insecticides, pest strips, insect repellents, and fly swatters. Snakes, both poisonous and nonpoisonous, are found in Sri Lanka. Yards and lawns around the houses must be maintained by keeping grass cut and clearing leaves, which helps to deter nesting of snakes.

Parents with small children must exercise special caution as to safe play areas outdoors. The U.S. Embassy health unit maintains a stock of snake bite serum, which, if needed, is best administered in a hospital setting.

Malaria prophylaxis must be started two weeks before arrival in Sri Lanka. Also, make sure immunizations are up to date, especially those for gamma globulin, rabies, meningitis, and hepatitis B.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Several international airlines fly into Sri Lanka's Katunayake Airport about 20 miles northwest of Colombo (one hour by car). At present, no American carriers provide service. Air Lanka is the national airline.

A passport and an onward/return ticket and proof of sufficient funds are required. A no-cost visit visa, valid for 30 days, will be granted at the time of entry into Sri Lanka to bona fide tourists and business travelers. Visitors staying more than 30 days for any purpose must pay residency visa fees. Yellow fever and cholera immunizations are needed if arriving from an infected area. All travelers departing Sri Lanka (except diplomats and certain exempted travelers) must pay an airport tax, in cash. Sri Lankan law requires all persons, including foreigners, who are guests in private households to register in person at the nearest local police station. Individuals who stay in private households without registering may be temporarily detained for questioning. This requirement does not apply to individuals staying in hotels or guesthouses.

American citizens are advised not to travel north of a line drawn from Puttalam on the west coast through Anuradhapura in the central north and Nivaveli (just north of Trincomalee) in the east. Areas north of this line contain many land mines, making travel off paved roads very dangerous. In addition, the LTTE rather than the Government of Sri Lanka is effectively the civil administration in many sections of the north. Official travel by U.S. Government personnel to this area is restricted, and their unofficial travel is prohibited. Travel in the east in the area south of the Anuradhapura-Nivaveli line (including Trincomalee, Batticaloa and points south) poses significant safety risks. Roads are often sub-

standard, and police, medical and other emergency help is severely limited or not available. Communications within the eastern areas are also limited, with no cell phone accessibility and very limited land-line telephone access. Because of these considerations, the U.S. Embassy may not be able to provide consular services in a timely manner to American citizens who travel to the north and east.

Sri Lankan customs authorities may enforce strict regulations concerning temporary importation into or export from Sri Lanka of items such as firearms, antiquities, business equipment, obscene materials, currency, gems and precious metals. It is advisable to contact the Embassy of Sri Lanka in Washington, D.C., or one of Sri Lanka's consulates in the United States for specific information regarding customs requirements.

Americans living in or visiting Sri Lanka are encouraged to register at the Consular Section of the U.S. Embassy in Colombo and obtain updated information on travel and security within Sri Lanka. The U.S. Embassy is located at 210 Galle Road, Colombo 3, Sri Lanka. The Embassy's telephone number during normal business hours Monday through Friday is (94)(1) 448-007. The after-hours and emergency telephone number is (94)(1) 447-601. The Consular Section fax number is (94)-(1)-436-943. The Embassy's Internet address is <http://usembassy.state.gov/srilanka>. The e-mail address for the consular section is consularcolombo@state.gov. The Embassy in Colombo also covers the Republic of the Maldives. U.S. citizens are strongly encouraged to register at the Embassy upon arrival in Sri Lanka or by e-mail.

Currency, Banking and Weights and Measures

Sri Lanka's monetary unit is the *rupee*. Strict currency controls require customs declaration of all foreign currency brought into and taken out of the country and severely limit local importation of foreign goods. Indian, Nepalese,

Pakistani, and Sri Lankan *rupees* are forbidden to be imported into or exported out of the country.

Sri Lanka operates on the metric system in calculating weights and measures.

The time in Sri Lanka is Greenwich Mean Time (GMT) plus five-and-one-half hours.

Damascus, Syria

SYRIA

Syrian Arab Republic

Major Cities:

Damascus, Aleppo, Latakia

Other Cities:

Deir-ez-Zor, Der'ā, Hama, Hasakeh, Homs, Raqqa, Tartūs

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated April 1997. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Archaeologists estimate that **SYRIA** is part of a civilization that may have existed as long ago as the third millennium B.C. Syria was occupied successively by Canaanites, Phoenicians, Hebrews, Arameans, Assyrians, Babylonians, Persians, Greeks, Romans, Nabataeans, Byzantines, and, in part, Crusaders before finally coming under the control of the Ottoman Turks. Syria is significant in the history of Christianity; Paul was converted on the road to Damascus and established the first organized Christian Church at Antioch in ancient Syria, from which he left on many of his missionary journeys.

The Syrians, after a long and turbulent existence under wars and occupation, proclaimed independence in 1941, and established autonomy a few years later when British and French troops were withdrawn from within Syrian borders. The country, made a French mandate in 1920 by the League of Nations, had been under the control of France's Vichy Government until British and French troops occupied it early in World War II. In 1958, Syria merged with Egypt as part of the United Arab Republic, but withdrew from that agreement in September 1961.

Syria has been directly involved in the Middle East unrest of the last 30 years. Its troops have aided Egypt in attacks on Israel (1973); have battled Christian forces in Lebanon (1976 and 1981); and have fought Israeli troops inside Lebanon (1982). More recently, the Syrian government sided with Iran during its long war with Iraq (1980–1988); became the first of the Arab countries to denounce the Iraqi invasion of Kuwait (1990); and used their considerable influence to help free U.S. hostages held in Lebanon (1991).

Life throughout Syria is a tapestry of modern and ancient aspects. The country possesses a rich and varied cultural heritage and meaningful economic potential.

MAJOR CITIES

Damascus

The origins of Damascus lie under the millennia of sands that have covered its secrets from the time of the Garden of Eden. According to local mythology, Eden sat astride the Barada River and was a fertile land blessed with a mild climate. Its claim to be the oldest, continuously-inhabited city is reinforced by its central location in relation to ancient civilizations and its acknowledged importance on the earliest trade routes. Damascus has a splendid covered bazaar. The Hamidiyyah Souk (bordered by Mahmat Pasha, the Street called Straight) is mentioned in the Bible as a thriving ancient marketplace.

Damascus is a city of sharp contrasts, with Roman arches shading Ottoman architecture on the same street featuring international five-star hotels. In the Old City, the narrow streets twist and wind around ancient gates and arches past fascinating homes and mosques. From the open stalls, shouts announcing new products and great prices compete with braying donkeys, passing street vendors and large crowds of people seeing the souk again or for a first time. Car horn cacophonies are

Muslim men at an outside cafe in Damascus

standard musical fare in major metropolitan areas and Damascenes are proficient in this artform. With comforting regularity, the prayer calls mark the passing of time; the schedule adjusted, by tradition, for the moon and the weather.

Business hours and days are based on religion and culture. Friday is the official day of rest for the predominantly Muslim community; Jews observe the Sabbath; and Christians take Sunday off. Many shops open around 09:00 and close for several hours around lunch (14:00 to 17:00). The work day may end at 20:00 or later. These hours do not apply before or during the Eid holidays.

Food

Excellent fresh fruits and vegetables in season are available in vegetable souks and in small neighborhood shops. Damascenes love their food and Syrian food is among the best in the Middle East. Prepare to learn to cook with new spices and methods. Spices are available and fresh, so don't ship old spice - reward your taste buds with sharp and distinct fresh spice flavors.

There are a few butchers in most neighborhoods and the quality of

meats can be good. There is beef, chicken, goat, lamb, turkey, and veal in the marketplace. There are two pork butchers who will provide sides of pork. You will need to learn which cuts you want and enjoy experimenting with fresh meats. Some shops have begun to carry baked and smoked hams, bacon and prosciutto to satisfy the foreign community's demands. These products are imported and expensive.

Fresh fish is available in limited quantities and varieties. It is useful to know your fish before buying as most is brought on ice from the coast. Several salesmen come around the neighborhoods with their trucks laden with fish and shrimp. Once you make contacts, the fishmongers will help you choose. Frozen fish appears in the shops from time to time. Canned fish (i.e., anchovies, crab, salmon, sardines, smelts and tuna) can be found imported from the Far East.

Dairy products are abundant. Butter, whipping cream, creme fraiche, cream cheese, and long-life whole, low fat, and skimmed milk are always available. Yogurts and ice creams come in both the local and imported varieties, and butter is made in Syria, both salt-free and lightly salted. Many shops import

butter and cheeses from Denmark, England, Finland, France, Germany, and Bread is the staple of most cultures' diets and Syria is no exception. People consume the flat Arabic bread, French style baguettes, white flour and multi-grain buns and loaves. The Armenian bakers make a crusty Russian style wheat loaf. Most of these use no preservatives or salt, therefore they do not keep well.

Syrian sweets are world famous. Bakeries make large varieties of delicious pastries including baklava, macarons, meringue, cookies and cakes with almonds and pistachios, creams and cheeses, honey and other sweeteners (rose-water, for example).

Alcoholic beverages (liquor, beer and wine) are available through the local duty-free stores. Quite a variety is imported by these organizations. Syria and Lebanon produce wines and beers and certain liquors that can be purchased in most corner grocery stores.

Syrians enjoy smoking the argileh (water pipe) and use either the dark black tobacco made famous in Latakia and throughout Persia or the fruited brown tobacco found in the Gulf States.

Syria produces a large variety of soft drinks under license from Royal Crown and Crush, to all the carbonated mixers (tonic, soda, bitter lemon, etc.) Fruit drinks are popular and produced locally. There are tetra-pack boxes of orange, grapefruit, lemon, pineapple and mango juice in liter and quarter liter sizes, with and without sugar added.

Clothing

Damascenes are very social and enjoy dressing for any occasion. Styles vary from the very conservative to the resplendent. Clothes that are imported from the West can be very expensive, but are available. There are many styles of clothes that Syria imports. Local production is growing and Syria is a producer of cotton and other cloth products.

Men: Social life is informal. Gentlemen wear dark suits for most formal occasions and coat and tie is the accepted evening wear.

In the summer season, lightweight suits are desirable for office wear. It does get hot, even with air-conditioning in the work place. Winter is cold enough to warrant wool or wool blend suits. Damascus has reasonably good dry-cleaning services and only the most exotic clothing might be at risk.

Women: In Arabic culture, one can never go wrong with a more conservative outfit for different occasions. Nevertheless, Damascus is quite cosmopolitan and women enjoy wearing ornate cocktail dresses for evening and formal events. Several dressy outfits, short or long, should satisfy most needs. The ladies wear dresses or pantsuits for daily wear and it behooves you to remember the season and weather.

In summer, cotton and linen blends are probably the most comfortable for inside (climatized) and outside. Slacks are acceptable and popular with the younger Syrians for day wear. Shorts, tank-tops, and other revealing dress is not suitable for street wear (except maybe in the beach cities) and will make you much more uncomfortable than the weather. Your winter wardrobe should include a wool coat and a raincoat for the rainy season. Sweaters and medium weight wools are probably the most comfortable from November to March. Syrian women wear furs; if you bring one to Damascus, bring all the necessary supplies for cleaning and storage as these are difficult to find.

Bring comfortable walking shoes to Syria; walking is a social event and everybody walks. Women's shoes are available in the market but sizes may be difficult to find and styles are not always comparable to those in the U.S. American brand lingerie, panty hose and stockings are not imported. European lingerie is expensive and sizes vary from what you may be used to at home.

Children: All of the observations above apply to children's clothing. Children's clothes should include durable playwear and tennis shoes (sneakers) for school and home. Students at the Damascus Community School dress very much like the kids they see on TV; a lot like those you find at your local school or mall. Preschoolers find the largest variety in the market from which to choose and infant clothing is reasonably priced. You can keep up with their growing spurts by shopping locally.

Supplies and Services

American toilet articles and cosmetics are expensive, when available, in Syria. Gentlemen without brand preferences have little difficulty obtaining necessary items in the local markets. American products for women are rarely available, though European substitutes can usually be found

Most drugs and medications are available in Damascus, either in the generic lines or in specific European labels, and are almost always less expensive than in the U.S. Nevertheless, if you have specific medical requirements, you should check with your doctor and bring sufficient supplies until you become familiar with the local pharmacies. Contact lens solutions and supplies should be brought with you.

Damascus offers a good selection of dress makers and tailors. Quality and the speed of production vary widely and, as with any service sector, it is best to know your provider. Nevertheless, this enterprise gets generally high marks. Shoe and boot makers and repair shops are also available. Handmade riding boots cost about \$150 and men's loafers run from \$50 to \$100.

There are plenty of beauty and barber shops that are up on the latest European styles and provide full services including shampoos, cuts, sets, permanents, manicures, pedicures, and massages. The cost of these services is very reasonable

Religious Activities

The majority of Syrians are Sunni Muslim and there are many mosques that serve both the Sunni and the small Shi'a communities. Damascus has many cultures and religious traditions and was a home to the earliest Christian and Islamic communities. There is one Jewish synagogue, several Roman Catholic churches, even more Orthodox (Eastern) churches, including Armenian, Greek, Russian, and Syrian Orthodox, several Protestant churches including Anglican (Episcopalian), Baptist, Communitarian, and Presbyterian. Mormons maintain a house of prayer and a community center in Amman, Jordan. Most Far Eastern religions are not represented (have no official presence) in Damascus

Education

The Damascus Community School (DCS), organized in 1950, provides English language based education from Pre-K through 12th grade. The student base (290 pupils in 94-95) included 21 nationalities drawn from the diplomatic and business communities as well as the local community. 60% of the student body is Syrian. Teachers are primarily U.S.-certified Americans and overseas hires. There are 35 full time teachers hired from overseas, 10 local hires and a support staff of 15, including office personnel. The school is accredited by the Middle States Schools Organization and belongs to E.M.A.C. (Eastern Mediterranean Activities Council.) School transcripts from DCS serve as a basis for enrollment in U.S. schools.

School programs include computer sessions for all grade levels, liberal arts electives including drama, journalism, music and dance. Pupils can choose either Arabic or French language programs for the foreign language requirement. DCS offers English as a second language (E.S.L.) for foreign students.

The campus is located in a pleasant residential area and is centrally located. The campus' central courtyard is landscaped and comfortably

laid out for social interaction. The playground areas include a soccer field, basketball court and two jungle gym areas for the younger students. The school cafeteria provides, for a fee, daily hot lunches and a variety of snacks and drinks. The school opens in late August and maintains a 180-day schedule equivalent to the standard U.S. public school schedule. For enrollment at DCS a student is required to furnish a birth certificate, transcripts or previous school records; health certificate and/or medical records including vaccination and immunization schedules, two current photos and proof of residence in Damascus, Syria.

Sports

The Sheraton, Meridien and Ibla Cham Hotels all offer memberships, for a fee, to their pool and tennis complexes. All have resident trainers and coaches. Sheraton's compound has six hard surface courts, a large pool, a children's pool, and a children's playground. The Meridien has four soft surface (clay) courts, and a large pool and gardens. Locally owned and managed, the Ibla Cham has eight hard surface courts, two pools and an equestrian paddock with rental horses available to the public. For tennis players, it is best to bring balls, racket strings and handle wraps as they are very expensive, when available.

There are several riding clubs in the city, generally for more advanced riders. Horses can be purchased and stabled at these clubs for a fee. Riding wear and boots are made in the souk and are not expensive: However, saddles, tack, medicines and other gear should be shipped from the States.

Golf is not played much in Syria and the two courses are more than five hours away from Damascus. The Cham Palace has a bowling alley that is open to the public. Fishing opportunities are very limited except on the coast. Camping is permitted by the Syrian Government and is popular with many in the diplomatic community. There are won-

derful, undeveloped, areas throughout the country that campers regularly visit.

Runners can look forward to joining the Hash House Harriers based in the British Embassy Club. Running is becoming a popular sport with Syrians and joggers are out daily in the larger parks around the city. The Canadians have organized a mini-marathon (Terry Fox Run) for the past two years.

Sports equipment of all types, including shoes, is all imported and quite expensive. Sizes and styles are very limited

Touring and Outdoor Activities

Syria, a cradle of civilization and squarely on the crossroads between East and West, has something for everyone.

Bosra, on the Syrian-Jordanian border and two hours south of the city, features possibly the best preserved Roman amphitheater anywhere. A medieval Arab citadel surrounds the theater. Ramparts of this fort have protected the Roman architecture since the 12th century. This site hosts a musical arts festival each September. The area was an important agricultural center to the Romans. A recently discovered, Pompeii-like, volcanically covered, Roman city has excited the archeological and historical communities with some wonderful finds.

Krak des Chevaliers, described by Lawrence of Arabia as the Vatican of the Middle East, is two hours north of Damascus overlooking a large valley and the pass from Homs to the coast. This Crusader fortress, built on a promontory originally developed by the Emir of Homs in 1031 AD, is a classic example of the siege defenses of the Middle Ages. Well preserved and massive, the castle complex supported a community of over 4,000 knights and retainers and had a rock-hewn stable large enough for 500 horses. Crusader knights occupied it from 1110 AD and deeded it to the Hospitaliers who finally

capitulated to the Mameluke Sultan Baibars in 1271. The villages around the Krak are predominantly Catholic to this day.

Kuneitra, up on the Golan Heights, was the site of some of the fiercest fighting between Syria and Israel in both the '67 and '73 wars. The village has remained untouched since being placed under UN supervision in 1974. Several diplomatic missions have staged concerts and picnics on its fertile plain where one can see snow-capped mountains and skiers on the Israeli-occupied side of the Golan.

Maloula, less than an hour from Damascus, is the site of the early Christian convent dedicated to St. Takla. The Syrian icons and paintings are particularly interesting, and still produced here. Maloula has the distinction of being uniquely bilingual with Aramaic (the language of Jesus Christ and the New Testament writings) still spoken by a large portion of the population.

Palmyra, an oasis that served the silk and spice trade from Nineveh, Babylon, Persepolis and points east of the Mediterranean, has the distinction of being mentioned in the Old Testament books of Kings and Songs of Solomon. Its biblical name, Tadmor, recalls its importance as an early center of trading and culture. The name appears in the annals of Roman conquests and the Emperor Valerian was so taken by the city, when he visited in the third century, that he granted it free city-state status and renamed it Palmyra Valeriana.

Three hours from Damascus on the road to Baghdad, these ruins are an extraordinary example of the synthesis of Roman, Syrian and Persian cultures. At its peak it boasted a population of over 50,000. Tadmori tycoons controlled trade throughout Anatolia and Syria in the Eastern Empire. Witness to their power and fame lies in the valley of tombs just north of the ruins of Palmyra. Queen Zenobia, who rebelled against Rome and expanded the "Palmyran kingdom"

to Egypt and eastern Asia Minor, drew the wrath of the Emperor Aurelian who destroyed Palmyra in 273 AD. He returned to Rome with Zenobia in golden chains and paraded her through the city. On the Aurelian Arch in Rome, one can still see the humiliation of Palmyra's queen. The city's importance waned and it was bypassed by history after this period. Its extensive oasis provides a walk through history along hard paths beneath the date, fig and pomegranate trees.

Sednayah, the Santiago de Compostela of the Anti-Lebanon Mountains, is a picturesque village built around an old monastery that was a popular pilgrimage point during the Crusades. Christians considered it an essential stop on the way to Jerusalem and accrued plenary indulgences for the visit.

Many more sites and sights, too numerous to mention, make Syria a travelers' wonderland. Several worth mentioning include an ancient, beautifully painted and well-preserved synagogue, Dura Europos. It is one of the many interesting sites on the high plains of the Euphrates valley area. Crusader and Arabic fortresses dot the coastal plain, which are as impressive and massive as the Krak des Chevaliers. Roman ruins that are a day's march from each other feature well-preserved mosaics and unusual architectural syntheses.

Campers often choose to set up their tents near these sites and use the long weekends to explore little known and undeveloped areas. Hikers find many areas that provide a feast for their eyes as well as a feat for their feet. In the spring and fall many walking clubs take advantage of the Ghuta, an agriculturally developed oasis near Damascus, to enjoy the blossoms or the fruits of the lush orchards. Picnic and camping sites are not developed or equipped. You should plan to bring any camping or picnic gear that will make these outings more pleasant.

Outside Syria

Travel by car or plane is reasonably easy and inexpensive. Amman is four hours away by car. The Nabatean ruins at Petra, Roman ruins at Jerash, Jerusalem and Israel are only a few of the possibilities. Direct, short flights to Athens, Cairo, Dubai, Istanbul, Larnaca, Sanaa, and Vienna make tourism a relatively affordable hobby from Damascus.

Entertainment and Social Activities

Cultural life in Syria is multifaceted. The Syrian Government is in the process of building a multi-function arts complex that will include an opera house and a concert hall. Presently the Damascus Symphony performs at several different venues including the Asad Library auditorium. Some diplomatic missions sponsor artists and performers from their respective countries and a few have year-around schedules. The Russian Embassy has a once-a-month musical program that has featured classical quartets, classical and modern pianists, and full orchestras. USIS brings a variety of performers representative of the American music scene. Hotels sponsor travelling troupes. The Syrian Government's festivals in Aleppo, Bosra and during the Damascus Fair supplement the fall schedule. Most of these have a token fee or request a donation of \$2.00 to \$5.00.

Several formal dances or balls are held throughout the year, the highlight being the Marine Corps Birthday Ball that is well attended by the community. The oil companies sponsor a country and western night that includes foods flown in from the States and a live band.

Movie theaters in Damascus feature Egyptian, Jordanian and Syrian films as well as American, French and Italian. Most are in the original language and subtitled. Prices are inexpensive.

Life in Damascus can run late and is often organized around sumptuous meals. Food is a reflection of culture and civilization, and Damascus

has had over 7,000 years to develop its extensive and delicious cuisine. Arabic food, especially Lebanese and Syrian, are a gourmand's delight with flavor-filled sauces of creams and spices covering vine-ripened eggplant and zucchini stuffed with lamb, onions and pine-nuts. Restaurants of all categories and price ranges abound. There are few Oriental (Chinese and Japanese) restaurants in the city. The predominance of foreign food is either French or Italian. The hotels compete to provide bountiful buffets and schedule weeks featuring the foods of other countries, such as German week during Oktoberfest and a summer Fiesta Mexicana.

The American Women in Damascus (AWD), holds monthly meetings that feature programs on regional archeology, cultural life in Damascus, etc. This group often sponsors special activities including gourmet cooking presentations, handicrafts, card competitions (such as bridge, belot), exercise classes, old-city tours, and several fund-raising events throughout the year.

Ahlan wa Sahlan, sponsored by the wife of Syrian Vice President Khaddam, is another international group that is very active in Damascus and strives to include most foreigners in many social and cultural activities. Group meetings and locations are announced each month and programs include arts displays, music performances, haute cuisine demonstrations and tastings, and introductions to Syrian agroindustries including viticulture. There are nominal fees for membership in either of the above.

Aleppo

Aleppo, with a population of more than 2.2 million, is the second largest city in Syria. It played an important role in Islamic defenses during the Crusades and has competed with Damascus for predominance in area politics since the days of the Roman Empire. The citadel, an ancient fortress rising out of the center of town, dominates the view of the city. It casts its shadows on

the colorful bazaar that competes only with the souk in Damascus for variety.

Tourists use Aleppo as a base for visiting many “dead cities” of northern Syria dating back to Ugarit and Hittite ages. Ebla, an iron age center searched for by archaeologists for centuries and found recently, is just south of the city. Early Christian ascetics, such as Simon Stylites, made their base a few kilometers north of Aleppo.

The Aleppo Museum is second only to the National Museum in Damascus for collections in Ugarit, Hittite, early Greek and Roman artifacts from Syria. T.E. Lawrence and Agatha Christie sat on the balconies of the Baron Hotel, still open and popular, and wrote while sipping tea and admiring the sunsets. This train stop, now in the center of a congested part of downtown, is featured in “Murder on the Orient Express.”

Aleppo was a flourishing trade center during the 16th century, but its importance declined with the use of sea routes to India and the later opening of the Suez Canal. Twice, it was nearly destroyed by earthquakes—first in 1822, and again eight years later. Aleppo was the state of French mandate which united with Damascus in 1925 to form the state of Syria.

Located in the semi-desert region of northwest Syria, Aleppo is a commercial center where grains, cotton, and fruit are grown. A market for wool and hides, Aleppo manufactures silk, printed cotton textiles, cement, and dried fruits and nuts, especially pistachios.

Aleppo has an international airport and is connected to Damascus and Latakia by rail, as well as with Turkey and Iraq.

The University of Aleppo (founded in 1960), Aleppo Institute of Music (founded in 1955), and Muslim theological schools are located in the city. Landmarks include the 12th-

century Byzantine Citadel and the Great Mosque, built in 715.

Education

International School of Aleppo is a coeducational, day, company-sponsored school for children in kindergarten through grade 12. Founded in 1976 and sponsored by the International Center for Agricultural Research in the Dry Areas, the school offers a modified U.S. curriculum to about 100 students. Of the 49 staff members, 10 are American.

The school year runs from September to June, with a two-week vacation at Christmas and a one-week spring break. International School is located in a southwest suburb of Aleppo. Facilities include three buildings, 22 classrooms, science laboratories, playing fields, tennis courts, and a 3,000-volume library. The address of International School of Aleppo is: P.O. Box 5466, Aleppo, Syria.

Latakia

Syria's principal port, Latakia, lies on the Mediterranean Sea. It is situated in the center of a rich agricultural region. Since the completion of its deep-water harbor in 1959, it has exported cereals, raw cotton, asphalt, bitumen, fruit, and Latakia tobacco, which has been cultivated since the 17th century. Sponge fishing, vegetable oil milling, and cotton ginning are among the city's industries.

Historically, Latakia was the ancient Phoenician city of Ramitha, and later prospered as the Roman city, Laodicea ad Mare. It was captured by the Crusaders in 1098, and flourished in the 12th century. The city was part of the Ottoman Empire from the 16th century until World War I. Latakia was the capital of the Territory of the Alaouites from 1920 to 1942. Its current population exceeds 300,000.

Near Latakia is the site of the Canaanite city of Ugarit, which has produced many interesting artifacts now on display in the Damascus

Museum. Ruins of a Crusader castle are also a short distance from Latakia. Beaches abound here, but chemical pollution from the port is widespread, and care must be used in selecting a swimming place.

OTHER CITIES

DEIR-EZ-ZOR (also spelled Dayr-ar-Zawr and Dayr al-Zur) is located in eastern Syria on the Euphrates River. A prosperous farming town with a cattle-breeding center, an agricultural school, and salt rock mines nearby, Deir-ez-Zor is also a hub for trans-desert travel, and has an airport. The modern city was constructed by the Ottoman Empire in 1867 to halt the incoming Arab tribes of the Euphrates region. France occupied Deir-ez-Zor in 1921, making it the seat of a large garrison. Taken by the British in 1941, it became part of independent Syria in 1946. The population is approximately 150,000.

DER'Ā (also spelled Dar'ā), the chief city of the Hawrān region, is located 65 miles south of the capital, near the border with Jordan. There is no industry here, but the city is a market center and rail junction. Der'ā has Greco-Roman era ruins, as well as a 13th-century mosque. A pivotal battle was waged here in 636 that led to the decimation of the Byzantine forces and the Arab conquest of Syria. The population of Der'ā is well over 50,000.

HAMA lies on the Orontes River, about 75 miles south of Aleppo. With a population over 250,000, Hama is the market center for an irrigated farm region that grows cotton, wheat, barley, millet, and maize. Famous old waterwheels, some as great as 90 feet in diameter, bring water from the Orontes for irrigation. Hama is a road and rail center, with an airport nearby. The city manufactures cotton, silk, and woolen textiles, towels, carpets, and dairy products. Historically, Hama was settled as early as the Bronze and Iron Ages. It was often mentioned in the Bible as Hamath, the

northern boundary of the Israelite tribes. As part of the Persian Empire, Hama was conquered by Alexander the Great. It also was part of the Byzantine and Ottoman empires. Following World War I, Hama became a constituent of the French Levant States (League of Nations) mandate and, in 1941, part of independent Syria. Landmarks here include the remains of a Roman aqueduct that is still in use, and the Great Mosque of Djami al-Nuri, which was a Christian basilica until 638.

HASAKEH (also spelled Hasakah and Hassaka) lies on the Khābūr River, 340 miles northeast of Damascus. This is a major road junction and hub of a large irrigated farming district. Assyrian refugees from Iraq settled here during the French mandate of Syria in the early 1930s. The population of Hasakeh exceeds 75,000.

HOMS is located in west-central Syria, about halfway between Damascus and Aleppo, and near the Lebanon border. Situated on the Orontes River, it is a commercial center situated in a fertile plain where grapes, wheat, barley, and onions are grown. Items manufactured in the city include petroleum products, flour, fertilizer, processed foods, and silk, cotton, and woolen textiles. With a population of over 480,000, Homs is also a road and rail junction. Historically, Homs was called Emesa and was the site of a great temple to the sun god Baal. The city came into prominence in the third century when a priest from the temple became the Roman emperor Heliogabalus. Homs was part of the Ottoman Empire from the 16th century until after World War I, when it was part of the French mandate of the League of Nations.

RAQQA (also spelled Raqqah or Rakkah) is the capital of the governorate of the same name, situated on the left bank of the Euphrates River, 100 miles southeast of Aleppo. The ancient Greeks were the first known inhabitants of the Raqqa area, calling it Nicephorium.

A number of palatial homes were built here in early Arab times, when it was a base of operations against the Byzantines. Modern development began with the construction of the nearby Tabaqah Dam on the Euphrates in 1968. There is a museum in Raqqa featuring finds from area archaeological digs. A government team of archaeologists has excavated and restored edifices from the 'Abbāsid period here. The population of Raqqa is roughly over 87,000.

TARTŪS (also spelled Tartous) is the country's second port, with a population over 55,000. Located 42 miles south of Latakia on the Mediterranean, Tartūs dates to at least the fourth century. The city's museum, built by the Crusaders and formerly called the Cathedral of Our Lady of Tortosa, is considered a fine example of crusader architecture of the period. The ruins of the Castle of the Templars are in the older district. Tartūs is also the hub of a fertile agricultural area and is a fishing port.

COUNTRY PROFILE

Geography and Climate

The Syrian Arab Republic is at the eastern end of the Mediterranean Sea and at the northern end of the Afro-Asian Rift Valley. It abuts Turkey on its northern border; Iraq on its east; Jordan on the south; Israel, Lebanon and the Mediterranean on the west. Syria's area, approximately 185,000 sq. km. (71,500 sq. mi.), comprises several distinct climatic conditions. The western coastal plain is a narrow, fertile stretch of land that is the most humid area of the country, with milder winters and summers than the rest of the country. Due east in the Orontes River valley, the northern extension of the Afro-Asian rift, is a rich agricultural area that continues into the Bekaa Valley to the

south. East of the Orontes valley begins the desert region.

The largest cities of Syria: Damascus, Homs, and Aleppo are located on the eastern side of the mountain spine created by the rift. Further to the east is the Syrian Desert with its ancient oasis-city, Palmyra. In the northeast, the Anatolian Mountains serve as a natural barrier between Syria and Turkey, and Syria and Iraq. Here is found the Jazira Valley watered by the Euphrates River that is the grain belt of Syria. The oil fields of Syria are also in this area.

Damascus, the capital and one of the oldest continually inhabited cities in the world, rests at around 700 m. (2,300 ft.) above sea level on the Barada River in the southwestern section of the country. Climatic conditions in Damascus are comparable to those of cities in the southwestern United States. There are four seasons in the city with spring, winter and fall generally lasting eight to twelve weeks apiece. Summers can be long, dry, and hot. Short winters can be cold and rainy, with occasional snow. Average annual rainfall in Damascus has been 255 mm. (10 in.) in the past decade.

Temperatures in the city range from lows of 0°C (32°F) at night to highs of 20°C (68°F) during the day in the winter, and in the summer from 16°C (60°F) to 38°C (100°F). Though snow falls infrequently in Damascus, it does snow in the mountains near the city and some roads are impassible during these storms. The climate variation in Syria allows a robust agriculture with year-round availability of fruits and vegetables, most staple grains, and cotton.

Population

Syria's population is estimated at 16.7 million (2001 est.), with approximately 60% in the urban centers and the remainder comprising a strong agrarian rural minority. Population in the Damascus metropolitan area is estimated at around four million; Aleppo, the sec-

ond largest city, has 1.5 million people; and Homs 400,000.

Roughly 90% of the citizens are Arab. Other minorities include Armenians, Circassians, Kurds, and Turks. Around 74% of the populace is Sunni Muslim. Alawis and other Muslim sects account for 16% and the Christians 10%. There is a small and dwindling community of Jews in Syria.

Arabic is the official language of the country. Many professionals and businesspersons speak English. French is still widely spoken by educated Syrians, particularly the older generation. Some Syrians, especially the Druze, speak Spanish. Kurdish, Armenian, Syriac, and Circassian are other minority languages in use in Syria.

Public Institutions

Syria has a presidential form of government with dominant executive power held by the President. The daily operation of government is directed by a Prime Minister and a Council of Ministers. Legislation is vested in a unicameral body, the Syrian People's Council, composed of 250 members elected from lists prepared in various governorates but constitutionally representing the population at large. Syria has a judicial system based originally on the French Napoleonic Code. The highest court of appeal is the Court of Cassation (equivalent to the Supreme Court of the United States).

The most important political party in Syria is the Ba'th Party (est. March 1963). Its political slogan proclaims the principles of Arab unity, freedom, and socialism. Various factions of the Ba'th Party have ruled the country since 1963. The Constitution guarantees the Ba'th party a majority in the People's Council. Several smaller political parties, including the Communist Party, have joined with factions of the Ba'th to create a majority in the People's Council and provide most of the ministerial-level officials in the government. Syria's armed forces

and security services are an important factor in the political scene.

Two of the most important economic organizations are the Chamber of Commerce and the Chamber of Industry, reflecting Syria's business and agriculture-based economy. Many governmental and religious social organizations operate orphanages and hospitals in addition to private (for profit) health care providers.

Arts, Science and Education

Damascus maintains one of the best museums in the Middle East, housing samples of its immense history from Neolithic times to the arts and crafts of today. Entering through the Qasr alHair al-Gharbi facade that has been rebuilt from an Omayyad desert palace in Palmyra, one finds Hittite, Assyrian, Phoenician, Greek, Roman, and Islamic antiquities. There is a reconstructed underground tomb (hypogea), a synagogue (Dura Europos) and an elaborately detailed old Damascene house from the last century. Next door to the museum are the Suleimaniye Mosque, madrasa (school), and hospice. This classic Ottoman complex was designed and built around 1560 in Syrian fashion with black and white striped masonry and contains one of the loveliest gardens in Damascus. The complex houses the Army Museum and a handicraft market that displays all the traditional crafts of Syria. The Azm Palace, near the Omayyad Mosque (Islam's first great house of prayer) is located in the old city. Also built in Turkish design in the 18th century, it houses displays of everyday Damascene life, now long gone. Museums throughout the country capture the enormous diversity of the cultures and ages of Syria. Archeological sites from the Bronze Age (Ebla) through Graeco-Roman (Palmyra and Bosra) and Islamic/Crusader (Sulaiman's Fort, Krak de Chevaliers) are not only sites to see but also venues for cultural events that occur throughout the year.

Contemporary and modern art galleries are found around Damascus with frequently scheduled exhibitions. Other exhibits take place at the Arab Cultural Center, the Asad Library, the People's Gallery, and the exhibition hall of the National Museum. There are more than thirty Arab Cultural Centers throughout the country. Several embassies also operate cultural centers in Damascus, including the British, French, German, Russian, and Spanish.

The American Cultural Center, which was first established in the 1950's, houses a library with approximately 5,500 books, 120 magazines, video tapes, cassette tapes, and microfilms. The USIS library collection features sections on art, literature, history, Arabic translations, and reference works. Magazines include the major journals (*Time*, *Newsweek*, *U.S. News and World Report*); a variety of general interest publications; plus some highly specialized periodicals. Activities include film presentations, U.S. performing groups, art exhibits, and lectures.

A major opera house and conservatory are presently under construction in Damascus which will house the Damascus Music Conservatory (est. 1960), as well as one of the few symphonies and opera troupes of the Middle East. Scheduled for completion in 1996, it will offer a broad range of programs in the performing arts, including Arabic and Western music and dance. There is a music conservatory in Aleppo (est. 1964) as well. Music instructors of voice and instruments are available in Damascus, and instruments are available for purchase or rent.

Cultural activity in Damascus increases during the annual Damascus International Fair. Major cultural programs are sponsored by Bulgaria, France, Great Britain, Russia, Spain, and Yugoslavia. The Bosra Festival of the Performing Arts is held annually in September in the restored Roman amphitheater of Bosra, two hours drive south of Damascus.

Since independence, Syria's educational facilities have grown in quality and quantity. The literacy rate has increased to 70% (86% male, 56% female). Elementary education is theoretically compulsory; however, this is not enforced in cities and towns, and is not yet possible in all the smaller villages due to shortages of teachers and buildings. Bright Syrian students, nevertheless, are entitled to free education from elementary through university levels. The government has emphasized education as a major goal by establishing a system of teacher-training colleges. Vocational schools are available throughout the country. The Ministry of Education controls the curricula and teaching methods of primary and secondary schools, excluding those with exclusively foreign student populations or operating under a licensed foreign charter.

Damascus University and Syrian higher education date back to 1903 when Turkish rulers founded a school of medicine and pharmacy in Damascus. During the French Mandate, authorities added several more faculties to form the Syrian University, now known as Damascus University. This institution now encompasses nine separate locations in the city and enrolls 95,000 students, about 20% women.

Aleppo University, founded in 1961, was a joint effort by the Syrian Government and UNESCO, supplemented by the Ford Foundation. It is a modern university with faculties in engineering, agriculture, medicine, law, and letters. Enrollment exceeds 60,000. Tishrin University in Latakia, founded in 1977, includes the Maritime Institute and enrolls around 20,000. The Ba'th University of Homs, founded in 1979, is the newest in the Syrian university system. It features an agricultural facility in Hama and has a 10,000-member student body.

All universities are under the jurisdiction of the Ministry of Higher Education. Arabic is the language of instruction for all undergraduate work, although some French and

English literature courses are also taught in Arabic. Postgraduate work requires a functional knowledge of a foreign language. The system of education reflects French influence in organization, nomenclature of degrees, and method of teaching. Special Arabic classes for foreigners are offered at the Arabic Institute.

Commerce and Industry

Syria is a middle-income developing country, with a diversified economic base in agriculture and industry. Per capita gross domestic product is about \$3,100 (2000 est.).

Watered in the northeast by the Euphrates River and its tributaries, in the west by the Orontes and other mountain streams, and in the southwest by headwaters of the Yarmuk, Syria produces large quantities of wheat, barley, cotton, and other crops.

Situated astride the traditional trade routes linking Europe with the Arabian Peninsula and Asia, Syria has always had a large and dynamic merchant class. In the past decade, Syria has also become an important producer of crude oil. From the 1960s until recently, the government pursued nationalization policies to enlarge the industrial base. These included building cement factories, a steel mill, two oil refineries, a fertilizer plant, sugar refineries, grain silos, and flour mills that now supply most of the country's basic needs. Nationalization also affected Syria's financial, banking, and insurance sectors. Under government management, the competitiveness and efficiency of these enterprises have atrophied mainly due to monopolistic practices, overemployment, inadequate compensation of employees, and low rates of capital replenishment.

Syria's participation in the Gulf War coalition briefly gave the government access once again to substantial financial aid resources. These are being used to develop a

wide range of projects to rehabilitate the country's deteriorating infrastructure and public sector enterprises. That assistance, mostly from Arab countries and Japan, has allowed Syria to modernize its telecommunications systems, expand its electricity generation capacity to overcome serious power shortages, and recapitalize some public sector enterprises. However, nonpayment of debts to foreign creditors, including the U.S., has jeopardized the volume of future assistance.

Unlike other socialist governments, Syria never destroyed its merchant class, leaving agricultural production and trade in its hands. Thus, when the government passed a new investment incentive law in 1991 (Law #10), domestic private sector investment rose dramatically. Additional ad hoc economic liberalization measures have fostered this regeneration of private sector industry, such that private businesses now produce over half of Syria's GDP. However, Syria's inefficient and anachronistic government-run financial sector has severely inhibited Syrians, repatriation of capital invested abroad, as well as foreign investment. As the Syrian Government carries out the next steps of its incremental reform program, the private sector should respond with increased investment and it will take its rightful place at center state of the Syrian economy.

Today Syria exports crude petroleum, cotton, textiles, phosphates, sugar, and food products to Europe and to other Arab countries. Meanwhile, its main imports are raw materials essential for industry and agriculture, advanced oil field equipment, and heavy machinery used in the construction of infrastructure projects.

Transportation

Local

There is an extensive public transportation system within Damascus that includes buses and taxis, and "service" vans. City bus service is inexpensive, but generally crowded

Syrian man driving a three-wheel vehicle

Cory Langley. Reproduced by permission.

and hard to learn. The “service” system (shared vans that travel specific routes) is both cheap and efficient (vans are available practically every minute or two). It, too, however, requires knowledge of the established routes. Taxis, the most popular form of public transport for foreigners, are readily available and very inexpensive. Cabs are generally painted yellow and have a taxi emblem or light. They are also distinguishable by their red-lettered license plates. There are even radio-dispatched taxi services in the cities. Fares, usually on a meter, run from about 25SL to 50SL for most in-city travel. The fare to the airport is around 500SL and may be a fixed amount without the use of the meter. If the taxicab does not have a meter, fares should be agreed upon before entering the vehicle.

Although there are street names, most Syrians orient themselves by landmarks and well-known sites. If you know the street address of your destination, it is still useful to know a restaurant, hotel, government building, or embassy nearby that the locals use as reference.

Regional

It is relatively simple to travel throughout Syria using the public transportation systems. Climatized

buses with waiters offering on-board food and drink service, en route video presentations, and express destinations are available between major cities. Sample fares from Damascus to Aleppo average 100SL (\$2.38). Taxis are also available between most cities. One may either rent the whole vehicle or buy a seat. A Damascus to Aleppo taxi ride costs about 500SL (\$11.90); rental of the vehicle for the same trip is around 3,000SL (\$71.43).

Rental cars with drivers are available and moderately priced. One way trips to Aleppo and Latakia cost 4,500 to 6,500SL (\$108 to \$155) and round trips are prorated costing about 35% more than the one way fare. Trains operate on limited schedules to several cities around the country, but service and conditions are poor. Schedules of times and prices are available from the Ministry of Transportation.

All-weather roads exist between most Syrian cities and to many touristic sites throughout the country. The roads are of reasonable quality though most are traveled by heavy truck traffic and may be in varying states of repair. Driving is most dangerous at night when unlit parked cars or unlit moving cars are

traveling along the poorly lit highways.

International

International European carriers serve Damascus from Amsterdam, Frankfurt, Istanbul, London, Paris, Rome, and Vienna. Middle East carriers fly from Bahrain, Cairo, Dubai, Jeddah, Kuwait, Riyadh, Sanaa, Tunis, and other points. Syrian Air serves an expanded list of stops and has reciprocal agreements with smaller regional airlines that include flights to Larnaca and Beirut. These lists change every six months subject to economic and political considerations.

Communications

Telephones, Modems, and Fax

Syria’s telephone system is currently being revamped and updated. Generally, international service is good and local service is improving, though still subject to occasional interruption, throughout the country. Calls to the United States cost 125SL (approximately \$3.00) per minute from 8 am to 2 am local time. From 2 am to 8 am, the cost is 63SL per minute. PTT, the national telecommunications utility, generates phone bills almost one year late, and discrepancies are difficult to contest and resolve. Access to ATT, MCI, and Sprint is available from some numbers in Damascus and is recommended. Membership cards to any of these long distance companies should be obtained prior to arrival.

PTT requires that modem and fax users pay a 600SL fee for a data line

Radio and TV

Electronic media, i.e., radio and television, is government owned and operated in Syria. Radio Damascus, across several AM and FM bands, broadcasts primarily in Arabic, though there are several English and French language programs including short news presentations. Syrian TV has two channels. One channel broadcasts primarily in Arabic. Programming

includes Egyptian and Jordanian soap operas and features. The other channel has an eclectic mix of European and American serials and movies in either English or French. The European PAL and Middle East SECAM TV systems are used in Syria. Local specifications include 625 line screens, 220v, 50 cycle power units. U.S. standard (NTSC) television sets will not work and are not readily convertible. multi-system set that operates in SECAM and PAL is necessary. Local signals from adjacent countries can be picked up with a sufficiently large roof antenna

There are a few local cinemas that feature primarily Arabic movies and older American and French films that have been subtitled. They are not widely frequented by Westerners.

Printed Media

There is a limited selection of English, French, and Arab language newspapers and magazines available in Syria. Publications include the dailies: *International Herald Tribune*, *Middle East News*, *Syria Times*, and several from Cairo, Riyadh, and Amman. Weeklies include *The Economist*, *Newsweek*, *Paris Match*, and *Time*. There is some government censorship and papers arrive at the newsstands several days late. Technical journals (i.e., *Scientific American* et. al.) and special interest magazines (such as *Architectural Digest*, *Southern Living*, et. al.) are not generally available. Single copy prices can be considerably higher than you are accustomed to in the United States. Any subscriptions sent through international mail are subject to the same censorship regulations that are applied to newsstand sales and delivery may be additionally delayed.

Health and Medicine

Medical Facilities

Private medical care in Damascus is adequate for routine problems and very inexpensive. U.S. prescription

drugs and medicines (or their European equivalents) are generally available across the counter in Syria. Though you may not find a specific drug, and there can be shortages, most drugs and medicines can be ordered by the local pharmacists and the prices are generally lower than they are in the United States.

Several Damascus hospitals are equipped and competent for emergency cases and routine care. Nursing care, however, is substandard. The regional medical authority recommends medical evacuation for major surgery, pregnancy confinement and delivery, long-term hospitalization, and high risk care

Community Health

The city services include potable water at the tap, trash removal, street sweeping, and periodic spraying for flying insects.

The water provided by the city main has been tested periodically (several times per year over the past three years) and found acceptably free of impurities and drinkable. Nevertheless, there is always a risk in any urban community that purification processes may fail. Water in Damascus need not be boiled, but anywhere else in Syria it is recommended that boiled and filtered or bottled water be consumed.

Trash dumpsters (large green receptacles) are available on most streets in the city. Collections are scheduled daily and city regulations require that all trash be disposed of in plastic bags. There is no rigid observation of these rules, though the population seems to make considerable effort to keep Damascus a clean city. Street sweepers dressed in orange overalls are apparent in most neighborhoods.

Seasonally, the city management sprays a concentrated mix to control the mosquito population that breeds on and around the Barada River. Flies can also be a problem in the warmer months. Spraying is done by large tank trucks that pass through the neighborhoods in the

evening and morning hours. Larger insects (ants, silverfish and cockroaches) can be problematic on the lower floors of apartment buildings.

Preventive measures to safeguard personal health in Syria include verifying that all persons have necessary inoculations before arriving and completing any inoculation programs that may require boosters. Though Syria has a program of childhood immunizations, many childhood diseases exist in country, including chicken pox, measles, and mumps. There are cases of tuberculosis and cholera reported.

Though Damascus is clean by most urban standards, normal precautions against diseases including amoebic dysentery, typhoid, various errant parasites and hepatitis should be taken. Fresh fruits and vegetables should be washed and soaked in Clorox or Miltons before use and consumption. Dining out requires some conscious decisions about what may or may not be eaten.

Seasonal weather changes that raise dry, dusty air can cause sinus and other upper-respiratory infections. These can be aggravated by the smog and strong desert winds. Humidifiers often relieve some of this discomfort and are recommended.

NOTES FOR TRAVELERS

The best way to reach Damascus is by air. Transfer points through Europe include Amsterdam, Athens, Frankfurt, London, Paris, and Rome. Alternatively one can arrive from Amman or Cairo, though these are neither as efficient nor as simple. Be sure to book your travel early and clearly as there are two peak travel seasons in Syria corresponding to the spring and fall, and peak travel season through Europe is in the summer. Travel to and through the Middle East is not as simple or efficient as in Europe or

the U.S. Make sure that you have all your necessary travel documents.

A passport and a visa are required. Visas must be obtained prior to arrival in Syria. The government of Syria does not allow persons with passports bearing an Israeli visa or entry/exit stamps to enter the country. Similar restrictions apply to persons born in the Gaza region or who are of Gaza descent. Entry into Syria via the land border with Israel is not possible. Foreigners who wish to stay 15 days or more in Syria must register with Syrian immigration authorities by their 15th day there. American men between the ages of 18 and 45 who are of Syrian birth or recent descent are subject to the Syrian compulsory military service requirement unless they receive a temporary or permanent exemption from the Syrian Embassy in the United States prior to their entry into Syria.

U.S. citizens are encouraged to carry a copy of their U.S. passports with them at all times, so that, if questioned by local officials, proof of identity and U.S. citizenship are readily available.

An AIDS test is not required for foreigners prior to arrival in Syria; however, tests are mandatory for foreigners age 15 to 60 who wish to reside in Syria. The AIDS test must be conducted in Syria at a facility approved by the Syrian Ministry of Health. A residence permit will not be issued until the absence of the HIV virus has been determined. Foreigners wishing to marry Syrian nationals in Syria must also be tested for HIV. For further entry information, travelers may contact the Embassy of the Syrian Arab Republic, 2215 Wyoming Ave. N.W., Washington, D.C. 20008, telephone (202) 232-6313 or check the Syrian Embassy's home page on the Internet at <http://www.syrianembassy.org>.

American citizens are cautioned that the Syrian government rigidly enforces restrictions on prior travel to Israel. Travelers with Israeli stamps in their passports, Jordanian

entry cachets, or cachets from other countries that suggest prior travel to Israel will cause Syrian immigration authorities to refuse the traveler admission to Syria. Likewise, the absence of entry stamps from a country adjacent to Israel, which the traveler has just visited, will cause the Syrian immigration officials to refuse admittance. American citizen travelers suspected of having traveled to Israel have been detained for questioning.

Syrian security officials are also sensitive about travel to Iraq. There have been instances in which Iraqi-Americans or Americans believed to have traveled to Iraq were detained for questioning at ports of entry/exit.

Syrian customs authorities may enforce strict regulations concerning temporary importation into or export from Syria of items such as weapons, narcotics, alcohol, tobacco, cheese, fruits, pharmaceuticals, modems, cosmetics, and some electrical appliances. It is advisable to contact the Embassy of Syria in Washington, D.C. for specific information regarding customs requirements.

Americans living in or visiting Syria are encouraged to register at the Consular Section of the U.S. Embassy in Damascus and obtain updated information on travel and security within Syria. The U.S. Embassy is located in Abu Roumaneh, al-Mansur Street No. 2, P.O. Box 29, Damascus. The telephone numbers are [963] (11) 333-2814, 332-0783, 333-0788, and 333-3232. The fax number is [963] (11) 331-9678. The Embassy is open Sunday through Thursday.

Pets

Pets should arrive with all of the proper inoculations, including rabies. A certificate not older than 60 days from a licensed veterinarian showing current and valid inoculations is a requirement for animals entering the country. No quarantine is required. Non-diplomatic personnel should be prepared to pay duty

on imported pets as they are not considered personal property. The duty is calculated on the shipping charges, not on a declared value. There are veterinarians, though services may not meet U.S. standards. Animal medicines are not readily available and are more expensive than in the United States.

Dogs must always be walked on leashes since there is an official government dog-removal program. All housing in Damascus is apartment style. Very few are garden apartments with enclosed outdoor areas. Large animals may be uncomfortable in small, enclosed homes.

Currency, Banking, and Weights and Measures

The Syrian Lira or Pound (SL) is a controlled currency. It cannot be exchanged for any other currency except at government-approved exchange centers within Syria, and it cannot be changed back into foreign currency. Travelers must declare all foreign currency when they enter Syria. There are no foreign banks and few ATMs in Syria, and it is impossible to wire or otherwise transfer money from the United States to Syria. Credit cards are not generally accepted in Syria.

The current exchange rate is 46.00SL to US\$1.00 (May 2002).

Syria uses the metric system of weights and measures.

TAIWAN

Republic of China

Major Cities:

T'aipei, Kaohsiung, T'aichung, T'ainan

Other Cities:

Chiai, Chungli, Hsinchu, Hualien, Keelung, T'aitung

INTRODUCTION

The island nation of **TAIWAN** is a dynamic, vibrant country. Since its creation in 1949, Taiwan has transformed itself from an underdeveloped, agricultural island to an economic power that is a leading producer of high-technology goods. Taiwan has moved from being a recipient of U.S. aid in the 1950s and early 1960s to an aid donor and major foreign investor, especially in Asia. Today, Taiwan has one of the largest capitalist economies in the world. Taiwan is the world's 13th largest trading power and its population enjoys the highest standard of living in Asia after Japan and Singapore.

Taiwan is a popular tourist destination. Visitors from all over the world come to Taiwan to experience the country's well-preserved Chinese art, culture, beautiful natural scenery, and pleasant subtropical climate.

In recent years, Taiwan has cultivated better cultural and political relations with its giant neighbor, the People's Republic of China. The Taiwanese hope to ease years of hostility between the two countries and bring economic reform and development to the Chinese mainland.

MAJOR CITIES

T'aipei

With a metropolitan population of nearly 2.9 million, T'aipei is Taiwan's capital and largest city. T'aipei is located in extreme northern Taiwan in a basin crossed by the Hsintien, Keelung, and Tamsui rivers. The city's climate is characterized by a short, mild winter and a long warm-to-hot summer. Temperatures in T'aipei reach an average high of 96°F (36°C) in July and an average low of 52°F (10°C) in February.

T'aipei was first settled in the 17th century and had developed into a prosperous trading center by the mid-19th century. A wall was erected around the city in 1882. Taiwan was occupied by the Japanese in 1895 and T'aipei was chosen as the colonial capital. The city grew rapidly in size and population. By 1932, T'aipei had over 300,000 residents. The Japanese were forced from Taiwan in 1945. Chiang Kai-shek and his Nationalist Army fled to Taiwan from China in 1949 after being defeated by Mao Tse-tung's Communist forces during mainland China's civil war. T'aipei was designated as the capital of the new Republic of China.

Today, T'aipei is Taiwan's political, commercial, and cultural center. The city has also developed many thriving industries. T'aipei's industries produce a wide array of products including canned goods, handicrafts, machinery and household appliances, and electronic equipment. T'aipei is the transportation center for northern Taiwan. Excellent roads, railways, and air links connect T'aipei with other cities throughout the island. Most of Taiwan's institutions of higher learning are also located in T'aipei. These include the National Chengchi University, the National Taiwan Normal University, and the National Taiwan University.

Recreation

T'aipei is a bustling city that offers wonderful recreational activities. The city has many beautiful museums and temples that are of interest to visitors. The most popular museum in T'aipei is the National Palace Museum, which houses the largest collection of priceless Chinese art treasures in the world. Paintings, calligraphy, and beautiful artifacts of porcelain, jade, and bronze spanning several centuries are located in the museum. Another museum, the T'aipei Fine Arts Museum, contains many wonderful examples of contemporary Chinese art. The T'aipei Fine Arts Museum sponsors cultural exchanges

between Chinese artists and artists from all over the world. Other interesting museums in T'aipei include the Taiwan Provincial Museum, which offers exhibits chronicling the history of Taiwan's aboriginal tribes, and the National Museum of History.

Most Taiwanese are adherents of the Buddhist and Taoist religions. As a result, there are thousands of temples located throughout Taiwan. In T'aipei, there are three major temples. The Lungshan (Dragon Mountain) Temple is a Buddhist temple dedicated to Kuan Yin, the goddess of mercy. Many visitors will enjoy viewing this impressive structure, which is considered one of the most striking examples of Chinese temple architecture in Taiwan. The Confucian Temple, located in the heart of T'aipei, is an oasis of calm in the midst of hectic urban life. This temple, with its gorgeous formal gardens, offers T'aipei residents a quiet place to pray and reflect. Another beautiful structure, the Hsingtien (Soar to Heaven) Temple, is the largest Taoist temple in T'aipei.

T'aipei offers many sight-seeing opportunities. The Grand Hotel, one of T'aipei's largest hotels, is a favorite stop for tourists. The lobby of the hotel, with its fourteen-yard wide marble staircase, forty-two red pillars, and huge gold-loom carpet, is the largest in the world. Sightseers can walk through downtown T'aipei and view the gates of a wall that once encircled the city.

Also in downtown T'aipei is the impressive Chiang Kai-shek Memorial Hall. Constructed in 1980, this building exhibits classical Chinese architecture. The Chiang Kai-shek Memorial Hall is part of a large park and cultural complex that includes the National Concert Hall and National Theater.

The Presidential Office, a red-brick structure with tall spires, is also an impressive structure. In the plaza in front of the Presidential Office, the Taiwanese flag is raised in the morning and lowered at nightfall

during daily ceremonies. Visitors may enjoy viewing this event.

Another important tourist destination is the Sun Yat-sen Memorial Hall. This hall contains a fine art gallery of modern art, an auditorium, and a large library containing over 140,000 volumes. Animal lovers will enjoy visiting the T'aipei City Zoo, which is among the largest in Asia. The zoo has over 3,000 animals from 300 different species, in addition to a butterfly aviary.

On the outskirts of T'aipei, the Yangmingshan National Park attracts many residents and tourists alike. Situated on Yangming Mountain, the park has beautiful azalea and cherry trees which, when blooming, draw thousands of visitors.

Entertainment

Entertainment opportunities, such as concerts, shopping, and fine dining, are plentiful in T'aipei. Classical music performances by international artists and T'aipei's own City Symphony Orchestra are offered nightly at the National Concert Hall. Several dance troupes perform traditional Chinese folk dances frequently at the National Theater. The National Theater also hosts Chinese operas and dramatic plays which are of interest to visitors.

Shopping opportunities for gifts and souvenirs are plentiful throughout T'aipei and prices are generally reasonable. Shops along Can Ya Tsai and Chungshan North Road offer excellent coral, coral jewelry, curios, rare coins, jewels, and porcelain items. Jade can also be purchased in T'aipei, but it is very expensive. For the adventurous, a large flea market opens every Saturday and Sunday, under the city's Kuanghua Bridge. Jade and gems, among many other items, are available for sale. Trading at the flea market is done at a hectic pace and tourists should have some knowledge of appropriate prices before attempting to make a purchase. Tourists can find wonderful gift and souvenir items at the National Palace

Museum store. This store offers excellent reproductions of calligraphy and paintings found inside the museum and sells them at reasonable prices.

Opportunities for dining, from luxurious to simple cuisine, are readily available in T'aipei. Taiwan is noted for its fine Chinese dishes and over 1,000 excellent restaurants are available throughout the city.

Kaohsiung

Kaohsiung is Taiwan's principal international port and a major industrial city. Located in southwestern Taiwan, Kaohsiung has a population of approximately 1.5 million people and covers an area of 59 square miles making it the country's second largest city. Kaohsiung has a pleasant climate, with warm, mild winters and long summers. Yearly temperatures in the city average between 75°F (24°C) and 90°F (32°C).

Kaohsiung is the world's third largest container port after Hong Kong and Rotterdam (the Netherlands). The city is a major export center for the rice, sugar, groundnuts, bananas, and citrus fruits grown in southern Taiwan's fertile agricultural regions. Kaohsiung is home to several thriving industries. These industries produce aluminum, textiles, petrochemicals, refined sugar, paper, bricks and tile, fertilizers, and cement. A large industrial complex, the 5,500-acre Linhai Industrial Park, is located near Kaohsiung's excellent port facilities. This thriving industrial park contains many industries, including a steel mill and a large petrochemical facility. The city has several large fisheries and a thriving fish canning industry. Kaohsiung is also an educational center, with three universities, and four junior colleges.

Recreation

Kaohsiung offers ample sight-seeing opportunities. Shou Shan (Long Life Mountain) is located in the city and offers visitors excellent views of Kaohsiung. One of the most popular

tourist destinations in Kaohsiung is Lotus Lake. This resort area contains several beautiful, distinctive structures such as the Dragon and Tiger Pagodas, the Spring and Autumn Pavilions, and a large Confucian temple. For those who enjoy sun and surf, Kaohsiung's Hsi Tzu Bay beach offers visitors beautiful sand and clear waters.

Many tourist attractions are located outside of Kaohsiung proper. South of the city is a large mountain known as Fo Kuang Shan (Buddha Torch Mountain). This mountain contains a massive Buddha statue measuring 82 feet tall and is surrounded by nearly 500 other Buddhist figurines. Fo Kuang Shan is not only a noted tourist site, but an important pilgrimage destination for Buddhists from Taiwan and all of Southeast Asia.

Perhaps the largest and most popular tourist resort south of Kaohsiung is the Cheng Ching Lake Resort. Located only a few minutes from the city, Cheng Ching offers wonderful sight-seeing opportunities. The resort, which is spread out over several miles, contains several beautiful pavilions, a distinctive zig-zag-shaped bridge, a large aquarium, a recreational center, and an avenue filled with orchids that is perfect for a relaxing late-afternoon stroll. The Chung Hsing Pagoda, which is one of Taiwan's most famous monuments, is also located at the resort. Below the Chung Hsing Pagoda, an 18-hole golf course, owned by the Kaohsiung Golf and Country Club, allows visitors to play a game amid beautiful rolling hills.

T'aichung

Taiwan's third largest city, T'aichung, has a population of approximately 800,000. Located in west-central Taiwan, T'aichung was founded by a group of Chinese settlers in 1721 and given the name Tatan. The city received its current name in 1895 when the Japanese took control of Taiwan. The Japanese embarked on major construction projects in T'aichung and, by

1945, had transformed it into a modern city. From 1948 until 1977, T'aichung's population nearly tripled and today the city occupies an area of over 60 square miles. T'aichung is located in a rich agricultural region and is central Taiwan's principal trading center for bananas, sugar, and rice. T'aichung is linked by rail and roadway with T'aipei and other Taiwanese cities.

Recreation and Entertainment

T'aichung's major tourist attraction is the Happy Buddha of T'aichung, which, at 88 feet, is Taiwan's largest statue. Most recreational activities are located outside of the city, however. Souvenir shoppers will thoroughly enjoy visiting the Taiwan Provincial Government's Handicraft Exhibition Hall. Situated 12 miles south of T'aichung in the town of Tsaotun, this hall offers opportunities to buy lanterns, tableware, jewelry, jewel boxes, toys, and other handicrafts created by Taiwanese artisans.

For those who enjoy outdoor recreation, the Chitou Forest Recreation Area and Sun Moon Lake are two important destinations. The Chitou Forest Recreation Area, located 50 miles south of T'aichung, covers over 6,000 acres of land and is the site of Taiwan's largest bamboo forest. One notable attraction is a cypress tree that is nearly 3,000 years old and 151 feet tall. The interior of the tree is hollow and visitors are allowed to peer upward from an observation platform at the base of the tree. Approximately 50 miles southeast of T'aichung, the Sun Moon Lake is a popular resort area that offers ample sight-seeing opportunities. Among the notable structures at Sun Moon Lake are the Hsuan Chuang Temple, the Wen-Wu Temple, and the Tzu En Pagoda which, at 150 feet, is the tallest pagoda in Taiwan.

T'ainan

Situated in southwestern Taiwan, T'ainan is the country's oldest city. From 1684 to 1887, T'ainan served

as the capital of Taiwan. Today, with a population of approximately 695,000, T'ainan is Taiwan's fourth largest city. The city is nestled in a highly productive agricultural region and serves as southwestern Taiwan's trading center for peanuts, sugarcane, rice, and fruits. Several major industries are located in T'ainan. These industries produce a wide variety of products, including rubber goods, chemicals, textiles, refined sugar, plastics, processed foods, and electrical appliances. T'ainan's location near the Formosa Strait, the body of water separating Taiwan from the Chinese mainland, has led to the development of several large fisheries. The city has many artisans known for their gold and silver handicrafts.

Recreation and Entertainment

T'ainan is known as a city of temples, with over 200 temples in and around the city. Many tourists enjoy visiting these beautiful temples. T'ainan is the home of one of the country's oldest Buddhist temples, the Kaiyuan Temple. Another temple worth seeing is the Confucian Temple. Constructed in 1665, it is the oldest Confucian temple in Taiwan and is viewed by many experts as Taiwan's most beautiful example of Confucian temple architecture.

Two other tourist attractions are located a short drive from T'ainan. Located approximately 20 miles from T'ainan is Coral Lake. This lake is part of a 23.2 square mile resort complex that is popular among both tourists and native Taiwanese. This lake, which contains over one hundred islets, is a favorite boating spot for tourists, while the forested areas around Coral Lake are ideal for camping and hiking. Coral Lake is fed by the Tsengwen Reservoir, which is located 37 miles northeast of T'ainan and is also considered an interesting place to visit.

The Tsengwen Reservoir was created when a large hydroelectric dam was constructed on the Tsengwen River in 1973. With an area of nearly seven miles, the Tsengwen Reservoir is Taiwan's largest lake.

Cruising the Tsengwen Reservoir in rented motorboats is a popular tourist activity.

OTHER CITIES

The western city of **CHIAI** is located in a fertile agricultural region. Chiai has developed over the years into a trading center for rice and sugar grown near the city. The hills surrounding Chiai are heavily forested, which has led to the development of a thriving lumbering industry. Several industries are located in Chiai. These industries produce paper, plywood, cement, and tires. Chiai is linked by rail and roadway with T'aipei and Kaohsiung. In 1987, Chiai had a population of approximately 265,000.

CHUNGLI is situated on the Hsin-Chien River in northwestern Taiwan. It is one of northwestern Taiwan's principal industrial cities. Factories in Chungli produce textiles and milled rice. Sweet potatoes, rice, and tea are grown near the city. A major freeway and railway connects Chungli with T'aipei, which is located approximately 20 miles northeast of Chungli. Chungli had a population of 314,000 in 1998. Current population figures are unavailable.

HSINCHU is an industrial city in northwestern Taiwan. Industries within the city produce textiles, glass, cement, and fertilizers. Hsinchu is the site of Taiwan's largest oil field and, since 1980, has developed into a center for technology and research. The land surrounding Hsinchu is extremely fertile and supports the growth of citrus fruits, tea, and rice. The city had a population of just over 356,000 in 1998.

A major international port, **HUALIEN** is eastern Taiwan's largest city. Situated on the Pacific Coast, the city is connected to the western town of T'aichung by the East-West Cross-Island Highway. Hualien is the primary eastern departure point for tours to T'aichung via this scenic highway. Economic activity

around Hualien is centered around agriculture, particularly the growth of camphor, sugarcane, jute, and rice. Hualien is located in an area that is prone to severe earthquakes. The city was heavily damaged by an earthquake in 1951, but has been completely rebuilt. Hualien has an estimated population of over 360,000.

The northern city of **KEELUNG**, located approximately 16 miles northeast of T'aipei, is one of the country's major ports. Many imported products destined for T'aipei enter the country through Keelung's port facilities. The city's location near the East China Sea has led to the development of large shipbuilding and fishing industries. Other industries in the city produce cement and fertilizers. Keelung is connected with T'aipei and other Taiwanese cities via railway and several modern highways. The city receives a heavy amount of rainfall throughout the year, particularly from March through October. Keelung's primary tourist attraction is a 74 foot tall marble statue of the Buddhist goddess of mercy, Kuan Yin, which is situated on a hill above the city. Keelung has a population of approximately 385,000.

T'AITUNG is situated on the Peinan River in southeastern Taiwan. The city, which is located in a fertile agricultural region, has developed into a trading center for rice, peanuts, and sugarcane. T'aitung is home to several industries which produced milled sugar, and processed timber and jute. The city has excellent road, rail, and air links with Kaohsiung and T'aipei. T'aitung had an estimated population of over 109,000.

COUNTRY PROFILE

Geography and Climate

The island nation of Taiwan, formerly Formosa, lies approximately

100 miles southeast of the Chinese mainland. It is situated between the East and South China Seas. Taiwan also controls the Pescadores Islands on the western coast of Taiwan as well as twenty small islands off the coast of mainland China. Taiwan, the Pescadores and other island territories comprise a total area of 13,885 square miles, roughly the size of Connecticut and New Hampshire combined.

A mountain chain runs the entire length of Taiwan from north to south. The eastern sections of Taiwan are also very mountainous and covered with forests. However, the western side of the island contains numerous rivers, gentle slopes and fertile soil. Most of Taiwan's cities and agricultural production are located on the western side of the island.

Taiwan has a tropical climate. Summers are hot and humid with very heavy rainfall. The period between November and March is somewhat cooler and drier. The island periodically experiences damaging earthquakes and typhoons.

Population

In 2000, Taiwan had an estimated population of 22.3 million people. More than 84% of the population are native Taiwanese descendants of Chinese immigrants from crowded coastal regions of mainland China. Refugees who fled after the Communist takeover of the mainland comprise 14% of the population. A small minority of aborigines, mostly of Malayo-Polynesian descent, reside in mountainous regions of the island.

A vast majority of Taiwanese speak Mandarin Chinese. However, other Chinese dialects are spoken also. As a result of Japan's fifty-year control of Taiwan, many elderly Taiwanese speak Japanese.

Taoism and Buddhism are the predominant religions of Taiwan. Confucianism is widely practiced. A handful of Chinese Muslims also inhabit the island. Christian mis-

Susan Rock. Reproduced by permission.

Parade in commercial district of Keelung

sionaries have been active in Taiwan for many years. As a result, a Christian minority of 600,000 live in Taiwan. Most of these Christians are Protestant. Estimated life expectancy in 2001 was 74 years for males, 80 years for females.

History

The Chinese are believed to have traveled to Taiwan as early as 500 A.D. However, the island was sparsely populated until 1624. In that year, the Dutch began to use Taiwan as a trading post for their burgeoning commercial markets in Japan and China. Dutch colonists administered the island until 1661. During the years of Dutch administration, many Chinese began to emigrate to Taiwan to escape political turmoil on the mainland. Manchu China ruled Taiwan until it was declared a Chinese province in 1886. In 1895, after a disastrous war with Japan, China was forced to relinquish control of Taiwan to the Japanese.

Under Japanese administration, Taiwan developed efficient transportation networks and farming techniques. The Japanese created an advanced educational system and a thriving market economy. Following the defeat of Japan in World

War II, Taiwan was administered by General Chiang Kai-shek and his Nationalist Chinese forces.

When the Communist government of Mao Tse-tung seized control of the Chinese mainland in 1949, Chiang Kai-shek and nearly 500,000 Nationalist troops were forced to flee to Taiwan. They were soon followed by two million other refugees. In 1950, Chiang Kai-shek announced the creation of the Republic of China with Taipei as the capital. The United States established diplomatic relations and provided massive amounts of military and financial aid to the new nation. The Republic of China lost its United Nations membership in 1971 when the General Assembly voted to recognize the People's Republic of China as the sole legitimate representative of China. Taiwan suffered a severe blow when the United States broke off diplomatic relations with Taiwan in 1979 and established diplomatic ties with the People's Republic of China. However, commercial ties between Taiwan and the United States remain strong.

Government

For many years, Taiwan's government was a one-party system dominated by Chiang Kai-shek's Nationalist (Kuomintang) party.

Chiang established the office of president in 1950 and served in that capacity until his death in 1975. He was succeeded by his son Chiang Ching-kuo, who governed Taiwan until his death in 1988. In March 1989, opposition political parties were legalized and Taiwan became a multi-party democracy. Lee Teng-hui was elected president in 1988 and re-elected to a six-year term in 1990. In 1996 he was reelected to a four-year term by popular vote in Taiwan's first direct election for president. In March 2000, Democratic Progressive Party candidate Chen Shui-bian became the first opposition party candidate to win the presidency. His victory resulted in the first-ever transition of the presidential office from one political party to another.

According to the 1947 constitution, the president and vice-president are elected by the National Assembly. The National Assembly is an elected body that had 334 delegates in 1997. It has the power to amend the constitution and the powers of initiative and referendum.

Taiwan's government consists of five administrative branches, or yuan. The Executive Yuan is responsible for policy and administration. It is elected by the president, with the consent of the Legislative Yuan. The 164-member Legislative Yuan is Taiwan's primary lawmaking body and the highest legislative organ in the state. In 1997, the Nationalist (Kuomintang) Party held 83 seats. The Nationalist Party's closest rival, the Democratic Progressive Party, has 54 seats.

The Control Yuan is an elected body which investigates political corruption and the efficiency of public service. The Judicial Yuan is the highest judicial body in Taiwan and is responsible for judging all criminal, civil and administrative cases. It includes a 17-member Council of Grand Justices who interpret the constitution. Also, the Judicial Yuan controls cases concerning disciplinary measures against public officials. The Examination Yuan supervises examinations for entry

into public offices and deals with personal questions of the civil service.

Martial law, which had been in effect for 38 years, was lifted in July 1987. The Taiwan government also ended its formal state of war with the People's Republic of China in May 1991. In December 1991, the terms of any remaining original "indefinite" deputies expired (Taiwan's original delegates of 1947 held their seats in perpetuity).

The flag of Taiwan consists of a red field with a blue rectangle in the upper-left corner. The blue rectangle contains Taiwan's national emblem, a twelve-point white sun.

Arts, Science, Education

Since 1968, a nine-year compulsory education system has been provided at government expense. In that year, the curriculum was revised to put more emphasis on science while maintaining Chinese cultural tradition. Six years of elementary school and three of junior high school are required of all students. In order to attend high school, junior high schoolers must pass examinations. Vocational schools offer three-year programs that stress industrial and commercial training, agriculture and fishing.

Taiwan has a highly developed system for college study. As of 1997, there are over 100 institutions of higher learning in Taiwan. Opportunities for graduate education are also increasing. An extensive series of examinations are conducted in order to select students for higher education.

In the 1980s, the Taiwanese government relaxed many restrictions that prevented students from studying abroad. Increasing numbers of students attend college in Japan, Europe and the United States. Taiwanese college and graduate students are particularly interested in engineering, computer science, nat-

ural science and business management programs.

There is also a system of education for adults. This is designed to improve the general knowledge of adults and increase the literacy rate. Courses in language, arithmetic, music and vocational skills are offered.

Taiwan has one of the world's highest literacy rates (91%).

Commerce and Industry

Since the 1960s, Taiwan's economy has experienced tremendous changes. Large amounts of foreign investment from Japan, Western Europe and the United States has transformed Taiwan from an agricultural to an industrial country. Taiwan is also intensively striving to develop its high-technology industries.

Foreign trade has been the backbone of Taiwan's economy for three decades. Taiwan's largest trading partner is the United States. Taiwan imports American farm products, raw materials and capital equipment while exporting textiles, clothing, electronic goods and light industrial products to the United States. The United States and Japan account for more than half of Taiwan's foreign trade. Other trading partners include Hong Kong, Germany, Great Britain, Kuwait, Indonesia, Saudi Arabia and Australia.

Taiwan's agricultural sector is highly productive. Although Taiwan is a small island, her arable land is extensively developed. Taiwan is self-sufficient in rice production, but imports other grains from the United States. Primary agricultural exports include rice, bananas, pineapples, sugarcane, sweet potatoes, peanuts, tea and asparagus. Also, Taiwan has a well-equipped fishing fleet and is one of the world's largest exporters of fresh fish.

Taiwan has few mineral deposits. Small reserves of coal, limestone, natural gas and marble are available. To fuel continued industrial growth, Taiwan imports large amounts of oil, chemicals and machinery.

In 2000, Taiwan had a gross domestic product (GDP) of \$386 billion dollars. Exports amounted to \$148.4 billion that year. Because of this heavy reliance on exports, Taiwan's economy is vulnerable to economic downturns in its principal markets.

The currency of Taiwan is the New Taiwan dollar.

Transportation

In 1995, Taiwan had an estimated 12,450 miles of roadway, of which 85% were paved. There are two modern expressways on the island. The North-South Freeway was completed in 1978 and links Taiwan's major cities. In July 1987, construction began on the Northern Taiwan Second Freeway. It opened to traffic in late 1992. There were approximately 4.1 million passenger cars and 850,000 commercial vehicles in use in 1995.

Domestic and international flights to Taiwan are readily available. Taiwan's largest airline is China Airlines (CAL). In addition to domestic flights, China Airlines supplies international service to the United States, Japan, the Philippines, Malaysia, Singapore, United Arab Emirates, South Korea, Indonesia, Thailand, Saudi Arabia and the Netherlands. Taiwan has two modern international airports. Chiang Kai-shek Airport, opened in 1979, is located at Taoyuan near T'aipei. Kaohsiung Airport is located on the southwestern corner of the island and offers daily flights to Hong Kong.

Taiwan has a well-developed shipping industry with four international ports at Kaohsiung, Hualien, Keelung and T'aichung.

Communications

Taiwan had an estimated 8.6 million radios and 6.7 million televisions in 1993. There were approximately 186 broadcasting stations in 1993. The main radio broadcasting service is the Broadcasting Corporation of China (BCC). BCC operates nine domestic stations and offers foreign services on shortwave frequencies. English transmissions can be heard on the Voice of Free China.

English newspapers and periodicals are available in T'aipei. These include: *China News*, *China Post*, *Free China Review*, *Free China Journal*, *Issues and Studies*, *National Palace Museum Bulletin*, and *Sinorama*.

Taiwan has excellent telephone and telegraph services. However, international calls made from Taiwan can be expensive.

NOTES FOR TRAVELERS

Passage, Customs & Duties

A passport is required. Travelers can obtain a visa prior to arrival in Taiwan at a Taipei Economic and Cultural Office (TECO) in the U.S. (maximum 60 day stay), apply for a landing visa upon arrival (maximum 30 day stay), or apply for entry under the Visa Waiver Program (14 day stay). Taiwan previously required that U.S. visitors to Taiwan hold passports valid for at least six months from the date of expected departure. In some instances, this is no longer the case: Taiwan now considers U.S. passports valid for return to the United States for six months beyond the expiration date of the passport. If the passport contains a Taiwan visa issued abroad, the traveler may be admitted for up to sixty days even if the passport will expire during the period of stay. If the traveler applies for a landing visa upon arrival, he or she will be admitted for 30 days or up to the day the passport expires, whichever comes first. A traveler who applies for entry under the Visa Waiver Program must have a passport valid for six months after the planned departure date.

No extension of stay or change of status is allowed if the traveler enters on the Visa Waiver Program.

Unofficial relations with the people of Taiwan are conducted through the American Institute in Taiwan (AIT), whose offices are authorized

by law to perform American citizen services. U.S. citizens are encouraged to register at AIT Taipei or AIT Kaohsiung, and to obtain updated information on travel and security. Registration can be done on-line by visiting the AIT web-site at <http://www.ait.org.tw>. The American Institute in Taiwan does not issue U.S. passports, but it accepts passport applications and forwards them to the Passport Agency in Honolulu for processing. Processing time takes three to four weeks. In an emergency, the American Institute in Taiwan can issue a travel letter to permit a U.S. citizen who has lost a passport to return to the United States or to travel to Hong Kong where he or she may apply for a passport at the U.S. Consulate General.

For assistance, U.S. citizen travelers may contact the American Institute in Taiwan at No.7 Lane 134, Hsin Yi Road Section 3, Taipei, Taiwan, telephone (886-2) 2709-2000; fax (886-2) 2709-0908; or the American Institute in Taiwan branch office at No. 2 Chung Cheng 3rd Road, 5th Floor, Kaohsiung, Taiwan, telephone (886-7) 238-7744; fax (886-7) 238-5237. AIT's citizens services section can also be contacted by e-mail at aitamcit@mail.ait.org.tw. In case of emergencies after working hours, the duty officer at the American Institute in Taiwan at Taipei may be contacted at telephone (886-2) 2709-2013.

Currency

The New Taiwan dollar (TWD) has an exchange rate of about 33.08TWD=US\$1 (2000).

Disaster Preparedness

Taiwan is subject to strong earthquakes that can occur anywhere on the island. Taiwan is also hit by typhoons, usually from July to October. Travelers planning a trip to Taiwan can obtain general information about natural disaster preparedness on the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>. Additional information about currently active typhoons can be obtained on the University of

Hawaii tropical storm page at <http://www.solar.ifa.hawaii.edu/Tropical/tropical.html>. The Central Weather Bureau of Taiwan also maintains a web site that provides information about typhoons and earthquakes. Its Internet address is <http://www.cwb.gov.tw>

The International Community Radio Taipei (ICRT) provides all of Taiwan with English-language programming 24 hours a day. In the event of an emergency or an approaching typhoon, travelers should tune their radios to FM 100.7.

TAJIKISTAN

Republic of Tajikistan

Major City:

Dushanbe

Other Cities:

Khudzhand, Kurgan-Tyube

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated June 1997. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The Republic of **TAJIKISTAN** declared its independence from the Soviet Union on September 9, 1991. Formerly known as the Tajikistan Soviet Socialist Republic, its independence was recognized by the United States on December 25, 1991 and an embassy was opened in the capital city, Dushanbe, in March 1992. Tajikistan became a member of the United Nations on March 2, 1992. Political unrest and armed conflict between Communist Party members and opposition forces have caused serious problems within the country. Many deaths have occurred. As a result, the U.S. Embassy was closed in October 1992.

MAJOR CITY

Dushanbe

Tajikistan's capital, Dushanbe, is located in the extreme west of the country about an hour's drive from the border with its western neighbor, Uzbekistan. Dushanbe was formed in 1922 when three small settlements of 5,000 people were united into one and became the capital of Tajikistan when it was formed as an autonomous republic in 1924. The city lies in a sheltered river valley at 2,300 feet above sea level, below the Hissar Mountains. The Varzob and Kofarnihon Rivers both flow through Dushanbe. Because of its sheltered location, Dushanbe is often spared the more extreme weather conditions prevalent elsewhere in the region. The cold winter, similar to Washington's, becomes a rainy spring which in turn becomes a hot, dry summer, with temperatures in some areas well over 100°F, followed by a pleasant, dry autumn. Warm, dry weather may suddenly become rainy and cool, and early frosts may be followed by warm, sunny weather.

With a 2000 estimated population of over 660,000, Dushanbe in its center retains the atmosphere of its

original planners in the 1920s—wide, tree-lined streets with mostly low-rise apartment houses and office buildings painted white or pastel colors. Although traffic has begun to pick up with increased availability of gasoline, it is still comparatively light. Because of the trees, walking or bicycle riding is pleasant much of the year. Outside the center part of the city, where the Chancery and Embassy homes are located, neighborhoods usually consist either of rundown high-rise apartments built in the Soviet area or poor-quality, single-family houses.

Food

The food supply in Tajikistan has been improving. Abundant, high-quality fruits and vegetables are in the markets during the summer and autumn, but greenhouses were destroyed in the civil war, and the economy is not strong enough to support the usual nonseasonal imports seen in other former Soviet countries. In season, you can purchase at very reasonable prices: strawberries, raspberries, blackberries, mulberries, rhubarb; many varieties (some you may not have seen previously) of cherries, apricots, peaches, pears, figs, apples, pomegranates, melons, persimmons, grapes, and glorious lemons.

All of the above are preserved by canning, drying, etc., and sold in shops and bazaars. There are walnuts, peanuts, almonds, and pistachios. There are grains and dried beans of many kinds available, but not enough to feed the whole population and not necessarily fine quality. There are beautiful tomatoes, cucumbers, carrots, beets, cauliflower, turnips, potatoes, onions, garlic, cabbage, leaf lettuce, and many radishes and radish-like vegetables we have not yet properly identified. There are green and red sweet peppers and red chili peppers. Fresh herbs such as basil, mint, dill, chives, and coriander are abundant, but many herbs and vegetables popular in America (thyme and broccoli, for example) are unknown here.

Fresh lamb, beef, and chicken are in the markets, but the animals sometimes led a hard life, a fact which is reflected in the meat. Local bread is whole-wheat "nan" similar to pita, which some find delicious. Regular loaves are sometimes obtainable, but homemade bread, with or without a machine, is better.

Local stores carry soft drinks, alcoholic drinks (vodka of all kinds and champagnes and cognacs are most popular) and some imported delicacies, such as chocolate, cheese, butter, and sausage. Tajikistan makes and bottles wines, but Tajiks prefer to drink dessert wines.

If there is a baby, bring baby food and equipment to make baby food from fresh foods.

Clothing

Women in Dushanbe love to dress up. Daily wear for villager and office worker alike will include plenty of sparkle from fabric and jewelry. High-heeled shoes are worn for all occasions. Men are less apt to dress up, but business suits are worn as appropriate. Many expatriates are in development work outside the city, so one is just as likely to find camouflage and field boots at an evening function as to find people in silk and embroidery harvesting crops.

Although most people in Tajikistan are Moslem, they are used to living with Europeans and tolerant of Western dress. Shorts on either men or women elicit stares, however.

The climate is extreme and not controlled in most buildings, so whatever style of dress you prefer, layers are essential. In winter, warm feet make a big difference. Wool socks—locals wear the colorful wool knitted "Pamiri" socks. In summer, light cottons are comfortable.

Tailoring is available, but materials found in the local markets are not always suitable to American taste. Local outfits, quilted coats, and silk trouser suits, are very attractive and wearable.

Dry-cleaners have not been able to remain in business, and shoe repair is of poor quality.

Supplies and Services

Although intensive shopping or borrowing sometimes results in finding the piece of equipment you lost or forgot to bring, it equally often does not. It is best to assume there are no supplies and services and pack everything you might need.

Religious Activities

Tajiks are mostly Moslem, but there are Baptist, Adventist, Korean Pentecostal, Catholic, German-speaking Catholic, and Russian orthodox churches here. The synagogue is closed. As far as post can tell, Buddhists and Hindus do not yet have places of worship in Dushanbe.

Education

The educational system in Tajikistan is in transition. Since funding is minimal and educational materials are unavailable, no expatriate children attend local schools at this time. There is a small group of English-speaking children from ages 5–10 who are educated by parents using the Calvert system and field trips to resources available in the community.

Older children might wish to consider the Woodstock school in India. It was created 140 years ago for the

children of American missionaries and is now a highly respected international residential school whose graduates attend the best universities in the world.

Recreation and Social Life

Dushanbe has endless opportunities to play outdoors. Hiking, camping, swimming in the many local lakes, cycling, running, horseback riding, fishing, hunting, skiing, or just visiting areas outside the capital to watch local activities such as wrestling, buzkashi (a game played on horseback with a dead goat) and picnics are all enjoyed by expatriates here. Tajiks welcome the involvement of foreigners in everything they do and are very proud of their hospitality.

Entertainment

There are concerts operas, plays, and films in Dushanbe, but at this time it is difficult to find out where and when they are. Since theaters are unheated, it is only the bravest who attend in the winter. In the summer, the most pleasant activities are in the gardens, especially music and dance programs organized by some of the small museums around town. Poetry readings are common but a high level of Tajik is needed to fully appreciate them.

Social Activities

It is easy to meet host country nationals, and there is a good understanding of the concept of "contact," including exchanges of visits to offices, followed by invitations to homes if the relationship is developing. Americans can be a little overwhelmed by Tajik hospitality.

Informal social life for young expatriates is active, and there is a nice mix of nationalities, including Tajik citizens at their parties. Dancing is required for almost every event, and the expatriate community has adapted well to the Tajik habit of "hitting the floor" as soon as the music starts.

The early days of too much vodka and too much fat seem to have given way to a new understanding that

these items are not highly valued by us, but customarily long, heavy meals are offered, and the guest is expected to toast and be toasted and to eat until the “plov” (rice with meat and vegetables) is served, after which he may go home without offending anyone.

Family occasions such as weddings, circumcisions, funerals, etc., are social occasions; anyone staying in Tajikistan will have a hard time not making Tajik friends, so he or she will be included. Again, a speech is expected, and a gift of some sort is appreciated.

Practical gifts for the household may be given, but fine objects from the U.S. are also appreciated. Urban Tajiks prize intellectual achievement, so a beautiful book—with pictures, since reading English is not everyone’s favorite pastime—is always welcome.

OTHER CITIES

KHUDZHAND (formerly Lenina-bad) is located on the Syr Darya River in the northwestern section of the country, 90 miles south of Tashkent, Uzbekistan. One of Central Asia’s oldest cities, it is now the second largest city in Tajikistan, with over 163,000 residents. The major industries consist of silk and cotton production and food canning and meat packing plants.

KURGAN-TYUBE, with a 1998 population of 59,000, is located in the southwestern part of the country, 40 miles south of Dushanbe. The agricultural sector of the economy is dependent on cotton and sheep. There are several industries in Kurgan-Tyube, most dealing with food processing or clothing manufacture.

COUNTRY PROFILE

Geography and Climate

The Republic of Tajikistan gained its independence during the breakup of the USSR and is part of former Soviet Central Asia. Tajikistan can be found at 36° 40’ northern latitude and 41° 14’ eastern longitude. Take an atlas or globe and locate Greece or southern Italy or Spain, trace a line eastward toward Eurasia, and there you will find Tajikistan nestled between Kyrgyzstan and Uzbekistan to the north and west, Afghanistan to the south, and China to the east.

Tajikistan is home to some of the highest mountains in the world, including parts of the Kunlun, Himalayan, Tien-shan, and Pamir Ranges. Ninety-three percent of Tajikistan is mountainous with altitudes ranging from 1,000 feet to 27,000 feet, with fully 50% of Tajikistan’s territory at elevations above 10,000 feet. Earthquakes of varying degrees are frequent. The massive mountain ranges are cut by hundreds of canyons and gorges at the bottom of which run streams which flow into the larger river valleys where the majority of the country’s population lives and works.

The principal rivers of central Asia, the Amu-Darya and the Syr-Darya, both flow through Tajikistan, fed by the melting snow in the mountains of Tajikistan and Kyrgyzstan. Flooding sometimes occurs during the annual spring thaw.

Although located at the same latitude as Washington, D.C., Tajikistan’s climate is drier and varies with altitude. Most rain occurs between November and May. Therefore, the summer, while hot, is dry. The winters at the lower elevations are similar to Washington’s but snowfall rapidly increases with altitude. The climate of the mountainous Gorno-Badakhshan autonomous oblast (GBO), which

occupies the eastern half of Tajikistan is more extreme. The mountainous east receives 90% of Tajikistan’s yearly precipitation, and its average annual temperature is 49°F, whereas in Dushanbe it is 65°F.

Population

The population of Tajikistan was estimated at 6,194,00 in 2000. Although about 1.5 million people live in Tajikistan’s urban centers, nearly three-quarters of the population continues to live and work in rural areas. In 2000, Dushanbe had a population of 664,000, nearly 300,000 less than its population prior to the disintegration of the Soviet Union. As Dushanbe has returned to calm, former refugees have returned, swelling the ranks of the city’s inhabitants. However, some Russians and Uzbeks have probably left the city forever. The rest of Tajikistan’s population is spread fairly evenly throughout the western half of the country; approximately 1.7 million people live in the northern or Leninabad region, 1.7 million in the Khatlon region in the south, and 1.4 million in the districts of republican subordination (Nurek, Rogun, Kofarnihon, Varzob, Hissar, Gharm, Lenin, Tursunzade, and Tavildara). According to the official census, the population in the mountainous eastern half of Tajikistan is very sparse, with a reported population of only 220,000 in Gorno-Badakhshan, a territory that makes up almost half the area of the country.

The population is split almost evenly between men and women. With the highest birth rate in the former Soviet Union, 41% of the population is under the age of 14.

Perhaps the greatest population change in Tajikistan since the end of the Soviet era and civil war is found in the Republic’s ethnic composition. From 1989 to 1994, the percentage of Russians living in Tajikistan dropped from 7.6% of the population to 3.3% or less. Many with sufficient financial resources have already left the Republic, and

many of the remaining Russians are simply accumulating enough money to finance their own migration. The numbers of other, smaller, minority groups such as Tatars, Jews, and what the government refers to as “others,” which includes ethnic Germans, Koreans, Ukrainians, Armenians, etc., have also been dramatically reduced in the wake of the breakup of the Soviet Union and Tajikistan’s civil discord. Some minority groups have continued to thrive. The small Kyrgyz minority living in Tajikistan has not been uprooted, and the large Uzbek minority population has remained constant at 25% of the population. Even today, ethnic Tajiks make up only 65% of Tajikistan’s population; the situation is reversed in Uzbekistan, where the populations of two of that Republic’s most important cities, Samarkand and Bukhara, remain largely Tajik. Within the Tajik population, important social divisions exist according to an individual’s place of origin. Tajiks separate themselves into Kulyabis, Gharmis/Karategins, Khojandis, Pamiris, Bukharans, and Samarkandis, as well as a host of other names based on location of origin. The Kulyabis, who were not a powerful group during the Soviet era, provided the muscle to win the civil war. Since 1993, they have dominated the government, and there was a steady migration of Kulyabis from the underdeveloped south to the capital. Conversely, the traditionally powerful Khojand (formerly Leninobod) group experienced a decline in its power in the central government based in Dushanbe.

During the Soviet period, the term “industrial workers” included the agricultural workers, i.e., those working on state or collective farms. Tajikistan thus claimed that 55% of employees were industrial workers, 21.7% were “white-collar” workers, 22.9% worked in rural areas, and 0.2% were engaged in “individual working activity.” Most recent estimates indicate that the labor force is divided at 30% in services, 20% in industry and 50% in agriculture.

The collapse of Tajikistan’s economy and the closure or reduction in work at many of the country’s large factories, and the inability of the government to pay salaries and pensions have all contributed to large numbers of people moving into the private sector in small shops or in one of the various street markets in order to survive.

Tajikistan has also changed linguistically since the breakup of the Soviet Union. Under the Soviet Union, Russian was the language of the government. Tajik was declared the state language of Tajikistan only in 1989, and became the sole official language under the new constitution adopted in 1994. Russian, “the language of interethnic communication,” continues to be used widely in the government and in Tajikistan’s urban centers. Tajik belongs to the southwestern group of the Iranian family of the Indo-European language group. It has four groups of dialects; northern, spoken in Khojand, Samarkand, and Bukhara; central, spoken in the upper Zarafshan; southern, spoken in Karategin and Kulob; and southeastern, spoken in Darvaz and Vanj. Uzbek, the language of almost one-fourth of the population, belongs to the Turkish group of languages and is most prevalent in Naw, Jabar-asulov, and Tursunzade. Several languages are spoken in the Pamir mountains of Gorno-Badakhshan from the eastern Iranian language group, including Shugnan, Yazgulum, and Vakhani. Kyrgyz is also spoken in the Eastern Pamirs. Yagnobi, the Eastern Iranian language of the Yagnob Valley, is a very ancient dialect whose preservation has provided the clue to understanding ancient Sogdian dialect.

Although each regional, social, ethnic, and language group has its own traditions and beliefs, the principal religion in Tajikistan is Islam; Sunni Moslems predominate in western Tajikistan, while the population of Gorno-Badakhshan is largely Ismaili. The two Islamic holidays officially celebrated in Tajikistan, *Idi Kurbon*, and *Id-al-Fitr*, have become more popular with the

collapse of communism. However, many traditional holidays, such as Navruz (new year) actually date from pre-Islamic times. The urban population is, in general, not particularly religious, but Tajik society as a whole is becoming more conservative.

Public Institutions

Having emerged from the Soviet era and a crippling civil war, Tajikistan now calls itself a newly formed constitutional, democratic, and secular republic with presidential rule. Executive power is vested in the President, Prime Minister, and the Council of Ministers in Dushanbe, and executive committees in every region, city, and district. The Republic’s legislative branch is the *Majlisi Oli* or Parliament. Provinces, districts, and cities also have legislative bodies. Similarly, there are courts at the national, district, and city levels.

Tajikistan has seven officially registered political parties:

- Communist Party of Tajikistan
- Popular Party of Tajikistan
- Party of Political and Economic Renovation of Tajikistan
- Democratic Party of Tajikistan (one branch)
- Party of the Popular Unity of Tajikistan
- Union Party of Tajikistan
- Justice Party of Tajikistan

Tajikistan also has one political movement, the Congress of the Popular Unity of Tajikistan.

Three parties—the Islamic Revival Party, the Democratic Party of Tajikistan (one branch), and the “Rastokhez” (awakening) Party—were banned during the civil war and remain illegal.

The trade unions created under communism, the Unions of Artists,

Architects, etc., and the Societies for the Blind, Deaf, etc., continue to exist but are weak, and offices housing them are frequently deserted.

Tajikistan is a member of the UN, the Commonwealth of Independent States, the Organization for Security and Cooperation in Europe, the World Bank, the International Monetary Fund, and many other international organizations. The International Red Cross is represented here, and Tajikistan also has a Red Crescent Society.

Arts, Science, and Education

The arts and sciences, as well as the education system in Tajikistan have suffered greatly in the wake of the breakup of the Soviet Union as government funding has disappeared. The Tajik Academy of Sciences and the education system were part of a centralized Soviet bureaucracy guided and controlled by Moscow. The end of the Soviet era and the subsequent political unrest left the arts, sciences, and education without direction or money.

There are, however, two live theaters, an opera house which houses a Western-style orchestra and ballet company in addition to the opera company, a film industry which produced a Cannes silver medal-winner in 1993, and numerous children's programs.

Poets are perhaps the most beloved of the artists, but lacking government patronage, they find it very difficult to support themselves. Still, occasional new works of poetry are published. Statues of poets replaced those of Lenin in Dushanbe.

Traditional music and dance are still alive, and professional musicians and dancers are paid to perform at weddings, receptions for visiting dignitaries, and other celebrations. Painters and craftspeople are trying to find supplies and markets. Only the best and most highly motivated will survive.

View of Dushanbe, Tajikistan

© Earl and Nazima Kowall/Corbis. Reproduced by permission.

The education system in Tajikistan is suffering from lack of funds from the central government for maintenance and salaries; lack of basic supplies such as books, pencils, and paper; and a lack of training among management staff who had previously received directives from Moscow. Although the education system continues to function, its resources have been severely reduced.

Commerce and Industry

Over six years of conflict and civil war have had a serious effect on the Tajikistan's economy. Per capita gross domestic product (GDP) in Tajikistan is about \$1,140 (2000 est), the lowest among the 15 other former Soviet republics. Nearly 80% of the population is living below the poverty line.

This country received substantial humanitarian assistance from the U.S., the United Nations High Commission on Refugees, the World Food Program, the European Union, and several nongovernmental organizations operating in various regions of Tajikistan. As the worst effects of the civil war are being ameliorated, these organizations are beginning to focus on develop-

mental aid. USAID established an office in Dushanbe with a permanent USAID representative in March 1995. The IMF and World Bank also have a presence in Dushanbe. But the country still struggles to revive some of its own industries.

Part of the old Silk Route, Tajikistan's Ferghana Valley has the oldest silk factory in the world. Following the breakup of the Soviet Union, it found itself unable to get its usual raw materials or to sell its production outside the immediate area. With foreign partnership, the quality of goods has increased.

Cotton production, which was forced during the Soviet period, continues to be Tajikistan's major cash crop. Wheat production, though growing, is still insufficient to feed the country. Vegetables, fruits, and nuts, both fresh and preserved, are grown for consumption and export.

One of the country's major nonagricultural industries is aluminum production based around a gigantic aluminum plant built during the Soviet era. Tajikistan provides most of the electricity but must import raw materials such as alumina, petroleum coke, and cryolite. Although production at the plant

has declined, Tajikistan continues to export aluminum.

The country does have a very small oil and natural gas industry; however, the entire yield is needed for use within the country. Additional oil and gas are imported from Uzbekistan.

Major export partners include Liechtenstein, Uzbekistan and Russia (1998). At least 32% of imports come from Europe, followed by Uzbekistan and Russia.

Tajikistan does have a limited number of joint ventures established between the Government of Tajikistan and/or local firms on the one hand, and foreign firms. The largest of these is the British Commonwealth Minerals gold mining project in Penjikent. South Korean and Italian firms have joint ventures in textiles. The USAID-financed Central Asian American Enterprise Fund (CAAEF) found its first Tajik partner in a Pepsi bottling plant in Khojand; it is expected to make additional loans/investments to private Tajik enterprises. Foreign investment is hindered by poor communications and a lack of international banking facilities.

Most workers belong to member unions of the Federation of Trade Unions, a holdover from the Soviet era. They enjoy the right to strike, but before a union may legally call a strike, arbitration must take place. If arbitration fails, unions have the right to strike, but labor unions have generally disavowed the utility of strikes in a period of deepening economic crisis and high unemployment. They have espoused compromise between management and workers. Nevertheless, several unofficial wildcat strikes have occurred.

Attitudes on property ownership and investment are changing. Some state enterprises (by 1995, 8%) have privatized. Others are planning to privatize, primarily to be in a better position to attract outside investors. A few private companies have started up. Most large towns have a

thriving bazaar or two, where small entrepreneurs hawk cheap consumer goods imported from the Gulf, Iran, the subcontinent, China, or Russia. By 1996, almost all apartments and houses have been privatized. Although the constitution prohibits private land, some land has been given on long lease to private farmers whose heirs may inherit it but cannot sell it. Even farmers remaining on state farms and collective farms usually have a small garden plot. These private plots collectively produce most of the country's fruit and vegetables and a sizable amount of grain.

Transportation

Local

Rental vehicles can be obtained in Dushanbe, as car-owners are often willing to rent their vehicles and themselves as drivers to supplement their incomes. To the best of post's knowledge, however, cars that you drive yourself or four-wheel-drive vehicles suitable for long trips are not available for rent. Taxis are available in cities such as Dushanbe and Khojand, though fares depend on the price of fuel, time of day, and appearance of the passenger. Most city-dwellers get around in buses or trolleybuses that run during the day.

Local official vehicles are red, for fire trucks; white and red or sometimes deep yellow for ambulances; and white and blue for police. UN vehicles, ubiquitous here, are white Nissan Patrols, Toyota Land Cruisers, or Land Rovers.

Some people, including Americans, ride bicycles in Dushanbe and environs. The light traffic, broad streets, pleasant weather, and friendly people make Dushanbe a delightful city for bicycling. However, since conditions include poor roads and hilly terrain, a good quality mountain bike with air pump, extra tires and tire repair kits, warning lights, etc., is advised.

Regional

Vehicles in Tajikistan are driven on the right side of the road. Roads in Tajikistan have deteriorated badly since the civil war; much of the terrain is mountainous and rugged. Intercity ground transportation may be by bus, truck, or rail. Buses run from Dushanbe to Samarkand, Termez, and Penjikent on a fairly regular schedule. You can get to almost all population centers by bus if you have no fixed timetable and are willing to be uncomfortable. Bus drivers do not go into areas of central Asia where there is unrest, and make these decisions based on up-to-the-minute (usually accurate) rumors.

Trains leave Dushanbe on even-numbered days for Moscow (87 hours) via Samarkand (18+ hours), Tashkent (25 hours), and Oktyobinsk, Kazakstan. Passports and visas are required. Tickets are available from 20 days to 5 minutes before departure. Restaurants and bedding are available on the train. Railway officials suggest that travelers carefully watch their belongings at all times. Other trains go from Dushanbe to other destinations in central Asia, and there are still small narrow-gauge lines that are very local. Like everything else here, ground transportation is struggling to meet growing needs and maintain minimal standards with no new resources in the midst of radical change.

Air transportation is available from two airlines that are operated by former Aeroflot personnel: Tajikair and Khojand Airlines. The latter operates two (some days three) daily flights between Khojand and Dushanbe. Tashkent is less than a 3-hour drive from Khojand. Tajikair theoretically operates flights to and from Penjikent, Aini, Isfara, Jirghital, Gharm, Kulyab, and Khovaling at least weekly; Khorog daily (although the weather frequently prevents service), and to the neighboring capitals of Bishkek, Almaty, and Ashgabat. It also flies four times a week to and from Moscow and operates charter flights for local merchants to Karachi, New Delhi,

and the Middle East. Tajikistan International Airlines had operated New Delhi-Dushanbe-London flights briefly during 1994, but these are currently suspended, and it is not known if or when they will resume.

It is extremely important to check on schedules before formulating an itinerary.

Do not expect international standards of safety or adherence to procedures familiar to us, such as transporting your baggage to the aircraft for you, using seatbelts or even (sometimes) sitting down.

Communications

Telephone and Telegraph

Local telephone service varies with the exchange.

Radio and TV

Russian and Tajik TV stations broadcast intermittently. You need rabbit ears or an antenna to pick them up—there is no cable TV.

Russian radio stations can be picked up in Tajikistan, and VOA, BBC, Radio China, and numerous Christian broadcasting services are available on shortwave.

Newspapers, Magazines, and Technical Journals

Local bookstores sell books in Tajik, Uzbek, Persian, and Russian, but the selection is extremely poor. The books, which are printed in Tajikistan, are not the best quality. Imports from Russia, Iran, and Uzbekistan are better. There are several printing houses in Dushanbe and one each in Khojand and Kulyab. They specialize in local authors.

Theoretically, there are more than 30 local magazines and newspapers printed in Dushanbe. But because of the price of newsprint and the difficulty of finding advertisers or affluent readers for most of these publications, they are dormant. Journalists also run the risk of going to jail for expressing contrary

views. The central government subsidizes several newspapers, others specializing in sensational material from the Russian press survive on sales, and some regional newspapers in Tajik and Uzbek continue to find enough readers to continue printing.

There is no English-language press, nor are any Western newspapers and magazines sold locally.

Health and Medicine

Medical Facilities

There is no acceptable local hospital, lab, dentist, or pharmacy in Tajikistan, although the clinic for microsurgery maintains a high standard.

The local health delivery system suffers from deficits of trained specialists, lack of medicines, broken equipment, and short work-hours.

The UN maintains a small clinic staffed by one doctor and two nurses for ambulatory care patients, serving the nondiplomatic expatriate community, as well as UN personnel.

Community Health

The Tajikistan Ministry of Health has advised all citizens to boil tap-water for drinking due to organic contaminants and the inability to adequately chlorinate the city water supply. Local water is deficient in iodine, and iodized salt is not available. Many local residents have enlarged thyroids due to chronic iodine deficiency. In Dushanbe, ground water contamination by heavy metals and chemicals is not a reported problem, although in outlying agricultural areas pesticides and fertilizers may be present. Use of these has been greatly curtailed since 1992, however. Locally bottled soft drinks and alcoholic beverages are also potential sources of contamination.

Fruits and vegetables should be soaked in chlorine water and washed with distilled water.

Untreated food and water are at risk for contamination by amoebas, Giardia, and other harmful bacteria.

The most frequent medical problems requiring treatment outside of Tajikistan have been for dental problems. There are good quality dental treatment centers in Moscow, dentists in New Delhi, one in Tashkent, and a clinic in Almaty of dentists trained by visiting Americans.

Some medicines are available for purchase in local pharmacies, but supply and quality are erratic. Individuals should bring all prescription and over-the-counter medicines they require on a regular basis.

Preventive Measures

Tajikistan had the highest prevalence of diphtheria in the world, but an intensive antidiphtheria campaign in 1995–96 brought the incidence down considerably. Other communicable diseases to be aware of in Tajikistan are cholera, malaria, rabies, polio, tuberculosis, hepatitis A, hepatitis B, and typhoid. Booster immunizations should be up to date before arrival for diphtheria, polio, hepatitis A (havrix 1440 vaccine), hepatitis B, typhoid, and rabies. The latter should be completed before arriving. The vaccine for cholera is not recommended by WHO. There is no vaccine for malaria, but those persons traveling in south Tajikistan in the summer, including Dushanbe, should take a dose of chloroquine each week, wear insect repellent, and sleep under a mosquito net. Tuberculosis testing should be performed after departure.

Americans in Tajikistan are most likely to encounter episodes of diarrhea and respiratory infections. These are more likely to occur in conjunction with fatigue, hence rest is recommended, especially after arrival in Dushanbe. Despite all efforts to avoid diarrhea, it is a frequent problem among Americans.

Before coming to Tajikistan any specialists routinely visited should be consulted, including dentists and

eye doctors. A spare set of glasses should be brought. Those wearing contact lenses should have a supply of cleaner and soaking solution, as these are not available locally. Those taking prescription medications should bring an ample supply.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Travel to, from, and within Tajikistan is difficult and unreliable. Flights may be canceled or substantially delayed. Commercial charter flights are frequently overloaded with merchandise. International train connections are dangerous because of criminals operating onboard.

The most common route to Dushanbe is via Tashkent (which has reliable connections several times a week to Istanbul, Frankfurt, London, and other locations). From Tashkent, one can take the traveler overland to Khojand, which is near Tashkent but inside of Tajikistan. From Khojand, there are generally two (and sometimes more) flights daily to Dushanbe.

From Khojand, all baggage (including hand baggage) is weighed and subject to overweight charges for excess above 25 kilos. The excess usually costs \$1 U.S. per kilo to Dushanbe. There will be a \$3 fee for use of the "Deputatski Zal," which essentially confirms your reservation. The ticket from Khojand to Dushanbe must be paid for in cash, with U.S. currency preferred. Bills dated 1990 or later, with no tears or markings should be accepted; others may not be.

It is also possible to reach Dushanbe via Tajik Air from Moscow (usually three flights a week), Almaty (generally twice a week), and Ashgabat (usually one flight a week). Traveling through Moscow requires the use of Domadedova Airport, an extremely difficult location to deal with. Some Russian is virtually a

prerequisite to successfully finding your flight at Domadedova. The Almaty flights are often tightly booked.

A passport and visa are required. Entry into Tajikistan at points along the Gorno-Badakhshan border requires special authorization in advance. Without a visa, travelers cannot register at hotels and may be required to leave the country immediately. In the U.S., visas for Tajikistan are issued by the Russian Embassy, Consular Division, 1825 Phelps Place NW, Washington, D.C. 20008, telephone (202) 939-8907, or the Russian consulates in New York, San Francisco or Seattle. Tajik visas granted by these offices are valid for a stay of three days in Tajikistan. If travelers plan a longer stay, they may apply for a longer visa at the Ministry of Foreign Affairs after arriving in the country.

Travelers who intend to visit Tajikistan should obtain double-entry Russian, Kazakh or Uzbek visas prior to departure, depending on intended transit points.

The government of Tajikistan requires visitors who remain in country for more than 90 days to present a medical certificate showing that they are HIV-free, or to submit to an HIV test in Tajikistan. This testing requirement has not been implemented, but could be at any time. Because of the lack of medical supplies, submitting to an HIV test in Tajikistan could be risky.

Travelers to Tajikistan are subject to frequent document inspections. Therefore, U.S. citizens are strongly encouraged to carry a copy of their U.S. passports and Tajik visa with them at all times so that they may more readily prove that they are U.S. citizens. In accordance with the Vienna Convention on Consular Relations and certain bilateral agreements, local authorities must grant a United States consular officer access to any U.S. citizen who is arrested. U.S. citizens who are arrested or detained should ask for

the U.S. Embassy to be contacted immediately.

U.S. citizens are encouraged to register with the Consular Section of the U.S. Embassy Almaty, Kazakhstan and obtain updated information on travel and security within Tajikistan. The U.S. Embassy in Almaty is located at 99/97A Furmanov Street, telephone 7(3272) 63-39-05. U.S. citizens may also register with the Consular Section of the U.S. Embassy in Tajikistan by telephone or fax, but emergency consular services for U.S. citizens may be limited or unavailable. U.S. citizens are reminded that personnel for the U.S. Embassy to Tajikistan are resident in Almaty. Consequently, the U.S. presence in Tajikistan is not continuous. The U.S. Embassy is temporarily located at 10 Pavola Street, Dushanbe, telephone 011 (992)(372) 21-03-48/50/52 fax 011 (992)(372) 21-03-62.

Currency, Banking and Weights and Measures

As of October 2000, the new currency is the Tajik *somoni* (SM), which can be divided into 100 *dirams*. The somoni is issued in notes of 1, 5, 10, 20, 50 and 100. The diram is also issued in notes with denominations of 1, 5, 20 and 50. Exchange in January 2001 was 2.2SM=US\$1.

Currency can be changed at authorized exchange houses. Do not change currency on the street, as this is illegal, and Americans have been picked up in sting operations.

No Tajik bank has a particularly strong record for banking. Tajikistan is a cash economy; neither travelers checks nor credit cards are accepted. Electronic funds transfers are sometimes lost, and some banks do not permit the recipient of an EFT to withdraw the full amount of the EFT.

Tajikistan uses the metric system for weights and measures.

Other Cities:

Khon Kaen, Lampang, Nakhon Pathom, Nakhon Ratchasima, Phet Buri, Phuket, Yala

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated April 1994. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

THAILAND is an exotic kingdom where the past and present mingle in harmony. The country once known as Siam came into being more than 1,000 years ago, when the Thai people descended from the hilly hinterlands of Burma (now Myanmar) and southern China. Here, in the fertile central plain and basin of the Chayo Phraya River, they created a number of independent kingdoms that were continually besieged by their Burmese and Khmer neighbors. Although the Thai were never colonized, they were forced to fight through the centuries to maintain their freedom.

In 1238, the Thai inflicted a devastating defeat on the Khmers and

created the kingdom of Sukhothai. At that time, Bangkok (the present capital) lay entirely beneath the waters of the Gulf of Thailand. In 1350, when the capital was moved to Ayutthaya, Bangkok was only a series of mud banks raised by alluvial deposits from the Chao Phraya.

Just 200 years ago, Siamese warriors, mounted on elephants, drove out the Burmese who had killed their king and sacked and destroyed Ayutthaya. The new king established a capital in Thonburi. Fifteen years later, Rama I, founder of the present Chakri dynasty, moved the seat of government across the river to Bangkok.

MAJOR CITIES

Bangkok

Bangkok, capital of Thailand, is the largest city in the kingdom and one of the largest in Southeast Asia. About seven and a half million people live in Bangkok and the surrounding metropolitan area. The city lies within a great bend of the Chao Phraya River (River of Kings), which empties into the Gulf of Thailand 35 miles to the south. Thonburi, on the west bank, is considered part of the metropolitan area.

Bangkok became the Thai capital in 1782. Called by the Thai "the city of angels," it is a national treasure house, containing most of the country's historic temples and major landmarks.

Bangkok is an exotic, energetic city of contrasts: high-rise apartment buildings and ancient temples; air-conditioned, modern department stores and crowded, narrow stalls of local markets; wide avenues teeming with traffic and crooked lanes bordered by canals, where small children bathe and fish; the blare of pop music and the tinkle of temple bells; spacious homes and primitive, thatched huts; the scents of jasmine and of fish drying in the sun; international restaurants, and food vendors squatting over small charcoal cooking pots on the sidewalk. A lifetime could be spent exploring Bangkok and its delightful mixture of cultures, customs, and peoples.

Bangkok (in Thai, Krung Thep) suffered heavy damage during World War II. It was seized by the Japanese in December 1941, only a few days after Pearl Harbor and, in 1944 and 1945, it became the target of frequent bombing raids by Allied planes.

Clothing

In Thailand's tropical climate, cotton and other lightweight washable clothing is comfortable and practical. Most types of summer fabrics, including lightweight knits, are worn for business, since all offices are air-conditioned.

Men find that shirts and ties, without jackets, are acceptable, as are wash-and-wear or safari suits. A dark business suit is usually worn for evening functions. Thai-style men's shirt-jackets, tailored in silk or cotton, can be worn to some evening events. Sports clothes are popular for casual wear, and can be bought locally. Shoes are available at reasonable prices, although larger sizes may have to be custom made.

Women need more clothing for Thailand than for a more temperate climate. Here, clothes need to be changed more frequently. Dresses in current styles are sold in boutiques and department stores, but usually only in sizes to fit petite Thai figures. Dressmakers can make equally comfortable and fashionable clothing. Prices range from reasonable to expensive, and results vary according to the design and the skill of the dressmaker. A wide variety of fabrics is sold in local shops. Thai cotton and silk are of high quality, and are popular for both daytime and evening wear.

Casual dresses, skirts, blouses, and slacks are suitable for almost all daytime occasions outside the office. Businesswomen will be appropriately dressed if they wear the same style of clothing that is acceptable in city offices in the U.S. Sleeveless and short-sleeved dresses with jackets are convenient for moving from the hot, humid outside air into air-conditioned buildings. Shoes purchased on the local market are reasonably priced, stylish, and comfortable, but are not always available in narrow widths or in larger sizes.

For informal social events, floor-length skirts, trousers, or dresses are popular. Occasionally,

more formal attire is needed, and can be easily made by dressmakers. Thais wear black only at funerals and when in mourning, and often show discomfort when a foreigner (not in mourning) wears this color. It is sometimes worn as part of fashion, but never as the dominant color.

Children need the same kind of clothing they would wear during hot summer months in the U.S. With few exceptions, most items can be purchased or made locally. Many parents order items through mail order catalogs.

Supplies & Services

Tailors and dressmakers are numerous; seamstresses will work in the home. Shoe repair services are available, but materials used are not of the quality found in the U.S. Dry cleaning and laundry services are adequate, as is repair service for small appliances.

Beauty salons and barbershops charge reasonable prices, and their personnel generally are well-trained.

Most personal and household items are found in Bangkok. Cosmetics, some toiletries, and bed and bath linens are costly. Attractive, locally made table linens, however, are moderately priced.

Religious Activities

Although Thailand is predominantly Buddhist, religious tolerance is practiced. The constitution requires the king to be a Buddhist, but also makes him the protector of all religions. Government offices and many businesses close on Sunday, not as a religious holiday, but as a day of rest.

Christian churches in Bangkok include many denominations, many of which hold regular services and Sunday school in English. Catholic, Protestant, Interdenominational, Seventh Day Adventist, Christian Science, and Church of Jesus Christ of Latter-Day Saints religious groups are represented in Thailand. A Jewish Center and a Baha'i Center are located in Bangkok. Many

up-country areas also have Christian churches, which are often operated by missionaries.

Domestic Help

Most foreigners resident in Thailand employ at least one maid or cook. Single people usually can manage with one domestic who cooks, cleans, and does the laundry, but families often need more help. Drivers are not necessary, although they offer great relief from the strain and stress of driving in city traffic.

Domestics work six days a week, with the free day determined by the employer; most household help live in their own quarters in the employer's house or apartment. Knowledge of English varies. Salary depends on skills and previous experience, and ranges from the equivalent of \$115 to \$200 monthly. Most are also paid one month's salary bonus, or a fraction if they have worked less than a year, at Christmas.

Before employment, and every year thereafter, each employee should have a complete medical examination (available at local hospitals). The American Women's Club in Bangkok operates a registry to assist Americans in finding household employees. Employee liability insurance is recommended.

Education

The International School of Bangkok (ISB) is the major English-language school in Thailand. It is private, based on the American educational system, and supervised by a board of directors elected by parents. The school's constitution requires that at least three nationalities be represented on the board.

About 50% of the staff are hired locally, but some of the teachers are spouses of U.S. Government personnel stationed in Thailand. ISB's teachers and administrative staff have strong academic and teaching credentials.

The school offers kindergarten through grade 12, is accredited by

Grand Palace in Bangkok

Susan Rock. Reproduced by permission.

the Western Association of Colleges and Secondary Schools, and is an academically excellent institution.

There is no longer a formal dress code, but all students are expected to be appropriately dressed and groomed while on campus or attending school-sponsored off-campus activities. Students are permitted to wear the national dress of their native countries. Uniforms are required only for physical education classes.

International School offers primarily a college preparatory program, although a limited number of vocational courses are available. Extracurricular sports and other activities are provided.

ISB participates in, and is a testing center for, the following national testing programs: Preliminary Scholastic Aptitude Test/National

Merit Scholarship Qualifying Test (PSAT/NMQT), College Board Scholastic Aptitude Test (SAT), Strong Vocational Interest Inventory (SVII), College Board Achievement Test (ACH), American College Test (ACT), College Board Advanced Placement Test, Secondary School Admission Test (SSAT), and Test of Academic Progress (TAP).

Six psychologist/counselors work with students and parents in academic and personal counseling. ISB's facilities for learning-disabled students are limited. If a child needs a self-contained classroom, a small (10–12 students) classroom, extensive occupational therapy, or psychiatric counseling, these services are not available at ISB or anywhere in Bangkok.

Ruamrudee International School is another institution offering an English-language curriculum. The

school, founded in 1963, is affiliated with the Catholic Church. A wide variety of elective and extracurricular activities are offered, as well as various sports.

Other schools in Bangkok include Holy Redeemer (Catholic), the Bangkok Pattana (British system), and La Petite École Française (French system).

Special Opportunities

Schools with instruction in English for handicapped children are not available, but a number of physical therapy clinics and wide range of Thai specialists can provide continuing care.

Several clubs in Bangkok offer English-language classes in the arts, sports, cooking, and crafts. The National Museum Volunteers group sponsors lectures on the ancient and modern history of Thailand, aspects

Courtesy of Ellen Bowden.

Floating market in Bangkok

of the country's culture and Buddhism, and Thai art. Qualified music teachers for many instruments are available, and a small music academy in Bangkok teaches theory and composition, and offers instruction in piano, voice, and stringed instruments.

Almost all Thai universities require a special entrance examination (which is in the Thai language) for undergraduate study. Most courses are taught in Thai. For these reasons, it is extremely difficult for an American student to enroll in a college degree program here.

Recreation

Facilities for many sports are available in Bangkok. Several commercial tennis and racquetball courts are located in the Sukhumvit area and in other parts of the city. Most golf courses are open to the public, and charge reasonable fees.

Privately owned health and exercise clubs are scattered throughout the city, some in the Sukhumvit district. Joggers use the paths at Lumpini Park, near the U.S. Embassy. Others jog on city streets in the early morning before traffic becomes heavy, or use the playing field at the International School of Bangkok. The Royal Bangkok Sports Club offers jogging tracks, horseback riding, an 18-hole golf course, and a swimming pool. However, there is a long waiting list (up to five years) for memberships, unless you pay a special, expensive fee.

There are bowling alleys and swimming pools in the residential areas. Ice skating and roller skating are available. Sporting goods can be bought locally, but prices are high.

Ballet, jazz, and aerobic classes for children and adults are offered at various Bangkok locations.

Spectator sports include Thai boxing, as well as other events ranging from tennis matches to gymnastic exhibitions.

Bangkok has a wealth of historic and scenic sites for the tourist to visit and enjoy. Local travel services have daily tours in modern air-conditioned buses. This is the best way, at first, to see the following sights: the *Wat Benchamabophit*, an ornate marble temple; *Wat Po*, which holds the large reclining Buddha image; *Wat Trai Mit*, temple of the Golden Buddha; *Wat Phra Keo*, in the Grand Palace where the emerald Buddha is housed; and many other picturesque and exotic temples.

Boat trips and *klong* (canal) tours can be arranged. These include taxi rides on the Chao Phraya River, and "long tail" boat trips through the *klongs* (where the visitor can see Thai houses built on stilts, and

observe a style of life based on water transportation networks). Cruises on converted rice barges also are possible.

A few examples of old Thai architecture have been preserved and now serve as museums. Among these are the Suan Pakkard Palace, which contains an antique collection of lacquer, pottery, and manuscripts; the Jim Thompson House, with its superb collection of objets d'art; and the Siam Society's Khamthieng House, an example of northern-style teak architecture. At the weekend market one can buy almost any conceivable article, from roasted beetles to antiques.

The following popular tourist attractions are within a day's drive of Bangkok:

The Ancient City and its outdoor museum, with replicas of nearly 100 ancient and modern monuments of Thailand erected on a scale of 1:1 up to 1:3.

The Rose Garden, featuring beautiful flower beds, a selection of hotels and restaurants, and a daily show recreating country life (Thai dancing, boxing, and cock-fighting).

Ayutthaya, the former capital of Thailand, only a two-hour drive from Bangkok. It has numerous ruins, some of which have been restored.

Bang Pa In, a former royal summer retreat with a collection of palaces and pavilions in various Thai, Chinese, Italian, and Victorian architectural styles.

Trips up-country and to the various beach resorts are a relaxing way to spend weekends and holidays. The following are some of the more frequently visited places:

Pattaya, a seaside resort with many excellent hotels and restaurants. Because of the rapid growth, however, the beaches are polluted and, unless one is willing to risk disease, water sports are limited to hotel pools. Scuba diving is popular, but

View of Bangkok, Thailand

© Richard T. Nowitz/Corbis. Reproduced by permission.

requires long boat rides to the outer islands to avoid the worst of the pollution. Nearby, at Bang Saroy, is the local affiliate of the International Game Fish Association, a point of contact for the serious angler.

Hua Hin, which can be reached by train, car, or bus. This resort, the oldest in Thailand, has beautiful white beaches, and mountain scenery. Golf, swimming, snorkeling, scuba diving, and boating are available.

Phuket, a large offshore island about 560 miles south of Bangkok. It has unspoiled sandy beaches and is a favorite spot for scuba diving and snorkeling. Large tin mines are found here.

Khao Yai, a forest and wildlife preserve, about 125 miles northeast of Bangkok. Accommodations include a hotel, bungalows, and camping facilities.

Pimai, called the Angkor Wat of Thailand. It has ruins dating back to the 11th century.

Chiang Mai, a 50-minute flight or a 13-hour overnight train trip from Bangkok. It can also be reached by car in eight hours. Here, one can visit the northern hill peoples and

the villages where artisans make umbrellas, silver bowls and jewelry, pottery, handwoven Thai silk and cotton, and carved teak furniture and other wooden objects. Located nearby is a young elephant training camp.

Tours organized by various groups are frequently offered to places outside the country, including Hong Kong, India, Nepal, Malaysia, Singapore, and Indonesia. Health and visa requirements change constantly, and must be checked before each trip.

Colorful festivals celebrating traditional Thai holidays include the following:

Songkran (mid-April), Thai New Year's Day. Young girls dressed in Thai national costumes go to the banks of the rivers in colorful processions. Water is sprinkled on Buddha images, monks, parents, and elders as a gesture of veneration. Sometimes the participants become too enthusiastic and throw buckets of water on passersby.

The Ploughing Ceremony which takes place during the sixth lunar month (May). It is an important festival, with historical roots embedded deeply in Thailand's traditional

dependence on the fertility of the land, and in Buddhist and Hindu rituals of kingship. After the king touches the sacred red and gold plough for good luck, the plough is drawn by garlanded bulls in a circular furrow on the Phra Mane Grounds, site of the weekend market. Brahmin priests chant as the animals are offered seven varieties of crops. The yield of the next year's harvest supposedly depends on which crops the bulls choose.

Loy Kratong, celebrated on the night of the full moon of the 12th lunar month (November). This festival marks the end of the rainy season and the end of hard work in the fields. People float their bad fortune away from them in tiny banana leaf or paper floats (*kratongs*), decorated with lit candles, flowers, and incense stick. The *kratongs* are sailed on rivers, canals, and ponds.

Ok Pansa (late October and early November), the end of the Buddhist Lent, during which monks must stay at a *wat* (temple) and not travel. At the end of Lent, Thai Buddhists can earn merit by presenting *kathin*, or offerings of food and other items for the *wat*, and new saffron robes for the monks. King Bhumibol Adulyadej, or another member of the royal family, presents *kathin* to several of Bangkok's large temples. Thai usually join together to purchase such offerings, often presenting them to a *wat* in another part of the country, and traveling there in festive procession.

Entertainment

Many activities and varied types of entertainment exist for children of all ages in Bangkok. Such attractions include Khao Din Zoo, one of the best in Southeast Asia; Magic Land, a Thai version of Disneyland; Siam Park, a combined amusement and water park; the Science Museum and Planetarium, with "hands on" exhibits; the Pasteur Institute's large collection of living poisonous snakes; and the monthly activities for children at the Nelson Hays Library.

Bangkok offers museums, art galleries, and occasional theater, dance, and music performances. The city also has discotheques and nightclubs.

Regular performances are sponsored at the Bangkok Community Theater, Music Society, Combined Choir, Alliance Française, and Bangkok Symphony. Americans interested in performing can join these groups.

The active American University Alumni Association regularly presents films, lectures, and displays, and holds classes in both Thai and English. Often, AUA sponsors performances of chamber music, jazz and popular music, and recitals by visiting American musicians. Various embassies and organizations offer Thai cultural programs throughout the year.

The Bangkok branch of the Interdenominational Christian Women's Club holds regular monthly luncheon programs. All are welcome; no dues are charged.

The Bhirasi Institute presents frequent art exhibits from Thailand and other countries. Local galleries show extensive work produced by Thailand's active artist community.

The Siam Society, organized to promote knowledge of the country's art, history, culture, and archaeology, provides activities toward these ends. The National Museum Volunteers plan trips and special programs.

At the International Club on Soi 21, Sukhumvit, there are tennis courts, a large swimming pool, a library, and a snack bar, open to all nationalities.

The American Women's Club welcomes any American woman or wife of a U.S. citizen residing in Thailand. The club has programs of local interest, operates a thrift shop, and maintains a servants' registry.

Americans participate in the activities of the Foreign Correspondents'

Club and the Hilltribe sale. An American who speaks serviceable Thai will have access to an even wider range of activities and local organizations.

Chiang Mai

Chiang Mai, with a population exceeding 160,000 is an important regional center for commerce and tourism. It is about 500 miles north of Bangkok, on a river plain surrounded by mountain ranges. Buddhist temples are found on almost every block, and city streets are crowded with bicycles, motorbikes, and converted pickup trucks used as taxis. Although Chiang Mai is undergoing a modernization process, with high-rise condominiums being constructed throughout the city, it still retains a measure of its traditional charm which makes it a popular tourist stop.

Chiang Mai, founded nearly seven centuries ago, was a major religious, cultural, and commercial center until 1556 when Burmese invasion reduced it to a vassal state. The Burmese were driven out in 1775, and Chiang Mai and the surrounding Lan Na Thai kingdom once again became part of northern Thailand.

The city is noted for its scenic splendor, ancient temples, the lilting dialect of its people and, especially, for its beautiful women. The Thai call it Shangri-La.

January is Chiang Mai's coolest month, and warm clothing is needed at that time. Temperatures start to rise in February, reaching their hottest in April with highs of 107°F. The rainy season, May through October, brings relief and heavy rainstorms. November and December are the best months with bright, sunny days and cool nights.

The northern provinces, where Chiang Mai is located, are mountainous, with transportation lines running primarily on a north-south axis along the wide river valleys. The region produces rice, tobacco, corn, sugarcane, and seasonal deli-

Wat Kukam Temple in Chiang Mai

cacies such as strawberries. Opium and jade are major illicit products. Lumber, textiles, mining, cottage industry, and tourism are also important elements in the region's economy. About 500 Americans, many of them missionaries, reside in northern Thailand.

Education

The Chiang Mai International School (CMIS), licensed by the Ministry of Foreign Affairs and operated by the Church of Christ in Thailand, provides instruction from kindergarten through tenth grade. Instruction, using U.S. textbooks, is in English. Uniforms are not required, and jeans are acceptable attire.

The school, founded in 1954, offers classes in Thai language and culture. Currently no programs for either gifted or learning disabled students are available, nor does the

school have guidance/vocational counselors.

Depending on the number and ages of preschoolers and the availability of teachers, informal nursery schools and play groups are often organized. Tutors can be found to teach Thai in the home, and the Alliance Française offers classes in French. Special educational opportunities may be available at Chiang Mai or Payap universities, but no organized activities or classes in English are currently offered.

Recreation and Entertainment

Chiang Mai offers the sports enthusiast golf, tennis, windsurfing, swimming, squash, bowling, fishing, horseback riding, and horse racing. Club memberships are available at reasonable rates. Sports equipment and attire are expensive, and both brand and choice of size are limited.

Chiang Mai is a popular tourist and trekking center. The city has many important and interesting Buddhist temples. On the mountain above Chiang Mai is the royal family's winter palace, Phuping, and a well-known Buddhist temple, Suthep. Nearby are villages that specialize in lacquer-ware, silver-smithing, silk and cotton weaving, wood carving, and umbrella making.

Regional touring opportunities include visits to elephant training camps, unusual hill-tribe villages, scenic waterfalls and picnic spots, historic sites along the Mekong River, and the towns of Chiang Rai, Lampang, Mae Hong Son, Lamphun, and Sukhothai. Interesting treks and river trips also can be enjoyed, although security regulations may limit the possibilities.

Several local movie theaters have special sound rooms where original

English-language soundtracks are played. The U.S. Air Force detachment here receives films each week from the armed forces film circuit; these are screened for the official U.S. community Friday and Saturday evenings.

Three Thai TV stations are received in Chiang Mai, but unlike Bangkok, no simultaneous English-language FM soundtracks are broadcast. American sets must be converted to the European (PAL) system.

Radio Thailand Chiang Mai has English broadcasts both mornings and evenings. With a shortwave receiver, British Broadcasting Corporation (BBC) and Voice of America (VOA) can be picked up. No English-language newspapers are available, but two Bangkok English-language papers arrive daily.

Social activities among Americans are informal, and depend on individual inclination and initiative. There is an International Women's Group, which holds luncheon meetings, sponsors arts and crafts and cooking classes, and organizes other special activities. Chiang Mai has several Rotary Club and Lion's International chapters with active and multi-national memberships. Many club and sports activities bring together Thai and foreign nationals.

Songkhla

Songkhla lies at the tip of the Thailand peninsula, about 815 miles south of Bangkok. It is served by Thai Airways and has train connections to Bangkok and Malaysia from the rail junction at Hat Yai, a half-hour drive from the city. This port town has regular freight service to Bangkok. The main highway to Bangkok is paved and the main roads leading to other provinces in the south are generally good.

Sea breezes (from an inland sea to the north and the Gulf of Thailand to the east) give Songkhla a pleasant climate. The temperature stays in the 80s year round, with an occasional hot day. Rainfall is heavy

from October through December. January through March is dry, with scattered rains.

In this city of about 250,000, the foreign community is small, but it continues to grow as a result of oil exploration efforts in the Gulf of Thailand. Housing is limited, but usually good. There is a first-class hotel on the beach. Electric current (220v, 50 cycles) is basically reliable, but subject to interruptions. City water is undependable, and the better homes have wells.

Songkhla has a provincial hospital. A Seventh-Day Adventist hospital and a new, modern university medical facility are located in nearby Hat Yai. Local markets are well stocked with seafood and fresh foodstuffs. Pork and chicken are readily available, but quality beef is hard to find. Shopping for items not found in Songkhla markets can be done in Hat Yai or Penang, a large northern Malaysian city, only four hours away by car.

The area around Songkhla includes many fine beaches. There are tennis courts and a golf course in the city.

Udon

Udon, a city over 100,000, is one of the regional hubs of northeastern Thailand. It is 350 miles northeast of Bangkok and 30 miles south of the Mekong River border with Laos. Udon (Udonrdhani) is connected to Bangkok with daily air, rail, and bus service. The drive from Bangkok takes eight hours on the Friendship Highway.

This part of Thailand, where life moves at a leisurely pace, has three distinct seasons. The cool interval, with clear warm days and cool nights, is from November to February. The hot dry season is like "burning sand under glass," to quote Kipling; it extends from March through May. The rainy season normally begins in June and tapers off in October.

From 1965 to 1976, the Royal Thai Air Force Base in Udon housed a

large contingent of U.S. Air Force personnel. With the withdrawal of this contingent in 1976, the American population dropped drastically; about 50 Americans now live in the Udon area. These include retired military, missionaries, and Peace Corp volunteers, as well as diplomatic personnel.

Considerable economic growth in Udon has resulted in the construction of new retail establishments, restaurants, hotels, and housing, although the city is still relatively small in area and does not yet boast any high-rises. Udon has two Western-style supermarkets, as well as a number of smaller grocery shops selling a variety of Western-style products. In addition, traditional open markets offer a wide variety of fresh vegetables, meats, and other products. Bakeries carry local breads and cakes, but they differ somewhat from American versions.

Udon's one department store and local shops meet most household needs. Ready-made clothing is difficult to find, but many tailor and seamstress shops offer decent service at inexpensive prices. Auto repair shops perform excellent maintenance on American and foreign-made cars at a reasonable cost. Film may be developed locally, but slides must be sent to Bangkok.

One of Udon's four cinemas has a sound booth available where one can listen to the English soundtrack when an English-language film is shown. Local TV is in Thai, except for English subtitles during the evening news on one channel. English-language radio broadcasts can be heard on shortwave radio. Bangkok based English-language newspapers are available the evening of the date published. English-language video cassettes can be rented from stores in Bangkok; local shops carry a limited supply.

Udon has many very good Thai and Chinese restaurants, as well as several acceptable Western ones. Recreational facilities are limited, but numerous tennis courts and a short

nine-hole golf course are located just outside of town. Also available are four swimming pools, fishing parks, and a jogging path along the city reservoir. Nearby archaeological digs at Ban Chiang, and mountain campsites at Phu Kadueng National Park in Loei Province offer interesting weekend trips for the adventurous.

General Information

Most of Thailand lies north of Bangkok and is referred to as "up-country." In general, life outside of Bangkok is restful. Those bothered by the noise, smoke, heavy traffic, and crowded conditions of the capital will enjoy the tranquility and spaciousness of the up-country.

North of Bangkok are jade green rice fields that stretch for miles in all directions, crisscrossed by *klongs*. Beside the *klongs*, farmers build their houses on stilts, out of reach of the water, and plant a few fruit trees and vegetable gardens. Many plow their fields with the aid of huge, slow-moving water buffalo with long, curving horns, although an increasing number are using small machine plows. After the day's work, the farmers wash the mud of the paddy from their bodies in waters of the *klong*.

Beyond the rice lands, the teak-covered mountains reach to the northernmost part of Thailand. To the northeast, a high plateau rises abruptly from the plains and slopes eastward to the Mekong River, which separates Thailand from Laos. This plateau is dotted with scrubby trees. In many areas, water is scarce and the soil poor. The dry season makes unpaved roads dusty, and the monsoon turns them to mud.

The climate in the north and northeast varies more than in Bangkok. Lightweight blankets and sweaters are needed for the cool season, and summer clothing for the hot season.

Western-style housing varies up-country but, on the whole, it is good and steadily improving. Some new houses are being built, and ingenu-

ity can make older homes comfortable and attractive. Houses are usually two-story, with airy rooms and at least one air-conditioned bedroom. Most electrical systems are 200v, 50 cycle, but voltage fluctuates sharply. Power failures in some areas are frequent, and water shortages occur during the dry season. Most homes have telephones.

Hotels vary widely. Some are new and modern; others have only cold water and furnish no sheets. For trips around the provinces, one must pack sheets, towels, soap, and plenty of extra changes of clothing.

Provincial hospitals have facilities adequate only for emergency treatment, although Chiang Mai has excellent medical institutions. Routine medical care is available at four hospitals in Udorn. Most expatriates with serious medical problems, or those requiring surgery or extended treatment, seek medical care in Bangkok. Also, most foreigners go to Bangkok for inoculations and dental care.

Since only Bangkok and Chiang Mai have English-language schools, American parents up-country either send their children to boarding school, or teach them at home, using the Calvert system. In some communities with several children, arrangements are made for one parent to act as teacher for all children.

Even the larger up-country towns may have only small Western communities, and may offer limited social activities and recreational facilities. Many people develop hobbies such as painting, writing, and gardening. Others teach English, cooking, or handicrafts to children or adults. Families now living up-country suggest that newcomers bring musical instruments, games, books, and sports equipment. A shortwave radio is useful. Most of these items can be bought in Bangkok.

A few up-country places have only one or two American families, but this isolation seems to draw them closer together. Friendships seem

warmer and a spirit of neighborliness prevails, much as in pioneer days in America. English is not widely understood or spoken in the up-country.

A great advantage of living up-country is the chance to become well acquainted with Thai people, to learn their language, customs, and culture. Many Americans who have accepted the challenge of working in rural Thailand feel that the experience gives a satisfaction that far outweighs the occasional inconvenience.

OTHER CITIES

KHON KAEN is the capital of Khon Kaen Province in east-central Thailand. The city lies on a railroad, 100 miles north of Nakhon Ratchasima. A university opened here in 1964. Khon Kaen's population is estimated over 210,000.

The capital of its province, **LAMPANG** is on the left bank of the Wang River and near a railroad, 45 miles southeast of Chiang Mai. Located in northwestern Thailand, the city is linked by a highway with Chiang Rai. Lampang is a commercial center with sugar-refining facilities.

Situated in southwestern Thailand, **NAKHON PATHOM** (also spelled Nagara Pathom) is the capital of Nakhon Pathom Province. The city is about 38 miles northwest of Bangkok and has, among its landmarks, a large temple.

Formerly ruled by Cambodia (officially called Democratic Kampuchea), the ancient walled city of **NAKHON RATCHASIMA** (also called Khorat or Korat) is the capital of its province, and lies on the Mum River, 100 miles east of Phra Nakhon Si Ayutthaya. Nakhon Ratchasima's population exceeds 280,000. A railroad junction point, the city is a trading and distributing center for the eastern region of the country.

PHET BURI (also spelled Petch-aburi or Bejraburi) is a seaport and provincial capital on the northwestern shore of the Gulf of Thailand. A railroad connects it with Bangkok, 60 miles southwest.

The seaport town of **PHUKET** is the capital of Phuket Province in southwestern Thailand. As one of the major Thai ports on the Indian Ocean, Phuket exports fish, rubber, charcoal, and tin.

Situated in southern Thailand, near the Malaysian border and 22 miles south of Pattani, **YALA** is a provincial capital. It is on the Pattani River and on the railway that runs from Songkhla to northeastern Malaysia. The residents of Yala are Malay in their language and culture and Islamic in religion. The city's exports include rubber and tin.

COUNTRY PROFILE

Geography and Climate

The Kingdom of Thailand, formerly Siam, is located at a strategic crossroads in Southeast Asia. With an area of about 200,000 square miles, it is the region's second largest nation. Its boundaries adjoin Myanmar on the north and west, Laos on the east and northeast, Cambodia on the southeast, and Malaysia and the Gulf of Thailand on the south.

Topographically, Thailand presents a varied landscape of forested mountains, dry plateaus, fertile river plains, and sandy beaches. Mountain ranges run along the border with Myanmar and down to Malaysia. Another range splits the country in half from north to south. Major deforestation has occurred throughout Thailand. However, the government has attempted to save the forests by imposing a ban on commercial logging.

The Chao Phraya River originates in the north and flows southward. It

irrigates the fertile rice lands of the central plains through a network of *klongs*. This long waterway also serves as the main water transportation route through the central part of the country. It empties into the Gulf of Thailand near the international port of Bangkok. Day and night, the river teems with traffic: ships of many lands; round-bottom barges loaded with rice, sugar, rubber, teak, and coconut; brightly painted river taxis; and tiny *sampans* piled high with fruits and vegetables for the city market.

Because it is located between the equator and about 20°N latitude, Thailand is warm and humid and classified as tropical monsoon. A pronounced rainy season lasts from July through October. From November through February, the northeast monsoon brings a cooler, drier period, when humidity drops from an average high of 95.2% to an average low of 58.5%. During this season, temperatures range from the mid-60s in the morning to the mid-80s during the day. March through June is usually hot and humid, and temperatures often reach 100°F.

Thailand's warm, humid climate, particularly during the rainy season, can cause mildew. However, air-conditioning generally prevents serious problems. The usual tropical insects and small lizards live on ceilings and walls; the lizards eat mosquitoes and other insects and do no damage or harm. Ants of all varieties abound. Ticks are a problem for pet owners.

Population

In 2000, Thailand's population was estimated at 61.2 million. Most people are native-born Thai whose ancestors migrated from southern China in the sixth and seventh centuries A.D. Over the centuries, they have developed an independent culture and identity that is uniquely national in character. The most significant minority are the Chinese, who comprise 14% of the population and live throughout Thailand. Small minorities include the

Malays, Mon, Khmer, Indians, Vietnamese, and various hill tribe peoples. About 20% of the population live in cities, with a disproportionately large number—six million—concentrated in metropolitan Bangkok. Villages and small towns dot the greater part of the landscape. The annual population growth rate has declined dramatically from over 3% a year in 1960 to less than 1% in 2001.

The Thai, historically governed by strong central rule tempered by Buddhist precepts of reciprocity between the king and his people, retain a traditional reverence for their monarch. Throughout their history, the Thai have encountered and borrowed selectively from regional and, later, Western civilizations, producing a rich cultural synthesis that is uniquely Thai. That their country maintained its independence despite pressures from colonial powers is a matter of great pride. A strong sense of cultural and national identity has helped to protect this society from massive disruption as it shifts from an agrarian economy to a developing, urbanizing, industrial state.

Social interactions are governed by formal expressions of courtesy, and deference to age and social status. Thais greet one another with a *wai*, performed by placing the palms of the hands together in front of the face and bowing slightly. The younger, or the one of lower station in life, customarily initiates the greeting. The word used is *sa-wat-dee kha*, spoken by women, and *sa-wat-dee krap*, by men. When taking leave, the same words and *wai* are repeated. It is good manners to remove shoes on entering a Thai home, and this custom is obligatory before entering a temple or shrine.

It is impolite to touch a Thai, even a child, on the head or shoulders, to point or shake a finger at another person, or to talk loudly or shout. To point one's feet at, or step over, another person is considered an insult. A woman should never touch a Buddhist monk, hand anything

directly to him, or allow her clothing to brush against his robe. Sitting or standing on Buddha images is considered a sacrilegious act, punishable by a fine or jail sentence. Pointing fingers at, or touching, any image of the Buddha is viewed as an expression of bad manners.

The royal family is of particular importance to all Thais. It is not acceptable to speak out against the King. Such behavior is punishable under *lese majeste* laws. Talking about any member of the royal family in derogatory terms, even in casual conversation, is also not acceptable. Everyone at a gathering stands when the King's anthem is played.

Thai is a tonal language, with a root monosyllabic vocabulary enriched by the addition of Sanskrit and other loan words. It is not inflected, and the absence of tenses and cases makes it relatively easy for Americans to pick up a rudimentary command of Thai, despite the difficulties introduced by the tone system. The regional dialects, as well as the closely related Lao language, can be hard to understand but, in this age of radio and television, almost all Thai people now understand some Bangkok or Central Thai. English, the second language of most educated Thais, is taught in schools and universities.

Thailand is a religious nation; 95% of its people are Buddhist. A mixture of Theravada Buddhism, Hinduism, and animism permeates all levels and aspects of society. It is a stabilizing force both at national and at local levels, where it provides a focus for community life, particularly in rural areas.

The *wat* (temple) is used not only for spiritual purposes, but for ceremonies of birth, marriage, and death. It also is used for recreation and welfare activities and, in remote areas, still serves as a school. Thai Buddhist men gain merit by spending from three months to several years in the saffron robes of the monk, adhering to Buddhist moral

and religious precepts, or *Dhamma*, and performing meritorious acts.

Most Chinese and Vietnamese in Thailand are adherents of Mahayana Buddhism. Less than 0.5% of the population are Christian. Thai Muslims, about 4% of the total population, are concentrated in the four southern provinces along the Malaysian border.

Most scholars believe that the Thai (also known as the Siamese) people migrated from the hilly hinterlands of southern China into what is now Thailand over 1,000 years ago. Settling first in the fertile central plain and basin of the Chao Phraya River, they created a series of independent kingdoms that competed with their Burmese and Khmer neighbors.

In the 13th century, the Thai defeated the Khmer and created a kingdom with its capital at Sukhothai. A second kingdom, founded in 1351 at Ayudhaya, later eclipsed Sukhothai in importance. The Burmese, in April 1767, sacked and captured Ayudhaya, killing the Thai king. Six months later the Siamese drove out the Burmese and General Phraya Taksin established a new capital in Thonburi, across the river from what is now Bangkok. In 1782, Rama I, who replaced Taksin and founded the current Chakri dynasty, moved the capital across the river to its present location. Although Westerners have long called the city Bangkok after a small fishing village once nearby, the Thai name of the capital is Krung Thep, or City of Angels. The Grand Palace lies in an area called Rattanakosin, or the Jewel of Indra, the name also used to designate the Chakri era's history and culture.

Government

In Thailand's pre-modern Buddhist state, the king was a living Buddha, or *Bodhisatta*, for his subjects, and a living embodiment of Buddhist law (*Dhamma*). He was protector of the monastic orders, and performed regular ceremonies to assure the progression of the seasons and fertility

of the land. Considered to be between human and divine, he was the apex of an earthly hierarchy below which the Thai social and political order was formed. Kings of the Chakri dynasty (late 19th and early 20th centuries) were a powerful modernizing force, introducing important reforms and innovations while protecting the country from encroachment by imperialistic forces in the region.

The modern period began in 1932 with the advent of constitutional monarchy and experiments with the parliamentary system. Since 1946, American-born King Bhumibol Adulyadej (Rama IX), as chief of state, has ruled in conformity with provisions of the constitution. The king has little direct power, but he plays an important symbolic, unifying role, and he continues to be the protector of Buddhism, performing regular ceremonial roles and is the patron of all religions. Legislative power lies with a democratically elected government led by a prime minister.

Since 1932, Thailand has lived under a succession of unstable governments in which the military has played a dominant role. Changes of government frequently came through coups and the groups seizing power rewrote the constitution to suit their own purposes. A relatively stable time occurred in the 1980s when Prime Minister General Prem Tinsulanonda presided over eight years of coalition governments. The military last seized power in 1991, but with citizen protests and royal intervention, civilian rule was restored in 1992.

The most significant development since then was the ratification of the current constitution in 1997. Thailand has revised their Constitution 16 times since 1932. The recent reforms involve the political process as well as expanded the rights and civil liberties of Thai citizens. They include the establishment of a National Counter Corruption Commission, a Constitutional Court, a national Human Rights Commis-

sion, and a new national Election Commission.

The Ratha Sapha (National Assembly) has two chambers: the Saphaputhan Ratsadon (House of Representatives), with 438 members, and the Wuthisapha (Senate) with 200 members.

House terms last for four years. However, the prime minister may choose to dissolve the House and call elections before that date. Elections for the country's first elected Senate were held in March 2000. All members of the Senate are elected concurrently for a set term of six years, and members are not eligible for reelection.

With the exception of the Democrat Party, Thailand's oldest organized political party, Thai political parties have tended to be centered on individual personalities rather than ideologies.

Thailand's legal system blends principles of traditional Thai and Western laws; Koranic law is applied in the far south, where Muslims constitute the majority of the population. The Supreme Court is the highest court of appeals, and its judges are appointed by the king.

The flag of Thailand is comprised of five horizontal bands—red, white, dark blue, white, and red, in that order. The central blue band is twice the width of the others.

Arts, Science, Education

The literacy rate for Thais aged 15 and over is 90%. Ninety-seven percent of those eligible for first grade enter school and 65% of these complete the primary grades. 60%, however, enroll in secondary and higher education. Bangkok is the home of 10 state-run universities and numerous private colleges and universities. Chiang Mai, Khon Kaen, and Songkhla each have an important regional university. The language of instruction is Thai, except for selected graduate economics and

business programs that offer courses in English.

The predominant sources of modern Thai culture are Hinduism and Theravada Buddhism, as transmitted through contact with ancient Mon, Ceylonese, and Khmer civilizations centered in what are now Myanmar, Sri Lanka, and Cambodia. A perceptible Chinese influence also exerts itself in many aspects of Thai culture. In southern Thailand, long traversed by Muslim traders, elements of the classical Islamic tradition have been incorporated into the culture.

Art objects in Thailand traditionally were created and used for religious purposes—decoration of temples, sacred manuscripts, and religious statues—and for the use of royalty and nobility. As a result of the sacking of Ayutthaya in 1767 and the destruction of many cultural artifacts, Thai art for this period is scarce, but later periods are well represented in museum and other collections. After the late 1940s, schools of modern Thai art began to show marked Western influences. Although many artists paint in styles derived from Western models, others are experimenting with expressing traditional Buddhist themes in contemporary forms. Traditional techniques are preserved and taught at Silpakorn University and the Department of Fine Arts in Bangkok.

The National Museum in Bangkok contains an extensive collection of Thai art, including prehistoric objects, sculpture, pottery, and paintings representing various periods and objects (furnishings, carriages, etc.) from previous royal families. The Jim Thompson House (dedicated to the man who popularized Thai silk throughout the world) and Suan Pakkard Palace exhibit private collections which contain some of the finest examples of Thai antiques.

The Museum Volunteer Group and the Siam Society give lectures and arrange study work groups on Thai culture. A number of cultural societ-

ies, including the Alliance Française, British Council, Goethe Institute, Japan Foundation, and American University Alumni Association show movies from their respective countries, usually in their native languages, and sponsor The Bangkok Community Theater, an amateur group, which presents a number of plays each year. The Bangkok Combined Choir presents an annual performance of Handel's *Messiah*. The Bangkok Music Society schedules recitals all year and the Bangkok Symphony Orchestra's yearly season includes at least four concerts.

Many private galleries show the works of contemporary artists and artisans. Air-conditioned theaters show American, Thai, Indian, and Japanese movies daily. In recent years, the more traditional forms of Thai art, music, and dance have been revived. The Royal Siamese classical dances, now in great demand, are performed frequently by troupes of the Department of Fine Arts, dance schools, and private groups. The more traditional forms of painting and handicrafts, including work with silver, silk, bronze, lacquer, and ceramics, also are enjoying a resurgence.

Commerce and Industry

In the earlier part of the 1990s, the Thailand economy was one of Southeast Asia's strongest. But financial crisis hit, beginning in 1997. By the end of 1998, the economy had collapsed by 10.8%, local currency lost half its value, and about 70% of Thailand's domestic financial institutions were either shut down, taken over by the government, or merged with other institutions. Per capita income dropped from \$3,000 in 1996 to \$1,800 in 1998.

With over \$17 billion dollars of aid from the International Monetary Fund, the economy has stabilized and has begun to move forward at a slow, but relatively steady rate.

About 54% of the labor force is involved in agriculture. The most important crop is rice, which is both the staple food and the principal export. Other agricultural commodities produced in significant amounts include: fish and fishery products, cassava (tapioca), rubber, maize (corn), and sugar. Exports of processed foods such as canned tuna, pineapples, and frozen shrimp are on the rise.

Thailand's manufacturing sector has revived with rapid increases in production of such goods as computers and electronics, garments and footwear, furniture, wood products, canned food, toys, plastic products, gems, and jewelry. High-technology products such as integrated circuits and parts, electrical appliances, and vehicles are now leading Thailand's strong growth in exports.

Tourism is still one of Thailand's single largest earners of foreign exchange. Many new luxury hotels and other tourist facilities have opened in order to serve the growing number of tourists from Japan, Europe, the U.S., and Taiwan.

The U.S. is Thailand's leading export market, followed by Japan and Singapore. Leading Thai exports are fishery products (especially canned tuna), textiles, integrated circuits, jewelry/precious stones, and footwear. Japan supplies most of Thailand's imports, followed by the U.S. Leading Thai imports are machinery and parts, aircraft, chemicals, textile fibers (especially cotton), and fish.

American investment has played a significant role in the Thai economy. Two American companies, ESSO (Exxon) and Caltex (a joint venture of Chevron and Texaco), are among the four largest gasoline retailers in Thailand. Seagate Technology has made Thailand its worldwide base for production of computer disk drives, and AT&T has constructed the world's largest corded telephone manufacturing plant outside Bangkok. American consumer brands such as Coca-Cola, Pepsi, Gillette, Johnson and Johnson, and

Colgate-Palmolive are well established in Thailand, selling products that are either imported or manufactured by local subsidiaries. American investment has not increased as rapidly as that of Japan or Taiwan, although the U.S. is still considered the largest or second largest foreign investor in Thailand.

Transportation

Bangkok is served by several international air carriers, and there are domestic airlines providing service between Thai cities. Comfortable, air-conditioned buses also are available, traveling to major cities and resort areas. Daily first-class train service to major cities is also available.

Canals, or *klongs*, have traditionally provided an important mode of transportation in parts of central and southern Thailand. Although most canals in Bangkok have been filled in, or are no longer navigable, water-taxi routes starting from points along the banks of the Chao Phraya River link the capital city to the large number of *klongs* in the countryside. Water taxis and small motorboats provide a low-cost and efficient means of transporting passenger and light-cargo traffic, and are a pleasant way to explore a style of Thai life not visible from the roads. These boats do not carry life jackets.

Roads in Bangkok are generally good. However, because the city is below sea level, major drainage problems arise during the rainy season, when certain streets become, or revert to, canals; when others flood; and when large potholes and drain openings go unrepaired for many weeks. Roads vary from the Friendship Highway and the main north-south roads, all in good condition, to unpaved, ungraded surfaces, often impassable by flooding during the rainy season.

Bangkok traffic is heavy and, when not halted at intersections in the city's infamous and interminable traffic jams, moves at a reasonable

pace. The billows of black smoke emitted by public buses, exhaust fumes from other vehicles, and the mixture of large passenger cars, motorcycles, bikes, *samlors*, public buses, and pedestrians make driving one of the least attractive and most fatiguing aspects of life in Bangkok. The perpetual, severe congestion forces people to arrange the day's activities around traffic problems, and often exceeds the limits of time, tolerance, frustration, and fatigue.

Public transportation in Bangkok includes buses (always crowded and driven aggressively); *samlors* (two-passenger, three-wheel vehicles used in emergencies for short trips); and taxis.

Taxis are usually air-conditioned to some degree. The state of repair of the taxi, the driver's knowledge of the local major destinations, English competence, and basic driving ability (including possession of a driver's license) can vary widely from taxi to taxi. The traveler should negotiate the fare before entering the vehicle and, upon completion of the trip, remain seated in the taxi until change is received. Meters are not required by law.

Taxis dispatched from hotels are air-conditioned and more comfortable, but the rates are two or three times the fare for a regular taxi. Hotel taxis are, however, particularly useful for late night trips or journeys to the airport because they can be booked in advance. You can rent air-conditioned cars and minibuses, with or without drivers, for trips in and out of Bangkok.

Local police cars vary in color; fire trucks are red. Traffic, when directed, is controlled by traffic lights or police officers.

Personally owned vehicles should be air-conditioned for comfort. The extremely hot, humid, and polluted air makes driving with open windows difficult.

Traffic moves on the left. Right-hand-drive cars are safer,

especially on the open highways, but left-hand-drive cars can be used. Station wagons and larger vehicles are not recommended, since they are difficult to maneuver or park in certain areas of Bangkok. They also cost more to operate and are difficult to sell.

Japanese and European cars can be purchased locally, although often with a wait of three to four months for delivery. If an American car is shipped, it should have a tropical radiator. Unleaded gas is not available. Adequate repairs are done on the local market. Labor costs are low, but most replacement parts for non-Japanese cars are expensive. Tires are available locally at reasonable prices.

Cars must carry adequate property damage and liability insurance. Several Bangkok firms are licensed to issue policies in Thailand, but many Americans order from well-known firms in the U.S. Third-party liability insurance is required; full comprehensive coverage is recommended.

Automobiles brought into the country must be registered promptly upon arrival, and cannot be driven without Thai license tags. Since it takes up to three months to obtain a Thai driver's license, an international or U.S. permit can be used in the interim.

Communications

Telephone service to the U.S. is good. Sometimes you can be put right through and at other times there is a one- to two-hour delay while the call is routed through the international operator. Calls may be placed from home, hotel, or the Central Radio Telephone Service of the General Post Office on New Road in Bangkok. Telegrams and cables can be sent from any post office and from most hotels; messages must be submitted in written form. Airmail service to the U.S. takes three to 10 days, and transit time for surface mail is from 10 to 20 days.

Thai television operates on the PAL system; American-made color sets must be adjusted before use. Modification to PAL can be done locally, but it is expensive and the results are not always satisfactory. Reception is fair when an outside antenna is used. Sets purchased locally are expensive.

Bangkok has five television stations. The stations carry some American and British programs, and English translations of the news, which the viewer receives by tuning in the appropriate channel and listening to the English soundtrack on FM radio.

A number of Thai-language and a few English-language radio stations operate on FM stereo and regular AM frequencies. Shortwave carries Voice of America (VOA) and the British Broadcasting Corporation (BBC).

Bangkok has two English-language dailies: the *Bangkok Post* and *The Nation Review*. Both offer home delivery and use Western wire services to supplement domestic news. *Time* and *Newsweek* (international editions), the *International Herald Tribune*, and *USA Today* are available by subscription or direct purchase at newsstands.

Health and Medicine

Bangkok has a full range of trained, English-speaking medical and dental specialists. Hospitals used by the American community are modern and well-equipped. In Bangkok, only a limited number of medical specialists are qualified to offer care to the physically handicapped or mentally disabled. In other cities, there are hospitals which are adequate for routine treatment; more complicated cases are often treated in Bangkok.

Most diseases in Thailand are also common in the U.S., but some occur with greater frequency because of climatic and sanitary conditions. Heat rashes, fungus infections,

colds and other respiratory infections, and intestinal disorders are common. Careful attention to sanitation and hand cleanliness is the best preventive against intestinal disorders.

Lack of vehicle pollution control plus severe industrial pollution have created a serious air pollution problem in Bangkok. Persons with chronic respiratory problems should seek medical advice before arriving for an extended stay, since these conditions usually become much worse here.

In large cities, household water comes from purification plants, but the possibility of contamination in the distribution system always exists. Boiled or bottled water must be used for drinking, making ice cubes, and brushing teeth. During times of flooding, drinking water becomes contaminated by seepage into the delivery pipes and diarrheal diseases invariably increase in frequency. Since the water here contains no fluoride, pregnant women and all children under 18 should use a fluoride supplement.

Fresh milk and ice cream are sources of many infectious diseases. Canned and powdered milk are safe to use, as are the products of Foremost Dairy, sold in most local supermarkets. Meat, especially pork, should be cooked thoroughly, and raw fruits and vegetables must be washed with soap and water and then soaked in chlorine or an iodine solution prior to cooking or peeling.

Mosquitoes are profuse throughout the country, but malaria is not a problem in the major cities or resort areas. Suppressants are available when traveling to border regions. Hepatitis is transmitted by contaminated food and water, but gamma globulin shots reduce its incidence and severity dramatically.

Rabies shots for pets are not compulsory, but rabid dogs are common here. All foreign residents, especially children, should (in advance of arrival) receive pre-exposure rabies immunizations. Any person

bitten or scratched by a fur-bearing animal or bat should seek medical care immediately. Cats, dogs, and other animals susceptible to rabies should have rabies shots before they are brought to Thailand as pets.

NOTES FOR TRAVELERS

Several international air carriers serve Bangkok. The most commonly traveled route for Americans is via Tokyo and Hong Kong.

U.S. citizen tourists staying for less than 30 days do not require a visa, but must possess a passport and onward/return ticket. A Passenger Service Charge, currently 500 baht (USD equivalent as of September 2001: \$11.50), must be paid in Thai baht when departing the country from any of Thailand's international airports. Thailand's Entry/Exit information is subject to change

without notice. For further information on Thailand's entry/exit requirements, please contact the Royal Thai Embassy, 1024 Wisconsin Avenue, N.W., Washington, D.C. 20007, telephone (202) 944-3600, or the Internet web site <http://www.thaiembdc.org>, or the Thai consulates in Chicago, Los Angeles, or New York City.

Thai customs authorities may enforce strict regulations concerning temporary importation into or export from Thailand of items such as firearms, explosives, narcotics and drugs, radio equipment, books or other printed material and video or audio recordings which might be considered subversive to national security, obscene, or in any way harmful to the public interest and cultural property. It is advisable to contact the Embassy of Thailand in Washington, D.C. or one of the Thai consulates in the United States for specific information regarding customs requirements.

Americans living in or visiting Thailand are encouraged to register either online or in person at the Consular Section of the U.S. Embassy in Bangkok or the U.S. Consulate General in Chiang Mai. At both locations updated information on travel and security in Thailand is available. The Consular Section of the U.S. Embassy is located at 95 Wireless Road in Bangkok; the U.S. mailing address is APO AP 96546-0001. The central switchboard number is (66-2) 205-4000; the American Citizen Services Unit number is (66-2) 205-4049; and the fax number is (66-2) 205-4103. The web site for the U.S. Embassy is <<http://usa.or.th>>. American citizens can register online via the web site. Questions regarding American Citizens Services can be submitted by E-mail to <acsbkk@state.gov>. The U.S. Consulate General in Chiang Mai is located at 387 Wichayanond Road; the U.S. mailing address is Box, C, APO AP 96546. The telephone number is (66-53) 252-629 and the fax number is (66-53) 252-633.

Pets

Thailand has no quarantine restrictions on entering pets, but does require a rabies inoculation certificate and a certificate of good health issued not more than one week prior to arrival. Bangkok's tropical climate poses numerous health hazards for pets. Dogs especially are susceptible to such afflictions as heartworm, roundworm, and other parasites. Fleas and ticks also abound. Local veterinary clinics are not always up to U.S. standards. Bangkok has a high incidence of rabies, and local pet purchases are discouraged. Pet goods are available at local pet shops.

Firearms & Ammunition

Any weapon that can be fired must be registered with authorities. Foreigners should not import antique weapons. Firearms imported into Thailand must be exported upon the owners departure, and cannot be disposed of by sale or gift within the country. Weapons are restricted to pistols and revolvers with minimum four-inch barrel length and maximum .45 caliber bore (one of each caliber); target rifles, not larger than .22 caliber (one of each type); hunting rifles neither operable in full automatic mode, larger than .375 caliber, nor configured as a military weapon (one of each caliber); shotguns, one of each designed for skeet or trap shooting, and one of each designed for hunting; and a total of 1,000 rounds of ammunition.

Social Customs & Laws

Thailand's traditional greeting is the *wai*, made by placing the palms together and raising them to a level determined by the relative status of those being greeted. The handshake is becoming more popular among cosmopolitan Thais.

It is a criminal offense to make negative comments about the King or other members of the royal family. Thais hold the King in the highest regard, and it is a serious crime to make critical or defamatory comments about him. This particular crime -- dubbed "lese majeste" -- is punishable by a prison sentence of

three to fifteen years. Purposely tearing or destroying Thai bank notes, which carry an image of the King, may be considered such an offense.

Currency, Banking & Weights and Measures

The time in Thailand is Greenwich Mean Time (GMT) plus seven.

The basic unit of Thai currency is the *baht*, divided into 100 *satangs*. All normal banking services are provided by several foreign and Thai banks; many have sidewalk currency exchange windows.

Thailand uses the metric system for most weights and measures, but some local units remain in force, particularly in the provinces. Some of the more important local measures are the *rai* (.4 acres), the square *wah* (four square meters), and the *picul* (60 kilograms).

TONGA

Kingdom of Tonga

Major City:

Nuku'alofa

Other Cities:

Tofua

INTRODUCTION

TONGA is located south of Western Samoa, and less than a quarter of the nation's 169 islands are populated today. Some of the Tongan islands may have been settled since at least 500 BC. The Tongan realm reached its zenith in the 13th century, when its control extended over part of the Lau group in Fiji, Rotuma, Futuna, 'Uvea, Tokelau, Samoa, and Niue. The Dutch first encountered Tonga in 1616, and Captain James Cook visited the islands in 1773 and 1777. Between the 1790s and the 1820s, civil war broke out among rival dynasties for control of the monarchy; it finally ended in 1845. Tonga entered into a treaty of friendship and protection with Great Britain in 1900. During World War II, New Zealand and US troops were stationed on Tongatapu, which became a hub for shipping. Coconuts, bananas, and vanilla became the main economic resources. Two more treaties of friendship between the United Kingdom and Tonga were signed in 1958 and 1960. On June 4, 1970, Tonga became an independent member of the Commonwealth of Nations. Tourism has become an important source of earnings, but Tonga still relies on foreign aid.

MAJOR CITY

Nuku'alofa

Tonga's only urban and commercial center is Nuku'alofa, located on the island of Tongatapu. Nuku'alofa is 430 miles from Suva, Fiji, and about 1,100 miles from Auckland, New Zealand. Tongatapu covers about 100 square miles and is the traditional residence of the king and high chiefs. The other islands traditionally supplied Tongatapu with agricultural produce throughout the year. Tongatapu became known as the "land of chiefs" while the outer islands were referred to as the "land of servants." Nuku'alofa was originally a fortress for the western part of the island. Raiders from the nearby Ha'apai island group periodically attacked the fort in the late 18th century and entirely destroyed it around 1807. Almost two-thirds of the country's population now lives on Tongatapu, and the Nuku'alofa area has about 40,000 inhabitants. The town has the majority of Tonga's hotels, restaurants, shops, bars, and other urban features, but its sprawl now covers nearby agricultural land and wetlands, and shacks line the edge of town. Nuku'alofa and Neiafu are Tonga's only ports of entry for foreign vessels. Nuku'alofa has a deepwater

harbor that is protected by reefs. The Pacific Forum Line and the Warner Pacific Line maintain scheduled service from Australia and New Zealand to Tonga via the Samoas or other islands. Tonga's main air field is Fuaamotu International Airport, 13 miles by road from Nuku'alofa. The government-owned Friendly Island Airways conducts flights between Tongatapu, Ha'apai, 'Eua, Vava'u, and Niuatoputapu. The town's economy is based on exports of copra, bananas, and vanilla and the sale of local handicrafts at the Malae (Park) Market.

Recreation and Entertainment

Basketball, boxing, cricket, rugby, soccer, and volleyball are all popular in Tonga. Fishing and sailing are popular recreations. Rugby matches are played at the Teufaiva Outdoor Stadium on Friday and Saturday afternoons from mid-spring until mid-summer. There are several dive sites to the north of Tongatapu along the many islands, reefs, and shoals. Four of Tonga's five national marine reserves are located in the reefs north of Tongatapu.

The Royal Palace is a white wooden Victorian building landscaped with expansive lawns and Norfolk Island pines. The palace was manufactured in New Zealand in 1867 and

Local market in Nuku'alofa

Susan Rock. Reproduced by permission.

transported to Nuku'alofa. The Royal Chapel was built behind the palace in 1882, and it has served as the site of Tonga's coronations since then. The palatial estate is not open to visitors but is visible from the waterfront. The royal tombs are located less than a mile south of the palace. The site has contained the graves of the monarchs (and their immediate families) since 1893. The graveyard lies in a large park adjacent to the Basilica of St. Anthony of Padua but is not open to the public. The basilica was constructed by volunteers in the late 1970s. The Tongan War Memorial at the Town Common is dedicated to the memory of Tongans who perished in World War II. The Nuku'alofa Talamahu Market is the country's main produce market.

The Tongan National Center in nearby Vaiola displays Tongan history, artifacts, and portraits of the monarchs. There are also demonstrations of traditional basket weaving, tapa making, wood, bone, and coral carving, painting, and kava preparation. Kava is a popular Tongan beverage, a mild tranquilizer made from the ground root of the pepper plant. Visitors to Tonga often enjoy a traditional evening of suckling pig, crayfish, chicken, and assorted accompaniments.

The famous 1789 mutiny on the British ship *Bounty* took place in the waters between the Ha'apai and Nokuma island groups. The former site of the Nuku'alofa fortress is on the slopes of Mt. Zion near the palace, but a radio tower now stands in its place.

The Tongans' ancient tombs consisted of great rectangular platforms of recessed coral limestone blocks erected in tiers. A traditional stone-lined burial vault would be dug into the sand on top of the platform. The Paepae'o Tele'a site on Tongatapu is the grandest of these ancient burial grounds, with its terraced platforms. This particular tomb, however, was probably erected as a memorial since it contains no burial vaults.

European and indigenous culture and living patterns have blended in Nuku'alofa, but in the rest of Tonga village life and kinship ties continue to be important. Heilala is a week-long series of celebrations, parades, sports competitions, and cultural events that take place during the time around the king's birthday (July 4). The Pangai public waterfront area is used for royal ceremonies, festivals, and local soccer and cricket matches. Singing and music are popular forms of entertainment.

The annual National Music Festival in June is a two-week competition with over ten different categories of performance. Tonga, along with some other South Pacific nations close to the International Dateline, is preparing an elaborate celebration to greet the new millennium. Since 1971, the Ministry of Education has operated a joint library service with the University of the South Pacific. The library is in Nuku'alofa and contains approximately 7,000 volumes. The Tonga College Museum's collection includes artifacts of Tonga's history. There are libraries at the Basilica of St. Anthony of Padua, and at the New Zealand and Australian high commissions. Nuku'alofa also has one small cinema.

OTHER CITIES

Largely uninhabited, **TOFUA**'s claim to fame is mutiny. It is believed that the famous Mutiny on the *Bounty* happened here in 1789, when quartermaster John Norton was clubbed to death (on Mutiny of the Bounty Beach) and Captain William Bligh and his men began their 4063 mile trip to Timor. Tofua is the largest island in the group and is fairly well covered with rainforest. Hikers can enjoy a large variety of plant and birdlife. Tofua is also the site of Tonga's most active volcano, which features a steaming lake in its crater.

COUNTRY PROFILE

Geography and Climate

The Tonga archipelago lies scattered east of Fiji in the South Pacific Ocean. The islands run roughly north-south in two parallel chains. There are 172 islands, of which 45 are inhabited. The total area of the islands is 289 square miles, or more than four times the size of Washington, D.C. The western islands are

volcanic, and the eastern islands are coralline and encircled by reefs. The volcanic islands reach a height of 3,389 feet on Kao. Fonuafo'ou, about 40 miles northwest of Nuku'alofa, is famous for its periodic submergences and reappearances, as a result of earthquakes and volcanic action. The climate is subtropical, with the cooler season lasting from May to November. The average daily temperature ranges from 50°F in winter to 90°F in summer. Most rainfall occurs between December and March. The annual average rainfall on Tongatapu is 70 inches; on Niuaotupapu, 74 inches; and on Vava'u, 110 inches.

Population

There are an estimated 110,000 people living in Tonga, for a density of 385 people per square mile. There has been considerable migration to urban areas, and many Tongans emigrate to work abroad. About 99% of the population is Tongan, a homogeneous Polynesian people. The remainder of the population is European, part-European, Chinese, or non-Tongan Pacific islander. Christianity is the dominant religion in Tonga. The largest denomination is the Free Wesley Church of Tonga, which is headed by the Tongan monarch and claims one-third of the population as members. There are also smaller numbers of Roman Catholics, Anglicans, Seventh-Day Adventists, Mormons, and Polynesian Christian denominations. Tongan and English are the national languages. Tongan is similar to Samoan and was unwritten until the 19th century. English is taught as a second language in elementary and secondary schools, so most Tongans have some understanding of spoken and written English.

Government

Hereditary absolute kings (known as Tu'i Tonga) have ruled in Tonga since the 10th century. Over the centuries the dynasty was split up so that by the early 19th century, three lines of kings all sought domi-

nance. In 1831 Taufa'ahu Tupou united the islands by conquest and took the name George. As George Tupou I, he became ruler in 1845 and was made constitutional monarch in 1875. In 1900, during the reign of George II, the first treaty of friendship was concluded between the United Kingdom and Tonga. Tonga was made a British protectorate but had full freedom over internal affairs. In 1970, Tonga ceased being a protectorate and became an independent member of the Commonwealth of Nations. The 1875 constitution divided the government into three main branches: the sovereign, Privy Council, and cabinet; the Legislative Assembly; and the judiciary. The King-in-Council is the chief executive body, and the cabinet, presided over by the prime minister, makes executive decisions of lesser importance. King Taufa'ahu Tupou IV has ruled since December 1965. The prime minister is appointed by the king. Only nine of the 30 Legislative Assembly seats are determined by popular election (12 are reserved for cabinet ministers and nine are for nobles). A pro-democracy movement has gained support since 1993. The Supreme Court exercises jurisdiction in major civil and criminal cases. Other cases are heard in the Magistrate's Court or in Land Court.

Tonga's flag is crimson with a cross of the same color mounted in a white canton.

Arts, Science, Education

Primary education is compulsory for all Tongans, and there are over 100 public primary schools. Elementary education is conducted in Tongan, and English is also taught. Adult literacy is over 90%. There is a teacher training college. Hango Agricultural College is part of the Free Wesleyan Church Education System. Tonga Maritime Polytechnical Institute is located in Nuku'alofa.

Commerce and Industry

Tonga's main exports are copra (dried coconut meat) and other coconut products, bananas, and vanilla beans. Gourds (squash and pumpkins) have also become a major export crop (especially to the Japanese market), accounting for nearly half of all exports in 1995. Fishing is relatively undeveloped and has become more important in recent years. Tourism is a major source of foreign earnings, but the economy still relies on foreign aid.

The Tonga Chamber of Commerce can be reached at P.O. Box 838, Nuku'alofa, Tonga, South Pacific.

Transportation

About 75% of Tonga's surfaced roads are on Tongatapu. There are no bridges, but causeways connect three islands in the Vava'u group.

Traffic moves on the left in Tonga. While roads in Nuku'alofa are paved, most other roads are not. Animals and unwary pedestrians walking in the road make night driving on unlit secondary roads hazardous.

Communications

Tonga Telecom has offices in Nuku'alofa, Pangai (Ha'apai), Neiafu (Vava'u), 'Ohonua ('Eua), and Hihifo (Niuaotupapu) where international telecommunications services are available. An internal radiotelephone system connects Nuku'alofa, 'Eua, Nokuma, Ha'afeva, and Vava'u. Radio Tonga broadcasts in Tongan, English, Fijian, and Samoan. Television reception is available only by satellite. The government's *Tonga Chronicle* is the main weekly newspaper. There are also church newspapers and a few private publications.

Health

Vaiola Hospital is located in Nuku'alofa. There is one govern-

ment medical department hospital each in Tongatapu, Vava'u, Ha'apai, and 'Eua. Tongans receive medical and most dental treatment free of charge. Tuberculosis, filariasis, typhoid fever, dysentery, and various eye and skin diseases remain common health problems.

NOTES FOR TRAVELERS

Passage, Customs & Duties

A passport and onward/return ticket are required. Visas are not required for stays up to 30 days. Tonga collects a departure tax. For further information about entry requirements, travelers, particularly those planning to enter by sea, may wish to contact the Consulate General of Tonga at 360 Post Street, Suite 604, San Francisco, California 94108; telephone 415-781-0365.

Tonga's customs authorities may enforce strict regulations concerning temporary importation into or export from Tonga of items such as firearms, explosives, motor vehicles,

eggs, and certain types of alcohol. It is advisable to contact the Consulate General of Tonga in San Francisco for specific information regarding customs requirements.

U.S. citizens are encouraged to carry a copy of their U.S. passports with them at all times, so that, if questioned by local officials, proof of identity and U.S. citizenship are readily available. U.S. citizens who are detained are encouraged to request that a consular officer from the U.S. Embassy in Suva, Fiji be notified

There is no U.S. Embassy or other U.S. diplomatic or consular post in Tonga. Assistance for U.S. citizens in Tonga is provided by the U.S. Embassy in Fiji, which is located at 31 Loftus Street in Fiji's capital city of Suva. The telephone number is (679) 314-466; the fax number is (679) 314-466. Americans may register with the U.S. Embassy in Suva, Fiji and obtain up-to-date information on travel and security in Tonga from the Embassy. Information may also be obtained by visiting the Embassy's home page at <http://www.amembassy-fiji.gov>.

TURKMENISTAN

Republic of Turkmenistan

Major City:

Ashgabat

Other Cities:

Chardzhou, Mary, Nebit-Dag, Tashauz

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated April 1997. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Bordered by Kazakstan, Uzbekistan, Afghanistan, Iran and the Caspian Sea, Turkmenistan is in the heart of Central Asia. Long on history—Alexander the Great passed through (and, according to local legend, his horse Bucephalus was from here); the Parthian Kingdom, a nemesis of the Romans, was located here; and later the Silk Road passed through the area—Turkmenistan is one of the newest countries in the world. It is now struggling to transform its political and economic systems to meet the challenges of the future.

The most significant geographic feature is the Kara Kum Desert, which covers 80% of the country's total

land area. During the summer, temperatures consistently exceed 40 degrees centigrade. Turkmenistan possesses significant natural resources. It has the fourth largest reserves of natural gas in the world, significant oil reserves, and a variety of mineral resources. It is also located in one of the world's high seismic regions and has suffered serious earthquakes.

MAJOR CITIES

Ashgabat

Ashgabat is located on the border between Turkmenistan and Iran, at 58° 20' E and 37° 58' N. Immediately south is the Kopet Dag Mountain range. To the north, on the other side of the Kara Kum Canal, lies the Kara Kum Desert. The city is in the foothills at an altitude of 775 feet. Ashgabat is the country's largest city with a population of over 460,000.

There are surprising numbers of trees and parks in the city, considering the inhospitable climate. From Friday through Sunday, wedding parties pose in front of the Magtymguly Statue (in honor of a famous 18th century Turkmen poet) near the Museum of Fine Arts.

The city boasts three small museums: the Turkmen History and Ethnography Museum, the Fine Art Museum, and the Carpet Museum. There is also an Exhibition Hall featuring works by contemporary Turkmen artists.

The Hippodrome on the eastern edge of town offers Ahal Teke horse racing in the early fall and late spring. A soccer club, Kopet Dag, plays in the stadium in the center of town.

Because of its history of catastrophic earthquakes, Ashgabat architecture tends toward low-level buildings; huge high-rise apartment blocks, such as those seen in many parts of the former Soviet Union, are a recent development.

Fifteen kilometers west of Ashgabat are the ruins of Nisa. This Parthian city was founded in the 3rd century BC. The palace fortifications are punctuated by the remains of a series of towers. Among the buildings that can be identified at the site are a palace, two Zoroastrian temples, kitchens, and a treasury.

Twelve kilometers east of Ashgabat on the south side of the road to Mary lies Anau. There are 3 mounds at this site. The easiest to spot is the site of a 15 century AD mosque which was destroyed in the

1948 earthquake. On and off, Anau is excavated by an American team from the University of Pennsylvania.

Food

Fresh meat, fish, poultry and produce are limited and often of poor quality. During the winter months, fresh vegetables consist of beets, cabbage, potatoes, carrots, turnips, tomatoes, cucumbers and onions. Fruit is limited to lemons, oranges, grapes and apples. During the summer, there is a slight improvement in selection, including eggplant, sweet peppers, melons, cherries, apricots and peaches.

The quality of the fruits and vegetables in the markets is low by U.S. standards, much of it being bruised or broken. Produce with broken skins not be consumed due to hazardous levels of nitrates, as well as parasites and worm eggs, on the surface of the fruits and vegetables.

Beef, lamb and pork are available in the local markets, though not always in familiar cuts. Because it is displayed in the open air, all meat should be cooked thoroughly before eating. Chicken and other poultry is of very inferior quality. Fish is rarely seen in the markets.

Milk, butter and cheese are locally produced but are unpasteurized, so are considered unsafe. Eggs are available, though they should be thoroughly cooked before eating.

There are a number of small Turkish-run stores which stock bread, juices and other canned goods, but the selection is limited and inconsistent.

Turkish beer is usually available locally, and Turkish wine can occasionally be obtained from local Turkish firms. Imported soft drinks are also usually available, although in limited flavors (cola, orange and lemon/lime).

Clothing

For the summer, bring lightweight, washable clothing. Cotton is the most comfortable fabric. For winter,

bring sweaters, a coat, and waterproof shoes or boots. The streets are very uneven, so comfortable walking shoes are important for all seasons. Purchasing clothing and shoes locally is not an option.

Dress for work and social occasions is relaxed in Turkmenistan. Turkmen rarely wear suits in the summer, although most office workers do wear ties. Slacks and skirts are acceptable attire for women. Tank tops and shorts worn in public will inevitably draw unwanted attention and are discouraged.

Supplies and Services

There are dry-cleaning establishments, though they are expensive and the results are inconsistent. Shoe repairs are available, but materials are not up to U.S. standards. Repairs take a long time, are not guaranteed, and often require extensive paperwork.

Some household products are sold in the Turkish stores, but they are of inconsistent quality and are not always available.

Religious Activities

There are two Russian Orthodox Churches in Ashgabat which have regular Sunday services. Several large mosques are under construction. There are Bahai, Jewish and Christian communities, but none has permanent facilities for meeting.

Education

The Ashgabat International School, run by Quality Schools International, opened in September 1994. It offers English language education for students from five to thirteen years of age.

The curriculum includes English (reading, grammar, composition, keyboarding, and spelling), mathematics, cultural studies (history, geography, economics, etc.), science, computer literacy, art, music, and physical education.

For additional information contact Quality Schools International in care of the U.S. Embassy in Ash-

gabat, or by phoning them at 7-3632-445580. They can also be contacted by writing to Box 2002, Sanaa, Yemen (phone: 967-1-234 437).

Turkmenistan's public schools welcome foreign pupils. However, the language of instruction is either Russian or Turkmen. The schools are short of textbooks and all supplies. From an American point of view, the curriculum is rigid. The foreign families that have tried the local schools have not been satisfied.

Recreation and Social Life

During the racing season (in the spring and fall), you can watch the famous Ahal-Teke horses in action. While horses are for rent at the race track and at rental stables, they are not pleasure riding horses.

Just north of the city is a reservoir lake which is used for recreation, swimming, boating, sailing, and sunning. However, as summer progresses the water is increasingly polluted and it reaches the point where it is no longer usable for recreation.

Jogging is popular among foreigners, though not among the Turkmen. Joggers—especially women—should expect to draw much attention and occasional harassment. The Ashgabat Hash House Harriers meet every other Sunday for a family-style run through the countryside.

Bicycle riding is an increasingly popular sport and means of transportation, though in the winter the cold weather and slick streets could present problems. The city is very flat, so multiple gears are not necessary.

Entertainment

There are two drama theaters, one Russian and one Turkmen, and an opera/ballet theater in Ashgabat. Tickets are not expensive. The season runs from October to April.

There are three concert venues and classical music concerts are held frequently. There are movie the-

aters which show foreign films dubbed into the local languages, but they are uncomfortable and are rarely if ever frequented by Americans.

Some of the larger hotels have good-quality restaurants, ranging in price from \$10-\$30/person. (Dollars only can be used in the major hotels; none accepts credit cards and only a few accept local currency.)

There are other, smaller restaurants popular among the Western community. Most serve a variation of Turkish cuisine at very low prices.

Because of the lack of structured entertainment facilities, socializing with family and friends is the most popular form of entertaining.

Social Activities

There are few Americans in Turkmenistan, and no organizations which provide social activities geared specifically for them. A newly-organized International Women’s Club welcomes women’s participation.

OTHER CITIES

CHARDZHOU, with a population of 164,000, is Turkmenistan’s second largest city. Situated in the eastern part of the country, on the border with Uzbekistan, the city is an important rail and cotton trading center. The industrial sector consists mainly of cotton, silk, and chemical factories.

MARY, located 180 miles east of Ashkhabad, had a population of 94,000 in 2000. Until 1937, the city was known as Merv. Mary is the administrative center of an extensive cotton growing region. Its location on the Kara-Kum Canal and on a rail line have made the city an important transport center.

NEBIT-DAG, which means “oil mountain”, has been the center of the country’s oil industry since the 1930s. The city is located in western

Turkmenistan, at the foot of the Great Balkan mountain range. The 2000 population of Nebit-Dag was 89,000.

TASHAUZ is in the northern section of the country, on the border with Uzbekistan. As the only city in the region, it is a transport and administrative center. Tashauz has 114,000 residents.

COUNTRY PROFILE

Geography and Climate

Situated in Central Asia, Turkmenistan lies north of the Kopet Dag mountain range between the Caspian Sea and the Amu Darya River. The country has borders with Kazakhstan and Uzbekistan on the north and northeast; Iran and Afghanistan on the south and southeast. Turkmenistan has an area of 488,100 square kilometers or 188,417 square miles (slightly larger than the state of California).

The most significant geographic feature is the Kara Kum Desert. One of the world’s largest deserts, it covers 350,000 square kilometers or 80% of the country’s total land area. The temperatures in the desert stay in the upper 40s centigrade from June through August. The Repetek Sandy Desert Biosphere Reserve near Charjew, which was set up in 1928, monitors the unique desert flora and fauna found in the Kara Kum.

The Kopet Dag mountain range to the south forms a 2,000 meter high natural border between Iran and Turkmenistan. The stark slopes are home to a number of endangered species, including leopards and mountain sheep. Most of the mountains are inaccessible, as they fall within restricted border areas.

Cities, towns, and farms are confined to the Amu Darya (historic Oxus) river valley and to the narrow

strip of arable land along the Iranian and Afghan borders.

The “silk roads” ran from the central regions of China through Turkmenistan to the Mediterranean coast during the ancient and middle ages. The caravans carried silk, tea, china and lacquerware to the European markets. Significant ruins related to these trade routes are located outside the present day cities of Mary (Merv) and Dashhowuz.

Precipitation in the inhabited regions averages 19 centimeters per year. Most of this falls between December and April. As you would expect in a desert climate, it does get very hot. In June, July, and August it is often uncomfortable to be outside during the day as the temperatures consistently exceed 40°C. At times in August, the “Afghan Winds” come from the east and the temperature can soar into the high 40’s. However, by late September the temperatures cool and pleasant “autumn-like” weather prevails.

The winter, which begins in late November, can be chilly, wet, and muddy with temperatures between 0°C and 15°C in the daytime, with occasional light snow. Because the snow doesn’t stay on the ground for long, the terrain on and near the Embassy housing compound can be quite muddy.

In Turkmenistan, there are the usual insects and snakes associated with a desert climate: scorpions, spiders, sandflies, cobras and other poisonous snakes. There are also mosquitoes and flies. All of the houses on the compound are screened and there have been no unusual problems with insects or vermin in homes. Care should be taken, though, if exploring the desert or countryside because poisonous snakes have often been seen there.

Turkmenistan is in one of the world’s high seismic regions. During the past 100 years there have been four disastrous earthquakes with intensities of 6+ on the Richter

Scale, each one resulting in great loss of life and property. In 1948, Ashgabat suffered a quake of tremendous strength. All but six buildings were destroyed and the entire city shifted two meters to the north. More than 30,000 of the 130,000 residents died and an additional 85,000 were injured.

Population

In 2000, Turkmenistan had an estimated population of approximately 4,436,000. The Turkmen trace their ancestry back to the Oguz tribe, one of the early Turkic tribes to move west from north Asia. The Oguz came to present-day Turkmenistan in the 9th or 10th Century A.D. That same tribe founded the Seljuk Empire and was the first Turkic group to colonize Anatolia. With the fall of the Seljuk Empire to the Mongols in the 13th Century, the Turkmen entered a period of tribal fragmentation and foreign domination which did not end until independence in 1991.

From the 14th to the 19th Centuries, the area was dominated by Persians (in the south) and the Khanae of Khiva and Emirate of Bokhara (in the north and east, respectively). Through it all the nomadic Turkmen tribes lived a largely isolated existence on the margins of the Kara Kum Desert.

The Turkmen were the last of the Central Asians to fall under Russian domination in the 19th century. The battle of Goektepe (some 40 miles west of Ashgabat) in 1880, ended Ahal Teke resistance and allowed the Russians to consolidate their Central Asian dominions. The nomadic life of the Turkmen did not change markedly under the Russians until the Bolshevik Revolution. Forced collectivization in the 1930s resulted in tens of thousands of deaths.

The Soviets were ambivalent about ethnic identification. At first, they did not recognize a Turkmen nationality and identified people by their tribe. Later, they created the "national" republics, largely as an

effort to prevent the development of a pan-Turkic nationality in Central Asia. Since creation of the Turkmen Soviet Socialist Republic in the thirties, the Turkmen nationality has been recognized in the USSR.

Today of the five or six Turkmen tribes which flourished 500 years ago, basically two tribes remain, each of them divided into two distinct groups: the Ahal and Mary Teke; and the Western and Northern omud. The Teke is the largest of the modern Turkmen tribes. Its two subgroups, however, share little in common and are political and economic rivals. The Ahal Teke occupy most of the Ahal Region, a populous area in the south center of the country which includes the capital, Ashgabat. The Mary Teke occupy much of the Mary region, located to the east of Ahal and bordering on both Iran and Afghanistan.

The western Yomud occupy much of the Balkan Region, which borders on the Caspian Sea. Their territory extends southward into Iran. The northern Yomud live in Dashhowuz Region in the north. The Yomud were separated in the 19th century during the wars against Russia.

Remnants of the other Turkmen tribes still live in the country: The Ersari in Lebap Region, bordering on Uzbekistan and occupying much of the Amu Darya River Valley, the Salor and Saryk in Mary and Lebap regions; the Choudour in the north and east; and smaller groups like the Alili and Ata. The emblems of the five major historical tribes (Teke, Yomud, Ersari, Salor and Saryk), best known from being the focal point of carpet designs, are preserved in the national flag of Turkmenistan.

The value that modern Turkmen place on tribal identity varies considerably according to age, location and social status. Not surprisingly, the young, urban and well-educated are less likely to consider tribal origins important than the old, rural and less-educated. Still, it is the rare Turkmen who completely discards tribal identity. Fully one quar-

ter of Turkmen marriages in Ashgabat are between relatives, a clear reflection of tribal loyalty.

Accents, intonation, vocabulary, and grammatical style are strong tribal/regional identifiers. Dress, particularly among women, can be another giveaway: color choices, embroidery patterns, and jewelry styles vary from tribe to tribe. Names can also give a hint of tribal identity. Preferences for given and surnames and the use of name endings (-geldy, -murad) vary from region to region.

There exists a small, but important, group—the russified Turkmen elite—which has genuinely lost most of its tribal identity. These Turkmen, many of whom occupy key government positions, speak Russian in the home and are barely conversant in Turkmen.

Turkmen social events revolve around the family. Memorials, weddings, and birthdays are celebrated with large parties called "toi." The menu for such occasions consists of traditional nomadic food. A favorite party specialty is dograma, a thick soup made from dry bread, raw onions, and mutton fat. A "must" at any Turkmen meal for foreigners is the local version of the ubiquitous Central Asian lamb and rice dish "plov."

Public Institutions

Turkmenistan formally declared its independence from the USSR on October 27, 1991. It became an independent state when the Soviet Union disbanded on December 25, 1991. President Niyazov, who was elected (uncontested) on October 27, 1990, was previously Chairman of Turkmenistan's Supreme Soviet and First Secretary of the Central Committee of the Republic's Communist Party. He won reelection for a 5-year term in June 1992. In January 1994, a referendum was held which ensured that President Niyazov will remain in office until June 2002.

Democratization in Turkmenistan has proceeded at a very slow pace. It

remains as single party state, with the Democratic Party of Turkmenistan (formerly the Communist Party), chaired by the president, as the only registered party. Criticism of government policy is not tolerated and the press is completely government-controlled and tightly censored.

Most government power is vested in the presidency. There is no vice president or prime minister. The president is advised by a cabinet of ministers and a number of offices within the presidential apparatus. According to the Constitution, the Chairman of the Parliament (Mejlis) assumes the presidency upon the death or permanent incapacitation of the president and then calls an election to replace him/her.

The Mejlis consists of 50 members, half of whom work permanently and half of whom are called for short sessions two or three times a year. The Mejlis was chosen in December 1994 elections with only one candidate per constituency. While largely a rubber stamp for presidential decisions and decrees, the Mejlis is slowly developing into a professional parliament. Mejlis members serve for five years.

The Turkmen constitution adopted two traditional advisory/legislative organs. One is the Council of Elders (Aksakal Maslahaty) which is used as a sounding board by the president to validate policies. The other is the People's Council (Halk Maslahaty) which is identified in the constitution as the supreme representative body of popular rule. Chaired by the president and composed of ministers, Mejlis members, Supreme Court judges and some 60 directly elected members, the Halk Maslahaty approves policy directions and constitutional amendments. It meets twice a year.

The court system in Turkmenistan has not been reformed since Soviet days. It consists of a supreme court, regional courts (including one solely for the capital city of Ashgabat), and at the lowest level, 61 district and city courts. There are also military

courts to handle crimes involving military discipline, criminal cases concerning military personnel and crimes by civilians against military personnel; and a supreme economic court, which hears cases involving disputes between state economic enterprises and ministries. The president appoints all judges for a term of five years without legislative review, except for the chairman (chief justice) of the supreme court, and he has the sole authority to remove them from the bench before the completion of their terms.

Arts, Science, and Education

Turkmen maintain the traditional arts of their nomadic and "silk road" ancestors.

Poets, both traditional and contemporary, have the status of national heroes. The work of Magtymguly, an 18th century poet, is especially honored. Turkmen love to recite poetry and use it often in their speech.

Folk dancing is highly regarded, and dancing groups make frequent appearances during local holidays and at important social events. Turkmen folk music features the "dutar," a two string wooden instrument shaped like a mandolin.

Silversmiths, weavers, and carpet makers are the most highly appreciated artisans. There are very few traditional jewelers left. Traditional Turkmen jewelry-making include fire-gilding, painting an amalgam of gold and mercury on the silver and then heating the piece over charcoal fire.

Carpets from Turkmenistan are known in the West as "Bokhara" rugs. They are made of wool or silk and usually come in various shades of red with white and black making up the tribal symbols and design. Their geometric patterns have been copied by virtually every major rug-producing country in the world. It is accepted that the carpets on the market now are of modern vintage,

with genuine antiques only rarely found outside the museums.

There are schools of classical music (including opera) and dance in Ashgabat, and a regular music season in the winter. Unfortunately, none of the performing arts receives state funding so performances are often notable for their lack of proper costumes, instruments or stage props. There is a privately financed chamber music group which has concerts throughout the year.

There are two universities in Turkmenistan, the principal one being the Magtymguly State University in Ashgabat. There are a number of scientific and technical institutions, as well as training institutes for teachers.

The education system is undergoing changes, the most significant being a reduction of the number of years students spend in formal education. Students leave secondary school at age 16, and they complete university or institute training by the age of 20.

While Turkmen is the official language, there is a dual primary and secondary school system: some teach in Turkmen, and some in Russian. As of January 1996, education in the Turkmen language school system is compulsory through grade nine; in the Russian language system, through grade 10 (both equivalent, in theory at least, to a secondary education in the U.S.). The Turkmen Government has made the study of English a high priority, resulting in an increase in schools teaching English. There is one "magnet" high school where the entire curriculum is in English.

Commerce and Industry

Turkmenistan is rich in natural resources including natural gas, oil, iodine-bromine, sodium sulfate, salts, sulphur, potassium, gold, platinum, molybdenum, and coal.

Mosque in Ashgabat, Turkmenistan

AP/Wide World Photos, Inc. Reproduced by permission.

Turkmenistan's major exports are cotton, gas, oil products, food products, chemical raw materials, and small manufactured products such as carpets, textiles, leathers, and furs. Major imports are machinery, agricultural and industrial equipment and vehicles, metals, chemicals, synthetic rubber, raw materials and processed products (nonfood), timber, paper, small manufactured goods and food products, raw material for food flavoring, and sugar. The country's major trading partners are Russia, Kazakhstan, Uzbekistan, Ukraine, Turkey, and Iran.

Natural gas was first discovered here in the 1960s. Turkmenistan has the world's fifth largest proven gas reserves and enormous unexploited oil reserves. These extensive and largely untapped hydrocarbon reserves promise to provide hard currency earnings in the future, and mining for precious metals and other minerals also hold potential.

Cotton production was increased during Soviet rule through extensive irrigation, albeit at the cost of environmental degradation. The government is now seeking ways to diversify agriculture and reduce the number of acres under cotton cultivation while maintaining current levels of production through increased efficiency and introduction of new technology. Other key economic sectors include textiles, Caspian Sea fisheries, and the production of karakul lamb pelts. Agriculture accounts for 25% of GDP and about 44% of total employment.

Turkmenistan is among the top ten cotton producers in the world and cotton provides 17% of GDP. Other important products include grains, vegetables, fruit, and livestock. Livestock accounted for nearly one-fourth of total gross agricultural production in 1992. Inefficiencies exist in processing agricultural goods: only 8% of fruit and vegetables, and 4% of cotton are processed, and much produce spoils because

processing plants are located too far from the farms. The government is strongly promoting investment in cotton processing, with a goal of raising the percentage of the cotton processed locally to 15% of GDP. Agricultural yields are comparatively low, due to years of inefficient water use, salinization, inappropriate land irrigation, and overdevelopment of cotton cultivation.

The large degree of specialization of the agricultural sector has rendered the economy heavily dependent on food imports. Efforts are underway to make the country self-sufficient in grains and to introduce sugar beets to reduce dependence on imported sugar.

Industry is dominated by the extraction of fuel and minerals. Other industrial activities include textiles and chemicals. Industry accounts for only 19% of total employment.

Turkmenistan hopes to create a market economy with a strong private sector, with the state retaining control of strategic sectors (e.g., hydrocarbons). However, given the low level of industrialization prior to independence, and shortage of resources for investment, the privatization process will be a long one. Land privatization began in February 1993 and in December 1993 the government announced gradual privatization of the trade and services sector. In early 1996 the government announced an aggressive program of privatization in agriculture to begin after the 1996 harvest season. The transportation industry has been designated as the next industrial/commercial sector to be privatized.

Turkmenistan's major trading partners remain Ukraine and Russia, although trade with Turkey and Iran has increased significantly since independence. Turkmenistan's 2000 exports were valued at \$2.4 billion and its imports at \$1.6 billion, yielding a positive balance of trade. It must be noted that most of the gas exports were to Ukraine, Georgia and Armenia which pay over time in a mixture of cash and commodities. The U.S. granted Turkmenistan Most Favored Nation (MFN) trading status in October 1993, but bilateral trade remains quite low although there are no significant trade barriers. In 1995 Turkmenistan exported goods valued at \$23 million to the U.S. and imported \$14 million of goods from the U.S.

Turkmenistan has agreements with the World Bank, the IMF, the European Bank for Reconstruction and Development, the Asian Development Bank, the Islamic Development Bank. Among U.S. institutions Turkmenistan has agreements with the Export-Import Bank, the Overseas Private Investment Corporation and the Trade and Development Agency.

Transportation

Local

Taxis are available in Ashgabat, but they are not recommended. There have been numerous reported incidents of both men and women passengers being molested or mugged by local taxi drivers.

Ashgabat has a shortage of public transportation, due to the poor condition of the buses. Bus service is available to cities outside of Ashgabat, but the buses are overcrowded and uncomfortable. There is no bus service from the city center to the housing compound.

Regional

Traffic in Turkmenistan may not be as bad as you have experienced in other developing countries. Generally, drivers adhere to traffic signals and speed limits, though they don't always stay in the proper lanes! The main city streets are very well maintained. Side streets can be dangerously ill-kept, however, with open man holes, huge potholes, no lighting and other obstacles. Pedestrian traffic can also present a hazard, as individuals stand well into the roadway hitching rides or hailing taxis.

Major intercity highways are in reasonable shape, but can be very dangerous, particularly at night when there is no lighting whatsoever. No driving be done outside the city after dark. Long vehicle trips should not be undertaken alone.

There are four land routes out of Ashgabat. For Americans, the road to the south stops at the Iranian border. The road to the west leads to the Caspian Sea, an eight-hour drive through the desert. The northern road goes directly across the Kara-Kum, ending six hours later in Dashhowuz. The road to the east leads to Mary, Turkmenistan's second largest city, near the site of ancient Merv (5 hours by car).

It is possible to take trains across the country, but they are in bad condition. They are not air-conditioned,

there is no food or drink available, and the toilets are unusable.

Flights within the country and the CIS region are possible via Turkmen Airlines. Many of their planes are former Soviet aircraft and can be quite uncomfortable, although new Boeing 737 and 757 aircraft service major international routes (Istanbul, New Delhi, London, Abu Dhabi). Their safety record is good, though they can be quite unreliable, with last-minute cancellations leaving travelers stranded until the next available flight. However, the flights within the country, and even on the limited routes to neighboring countries, are frequent and inexpensive.

Turkish Air flies four times a week to Istanbul; Lufthansa has a twice weekly flight to Frankfurt; and PIA flies to several cities in Pakistan

Communications

Telephone and Telegraph

Direct dialing and operator assisted calls can be made from Turkmenistan though both methods are very expensive (\$4.00-7.00/minute). Fax is also available.

Radio and TV

Local television programs are in either Turkmen or Russian, as are the local radio broadcasts. A multi-system or PAL/Secam television set is necessary to receive these broadcasts.

BBC and VOA can be heard, but the reception is very poor.

Newspapers, Magazines and Technical Journals

There are no locally published English-language newspapers or magazines, and only rarely is English reading material sold in bookstores. Some hotels carry limited English-language newspapers (e.g., USA Today), but generally, such material is unavailable.

The local press does not subscribe to international news wire services,

and carries scant international news.

The National Library has a collection of several thousand books and a number of dated magazines in English in its foreign language collection. The University also has English-language books in its library, primarily for the use of its foreign language students.

Health and Medicine

Medical Facilities

Local medical care and facilities are extremely poor, due to lack of equipment, staff and sanitary conditions. The VIP Hospital, considered the best in Ashgabat, is considered one of the poorest in the former Soviet Union.

Local dentistry lacks modern techniques, equipment, medication, and basic sanitation.

Community Health

Community sanitation levels are low. Tap water is not potable, and restaurant food is often of questionable safety. There have been cases of Typhoid, as well as numerous incidents of E. coli contamination and other gastrointestinal ailments. Care should be taken in eating in restaurants, and all produce should be soaked in iodine or bleach tablets before consumption at home.

Western standards of public cleanliness are not observed in Turkmenistan. Public toilets are in poor condition and those on planes and trains are often virtually unusable. Though the main streets are swept each day, on the side streets garbage is often placed unwrapped in open containers outside residential buildings for collection once a week.

Turkmenistan's health indicators are among the worst in the former Soviet Republics. Infant mortality is reported to be 50 per 1,000 and anemia is common. There is a high rate of Hepatitis A and B. Amoebas and gastroenteric disease is common. Cutaneous Leishmaniasis, a para-

site quite common throughout Central Asia spread by sandfly bites, is prevalent. Typhus, spread by body lice, and crub Typhus, spread by mites, are both considered endemic in Turkmenistan. Rabies is present in Ashgabat.

At a minimum this includes Hepatitis A and B, Typhus, Typhoid, Diphtheria/Tetanus and Rabies.

Leishmania is a parasite found throughout Central Asia. It is quite common and is spread by sandfly bites. Typhus, a disease spread by body lice, and Scrub Typhus, spread by mites, are both considered endemic in Turkmenistan. Hepatitis A and other water borne diseases are common. In general, the immunization status is lower than in the U.S., and everyone coming to Ashgabat should have all routine vaccinations before arrival.

Preventative Measures

The water is considered dangerously contaminated. Foodstuffs can be exposed to a variety of contaminating agents, such as flies and rodents. Due to unregulated pesticide and fertilizer use there is a hazardous nitrate level on fruits and vegetables. Therefore, personnel are advised to buy only undamaged fruit and vegetables and clean them carefully with a mild detergent, followed by soaking in a chlorine solution for 15 minutes, then rinsing with potable water before consuming or storing in the refrigerator. Raw meat should be purchased as early in the day as possible to avoid contamination, and should be cooked thoroughly before consuming.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Turkish Air, Lufthansa and Pakistan Air fly from various locations to Ashgabat. The most common route from the U.S. is through a European transit point (usually

Frankfurt) to Istanbul, then to Ashgabat on Turkish Air.

American citizens must have a valid passport and visa to enter and exit Turkmenistan. To apply for a visa, all U.S. citizens must complete an application and have a letter of invitation approved by the Ministry of Foreign Affairs (MFA) in Ashgabat. A letter of invitation must be submitted to the MFA on behalf of an American citizen by an individual or organization in Turkmenistan. The MFA requires at least ten working days for approval. The U.S. Embassy in Ashgabat does not issue letters of invitation to citizens interested in private travel to Turkmenistan. Applications for a Turkmen visa can be submitted to the Turkmen Embassy in Washington, D.C. or directly to the MFA in Ashgabat. Recent travelers to Turkmenistan have found it difficult to secure visa issuance from the Embassy of Turkmenistan in Washington, D.C. A traveler with a stamped and approved invitation letter from the MFA may also obtain a visa at the Ashgabat Airport upon arrival in Turkmenistan.

The price for the visa will vary according to the intended length of stay. The visa can be extended from its initial validity for any period of time up to one year at the MFA in Ashgabat for an additional charge. Any traveler arriving without a visa or without the needed documents to obtain a visa will be denied entry and may be held at the airport or border until the traveler has secured transportation out of Turkmenistan. Travelers departing Turkmenistan must have a valid visa or they will be denied exit while they extend the validity of the visa. In addition, U.S. citizens traveling in Turkmenistan should be aware that they may require special permission from the MFA to travel to some areas of the country that have been restricted by the Government of Turkmenistan.

For complete information concerning entry and exit requirements, as well as internal travel restrictions, U.S. citizens should contact the

Embassy of Turkmenistan at 2207 Massachusetts Ave. NW, Washington D.C. 20008, telephone (202) 588-1500. The Embassy may also be reached at its homepage on the Internet: <http://www.turkmenistanembassy.org>.

There are local Turkmen registration requirements. Americans who plan to stay more than five days in Turkmenistan must register with the Office of Visas and Registration (OVIR). OVIR offices are located in all of Turkmenistan's five major cities: Ashgabat, Dashoguz, Mary, Turkmenabat and Turkmenbashi. Visitors who do not register may have to pay fines upon departure. According to the MFA, all foreigners staying in Turkmenistan more than 3 months must be tested for HIV. Testing should be performed upon arrival in Turkmenistan. Before extending a visa, the MFA requires a certificate from the Blood Transfusion Center located on 53 Gerogly Street, Ashgabat. U.S. test results are not accepted. Previous travelers have reported sporadic enforcement of this regulation.

Turkmenistan customs authorities may enforce strict regulations concerning temporary importation into or export from Turkmenistan of items such as carpets, jewelry, musical instruments, pieces of art, archaeological artifacts, antiques, etc. It is advisable to contact the Embassy of Turkmenistan in Washington, D.C. for specific information regarding customs requirements. Travelers who want to take carpets out of Turkmenistan must obtain a certificate from the Carpet Museum in central Ashgabat indicating that the carpet is not of historical value. In addition, buyers may have to pay a tax calculated on the size of the carpet.

Americans living in or visiting Turkmenistan are encouraged to register at the Consular Section of the U.S. Embassy in Ashgabat to obtain updated information on travel and security within Turkmenistan. Registration with the Embassy can assure quick communication during an emergency and

help replacement of a lost and/or stolen passport. The U.S. Embassy is located at 9 Pushkin Street, off Magtymguly Street, tel. (993-12) 35-00-45; fax (993-12) 51-13-05. The Consular Section can also be contacted by e-mail at: consularashgab@state.gov. The Embassy's Internet address is <http://www.usemb-ashgabat.usia.co.at/>

Pets

There is no quarantine requirement in Turkmenistan. All dogs and cats must be accompanied by a certificate of good health, bearing the seal of the local board of health and signed by a veterinarian. The certificate must be issued not more than 10 days prior to the animal's arrival in country. A valid rabies certificate is also necessary. Pets are not allowed in the local hotels.

The national currency is the Manat, which circulates in 20, 50, 100, 500, 100 and 5000 denomination notes (a 10,000 note may be introduced shortly). Exchange is about 5,200M=US\$1 (January 2001).

The government exercises strict controls over import and export of Manat and foreign currencies.

Dollar transactions are permitted at the banks, hotels, airlines, phone company and some restaurants. All other merchants are required to accept payment in Manat.

Credit cards are not accepted at most local hotels or restaurants. Turkish Airlines will accept an American Express Card or Visa Gold Card as payment for a Turkish Airlines ticket to Istanbul.

The metric system is used in Turkmenistan for all forms of measurement.

Disaster Preparedness

Turkmenistan is an earthquake-prone country. Building practices within Turkmenistan do not generally meet U.S. seismic standards. In addition, local authorities do not have sufficient resources to respond to a large-scale disaster. American citizens traveling to Turkmenistan

are encouraged to register with the U.S. Embassy Consular Section. Registration can assist the Embassy in quickly contacting American citizens during an emergency. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov>.

TUVALU

Tuvalu

Major City:
Funafuti

INTRODUCTION

Formerly known as the Ellice Islands, **TUVALU** is a group of nine scattered atolls whose only export product is copra (dried coconut meat). The islands were probably first settled by Polynesians between the 14th and 17th centuries. After determining the inhabitants' wishes, the Ellice Islands (together with the Gilberts, now known as Kiribati) came under British protection in 1892. After the Japanese occupied the Gilbert Islands in 1942, US forces occupied the Ellice group in 1943 and drove the Japanese out of the Gilberts. After the war, the ethnic differences between the Micronesians of the Gilberts and the Polynesians of the Ellice Islands led the Ellice Islanders to demand separation, which won approval in 1974. Tuvalu later became an independent member of the Commonwealth of Nations on October 1, 1979.

MAJOR CITY

Funafuti

Funafuti, the capital of Tuvalu, is the largest and most populated island, with about 4,000 inhabit-

ants. The village of Fongafale is the main settlement, with a hotel, hospital, and an airstrip (recently upgraded with Commonwealth assistance). About 40% of the island of Funafuti is uninhabitable because the United Kingdom authorized the United States to dig an airstrip out of the coral bed during World War II. There is a deepwater port at Funafuti which accepts vessels with a draft of up to 30 feet. A passenger and cargo vessel based there occasionally sails to Suva, Fiji. Tuvalu's only airfield is located on Funafuti, and the airstrip occupies about one-third of the island's land area. In 1992, a new runway replaced the grass strip. There are flights to the Marshall Islands, Kiribati, Fiji, and Nauru, but no internal air service is available. There are only a dozen cars on the island. The residents of Funafuti have a higher income level than those of the other islands, who mainly live at a subsistence level. Although the soil is sandy and not very fertile, the island still manages to produce copra for export.

Recreation and Entertainment

Soccer, rugby, and cricket are played along Funafuti's airstrip. A siren warns players to clear the area when an airplane is approaching.

Tuvalu is too small and remote for the development of a tourist industry. Only about 1,000–1,200 tourists per year visit the country, which has just one hotel with 17 rooms.

Funafuti's *maneava* (meeting house) is the site where the council of the island's elders gets together to discuss important issues and to socialize. The country's only library is in Funafuti and it also houses national archives. Young men's clubs and women's committees are standard features of social life, concerning themselves with sailing, fishing, and crafts.

COUNTRY PROFILE

Geography and Climate

Tuvalu is a cluster of nine islands, plus islets, located in the southwestern Pacific Ocean just south of the Equator. The country is located about halfway between Australia and Hawaii. Tuvalu is one of the world's smallest nations in terms of land area (about 10 square miles), but its territory covers some 500,000 square miles of ocean.

The entire country is low-lying atolls, none of which is more than 16 feet above sea level. Some scientists predict that within 50 years, Tuvalu will be one of the first island nations to vanish as a result of erosion and global warming.

Few of the atolls are more than a half mile wide. On five atolls, the reefs enclose sizable lagoons. There are no rivers. Since copra (dried coconut meat) is the country's primary export, coconut palm trees cover much of the land. The climate is tropical, with little seasonal variation. The annual average temperature is 86°F, and rainfall averages 140 inches per year. The wet season is from November to February. Severe cyclones struck in 1894, 1972, and 1990.

Population

There are about 10,750 inhabitants, with a population density of 1,011 per square mile. About half the population lives on Funafuti. Only about 15% of the population lives on Vaitupu, followed by Niutao (11%), Nanunea (11%), Nukufetau, Nanumanga, Nui, Nukulaelae, and Niulakita. Some 1,000 Tuvaluans work abroad. Unemployment is expected to rise as the phosphate mining on Nauru declines and Tuvaluans employed there return home. New Zealand permits Tuvaluans to live and work there for up to three years. The islanders are almost entirely Polynesian, with strong cultural ties to the Samoans and Tokelauans. Nearly all Tuvaluans are Protestant, members of the Church of Tuvalu, a Congregationalist group. There are small numbers of Roman Catholics, Seventh-Day Adventists, and Baha'is. The Tuvaluan language, closely related to Samoan, and English are the principal languages.

Government

In 1892, the United Kingdom proclaimed the Ellice Islands (as Tuvalu was then known), together with the Gilberts, as a British protectorate. The proclamation was

made after ascertaining the inhabitants' wishes. After World War II, US forces occupied the islands. Political differences between the Gilbert Islanders and the Ellice Islanders led the Ellice Islanders to demand a separation, which they declared by a vote in 1974. In 1975, the Ellice Islands were established as the separate British colony of Tuvalu. After a constitutional conference in 1978, Tuvalu became an independent member of the Commonwealth of Nations in 1979. The head of government is the British monarch, who is represented by a governor-general. The unicameral House of Assembly has twelve members elected to four-year terms. A prime minister and deputy prime minister are elected from the members of parliament. A simple code of law, based on mission legislation and traditional councils, is observed by native courts. There are island courts that deal with land disputes. The High Court of Justice hears appeals from district courts.

Tuvalu's flag is a light blue field with the British Union Jack in the upper quarter near the hoist. Nine yellow stars are arranged on the field in the same pattern as Tuvalu's nine islands.

Arts, Science, Education

Education begins at age seven and is compulsory for nine years. Secondary education is provided at Motofoua, a former church school on Vaitupu now jointly administered by the government. The Tuvalu Maritime School was opened in 1979 with Australian aid. The school trains young Tuvaluans with the skills needed to serve overseas on a merchant ship. Fiji's University of the South Pacific also has an extension center at Funafuti.

Commerce and Industry

The United Nations ranks Tuvalu among the least developed nations

of the world. Many Tuvaluans in the smaller villages and islands are self-sufficient and live without a money-based economy. Tuvaluans intensively utilize their limited natural resources, namely coconuts and fish. Nearly every part of the coconut palm is utilized to make a useful object. Taro is also grown in pits.

Money sent home from Tuvaluans working abroad can account for up to 30% of the country's annual foreign exchange earnings. The sale of collectible postage stamps contributes up to 40% of foreign revenue, and the remainder comes mainly as foreign aid.

In 1998, Tuvalu began licensing foreign use of its area code for "900" lines. In 2000, leasing of its ".tv" Internet domain name began. Royalties from these new technology sources could raise GDP three or more times over the next decade.

Transportation

Traffic moves on the left in Tuvalu. The few roads on these tiny islands are generally unpaved. Most roads are little more than tracks, although Funafuti has about five miles of coral-impacted roads for the island's few cars and trucks. Animals and unwary pedestrians walking in the road make night driving on unlit secondary roads hazardous.

Funafuti and Nukufetau are the only seaports, used mainly by freighters in the copra industry. All the islands are served by Tuvalu's interisland ferry.

Communications

There is an interisland telephone service. The government-owned Tuvalu Broadcasting Service on Funafuti transmits in Tuvaluan and English. There is no television service. The government publishes a biweekly called *Tuvalu Echoes*.

Health

There are no serious tropical diseases on the islands except for a dwindling number of leprosy and dysentery cases.

NOTES FOR TRAVELERS

A passport, onward/return ticket, and proof of sufficient funds for the trip are required. Visitor permits are issued upon arrival. For further information about entry requirements, travelers may wish to contact the British Embassy in

Washington, D.C. at 202-588-7800. This is particularly true for those persons planning to enter by sea.

There is no U.S. Embassy or diplomatic post in Tuvalu. Assistance for U.S. citizens in Tuvalu is provided by the U.S. Embassy in Fiji, which is located at 31 Loftus Street in Fiji's capital city of Suva. The telephone number is (679) 314-466; the fax number is (679)300-081. Americans may register with the U.S. Embassy in Suva, Fiji and obtain up-to-date information on travel and security in Tuvalu from the Embassy. Information may also be obtained by visiting the Embassy's home page at <http://www.amembassy-fiji.gov>.

Abu Dhabi, United Arab Emirates (UAE)

UNITED ARAB EMIRATES

Major Cities:

Abu Dhabi, Dubai, Sharjah

Other City:

Al-Ain, Ras al-Khaimah

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated January 1996. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The **UNITED ARAB EMIRATES (UAE)** lies between Qatar and Oman on the southeastern shore of the Persian Gulf. Until the exploitation of large oil reserves, the small population engaged in pearling, trading, nomadic herding and oasis agriculture. Britain held a degree of political control over the sheikhdoms of the region from early in the nineteenth century until the emirates joined to form an independent federation in 1971. Before independence the British called the region the Trucial Coast or Trucial Oman, and Arabs called it the Oman Coast.

The seven emirates which comprise the U.A.E. differ markedly in size, population, and natural resources.

Their rulers, though united under one national flag, maintain a large degree of autonomy and have imprinted their individual characters on the development of their emirates. This diversity gives the social and political scene in the country a unique and dynamic flavor. The UAE's efforts to reach an effective balance between Federal and Emirate authorities is reminiscent of the political development of the United States, where to this day individual states and the Federal government continue to find new ways to make "one out of many."

Because Abu Dhabi is the largest emirate in size and population, and possesses the most oil resources, it plays a dominant role in the federation's political and economic affairs. A small fishing and pearling settlement before the discovery of oil, Abu Dhabi city has grown since independence into a modern capital with broad, tree-lined streets amid rows of skyscrapers lining the Corniche. The sedate character of the city is shaped by the dominant presence of central government institutions, financial institutions, and oil companies. In contrast, the mood in Dubai is more socially vibrant, economically open and cosmopolitan. Bustling markets, an active shipping trade, and a lively sporting and entertainment calendar put Dubai in the region's economic and social

fast lane. In both cities, a walk downtown reveals the large proportion of foreigners working in the country.

Americans coming to the UAE will find a small country in the midst of rapid social and economic transformation. The seven emirates are each distinct in resources and character, ranging from the poorer, smaller emirates of the north to the dynamic commercial center of Dubai and the staid, oil-rich Abu Dhabi. These last two cities are pockets of wealth where five-star hotels feature cuisine from around the world and shops sell expensive fashions from Europe and electronics from Japan. Despite outward appearances like this, however, the UAE is still a developing country in important respects. For example, while the telephone system has the latest technologies, public hospitals are for the most part far below standard in many areas. And while UAE citizens control the country, it is foreign nationals from places like New Delhi, Dhaka, Manila, and Cairo who actually sit behind cash registers, build skyscrapers, and repair plumbing. In this sense, since the majority of the country's residents are foreigners, it is easy for foreigners to feel at home.

MAJOR CITIES

Abu Dhabi

In 2000, Abu Dhabi, the U.A.E. capital, and its surrounding metropolitan area had a population of 928,000. It is located on a small, flat island connected to the mainland by two bridges. The island is about 30 square miles in area, much of it reclaimed land, crisscrossed by an expanding road network. First a fishing village, then a small oil company town, Abu Dhabi is now a medium-sized city, which is still expanding. Most buildings are high-rise apartments, offices, and residential areas with single- and three-unit dwellings (townhouses).

Food

Several American and European-style supermarkets stock most basic items. Spinneys, Prisunic, Abela, Choitram's, and Al-Kamal are modern supermarkets that sell American, French, Mexican, Japanese, and Arab foods. Fresh foods include meat, seafood, produce, and dairy products, which are available year round. A wide and varied array of packaged and canned foods is available as in any comparable supermarket in the U.S. Fresh meat is flown in from Australia and Europe. Frozen meats and vegetables are also available. Except for occasional shortages of certain items, you will find almost any food item in Abu Dhabi stores, including an increasing amount of American brands. Pork products are available in special "non-Muslim" sections of some stores.

Clothing

Local shops and boutiques carry various types of clothing, usually European brands and styles, but they are expensive, and quality varies. Cotton or cotton-blend clothes are strongly recommended for summer; synthetics are too hot to wear. A sweater or shawl is useful for overly air-conditioned receptions. It is cool during winter (December–February), and houses hold dampness. Light woolens and synthetics

© K. M. Westermann/Corbis. Reproduced by permission.

View of Abu Dhabi, United Arab Emirates

are comfortable, and sweaters are useful.

Shoes, including sandals, to suit American tastes are difficult to find, and the sand makes them wear fast. A good supply is needed throughout your tour. Locally made sandals and shoes are inexpensive, but not durable.

Dry-cleaning facilities are adequate, but bring as few items that need dry-cleaning as possible. White and light-colored fabrics are subject to stains from rusty water, but filter attachments help prevent this problem.

Men: "Gulf or Red Sea rig," sometimes specified for dressy summer occasions, consists of an open-necked dress shirt and dress trousers with cummerbund. A business suit with tie is normally worn during working hours and is suitable for most evening functions.

Women: Use discretion when choosing clothes for the U.A.E., which is a Moslem country with conservative dress customs. Low-cut, short hemlines, sleeveless tops, or revealing/see-through clothes are not worn in public. Slacks are worn in public, but shorts are not advised, except for recreation. Typical

evening dresses (bare shoulders, low-cut, etc.) may be worn at private functions, depending on the guest list and location. Tailored dresses are always appropriate.

Children: Teenage girls in the American school are expected to wear knee-length clothes. Bring the same type of clothes as children would wear in Washington, D.C., but light, winter clothes—sweaters, jackets, and long pants, etc. Children's shoes are expensive.

Supplies and Services

Unless you have strong brand preferences, most items needed can be purchased in either Abu Dhabi or Dubai, but are expensive.

Tailoring and dressmaking can be reasonable. Shoe repair is available, but quality is fair. Beauty and barbershops are available and reasonably hygienic.

Religious Activities

Catholic, Anglican, and Syrian Orthodox services are held in Abu Dhabi in English, French, Arabic, and various Indian dialects. The Evangelical Alliance Mission (TEAM), a nondenominational American missionary group, also holds regular services.

Education

School-aged American children may attend the American Community School (ACS), which offers pre-kindergarten through grade 12. Of the about 500 pupils enrolled, nearly 40% are American. The remainder of the student body is multinational. All instruction is in English, and the American curriculum is followed. French is taught in the high school only, and the Arabic language and culture is taught from the lower school.

The typical school year is from September to June. Classes are held Saturday through Wednesday, from 7:25 am to 2:25 pm. As a college preparatory high school, ACS does not have programs for students with special needs. The school has two large and well-equipped science labs, a large art room, a photogra-

phy lab, a music room with two adjacent practice rooms, and a cafeteria/all-purpose room, two computer labs, a gymnasium with stage, an athletic field, tennis courts, and a swimming pool.

Both the lower school (pre-kindergarten through grade 6) and the upper school (grades 7 through 11) are accredited by the Middle States Association of Colleges and Secondary Schools. The school went through re-accreditation that was completed in the fall of 1993 (which will include grade 12). The curriculum reflects that of a small American School in the U.S. The courses offered in the high school are college preparatory, and the academic load is demanding.

Several other schools exist in Abu Dhabi, some of which are listed below:

National College of Choueifat
P.O. Box 7212
Abu Dhabi, U.A.E.

Al-Worood School
P.O. Box 46673
Abu Dhabi, U.A.E.
(Accredited by the Middle States Association of Colleges and Secondary schools)

International School of Abu Dhabi
P.O. Box 25898
Abu Dhabi, U.A.E.
(Opened in September 1992; U.S. curriculum; no U.S. accreditation as yet.)

Al Manhal Canadian School
P.O. Box 3110
Abu Dhabi, U.A.E.
(Accreditation by the Minister of Education—Ontario)

Special Educational Opportunities

No special programs are available for students with learning disabilities.

Sports

Water-skiing, scuba diving, sailing, bowling, tennis, squash, handball, etc., are offered by various recre-

ation clubs around town. Sports activities (with the exception of water sports) diminish during the long, hot summers when outdoor activities are kept to a minimum. Swimming pools in major recreation clubs are temperature controlled. Good fishing is available in local waters. Both Dubai and Abu Dhabi have ice-skating rinks. To save money, bring your own sports equipment and clothing, although most items can be purchased locally.

Recreation clubs include The Club, Hiltonia, Meridien, Intercontinental Hotel, Palm Beach, Sheraton Hotel, the Marina, Dhahi Health (Al Ain Palace Hotel) and the Khalidiya Palace Hotel.

An organized slow-pitch softball league is sponsored by some of the major American oil companies. Games are played during the cool season.

The Abu Dhabi Golf Club is an 18-hole sand course with Astroturf for fairway shots. An entrance fee of is required; as is an annual membership fee, which is higher for men than for women. There is a 12-month waiting period for men and 4 months for women. Golf enthusiasts with handicaps stand a better chance of admission. A new golf course is being planned.

Touring and Outdoor Activities

Except for a small area on the east coast, scattered oases, and the northern tip of the country, the U.A.E. is desert. The mainland across from Abu Dhabi island is especially desolate. Nevertheless, driving trips to the oasis of Al-Ain, about 100 miles inland, to the beaches of Fujairah and Khor-Fakkan on the east coast, and northward to the greener areas of Ras-Al-Khaimah all provide interesting changes of scenery. Camping on the east coast is popular. A Hilton Hotel at Fujairah and the Oceanic Hotel at Khor-Fakkan are modern, attractive lodges that help to ensure overnighting for noncampers as well. At these sites, one can find boating,

fishing, picnicking, swimming, and tennis.

Dubai, Al-Ain, and Ras-Al-Khaimah all have small but interesting museums, and Sharjah has an archeology museum. Al-Ain has an extensive, well-run zoo, which is worth a visit during cool weather, as well as "Fun City," an amusement park popular with families. Dubai also has a small zoo, and with its picturesque creek filled with dhows and with its historic wind towers, offers weekend diversions. Several archeological sites have been discovered and can be reached easily. The Heritage Village in the Bateen airport area and the Abu Dhabi Women's Handicrafts Center are worthwhile visiting. Visitors can stay overnight in Al-Ain at either the Hilton Hotel or the Intercontinental Hotel and in Dubai at one of the several large, modern hotels there. A shopping trip to the souks in any Arab country is a must. The U.A.E. is no exception. The gold souk in Dubai has a large selection of 18 and 21/22 carat gold. Sharjah has a new souk, an impressive building in its use of mosaic tiles and traditional designs. There you will find a varied selection of Persian handmade carpets and tribal rugs, plus hundreds of other items, mostly imported.

A visit to Oman is worth the effort. An agricultural and trading center for centuries, Oman's more settled population has had time to develop interesting architecture and crafts, which are lacking among the Bedouin population of the U.A.E. The old souks and towns retain an unspoiled atmosphere. The Musandam peninsula, which juts out into the Strait of Hormuz, can be reached by four-wheel-drive vehicles and is rightly considered the "Norway" of the Middle East with its spectacular "fjord-like" sea inlets.

Entertainment

The Abu Dhabi Cultural Foundation offers various cultural activities throughout the year. Most hotels have good restaurants and disco nightclubs. Performing artists are sponsored by the hotels, USIS,

the British Council, the French Cultural Center, and private businesses. Performances usually take place in the hotels.

Local groups include the Abu Dhabi Choral Group, Emirates Natural History Group, the Thespians of Abu Dhabi Society or TOADS (drama), and various sporting societies.

Social Activities

The diplomatic and foreign community is large. The American community, although not formally organized, participates with the U.S. Embassy staff in such events as U.S. Navy ship visits and Fourth of July activities. The ACS is also a focus of American activity. Girl Scout and Boy Scout troops and a PTA are active.

International contacts can be made at any cultural activity, but more specifically, at the Emirates Natural History Group and the Women in Abu Dhabi monthly meetings. Both organizations present guest speakers, activities, slide shows, and exhibits. They also sponsor excursions for members to places of interest.

Dubai

Dubai is actually just one of the U.A.E.'s largest metropolitan areas. It is a tri-city region of over one million people, that includes not only Dubai, but the contiguous cities of Sharjah and Ajman as well. This metropolitan area is the commercial center of the U.A.E. For decades, the Dubai-Sharjah-Ajman area has been an important stop on the Eastern trade routes.

Food

Several large Western-style grocery stores operate in Dubai. Safeway, Spinneys, and Choitram's carry American and international brands of food and fresh meat, produce, and dairy products. There are also large, open-air markets that sell fresh produce, meat, and fish.

Religious Activities

Services are held in English at the Protestant and Catholic churches.

Education

The American School of Dubai has about 650 (about 55% are American) students from kindergarten to grade 11. Send records in advance to:

The Headmaster
Jumairah International School
P.O. Box 2222
Dubai, United Arab Emirates.

The school follows the U.S. curriculum and calendar. It is owned by a group of companies and accredited by both the Middle States and Southern States School Associations. Classes are held Sunday through Thursday from 7:50 am to 2:45 pm, September to June.

The National College of Choueifat at Sharjah, some 10 miles from Dubai, has classes for students ages 4-18. An offshoot of the parent school in Beirut, which was founded in 1886, the school prepares students for the International Baccalaureate Degree, O and A levels. The medium of instruction is English, French, and Arabic. The academic year is from September to June. The school week is Saturday through Wednesday from 8 am to 4 pm. For more information, write to:

The Director
National College of Choueifat
P.O. Box 2077
Sharjah, United Arab Emirates

Sports

Water sports are popular, and, for most people, they are the only outdoor activities during the hottest part of the year. Most sports activities center around five social clubs.

The Hilton Beach Club is popular among the foreign community at large. In addition to beach facilities, it has two swimming pools, lighted tennis courts, squash courts, exercising and fitness center, and a restaurant/bar. Family membership is over \$1,100 plus an entrance fee of over \$500.

The Metropolitan Beach Club offers tennis, squash, billiards, gymnasium, sauna, windsurfing, and a swimming pool. Annual membership fee is About \$900 plus \$200 joining fee, and over \$600 plus \$130 joining fee for singles.

The Emirates Golf Club Dubai offers a 27-hole golf course, tennis courts, squash courts, gymnasium, and a swimming pool. Annual subscription for a family with two children is about \$4,100; single man \$3,000; single lady \$2,100.

The Dubai Country Club has a 36-hole sand golf course, tennis and squash courts, and a swimming pool. The club has a restaurant/bar, which is open daily. Membership is limited to 1,500 people, and waiting periods of several months occur. Family memberships is \$1,096 annually; \$712 for a single man and \$438 for a single woman.

The Dubai Offshore Sailing Club has limited facilities for those who like sailing. Owning a boat is a prerequisite for membership. The Club has three boats for rent by members only. It has a bar, restaurant, moorings, and a small beach with showers and changing rooms. Annual dues are about \$410 to join and \$136 annually.

Several hotels offer swimming, sports, and health club services at individual rates of about \$500 a year.

Entertainment

Dubai has many good restaurants offering Chinese, Japanese, Continental, Indian, Pakistani, and Arab cuisine. Several hotels, including the Hilton, Hyatt Regency, Intercontinental, and Sheraton, offer extensive luncheon buffets, which feature Arab-style "mezzas" (smorgasbord). Several nightclubs have bands and dancing nightly. Most hotels offer live entertainment in the evenings.

A new cinema, Al-Nask, now shows current English-language movies.

Three lending libraries are available: the Dubai Municipal Library,

the British Council Library, and the Dubai Lending Library.

Social Activities

Most of the estimated 4,500 Americans in the U.A.E. live in the Dubai-Sharjah area, and many important U.S. firms have offices in Dubai. This American community, coupled with a Consular Corps representing 20 countries, insures an active social life for Americans in Dubai.

Sharjah

Sharjah, chief city in the emirate of the same name, is the third largest city in the U.A.E., with a population of 314,000 (2000 est.). A former British protectorate, the city was the site of a British base until 1971. Once the principal town in the area, Sharjah declined until oil was discovered offshore in 1974. Connected by roads to the northern emirates, Sharjah experienced a construction boom in the mid-1970s. Tourism is also important in Sharjah. In recent years, a deep water port has been constructed at Khor-Fakkan and light industries expanded. The U.A.E.'s fisheries research station is located here.

Education

Two English-language schools are located in Sharjah. The International School of Choueifat at Sharjah, some 10 miles from Dubai, has classes for students in pre-kindergarten through grade 13. An offshoot of the parent school in Beirut which was founded in 1886, the school offers a British curriculum and prepares students for the International Baccalaureate degree. The medium of instruction is English, French, and Arabic. The academic year is from September to June. School days run from 8 a.m. to 4 p.m., five days per week, Saturday through Wednesday. Enrollment is 1,300; there are 77 full-time instructors. Facilities include 16 buildings, science and computer laboratories, a covered play area, and a 5,000-volume library. The school's address is: P.O. Box 2077, Sharjah, U.A.E.

OTHER CITY

AL-AIN, (population 226,000, 1995 est.) is the largest city in the Buraimi Oasis, an area which spans the border between Abu Dhabi and Oman. Surrounded by red sand dunes and a breathtaking mountain range, it has earned the nickname "The Garden City Of The Gulf." As the birthplace of Shaikh Zayed, the current ruler of Abu Dhabi, funding for a variety of cultural, educational, and social attractions has been quite substantial and travelers can enjoy all the modern accommodations of a larger city while still experiencing the uniqueness of the Arab culture.

The Al-Ain Zoo and Aquarium is a favorite attraction which showcases such animals as Arabian antelope and deer; oryx, eland, gazelle and lechwe; and big cats, such as lion, tigers, pumas, black and spotted leopards and jaguars. A large Camel Souk (market) can be found in Al-Ain. It's open every Friday, since that is the same day as the famous camel races during the winter months. Tour guides are usually around to arrange camel safaris that range from a short trek of an hour or two to an overnight journey with a stay in a Bedouin tent.

The Al-Ain Museum is a great touring site for those interested in Bedouin history and culture. The museum contains exhibits on life in pre-oil days, as well as jewelry, weaponry, and musical instruments of the Bedouins. The museum also holds the collection of rare and unusual gifts received by the Shaikh, including the Order of Isabel the Catholic and a bullet from a Palestinian commando leader who hijacked three aircraft to Jordan in 1970.

Al-Hili Fun City, the largest theme park in the Gulf area, has been called the Disneyland of the Middle East. Located just northeast of city center, the park has a nice variety of thrill rides ranging from roller coasters to large slides. A Dynamic Motion Theater is also part of the

parks attractions. Admission is just about US\$3.

There are several small public parks within the city, including, Al-Slmi Park, Al-Jahli Park (for ladies and children only), Al-Basra Park (ladies), and Al-Maqam Park (ladies).

The mountain range above Al-Ain is Jabal Hafit. It is the highest point in the country and tourists can reach the peak along an excellent mountain road. Several picnic and parking areas are located along the road. The slopes around the mountain contain caves that can be explored through group tours. Visitors can also enjoy the hot springs at the bottom of the mountain. The Ain Al-Fayadah Resort, located on the west of the mountain, offers typical tourist accommodations. There are two swimming pools in the resort, one for men and one for women. Other facilities include a bowling center and Western and Eastern style restaurants.

If you have a chance, Buraimi, the Omani sister city to Al-Ain, can be visited without a separate visa. The Buraimi Souk offers a provincial open air market of fruits and vegetables and a small-town atmosphere that is quite different from Al-Ain.

Al-Ain is a two hour drive east from Abu Dhabi. There are plenty of buses and taxis within the city.

RAS AL-KHAIMAH city is an ancient seaport near which archaeological remains have been discovered. The city and the emirate are the most agricultural in the U.A.E., producing vegetables, dates, fruit, and tobacco. The city's industries include cement factories, a lime factory, and an explosives plant. In 1982, oil and gas were discovered offshore. The city's population is about 130,000 (2000 est.). The Ras al-Khaimah English Speaking School, founded in 1976, offers a U.K. curriculum for nursery school through grade six. The school's mailing address is: P.O. Box 975, Ras al-Khaimah, U.A.E.

COUNTRY PROFILE

Geography and Climate

The United Arab Emirates (U.A.E.) became a sovereign, independent country on December 2, 1971, after being a British protectorate. It comprises a federation of seven small Arabian emirates formerly known as the Trucial States: Abu Dhabi, Dubai, Sharjah, Ajman, Umm al-Qaiwain, Ras al-Khaimah, and Fujairah.

The U.A.E. (about the size of Maine) has an area of about 34,000 square miles, with a 386-mile coastline on the Arabian Gulf and the Gulf of Oman. All the main towns, with the exception of the oasis of Al-Ain, are on the coast. Apart from a mountain range in the north and scattered oases, much of the U.A.E.'s territory is sandy desert, and salt marshes. A few offshore islands belong to or are claimed by the U.A.E.

Rainfall is low, but coastal humidity is uncomfortably high. May to October is extremely hot, with shade temperatures of 29°C (85°F) to 50°C (122°F) and frequent 100% humidity. During the cool season (December–February) the weather is damp and seems colder than the 10°C (50°F) the thermometer sometimes indicates. During the rest of the year, the climate is pleasant, except for occasional sandstorms and hot, dry winds, which blow off the Empty Quarter of Arabia.

Population

Figures published in 2000 put the population of the country at more than 2.4 million, with about 60% males and 40% females. Recent population figures show a total of more than 2 million. U.A.E. citizens constituted about 20% of the total. The other 80% represent different nationalities who live here, which include foreign Pakistanis, Indians, and Iranians, Filipinos, and various Arab and European nationalities.

Many men from India, Pakistan, Iran, Afghanistan, and Oman have left their families to seek their fortunes in the U.A.E., working at unskilled and semiskilled jobs, and earning wages higher than any they could hope to earn in their own countries. This influx, coupled with the Arab tradition of secluding women, creates the overwhelmingly male crowds seen on streets in the souk (market place), in restaurants, and in other public places.

Islam is the predominant religion throughout the country, but with such a large foreign population, Hinduism and Christianity are also evident. Churches (which include the Roman Catholic, Anglican/Episcopalian, and other denominations) conduct their services in English and several other languages. Arabic is the official language, but English, Persian, Hindi, Tagalog, and Urdu are widely spoken.

Public Institutions

The U.A.E. is governed by a Supreme Council composed of the rulers of the seven emirates. There is an executive Council of Ministers and a consultative Federal National Council consisting of 40 nominated members. The Constitution guarantees basic personal, legal, and social rights. It also defines the role of the Federal Government and its relationship to individual emirate governments.

The Federal Government has responsibility for foreign affairs; armed forces and defense; internal security; law and government affairs in the capital; affairs of Federal employees and the judiciary; Federal finance, taxes, fees, and royalties; postal and telegraphic services; road construction and maintenance of main highways; air traffic control and licensing; education; public health and medical services; currency, information; and passport, immigration, and nationality matters.

The U.A.E., whose armed forces consists of 60,000 troops, contributes a few hundred troops to the Gulf

Cooperation Council's "Peninsula Shield" force, headquartered in Saudi Arabia. These forces participated in the Gulf War.

In the past, many of these services were performed by the individual emirates. Now, however, the Federal Government, headquartered in Abu Dhabi and organized into functional ministries, is active throughout the country. Ministers are drawn from ruling families and leading citizens of the seven emirates. The individual emirates, however, retain a remarkable measure of control over their own internal and economic affairs, including petroleum concessions, industrial development, public works and utilities, security, customs, and town planning.

Civil and criminal legal systems have been codified. There is a dual system of Sharia (religious) and secular courts, each of which deals with criminal and civil law. Secular Courts fuse Sharia law with legal principles found in Jordanian, Egyptian, Sudanese, and English legal systems. No political parties or organizations exist.

Rapid modernization, enormous strides in education, and the influx of a large foreign population have changed the face of the society but have not fundamentally altered this traditional political system.

Arts, Science, and Education

The rapid introduction of large amounts of wealth, technology, and foreign workers into the UAE has resulted in the wholesale transformation of social and cultural life. Before this transformation, the Oman Coast's urban culture was influenced by Oman and Iran. What local traditions that existed were often oral, employing poetry, singing, and story-telling. Material culture, from architecture to handicrafts, was at a basic level. Since most settlements were on the coast and relied on the products of the local waters for a livelihood, much of what can be considered tra-

ditional UAE culture revolves around pearling, fishing, and seafaring. In addition, Bedouin influences are also strong, and the ruling family's Bedouin origins ensure that the culture and sports of the desert (camel racing, falconry, and Bedouin song and dance, for example) are closely intertwined with the national image and an integral part of national celebrations.

The government supports a number of organizations dedicated to preserving U.A.E. traditional handicrafts and folklore practices. The U.A.E. Women's Association operates a handicraft center in Abu Dhabi where basketry and weaving are carried out. Sharjah, which was the region's most important city in the 19th century, has made a special effort to rebuild its traditional urban quarters. Visitors can get an idea of the way of life before the coming of oil by walking through the city's renovated Old Souq and the Ethnographic Museum, the former house of a wealthy pearling family. Archeologists continue to find evidence of early habitation of the region, and museums in Al Ain and Sharjah, for example, have displays of many artifacts. An as evidence to how far they have come since the coming of oil, the UAE has produced artists in the fields of painting, theater, music, and literature who contribute to the cultural development of their country and the enrichment of Arab culture in general.

The few Western-style cultural outlets include English-language movie theaters, and touring singers and theater troupes whose performances are sponsored by major hotels in Dubai and Abu Dhabi.

As in other parts of the Islamic world, for many years mosques served as a center for teaching in Coastal Oman—principally reading, writing, and recitation of the Quran, Islam's Holy Book. In the early part of the 20th century, leading pearl merchants established schools staffed by foreign teachers in the main coastal towns. The first school offering a comprehensive curricu-

lum was built by the British in 1953. For a period during the 1950s and 1960s, Kuwait and other Arab States contributed to the educational system. (Only recently have UAE nationals begun replacing Arabs as school teachers at all levels.) The founding of the UAE saw a tremendous expansion of education, with spending for this area second only to defense in the first national budgets.

Education through the secondary level is compulsory and free through college for UAE nationals. United Arab Emirates University opened in 1977 in Al Ain and has faculties in arts, science, education, political science, business administration, Islamic jurisprudence, agriculture, medicine, and engineering. Enrollment in 1991-92 was around 10,000, with more than twice as many women as men. Many UAE nationals pursue higher degrees overseas, most going to the U.S. Technical and agricultural training is provided at the Higher Colleges of Technology, which have branches in Abu Dhabi, Dubai, and Al Ain. There are many private schools (including American Schools in Abu Dhabi and Dubai), which cater to the various foreign communities. The literacy rate in 1995 was estimated at 79%.

Commerce and Industry

The U.A.E.'s economy depends on its oil income, estimated at \$20.6 billion in 2000, giving its citizens one of the world's highest per capita GDP income figures at about \$22,800.

The major centers of economic activity are Abu Dhabi, Dubai, and Sharjah. Abu Dhabi produces about 85% of the country's oil and imports building materials, machinery, food, electrical appliances, cars, medicines, and almost everything else. Dubai, which produces most of the rest of the U.A.E.'s oil, also engages in a sizable reexport trade. It reexports textiles, consumer electronics, cameras, watches, gold, motorscooters, and perfumes to Iran, India,

Pakistan, and other Gulf states. Most reexport trade is carried by motorized dhows (locally built triangular-rigged sailing vessels). Dubai has been called the Hong Kong of the Gulf because of its mercantile and entrepot activity and the atmosphere of free enterprise that prevails there. Dubai also has the Jebel Ali Free Zone, the largest and most successful in the Middle East. Sharjah has become a big gas producer and is the manufacturing center of the U.A.E.

The Abu Dhabi port, Mina Zayid, is being expanded and will have 29 berths. However, it remains underused. Sharjah and Fujairah have developed ports on the Arabian Gulf and the Gulf of Oman, respectively, which feature facilities for containerized cargo. In addition to Dubai's large central port of Mina Rashid, the Dubai government built a huge 180-berth port in the Jebel Ali Free Zone.

The demand for goods, most of which must be imported, resulted in rapid inflation during the 1970s and early 1980s. With the later fall in oil prices; however, the economy went into recession, and local prices have now stabilized, although at a level high, by U.S. standards.

The typical Abu Dhabi investor shuns long-term industrial investments in favor of commerce or housing construction projects, which offer more immediate returns. Although houses with Western-style floor plans are still in short supply, apartments in high-rise buildings are readily available. Rents in Abu Dhabi are kept at artificially high levels by a government-run scheme designed to benefit U.A.E. nationals who own rental property.

Industrial development in the U.A.E. is still in its early stages and is concentrated in hydrocarbon-related projects. Dubai has constructed an aluminum plant and a drydock capable of handling the largest supertankers.

In recent years, the U.A.E. has expanded its agricultural produc-

tion significantly through the extensive application of large, government subsidies, and seasonal surpluses of some vegetables are even exported. A project established by the Arid Lands Research Center of the University of Arizona has produced good results with hydroponic cultivation of vegetables; another team from the same university has a prototype commercial farm based on saltwater irrigation near Fujairah. Other horticultural projects are flourishing in Al-Ain and Digdaga. An import tax on vegetables now exists to protect the market for locally grown vegetables. The government is encouraging livestock and poultry production and expanded commercial fishing. It is unlikely, however, that the U.A.E. will become self-sufficient in foodstuffs.

Transportation

Local

Although getting around by taxi is relatively easy, most travelers prefer the convenience of a personally owned vehicle. Taxis are plentiful and fares reasonable but costly for intercity travel. Meters are used for trips within Abu Dhabi. Taxis are scarce during peak hours, late at night, and in the early hours of the morning, particularly off the main streets. Not all drivers understand English. Al-Ghazal taxis offer round-the-clock service and are similar to a limousine service. They may be booked by telephone or found outside major hotels. Some areas in the cities are served by public buses, but most travelers prefer to use personally owned vehicles.

Regional

Abu Dhabi emirate covers 30,000 square miles, or almost 90% of the U.A.E. land area, with the remaining emirates making up only 4,000 square miles. The bulk of the population is concentrated in eight main towns—the seven emirate capitals and the oasis of Al-Ain in Abu Dhabi emirate. A network of good, hard-surfaced roads connects these cities.

Abu Dhabi proper is linked with Al-Ain and the other emirates by four-lane divided highways. Other highways link the U.A.E. with neighboring Oman, Qatar, and Saudi Arabia. The U.A.E. has six international airports. The two largest airports are located in the cities of Dubai and Abu Dhabi.

Communications

Telephone and Telegraph

The UAE has an excellent telecommunications infrastructure, with direct-dial international links and services such as pagers, mobile phones, faxes, and connection to the Internet. There are locally based operators for AT&T, MCI, and Sprint.

Radio and TV

Abu Dhabi, Dubai, Ras Al-Khaimah, and Umm Al-Kuwait all have radio stations. Abu Dhabi's AM band broadcasts in Arabic, French, Urdu, Bengali, and Tagalog and 2 hours in English. English is also broadcast on the FM band for 17 hours and on SW for 2 hours. Dubai broadcasts in English on FM and Arabic on AM band. Ras Al-Khaimah and Umm Al-Kuwait broadcast Arabic on the AM band. Many Americans also listen to the BBC and VOA on shortwave radios; however, reception is sometimes poor.

The emirates of Abu Dhabi, Dubai, and Sharjah have TV stations. Abu Dhabi and Dubai have two channels each, one in Arabic, and the other mostly in English. U.A.E. viewers with good antennas can also receive transmissions from neighboring countries.

The U.A.E. now abides by intellectual property agreements. Pirated audio and video cassettes, once prevalent in the market, have largely disappeared from store shelves. Selections of legitimately licensed product are only fair, but are improving. Prices for CD's and cassette tapes are roughly equivalent to U.S. prices. Prerecorded video tapes are more expensive, and

selection is sparse, though improving. All music and video programs sold in the UAE are subject to Government censorship.

Newspapers, Magazines, and Technical Journals

The country has five Arabic daily papers, three in Abu Dhabi, one in Dubai, and one in Sharjah. Abu Dhabi has one English-language daily paper and Dubai has two, all of which are available throughout the U.A.E. All papers feature stories from the Western wire services, such as Reuters, AP, and UPI. News is fairly current, but some may be censored. *The International Herald Tribune*, *USA Today*, and *Wall Street Journal* can be purchased locally 1–3 days after publication. The major British dailies can also be purchased.

Distribution of *Time*, *Newsweek*, and the *Economist* is timely, although articles offending local moral or political sensitivities are censored. Some bookstores carry a wide selection of English-language magazines, but at high prices (i.e., five or more times U.S. prices).

Health and Medicine

Medical Facilities

Abu Dhabi and Dubai have several government hospitals, including OB/GYN hospitals, capable of handling emergencies and routine medical care. However, they are not up to Western standards. Personnel at the hospitals are usually recruited from Egypt, Lebanon, India, and the Philippines.

There are several private clinics and laboratories available. Dental clinics staffed by dentists from the U.S., Sweden, U.K., and France are satisfactory.

Local pharmacies are well stocked with medications from Europe. However, bring your own supply of prescription medication.

Community Health

The government is working to improve the water and sewage systems, and residential areas are fumigated regularly.

Preventive Measures

Tap water in Abu Dhabi and Dubai is generally safe to drink; however, tanks and pipes may be rusty or contaminated. Most people prefer to drink bottled water, which is available for inexpensive home delivery. Malaria is a risk only in the mountainous area near the Omani border.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Most major airlines have daily flights from Europe to Abu Dhabi and Dubai.

A passport and visa are required. In addition, an AIDS test is required for work or residence permits; testing must be performed after arrival. A U.S. AIDS test is not accepted. For further information, travelers can contact the Embassy of the United Arab Emirates, Suite 700, 1255 22nd Street, N.W., Washington, D.C. 20037, telephone (202) 243-2400.

UAE customs authorities enforce strict regulations concerning temporary importation into or export from UAE of items such as firearms, including fireworks, pornographic materials, medications, religious materials and communication equipment. It is advisable to contact the Embassy of UAE in Washington for specific information regarding customs requirements.

Americans living in or visiting the UAE are encouraged to register with the Consular Section of the U.S. Embassy in Abu Dhabi or the Consulate General in Dubai, where they can obtain updated information on travel and security within the UAE. The U.S. Embassy in Abu Dhabi is located on 11th St., also known as Al-Sudan St., P.O. Box 4009. The telephone number is

(971) (2) 443-6691, and the Consular Section fax number is (971) (2) 443-5786. The after hours telephone number is (971) (2) 443-4457. The Embassy internet web site is <http://www.usembabu.gov.ae>. The U.S. Consulate General in Dubai is located on the 21st floor of the Dubai World Trade Center, P.O. Box 9343. The telephone number is (971) (4) 331-3115, and the Consular Section fax number is (971) (4) 331-6935. The workweek for both the Embassy in Abu Dhabi and Consulate in Dubai is Saturday through Wednesday.

Social Customs & Laws

Taking photographs of anything that could be perceived as being of military or security interest may result in problems with authorities.

The penalties for possession, use, or trafficking in illegal substances are strict in the UAE, and convicted offenders can expect jail sentences and heavy fines. Legislation enacted in January 1996 imposes the death sentence for convicted drug traffickers. A variety of drugs normally taken under a doctor's supervision in the United States are classified as narcotics in the UAE. A doctor's prescription should be carried along with any medication that is brought into the country.

In addition, the UAE's tough anti-narcotics program also includes poppy seeds on its list of controlled substances. The importation and possession of poppy seeds in any and all forms is strictly prohibited. Persons found to possess even very small quantities of any controlled substances listed by the UAE are subject to prosecution by the authorities and may be given lengthy prison terms of up to 15 years. Travelers with questions regarding the items on the list of controlled substances should contact the U.S. Embassy in Abu Dhabi or the U.S. Consulate General in Dubai.

If suspected of being under the influence of drugs, individuals may be required to submit to blood and/or urine tests so that local authori-

ties may make a determination as to usage. UAE authorities have been known to arrest travelers upon their arrival into the UAE and, based on recent prior drug use, to prosecute these travelers.

Crimes of fraud, including passing bad checks and non-payment of bills (including hotel bills), are regarded seriously in the UAE and can result in imprisonment, as well as fines. Penalties are generally assessed according to religious law. If imprisoned, bail is generally not available to non-residents of the UAE.

Drinking or possession of alcohol without a Ministry of Interior liquor permit is illegal and could result in arrest and/or fines and imprisonment. Alcohol is served at bars in most major hotels. However, this alcoholic beverage service is for those persons who are staying at the hotel. Persons not staying at the hotel who come in to use the facility's bar technically are required to have their own personal liquor license. Liquor licenses are obtainable only by non-Muslim persons who possess UAE residency permits. Drinking and driving is considered a serious offense.

While individuals are free to worship as they choose, and facilities are available for that purpose, religious proselytizing is not permitted. Persons violating this law, even unknowingly, may be arrested and imprisoned.

Pets

UAE customs authorities also impose additional requirements for the importation of pets into the country. Prior permission in the form of a permit from the UAE Ministry of Agriculture and Fisheries must be secured before the pet's travel. To obtain the permit, the following items will need to be submitted to the UAE Ministry of Agriculture and Fisheries at the following address: P.O. Box 213, Abu Dhabi, UAE, telephone number 971-2-662-781 or 971-2-485-438. a). the pet's travel itinerary; b). copies of veterinary health certificates, showing that the animal is free of

disease and indicating all shots which have been given to the pet; c). the sex and color of the pet; and d). a completed import permit application form (available from the ministry).

Some American and British brands of pet food and cat litter are stocked in all supermarkets.

Firearms & Ammunition

No weapons or ammunition may be imported or acquired in the country.

Currency, Banking and Weights and Measures

Basic currency is the U.A.E. dirham (DH), which is divided into 100 fils. The dirhams come in 500, 200, 100, 10, and 5-bill denominations, and coins in 1 Dirham, 50, 25, 10, and 5 fils. Exchange generally averages about DH 3.67 = US\$1 (1998). Many banks provide full banking services. Dollar and sterling travelers checks are readily available.

UZBEKISTAN

Republic of Uzbekistan

Major City:

Tashkent

Other Cities:

Andizhan, Bukhara, Samarkand, Karakalpakstan

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated November 1995. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Many of the cities of the fabled Silk Road—Samarkand, Bukhara, Khiva—are located in **UZBEKISTAN**, and many famous conquerors passed through the land. Alexander the Great stopped near Samarkand on his way to India in the 4th Century B.C. and married Roxanna, the daughter of a local chieftain. Genghis Khan and his Mongols arrived in 1220 and leveled everything in their path, leaving only one tower in Bukhara standing from earlier ages. Timur, known in the west as Tamerlane, was born in Shahrisabz, turned Samarkand into the cultural capital of the world, and established the greatest empire of the time (14th century), becoming the most feared warrior since Geng-

his Khan. His grandson, Ulug Beg, helped found the modern science of astronomy, and his grandson Bobur went to India to establish the Moghul Empire. Alisher Navoi, the greatest Uzbek writer, wrote not only in Persian but in Uzbek; as the first to do so, he did what Luther did for German and is venerated as Shakespeare is in Britain.

Russian incursions into Central Asia began in the mid-1800s, when the demand for cotton led Slavic settlers and Imperial troops into the region. The power of traditional entities such as the Khanates of Kokand and Khiva and the Emirate of Bukhara waned as Imperial Russia strengthened its grip. In the wake of the October Revolution, the Red Army enforced Bolshevik control. The Basmachi movement offered fierce resistance. Total Soviet control came in the 1930s with the imposition of collectivization and a culture of repression; many perished in the purges, and others fled abroad. In Stalinist times, Soviet authorities resettled displaced and deported peoples from other parts of the USSR in Uzbekistan, including Ukrainian Kulaks, Crimean Tatars, Volga Germans, Koreans, Meskhetian Turks, Armenians, and others. Moscow used Uzbekistan as a resource base, promoting a cotton monoculture and shipping natural resources to

Russia for processing. During these years, it had one of the lowest levels of per capita income among Soviet republics. In the wake of the failed Moscow coup attempt in August 1991, Uzbekistan declared its independence.

MAJOR CITY

Tashkent

Tashkent is the capital of Uzbekistan and its largest city, with a population of approximately 2,495,000, making it the fourth largest city in the former Soviet Union, behind Moscow, St. Petersburg, and approximately the same size as Kiev. Tashkent sits in the Chirchik River Valley (the River feeds into the Syr Darya), and two main canals, the Ankhore and the Bozsou, run through the city. Though the climate is semi-arid, the extensive system of canals, parks, gardens, and tree-lined avenues gave Tashkent the reputation of being one of the greenest cities in the USSR. The spring rains usually subside by mid-May; the greatest heat, often over 104°F (40°C), comes in July and early August, but nighttime temperatures are much lower. Fall can extend into November and early December, with a short January-February winter occasioned by

scattered snow falls but few sustained freezing spells.

While located on a historical site along the Silk Road, Tashkent can be considered a relatively modern city. It was a small community before the Russians conquered it and made it their administrative center in 1865, a time when Samarkand and Bukhara were the main cities in Central Asia. The Russians then developed the city in a primarily Imperial Russian architectural style. After the Bolshevik Revolution in Russia in 1917, a core of radicals established a Soviet which controlled Tashkent, the first foothold of Bolshevism in a region generally hostile to the revolutionary ideas. During World War II, when much of the European part of the Soviet Union crumbled and starved under the Nazi onslaught, Tashkent became known as the “City of Bread.” In 1966, a devastating earthquake leveled much of the old city. The 14 other republics of the USSR were each given a section of Tashkent to rebuild; the resulting lack of coordination contributed to Tashkent’s current dispersed layout. Remnants of the old city can be found in the neighborhoods northwest of the center of town. The architecture elsewhere, however, is decidedly contemporary Soviet. In addition to the central city administration (“hokimiat”), there are 13 district hokimiats which provide many of the services normally associated with city administration. Long-term residents of Tashkent will often identify more with their makhallah (neighborhood/district) and the chaikhana (tea-house) there than with any city-wide institution or identity.

Tashkent boasts the only underground metro system in Central Asia; ongoing construction aims to add a third line to the two presently in place. The Supreme Soviet recently voted to spend \$500 million to construct a new airport complex in an effort to bolster Tashkent’s potential as an air gateway between Europe and Asia.

Many of the Russians, Ukrainians and other nationalities who came to rebuild the city in the aftermath of the earthquake preferred the warmer climate and decided to settle here, further diluting the Central Asian character of the City. As a result of the lengthy Russian presence and the use of Tashkent as a regional center for Central Asia, Tashkent is home for over 100 nationalities and retains the flavor of an international city. It is here that you will find the largest concentration of Russians (17% vs. 8% countrywide). The smaller Korean community makes its presence known in the marketplaces and in restaurants around town.

Despite its size and status as a capital, Tashkent can seem surprisingly provincial—there is little night life and few restaurants. Ample parks and other recreational facilities, however, help to offset this reality and make life interesting in this city.

Food

Fresh vegetables and fruits are available in season in Tashkent year ‘round. Available fruits include pomegranates, grapes, pears, cherries (bing and sour), apples, oranges, lemons, limes, nectarines, melons, peaches, plums, apricots, raspberries and strawberries. Canned fruits are available but most residents prefer to can their own. Vegetables in the market include eggplant, pumpkin, squash, green beans, potatoes, carrots, cabbage, tomatoes, cucumbers, radishes, onions, garlic, green and red peppers, cauliflower and leaf lettuce. Potatoes, cabbage, carrots and tomatoes are available year ‘round.

Beef, lamb, pork and chickens are generally available in the markets; the quality ranges from average to poor. Ham, bacon and sausage are also available at Tashkent’s main market. Smoked fish is available throughout the year, but may involve health risks; fresh fish, of varying quality, is seasonally available. There is no other seafood. Eggs are available and good, usually fresh. Locally produced butter, milk

and other dairy products are scarce; and due to improper hygienic conditions in handling and packaging, their use is not recommended (except for hard cheese). Occasionally, Turkish butter, long life milk and imported cheeses are available. Flour and sugar are rationed items and not always available. Bread is plentiful through state-controlled bread stores, and is heavier than American-type bread, is preservative-free, tasty and freezes well. About five or six different kinds, including a French-type loaf and an Uzbekistan-style pita, are baked fresh and shelved several times during the day.

Hard currency shops stock limited supplies of hard liquor and wines, and beer is usually available from those shops or from street vendors. Prices are somewhat high. Coca-Cola has recently opened a bottling plant in Tashkent and a limited variety of other Western products, including Pepsi-Cola, is available. Locally produced soft drinks are plentiful and good.

Clothing

Tashkent is not a particularly fashion-conscious city; good quality clothing is not available, and many residents who are well dressed make their own.

Men: Social life is informal; black-tie affairs are rare. Men wear coats and ties and dark suits for more formal occasions. A lined raincoat is useful; heavy winter coats are occasionally necessary. In summer, lightweight suits are useful for the office, and short-sleeved shirts are acceptable. In winter, light- to medium-weight wool or wool-synthetic blend suits are useful.

As in Southern Europe, men do not wear shorts outside of their own house. Use discretion while playing sports or hiking in the mountains, and change to trousers.

Women: There are two dress codes, one for most parts of Tashkent and one for everywhere else. In Tashkent: It is acceptable in many places to wear short skirts, tops with bared

shoulders, and pants. Outside Tashkent: The dress is much more closed. A dress or skirt should be below the knee; short sleeves are fine, but the shoulder and front should be fully covered. Pants are acceptable if covered by a long top, as is done in Uzbek or Pakistani national dress. Women do not need to cover their heads, as is the case in more Muslim countries.

In Tashkent, there are few occasions for cocktail dresses, but dressy evening outfits will be used. In summer, cotton, linen, blends and knits in casual styles are most comfortable for office and home wear. Revealing dresses or shorts are not suitable for street wear, particularly in bazaar (market) areas. Younger Uzbek women wear slacks, and they are acceptable in restaurants, modern shopping areas, etc., in Tashkent only. For winter, medium- to heavyweight woolens will be comfortable, as will be a warm coat. Dresses, skirts, blouses, sweaters, jackets, suits, slacks, etc., are all worn. Although houses have central heat, winter dampness makes it feel much colder than it actually is. Wool stoles and sweaters are also useful on many winter evenings. Tashkent has no storage facilities for furs.

Walking shoes with low heels are good for shopping and sight-seeing. Shoes are not worn inside homes and are removed at the entrance. Rubbers or wet-weather-type shoe/boots are essential. Lingerie, pantyhose and the like are not available locally.

Supplies and Services

Toilet articles and cosmetics are few and far between, as are drugs and medications, and cleaning products.

Dressmaking and tailoring are available; work can be good and is reasonable. Shoe repair in Tashkent can be satisfactory. Dry-cleaning is available, but of poor quality.

Adequate beauty shops abound. Some Americans take their own shampoo, or shampoo at home and go to the shop for a cut and/or set only. Most hairdressers don't speak

enough English to understand instructions. Barbershops are also available; prices are much lower than in the U.S.

Much of Tashkent commerce is conducted in "bazaars," open-air markets around town. Tashkent has five main bazaars, with many smaller ones scattered through the city. There are also stores that have essential and local mass-produced goods. There are places to buy handicrafts and souvenirs, but they are limited and not necessarily oriented to the needs and desires of tourists.

With the freeing of most food prices, bazaars have the widest selection of foods and offer the best quality. Buyers should be aware of the sanitary conditions of the food.

For goods, bazaar sales are catch as catch can; what may appear new could well be broken, and what may appear antique probably is an imitation. Prices are never fixed, and first demands should never be paid; intuition and desire are the best guides.

Tashkent does not have hard-currency stores that offer the range of goods found in a U.S. convenience store. There are small stores scattered around the city which sell Western alcohol (beer, some wine and spirits), soft drinks, cigarettes, sweets and some dairy products. Some carry consumer electronics and a variety of other luxuries. Selection is limited and prices are very high by U.S. standards.

Despite its storied Silk Road heritage and legendary cities, Uzbekistan has surprisingly little to offer to the casual buyer or tourist; even finding post cards can be demanding and unsuccessful. The best quality goods—from rugs and tapestries to silk and pottery—can be obtained directly from factories, mostly located outside Tashkent.

Religious Activities

Uzbekistan is a Muslim country. There are, however, communities of Christians—Orthodox, Catholic, and Protestant—and Jews, all of

which maintain places of worship and conduct services.

Education

A small international school opened its doors in September 1994 to approximately 50 students. It will be somewhat larger in 1995-96, with kindergarten through grade ten, using correspondence courses. The school is not accredited.

Touring and Outdoor Activities

Samarkand. Timur's capital city is a four-hour drive or an hour's flight from Tashkent, either of which could facilitate a day trip. The five main sites are: Gur Emir, Tamerlane's tomb; the Registan, the most magnificent Square in Central Asia; Shah-i-Zinda, Tomb of the Living King; Bibi-Kanim Mosque; and Ulug Beg's Observatory. The best way to travel by car is to hire a driver with vehicle for the day; they are quite available, and reasonable. It's more convenient to travel to Samarkand by plane; but once there, a car will be needed. Guides are available for hire at the Intourist Hotel or the Business Center.

Bukhara. Bukhara is another 2-3 hours by car beyond Samarkand; the flight from Tashkent is 1.5 hours one way. It is possible to visit many of the sites of Bukhara on foot, but one might wish to arrange a vehicle for airport pickup and transfer to outlying sites. Guides are available. Sites include the Pool in the City Square, the Tower before which Genghis Khan bowed, the unique 11th century Mausoleum, various madrassas, and the Summer Palace located a few kilometers outside of town.

Khiva. Khiva is less accessible than either Samarkand or Bukhara. One must fly about two hours to Urgench, and travel the last 25 kilometers by bus, minibus or taxi. Old Khiva is a museum city, in which the many madrassas, palace and other ancient buildings have been restored. The Museum of Applied Arts, well worth a visit, is near the palace tower, which provides a good view of the city. One of the city's

mosques boasts 200 carved wooden pillars.

Shahrisabz. The birthplace of Tamerlane has several monuments of note, including the remains of Timur's massive gate. Shahrisabz is 80 kilometers from Samarkand over a steep mountain pass which is closed in winter, but offers a great view from spring through early fall.

While most people have heard of the Silk Road cities, few know of the beauty and serenity of the mountains and nature preserves within an hour or two of Tashkent. In all cases, it is best to drive, by either personal or hired vehicle. Popular destinations include:

Chirvak. A reservoir which offers swimming, sail boating, wind surfing and hang gliding.

Chimgan. An area for skiing in the winter and hiking in the summer. The Beldeersai chairlift is 2 km long and offers intermediate and advanced ski slopes. Helicopter skiing can be arranged.

Chatkal Nature Reserve. This reserve facilitates hiking and has a beautiful ranger station/caravanse-rai with river swimming.

For travel outside Uzbekistan, there are frequent direct flights to such places as London, Moscow, Frankfurt, Tel Aviv, Kuala Lumpur, Seoul, New Delhi, Islamabad/Peshawar and Sharja (providing access to Abu Dhabi and Dubai).

Entertainment

Aside from the ballet, concerts and theater described in the section on Arts and Education, Tashkent offers dinner shows at many restaurants around the city. The food served at these establishments is adequate, although the variety is quite limited and the quality average to poor, as are the sanitary standards. Oftentimes, music is provided—either live or recorded—for dancing after the floor show. The larger hotels have “night bars” where people can gather until the early morning hours. There are also theaters

which screen movies in the local languages; some even boast an occasional screening in English

Social Activities

A sports center is located about five minutes from the U.S. Embassy. For a nominal monthly fee, one may use its outdoor Olympic-sized swimming pool and gyms catering to weightlifters, boxers and gymnasts. Tennis courts, and lessons, are available. The Hippodrome has facilities for boarding horses, but horses available locally for riding are definitely not for the amateur.

Since outside social activities are limited, many people entertain at home with dinners, cocktail parties, card parties, and the like. Currently, there is a Hash House Harriers event on Sundays, with the group gathering—on a rotating basis—at a participant's home after the run/walk.

An international women's group meets monthly; the group can offer programs relating to archeological, cultural and social aspects of life in Uzbekistan, as well as various special activities such as gourmet cooking, handicrafts, exercise, bridge lessons, etc., depending on the interest of the group.

oldest cities in Central Asia. Many of its ancient monuments and buildings, dating from the 13th century, represent some of the best of Central Asian architecture. With a population of 370,000, Samarkand is the second largest Uzbek city. Now a rail and industrial center, much of the city's industry is dependent on the area's agricultural crops. Major industries include cotton and silk processing, canning, and the production of fertilizers, textiles, and wine. The city has a university and is known as a center for karakul sheep breeding research.

Spanning the delta of the Amu Darya and comprising nearly one-third of the territory of Uzbekistan, **KARAKALPAKSTAN** is an autonomous republic within the Republic of Uzbekistan. Karakalpakstan has its own legislature and executive branches, as well as its own constitution, but its autonomy does not apply in areas such as foreign affairs, defense or security. About 1.2 million people live in Karakalpakstan, a third of them Karakalpaks, who are closer ethnically and linguistically to Kazaks than to Uzbeks. Karakalpakstan has borne the brunt of the ecological damage associated with the Aral Sea disaster.

OTHER CITIES

ANDIZHAN is a cotton growing and transport (road and rail) center. Located in the Fergana Valley, the city is 155 miles southeast of Tashkent. The region is subject to earthquakes and the city was rebuilt after a severe 1902 quake caused massive destruction. Andizhan has over 300,000 residents.

BUKHARA, 140 miles west of Samarkand, is a historic city. Once known as an Islamic intellectual center and holy place, the city has many magnificent ancient monuments. The population of Bukhara is more than 230,000.

SAMARKAND, located 180 miles southwest of Tashkent, is one of the

COUNTRY PROFILE

Geography and Climate

Located between the Amu Darya (OXUS) and Syr-Darya Rivers, Uzbekistan lies at the heart of Central Asia. Along its borders are Afghanistan to the south, Turkmenistan to the west and south, Kazakhstan to the north and Tajikistan and Kyrgyzstan to the east. Covering an area of 500,000 sq. km, Uzbekistan is roughly the size of California. Most of the country is desert (the Kyzylkum and the Karakum) or irrigated steppe, but it has rugged mountains in the east (a branch of the Tien Shan range). The

area has a severe continental climate that is dry and hot in the summer months and cool and wet in the winter. In the long summer, daytime temperatures often reach 40°C (104°F); during the short winter, daytime temperatures generally stay above freezing, but on occasion can dip well below, and snow is not unusual. Spring and fall are the most comfortable seasons. In all seasons, the differences between daytime and nighttime temperature and humidity is much greater than most parts of the U.S.

Population

Uzbekistan has an estimated population of 24.4 million people. Of these, approximately 16 million are ethnic Uzbeks and between one and two million are Russian. The rest of the population is made up of Tajiks, Tatars, Kazaks, and Karakalpaks, along with over 100 other ethnic groups. Most of the population lives in the eastern part of the country, particularly the Fergana Valley, and in the parts of the desert made habitable by heavy irrigation.

The Uzbeks (as well as the Karakalpaks, Kazaks, Turkmen and Tatars) are a Turkic people and speak a Turkic language. The language and culture in Uzbekistan has also been strongly influenced by the Mongols and Persians (Iranians, Tajiks). The Uzbek language employed Arabic script until 1929 and the Latin alphabet for a decade, but since 1940 it has been written in Cyrillic; the Supreme Soviet recently decreed that the transition back to the Latin script should occur by the year 2000. Although Uzbek is the official language of the country, Russian is also widely spoken in the cities, particularly among the educated elite and government officials. The historical towns of Bukhara and Samarkand are primarily Tajik speaking; and in the countryside, Russian is hardly spoken at all.

Aral Sea Crisis

The Aral Sea lies between Uzbekistan and Kazakhstan in a vast geological depression, fed by the Amu

Darya and Syr Darya Rivers, with no outlet. Before its drastic decline, the Aral Sea was the fourth largest inland water lake in the world. In the past 30 years, the Aral Sea has lost nearly two-thirds of its volume and half of its previous surface area; its level has dropped nearly 50 feet, splitting it in two. Its salinity has increased nearly threefold. The almost total use of water from the Amu Darya and Syr Darya Rivers for irrigation purposes has been exacerbated by excessive use of chemicals for growing cotton and rice, much of which returns to the Rivers upstream. The desiccation of the Aral Sea has wiped out its fishing industry and destroyed nearby ecosystems. Toxic blowing salts from the exposed seabed and the pollution of surface and groundwater have caused serious health problems and damaged agricultural production. The United Nations Environment Program has stated that, in terms of its ecological, economic, and social consequences, the Aral Sea is one of the most staggering disasters of the twentieth century. Restoring the Aral Sea to its pre-disaster (1960) conditions is generally considered impossible, given expanding populations and pressures for increased agricultural production.

All five republics of Central Asia depend on the two river systems, but Uzbekistan, Kazakhstan and Turkmenistan are heavily dependent upon existing allocations of water. International and regional efforts to stabilize the ecological situation on the basis of available river flows and more efficient irrigation techniques will take years to achieve, so international assistance also focuses on the health problems among those living near the Aral Sea.

Public Institutions

Uzbekistan's political institutions, inherited from the Soviet Union when Uzbekistan declared independence on September 1, 1991, are gradually evolving away from their Soviet models. A new constitution was adopted in December 1992, and

a new parliamentary election law passed a year later provided the basis for electing a new parliament, the Oliy Majlis, which met for the first time in February 1995. The Constitution provides for a strong President; in addition, opposition parties and public criticism of the President have been suppressed. President Islam Karimov was elected for five years in December 1991, and his term was extended until 2000 by referendum in March 1995. While many Soviet laws are still valid, they are steadily being replaced by new ones, and even some of the new laws (especially those affecting business) have been revised. Radical changes are rare, but the changes in public life are continuous and cumulative.

Social Customs

There is no question that Uzbekistan is a male-dominated society. Much of the local social life revolves around the chaikhanas (tea-houses). While foreign women are allowed in, the chaikhanas basically serve as a men's club where they congregate and talk; local women do not frequent the establishments. When there are large social gatherings of mixed company, the women and men usually sit in separate groupings (again, exceptions are made for "honored foreign guests"). Mosques are segregated during regular prayers, and head coverings for women may be required. Women should take the lead in greetings and in offering a handshake; Uzbek women normally do not shake hands, and well-behaved men do not take the lead in greeting unknown women. Women should avoid walking alone in the evening or in crowded public places such as the bazaar, and should dress more conservatively there.

Uzbeks are a very friendly people, especially when foreigners take the trouble to learn a few introductory greetings in Uzbek. Most people will be happy to help with directions, and Uzbeks often invite people to their homes. On such occasions, small gifts, especially for children would be appreciated but not

expected; your hosts are more likely to offer you small gifts/souvenirs.

The standard Uzbek celebratory meal is lengthy and expansive; be careful not to eat too much during the first several rounds. The end of the meal is near when the plov (national dish of rice with some vegetables and sheep meat) is served, followed by tea. Plov is traditionally eaten from a communal plate using the right hand as a scoop, with a garnish of sliced tomatoes and onions. Uzbeks fill their tea bowls only halfway, so the guest knows that he or she is not expected to leave immediately upon finishing.

Arts and Education

In the last decades of the Soviet Union, Tashkent had become one of its most vibrant and progressive artistic and intellectual centers, because of the rich mix of Asian and European cultures here, especially, because intellectuals and artists who did not end up in the Gulag but who were exiled from Moscow frequently moved to Tashkent. Since independence in September 1991, state subsidies for the arts and for education have fallen precipitously; and a good number of European-nationality artists, intellectuals, and journalists have emigrated. Furthermore, independent Uzbekistan is experiencing the cultural dislocation common to post-colonial situations. The dominant Soviet/Russian culture is beginning to wane, and Uzbek culture is moving to the fore. Tashkent, as well as Samarkand and Bokhara, as they have long been, are the artistic and intellectual centers of Uzbekistan.

Uzbek culture, long repressed under the Soviet Empire, strongly emphasizes tradition and ceremony, especially on the life-cycle occasions of weddings, circumcisions, and funerals. For the first two, the celebration features traditional Uzbek music, poetry, and dance. Professional artists who perform at these events are highly regarded in the Uzbek community—and highly paid. A wedding celebration, with its procession

Museum and mosque in Tashkent, Uzbekistan

of musicians, is an event not to be missed.

Tashkent is the most Europeanized city in the country. The National Museum of Art has a representative selection of Russian, Soviet, European, and Uzbek paintings and other objects from the 17th century to the present. The museum occasionally hosts temporary exhibits from other countries. The Museum of Applied Arts, housed partly in a restored 19th-century trader's mansion, has a permanent exhibit of the traditional arts and contemporary glass and ceramic products of Uzbekistan. Both of these museums have small but interesting consignment shops which sell Central Asian and Russian antiques, carpets, jewelry, and contemporary arts and crafts. Handwritten signs in these shops note that it is illegal to take anything out of the country which was made before 1947.

Uzbekistan's rich collection of Central Asian antiquities and jewelry has been put into storage awaiting the opening of the Uzbekistan Historical Museum, which will be housed in the former Lenin Museum, a lattice-covered modernist cube located across the street from Independence Square. Tash-

kent also has a Museum of Natural History, a Museum of Military History, the Museum of Ancient Oriental Manuscripts, as well as other small, specialized museums. Several small, private art galleries also exist and are gathering spots for the artistic and bohemian communities of the capital. The Archduke Romanov's home as Governor of Turkestan in the 1890s has been fully restored and is now used as a reception hall by the Foreign Ministry. The Samarkand Museum, abutting the world-famous Registan ensemble of medieval buildings, has one of the best displayed and richest exhibits of the arts of daily life in all of Central Asia.

The Navoi State Opera and Ballet Theater is the most prestigious in the country and has a full season of Western opera, ballet and symphony productions, which sometimes star visiting artists from Russia. Tashkent also has ten theaters with regular repertoires. The most popular are Ilkhom Theater, Young Spectator's Theater, Khidoyatov Uzbek Drama Theater, and Gorky Russian Drama Theater, and Russian Operetta Theater. The Conservatory of Music, one of the best of the former Soviet Union, sponsors numerous concerts and recitals dur-

ing the year. All performances in Tashkent begin at 5 or 6 p.m., and audiences are home before 10 p.m.

Uzbekistan may become a major tourist destination because of its world-class monuments of medieval Islamic architecture. Samarkand is the richest city with its Registan ensemble, the ruins of Bibi Khanum Mosque, the tomb of Amir Timur (Tamerlane), and the haunting Street of Mausoleums. Bokhara and Khiva, great cities of the Silk Route, also merit visits. UNESCO has begun a 20-year project to restore properly these World Heritage sites and to develop a responsible tourism industry.

As elsewhere in the former Soviet Union, education had high priority in Uzbekistan. With independence, the language of instruction is shifting from Russian to Uzbek, and a number of non-Uzbek nationality educators and scholars have emigrated. Some students and educators complain that the quality of education and the integrity of academic administration have fallen. All education is under the Ministry of Higher Education or the Ministry of Public Education. No private schools are accredited, although a few private academies exist, especially to teach business subjects. Tashkent has an extensive system of specialized high schools for students gifted in the sciences, the arts, and languages.

There are four important universities in Tashkent: The University of World Economy and Diplomacy (the elite school for government service), Tashkent State Economics University, Tashkent State University, and the University of World Languages. There are also many institutes and think tanks in Tashkent, including the prestigious Oriental Studies Institute. Tashkent State University has recently decentralized and upgraded provincial training centers to the status of state universities.

Commerce and Industry

Since its independence in 1991, Uzbekistan has been engaged in the process of converting from a planned to a market economy. The government regularly states its determination to complete this process, but that it must be done carefully, in keeping with Uzbekistan's unique conditions, to maintain social stability. The result has been slower and more centrally-managed reform than in some other former Soviet republics. Following introduction of Uzbekistan's own currency, the som, in summer 1994, macroeconomic stabilization measures met with IMF approval and led to an agreement in early 1995.

Uzbekistan's economy is primarily based on agriculture and agro-processing, accounting for about one-half of the GNP. Uzbekistan is the world's third largest producer of cotton (second largest exporter after the U.S.), and cotton accounts for over 40% of the agricultural production. Much of the industrial production is linked to agriculture, including the production of cotton harvesting equipment, textiles, and chemical fertilizers and pesticides. Uzbekistan also has promising mineral reserves, including significant amounts of gold, uranium, silver, copper, lead, zinc, wolfram and tungsten. Uzbekistan is a net exporter of natural gas and hopes to achieve oil self-sufficiency.

Although Uzbekistan is a large net exporter of fruits and vegetables, mostly to the former Soviet Union, it must import four million tons of wheat each year, much of it from the United States. Uzbekistan hopes to reach wheat self-sufficiency in the near future by increasing yields and shifting land from cotton to wheat cultivation. However, it is likely that the country will remain a net importer in the near term.

Uzbekistan has a very liberal investment code which, in theory, allows for, among other things, free and full repatriation of profits and tax holidays of 2-5 years, depending

upon the type of investment. However, in practice, even negotiating and registering joint ventures is a cumbersome process (taking anywhere from three to six months). This requires the approval of numerous government agencies and usually at the highest levels of government. Repatriation of funds, the system for which is still unclear, is complicated by the limited amount of foreign exchange in the country. Uzbekistan signed a Bilateral Investment Treaty with the U.S. in late 1994.

The government has targeted oil and gas, mining, processing of agricultural commodities, textiles and tourism as priority areas for foreign investment. However, foreign ownership is limited in "strategic" industries, such as in the mining, energy, cotton processing and oil and gas sectors.

American firms currently operating in Uzbekistan include Newmont Mining, Bateman Engineering, M.W. Kellogg/Dresser, Coca-Cola, Pepsico, Price Waterhouse, Deloitte Touche, KPMG Peat Marwick, and others. Prospects for long-term opportunities in this market are excellent and we expect to see the number of American firms in this market increase dramatically over the next several years.

Transportation

Local

The public transportation system within Tashkent consists of buses, trolleybuses, trams, taxis and a metro system. City bus service is one class and inexpensive; however, it is not recommended for use because of crowding and petty crime. The underground "metro" system, the only one in Central Asia, currently has two lines; a third is under construction. It, too, is inexpensive, and the crowds can be intense at rush hour, but it is reliable. Taxis, used frequently by Americans, are readily available during daylight hours. They are marked with the checkerboard stamp on the side. Accepting rides

from “private” taxis late at night can be dangerous and is discouraged. If the taxi is not equipped with a meter, the fare should be determined prior to the journey.

Regional

All-weather roads exist between the larger cities and points of interest. But most of these roads are in poor repair and can wreak havoc on your auto. Highway driving at night is dangerous due to pedestrians, and unlit parked and moving vehicles.

The use of personal vehicles for overnight trips outside the city is discouraged unless someone will be with the car at all times; vandalism is prolific. Cars and drivers are available for hire on an hourly, daily, or several-day basis for a reasonable fee.

Communications

Telephones

The quality of the phone lines in Uzbekistan is abysmal, and for local calls, you will frequently need to try many times before making contact. Making long-distance calls can be a frustrating experience if you are not a Russian speaker. The operator often demands that the calls be paid for beforehand and places a 10-minute limit on calls. Direct-dial capability is available, but can be an extremely frustrating experience due to the low number and quality of lines.

Radio and TV

Both radio and TV in Uzbekistan are government-operated in Uzbek and Russian. Shortwave reception of STAR TV, BBC-TV, BBC-Radio and VOA are, at best, sporadic. However, in August 1993, an Uzbek-American joint venture, Kamalak-TV, began offering cable service with eight channels in addition to the five available on local TV, and have promised to add CNN.

Newspapers, Magazines, and Technical Journals

Subscriptions to the *International Herald Tribune*, *Newsweek* and *The Economist* through a private expe-

diter arrive a few days late and are very expensive. There are currently no English-language periodicals available in Tashkent. Avoid having magazines or newspapers sent through international mail.

Health and Medicine

A subscription international clinic has recently been established, under the operation of a nurse practitioner. There are no doctors, medical or dental facilities of western standards, or adequately stocked pharmacies in Uzbekistan.

Residents of Tashkent should take appropriate precautions against the health conditions existing in Tashkent. Following are recommended vaccines for Uzbekistan:

Diphtheria, Tetanus: boosters every 10 years.

Hepatitis A: a series of three shots over a 6-month period.

Hepatitis B: a series of three shots over a 6-month span.

Meningococcal: every three years.

Rabies: three injections over a one-month period; booster recommended every 2 years.

Tuberculin skin test: if initial test comes up positive, further investigation required.

Typhoid: oral every 5 years; not completely effective; water still needs to be treated.

Food Preparation and Storage

Tap water, restaurant water, and ice throughout Uzbekistan are unsafe, particularly during the warmer months. All water should be filtered and treated. A distiller, which boils the water and produces sediment-free water, is recommended. Another option is to boil the water and use a basic charcoal filter, such as the Brita system, which removes sediment and improves taste. Make

sure plates, glasses and flatware in restaurants are dry.

Produce which will be peeled should be washed. Other vegetables and fruit should be soaked in a chlorine (three drops Clorox per liter) for 15 minutes. (State Department no longer recommends iodine.)

Meat in local markets has been exposed to dust and flies; it should be rinsed well, allowed to dry, and cooked very thoroughly. Eggs should be washed well just before use.

Dairy products in state stores or hard currency shops should be safe, having been pasteurized, but are poorly handled; those in the market normally have not been pasteurized. Fresh milk should be brought to a boil before being used. Soft cheese should be avoided; hard cheese is okay.

Remember to wash hands before preparing food and before eating.

Brush teeth with “safe” water (boiled, distilled, or chlorine-filtered).

Be aware of problematic snacks at receptions (cream-filled pastries; chicken, etc.).

Community Health

Garbage is usually dumped on the street and is collected infrequently. Flies, rodents and mosquitoes can be a problem, as can cockroaches, ants, and other household pests. Stray cats and dogs might be infested with parasites; if you want to take one of them into your home, have it checked by the veterinarian.

NOTES FOR TRAVELERS

Passage, Customs & Duties

The best way to reach Tashkent is by air from Frankfurt or Istanbul, but London, Moscow and other points can also be convenient. Make reservations as far in advance as possible.

A passport and visa are required; official invitations from a sponsoring organization or individual are no longer required for American citizens. Visas are issued by Uzbek embassies and consulates abroad. Visitors coming from countries where Uzbekistan does not have diplomatic or consular representation should obtain visas in a third country. Visas are not available upon arrival at any Uzbek airport.

Importantly, Uzbek visas indicate not only the validity of the visa, but also the period of time a person is allowed to stay in Uzbekistan on a given trip. Although Uzbek visas given to private American citizens are generally valid for four years with multiple entries, a visitor will have to leave the country after the number of days indicated as the duration of stay on the visa. Therefore, it is important to indicate your intended period of stay when applying for your Uzbek visa.

Further visa information is available at the Embassy of the Republic of Uzbekistan, located at 1746 Massachusetts Ave., N.W., Washington, D.C. 20036; telephone (202) 887-5300; <http://www.uzbekistan.org>; or the Uzbek Consulate in New York, located at 866 United Nations Plaza, Suite 327A, New York, N.Y. 10017; telephone (212) 754-6178 or (212) 754-7403; <http://www.uzbek-consul.org>.

All travelers, even those simply transiting Uzbekistan for less than 72 hours, must obtain an Uzbek visa before traveling to Uzbekistan. Uzbekistan has suspended the 72-hour transit rule that allowed travelers with visas from other members of the Commonwealth of Independent States to transit Uzbekistan without an Uzbek visa.

On December 1, 2001, the Uzbek Government imposed travel restrictions on large parts of the Surkhandarya Oblast region bordering Afghanistan, including the border city of Termez. Foreign citizens intending to travel to this region must obtain a special permission card from the Ministry of For-

eign Affairs, the Ministry of Internal Affairs or Uzbek embassies and consulates abroad.

All travelers present in Uzbekistan for more than three days must register with the Office of Entry, Exit, and Citizenship. Hotel guests are registered automatically, but all other travelers are responsible for registering themselves. Visitors without proper registration are subject to fines and possible harassment by local authorities. Uzbek law mandates that visitors carry a medical certificate attesting that they are not infected with HIV. However, this requirement is only sporadically enforced.

Travelers to Uzbekistan are subject to frequent document inspections. Therefore, U.S. citizens are strongly encouraged to carry a copy of their U.S. passport and their Uzbek visa with them at all times so that they may more readily prove that they are U.S. citizens.

Uzbek customs authorities may enforce strict regulations concerning temporary import or export from Uzbekistan of items such as armaments and ammunition, space technology, encryption devices, X-ray and isotope equipment, nuclear materials, poisons, drugs, precious and semi-precious metals, nullified securities, pieces of art and antiques of historical value. It is advisable to contact the Embassy of Uzbekistan in Washington, D.C. or the Consulate of Uzbekistan in New York for specific information regarding customs requirements.

Foreigners must complete a customs declaration upon entering Uzbekistan and may face fines upon departure if unable to produce certificates verifying legal conversion of foreign currency. Old U.S. dollar bills (prior to 1990) and/or those in poor condition (with tears, writing or stamps) are not acceptable forms of currency in Uzbekistan. Although payment in U.S. dollars is required for certain hotel charges, plane tickets, and visa fees, other dollar transactions, as well as black market currency exchanges, are prohibited.

Americans are encouraged to register at the Consular Section of the U.S. Embassy and obtain updated information on travel and security in Uzbekistan. The U.S. Embassy in Tashkent, is located at Ulitsa Chilanzarskaya, 82. The main Embassy telephone number is (998 71) 120-5450, fax (998 71) 120-6335; the Consular Section's direct line is (998 71) 120-5444, e-mail address: consular@usembassy.us. Current information may also be obtained from the Embassy web site at <http://www.usembassy.uz>.

Pets

Pets should arrive with all inoculations, including rabies, up to date. Vaccines are not available locally. A health certificate from a veterinarian and certificate showing a current and valid rabies inoculation are required for dogs and cats entering the country. No quarantine is required.

There is no dog food of American quality and standards available in Uzbekistan. Appropriate food for your pets should be shipped with consumables.

Veterinarian services in Tashkent are below U.S. standards, and have been used by Americans with varying degrees of success.

Currency, Banking, and Weights and Measures

In general, Uzbekistan is a cash-only economy, with the majority of transactions in the local currency, the Sum. Many vendors and merchants, however, will request payment in cash dollars once they discover you are American. Prices for goods that are available for sums are usually quite reasonable by Western standards; because of low prices and constantly changing exchange rates, it is recommended to exchange only small amounts of cash per accommodation transaction.

Travelers checks are generally not accepted in Uzbekistan. Credit cards are not widely accepted in Tashkent; the few shops which do accept credit cards add a service

charge to the price of the merchandise to cover costs.

Uzbekistan uses the metric system of weights and measures. A metric tape measure is useful.

Disaster Preparedness

Uzbekistan is an earthquake-prone country. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>.

VANUATU

Republic of Vanuatu

Major City:
Port-Vila

INTRODUCTION

VANUATU is probably best known to Americans as the setting for James Michener's 1947 novel *Tales of the South Pacific* that was later made into a musical, but the islands have a long history and a diverse population. Human habitation of the Vanuatu island group may have begun as far back as 4,000 years ago. In 1606, the Portuguese were the first Europeans to discover the island group. Europeans did not return until 1768, and in 1774 the British Captain James Cook named the islands the New Hebrides. During the 1860s, planters in Australia, Fiji, New Caledonia, and the Samoa Islands encouraged long-term indentured labor of the islanders, a term called "black-birding." Missionaries and settlers then came. A mixture of French and British interests in the islands brought a unique form of government where France and the United Kingdom jointly administered the islands from 1906 until the arrival of Americans in World War II. Indigenous political activity developed in the post-war years. In early 1980, several northern islands seceded before the upcoming fixed date for independence that year. On July 30, 1980, New Hebrides became the independent Republic of Vanuatu. The new government restored order and

arrested the secessionists, who had been secretly supported by France.

MAJOR CITY

Port-Vila

Port-Vila, the capital of Vanuatu, is located on the island of Efate, the most populous island. The capital is perched on the sides of steep hills along the shores of a horseshoe bay. The town was little more than a row of warehouses along a dirt path until the 1890s, when drought and malaria caused the island's population to relocate its business district from Havannah Harbour. Port-Vila was made the seat of government in 1906. During the 1920s, Port-Vila had a reputation of being a wild frontier town, complete with drunken brawls, gambling, and sporadic gunfights and public executions. During the 1930s, the town was an enclave for the resident Europeans, and Ni-Vanuatu residents were only permitted to live there if they had employment in the town.

Port-Vila has a population of 23,000. In February 1987, a cyclone damaged 95% of the buildings in Port-Vila. Bauerfeld, on Efate, and Pekoa, on Espiritu Santo, are the

main airfields. Port-Vila and Luganville are the principal seaports. Agriculture and services account for most of the domestic economy. There is high-grade manganese ore on Efaté, but it is not currently mined. Tourism is regarded as a secondary part of the economy, and has developed since the 1980s. The country's Financial Centre, a tax haven created by the British in 1971, is the third-largest source of the national government's revenue. Its creation was the catalyst for an increase in construction in Port-Vila area during the 1970s—a new wharf significantly increased cruise ship traffic.

Clothing

Though most Ni-Vanuatu wear Western style clothing, there may be special circumstances within small communities of natives.

For instance, the chief of the small Paama Island community (about 600 people) in the capital of Port Vila has recently banned women from wearing pants, saying that such clothing is an unwelcome Western influence. The all male, honorary police force of the community will uphold the ban. However, there has been no indication, as of yet, that non-Paama women will be cited for wearing pants.

Recreation and Entertainment

Tennis and golf are sports that are popular around Port-Vila. Tennis matches on the international circuit are occasionally held in Vanuatu. Korman Stadium was built for the 4th South Pacific Mini Games that were held in Port-Vila in December 1993. Basketball, boxing, volleyball, and soccer are played there. Netball, handball, squash, and rugby are also played in town. Scuba diving and snorkeling are popular tourist activities, and there are several shipwreck dive sites near Port-Vila.

Port-Vila's panorama, tropical flora, and historic French persuasion make it one of the South Pacific's most picturesque cities. The central business district is concentrated in a half-mile strip along Kumel Highway that follows the waterfront's contour. An area known as Chinatown in central Port-Vila is the commercial center of the islands' Chinese merchant community. The waterfront market is the country's largest, and offers a wide variety of produce, as well as flowers, handicrafts, and artifacts. Independence Park is lined with English-style buildings and is the site of weekend cricket matches. Port-Vila's Quartier Français (French Quarter) contains several houses and the city's town hall, all built in the French colonial style.

Port-Vila has several fine restaurants encompassing Continental French, Vietnamese, and Chinese cuisine. The city also has many nakamals, or kava bars (kava is a popular beverage in the South Pacific, a mild tranquilizer made from ground pepper roots). Movie theaters and other places for nighttime entertainment are available. A new tourist attraction at Vatusala on Efate provides demonstrations of traditional village activities. Several islands of Vanuatu have caves decorated with ancient paintings.

A cultural center in Port-Vila has a library of both French and English books. The library's reading room

contains French and English periodicals and articles on Vanuatu's history. The center also houses a collection of fine Melanesian art and artifacts. There is also a display of preserved native flora and fauna, photographs, and a collection of valuable stamps. The Michoutouckine and Pilioko Foundation Art Gallery has a display of Pacific art, carvings, masks, prints, and embroideries.

Dancing is an important part of the traditional culture of the Ni-Vanuatu people.

COUNTRY PROFILE

Geography and Climate

Vanuatu is an irregular Y-shaped chain of 84 islands in the South Pacific Ocean, about three-quarters of the way from Hawaii to Australia. The island chain extends for about 500 miles and lies 600 miles west of Fiji and 250 miles northeast of New Caledonia. The total land area of the islands is 5,699 square miles (about the size of Connecticut), with a total coastline of 1,571 miles. The largest island is Espiritu Santo (sometimes just called Santo), with an area of 1,524 square miles. The islands are of coral and volcanic origin. There are active volcanos on Ambrym, Lopevi, and Tanna. Earthquakes are common, with the most recent severe one happening in 1994. Earthquakes in 1875 and 1948 created tsunamis that wiped out entire villages. The tropical climate is moderated by southeastern trade winds, which blow from May to October. Average temperatures in Port-Vila range from 77°F in winter to 84°F in summer. Cyclones strike the islands an average of 2.5 times each year. In 1987, Cyclone Uma hit Port-Vila and caused widespread damage and many fatalities.

Population

There are approximately 193,000 inhabitants. Only 70 of the islands are inhabited. Two-thirds of Vanuatu's population live on Efate, Espiritu Santo, Malekula, and Tanna. The Ni-Vanuatu are the Melanesian inhabitants of the country, and make up about 95% of the population. Europeans (mostly French) and other Pacific Islanders account for the remainder. About 80% of the population is Christian; the largest sects are Presbyterian, Anglican, and Roman Catholic. In the 1940s, an indigenous cult became popular, especially on Tanna. There was a belief in a mythical messianic figure named John Frum, who could obtain industrial goods through magic. There are 105 languages spoken among Vanuatu's small population, some of which have never been classified. The three official languages are English, French, and Bislama (also known as pidgin English or Bichelama). A child may speak as many as four different languages, and public life is often complicated by language problems.

Government

The Anglo-French Convention of 1887 established a joint naval commission over New Hebrides (as Vanuatu was then known) to protect the lives and interests of islanders. In 1906, the Anglo-French Condominium was established. Indigenous political activity developed after World War II, with increasing concern over land alienation and European dominance. In 1975, a representative assembly replaced the nominated advisory council under which New Hebrides had been governed. Self-government was agreed upon in 1978, and independence was attained in 1980. Under the 1980 constitution, the head of state is the president; the head of government is the prime minister. The unicameral legislature consists of 50 members, elected to four-year terms by popular vote. The judicial system is based on British criminal procedure and the French penal code. The Supreme

Village scene in Vanuatu

© Wolfgang Kaehler. Reproduced by permission.

Court has a chief justice and three other judges; there is also an appeals court.

Vanuatu's flag has a red upper section and a green lower section divided horizontally by a gold stripe running within a black border and widening at the hoist into a black triangle. A pig's tusk and two crossed yellow mele leaves are depicted on the black triangle.

Arts, Science, Education

Children are instructed in either English or French during elementary school, then switch to the other language for secondary school. About 90% of Ni-Vanuatu children attend elementary school, but less than 10% go to secondary schools. Cooperative units have organized a training center at Port-Vila for such skills as accounting, management, law, and marketing. The University of the South Pacific has an annex in Port-Vila with a Pacific languages curriculum that attracts students from all over Oceania. For higher education, especially medical or technical training, selected students go to Fiji, Australia, and New Zealand.

Commerce and Industry

Subsistence farming provides a living for most of the population. Fishing and tourism are the other mainstays of the economy. Mineral deposits are negligible; the country has no known petroleum deposits, but the government is encouraging gold and copper mining. A small light industry sector caters to the local market. Offshore banking, insurance, and trusts generate a significant amount of the country's income, due to the lack of taxes, duties, and controls. The government attracts international investors through tax exemptions and the ability to repatriate funds.

Transportation

Only Port Vila and the town of Luganville, located on Espiritu Santo Island, have surfaced roads on which a speed limit of 50 kilometers an hour is enforced. Surfaced roads are two lane and can be narrow in spots; care should be taken especially when driving at night or along unfamiliar routes. The roads found in all other areas are unsurfaced and dirt tracks. Drivers on all roads should give way to traffic coming from the right. Travelers must

take care when driving off main roads to avoid trespassing on communal land.

Travel between the islands is mainly done by light plane and boat. There are 31 small airfields that serve all the main islands. The chief airports are on Efate and Espiritu Santo, but these are still too small to accommodate jumbo jets, limiting the number of flights to and from the islands. Port-Vila and Luganville are the main seaports. Small ships provide interisland service. Vanuatu maintains a policy of open registry for merchant ships, allowing foreign shipowners to avoid the higher costs and regulations of registration under their own flags.

Communications

Vanuatu has an Intelsat satellite earth station that links the country to the rest of the world. Radio Vanuatu broadcasts daily in English, French, and Bislama through AM, FM, and shortwave transmissions. A single television station is also available. The weekly government newspaper is *Vanuatu Weekly Hebdomadaire*. The only private newspaper is the English-language *Trading Post*.

Health

Port-Vila and Luganville have the country's main medical facilities. There are five hospitals (with approximately 370 beds) and about 90 clinics, health centers, and dispensaries scattered throughout the islands. Vanuatu has only about 15 physicians.

Medical conditions resulting from diving accidents may require medical evacuation to Australia or New Zealand. A hyperbaric recompression chamber is located in Luganville on Espiritu Santo Island.

Malaria is a significant danger in most areas. Leprosy, tuberculosis, filariasis, and venereal diseases are also medical problems in Vanuatu.

NOTES FOR TRAVELERS

Passage, Customs & Duties

A passport and onward/return ticket are required. Visas are not required for stays up to 30 days. Travelers who anticipate the possibility of transiting or visiting Australia are advised to obtain an Electronic Travel Authority (ETA) or visa for Australia before leaving the United States. The ETA is available to eligible U.S. citizens at time of ticket purchase through travel agents and airlines. For more information about entry requirements, travelers, particularly those planning to enter by sailing vessel, may consult the Vanuatu Mission to the United Nations at 42 Broadway, Room No. 1200-18, New York, NY 10004; tel (212) 425-9652, fax (212) 422-3427.

.Vanuatu customs authorities may enforce strict regulations concerning temporary importation into or export from Vanuatu of items such as firearms and ammunition, sexually explicit material and certain prescription medications. Other goods may be subject to quarantine or import duty. The government of Vanuatu prohibits the export of artifacts from the Second World War without prior permission. It is advisable to contact the Vanuatu Mission to the United Nations for specific information regarding customs requirements.

There is no U.S. Embassy or diplomatic post in Vanuatu. Assistance for U.S. citizens is provided by the U.S. Embassy in Port Moresby, Papua New Guinea, which is located on Douglas Street, adjacent to the Bank of Papua New Guinea. This address should be used for courier service deliveries. The mailing address is P.O. Box 1492, Port Moresby, N.C.D. 121, Papua New Guinea; Tel: (675) 321-1455; fax (675) 321-1593. There is a voluntary American Warden located in Port Vila who has general information and forms (such as passport application forms). The U.S. Embassy in Port Moresby can provide information on how to get in touch with the warden in Vanuatu.

Americans are encouraged to register with the U.S. Embassy in Port Moresby, Papua New Guinea, and to obtain updated information on travel and security in Vanuatu from the Embassy. Information can also be obtained from the homepage of the U.S. Embassy in Port Moresby at <http://www.altnews.com.au/usembassy>.

Disaster Preparedness

Vanuatu lies in the South Pacific cyclonic trajectory, and is vulnerable to earthquakes, volcanic eruptions and sudden tidal movements. The Pacific Cyclone season extends from November through March. General information regarding disaster preparedness is available via the Internet at <http://travel.state.gov/crisismg.html>, and

from the U.S. Federal Emergency Management Agency (FEMA) home page at <http://www.fema.gov>.

VIETNAM

The Socialist Republic of Vietnam

Major Cities:

Hanoi, Ho Chi Minh City, Haiphong, Da Nang, Huế

Other Cities:

Dalat, Nha Trang, Qui Nhon

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Vietnam. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

VIETNAM is a land of beautiful plains, mountains, and coastline and the site of a once-powerful and rich civilization. Throughout history, Vietnam has been invaded and occupied by various foreign powers. Many Americans were unfamiliar with Vietnam until the mid-1960s, when the United States became embroiled in a conflict between Communist North Vietnam and non-Communist South Vietnam. The United States, an ally of South Vietnam, launched a series of air strikes against North Vietnam in 1965 and sent the first group of combat troops to South Vietnam during that same year. Over the next several years, the United States became increasingly involved in the

conflict. By 1969, 543,000 American combat troops were serving in Vietnam. From 1965–1973, the United States and its South Vietnamese allies fought many bitter and bloody battles against the powerful North Vietnamese Army. On January 27, 1973, the United States and North Vietnam signed a peace agreement which allowed the United States to withdraw its troops from Vietnam. The last American troops left Vietnam on March 29, 1973. The United States involvement in the Vietnam War claimed the lives of 58,000 Americans. The war between North Vietnam and South Vietnam resumed in early 1974, with the North Vietnamese quickly gaining the upper hand. The South Vietnamese army, suffering from high casualties and a lack of ammunition and spare parts, was soon defeated. On April 30, 1975, North Vietnamese Army troops entered Saigon, South Vietnam's capital, to accept the surrender of the South Vietnamese government. The Socialist Republic of Vietnam, created from the former Republic of Vietnam (South Vietnam) and the Democratic Republic of Vietnam (North Vietnam), was established as a new nation in July 1976.

Relations between the United States and Vietnam have been deeply strained since the war. Following the fall of South Vietnam in

1975, the United States imposed an economic embargo against Vietnam which prevented trade between the two countries or American business investment in Vietnam. The demise of communism in Eastern Europe in 1989 and the collapse of the Soviet Union in 1991 deprived Vietnam of vital export markets and economic aid and prompted the Vietnamese to seek new economic ties with the United States. Throughout 1992 and early 1993, the United States and Vietnam have begun negotiations to relax or lift the American embargo and establish diplomatic relations. The United States has stated that it will not lift the embargo until the fate of American servicemen missing since the Vietnam War is known. The Vietnamese government has agreed to cooperate in this endeavor.

MAJOR CITIES

Hanoi

Hanoi is the capital of the Socialist Republic of Vietnam and has a rapidly increasing population of approximately 3,000,000. It is located in the north of the country along the Red River. It is in an alluvial plain approximately 150 kilometers from the coast and is

© Wolfgang Kaehler. Reproduced by permission.

Street scene in Hanoi

surrounded by rural countryside consisting largely of rice paddies.

Utilities

Electricity in Hanoi is 220v/50-cycle AC (with two round pin electrical plugs). Voltage regulators are recommended for most appliances, especially computers, as electrical power in Hanoi is unstable and prone to voltage fluctuations, which could damage sensitive electronic equipment. Small UPS (uninterrupted power supply) units and a full range of transformers are available on the local market.

Food

Fresh meat and dairy products are not considered safe, as the Vietnamese have no adequate inspection system and processing facilities are often crude. However, a number of employees do consume meat and seafood purchased from the local open-air markets without any health problems. Imported seafood and meat, primarily from Australia and New Zealand, are always available fresh or frozen at, of course, a much higher price. Long life UHT milk (whole, low fat and skim) from New Zealand, powdered milk, and butter are readily available.

Most other basic foodstuffs are available in the supermarkets and

delicatessens. The limited selection of Western fruits and vegetables varies from season to season. Principal items which must be imported are traditional holiday foods, ethnic foods, dietary products, baby foods, cereals (those locally available are often stale), snack foods, sports drinks, and treats for children and pets. Personal care and cleaning products are generally available, but U.S. products or equivalents are sometimes scarce and sell at twice the average U.S. price. Seldom will you find a wide selection of products available at one location. Thus, from time to time, you will need to shop around before you find a certain item on your grocery list.

There is also a duty free shop operated by the Vietnamese Government for foreign officials, amply stocked with a variety of canned sodas, liquor, a limited variety of food items, and small appliances.

Clothing

By and large, dress in Hanoi is very similar to that in the U.S. for both business and recreational activities. A word of warning - even though the temperature may not indicate it, winters in Hanoi can be very chilly. Include some warm jackets, sweaters, scarves and hats in your luggage. Also, bring an adequate

supply of dress and sports shoes for everyone.

Women: There are a number of reputable women's clothing shops, which sell off the rack or made to order clothes in a variety of material.

Supplies and Services

Stock up on toiletries, particularly sunscreen lotion and mosquito repellent, paper and plastic products, vitamins, makeup, prescription medicines, and cooking and baking spices and seasoning.

Dry cleaning is good and relatively inexpensive. Shoe repairs are fair. You can get a replacement battery for your watch, but it won't last more than 6 months. Men can get their hair cut on the streets with a head and shoulder massage thrown in for less than \$2. Women's hair cuts range from \$3 to \$20. There are several good unisex beauty shops in town with both Vietnamese and "international" hair stylists offering a complete range of services. Automobile servicing is good, especially for Japanese cars. Picture framing is good and inexpensive.

Domestic Help

Below are examples of staff responsibilities and average salaries (as of January 1999). Salaries are stated in U.S. dollar equivalents and usually are paid in U.S. dollars. Domestic employees usually put in a 6-day workweek. At the higher end of the salary range are staff who speak good English, demonstrate initiative, and have several years experience working for Westerners. Giving your staff a "TET bonus"-equivalent to one month's salary is standard practice in Vietnam. Locally employed domestics do not live in.

Cook/Housekeeper: \$120-220 per month. Plans the meals with you; shops for food; supervises any work done in your house; supervises other household staff; keeps a kitchen account book; does the laundry; and cleans the house.

Maid: \$100-120 per month. Cleans the house; washes dishes; irons clothes; may prepare meals on the cook's day off; may do some marketing. It is possible to have part-time domestic help for one-two days per week for well under \$100/month.

Nanny: \$100-120 per month. Takes care of the children. May help with some light cooking and general housecleaning if the family is small.

Driver: \$100-130 per month. Acts as chauffeur. Purchases the gas and oil. Keeps your car in good operating condition. May also tend the garden and help out during social functions.

Day/Night Watchmen: \$75-80 per month. Screens visitors and guards your house.

Religious Activities

Hanoi has a large Catholic cathedral, but the regular services are only in Vietnamese and French. However, a nondenominational Christian service in English is held every Sunday at 10:30 a.m. on the Van Phuc Diplomatic Compound. Protestant services in English are conducted every Sunday in the Dae-woo Hotel. Islamic services are held every Friday. Jewish services are not available.

Education

United Nations International School (UNIS). Children from kindergarten (prep-1) through grade 12 attend the United Nations International School. Student enrollment for the 19992000 school year is 346. The curriculum does not follow any specific national system, but is similar to American elementary and middle school programs. The school has based its curriculum on that used by the United Nations School in New York, as a lead-in to the International Baccalaureate (IB) Program. Currently more than half of the 49 full-time teachers are American or Canadian. The high school is fully accredited by the Western Association of Schools and Colleges and the European Council of International Schools. All instruction is in English. Students are not required to wear uniforms.

Address: Lower School 2C Van Phuc Kim Ma Road, Hanoi Tel: (84-4) 823-0820 Fax: (84-4) 846-1285. Upper School, Hanoi Amsterdam Giang Vo, Hanoi Tel: (84-4) 823-4910 or 823-5782 Fax: (84-4) 846-3635. E-mail: UNIS@netnam.org.vn

Hanoi International School (HIS): In its third year of operation, HIS offers an academic program to meet the individual needs of students from pre-school through high school. The Pre-School program for 3 and 4-year-olds offers a balanced day of free and structured play, storytime, and directed group time. The school's International Baccalaureate (IB) program is divided into IB Early-Years (kindergarten to fifth grade), IB Middle-Years (grades six to ten), and the two-year pre-university IB diploma curriculum (grades eleven to twelve). The school year begins in October and ends in June. All students speak and study in English. The newly-renovated campus includes a library, computer center, science laboratory, music room, sports facilities and playing fields. HIS has an international staff of 13 full-time and 7 part-time teachers from the U.S., Canada, Europe and Asia.

Address: (Local) Lieu Giai Street Hanoi, Vietnam Tel: (84-4) 832-7379 Fax: (84-4) 832-7535. In the U.S., PO. Box 2876, Reston, Virginia 20195 No E-mail.

Morning Star International Kindergarten (MSIK): Opened in 1995, MSIK is a bilingual/multicultural education center for children ages 15 months to 5 years old. The teaching staff encourages the kids to develop basic skills in learning through playing and to develop confidence in themselves and their heritage. The regular year begins in early September and ends in mid June. The summer program begins in June and ends in late August. Lunch is served at 11:30 a.m. Snacks are available both in the morning and in the afternoon.

Located in the Thanh Cong area, the campus facility includes a number of large sunlit air-conditioned

rooms and a spacious outdoor area. A variety of playground equipment and indoor activity materials are provided for recreation and learning.

Schedule Options: 2-1/2 to 5 years old. Full Time, Full Day, Monday to Friday 8:00a.m. to 4:00p.m.; Full Time, Half Day, Monday to Friday 8:00a.m. to 12:30p.m.

15 months to 2-1/2 years old. Full Time, Monday to Friday 9:00a.m. to 12:00p.m; Part Time, Monday, Wednesday, Friday 9:00a.m. to 12:00p.m.

Address: G 6 Thanh Cong Ba Dinh District Hanoi, Vietnam Tel: (84-4) 831-0879 Fax: (84-4) 835-0955. E-mail: mornings@netnam.org.vn Home page: <http://www.destination-vietnam.com/morningstar.htm>

Lycee Francais Alexandre Yersin: Recognized by the French Ministry of National Education and operated in collaboration with the French Embassy in Hanoi, the French International School of Hanoi (FISH) provides an academic curriculum in French for pre-school to high school aged children. FISH has a teaching staff of 35. Enrollment for the 1998-99 school year was approximately 300 (which includes 31 nationalities with the majority being French). Classrooms are large and fully air-conditioned. The cafeteria offers a choice of Vietnamese or Western food. The kindergarten has a well-equipped playground with flowers and trees. The new school building houses a gymnasium, two state-of-the-art laboratories, a well equipped library, and a research and information center with multimedia computer equipment.

Classes begin in September and finish around June 20.

Address: Truong Phap Quoc Te Ptth Hanoi Amsterdam Giang Vo, Hanoi Vietnam. Tel: (84-4) 843-6779 Fax: (84-4) 823-2023 E-mail: yersin@netnam.org.vn or lfay@hn.vnn.vn.

Special Educational Opportunities

Language training is available through a number of local resources.

The Hanoi Fine Arts Institute offers instructions in a variety of art mediums, including Vietnamese lacquer ware and the application of watercolor on silk.

UNIS offers a number of evening courses. You can study art, learn a foreign language, play tennis, do aerobics, surf the Internet, and lots more.

Sports

Tennis: There are plenty of tennis courts in Hanoi, but the demand still exceeds the supply, unless you are able to play during the week in the daytime. Most courts are in good condition and adequately-maintained. Court surfaces are either hard or carpeted. There are, unfortunately, no indoor tennis facilities. Bring a supply of shoes and socks, tennis balls, strings, grips, etc. Tennis equipment and clothes are locally available, but there isn't much of a selection and what is acceptable is more expensive than in the U.S. Court fees vary between \$3 and \$5 during the day, with evening hours (5:00-10:00 p.m.) at double rates. If you provide the string, you can get your racquet restrung in Hanoi for \$1.00. Most Vietnamese tennis coaches will charge \$10/hour. All service apartments, major hotels, and some of the diplomatic missions have tennis courts.

Golf: About 35km west of Hanoi is Kings Island - a scenic 18-hole golf course. The golf club is situated at the base of Ba Vi National Park and is surrounded by historic temples and pagodas, natural caves, waterfalls, hiking trails, hot springs, and ethnic minority villages. A new highway to the course is almost finished, making it about an hour's drive from Hanoi on Highway #11. Facilities include a swimming pool, tennis courts, a fully-stocked pro shop with golf club and shoe rentals, and a clubhouse which serves both Asian and Western food. Member-

ship fee is US \$15,000. Special package day tours allow non-members to play for \$55 during the week and \$80 on the weekend.

Swimming: Most of the larger hotels and service apartments have swimming pools. The schools do not. Avid swimmers usually join a health club with swimming privileges included in the package. One of the larger hotels in the city has the only indoor swimming pool with a retractable roof.

Bowling: There are three large bowling centers. One is located in a hotel just across from the U.S. Embassy (24 lanes) and another is within walking distance. A game costs \$3.00 and bowling shoes rent for \$1.00.

Health Clubs: Virtually every hotel and apartment complex has an exercise room with state-of-the-art equipment, showers, saunas, and whirlpools. Annual fees range from \$550-1200.

Touring and Outdoor Activities

Several scenic and historic sights, including national parks and pagodas, can be done via a day trip from Hanoi. Although road conditions and traffic flow are steadily improving, travel can be a bit uncomfortable and stressful, due to poor road conditions. There are also several craft villages within a one-hour drive from Hanoi to view paper making, snake farming, noodle-making, and silk weaving. Also a popular attraction are the nearby factories for making costume jewelry, ceramics, lacquer ware and crystal.

Halong Bay: A five hour drive from Hanoi, Halong Bay is considered by many to be one of the most scenic areas in Asia. The bay consists of hundreds of small islands filled with caves and grottoes full of stalactites and stalagmites. Cat Ba, one of the largest islands in Halong Bay, is home to one of Vietnam's national parks and includes a large seven acre freshwater lake in the center of the island.

Sapa: Built originally as a hill station, Sapa now is one of Vietnam's major tourist attractions in the northernmost part of the country. By road (and some of it very bumpy), Sapa is a 12-14 hour scenic drive from Hanoi. For those travelers who prefer a more comfortable, faster ride up north, the overnight train from Hanoi to Sapa and back is perfectly safe and hassle free. During the weekend, you can mingle with the colorfully dressed hill tribe people (mostly women) who come into Sapa to peddle their home-made garments and textiles. Using Sapa as a base, you can also hike to several minority tribe villages, while taking in the panoramic view of Vietnam's Hoang Lien Mountains.

Vietnam is a photographer's paradise. Camera shops are everywhere. Film can be developed inexpensively in a couple of hours.

Entertainment

There are enough Western restaurants in town to titillate the gourmet's taste buds, ranging from traditional French cuisine to nouveau California fare. There are also some very good Asian restaurants for Vietnamese, Japanese, Korean, and Chinese food. For fast-food lovers, Hanoi offers several restaurants/delis for pizzas, hamburgers and hotdogs, and sub-sandwiches. Hanoi even has a Baskin-Robbins ice cream store.

American Club: The American Community Association (ACA) supervises the operations of the American Club and the Video Club. Patrons and their guests can enjoy an informal meal in the air-conditioned restaurant/bar area or outdoors in the bamboo pavilion. Also on the premises are areas set up for a variety of sports, including darts, billiards, badminton, basketball, and sandlot volleyball. Next to the pavilion is a newly-constructed playground for the younger children. Membership is open to all Embassy employees (American and Vietnamese) and to the expatriate business and diplomatic community (\$60 for singles/\$100 for families).

An additional \$50 fee is charged to join the Video Club, which offers a good selection of movies for both adults and children at a rental fee of \$1.00 per tape.

Social Activities

American Chamber of Commerce (AmCham): The largest business group in Vietnam, AmCham offers opportunities to help international corporations operate and thrive here. There are 230 members in the Hanoi Chapter and 300 in HCMC. Through its committees, AmCham adopts positions on a variety of general business issues in Vietnam. These committees work on such issues as reducing tax burdens for U.S. companies, individuals and their staff. Efforts have also been made to improve access to foreign exchange and to reduce bureaucracy and red tape in business dealings with the Vietnamese Government. Both the chapters in Hanoi and HCMC host a number of working luncheons with keynote speakers throughout the year. AmCham also organizes social activities, including an annual formal dinner/dance.

The Hanoi International Women's Club (HIWC): Open to all foreign women, the Club has approximately 325 members. The IWC promotes goodwill between the host country and the expatriate community through its annual Christmas Charity Bazaar and work throughout the year with local orphanages and rural support systems. The IWC also organizes monthly luncheons, coffee mornings, and orientation programs for newcomers. A non-profit organization, the annual membership fee is \$10 (which basically covers the cost of sending out the IWC monthly newsletters).

International Business Women's Club: A fledgling group of Hanoi's working women - expatriate and Vietnamese - exchange thoughts and network during an informal luncheon meeting once a month.

Ho Chi Minh City

Ho Chi Minh City (HCMC) is Vietnam's largest city and river port, covering an area of 761 square miles on the Right Bank of the Saigon River, stretching from the shores of the South China Sea to within a couple miles of the Cambodian border. With a teeming population of 6 million, it is also the economic capital and cultural trendsetter of Vietnam. There are 22 districts (15 urban and 7 rural) with 75% of the population in the urban districts. Only a few degrees above the Equator, the city has a tropical, monsoon climate with an average annual temperature of 83°F.

April is the hottest month with an average temperature of 86°F. There are two seasons-rainy (from June to November) and dry (from December to April). Average number of rainy days annually is 159, with 90% of the rainfall occurring in the rainy season.

Food

The information on food in Hanoi generally applies also to HCMC. There is, however, a wider selection of fruits and vegetables available in HCMC, due to the proximity of HCMC to Dalat, where most of the fruits and vegetables are cultivated.

Clothing

See Hanoi for general information on clothing, but note that HCMC does not have a cold season.

Religious Activities

Houses of worship are available for Buddhists, Catholics, Muslims, and Protestants, but services for most are conducted in Vietnamese. Protestant worshipers can attend services in English on Sunday conducted for foreigners only. There is also a small international Jewish community that observes Jewish holidays. Our Lady Cathedral has a bilingual Vietnamese-English Mass on Sunday mornings.

Education

Fundino Kids Club (FKC): FKC provides high quality, innovative childcare and recreation for chil-

dren 1 to 5 years old. The eye-pleasing, up-beat Clubhouse and grounds are all on one level and colorfully and cleverly decorated with lots of primary colors using a dinosaur theme. There are currently 52 kids enrolled, including one physically handicapped and one developmentally-disabled child. All students are required to wear the Club uniform-T-shirt with a Fundino dinosaur emblem and denim shorts. Fundino's staff consists of 3 full-time expatriate teachers (one with special education training) and 8 Vietnamese assistants. Indoor facilities include a large floor and wall-padded playroom for the tots, a small kitchen for lunch and snacks, a library, and individual rooms for art, music, reading, computer and dance instruction. The spacious outdoor area includes an elaborate playground and wading pool for the older kids. FKC is open after hours to their kids as well as non-registered children, e.g. older siblings who attend other schools. Parents can sign up a child as a "Club Member" and pay a \$5.00 fee (which covers cost of general program, food and drink). Fundino's also caters birthday parties and special events.

Class Schedule: Play & Learn and Mums & Bubs (younger kids attended by a parent or nanny pay a reduced fee) operate Monday through Friday, except for Vietnamese Public Holidays.

Play & Learn 8:30 a.m. - 5:00 p.m. (Age 2-3yrs and 3-5yrs) Mums & Bubs 8:30 a.m. - 11:30 a.m. (Age 1-2yrs) 1:00 p.m. - 4:00 p.m. Address: 11B Nguyen Gia Thieu, Ward 6 District 3, HCMC. Tel: 930-0514 Fax: 930-0513 E-mail: none.

Saigon South International School (SSIS): This is a pre-kindergarten through 6th grade, coeducational school located in District 7 (the industrial zone). SSIS is the only school in HCMC which provides an American-based curriculum, with modifications made to accommodate the school's non-American population. In its first year of operation, the school currently shares a building and spa-

cious school grounds with two other schools (Vietnamese and Japanese). Even though the three schools occupy the same campus, they do operate autonomously. Shared facilities include a library media center, a swimming pool, two playgrounds, and a grass soccer field. Students are required to wear uniforms. Potable water is available on campus. However, students must bring their lunches, snacks and beverages to school. At the moment, SSIS does not have any programs for children with special needs.

Address: Phu My Hung Corp. Saigon South Parkway Tan Phu Ward, District 7, HCMC Tel: (84-8) 872-8410 Fax: (84-8) 872-5580 E-mail: none.

Class Schedule: Monday through Friday 8:30 a.m. -3:00 p.m.

International School Ho Chi Minh City (IS): Operating in two locations, the Senior Campus for grades 2 through 11 (grade 12 was added for the 1999-2000 term) is located in An Phu. The Junior Campus for pre-school to grade 1 is in District 3. The combined teaching staff totals 59 expatriate and 3 Vietnamese teachers for approximately 350 students. IS is a privately-owned co-educational, non-denominational institution. It operates an international curriculum with the International Baccalaureate diploma program offered in grades 11 and 12. All students (except for grade 11) are required to wear uniforms. Lunch can be purchased from the School's canteen. For recess the School provides its students with nutritional snacks. Potable drinking water is available on both campuses.

Senior Campus Address: 649A Vo Truong Toan St., An Phu, Thu Duc, HCMC Tel: (84-8) 898-9100 Fax: (84-8) 887-4022 E-mail: none.

Junior Campus Address: 236 bis Nam Ky Khoi Nghia St., District 3, HCMC. Tel: (84-8) 822-5858 Fax: (84-8) 823-0000 E-mail: none.

Sports

Tennis: All major hotels and service apartments have either hard or carpeted tennis courts. However, the current supply does not meet the demand, unless you can play during the daytime. Sports center and service apartment court fees range from \$3.00 (before 5:00 p.m.) to \$5.00 (after 5:00 p.m.). Hotels charge \$6.00 and \$12.00, respectively. Tennis pro fees range between \$5-\$8/hour.

Golf: There are three excellent golf clubs in the area. Dong Nai (18-hole) is approximately 1-1/2 hour drive from the city. The other two-Song Bei (18-hole) and Thu Duc (36-hole) are approximately a 45-minute drive. All three golf facilities have a clubhouse with a restaurant. Weekend greens fees are \$85, with weekday specials starting at \$45. Caddies are available at all three clubs. A fourth golf club-Saigon South (9-hole) opened for business in 1999.

Bowling: There are several bowling centers scattered around the city. Fees are the same as in Hanoi.

Swimming: With year-round temperatures in the mid-80s, swimming and/or lounging around the pool can be a great stress reliever. Having said that, you will still, however, need earplugs or a Walkman to deafen the cacophony of round-the-clock street and construction noise.

Jogging and biking: Unfortunately, the city's hazardous traffic conditions preclude all but the foolhardy from jogging and biking safely anywhere in town. Joggers and bikers are relegated to the safe interior facilities of health centers or travelling some distance outside the city.

Touring and Outdoor Activities

Hoi An: A 45-minute ride outside of Danang, Hoi An was once a prosperous trading town frequented by the Japanese, Portuguese, Dutch, French and Chinese, Hoi An is now a quaint, artistic tourist attraction. For architecture buffs, there are a

number of well-preserved historic sites in Hoi An over 200 years old, including private homes, chapels, temples, pagodas, bridges and tombs. For the shoppers, Hoi An has lots of art and craft shops, streetside cafes, a large outdoor market, and quality garment tailors who can produce quality dresses, trousers and shirts quickly at very reasonable prices.

Dalat: Approximately 6 hours by road or one hour by plane from HCMC, Dalat enjoys year round spring weather. Dalat offers something for everyone. There is an 18-hole golf course, botanical gardens, ancient palaces and pagodas, and a large central market full of fresh vegetables, fruits and flowers. After a hearty meal, you can walk along small paths behind waterfalls or in the streets of the French Quarter up on the hill.

Hue: The former capital of Vietnam prior to WWII, Hue is surrounded by a large number of historic Imperial landmarks. Hue is a 2-hour plane ride from HCMC and is probably the largest city in Vietnam with the least amount of street traffic. Visitors to Hue can safely explore the inner city on foot. Cyclos can be used to tour the Forbidden Purple City and the Citadel. Bicycles or motor scooters can be rented from hotels for the short trips to the numerous Imperial tombs and pagodas.

Nha Trang: This sleepy little resort town has beautiful sandy white beaches with turquoise water, small outer-lying islands and coral reefs to explore, and the best fresh fruit milkshakes and ice cream in Vietnam. You can navigate around town by foot, cyclo, bicycle or motor scooter without a hassle. Nha Trang is a one-hour plane ride from HCMC.

Entertainment

HCMC has a larger variety of restaurants than Hanoi, including fast food chains (KFC and Jollibee), Tex-Mex, European, Indian, and Asian (Chinese, Japanese, Korean, Thai) cuisine. There are also numerous

nightclubs (some with live jazz ensembles), discos, and, of course, karaokes. A couple of the numerous video rental stores in the city stock movies in English. HCMC also has three large water parks and an 18-hole miniature golf course near the airport.

Social Activities

American Chamber of Commerce (AmCham): See Hanoi section.

Saigon International Women's Club (SIWC): The Saigon Chapter has approximately 600 members. (See Hanoi International Women's Club for activities.)

Haiphong

Vietnam's third largest city, Haiphong, is located in northern Vietnam approximately 10 miles from the Gulf of Tonkin. The city is one of Vietnam's major ports and a principal industrial city. Industries in Haiphong produce a number of products, including glass, cement, cotton, and chemicals. The city's location near the Gulf of Tonkin has led to the development of a large fishing industry. Haiphong was heavily bombed from 1965 to 1972 by American warplanes, but much of the damage has been repaired. In 1992, Haiphong had a population of approximately 783,000.

Recreation and Entertainment

Recreational activities in and around Haiphong are somewhat limited. The city offers many opportunities for souvenir shopping. Markets and stores in Haiphong sell pearl jewelry, brass figurines, carpets, and products made of buffalo horns and tortoise shells. The prices for many of these souvenirs is very reasonable. Other souvenirs can be purchased in the nearby village of Bao Ha. Villagers in Bao Ha are noted for their exquisite wood carvings of religious figures, lions, dragons, and buffalo. These carvings are very well-made and reasonably priced.

© Wolfgang Kaehler. Reproduced by permission.

Tomb of Tu Duc in Hué

Haiphong has two primary tourist attractions. The Hang Kenh Communal House is one of the city's most interesting architectural structures. It is composed of over 500 intricate wood sculptures. Also, the 300-year-old Du Hang Pagoda is open to visitors. It is considered Haiphong's finest example of Vietnamese temple architecture. The Du Hang Pagoda contains a beautifully carved altar and several interesting statues of Buddha. A stone stela (tablet) in the pagoda lists the names of those who have served as caretakers for the pagoda over the centuries.

For tourists who enjoy sand and surf, the Do Son Beach is a pleasant

place to visit. Located approximately 13 miles southeast of Haiphong, Do Son Beach is a popular resort for Vietnamese and foreigners alike. It has miles of beautiful sandy beaches and several nice hotels.

Da Nang

Da Nang is located in central Vietnam and is the country's fourth largest city. The city became the site of a major American military base during the Vietnam War. Today, Da Nang is one of Vietnam's largest ports. Several industries are located in Da Nang. These industries produce beverages, machinery, and textiles. The city is a transportation

© Wolfgang Kaehler. Reproduced by permission.

Village nearby Haiphong

hub for central Vietnam. Roads and railways link Da Nang with Hanoi and Ho Chi Minh City. In 1993, Da Nang had a population of approximately 383,000.

Recreation

Da Nang has many attractions that are of interest to visitors. Among the most interesting sites are the Marble Mountains. The Marble Mountains consist of five hills composed of marble. According to local traditions, these five hills represent the five elements of the universe (water, fire, metal, wood, and earth). Several caves containing Buddhist Shrines are located on the largest of the Marble Mountains, Thuy Son. These shrines, each of them unique, are open to visitors. Tours of the caves are conducted daily. Located near the Marble Mountains is China Beach (Non Nuoc Beach). This beach was a favorite relaxation and picnic spot for American soldiers during the Vietnam War.

Da Nang's Cham Museum is well worth a visit. This museum contains sculpture from the fourth through fourteenth centuries. Each room of the museum is dedicated to sculpture and artifacts from a particular period in Vietnamese history. An English-language booklet explaining the origin and history of

the museum's artifacts is available from tour guides.

Entertainment

Opportunities for entertainment in Da Nang are rather sparse. Several restaurants in the city serve good traditional Vietnamese or French cuisine. Vegetarian dishes can be found at food stalls in the city. Da Nang has many shops and handicraft markets that fulfill the needs of most souvenir shoppers. Many tourists enjoy visiting Cho Con, Da Nang's central market. Among the products available to customers include flowers, household items, fruit, stationary, and ceramics. Bamboo handicrafts, rugs, and wood carvings, sold in Da Nang, make excellent souvenirs. Nightclubs are available in downtown Da Nang. On occasion, the city's Municipal Theatre offers performances of classical Vietnamese drama.

Huế

The city of Huế is situated on the Huong River in central Vietnam. Huế served as the capital of Vietnam from 1802 to 1945. Today, it is one of Vietnam's educational, religious, and cultural centers. The city was heavily damaged during the Vietnam War when it was a major focus of the North Vietnamese Tet

offensive in 1968. Although many priceless treasures, buildings, museums, and shrines were destroyed, some of the damage has been repaired. Huế experiences a very hot and dry climate, particularly during the summer. From September to April, the city receives heavy rainfall. Huế had a population of approximately 220,000 in 1992.

Recreation

Huế offers extensive opportunities for sight-seeing. Tourists may visit the Forbidden Purple City. This palace was used exclusively by emperors and their families. The entire complex was practically leveled during the Tet Offensive of 1968, but parts of the building's library have been reconstructed. Located near the Forbidden Purple City, the Thai Hoa Palace is a beautiful structure which escaped damage during the war and is open to visitors. Constructed in 1805, the Thai Hoa Palace has an ornate red lacquer ceiling with gold inlays.

The Imperial Museum is well worth a visit. Although many priceless artifacts were destroyed during the Vietnam War, some of the museum's treasures survived without damage. Among the items on display are furniture, clothing, and a sedan chair used by Vietnamese emperors.

Huế was the final resting place of seven Vietnamese emperors. As a result, many tombs are located in the city. Most of the tombs contain not only the remains of the emperor, but also an altar containing some of the personal treasures possessed by the emperor and a temple for personal devotions. One of the most impressive of all tombs is the Tomb of Minh Mang. This tomb has beautiful architecture and magnificent stone carvings. Another tomb, the Tomb of Khai Dinh, is frequently visited by tourists. Although the exterior of the tomb is unimpressive, the interior contains magnificent frescoes made of colorful glass and ceramic fragments. The Tomb of Khai Dinh also contains a bronze statue of the emperor adorned in royal clothing.

Entertainment

Western-style entertainment in Hué is very limited. Most entertainment activity centers around shopping in the city's huge Dong Ba Market. A wide variety of products are available at this market, including the large conical hats that are worn by many Vietnamese. Hué's Gold and Silver Trade Department sells beautiful gold and silver handicrafts.

Several restaurants serving traditional Vietnamese, French, and vegetarian cuisine are located in Hué. Good food is also available at food stalls throughout the city. The prices of food in Hué is very reasonable.

OTHER CITIES

The city of **DALAT** is located in the central highland region of southern Vietnam. Dalat is situated in a forested region amid beautiful lakes and waterfalls. It enjoys a pleasant, cool climate, with a rainy season between July and October. The city is noted for its fresh vegetables, strawberry jam, candied plums, wine, artichokes, tea, and tropical flowers and is a popular tourist destination. Coffee, rubber, and tea plantations near the city are an important contributor to the local economy. Dalat is the home of a major university. Road and air connections link Dalat with Ho Chi Minh City. Dalat has an estimated population of 125,000.

NHA TRANG is situated at the mouth of the Cai River in southeastern Vietnam. The city's location near the South China Sea has led to its development as a major port city. Fishing is the primary industry in Nha Trang and the city is noted for its excellent seafood. The region near Nha Trang is very fertile and supports the growth of coffee, coconuts, sesame seeds, and cashew nuts. These agricultural products are exported through the city's port. Tourists are attracted to Nha Trang's beautiful, sandy beaches and the coastal waters are condu-

cive to snorkeling, fishing, and scuba diving. The city is connected by road, air, and rail with Ho Chi Minh City. Nha Trang had a population of roughly 221,000 in 1992.

The city of **QUI NHON** is located in central Vietnam and is an important port city. Qui Nhon has very few industries, the largest of which are salt evaporation and fishing. The city offers weekly flights to Hanoi and Ho Chi Minh City. In 1992, Qui Nhon had a population of 163,400.

COUNTRY PROFILE

Area and Geography

Like a dragon floating in the sea, Vietnam winds its way some 1,030 miles up from the South China Sea to the Gulf of Tonkin, with its head caressing the border of China to the north and its back resting snugly against her Southeast Asian neighbors Laos and Cambodia-to the west. The total land area of Vietnam covers about 128,000 square miles (larger than Virginia, North Carolina, and South Carolina combined). Vietnam's main cities, for population and importance, are Hanoi, Haiphong, Hue, and Ho Chi Minh City (formerly Saigon).

Vietnam's northern terrain is mostly mountainous or hilly, with some highland areas covered by a thick green blanket of jungle (about half the total land area). The Red River Delta and coastal plains in the lowland part of the North are heavily populated and intensively cultivated (almost entirely by rice fields). Although much of this Delta Region is seasonally flooded, a complex network of dikes and levees help to prevent serious flood damage.

The southern part of Vietnam is dominated by the estuary of the Mekong River system and is low, flat, and frequently marshy. The

rich soil in the Mekong Delta is the most fertile in the country. Areas immediately north and east of Ho Chi Minh City in the Mekong Delta are much more varied-with low-lying tropical rain forest, upland forest, and the rugged Annamite Mountain chain.

Vietnam is largely a tropical monsoon country. In the north, a hot rainy season prevails from May to September. The average temperature in Hanoi is about 86°F during this period, with very high humidity. Due to the lack of proper drainage, flooding caused by heavy rainfall and/or typhoons can create hazardous conditions to one's health and property. Flooded streets slow down traffic and provoke accidents. Houses and furnishings can suffer as a result of leaky roofs and other sources of water damage. Food supplies are also affected. During the cooler, dry season in the north from December to March, the average temperature is 68°F, with overnight minimums sometimes around 40°-42°F. Due to the lack of heating in most shops and offices during the dry season, it will feel considerably colder.

In the south, Ho Chi Minh City and the Mekong Delta experience a year-round tropical climate with daily temperatures normally exceeding 88°F. The rainy season in Danang and Hue in the center of the country lasts from October to March.

Population

In 2000 Vietnam's rapidly growing population was estimated at nearly 80 million, making it the twelfth most populous country in the world. The population makeup is roughly 85% ethnic Vietnamese, 3% ethnic Chinese, and the remaining 12% a mixture of over 50 ethno-linguistic groups, including Khmer, Cham and Muong. The largest single minority group - the Chinese - live mostly in the Cho Lon District of Ho Chi Minh City and other large cities. Vietnam's infant mortality rate is 36/1000. Life expectancy for males is 63 years and 67 years for females.

Vietnam has one of the most complex ethno-linguistic mixes in all of Asia. Aside from the Kinh or Vietnamese, the rest of the country's 54 nationalities inhabit the Central Highlands and the mountainous regions in the north. The official language is Vietnamese—a hybrid of Mon-Khmer, Tai and Chinese. English is increasingly favored as a second language. In addition to English, many Vietnamese officials and businessmen speak some French, Russian or Chinese.

The predominant religion practiced by 90% of the Vietnamese is Mahayana Buddhism, which is often referred to as a way of life or a philosophy rather than a religion. It advocates moderation in all facets of life and sees material objects as standing in the way of greater happiness. Buddhists believe in reincarnation, with the actions of your current life determining the role of your next life.

By living simply and selflessly, a person will be reincarnated many times over. This continues over many lifetimes until the soul reaches a stage of eternal happiness - nirvana. Other religions practiced in Vietnam are Confucianism, Taoism, Catholicism, Animism, Cao Daim, and Islam.

Culture

The Vietnamese family unit (particularly in the rural areas) is patriarchal in nature with strong familial ties. It is not unusual to find three or four generations living in the same household. Personal names are written with the family name first, middle name second, and the first name last. It is common practice to address people by their first names, e.g. a woman by the name of Nguyen Anh Tuyet would be addressed as “Miss Tuyet.”

Observing the following local customs will help keep you from embarrassing yourself with the Vietnamese. Crossing your index and middle finger (our way of wishing it were so) is considered to be a lewd gesture. Direct eye contact is

seen as a sign of disrespect. Touching someone, especially on the head, is not welcomed. Motioning for someone to come with your palm up is considered rude. Handing a pair of chopsticks or a toothpick to someone is considered bad luck. And, last but not least, the Vietnamese (like most other Asians) do not like to “lose face.” When they don't understand a request or question, they will still respond affirmatively so as not to lose face. Although they might disagree, they will nod affirmatively just to avoid confrontation. The Vietnamese are not prone to show their emotions in public.

Public Institutions

The Socialist Republic of Vietnam (SRV) is a one-party state controlled by the Vietnamese Communist Party, with the Political Bureau (Politburo) as the central organ of the Party. Its national flag is red with a large yellow star in the center. The Party's constitutionally mandated leading role and the occupancy of nearly all the senior Government positions by Party officials ensures the primacy of Politburo guidelines. The National Assembly (chosen in quadrennial elections) elected non-Party members for the first time in 1997. But, despite some increased activism, it remains largely controlled by the Party. Party intrusion into Government operations has diminished somewhat, allowing Government officials to have more latitude in implementing policy. The Party and State have also diminished their intrusion into the daily lives of the people.

Vietnam's administrative bodies are divided into the following four levels: 1) central; 2) provincial and municipal (Hanoi, Ho Chi Minh City, Danang, and Haiphong); 3) quarters (urban) and districts (rural); and 4) precincts (urban) and communes (rural). Vietnam has 61 provinces, 3 municipalities under central government control, one special zone, urban quarters and rural districts, and urban precincts and rural communes. All these different levels have a fair degree of independence in implementation of

policy and administration of local resources.

There are a number of “mass organizations.” The Women's Union (approximately half of the total labor force), the Farmer's Union, and the Youth Union are called on to represent the interests of various sectors of the Vietnamese public and serve as a political link between the people and the Communist Party on the one hand, and the Party and Vietnamese Government on the other. The Vietnam Fatherland Front, an umbrella organization under the Communist Party, coordinates and oversees the activities of these mass organizations. The Vietnam Chamber of Commerce and Industry (VCCI) represents the commercial interests of both state-owned industries and the private sector and informally advises the Vietnamese Government on economic policy.

Vietnam obtained membership in the Association of Southeast Asian Nations (ASEAN) in July 1995 and in the Asia Pacific Economic Cooperation (APEC) in November 1998. The SRV also belongs to the following international organizations: The United Nations Food and Agriculture Organization (FAO), International Bank for Reconstruction and Development (IBRD), International Civil Aviation Organization (ICAO), International Monetary Fund (IMF), UN Development Program (UNDP), UN Educational, Scientific, and Cultural Organization (UNESCO), WHO (World Health Organization), World Intellectual Property Organization (WIPO), ADB (Asian Development Bank), INTELSAT, Mekong Committee, Nonaligned Movement, and the Pacific Economic Cooperation Council. Vietnam also has observer status in the General Agreement on Tariffs and Trade (GATT).

Arts, Science and Education

The art scene in Vietnam reflects the perception of a people surrounded by a rich cultural heritage

who at the same time are striving to stake their place in the modern world. There are dozens of art galleries in Hanoi-many with high-quality paintings available, but just as many with trendy commercialized "souvenir" artwork churned out for the tourist trade. Other popular art forms include ceramics, religious wood carving sculptures and lacquer ware. Hanoi's Art Museum contains a smattering of work from different eras but probably does not have as good a collection as some of the private galleries. Also of interest are Hanoi's History Museum which contains artifacts from 1,000 years ago and the recently opened Ethnological Museum.

The capital city of Hanoi is sometimes referred to as "Asia's architectural pearl," with its mixture of traditional Southeast Asian/Chinese Art Deco and French Colonial styles. Juxtaposed among these quaint and pastel-colored turn of the century houses and office buildings are the recently constructed hotels and high-rise buildings of shiny steel and glass. There is an international movement - Friends of Vietnam's Heritage - actively engaged in preserving the architecture of the past in the face of the temptation to tear it down to build more commercial enterprises.

The Opera House is one center of culture in Hanoi. It is the home of the Hanoi Symphony Orchestra. International cultural groups also perform at the Opera House or at Hanoi's Music Conservatory. There are several smaller theaters for traditional Vietnamese opera ("cheo") and water puppet performances.

Although the quality of education has improved significantly here, Vietnam's reputation as a highly educated country exceeds the reality. Vietnam's population is probably better educated than other countries enduring similar levels of economic development. But, for the most part, the academic curriculum in this country still focuses on rote memory and "the one right answer." Since economic reforms officially began in 1986, literacy levels have

fallen due to families, particularly in the rural areas, pulling their children out of the classroom to earn money. Schools operate on double and sometimes triple shifts, meaning very little actual classroom time for many students. Educational facilities are frequently inadequate. Oftentimes families cannot afford the fees for attending school beyond the very basic levels.

The National University has many branches, the most prestigious of which is located in Hanoi. The SRV is striving to improve its comparatively low level of technological knowledge, particularly in the field of computer science.

Initiated in Vietnam in 1992, the Fulbright Program enrolls some 30 Vietnamese officials, scholars and professionals annually in graduate programs at leading American universities. Last year the program began funding American graduate student research in Vietnam. This year's Fulbright agenda included placing American lecturers at seven Vietnamese universities to teach and consult in various disciplines. In addition, there is a Fulbright run program in HCMC, which trains mostly provincial level officials in economic decision-making.

Commerce and Industry

After a decade of political isolation brought on by its invasion of Cambodia, Vietnam began to open its doors in 1986, seeking both to enter the marketplace and participate in the international community. As in China, reforms started with the agricultural sector and an opportunity for farmers to hold land for extended periods of time and decide on what crops to plant and how to sell much of what they produced. The "doi moi" (renovation) reforms also tried to create an atmosphere to attract foreign investment.

Agriculture, especially wet-rice cultivation, accounts for nearly 30% of overall production and employs the great majority of the population.

Important cash crops include coffee, rubber, tea, and mulberry (for silk production). Vietnam has significant deposits of crude oil and natural gas lying mainly off the southern coast, as well as coal and limestone. Other minerals are present, but not in marketable quantities, using locally available technology. Sixty per cent of the industrial sector is still in the hands of state-owned companies. The country's main exports are garments, textiles, crude oil, rice, seafood products, coffee, footwear, and other agricultural products. Export of light manufactured goods, especially textiles, footwear, and processed foods, is growing in importance. Major imports include petroleum products, industrial machinery, vehicles, consumer electronics, telecommunications equipment, fertilizers, and pharmaceuticals.

European and Asian investors came first, and remain among Vietnam's top ten investors even today. The U.S. trade embargo was not lifted until February 1994, after a long period in which the U.S. sought to strengthen Vietnamese commitments to cooperate on the humanitarian MIA issue. Vietnam also focused on re-establishing both regional and international ties, establishing diplomatic relations with over 100 countries. As a member of ASEAN, Vietnam committed itself to the ASEAN Free Trade Agreement (AFTA) as a part of the requirements for further economic reforms and tariff reductions.

Vietnam's reform process had already slowed by 1997, due to a two-year process in which Vietnam moved from a generation of 80-year-old leaders to a government and party led by men in their sixties. The new leadership pledged to continue the reform process and has not rolled back any of the earlier reform policies. But they have yet to move past the earlier stages of reform to attack the inefficiencies of a State-run system, preferring instead to sustain a lower level of growth while maintaining basic social stability and control by the Communist party.

The initial boom in foreign investment began to create the trappings of modernity in larger cities like Ho Chi Minh City (HCMC). Hanoi, Haiphong, Hue and Danang got new hotels, taxi cabs and the start of a tourism industry. The hotel boom, most notably in Hanoi and HCMC, became a bust in 1997-98 when the over supply of three, four, and five-star facilities tumbled room rates. Unfortunately, this did not fill Hanoi's 3,000 new, higher-end hotel rooms because tourist levels had already begun to fall as a result of the Asian financial crisis. This crisis has also taken a deep bite out of foreign investment levels, which have been declining since 1996. By the end of 1997, U.S. investment in Vietnam reached \$1.4 billion, putting us seventh behind the French and a host of regional countries with significantly more money invested than the U.S. Two-way trade at about \$700-800 million is a fraction of its potential because of the absence of normal trade relations (formerly called MFN or most favored nation status).

Negotiation of a bilateral trade agreement has been a priority for the U.S. and Vietnam since the opening of our respective embassies in August 1995 and the commitments of then Secretary of State Christopher and Foreign Minister Cam to concentrate next on economic normalization. Movement has been slow, following the U.S. presentation of a draft agreement in April 1997. However, both sides remain committed to moving forward.

Another area of mutual interest, which has yet to be realized, is the negotiation of a Civil Aviation Agreement. Thus far, U.S. proposals have not been viewed favorably by the SRV in civil aviation negotiations. On the positive side, however, we have concluded a copyright agreement, providing reciprocal protection to published works, and are hoping to conclude a counter-narcotics agreement and a framework for science and technology cooperation.

Transportation

Automobiles

Having your own car or recreational van will add a great deal of convenience and independence to your life. Retaining a full-time driver is highly recommended, particularly if you have school-aged children with extracurricular activities and active social lives. A valid U.S. driver's license is required to obtain a local driver's permit. (International driver's licenses are not valid in Vietnam.) Please note that you may not import a vehicle over four years old.

Driving in Vietnam is stressful and requires a great deal of care and vigilance to avoid accidents. Most people do not obey standard rules of the road. Traffic moves on the right, but operators sometimes do not stay on their own side of the road. There are very few traffic lights or stop signs. In principle, the bigger you are, the more right of way you have. Another basic rule of thumb for driving in Vietnam: Those behind need to watch out for those in front or alongside. If you plan on operating a motorcycle or riding a bicycle, bring a sturdy helmet. Department of Transportation approved helmets provide excellent protection; however, some people find that the limitation of peripheral vision from a full face helmet is not always a good trade off in Vietnam given the need to watch for lane intrusion from all directions. An open-faced helmet or even a bicycle helmet may be appropriate, but riding bareheaded is not.

Virtually everyone in HCMC owns a motor scooter and operates it like there's no tomorrow. With this seemingly endless stream of motor vehicles, HCMC is, without a doubt, one of the noisiest cities in the world. At first glance, one might think HCMC's mostly straight and perpendicular roads would be safer to navigate than Hanoi's winding streets, but one quickly realizes that havoc reigns supreme down south. People make U-turns wherever they please. Motor scooters dodge in and out pushing your nerves to the limit. If that weren't enough, the

motor scooter operators drive significantly faster and are terrifyingly more reckless than in Hanoi. And, if the speed doesn't get to you, the abundant exhaust fumes will.

Local

Taxis are plentiful and the taxi drivers usually understand enough English to take you where you want to go. Cities still have many cyclos or pedicabs you can use for short distances and/or more scenic rides. There are also "hugging" motor scooter rides available for the more adventuresome traveler (riding behind a Vietnamese on a 100cc Honda Dream).

Regional

Using local buses is not recommended. They are not only crowded and uncomfortable, but are also considered unsafe for most foreigners. Trains in Vietnam only service coastal cities. Not only are they limited in service, but they run slowly on a narrow gauge track and, except for a special group of cars used from Hanoi to Sapa in the northwest highlands, are uncomfortable, unsafe, and noisy. Vietnam Airlines and its sister company, Pacific Airlines, monopolize the domestic air service, and enforce a double-tier price structure, which subsidizes Vietnamese travelers' fares. Suffering financial difficulties, Vietnam Airlines sometimes cancels flights without notice, often leaving passengers stranded.

Communications

Telephone and Telegraph

Local and international telephone service is available and reliable. International direct dial service is excellent. A 3-minute call to the U.S., however, costs approximately \$15 (one of the highest rates in the world). Direct calls from the U.S. can be received in Hanoi and cost approximately \$1.50 per minute.

Radio and TV

The Vietnamese Government operates two radio stations, which broadcast classical music, traditional Vietnamese music, the news

in Vietnamese, and American pop music a couple of hours per day.

There are four Vietnamese television channels. With the significant increase in the expatriate population during the past couple of years, installation of satellite dishes on detached houses and service apartments has brought a myriad of international television channels to Vietnam, including but not limited to-CNN, CNBC, MTV, and Hong Kong's Star World and Star Sports (which show selected British, Australian and American programs). Other channels available come from China, France, Australia, Indonesia, India and Malaysia. In Hanoi, one can obtain cable service from Vietnam TV for an initial fee of \$250.00 and a monthly fee of about \$30.00.

In HCMC, the following cable channels can be viewed in all major hotels and service apartments: CNN, CNBC, DIS, HBO, MTV, TNT, National Geographic and the Cartoon Network. Other channels come from Australia, France, Japan, Hong Kong, India, Indonesia, Malaysia, and the UK. Radio stations play both Vietnamese and Western music.

Locally purchased televisions and VCRs use the NTSC PAL system. Both PAL-system and multi-system televisions and VCRs are available here at reasonable prices.

Newspapers, Magazines, and Technical Journals

Personnel are advised to bring reading material from home because English language books and magazines are scarce. Moreover, what little supply of English language material is available in Vietnam costs two to three times what we would pay in the U.S.

The local print and broadcast media are run by the Communist Party and Government of Vietnam. Reporting of local developments is therefore heavily controlled and coverage of international events is limited.

E-mail and Internet services have recently become available but can also be censored. Because of power outages, service is often unreliable and subject to interruptions.

Health and Medicine

Medical Facilities

The medical care available in Vietnam does not meet U.S. standards. Anything involving broken bones or other surgical procedures will entail a medevac. Medevac patients are flown either to Bangkok, Hong Kong or Singapore.

There are three medical facilities in Hanoi approved by the U.S for minor medical treatment: Dr. Kot's Clinic, AEA International, and the Hanoi International Hospital. In HCMC the three approved medical facilities are: AEA International, Columbia - Gia Dinh Clinic, and Dr.Vannort's Clinic. All of the above medical facilities have a number of qualified foreign doctors on staff who speak English. While each can treat routine illnesses and stabilize trauma, they are not full service medical facilities. Dentists are also available in Hanoi and HCMC and the caliber of general dental care is considered good.

Community Health

Tap water is not considered safe to drink. Bottled water can always be purchased in most restaurants and grocery stores. Consuming ice made from unfiltered water poses a risk when having refreshments outside the home.

All fruits and vegetables eaten raw should be thoroughly cleaned using an acceptable washing/soaking procedure. Reports by several Western doctors have noted that Vietnamese farmers rely heavily on DDT and night soil.

The sewage system is inadequate and in many places within the cities totally nonexistent. And, since the majority of Vietnamese homes in the city do not have indoor plumbing, it is not uncommon to see the

Vietnamese using trees and walls as urinals, or to see the children use runoff channels in the street next to the sidewalks as toilets. Spitting, nose picking and nose blowing on the sidewalk are also common. During the rainy season, the aforementioned practices are even more of a health hazard due to flooding on the streets and sidewalks.

Shopkeepers and residents place garbage in small piles outside in anticipation of the evening garbage collector, who then hauls away the debris in an open cart. Oftentimes, people can be seen sitting along the streets sifting through a day's collection of garbage to recover recyclable material. A neighborhood site serves as the pickup point for the city's garbage trucks.

Preventive Measures

Be aware of both the medical and physical health hazards in country. Try to avoid exposure to mosquitoes and/or use mosquito repellent. Mosquitoes are the most common transmitter for dengue fever, malaria and Japanese encephalitis. Recurring parasitic infestations (e.g. worms) are a problem. Individuals usually suffer some form of intestinal disorder (from mild to severe) within a few weeks after arrival in Vietnam. Diseases prevalent in Vietnam include tuberculosis, dengue fever, Japanese encephalitis, hepatitis, STDs, and malaria. Inoculation against cholera and taking malaria suppressants are not necessary. Children should have the normal variety of immunizations, including the three-shot rabies preventive series and a tetanus booster. Local pharmacies are known to carry contraband or counterfeit medication. Bring at least a 3-month supply of medicine for chronic conditions and arrange for regular renewal of supplies to be sent through mail.

Contact lenses and solutions are available in Hanoi and Ho Chi Minh City, though they may be difficult to find. With increasing pollution levels, those using extended wear lenses may find them inappropriate. If you wear eyeglasses, however, it is advisable to bring an extra pair.

Larger (men's) size frames are not available and frame styles are quite limited. Acceptable eye care services are available in Bangkok, Hong Kong or Singapore.

Pickpocketing and handbag/camera snatching are common occurrences (much more so in HCMC than in Hanoi), particularly before the Lunar New Year - late January/early February. Fortunately, most of these petty crimes are economic and non-violent in nature. Should you be the unfortunate victim of such petty crimes, it is wise not to resist. Stolen cameras, wallets and handbags can be replaced; they are not worth risking life and limb.

While most people are more concerned with threats of infectious disease, traumatic injuries resulting from automobile or motorcycle accidents are the greatest hazard. Be sure to bring a sturdy helmet if you intend to ride either a bicycle or motor scooter in Vietnam.

NOTES FOR TRAVELERS

Passage, Customs & Duties

The most direct route to Vietnam from the U.S. is by air over the Pacific. Getting to Hanoi usually requires an overnight in Bangkok or Hong Kong to connect planes.

U.S. passports are valid for travel in Vietnam. Visas are required and should be obtained from a Vietnamese Embassy or Consulate before traveling to Vietnam. Visas may be issued for one or multiple entries but are usually valid for only one entry. Visas are generally valid for one month, but increasing numbers of travelers have been successful in having their visas renewed after their arrival in Vietnam for up to three months. Entry into and exit from Vietnam is sometimes restricted to a specific port of entry.

U.S. citizens are cautioned that the Vietnamese immigration regulations require foreigners entering

Vietnam to carry out only the activity for which the visas were issued. Change of purpose requires permission from the appropriate Vietnamese authority in advance. U.S. citizens whose stated purpose of travel is tourism but who engage in religious proselytizing have had religious materials confiscated and have been expelled from Vietnam.

No shots are required for entering Vietnam unless you are coming from a country that has had an outbreak of cholera, smallpox, or yellow fever.

Current entry requirements as well as other information may be obtained from the Vietnamese Embassy, 1233 20th Street, Suite 400, NW, Washington, DC 20036, telephone 202-861-0694 or 2293, Fax 202-861-1297, Internet home page: <http://www.vietnamembassy-usa.org>; the Vietnamese Consulate General, 1700 California Street - 4th Floor, San Francisco, CA 94109, telephone 415-922-1577, or from a travel agent who organizes travel to Vietnam. Overseas inquiries may be made at the nearest Vietnamese Embassy

U.S. citizens have been detained after traveling in areas close to the borders with Vietnam's neighbors. These areas and other restricted areas are not always marked, and there are no warnings about prohibited travel. Travelers should avoid such areas unless written permission is obtained in advance from local authorities

U.S. citizens living in or visiting Vietnam are encouraged to register in person or via telephone with the consular section of the U.S. Embassy in Hanoi or the U.S. Consulate General in Ho Chi Minh City and to obtain updated information on travel and security within Vietnam.

The Consular Section of the U.S. Embassy in Hanoi is located at 6 Ngoc Khanh, Ba Dinh District, Hanoi, Socialist Republic of Vietnam, telephone: (84-4) 831-4590; after hours emergency telephone

number: (84-4) 772-1500; fax: (84-4) 831-4578, Internet home page: <http://usembassy.state.gov/vietnam/>. The consular section's business hours are 8:00 am to 5:00 pm. The Embassy's Consular Section provides the full range of services for U.S. citizens (passport services, consular reports of birth abroad, notarial services) and non-immigrant visa services (except K-1 fiancee visas).

The U.S. Consulate General in Ho Chi Minh City is located at 4 Le Duan, District 1, Ho Chi Minh City, Socialist Republic of Vietnam, telephone: (84-8) 822-9433, fax: (84-8) 822-9434, Internet home page <http://www.uscongenhcmc.org>. The Consulate General's business hours are 8:00 am to 5:00 pm. The Consulate General provides the full range of consular services for U.S. citizens and the full range of immigrant and non-immigrant visa services. All immigrant visa processing in Vietnam, including visas for adopted children and fiance/e visas, is conducted solely at the Consulate General in Ho Chi Minh City.

Callers from the U.S. should note that Vietnam is 12 hours ahead of Eastern Standard Time and 11 hours ahead of Eastern Daylight Time.

Pets

Pets can be brought into Vietnam. All animals must have a certificate of health issued by a veterinarian, including certification of inoculation against rabies dated between one to six months before the pet's arrival at post. Currently, no quarantine is required. Pets are usually brought in as excess baggage at the traveler's expense, rather than as cargo, to avoid long airport delays and expensive handling charges. You should notify post via telegram or fax prior to arrival to obtain an import permit. Competent veterinary services are available in Hanoi and HCMC. A limited variety of dogs, cats and birds are available in the local marketplace at very reasonable prices. Hanoi even has a bona fide pet store.

Currency, Banking, and Weights and Measures

The monetary unit is the Vietnamese Dong (VND). There are no coins. Paper notes bear the portrait of Ho Chi Minh with the smallest note at VND 100 and the largest at VND 50,000. The rate of exchange fluctuates. In November 1999 it was VND 14,040 to US\$1. The Vietnamese use the international metric system of weights and measures. Gasoline and other liquids are sold by the liter, cloth by the meter, and food and other weighted items by the kilogram. Distance and speed are measured in kilometers.

Taxes, Exchange, and Sale of Property

There is a 10% VAT on all locally purchased items.

LOCAL HOLIDAYS

- Jan.1 New Year's Day
 - Feb. 3 Communist Party Foundation Day
 - Jan/Feb Tet Nguyen Dan*

Sanaa, Yemen

YEMEN

Republic of Yemen

Major Cities:

Sanaa, Aden, Taiz, Hodeida

Other Cities:

Dhamār, Ibb, Al-Mukallā, Sa'dah

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated July 1993. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

YEMEN, once part of the ancient Kingdom of Sheba, is one of the oldest centers of civilization in the Near East. Although much of its early history is obscure, it is known that from about 1000 B.C. to A.D. 600, it was the center of an advanced culture based on intensive agriculture and a prosperous link in trade between Africa and India. A biblical reference speaks of its gold, spices, and precious stones as gifts given by the Queen of Sheba to King Solomon.

Halfway across the world and shielded from Western civilization for centuries, this lush, mountainous country has long remained politically and economically back-

ward. Within Yemen, there is a variety of scenery, architecture, people, and customs, ranging across the hot and sandy coast land with bananas, palms and African-style thatched-roofed houses to the cool, coffee-growing central highlands dotted with stone fortresses.

After years of conflict, pro-Western Yemen Arab Republic (North Yemen), and the only Marxist Arab country, the People's Democratic Republic of Yemen (South Yemen), merged into one country—the Republic of Yemen—on May 22, 1990. Today, Yemen is making rapid advances in modernizing political, economic, and public institutions, while seeking to retain the traditions of its culture and history.

MAJOR CITY

Sanaa

Sanaa, the capital of the Republic of Yemen, is a growing city of about 630,000 people located in the middle of a broad valley between mountains that rise to 12,000 feet. Sanaa's altitudes of 7,226 feet above sea level and its position on the Arabian Peninsula provide an almost ideal climate. Although dust can be a problem, the winters are warm

and the summers relatively cool. With the exception of two short rainy periods in spring and late summer, the air is very dry.

The geology of the Sanaa basin mixes volcanic with sedimentary rocks and the brown and black mountains create striking patterns in the morning and evening light. Many people are reminded of the stark beauty of Arizona and Utah, although the generally barren terrain is relieved by verdant channels of vegetation along the valley water courses. These water courses, or wadis, permit an extraordinary system of terraced farming along the slopes of the escarpment that turn the hills green during the two growing seasons of the year.

Sanaa has a unique architectural tradition dating from medieval times, which is preserved within the walls of the old city. Stone houses, often six or seven stories high, are highlighted by clusters of stained glass windows. Intricate designs traced in plaster decorate the exterior walls, while within the house guests climb stairs past the family quarters to a "mufraj" reception room. The mufraj—the word comes from the Arabic root "to view"—is chosen if possible for its view of the city and mountains, and guests recline on colorful cushions and carpets.

Overview of Sanaa

A wall still surrounds most of the old city, and life within has changed little over the years. Narrow streets twist through the suq, or market area, offering a glimpse of blacksmiths working over their forges, meat, and vegetable vendors with their wares, gold and silver merchants and moneychangers doing brisk business, donkeys plodding beside their masters, colorful and pungent baskets of spices and children running everywhere. There is an atmosphere of continual festivity, with tribesmen from mountain villages examining the wares of the city alongside veiled housewives striking hard bargains with the merchants.

Westerners visiting the suq are treated with genuine friendliness by shopkeepers and their customers—and with little of the harassing pressure to buy found in some other countries. The old city is a favorite destination of many Mission mem-

bers, who enjoy bargaining for such treasures as elaborate silver jewelry, antique rifles, Maria Theresa coins from the Africa and India trade, as well as traditional jambias and embroidered cloth.

Outside the walled city, land prices have risen rapidly as emigrant workers invest their savings in new houses and shops. Construction projects continue in every area of Sanaa, but city services have lagged behind the population increase. Electricity outages in some areas are frequent, and voltage fluctuations can cause serious damage to electronic equipment not protected by voltage regulators. Houses in several districts are connected to municipal water and sewer systems, but many houses still rely on water wells or water delivered by tank truck, and their own septic tanks or cesspools. The municipal system provides water only for a limited time each week

requiring that water be stored in roof-top tanks.

Traffic is increasingly congested, both from cars imported with emigrant capital as well as from construction and utility projects which can close roads for extended periods. Most new houses retain traditional features such as stained glass windows and mufraj rooms, but rarely exceed three stories.

Stores carry a variety of consumer goods but supplies are inconsistent and prices high. A well-tuned system of information among the western community announces when scarce items are again in stock. Dedicated shoppers can generally find most items they need and many people enjoy their frequent contacts with local shopkeepers.

Contrary to the situation a few years ago, Sanaa's grocery stores are well-stocked with a wide range

of foodstuffs, albeit many are expensive by U.S. standards. Seasonal fruits and vegetables are widely available and inexpensive. Many food products familiar to American consumers, including snack foods, diet drinks and other packaged foods, are not available and should be included in consumable shipments.

U.S.—Yemeni Relations

The U.S. first established diplomatic relations with Yemen in 1946, but it was not until 1959 that a resident legation was opened in Taiz. The Agency for International Development program began soon after, and the legation was upgraded to Embassy status.

The U.S. recognized the post-revolutionary Yemen Arab Republic on December 19, 1962. On June 7, 1967, during the Arab-Israeli conflict, the government of Abdullah al-Sallal severed diplomatic relations with the U.S. and all Americans were withdrawn.

In 1970, the Yemen Arab Republic requested the resumption of diplomatic relations, and on April 29, 1970, a U.S. Interests Section was established in the Italian Embassy in Sanaa. On July 1, 1972, full diplomatic relations were resumed during a visit by then Secretary of State William P. Rogers. A new USAID program was started in the spring of 1973 and the Peace Corps began several projects in the same year. A military sales agreement was signed in 1976, followed in 1979 by the establishment of the Office of Military Cooperation.

In 1984, the Hunt Oil Company discovered oil in Marib. The pipeline work began in 1986 and commercial production began in 1988. Then-Vice President Bush attended the inaugural ceremonies of the central processing unit in 1986. Mr. Bush also inaugurated the beginning construction of the present embassy compound. President Ali Abdullah Saleh visited the U.S. on an official state visit in January 1990.

The former People’s Democratic Republic of Yemen severed its diplomatic relations with the U.S. in 1969. Before the resumption of diplomatic relations, contacts between the U.S. and the PDRY was exceedingly rare. However, in 1980, after the fall of former President Abd al-Fattah Ismail, the PDRY began realigning its foreign policy toward the conservative Gulf Shaykhdoms and dropped its sponsorship of Dhofar separatists attempting to secede from Oman. In the late eighties, PDRY began exploring the possibility of reestablishing diplomatic relations with the U.S. which were resumed in April 1990.

In May 1990, the Yemen Arab Republic and the People’s Democratic Republic of Yemen merged into the Republic of Yemen. A provisional constitution was overwhelmingly approved in a referendum held in May 1991. The unification agreement, according to which the ruling parties of the former North and South Yemen share power equally, stipulated a 30 month transitional period, due to end in November 1992. Parliamentary elections are scheduled to be held before the end of the period.

U.S.-Yemen relations took a turn for the worse as a result of the Gulf Crisis. The U.S. withdrew its Office of Military Cooperation, the Peace Corps, and slashed its AID program. As of mid-1992, bilateral relations continued to be strained by Yemen’s political support for the regime of Saddam Hussein. However, Peace Corps volunteers returned in midsummer, 1991 and the program continues to expand. U.S. companies are playing a growing role in the development of Yemen.

Food

A variety of food items is available in Sanaa, though prices are high, choice of brands is limited and quality varies, especially with fresh meat. Western-brand packaged foods are often found in grocery stores but their availability is sporadic and their price very high. The

following is a partial list of foodstuffs available.

- Fresh Meat: Beef, veal, lamb, chicken, rarely turkey.
- Frozen Meat: Beef, lamb, chicken, duck, steak, beef sausages (all are imported).
- Fresh Seafood: Shrimp (periodically), several varieties of fish (generally all of high quality, though lack of refrigeration requires care in choosing items).
- Fresh Vegetables: Cabbage (no red), carrots, okra, potatoes, tomatoes, green peppers, hot peppers, leaf lettuce, egg plant, squash (in season), onions (red and yellow), garlic, spinach, green beans (in season), cauliflower (in season).
- Fresh Fruit: Bananas, papaya, mango, pomegranates, figs, melon, grapes, limes, apples, oranges, peaches, pears and plums. Most fruits are highly seasonal.
- Dairy Products: Eggs, “long life” milk, butter (imported), yogurt, ice cream. Fresh cheese is now generally available, as are canned cheeses.
- Canned goods: Fair variety of canned fruits and vegetables, (all expensive). Locally produced fruit juices are reasonable in cost, but no sugar-free brands are available.
- Toiletries: Limited variety of basic items such as toothpaste, soap, body lotion and shampoo (expensive and sometimes of poor quality).
- Paper Products: Limited selection and expensive.
- Soft Drinks: Limited variety but ample supply of brand-name soft drinks are available.
- Miscellaneous: Most spices, ketchup and mustard (limited selection), pickles (limited selection), tea, coffee beans; vendors will grind the beans but result is usually too fine for American tastes. Instant

coffee is available but expensive. Flour and sugar (coarsely ground of uneven quality).

Clothing

Dress is relatively informal in Sanaa. Most Americans wear comfortable business attire to work. Formal wear for men is not required. Women wear both long and short dresses at receptions and cocktail parties. Women should also bring a "suq dress," an oversized, long sleeved garment with a high neck and hemline below the calf, and/or loose slacks with long overblouse. While Yemenis are generally tolerant of Western behavior and dress, most Americans feel more comfortable wearing conservative clothing in public. For street wear, in addition to the "suq dress," women often wear slacks with a loose-fitting shirt or blouse which reaches the thigh. Shorts are worn only for sports.

Because of the constant dust in Sanaa, clothing may wear out quickly with frequent washing in hard water. Durable fabrics are recommended. With Sanaa's moderate climate, all but the heaviest and lightest materials will be comfortable most times of the year. Sweaters and light jackets are necessary for at least part of the day during the winter months and often evenings in summer. As most streets in Sanaa are unpaved, sturdy shoes with crepe or rubber soles are a necessity. Ladies' leather heels can quickly be ruined on gravel, which is used instead of concrete or asphalt in many parking areas and paths.

There are several stores in Sanaa offering western clothing. Prices are high, selection is limited especially for larger sizes, and quality only fair. A good selection of imported fabrics is available. Imported shoes are available, but, again, prices are high and selection only fair. There are a few dependable seamstresses in town who can make simple garments.

Supplies and Services

Cosmetics and toilet articles are appearing in increasing variety, though quality may not be up to American standards. Favorite brands should be brought.

High altitude and clear skies make for a harsh, bright sun. A good supply of sunblocks or suntan lotions should be brought. Sunglasses are also advisable. Reasonable quality non-prescription types can be found in town; prescription sunglasses should be brought. Hats are recommended for outdoor activities especially for children. Skin creams are important in Yemen's extremely dry air, and liquid soap may be more tolerable than regular bar soap. Lip balm is also useful.

Non-prescription drugs familiar to Americans may not be available; a supply of medicines such as aspirin, cough syrup, and digestive remedies should be brought. Prescription drugs may be available locally, but you should bring a supply.

Local, American, and English brands of cigarettes are readily available at reasonable prices. Menthol brands are harder to find. Some pipe tobacco and cigars are available, but not in great variety.

Three hotels provide clean, fair to good quality barber and hairdressing services at reasonable prices. There are a large number of cheaper barbers, though quality and cleanliness can be a question. Dry cleaning services are offered by hotels and many shops, and quality is satisfactory. Car rentals are available but prices are high and a Yemeni driver's license is required (drivers can be hired for an additional charge). Shoe repair is very primitive.

Religious Activities

Islam is the national religion and Yemeni law prohibits religious proselytizing. However, Yemen is tolerant of the private practice of religion by foreigners. Both Catholic and nondenominational Protestant services are held weekly at the Hadda Community Center. Catholic Mass

is also held weekly and on holidays at the Sisters of Mercy home in Sanaa. A Protestant youth group holds regular meetings and sponsors various activities throughout the year. There are no functioning synagogues in Yemen, but Yemeni Jews hold religious services in their homes. There is an active Catholic church and Hindu temple in Aden.

Education

The Sanaa International School (SIS) is an English-language day school with students representing about thirty nationalities. The Department of State considers SIS as "adequate" through the sixth grade, although many American dependents attend SIS through ninth grade.

English (reading, grammar, composition, keyboarding, and spelling), mathematics, cultural studies (history, geography, economics, etc.), science, art, music and physical education are offered as a part of the standard curriculum.

A 4-year American secondary program is offered, which includes the basic subjects and a limited selection of electives. Various enrichment activities are scheduled some afternoons each week.

The school year runs from late August through early June, and the children attend school Saturday through Wednesday with Thursday and Friday off. The school hours are: 8 am to noon for kindergarten; 8 am to 1:30 pm for children ages 6 through 11 (although some days students will stay for various activities or special subjects); and 8 am to 3 pm for students ages 12 years and up. Bus service is available for a yearly fee. Children are expected to bring a snack on the shorter days and lunch on activity days. All textbooks are loaned to the students, who are responsible for their own pencils, erasers and notebooks.

The school is located about 20 minutes outside Sanaa, and consists of a number of comfortable, spacious buildings around a center courtyard. The 35-acre campus has large

play areas with outdoor play equipment.

A few English-language preschools are available for younger children. These preschools operate in private homes and have between 10 and 30 students. Qualifications of teachers vary, and other parents should be consulted before choosing a preschool.

Special Educational Opportunities

The Sanaa International School offers night classes in various subjects from time to time, including computer programming. In addition, Sanaa University offers a few English-language courses, though admission requirements and quality have not been tested. The British *Council* offers basic Arabic classes at regular intervals for a moderate charge. The Peace Corps offers a 2-month intensive courses in Arabic, but charges must be paid personally by the student. The American Institute for Yemeni Studies (AIYS) hosts lectures on a variety of topics relating to Yemeni and Arab culture, and shows by local artists and entertainers. It also maintains an excellent library of books relating to Yemen. Visiting scholars supported by AIYS and USIA provide opportunities for discussing a myriad of topics.

Sports

The Sheraton and Taj Sheba hotels offer memberships for use of their heated swimming pools, exercise rooms, and tennis courts (Sheraton only).

The Sanaa chapter of the Hash House Harriers sponsors weekly runs through the scenic countryside. Yemeni soccer teams play weekly throughout the season, and visiting teams bring international-level competition several times a year. Many individuals jog through residential streets without difficulty, as long as they are vigilant for ubiquitous potholes, curious dogs, and vehicles that often drive on the wrong side of the streets.

Old town, Bab Al-Yemen (southern gate) in Sanaa

Touring and Outdoor Activities

Much of the Yemen's natural beauty is increasingly accessible. Paved roads lead to the coast, to the southern areas of the country, to the city of Sa'ada in the north, and to Marib in the eastern desert. Four-wheel drive allows one to explore more remote areas of the country. However, visitors should use caution when traveling to these areas, as hijackings of vehicles (mostly large, four-wheel-drive Toyota land cruisers) are not uncommon.

The warm, coral-fringed Red Sea coast is a favorite spot for swimmers, fishermen, and snorkelers, especially during the moderate winter months. (There are no facilities for servicing scuba gear.) Scenic but primitive camping sites are available in several areas along the coast. No acceptable hotels are available outside of Hodeidah, and camping gear is necessary. Basic Arabic is quite helpful in communicating with local residents.

The ancient sites of the Marib Dam and Temple of the moon at Marib are an easy day trip from Sanaa. The "triangle" from Sanaa, west to Hodeidah on the coast, southeast to Taiz and back to Sanaa, is a popular weekend trip. It allows one to see

the Tihama and the Red Sea coast, the medieval university city of Zabid, the famous port at Mocha, the fertile green farmlands of the southern highlands, spectacular mountain scenery and ancient walled cities at Taiz, Jibla and Ibb. Adequate hotels are available both in Hodeidah and Taiz. Other interesting places to visit are "Job's Tomb," an excellent spot for experienced and novice rock climbers, the extinct volcano of Hamt Dam, and the fossil fields just outside Sanaa.

Since unification in 1990, travel to Aden (formerly the capital of South Yemen and currently the "economic and commercial capital" of united Yemen) has become increasingly popular. There are two paved roads from Sanaa to Aden, where visitors will find stark contrasts with the North—British and Soviet influences on architecture, and cultures are readily apparent. Visitors will find, among other things, one of the world's best natural harbors, scenic beaches, a popular brewery and an international-class hotel. Aden also boasts Yemen's finest (and only) Chinese restaurant.

Yemen is a photographer's paradise. The exotic scenery and children in native dress clamoring to be photographed provide delightful and

exciting opportunities. Women, however, should not be photographed without their permission, nor any site that could be considered military. When in doubt, asking a local shopkeeper or traffic policeman for permission to photograph is both good manners and good sense. Yemeni authorities are sometimes suspicious of video cameras, especially in urban areas. In general, these cameras should only be used for recording family or American community events. Film is available, though in limited variety. Local processing is adequate for prints, although slide and movie film must be sent out of the country.

Entertainment

The Sanaa Amateur Minitheater Society, boasting members of several nationalities, provides several opportunities each year for budding performers as well as those who only wish to attend. In recent years the Society has presented several plays and play readings, musicals, dinner theaters, cabarets and pantomimes.

Social Activities

Approximately 350 Americans live in Sanaa, with much smaller communities in Taiz, Jibla, Aden and Sa'ada. Informal parties are frequent and provide excellent opportunities for meeting people. Most social activities take place in the home, but community picnics, athletic events, and amateur theatricals provide occasions throughout the year to meet the entire American community.

Yemenis are accessible people, and interesting friendships are possible, especially for Americans who speak Arabic. A few words of Arabic, even simple greetings, will go a long way toward making Yemeni acquaintances. An ever-increasing number of Yemenis speak English.

There are many diplomatic missions in Sanaa, as well as several expatriate business firms whose employees participate in social activities with Americans. Many nationalities are represented among the Hash House harriers running group, while the Christmas

View of Aden

pantomime is an Anglo-American tradition in Sanaa.

Aden

When the two Yemens merged, Aden was chosen to be the economic capital of the country. Aden became a British crown colony in 1937 and in 1968 it became the capital of South Yemen.

The Old Testament book of *Ezekiel* mentions Aden as a trading partner with the Phoenician port of Tyre on the Mediterranean Sea. Aden maintained its position as a trading center in the following years under its rule by Yemenis, Ethiopians, Arabs, Turks, and the British. Situated between Africa and India, Aden became a strategic and convenient port in the years following its capture by the British in 1839. Aden became even more important as a trading center after the 1869 opening of the Suez Canal. However, Aden's economy and importance declined after 1967 when South Yemen became independent. The British withdrew from the country, resulting in a loss of tourist trade and the income generated by the British military base. The closure of the Suez Canal from 1967 to 1975, during the Arab-Israeli crisis, further eroded Aden's position.

The city has a population of more than 562,000 (2000 est.). Small industries include some light manufacturing, seawater evaporation plants (to obtain marine salt), and boat building. The international airport at Khormaksar, a northern suburb of Aden, is the former British Royal Air Force base.

Aden consists of three sections or quarters: the Crater, Ma'llah, and Tawahi. The Crater, so named because it is located in the crater of a dead volcano, is the old commercial quarter. Despite Aden's long history, very few very historic constructions still exist. The oldest surviving construction is the Aden Tanks, located at the southern edge of the crater. The Tanks are huge water cisterns partially carved out of rocks. On the edge of the crater still stand remnants of the old city walls and bastions, some dating back as far as the 12th century. The Mosque of Sayyid Abdullah al-Aidrus, built in the 14th century and largely renovated, is Aden's Islamic religious center. Ma'llah, a small port area, is known for its traditional Arab *dhows* (boats). The business quarter of Tawahi is where most of the tourist hotels and shops are located. Also in Tawahi is the National Museum of Antiquities, which has an interesting collection of pre-Islamic statues.

Taiz

Taiz (sometimes spelled Taizz and Ta'iz), with a population over 180,000 is located in Yemen's southern highlands, about 125 miles south of both Sanaa and Hodeida. The three cities form a triangle and are connected by a road system. Bait al Faqih, Abid, and Yarim are other cities situated on these roads. Taiz, called "Aruzat al Yaman" in Arabic, meaning "bride of Yemen," is located in a narrow valley at the base of the rolling Saber Mountains, at an altitude of about 1,400 feet. It is an agricultural marketing center and was the country's administrative capital from 1948 to 1962.

The history of Taiz dates to the early seventh century, when the site first consisted of just a fortress on top of a steep cliff at the foot of Mount Saber. At this time, the town of al-Janad, four miles north of Taiz, was more prominent and because of the famous al-Janad Mosque, it was the religious and administrative center of the area. The shift in importance to Taiz began in 1174 when Turan Shah al-Ayyubi made the city the seat of his government. The city grew into a trade center, a position it still maintains today. Taiz expanded greatly during the time it served as Yemen's capital. The old city became an enclave in a fast-growing, modern urban center; the remains of the city walls near Mount Saber form an imaginary circle in which all the beautiful mosques and old houses can be found.

Many tourist sites may be found in Taiz, including two of the most beautiful mosques in Yemen. Al-Ashrafiya, with its two minarets, still serves as an important Koran school. Al-Mudhaffar has many small domes; its minaret collapsed after centuries and has never been rebuilt. The former Palace of Imam Ahmed and the Salah Palace both are museums now.

The Taiz *souk* offers a colorful variety of goods, including baskets, pottery, textiles, and carpets. Native

women take an active part in the *souk*; they wear colorful dresses and do not wear the traditional veils.

Education

Mohammed Ali Othman School, for kindergarten through grade 12, is located in Taiz. The coeducational school, founded in 1972, has an enrollment of over 1,000, and over 60 teachers, including Americans.

The school employs a combined U.S., U.K., and Yemeni curriculum, with instruction in English and Arabic. Extracurricular activities include newspaper, music club, volleyball, and football. The school has seven buildings, 53 classrooms, playing fields, science laboratories, and a 6,000-volume library. The school's mailing address is: P.O. Box 5713, Taiz, Yemen.

Hodeida

Yemen's chief port is Hodeida (sometimes spelled Hodeidah and Al Hudaydah), located on the Red Sea about 90 miles west of Sanaa. Developed by the Turks in the mid-19th century as a seaport, Hodeida exports dates, coffee, and hides. A fire in 1961 destroyed most of the city, but it was rebuilt with aid from the former Soviet Union. Hodeida's modern harbor has a port that can accommodate medium-sized ships and tankers. The port facilities have been the impetus behind the city's expansion. Hodeida is linked to Sanaa by a highway; taxis and airlines also travel between the seaport and the capital. Hodeida has modern health and communications facilities. The population of Hodeida is over 300,000.

Historic sites are nonexistent in Hodeida. There is, however, a fish market on the city's southern shore, where wooden fishing boats are still built in the traditional way. Hodeida's clean, sandy beaches offer excellent swimming.

Southeast of Hodeida is the village of Bait al-Faqih, known as the handicraft center of the Tihama. Craftsmen from the surrounding area

come to the village on market day (Friday) to sell pottery, leather goods, textiles, baskets, and other woven goods. Farther south is Zabid, which used to be the site of a prestigious Islamic learning institution. Zabid has a Great Mosque and a colorful market known for its local sweets.

OTHER CITIES

DHAMĀR, with a population of over 40,000, is situated about 50 miles south of Sanaa. It is a provincial capital and market center for the nearby grain-growing region. Local tradition notwithstanding, first mention of the town is by the Arab geographer Yāqūt (1179–1229). He noted the city's handsome buildings and fecund countryside. Market gardens divide Dhamār in two; there are numerous mosques.

IBB is one of Yemen's most picturesque cities. Located about 100 miles south of the capital, its surrounding wall contains several homes. An aqueduct from the mountains supplies the city with a rare luxury in this country—running water. The Muzaffariyah Mosque, among the dozens here, is considered especially beautiful. Ibb is a farming center, situated in the province that receives the highest rainfall, and remains green all year long. It has a *souk*, or marketplace, that serves as the regional hub for agricultural products. The city may date to biblical times. Its estimated population is roughly over 34,000.

AL-MUKALLĀ, the only important port in eastern Yemen, is 320 miles northeast of Aden. With a population of more than 50,000, al-Mukallā is the largest city east of Aden and is a market center for the mostly undeveloped interior regions. The fishing industry is of prime importance here. Industries include a fish canning plant and a fish meal factory; fish products, along with tobacco, are the major exports. Boat building is also important here.

SA'DAH, situated 120 miles northwest of Sanaa, is the capital of Sa'dah Province. The city of roughly 12,000 residents (1986 est.) is a major administrative center in the north. Industries here include leather goods manufacture and stoneware production. Sa'dah was the first headquarters for the Zaydī *imams* (leaders), who ruled the country from 860 to 1962. It lost its stature when the capital was moved to Sanaa in the 17th century. A recently built road connects Sa'dah with Sanaa and Dhahran, Saudi Arabia.

COUNTRY PROFILE

Geography and Climate

The Republic of Yemen is located in the southern corner of the Arabian peninsula bordered by Saudi Arabia to the north and east, Oman to the east, and by the Gulf of Aden and the Arabian Sea to the South and by the Red Sea to the west. In area, it is about 204,000 square miles—the size of France.

Sanaa, the capital, is located at an altitude of 7,200 feet above sea level. Nearby is the highest mountain between East Africa and Iran, Djebel al-Nabi Shu'ayb, at 12,300 feet. The interior highlands have two rainy seasons a year: the first, in March and April; and a second, heavier, rainfall in July and August. For the rest of the year, sunny clear weather is the rule, with occasional dust storms. In winter, nighttime temperatures in Sanaa can drop to 30°F, with sunshine and day time highs of 70°F. Summer temperatures are very moderate, with highs of 85°F, dropping to the low 60s at night. The climate is very pleasant.

To the east of the highland interior, the terrain slopes down to the sandy wastes of the deserts of inner Arabia, the famous "Empty Quarter." These desert areas are extremely dry, with summer temperatures

exceeding 110°F, but they can be quite cold on winter nights.

To the west, in the Tihama (the lowlands adjoining the Red Sea) where there is a mixture of African and Arabian cultures, the temperatures are very hot and humid for much of the year. Even in winter, daytime highs can be in the 90s. During the summer, torrential monsoons occur. Aden is similarly hot and humid, with summer temperatures frequently in the 100s. However, winter temperatures are far milder and more pleasant. The Hadhramaut and the desert regions extending east from Aden to the Omani border are hot and dry.

Population

In 2000, Yemen's population was estimated at 17,521,000. Before the Gulf Crisis, about 1.4 million Yemenis were working overseas, with perhaps over 1 million in Saudi Arabia alone. One consequence of Iraqi aggression is that 800,000 to 850,000 Yemeni workers returned home. Over half the population of the Arabian peninsula lives in the Republic of Yemen.

In contrast to the nomadic traditions of other peninsula inhabitants, most Yemenis have long been settled in small agricultural communities, and the population is still mostly rural. Because of poverty and the shortage of arable land, there has been a long tradition of Yemeni men working as expatriate workers and small traders. Many Yemenis have close family relations in Ethiopia, Somalia, and Djibouti, and there are Yemeni-origin communities as far-flung as the U.S. and Korea.

Yemenis belong to two principal Islamic religious groups: The Zaydi community of the Shi'a sect, which predominates in the northern, central, and eastern areas of the country; and the Shafi community of the Sunni sect in the southwest. The Zaydi Shi'a have a distinct religious tradition that differs little from the Sunni mainstream. Yemen also has the vestiges of a once thriving Jew-

ish community, believed by some scholars to be one of the oldest diaspora communities in the world.

Arabic is the official language of Yemen, although English is gradually becoming more common as a second language.

Yemenis are proud of their culture and history and regard their distinctive civilization as a unifying force among the many tribes that make up the population. This distinctiveness has been recognized in several fields. For example, the architecture of the old city of Sanaa has been accorded protective status by UNESCO. Another characteristic feature of Yemeni society is the chewing of qat leaves at social sessions. Yemeni men, especially tribesmen, prominently carry the "jambia," a curved knife, at the waist as a sign of their personal dignity and independence.

Although Western dress is becoming more common, especially in the cities, most Yemeni men still wear the traditional "futtah" skirt, or full length "thobe," and an open jacket with their jambias. In the tribal areas of the north and east, most adult men also carry a rifle.

Yemeni women living in urban areas usually veil completely. In public, they generally wear black overskirts, loose-fitting capes and veils, or colorfully printed draperies over embroidered dresses and loose trousers. However, customs differ. In Taiz, women generally cover their hair with bright gold or saffron colored scarves but do not otherwise veil. Veiling is less common in rural areas, although many women will draw scarves across their faces if strangers approach. Some younger Yemeni women, especially university students, cover their hair with scarves. In Aden after unification, women have begun to cover their hair more frequently than before.

Yemenis are, for the most part, very friendly to Americans. Many have family and tribal ties to the thousands of Yemenis who have emigrated to the U.S. Since most

Yemenis do not speak English, even a few phrases in Arabic will be warmly appreciated.

History

From about 1000 B.C. to 600 A.D., Yemen was the center of an advanced civilization based on intensive agriculture and a lucrative trade in aromatics, such as frankincense, with Mediterranean countries. The Biblical Queen of Sheba, Queen Bilquis, presided over a flourishing kingdom centered in Marib. Ruins of temples and walls, as well as of the famous Marib dam whose final rupture in A.D. 570 (recorded in the "Elephant" sura of the Koran) spelled the end of this civilization, can still be seen near Marib. According to popular tradition, the city of Sanaa was founded by Shem, a son of Noah.

The country converted to Islam about A.D. 628 during the prophet Mohammed's lifetime. Previously, it had undergone periods as both a Jewish and Christian kingdom. Yemen provided many warriors to Islamic armies, and its artisans worked in constructing buildings that have given Islamic architecture its renown. Since early medieval times, Yemen has enjoyed varying political and economic fortunes that have been tied closely to the relative importance of its caravan routes. The Zaidi Imamate was founded by Yahya bin Husain bin Qasim al-Rassi, in A.D. 897 and lasted until the Republican Revolution in 1962. Other important dynasties that ruled in northern Yemen included Sulayhids, who produced the second great female leader in Yemeni history, Queen Arwa bint Ahmad. She established her capital in Jibla and ruled between A.D. 1067 and 1138. A second dynasty, important for its mosque-building activities and for the establishment of the famous medieval university in Zabid, was the Rasulids. Areas of the country were twice ruled by the Ottoman Turks—the first period lasted from 1513 to 1636—and the second from 1849 to 1918.

After the departure of the Turks in 1918, Imam Yahya assumed political control of the north. Succeeding Imams kept the country in almost complete isolation until the regime was overthrown on September 26, 1962 by elements intent on modernizing the country's medieval economic, political, and social structures. The new republic was opposed by forces loyal to the Imam's family for several years. The Republicans were supported by Egyptian troops and the Royalists by Saudi Arabia, and periodic heavy fighting continued for almost 8 years between the Republican and Royalist forces and their supporters.

The Egyptians departed in November 1967, and a settlement was mediated by Saudi Arabia and Egypt in March 1970, which guaranteed a republican form of government in the former Yemen Arab Republic. Subsequent presidents of the republic established a written constitution and parliament. The new state faced both external and internal threats. It fought two border wars with the Communist-ruled People's Democratic Republic of Yemen in 1972 and 1979 and suffered from a Communist-inspired insurgency until the mid-eighties. Two Presidents were assassinated within a year in 1978. President Ali Abdullah Saleh, the current President of the unified Republic of Yemen, took office in that year.

South Yemen was a focus of European attentions from the beginning of the 15th Century. Attracted by the superb natural harbor of Aden, the British came to Aden in 1839 and quickly established relations with sultans in the hinterlands of Hadhramaut to protect their position in Aden. With the opening of the Suez Canal in 1869, the British reinforced their position in Aden in order to ensure their line to India and their dominance in the region. Following the departure of the British in 1967 and independence, the militant Marxist National Liberation Front (NLF) took power. The People's Democratic Republic of Yemen (PDRY) was proclaimed

under Communist Aegis in 1970 and immediately began to support an unsuccessful guerilla war in the Dhofar province in neighboring Oman. In January 1986, Aden was rocked by a bloody 10-day coup between rival leftist factions. Estimates of those killed during the coup range up to 10,000.

Yemeni unification took place on May 22, 1990, following the decline of Soviet support for the PDRY and the collapse of the economy. The new state, the Republic of Yemen, was accorded immediate recognition by most of the world community, including the U.S. and Saudi Arabia.

Public Institutions

Yemen essentially has two political systems: an developing democracy and an ancient tribal system. Yemen's government is divided into three branches: the executive, with the President appointing a cabinet headed by a Prime Minister; the legislative, with a 301-member unicameral Parliament; and the judiciary, consisting of three levels of courts (magistrate, appellate, and supreme).

The president is elected by popular vote from at least two candidates selected by the legislature. Yemen held its first direct presidential elections in September 1999, electing President Ali Abdallah Salih to a five-year term in what were generally considered free and fair elections. However, a Constitutional amendment adopted in 2000 extended the presidential term by two years, moving the next presidential election to 2006.

A 2001 amendment created the bicameral legislature consisting of a Shura Council (111 seats; members appointed by the president) and a House of Representatives (301 seats; members elected by popular vote). Parliamentary terms of office are 6-years.

Yemeni law is a mixture of tribal customs (known as *urf*), Muslim religious statutes (*sharia*), execu-

tive decree, and parliamentary legislation. New laws do not yet cover the full range of civil issues, but they have codified some traditional procedures, while introducing new concepts regulating commerce, labor, nationality, taxes, and civil rights. Outside urban areas, justice and law are still largely administered by traditional figures such as religious judges and tribal leaders

Arts, Science, and Education

In medieval Yemen, disciplines of law, religion, history and poetry were sophisticated and widely spread among the population. Yemen made many important contributions to Islamic civilization: a famous example is the development of algebra in the University of Zabid in the Tihama. Yemeni teachers taught in the Al-Azhar University of Cairo in the 10th and 11th centuries and students came to Zabid from all over Arabia, Ethiopia and Somalia. Yemeni isolation in recent centuries, however, led to a development gap which has had lasting consequences.

A low level of education (literacy is about 53% for males and 26% for females) has hampered development projects initiated by the government, but the number of students has greatly increased in recent years. Primary school enrollment in 1997 was about 2.7 million students. However, in the same year, secondary school enrollments only reached to about 354,000 students.

Yemen's principal universities are the University of Sanaa's arts colleges (including the Faculty of Education, which has branches in several other locations in Yemen) and Aden University. Total university enrollment in 1997 was about 65,675 students, with about 2,000 additional students studying abroad.

Commerce and Industry

Although once noted for its exports of coffee from the port of Mocha, today Yemen now exports little other than oil. The discovery of oil in both North and South Yemen has been regarded as the most significant economic development in many years. Oil was discovered July 4, 1984, by the American-owned Yemen Hunt Oil Company (YHOC) in the Marib region east of Sanaa. The Soviets also found oil about 80 miles to the south of the Marib area in the mid-80's. Yemen is believed to have modest reserves by Arabian peninsula standards. Export pipelines were constructed from both fields to oil terminals. Oil from the YHOC fields began to be exported in 1988, while no oil from former Soviet field (block 4) has been exported as of July 1992.

Outside of the petroleum sector, Yemen's economic prospects are limited. Yemen continues to import much of its food and, with a population growing at over three percent a year, chances for it becoming self-sufficient in food are slim. Agriculture cannot be expanded significantly due to the limited supply of water. Yemen is able to produce modest quantities of fruits and vegetables for export to its neighbors which should increase once relations with them improve. A small food processing industry has developed in the last decade mainly using imported raw materials. While primarily for the domestic market, some of this production is exported; including to Europe. Fishing holds some brighter prospects although over-fishing in the former South has severely depleted stocks. The government is committed to economic liberalization and improving the climate for investment although so far this commitment has yielded few tangible results. A new investment law has been passed but implementing regulations and the investment authority are not yet functioning.

The government has eased restrictions aimed at controlling imports. Formerly, it had sought with little

success to limit outflow of foreign exchange by restricting imports through licensing and providing foreign exchange only for authorized imports. After unification, the government relaxed import restrictions and has generally not acted to halt smuggling of consumer goods. The government is allowing high levels of consumption and has not yet completed legal and political steps to create a more favorable environment for capital investment.

Transportation

Local

Within Sanaa, taxis are common, but hardly luxurious, and often operate on a group basis. Fares are generally reasonable and should be negotiated in advance. Tipping is not necessary. Women are generally advised not to take taxis alone.

Regional

Taxis between cities have a poor safety record and are not recommended. Buses are generally considered safer, since journeys are scheduled and drivers have no incentive to make the trip faster than safety permits.

The network of paved roads which now links Yemen's major cities is being steadily extended, but many parts of the country are accessible only by rough and narrow tracks with no roadside services available. Yemen is now connected to Saudi Arabia by an excellent road running from Jeddah to Hodeidah.

Major airlines serve Sanaa International Airport, including Air France, Lufthansa, Egyptair, Royal Jordanian, KLM (starting October 1992) and the national carrier, Yemenia Airlines. No U.S. carriers operate in Yemen.

Communications

Telephone and Telegraph

Domestic telephone service is fairly reliable. Service to countries, such as the U.S., with international direct-dial facilities is excellent but very expensive. A call to the U.S.

costs about twice as much as the cost of the same call initiated from the U.S. Operator-assisted calls can take up to 3 hours. It is more economical to have families and friends in the U.S. do most of the calling. Telegrams may be sent from the downtown office of Cable and Wireless. A written text is necessary to ensure accuracy.

Health and Medicine

Sanaa is located at an altitude of 7,200 feet and is dusty. Individuals with respiratory or heart problems are suggested to contact Med before assignment.

Medical Facilities

Sanaa hospitals are used only in emergency situations. Hospitals are also located in Sa'ada and Jibla (both about 4 hours by car from Sanaa).

You and your family should ensure that all required dental treatment is completed before arriving in Sanaa. Local dentists are not trained or equipped to U.S. standards. They generally are used only for simple fillings and similar dental procedures.

Community Health

Public health conditions in Sanaa and other cities remain poor. Municipal garbage collection is irregular, and many areas suffer from overflowing dumpsters. Given the dryness and altitude, household pests are not a big problem and all homes are screened against flies. Happily, few rats exist in Sanaa, since a thriving population of wild cats and dogs keeps them under control. The cats and dogs pose some threat of rabies. Early morning joggers sometimes carry small stones to scare off the easily cowed dogs, who are rarely seen during day and evening hours.

Most water supplies, either from city services or private water companies, come from deep wells but are often contaminated. A city-wide sewer system is under construction

but not yet completed, and wells can be contaminated by ubiquitous shallow cesspools. Proper treatment of water by boiling and filtration protects against water-borne diseases.

Preventive Measures

Dusty days can prove an inconvenience to sinus and allergy sufferers. Plant allergies, in contrast, are not a problem with the sparse vegetation around Sanaa.

Commercially bottled water and carbonated soft drinks manufactured in Yemen are safe and are widely available throughout the country. Some local hotels and restaurants offer food that is safe and sanitary.

Typhoid has occurred in Yemen in recent years, as well as polio, tuberculosis and scattered incidents of hepatitis A. Some malaria cases have been reported from exposure in the lowlands. However, malaria is not present at the altitude of Sanaa. Cholera has been reported in scattered locations in Yemen.

Gastro-intestinal parasites are common, but can be diagnosed and treated routinely. Firm discipline in water and food preparation greatly reduces the likelihood of such illnesses.

Schistosomiasis or bilharzia is endemic in Yemen but can be easily avoided by not wading or swimming in streams or fresh water pools. Fresh vegetables must be washed in a chlorine or iodine solution. You can buy imported meats, but they must be well cooked. Local meat from selected stores is also safe after thorough cooking.

Qat

Qat is a leaf which many Yemenis like to chew in the afternoon hours after lunch. It is on the official U.S. list of controlled substances and may not be imported into the U.S. It produces a mild amphetamine-like reaction. Much of the social activity of Yemen is centered around the "Qat chew." Important business agreements as well as community and national matters are usually

discussed, and often decided during these sessions.

While qat does not appear to be physically addicting, withdrawal reaction has been known to occur after many years of regular chewing. The dangers include: blood pressure elevation; infectious diseases transferred via its leaves and/or the water with which it is washed; and ingestion of pesticides or other chemicals sprayed on the leaves.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Connections are usually made from Frankfurt, Paris, London, Bahrain or Jeddah, with flights in or out of Sanaa most days of the week. Reservations should be made and confirmed as far ahead of time as possible.

Passports and visas are required. As of November 17, 2001, the Yemeni government stopped issuing visas to American passport holders at airports and other points of entry. All U.S. travelers to Yemen must obtain visas prior to travel at Yemeni embassies or consulates overseas. Upon arrival in Yemen, travelers should register within the first month at the Immigration Authority in Sanaa or at any police station in the district where they are residing. Long term residents should re-register when they change their residence. Yellow fever vaccination is recommended. For further information on entry requirements, please contact the Embassy of the Republic of Yemen, Suite 705, 2600 Virginia Avenue, N.W., Washington, D.C. 20037, telephone (202) 965-4760; or the Yemen Mission to the U.N., 866 United Nations Plaza, Room 435, New York, N.Y. 10017, telephone (212) 355-1730. The Embassy in Washington, D.C. maintains a home page at <http://www.yemenembassy.org>.

Americans who are considering studying in Yemen should make this fact clear to a Yemeni consular official in the United States and apply for the appropriate visa. Some American Muslims who come to Yemen for tourism or Islamic studies at Yemeni schools and have appropriate visas nevertheless have been detained by Yemeni security officials who seized their passports. In such instances, the American citizens were told their passports would be returned when they departed the country. Some Americans studying in Yemen without official permission have been deported.

Yemeni government security organizations have arrested and expelled foreign Muslims, including Americans, who have associated with local Muslim organizations considered extremist by security organs of the Yemeni government. The events mentioned in the WARNING section of this Consular Information Sheet have served to make Yemeni authorities, if anything, more suspicious of some foreign Muslims. Any American in Yemen who is considering associating with any political or fundamentalist Islamist group should discuss those intentions with a Yemeni consular official in the United States before traveling to Yemen. Americans risk arrest if they engage in either political or other activities that violate the terms of their admission to Yemen.

Yemeni law prohibits the removal of antiquities from the country. Yemeni authorities define antiquities loosely as anything man-made that is more than 50 years old. Persons attempting to depart with antiquities are subject to arrest, imprisonment or fines.

Yemeni customs authorities may enforce strict regulations concerning temporary importation into or export from Yemen of items such as firearms, pornography, and antiquities. It is advisable to contact the Embassy of Yemen in Washington, D.C. for specific information regarding customs requirements.

Americans living in or visiting Yemen are encouraged to register at the Consular Section of the U.S. Embassy in Sanaa and obtain updated information on travel and security conditions within Yemen. The U.S. Embassy is open for American citizen services between 8:30 and 10:30 a.m., Saturday through Tuesday. The Embassy is located at Dhahr Himyar Zone, Sheraton Hotel District, P.O. Box 22347. The telephone number of the Consular Section is (967) (1) 303-155, extension 118, 265 or 266. The fax number is (967) (1) 303-175.

Laws

Photography of military installations, including airports, equipment, or troops is forbidden. In the past, such photography has led to the arrest of U.S. citizens. Military sites are not always obvious. If in doubt, it is wise to ask specific permission from Yemeni authorities.

Pets

Dogs and cats require current rabies and distemper vaccinations as well as a general certificate of good health dated within 2 weeks of arrival. Pets are generally cleared immediately upon their arrival. Shipment through Air France or Lufthansa is recommended. Some birds, including African parrots, and animals such as turtles and reptiles are not permitted entry. There are several Western-trained veterinarians in Sanaa.

Currency, Banking, and Weights and Measures

The Yemeni Riyal (YR) is broken down into 100 fils. Notes are available in denominations of YR1000, 500, 100, 50, 20, 10, 5 and 1. Coins are in denominations of 50, 25, 10, 5 and 1 fils. The exchange is around 164.59YR=US\$1.

Travelers should be aware that automatic teller machines (ATM) are not available in Yemen. Credit cards are not widely accepted.

The metric system is understood within Yemen's main cities, but sev-

eral traditional measures continue in use.
