Muslim Conquest of Spain (711–718)

PRINCIPAL COMBATANTS: Arabs (Moors) vs. Visigoths and Spanish Christians

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Arabs sought conquest of Spain.

OUTCOME: Most of Spain fell into Arab (Moorish) hands.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Arabs commanded at least 50,000 men.

CASUALTIES: Unknown, but consistently heavy among the Visigoths

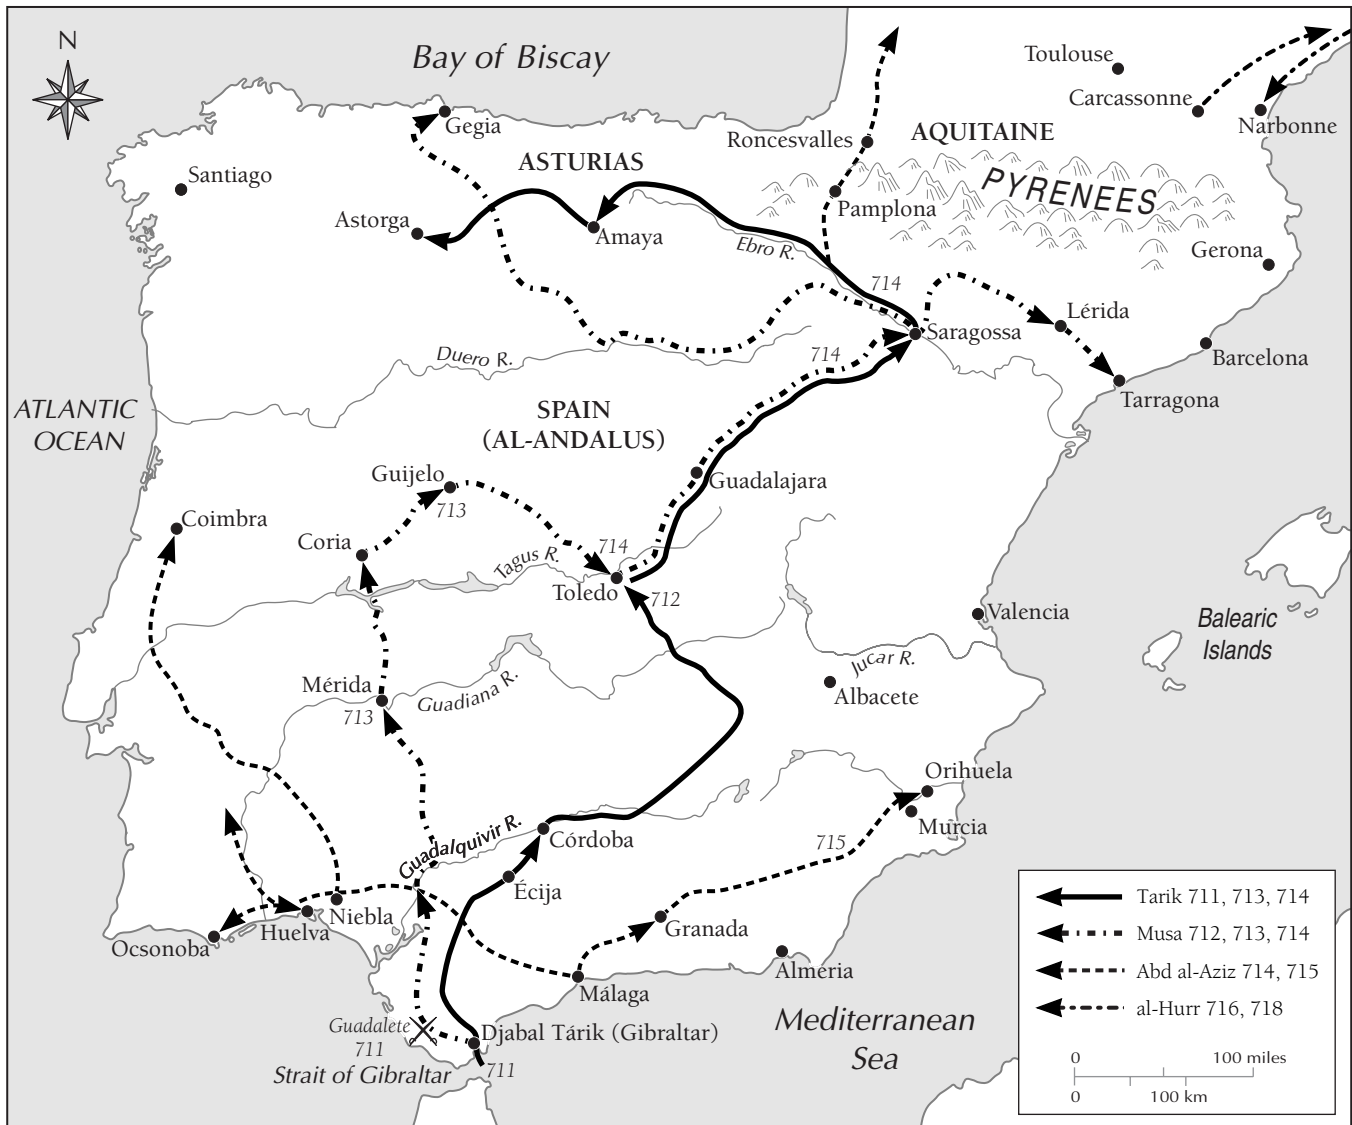

TREATIES: Treaty with the Visigoths at Murcia, 713

When the Umayyad clan took over the Islamic Empire at the end of the seventh century, Muslims began a new wave of conquests that would extend Islam to its utmost. During this period, Spain was controlled by the Visigoths, who had earlier conquered certain Arab territories. Musa ibn-Nusayr (c. 660–c. 714), Arab viceroy in North Africa, decided to invade Spain in an effort to regain some of what had been lost. Tarik ibn-Ziyad (d. c. 720) was sent at the head of an Arab-Berber army to attack across the Gibraltar strait in 711. On July 19, 711, at the Battle of Laguna de Janda, ibn-Ziyad defeated King Roderick (d. 711) and his forces. Roderick, last of the Visigoth kings, fell in battle.

The force of ibn-Ziyad's personality was such that many in Roderick's defeated army joined him in completing the conquest of Spain. Córdoba and Toledo, the Visigoth capital, fell by early 712. At this point, Musa ibn-Nusayr joined the campaign at the head of 18,000 Arabs, who landed at Algeciras in June 712. The army advanced to Medina-Sidonia, which fell to it, then to Seville and Mérida, the latter falling to the Arabs on June 30, 713. At this point, ibn-Nusayr and ibn-Ziyad linked up, ibn-Ziyad having by this time acquired the support of Spain's Jews.

After campaigning together for a time, ibn-Ziyad launched a separate campaign against northwest Spain, conquering León and Astorga. Musa ibn-Nusayr returned to Damascus, Syria, in 713 after installing his son, Abd al-Aziz (d. 716) as emir in the south of Spain. Negotiating from a position of great strength, al-Aziz made peace with the Visigoths at Murcia, making the remaining Visigoths in southern Spain Arab vassals. In the meantime, elsewhere in Spain, the Arab conquests continued: Saragossa fell in 714 and Barcelona in 717. The culmination of the Arab conquest came in 718, after the Spanish Christians had been pushed to the mountainous regions of northern and western Spain and the Muslims—now known as the Moors—controlled territory touching the Pyrenees.

Muslim conquest of Spain, 711–718

Muslim Dynastic War (1196–1200)

PRINCIPAL COMBATANTS: Al-Malik al-Adil vs. the sons of Saladin

PRINCIPAL THEATER(S): Egypt

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The original dispute involved control of the sultanate of Cairo, but grew to encompass the entire Ayyubid Empire.

OUTCOME: Al-Malik al-Adil achieved control of the empire Saladin had divided between his sons.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Hoping to avoid a ruinous dynastic struggle, the Muslim leader Saladin (c. 1137–93) wisely apportioned his great Ayyubid Empire in Egypt and Syria among designated heirs before his death. Unfortunately, he overlooked the sultanate of Cairo, and in 1196, three years after Saladin's death, two of his sons, al-Afdal (r. 1186–96) and al-Aziz (r. 1193–98), the sultan of Syria and the sultan of Egypt, fell to disputing over control of Cairo. Al-Malik al-Adil (d. 1218), Saladin's brother, also participated in the dispute, fighting on both sides until he himself gained the upper hand over his nephews. In January 1200, al-Adil fought the critical Battle of Bilbeis, Egypt, and was able to seize control not only of Cairo but of the entire empire Saladin had left to his sons. Thus, for a time, Egypt and Syria were united under his rule. Nevertheless, the defeat of Saladin's heirs did not bring peace to the Ayyubid dynasty. Disputes, quarrels, and armed

conflict persisted, the Ayyubids were progressively weakened, and Ayyubid control of the empire finally collapsed in 1250 in a rebellion by the Mamluks.

Muslim Invasion of Egypt (639–642)

PRINCIPAL COMBATANTS: Muslim Arabs vs. Egypt

PRINCIPAL THEATER(S): Egypt

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: The Muslims overran Egypt and occupied its major cities.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

During the first epoch of Islamic expansion, an army under Amr ibn al-'As (d. 633) defeated Byzantine forces at the Battle of Babylon, which took place near Heliopolis in July 640. This victory served as al-Aslon's springboard to an assault on the fortress city of Babylon itself in April of the following year. From here, al-Aslon led a Muslim assault on the Egyptian capital, taking Alexandria in September 642 after a prolonged siege.

Torrey, ed. *History of the Conquest of Egypt, North Africa, and Spain* (New Haven, Conn.: Yale University Press, 1922).

Muslim Invasion of India (661–663)

PRINCIPAL COMBATANTS: Muslim Arabs vs. India

PRINCIPAL THEATER(S): Sind and lower Indus Valley, India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Raids, preparatory to invasion and eventual conquest

OUTCOME: The raids were successful, but the invasion was not immediately succeeded by occupation.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The Muslim Arabs, having expanded through India and having made a truce with the Byzantine Empire (in 659), turned their attention to an advance into India. Under the command of Ziyad ibn Abihi (d. 672), Arab forces reached the borderlands of India by 661, then conducted raids into Sind and the lower Indus Valley. At this point, the invasion did not result in occupation.

Further reading: Karen Armstrong, *A Short History of Islam* (New York: Random House, 2002); Sir John Bagot Glubb, *The Great Arab Conquests* (London: Hodder and Stoughton, 1963); P. M. Holt, Ann K. S. Lambton, and Bernard Lewis, *The Cambridge History of Islam*, 2 vols. (New York: Cambridge University Press, 1970); Charles C. Torrey, ed. *History of the Conquest of Egypt, North Africa, and Spain* (New Haven, Conn.: Yale University Press, 1922).

Muslim Invasion of Morocco (681–683)

PRINCIPAL COMBATANTS: Arab Muslims vs. the Berbers of Morocco (with Byzantine allies)

PRINCIPAL THEATER(S): Morocco

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: The Arabs penetrated deeply into Morocco before they were driven out by a Berber counterattack conducted in concert with Byzantine action.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Egypt having been invaded and occupied during the MUSLIM INVASION OF EGYPT from 639 to 642, the Arabs used it as a staging area for an invasion of Morocco, which started in 681 under the command of Okba ibn Nafi (fl. late seventh century). The invaders advanced all the way to the Atlantic before they were beaten back to Cyrene by Berbers who had allied themselves with the Byzantine garrison at Carthage. Ibn Nafi was killed in the retreat.

S. Lambton, and Bernard Lewis, *The Cambridge History of Islam*, 2 vols. (New York: Cambridge University Press, 1970); Charles C. Torrey, ed. *History of the Conquest of Egypt, North Africa, and Spain* (New Haven, Conn.: Yale University Press, 1922).

Muslim Invasion of Southern France *See* FRANKISH-MOORISH WAR, FIRST.

Muslim Invasion of Transcaspia (716)

PRINCIPAL COMBATANTS: Muslim Arabs vs. the peoples of the Transcaspian region

PRINCIPAL THEATER(S): Territory between the Oxus River and the Caspian Sea

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: The Arabs dominated the region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

One of the landmarks in the great movement of Muslim expansion out from the Middle East (*see* MUSLIM INVASION OF EGYPT) was the overrunning of the Transcaspian region. The Yemenite commander Yazid ibn Mohallib (fl. early eighth century) led an invasion that swept through and dominated the territory bounded by the Oxus (Amu Dar'ya) River and the Caspian Sea.

Further reading: Karen Armstrong, *A Short History of Islam* (New York: Random House, 2002); Sir John Bagot Glubb, *The Great Arab Conquests* (London: Hodder and Stoughton, 1963); P. M. Holt, Ann K. S. Lambton, and Bernard Lewis, *The Cambridge History of Islam*, 2 vols. (New York: Cambridge University Press, 1970).

Muslim Invasion of Transoxiana (674–676)

PRINCIPAL COMBATANTS: Arab Muslims vs. the Byzantines

PRINCIPAL THEATER(S): Transoxiana Uzbekistan and Anatolia (Turkey)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: Initially victorious in Transoxiana, the Arabs lost heavily in Anatolia and were forced to withdraw from Anatolia as well as the entire Transoxiana region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: A treaty was concluded between the Arabs and Byzantines in 679, pledging 30 years of peace and an Arab tribute to the Byzantines.

After raiding India (*see* MUSLIM INVASION OF INDIA) and while engaged in general warfare against the Byzantines, the Muslims invaded Transoxiana. In 674, Muslim forces took Bukhara and, two years later, the leading trading city of Samarqand. However, these conquests were temporary, as the Byzantines defeated the Arabs in a major land battle at Armorium (in Anatolia, 669) and also in two major sea

battles, at Cyzicus (Kapıdagı) in the Sea of Marmara (672) and at Syllaeum (679).

Muslim Raids on Aquitaine and South France

See FRANKISH-MOORISH WAR, FIRST.

Muslim Rebellion in China (1863–1877)

PRINCIPAL COMBATANTS: Manchu Chinese forces vs. Muslim rebels in Turkistan; Russian peripheral involvement

PRINCIPAL THEATER(S): Turkistan

DECLARATION: Yakub Beg proclaims an independent Turkistan, 1863

MAJOR ISSUES AND OBJECTIVES: China sought to reclaim rebellious Turkistan.

OUTCOME: The rebellion was put down, but a separate treaty had to be made with a Russian occupation force.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Manchu forces, 100,000; rebel strength unknown

CASUALTIES: Known to be very high among Muslim civilians

TREATIES: Treaty between China and Russia, 1881

In 1863, Muslim tribes in Chinese Turkistan—west of Tibet—rebelled against the Manchu (Qing or Ch'ing) rulers. Under Yakub Beg (1820–77), the rebels established a breakaway government at Kashi, near territory controlled by Russia. Always fearful of rebellion, the Russians sent troops into Turkistan in 1871, but in 1872 signed a trade treaty with Yakub Beg, thereby legitimating his claim to sovereignty.

Although the Russians were satisfied that they had controlled the Muslim rebellion as far as their interests were concerned, the Chinese sent an army of 100,000 under General Zuo Zongtang (Tso Tsung-t'ang; 1812–1885) to put down the rebels in Turkistan. In 1876, Tso engaged Beg at Kashi and defeated him. Later that year, Tso captured the Muslim capital at Urümqi, and on May 16, 1877, took the principal Muslim stronghold of Turfan. This forced Beg to acknowledge Chinese authority over Turkistan. Now, however, it was the Russians who presented a problem. They declined to leave Turkistan until 1881, when they concluded a treaty with China in which Turkistan reverted back to the Chinese—in exchange for 9 million rubles. The money was compensation to Russia

for the cost of the occupation—even though China had not authorized that occupation.

Muslim Revolt (656)

PRINCIPAL COMBATANTS: Caliph Ali ibn Abi Talib vs. the rebels Talha and Al-Zubair

PRINCIPAL THEATER(S): Mesopotamia (Iraq)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The rebels sought to topple Ali ibn Abi Talib.

OUTCOME: The rebels were defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rebel forces numbered 30,000; Ali ibn Abi Talib's strength was similar.

CASUALTIES: Unknown

TREATIES: None

The Arab world was rocked by turbulence after the passing of the prophet Muhammad (570–632). In 656, the third caliph, Uthman ibn Affan (d. 656), was assassinated and succeeded by the cousin and son-in-law of Muhammad, Ali ibn Abi Talib (c. 600–661). Two followers of Muhammad, Talha (d. 656) and Al-Zubair (d. 656) rebelled against him with the support of Muhammad's widow, Aishah (614–678). The rebels recruited a 30,000-man army and fought the so-called Battle of the Camel near Basra, Mesopotamia (Iraq) on December 4, 656. (Aishah observed the battle at close quarters while seated on a camel.) The battle ended when Talha and Al-Zubair were killed. Aishah was captured and sent into exile. However, Ali's ascension to the caliphate did not bring stability, but ignited the MUSLIM CIVIL WAR (657–661).

Mysore War, First (1767–1769)

PRINCIPAL COMBATANTS: British East India Company vs. Mysore

PRINCIPAL THEATER(S): Mysore (modern location's name), India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The East India Company sought dominance in the region.

OUTCOME: After the company's chief allies withdrew, Mysore defeated the army of the company and concluded a peace favorable to Mysore.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

British East India Company, 1,400 British infantry, 800 British cavalry, 9,000 Sepoy troops; Mysore forces, 42,000 infantry, 28,000 cavalry

CASUALTIES: East India Company forces, fewer than 1,000 killed or wounded; Mysore forces, 7,000 killed or wounded

TREATIES: Treaty of 1769

The British East India Company competed for supremacy in Indian trade with the Mysore kingdom and the Marathas. Striking an uneasy alliance with the Marathas and Hyderabad, the East India Company attacked Mysore in 1767 and defeated Mysore forces led by the Muslim Hyder Ali (1722–82). On September 24, 1767, an Anglo-sepoy force of more than 11,000 fought a Mysore force of 42,000 infantrymen and 28,000 cavalry troops at Trincomalee. Despite being massively outnumbered, the Anglo-sepoy army scored a major victory, inflicting some 4,000 casualties on the enemy while suffering 48 British and 67 sepoy casualties. Just a few days later, 65,000 Mysori attacked the Anglo-sepoy camp at Changama and were repelled, losing 2,000 killed or wounded. The defenders suffered 170 casualties.

While this action was taking place, another Anglo-sepoy force stormed the Mysore fortress at Mulwagal, inflicting 1,000 casualties at a cost of 230 killed or wounded.

In 1768, both the Marathas and the forces from Hyderabad withdrew from the alliance, and Haidar, who had always evaded the British, menaced the East India Company headquarters at Madras in 1769. In April of that year, Britons concluded a peace, primarily on Mysore terms, and the stage was set for a Second MYSORE WAR.

(New York: Oxford University Press, 1981); Jac Weller, *Wellington in India* (London: Greenhill Books, 2001).

Mysore War, Second (1780–1784)

PRINCIPAL COMBATANTS: Mysore (with French aid) vs. the British East India Company (Anglo-Indian forces)

PRINCIPAL THEATER(S): Mysore (Karnataka) and Madras (Tamil Nadu), India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dominance of Mysore

OUTCOME: After initial successes, Mysore was defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Mysore, 90,000; France, 1,000; Anglo-Indian forces, 12,000

CASUALTIES: Mysore, 16,500 killed or wounded; Anglo-Indian, 4,573 killed, wounded, or taken prisoner; French losses unknown

TREATIES: Treaty of Mangalore, 1784

As with the AMERICAN REVOLUTION, Britain fought the Second Mysore War against both indigenous people and the French, who had established a presence in India, allied with Hyder Ali (1722–82), at Pondicherry on the Karnataka coast. Before the war got under way in earnest, the British had seized Pondicherry as well as Mahe (on the Malabar coast) from the French.

In July 1780, Hyder led an army of 55,000 infantry, 28,000 cavalry, 7,000 rocketeers and artillerymen, and 400 French gunners against the British in the Karnataka. This massive force readily overwhelmed the Anglo-Indian garrison of 3,853 at Perambakam (Pollilur) on September 10. More than 300 British soldiers were killed in battle, as were some 1,700 sepoys. At least 1,000 prisoners were taken, most of whom died in captivity, making this one of Britain's costliest defeats in India.

After triumphing at Perambakam, Hyder overran the Karnataka and menaced the British stronghold of Madras. An Anglo-Indian force of about 10,500 met Hyder's army of 40,000 at Porto Novo on June 1, 1781, defeating it soundly. Three thousand Mysoris died, and twice that number were wounded. This Anglo-Indian victory was followed by two more, at the Second Battle of Pollilur (August 27), in which 12,000 Anglo-Indian troops defeated more than 80,000 Mysoris, and at Sholingarh, where fewer than 9,000 Anglo-Indians defeated 70,000 of Hyder's troops. Sholingarh brought the Mysoris close to defeat; however, French naval forces intervened with the capture of Trincomalee on the coast of Ceylon (Sri Lanka) on August 30, 1782. From here, the French were able to send aid and arms to Haidar, and, on June 13, 1783, the French garrison at Cuddalore, consisting of 3,000 French regulars, 3,000 sepoys, and 5,000 Mysori troops, coordinated with the French fleet to defeat an Anglo-Indian force of nearly 10,000. Despite this victory, however, the 1783 Treaty of Paris, which ended the American Revolution, mandated the withdrawal of French support from Mysore, and, the following year, the Mysoris had little choice but to make peace.

Further reading: Barbara Daly Metcalf and Thomas R. Metcalf, *Concise History of India* (New York: Cambridge University Press, 2002); Vincent A. Smith, *The Oxford History of India*, 4th ed. (New York: Oxford University Press, 1981); Jac Weller, *Wellington in India* (London: Greenhill Books, 2001).

Mysore War, Third (1790–1792)

PRINCIPAL COMBATANTS: Mysore vs. the Anglo-Indian forces of the British East India Company

PRINCIPAL THEATER(S): Mysore (Karnataka), India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Domination of Mysore

OUTCOME: Mysore relinquished about half of its territory to the British East India Company.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Mysore, 45,000; Anglo-Indian forces, 61,000

CASUALTIES: Mysore, 23,000 killed, wounded, or died from illness; Anglo-Indian forces, 1,500 killed or wounded

TREATIES: None

The successor of Hyder Ali (1722–82) as leader of the Mysori opposition to the hegemony of the British East India Company was Tippu Sultan (1749–99). On December 28, 1789, he attacked British defenses at Travancore and was repulsed at terrible cost: 2,000 killed or wounded out of the 15,000 he committed to the battle.

Seeking to forestall any further attacks, Charles, Lord Cornwallis (1738–1805), recently named governor-general of British India, invaded the territory controlled by Tippu, laying siege to the Mysore stronghold of Bangalore during March 5–21, 1791. Of the 8,000 Mysoris holding this position, 3,000 were killed or wounded before resistance collapsed. Moreover, Tippu's attempt, on March 7, to relieve the siege was likewise repulsed at great loss to the Mysori—2,000 killed or wounded.

Maintaining the momentum of these victories, Cornwallis led 23,000 men against Mysore fortifications of Carigat; the resulting battle, sometimes called the Battle of Arikera, resulted in 2,000 casualties among the 20,000 Mysori defenders and the loss of the fortifications.

In 1792, Cornwallis led a massive army, consisting of 9,000 British regulars, 22,000 sepoys, 18,000 Hyderabad cavalrymen, 12,000 Maratha mercenary troops, complete with artillery, in a wide-ranging campaign. Of this number, 8,700 were deployed against Seringapatam, Tippu's stronghold, a fortification celebrated as perhaps the most formidable on the subcontinent and garrisoned by 45,000 Mysoris. Despite being overwhelmingly outnumbered, Cornwallis stormed the bastion on February 6 and, at the cost of 535 killed and wounded, inflicted

ing 3,000 casualties among the Mysori. When an additional 9,000 Anglo-Indian troops arrived a few days later, Tippu surrendered, but no definitive treaty was concluded. Indeed, Tippu used the truce that commenced in March 1792 to regroup for a new war, which came seven years later.

See also MYSORE WAR, FIRST; MYSORE WAR, SECOND; and MYSORE WAR, FOURTH.

Further reading: Barbara Daly Metcalf and Thomas R. Metcalf, *Concise History of India* (New York: Cambridge University Press, 2002); Vincent A. Smith, *The Oxford History of India*, 4th ed. (New York: Oxford University Press, 1981); Franklin B. Wickwire and Mary B. Wickwire, *Cornwallis: The Imperial Years* (Durham: University of North Carolina Press, 1980).

Mysore War, Fourth (1799)

PRINCIPAL COMBATANTS: Mysore (with a limited French aid) vs. the British East India Company and Hyderabad

PRINCIPAL THEATER(S): Mysore (Karnataka), India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Domination of Mysore

OUTCOME: Tippoo, son of Haydar Ali, died in battle; that portion of Mysore not lost in the Third Mysore War was now divided between the British and their Hyderabad allies.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Mysori forces, 25,000; Anglo-Indian forces, 57,000

CASUALTIES: Mysori losses, 11,000 killed; Anglo-Indian losses, 1,464 killed or wounded

TREATIES: None

The final bout between Britain and Tippu Sultan (1749–99) was staged in 1799.

Anglo-Indian commanders used about half of the available force of 57,000 men against the Mysori when war resumed in 1799, as British authorities responded to an attempt by Tippu, leader of the Mysori, to make an anti-British alliance with France. Two Anglo-Indian forces converged on Tippu's stronghold at Seringapatam. Tippu unsuccessfully attempted to stop the convergence at Sedaseer Hill on March 6, 1799, but was defeated with the loss of 2,000 troops. On March 27, Tippu offered battle at Malavelley and was again defeated, losing half of his attacking force of 2,000.

The two defeats left Seringapatam ripe for attack, although, as in the Third MYSORE WAR, it remained a formidable objective, excellently situated and garrisoned by 13,737 Mysori and 120 French troops. In addition, 8,100 Mysori soldiers were positioned on a fortified island southeast of the fortress city. The Anglo-Indian force began its siege on April 17, and the fortress fell on May 4, with great loss of life. The attackers lost 389 killed or wounded, whereas the garrison suffered at least 6,000 deaths, including that of Tippu Sultan. Added to the number of defenders killed during the siege itself, Mysori losses at Seringapatam reached 9,000 killed.

Nadir Shah's Abdalis Campaign *See*
PERSIAN-AFGHAN WAR (1726–1738).

Nadir Shah's Conquest of Bokhara and Khiva (1740)

PRINCIPAL COMBATANTS: Persia vs. Uzbeks

PRINCIPAL THEATER(S): Region of Bukhara and Khiva (Uzbekistan)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest and territorial expansion

OUTCOME: Nadir Shah achieved quick victory and annexed territory south of the Aral Sea.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: None

Nadir Shah (1688–1747), perhaps the greatest military mind in later Persian history and the last of the great Asian conquerors, decided to annex the region south of the Aral Sea. He invaded the land of the Uzbeks and defeated that tribe in two battles, one at Charjui and one at Khiva. After Charjui, the great trading city of Bukhara fell to him. The Battle of Khiva yielded Khiva and put Nadir Shah in position to annex the region he desired.

Namibian War of Independence
(1966–1990)

PRINCIPAL COMBATANTS: SWAPO (Namibian nationalist guerrillas) vs. Union of South Africa

PRINCIPAL THEATER(S): Namibia and Angola

DECLARATION: UN Resolution 435, calling for Namibian independence, passed in 1966, was the closest thing to a declaration of war.

MAJOR ISSUES AND OBJECTIVES: SWAPO sought to drive out the South African mandate government from Namibia and achieve full independence.

OUTCOME: After years of guerrilla fighting, independence was achieved in 1990.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

SWAPO, 18,000; South African forces, 30,000

CASUALTIES: Total deaths, about 25,000, including civilians

TREATIES: U.S.-brokered peace, 1988

During the 1960s, African countries were swept by a tide of independence, as former colonies, protectorates, and mandate territories stirred with nationalism and, in most cases, achieved independence. Namibia, formerly a German colony—and, since the end of WORLD WAR I, a mandate territory of South Africa—was nominally given its independence by a UN resolution in 1966. The white government of South Africa refused to abide by the resolution, however, and did not relinquish control of Namibia. This led Namibian nationalists to organize the South West Africa People's Organization (SWAPO), a guerrilla liberation movement.

At first, SWAPO was ineffective; however, when the Portuguese were driven out of neighboring Angola in the ANGOLAN WAR OF INDEPENDENCE, that newly independent nation offered Namibian guerrillas aid and bases of operations in Angolan territory. Cuban troops in Angola offered to train the SWAPO guerrillas. After these developments, the guerrilla war in Namibia intensified, and South African troops made incursions into Angola to raid guerrilla bases. SWAPO, however, continued to retaliate in Namibia.

The war ground on for a decade before the United Nations condemned South Africa in 1976 for its illegal occupation of Namibia. In 1977, the United Nations declared SWAPO the exclusive legal representative of Namibia, and in 1978 called for an international conference to resolve the long Namibian crisis. As a result of the conference, South Africa agreed to allow free elections in Namibia; however, the South African government soon reneged on the offer. In 1979, South Africa rejected a new UN initiative to settle the dispute, and a 1981 peace conference in Geneva also broke down. By this time, however, the stumbling block had been defined: control of Namibia's only deep-water port, Walvis Bay. The United States, fearing Cuban influence in Namibia, sided with South Africa to the extent that it favored refusing to pull out until the Cubans left Angola. Although the dispute remained unresolved, a cease-fire was agreed on in 1984, to be supervised by a UN commission. The following year, South Africa agreed to the installation of a multiracial government.

Despite these concessions, SWAPO pressed on with the war, demanding both the implementation of the UN

resolution for Namibian independence and the withdrawal of Cuban troops from Angola—for these now loomed as a menace to an independent Namibia. The United States mediated an agreement in December 1988, whereby Cuba, South Africa, and Angola agreed on a timetable for Namibian independence. For its part, Cuba agreed to make a phased withdrawal of its troops from Angola.

On April 1, 1989, SWAPO guerrillas invaded Namibia from their bases in Angola. They were met by Namibian security police forces, which killed several hundred of the invaders and effectively put an end to SWAPO raids across the border. The peace process then continued, as thousands of Namibian refugees peacefully left Angola to return to Namibia. One of these refugees, the nationalist leader Samuel S. Nujoma (b. 1929), won election as Namibian president when South Africa finally pulled out of the country. Namibia achieved full independence on March 21, 1990. SWAPO became a powerful force in the nation's Constituent Assembly.

Naning War (1831–1832)

PRINCIPAL COMBATANTS: Great Britain vs. Naning

PRINCIPAL THEATER(S): Naning, Malay Peninsula

DECLARATION: 1831, Britain against Naning

MAJOR ISSUES AND OBJECTIVES: Britain sought to compel Naning to pay to them the annual tribute formerly paid to the Dutch.

OUTCOME: After a brief but inordinately costly war, Naning agreed to pay the tribute.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

During the 17th and 18th centuries, Minangkabau immigrants from Sumatra settled in Naning, a Malay state, paying a regular tribute for this privilege to the Dutch East India Company. In 1799, the Dutch government assumed control of the financially ailing Dutch East India Company. By a treaty of 1824, the Dutch ceded Malacca—including nearby Naning—Singapore, and Pinang to the British. In 1829 the British attempted to collect the annual tribute (amounting to 10 percent of the agricultural output of the country) that had been paid by Naning to the Dutch. The ruler of Naning, Datuk Abdul Saiyid (r. 1801–32), refused. Two years later, British authorities dis-

patched a small expeditionary army to enforce payment, but it was defeated. A larger expedition was mounted in 1832 and was resisted for three months. Although the British eventually extracted the tribute payment, the costly effort discouraged other countries on the Malay Peninsula from negotiating trade treaties with the British. The net effect was to retard the progress of British trade in the East Indies through the mid-19th century, making this a very costly conflict.

Napoleonic Wars (1795–1815)

PRINCIPAL COMBATANTS: France vs. the major European powers, Great Britain, and the Ottoman Empire

PRINCIPAL THEATER(S): Europe, Russia, Egypt, Syria

DECLARATION: Various

MAJOR ISSUES AND OBJECTIVES: The rise of Napoleon Bonaparte from an obscure artillery officer to emperor of France during the French Revolution inspired his attempt at world conquest, after the Revolution itself had sparked a series of conflicts across Europe.

OUTCOME: Napoleon was ultimately defeated and expelled from France to die in exile, while a Europe transformed by the Napoleonic Wars tried to put together a lasting peace.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Some 12 million men were mobilized among all belligerents during the era of the Napoleonic Wars.

CASUALTIES: Estimates of casualties during the Napoleonic Wars vary widely but most historians agree that nearly 6 million troops were killed on all sides.

TREATIES: Major treaties of 1795–1805 include Treaty of Campo Formio (October 17, 1797); Treaty of Amiens (March 27, 1802); Treaty of Pressburg (December 26, 1805); Treaty of Tilsit (July 7–9, 1807); Treaty of Schönbrunn (October 14, 1809); First Peace of Paris (May 30, 1814); Second Peace of Paris (November 20, 1815).

This entry covers the rise of Napoleon Bonaparte (1769–1821) to supreme power in France and an overview of his wars of conquest. For a full account of Napoleon's role in the Revolution, see **FRENCH REVOLUTION**. For Napoleon's role in the French Revolutionary wars, see the **COALITION, WAR OF THE FIRST**, and the **COALITION, WAR OF THE SECOND**. For more on the post-Revolutionary conquests themselves, see **COALITION, WAR OF THE THIRD**; **NAPOLEON'S WAR WITH AUSTRIA**; **PENINSU-**

LAR WAR; and **NAPOLEON'S INVASION OF RUSSIA**. For the conclusion of the wars, the peace settlement, and their historic impact, see **HUNDRED DAYS' WAR**.

For some 20 years the history of Europe at the end of the 18th and beginning of the 19th centuries was intertwined and inseparable from the fortunes of a single man, Napoleon Bonaparte. From his relatively obscure origins in Corsica, Bonaparte's military prowess and political acumen swept him to personal dominance over most of the Continent. At its height, Napoleon's empire stretched from Spain to the Russian border. Napoleon ruled France, Catalonia, the Netherlands, the Dalmatian coast, and northern Italy, and members of his family reigned over Spain, modern-day Germany and Poland, and the rest of Italy. For some of these countries, French occupation brought a centralized rule and liberal institutions that provided them for the first time with a true sense of national identity. Even after Napoleon's downfall in 1815, the empire's legal codes and administrative systems continued to operate for decades or longer in the once-occupied territories. Certainly the history of warfare during the first decades of the new century centered on the doings of the man who made himself Emperor Napoleon I.

During two decades of revolution and war, Napoleon changed the history of France and of the world. When that ended, a Europe much rattled by revolution and its global impact met in victory at Vienna to try to put the Old World back together, only to discover that Europe as conceived by the conservative representatives of the traditional regimes had vanished. Ultimately, in the wake of the French Revolution and the rise to power of one of the pre-eminent personalities of the 19th century, Napoleon Bonaparte, the old regimes of continental Europe eventually, if quietly, modernized their governments and internationalized their relations.

Destined to become perhaps the most brilliant figure in military history, the emperor-to-be was born Napoleone Buonaparte on August 5, 1769, in Ajaccio, Corsica, a politically turbulent island recently acquired by the French Crown from the Republic of Genoa. He was the second surviving son of Carlo Buonaparte (1746–85), a lawyer who claimed descent from the 12th-century military aristocracy of Tuscany, and his wife, Maria Letizia Ramolino (1750–1835). Carlo Buonaparte had married the comely and strong-willed Letizia when she was 14, and they eventually had eight children, whom they raised through difficult times. A number of Corsicans, led by Pasquale Paoli (1725–1807), resisted France's occupation of the island, and Carlo Buonaparte counted himself among them. But when Paoli fled the island, Carlo came to terms with the French ancien régime, winning the protection of a new governor and appointment to the judicial district of Ajaccio as an assessor.

Using his political connections, Carlo obtained Napoleone's admission to the preparatory military

academy at Autun, where the nine-year-old Buonaparte learned to speak French and temporarily dropped the “e” from his Christian name. A few months later, Carlo saw years of struggle culminate in success when the French court recognized the Buonapartes’ Corsican patents of nobility, a vital step in securing the military future of his son, because the French officer corps recruited only from the aristocracy. Napoleon received a king’s scholarship for the offspring of poor nobles and moved on to a more distinguished school in the Champagne region of eastern France, the Royal Military College at Brienne-le-Château, which he attended from April 1779 to October 1784. Spurned as a provincial and a foreigner, Corsican by birth, blood, and the bonds of childhood, Napoleon continued for some time after his arrival on the Continent to feel he was an outsider, and he kept aloof and threw himself into his studies.

If he was never the reincarnation of a typical 14th-century condottiere that some biographers later made him out to be, from the beginning Napoleon shared few, if any, of the traditions and adopted almost none of the prejudices of his new country, however French his education. Remaining Corsican by temperament, he became, through both that education and his own reading, a man of the 18th century, of both its belief in enlightenment and its absolutism. Though in Champagne, he managed to graduate only near the bottom of his class, 42nd of 58 members, a final report praised his conduct and mathematical skills (his accomplishments were weak, said the school, in music, dancing, and other social skills) and concluded, “This boy will make an excellent sailor.” But Napoleon abandoned the navy for the artillery, which enjoyed little prestige among the country’s officer nobility but was the most forward-looking arm of the French military and on the cutting edge of 18th-century technology. At 15, Napoleon pursued his studies at the *École Militaire* in Paris, and a year later—about half the time it took most cadets to graduate—he was assigned as a second lieutenant in the artillery regiment of Le Fere, a kind of training school for young artillery officers.

Back in February 1785, Napoleon’s father had died of stomach cancer, leaving his family in straitened circumstances. Although not yet 16 and not the eldest son, the young lieutenant had assumed the position of head of the family. In these twilight years of the *ancien régime*, garrison duty was leisurely, with light workloads and long leaves, which Napoleon not only took but abused. Garrisoned at Valence, Napoleon read more widely than the average young officer. Plunging especially into works on strategy and tactics, he fell under the influence of the military theorist J. P. du Teil (fl. 18th century). He wrote *Lettres sur la Corse*, a history of Corsica that revealed his romantic feelings for his native island. At the same time, having read Voltaire and Rousseau and steeped himself in the liberal ideas sweeping France, he believed political

change was imperative, although as a career officer he seemed leery of radical social reform. He went back to Corsica in September 1786 and did not rejoin his regiment until June 1788. He soon garnered a post at the Auxonne artillery depot, and—as an aide to senior officers engaged in technical experiments—he acquired practical experience as well as influential friends. It was here, in 1789, that Buonaparte first saw active service when he and his troops were sent to quell food riots.

Later that year, the National Assembly, meeting to write a national constitution, granted Pasquale Paoli permission to return to Corsica. Napoleon asked for leave to follow him and joined Paoli’s group in September 1789. But Paoli did not much care for the Buonapartes. In Paoli’s eyes not only had Napoleon’s father deserted the Corsican cause back in the days of the *ancien régime*, but these days, his son was nothing better than a foreigner. The disenchanting young soldier returned to France, where he was transferred to the Grenoble artillery regiment in February 1791, securing promotion to first lieutenant. He immediately joined the Jacobin Club of Grenoble, at a time when that debating society still favored a constitutional monarchy. Soon the local club’s president, Napoleon made speeches declaiming against nobles, monks, and bishops. In September 1791, Napoleon took three months’ leave to return to Corsica. There he contrived to have himself elected lieutenant colonel of the newly formed Ajaccio National Guard, whose commander in chief was none other than Pasquale Paoli, with whom he soon had yet another falling out. When he failed to return to France, he was listed as a deserter in January 1792, but after France declared war on Austria in April, he was both forgiven his offense and—apparently through patronage—promoted to the rank of captain. However, instead of rejoining his regiment, in October 1782 Napoleon returned to Corsica, which was well on the way toward civil war, and joined the Corsican Jacobins. Many of the island’s natives, including Paoli, had always seen in France’s revolutionary turmoil a chance to seize their own independence. Rising to power on the back of the National Guard, Paoli was by this time acting as a virtual dictator and preparing to separate Corsica from France. Only the Jacobins stood in his way, and when civil war broke out in April 1793, Napoleon—at the head of the pro-French Ajaccio Volunteers—acted vigorously, if unsuccessfully, to suppress what was now considered a rebellion. As a result, in June, Paoli had the Buonaparte family sentenced to “perpetual execration and infamy.” With his family, Napoleon fled to Marseille on June 10, 1793.

Back in France, Maximilien Robespierre (1758–94) and his radical Jacobins, despite pockets of resistance, were running the country. Now a republic, France was beleaguered on all fronts, at war with most of Europe and fighting rebellion in the countryside. She needed all the soldiers she could get, especially young Jacobins like

Napoleon who, upon rejoining his regiment in Nice in late June, wrote a pamphlet entitled *Souper de Beaucaire*, which argued fervently for united action by all republicans rallied around the Jacobins and the National Convention who had, the past autumn, abolished the monarchy. The exhortation caught the attention of Augustin Robespierre (1764–94), brother of Maximilien and the Jacobin government's representative in the south, and Napoleon would soon use this new contact in the government to good advantage.

At the end of August 1793, government troops had retaken control of Marseille, but they were brought up short at the port of Toulon, where defecting royalists had allowed the British to occupy the town. The scratch revolutionary army was trying to dislodge them, so far unsuccessfully, making Toulon Augustin's biggest headache. When the French artillery commander was wounded, Buonaparte obtained the post through the commissioner to the army, Antoine Saliceti (fl. late 18th century), who was a Corsican deputy to the National Assembly and a friend of Napoleon's family. It was the first real opportunity in Napoleon's career, and the greatest opportunist of the age played it for all it was worth, rising to major in September and adjutant general in October. With backing from Augustin Robespierre, he persuaded his reluctant superiors to adopt his plan of employing artillery to force the port's British supporting fleet to withdraw, and in December he carried out the plan. Receiving a bayonet wound on December 16, he nevertheless watched the next day as British troops, harassed by his artillery, evacuated the port and the British ships sailed away. Toulon, an embarrassment to the republic for months, had fallen within 48 hours of Napoleon's taking direct charge. On December 22, Buonaparte, aged 24, still hobbling from his leg wound, was promoted again, to brigadier general. Augustin Robespierre wrote to his brother Maximilien, by then head of the government in all but name and the leading figure behind the Reign of Terror, praising what Augustin called the "transcendent merit" of the young republican officer.

As a reward for his able command of the artillery, Napoleon was designated artillery commander of the French army in Italy in February 1794. Following the overthrow of Maximilien Robespierre in July of that year, however, Buonaparte was thrown into prison from August 6 to September 14, but he was already too well connected politically to long remain there. Following his release, he declined artillery command of the Army of the West and was assigned instead to the war office's Topographical Bureau. Soon appointed second in command of the Army of the Interior, he ended the Parisian uprising of 13 Vendémiaire (October 5, 1795), which was mounted in protest against the new constitution introduced by the National Convention. Napoleon dispersed the insurrectionists with his beloved artillery, thereby saving the Con-

vention. The Directory, as the new government was called, rewarded him with full command of the Army of the Interior, at which point he married Josephine de Beauharnais (1763–1814), the rather notorious widow of a titled republican general, and changed his name to Bonaparte.

Once in command of the Army of the Interior, Napoleon moved vigorously against Piedmontese (Sardinian) and Austrian forces, bringing about an armistice with the Piedmontese by the end of April after defeating them at Ceva and Mondovi in April, thereby securing the cession of Savoy and Nice to France. He next moved swiftly and brilliantly against the Austrians, defeating them at Lodi on May 10, then entering Milan on May 15. He drove the Austrian forces out of Lombardy during May and June. Mantua, the last Austrian stronghold in the region, fell to Napoleon in February 1797 following a lengthy siege. Next Napoleon advanced toward Vienna itself, a move that sent the Austrians to the peace table. The commander himself negotiated the Treaty of Campo Formio on October 17, 1797, by which the War of the First Coalition—the first of the French Revolutionary Wars—was ended.

Napoleon reshaped Italian politics, creating the Cisalpine Republic, establishing what were in effect various puppet governments in Italy, and pillaging Italian art collections to help finance French military operations. He was hailed as a hero by the Directory, which proposed to send the conqueror of Italy to invade England. But Napoleon successfully promoted another grand strategy: the invasion of Egypt in order to secure a staging area for an invasion of British India, in what is known as the War of the Second Coalition.

Taking Malta on the way, while deftly avoiding the British navy under Horatio Nelson, Napoleon managed to occupy Alexandria and Cairo in late 1798, where he wisely guaranteed the preservation of Islamic law but set about modernizing the secular government. But then the British fleet destroyed the French fleet at Aboukir Bay, cutting off Napoleon from France, and the Ottoman Turks declared war on France in February 1799. Napoleon preemptively invaded Syria, only to be stopped at Acre by British-led Ottoman troops, and the French army fell prey to the plague. By the time Bonaparte returned to Cairo in June, the French government had reached a crisis under the onslaught of the Second Coalition victories in Europe.

Napoleon embarked for France on August 24, 1799, arriving in Paris on October 14 to discover that he had been recalled by the members of the Directory to help again to "save" the Revolution. He participated in the coup d'état of 18 Brumaire (November 19) against the Directory, which was reconstituted with Napoleon as one of its three consuls. Appointed commander of the Paris garrison, Napoleon was elected first consul under the new constitution of the Year VIII, with power to appoint mem-

bers of the Consulate itself, government officials, and judges. Installed in February 1800, Napoleon consolidated what soon amounted to dictatorial power and radically centralized the government, bringing it under his personal control. The French Revolution was over.

The nation favored the first consul, and there was remarkably little opposition. Wracked by years of revolutionary terror and lawlessness, still faced with a formidable royalist faction, the people—whose yearning for stability was almost tangible—were willing to hand over authority to one strong man. Buttressed by the new and highly authoritarian constitution that a plebiscite of his weary fellow citizens backed almost unanimously, Napoleon radically restructured the French national debt, setting the French economy on a sound footing. He encouraged the development of industry and the improvement of the educational system, and he initiated an ambitious program of construction inspired by the classical examples of imperial Rome. He created the Code Napoleon, which codified civil law by amalgamating the old customs of northern France with the Roman law of the south. Also included was a new criminal code to be enforced by judges. These changes were sweeping, and over the years the code would be extended to regulate and transform every aspect of French life, and then, as it came to cover Napoleon's conquests, the life of much of Europe. One provision in particular, requiring the equal division of property between sons, did more than the Revolution to destroy the power of France's—then the Empire's—landed gentry. Equally as significant, the first consul concluded the 1801 Concordat with Pope Pius VII (1742–1823), reestablishing Roman Catholicism as the state religion, or—as the Concordat would have it—at least “the religion of the great majority of the French people,” whose practice was authorized “in conformity with any police regulations that may be necessary for public order.”

In April 1802, church bells rang out for the first time since the onset of the Revolution, as if in celebration of a new civic harmony within France and a new peace in Europe. For Napoleon, needing peace at home and abroad to give time for his reforms to take effect, had moved decisively in May 1800 to bring an end to the War of the Second Coalition. Crushing the Austrians at the Battle of Marengo on June 14, 1800, he did indeed initiate a brief interval of peace with all Europe, including Britain, the next year. The failure of William Pitt's (1759–1806) coalition on the Continent forced him to resign as British prime minister, and the incoming government—its members emotionally fatigued by almost a decade of fruitless fighting—signed the Treaty of Amiens on March 27, 1802. Although the peace—with Great Britain still deeply suspicious and France full of expansionist ambition—was destined to be not much more than a brief truce, it did nevertheless provide Napoleon nearly 15 months to complete his civic and clerical reforms and to reshape his

army. A grateful France made Napoleon first consul for life on August 2, 1802.

To the chagrin of the British, much of France's newfound energy seemed devoted to ship building, and not just to constructing ships of the line, but also flat-bottomed barges that could only, they decided, be intended for an invasion of their island. Worse still, in 1803 Napoleon set about once again to reshape the face of Europe. In Holland he occupied the Batavian Republic and in Switzerland the Helvetic Republic. He annexed Savoy-Piedmont, then took the first step toward abolishing the Holy Roman Empire by means of the Imperial Recess of 1803, which consolidated free cities and minor states dominated by the Holy Roman Empire. He also attempted to recover the Caribbean island of Haiti, which had rebelled against French colonial domination. To help fund these adventures and to ensure, at the very least, America's neutrality in what was surely the coming war with Britain, Napoleon sold Louisiana—ceded to France by its ally, Spain, in 1800 under the secret Treaty of San Ildefonso—to the United States at a cut-rate price, extracting in exchange vague promises of friendship that fell far short of Bonaparte's hopeful prediction to the U.S. diplomats that the Americans would fight Britain again.

Britain was even more irritated by Napoleon's determination to turn Europe into a huge market reserved exclusively for French goods. Not only did France control the continental coastline from Genoa to Antwerp, it was also charging extortionate customs duties that much affronted the commercially minded island sea power. Thus Napoleon's renewed aggression in Europe, coupled with his refusal to grant trade concessions to Britain, led the English to reignite war—on the slim pretext that he was not living up to the Treaty of Amiens—in May 1803. As Napoleon prepared to invade England with an army of 170,000 troops, an assassination scheme, financed by the British, was discovered. Alarmed by the plot, the French Senate—nudged along by Napoleon—petitioned the first consul to establish a hereditary dynasty. Once more, Bonaparte eagerly seized opportunity and, on December 2, 1804, as Pope Pius VII looked on, he crowned himself emperor.

Eliminating the republic for which he had supposedly fought for so long and so ostentatiously, Napoleon created a royal court populated by former republicans and royalists alike. Not content merely to create a dynasty for France, he would eventually install members of his family on the thrones of the newly created kingdoms of Naples, Holland, Westphalia, and Spain. Meanwhile, he went to war with the world.

From the moment he became emperor, Napoleon was almost constantly at war. Great Britain proved his most dogged opponent, but Prussia, Russia, and Austria also joined in the series of coalitions stitched together to stop Napoleon's march across Europe. Backed by an entirely

new kind of army—ideologically conscripted rather than professionally recruited—he was a master strategist, particularly skilled at the rapid deployment of masses of troops and mobile field artillery. Until 1812—with some important exceptions—the French military was usually successful. One of those exceptions came in October 1805, when British admiral Horatio Nelson (1758–1805) annihilated the French navy at the Battle of Trafalgar off the coast of Spain. Preoccupied with Austria and Russia, Napoleon was probably not aware that the battle—which cost Nelson his life—was one of the turning points in history. In the short term, it meant Napoleon had to call off his elaborate plans to invade England; in the long run, Nelson's victory ensured the British navy would rule the seas for more than a century.

Forcing the Russians to capitulate and sign the Treaty of Pressburg after the Battle of Austerlitz in December (his single greatest military victory), Napoleon abolished the Holy Roman Empire and organized in its stead the Confederation of the Rhine, a French protectorate of German states. In an attempt to ease hostilities with Britain, Napoleon offered to return Hanover to British control, which provoked a war with Prussia in September, though Napoleon easily defeated this Fourth Coalition. Once again, he forced major concessions from Prussia and its ally, Czar Alexander I, creating the French-controlled Grand Duchy of Warsaw, gaining Russian recognition of other European entities spawned by Napoleon, and removing from Prussia all lands between the Rhine and Elbe rivers.

The emperor now enjoyed unparalleled sway over Europe, but he was not satisfied. Unable to defeat Britain by military means, he instituted in 1806 the Continental System, a blockade of British trade intended to destroy England's economy. Britain responded with the Orders in Council, which called for its own naval blockade of Napoleonic Europe. The Continental System, and the British response, created tremendous unrest throughout Europe, and Portugal immediately announced that it would not participate. Napoleon launched the Peninsular War to compel Portugal's obedience, which provoked unrest in Spain and led to the abdication of King Charles IV (1748–1819) and his son Ferdinand VII (1784–1833). When Napoleon replaced them with his brother, Joseph Bonaparte (1768–1844), a popular revolt broke out in Spain and in Spanish holdings around the world. With Napoleon embroiled on the Iberian Peninsula, Austria formed the Fifth Coalition, won a few early victories, then lost decisively. Napoleon's marriage to Marie-Louise of Austria followed the 1809 armistice.

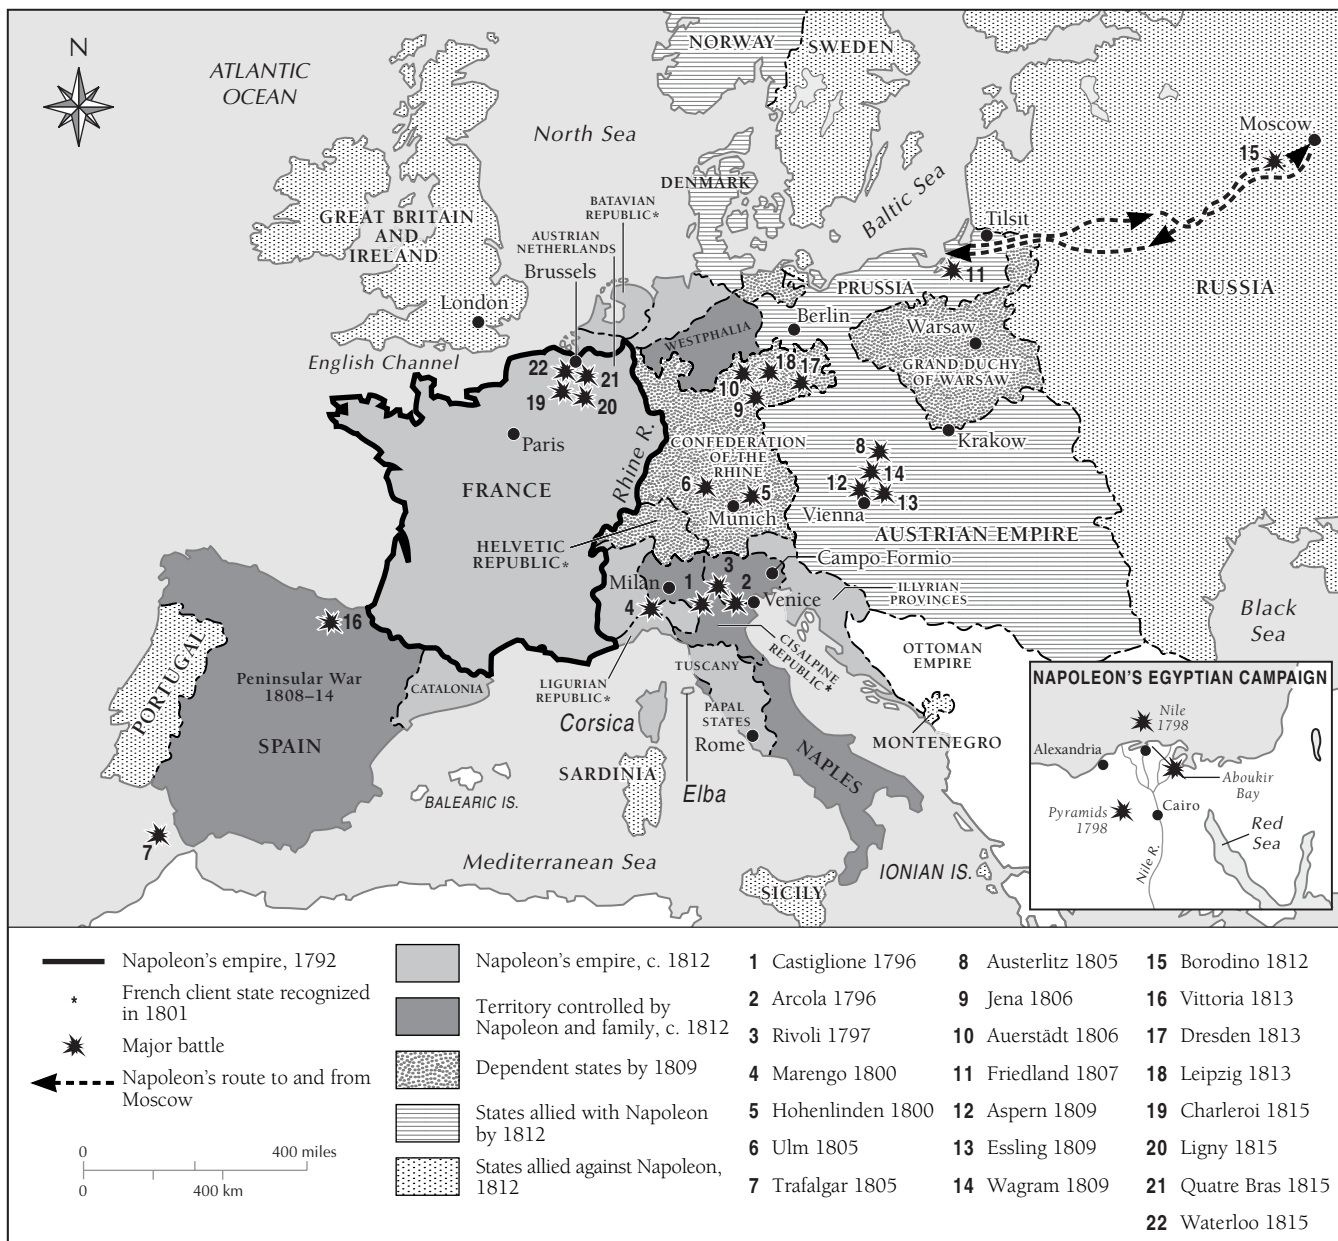

By 1809 Napoleonic France had annexed the Low Countries and western Germany and set up satellite kingdoms in eastern Germany and Italy, Spain, and Poland. Despite the enmity his empire provoked, Napoleon hoped that his union with one of Europe's oldest royal families, in addition to providing an heir, would guarantee him

Austrian friendship and bring peace to Europe. Instead, English-backed guerrillas continued to threaten his grasp on Spain and Portugal, and Russia—nervous about the substantial French forces in Poland—also refused to participate in the Continental System. These irritations provoked Napoleon to overreach himself beginning in 1810.

Following an enormous effort requiring every country in Europe, including a reluctant Prussia, to contribute a contingent, the emperor assembled 650,000 troops along the Russian frontier, where he planned one of his lightning campaigns that would destroy the Russian forces in six weeks and allow him to impose a humiliating peace. But the invasion failed miserably in the cold Russian winter, and by December of 1812, the Prussians had deserted the Grand Army and turned against the French, the Austrians had likewise withdrawn and were growing increasingly hostile, and even stalwart Italy was turning its back on Napoleon. They would all hail the formation of yet another anti-French Coalition—the sixth—consisting of Prussia, Russia, Britain, and Sweden. In Austria, Napoleon's own father-in-law was mobilizing against him.

This time, the forces arrayed against France would no longer be armies of mercenaries but those of nations fighting for their freedom. And even though, in Paris, the emperor built a new army, with which he defeated coalition forces in 1813 and brought about a brief armistice, the French themselves had lost their enthusiasm for a European empire. Napoleon's goal of conquest was no longer that of the French nation. In August, Austria joined the Sixth Coalition. Napoleon promptly defeated Austrian troops at Dresden but, badly outnumbered, the French were in turn trounced at the Battle of the Nations at Leipzig on October 16–19, 1813. Napoleon retreated across the Rhine, but refused to surrender any conquered territory. The next year, when coalition armies invaded France itself, the emperor prevailed against each attempt to penetrate to Paris until repeated mauling of his dwindling forces prompted a mutiny of his marshals and the fall of the capital on March 31, 1814. A few days later, on April 4, Napoleon abdicated in favor of his son.

The allies rejected this “solution,” and Napoleon abdicated unconditionally on April 6. He was exiled to the British-controlled island of Elba. In a matter of days, the empire had vanished, and in Napoleon's place the victors had enthroned the Bourbon Louis XVIII (1755–1824), whose brother had lost his head to the Revolution 21 years before. On May 30, the new king signed the First Peace of Paris, which Charles Maurice de Talleyrand-Périgord (1754–1838) negotiated to retain those “natural” frontiers of France in place since 1792. A great congress was summoned at Vienna to set in order a post-Napoleonic Europe, but within weeks, thanks to Talleyrand's diplomacy, the allies' wartime unity had begun to evaporate and the diplomats were engaged in bitter squabbles. They had at least managed to agree to the creation of a

Napoleonic Wars, 1792–1815

moderately powerful state in the Netherlands as a buffer against a resurgent France when the congress was interrupted by news that Napoleon had escaped from exile and was on his way to Paris.

He landed, with a few hundred followers, at Cannes on March 1, 1815, aware that Louis XVIII was unpopular, that the peasants feared a restoration of the aristocracy would cost them all they had gained in the Revolution, and that the middle class hated a reactionary regime threatening to its own class hegemony. Troops sent by the king to arrest Napoleon instead joined him, and yet again a Bourbon monarch fled Paris. Napoleon occupied the

city, which joyfully acclaimed the return of its emperor on March 20. The Congress of Vienna spurned Napoleon's claim that his intentions were peaceful and labeled him an outlaw. Seeking to forestall combined attack by Russian and Austrian armies, Napoleon decided to strike first in order to divide and destroy Prussian and Anglo-Dutch armies in Belgium. Indeed, Napoleon prevailed against the Austrians at Ligny on June 16 and against the British at Quatre-Bras on the same day, but he was defeated at Waterloo by Arthur Wellesley (1769–1852), duke of Wellington, reinforced by troops under Gebhard von Blücher (1742–1819) on June 18, 1815.

The duke of Wellington claimed Waterloo had been nearly a draw and a very close call, but even had Napoleon won, the world was determinedly arrayed against him and would have quickly crushed his restoration. Now he was on the run, a mere fugitive, who reached the port of Rochefort in early July hoping to find a ship to take him to the United States. But the British, always his nemesis, were still strictly enforcing their blockade, and Napoleon had no way out. Napoleon returned to Paris, abdicated for the second time on June 22, and surrendered to the captain of the *Bellerophon*, a British warship, cheekily seeking asylum in England. The British demurred, and he was exiled again, this time to the desolate South Atlantic island of Saint Helena. There he composed his memoirs and grew increasingly ill. Some authorities believe that he succumbed, like his father, to cancer of the stomach on May 5, 1821; others have theorized that he died of gradual arsenic poisoning, which may have been the result of a deliberate assassination effort or due to overmedication with the arsenic-based drugs popular at the time.

HISTORICAL IMPACT OF THE WARS

The Congress of Vienna, which had been so shocked by Napoleon's escape that it interrupted its bickering, picked up where it had left off in March. Both a diplomatic conference and a glittering social occasion, the delegates discussed the fate of their world amid a gala of balls and receptions where old Europe celebrated its survival. Austria's foreign minister, Prince Klemens von Metternich (1773–1859), whose shadow stretched long over the future of Europe, dominated the proceedings as diplomats from Britain, Russia, and Prussia worked to restore a balance of power that would ensure their old order continued to thrive indefinitely. Much of their attention focused on the undoing of Napoleon's reforms in Europe, but—terrified by both the Revolution and the attendant nationalism that gave rise to France's empire—they hoped to do more than merely restore the balance of power.

They hoped to come up with a settlement designed to prevent any such events from recurring. Thus all the powers, including the constitutionally governed Britain, placed great emphasis on principles of legitimacy for monarchies. Some of Napoleon's innovations, long envied and often imitated, the congress was not willing to forego. Having striven to copy his efficient and centralized administration, they retained the improved bureaucratic and fiscal systems he had imposed on his conquests, and where these conflicted with the old feudal aristocracy, they often set aside old and once-cherished privileges. Napoleon's Civil Code, too, they left intact, underpinning the legal systems not just of France, but also of Holland, Belgium, Italy—wherever had trodden the troops of the Grand Army.

Napoleon's rise had transformed many institutions beyond the ability of the European peacemakers to change—indeed, beyond remedy by the art of diplomacy

altogether. Not only did his conquests spread revolutionary ideology to much of western Europe and destroy the old order inherited from the 18th century in major sections of the Continent, but in such areas as Belgium, western Germany, and northern Italy, Napoleon's armies consolidated what before had been scattered territories. This welter of states was never truly restored. Such developments, added to an intense resentment toward Napoleonic hegemony, did indeed spark a growing nationalism in these areas, as well as in Spain and Poland. And even Prussia and Russia, more resistant to the siren call of revolution, had introduced political reforms to strengthen their states and resist Napoleon's war machine.

Napoleon's impact was felt outside Europe as well, most spectacularly in Latin America. When Bonaparte placed his inept brother on the Spanish throne, he unintentionally united all Creole society in opposition to Joseph, and mobs drove French emissaries out of capitals across the lower half of the Western Hemisphere. Then Spanish officialdom itself, increasingly viewed as the puppet of a French usurper, came under attack. For a year, Spanish viceroys clung to power, but in 1810, Latin America's Creole population arose, almost as one, to depose their already powerless rulers. The rebellions struck every Latin country in the New World but Peru. Years later, Spain and Portugal would make a feeble stab at reclaiming some of their lost colonial empires, but by then the United States, backed by Great Britain, was determined to stop them, setting the stage for U.S. president James Monroe to issue the seminal Monroe Doctrine, by which the United States proclaimed itself the defender of republican government in the Americas.

Perhaps just as significantly, Great Britain, protected by the English Channel from Napoleon's army, was also transformed by the long series of conflicts. Fifteen years of continuous war against the French emperor (and 10 years of war against the French Revolution before that), although arduous for those at the front on land or sea, was nevertheless a godsend for British industrialists and empire builders. Honed by Napoleon's constant pressure, the Royal Navy came to rule the waves, not only protecting the island kingdom from invasion but also keeping the ocean lanes open for British export. The navy enforced the Orders in Council, which not only blockaded France and her allies but also permitted neutrals to trade with the enemy only if they paid duty on their cargoes. Although this ultimately provoked the WAR OF 1812 with the United States, it also gave Britain's fledgling industries the security they needed to expand.

Britain's military victories in the Napoleonic Wars also expanded its empire. French possessions in the Caribbean and Mediterranean soon joined its growing—and captive—imperial market. When Holland fell to France, the British seized Dutch territories in Africa and Asia. The expanded colonial demands for British goods

helped offset the decline in trade with a continental Europe squeezed by economic sanctions, but more important, it stoked the fires of Britain's industrial revolution and gave rise to one of the greatest colonial empires the world had ever seen. But even the protection afforded by the British navy, and the expanding industrial economy that ultimately helped to wear Napoleon down, could not prevent the French revolutionary example from spurring a new wave of democratic agitation in British society.

Thus Britain was as anxious to preserve some of the old order as the Europeans coming under Metternich's sway. The Treaty of Vienna they produced disappointed the growing number of nationalists, who had hoped for an officially unified Germany and Italy, and it certainly daunted democrats and liberals, but—thanks in no small measure to Talleyrand—it was not truly reactionary, nor as punitive toward France as it might have been. After Vienna, conservatism dominated the diplomatic and political agenda of Europe through the mid-1820s, with major governments, even in Britain, employing police agents to ferret out revolutionary agitators. The balance of power worked out at the congress would preserve the peace in Europe for more than half a century, but in the long run the conservative political order it worked to reestablish was doomed by the boost given to national movements in the Napoleonic Wars.

Napoleon's Invasion of Russia (1812)

PRINCIPAL COMBATANTS: France vs. Russia

PRINCIPAL THEATER(S): Russia

DECLARATION: France against Russia, April 8, 1812

MAJOR ISSUES AND OBJECTIVES: When Russia renounced Napoleon's Continental System, because the trade boycott against Britain was ruining the Russian economy, and made peace with the British, Napoleon invaded his erstwhile ally.

OUTCOME: Napoleon's Grand Army nearly perished in the harsh Russian winter, leaving Napoleon vulnerable to a new coalition of forces in Europe.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

France, 500,000 in Russia; Russia, 409,000

CASUALTIES: France, 334,000 killed, 180,000 wounded, 100,000 captured; Russia, 150,000–200,000 killed, 150,000 wounded, 50,000 deserted

TREATIES: First Peace of Paris, May 30, 1814

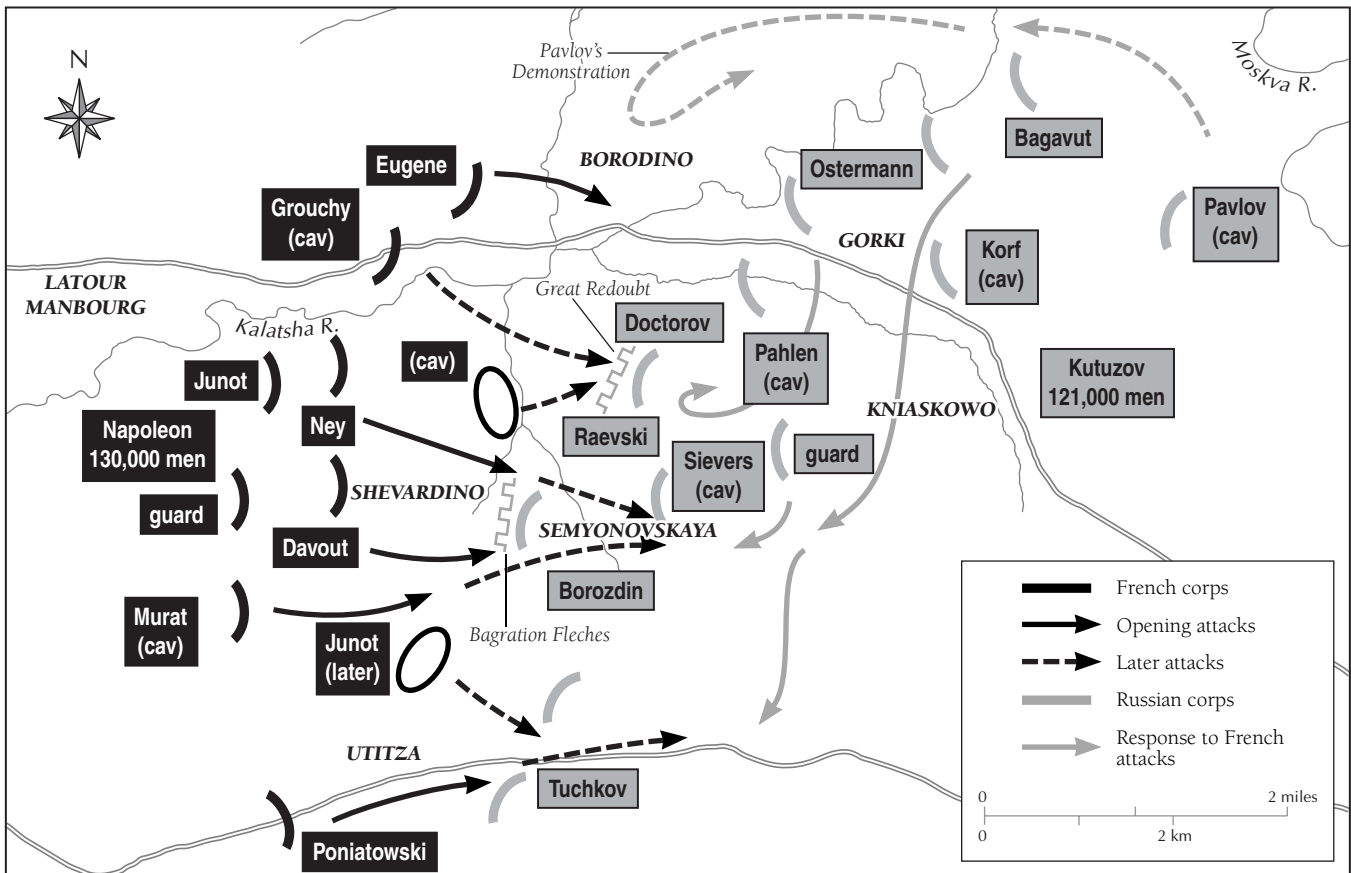

Since the Congress of Erfurt in the fall of 1808, Russia's Czar Alexander I (1777–1825) had shown himself increasingly less willing to deal with Napoleon (1769–1821) as a trusted ally or to enforce his Continental System of trade restrictions against the British. By the summer of 1812, Napoleon had massed his troops in Poland to intimidate Alexander into staying the course, but in June 1812—after attempts to heal the rift had failed—the czar made peace with Great Britain, and Napoleon's Grand Army of 500,000 invaded Russia.

The Russians retreated, adopting a “scorched earth” defense that kept the French army from the approaches to Moscow until the beginning of September. At Borodino, the Russian commander, Mikhail Kutuzov (1745–1813), engaged Napoleon in a savage, bloody, indecisive battle that did not prevent the French from entering Moscow a week later, after the Russians had abandoned the city. A huge fire broke out that same day, although no one knows whether it was deliberately set by the Russians or occurred accidentally at the hands of French looters. In any case, it destroyed the greater part of the town, and afterward, Alexander refused to treat with Napoleon. Stranded in the heart of Russia with winter coming on, Napoleon withdrew. But early snows made the retreat disastrous. By December, although he managed to preserve himself and the core of his Grand Army, much of his forces were destroyed or had deserted him, and although 40,000 made it out alive, fewer than 10,000 men fit for combat remained in Napoleon's main force.

THE AFTERMATH

The French catastrophe cheered all Europe. Though Arthur Wellesley (1769–1852), duke of Wellington, had earlier failed to take Burgos in Spain, in 1813 he routed the French at Vitoria and pursued them back into their home country. Napoleon's Prussian allies, smelling weakness in the Russian and Spanish setbacks, formed a new coalition with Russia, Sweden, and Austria to wage a “War of Liberation.” Having pursued Napoleon's army into France itself, Wellington laid siege to Bayonne and Bordeaux, where his efforts merged with the general allied effort. This brought the PENINSULAR WAR—which had brutalized Spain and detonated Latin American revolutions—to a close.

Meanwhile, at the Battle of Nations in Leipzig on October 16–19, 1813, coalition powers defeated the Grand Army. Napoleon rejected the allies' offer of a peace that stipulated France's pre-1792 frontiers on the Rhine and

Battle of Borodino, September 7, 1812

along the Alps as its “natural” borders and stubbornly held his ground. But in March 1814, Paris was captured by the allies, and Napoleon relinquished the battle, abdicating as emperor and accepting—under the Peace of Paris—exile from Europe to the island of Elba (see NAPOLEONIC WARS).

Napoleon's War with Austria (1809)

PRINCIPAL COMBATANTS: France (including Bavarian forces) vs. Austria (nominally heading a Fifth Coalition)

PRINCIPAL THEATER(S): Austria

DECLARATION: Austria on France, February 9, 1809

MAJOR ISSUES AND OBJECTIVES: The Austrian Hapsburgs, always jealous of Napoleon's domination of Europe, attacked France while Napoleon was preoccupied with fighting in Spain and Portugal.

OUTCOME: Napoleon soundly defeated the Hapsburgs and allied himself to them by marriage.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: France, 169,400; Austria, 136,200

CASUALTIES: France, about 30,000 killed or wounded; Austria, 80,855 killed or wounded

TREATIES: Treaty of Schönbrunn (or Treaty of Vienna), October 14, 1809

In 1809 while Napoleon (1769–1821) was caught up in the PENINSULAR WAR, the Hapsburgs invaded Bavaria on April 9, 1809, in hopes of rousing all Germany against a common foe, but they only succeeded in catching Napoleon's undivided attention. Napoleon marshaled a

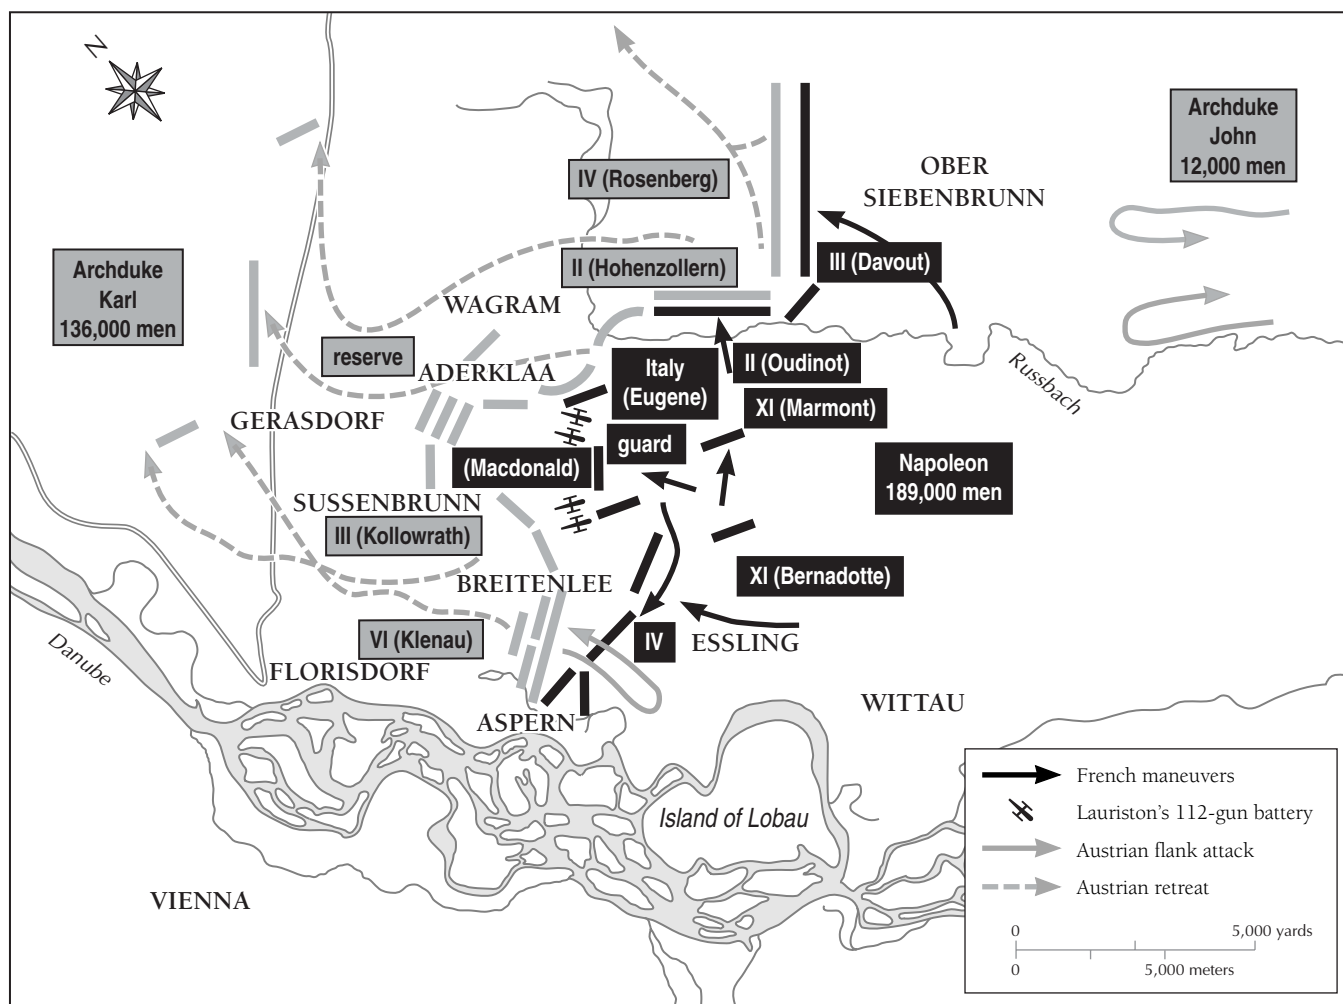

large army to confront the Austrians, but the first action of the war was against the Tyrolean peasantry, which rose in rebellion against Bavarian garrisons on the southern flank of Napoleon's main army. Although a French force of 36,000 attacked 40,000 Austrians at Sacile on April 16, the combination of the uprising and Austrian resistance overwhelmed the attack: 3,500 French soldiers were killed or wounded, and another 6,000 taken prisoner.

Three days later, on the war's main front in Bavaria proper, a French army was more successful, penetrating Austrian lines, albeit at great cost. Of 22,000 French troops engaged, 4,000 were killed or wounded, whereas Austrian casualties were about 3,000. Nevertheless, Napoleon personally led a force to exploit the breach in the Austrian lines and scored a stunning victory at Abensberg on April 19–20. Of about 14,000 men, the Austrians lost 2,700 killed or wounded and 4,000 taken prisoner. French losses were negligible. This action exposed the left wing of the Austrian army of 27,000 men, which

Napoleon attacked on April 21 and drove back across the Iser River at Landshut. Austrian losses were about 2,000 killed or wounded, 3,312 captured, and another 2,653 missing. Of some 70,000 French soldiers in the region, 1,500 were killed or wounded.

From the triumph at Landshut, Napoleon turned north to reinforce the 36,000 French troops menaced by an army of 75,000 on the Danube. Napoleon arrived just in time on April 22 to repulse an Austrian attack at Eggmühl. The repulse cost the French 3,000 killed or wounded, about the same as the casualties inflicted on the Austrians.

Although it had suffered a series of stinging defeats, the Austrian army withdrew in good order, whereupon Napoleon turned down the Danube in an advance on Vienna. This brought an Austrian counterattack on April 24 at Neumarkt-St. Vieth, which took a sharp toll on the Bavarian division there, but failed to stop Napoleon, who entered Vienna without resistance on May 13.

Battle of Wagram, July 4–6, 1809

In the meantime, the French Army of Italy engaged in an offensive on the Piave River beginning May 7–8. A large force of 44,800 Frenchmen defeated 20,750 Austrians and broke through to the Isonzo River by May 18. Here the French cleared the Austrian border defenses—which, badly outnumbered, nevertheless fought valiantly—and invaded Austrian territory from the south.

During the action in Bavaria and Italy, an Austrian army defeated combined French and Polish forces in Poland and, on April 19, took Warsaw. Thus Poland fell under Austrian control.

In the meantime, the main Austrian army, though so far defeated, remained intact and, on May 21, repulsed a major thrust by Napoleon at Aspern-Essling. Thirty percent of the French forces engaged, 21,000 men, were killed or wounded, at a cost, however of 23,340 Austrians killed, wounded, captured, or missing.

The costly repulse at Aspern-Essling inspired the people of the Tyrol, who once again rose up in rebellion. However, the Austrians were having their own trouble in Poland, and when the nation erupted into widespread rebellion, the Austrian army had to relinquish Warsaw and begin a general withdrawal southward.

As for Napoleon, after the terrible defeat at Aspern-Essling, he regrouped with 188,900 men for an all-out push against 146,000 Austrians on the Danube. Crossing this river on July 4–5, Napoleon engaged the Austrian forces in the culminating Battle of Wagram beginning on July 5. The battle continued the next day and would stand with Leipzig and Borodino as the bloodiest clash of the NAPOLEONIC WARS. Napoleon lost 24 percent of his army during these two days, 6,901 killed and 26,757 wounded (some authorities put the losses even higher). Austria lost 5,631 killed, 18,119 wounded, and 18,000 captured (again, some historians believe the losses were significantly greater). Despite his staggering losses, Napoleon forced the retreat of the Austrians, who, fighting a desperate rearguard action, sued for an armistice on July 10. While this ended fighting on the main Bavarian front, combat in the Tyrol continued until the conclusion of the Treaty of Schönbrunn on October 14, whereupon the Austrians summarily abandoned the Tyrolean rebels. These warriors were finally pacified the following year.

By terms of the October treaty, Austria ceded some 32,000 square miles of territory and 3 million of its 16 million subjects.

Natchez Revolt (1729)

PRINCIPAL COMBATANTS: Natchez Indians vs. French settlers

PRINCIPAL THEATER(S): Lower Mississippi Valley

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Natchez resistance to French invasion

OUTCOME: The Natchez were defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: At least 200 colonists in initial raids

TREATIES: None

In the 18th century, the Natchez Indians lived just east of the present-day Mississippi city that bears their name. On November 28, 1729, the tribe attacked Fort Rosalie, a French settlement and military outpost, killing about 200 French colonists. The initial assault was followed by scattered raids throughout the lower Mississippi Valley. The “revolt” was the culmination of long-deteriorating relations between the French and the Natchez. There had been outbursts of violence in the past, but open warfare had been avoided largely through the diplomacy of Tattooed Serpent, brother of the Natchez principal chief, known as the Great Sun. After the death of Tattooed Serpent, however, the French governor of Louisiana, Sieur Chepart (d. 1729), summarily ordered the removal of the Natchez from their sacred Great Village, opposite Fort Rosalie on the bluffs of the Mississippi. Even at this outrage, the tribal “queen mother,” Tattooed Arm, counseled peace, but to no avail. The Natchez Revolt was under way.

Among those taken captive in the attack on Fort Rosalie was the governor, whom the Natchez warriors regarded with such contempt that none of them would defile a weapon by taking his life. Sieur Chepart's execution was assigned to a Stinkard, a member of the lowest caste in the hierarchy of Natchez society. Death by the blade was deemed too noble, and the Stinkard was ordered to club the governor to death.

French colonial officials retaliated against the Natchez with vigor, dispatching several invasion forces out of New Orleans. The Natchez and the Yazoo Indians, who had joined in the uprising, were soon defeated in battle. Those captured (about 400) were sold into West Indian slavery. Survivors who evaded capture sought refuge among the Chickasaws.

The defeat of the Natchez brought peace to the lower Mississippi Valley only until 1732, when the French renewed prior demands that the Chickasaws expel English traders from their villages and, with them, refugees from the Natchez Revolt (see CHICKASAW RESISTANCE).

Nat Turner's Rebellion See TURNER'S REBELLION.

Navajo War (1861–1863)

PRINCIPAL COMBATANTS: Navajo Indians vs. United States

PRINCIPAL THEATER(S): New Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Navajos were responding to the provocations of New Mexican settlers and an unprovoked attack by the U.S. Army with raids; the United States intended to subdue the Navajos and imprison them at Bosque Redondo to keep them from hampering its war against the Confederacy, or worse, from joining forces with the South's Rebels.

OUTCOME: The Navajos were defeated under a harsh, take-no-prisoners campaign by the U.S. Army and forced en masse onto Bosque Redondo.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Kit Carson's regiment, 736; Navajo, unknown

CASUALTIES: Navajo, around 500 killed or died, wounded unknown, 8,000 taken captive and forced onto Bosque Redondo; U.S. and CSA—Unknown

TREATIES: None, but a later Peace Commission, formed to investigate the charges of inhumane conditions at Bosque Redondo, negotiated a treaty in 1868 that returned the Navajo to their traditional homelands in New Mexico.

At the beginning of the American Civil War, the United States found itself faced not only with half a country in rebellion (see UNITED STATES CIVIL WAR: WESTERN THEATER), but also two major Indian uprisings—one with the Apaches (see APACHE UPRISING), the other with the Navajos. The outbreak of civil war drained the army of the West, especially its officers. One-third of the army's officer corps—313 officers—left primarily western commands to take up arms on the side of the Confederacy. At this time, Confederate Lieutenant Colonel John Robert Baylor (1822–94) took advantage of the Union army's weakness to sweep through the southern New Mexico Territory,

from the Rio Grande to California, and proclaim the Confederate Territory of Arizona, which encompassed all of present-day Arizona as well as New Mexico south of the 34th parallel. Baylor appointed himself governor. There was not much the Union could do about it. Colonel Edward R. S. Canby (1817–73), commander of the Department of New Mexico, had his hands full with Navajo raids in New Mexico and unauthorized, provocative New Mexican counterraiders.

Indeed, the very people Canby was trying to protect, the citizens of New Mexico, repeatedly provoked the Navajo by raiding them and taking captives whom they subsequently sold as slaves. In retaliation, the Navajo, joined by Mescalero Apaches, Utes, Comanches, and Kiowas, ravaged the countryside in the spring of 1860. Learning that the majority of New Mexicans were loyal to the Union, Canby hastily sought to organize them as the First and Second Regiments of New Mexican Volunteers. This gesture, however, failed to bring the volunteers under Canby's control.

In September and October 1860, New Mexico volunteers invaded Canyon de Chelly and destroyed Navajo crops, seized Navajo livestock, and took Navajo captives, killing one of the major peace-minded chiefs—Zarcillos Largos (d. 1860). The attack marked a period in Navajo history that the Indians came to call “the Fearing Time,” a period of war and, ultimately, of defeat and exile.

Meanwhile, Navajos, Utes, and Apaches continued to raid freely as the distracted U.S. Army geared up to meet the Confederate invasion of New Mexico. Then, at Fort Fauntery on September 13, 1861, the New Mexico volunteers engaged in a massacre of Navajos gathered there peacefully, enraging tribesmen and swelling the ranks of the war-minded faction, whose members—led by Manuelito (c. 1818–93)—struck out with renewed fury.

It had become clear to Canby that the army proper was going to have to take the matter in hand, and he proposed a firm policy for dealing with the Navajos. Those, he announced, who agreed to settle on a reservation would be spared and protected by the United States government; those who refused would be branded enemies and hunted down. It fell to Canby's successor—General James H. Carleton (1814–73)—to carry out the plan.

A veteran Indian fighter, Carleton was also considered a humanitarian, which in the second half of the 19th century meant he wished to see a transformation of Native American culture and the ultimate assimilation of the Indians into Anglo-American society. To further that end, he set up a reservation at Bosque Redondo, a barren flat on eastern New Mexico's Pecos River. He then turned his attention to the Mescaleros, whom he quickly defeated and resettled on the reservation. Then, he unleashed on the Navajos his best colonel—Christopher Houston “Kit” Carson (1809–69). Ordered to prosecute his campaign

until headquarters concluded that the Navajo had been effectively punished, Carson succeeded in killing 13 warriors before the end of the month, taking 11 women and children captive. Far more significant was the widespread destruction of Navajo fields and orchards. Carleton offered a \$20 bounty for each horse or mule captured and a dollar for each sheep. Although Navajo raiding continued—10,000 sheep were stolen in August alone—the Indians did begin to surrender to confinement at the Bosque Redondo: 51 at the end of September, 188 in November, more than 500 in January. By March, a total of 2,138 Navajos were sent from Fort Canby, New Mexico, to the Bosque.

Not to be satisfied, however, until every last Navajo had been consigned to the reservation, Carleton pressed his campaign relentlessly. He repeatedly admonished Carson and his officers that they were to negotiate nothing with the Navajo, for the Indians' choice was as simple as it was absolute: either go to the Bosque or be destroyed. On December 31, 1863, Carleton issued an order for the kind of hard winter campaign soldiers dreaded almost as much as the Indians did.

On January 6, 1864, Carson and 389 officers and men set out from Fort Canby to strike from the west the Navajo's ancient stronghold, Canyon de Chelly. Two more companies approached from the east. On January 12, a patrol in advance of Carson's main body engaged a party of Navajo, killing 11 of them. Otherwise, Carson's command fought no Navajos. Instead, on January 15, 60 Navajos surrendered to Carson, complaining that the ceaseless warfare was starving them. After destroying dwellings and orchards, Carson declared the Canyon de Chelly Expedition ended, and even more Navajos dejectedly marched off to the Bosque. By late 1864, three-quarters of the Navajo tribe had accepted concentration on the reservation.

The Bosque Redondo was a place to be dreaded. Although government wagons were furnished to transport the very young, the old, and the infirm, the remainder took an infamous "Long Walk." Conditions at Fort Canby, the jumping-off point for the Bosque, were deplorable, and 126 Navajos died of dysentery there. More died en route to the Bosque itself; reportedly, some, no longer able to march, were shot by their soldier escorts. The entire affair was reminiscent of the Cherokees' Trail of Tears. Eventually, 8,000 Navajos crowded the reservation, but, with an inefficiency and inhumanity that had become routine, the government failed to supply sufficient rations to feed this population. To his credit, General Carleton was unremitting in his pleas for 2 million pounds of food, 13,000 yards of cloth for clothing, 7,000 blankets, 20 spinning wheels, 50 mills for grinding corn, farm implements, and seeds. Finally—perhaps it was his special nod toward the amenities of white civilization—Carleton asked for 600 cotton handkerchiefs.

Congress did appropriate funds, but the amount fell short of what was needed. Attempts to teach the traditionally peripatetic Navajo and Apache Indians sedentary farming techniques likewise failed. By 1864, conditions at "Fair Carletonia"—as the soldiers sardonically christened the Bosque—were desperate. After enduring through 1868, Manuelito, Barboncito, and other chiefs were permitted to journey to Washington, D.C., to inform President Andrew Johnson of conditions at the reservation. A month later, peace commissioners visited the Bosque Redondo and concluded that the Navajos "had sunk into a condition of absolute poverty and despair." A treaty was concluded on June 1, 1868, returning the Indians to their homeland and declaring it their new reservation.

Neapolitan Revolt (1485–1486)

PRINCIPAL COMBATANTS: Angevin barons vs. Ferdinand I of Naples

PRINCIPAL THEATER(S): Naples

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Angevin barons, oppressed by high taxes, sought to overthrow Ferdinand I.

OUTCOME: With the aid of Lorenzo de' Medici of Florence, Ferdinand I defeated the barons and maintained his throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Ferdinand I (1423–94) ruled Naples with an iron fist, imposing a heavy tax burden on the Angevin barons of that city-state. At length, the barons rebelled against Ferdinand in 1485, seeking to replace him with René II (1451–1508) of Lorraine or Frederick of Aragon, Ferdinand's own second son. At first, Ferdinand acted against the rebellion through police actions, including arrests of subversives, followed by trials and executions, but as the movement against him gained ground, especially after Pope Innocent VIII (1432–92) threw his support behind the barons, he appealed to Lorenzo de' Medici (1449–92)

810 Neapolitan Revolt (1820–1821)

of Florence for military assistance (*see* FLORENTINE WAR WITH THE PAPAL STATES). Lorenzo's intervention in 1486 defeated the papal supporters of the Angevin barons and preserved Ferdinand on the throne. This, in turn, led Milan's Lodovico Sforza (1451–1508), who feared Ferdinand's growing power, to invite Charles VIII (1470–98) of France to intervene in the wars among the Italian city-states. (*See* ITALIAN WAR OF CHARLES VIII.)

Killinger, *The History of Italy* (Westport, Conn.: Greenwood Publishing, 2002).

Neapolitan Revolt (1820–1821)

PRINCIPAL COMBATANTS: Neapolitan nationalists (Muratists) vs. Ferdinand I, king of the Two Sicilies (backed by the Holy Alliance)

PRINCIPAL THEATER(S): Naples

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Muratists rebelled against the despotism of Ferdinand I.

OUTCOME: Ferdinand I secured Austrian aid in crushing the rebellion and reestablishing despotism over Naples.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Neapolitans: 50,000; Holy Alliance: 60,000

CASUALTIES: Unknown

TREATIES: None

The fall of Napoleon (1769–1821) in 1815 brought an end to the Decennio, the decade of French rule in Italy. Resented by Italian nationalists, Napoleon's puppets were often admired by liberals for the political reforms they brought in their wake. Thus, when the old despot, Ferdinand I (1751–1825) was restored as king of the Two Sicilies (that is, Naples and Sicily), the Muratists, followers of Joachim Murat (1767–1815), the late Napoleonic king of Naples, attempted to carry out democratic reforms to government under Ferdinand's reactionary rule. When the reforms failed, a Muratist cavalry regiment mutinied in the town of Nola on July 11, 1820. Ferdinand I called on the army to put down the mutiny, but the officers, sympathetic to the Muratist soldiers, refused. Their cause attracted support from the Carbonari, a nationalist fraternity that had been formed under the French dominance and had since become chief among those groups calling for a liberal revolution against Ferdinand. Led by veteran general Guglielmo Pepe (1783–1855), the insurgency burgeoned and the violence magnified into a week of riot and revolt. The king felt that he had no choice but to grant Naples the con-

stitution the revolutionaries sought. However, a Sicilian junta opposed the Neapolitan constitution, and the new Neapolitan parliament sent an army under Pietro Colletta (1775–1831) to suppress the Sicilian government. This touched off a revolt in Palermo, the chief city of Sicily, which prompted the Holy Alliance, a reactionary league of European nations, to send troops to "restore order" in Sicily and Naples. The Neapolitans called on Ferdinand I to travel to Ljubljana, Austria (today the capital of Slovenia), to block intervention from the Holy Alliance. He agreed to go but betrayed Naples by formally requesting military aid from Austria. Sixty thousand Austrian troops marched on Naples in March 1821. The Neapolitan army, consisting of some 50,000 citizen-soldiers mobilized by the constitutionalists, could hardly stand up to the Hapsburg regulars. They crumpled even before the Austrians reached the border. Ferdinand resumed his despotic reign over Naples and denounced the constitution. He enforced his rule by means of an Austrian army of occupation, which remained in Naples through 1827.

Nebuchadnezzar's Campaigns

(605–561 B.C.E.)

PRINCIPAL COMBATANTS: Babylon vs. (variously) Judah, Arab tribes, and Egypt

PRINCIPAL THEATER(S): Judah, Syria, Palestine, and Egypt

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest; expansion of the Babylonian Empire

OUTCOME: Despite some reversals, Nebuchadnezzar was an active and successful conqueror, who greatly enlarged Babylon in extent and influence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

Nebuchadnezzar II (c. 630–562 B.C.E.) was the second king of the Chaldean dynasty of Babylonia. His entire reign, from about 605 to about 561 B.C.E., was marked by military campaigns. His first significant campaign came in 607–606, when, as crown prince under his father, Nabon-

polassar (fl. 625–605 B.C.E.), he commanded an army in the mountains north of Assyria. When Nabopolassar returned to Babylon, Nebuchadnezzar led military operations entirely in his own right.

When Babylonian forces were defeated in battle by the Egyptians during 606–605, Nebuchadnezzar was appointed to command Babylonian forces. He proved a brilliant general—far superior to his father—and defeated the Egyptian army at the battles of Carchemish and Hamath. These victories gave Babylon control of all Syria.

Following the death of Nabopolassar on August 16, 605, Nebuchadnezzar returned to Babylon and assumed the throne. Then, between June and December of 604, after receiving the submission of local states, including Judah, he captured the important city of Ashqelon. He set about expanding his armies by hiring Greek mercenaries, whom he sent campaigning into Palestine. Within three years, Babylon controlled the region. However, during 601–600, his armies tangled with Egyptian forces and suffered severe losses. This defeat precipitated the desertion of some vassal states, including Judah.

During 600–599 B.C.E., Nebuchadnezzar regrouped his forces and, in particular, repaired and refitted his war chariots. By the end of 599–598 (December to March), Nebuchadnezzar resumed campaigning to regain control of Palestine. He attacked the Arab tribes of northwestern Arabia to clear the way for an assault on and occupation of Judah. That attack came in 597, and on March 16 of that year, Nebuchadnezzar took Jerusalem, ousting the king, Jehoiachin, and deporting him to Babylon.

After the conquest of Judah, Nebuchadnezzar led a campaign into Syria during 596–595. However, he had to return to Babylonia to repel a threatened invasion of the eastern portion of his realm, apparently from Elam (southwestern Iran). Nebuchadnezzar also faced internal dissension during this period. Late in 595–594, a rebellion broke out among some elements of the army. Evidently, the rebellion was extinguished, because Nebuchadnezzar launched two new campaigns in Syria during 594.

Nebuchadnezzar's military activities after 594 are not recorded in any surviving chronicles, but are mentioned in the Old Testament. Here we learn of another attack on Jerusalem and a 13-year siege against Tyre. Nebuchadnezzar may also have invaded Egypt. According to the Bible, the second siege of Jerusalem was successful. The city fell to Nebuchadnezzar in 587–586. Nebuchadnezzar purged the city of certain prominent citizens, who were deported to Babylon. A second wave of deportations occurred in 582.

Fragmentary cuneiform references suggest that Nebuchadnezzar's culminating operation was an invasion of Egypt, in 568–567 B.C.E.

Neuchâtel, Insurrection at (1856–1857)

PRINCIPAL COMBATANTS: Neuchâtel republicans vs. Neuchâtel royalists (backed by Prussia)

PRINCIPAL THEATER(S): Neuchâtel, Switzerland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The royalists sought to overthrow the republican government of Neuchâtel and establish Prussia's Frederick William IV as prince of Neuchâtel.

OUTCOME: A stand-off developed between Prussia and Neuchâtel, but war was averted by diplomatic compromise.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: None

TREATIES: Compromise of 1857

The Congress of Vienna that followed the conclusion of the NAPOLEONIC WARS temporized in the case of Neuchâtel, establishing it simultaneously as a new Swiss canton and as the property of the king of Prussia. This prompted the Swiss to rebel in 1848, a year in which revolution swept Europe, and to declare Neuchâtel a republic. In 1852, the major European powers responded with the London Protocol, which confirmed the rights of Prussia's Frederick William IV (1795–1861) to the canton, but also advised him to forestall action unless the powers concurred. Frederick William agreed to the London Protocol but nevertheless endorsed a coup by Neuchâtel's royalists in 1856. The coup d'état fizzled, resulting in the mass arrest of 530 aristocrats. When the republic of Neuchâtel refused to release the plotters, Prussia vowed to go to war. The Swiss then mobilized for combat as well, but war was staved off by the diplomatic intervention of France's Napoleon III (1808–73). He decided to back the claims of Neuchâtel, and the British supported this decision. Frederick William was thus put in an embarrassing position, which French diplomats resolved by suggesting that he retain his title of prince of Neuchâtel but simultaneously renounce sovereignty over it, thereby allowing the canton to remain an independent republic. In return, Neuchâtel officials agreed to release the aristocrats without taking further action against them. Prussia and Neuchâtel demobilized their armies, and war was averted.

Nez Percé War (Chief Joseph's Uprising) (1877)

PRINCIPAL COMBATANTS: Nez Percé Indians vs. United States

PRINCIPAL THEATER(S): Portions of Idaho, Washington, Oregon, and Montana

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: A Nez Percé faction refused to relinquish their lands and move to a reservation; when pressured by the United States, they fled for Canada; the U.S. Army sought to prevent their escape and their joining Sioux leader Sitting Bull in Canada

OUTCOME: Nez Percé surrender and removal to reservations

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: United States—5,000; Nez Percé—300 warriors

CASUALTIES: United States, civilian and military—92 killed, about 57 wounded; Nez Percé—(according to Nelson Miles) 120 killed in action, 205 died en route, 150 captured and turned over to Cheyenne, wounded unknown, though many who survived the journey, wounded, sick, or exhausted, died soon thereafter

TREATIES: None

The Nez Percé of central Idaho, southeastern Washington, northeastern Oregon, and parts of Montana fell into sharply divided “treaty” (pro-white) and “non-treaty” (anti-white) factions after an 1863 gold rush had prompted a revision of an earlier treaty that had defined the boundaries of the Nez Percé homelands. The revised covenant carved the mineral-rich lands out of the original allocation. Those Indians whose homes remained within the revised boundaries signed the treaty; those who were dispossessed refused to sign. Prominent among the latter was the revered Chief Joseph (d. 1871), who repudiated the treaty and lived with his people in land now claimed by the government.

For many years, few whites were actually interested in the particular area, however, and Joseph was left in peace. Indeed, in 1873, two years after Joseph's death, President Ulysses S. Grant (1822–85) set aside part of the Wallowa Valley as a reservation. At this very time, however, Oregon settlers began to covet the land for grazing and lobbied for its reopening to white settlement. General Oliver O. Howard (1830–1909) headed a negotiating committee charged with persuading the nontreaty Nez Percés to leave the disputed lands. The conference, which took place between November 12 and November 15, 1876, broke down, but Young Joseph (c. 1840–1904), who had become

chief upon the death of his father, nevertheless marched off with the nontreaty faction to the reservation, realizing that war with the whites would be useless.

As was frequently the case, the younger men in the tribe could not reconcile themselves to the situation. On June 13 and 14, 1877, while traveling to the reservation, some young warriors, drunk, killed four whites. Although Young Joseph tried to convince his followers to seek reconciliation with white authorities, the nontreaty Indians now decided to turn south, toward the Salmon River, instead of continuing to the reservation, and in the course of their run, 15 more settlers were slain.

General Howard dispatched 100 cavalrymen under Captain David Perry out of Fort Lapwai. Persuaded by panic-stricken civilians to strike, Perry confronted the Indians on June 17 at White Bird Canyon. Joseph sent a delegation under a flag of truce, intending to talk peace, but a party of trigger-happy civilian volunteers opened fire, inciting an attack on Perry's troops, one-third of whom—more than 30 men—were killed.

On June 22, Howard moved about 400 men to White Bird Canyon. Once again, a Nez Percé leader, Chief Looking Glass (c. 1823–77), offered reconciliation, and, once again, civilian volunteers attached to the army force provoked a fight. Under attack on July 1, the regulars trained their Gatling guns against the village, killing several people, including women and children, and sending Looking Glass over to the side of the hostiles.

Ten days of pursuit and attack followed, with the Indians usually maintaining the advantage. On July 9 and 10, the Indians besieged a force of volunteers at a place the whites dubbed Mount Misery. Howard was able to bring his main force to the Nez Percés' rear, and on July 11, the two-day Battle of Clearwater began, which ended in the Indians' withdrawal. However, exhausted by the battle, Howard could not give chase and thereby failed to bring the war with the Nez Percé to an immediate conclusion.

The army pursued the fugitive Indians until August 9, when Colonel John O. Gibbon (1827–96), leading 15 officers, 146 enlisted regulars, and 45 volunteers, surprised a camp on the Big Hole River, Montana. Looking Glass led a quick and successful counterattack, killing two of Gibbon's officers, 22 regulars, and six civilians, and wounding five more officers, 30 enlisted men, and four civilians. The Nez Percés then traveled 100 miles, killing nine whites, seizing 250 horses, and raiding a wagon train before they entered the newly established Yellowstone National Park, where they terrorized visitors.

Howard gave chase while the seventh Cavalry, under Colonel Samuel D. Sturgis (1822–76), attempted unsuccessfully to block the escape route. On August 19, 200 warriors skirmished with troopers on Camas Meadows and made off with 150 army mules, having killed one trooper and wounded seven. On September 13, the seventh Cavalry engaged Nez Percé at the site of present-day

Billings, Montana, and, once again, the army took serious casualties. Sturgis lost three men killed and 11 wounded.

The Nez Percés fled northward, toward Canada, where they hoped Sitting Bull (c. 1831–90), in exile there, would welcome them. But, only 40 miles south of the border, they paused to rest. On September 30, on the northern edge of the Bear Paw Mountains, they were attacked by about 400 regulars under Colonel Nelson A. Miles (1839–1925). The Indians dug in, and the Battle of Bear Paw Mountain lasted six snowy, miserable days, from September 30 to October 5.

During the battle, the Indians held council. Chief Joseph argued for surrender. Looking Glass wanted to fight, but they agreed to talk terms. On October 1, under a flag of truce, Joseph went to meet Miles to negotiate surrender terms. Talks broke down, and Miles decided to hold the chief hostage but exchanged him for one of his own men held captive. On October 5, Looking Glass was struck in the forehead by a stray bullet and killed, whereupon Chief Joseph surrendered to Miles, making a speech of heart-wrenching, desperate eloquence:

I am tired of fighting. Our chiefs are killed. Looking Glass is dead. Toohoolhoolzote is dead. The old men are all dead. It is the young men who say yes or no. He who led on the young men [Joseph's brother, Ollokot] is dead. It is cold and we have no blankets. The little children are freezing to death. My people, some of them, have run away to the hills, and have no blankets, no food; no one knows where they are—perhaps freezing to death. I want to have time to look for my children and see how many of them I can find. Maybe I shall find them among the dead. Hear me, my chiefs! I am tired; my heart is sick and sad. From where the sun now stands I will fight no more forever.

For three months, 800 Nez Percés traveled more than 1,700 miles, consistently eluding or defeating the army. Chief Joseph, aided by Miles and Howard, who had come to respect him deeply, spent the rest of his life unsuccessfully petitioning for the land originally promised by President Grant. Joseph died on a reservation in 1904.

Nian Rebellion (1853–1868)

PRINCIPAL COMBATANTS: Nian (Nien) rebels vs. Manchu China

PRINCIPAL THEATER(S): Yellow (Huang) River Valley of China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Nian rebelled against the ineffectual Manchu government.

OUTCOME: For many years, the Nian controlled much of northern China, but, following the death of their leader, the movement began to collapse, and the rebellion was crushed by 1868.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Nian rebels, 50,000

CASUALTIES: Civilian and military casualties, more than 4 million

TREATIES: None

An offshoot of the Buddhist-inspired White Lotus secret societies, the Nian were outlaw bands of Chinese peasants army deserters, and smugglers living along the Yellow River, who had raided the Manchu (Qing or Ch'ing) Empire sporadically since the early 1800s. Victims of long-term famine, they took to plundering Anhui (Anwei), Henan (Honan), and Shandong (Shantung) during the early 1850s when the Manchus were preoccupied with the TAIPING REBELLION. Soon, the Nian assumed paramilitary status, fortifying villages and using these as bases from which to conduct their raids. The Manchu government acted ineffectually against the Nian, who now numbered between 30,000 and 50,000, organized into five armies, and who came to control much of northern China, establishing in this region a kind of shadow government.

The death of the Nian leader Zhang Luoxing (Chang Lo-hsing) in 1863 at the government's siege at Zhi-ho (Chih-ho), the Nian citadel, brought disorder to the Nian. Had they been able to coordinate their actions with the Taiping rebels of southern China, the Manchu dynasty might well have been overthrown. But, disorganized now, the Nian fell prey to an imperial assault under a series of generals, Senggelingqin (Seng-ko lin-ch'in; d. 1865), Zeng Guofan (Tseng Kuo-fan; 1811–72), and Li Hongzhang (Li Huang-chang; 1823–1901). The imperial troops laid siege to all of the Nian fortress villages, starving the inhabitants into surrender. Through systematic sieges, the rebellion was put down by 1868.

Perry, *Rebels and Rebellion in North China, 1845–1945* (Palo Alto, Calif.: Stanford University Press, 1980).

Nicaragua, Spanish Conquest of See SPANISH CONQUEST OF NICARAGUA.

Nicaraguan Civil War (1909–1912)

PRINCIPAL COMBATANTS: Conservative Party opposition (backed by U.S. intervention) vs. the nationalist forces of President José Santos Zelaya.

PRINCIPAL THEATER(S): Nicaragua

DECLARATION: Demonstrations against Zelaya's government began at Bluefields on October 10, 1909.

MAJOR ISSUES AND OBJECTIVES: Conservatives, supported by the United States, rebelled against nationalist and dictatorial government.

OUTCOME: Installation of a Conservative Party regime, friendly to the United States

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Fewer than 1,000 U.S. Marines; rebel and government forces at variable strength

CASUALTIES: Unknown

TREATIES: None

A backwater of the old Spanish Empire, Nicaragua had been inspired by the revolutions in Mexico and El Salvador to depose its imperial intendant in 1811. When Guatemala declared its independence from Spain in 1821, both countries united briefly with Mexico but often fought against one another for supremacy until 1826, when Nicaragua joined the United Provinces of Central America. By the time it seceded from that federation in 1838, liberal and conservative factions were already battling with each other and would continue to do so throughout Nicaraguan history. The discovery of gold in California in 1848 made Nicaragua a strategic location for interocean travel, which caught the attention of U.S. railroad and shipping magnate Cornelius Vanderbilt (1794–1877). Backing the Conservative Party, Vanderbilt just about owned the country when famed soldier of fortune William Walker (1824–60) attempted his ill-starred invasion at the behest of the Liberals, then made himself president in 1856 (see WALKER'S INVASION OF NICARAGUA.)

After Vanderbilt's transit-company army and the forces of five republics from the former United Provinces routed Walker the following year, Nicaragua was ruled until 1893 by Conservatives, supported by the United States and routinely in the pay of North America's profit-minded big business interests. The Conservatives brought relative peace but little in the way of freedom or democracy to the people of Nicaragua, and they were ousted by the Liberal presidency of José Santos Zelaya (1853–1919).

Zelaya, a committed nationalist but a brutal dictator, promoted schemes for Central American reunification and refused to grant U.S. businesses the kind of concessions they demanded to build a canal across his country, which encouraged Theodore Roosevelt (1858–1919) and his friends to turn to Panama. As if that weren't dangerous enough, rumors spread that Zelaya planned to invite Japan

to construct a canal that would compete with the projected U.S. waterway. Not content to alienate U.S. business interests and foil North American "progress," Zelaya displayed open hostility toward U.S. diplomats in the capital, Managua. The United States promptly turned its support to Zelaya's Conservative opposition and urged its members to stage a revolt.

Juan J. Estrada, Adolfo Díaz (1874–1964), and Emiliano Chamorro Vargas (1871–1966) led a group of powerful and influential Nicaraguans in the rebellion beginning on October 10, 1909. At first localized near Bluefields, on Nicaragua's eastern coast, the conflict slowly spread west. Two American citizens, Leonard Croce and Leroy Canon, volunteered for service as officers in Chamorro's revolutionary army and were captured by Zelaya's troops. Despite the warnings of his own advisers, Zelaya ordered the execution of the two Americans, an act that prompted U.S. secretary of state Philander Knox (1853–1921) to sever diplomatic relations with the Zelaya government on December 1, 1909.

Simultaneously, the navy was ordered to organize the Nicaraguan Expeditionary Brigade of marines, which arrived at Cristobal, Canal Zone, on December 12. The marines then boarded the USS *Buffalo* bound for Corinto, Nicaragua. Their arrival in Nicaragua persuaded Zelaya to resign office, on December 16, in favor of José Madriz (fl. 1909–10) and to flee to political asylum in Mexico. Immediately, relations with the United States improved, and the marines sailed back to Panama on March 22, 1910.

The departure of Zelaya by no means left Nicaragua peaceful, however. In the vicinity of Bluefields, where the revolt had started, fighting broke out between rebels loyal to Juan J. Estrada and forces loyal to President Madriz. Seeking to restore order, U.S. naval commander William W. Gilmer, skipper of the USS *Paducah*, riding off Bluefields, issued a proclamation to both sides forbidding fighting within the city. Gilmer requested a contingent of marines to enforce his proclamation. Two hundred marines under Major Smedley D. Butler (1881–1940) arrived from the Canal Zone on May 30.

The principal dispute at Bluefields was the disposition of the customs house there. Estrada's rebels had seized it and used it as a source of finance. On May 27, Madriz's army retook it, even though Estrada's forces still occupied the city. Estrada demanded that customs duties be paid to his men in the city, whereas Madriz insisted that they be paid at the customs house he now controlled. U.S. authorities, feeling that Madriz was becoming dictatorial and dangerous, ordered that customs duties be paid to Estrada. This provided the financial support he needed to continue his revolt against Madriz. While the U.S. Marines maintained civil order in Bluefields—and oversaw the rebuilding of the local hospital, market, and sanitary facilities there—Estrada took Managua on August 23. He was inaugurated as president on August 30, and, on September 4,

the Marines pulled out of Bluefields and sailed back to Panama.

However, Nicaragua was still rocked by unrest. Zelaya's followers were still active, and many in Estrada's own party became dissatisfied over the paltry shares of power and spoils they received. Nicaraguans more generally objected to U.S. imperialism and the various trade considerations and monopolies the United States received. When fighting broke out in Managua, Elliott Northcott (1869–1946), U.S. minister to Nicaragua, persuaded Estrada to resign in favor of his vice president, Adolfo Díaz. This relieved tensions for a short time, but in 1912, General Luis Mena, who had been war minister under Estrada, took a portion of the army to Masaya and then instigated the seizure of American-owned steamships on Lake Managua.

U.S. officials appealed to Díaz for assistance. He replied, in turn, with a request for U.S. military aid, and 100 sailors from the USS *Annapolis* arrived in Managua on August 4, 1912, while 353 marines, under Smedley Butler, set off from Panama for Corinto. On August 14, the Marines and 80 more seamen left Corinto by train for Managua, arriving on August 15. Thus backed, George F. Weitzel (b. 1873), who had replaced Northcott as minister in Managua, demanded that Mena immediately return the vessels that had been appropriated. When Mena refused, more marines were called up.

On September 6, the First and Second Marine Battalions of the First Provisional Regiment, Colonel Joseph H. Pendleton (1860–1942) commanding, arrived in Managua to join the small force already there. Assuming command of the combined forces, Pendleton loaded three marine companies onto a train bound for Granada, to confront Mena. At La Barranca, a hill near the town of Masaya, the forces of General Benjamin Zeledon (1879–1912), a supporter of Mena, blocked the train. Butler set up a conference between Pendleton (along with Admiral William H. H. Southerland [1852–1933]) and Zeledon, who eventually agreed to allow the marines to pass. On September 19, however, within the city limits of Masaya, revolutionary troops ambushed the train, which, putting on full speed, managed to get through the city without serious harm. At San Blas, on the outskirts of Granada, Butler informed General Mena's representatives that he would attack Granada if Mena did not surrender. Ailing, Mena gave up in return for safe conduct to political asylum in Panama.

The marines had achieved control of the rail line but still had to take Zeledon's stronghold in the Barranca-Coyatepe hills and his rebel positions in Masaya and León. On October 2, marine and Nicaraguan government troops commenced artillery bombardment of the hills, then, on October 3, stormed Zeledon's positions, readily taking them. Now the Nicaraguan troops descended on Masaya, which they ravaged and looted. Seeking to avoid Masaya's fate, León quickly surrendered to the U.S. Marines. This

ended the revolt against the Díaz regime. In November 1913, most of the marines returned to Panama, leaving behind a contingent of 100 to guard the U.S. legation—and to supply the muscle needed to bolster the U.S.-friendly, Conservative Díaz government.

Nicaraguan Civil War (1925–1933)

PRINCIPAL COMBATANTS: Nicaraguan Liberals vs. Nicaraguan Conservatives (aided by U.S. troops)

PRINCIPAL THEATER(S): Nicaragua

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: After the failure of a U.S.-sponsored Liberal-Conservative coalition government and the withdrawal of long-standing U.S. occupation forces, liberal and conservative factions vied for control of the country.

OUTCOME: Conservatives retained power; Augusto César Sandino, the leading Liberal guerrilla commander, was assassinated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

U.S. military contingent, 2,000 marines; Nicaraguan government and rebel forces at variable strength

CASUALTIES: Unknown

TREATIES: None

Though the citizens of the United States liked to think of their country as a champion of democracy and human rights, those living in Central and South America often had a different historical notion about the behemoth to their north. Beginning in the late 19th and early 20th centuries, when U.S. foreign policy more openly served the economic imperialism of American big business interests, the United States helped to create a series of Latin American client republics. The conservative governments of such countries were supported by the U.S. military and often controlled behind the scenes by U.S. corporations interested only in the profits they could exploit. Because these corrupt governments tended to be brutal and repressive, popular national liberation movements in Latin America usually took on a decidedly anti-North American, anticapitalist tone.

In Nicaragua, from the time the country became independent in 1838, Liberals struggled for power with Con-

servatives, who were in the thrall of Cornelius Vanderbilt (1794–1877) and his transportation companies from the start and who grew especially friendly toward U.S.-owned fruit producers. In 1893, Liberals regained power but, under threat by the United States, were forced to yield to the Conservatives in the NICARAGUAN CIVIL WAR (1909–1912). To shore up the new government and protect American business interests, the United States dispatched a detachment of marines to the scene. This small force of about 100 men continuously occupied Nicaragua until 1925, when the United States helped engineer a coalition government between Conservative president Carlos Solórzano (fl. 1920s) and Liberal vice president Bautista Sacasa (1874–1946). Believing it had “solved” the long-standing animosities, the U.S. government withdrew its marines, which sparked another civil war.

On October 25, 1925, shortly after the marines left, General Emiliano Chamorro Vargas (1871–1966) and Adolfo Díaz (1874–1964) staged a coup, which drove the Liberals, including Sacasa, out of office. Soon after, Solórzano also resigned, and, in January 1926, Chamorro became president. The United States refused to recognize his elevation to office, and, in the meantime, the charismatic General Augusto César Sandino (1893–1934) led Liberals in a revolt against Chamorro. In the course of the revolt, Sandino’s followers (“Sandinistas”) seized U.S. businesses and property in Nicaragua, which prompted the United States to dispatch gunboats and marines to the country. Their presence brought about a truce, during which Chamorro stepped down as president and left Nicaragua. In October 1926, the Nicaraguan congress elected the Conservative Díaz president.

At this point, Sacasa returned from his exile in Mexico and, with Mexican support, set up a rival Liberal government on the east coast of Nicaragua. This triggered a civil war between Sacasa’s followers—a rebel army under General José María Moncada (1868–1945)—and the government forces of Díaz. At the urging of U.S. business and the request of the Conservative president, U.S. president Calvin Coolidge (1872–1933) authorized military aid in 1927, including several warships and a contingent of 2,000 marines. The United States also supplied Díaz with weapons and other materiel.

U.S. intervention in the Nicaraguan Civil War incited Augusto Sandino to join the fight, leading a brilliant guerrilla campaign against the marines and other gringo interlopers. In the face of this new development, Coolidge dispatched former secretary of war Henry L. Stimson (1867–1950) to Nicaragua to mediate between the rival leaders Díaz and Moncada. He persuaded them to disarm and to allow the United States to supervise the upcoming election. On November 4, 1928, Moncada, the Liberal candidate, was elected. But Sandino refused to accept the U.S.-mediated result placing a rival general, even if he was Liberal, in power, and his guerrillas continued to clash

with the marines. The United States responded by sending light bombers over the mountain regions known to harbor Sandinista guerrillas. After the bombings, Sandino fled to Mexico but continued to direct guerrilla activities from there.

In 1932, Sacasa himself was elected to the presidency in another U.S.-supervised election and began negotiating with Sandino. The rebel leader agreed to end the war as soon as U.S. Marines withdrew, which they did in 1933 after training the Nicaraguan National Guard to maintain order for the new civilian president and leaving a hand-picked man, Anastasio Somoza García (1896–1956), in charge of the guard. Granted amnesty by Sacasa, Sandino returned to Nicaragua and, in 1934, was assassinated by soldiers of the Somoza-controlled force in Managua. This created a Liberal political martyr and an enduring symbol of resistance to oppression and to U.S. imperialism in Nicaragua. Four decades later, liberal socialist elements, calling themselves Sandinistas, would clash with the ruling Somoza presidential regime, which was supported by the United States, in yet another civil conflict, the NICARAGUAN CIVIL WAR (1978–1979).

Nicaraguan Civil War (Sandinista Revolution) (1978–1979)

PRINCIPAL COMBATANTS: Sandinista rebels vs. Nicaragua’s government forces under dictator Anastasio Somoza

PRINCIPAL THEATER(S): Nicaragua

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The growing brutality and greed of the Somoza dynasty had long fed unrest in Nicaragua, which exploded in a Marxist revolution in 1979.

OUTCOME: Somoza fell from power, fled the country, and was later assassinated, whereas the Sandinistas assumed control of the country and installed a military junta.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Sandinistas, 5,000; National Guard, 13,000

CASUALTIES: 10,000 Nicaraguans killed including 7,000 civilians

TREATIES: None

On July 17, 1979, the longtime president and brutal dictator of Nicaragua, Anastasio Somoza Debayle (1925–80), resigned his office and fled before the advancing revolutionary army of the Marxist Sandinistas. Nicaragua had undergone a revolution, and the United States was deeply implicated in the struggle.

For about a century after Nicaragua became independent in 1838, the nation was torn by power struggles between Liberals and Conservatives. The Conservatives were especially friendly to outside business interests, and that included U.S. fruit producers. In 1893, the Liberals regained power but were persuaded under threat of force by the United States to yield to the Conservatives in 1909. To back up the new government and to protect American business interests in Nicaragua, a U.S. Marine detachment was dispatched to the scene (*see* NICARAGUAN CIVIL WAR [1909–1912]). It remained until 1925, when its withdrawal sparked an outright civil war between Liberals and Conservatives (*see* NICARAGUAN CIVIL WAR [1925–1933]).

Before the U.S. Marines left, a coalition government had been formed with the election of a Conservative as president and a Liberal as vice president, but hardly had the marines reached home before the Nicaraguan Army staged a coup d'état, which led to a Liberal revolt. In 1927, the United States again sent thousands of marines to put down the Liberal insurrection. However, two elections held under U.S. supervision resulted in the election of Liberal presidents in 1928 and 1932. After training the Nicaraguan National Guard to maintain order, the marines withdrew in 1933, leaving a handpicked man, Anastasio Somoza Garcia (1896–1956), in charge of the guard. The Liberal government of the early 1930s was far more moderate than earlier Liberal regimes; however, one important “radical” leader remained, Cesar Augusto Sandino (1893–1934), who led a resistance movement not only against the Conservatives, but opposed to the U.S. presence as well. Somoza, knowing the United States would support him if he made a bid for power, took his chance and invited Sandino to a peace conference but arranged to have him abducted and murdered by the National Guard. With Sandino out of the way, Somoza rallied support for the ouster of President Juan Bautista Sacasa (1874–1946) in 1936, after which Somoza was elected president. Somoza ran the country with an iron hand until 1956, when he was assassinated by a nationalist poet. But during his long tenure, Somoza laid the foundation of a modern dynasty, appointing his family members to the highest government posts and manipulating government policy to facilitate his amassing a fortune in money and land. Following Somoza's assassination, first his oldest son Luis (1922–1967) and then his third son, Anastasio Somoza Debayle (1922–1967), succeeded him as president.

The new leader transformed the National Guard into a private palace army under his personal control. He

struck a deal with the Conservative Party to succeed himself as president in 1971 in return for giving the Conservatives 40 percent of the legislature. Then the devastating 1972 earthquake, which destroyed a large part of the capital city of Managua and brought in millions of dollars in foreign aid, mostly from the United States, swelled the Somoza fortune in real estate, construction, finance and insurance companies, and a range of businesses. By then, the Somoza family already held half of the nation's land deeds and owned outright a quarter of the best arable land. Given its wealth and American business contacts, the regime, distastefully arrogant and distressingly repressive though it was, came to be regarded by the United States as a bastion against incursions of communism into a chronically unstable Central America.

After Somoza's “election” to a third term in 1974, the Sandinistas, a leftist guerrilla force named in honor of Augusto César Sandino, stepped up their hitherto sporadic attacks and abducted high-ranking members of the Somoza government. The president waged a two-and-a-half-year counterinsurgency campaign, killing thousands. In 1977 the U.S. State Department signaled a change in attitude toward Somoza (and developing country dictators in general) under President Jimmy Carter (b. 1924) by citing the regime for human rights violations. That same year Nicaragua's Roman Catholic hierarchy accused the government of torturing and summarily executing civilians in its brutal anti-Sandinista campaign. The murder of opposition publisher Pedro Joaquin Chamorro (d. 1978), owner of the newspaper *La Prensa*, in 1978 led to rioting by thousands of Nicaraguans, who not without reason blamed Somoza for his death.

Antigovernment activity grew apace, and calls came for Somoza's resignation both at home and in the United States. In August 1978, Sandinista guerrillas invaded the national palace and held some 1,500 people hostage, including members of the Nicaraguan Congress, until Somoza—in a telling show of weakness—released 59 political prisoners and gave them safe passage out of the country. Invading Sandinistas from Costa Rica sparked a successful revolution on May 29, 1979, which after seven weeks of fighting reached the capital in Managua. The summary execution of a U.S. news reporter by Somoza's troops, caught on camera and broadcast nationwide in the United States, not only enlisted popular support for the Sandinistas in North America, but also ensured there would be no U.S. Marines rushing in to save wealthy conservatives this time around. On July 17, 1979, Anastasio Somoza Debayle resigned as president, fleeing two days later, first to Miami and then to Paraguay, where he was assassinated in a September 1980 bazooka attack.

The Sandinistas broadcast over government radio that a cease-fire was in place. A five-man military junta was installed and immediately set about reforming the country's institutions and economy, nationalizing all of the

818 Nicaraguan Civil War (1982–1990)

Somozas' vast holdings, banks, insurance companies, mineral reserves and forests. Turning to the United States with requests for foreign loans and expanding ties with many noncommunist nations, Nicaragua also established particularly close relations with Cuba, a country that had much resembled Nicaragua during the early days after the CUBAN REVOLUTION. The new U.S. president, Ronald Reagan (1911–2004), took the growing ties between the only Marxist-Leninist governments in the Western Hemisphere as evidence of an expanding communist presence in Central America and not only cut off economic aid to Nicaragua, but authorized some \$20 million to create and arm Nicaraguan counterrevolutionaries to fight the Sandinistas. Reagan justified his actions by pointing to the fact that the Sandinistas were building a huge army themselves and, so he claimed, were acting in concert with Cuba to destabilize the government of neighboring El Salvador. Whether or not Reagan's claims were justified—and there were soon Congressional white papers to say they were not—his funding of a counterrevolutionary force operating out of neighboring nations was both a venerable dollar-diplomacy tradition and insurance that another civil war would follow (see NICARAGUAN CIVIL WAR [1982–1989]).

Walker, *Nicaragua*, 4th ed. (Boulder, Colo.: Westview Press, 2003).

Nicaraguan Civil War (1982–1990)

PRINCIPAL COMBATANTS: The contras (adherents of the former Nicaraguan dictator Anastasio Somoza) vs. Nicaragua's Sandinista government

PRINCIPAL THEATER(S): Nicaragua's border regions

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Right-wing remnants of Somoza's National Guard sought, with massive U.S. aid, to overthrow the new revolutionary government of the Marxist Sandinistas.

OUTCOME: The Sandinistas were able to contain the rebels, but at the cost of U.S. hostility and economic ruin, which led to their defeat by a U.S.-backed opposition candidate in the first general election under the new constitution

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Contras—15,000; Sandinistas—60,000

CASUALTIES: More than 30,000 Nicaraguans killed

TREATIES: 1990 cease-fire between contras and UNO (National Opposition Union), followed by 1991 treaty in Managua

Some of the former Nicaraguan National Guard called *Somocistas* because of their loyalty to the late dictator, Anastasio Somoza Debayle (1925–80), went into exile in Miami with Somoza when he first fled the country after the Marxist Sandinistas had staged their successful national revolution in 1979 (see NICARAGUAN CIVIL WAR [1978–1979]). Others fled to neighboring Honduras, El Salvador, and Costa Rica. All of them were soon plotting to overthrow the National Liberation Front's five-man military junta that the Sandinistas had installed. The country the Sandinistas inherited was devastated economically and socially, so Sandinistas turned to the United States, and received from the administration of President Jimmy Carter (b. 1924) recognition and economic aid, but they also established particularly close relations with Cuba.

When U.S. president Ronald Reagan (1911–2004) took office in 1980 he made much of these growing ties with Cuba, claiming they were evidence of an expanding communist presence in Central America. In 1981, he suspended U.S. economic aid and authorized some \$20 million to create and arm Nicaraguan counterrevolutionaries to fight the Sandinistas. The Sandinistas, he claimed, were curtailing civil liberties and setting up a socialist economy, which was clearly true. Also, he pointed to the fact that the Sandinistas were building a huge army themselves. Finally, he claimed that not only were the Sandinistas in league with Communist Cuba, together they aimed to destabilize all of Central America, beginning with neighboring El Salvador. Congress openly questioned that claim. On the other hand, it was certainly clear that the Reagan administration wanted to destabilize Nicaragua.

By the mid-1980s, the Somocistas were joined by Nicaragua's Miskito Indians, who were resisting the Sandinistas' attempts to resettle them away from the Coco River on the Nicaraguan-Honduran border. In January 1982, Nicaraguan troops crossed the border into Honduras, raided several Miskito villages, and killed more than 100 Indians, alienating in the process many Sandinista sympathizers at home and abroad. Some Miskitos headed for rebel camps across the border while others joined a guerrilla outfit in southern Nicaragua called the Alianza Revolucionaria Democrática, which accused the Sandinistas of being Stalinists. In Honduras and El Salvador, the contras—as the counterrevolutionaries there had come to be called—now numbered about 15,000 soldiers. In 1983 and 1984, the contras, financed by the United States and trained covertly by the Central Intelligence Agency, made incursions into Nicaragua, inflicting costly damage by blowing up bridges and oil tanks, and

earning a brutal reputation for the zeal with which they avenged themselves on the mostly Sandinista-sympathizing population.

The Sandinista government responded with a further military buildup and by speeding up their domestic political reforms. In November 1984, the Sandinista National Liberation Front (FSLN) and its presidential candidate, Daniel Ortega Saavedra (b. 1945), won 63 percent of the vote in an election that international observers, including former U.S. president Jimmy Carter, deemed fair and competitive, and Ortega was inaugurated in January 1985. Two years later the Constituent Assembly produced a constitution that called for regular elections, the first for national office to be held in 1990. Growing ever more legitimate in the eyes of other nations, the Nicaraguan government was eventually able to acquire critical equipment for its military, such as assault helicopters, and to mount an effective counterinsurgency campaign that by the late 1980s contained and demoralized the contras.

President Reagan wanted to provide additional backing for the contras, but he encountered domestic resistance to more massive aid. In El Salvador, the United States found itself supporting a client regime that openly violated human rights, including the widely documented murder of U.S. missionary nuns. Congress wanted no part in protecting the brutal government of El Salvador from the perhaps chimerical threat of the Sandinistas, nor in supporting a counterrevolutionary campaign linked to the Somoza family's interests and its savage former national guard. In 1987, it voted against supplying further military aid to the contras.

That led to one of the century's more bizarre presidential scandals, which cast a telling light on the tangled web of world diplomacy and shadow government in the late 20th century and moved the Nicaraguan civil war from the battlefield to the plane of international politics. In 1979, Iranian followers of the Ayatollah Ruhollah Khomeini (1901–89) seized 90 American diplomats at the U.S. embassy in Tehran. The resulting "Iran Hostage Crisis" blighted Jimmy Carter's last year in office but ended on the day Ronald Reagan became president, when Khomeini—much to Reagan's political benefit—released the hostages. However, another round of kidnappings, inspired by those in Iran, soon followed in Lebanon. Most of the new hostages were to remain in captivity, their whereabouts unknown and their kidnappers unidentified throughout the Reagan presidency. The Reagan administration was especially worried about hostage William Buckley (1928–85), because his captors knew that Buckley was the CIA's head of station in Beirut. Fearing the political cost of appearing weak, President Reagan declared he would not under any circumstances negotiate with terrorists for hostages. Then, in 1985, a group of Israelis told Reagan's National Security Advisor, Robert MacFarlane (b. 1937), that an Iranian arms dealer could gain the release of the

hostages if the United States were willing to trade antitank missiles, which Iran desperately needed for its war with Iraq (*see* the IRAN-IRAQ WAR), in exchange for Tehran's promise to use its influence over the kidnappers. MacFarlane outlined the arms-for-hostages plan for President Reagan, but Secretary of State George Schultz (b. 1920) and Secretary of Defense Caspar Weinberger (b. 1917) both strongly opposed it. They left the meeting with Reagan and MacFarlane, believing the plan was dead and buried.

Instead, according to MacFarlane, the president told him to go ahead. MacFarlane got one arms shipment off and one hostage returned. MacFarlane then turned a second shipment over to one of his Security Council deputies, Colonel Oliver North (b. 1943). North, a Vietnam veteran and right-wing zealot, had—so he claimed—become the protégé of CIA director William Casey (1913–87) when he (North) came up with a plan to transfer money received from arms sales to Iran to the contras. This would need to be done secretly because Congress had banned such funding. Casey gave North the go-ahead, North recruited former CIA and U.S. military men to help him. Soon he was talking about expanding the mission into a permanent, off-the-shelf covert enterprise, always ready for use in circumventing congressional oversight of secret CIA operations.

Unfortunately for North, the second shipment of arms-for-hostages went sour, and, while he was preparing to arrange a third, an obscure Middle Eastern magazine broke the story that would lead to the unraveling of the Iran-contra plans. Within days of finding out that North and MacFarlane had been to Iran, U.S. newspapers ran stories about the affair. As in the Watergate scandal that had torpedoed Richard Nixon's presidency, the White House issued baldly conflicting statements. President Reagan rushed to appoint a commission headed by Senator John Tower (1925–91), which produced a scathing indictment of the administration. Congress also followed the Watergate pattern by creating a special committee to investigate, and a special prosecutor was appointed. President Reagan invoked "national security" as an excuse for withholding evidence, a strategy that famously had failed Nixon in the case of Watergate. Meanwhile, Oliver North, under a congressional grant of immunity, freely admitted at least those of his lies, deceptions, and illegal activities covered by the immunity, in all of which he implicated his superiors, including the president.

CIA director Casey, whom North had identified as the prime mover of the entire operation, had died of a stroke, and others in the administration either remained adamant in their denials or claimed loss of memory. Oliver North was given a suspended sentence on a number of the counts on which he was found guilty, and even these convictions were overturned on appeal. (He would later run for the U.S. Senate, then became a radio talk-show host).

MacFarlane unsuccessfully attempted suicide early in the scandal. Ronald Reagan emerged legally unscathed, though the scandal, coupled with the precipitous crash of the stock market, cast a pall over the final days of his administration.

In some ways, the Iran-Contra scandal, born of the war in Central America and hostilities in the Middle East, was the greatest nonevent of the 20th century. Although its implications were staggering (an out-of-touch president, a fanatical junior officer running major illegal foreign-policy initiatives unsanctioned by any elected authority, a Central Intelligence Agency making plans to institutionalize the illegal circumvention of Congress) U.S. citizens seemed not much to care. For the Nicaraguans, however, the Reagan administration's meddling approach to their internal affairs was very much a matter of concern.

Reagan had denounced the 1984 Nicaraguan election as a sham. Since 1982, the United States had used its leverage within the World Bank and the Inter-American Development Bank to block Nicaraguan loan requests. In 1985, the Reagan administration declared an outright embargo against the country. Such measures, combined with the social and economic dislocations of the civil war with the Sandinistas' own economic errors, caused an already weak economy to plummet after 1985. In response to an annual inflation rate in 1988 of 30,000 percent, the Sandinistas introduced harsh and unpopular austerity measures in 1989, slashing government programs in health, education, housing, and nutrition, which formed the background for the 1990 elections. Held under intense international scrutiny, the elections were marred by increased contra violence, but they were held nevertheless, and ended with a surprise. The U.S.-backed and -financed National Opposition Union and its presidential candidate, Violeta Barros de Chamorro (b. 1929), widow of a newspaper publisher martyred by former dictator Anastasio Somoza, won in an upset, and a peaceful transition ensued between the Sandinista administration and hers. The contras agreed to an immediate cease-fire, and eventually Barros persuaded them—despite the resistance of some very strong factions—to lay down their arms altogether. The civil war was over.

Nicopolis, Crusade of (1396)

PRINCIPAL COMBATANTS: Crusaders (under Sigismund of Hungary) vs. Ottoman Turks (under Bayazid I)

PRINCIPAL THEATER(S): Bulgaria

DECLARATION: Papal call to arms, 1396

MAJOR ISSUES AND OBJECTIVES: The crusaders wanted to check ongoing Ottoman conquests.

OUTCOME: The crusaders suffered disastrous defeat at the Battle of Nicopolis.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 100,000 crusaders (of whom many subsequently deserted)

CASUALTIES: Thousands of crusaders fell, and some 10,000 were taken prisoner.

TREATIES: None

In 1396, Pope Boniface IX (c. 1355–1404) proclaimed a crusade against the Ottoman Turks, who spread panic throughout Europe because of their conquests in the Balkans and their assault upon Constantinople. An army of some 100,000 assembled in Buda, from which Hungary's King Sigismund (1368–1437) led them down the Danube to seize two Ottoman forts. The crusaders were charged with liberating from the Ottomans those towns and villages through which they advanced; however, the crusaders behaved poorly and pillaged most of the communities that lay in their path.

At Nicopolis (Nikopol, Bulgaria), the ill-disciplined crusader army began to fall apart in earnest. The crusaders laid siege against the Ottoman fortress but soon grew restless in this thankless work. Without a firm battle plan or an agreed-upon chain of command, individual leaders took action on their own. John the Fearless (1371–1419) of France led his knights in an ill-advised attack against Sultan Bayazid I's (1347–1403) army. He and his forces fell victim to the Ottoman tactic of luring the enemy with an apparently vulnerable front line, only to envelop and destroy the attackers from the flanks. John's knights were slaughtered, and the 16,000 men Sigismund sent to his relief fared little better. In addition to thousands slain in battle, 10,000 were made prisoner. Some of these were subsequently ransomed at great cost, while others were executed.

Sigismund fled the battle, escaping back to Hungary by ship. For his part, Sultan Bayazid I continued unchecked his conquest of the Balkans.

Nigerian-Biafran War (1967–1970)

PRINCIPAL COMBATANTS: Nigeria vs. Biafra

PRINCIPAL THEATER(S): Biafra

DECLARATION: Biafra declared independence on May 30, 1967.

MAJOR ISSUES AND OBJECTIVES: Biafra sought independence; Nigeria sought to reclaim Biafra.

OUTCOME: Biafra was defeated, mainly as a result of a long and intensive blockade that held the nation under a state of siege.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Nigerian army, 200,000; Biafran army, 50,000

CASUALTIES: Battle deaths, 45,000 on both sides; 500,000 civilians died, mainly as a result of starvation

TREATIES: None

Biafra broke away from Nigeria in 1967, seven years after Nigeria achieved independence from Britain. In 1960, when independence came, the Ibo people of eastern Nigeria, who—under British colonial rule—had become an educated elite and were now essentially a privileged class, assumed economic and political dominance in the new nation. This alienated the less privileged Islamic Hausa people of the north, who rioted against the Christian Ibo. In an effort to establish some semblance of home rule, the Nigerian government divided the nation into three states, corresponding to the territorial concentrations of the Ibo, the Hausa, and the Yoruba peoples. Far from bringing peace, this prompted the Ibo to secede from Nigeria. After the military governor of the eastern region, Lieutenant Colonel Chukwuemeka Odumegwo Ojukwu (b. 1933), declared an independent state of Biafra on May 30, 1967, the new country's Ibo army went on the offensive and made a major push toward the Nigerian capital of Lagos. The Nigerian army stopped the advance and counterattacked, invading Biafra and overcoming stout resistance to capture the Biafran capital, Enugu, on October 4, 1967. This was followed by peace negotiations early in 1968, which, however, came to nothing.

As the Civil War continued, the Nigerian government—determined to bring the oil-rich area back into its territory waged total war against Biafra, mainly in the form of a blockade, which created a famine throughout the region. European powers intervened in the struggle, the British, the Soviets, and Italy giving aid to Nigeria, whereas France supplied arms to beleaguered Biafra. For the new nation, however, it was a losing battle. Port Har-

court, Aba, and Owerri, all key cities, fell in 1968. Although Owerri was retaken in 1969, the Biafran army was overwhelmed by a counteroffensive from a now well-equipped Nigerian army of 200,000 men. Biafra's military defeat took place against a background of great civilian suffering, as the nation's name became an international byword for want and starvation. Biafra surrendered to Nigeria on January 12, 1970. Ojukwu fled to exile in the Ivory Coast. Civilian losses in Biafra topped 500,000, almost all from starvation and diseases related to malnutrition.

Nigerois Civil War (1990–1995)

PRINCIPAL COMBATANTS: Nigerois government vs. Tuareg rebels

PRINCIPAL THEATER(S): Northern Niger

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Tuaregs sought autonomy.

OUTCOME: Limited autonomy was granted.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Thousands of civilian deaths, mainly due to general privation created by the war

TREATIES: Treaty of Ouagadougou (Burkina Faso), October 9, 1994; additional treaty, April 24, 1995

In Niger, Africa, the Tuareg tribe of the northern desert was frequently at odds with the mainstream government. Tuareg separatists often fought with government troops in the capital city of Niamey. At last, in May 1990, the government retaliated with a major raid in Tchén Tabaraden, in which hundred of Tuaregs were killed or arrested. In response, the Tuaregs stepped up attacks in the north, hitting government security forces as well as foreign tourists. The government mounted a new sweep against rebel activity in August 1992, rounding up members of the Tuareg Liberation Front of Air and Azawad (FLAA) and declaring a state of emergency in the northern region.

The civil war created great hardship for the people, and the FLAA agreed to a truce while the government sent aid to the starving. Although fighting between the govern-

ment and the Tuaregs was largely suspended during 1993, violent unrest was common elsewhere in Niger, triggered mainly by the depressed economy. Under general pressure, the government negotiated in 1994 terms of limited autonomy for some 750,000 Tuaregs affiliated with the Coordination of Armed Resistance (CRA) organization. On October 9, 1994, CRA signed the formal Treaty of Ouagadougou, and other Tuareg groups fell into line with a treaty of April 24, 1995. With the war formally concluded, the Nigerois government granted amnesty to all Tuaregs and released its political prisoners. At this point, only a single rebel group, the Democratic Renewal Front, held out, but even the DRF agreed to the treaty terms in 1997.

Nika Revolt (532)

PRINCIPAL COMBATANTS: Nika rebels (supporters of Hypatius) vs. Byzantine emperor Justinian I

PRINCIPAL THEATER(S): Constantinople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Nika rebels protested general corruption and extortionate taxation.

OUTCOME: The rebellion was crushed, but it did prompt Justinian I to step up reform of Byzantine government.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: 30,000 rebels were killed

TREATIES: None

The Byzantine Empire was plagued by despotism and corruption at regional levels of government, a situation the emperor Justinian I (483–565) attempted to alleviate by acting against many imperial officials and administrators. This produced some improvement, but not enough to prevent a popular uprising in Constantinople in protest against exorbitant taxes and government-sanctioned extortion. The battle cry of the rebellion was *Nika!*, meaning victory.

When a mob surrounded Justinian's palace, the emperor contemplated fleeing the city, but his wife, Theodora (c. 508–548), stood firm and persuaded her husband to do likewise. Justinian ordered his two top generals, Belisarius (c. 505–565) and Narses (c. 478–573), to lead the imperial bodyguard and other troops against the rebels. In a fierce action, some 30,000 Nika rebels, having proclaimed Hypatius (d. 532) emperor, were killed. Hypatius was captured and executed as a traitor. Although the rebellion thus collapsed, it did move Justinian to act more aggressively against corrupt

and abusive officials. More administrators were removed from office.

Nineveh, Fall of (612 B.C.E.)

PRINCIPAL COMBATANTS: Medes, Babylonians, Scythians, and Persians vs. Assyrians

PRINCIPAL THEATER(S): Nineveh, Assyria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Presumably conquest

OUTCOME: Nineveh fell.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents exist

The capital city of the great Assyrian Empire, Nineveh, on the Tigris, was so strongly fortified that it was deemed impregnable. It was surrounded by seven miles of walls, which, in some places, were almost 150 feet thick. Despite this, a combination of Medes, Babylonians, Scythians, and Persians overran Nineveh and destroyed the city in 612 B.C.E. Beyond this fact nothing is known, and no details of the military operation exist. It is possible that the main assault was amphibious, using rafts with battering rams and other siege devices on the Tigris, which was at high flood stage during this time.

Nine Years' War *See* GRAND ALLIANCE, WAR OF THE.

Norman-Byzantine War, First (1081–1085)

PRINCIPAL COMBATANTS: Normans vs. Byzantine Empire

PRINCIPAL THEATER(S): Southern Italy and the Balkans

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ultimately, the Normans' leader, Robert Guiscard, intended to seize the Byzantine throne.

OUTCOME: Guiscard died before he could carry out his plan in earnest.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The dashing Norman soldier Robert Guiscard (c. 1015–85) campaigned with his brother Roger I (c. 1031–1101) to gain control of Apulia, Calabria, and Sicily, lands granted him by the pope. In the process of fighting Muslim forces in southern Italy, Guiscard ran afoul of the Byzantine Empire. This prompted the avaricious Guiscard, with his son Bohemund I (c. 1056–1111), to mount an invasion of the Balkans. He captured Corfu and Dyrrachium, then decided to attack the emperor, Alexius I Comnenus (1048–1118), with the objective of taking the imperial crown for himself. His scheme was delayed by the ongoing wars in Italy, however, and by the time he was ready to commence his attack against Cephalonia in 1085, he succumbed to the plague.

Mango, ed., *Oxford History of Byzantium* (New York: Oxford University Press, 2002); John Julius Norwich, *Byzantium: The Decline and Fall* (New York: Alfred A. Knopf, 1996).

Norman-Byzantine War, Second (1098–1108)

PRINCIPAL COMBATANTS: Normans vs. Byzantine Empire

PRINCIPAL THEATER(S): Byzantine Empire and Jerusalem

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Norman leader Bohemond sought to complete his late father's plan to topple Alexius I Comnenus from the Byzantine throne.

OUTCOME: Bohemond was ultimately defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In the First NORMAN-BYZANTINE WAR, from 1081 to 1085, Robert Guiscard (c. 1015–85) had planned to topple Alexius I Comnenus (1048–1118) from the Byzantine throne and seize it for himself. Guiscard's death from plague in 1085 ended this scheme until 1098, when Guiscard's son Bohemond I (c. 1056–1111) attacked the empire. During this war, he also participated in the First CRUSADE and became vassal to Geoffrey of Bouillon (c. 1053–1100), the

Latin ruler of Jerusalem. His campaign against the empire was interrupted during 1100–03, when he was held prisoner by the Muslims in the Holy Land. On his return to Europe in 1103, he pressed his campaign against Alexius I Comnenus, whom his father had been unable to defeat, but was himself defeated by 1108. His bid for the Byzantine throne came to an end.

Norman Conquest (1066)

PRINCIPAL COMBATANTS: William I (Normans) vs. Harold Godwinson (Saxons)

PRINCIPAL THEATER(S): England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: William fought Harold for the English throne.

OUTCOME: William won the decisive Battle of Hastings and thereby claimed the throne.

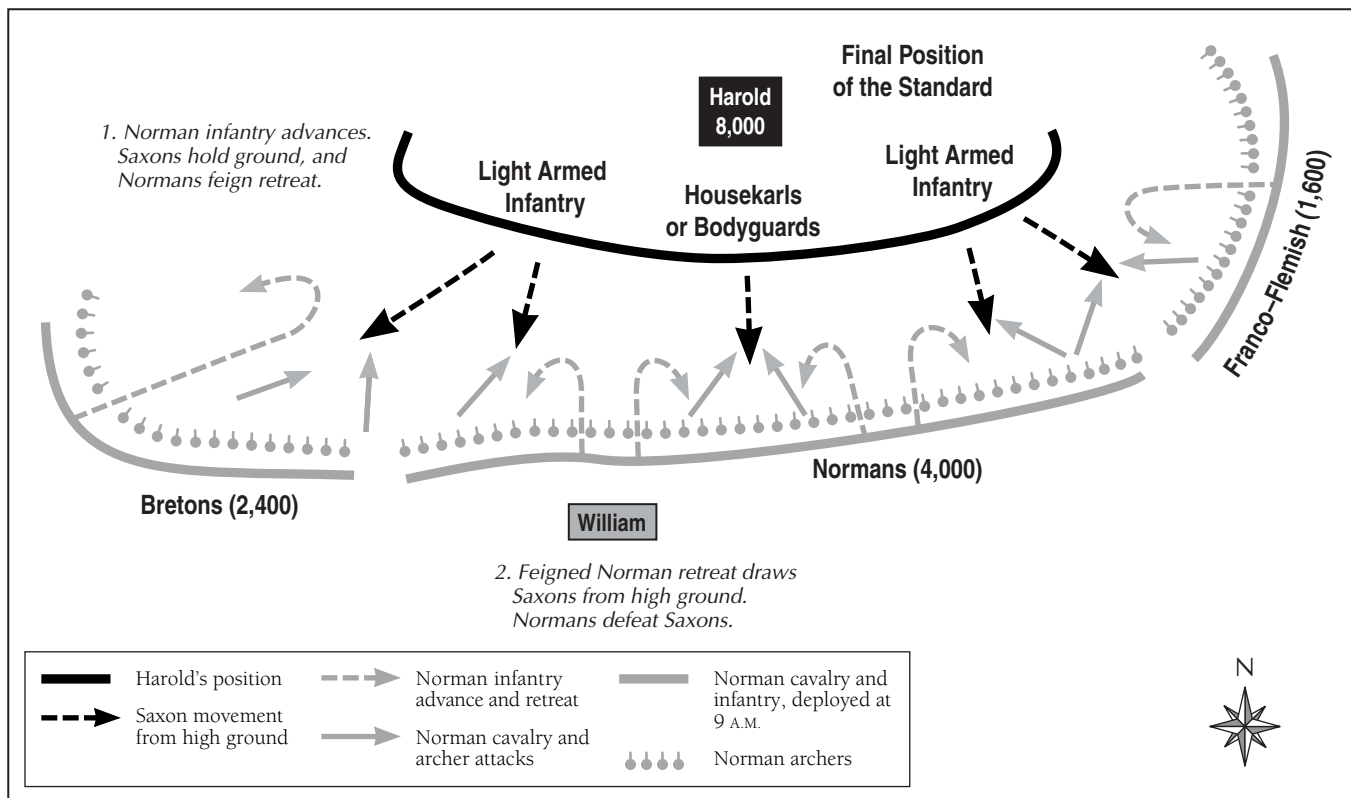

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 4,000–7,000 on each side

CASUALTIES: Both side lost about one-quarter of their troops.

TREATIES: None

The Normans, named for the Vikings ("Norsemen") from whom they were descended, made their homeland in northwestern France. Over the course of about three generations of intermarriage with the area's Frankish tribes, they had transformed themselves from pagan raiders into devout, if fierce, Christian crusaders. From Normandy, they launched sporadic conquests by which, during the course of the 11th century, they created a patchwork empire from the North Sea to the Mediterranean. Leading the way were freelancing Norman knights fighting for feuding Lombards and Greeks, and picking up what fiefs they could along the way. By mid-century they had taken most of southern Italy, and in 1061 they defeated the Muslim occupiers of Sicily. Soon the knights would seize Greek Corfu and invade the Byzantine Balkans. In 1098, as a result of their service in the First CRUSADE, they established the principality of Antioch. Long before that, however, their much-hailed leader William I (the Conqueror; c. 1027–87) had added Anglo-Saxon England to the piecemeal dominions of Normandy.

England's King Edward (c. 1003–1066), known as the Confessor for his piety, was related to the Norman

Battle of Hastings, 1066

nobility through his mother. During the years of Canute's reign in England (c. 995–1035), Edward had spent much of his youth and young manhood 100 miles across the English Channel in exile at the Norman court. Nine years after he ascended to the throne in 1051, he named William, duke of Normandy, as his heir. It was this claim that William sought to assert after Edward died on January 5, 1066.

However, William was not the only contender.

Harold Hadrada (d. 1066), king of Norway and the most renowned Viking warrior of his day, hoped to reassert the Scandinavian claim to the Crown established early in the century by King Canute (d. 1035). Edward had further complicated matters by changing his mind on his deathbed and naming Harold Godwinson (c. 1022–66) as his successor, or so Godwinson, the earl of Wessex, claimed. Not only an English baron, he was the most powerful magnate on the island, and he moved decisively to have himself crowned Harold II of England at Westminster Abbey only hours after Edward had been buried in the famous church.

Harold had trouble justifying his actions. Only two years before he had appeared at the Norman court and sworn fealty upon holy relics to William as the rightful heir to the English throne. Now, however, he claimed he had been forced to take the oath when his ship acciden-

tally ran aground on the Normandy coast, but neither the knights in France nor the pope in Rome accepted his version of events. Set to march with Pope Alexander II's (d. 1075) blessing under the three-tailed papal banner, William's forces swelled mightily as knights from every principality in northern France rushed to join the now holy cause.

Meanwhile, Harold was suffering problems enough at home. His own brother, Tostig (d. 1066), rose up to challenge him, and upon being quickly defeated, united with Hadrada in the Norwegian invasion of England. Harold not only repulsed the Norwegian invasion at the Battle of Stamford Bridge on September 25, 1066, but killed both Tostig and Hadrada. This left only William as his rival for the throne.

Now time and distance worked against Harold Godwinson and became the key factors in the Norman conquest of England. When the Norman fleet landed at Pevensey on the southwest coast of England in late September, King Harold's Anglo-Saxon army was in York, about 200 miles away, celebrating its victory over the Norwegians.

At least 7,000 Normans disembarked from the 700 or so vessels of William's armada in an operation that was a nightmare of logistics. Some 3,000 cavalry mounts had to be offloaded from makeshift wattle stalls down shaky

wooden ramps. The invaders brought ashore cartloads of arms and the heavy armor the Normans were becoming famous for wearing, and they dragged onto the beach the tools and planks they needed for building fortifications, the pots and supplies for setting up camp and cooking, and barrels of French wine to shore up their courage. Blessed by favorable winds for the passage over, they now managed to land virtually unopposed, securing a beach-head without a single loss of life.

Godwinson rushed south to do battle with William. The army Harold Godwinson had force-marched to Sussex was of approximately the same size as William's—somewhere between 4,000 and 7,000 troops—but it consisted mainly of untrained and poorly armed peasants, whereas William commanded a professional force. Moreover, Harold lacked both archers and cavalry. He compensated for this by deploying his troops on a ridge about 10 miles northwest of Hastings, but he made the serious tactical error of packing his soldiers closely together. This transformed them into ready targets for William's fine archers. Yet Harold's men did fight back, exacting a terrible toll on William's bowmen and prompting him to pull them back. William then sent in his cavalry. From their well-defended positions, Harold's troops decimated the horsemen in their first assault.

Not one to panic, William persisted. He wore away at the Saxons by alternating cavalry charges and bow attacks all day. When he saw that Harold's army was wearing down, William feigned two retreats late in the day. These lured the Saxon troops out of their protected position. Once they were in the clear, William suddenly wheeled about and counterattacked, routing the tired Saxon army.

Harold fell in battle, killed by a stray arrow, and the leaderless army began to fall apart. Those who did not surrender scattered in defeat. William advanced against London to cut off the city. He met with no resistance from the nobles in the surrounding area, and, at Westminster, on Christmas, 1066, William was crowned King William I of England.

Although the Norman victory at the battle of Hastings had been decisive, it was yet another five years before the Anglo-Saxons were fully subjugated. Meanwhile, William's army of occupation frequently faced rebel forces, most notably in Yorkshire and on the isle of Ely in the east. At length, the conquest was completed in 1072, when the Normans secured England's northern border with an attack through Scotland.

Norman-French War (1077–1082)

PRINCIPAL COMBATANTS: Normans under William I the Conqueror vs. the French under his son, Robert Curthose

PRINCIPAL THEATER(S): Normandy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Robert Curthose sought to topple his father.

OUTCOME: The rebels were defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Once William the Conqueror (c. 1027–87) had completed the NORMAN CONQUEST of England, he chose to reign, for the most part, from his native Normandy, and leave the administration of his island kingdoms to regents. Back in the north of France, except for an attempted coup by a few English earls and yet one more—the final—Danish invasion in 1085, his time was taken up with defending Normandy's frontiers against hostile neighbors. Not the least of these was King Philip I (1052–1108) of France, who very much desired to prevent the union of Normandy and England under a single ruler. Toward that end he backed William's first son, young Robert Curthose (c. 1054–1134), in a series of rebellions. Not that Curthose needed much encouragement—he bitterly resented his father's refusal to let him play a vital role in the governing of the French province, which William had nominally handed over to him in 1066 when he went off to invade Anglo-Saxon England. Easily defeated in his initial outing, Robert for a while reconciled with his father, until further disagreements led to renewed fighting. At one point, the son's challenge was serious enough, that William was forced to launch an operation from England (see WILLIAM I'S INVASION OF NORMANDY) and ultimately he was forced to send his son into exile. Thus thwarted, Philip I would prevail briefly when Robert returned to Normandy in 1087, on the death of William, and inherited the title of duke of Normandy, reigning as Robert II. He did not lay claim to the throne of England, which fell to his brother William II. Shortly, however, this William, too, reunited the kingdoms.

Northern Ireland Civil War (1969–2001)

PRINCIPAL COMBATANTS: Northern Irish Protestants vs. Northern Irish Catholics; also involved: British peacekeeping and policing troops

PRINCIPAL THEATER(S): Northern Ireland, with some terrorist activity in England (mainly London)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In general, Northern Irish Catholics wanted independence from England and union with the Republic of Ireland; Northern Irish Protestants, the nation's majority, have wanted to remain politically connected with England, which provided defense.

OUTCOME: After a new National Assembly was created and the Irish Republican Army (IRA) disarmed, hopes ran high for a sustained end to the civil war.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Approximately 3,000

TREATIES: Agreement of May 22, 1998, establishing a Northern Ireland National Assembly

For centuries, Britain had oppressed the Irish. The British put down the 1916 EASTER UPRISING, but it produced a great wave of support for Irish independence—both in Ireland and among many in Britain. In 1921, the Irish Free State was created, divided from Northern Ireland, which was still a part of Britain (see ANGLO-IRISH CIVIL WAR). Subsequently, the Free State became a sovereign nation. The chief difference between independent Ireland and Northern Ireland was religion. Ireland was and is about 95 percent Roman Catholic. Northern Ireland is 60 percent Protestant. The Catholic minority in Northern Ireland, feeling politically and economically oppressed by the Protestant majority, demanded union with independent Ireland. The Protestant majority, fearing absorption into Catholic Ireland, sought to remain attached to the United Kingdom.

Catholics and Protestants in Northern Ireland fought frequently after the break with the Irish Free State. However, in 1968, when the Catholic minority staged massive civil rights protests, violence became acute, and British troops were called in to maintain order. The British military presence has remained a part of Northern Irish life—much resented by the Catholics, who saw themselves as oppressed not only by their Protestant fellow citizens but by an army of occupation from a Protestant nation, England, and in the service of Protestantism in Northern Ireland.

Both the Catholics and the Protestants developed paramilitary organizations to wage civil war. The Irish Republican Army (IRA) and its even more radical and violent wing, the Provisional Wing (Provos) of the IRA, carried out the Catholic military agenda, whereas the Protestant Ulster Defence Association was the militant arm of Northern Ireland Protestants. Caught in the middle were noncombatant citizens and the British military. From 1969 into the 1970s, these paramilitary organizations staged violent demonstrations, engaged in street fighting, planted bombs, and carried out political assassinations.

To cope with the crisis, the British government suspended the Stormont, the Northern Ireland parliament, in 1972 and took over administration of the government. The following year, a plebiscite was held on the question of union with Ireland. By an overwhelming majority, union was rejected, and a coalition government—Catholic and Protestant—was formed. However, radical Protestants, led by the Reverend Ian Paisley (b. 1926), set out to destroy the coalition. They did so primarily through political means, sending a hard-line slate of members to the British parliament and calling a general strike that brought about the collapse of the reconstituted Stormont.

In the meantime, violence continued—a daily affair of action and reaction, offense and reprisal. Catholic terrorism was carried out against British troops in Ulster and against British civilians in England, especially London. At last, in 1983, a new bill was introduced in the British parliament, attempting to form a third home rule government for Northern Ireland, but a Roman Catholic boycott killed the bill. The following year a new plan for union with Ireland was also developed, and, this time, a majority approved it—but the union did not come to pass, and the violence continued through the early 1990s.

In 1993, the Downing Street Declaration pledged the commencement of peace talks between Britain and Ireland. In response, in September 1994, the IRA declared a cease-fire, which the Protestant paramilitary organizations agreed to the following month. In 1995, a “Framework Document” outlined and addressed key political issues. The atmosphere was generally hopeful until a bomb was exploded in London in an IRA terrorist attack in February 1996. This was followed by renewed street fighting in Portadown, Northern Ireland, in July. The IRA, however, was determined to play a role in the joint British-Irish peace talks, which were restricted to peaceful groups only. Therefore, the IRA unilaterally reinstated the cease-fire in July 1997. In September, the IRA's political wing, known as Sinn Fein, headed by the fiery Gerry Adams (b. 1948), was admitted to the talks—and Adams presented himself in a statesmanlike manner. The talks produced, on April 10, 1998, an agreement that created a National Assembly for Northern Ireland, which would work cooperatively with the Republic of Ireland and which included a balance of Protestant and Catholic representation.

Hard-liners and diehards continued to perpetrate acts of violence—the most notorious group calling itself the “Real IRA.” However, public disgust at the renewed killings—most notably a car bomb detonation at Omagh on August 15, 1998, which killed 28 and wounded some 330—undercut support for the militants. At the end of October 2001, the IRA announced, unilaterally, that it had begun to destroy its arsenal. This act of good faith seemed to mark an end to 32 years of Irish civil war. Since then fitful initiatives attempting to establish real peace have made uneasy headway, and while Northern Ireland remains volatile both socially and politically, the once almost universal violence has abated.

Northern War, First (1655–1660)

PRINCIPAL COMBATANTS: Sweden vs. Poland and Denmark

PRINCIPAL THEATER(S): Poland, Holstein, Schleswig, and Denmark

DECLARATION: Sweden against Poland, 1655

MAJOR ISSUES AND OBJECTIVES: Sweden’s Charles X sought glory and conquest.

OUTCOME: The Swedes made remarkable initial advances but ultimately failed to hold the territories gained, except in Poland.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Sweden, 50,000; Poland and Denmark, unknown

CASUALTIES: Unknown

TREATIES: Treaty of Roskilde, 1658, and Treaty of Oliva, 1660

The great Swedish warrior king Charles X (1622–60) sought to push his kingdom’s dominion into the Baltic and, by the Second POLISH-SWEDISH WAR FOR LIVONIA from 1600 to 1611, asserted a claim as “Protector of Poland.” King John II Casimir (1609–72) of Poland refused to recognize the protectorate, whereupon Charles declared war.

Charles personally led a large army of invasion, which seized Warsaw after a three-day battle. With this, Poland was conquered, and Charles now pressed on into Lithuania, which the Swedes quickly occupied. Charles’s Prussian ally, Frederick William (1620–88), secured peace with Poland, which allowed Charles to advance westward to fight Denmark (Poland’s ally) for possession of Holstein, Schleswig, and most of Jutland. Having secured these territories, Charles led an extraordinary assault across the ice from Jutland with the object of taking Copenhagen, the Danish capital. For the moment, the

Swedish king contented himself with holding the island of Fünen, pending the terms of a Danish-Swedish peace. Displeased with the Treaty of Roskilde, Charles advanced on Copenhagen and laid siege to the city. Ships of the Dutch fleet—Holland was a Danish ally—forced the lifting of the Swedish blockade of Copenhagen.

In the meantime, in Schleswig and Holstein, Polish forces drove out the invading Swedes. Next, the Danes and Norwegians defeated the Swedes at Bornholm and Trondheim, prompting Charles to sue for peace.

Negotiations dragged on, then faltered, but the Danish victory at the Battle of Nyborg in November 1659, which resulted in the defeat and capture of Sweden’s best soldiers, prompted the Swedish government—now under the control of a regency, Charles having succumbed to a fever—to conclude the Treaty of Oliva in 1660. By this treaty, Sweden was confirmed in its rights to Livonia, while the Danes claimed Bornholm and Trondheim, and Brandenburg retained East Prussia.

Northern War, Second (Great Northern War) (1700–1721)

PRINCIPAL COMBATANTS: Sweden vs. Poland, Russia, Prussia, Saxony, Hanover, and Denmark

PRINCIPAL THEATER(S): The Baltic, Poland, Denmark, Russia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Charles XII wanted to achieve dominance in the Baltic and beyond.

OUTCOME: Sweden was ultimately defeated by a large coalition.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

The largest army fielded was a Swedish force of 80,000.

CASUALTIES: At the disastrous Battle of Poltava, Charles XII lost virtually all of his 80,000-man army, by death, capture, and desertion.

TREATIES: The Treaties of Stockholm, 1719–1720 and the Treaty of Nystad, 1721

During the 16th and 17th centuries, Sweden had expanded its hold over the coasts of the Baltic Sea, much to the irritation of its neighbors. Russia resented having

its access to a northern port blocked by such Swedish-controlled lands as Estonia, Ingria, Karelia, and Livonia. Denmark-Norway, already glum over the loss of its Scandinavian provinces to the Swedes, was especially unhappy about Sweden's alliance with Holstein-Gottrop. For it was this alliance that held Denmark in check from the south and prevented the Danes from again taking control of Schleswig and Holstein. The Germans, the house of Brandenburg in particular, which lusted after Swedish Pomerania, deplored the role Sweden played in

Battle of Poltava, June 28, 1709

the Holy Roman Empire. Finally, the Poles continued to stew over the loss of Livonia, holding it still Polish by any honest reckoning.

The atmosphere was already charged with danger, then, when Sweden's Charles XI (1655–97) died, making a 14-year-old the heir to the throne. Denmark-Norway took Charles XII's (1682–1718) ascension as the signal to organize an anti-Swedish coalition, and the young king was immediately confronted by three threats: the Danes invading Holstein-Gottorp, King Augustus II (1670–1733) of Poland attacking Livonia at Riga, and Russian czar Peter I (the Great; 1672–1725) laying siege to Narva in a bid for Ingermanland.

The new king showed some strategic brilliance when he concentrated his forces first on Denmark, forcing King Frederick IV (1670–1730) to withdraw Denmark and Norway from the anti-Swedish alliance and to sign, in August 1700, the Treaty of Traventhal, which returned the status quo ante bellum. Then, quickly, Charles turned his attention to Peter's army at Narva, forcing the Russians to lift the siege there, before he marched to the relief of Riga, driving the Poles and the Saxons into retreat as he pushed on through Livonia to invade first Lithuania, then Poland itself, where he seized both Cracow and Warsaw.

Augustus II of Poland, commanding some 10,000 men, met Charles at the Battle of Pultusk, about 32 miles north of Warsaw, on April 13, 1703. The two armies were fairly evenly matched, but Charles XII trounced Augustus, sending his army into full retreat. On the heels of this victory, the Polish diet installed Charles's candidate, Stanislaus I Leszczyński (1677–1766), on the Polish throne in 1704. Two years after taking Poland, Charles moved against Lithuania and chased Augustus II into Saxony. It was this invasion of Saxony, finally, that led Augustus, after six years of fighting, to relinquish his Polish throne. For, though he fought Charles to a standstill, he nevertheless agreed, under the Treaty of Altranstadt in September 1706, to renounce his royal claim in favor of Stanislaus and to break with his Russian allies. For his part, Charles clearly intended to continue on into Peter the Great's vast kingdom.

Meanwhile, the czar had used the period when Charles had focused on defeating Augustus to reorganize the Russian army and to entrench Russia on the east coast of the Baltic, where in 1703 Peter founded both the city of Saint Petersburg and the naval port of Kronstadt.

Thus was Russia the better prepared when Charles marched from Saxony in September 1707 at the head of an 80,000-man army through Poland and Lithuania and into Russia. Like other invaders who would come after him, including Napoleon I (1769–1821) and Adolf Hitler (1889–1945), Charles fell victim to the Russian winter and to the dogged resistance of the Russian soldier. He failed to reach Moscow and turned instead toward the

Ukraine, where he joined forces with the Cossack insurrectionist leader Ivan Mazepa (c. 1640–1709). His army greatly reduced by the hardships of Russia, Charles was badly defeated at the Battle of Poltava on June 28, 1709. He had only 1,800 men with him when he fled to Turkish Moldavia.

While Charles was in ignominious retreat, Augustus returned to Poland and overthrew Stanislaus, and Peter I invaded Ingermanland, as well as Livonia and Finland. Prussia conquered Pomerania. Poland, Russia, Prussia, Saxony, Hanover, and Denmark now leagued against Sweden. The Swedes managed to defeat a Danish army in Skåne, Sweden, and a combined Danish-Saxon army in Pomerania, but a Russian, Danish, and Saxon coalition defeated the Swedish army in Holstein. At this time, too, the Swedish fleet fell to Russia.

Sweden began negotiating a peace, but the process was interrupted by Charles XII, who goaded the Turks into war with Russia. From a headquarters at the Baltic town of Stralsund, Charles ordered the war to resume, but the anti-Swedish coalition quickly besieged Stralsund, which fell in December 1715. Charles made for Sweden, where he raised a new army to invade Norway (at the time a Danish possession), but the king fell victim to an enemy bullet while he was commanding the siegeworks outside of Frederikshald in December 1718.

Without their commander in chief, the Swedish army withdrew and marched home, and Sweden now entered into negotiations that resulted in the Treaties of Stockholm. Hanover collected from Sweden the duchies of Bremen and Verden in exchange for an indemnity. To Prussia went Stettin and parts of Pomerania. Denmark relinquished most of its war gains, except for Schleswig, taking an indemnity payment in exchange. By the Treaty of Nystad, Sweden ceded Livonia, Ingermanland, a portion of Karelia, and various Baltic islands to Russia, which relinquished Finland in return. Russia became the dominant power in eastern Europe.

Northumberland's Rebellion (1408)

PRINCIPAL COMBATANTS: Scottish rebels (under the earl of Northumberland) vs. England

PRINCIPAL THEATER(S): Northern England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Northumberland was rebelling against Henry IV.

OUTCOME: The rebel army was crushed and Northumberland killed in battle.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Henry IV (1357–1413) could hardly have gained his throne without the support of Henry Percy (1342–1408), first earl of Northumberland, and early in Henry's reign Northumberland remained an important member of the English privy council. But the earl and his son (Shakespeare's "Hotspur," Sir Henry Percy [1366–1403]) both grew disenchanted with the Crown when Henry failed to reward them sufficiently for their service in Scotland. They ultimately rose up against the king in PERCY'S REBELLION, which led to Hotspur's death and Northumberland's complete alienation. He joined the conspiracy to oust King Henry and replace him with Edmund Mortimer (1376–1409) that lay at the heart of GLENDOWER'S REVOLT. Informed of the plot, Henry caused the arrest of Northumberland's coconspirators, who were subsequently executed. As for Northumberland, he escaped to Scotland, then to Holland. In the summer of 1406 he returned to Scotland, where he raised a small army to raid the north of England just across the Scottish border. The raids had little effect, and on February 19, 1408, he was trapped at Bramham Moor by a force under the local sheriff, Thomas Rokeby. The rebels were soundly defeated, and Northumberland was among the slain.

Northwest Rebellion See RIEL'S SECOND REBELLION.

Norwegian Invasion of Scotland (1263)

PRINCIPAL COMBATANTS: Norway vs. Scotland

PRINCIPAL THEATER(S): Largs, Scotland—on the Clyde River

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: King Haakon IV of Norway sought conquest.

OUTCOME: A storm wrecked Haakon's fleet, and his land forces were readily defeated; ultimately, Norway sold the Hebrides to Scotland.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown; Haakon's fleet numbered 100 ships.

CASUALTIES: Unknown, although well over half of Haakon's fleet was lost.

TREATIES: No treaty ended the war; the 1266 Treaty of Perth transferred sovereignty of the Hebrides to Scotland.

Haakon IV (1204–63), king of Norway, invaded Scotland in the summer of 1263 by sending a fleet of 100 ships to the port of Largs. King Alexander III (1241–86) of Scotland entered into deliberately protracted negotiations with Haakon, extending talks into the fall, which, he knew, was the stormy season. Haakon's fleet was decimated by storms, leaving his land troops without supply. Alexander defeated Haakon at the Battle of Largs, which sent the Norwegian king fleeing back to his homeland. He died en route, however, at Kirkwall in the Orkneys, and his successor, King Magnus IV (1238–80), sold Alexander control of the Hebrides Islands in 1266. To cement relations between Scotland and Norway, Magnus married his sons to the daughters of the Scottish king.

Novgorod, Sack of (1569–1570)

PRINCIPAL COMBATANTS: Czar Ivan IV "the Terrible" vs. Novgorod

PRINCIPAL THEATER(S): Novgorod

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The czar sought retribution for what he falsely asserted was the disloyalty of the metropolitan of Novgorod.

OUTCOME: The city was all but completely destroyed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: 60,000 citizens of Novgorod were killed outright; others subsequently died of plague brought on by their inability to dispose of corpses. The death toll in Tver (Kalnin) and other towns along the czar's route to Novgorod is unknown.

TREATIES: None

In the 14th and 15th centuries, Novgorod—one of the oldest of Russia's cities whose history stretches back at least to 859—engaged in a long, bitter, and often destructive battle for supremacy with Moscow. During the course of this struggle, Novgorod not uncommonly turned to Lithuania for help. Soundly defeated by Moscow in 1386, the city stubbornly continued its opposition to and maintained its alliance with Lithuania, however sporadic. Then in 1471, Grand prince of Moscow Ivan III (the Great; 1440–1505) defeated Novgorod and annexed much of its northern territories (*see* MUSCOVITE CONQUEST OF NOVGOROD).

Though forced in 1478 finally to recognize Moscow's sovereignty, opposition by the city's leading citizens remained a Novgorod tradition until Ivan IV (the Terrible; 1530–84) became czar and decided to put an end to Novgorod's history of disloyalty. In December 1569, Ivan relied on trumped-up evidence that the Novgorod metropolitan had secretly concocted an alliance with Lithuania to justify launching a military expedition against the city. On the way to Novgorod, his troops destroyed various villages and towns, including, most notably, Tver (Kalinin), whose citizens were massacred.

On January 2, 1570, Ivan and his troops arrived at Novgorod. They swept through the city, looting and destroying churches and monasteries and putting to death, by cold-blooded, methodical execution, some 60,000 residents of the city at the rate of 500 to 1,000 daily. At length exhausted, the czar pardoned the survivors of the massacre—but the town was piled so high with rotting corpses that plague broke out and killed many of those who had escaped execution.

To impress the people back in Moscow, Ivan returned bearing the corpses of the Novgorod metropolitan and other church and city leaders suspected of plotting against Russia.

Numantian War (137–133 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. Numantia

PRINCIPAL THEATER(S): Numantia, Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome sought to conquer the stubbornly defended Spanish town of Numantia.

OUTCOME: After an eight-month siege, the town fell.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rome, 60,000; Numantia, numbers unknown, but certainly far inferior to Rome

CASUALTIES: Only 4,000 Numantians survived the eight-month Roman siege.

TREATIES: None

This may be seen as a phase of the CELTIBERIAN WARS, from 154 to 133 B.C.E. Numantia was a Celtiberian town located near modern-day Soria, Spain, along the Duero River. In the past, the town had repulsed a number of Roman attempts at conquest. In 137, Gaius Hostilius Mancinus (fl. mid-second century) B.C.E.) led 20,000 Roman legionnaires against Numantia and was forced to surrender, leading to the general demoralization of Roman troops in Spain.

In 134, Scipio Aemilianus (c. 185–129 B.C.E.) was sent to take charge of the legions and revive their spirit. With 60,000 men, he renewed the siege of Numantia, which endured for eight months before a mere 4,000 starving survivors surrendered. Scipio Aemilianus gave no quarter. After destroying Numantia, he ordered the execution of some of his prisoners and the enslavement of the rest.

Octavian's War against Antony

(33–30 B.C.E.)

PRINCIPAL COMBATANTS: Mark Antony and Cleopatra vs. Octavian

PRINCIPAL THEATER(S): Egypt

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Possession and control of Egypt

OUTCOME: Antony and Cleopatra were defeated; Octavian conquered Egypt and subsequently, as Caesar Augustus, was the first emperor of the Roman Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Antony and Cleopatra's forces, 40,000; Octavian's forces, 40,000

CASUALTIES: At Actium, 5,000 of Antony's men died.

TREATIES: Egyptian capitulation and tribute, 30 B.C.E.

After the assassination of Julius Caesar (100–44 B.C.E.) in 44 B.C.E., two of his cohorts, his second-in-command Marcus Aemilius Lepidus (d. c. 13 B.C.E.) and his right-hand man Marcus Antonius (c. 83–30 B.C.E. ["Mark Antony" to the English-speaking, Shakespeare-reading world]) formed the Second Triumvirate with Caesar's nephew and adopted heir, 18-year-old Gaius Octavius (63 B.C.E.–14 C.E.; called Octavian by English scholars and soon to be known throughout the world and for eternity as Rome's first and greatest emperor, Augustus Caesar. Though the three, with good reason, hardly trusted one another, they managed to coexist until 36 B.C.E., when Lepidus—resentful of the growing domination of the triumvirate by Octavian and Antony—attacked Octavius in Sicily, only to lose his

army to the younger man and find himself placed under lifelong armed guard.

Meanwhile, Antony—having taken Rome's Eastern Empire as his share of the Triumvirate's division of power—was refused aid by Octavian in the further execution of the ongoing ROMAN-PARTHIAN WAR (55–38 B.C.E.) So, instead, Antony turned to Julius Caesar's former lover, Cleopatra (69–30 B.C.E.), queen of Egypt. Thus began one of the great sexual-political-military liaisons of history, a heated affair hardly affected by the fact that in 40 B.C.E., when Antony returned to Rome to patch up matters with Octavian, he entered into a politically necessary marriage with Octavian's sister, Octavia (69–11 B.C.E.). The speed with which Antony returned to Egypt and the openness of his infidelity with Cleopatra affronted not only his official wife but enraged her powerful brother. Octavian was soon joined in his anger by the whole of Rome itself when news spread that Antony was turning over liberal patches of the Eastern Empire to Cleopatra and her children, three of them in fact sired by Mark Antony.

Pushed by Octavian, the Roman Senate declared war on Antony and Egypt. Antony was portrayed throughout Rome as a traitor, and Octavian was thereby able to persuade all of Italy and the western Roman provinces to withdraw allegiance from Antony and swear loyalty to himself. Officially, Antony was stripped of all Roman titles and honors, and the Senate declared war on Cleopatra, which was also war against Antony.

Together, Antony and Cleopatra assembled an army and a fleet, which sailed to Greece during 32–31 B.C.E. to wait out the winter. In the spring, Octavian and his lieutenant, Marcus Vipsanius Agrippa (63–12 B.C.E.), crossed the Adriatic with a force of comparable size to that of

Battle of Actium, 31 B.C.E.

Antony. On September 2, 31, the Battle of Actium was fought on the Ionian coast of Greece. While Agrippa blockaded Antony's fleet, Octavian cut off the overland supply routes of his army. Antony then ordered a retreat and took his chances running the naval blockade. Most of the ships, together with the troops they held, were sunk or surrendered. Antony and Cleopatra made it successfully through the blockade, however, and managed to regroup. In 30, when Octavian invaded Egypt, Antony was at first able to mount a creditable defense, pushing the Romans back before they reached Alexandria. However, Antony's army soon deserted to the enemy, leading both Antony and Cleopatra to commit suicide.

Octavian looted the treasures of Ptolemaic Egypt and forced the Egyptians to pay a heavy tribute. With the conquest of Egypt, Octavian was the preeminent leader of the known world. As Caesar Augustus, he became the first emperor of the Roman Empire.

Octavian's War against Pompey (40–36 B.C.E.)

PRINCIPAL COMBATANTS: Octavian vs. Pompey the Younger

PRINCIPAL THEATER(S): Sicily and Sardinia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: At issue was control of Sardinia and Sicily in an effort to secure a reliable supply of grain for Rome.

OUTCOME: Octavian ultimately prevailed, capturing both Sardinia and Sicily and ensuring the free passage of grain to Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown; Octavian dispatched a fleet of 120 vessels against Pompey's smaller fleet.

CASUALTIES: Unknown

TREATIES: Treaty of Misenium, 39 B.C.E.

Following the death of Pompey the Great (106–48 B.C.E.) in the Great ROMAN CIVIL WAR (50–49 B.C.E.), his son Pompey the Younger (Sextus Pompeius Magnus) (75–35 B.C.E.) fled to Egypt and then to Spain, where he continued to oppose the forces of Julius Caesar (100–44 B.C.E.) and his successors. Pompey the Younger captured Sicily and, operating from there, blockaded shipments of grain

to Rome. From there, too, he launched an attack on Sardinia, which he seized from Octavian (63 B.C.E.–14 C.E.) in 40 B.C.E. This prompted Octavian and Mark Antony (c. 83–30 B.C.E.) to conclude the Treaty of Misenium with Pompey the Younger, by which Pompey was made governor of Sicily and Sardinia and was compensated for property seized from Pompey the Great. In return, Pompey the Younger agreed to transport grain to Rome.

The treaty did not long endure. In 38, Octavian regained Sardinia, but when he attempted to capture Sicily as well, his fleet fell victim to a combination of Pompey's sailors and a severe storm.

In 36, Octavian launched a new naval attack against Pompey's Sicily, sending against him 120 ships under Marcus Vipsanius Agrippa (63–12 B.C.E.). At the naval Battle of Naulochus, Pompey's fleet was defeated. Pompey himself escaped to Asia Minor, but was captured in 35 by Mark Antony and was subsequently killed. Rome never again suffered a threat to its supply of grain.

Odaenathus's Gothic Campaign (266)

PRINCIPAL COMBATANTS: Odaenathus vs. Goth raiders

PRINCIPAL THEATER(S): Asia Minor

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Backed by his patron, Rome's emperor Gallienus, Odaenathus launched a punitive expedition against the Goths.

OUTCOME: Odaenathus subdued the barbarian raids but was soon afterward murdered.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

In the middle of the third century, the Goths took advantage of Rome's wars with Persia to ravage Asia Minor. Teutonic "barbarians" of mixed Scythian and German stock, though less Asian than the Sarmatians, they consisted of two main groups: the Ostrogoths, or East Goths, from the Dnieper-Don steppes, who were primarily horsemen, and Visigoths, or West Goths, from the Carpathians, who

relied primarily on infantry. But the Goths also became a seafaring people, and their most destructive raids into the Roman Empire came by water, across the Black and Aegean Seas.

During the ROMAN-PERSIAN WAR (257–261), a Romanized Arab, Septimus Odaenath (or Odaenathus) (d. c. 267), prince of Palmyra, rose to prominence by effectively defending the empire's eastern provinces against Shapur I (d. 272), who had captured the Roman emperor Valerian (d. c. 261) in battle, and by defeating and executing one of the "Thirty Tyrants" named Quietus (d. c. 261). After Valerian died in captivity, the new emperor Gallienus (d. 268) graced Odaenathus with the title "Dux Orientus" and made him a virtual coruler of the Eastern Empire. Accompanied and aided by his wife, Zenobia (d. after 274), Odaenathus led the ARAB INVASION OF PERSIA in 262 and had recaptured Rome's lost provinces east of the Euphrates by 264.

Because he was already in the area, it was only natural that Odaenathus take on the Goths then raiding throughout Asia Minor. Backed by Gallienus and reinforced with Roman troops, Odaenathus launched his army of light foot soldiers and Arabian cavalry on a successful punitive expedition against the Goths in 266. The expedition, however, is mostly significant for its conclusion. Soon after completing his last "mission" for Rome, the Dux Orientus was murdered, at which point his title passed to his son, Vaballathus (d. c. 273), but his power—over Palmyra and the Eastern Empire—effectively passed to his widow, celebrated for her beauty and her military acumen, but not necessarily for her loyalty to Rome (see ZENOBIA'S CONQUEST OF EGYPT and AURELIAN'S WAR AGAINST ZENOBIA).

Further reading: Peter Brown, *The World of Late Antiquity, A.D. 150–750* (New York: W. W. Norton, 1989); Richard Stoneman, *Palmyra and Its Empire: Zenobia's Revolt against Rome* (reprint, Ann Arbor: University of Michigan Press, 1995).

Offa's Wars (771–796)

PRINCIPAL COMBATANTS: Mercia's Offa vs. various rebellious lords and subkings and the Welsh

PRINCIPAL THEATER(S): England below Yorkshire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The forging of Anglo-Saxon England

OUTCOME: Offa obtained and maintained control over most of England south of Yorkshire; Wales remained wildly independent.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents survive

From ancient Mercian lineage, Offa (d. July 796) became one of the more powerful Anglo-Saxon kings in England after he seized the throne during a civil war following the murder of his cousin, King Aethelbald (r. 716–57). Ruthlessly suppressing the small states in and around Mercia, he forged a united kingdom south of Yorkshire. By 774, lesser kings in the region were paying him homage as "king of the English," and he married his daughters to the rulers of Wessex and Northumbria. Offa's England was, however, an unstable place, and in addition to the wars he had waged to unite the kingdom before 774, he was forced afterward to engage in a number of disciplinary conflicts from 775 through 796 against upstart rebels, most often in Kent, but also in Wessex and East Anglia.

Offa's goal throughout was to establish himself on a par with the monarchs of continental Europe, and though he quarreled frequently with the king of the Franks, Charlemagne (c. 742–814) nevertheless concluded a commercial treaty with Offa in 796. Offa was also on good terms with Rome and allowed Pope Adrian I (pope from 772–95) to increase his control over the sometimes maverick English church. None of his European prestige, however, helped Offa much with the Welsh, who stoutly resisted conquest, and Offa ultimately gave up on these stubborn people, erecting an earthen boundary, Offa's Dyke, to separate England from Wales—and to provide something of a fortified position to defend against raids and other incursions.

Og's Rebellion (1480)

PRINCIPAL COMBATANTS: Angus Og vs. the Macdonald and Maclean clans

PRINCIPAL THEATER(S): Northwestern Scottish Highlands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Domination of the Highlands

OUTCOME: Og defeated his father, the Lord of the Isles, and caused great and violent feuding throughout the Highlands.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but the Battle of Bloody Bay is believed to have been extraordinarily savage.

TREATIES: None

In the northwest of Scotland, the Macdonald clan dubbed themselves the "Lords of the Isles" and rebelled against the Scottish Crown in the MACDONALD REBELLION in 1411. After years of chronic unrest and uprising, the

Crown reached an agreement with the Macdonalds, which, however, turned Angus Og (d. 1490), bastard son of the current lord of the Isles, against his father as well as the Crown. His break with his father divided the north-western Highlands into two warring factions. In 1480, at the Battle of Bloody Bay, Og, allied now with the Macleod and MacKenzie clans, fought his father and his allies, the Macleans. Og not only enjoyed victory, he captured and imprisoned his father (as well as two of his principal Maclean officers) and persisted in stirring up violent feuding in the Highlands. The assassination of Og in 1490 ended this.

Old Zurich War (1436–1450)

PRINCIPAL COMBATANTS: Zurich and Austria (with French aid) vs. Schwyz, Glarus, and the Swiss Confederacy

PRINCIPAL THEATER(S): Zurich and the Toggenburg

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Toggenburg

OUTCOME: Zurich relinquished the Toggenburg to Schwyz, and the house of Savoy was installed in the Aargau (Switzerland).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Schwyz and Swiss Confederacy, 20,000; Zurich and allies, 40,000

CASUALTIES: Unknown

TREATIES: Peace of Ensishheim, 1444; Peace of Constance, 1446

The Old Zurich War grew from a territorial dispute created by the death of the last count of Toggenburg in 1436. The Toggenburgs, always vassals of either German kings or Holy Roman Emperors, boasted extensive possessions in what is now northeastern Switzerland. The dying off of the dynasty not only raised questions about who would rule some of the large Toggenburg holdings but fed the greed of nearby towns. The Toggenburg lands were bounded to the west and to the southwest by the free cities of Zurich, Schwyz, and Glarus—all members of the Swiss Confederation. To the southeast, Toggenburg possessions bordered lands held by two of the three leagues later known collectively as the Grisons.

While the southeasternmost part of the territory was quickly claimed (and occupied) by the newly formed Zehngerichtenbund (League of Ten Jurisdictions), the rest of the Toggenburg inheritance fell open to dispute. The House of Raron (in distant Valais) managed successfully to claim most of the countship, but the dependencies nearest to Lake Zurich and a tract to the east of them was

promptly invaded by the men of Schwyz, who blocked the road to Zurich. These moves were, of course, fiercely resented by Zurich, whose leaders desired to control at least the shore of the lake if nothing else. When a meeting of the Swiss confederates in 1437 authorized Schwyz and Glarus to retain nearly all the occupied zone, Zurich rejected the settlement out of hand and appealed to the Imperial Diet in 1440. The Austrian duke and German king Frederick III (1415–43) allied his forces with Zurich, which prompted Schwyz and its ally Glarus to declare war on Zurich and Austria.

During the opening clash, Zurich's burgomaster, at the head of its army, was killed, sending the forces of Zurich into headlong retreat. The Imperial Diet now called for conciliation, whereupon Zurich broke with Austria, which rejected the directive of the Diet. Joining the side of Schwyz, the Swiss Confederacy aided the city with some 20,000 troops in its siege against Zurich. Frederick obtained aid from France—40,000 men—who were nevertheless defeated by the much smaller Schwyz-Swiss Confederacy force in 1444.

The Peace of Ensishheim was concluded in 1444, but Zurich refused to be a party to it. Two years later, however, the Peace of Constance ended the Austrian-Zurich alliance and gave some territory back to Zurich, but yielded to Schwyz most of Toggenburg. Austria remained involved in sporadic fighting in the region until a special court of arbitration ordered Austria out of the Aargau (Switzerland) altogether and installed there the house of Savoy. Ultimately, the major portion of the Toggenburg countship was sold by the house of Raron to the prince-abbot of Sankt Gallen in 1468, only to become a ground for discord during the Swiss Reformation (see the VILLMERGEN WAR, SECOND).

Onin War (1467–1477)

PRINCIPAL COMBATANTS: Rival shogun clans

PRINCIPAL THEATER(S): Kyoto and environs

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the shogunate

OUTCOME: The issues of succession remained unresolved throughout the long and ruinous war.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

A feudal dispute erupted into chaotic warfare in western Japan. Yoshimasa (1435–90), the Ashikaga shogun (mili-

tary overlord), retired in 1467, triggering a dispute over succession to his shogunate. Rival families started a full-scale war in and about Kyoto, which was largely destroyed in the conflict. Even though the leaders of the warring factions, Yamana Mochitoyo (1404–73) and Hosokawa Katsumoto (c. 1430–73), both died in 1473, their partisans continued to fight, ultimately bringing some dozen major military families into the fray and laying waste to the entire region around Kyoto. The Onin War produced nothing but general ruin and failed to resolve the succession to the shogunate.

“Operation Just Cause” See UNITED STATES INVASION OF PANAMA.

Opium War, First (1839–1842)

PRINCIPAL COMBATANTS: Great Britain vs. China

PRINCIPAL THEATER(S): The China coast

DECLARATION: China attacked the British ships sent to protect the opium trade on September 4, 1839.

MAJOR ISSUES AND OBJECTIVES: The British used Chinese trade policies against the importation of opium and China’s treatment of opium merchants as a cause for going to war and forcing “open” trade policies on the traditionally insular Qing (Ch’ing) dynasty.

OUTCOME: China was forced to open its ports to British and other foreign trade and to grant a number of humiliating concessions

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: British forces, 12,000; Chinese forces, 45,000

CASUALTIES: Britain, about 100 killed or wounded; China, about 6,800 killed, wounded, or captured

TREATIES: Treaty of Nanking, August 29, 1842

Basically trade wars in which Western nations gained commercial privileges in China, the Opium Wars (fought from 1839 to 1842 and 1856 to 1860) were the first major military confrontations between China and the European West. Since the beginning of the 19th century British traders had been illegally importing the drug into China, leading to widespread social and economic disruption and degradation. They not only ended Chinese isolation from

other civilizations, but began for China a century of mistreatment and humiliation at the hands of foreign powers, leading to the decay of the Qing dynasty and, ultimately, revolution, civil war, and the ascendancy of communist rule.

The First Opium War began when British merchants ignored a Chinese prohibition against the importation of opium. On March 30, 1839, the Chinese imperial commissioner, Lin Zexu (Lin Tse-hsü)—frustrated by the insouciance of British merchants toward official China—confiscated and destroyed all the smuggled opium in British warehouses and ships in Canton (Guangzhou [Kwangchow]), British tempers, from merchant to skivvy, flared, and the antagonism between the British and Chinese officialdom only increased a few days later when drunken British sailors killed a Chinese villager. The British government, which did not recognize the Chinese legal system, refused to turn the accused men over to the local courts.

Hostilities broke out, and Britain responded by dispatching warships and troops to attack the China coast. In rapid succession, the cities of Hangzhou (Hangchow), Hong Kong, and Canton fell under attack and were blockaded by the British. A small amphibious force sailed up the Pearl River and assaulted the fortifications surrounding Canton. The city fell in May 1841, followed soon by Amoy and Ningbo (Ning-po). After a lull in the fighting when disease struck the British forces, renewed efforts resulted in the taking of Shanghai and Xinjiang (Chin-kiang). Outmatched by British troops and equipment, the Chinese capitulated when British navy ships appeared in August 1842.

The subsequent Treaty of Nanjing (Nanking) was harsh. In addition to agreeing to pay a \$20 million indemnity, the Chinese opened the ports of Canton, Xiamen (Amoy), Fuzhou (Foochow), Ningbo, and Shanghai to British trade and residence. China also granted Britain the right of “extraterritoriality,” whereby British residents in China were subject not to Chinese legal jurisdiction but to that of special consular courts. The greatest prize ceded to the Crown was Hong Kong, which was transferred to Britain in perpetuity.

The trade and legal concessions made to the British under the treaty were soon extended to other Western powers, and China’s long isolation came to an end. The Second OPIUM WAR erupted in 1856.

Travis Hanes and Frank Sanello, *The Opium Wars: The Addiction of One Empire and the Corruption of Another* (Naperville, Ill.: Sourcebooks Inc., 2002).

Opium War, Second (1856–1860)

PRINCIPAL COMBATANTS: Great Britain and France vs. China

PRINCIPAL THEATER(S): The China coast

DECLARATION: England and France attacked China after the *Arrow*, a Chinese-owned ship flying the British flag, was seized by the Chinese.

MAJOR ISSUES AND OBJECTIVES: After the First Opium War, the British and the French (and other Western powers, including the United States) sought further trade concessions and, once again, used China's enforcement of its ban on the opium trade as an excuse to go to war and get them.

OUTCOME: China was forced to open more of its ports to British and other foreign trade and to grant Great Britain further land around Hong Kong in a "lease" to last 99 years

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Anglo-French forces, 17,700; Chinese forces, 30,000

CASUALTIES: Anglo-French, nearly 900 killed or wounded; Chinese, more than 7,000 killed, wounded, or captured

TREATIES: Treaty of Tientsin (Tianjin or Tianjian [Tientsin]), June 28, 1858 (reaffirmed and expanded in 1860) plus copycat treaties with France, Russia, and the United States

The First OPIUM WAR resulted in the opening of several Chinese ports as well as the cession of Hong Kong to Great Britain. By 1856, the British (and the French) were restless for further trade concessions. In that year, Chinese officials seized the *Arrow*, a Chinese-owned ship flying the British flag and engaged in smuggling opium. The British, seeking to extend their trading rights in China, used the seizure as an excuse to renew hostilities. They were joined in the hostilities by the French, who used as *their* excuse the murder of a French missionary in the interior of China. In late 1857 a combined English and French force attacked, occupying Canton (Guangzhou [Kwangchow]). Next, the force took forts near Tianjin, and treaties were concluded between China and Britain as well as similar treaties between China and France, Russia, and the United States.

The new treaties with the Western powers caused widespread outrage in China and failed to receive ratification. Foreign diplomats were refused entrance to Beijing (Peking), and a British force was slaughtered outside of Tianjin in 1859. A renewed Anglo-French assault captured Tianjin and defeated a Chinese army outside of Beijing. The Chinese emperor, Xianfeng (Hsien-feng; 1831–61), fled, and his commissioners concluded new treaties embodying the provisions of the Tianjin agreement and adding four more ports to the list of those now open to foreign trade.

Of special importance, the Kowloon Peninsula on the Chinese mainland was added to the Hong Kong colony,

and in 1898 a large area beyond Kowloon, together with the surrounding islands (the "New Territories"), was leased to Great Britain for 99 years.

Oporto, Revolution at (1820)

PRINCIPAL COMBATANTS: Oporto Jacobins vs. Great Britain

PRINCIPAL THEATER(S): Oporto and Lisbon, Portugal

DECLARATION: Coup of August 24, 1820

MAJOR ISSUES AND OBJECTIVES: The Jacobins sought the ouster of the British regency in Portugal.

OUTCOME: In a bloodless revolution, the British regency was evicted and the Portuguese king returned to his throne as a constitutional monarch.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: None

TREATIES: None

As a result of the British victory over Napoleon Bonaparte (1769–1821) in the PENINSULAR WAR from 1808 to 1814, Portugal came under the rule of a British regency, its king, John VI (1769–1826), having fled to Brazil to establish a government in exile. During the regency, Portuguese radical nationalists—popularly called Jacobins—fomented rebellion, calling for the removal of the British marshal in charge of the Portuguese army, William Carr Beresford (1768–1854). To counter the Jacobin movement, Beresford went to Brazil in an effort to persuade the king to return. In Beresford's absence, on August 24, 1820, the Jacobin Club of Oporto conspired with high-ranking military officers to stage a coup d'état. A junta was summarily established, and the revolution was accomplished with nothing more than a volley of musket fire.

The revolution spread to the Portuguese capital, Lisbon, within a matter of days. A quick revolt took place on September 15, 1820, and the junta ousted the regency and convened a session of the Cortes (parliament). The small contingent of British military was ejected from the country, Beresford was recalled to Britain, and John VI did return to Portugal, without the intermediation of a foreign regency and as a constitutional monarch. The king had left his first son behind as Emperor Pedro I (1798–1834) of Brazil, but his second son, Don Miguel

(1842–66) could not reconcile his father's return with his own ideas of absolute monarchy and his own ambitions for such a crown. Backed by his Braganza family in Portugal, he tried to extend their dynasty in a stop-and-go rebellion that ultimately led to the MIGUELITE WARS (1828–34).

Orange River War (1846–1850)

PRINCIPAL COMBATANTS: The Boers vs. Great Britain

PRINCIPAL THEATER(S): South Africa, between the Vaal and Orange rivers

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Frontier conflict between colonial rivals

OUTCOME: Inconclusive, although the British beat back a Boer incursion across the Vaal River

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Boers, 1,000; British, 1,000

CASUALTIES: 100 killed or wounded on both sides

TREATIES: None

Throughout much of the 19th century, the Boers (Dutch colonial farmers of South Africa) came into increasing conflict with the British who had control of the region. During 1835–37, some 12,000 Boers migrated northward and established their own independent states. Along the frontier between these new Boer states and the British colonial holdings warfare developed during 1846–50. There was only a single set battle, and no war was formally declared. However, the chronic conflict near the Great Kei River and in the area between the Orange River and the Vaal River was dubbed the Orange River War.

The single major battle of the war, at Boomplaats, on August 29, 1848, resulted in the defeat of the Orange Colony Boers under General Andreas Pretorius (1798–1853) by a British force commanded by Sir Harry Smith (1787–1860). As a result, the Boers retreated across the Vaal, but violence continued sporadically.

Oranges, War of the (1801)

PRINCIPAL COMBATANTS: France and Spain vs. Portugal

PRINCIPAL THEATER(S): Portugal

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: France wanted Portuguese cessions of territory and concessions of trade; under pressure from Napoleon, Spain cooperated in war against Portugal.

OUTCOME: Portugal ceded territory in Brazil and Portugal and made other concessions; Napoleon was unsatisfied.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Badajoz, June 6, 1801

Threatened by Napoleon I (Napoleon Bonaparte; 1769–1821), Spain joined France in a brief war to compel Portugal to cede much of its territory to France and to close its ports to British trade. French forces, joined by Spanish troops under General Manuel Godoy (1767–1851), invaded in April 1801. The Portuguese were defeated along the Spanish border at the Battle of Olivenza, whereupon Godoy sent to the queen of Spain a basket of oranges picked at nearby Elvas, with a message announcing his intention to march to Lisbon. However, Portugal quickly agreed to the Treaty of Badajoz on June 6, 1801, shutting its ports to British trade, granting special trading status to France, ceding Olivenza to Spain, ceding part of Brazil to France, and paying monetary reparations. Napoleon, wanting more of Portugal itself, denounced the treaty, prompting Spain to take a stand against France. Napoleon threatened to devastate both Spain and Portugal, but he was unable to make good on his threat because of war pressures elsewhere.

Orléans, Siege of (1429)

PRINCIPAL COMBATANTS: English forces for Henry VI and Burgundian allies vs. Joan of Arc and forces for the French heir Charles

PRINCIPAL THEATER(S): City of Orléans in southern France

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: A contest for the French throne following the death of King Charles VI.

OUTCOME: The dauphin ascended to the throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

English, 5,000; Joan was accompanied to Orléans by several hundred troops.

CASUALTIES: English, 500 killed or captured; French, unknown

TREATIES: None

In 1420, during the HUNDRED YEARS' WAR, England's King Henry V (1387–1422) became heir to the French throne, by courtesy of the Treaty of Troyes, upon the death of French king Charles VI (1368–1422). The deal was denounced by Charles's son, the dauphin, and his followers, and when Charles died, the dauphin claimed the crown as Charles VII (1403–61). Unfortunately, the English, too, decided to press their claim, and they allied with Philip III (the Good; 1396–1467), duke of Burgundy—whose forces controlled much of northern France—to keep Charles from taking the throne. As it happened, Henry V died the same year as Charles VI, so it was not he but his infant son, Henry VI (1421–71), in whose name the English regent, John Plantagenet (1389–1435), duke of Bedford, took control of English holdings in northern France. Five years after the death of this father, Charles VII had not yet been crowned, since Reims, traditional site of French coronations, lay under the control of his enemies.

Even worse, Bedford soon attacked the south, sending 5,000 troops to conquer Maine, a border region between those French lands recognizing Henry of England as king and those recognizing Charles as king. After taking Maine, Thomas de Montacute (d. 1428), earl of Salisbury, launched the siege of Orléans, a city which had become key to maintaining the dauphin's ambition. Not only the French were unhappy with Salisbury. His action had been taken against the advice of the duke of Bedford himself, who argued for an advance into Anjou instead. Salisbury managed to capture some important places upstream and downstream from Orléans, along with the bridgehead fort on the south bank of the Loire River opposite the city itself, before he died from a battle wound on November 3.

His successor in command, William de la Pole (1396–1450), earl of Suffolk, did little to advance the siege before December of 1428, when John Talbot (1384–1453 [later earl of Shrewsbury]) and Thomas Scales arrived to push him forward. Under their influence the English began to build impressive siegeworks, including forts, and to press harder on the city, and a French attempt to cut the besiegers' line of supply was defeated in the Battle of the Herrings on February 12, 1429. Still, as the weeks went by, Orléans held out.

Part of the reason lay with a young French peasant girl, the deeply religious Joan of Arc (1412–31), who would lead the defense against the siege after forcing an audience with the dauphin and persuading him to accept what she saw as her divine mission to save the city. In fact, the defenders, under Jean d'Orléans (1403–68), comte de Dunois (bastard son of Charles VII's late uncle Louis, duc

d'Orléans [1372–1407]), were considering capitulation when Joan had her audience. At length, she persuaded Charles to send an army to relieve the besieged town.

With several hundred of the dauphin's troops, Joan set out for Orléans. From Chézy five miles upstream, Joan distracted the English with a diversionary feint against one of the English forts, and entered Orléans with supplies on April 30. On May 4 she attacked the principal English forts, and within three days they had all been stormed. Suffolk abandoned the siege. What was more, the English were forced out of Troyes, Châlons, and Reims. There, at last, Charles was crowned. Although ultimately the English would execute Joan as a witch and a heretic, the "Maid of Orléans" had loosened England's grip on French lands for good.

Oruro Revolt (1736–1737)

PRINCIPAL COMBATANTS: Spain vs. the Oruro Indians

PRINCIPAL THEATER(S): Central Peru

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rebellion against intolerable working and living conditions in the mines of central Peru

OUTCOME: The rebels sacked the city of Oruro, but the rebellion was extinguished by Spanish colonial troops.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Oruro Indians of Peru were treated essentially as slaves by the mine owners in the central portion of that colony. The horrific conditions drove the Oruros to desperation, and they rallied behind Juan Santos, who led them in revolt. In 1737, they overran the city of Oruro before colonial troops put down the rebellion.

Oswald's Wars (1633–641)

PRINCIPAL COMBATANTS: Oswald, king of Bernicia, and Penda, king of Mercia vs. Cadwallon, king of Gwynedd, Wales; later, Oswald vs. Penda

PRINCIPAL THEATER(S): England, primarily Northumbria and Wales

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Domination over Anglo-Saxon England

OUTCOME: Oswald amassed a large Anglo-Saxon kingdom, but was killed in battle by his former ally, Penda, who elevated Mercia to a long period of dominance over Anglo-Saxon England.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents survive

During the Middle Ages, England was a region of fragmented kingdoms. The death of Edwin (585–632), king of Deira, enabled Oswald (c. 605–641), son of the Bernician king Aethelfrith (fl. 593–616), to regain dominance of both Bernicia and Deira after he had been exiled from Northumbria (the region encompassing Bernicia and Deira) in 616. With King Penda (c. 577–655) of Mercia, Oswald now attacked King Cadwallon (d. 634) of Gwynedd, in northern Wales. After a year of combat, the forces of Cadwallon were defeated, and Cadwallon himself killed at the Battle of Heavenfield in 634.

Oswald now fought to secure his Northumbrian borders and extend his realms south. Along with battle, he used a dynastic marriage to secure control of Wessex. This, however, turned his ally Penda against him, and the two led armies into combat at the Battle of Maserfeld in 641. There Oswald fell, propelling Penda and the kingdom of Mercia to dominance over Anglo-Saxon England. Mercia would come to dominate England for a century and a half. Oswald, who had tried to bring peace to his realm and who founded a famous monastery at Lindisfarne to bring Christianity into pagan Northumbria, was later canonized.

Ottoman Civil War (1403–1413)

PRINCIPAL COMBATANTS: Four sons of Sultan Bayazid I of the Ottoman Empire

PRINCIPAL THEATER(S): Ottoman Empire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the Ottoman sultanate

OUTCOME: After a long civil war, one son emerged victorious and ruled as Muhammad I.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

When Sultan Bayazid I (1347–1403) was killed at the Battle of Angora in 1403, his death began a period known as the Interregnum, during which four of his six sons tore the fledgling Ottoman Empire apart in their quest for domination of the sultanate. Muhammad, or Mehmed I (1389–1421), captured Karaman and made this city his stronghold. Süleyman (d. 1411) had control of the empire's European territories. Both Isa Bey (d. 1405) and Mustafa, or Musa Bey (d. 1413), took territories in Anatolia Turkey.

Süleyman struck an alliance with the Byzantine Empire in 1405 and met Isa in battle. Defeating Isa's army, he strangled his brother. Mustafa attacked Süleyman in 1406, fighting him and the Byzantine co-emperor John VIII Palaeologue (1390–1448) in Thrace. When Mustafa's Serbian and Bulgarian allies fled the field, however, Süleyman was able to take Adrianople (Edirne), the Ottoman European capital. Mustafa regrouped, assembling an army of Turks and Wallachians, against Adrianople. In the course of the battle, Mustafa persuaded Süleyman's contingent of Janissaries to defect to his side, and Süleyman was captured. Mustafa had him strangled as well.

After the death of Süleyman, Mustafa laid siege to Constantinople but suffered defeat at sea. Despite this loss, Mustafa was still more powerful than Muhammad and was dominant in the region. He attacked Serbia in 1406 and conquered Salonika, blinding its ruler, a son of Süleyman. Muhammad, however, with a large Turkish force and allied with the Byzantines, lifted Mustafa's siege of Constantinople and regained the loyalty of the Janissaries. He waged unremitting war on Mustafa, fighting him in three separate battles before he definitively defeated his brother in 1413. Like Isa and Süleyman, Mustafa was executed by strangulation. Muhammad I assumed the Ottoman throne and set about rebuilding the empire.

Ottoman Civil War (1481–1482)**PRINCIPAL COMBATANTS:** Bayazid II vs. Djem**PRINCIPAL THEATER(S):** Ottoman Empire**DECLARATION:** None**MAJOR ISSUES AND OBJECTIVES:** Succession to the Ottoman sultanate following the death of Muhammad II the Conqueror**OUTCOME:** Djem was defeated several times and ultimately fled to Rhodes, where he was imprisoned for the rest of his life.**APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:** Unknown**CASUALTIES:** Unknown**TREATIES:** None

Although Sultan Muhammad, or Mehmed II (the Conqueror; 1429–1481) had greatly expanded the Ottoman Empire, leaving a firm foundation for the great future conquests of the 16th-century sultans, his death left unresolved many of the problems caused by his internal policies. The taxes he had imposed to finance his conquests, for example, had led during the last year of his reign to a virtual civil war in Constantinople between major factions of the janissaries and the Turkish aristocracy. Muhammad's son, Bayazid (1447–1513), left Amaysa to assume the throne at the behest of the Janissaries, who dominated the capital militarily and whom Bayazid had courted with promises of a full amnesty for their rebellion and an increase in pay for their services, the latter always a key attraction for mercenary troops. Bayazid II's first act was to kill the grand vizier, who had backed the other candidate for Muhammad's throne, Djem (1459–95), governor of Karaman and Bayazid's younger brother, who had already been proclaimed sultan in the old Ottoman capital of Bursa. Djem proposed to his brother that Bayazid rule Ottoman Europe and let Djem assume control of Anatolia. Bayazid rejected this proposal. He then managed to conciliate the nobility with his essentially pacific plans for consolidating his father's empire, which downgraded the Janissaries. Bereft of his major support, Djem nevertheless came to fight. The two met in battle at Yenishehr in 1481. Defeated, Djem fled into exile in Mamluk Syria in the summer of 1481. In Cairo, he regrouped, and, in 1482, renewed his attack on Bayazid II, this time with Mamluk aid. Djem failed, however, to recruit support in Karaman, where the Turkoman nomads he had hoped to rally were instead attracted to Bayazid's heterodoxy. Consequently, Djem was again defeated by his brother. This time, he fled to Rhodes, where the Knights Hospitalers kept him a captive—apparently at the request of Bayazid II, who paid them an annual fee for the service. However, another condition of Djem's captivity—either explicit or understood—was that the Ottomans refrain from attacking Europe. For 13 years, Bayazid II left Europe unmolested, fearing that the Knights Hospitalers would

release Djem. Upon Djem's death (by poisoning, probably on Bayazid's orders), Bayazid launched the VENETIAN-TURKISH WAR (1499–1503).

Further reading: Jason Goodwin, *Lords of the Horizon: A History of the Ottoman Empire* (New York: Picador, 2003); Colin Imber, *Ottoman Empire: 1300–1650* (London: Palgrave Macmillan, 2003); Halil Inalcik, *The Ottoman Empire: The Classical Age, 1300–1600* (London: Phoenix Press, 2001).

Ottoman Civil War (1509–1513)**PRINCIPAL COMBATANTS:** Bayazid II vs. his sons**PRINCIPAL THEATER(S):** Ottoman Empire**DECLARATION:** None**MAJOR ISSUES AND OBJECTIVES:** Succession to the Ottoman sultanate**OUTCOME:** Selim prevailed over his father and brothers and assumed the throne as Selim I.**APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:** Unknown**CASUALTIES:** Casualties included 40,000 Anatolian Shi'ites slain.**TREATIES:** None

Although Bayazid II (1447–1513) had inherited a considerable empire from his father, Muhammad, or Mehmet, II (1429–81), he was never able to undertake the new conquests in Europe that the expansion-minded old sultan might have imagined to be the Ottoman legacy. For one thing, Bayazid had to turn much of his attention in the later years of his life to internal rebellion, especially in eastern Anatolia, where Turkoman nomads resisted not just the extension of the Ottoman administrative bureaucracy but also the empire's Sunni orthodoxy. They developed a fanatical attachment to the Sufi and Shi'ite mystic orders, the most successful of which, the Safavids, used a combined religious and military appeal to conquer most of Persia. They then spread a message of religious heresy and political revolt, not only among the tribesmen but also to farmers and some city dwellers, Ottoman citizens who were beginning to imagine in this movement the answers to their own problems.

At the same time, Bayazid was having trouble with the Janissaries who had been so instrumental in his own rise to power (see OTTOMAN CIVIL WAR [1481–1482]). Whereas Bayazid wished to name his son Ahmed (d. 1513) as his successor, the Janissaries much preferred his brother, Selim (1467–1520), governor of Trebizond. Bayazid, who had been put on the throne by the Janissaries despite his peace-loving nature, had throughout his reign only carried out military activities with reluctance, and Ahmed seemed to share his father's personality. Selim, on the other hand, like the mercenary Janissaries, longed to return to Muhammad

II's aggressive style of conquest. When Bayazid seemed to be prepared to abdicate in Ahmed's favor, Selim, governor of Trebizond, led an army to Adrianople, demanding that he be given a European province to govern. He wanted to ensure that he had sufficient power to topple Ahmed. Bayazid refused to accede to Selim's demand, and Selim was defeated in battle. He returned to Trebizond in 1509.

Then, in 1511, all the grievances disturbing the empire coalesced into a fundamentally religious uprising against the central government. The Shi'ite Turkoman nomads rebelled and took Bursa, the old Ottoman capital, about 150 miles from Adrianople. Bayazid dispatched his grand vizier Ali Posa (fl. 1512) with a force to put down the Turkoman rebellion, an action that left him vulnerable to Ahmed's pressure for abdication. The Janissaries threatened to revolt if Ahmed ascended the throne, so Bayazid decided not to abdicate. This prompted Ahmed to join with another brother, Kortud (d. 1513), in a rebellion in Anatolia. However, in 1512, Selim, backed by Persian allies, defeated Ahmed, then advanced to Adrianople. With the aid of the Janissaries, he at last compelled Bayazid's abdication. Both Bayazid and Kortud were soon dead—poisoned. Selim pursued Ahmed, who was defeated in battle in 1513. Captured, he was put to death by strangulation. To ensure that he would now rule unopposed, Selim—now Selim I—ordered the deaths of all seven of his nephews, and four of his five sons. He then massacred 40,000 Anatolian Shi'ites to prevent another Turkoman rebellion. With his sultanate secure, Selim could then turn to new conquests.

Ottoman Civil War (1559)

PRINCIPAL COMBATANTS: Son of Süleyman I the Magnificent, Selim vs. his brother, Bayazid

PRINCIPAL THEATER(S): Ottoman Empire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the Ottoman sultanate

OUTCOME: Selim prevailed against Bayazid, who was executed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Süleyman I (the Magnificent; 1496–1566), was warned by his favorite wife, Roxelana (d. 1559), that his eldest son,

Mustafa (d. 1553), was plotting against him. This was untrue, but the sultan did not pause to investigate; instead, he had Mustafa arrested and beheaded in 1553. This left the sons Süleyman had had by Roxelana in position to inherit the throne; however, upon Roxelana's death, the two young men, Selim (c. 1524–74), and Bayazid (d. 1561), fell to disputing their inheritance. Bayazid raised an army to oppose Selim, Süleyman's favorite. Selim defeated Bayazid at the Battle of Konya in 1559, whereupon Bayazid fled to Persia. Süleyman subsequently authorized Selim to dispatch executioners to Persia and paid Shahtahmasp I (r. 1524–76) to deliver Bayazid into their hands. Bayazid was killed in 1561.

Ottoman Conquest of Bulgaria (1369–1372)

PRINCIPAL COMBATANTS: Ottoman Turks (principally the Janissary corps) vs. the Bulgarians and Serbs

PRINCIPAL THEATER(S): Bulgaria and Macedonia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest of eastern Europe

OUTCOME: The Ottomans seized control of Bulgaria and much of Macedonia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Under Murad I (1319–89), the Ottoman Empire pressed a program of invasion and expansion into eastern Europe. The conquest of Bulgaria was accomplished chiefly by the elite corps of troops Murad created. The Janissaries were former Christians who had been captured in childhood and raised as violently fanatic Muslims. Murad harnessed their fanaticism by shaping them into a disciplined body of infantry archers. The Janissary victory at the Battle of Cernomen in 1371 neutralized Serb resistance in the region of the Maritza River and led to the conquest not only of Bulgaria, but Macedonia as well.

Over the next half millennium, the Janissaries would figure as an extremely powerful—and ultimately self-serving—force in Ottoman history.

Further reading: Godfrey Goodwin, *The Janissaries* (London: Saqi Books, 1997); Colin Imber, *Ottoman Empire: 1300–1650* (London: Palgrave Macmillan, 2003); Halil Inalcik, *The Ottoman Empire: The Classical Age, 1300–1600* (London: Phoenix Press, 2001).

Ottoman-Druse War (1585)**PRINCIPAL COMBATANTS:** Ottoman Turks vs. Lebanese Druse**PRINCIPAL THEATER(S):** Lebanon**DECLARATION:** None**MAJOR ISSUES AND OBJECTIVES:** The Ottomans sought to suppress rebellion among the Druse.**OUTCOME:** The Druse rebellion was suppressed, but, in Lebanon, the Druse remained an important political force.**APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:** Unknown**CASUALTIES:** Unknown**TREATIES:** None

The Islamic sect known as the Druse was small but important during the 16th century. The Ottoman sultan Selim I (1467–1520) sought to placate Druse interests by naming Lebanon's Fakhr ad-Din (d. 1544) emir of the Ottoman Empire's Druse. However, in 1585, the Shi'ite ruler of Tripoli, Yusuf Sayfa (fl. 1580s), led an insurrection against the Ottoman sultan. The rebel forces encompassed a number of religious groups, including Druse led by Korkmaz (1544–85), the son of Fakhr ad-Din. The Ottomans put down the rebellion and executed Korkmaz. He was succeeded first by his uncle and then by Fakhr ad-Din II (1572–1635), grandson of Fakhr ad-Din. Although nominally under Ottoman control, the Druse came to dominate Lebanese politics.

Ottoman-Druse War (1611–1613)**PRINCIPAL COMBATANTS:** Ottoman Empire (through the pasha of Damascus) vs. Fakhr ad-Din II and the Druse of Lebanon**PRINCIPAL THEATER(S):** Lebanon**DECLARATION:** None**MAJOR ISSUES AND OBJECTIVES:** The Ottoman sultan wanted to punish the Druse for an unauthorized alliance with Tuscany (Holy Roman Empire).**OUTCOME:** Fakhr ad-Din was driven into exile.**APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:** Druse army, 40,000; pasha's forces were larger**CASUALTIES:** Unknown**TREATIES:** None

Fakhr ad-Din II (1572–1635), emir of the Druse in Lebanon, made the Druse dominant in the region. In

1608, when he struck an alliance with Tuscany—effectively an alliance with the Holy Roman Empire—Ottoman sultan Ahmed (1589–1617) ordered the pasha of Damascus to conduct a punitive expedition against the Druse. Fakhr commanded an army of 40,000, a formidable force that readily countered the Ottoman action. The pasha mounted a larger assault in 1613, which defeated the Druse and sent Fakhr fleeing into Tuscan exile. (He returned in 1618 at the invitation of a new sultan, Osman II [1604–22].)

Cook, ed., *A History of the Ottoman Empire to 1730* (Cambridge, England: Cambridge University Press, 1976); Jason Goodwin, *Lords of the Horizon: A History of the Ottoman Empire* (New York: Picador, 2003); Colin Imber, *Ottoman Empire: 1300–1650* (London: Palgrave Macmillan, 2003).

Ottoman-Druse War (1631–1635)**PRINCIPAL COMBATANTS:** Ottoman Empire vs. the Druse**PRINCIPAL THEATER(S):** Lebanon**DECLARATION:** None**MAJOR ISSUES AND OBJECTIVES:** Suppression of the Druse**OUTCOME:** The Druse were defeated, and their leader, Fakhr ad-Din, executed.**APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:** Ottoman forces, 80,000; Druse, 25,000**CASUALTIES:** Unknown**TREATIES:** None

Exiled to Tuscany after the OTTOMAN-DRUSE WAR (1611–1613), Fakhr ad-Din II (1572–1635) returned to Lebanon in 1618, then continued a program of territorial expansion and opposition to the Sublime Porte (the government of the Ottoman Empire). Armed exchanges were taking place by 1631, and, in 1633, Sultan Murad IV (1609–40) sent a major amphibious expedition against the Druse. While Murad's fleet blockaded the coast of Lebanon, an 80,000-man army (made up of Syrians and Egyptians) defeated a Druse army numbering 25,000 men (and consisting of Maronites and mercenary troops in addition to the Druse). Fakhr fled the field and took refuge in the mountains. One of his sons was immediately captured and executed, and Fakhr was captured in 1634 and executed the following year, as were two more of his sons. This brought an end to the war, but not to the Druse presence and influence in the region. As a ruling dynasty (called the Ma'n), the line of Fakhr ad-Din ended in 1697.

Otto the Great, Conquests of (942–972)

PRINCIPAL COMBATANTS: Otto I vs. various rebels within Germany; Otto vs. the Slavs of middle Europe; Otto vs. the Magyars; Germany vs. France; Germany vs. Italy

PRINCIPAL THEATER(S): Central Europe and northern Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Otto I sought to centralize German-speaking Europe and expand his kingdom.

OUTCOME: Otto consolidated the German Reich and gained hegemony over much of Europe.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At Lechfeld, Otto led an army of 10,000.

CASUALTIES: Unknown

TREATIES: None

The son of Germany's Henry I (c. 876–936), Otto I (the Great; 912–73) consolidated the German Reich by suppressing rebellious vassals (led by Thanknar, his half brother, and Henry, his younger brother) in the GERMAN CIVIL WARS (938–941) and ultimately by winning a decisive victory against the Hungarians at the battle of Lechfeld in 955 (see MAGYAR RAID, GREAT). But Otto's ambition stretched beyond Germany, and even as he was quelling the early rebellions against his reign, he took the time to strengthen and expand his kingdom's frontiers.

In the East, he attacked and defeated the Slavs, consolidating his gains by founding a monastery in Magdeburg in 941 and establishing two bishoprics in 948. In the North, he extended Christendom into Denmark, establishing four bishoprics there by 968. However, an early campaign in Bohemia failed, and it took Otto till 950 to force its prince, Boleslav I (d. 967), to submit and pay tribute.

Otto was then in a position to deny any French claims to Lorraine, which he had taken when he put down the French-backed rebellion of 939 to 941. He also assumed

the role of mediator in France's internal struggles. He held a similar sway over Burgundy. In fact, when Burgundian princess Adelaide, the widowed queen of Italy, appealed to him after being taken prisoner by the Lombard prince Berengar (c. 900–966), Otto marched into Italy in 951, declared himself king of the Lombards, and married Adelaide (his first wife having died). Berengar became his vassal for the kingdom of Italy.

Otto was forced to cut his first Italian campaign short when a revolt broke out in Germany in 953. Led by his son Liudolf (930–957), and backed by Conrad (d. 955), duke of Lorraine, and Frederick, bishop of Mainz, the rebellion at first succeeded, forcing Otto to withdraw to Saxony. But the rebellion began to fail when the Magyar invasion allowed Otto to paint the rebels as traitors and enemies of the Reich in league with the invaders. In 955, not only did Otto defeat the Magyars so decisively at Lechfeld that they never invaded again, he also captured the rebel stronghold at Regensburg, ending the rebellion. That year, too, Otto also won another major victory over the Slavs, which he followed with a series of campaigns that, by 960, had forced the utter subjugation of all the Slavs between the middle Elbe and the middle Oder rivers. By 968, even Mieszko (Mieczyslaw I) (c. 930–992), prince of Poland, was paying tribute to the German king.

Meanwhile, Otto's old enemy and former vassal Berengar, free of German interference, was now threatening Rome. Pope John XII (d. 964) appealed to the German king for help. Otto's price was the Holy Roman Empire. When Otto arrived in Rome on February 2, 962, he was crowned emperor, and 11 days later, he and the pope reached an agreement called the *Privilegium Ottoianum*, which regulated relations between emperor and pope and gave the emperor the right to ratify papal elections. Some say this provision was added later by Otto after he deposed John XII in December for treating with Berengar. In any case, Otto replaced John with Leo VIII (d. 965) as pope, then captured Berengar and dragged him back to Germany. In 966, Otto was back in Italy for a third campaign, this time to suppress a revolt by the Romans against his puppet pontiff, Leo VIII. Since Leo had been deposed by Benedict V (d. 966), and had since died, in 972 Otto appointed a new pope, John XIII (d. 972).

Otto consolidated the German Reich and gave it peace and security from foreign attack. Enjoying something approaching hegemony over Europe, Germany under his rule experienced a cultural flowering that some scholars call the "Ottonian renaissance."

Empire of Otto the Great at the time of his death

P

Pacific War of the (1879–1884)

PRINCIPAL COMBATANTS: Chile vs. Bolivia and Peru

PRINCIPAL THEATER(S): Atacama Desert region and adjacent sea

DECLARATION: Chile against Bolivia and Peru, April 5, 1879

MAJOR ISSUES AND OBJECTIVES: Control of this nitrate-rich region

OUTCOME: Chile triumphed, winning important portions of the Atacama region from the Peruvian-Bolivian alliance.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Chile fielded as many as 25,000 troops and had a reserve of 50,000; Peru, 9,680 plus 30,000 reserves; Bolivia, 7,959

CASUALTIES: Chile, 3,276 killed, 5,610 wounded; Peru, 9,672 killed, 14,431 wounded; Bolivia, 920 killed, 1,210 wounded

TREATIES: Treaty of Ancón (Chile and Peru), October 20, 1883; Treaty of Valparaiso (Chile and Bolivia), April 4, 1884

The War of the Pacific ranks with the PARAGUAYAN WAR as one of the two greatest international conflicts in 19th-century South American history. Here Chile waged war against Peru and Bolivia for control of the guano and nitrate deposits (vital in the manufacture of fertilizer, explosives, and economically important chemicals) found in the Atacama Desert. Although Chile claimed Tacna, Arica, and Tarapacá, and Bolivia Antofagasta, the boundary between the two was uncertain, despite the fact that

they had settled on the 24th parallel as the dividing line in 1866. Chilean-financed mining concerns took advantage of the instability. They swarmed into the region, threatening both Peruvian and Bolivian holdings. In response, these two nations signed a secret accord in 1873, pledging to assist one another in defense of their Atacama territory. In 1875, Peru seized the property of Chilean mining companies. Three years later, Bolivia made seizures of its own in 1878. Chile responded in turn. Its president, Aníbal Pinto (1825–84), dispatched 200 troops to take and occupy the port of Antofagasta in February 1879, and on April 5, 1879, Chile declared war on Bolivia and Peru.

The war began at sea, when Chilean warships blockaded Peruvian and Bolivian ports. Peru dispatched its ironclad *Huáscar* to attack the blockading vessels, which it did with considerable success until it was sunk in the Battle of Antofagasta on October 8, 1879. Not only did Peru lose one of its two ironclads, but one of its important naval officers, Admiral Miguel Grau (1838–79), perished along with most of his crew.

After the sinking of the *Huáscar*, the action shifted to land. The Peruvian and Bolivian armies were ill-trained and poorly armed, possessing none of the modern weapons to match those boasted by Chile's well-drilled infantry armed with Gras rifles, its veteran Winchester-toting cavalry, or its formidable artillery, equipped with Krupp and Armstrong field guns and a smattering of Gatlings and Nordenfelts. Thus it was a confident Chilean army that staged a counteroffensive against the combined forces of Peru and Bolivia in the Tarapacá region during the closing months of 1879. Chilean forces took and occupied both Antofagasta and Tarapacá, then invaded Arica and Tacna. These towns would fall to Chile by June 1880.

Bolivia reeled in defeat, but Peru stayed in the fight, determined to regain Tarapacá. However, while this fighting continued, peace negotiations were opened. Chilean leaders took advantage of the ongoing negotiations to increase the pressure on Peru by invading that country, at Pisco, with some 25,000 troops. Outnumbered, the Peruvian defenders fell back, and the Chilean army marched north. At the village of Concepción on June 9–10, 1883, a company of 77 Chileans went down bravely fighting some 1,800 Peruvians in a battle that came to represent for Chile what the Alamo represented for Texans or Thermopylae for the Greeks. More determined than ever, the Chilean soldiers redoubled their efforts, the Peruvian resistance collapsed, and the government itself tottered. On December 17, 1879, Peru's capital, Lima, fell. It proved a decapitating blow. A cease-fire was declared, and, on October 20, 1883, Peru and Chile concluded the Treaty of Ancón, by which Peru ceded Tarapacá to Chile. Peru was to retain Tacna and Arica for a period of 10 years, after which possession would be decided by plebiscite. On April 4, 1884, Chile and Bolivia concluded the Treaty of Valparaiso, by which Bolivia ceded to Chile the city and the province of Antofagasta. Diplomatic wrangling delayed formal implementation of these terms for many years, until 1904.

Padri War (1821–1837)

PRINCIPAL COMBATANTS: Padri Muslim reformers vs. various leaders in Minangkabau, Sumatra, and Dutch colonial forces

PRINCIPAL THEATER(S): Minangkabau, Sumatra

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Suppression of the Padri
OUTCOME: After a long (15-year) siege, the major Padri stronghold fell, and the Padri surrendered; guerrilla warfare continued sporadically.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Padri were fundamentalist Islamic reformers who essentially forced their beliefs on the Muslims of Minangkabau, Sumatra, during the early 19th century. Local chiefs rebelled against the Padris but failed to suppress them. The local leaders appealed to Dutch trade and

colonial interests in Java for aid. Seeing the fanatical Padris as a threat to Dutch interests in the region, the Dutch intervened in the conflict and mounted a 15-year siege against the Padri fortress-city of Bondjol. Although the city finally fell in 1837, bringing the main phase of the war to an end, many Padri dispersed into the mountains, from which they continued to wage sporadic guerrilla warfare against the Dutch as well as non-Padri natives.

The conflict was also known as the Minangkabau War.

Pahang Civil War (1857–1863)

PRINCIPAL COMBATANTS: Rival claimants to the throne of Pahang, each with foreign allies (mainly Britain and Siam)

PRINCIPAL THEATER(S): Pahang, Malaya

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the Pahang sultanate

OUTCOME: The war ended with the death (from natural causes) of one of the two claimants to the throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Two rival brothers claimed the throne of the Malay state of Pahang after the death of their father, Sultan Bendahara Tun Ali in 1857. The rival claims erupted into war, in which the older brother, Tun Mutahir (d. 1863), found support from Johore, a neighboring sultanate, and from the British, who were attempting to achieve colonial domination of Malaya. The younger claimant, Wan Ahmad (fl. 1860s), was aided by the Trengganu sultanate and by the Siamese, who were opposed to the British. In effect, Britain and Siam used the war as a pretext for fighting one another for dominance in Malaya.

The war consisted mainly of hit-and-run raids, ambushes, and skirmishes, with occasional assaults on fortified positions. British naval vessels destroyed a Siamese fleet in 1862, which drew the war close to a conclusion. When Tun Mutahir died in 1863, the cause of war died with him, and Wan Ahmad was recognized as the new sultan.

Paiute War (Pyramid Lake War) (1860)

PRINCIPAL COMBATANTS: Local miners and the United States vs. the Paiute Indians

PRINCIPAL THEATER(S): Comstock mining region of Nevada

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: When local miners raped two Paiute women, the Indians sought revenge by attacking a trading post; the miners sent a force to exact their revenge for the raid but fell victim to an ambush; the U.S. Army was sent in to punish the Paiutes.

OUTCOME: The army skirmished with a small Paiute force, killing 25 Indians and bringing the war to a close, afterward establishing Fort Churchill to protect overland trails through Nevada to California.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 105 miners; 800 U.S. Army regulars and volunteers; Paiutes, unknown

CASUALTIES: 100 soldiers and civilians; 25 Indians

TREATIES: None

The last significant Indian-white conflict before the U.S. Civil War was between Nevada miners and the Southern Paiutes. Williams Station was one of two trading posts in the Carson Valley along the California Trail. The station served the Central Overland Mail and the Pony Express and was a vital link to the outside world for the miners of Carson City, Virginia City, Gold Hill, and Genoa. Early in May 1860, traders at Williams Station abducted and raped two young Indian women. The Southern Paiutes, already resentful of white intrusions into their lands, were moved to revenge. A party of Indian soldiers rode to the station, rescued the two girls, then burned the station and killed five whites.

Word of the “massacre” reached Virginia City’s Wells Fargo office on May 8. Anticipating a major Indian attack, a large and rowdy “army” of miners—perhaps as many as 2,000 men—immediately assembled. The miners telegraphed the governor of California asking for arms. As quickly as they banded together, the miners, totally undisciplined and thoroughly disorganized, dispersed. A miner named Henry Meredith organized and armed a new force drawn from the mining towns. At Dayton, Nevada, Meredith’s men were joined by Major William M. Ormsby (d. 1860) and a group from Carson City. Ormsby now assumed command of the combined force of 105 men, which made its way to Pyramid Lake in Paiute country—not merely to defend the mining towns but also to exact revenge.

The Paiute chief Numaga (d. 1871) had hoped to avoid further violence, but he realized that the miners

would be satisfied with nothing less than blood. He set up an ambush at the Big Bend of the Truckee River valley. In the narrow pass, about four in the afternoon of May 12, the trap was sprung. It was deadly and effective. The Paiutes’ poison-tipped arrows accounted for 46 fatalities—almost half the force that had been organized against them.

The Comstock country was thrown into a panic, but the governor of California responded with troops under the command of Colonel Jack Hayes (d. 1883), a former Texas Ranger. A small body of U.S. infantry regulars out of the Presidio in San Francisco, together with some local volunteer groups, brought the force to about 800 men, who headed toward the Truckee at the end of May. The force encountered a few Paiutes near the site of the original ambush and, after a skirmish, pursued the Indians to Pinnacle Mountain, killing about 25 Paiute soldiers. The short-lived Paiute War was over, but to ensure the peace and keep the California Trail open, the U.S. Army established Fort Churchill near Buckland Station.

Wheeler, *Paiute* (Reno: University of Nevada Press, 1996).

Pakistani Civil War (1971)

PRINCIPAL COMBATANTS: West Pakistan vs. East Pakistan (Bangladesh), with aid from India

PRINCIPAL THEATER(S): East Pakistan (Bangladesh)

DECLARATION: Bangladesh declared independence on March 26, 1971.

MAJOR ISSUES AND OBJECTIVES: East Pakistan wanted independence as Bangladesh.

OUTCOME: Bangladesh achieved independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Pakistan, 60,000; Bangladesh and India, the numbers are unknown, but they are much larger.

CASUALTIES: Pakistan, heavy casualties and many prisoners; Bangladesh, hundreds of thousands of civilians killed, 10 million refugees created

TREATIES: Treaty of Friendship and Peace between India and Bangladesh, March 19, 1972; no formal peace treaty between Pakistan and Bangladesh

By the mid-1960s, a strong independence movement gathered momentum in East Pakistan. Although this region accounted for some 75 percent of Pakistan’s foreign trade, West Pakistan remained politically dominant, and the East received disproportionately less representation in government and far fewer economic benefits. Riots broke out in

East Pakistan during 1968 and 1969, prompting the new Pakistani president, General Agha Muhammad Yahya Khan (1907–74), to call for a vote for a national assembly. Held in December 1970, these were Pakistan's first general elections held by Pakistan since independence in 1947. The Awami League—an organization calling for the independence of eastern Pakistan and headed by the popular Bengali leader Sheikh Mujib Rahman (1920–75)—won a majority in the new assembly. Yahya Khan promptly refused to honor the outcome, first by postponing the assembly, then by cancelling the result of the elections.

This, predictably, triggered civil war, beginning with a general strike throughout East Pakistan and the withholding of all taxes. The Pakistani president then declared martial law and sent 60,000 troops into East Pakistan. Negotiations between the East and West quickly broke down at the end of March 1971, after Mujib demanded virtual independence for East Pakistan. Instead, Yahya Khan ordered a military massacre in Dacca. When Yahya Khan had Mujib arrested and flown to prison in West Pakistan, the Bengali firebrand called upon his followers in the East to rise up and proclaim their independence as “Bangladesh,” which translates into English as “Land of the Bengalis.” Demonstrations and riots followed, and Pakistani troops, on March 25, 1971, fired on civilians—students in dormitories and people in crowded marketplaces—prompting Bangladesh to declare its independence on March 26.

The declaration unleashed the full force of the Pakistani army in the region. Troops rounded up and killed hundreds of thousands of Bangladeshi “rebels” and sent some 10 million terrified refugees fleeing Bangladesh for the neighboring Indian state of West Bengal. This refugee crisis, in turn, became the basis for the INDO-PAKISTANI WAR (1971), as Pakistan attacked the Indian-held portion of Kashmir on December 3.

The attack on India was ill-advised. When the monsoon season had passed, India's army moved quickly up to the Bangladesh border. By early December the Indians had advanced virtually unopposed to Dacca. Pakistan surrendered the city in mid-December 1971. Yahya Khan resigned in disgrace and was replaced by Zulfikar Ali Bhutto (b. 1921), who ordered the release of Sheikh Mujib, who flew home to a hero's welcome. In January 1972, he became the first prime minister of the People's Republic of Bangladesh, but it was not until 1973 that a prisoner of war exchange was concluded between Pakistan and Bangladesh. A year later, Pakistan formally recognized the independence of the nation.

Meanwhile, India's stunning victory over Pakistan in the Bangladesh war was achieved in part due to Soviet support, and—with the birth of Bangladesh—India came to dominate South Asia and its foreign policy. Officially nonaligned, it tilted toward the Soviet Union, which led the United States to veer toward supporting Pakistan. Belatedly the United States sent a nuclear-armed carrier

from its Pacific Fleet to the Bay of Bengal, ostensibly to evacuate civilians from Dacca. Instead it only stirred up the dangerous cold war stew by provoking a nuclear arms race between India and Pakistan.

Palit, *The Lightning Campaign: The Indo-Pakistan War of 1971* (New Delhi: Thomson Press [India], 1972); Richard Sisson, *War and Secession: Pakistan, India, and the Creation of Bangladesh* (reprint, Berkeley: University of California Press, 1991).

Palan Wars (800–1025)

PRINCIPAL COMBATANTS: Pala dynasty vs. various Indian states (especially the Rashtrakutas, the Rajput alliance, and the Cholas)

PRINCIPAL THEATER(S): India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Pala expansion

OUTCOME: The Pala were unable to establish permanent expansion of their empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents survive

The Palan Wars encompass a long period of violent chaos in northern India following the failure of Harsha Vardhana (c. 590–c. 647) to revive the Gupta Empire, which disintegrated during the CHALUKYAN WAR AGAINST HARSHA in 620. Over the years, many of the small Indian states that broke away from the Gupta Empire expanded, leading to many conflicts.

One of the most aggressive of the breakaway kingdoms was Bengal under the Pala dynasty. Between 800 and 1025, the Palas made three major attempts to expand west, meeting with ultimate defeat each time. Under Dharmapala (fl. 770–810), the Palas reached Harsha's former capital, Kannauj, but were met there by the Rashtrakutas, who checked the advance. In the ninth century, Devapala (fl. 810–850), who succeeded Dharmapala, attempted to assert rights to the Deccan and mounted a campaign along the Narmada River. Once again, the Rashtrakutas checked the Pala advance.

In the Rajput, a number of states leagued against the Palas to counter their activity along the Ganges. The army of this alliance marched into Bengal in 916, which neutralized Palan expansionism until the early 11th-century reign of Mahipala (fl. 988–1038). Under his leadership, the Pala dynasty pushed its influence as far west as Benares and south along the east coast of the subcontinent. The latter advance brought the Palas into conflict with the Cholas, who, beginning in 1021, mounted a

strong military campaign against the invaders. By 1025, the Cholas had entered Bengal, dealt Mahipala a strong defeat, and sent the Pala dynasty into a sharp decline.

Palestinian Guerrilla War (c. 1960s–ongoing)

PRINCIPAL COMBATANTS: Palestinian guerrillas (especially Palestine Liberation Organization, or PLO) vs. Israel

PRINCIPAL THEATER(S): Israeli territory, West Bank, Gaza, and various international locations of terrorist attacks

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Palestinian self-rule; Palestinian possession of territory; Palestinian challenge to the right of Israel to exist

OUTCOME: Violence continues as of January 2004 despite two important peace accords.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: In the tens of thousands, mostly among Palestinians

TREATIES: PLO-Israel Accord, September 13, 1993; Wye River Memorandum, October 28, 1998

Until 1988, Palestine did not exist as an independent state, but was a loosely constituted political entity consisting of Muslims who had been, in effect, internally displaced by the creation of the State of Israel. Beginning in the 1960s, various Palestinian organizations, primarily the Popular Front for the Liberation of Palestine (PFLP, a Marxist organization) and, even more centrally, Al Fatah, led by Yasser Arafat (b. 1929), launched a low-level but persistent guerrilla war and program of terrorism against Israel. In military terms, the actions of the Palestinians might best be characterized as guerrilla raids.

In 1964, Arafat emerged as the most highly visible of the Palestinian leaders—although he by no means had full control of the people—and formed the Palestine Liberation Organization (PLO). Five years later, Arafat became chairman of the organization.

The PLO seemed to gear its program of attacks to the lulls between the more formal wars between Arabs and Israelis during the 1960s and early 1970s. PLO terror tactics included rocket attacks on markets and other civilian public places, assassinations, raids on Israeli schools, and attacks on transport buses. The PLO guerrillas based their operations variously in Syria, then Jordan, and, for much of the 1970s and early 1980s, war-torn Lebanon.

PLO and PLO-backed actions were not directed solely against the territory of Israel. The organization engaged in international terrorism, as when the so-called Black September group hijacked commercial airliners during September 6–9, 1970, taking 435 hostages to Amman. Most infamous were the PLO attacks at the 1972 Olympics in Munich, in which 11 Israeli athletes were taken captive and killed.

As a result of the LEBANESE CIVIL WAR (1975–92), the PLO was forced out of Lebanon in 1983, and the group became less effective and less capable of applying a steady program of raids. After a period of relative quiescence, however, Palestinians living in Israeli-controlled Gaza staged massive riots against Israeli troops and paramilitary police in 1987. The violence spread to other Israeli-occupied territories, and, emboldened, the PLO proclaimed an independent state of Palestine in 1988. At this point, Israel granted Palestine a nominal—and quite limited—diplomatic recognition, and the United States followed suit.

This did not bring an end to the violence, which shifted to the West Bank and Gaza. In a campaign of popular Palestinian uprisings known as the Intifada, the PLO orchestrated battles with Israeli troops during 1989 and 1990. These were one-sided affairs, which resulted in the wounding and death of many Palestinians—all of whom were regarded as martyrs to the cause. Moreover, against this backdrop of continual violence, both the Israeli government and the Palestinian leadership showed an unprecedented willingness to come to a modus vivendi. In 1993 agreements brokered by the U.S. government and, personally, by President Bill Clinton (b. 1946), Israel and Palestine concluded peace accords. Whereas Israel agreed to accept the PLO as the representative government of Palestine, the PLO retracted its adamantly held objective of destroying Israel and now conceded the right of Israel to exist. In 1994 and 1995, the Palestinians were given a significant measure of self-rule on the West Bank and in Gaza.

There was an aura of hope during this period, but among many Palestinians as well as Israelis, there was also a backlash and resistance to the peace process. In 1996, Israelis elected right-wing candidate Benjamin Netanyahu (b. 1949) as prime minister. His hard line provoked new clashes between Israeli troops and Palestinians in the fall of 1996. In 1998, President Clinton brought the Israelis and Palestinians to Wye River, Maryland, to negotiate further peace terms. Israel agreed to cede additional territory in return for various U.S.-backed security guarantees. Feeling some political heat from home and abroad, Netanyahu signed the Wye River Memorandum, but when the peace process nevertheless faltered, he lost the next election on May 19, 1999, to Labor Party leader Ehud Barak (b. 1942). Barak had campaigned on a platform of bringing an end to Israel's conflicts with all its neighbors—Syria and Lebanon, for example—in addition to the Palestinians. On September 5, 1999, Israel and the

Palestinian Authority agreed to a new, revised deal on the stalled Wye River accord, hoping to revive the Middle East peace process. On November 8, 1999, they resumed “final status” talks.

In February 2000, a summit between Barak and Arafat fell apart over the promised Israeli withdrawal from the West Bank under the revised Wye accord, new deadlines were missed, and the “final status” negotiations deadlocked. Regardless of disagreements on the final stages of peace, however, in March Israel did indeed hand over part of the West Bank to Palestinians as part of a land transfer agreed to at Wye River back in 1998. Then, in May 2000, Israel unilaterally withdrew from the area of Lebanon it had been occupying since 1982. The seesaw swung the other way in July, when a peace summit at Camp David foundered on competing claims to Jerusalem and the issue of Palestinian refugees. By October, President Clinton had helped patch up matters some, presiding over yet another summit at the Egyptian resort of Sharm el-Sheikh, where the attendees announced a cease-fire and plans to bring an end to the Palestinian-Israeli violence. No sooner was the cease-fire created than it came undone, and Barak—feeling the need to seek a mandate to see the process through—stepped down and called for new elections on December 10.

Instead of a mandate, he lost the election to Likud Party candidate Ariel Sharon (b. 1928) by 20 percentage points. Sharon campaigned on a platform calling for “Peace with Security,” and promised that he would take a different approach to the Palestinian conflict, which most read as a conservative attempt to turn back the clock. The Palestinians, who disliked Sharon for his harsh policies in Israel’s 1982 invasion of Lebanon and distrusted him because of his outspoken support of Israel’s settlement activity, soon raised the stakes with a wave of “suicide” attacks.

Then on February 14, 2001, following the deaths of eight soldiers and civilians killed when a Palestinian bus driver ploughed his vehicle into a waiting line of passengers, Israel reimposed a total blockade on the occupied territories. By the time Ariel Sharon formally took office on March 7, his fragile seven-party coalition included veteran Labor leader Shimon Peres (b. 1923) as foreign minister. Peres had persuaded his party to join Sharon’s right-wing government in the name of national unity. A month later, a more united Israel was ready to respond to the newest wave of Palestinian “terrorism.” In April, Israeli troops seized territory controlled by the Palestinians for the first time since the start of the Oslo peace process, taking the Gaza Strip and dividing its territory into three parts. The United States responded by setting up a commission under former U.S. senator George Mitchell (b. 1933) to explore the new deadlock and look for ways around it. In May, the Mitchell Commission called for an immediate cease-fire, to be followed by confidence-building measures and ultimately by renewed peace negotiations.

Tellingly, Mitchell also called for a freeze on expansion of Jewish settlements in the occupied territories about the same time that the European Union accused Israel of employing “disproportionate” force in the occupied territories and called for the dismantling of Jewish settlements in the West Bank and Gaza Strip. But the world pressure on Israel was immediately undermined when a suicide bomber killed 19 young Israelis at a nightclub in Tel Aviv. With the pressure now reversed, Arafat ordered his forces in the occupied territories to enforce a cease-fire.

But Israel was having none of it. On July 4, 2001, the Israeli security cabinet voted to give the Israeli Defense Forces (IDF) a broader license to target Palestinian terrorists, permitting their assassination anywhere and anytime they could be found, rather than, as formerly, only when they were on the verge of committing an attack. “Targeted assassination” was the Israeli policy response to suicide bombing, although it was attacked by the Palestinians as extrajudicial execution, a war crime under Geneva conventions.

On August 10, in retaliation for a Hamas-sponsored suicide bombing in Jerusalem the day before, Israeli war planes destroyed the headquarters of the Palestinian police in the West Bank city of Ramallah. Israeli Special Forces also seized the offices of the Palestine Liberation Organization at Orient House in East Jerusalem. Several days later, Israeli tanks moved into the West Bank city of Jenin and opened fire on the Palestinian police station, utterly destroying it. This, the biggest incursion into Palestinian-controlled territory since 1994, was roundly criticized by Washington, which was increasingly coming under international pressure to step up its intermediary role in the region.

Regardless of U.S. desires, on August 28, 2001, Israeli troops moved into the West Bank town of Beit Jala, near the southern outskirts of Jerusalem, and both the United States and Britain strongly condemned the Israeli action. Throughout the late summer and fall, Israel occupied major Palestinian cities for various lengths of time, including Jericho, Ramallah and Tulkarm.

Then came the terrorist attacks on New York and Washington, D.C., on September 11, and the Bush administration began to manifest a much greater interest in bringing Israel and the Palestinians to negotiations, partly in response to requests from Arab and Muslim governments that were, many quite reluctantly, supporting the UNITED STATES WAR ON TERRORISM. Also, it was clear that that war could be more effectively fought if the Palestinian cause were removed as a justification for terror by Muslim extremists. On October 2, George W. Bush (b. 1946) announced a dramatic break with his administration’s previous Middle East policy by stating that he was prepared to back the creation of a Palestinian state, and U.S. secretary of state Colin Powell (b. 1937) spearheaded a new American initiative, which—as it turned out—involved

the removal of Yasser Arafat as the only spokesman for the Palestinian cause. Thus, even though the Israeli-Palestinian conflict escalated once more after the October 17, 2001, assassination of the Israeli hard-line minister of tourism Rehavam Zeevi (1926–2001) by Palestinian militants, there was ample evidence of a renewed Israeli interest in peace talks in the two years following.

As of 2004, the seesaw violence between terrorist attack and brutal reprisal continued, as did the peace initiatives. However much the United States may have been determined to solve the long intractable problems of the Arab-Israeli conflict in the wake of 9/11, it had yet to find the key.

Panamanian Revolution (1903)

PRINCIPAL COMBATANTS: Panama (with U.S. backing) vs. Colombia

PRINCIPAL THEATER(S): Panama

DECLARATION: Panamanian Declaration of Independence, November 3, 1903

MAJOR ISSUES AND OBJECTIVES: U.S.-backed parties with an interest in building a canal across the Isthmus of Panama fomented a revolt in Colombia that led to the declaration of an independent Republic of Panama, ready to comply with American plans for the canal.

OUTCOME: Panama achieved independence and U.S. recognition; the United States gained the rights to build and administer the Panama Canal.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Hay-Bunau-Varilla Treaty (also called the Panama Canal Treaty) of November 18, 1903

For centuries Europeans had dreamed of joining the Atlantic and Pacific oceans by cutting a canal through the Isthmus of Panama, which separates the Caribbean Sea from the Pacific. The United States did not begin to take the idea seriously until after the UNITED STATES–MEXICAN WAR. In 1848, the United States negotiated an agreement

with New Granada (a nation consisting of present-day Panama and Colombia) for rights of transit in exchange for a guarantee of New Granada's sovereignty over the isthmus province. The 1849 California gold rush, which sent tens of thousands of easterners west, prompted the United States to fund the Panama Railroad across the isthmus, but the ultimate dream remained a canal.

Meanwhile, U.S. diplomats—influenced by speculators such as railroad magnate Cornelius Vanderbilt (1794–1877) and adventurers such as famed filibuster William Walker (1824–60)—had become mired in the affairs of the tiny and politically volatile Republic of Nicaragua, which a number of them saw as being every bit as promising a site as Panama for an interoceanic canal. Here, however, the Americans were in competition with Britain, whose world trade, transoceanic navy, and numerous colonies ensured that she also was keenly interested in such a canal. London had kept close watch on U.S. ambitions in Central America, and attempted to establish a political beachhead at the mouth of the San Juan River, the most likely terminus for a Nicaraguan canal, by claiming a protectorate of the Miskito Indians on Nicaragua's east coast. This set off alarms within the U.S. foreign policy community, and the two countries exchanged diplomatic notes warning they would not permit the other exclusive control over a canal through the isthmus. In 1850 the British minister to the United States, Sir Henry Lytton Bulwer (1801–72), and Zachary Taylor's (1784–1850) secretary of state, John Clayton (1796–1856), got together and agreed to terms in a treaty settling the dispute. The Clayton-Bulwer Treaty provided that any canal built through either Panama or Nicaragua would be unfortified, neutral during war, and open to shipping from any country on equal terms, and that neither the United States nor Great Britain was to colonize or try to establish dominion over any part of Central America.

The treaty was ratified by the U.S. Senate and remained in force for half a century, but it was never very popular. Britain only made matters worse when it maintained that the treaty was not retroactive—meaning it still got to keep its protectorate over the Mosquito Coast. The Americans responded in typical fashion—Tennessee filibuster William Walker led an expedition to Nicaragua in 1855 and took over the country (see WALKER'S INVASION OF NICARAGUA). He was soon driven out, but not by the British. Cornelius Vanderbilt had at first given Walker clandestine support to take control of the isthmus across which he planned to build his own railroad. When Walker instead assumed power, Vanderbilt became the driving force behind his removal. Despite the brouhaha, what the treaty said was ultimately not of much importance. Until someone actually tried to build a canal—and negotiated the rights to do so—the impact of the Clayton-Bulwer Treaty was academic.

Decades later, a French firm under the direction of the brilliant Ferdinand de Lesseps (1805–94) did indeed

negotiate the necessary rights with New Granada to build a canal across the Isthmus of Panama. The firm began construction in 1881 but went bankrupt in short order. The project was taken over by the reorganized New Panama Canal Company (officially, the *Compagnie Universelle du Canal Interocéanique*) which hired another French engineer, Philippe Bunau-Varilla (1860–1940) in 1884 to oversee completion. Bunau-Varilla fared no better than his predecessor, and by 1880 the French Panama canal project had clearly failed. Bunau-Varilla approached the United States with an offer to sell the rights to build the canal, but got no takers. Then, in the flush of victory after the 1898 SPANISH-AMERICAN WAR (and encouraged, after 1901, by the expansionist president Theodore Roosevelt [1858–1919]), who had played a prominent role in that war), the United States persuaded Great Britain to relinquish its claims to share control of a Central American canal. The treaty, which had been negotiated in 1899 and 1901 by the U.S. secretary of state John Hay (1838–1905) and Baron Julian Pauncefote (1828–1902) of Preston, British ambassador to the United States, had been amended by the Senate in 1900, and was rejected by the British. The second version of the Hay-Pauncefote treaty, which the British government accepted and which the Senate ratified in December 1901, superseded the Clayton-Bulwer treaty and gave the United States the right to construct and fully control an isthmian canal in Central America. It retained, at least nominally, the principle of neutrality under the sole guarantee of the United States and provided that the canal would be open to ships of all nations on equal terms, but it omitted a clause contained in the first draft that, following Clayton-Bulwer, had forbidden fortifications.

Before the treaty was passed, however, an American commission of experts authorized by Congress in 1901 and advised by Bunau-Varilla had come to prefer a lock canal through Panama. This, argued the commission, would provide the cheapest and shortest route between the two U.S. coasts, over the original plan to build the canal in Nicaragua, whose Mosquito Coast—and British protection of that coast—had been behind the controversy that led to Clayton-Bulwer in the first place. Accordingly, in June 1902, Congress directed the president to negotiate with Colombia the acquisition of a strip of land in Panama after the New Panama Canal Company, successors to de Lesseps's defunct firm, agreed to a reasonable timetable and reasonable terms for selling the United States its titles and equities in the area. Rather than the original asking price of \$109 million for this right-of-way, the French company took the \$40 million at which the American commission had valued their holdings.

Roosevelt then pressed Colombia, which had jurisdiction over New Granada, to surrender control over the 10-mile-strip of land in return for a \$10 million cash payment and annual rent of \$250,000. These were the terms negotiated by the U.S. secretary of state John Hay and Colom-

bian foreign minister Tomas Herrán (1843–1904) and presented to both the U.S. and the Colombian senates. Early in 1902, the Congress authorized construction and the next year ratified the Hay-Herrán Treaty. The Colombian Senate, however, delayed ratification in the hope of increasing the price offered by the United States and, in the end, on August 12, 1903, refused to ratify the treaty—not only because of dissatisfaction with the financial terms but also in response to a popular movement to resist “Yankee imperialism” and popular objections to relinquishing a significant measure of national sovereignty. Faced with Colombian intransigence, an outraged Roosevelt called the new financial demands—reasonable enough from the Colombians' point of view—“blackmail” and let it be known privately to those interests backing the canal that he would smile upon an insurrection in Panama.

To the surprise of few, an insurrection did indeed occur in 1903; and if one had not, President Roosevelt would have been fully prepared to ask Congress for the authority to seize the zone from Colombia. The ubiquitous Bunau-Varilla helped organize the revolt. He cooperated with a group of railway workers, firemen, and soldiers at Colón, Panama, in an uprising during November 3–4. The rebels proclaimed Panamanian independence, and, just offshore, the U.S. Navy cruiser *Nashville* prevented an attempt by Colombian general Rafael Reyes (c. 1850–1918) to land troops intended to quell the rebellion. Immediately after this action, on November 6, President Roosevelt recognized the newly independent Republic of Panama and then received Bunau-Varilla as its first foreign minister. He and Secretary of State Hay concluded the Hay-Bunau-Varilla Treaty on November 18, which provided for the acquisition of a canal zone and the right to build and control a canal in exchange for the same monetary terms that had been offered Colombia. Called officially the “Convention for the Construction of a Ship Canal,” the treaty was ratified in 1904.

Afterward Teddy Roosevelt often boasted that he “took Panama,” and most Americans, certainly the American elite, at the time not only condoned but applauded his behavior. Nevertheless—in the eyes of much of Europe, some Americans, all Colombians, many in Latin America, and any number of historians since—the episode was a national disgrace. Some hinted at scandal, and the agents of the French Panama Canal Company, anxious to dump their worthless stock, had surely influenced the State Department and a number of members of Congress to adopt their favorable view of the Panama route. When the time came, those agents just as surely had helped stir up the Panamanian revolution.

Roosevelt personally had no stake in their game, and he probably could not have cared less about the ethics of their actions in pursuit of profit, but he was no less ruthless than they in pushing what he perceived as America's national interest, and he was certainly much better than

they at persuading primarily himself but also many others of the righteousness of his cause in stamping out lawlessness in Colombia and disorder in Panama. Thus did “stability” become a watchword for American imperialism in Latin America.

Pan Chao's Central Asia Campaigns (73–102)

PRINCIPAL COMBATANTS: Chinese forces of Pan Chao (Pinyin: Ban Zhao) vs. the tribes of Turkistan and the Kushan kingdom

PRINCIPAL THEATER(S): Turkistan and the region of the Hindu Kush

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: Pan Chao's brilliant campaign extended Chinese control into Turkistan and the region between the Hindu Kush and the Aral Sea; it is possible that control was pushed as far as the eastern shore of the Caspian.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown, but the proportions of Pan Chao's army were certainly modest.

CASUALTIES: Unknown

TREATIES: Tribute pledge from the Kushans, about 90 C.E.

One of the most celebrated generals in Chinese military history, Pan Chao (32–102) first proved himself as a subordinate in campaigns against the Xiongnu (Hsiung-nu). After this, he was given command of a modest army and sent into the southwest, where he conquered the Tarim Basin, encompassing eastern Turkistan. This accomplished, he marched over the Tian (Tien) Shan Mountains into the western reaches of Turkistan. Here he fought and suppressed a host of nomadic tribes, sweeping through the vast region lying between the Hindu Kush and the Aral Sea. The nomads yielded to Chinese suzerainty.

Having built a power base among the nomadic tribes of Turkistan, Pan Chao carried battle to the formidable Kushans, who, around 90 C.E., agreed to send annual tribute to China.

It is a certainty that advance elements of Pan Chao's army reached as far as the eastern shore of the Caspian; whether the general actually imposed Chinese control this far is not known.

Pannonian Revolts (6–9 C.E.)

PRINCIPAL COMBATANTS: Roman legions vs. Pannonian rebels

PRINCIPAL THEATER(S): Pannonia (Hungary)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Romans sought to put down a Pannonian uprising and assert firm control of Pannonia as a frontier province of the Roman Empire.

OUTCOME: By means of a patient, systematic campaign of attrition, the Romans established suzerainty over the Pannonian rebels.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The era of the great Pax Romana was not altogether peaceful. Rome faced revolts among the conquered people of northern and eastern Europe, notably in Pannonia (Hungary). Here, for three years, violent uprisings prompted Tiberius (42 B.C.E.–37 C.E.) to break off his campaigning in Germania (Germany)—he left some legions there under the command of his legate, P. Quintilius Varus (d. 9 C.E.)—and rush to the Danube.

Tiberius understood that his legions possessed a weapon superior to any that the Pannonian tribes, no matter how fierce, commanded. His army was highly disciplined, patient, and as willing to expend time and effort as blood. Accordingly, he led his legions in gradual, methodical operations against the Pannonian rebels. By 9 C.E., the Romans had worn down the rebellion. There were no spectacular battles, no great victories, just journeyman military work leading to the attrition of the enemy. Both upper Pannonia and Moesia became firm provinces on the vast Roman frontier.

Papineau's Rebellion (1837)

PRINCIPAL COMBATANTS: French-Canadian rebels vs. Canada

PRINCIPAL THEATER(S): Montreal vicinity

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The French-Canadians sought an end to British domination of Quebec.

OUTCOME: The rebellion was quickly extinguished.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Numbers not known, but casualties were light.

TREATIES: None

After the WAR OF 1812, political unrest spread through Canada, some of it as a result of Canada's 1791 constitution, but much of it a result of resentment toward the country's ruling elites—the so-called Family Compact in Upper Canada (southern Ontario) and the Château Clique in Lower Canada (southern and eastern Quebec). The wealthy members of the Family Compact modeled themselves on England's landed gentry, while the Château Clique consisted in the main of merchants, bankers, and shipping magnates. Colonial oligarchies formed the inner circle of government, shared religious and cultural ties, and married among themselves as a matter of course. Coming from the same circles, they not surprisingly chased similar social, economic, and political aims, and so they quite naturally supported each other politically. In Upper Canada the Family Compact used its political power to attempt to create a class-ordered society on the British model, and the tensions caused by its land hunger led to MACKENZIE'S REBELLION. In Lower Canada, the situation was more nuanced.

The Château Clique sought to spend liberally the tax monies raised by the French-Canadian-dominated legislature to improve the colony's infrastructure, thereby improving commerce and further enriching members of the Clique, which threatened the standing of the more traditional French-speaking and Roman Catholic majority. Indeed, these French *habitants* soon became convinced that the English-speaking, Protestant Château Clique aimed to destroy their way of life. In many ways, they were right: since the turn of the century, the French Canadian standard of living, especially in rural areas, had fallen dramatically as grain prices steadily dropped with, it seemed, no hope of recovery. At the same time, the British colonial regime had heavily increased the habitants' seigniorial dues. Their strong resentment of the ever-growing number of non-French immigrants exploded into riots when Montreal was hit by cholera and typhoid epidemics, and soon the resentment spread to open rebellion.

The habitants were represented in the colonial assembly by the Parti Canadien (later called the Parti Patriote), and this was headed by Louis-Joseph Papineau (1786–1871). Farmers made up the majority of the rebels, farmers from the parishes to the west and south of Montreal, and they first took up arms when the government moved to arrest leading members of the Parti Patriote, including Papineau. When Papineau and others fled to the countryside, the governor sent troops to arrest them. The first battle was fought in November at St. Denis, near Montreal; the government forces were repelled. But the rebels were defeated in subsequent battles at St. Charles and St. Eustache, and Papineau was forced to flee to the United States to escape arrest and a charge of treason. The rebels tried unsuccessfully to renew the fighting in the months that followed, but in 1839 Papineau took flight aboard a ship for France. Papineau eventually returned to Canada after he was pardoned in 1845, but a number of his followers were jailed, executed, or deported to Australia.

Paraguayan Civil War (1947)

PRINCIPAL COMBATANTS: Liberal Febrerista party vs. government of Higinio Morínigo

PRINCIPAL THEATER(S): Paraguay

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The liberals sought to overthrow the nation's military dictatorship.

OUTCOME: The civil war was quickly over and the Febreristas crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

General José Félix Estigarribia, architect of Paraguay's military strategy in the CHACO WAR with Bolivia, was elected president in 1939 on the heels of the failed military coup conducted by radical officers called Febreristas (for the February Revolutionary Party or Partido Revolucionario Febrerista, PRF), but before he could implement the new constitution, which gave him immense authoritarian powers, he died in a plane crash. Replacing him in 1940 was General Higinio Morínigo (1897–1983), a harsh opportunist who moved immediately to shore up the fascistic Colorados, and to persecute the Liberales. He suspended the nation's constitution and ruled as a military dictator. Because he maintained the military in so privileged a position, the army remained intensely loyal to Morínigo,

despite frequent civil unrest. Nevertheless, in July 1946, yielding to unremitting popular pressure, Morínigo allowed political activity to resume legally, and he formed a coalition two-party cabinet. The coalition did not long endure. Morínigo's opposition, the Febreristas, all resigned from the cabinet, and their leader, Rafael Franco (1896–1973), attempted a liberal coup. The result was a brief civil war from March to August 1947, which was crushed by the military. The revolt, which devastated the countryside and left thousands dead, greatly destabilized the Morínigo government, which was toppled the following year, on June 6, 1948, not by liberals, but by a military unhappily with Morínigo's handling of the crisis.

In the next six years, Paraguay had six weak presidents before General Alfredo Stroessner (b. 1912), backed by both the Colorados and the military, seized power in 1954.

See also PARAGUAYAN REVOLT (1954).

Paraguayan Revolt (1954)

PRINCIPAL COMBATANTS: Forces of General Alfredo Stroessner vs. President Federico Chavéz

PRINCIPAL THEATER(S): Paraguay

DECLARATION: Coup proclaimed on May 5, 1954

MAJOR ISSUES AND OBJECTIVES: Stroessner wanted to seize power from the current government.

OUTCOME: The military coup quickly succeeded, putting Stroessner in position to run for president without opposition.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Following the toppling of General Higinio Morínigo (1897–1983) in 1948, Paraguay became severely destabilized, and Federico Chavéz (d. 1978) was the sixth president in as many years when General Alfredo Stroessner (b. 1912), commander in chief of the Paraguayan armed forces, led a revolt against Chavéz's weak government on May 5, 1954. With Chavéz deposed, Stroessner put himself up for election, unopposed, to the office of president. He quickly purged the government of all current and potential adversaries, maintaining power through the military suppression of attempted coups and revolts. He placated capitalists by stabilizing the Paraguayan economy, while pleasing the people at large with a program of major public works.

So successful was Stroessner, with much help from the United States, at breaking down Paraguay's traditional isolation, both internal and external, that, after about 1960, he began to relax some of the harshness of his rule and permitted elections at all levels of government. However, the ultra-right-wing Colorado Party never lost such elections, and Stroessner was returned to office like clockwork every five years. For its part, the Catholic Church continued to decry Stroessner's brutal treatment of his country's Indian minority and to protest the government's strict censorship. During the 1970s, when the U.S. administration under Jimmy Carter stressed human rights in its foreign relations policy, Paraguay's relationship with the United States began to deteriorate and Carter much reduced U.S. aid. As a result, Paraguay drew ever closer to the right-wing regime in Brazil, which helped replace some of the lost U.S. funding for Stroessner's public works programs. Not until the 1980s, when Paraguay's economy took a serious nosedive, did the regime find itself threatened by rebellion (*see* the PARAGUAYAN REVOLT [1989]).

See also PARAGUAYAN CIVIL WAR (1947).

Paraguayan Revolt (1989)

PRINCIPAL COMBATANTS: Military forces under General Andrés Rodríguez vs. government of General Alfredo Stroessner

PRINCIPAL THEATER(S): Paraguay

DECLARATION: February 3, 1989, coup d'état

MAJOR ISSUES AND OBJECTIVES: Seizure of power from the prevailing dictator

OUTCOME: The government of Alfredo Stroessner was toppled.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Approximately 300

TREATIES: None

General Alfredo Stroessner (b. 1912) came to power in the PARAGUAYAN REVOLT (1954) and maintained his dictatorship for far longer than any previous Paraguayan ruler. Although this brought an unprecedented degree of stability to Paraguay, the people paid a high price in human rights and liberty. When he assumed his seventh five-year terms in office in 1988, Stroessner was not only aging, he was seen to be aging. Now, worry began to grow within his own Colorado Party, where the traditionalists and the militant factions were squaring off for a fight over the succession to the presidency. In the end, they could not simply

wait for the old man to pass away. On February 3, 1989, General Andrés Rodríguez (1923–98), Stroessner's chief lieutenant, staged a short, violent coup against the government in its Asunción capital. Three hundred people were killed, including troops and civilians in the government, and Stroessner was placed under close house arrest. He was subsequently permitted to seek refuge abroad.

Although Rodríguez carried out the revolt in the name of restoring democracy to Paraguay, his enemies alleged he was a criminal and known cocaine trafficker. In 1993, he did allow an election, which replaced him with Juan Carlos Wasmosy (b. 1939), a civilian and a democrat. He presided uneasily over a government that was still strongly influenced by the military, which remained the most powerful force in the government of Paraguay.

Paraguayan Uprisings (1959–1960)

PRINCIPAL COMBATANTS: Paraguayan rebels vs. government of Alfredo Stroessner

PRINCIPAL THEATER(S): Paraguay-Argentine border region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The rebels wanted to topple the Stroessner government.

OUTCOME: The rebels (operating from Argentina) and the guerrillas (operating from within Paraguay) were largely suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Initial incursion, 1,000 rebels

CASUALTIES: Unknown

TREATIES: None

General Alfredo Stroessner (b. 1912) brought unprecedented stability to Paraguayan government—at the cost of human rights and liberty. During the years that followed the establishment of the Stroessner regime (after the PARAGUAYAN REVOLT [1954]), thousands of Paraguayans fled across the border into Argentina, where they established a guerrilla base from which they mounted attacks against their homeland, seeking to overthrow Stroessner. To combat these incursions, Stroessner ordered the southern border of Paraguay closed in September 1959. On December 12, 1959, a force of about 1,000 rebels crossed the border and advanced several miles into Paraguay until government forces checked their advance. After this incident, Stroessner declared a state of siege, and Paraguay and Argentina teetered on the brink of war.

The uprisings consisted of periodic rebel incursions from Argentina, culminating in six major attempts in 1960. When the rebels failed to penetrate far into Para-

guayan territory, they fomented rebellion by guerrillas living in Paraguay. Stroessner's forces cracked down, and by the end of 1960, most of the rebel and guerrilla activity had been suppressed.

Paraguayan War (1864–1870)

PRINCIPAL COMBATANTS: Paraguay vs. the Triple Alliance (Brazil, Argentina, Uruguay)

PRINCIPAL THEATER(S): Brazil and Paraguay

DECLARATION: Paraguay against Brazil, 1864; against Argentina, 1865

MAJOR ISSUES AND OBJECTIVES: Seeking expansion, Paraguay waged war against its larger neighbors.

OUTCOME: Paraguay was devastated by the costliest war ever fought on the South American continent.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: 220,000 Paraguayans killed; Alliance casualties, 190,000

TREATIES: Concluded on June 20, 1870

The Paraguayan War, also called the López War and the War of the Triple Alliance, was the bloodiest conflict in Latin American history. It began when Francisco Solano López (1827–70)—the callow pampered son of an iron-willed dictator—conceived a longing to establish Paraguay as the center of a vast South American state. Overestimating Paraguay's military strength, he imagined a showdown with Brazil as a first step toward realizing his dream. That showdown came in August 1864 when Brazil ignored López's increasingly strident warnings and intervened in Uruguay's civil war in support of the pro-Brazilian right-wing Colorados faction, who were opposed to the López-backed liberal Blancos. When the Brazilians ignored López's demands that they immediately withdraw, he declared war on Brazil. In November, he ordered the capture of a Brazilian war steamer and dispatched both his army and navy north to invade the Mato Grosso.

When Argentina foiled López's plan to send troops into southern Brazil by refusing him permission to march through Argentine territory, Paraguay declared war on Argentina as well in March 1865.

In response to tiny Paraguay's belligerence, Brazil, Argentina, and Uruguay formed the Triple Alliance on May 1, 1865, and mounted major counterattacks against Paraguayan forces. Argentine general Bartolomé Mitre (1821–1906) led the ground forces of the Alliance, and the Brazilian navy conducted a successful campaign on

the Paraná River south of Corrientes in mid-1865. The Paraguayan invaders shortly retreated to their own territory and were obliged to fight a desperate defensive war.

López suffered defeat after defeat, although he scored a significant victory at the Battle of Curupayti on September 22, 1866. Despite this, the Alliance steadily advanced up the Paraguay River, pushing the Paraguayan defenders before them. In May 1866 López lost the cream of his army—almost 20,000 of his best men—in a series of suicidal attacks against allied forces at Tuyutí. In addition to heavy battlefield losses, after 1866 widespread epidemics of Asiatic cholera depleted the population at large.

In 1867, the key Paraguayan river fortress of Humaitá fell to the Alliance, forcing López to withdraw north to Angostura and Ypacaraí. These two towns were lost to the Alliance by the end of 1867, leaving Asunción, capital of Paraguay, vulnerable. A Brazilian army, led now by Luís Alves de Lima e Silva (1803–80), duke of Caxias, who had assumed command from Mitre, sacked the capital.

López was now reduced to fighting a guerrilla war in the remote regions of northern and eastern Paraguay. In 1869 and 1870 López fled before the huge allied forces, dragging his shattered army and thousands of civilian refugees behind him into the interior, trailing famine, disease, and death in his wake. Some historians think that by now he had become unhinged, and he certainly grew Lear-like, grimly ordering the executions of hundreds, including his own two brothers, two brothers-in-law, and many of his officers.

Ultimately, he was killed on March 1, 1870, in a battle in the province of Concepción. This cleared the way for the provisional Paraguayan government that replaced López to sue for peace. The treaty concluded on June 20, 1870, ceded to Argentina and Brazil 55,000 square miles of Paraguayan country. But the loss in land was as nothing compared to the human toll: of a population of 525,000, 220,000 Paraguayans were killed. Only 29,000 adult males survived the war. Not only did López's country by then lay in ruins, it was under the control of a Brazilian army of occupation, which continued to further drain the country until 1876.

Kolinski, *Independence Death: The Story of the Paraguayan War* (Gainesville: University of Florida Press, 1965); Harris Gaylord Warren, *Paraguay and the Triple Alliance: The Postwar Decade, 1869–1878* (Austin: Institute of Latin American Studies, University of Texas at Austin, 1978).

Paraguayan War of Independence (1810–1811)

PRINCIPAL COMBATANTS: Paraguay vs. the United Provinces of the Río de la Plata and, separately, Spain
PRINCIPAL THEATER(S): Paraguay; mainly Asunción
DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Paraguay wanted independence from both Spain and the United Provinces

OUTCOME: Independence was achieved, although governing power was soon vested in an absolute dictator.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 1776, the Spanish combined the present countries of Paraguay, Argentina, Bolivia, and Uruguay (then called Banda Oriental) into the Río de la Plata, under the rule of a viceroy. But when Napoleon (1769–1821) deposed Spain's Ferdinand VII (1784–1833), Argentines in Buenos Aires formed a junta to govern what they called the United Provinces of the Río de la Plata. In 1810, Paraguay, asserting its autonomy, refused to join. A year later, a United Provinces army under Manuel Belgrano (1770–1820) marched out of Buenos Aires to attack the Paraguayan capital, Asunción, to compel Paraguayan compliance. Belgrano met stiff resistance and was forced to withdraw from the capital. Having defeated the United Provinces, the Paraguayans turned on the Spanish royal governor, whom they ousted. After declaring independence from Spain, a junta established a government at Asunción, and, in 1814, José Gaspar Rodríguez de Francia (1766–1840) was named first consul. In 1816, he was vested with dictatorial powers for life.

Paraguay's Jesuit-Indian War against Portuguese Slave Traders (1609–1642)

PRINCIPAL COMBATANTS: Paraguayan missionaries and Indians vs. Portuguese invaders

PRINCIPAL THEATER(S): Paraguay

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Jesuits sought to resist an invasion by Paraguayan slave traders.

OUTCOME: By rallying and organizing the Indians, the Jesuits fashioned an effective defensive force, which ultimately succeeded in ejecting all Portuguese slave traders from Paraguay.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Little is known about this long conflict, which included no recorded set battles. Spain and Portugal competed for territory and trade in South America. Paraguay became subject to dispute. Spain had dispatched Jesuit missionaries to convert the Indians. For many years, these Jesuit priests were the only representatives of Spanish authority in the region. During the early 17th century, Portuguese slave traders invaded Paraguay. They were repeatedly repulsed by small forces of Indians organized by the Jesuit fathers. This makeshift “army” succeeded in driving all of the Portuguese out of the region by 1642.

Parthian Conquest of Media (150 B.C.E.)

PRINCIPAL COMBATANTS: Parthia vs. Seleucid Syria

PRINCIPAL THEATER(S): Media

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: By exploiting chaos within the Seleucid dynasty, Parthia’s King Mithradates I made a lightning conquest in Media.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Unknown

From 162 to 143 B.C.E., the Seleucid dynasty in Syria was torn by internecine strife and internal rebellion. Mithradates I (fl. 171–138 B.C.E.), king of Parthia, exploited the Seleucid disarray by advancing against Media and, in a single, sweeping campaign, conquering the region. The Seleucids were powerless to respond until 141 B.C.E., when, following Mithradates I’s invasion of Babylonia, a full-scale war was waged between the Seleucids and Parthia.

Pastry War (1838)

PRINCIPAL COMBATANTS: France vs. Mexico

PRINCIPAL THEATER(S): Veracruz, Mexico

DECLARATION: Mexico declared war on France in 1838.

MAJOR ISSUES AND OBJECTIVES: The pretext was reparations for foreign losses during Mexican civil unrest, but there was something of a bully’s need to push around a weaker power in the newly installed French king’s provocative dispatch of the French fleet to collect a debt owed to a French pastry chef for abuses he suffered at the hands of rowdy Mexican army officers.

OUTCOME: Mexico agreed to pay France’s demands for reparations, and France withdrew, but not before making just enough of a martyr of the retired general Santa Anna to launch him once again on the road to becoming Mexico’s president.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

France, 4,000; Mexico, 1,600

CASUALTIES: France, 12 killed, 99 wounded; Mexico, 65 known dead, about 347 either killed or wounded

TREATIES: None

In 1836, Texan general Sam Houston (1793–1863) defeated the Mexican army under Mexico’s president, General Antonio López de Santa Anna (1794–1876), the self-styled Napoleon of the West, at the Battle of San Jacinto (see TEXAN WAR OF INDEPENDENCE). Afterward Houston had treated the ingloriously captured Santa Anna decently enough as the defeated former head of an enemy country, but Houston’s Texas troops threw the generalissimo in jail the minute Houston left on a politically motivated trip to the United States. Santa Anna remained in chains for two months while Houston was out of the country. Finally the Texans, not knowing exactly what to do with him, sent His Excellency to Washington. There Andrew Jackson (1767–1845), too, treated Santa Anna courteously, receiving him as a head of state on January 19, 1837. As Jackson’s guest, Santa Anna discussed with the president the state of affairs in Texas, the two men agreeing to disagree on Mexican recognition of Texas as an independent republic, before Jackson sent him on his way to Veracruz under naval escort.

The United States, Texas, and most of Mexico fully expected the deposed Santa Anna to live out his retirement there. But Santa Anna remained in Veracruz for only a year or so before he heard himself recalled to the defense of his country by public acclaim. His mission was to expel the French who had occupied his hometown on a silly pretext. In the early years of the Mexican republic, foreigners sometimes found their property destroyed during Mexico’s frequent civil disorders, and unable to get satisfactory compensation from Mexico, they had taken to petitioning their own governments for help.

Just before leaving with Santa Anna for Texas and the Alamo three years before, some of Santa Anna’s officers had visited a French restaurant in Veracruz. They had

wrecked the place and carried off all the French pastry they could find. The proprietor, knowing that a suit against the Mexican government was an exercise in futility, sought out the French minister, who had been collecting similar claims, all totaling about \$600,000. By 1838, Mexico did not have \$600,000. In fact, it had a 17-million-peso national debt. So when the French minister pressed Mexico for payment, the government ignored him. France, once again a monarchy, decided to use the incident as a pretext for chastising the arrogant little republic: thus the so-called Pastry War.

The French king, Louis Philippe (1773–1850) sent a fleet to collect the pastry chef's debt, along with all the others, and the French navy sailed into the port at Veracruz and began bombarding the nearby fortress of San Juan de Ulúa, which the French then seized, briefly occupying Veracruz itself. Mexico declared war in 1838, and Santa Anna immediately put himself at the head of a Mexican force and marched against the French at Veracruz. He acted without authority; no one in the current administration, and certainly not President Anastasio Bustamante (1780–1853) (an old rival), wanted to see Santa Anna come out of retirement, but Santa Anna had never been one for legal niceties. He chased the French out of Veracruz with little problem, especially because the Mexican government, upon hearing he was involved, quickly promised to pay the \$600,000, and the French just as quickly agreed to withdraw. Santa Anna, who lost a leg from a stray volley from the departing French ship, parlayed his wound and his success in the Pastry War into an 1841 coup that made him, once again, president of Mexico.

Paulician War (867–872)

PRINCIPAL COMBATANTS: Byzantine Empire vs. the Paulician sect

PRINCIPAL THEATER(S): Tephrike, Byzantine Empire (Divrigu, Turkey)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Byzantine objective was to wipe out a “heretical” sect.

OUTCOME: The Paulicians were totally defeated, many were killed, and others were forced to flee the empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but a high percentage of the Paulicians were killed.

TREATIES: None

The Paulicians, a Christian sect, created a Paulician state in the Byzantine city of Tephrike (Divrigu, Turkey). Although they were mercilessly persecuted by Byzantine religious authorities as heretics, the Paulicians continued to spread their teachings and, to counter their Byzantine persecutors, they allied themselves with the Muslims in the BYZANTINE-MUSLIM WAR (851–863). At last, in 867, Basil I (c. 813–886), Byzantine emperor, mounted a concerted military campaign against the Paulicians, seeking to wipe out the sect once and for all. The campaign was more protracted than anticipated, but by 872, Byzantine troops had invaded and occupied Tephrike and killed the sect's spiritual and political leader, Chrysocheir (d. 872), as well as many other Paulicians. The survivors fled their fallen capital and sought refuge in Armenia and Syria.

Paxton Riots (1763)

PRINCIPAL COMBATANTS: A mob of Scotch-Irish Presbyterians from the Pennsylvania frontier vs. Conestoga and Delaware Indians

PRINCIPAL THEATER(S): Vicinity of Philadelphia and the Pennsylvania frontier

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Settlers indiscriminately sought vengeance against Indians.

OUTCOME: Nothing conclusive

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

British colonies, 57 from Paxton and Donegal settlements, others from the Delaware Valley Irish settlement; Indians, unknown

CASUALTIES: 20 Conestoga Indians, 56 Delaware Indians died in protective custody; colonial casualties not recorded

TREATIES: None

During the period of the FRENCH AND INDIAN WAR, settlers made little or no effort to distinguish between combatant and noncombatant Indians. On December 14, 1763, a mob of 57 Scotch-Irish Presbyterians from Paxton and Donegal, Pennsylvania frontier settlements subject to violent Indian raids, slaughtered six innocent Conestoga Indians in Lancaster County. Provincial lieutenant governor John Penn (1729–95) issued an arrest warrant for the mob, but no official dared execute it. Most frontier Pennsylvanians heartily approved of the actions of the mob they called the “Paxton Boys.”

In order to protect the Conestogas who had survived the attack from further harm, the magistrates of Lancaster County placed them in protective custody in a public

workhouse. But the Paxton Boys struck again on December 27, killing 14 Conestogas while they knelt in prayer.

In the meantime, the residents of the so-called Irish Settlement in the Delaware Valley were harassing and even killing their Delaware Indian neighbors, who had been converted to Christianity by Moravian missionaries. Colonial authorities removed these Indians to Province Island, Philadelphia, whereupon the Paxton Boys descended on the City of Brotherly Love and were confronted by a band of young citizens who had rallied to the Indians' defense. The timely intervention of no less a figure than Benjamin Franklin (1706–90) averted violence; he persuaded the Paxton Boys to go home.

Tragically, 56 of the Indians given refuge on the island sickened and died in the harsh winter. When the survivors returned to the Delaware Valley, they found their villages had been destroyed. Some moved farther west. Others were killed by frontiersmen.

Peach War (1655–1657)

PRINCIPAL COMBATANTS: The Delaware (and allied Indian tribes) vs. Dutch settlers

PRINCIPAL THEATER(S): Southern New Netherland (New York)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Indian retaliation for a Dutch farmer's murder of an Indian woman who picked peaches in the farmer's orchard

OUTCOME: Inconclusive; no definitive ending to the conflict

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: In early raids, 28 Dutch farms were burned, 50 colonists killed, at least 100 taken captive; number of Indian casualties unknown

TREATIES: None

The Peach War began when a Dutch farmer (in present-day New York City) killed a Delaware Indian woman for picking peaches in his orchard. Her family retaliated by waylaying and killing the farmer. Word of the incident spread rapidly, inciting other Delaware bands to strike out against Dutch settlers. Several settlers were killed at New Amsterdam, and 150 were taken captive there. Governor Peter Stuyvesant (c. 1592–1672) called out the militia, which liberated most of the captives, then destroyed a number of Indian villages. Following this exchange,

Dutch-Indian violence continued sporadically, to the detriment of the Indians as well as the settlers.

Many wars between settlers and Indians began, like this one, with an isolated incident; however, the killing in the orchard was hardly the sole motive for Indian action. While Stuyvesant and his troops were campaigning against the Swedes for dominance in the Delaware Valley, a band of several hundred Delawares entered New Amsterdam one September morning in 1655. Although they did not attack anyone, they did break into a house, claiming that they were in search of "Northern Indians," their enemies. Then the invaders refused to vacate Manhattan until they received news that the farmer who had killed the Delaware woman in his orchard had been slain. This confirmed, the Indians prepared to leave, only to be attacked by the local militia. A battle ensued, which drove the Indians to retreat across the Hudson River to Staten Island and Pavonia (Jersey City, New Jersey).

The Dutch attack in Manhattan was doubtless intended to intimidate the Delawares; it failed. Instead, it moved the tribe to exact vengeance on local Dutch settlements near Manhattan in a series of raids conducted over a three-day period. Twenty-eight Dutch farms were burned, 50 colonists were killed, and at least 100 colonists taken captive.

Returning from the Delaware Valley campaign against the Swedes, Stuyvesant turned his attention to the Indians, negotiating the release of at least 70 prisoners in exchange for a ransom of trade goods, including gunpowder and lead. The Delaware band known as the Hackensacks quickly concluded negotiations, but other bands stubbornly held onto their captives. After much debate, Stuyvesant prepared to attack at least one of the recalcitrant bands, with the object not only of recovering the captives but also to discourage Indians from taking hostages as a tool of extortion. But Stuyvesant was unable to mount the new offensive. History does not record the reason for this failure, but it is likely that at least some of the remaining captives were retained by the Indians precisely to discourage a Dutch assault. Stuyvesant could not risk an attack that would result in the immediate murder of the prisoners. With this anticlimax, the Peach War faded by early 1656, concluded without any treaty or other formal ending.

Peasants' War (1524–1525)

PRINCIPAL COMBATANTS: German peasants vs. German nobles

PRINCIPAL THEATER(S): Germany and Austria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Inspired by Protestant paeans to individual freedoms, German peasants revolted against the country's upper classes.

OUTCOME: The rebels were crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Peasants, 30,000 at any given time; nobles, 10,000 at any given time.

CASUALTIES: 130,000 peasants killed; casualties among nobles, unknown.

TREATIES: None

Beginning on August 24, 1524, German peasants, inspired by the Protestant fervor of Martin Luther (1483–1546), Huldrych Zwingli (1484–1531), and John Calvin (1509–64), rose up against the papacy and the Holy Roman Empire in Swabia and Franconia and pillaged churches and nobles' lands across much of southern Germany. Some landholders sympathized with the rebels and their desires for new rights and freedoms, and they even won the support of several towns as the rebellion escalated into Hesse, Thuringia, Saxony, and the Tyrol. The German nobility, now awakened to the danger, organized quickly to quell this uprising of the poor.

In April 1525, Jaecklein Rohrbach (d. 1525?) led rebels against the town of Weinsberg, overcame the men-at-arms defending the town, and forced Count Ludwig von Helfenstein (d. 1525) and 16 of his knights to walk to their deaths along a gauntlet of men carrying pikes and daggers.

The response was swift. Martin Luther himself denounced the uprising, and the Catholic Swabian League engaged mercenary troops under Georg von Truchsess (fl. 1525) to recapture the towns that had fallen to the peasants and to put down the uprising with utmost brutality. Truchsess did both. With about 10,000 men, he swept through Alsace and slaughtered perhaps 20,000 rebels.

While Truchsess operated in the west, armies were formed in Hesse and Saxony and attacked the headquarters of rebel leader Thomas Munzer (d. 1525) at Mühlhausen (Mulhouse). Munzer mustered some 8,000 troops, but was defeated at the Battle of Frankenhausen on May 15, 1525. Five thousand of his men were slaughtered, and he was led off to torture and execution. About 1,200 rebel diehards continued to defend Mühlhausen, but were soon overwhelmed.

Although sporadic rebellion continued in Austria until 1526, the German Peasants' War had been effectively crushed by the spring of 1525. The death toll among the peasants reached 130,000.

Pecheneg Invasion of Russia (967–968)

PRINCIPAL COMBATANTS: Pechenegs vs. Russians

PRINCIPAL THEATER(S): Russia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest of Russian territory in a general Pecheneg expansion

OUTCOME: The Pechenegs were driven out of Russia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The Pechenegs were a nomadic Turkic people who lived in the steppes north of the Black Sea from the sixth through the 12th centuries. By the 10th century, having driven out the Hungarians, they reached the height of their power and extent, controlling the territory between the Don and lower Danube rivers. From here, they menaced Byzantium and Russia.

In 967, the Pechenegs were poised to take Kiev, which prompted Sviatoslav (d. 972), the son of the Russian prince Igor (877–945), to return from campaigning in Bulgaria. Sviatoslav engaged the Pechenegs and drove them out of Russia by 968. Encouraged by this triumph, he returned to Bulgaria, scoring success against the enemy there. Sviatoslav was defeated by the Byzantines shortly after his victories against the Pechenegs and the Bulgarians. On his return to Russia from a renewed campaign against Bulgaria in 972, he was intercepted by a Pecheneg army, which defeated his forces and killed him.

Peddlers' War *See* MASCATES, WAR OF THE.

Peloponnesse War, First (460–445 B.C.E.)

PRINCIPAL COMBATANTS: Athens vs. Sparta (and her allies, especially Corinth)

PRINCIPAL THEATER(S): The Peloponnesse, Greece

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ultimately, resentment against Athens's growing influence in Greece, mainly from Sparta and Corinth

OUTCOME: After initial triumphs, Athens fell victim to multiple revolts, and the war ended with the situation essentially restored to its prewar status.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Truce in 451; “30 years’ peace” in 445

By 462 B.C.E., Sparta and Corinth, trade and political rivals to Athens and the Athens-dominated Delian League, had developed an intense enmity toward Athens. That year Sparta insulted Athens by spurning Athenian aid in putting down a revolt of Spartan helots, which sent Athens into a series of alliances with the enemies of Sparta.

But it was the Corinthians, even more than the Spartans, who grew to hate the Athenians. Corinth saw the series of alliances—first with Argos and Thessaly, and more recently with Megara (which had turned to Athens after Corinth put pressure on its borders) as a direct challenge. The First Peloponnesian war is best viewed, then, as a conflict between Athens and Corinth, in which Sparta—as Athens’s principal rival—sometimes intervened.

Athens took the initiative in 460, attacking the Corinthian fleet at Hailes, in the Gulf of Argolis, a Corinthian victory. The next battle, however, went the other way, when in 459 Athens defeated a Corinthian force that attacked Megara. Two years later, Athens launched a successful invasion of Aegina, Corinth’s ally. At this point, Sparta sent an expedition into Boeotia in support of its ally Thebes, which had the effect of taking pressure off Aegina. Near Thebes, it was the Spartans who triumphed over the Athenians at the Battle of Tanagra in 457. But, Sparta unwisely relinquished the initiative by recalling its forces, leaving an opening for an Athenian counteroffensive at Oenophyta, which fell in 457. The defeat left Boeotia exposed, and Athens took control of it.

The great Athenian dictator Pericles (c. 495–429 B.C.E.) led his country’s forces to a series of victories along the coast of Achaia in 455, thereby securing the Spartan helots as vassals of Athens. They were dispatched to colonize the Gulf of Corinth. Athens under Pericles had rapidly established a Greek empire, and the city’s ambition did not end with the Peloponnesian. It would continue to try to expand throughout the Aegean.

Following this whirlwind of Athenian triumphs, a five-year truce was concluded in 451. But Boeotia rose up in revolt against Athens, and, with this, Sparta and its allies resumed the war. With Megara, Phocis, and Euboea all in rebellion against Athens, Pericles barely managed to block a Spartan advance against Athens. He also recovered Euboea, but, in 445, when a peace was concluded, most of the quickly won Athenian empire had vanished.

The belligerents pledged 30 years of peace. The Second (Great) PELOPONNESIAN WAR would break out within half that time.

Spencer Shrimpton and David Joseph McCargar, eds., *Classical Contributions* (Locust Valley, N.Y.: J.J. Augustin, 1981), pp. 71–78.

Peloponnesian War, Second (Great)

(431–404 B.C.E.)

PRINCIPAL COMBATANTS: Athens (and allies) vs. Sparta (and allies)

PRINCIPAL THEATER(S): The Peloponnesian, Greece; Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Sparta and Athens vied for dominance in the Mediterranean world.

OUTCOME: Although Athens frequently held the upper hand, Sparta prevailed, ultimately reducing Athens to complete subordination.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

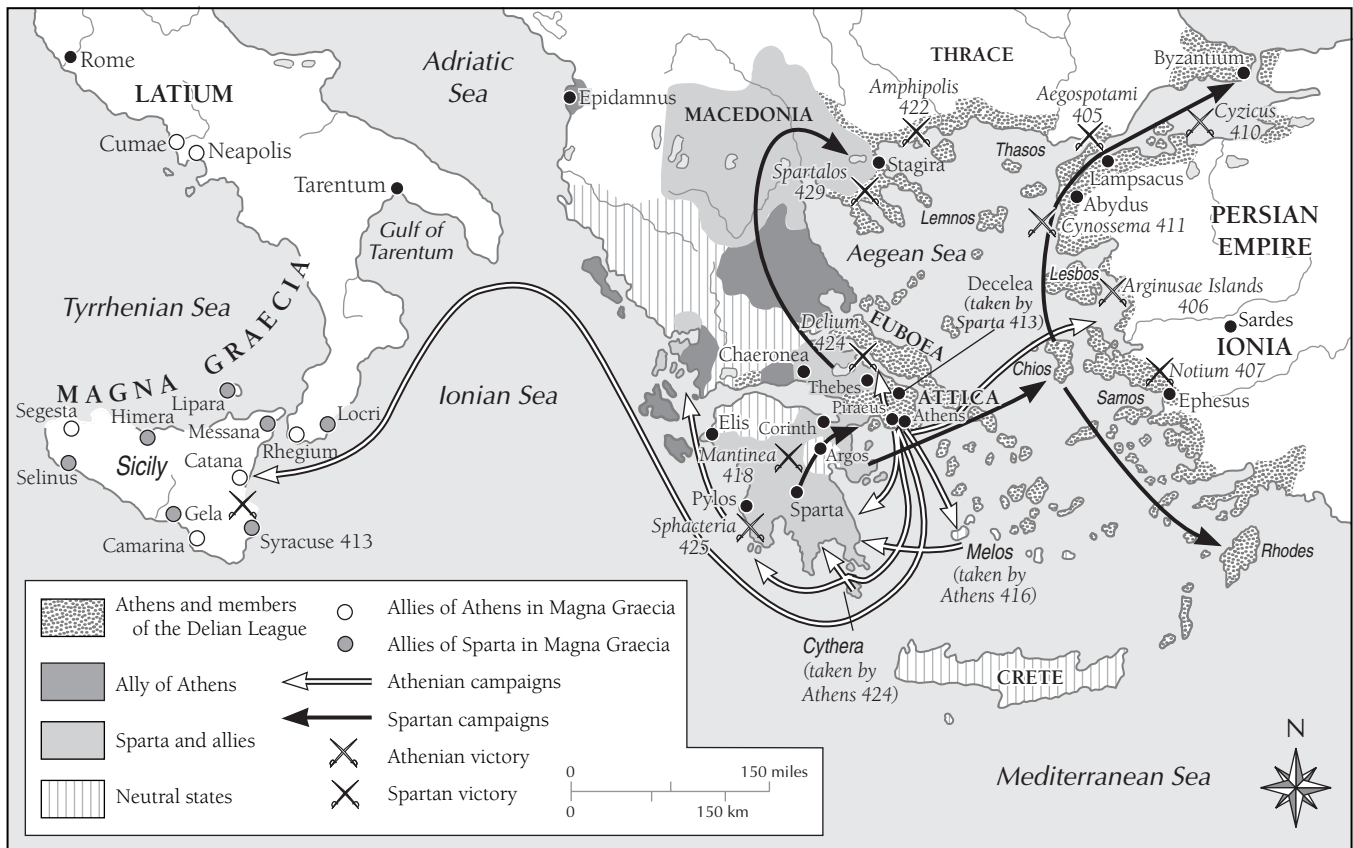

CASUALTIES: At the siege of Syracuse, Athens lost 40,000 men killed; survivors were enslaved.

TREATIES: Truce of 424; Peace of 421; Peace of 404

In the spring of 431, just about halfway through the promised 30-year peace that ended the First PELOPONNESIAN WAR, Thebes—Sparta’s ally—attacked Plataea, which was allied with Athens. Eighty days later, Sparta itself struck at Athens, launching the Great Peloponnesian War.

According to the Greek historian Thucydides (c. 460–390), the cause of the war was Sparta’s fear of Athens and its imperial ambitions, though it was more immediately Sparta’s allies who precipitated the war. Corinth had recently and unofficially sent a force to its former colony at Potidaea to help those now in rebellion there against Athens. Corinth convened a congress of Spartan allies to discuss their many grievances against Athens, and—with Thebes’s enthusiastic support—pushed through a decision to go to war with Athens. Even Sparta later admitted that the Theban attack on peaceful Plataea, which followed the congress, was unprovoked and a just cause for Athenian anger. Sparta nevertheless ignored Athens’s call for arbitration and invaded Attica just as the Spartans’ provocative allies had hoped.

During the early phases of the war, Pericles (c. 495–429 B.C.E.) followed a canny strategy of avoiding out-and-out battle, and he did manage to drive off a Spartan siege of Athens. However, a plague epidemic killed not only Pericles but also approximately a quarter of the population of Athens. When Cleon (d. 422 B.C.E.) replaced Pericles as the new Athenian leader, he discarded the policy of battle avoidance. Whereas Pericles had exhausted the Spartans with hit-and-run raids and a blockade, which closed the Gulf of Corinth in 429, Cleon impatiently took the offensive. In 428, he put down a revolt in Lesbos, then

Second (Great) Peloponnesse War, 431–404 B.C.E.

advanced into Boeotia the following year. He failed to take Boeotia, but he did manage to capture every military base along the Gulf of Corinth save one.

Under Cleon, in 425, the Athenians boldly established a military base at Sphacteria, in the heart of Spartan territory. This enabled victories at Megara and the port city of Nisaea the following year.

Despite Cleon's aggressive triumphs, his failure to take Boeotia and the collapse of the Boeotian campaign at the Battle of Delium disheartened Athens. A peace faction rose up. Its leader, Nicias (d. 413 B.C.E.), opposed Cleon, and the momentum of his monolithically aggressive strategy was frittered away. As a result, the Spartan commander Brasidas (d. 422 B.C.E.) crushed the Athenians at the Battle of Amphipolis in 424, precipitating a yearlong truce. After regrouping, Athens made a new attempt against Amphipolis, but failed.

The deaths of both Brasidas and Cleon in 422 left Nicias the undisputed leader of Athens, and his peace policy was unopposed. He hastily concluded a peace in 421, whereby Athens retained the important Messenian harbor of Pylos, and Sparta retained its great port, Amphipolis. At this time, however, the charismatic military leader Alcibiades (c. 450–404 B.C.E.) stirred Athens to break the peace. Under Alcibiades' direction, Athens stole Argos, Mantinea,

and Tegea from the camp of Spartan allies. Alcibiades promoted a grandiose plan to conquer Syracuse, Sicily, and an Athenian fleet was launched in 415. Incredibly, however, even though he was the leader of the invasion, Alcibiades, was recalled to Athens to face charges of religious sacrilege involving the defilement of sacred objects. This prompted the mercurial Alcibiades to defect to the Spartan cause. He successfully prevailed upon Sparta to send troops to the defense of Syracuse, where they could trap the Athenian invasion force.

As a result of Alcibiades' defection, the Athenian siege of Syracuse was a disaster. In 414, the Athenian land forces were themselves laid under siege, and in 413, the Athenian fleet was destroyed. Approximately 40,000 Athenian troops died, and 240 ships were lost. Athenian survivors were enslaved. Nicias and Demosthenes (d. 413 B.C.E.), leaders of the Athenian forces, were taken prisoner and put to death.

Following the defeat of Athens, Alcibiades established a Spartan garrison at Declea, on Attic territory, directly threatening Athens itself. Worse, Declea straddled Athenian access to its silver mines at Laurium, thereby cutting off the Athenian treasury from replenishment. In the meantime, Sparta reached out to Sardis, a Persian province, concluded an alliance with it, and together they

incited Athenian colonies to revolt—Sparta having agreed to allow Persia to hold sway over any colonies acquired in exchange for financial support of a naval expedition against Athens.

By 412, despite all hardships, Athens rebuilt its fleet and reorganized its army. The ever-treacherous Alcibiades entered into secret negotiations with Athens and was given command of the new Athenian fleet in 411. This he led the following year to victory at the Battle of Cynossema and the Battle of Abydos, defeating the Spartan fleet in both battles. In 410, at Cyzicus, a combined Spartan-Persian fleet was defeated, as were the alliance's land forces.

Reeling from the unexpected disasters of 411 and 410, Sparta sued for peace to restore the status quo ante-bellum. The plea fell upon the deaf ears of the dictatorial Cleophon (d. 405 B.C.E.), new leader of Athens. He pressed on with the war.

At first, this seemed a good idea. Thanks to the generalship of Alcibiades, Byzantium fell under the Athenian yoke in 408. The general had little enough time to relish his victory, however. In 406, while he was back in Athens, his sea forces were defeated by a combined Spartan-Persian fleet under Lysander (d. 395 B.C.E.) at the Battle of Notium. This led to the complete blockade of the Athenian fleet at Mytelene.

With nearly miraculous resilience, the Athenians built a *third* new fleet—despite the paucity of silver in the treasury—and advanced against the Spartan fleet at the Battle of Arginusae in 406. Dealt a defeat here, the Spartans once again sued for peace, and, once again, Cleophon spurned the plea.

Thus circumstances stood in 405 when Lysander led a Spartan fleet in a surprise attack against the 200-ship Athenian fleet riding at anchor off the Hellespont at Aegospotami. The Athenian fleet was destroyed, and all hands were either killed or captured. Capitalizing on his victory, Lysander sailed to Piraeus and Athens, laying siege to both. After six months, the starving Athenians surrendered, and Cleophon was executed. Sparta forced extremely punitive peace conditions on Athens. All of its military fortifications were razed, and its mighty fleet was limited to no more than a dozen vessels. The government of Athens was decreed as an oligarchy (the so-called Thirty Tyrants), a virtual puppet of Sparta, to which it was subject as an involuntary ally. The conclusion of the Great Peloponnesian War brought the end of Athenian hegemony in ancient Greece.

Peninsular War (1808–1814)

PRINCIPAL COMBATANTS: France and Napoleonic Spain vs. Spanish rebels, Portugal, and Great Britain

PRINCIPAL THEATER(S): Spain and Portugal

DECLARATION: July 14, 1807, summons to war

MAJOR ISSUES AND OBJECTIVES: Portugal's British-backed resistance to French trade policies and Spanish patriots' hatred of Napoleon and his puppet rulers led to a long and bloody rebellion against French rule.

OUTCOME: Ultimately Napoleon was defeated and driven first from the Iberian Peninsula, then from power.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

France, 230,000 in 1812; Spain, Portugal, and Great Britain, 172,000 in 1813

CASUALTIES: France and allies, 91,000 killed in battle, 237,000 wounded; Spain, 25,000 guerrillas killed plus tens of thousands of regular Spanish and Portuguese troops; Great Britain, 35,630 killed; 32,429 wounded. Including noncombatants, total deaths from all causes may have exceeded 1 million.

TREATIES: First Peace of Paris, May 30, 1814

After the humiliating concessions made by Prussia and the less humiliating accord with Russia that followed the WAR OF THE THIRD COALITION, Napoleon Bonaparte (1769–1821) moved in November and December 1807 against Portugal when that country refused to answer his July 19, 1807, summons to declare war on Great Britain. His Continental System—aimed at killing the world's trade with archenemy Britain—was failing, and he realized for the blockade to work, he needed to enforce it throughout Europe; that meant seizing Portugal, a country that, from the beginning, had made clear its opposition to Napoleon's trade restrictions. Spain's Charles IV (1748–1819) allowed French troops passage across the Iberian Peninsula, and they soon occupied Lisbon. The presence of Napoleon's legions in northern Spain, however, did not sit well with Charles's subjects, and they rebelled, forcing him to abdicate in favor of his son, Ferdinand VII (1784–1833). Napoleon saw in the abdication a chance to rid Europe and himself of the last Bourbon rulers, and he peremptorily summoned the Spanish royal family to Bayonne in April 1808. There, he removed both Charles and Ferdinand from the throne and interned them in the chateau of French foreign minister Charles Maurice de Talleyrand-Périgord (1754–1838). In their stead Napoleon named his brother, Joseph Bonaparte (1768–1844), king of Naples, as the new ruler of Spain.

Spaniards were no happier with a Bonaparte on the throne than they were with a Bonaparte army roaming the countryside. When Napoleon brutally suppressed an uprising in Madrid, the insurrection spread across the

whole of the peninsula. Encouraged at the sight of Iberia up in arms, the British decided to use the area as a bridgehead on the Continent and sent a small force under the energetic Arthur Wellesley (1769–1852) (subsequently the duke of Wellington) to support the rebellion. The French, after setbacks at Bailén and Vimeiro, surrendered Lisbon. Napoleon met with his reluctant ally, Czar Alexander I (1777–1825) of Russia, at the Congress of Erfurt in September and October of 1808, to extract promises of help in a situation that might well become desperate. Despite the august company of princes assembled by Napoleon, the czar made no clear commitments. So damaged was Napoleon's prestige by the sensational blows he had received during what could only be considered a national uprising in Spain and Portugal that even Talleyrand—always a harbinger of informed French opinion—had grown dismayed by his emperor's policies and was already negotiating with Alexander behind Napoleon's back.

With little choice, Napoleon personally led an expedition onto the peninsula during November 1808 through January 1809. Taking most of his Grand Army with him, he nearly defeated the British, who narrowly escaped at Coruña in early 1809. Thus, Napoleon was on the brink of putting down the entire revolt when Austria—seeing him preoccupied in Spain—attempted to regain her autonomy (see NAPOLEON'S WAR WITH AUSTRIA).

From 1809 onward, Spanish guerrillas, sometimes backed by British ships and British troops, harassed the French while Napoleon was preoccupied in Austria. In fact, the British under Wellington returned to drive the French from Portugal and invade Spain, winning an important victory at Talavera on July 28, 1809. But Napoleon sent reinforcements to lance what he described as his "Spanish ulcer" and enforce the Continental System in the only way he could after losing his fleet at Trafalgar. Freshly spilled blood did for the moment restore French ascendancy, but in 1811 Wellington's forces began their inexorable recovery of Portugal's frontier fortress. Although the Spanish field armies had been smashed and scattered by Napoleon's marshals the year before, guerrillas continued the struggle and, with British aid, proved effective. Without the British, the guerrillas would hardly have survived; without the guerrillas, the outnumbered British would have been swept away by the more experienced French; together—supplied by the Royal Navy—Wellington's regulars and the Spanish irregulars were devastating, although at an appalling cost to Spain's civil population.

In 1812, the national Cortes, convened at Cadiz by the rebels, promulgated a constitution inspired by both the FRENCH REVOLUTION and by British institutions, which in turn would spark revolutions throughout the old Spanish Empire's holdings in the New World. For now, it cheered the allies on to Salamanca and Madrid, where they

evicted the French from southern Spain by 1812. Wellington failed to take Burgos in 1812, but he did better in 1813, routing the French at Vitoria and chasing them back into France. There, he joined the general effort of the European allies to bring down Napoleon (see NAPOLEONIC WARS; NAPOLEON'S INVASION OF RUSSIA) by besieging Bayonne and Bordeaux.

Penruddock's Revolt (1655)

PRINCIPAL COMBATANTS: Penruddock's "army" vs. Cromwellian Britain

PRINCIPAL THEATER(S): Salisbury and vicinity

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Penruddock sought the restoration of the British Crown.

OUTCOME: Penruddock was captured, tried for treason, and executed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Penruddock had about 200 followers.

CASUALTIES: None, except for Penruddock himself

TREATIES: None

After the Lord Protector, Oliver Cromwell (1599–1658), dissolved Parliament in 1655, a number of royalists responded to this dictatorial and tyrannical measure by raising revolts with the objective of bringing about the return of the monarchy. In Wiltshire, John Penruddock (1619–55), a royalist who had been persecuted by Cromwell's regime, raised an "army" of 200 followers and occupied Salisbury. There he abducted judges who were in the process of trying a number of royalists for treason. His point made by the abductions, Penruddock declined to harm the judges and marched into Devon. There he was taken prisoner by a regiment of Cromwell's troops. Remanded to the judges he had abducted and released, he was tried for treason, found guilty, and beheaded. Acknowledging that Penruddock had not harmed the judges, however, Oliver Cromwell personally saw to it that a portion of Penruddock's estate, subject to forfeiture because of his treason, was given to his children.

Pepin's Campaigns in Aquitaine (760–768)

PRINCIPAL COMBATANTS: Pepin III vs. Waifer, duke of Aquitaine

PRINCIPAL THEATER(S): Aquitaine

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Pepin sought to put down the rebellion of Waifer, who wanted to maintain Aquitaine's independence from France.

OUTCOME: After a protracted war, Waifer was defeated, and Aquitaine became a province of Pepin's Frankish Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Pepin III (c. 714–814, also known as Pepin the Short), son and successor of Charles Martel (c. 688–741), succeeded in driving the Muslims over the Pyrenees and out of France. Pepin held the nominal title of Mayor of the Palace but ruled as the true power behind the Merovingian throne for 10 years until he deposed Childeric III (d. 755) and brought about his own coronation as king of the Franks in 751. This accomplished, he campaigned against the Lombards and in Germany (see PEPIN'S CAMPAIGNS IN GERMANY). Then he launched a campaign against the forces of Waifer, the duke of Aquitaine. Waifer sought to keep Aquitaine independent of France. Over the course of a bitter eight-year campaign, Pepin defeated Waifer and brought Aquitaine firmly into the fold of his growing empire.

Pepin's Campaigns in Germany (757–758)

PRINCIPAL COMBATANTS: Franks vs. Saxons

PRINCIPAL THEATER(S): Bavaria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Tassilo III, duke of Bavaria, sought independence from the Frankish empire.

OUTCOME: Under the leadership of Pepin III, the Franks crushed the rebellion and forced a heavy tribute on the Saxons.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Tribute agreement, 758

After driving the Muslims from France and subduing the Lombards in Italy and before commencing a protracted campaign against Waifer, duke of Aquitaine (see PEPIN'S

CAMPAIGNS IN AQUITAINE), Pepin III (c. 714–814, also known as Pepin the Short), king of the Franks and effectively king of France, invaded Germany, primarily to put down a rebellion led by Tassilo III (fl. 788), duke of Bavaria. Tassilo sought to break with the Frankish empire and proclaim Bavarian independence. Pepin quickly defeated Tassilo and extracted from the Saxons a heavy tribute.

Pepin's War with Muslims *See* FRANKISH-MOORISH WAR, SECOND.

Pequot War (First Puritan Conquest) (1634–1638)

PRINCIPAL COMBATANTS: Pequot Indians vs. colonists of New England

PRINCIPAL THEATER(S): Western Massachusetts and Connecticut

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: After years of tension caused by white encroachment upon Pequot-held lands, the murder of a colonial captain ignited hostilities.

OUTCOME: Essentially, the annihilation of the Pequot tribe

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Colonists, at Block Island, 90; at Pequot Harbor, 90 whites and 60 Mohegan and some 500 Narragansett and Niantic allies. Pequots, unknown.

CASUALTIES: Colonists, unknown; Pequots, 600–700 at Mystic fort, others

TREATIES: Treaty of Hartford, September 21, 1638

By the 1630s, growing numbers of settlers in the Connecticut River valley were encroaching upon the territory of the Pequots, an Algonquian tribe related to the Mohegans and, like them, originally settled along the Hudson. In 1634, Captain John Stone fell victim to an Indian raid. The only thing certain about the incident is that the raiders were not Pequots, but western Niantics, a tribe dominated by the Pequots; however, on November 7, Pequot representatives agreed to hand over those guilty of Captain Stone's murder, to pay an exorbitant indemnity, to relinquish rights to Connecticut land the English might wish to settle, and to trade with the English "as friends."

When the Pequot council failed to ratify what the tribe's ambassadors had agreed to, the English grumbled for two years over a breach of treaty but took no action.

On June 16, 1636, however, colonial officials received a message from Uncas (fl. 17th century), chief of the friendly Mohegan tribe, warning that the Pequots were about to strike. A conference was called, and the colonists reasserted the demands of the 1634 treaty, again calling for the killers of Captain Stone and full payment of the tribute. It is not clear what the Pequot response was to these demands, but a few days following it, another trading captain, John Oldham (c. 1600–36), and his crew were killed on Block Island by Narragansetts or members of a tribe subject to them.

Although the Narragansett sachems Canonchet (c. 1630–76) (whom the English called *Canonicus*) and Miantonomo (c. 1600–43) condemned the murder and offered reparations and a pledge of loyalty, colonial authorities dispatched Captain John Endecott (c. 1588–1665), with Captain John Underhill (c. 1597–1672) and Captain William Turner (1623–76) and a force of 90 men to Block Island on August 25. By the time Endecott reached Block Island, however, most of the Indians had fled, so he and his troops sailed to the English fort at Saybrook, Connecticut, on the Connecticut River to punish the Pequots—even though they had had nothing to do with the death of John Oldham.

Endecott proceeded to Pequot Harbor at the mouth of the Pequot (Thames) River. The Pequots there greeted him, Endecott proclaimed his mission of revenge, and the Pequots asked for a parley. Endecott refused and called the Indians to battle. The Indians refused to fight, whereupon Endecott set about burning dwellings and crops, thereby provoking a full-scale war.

A band of Pequots besieged the Saybrook fort for months, and other groups raided nearby settlements. In the meantime, the English and the Pequots vied for an alliance with the powerful Narragansett tribe. Largely due to the skillful negotiations of religious dissident Roger Williams (c. 1603–83), the sachem Miantonomo pledged the Narragansetts to an alliance with the English.

Despite the alliance, the war became increasingly brutal. By the spring of 1637, Wethersfield, Connecticut, had been ravaged, and other settlements fell under attack. On May 1, the Plymouth, Massachusetts, and Connecticut colonies resolved to unite in fighting the Pequots. Yet political and religious wrangling delayed organization of an effective fighting force.

While Massachusetts and Plymouth floundered, Captain John Mason (c. 1600–74) set out from Hartford, Connecticut, on May 10 with 90 colonists and 60 Mohegans under Chief Uncas to attack the principal Pequot stronghold, the fort of Sassacus (d. 1637), on Pequot Harbor. As he neared his objective, Mason decided to recruit more Indian allies before attacking.

On May 25, Mason, with 500 Narragansett and Niantic allies, drew near Sassacus's Pequot Harbor fort. Instead of attacking it, however, Mason turned to Mystic to attack another fort, which harbored not warriors but mostly women, children, and old men. The May 26 assault

on the fort at Mystic was less a battle than a slaughter of innocents. Within an hour 600–700 Pequots were slain.

In late May or early June, Mason joined his troops to a Massachusetts unit and attacked a large number of Pequots near the Connecticut River, causing a general rout, with many of the surviving Indians fleeing south to Manhattan. A pursuit detachment of about 160 troops was organized in July, and on the 13th they ran the Mystic survivors to ground in a swamp near New Haven. After surrounding the Indians, the English announced that they would guarantee old men, women, and children safe conduct out of the swamp. Almost 200 emerged, whereupon they were made prisoners, the male children to be sold into West Indian slavery, and the females to be distributed as slaves to various colonial towns as well as to the Indian allies of the English.

The 80 Pequot warriors who remained holed up in the swamp fought valiantly as the colonial troops cut through the swamp with their swords, all the while shooting at them.

Despite the unrelenting assault, a sizable number of Pequots, perhaps including the sachem Sassacus, slipped through the English lines on July 14. The remainder were (as one eyewitness put it) “killed in the Swamp like sullen Dogs.”

Sassacus and other Pequot fugitives sought sanctuary among neighboring tribes, but the terror tactics of the English had so intimidated the Indians of the region that no tribe took Sassacus in. Finally, the Mohawks sent colonial officials the severed head of Sassacus, who had—unsuccessfully—sought refuge among them.

The Treaty of Hartford, concluded on September 21, 1638, divided the survivors of the swamp siege as slaves among the Indian allies. The treaty also directed that no Pequot might inhabit his former country and ordered that the very name *Pequot* be expunged; those enslaved had to take the name of their “host” tribe. Those Pequots who escaped death or enslavement fell easy prey to surrounding tribes, who had long endured their raids and depredations.

Shortly after the treaty was signed, a number of Pequots settled at Pawcatuck, in former Pequot country and, therefore, in violation of the treaty. Mason was dispatched with 40 colonists and 120 Mohegans, led by Uncas, to clear them out, which he did, allowing his men and the Indian allies to plunder freely, and, with this, the Pequot War ended.

Further reading: Alan Axelrod, *Chronicle of the Indian Wars: From Colonial Times to Wounded Knee* (New York: Prentice Hall General Reference, 1993); Francis Jennings, *The Invasion of America: Indians, Colonialism, and the Cant of Conquest* (New York: Norton, 1975).

Perak War (1874–1876)

PRINCIPAL COMBATANTS: Perak vs. Great Britain

PRINCIPAL THEATER(S): Perak, Malaysia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A rebellion against British occupation by a group of dissident Malay chiefs led to the assassination of the first British resident at Perak, then to reprisals that crushed the resistance.

OUTCOME: The dissident native leaders were arrested and removed from power, failing to curb British economic and political influence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Violation of the Pangkor Treaty of 1874 triggered the war.

The Pangkor Treaty of 1874 between the British government and the local Malay chiefs permitted Britain to install a resident in Perak, a country in northwestern Malaysia, to administer trade and other commercial and governmental functions. When the first resident, James W. W. Birch (d.1875), arrived in Perak in November 1874 to take up his post as official British adviser to the sultan, he embarked on a program of reform that ended both corrupt revenue collection policies and slavery in Perak. Birch hoped through his influence not only to modernize the traditional administrative system, under which government had been based on personal relationships between the sultan and the chiefs, but also to have Raja Abdullah accepted as sultan in Upper Perak, in other words, as its supreme ruler, the one man who dealt directly with the British. But Birch's rapid and revolutionary changes quickly alienated both Abdullah and most local chiefs. At a meeting in July 1875, the sultan organized a movement to end foreign influence in Perak by assassinating Birch.

Later that month, when Birch was in Upper Perak posting his new tax proclamations, one of the chiefs, Maharaja Lela, and his men assassinated the resident. The conspirators failed, however, to follow up with the planned attack on the residency itself. His murder prompted immediate reprisal from the British government, which dispatched troops to put down all resistance to British administration in the region.

By the middle of 1876, the rebellious chiefs and leaders had been rounded up. They were later tried and punished. The sultan Abdullah was deposed, and the British assumed an increasing degree of influence over Malay affairs. However, the lesson of the Birch affair was not lost on subsequent British residents. Instead of acting unilaterally to impose changes and reforms, they worked cooperatively with indigenous rulers, and made few drastic changes in traditional institutions.

Percy's Rebellion (1403)

PRINCIPAL COMBATANTS: Henry "Hotspur" Percy vs. Henry IV

PRINCIPAL THEATER(S): Shrewsbury, England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Hotspur wanted to topple Henry from the throne and replace him with Edmund Mortimer.

OUTCOME: Hotspur's forces were defeated—and Hotspur killed—at the Battle of Shrewsbury, bringing about the collapse of the rebellion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Prominent among those who helped Henry Bolingbroke depose Richard II (1367–1400) to become England's king Henry IV (1367–1413) were Henry Percy (1342–1408), first earl of Northumberland, and his son Sir Henry Percy (1366–1403), nicknamed "Hotspur" by his Scottish enemies for the alacrity with which he patrolled their borders. A grateful Henry IV rewarded the Percys liberally with lands and offices in northern England and Wales, making them the largest landowners in Northumberland. But their ambitions were deeper than Henry's purse could ever accommodate—ultimately they sought to control the throne itself. As it happened, they parted ways with the new king over a trifle—falling into a dispute over the ransom of a Scottish rebel. When Hotspur captured the earl of Douglas at the battle of Homildon Hill, Henry demanded the prisoner and claimed the ransom for himself. The break had been building, and now it came—the Percys withdrew their support from Henry and backed Edmund Mortimer.

Mortimer (1376–1413) was the uncle of Richard II's legitimate heir, the earl of March (d. 1428). He had been captured by the French-backed Welsh rebel Owen Glendower (c. 1359–1416) and persuaded to make common cause against Henry. The Percys dispatched an army to join Glendower, but it was intercepted en route by royalist forces under Henry IV and his son, Prince Hal (1387–1422, later Henry V). On July 21, 1403, the armies clashed in the Battle of Shrewsbury. The Percys were defeated before Glendower could reinforce them. Hotspur fell in battle, and his leaderless troops surrendered.

Pergamum, Conquest of (133–129 B.C.E.)

PRINCIPAL COMBATANTS: Rome (with Cappadocian aid) vs. Aristonicus of Pergamum

PRINCIPAL THEATER(S): Pergamum, Italy
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: Aristonicus resisted Roman annexation of Pergamum.
OUTCOME: Aristonicus was ultimately defeated, and Pergamum became the Roman province known as Asia.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: Unknown
TREATIES: None, save underlying bequest of Attalus III, king of Pergamum

On his death, Attalus III (c. 170–133 B.C.E.), ruler of the Italian kingdom of Pergamum, bequeathed his realm to Rome. However, a pretender to the throne, Aristonicus, intervened and blocked Roman efforts to assume control of Pergamum. It took forces under the command of pro-consul P. Licinius Crassus (c. 180–130 B.C.E.), in alliance with a Cappadocian army, to defeat Aristonicus. With the pretender driven from the throne, Pergamum became the Roman province of Asia.

Peronist Revolts (1956–1957)

PRINCIPAL COMBATANTS: Peronists vs. Argentine government
PRINCIPAL THEATER(S): Argentina
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: The Peronists wanted to restore Juan Perón as dictator of Argentina.
OUTCOME: The Peronists were partially suppressed, but a low-level civil war ensued, to the great detriment of the Argentine economy.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: Casualty numbers unknown; 2,000 Peronistas were arrested; 38 executed.
TREATIES: None

Juan Perón (1895–1974), dictator of Argentina, was deposed in the ARGENTINE REVOLT (1955), but his supporters were still very much present in Argentine politics. In the power vacuum left by Perón's ouster, General Eduardo Lonardi (1896–1956) assumed control of a provisional government. On November 13, 1955, Lonardi was deposed by General Pedro Pablo Eugenio Aramburu (1903–70) in a bloodless coup. A hard-line anti-Peronist, Aramburu took steps to ensure that the Peronist party would never again assume power. The party was outlawed—a step that served only to intensify the Peronists' subversive activities.

Juan Perón, living in exile in Paraguay, directed the Peronists in a campaign of antigovernment activity, rang-

ing from harassment to terrorism, including sabotage and rioting. On June 14, 1956, Peronist rebels staged major uprisings in Santa Fe, La Pampa, and Buenos Aires. The government responded by declaring martial law, and Peronists and government troops clashed in bloody battles. The first wave of revolts was put down, with the arrest of some 2,000 Peronists, of whom 38 were subsequently executed.

In the meantime, although the Peronist party had been declared illegal, a neo-Peronist “Popular Union Party” was established. It urged voters to signal protest in the upcoming general elections by casting blank ballots. In an atmosphere of increasing hostility, more violence erupted between Peronists and the government as the elections of 1957 approached. The Peronists exercised their considerable influence and swung their support behind Arturo Frondizi (1908–95), a radical leader who promised to reopen political life in Argentina for them. Frondizi won majorities in both houses of Congress, but when his reformist majority proved more interested in foreign investment than in the adverse effect his currency devaluation was having on the middle and lower classes, he had to use the military to shore up his unpopular policies against these traditional strongholds of Peronists. An ongoing, low-level civil war resulted, which greatly disrupted the already beleaguered Argentine economy.

Persian-Afghan War (1726–1738)

PRINCIPAL COMBATANTS: Safavid Persians (with Abdali Afghan allies) vs. Ghilzai Afghans
PRINCIPAL THEATER(S): Persia (Iran)
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: Nadir Khan (later Nadir Shah) sought to reconquer Persia from the Ghilzai Afghans.
OUTCOME: The Ghilzai were largely driven out of Persia, which was restored to Safavid rule—under Nadir Shah.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Hundreds of thousands (100,000 Abdalis at Meshed; 80,000 troops to lay siege against Kandahar)
CASUALTIES: Unknown
TREATIES: None

Over the course of the first three decades of the 18th century, Afghan tribes seized control of nearly half of Persia

(Iran). In 1722, Ghilzai Afghan rebels had driven the Safavid shah, Hussein (c. 1675–1726), from his throne (see AFGHAN REBELLIONS [1709–1727]). Meanwhile the Safavid dynasty's weakness had attracted other invaders—first the Russians from the East (see RUSSO-PERSIAN WAR of 1722–1723), then the Ottoman Turks from the West. As Persia collapsed, not so surprisingly, into civil war (see PERSIAN CIVIL WAR [1725–1730]), the Afghans continued to make the most of the chaos, taking Tehran in 1725 and soundly defeating both the Russians and the Ottomans. Only the rise of Nadir Kahn (1688–1747, later, Nadir Shah) put a stumbling block between the rebels and their dream of Afghan liberation.

From an obscure beginning in the Afshar tribe of Turks loyal to the Safavids—where he served under a local chieftain—Nadir Kahn first evidenced his remarkable leadership qualities when he formed and led a band of robbers. By 1726, as head of the gang, he persuaded 5,000 of his followers to support the putative Safavid shah Tahmasp II (d. 1739), now seeking to regain the throne his father had lost four years earlier to the Afghan usurpers. Under Tahmasp's banner Nadir reformed Persia's military forces, slowly assembling and carefully training the army he would need to retake the lost reaches of the empire.

Nadir initially fought a limited, stealthy war, retaking areas near Afghan-held Herat but always avoiding large-scale engagements while he continued to build up and prepare his forces.

By 1728, Nadir had captured Mazandrin, which controlled the routes to Tehran. With these routes closed, Nadir advanced on Herat itself in 1729, defeating the Abdali Afghans. Having defeated them, he engaged them as allies to fight their rivals, the Ghilzai Afghans. In 1729, Nadir and his Abdali allies defeated the forces of Ashraf (d. 1730), the Ghilza Afghan to whom Hussein had abdicated, at the Battle of Mihmandust. The allies collaborated again on a victory at Murchalkur later in the year. After this series of brilliant victories, by which Nadir utterly defeated the Ghilzai, he restored Isfahan (near Murchalkur) Tahmasp II to the Persian throne.

Nadir then attacked and routed the Ottoman Turks, who had occupied adjacent areas of Azerbaijan and Iraq. Despite these early successes in the TURKO-PERSIAN WAR (1730–1736), Nadir was soon frustrated by the inept aggression of the new shah. Even as Nadir fought the Turks, the Afghans continued to rebel at Herat. Then, while Nadir was absent quelling the revolt, Tahmasp rashly attacked the Turks only to be heavily defeated. The Turks forced an ignominious peace on the shah, all of which enraged Nadir when he heard about it. He rushed back, deposed Tahmasp, placed the shah's infant son, Abbas III, on the throne, and declared himself regent. When he suffered a defeat at the hands of the Turks in Iraq, Nadir redoubled his effort and relentlessly drove them completely out of Persia. Fresh from that victory, he

turned to Russia, threatening war. To avoid fighting Nadir, an uneasy Russia gave up its Caspian provinces in favor to Persia. Then, in 1736, Nadir deposed the child king Abbas III and took the Persian throne himself, assuming now the title of Nadir Shah.

And still, the war with the Afghans went on. In 1736, Nadir transferred 100,000 of his Abdali allies to Meshed, where they were to safeguard Khorasan. This generally stabilized Persia, enabling Nadir to conclude the war with the Turks. Once the Ottoman Turks were defeated, Nadir turned in 1737 to the task of taking the great fortified Ghilzai city of Kandahar, considered impregnable. With 80,000 troops, most of them Abdalis, Nadir laid siege to the fortress city, which fell in 1738. Nadir attempted to raze Kandahar, but its 30-foot-thick walls were so stout that he was unable to destroy it. He evacuated it of Ghizalis, redeeming prisoners of war for captured Abdalis. With Persia largely won back from Afghan control, Nadir's ambitions expanded as he prepared to invade Mogul India (see PERSIAN INVASION OF MOGUL INDIAN).

Persian-Afghan War (1798)

PRINCIPAL COMBATANTS: Muhammad Barakzai (with Persian allies) vs. his brother, Zaman Barakzai

PRINCIPAL THEATER(S): Afghanistan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Muhammad Barakzai wanted to depose his brother and assume leadership of the Afghans.

OUTCOME: With Persian help, Muhammad Barakzai prevailed; his brother was deposed, blinded, and imprisoned.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

When Zaman Shah (r. 1793–1800) seized the Afghan throne with the intention of following in the footsteps of his grandfather, Ahmad Shah (d. 1772)—the founder of the Durrani dynasty, who had extended Afghan control from Meshed to Kashmir and Delhi—British imperialists grew nervous. Seeking above all to defend their growing hold on India, they persuaded the shah of Persia, Fath Ali (1766–1834), to pressure Zaman to call off his planned attack on India. Zaman, refusing to comply with the shah's wishes, invaded India, whereupon Fath Ali goaded Zaman's older brother, Muhammad (fl. 1798–1816), to

take advantage of Zaman's absence by usurping the Afghan throne. With Persian assistance, Muhammad took the fortress city of Kandahar and then the Afghan capital of Kabul. When Zaman returned from India, he found that he had been deposed. Falling captive to his brother, he was blinded and imprisoned.

Persian-Afghan War (1816)

PRINCIPAL COMBATANTS: Persia vs. Afghanistan

PRINCIPAL THEATER(S): Persian-Afghan frontier

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Fath Ali, shah of Persia, wanted to seize Herat, a city held by the Afghans.

OUTCOME: Muhammad, the Afghan king, was able to appease the Persian shah, who broke off his advance on Herat.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Fath Ali (1766–1834), shah of Persia, mounted an invasion of Afghanistan in 1816, marching a large army to Ghorian, a Persian fortress on the frontier. His objective was the capture of Herat, an Afghan city claimed by the Persians. However, the Afghan governor of Herat proposed to pay the Persian army to abort the invasion. The Afghan vizier disapproved of this bribery scheme and ordered the Herat governor to be deported. This done, Fath Ali's troops continued their advance on Herat. To appease Fath Ali, Muhammad (fl. 1798–1816), king of the Afghans, ordered that the vizier be blinded. Although Fath Ali did break off his campaign against Herat, the blinding of the vizier induced his relatives to seize the Afghan throne from Muhammad by way of vengeance.

Persian-Afghan War (1836–1838)

PRINCIPAL COMBATANTS: Persia vs. Afghanistan (allied with Great Britain)

PRINCIPAL THEATER(S): Herat, Afghanistan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Persians wanted to take Herat.

OUTCOME: With British aid, the Afghans resisted a 10-month Persian siege, forcing the Persians to withdraw.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Russian czar Nicholas I (1796–1855) induced Muhammad Shah (1810–1848), ruler of Persia, to invade Afghanistan. Muhammad assembled his invasion force at Khorasan, preparatory to an assault on the often-disputed city of Herat. The siege was begun on November 23, 1837. Meanwhile, the British, grown fearful that Persia was falling completely under Russia's spell, decided to aid the Afghans in defending Herat, which the British tended to see as the key to India. Entering into an alliance with the rulers not only of Herat but also of Kabul and Kandahar, they sent a formal mission to meet with Dost Muhammad (1793–1863), founder of the Afghan ruling dynasty—the Barakzai (or Mohammadzai). When Captain (later Sir) Alexander Burnes (1805–41) arrived in Kabul in 1837, he was thinking of protecting India from Russia, while Dost Muhammad was thinking of his failure the year before to take Peshawar, India, from the Sikhs.

The British helped the Afghans resist the Persian siege of Herat for 10 months, but after the Persians withdrew on September 28, 1838, Burnes refused to give Dost Muhammad the assurances of support he felt he needed and deserved to invade Peshawar again. If the British would not be enticed, however, the Russians might, and the Afghan ruler turned to the czar's government. A Russian agent appeared in Kabul ready to intrigue with the Afghans against the interests of their erstwhile allies, and the British promptly withdrew back to India, where they began their own plottings. Indeed, the failure of Burnes's mission made the First AFGHAN WAR (1839–42) almost inevitable.

Persian-Afghan War (1855–1857)

PRINCIPAL COMBATANTS: Persia vs. Afghanistan (allied with Great Britain)

PRINCIPAL THEATER(S): Herat, Afghanistan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Persia wanted to seize Herat.

OUTCOME: Under combined Afghan and British pressure, the Persians withdrew.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Afghan-British alliance was created by the Treaty of Peshawar of 1855.

Although the Afghan ruler Dost Muhammad (1793–1863) and most of his family had been deported to India after he surrendered to the British in Kabul at the close of the First AFGHAN WAR (1839–42), the British were never able to control postwar Afghanistan. When they tried to discuss terms for their withdrawal with Akbar Kahn, Dost Muhammad's son, they only managed to get their agent, Sir William Hay Macnaghten (1793–1841), assassinated during the parley. By the summer of 1842, the new governor general, Edward Law, Lord Ellenborough (1790–1871), decided to withdraw his country entirely from Afghanistan. The following year Dost Muhammad returned to Kabul ready to begin some 20 years of consolidating his rule.

By 1855, he had occupied Kandahar. That same year Britain and Afghanistan concluded the Treaty of Peshawar, which established, for the moment, friendship between the two nations. The treaty was timely; for also in 1855, a Persian army invaded Afghanistan, with the object of taking Herat, and the British answered the Afghans' call for aid. Under British pressure, the Persians withdrew. This freed Dost Muhammad to further consolidate his kingdom, uniting what had previously been many independent local rulers under his dynasty. In 1859 he occupied Balkh and then Herat in 1863 less than a month before his death in June.

Persian Civil War (522–521 B.C.E.)

PRINCIPAL COMBATANTS: Gautama (the “false Smerdis”) vs. Darius I

PRINCIPAL THEATER(S): Persia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: An internecine struggle within the Achaemenid dynasty for control of the Persian Empire

OUTCOME: Darius I ascended the Persian throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Like that of many of the Achaemenid kings of Persia, the reign of Cambyses II from 529 to 522 B.C.E. was marred by a struggle for power within the dynasty. Cambyses was the eldest son of King Cyrus II (the Great; c. 600–529 B.C.E.), and his mother, Cassandane, was the daughter of a fellow Achaemenid. Cyrus put Cambyses in charge of Babylonian affairs in 538, and in 530, before Cyrus set out on his last campaign, he appointed Cambyses regent in Babylon, but it was the Persian conquest of Egypt, planned by Cyrus, that proved the major achievement of Cambyses reign.

Aided by Polycrates (c. 535–522 B.C.E.), tyrant of Samos, well-informed by Phanes, a Greek general in the Egyptian army, and supplied by Arabs with the water essential for crossing the Sinai, Cambyses defeated the army of Psamtik III (d. c. 523) at the battle of Pelusium in 525 in the Nile Delta. When he subsequently captured Heliopolis and Memphis, Egyptian resistance collapsed. According to the Greek historian Herodotus (c. 484–between 430–420 B.C.E.), Cambyses was a madman and guilty of many atrocities in Egypt, though later historians have questioned his judgments based on contemporary Egyptian sources, which suggest—at least in the beginning—Cambyses pursued a conciliatory policy toward Egypt while he planned new expeditions against Ethiopia and Carthage.

Herodotus based his judgments on the propaganda spread by Cambyses' distant cousin and successor Darius I (the Great; c. 558–486 B.C.E.). According to Darius, Cambyses, before going to Egypt, had secretly killed his brother, Bardiya (whom Herodotus called Smerdis [d. c. 525 B.C.E.]), so he could claim sole rule over Persia. The murdered prince was, however, impersonated by Gaumata (d. 521 B.C.E.), the Magian, a Median priest who seized the Achaemenid throne in March 522. Cambyses abruptly broke off his plans for other expeditions and headed back to Persia from Egypt, dying along the way in the summer of 522, either by accident or, possibly, suicide.

Gautama-Smerdis continued to rule for seven months but was overthrown and killed by Darius (c. 558–486 B.C.E.). Darius now ascended the throne as Darius I and, after hard-fought campaigns to thwart rebellions all across Persia, would reign as Darius the Great.

Persian Civil War (1500–1503)

PRINCIPAL COMBATANTS: The Koyunlu sect vs. the Shi'ite sect

PRINCIPAL THEATER(S): Persian Empire (Iran and Iraq)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ismail, Shi'ite leader, sought to unify the Persian Empire under Shi'ism.

OUTCOME: To a great extent, Ismail succeeded in suppressing the Sunnis and establishing the dominance of Shi'ism in the Persian Empire and beyond.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Religion was at the root of this conflict between the Turkoman Al Koyunlu dynasty and the Shi'ites (and other sects) of Persia. The Koyunlus reformed Timurid and Mongol laws to comply with Sunni religious canons, seeking to reapply rigorous orthodox rules for collecting taxes. This enraged the Sufi Shi'ite sheikh Heydar (d. 1488) of Ardebil, who was killed by Sunnis in 1488. Meanwhile, the reforms had damaged the popularity of the regime and discredited Sunni fanaticism, leaving the path clear for Heydar's son, Ismail (1486–1524), who swore revenge and used his father's Kizilbash warrior society to fight the Koyunlus and ultimately establish the Safavid dynasty. Through a combination of his own military skill and charisma and by exploiting the fractious nature of the Koyunlu dynasty, Ismail established himself as shah in Tabriz in 1501. At the Battle of Shurur later in the year, he defeated the last of the Koyunlu rulers, then went on to conquer the territory encompassing most of modern Iran and Iraq. When he captured Hamadan in 1503, Ismail had such power and influence that he was able to convert most of the region's Sunnis into Shi'ites, and he firmly established Shi'ism as the state religion of the Persian Empire. Ismail's spiritual influence extended even further than his political power, encompassing Turkoman sects in Anatolia (Turkey) and into eastern Europe (southern Romania). Ismail's family, riding the swelling Shi'ite tide, would occupy the throne until 1722.

Persian Civil War (1725–1730)

PRINCIPAL COMBATANTS: Forces of Tahmasp II (under Nadir Khan) vs. various Persian factions and the Ottoman Turks

PRINCIPAL THEATER(S): Persia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Establishment of Tahmasp II as shah of Persia

OUTCOME: Thanks to the military skill of Nadir Khan, Tahmasp was established on the Persian throne, and the occupying Ottoman Turks were pushed out of Persia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Amid the early disintegration of the Safavid dynasty in Persia, Shah Hussein (c. 1675–1726) was murdered by an Afghan in 1726, thereby precipitating Persia into full-scale civil war. The Ottoman Turks exploited Persia's chaos by invading and occupying vast territories, from Georgia to Hamadan. In the meantime, Nadir Khan (1688–1747) served Tahmasp II (d. 1739), the uncrowned shah of Persia, as his leading general. He patiently assembled, enlarged, and continually trained a formidable army, which made Tahmasp dominant in Persia. By 1730, Nadir Khan had forced the Ottomans out of Hamadan, Kirmanshah, and Tabriz. With that, the Persian Civil War of 1725–30 came to a close.

Persian Civil War (1747–1760)

PRINCIPAL COMBATANTS: The late Nadir Shah's military commanders

PRINCIPAL THEATER(S): Persia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The military commanders fought one another for control of the Persian Empire.

OUTCOME: Karim Khan founded the Zand dynasty and emerged as the dominant ruler of Persia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 1736, Nadir Khan (1688–1747) established the Afshar dynasty in Persia, reigned as Nadir Shah, and reestablished the greatness of the Persian Empire. However, Nadir Shah was assassinated in 1747, and the Persian Empire fell prey to the ambition of Nadir Shah's various

military commanders, who—bent on establishing their own states—scrambled for territorial spoils. Ahmid Shah Durran (1725–75) founded a kingdom in Afghanistan, based at Kandahar; Shah Rokh, Nadir’s blind grandson, remained at the helm of the Afsharid ship of state in Khorasan; the Qajar chief, Muhammad Hasan, took the region of Mazanderan south of the Caspian Sea, then expelled Azad Kahn from Azerbaijan. From 1747 to 1760, a half dozen men struggled to dominate the Persian Empire.

In 1760, central and southern Persia had been consolidated under the nominal rule of an infant, Shah Ismail III (fl. c. 1755–80), who was controlled by his regent, Karim Khan (c. 1705–79), founder of the Zand dynasty. Karim Khan was content never to assume the title of shah for himself, but he worked behind the scenes in an effort to return Persia to the greatness it had enjoyed under Nadir Shah. He succeeded to some extent, rebuilding the country, reforming taxation, and expanding trade; however, on his death in 1779, the empire was once again torn by civil war (see PERSIAN CIVIL WAR [1779–1794]).

Persian Civil War (1779–1794)

PRINCIPAL COMBATANTS: Kajars vs. Zands and, subsequently, various rebel factions

PRINCIPAL THEATER(S): Persia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rule over Persia

OUTCOME: By 1794, Agha Muhammad Khan had founded and firmly established the Kajars as the ruling dynasty of Persia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The assassination of Karim Khan (c. 1705–79), founder of the Zand dynasty, touched off a struggle for power among members of the dynasty. Lotf Ali Khan Zand (1769–94) rose to dominance after a struggle that lasted until 1789. However, once placed on the Persian throne, Lotf Ali became the target of Agha Muhammad Khan (1742–97), head of the rival Qajar (or Qajar) family. He met Lotf Ali in battle at Kerman in 1794, defeated him, captured him, and had him killed. This having been done, Agha turned his wrath on the people of Kerman, whom he massacred. Those who escaped death were mutilated or blinded—all in retribution for their having supported Lotf Ali.

Within two years after killing Lotf Ali, Agha had subdued all of Persia, save the always rebellious Khorasan.

Crowning himself “king of kings,” Agha led an attack on Khorasan in 1796, taking its ruler Shah Rokh (d. 1796) captive and torturing him to death to make him reveal the location of all the Afsharid treasure. Although Agha’s rapacity and sheer cruelty dismantled the Persian economy, he ruled with such a degree of terror that all rebellions—and there were many—quickly withered. His Qajar dynasty held Persia in thrall until the ascension of the Pahlavi dynasty with the PERSIAN REVOLUTION (1921). Agha himself was assassinated in 1797.

Persian Conquests (559–509 B.C.E.)

PRINCIPAL COMBATANTS: Persia vs. Scythia, the Getae, Thrace, the Greek cities of Asia Minor, and Macedonia

PRINCIPAL THEATER(S): Scythia, the Getae, Thrace, the Greek cities of Asia Minor, and Macedonia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Territorial conquest

OUTCOME: Persia greatly expanded under Darius I the Great.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents survive

After securing his authority over Persia, Darius I (the Great; c. 558–486 B.C.E.) embarked on an ambitious campaign of imperial expansion, beginning by fighting against the Scythians on Persia’s borders, pushing them east of the Caspian Sea and thereby expanding the Persian domain as far east as the valley of the Indus. This accomplished, in 513 B.C.E. he attacked the Scythians of eastern Thrace and the eastern territories of the Getae. This campaign took the forces of Darius into Europe, as the emperor pushed the Scythians and Getae into the territory now encompassed by Romania.

Unfortunately, Darius had ventured so far that supply became a major problem, especially as the conquered people began destroying crops and other resources to foil foraging. Darius withdrew his troops and left the rest of the task of conquering Thrace and Asia Minor to a network of satraps (royal governors). As for Macedonia, Darius never conquered it, but he did compel its submission to Persian authority. In 509, the first great phase of Persian conquest was completed with the acquisition of the Aegean islands of Lemnos and Imbros.

Persian Gulf War (1990–1991)

PRINCIPAL COMBATANTS: Iraq vs. Kuwait and a U.S.-led coalition of 48 nations

PRINCIPAL THEATER(S): Saudi Arabia, Iraq, and Kuwait

DECLARATION: UN-set deadline for Iraqi withdrawal from Kuwait, January 15, 1991

MAJOR ISSUES AND OBJECTIVES: A UN-sanctioned, U.S.-led coalition—with the objective of protecting key oil supplies in the Middle East—sought to liberate Kuwait from occupation by Iraq.

OUTCOME: Kuwait was liberated, but Iraq's dictator, Saddam Hussein, remained in power.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Coalition, 450,000, in addition to vast air and naval assets; Iraq, 530,000

CASUALTIES: Coalition casualties: 95 killed, 368 wounded, 20 missing in action; Iraqi casualties: 50,000 killed, 50,000 wounded, 60,000 taken prisoner

TREATIES: Iraqi capitulation, February 28, 1991

After prevailing in an eight-year war against Iran so costly that it nearly led to a military coup in Iraq (*see* IRAN-IRAQ WAR), dictator Saddam Hussein (b. 1935) on August 2, 1990, invaded and attempted to annex the small, oil-rich neighboring nation of Kuwait. The invasion was swift; in less than a week, the Iraqi army, fourth-largest ground force in the world, was in complete control of Kuwait. The United States, its allies, and much of the world now feared that Iraq would go on to mount an attack southward into Saudi Arabia. This could give Hussein a stranglehold on much of the world's oil supply; even if he chose to press the attack no farther, his seizure of Kuwait put him in a position to threaten Saudi Arabia and thus control the flow of oil.

The United States responded to the invasion by freezing Iraqi assets in the United States and by cutting off trade with the country. The administration of President George H. W. Bush (b. 1924) then worked to secure UN resolutions condemning the invasion and supporting military action against it. Bush and Secretary of State James Baker (b. 1930) worked quickly to forge an unprece-

dent coalition among 48 nations. Of these, 30 provided military forces, with the United States making the largest contribution; 18 other nations provided economic, humanitarian, and other noncombat assistance. Saudi Arabia and other Arab states near Iraq provided port facilities, airfields, and staging areas for the buildup of ground forces. Because the participation of Israel would drive a wedge between the Arab members of the coalition and the United States and other Western members, Israel agreed not to take part in any military action, except in direct self-defense.

The U.S. buildup in the Middle East began on August 7, 1990, in response to a Saudi request for U.S. military aid to defend against possible Iraqi invasion. Operation Desert Shield was initiated to deploy sufficient forces to deter further Iraqi aggression and to defend Saudi Arabia. The first step was a naval blockade of Iraq. On August 8, U.S. Air Force fighters began to arrive at Saudi air bases. Lead elements of the army arrived on August 9. By September, the coalition had sufficient resources deployed to deter any further invasion. U.S. forces in the region included, by the fall, four aircraft carrier battle groups, each of which consisted of 74 aircraft, one guided missile cruiser, three to five destroyers or frigates, and one or two support vessels in addition to one aircraft carrier. Six to eight nuclear submarines were also in the Persian Gulf area. The U.S. Air Force had 400 combat aircraft in the theater of operations by September 2. By the end of October, 210,000 U.S. Army and Marine troops had been deployed, in addition to 65,000 troops from other coalition nations. These forces put the United States and the coalition countries in a position to attempt the diplomatic negotiation of an Iraqi withdrawal from Kuwait. But Saddam Hussein proved unresponsive, despite a series of UN resolutions condemning him. President Bush prepared the American people to accept the necessity of military action against Hussein. Bush and the State Department also successfully lobbied for a UN resolution authorizing military force to expel Iraq from Kuwait. This was secured on November 29. The resolution set a withdrawal deadline of January 15, 1991.

Mid-January was also when the United States anticipated completing a second phase of the military buildup in the Middle East. As the deadline approached, 450,000 coalition troops were on the ground, to oppose a larger Iraqi force, some 530,000, in Kuwait. Except in troop numbers, the coalition enjoyed an overwhelming advantage: more than 170 ships were now in the area, including six aircraft carriers and two battleships. Air power consisted of 2,200 combat craft.

When the deadline passed, Operation Desert Shield became Operation Desert Storm, and on the morning of January 16 a massive air campaign was unleashed against Iraq and Iraqi positions in Kuwait. This air war continued for five weeks, during which coalition forces flew more

than 88,000 missions with losses of only 22 U.S. aircraft and nine craft from other coalition countries. The Iraqi air force offered almost no resistance, and anti-aircraft fire and surface-to-air missiles had little effect against the coalition sorties. The Iraqis attempted to hide some of their planes in hardened revetments; others were flown into Iran.

The Iraqis did make use of Scud surface-to-surface missiles, which were directed against Israel and Saudi Arabia. Israel was targeted specifically in the hope that the attacks would goad it into entering the war, thereby alienating the Arab members of the coalition. Through deft diplomacy, the United States kept Israel out of the war. The United States deployed mobile Patriot missile launchers to intercept Scud attacks. Although most of the incoming Scuds were successfully deflected, the coalition was far less successful in destroying Scud launchers on the ground. Iraqi missile crews were skilled at camouflaging the mobile Scud launchers, then quickly moving the launchers to a new site.

Impressively destructive as the coalition air campaign was, its main purpose was to prepare the way for the ground campaign, which was led primarily by U.S. general H. Norman Schwarzkopf (b. 1934). The overwhelming air supremacy of the coalition kept Iraqi reconnaissance aircraft from discovering anything about the deployment of coalition ground troops; however, it was the Iraqis who made the first move on the ground, launching an attack on the Saudi town of Khafji on January 29, with three tank brigades. Although the Iraqis occupied the lightly defended town, they were pushed out the next day by a Saudi counterattack. The Battle of Khafji suggested to coalition military planners that the Iraqis were no match for U.S.-style mobile warfare.

The coalition ground offensive stepped off at 4 A.M., February 24, 1991. The plan was for the army's 18th Airborne Corps to be positioned on the coalition's left flank. This unit would move into Iraq on the far west end, striking deep within the country, cut off the Iraqi army in Kuwait, isolating it from any support or reinforcement from the north. The French Sixth Light Armored Division covered the 18th Airborne Corps's own left flank. The center of the ground force consisted of the U.S. Seventh Corps, the U.S. Second Armored Cavalry, and the British First Armored Division—celebrated as the "Desert Rats" who defeated Erwin Rommel's Afrika Korps in WORLD WAR II. The center units would move north into Iraq after the left and right flanks had been secured, then make a sharp right turn to advance into Kuwait from the west to attack Iraqi units there, including the elite Republican Guard. The right flank was also charged with breaching Iraqi lines in Kuwait. The units composing this flank were mainly U.S. Marines.

The attacks on the first day were intended, in part, to screen the main attack and to deceive the Iraqis into thinking that the principal assault would come on the

coast of Kuwait. Although Iraqi defenses were well developed, relatively light resistance was offered, and many Iraqi prisoners were taken. By the second day of the ground war, French troops had secured the left flank of the coalition advance, and the U.S. forces had cut off all avenues of Iraqi retreat and reinforcement. The U.S. 24th Division ended its advance in Basra, Iraq, which sealed the remaining avenue of escape from Kuwait.

With the Iraqis in Kuwait occupied on the right, the Eighth Airborne Corps made a surprise attack on the left, in the west. By nightfall of February 25, well ahead of schedule, the Eighth Airborne Corps was already turning east into Kuwait. When the corps encountered units of the Republican Guard, the vaunted Iraqi elite fled before their advance. By February 27, however, with the 24th Infantry having taken Basra, the Republican Guard was bottled up. The Hammurabi Division, the elite of the elite Republican Guard, attempted to engage the Eighth Airborne Corps in a delaying action to allow the remainder of the Republican Guard to escape. The attempt failed, and the Hammurabi Division was wiped out.

Among the American public, haunted by memories of Vietnam, the war against Iraq had been fraught with much trepidation. In fact, the air and ground campaigns were probably the most successful military operations in modern history. This was due in large measure to overwhelming force and technology, as well as planning that was both careful and bold; but it was also due to the universal ineptitude of the Iraqi response to the coalition and to the poor generalship of Saddam Hussein, who took personal command of much of the war. In the end, the Scud missiles were the only significant element of Iraqi resistance to the coalition attack. The Iraqi air force was essentially a no-show in the war, as were the 43 ships of the Iraqi navy.

A cease-fire was declared at 8 A.M. on February 28, shortly after Iraq capitulated on U.S. terms. The ground war had lasted 100 hours. Operation Desert Storm had achieved its mission of liberating Kuwait, and it had done so with minimal coalition casualties: 95 killed, 368 wounded, 20 missing in action. Iraqi casualties were perhaps as many as 50,000 killed and another 50,000 wounded; 60,000 Iraqi troops were taken prisoner. Iraqi military hardware was destroyed, as were communication equipment and military bases, barracks, and other facilities.

During the war, Iraqi forces in Kuwait terrorized citizens and laid waste 300 oil fields, setting numerous blazes. The oil-field fires were one of the worst legacies of the war, burning for years to come. In addition, Saddam committed unprecedented acts of ecological terrorism by creating massive and deliberate oil spills into the Persian Gulf, hoping to foul Saudi desalinization plants, which produce drinking water for the nation. In Iraq itself varying degrees of civil unrest followed in the wake of the ruinous war, especially in outlying provinces and particularly in the chronically rebellious Kurdish provinces. But

Saddam managed to hold on to power and continuously to indulge in bouts of defiance against sanctions leveled and conditions imposed by the United Nations.

In its immediate aftermath, the Persian Gulf War appeared to many Americans to be the first “good” war the United States had fought since World War II. In an era marked by ambiguity of motives and murky options that often amounted to attempting to determine the least of any number of manifest evils, here was a conflict that seemed a simple matter of choosing to defend the hapless against the hateful. There had been a number of voices raised in the United States—both among the public and in Congress—at the outset protesting the exchange of “blood for oil.” But to most, Hussein soon appeared the devil incarnate and a stark contrast to the head of the coalition forces, General Schwarzkopf, who was frank and professional in his many wartime press conferences, and to the head of the American joint chiefs, the clear-thinking, politically astute African-American general, Colin Powell (b. 1937). The pleasure most Americans took in the victory over Saddam Hussein was evident in the public adulation accorded Schwarzkopf and Powell and in the unprecedented 90-percent-plus popular approval rating President Bush garnered during and immediately following the war.

To be sure, Saddam Hussein was a tyrant. But the century had seen many tyrants, and many far worse—in terms of body count—than he: Stalin, Hitler, Mao Zedong (Mao Tse-t’ung), Pol Pot, and others. The difference was—and it was a difference that made the Gulf War unique at the time—never had so many people seen the work of a tyrant so close and immediate. CNN, the cable television 24-hour news network, covered the war in such thorough and intimate detail that Powell, Schwarzkopf, and others admitted to using the broadcasts as valuable supplements to official intelligence. Vietnam had, of course, been reported on television—and the effect was powerful—but here television audiences nationwide not only got reports on the Persian Gulf War, they also saw it unfold at the same time as the commanders did.

It was a late 20th-century war, creating around it an electronic community and, in the process, translating complex moral and political issues into real-time television melodrama. Certainly George Bush treated the war as a miniseries depicting the triumph of good guys over bad as he began to talk boldly about a “new world order” based on this first post-cold war conflict, which would see a confluence of world powers policing “outlaw” nations and protecting the globe from the threat they represented. But even as the smoke continued to billow into the atmosphere from sabotaged Kuwaiti oil wells, ethnic conflicts in Africa and the Balkans raised issues that appeared to befuddle the same world that had united against Hussein. When the United States and the United Nations seemed to ignore the genocide of “ethnic cleansing” in these new trouble spots, their irresolution called into question just

how much the Gulf War had to do with humanitarian rescue and how much with fossil fuels.

However hard President Bush tried to make Desert Storm into the antidote for America’s so-called Vietnam syndrome, he could not maintain his popularity when the war degenerated into something of a personal squabble with Saddam after the fighting was over. Bush found himself attacked for sending Saddam the confused diplomatic signals that encouraged the Iraqi dictator to invade Kuwait in the first place, for saving that country only to return it to a few incredibly wealthy and arrogant oil autocrats, for failing to finish the job he had started by deposing Saddam, and for floundering in his responses to Saddam’s flouting of UN-imposed sanctions and peace conditions.

Bush’s telegenic military commanders, however, fared much better. Schwarzkopf had become a media darling by the time he retired, conducting a well-received and enriching speaking tour and producing a best-selling autobiography centered on his Gulf War experiences. Colin Powell, his authority swelled by the success of the war, proved a thorn in the side of the new U.S. president, Bill Clinton (b. 1946), blocking Clinton’s attempts to integrate openly gay men into the military and frustrating Clinton’s efforts to make drastic cuts in the defense budget shortly after he assumed office.

As an African American who enjoyed tremendous prestige and great popularity, Powell seemed poised to run for political office himself as he resigned early in the Clinton administration. Instead, he wrote his own best-selling autobiography and conducted an extended publicity tour to sell it. In the book, Powell admitted that it was he—and not George Bush—who refused to continue the war in order to bring down Saddam Hussein and, in fact, that he had been opposed to going to war with Iraq from the start. Ironically enough, President George W. Bush (b. 1946)—George H. W. Bush’s son—would make Powell his secretary of state primarily because of the reputation he gained from a war he did not want to fight and, most felt, had called off too early.

Persian Invasion of Greece (480–479 B.C.E.)**PRINCIPAL COMBATANTS:** Persia and Greece**PRINCIPAL THEATER(S):** The Aegean coast of southern Greece**DECLARATION:** None**MAJOR ISSUES AND OBJECTIVES:** Persia sought to invade, conquer, and subjugate the Greek city-states; Greece sought to stave off the invasion.**OUTCOME:** At Thermopylae, Xerxes defeated the Spartans only to see the invasion ultimately fail because of Athenian prowess at sea.**APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:** Unknown**CASUALTIES:** Unknown**TREATIES:** None

After the Persian defeat during the MARATHON CAMPAIGN in 490 B.C.E., Darius I (the Great; c. 558–486 B.C.E.) made plans to invade and conquer Greece but died before he could execute them. In 480, his son Xerxes (c. 519–465 B.C.E.) fell heir to the throne and to his father's ambitions and led the invasion, attacking from Macedonia and moving south through Thessaly. Led by Sparta's king, Leonidas (d. 480 B.C.E.), the small Greek army met the vastly superior Persian force at Thermopylae. For two days Leonidas withstood the Persian onslaught and held in check Xerxes' advance. At length, the Persians, attacking from the rear, trapped the Greeks in a narrow pass. By then the Spartan king had ordered most of his troops to retreat, while he and his 300-member royal guard remained behind to fight the invaders down to the last man. The episode clearly made a deep impression on the Greek imagination, and—thanks in no small measure to Herodotus—Thermopylae gave rise to the legend that Spartans never surrendered.

Meanwhile, the Greek navy, mostly Athenian, fought the Persians in the Aegean. Indeed the Greek navy saved the day, destroying Xerxes' fleet, causing the Persians to flee back to Asia Minor, and greatly enhancing the power and prestige of Athens. Left in charge of the Persian force in Greece, Mardonius (d. 479 B.C.E.) attacked Boeotia in 479 but was thwarted by Pausanias (d. 471 B.C.E.), who led the bedraggled Greeks through some ingenious maneuverings into the heart of the Persian camp, which they sacked, killing Mardonius in the process. The Greek fleet finished the Persian navy at Cape Mycale near Samos, cutting off all possibility of a Persian attack through Europe.

Persian Invasion of Mogul India

(1738–1739)

PRINCIPAL COMBATANTS: Mogul Empire vs. Persia**PRINCIPAL THEATER(S):** India**DECLARATION:** Nadir Shah invaded India on May 10, 1738.**MAJOR ISSUES AND OBJECTIVES:** To punish the Indians for coming to the aid of the Afghans under Persian attack, Nadir Shah invaded India.**OUTCOME:** The Persians defeated and sacked the Mogul Empire, but left the current emperor in power.**APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:**

Persians, 50,000; Moguls, 300,000

CASUALTIES: Persians, 3,400 killed; 5,000 wounded; Moguls, 17,000 killed; 20,000 citizens of Delhi massacred by Nadir Shah**TREATIES:** None

When Muhammad Shah (1702–48), the Mogul emperor, allied himself with the Afghans and against the Persians during the PERSIAN-AFGHAN WAR (1726–1738), he unfortunately brought India to the attention of the Persian ruler, Nadir Shah (1688–1747). After forcing Kabul to surrender in September of 1738, Nadir drove on into the Mogul Empire looking for loot to shore up his war-depleted resources. Brushing the Mogul force aside at the Khyber Pass, Nadir and his 50,000 men marched toward the Punjab, seizing Peshawar and Lahore as they went. At Karnal the Moguls mustered some 300,000 Indians and 2,000 elephants to halt the Persian advance, but the clever Nadir sneaked past their encampment to set up an ambush at a nearby village. Nadir lured part of the Indian force from its camp and routed it after a four-hour battle, which led to an abject Indian surrender. After the triumphant Nadir entered Delhi, rumors of his murder led his soldiers to riot, which almost cost him his life at the hand of Indians resisting the rioting troops. A vengeful shah ordered the massacre of some 20,000 Indians as the Persians sacked and burned Delhi. Though he left Muhammad Shah in power, Nadir took the Peacock Throne on which the Indian ruler sat back with him to Persia, along with the crown jewels, the Koh-i-noor diamond, and a huge indemnity of 700 million rupees collected from the Indian citizens. So great was the Indian booty, Nadir was able to exempt the whole of Persia from taxes for three years, at least temporarily solving the vexing problem of how to make his empire financially sound.

Persian-Kushan War (c. 250)

PRINCIPAL COMBATANTS: Persia vs. the Kushans

PRINCIPAL THEATER(S): Bactria or Gandhara

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Presumably, Shapur I of Persia wanted to make conquests in central and western Asia.

OUTCOME: Shapur I defeated the Kushans under Vasuveda but failed to follow up on his triumph; thus, while the Kushans were driven out of central and western Asia, the Persians did not step in to fill the vacuum.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Shapur I (d. 272), the Sassanid emperor of Persia, mounted an expedition against the Kushans, who were led by Vasuveda. The exact date of the expedition is unknown, as is the precise location of the brief war, which, however, is believed to have taken place in Bactria or Gandhara.

Unfortunately for Persia, internal strife and Shapur's own preoccupation with the ongoing struggle against Rome prevented exploitation of the triumph over the Kushans, who were, in fact, driven from central as well as western Asia.

Persian-Lyidian War (547–546 B.C.E.)

PRINCIPAL COMBATANTS: Persia vs. Lydia (with Chaldea, Egypt, and Sparta)

PRINCIPAL THEATER(S): Lydia and Ionia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Lydia's King Croesus sought either conquest or to forestall Persian invasion; Persia's Emperor Cyrus sought conquest.

OUTCOME: Lydia fell to Persia, as did the former Lydian satellite cities along the Ionian coast.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Persians, 50,000; Lydian forces were larger

CASUALTIES: Unknown, but certainly heavy among the Lydians

TREATIES: None

By about 550 B.C.E., Croesus (d. 547 B.C.E.), king of Lydia, had successfully annexed a number of the Greek cities along the coast of Asia Minor. From these conquests, Croesus moved on, in 547, to invade Cappadocia, a province of Persia-Media. Just why Croesus crossed the Halys into this territory is unclear. He may have wanted to restore his brother-in-law Astyages (fl. 584–549 B.C.E.) to the Median throne, or he may have been moving preemptively against what he believed would be a Persian invasion of Lydia. Allied with Croesus were the forces of Chaldea, Egypt, and Sparta.

The Persian army was led by Cyrus II (c. 600–529 B.C.E.), who engaged Croesus's forces at the Battle of Pteria in 547 or 546. The battle, under harsh winter conditions, was fierce, but ultimately indecisive—although it did result in the retreat of Croesus back across the Halys.

Returned to Sardis, Croesus communicated with his allies in an attempt to organize a new invasion during a more favorable season; however, Cyrus stole a march on him by invading Lydia with at least 50,000 men. As Cyrus closed in on Sardis, Croesus hastily assembled a superior force to meet him. The greatly outnumbered Cyrus deployed his forces with consummate and innovative skill, using a great square formation rather than the conventional parallel order of battle. This formation tempted the superior Lydian army to attempt an easy envelopment. Anticipating this movement, however, Cyrus was able to exploit the gaps that were created by it. His forces drove the Lydians to great disorder and ultimately routed the army of Croesus. Cyrus took Sardis but treated the conquered people with great magnanimity.

A short time later, during 546, the Persian general Harpagus (fl. sixth century B.C.E.) conquered the Ionian cities, which had been under the control of Croesus. After that king's defeat, these cities made bold to assert their independence. Harpagus quickly crushed the incipient rebellions and seized control of the cities for Persia.

Persian Revolts (521–519 B.C.E.)

PRINCIPAL COMBATANTS: Forces of Darius I vs. various pretenders and rebel forces

PRINCIPAL THEATER(S): Persia, Media, Susiana, Babylonia, Sagartia, Margiana, and Armenia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Consolidation of control over the Persian Empire

OUTCOME: Darius I firmly established himself as ruler of the empire and put himself in position for further conquests.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After he became ruler of Persia in the course of the PERSIAN CIVIL WAR of 522–521 B.C.E., Darius I (the Great; c. 588–486 B.C.E.) embarked on a ruthless campaign to enforce and secure his rule. He led an expedition to Media to assassinate the putative son of Cyrus II (the Great; c. 600–529 B.C.E.)—Gaumata (d. 521 B.C.E.), a Magian, who claimed to be Bardiya (d. c. 521 B.C.E.) (called by Herodotus “Smerdis”). Darius claimed the real heir had been secretly murdered by his brother, Cambyses II (d. 522 B.C.E.), who had recently died, perhaps a suicide, while in Egypt. The priest Gaumata, then, was a fraud, who had usurped the Median throne in 522.

The assassination of Gaumata accomplished, Darius led or dispatched forces to Susiana, Babylonia, Sagartia, and Margiana to crush uprisings in these places. Each had taken advantage of the internal chaos of Persia during the civil war and had established independent governments. Darius brought these to an end.

In the meantime, back at home in Persia and in Babylonia, impostors claiming descent from Cyrus or Cyaxares (d. 585 B.C.E.) attempted to usurp the throne. Darius crushed their forces quickly.

In 519 B.C.E., Armenia and Parthia rose against his rule. Troops nipped budding revolts there, then had to return to Susiana, where a third revolt was under way. Archaeological evidence exists that, in Susiana, Darius fought 19 battles in which he crushed nine rebel leaders.

After 519 B.C.E., Darius had so thoroughly secured his empire that he launched invasion offensives to acquire more (see PERSIAN CONQUESTS).

Persian Revolution (1906–1909)

PRINCIPAL COMBATANTS: Kajar Shah of Persia (with Russian aid) vs. liberal revolutionaries

PRINCIPAL THEATER(S): Persia (Iran)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The shah sought to preserve an absolute monarchy; liberals sought to introduce constitutional government.

OUTCOME: Despite Russian aid, the shah was ultimately forced to abdicate.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Persia entered the 20th century as a faltering absolute monarchy, its shah, Mozaffar od-Din Shah (1852–1907), weak, and its economy weaker. In 1906, the shah bowed to popular pressure for a constitution and signed the Fundamental Law, by which Persia became a constitutional monarchy. Shortly after signing the document, the shah died, leaving the nation to his son, Muhammad Ali (1872–1925). Immediately, the new shah sought to abrogate the constitution by overthrowing the Majles, the new parliament. He was aided by the Russian czar Nicholas II (1868–1918), who had recently put down the RUSSIAN REVOLUTION (1905). Muhammad Ali formed a brigade of Persian Cossacks, which terrorized the parliament into suspending itself. This did not prevent revolutionaries from assassinating the shah’s reactionary prime minister, Mirza Mahmoud Khan (d. 1906). The newly formed parliament yielded to the shah in enacting an absolutist constitution, yet it simultaneously declined to abrogate the original liberal document. The new prime minister, Aynu’d-Dawlih a liberal, united with others in the parliament in supporting the original constitution and was arrested for this in December 1907. A few months later, in June 1908, the shah used his Persian Cossacks to break up the second parliament. A third was formed and, in obedience to the shah’s will, repudiated the original 1906 constitution, claiming that it ran contrary to Muslim law.

Yet the seeds of revolution had been sown. In 1908, Tabriz rebelled against Muhammad Ali, and Rasht and Isfahan followed the next year. In March 1909, Persian and Russian forces combined to crush the rebels, but Bakhtiari tribespeople overran the capital, Tehran, in July 1909, forcing Muhammad Ali to abdicate in favor of his 12-year-old son, Ahmed Mirza (1898–1930). He was subject to a regent who initially accepted some reform, but when Ahmed Mirza came into his majority, he proved a corrupt, inept, and ineffective leader. A new revolution erupted in 1921 (see PERSIAN REVOLUTION [1921]).

Further reading: Peter Avery, *Modern Iran* (New York: Praeger, 1965); Edward G. Browne, *The Persian Revolution of 1905–1909* (Washington, D.C.: Mage Publishers, 1995); Sir Percy Sykes, *A History of Persia* (RoutledgeCurzon, 2003).

Persian Revolution (1921)

PRINCIPAL COMBATANTS: Forces loyal to Reza Khan Pahlavi vs. the government of Ahmed Shah

PRINCIPAL THEATER(S): Persia (Iran)

DECLARATION: Coup of February 21, 1921

MAJOR ISSUES AND OBJECTIVES: Overthrow of the Kajar dynasty

OUTCOME: Pahlavi overthrew Ahmed Shah and established the Pahlavi dynasty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: The coup was accomplished with 3,000 troops.

CASUALTIES: Few

TREATIES: None

Ahmed Shah (1898–1930), who came to power as a result of the PERSIAN REVOLUTION (1906–1909), proved a corrupt and incompetent ruler, who brought Persia to the edge of total political and economic collapse, subject to the whim of Great Britain and Russia, which, between them, had commercial control of the country. Then, during WORLD WAR I, Iran was the scene of much intrigue from the pro-British and pro-German groups among the Persian nobility, which had pretty much gained control of the Iranian parliament (called in Iran the Majles). When the war-spawned economic and political disruptions were greatly exacerbated by growing famine and the looming national bankruptcy, Great Britain offered both financial and military assistance. But the Nazi faction won out in the Majles, Iran refused the British offer (with all the strings it implied) and Great Britain withdrew its financial and military experts from Persia.

It was into this chaos that an Iranian officer, Reza Khan (1877–1944), of the Persian Cossack Brigade, stepped in to take charge. In collaboration with a political writer, Sayyid Zia od-Din Tabataba'i, he staged a coup d'état on February 21, 1921. Immediately seizing control of all the military forces, Pahlavi named himself minister of war in the new provisional government and quickly seized dictatorial control. He cleared Russian troops out of the country, then, in 1923, as prime minister, negotiated the withdrawal of British forces as well. In 1925, he pushed the Majles (parliament) to make Ahmed Shah's removal official and he himself was named shah. Thus fell the last of the Kajar shahs, and thus was the Pahlavi dynasty established under the man now known as Reza shah.

TREATIES: Treaty of Paucarpata, 1837; rejected

In 1835 Bolivian dictator Andrés Santa Cruz (1792–1865) invaded Peru, ostensibly to help quell an army rebellion against Peruvian president Luís José de Orbegoso. Having conquered the country instead, Santa Cruz created what proved to be a short-lived union of Peru and Bolivia that he called the Peruvian-Bolivian Confederation. Bolivia itself he split into two parts, allowing Orbegoso to remain as president in the north and placing General Ramón Herrera in charge in the south. With both these states then joined to Bolivia, Santa Cruz made General José Miguel de Velasco president of the latter. For himself Santa Cruz created the office of “protector” of the confederation, a lifetime and hereditary office in which the true power lay.

Perhaps because of his reputation as the able leader of Bolivia, not only did many influential Peruvians welcome his rule, but also Great Britain, France, and the United States quickly recognized the confederation. But the sudden appearance of a new and powerful state in South America worried some of Santa Cruz’s neighbors, especially Argentina and Chile who feared and opposed the powerful new state. Moreover, Chile was locked in a financial dispute with Peru. Callao (a major port near Lima) was a major economic rival of Chile’s port at Valparaíso, and relations had been rapidly deteriorating

between Chile and Peru even when Peru was still an independent country. Now, backed by Peruvians opposed to Santa Cruz, Chile declared war on Peru on November 11, 1836. But an invasion early the following year resulted in a standoff. Andrés Santa Cruz, who now presided over the Peruvian-Bolivian Confederation, sued for peace, but Chile rejected the proposed Treaty of Paucarpata. Invasion efforts were renewed, and in 1838 General Manuel Bulnes (1799–1866), leading a Chilean army, captured Lima. Santa Cruz’s army recaptured it before the end of the year, but the Peruvian-Bolivian forces were badly defeated in the next major battle—January 20, 1839, at Yungay. Santa Cruz sought refuge in Ecuador, and the Peruvian-Bolivian Confederation was dissolved.

Peruvian-Bolivian War (1841)

PRINCIPAL COMBATANTS: Peru vs. Bolivia

PRINCIPAL THEATER(S): Bolivia

DECLARATION: Peru on Bolivia, 1841

MAJOR ISSUES AND OBJECTIVES: Peru attempted to annex Bolivia.

OUTCOME: The invasion was quickly defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of peace, June 1842

When former Bolivian dictator Andrés Santa Cruz (1792–1865) fled into exile before an advancing Chilean army during the War of the PERUVIAN-BOLIVIAN CONFEDERATION, Agustín Gamarra (1758–1841) assumed the presidency of Peru. Gamarra had been one of those Peruvian generals whose revolt led Santa Cruz to invade Peru and set up the confederation in the first place. He and the few other Peruvians of note who were disgruntled with the new union headed by the effective and charismatic Santa Cruz, had supported Chile in the war, despite the fact that Chile was fighting as much to keep Peru from becoming its economic rival as it was to remove Santa Cruz from power.

As president of Peru, Gamarra longed to turn the tables completely on Bolivia. In 1841 he launched an invasion in an effort this time to annex Bolivia to Peru. Bolivian forces crushed the invaders at the Battle of Ingavi on November 18, 1841. Gamarra, who led Peruvian forces,

was killed on the battlefield. A treaty was concluded the following year. Meanwhile, both Peru and Bolivia entered into a period of great internal conflict and massive disorder.

Peruvian Civil War (1842–1845)

PRINCIPAL COMBATANTS: Constitutionalist forces vs. dictatorship of Manuel Ignacio Vivanco

PRINCIPAL THEATER(S): Peru

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Constitutionalist wanted to end the Vivanco dictatorship.

OUTCOME: After a single decisive battle, Vivanco's forces were defeated, and he fled the country.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After Peru's ignominious defeat in its over-hasty invasion of Bolivia in 1841, the country fell into a period of civic unrest during which there emerged two parties—the liberals and the conservatives—with ill-defined political agendas and programs that only enhanced the instability. Following a year of political chaos and fighting, conservative champion Manuel Ignacio Vivanco (the Regenerator; fl. 1840s) used the army to seize power. Vivanco set up a dictatorship, and he abrogated the 1839 constitution, refused to convene congress, and shot anyone who crossed him. In southern Peru, Constitutionalist opponents of Vivanco formed under the leadership of liberal Ramón Castilla (c. 1797–1867). He led troops into Lima and, in Vivanco's absence, seized the capital. Vivanco fought Castilla's forces at the Battle of Carmen Alto on July 22, 1844, and suffered a decisive defeat. Vivanco fled the country, but civil strife persisted until the following year, when Castilla was elected to the presidency. A degree of order was then restored to Peru, as Castilla—despite his mestizo background—managed to dominate the political scene for the better part of the next two decades.

Peruvian Guerrilla War (1980–ongoing)

PRINCIPAL COMBATANTS: Shining Path vs. MRTA guerrillas and Peruvian government forces

PRINCIPAL THEATER(S): Peru, especially Ayacucho and Lima

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The guerrillas apparently seek to establish a radical Maoist/Incan government.

OUTCOME: As of mid-2002, a low-level guerrilla war continues.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Between 1980 and 2001, more than 25,000 people, mostly civilians, have been killed; in the worst single incident, 66 civilians were massacred in an Ayacucho village.

TREATIES: None

The Sendero Luminoso (“Shining Path”) guerrilla group, who combined radical Maoism with ancient Incan tribal traditions, began raiding parts of Peru in 1980. Initially, the attacks centered on Ayacucho but then targeted the capital city of Lima as well.

Raids included an attack on an Ayacucho prison, which liberated about 250 prisoners, sabotage of utilities, bombing of rail lines and public buildings, and a horrific raid on an Ayacucho village, which resulted in the deaths of 66 villagers. Lima and the port city of Callao were repeatedly attacked. In conjunction with military action, the Shining Path incited civil disturbances and strikes. In 1990, they targeted the new president, Alberto Fujimori (b. 1938), joining forces with another terrorist group, Movimiento Revolucionario Tupac Amará (MRTA). In 1992, the two groups attempted to assassinate Fujimori.

Fujimori responded to the escalation in guerrilla violence by declaring war on “all guerrillas.” Government forces enjoyed some success, but, on December 17, 1996, a band of MRTA guerrillas attacked the residence of the Japanese ambassador during a state reception and took 600 hostages. The guerrillas demanded the release of their captured comrades, showing their good faith in the stand-off by releasing most of the hostages. On April 22, 1997, Peruvian government forces stormed the ambassador's residence, killed the guerrillas, and successfully freed the remaining 72 hostages.

This did not bring an end to the guerrilla war, which continues fitfully as of mid-2004.

Peruvian Revolt (1780–1782)

PRINCIPAL COMBATANTS: Indian rebels under Tupac Amarú vs. Spain

PRINCIPAL THEATER(S): Peru

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Tupac Amarú sought to overthrow Spanish rule in Peru.

OUTCOME: Spain regained control of the country.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

75,000 Indian rebels; 60,000 Spanish colonial troops

CASUALTIES: Unknown

TREATIES: None

The Spanish conquistadores never succeeded in entirely suppressing Indian rebellion in Peru, and as late as 1780, José Gabriel Condorcanqui (c. 1742–81), assuming the name of Tupac Amarú II, after his ancestor and the last of the great Inca chieftains, led a rebellion. A hereditary chief—the Indians called them *caciques*—in the Tinta region of southern Peru, Tupac Amarú II had been schooled by the Jesuits but lived the traditional life among the Indians. He sparked the revolt in 1780, when he arrested and executed the provincial administrator—or *corregidor*, Antonio Arriaga, on charges of cruelty.

It was to be the last general Indian rebellion against Spain, and at first it enjoyed the support of some among the Creoles (Spaniards born in the Americas), who disliked Spanish cruelty toward the Indians and were in theory opposed to their enforced labor. His army consisted of Incas of the highlands, who, although poorly equipped, were large in number. Late in 1780, some 75,000 rebels, aided by the Creoles, stormed across southern Peru and into present-day Bolivia and part of Argentina. Resistance crumbled before the onslaught, and Tupac Amarú declared himself Peru's liberator.

But, as the revolt spread, it had become a violent battle between Indians and Europeans, and Tupac Amarú II lost the support of the Creoles, turning the tide against him. When he led two assaults against the Spanish colonial stronghold of Cuzco, he and his family were taken prisoner during the second assault. In March 1781, they were taken to Cuzco and, after Tupac was forced to witness the execution of his wife and sons, he was mutilated, drawn and quartered, and beheaded. This, however, did not put an end to the revolt, which was continued by Tupac Amarú's half brother, Tupac Amarú III (d. 1787). The rebels laid siege against La Paz twice. By this time, however, the Spanish had amassed a well-armed force of 60,000, which crushed the rebellion. In an effort to

appease the rebels, Spanish officials granted a general amnesty.

Peruvian Revolt (1948)

PRINCIPAL COMBATANTS: Conservative forces led by Manuel Odría vs. leftist forces of the Alianza Popular Revolucionaria Americana (APRA)

PRINCIPAL THEATER(S): Peru

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Struggle between left-wing and right-wing forces; the right wing sought to topple a government sympathetic to and rife with APRA members.

OUTCOME: The forces of Odría prevailed, propelling Odría to the Peruvian presidency.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Peru's American Popular Revolutionary Alliance (Alianza Popular Revolucionaria Americana [APTA]), known as the "Aprista movement," had been formed in 1924 by a Peruvian intellectual named Victor Raul Haya de la Torre (1895–1979) then living in exile in Mexico City. Calling for the unity of the American Indians and an end to American imperialism, and supporting a planned economy and the nationalization of foreign-owned business inside Peru, the Partido Aprista suffered its up and downs, falling permanently afloat of the powerful Peruvian military when some party members assassinated the head of a ruling military junta in 1933. Declared illegal after the assassination, the party's fortunes rebounded when it backed the winner of the 1939 presidential elections, Manuel Prado (1889–1967). WORLD WAR II brought not only economic prosperity to Peru, but something like the promise of real democracy, as crypto-fascist militarism fell out of favor. Pressured by public opinion, the retiring President Prado in 1945 approved the candidacy of José Luis Bustamante y Rivero (1894–1979). And Bustamante, a left-leaning lawyer from Arequipa, won the election with the not inconsiderable help of Victor Raul Haya de la Torre and the Partido Aprista.

The Apristas may have been riding Bustamante's more respectable coattails, but they did nevertheless take numerous seats in both houses of the Peruvian legislature and accepted three posts in the cabinet. In power at last, they were determined to make changes and embarked on

a program of liberal reform. This provoked a conservative reaction, and when a conservative newspaper editor was slain in 1947, the Apristas were blamed. The accusations moved Aprista government officials essentially to boycott the government, which, in turn, ground to a halt.

Under deteriorating political and economic conditions, dissident Apristas stormed and took the port town of Callao in October 1948. This prompted the seizure of warships in port by discontented sailors and civilians. Civil war seemed unavoidable, and as the country tottered on the brink, General Manuel Odría (1897–1974), chief of staff of the Peruvian army, suddenly led military loyalists against the Apristas during October 27–29. The action quickly assumed the form of a full-scale rebellion against the Bustamante government, which collapsed. Odría assumed power and immediately outlawed the APRA and other leftist parties. Military and paramilitary troops were sent to arrest leftists, many of whom were imprisoned or sent into exile. Haya de la Torre fled to the asylum of the Colombian embassy in Lima. As for Odría, he was formally elected president on July 2, 1950.

Peruvian War of Independence (1820–1825)

PRINCIPAL COMBATANTS: Peruvian and other independence fighters vs. Spanish royalists

PRINCIPAL THEATER(S): Peru and Upper Peru (Bolivia)

DECLARATION: Peruvian independence declared, July 1821

MAJOR ISSUES AND OBJECTIVES: Independence from Spain

OUTCOME: Independence was achieved, both for Peru and the newly created state of Bolivia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

9,000 independence fighters (Peruvian and others) vs. 9,300 royalists

CASUALTIES: At Juní, the rebels lost 55 killed and 99 wounded; the royalists lost 374 killed and 80 captured. At Ayacucho, the rebels lost 310 killed, 609 wounded; the royalists lost 1,400 killed, 700 wounded, 2,600 captured.

TREATIES: None

Napoleon's invasion of Spain in 1808 sparked revolutions throughout Central and South America. For more than a decade, the Creoles (those of Spanish descent born in the Americas) launched successful wars of independence in all the Spanish colonies but Peru, where an entrenched and conservative aristocracy, including a relatively high number of native Spaniards, led to the concentration of

royal military power in Lima and to the grimly effective suppression of the kind of Indian uprisings that often lent support to Creole revolts elsewhere.

As a result, liberating Peru fell to outsiders, among them the great South American revolutionary leader José de San Martín (1778–1850), who saw Peru as the key to the liberation of all South America from the Spanish yoke. Not only did he wish to disable this bastion of Spanish imperial power on the continent, he also wanted for Argentina the silver mines of Upper Peru, now in the hands of the Spanish. Having already lost earlier to the imperial forces in the mountains, San Martín decided in 1818 to surround them by liberating Chile (see CHILEAN WAR OF INDEPENDENCE) and using that country as a base for a seaborne assault on Peru. San Martín led 4,000 troops from that struggle, along with the new Chilean navy (under the command of the British Lord Thomas Cochrane [1775–1860]) to Pisco, Peru. The troops landed and established a camp at Huacho. San Martín used this as his recruiting headquarters, and, soon, his small Chilean army became the nucleus of a Peruvian army of independence.

With San Martín's forces threatening, the Spanish colonial government evacuated Lima, and took refuge in the interior. The citizens of the capital then invited San Martín to enter the city in July 1821. Upon entering Lima, San Martín proclaimed the independence of Peru and "Upper Peru" (Bolivia).

San Martín well understood that it was one thing to proclaim independence and quite another to make it a fact. To attack the strong, entrenched Spanish forces in the interior, he called upon the "Great Liberator," Simón Bolívar (1783–1830), and the two leaders pooled their forces at Guayaquil in July 1822. This completed, San Martín decided to relinquish control of the army entirely to Bolívar. With Antonio José de Sucre (1785–1830), Bolívar led a 9,000-man army to victory against Spanish royalist forces at the Battle of Junín on August 6, 1824. On December 9, 1824, Sucre led 6,000 men against a significantly superior royalist force (9,300 men) at the Battle of Ayacucho. Sucre was not only victorious, but he captured the entire Spanish force led by José de La Serna (1770–1832). This compelled the Spanish to withdraw from Peru.

Upper Peru remained in royalist hands. The revolution had not been going well there. But the victory in Peru freed Bolívar and Sucre's troops to aid the freedom fighters in Upper Peru, and in 1824 a 4,000-man Spanish royalist force capitulated to the reinforced independence army. Upper Peru gained its independence as Bolivia.

Philip of Macedon's Northern Conquests

(345–339 B.C.E.)

PRINCIPAL COMBATANTS: Macedon vs. Epirus, Thessaly, Illyria, and Danubian tribes, as well as Perinthus and Byzantium

PRINCIPAL THEATER(S): Middle East and middle Europe

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: Philip greatly extended the Macedonian empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Philip II of Macedon (382–336 B.C.E.) conducted a campaign of conquest through Epirus, Thessaly, and the southern portion of Illyria during 344–342 B.C.E. With these regions subdued, he moved north into the wild Danube region, where he intimidated the northern tribal peoples. This accomplished, Philip pushed his conquests eastward within Thrace, acquiring territory as far as the Black Sea.

In 339, Philip met united opposition from the peoples of Perinthus and Byzantium, who were backed by Athenian finance. Repulsed in battles for these territories, Philip withdrew and from 339 to 338 B.C.E. turned his attention to the Fourth SACRED WAR.

Philippine Guerrilla Wars (1969–1986)

PRINCIPAL COMBATANTS: Philippine government vs. Huk and Moro guerrillas

PRINCIPAL THEATER(S): The Philippines, especially Luzon and Sulu

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: For the rebels, the overthrow of Ferdinand Marcos; for Marcos, the continuation of his personal rule

OUTCOME: Marcos fell from power, and rebel activity markedly dissipated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After the United States liberated its former protectorate, the Philippines, from their Japanese conquerors in WORLD WAR II, the Americans came under international pressure to act as it was urging European powers with former colonies in the Pacific and Southeast Asia to act. In 1946, the United States finally granted the islands the independence it had been more or less promising Filipinos for half a century. But, during the war, intense fighting, especially around Manila, during the Japanese retreat had virtually destroyed the Filipino capital and the country's economy. It also had left the islands subject to special conditions set by the U.S. government through the Bell Act and other heavy-handed postwar policies. Some of these were more onerous than others, but they all fueled Filipino resentment. For example, free trade with the islands was extended for eight years, with gradually increasing tariffs, and the United States leased a number of military bases for 99 years. The latter ensured an extensive military presence over which the Filipinos had no control because U.S. authority on the bases amounted to all but territorial rights. Finally, in return for the release of U.S. payments to cover damages done by the war, the Philippine government was forced under the so-called Parity Amendment to change its constitution to grant U.S. citizens (read American big business) equal rights with Filipinos in exploiting the islands' ample natural resources.

Soon resentment flared into open dissent and then outright rebellion from the Communist-led Huk militants. The U.S.-backed government responded with heavy-handed repression and clearly fraudulent national elections, which placed Elpidio Quirino (1890–1956) in the presidency. By 1954, the HUKBALAHAP REBELLION had been quelled, partly with U.S. military aid but also as a result of the opening of the political process to greater participation by the Filipino masses. Still, under the charismatic Ramon Magsaysay (1907–1957) and his successors, true reform remained elusive—for such reform faced adamant resistance from a corrupt legislature and an entrenched bureaucracy. Unrest was nevertheless usually handled through the electoral process and legal protest.

In November 1965, Ferdinand E. Marcos (1917–89) was elected president. Grave economic problems were exacerbated by Marcos's own venality and arrogance, though these did not prevent him from being the first elected president of the Philippines to win reelection in 1969. By then the Huks had renewed hostilities in central Luzon, where the sense of social injustice among tenant farmers had always been strong. Now their voices were joined by those of the intensely nationalistic Moro (Muslim) rebels in Mindanao. No longer did Filipinos take pride as a matter of course in being an outpost of Christianity in an Asian world; instead, many began to look to precolonial times for an Asian cultural identity and a language, Pilipino, other than English or Spanish. Respond-

ing to these cultural pressures and fears of Communist influence among the growing number of rebels, the Filipino authorities, pushed by a troubled U.S. administration, held one of the more honest—and certainly more peaceful—elections in Philippine history. The voting produced a widely representative Constitutional Convention intended to undertake a fundamental restructuring of power in the waning years of Marcos's legally limited term in office.

Instead, backed by big business interests, mostly American, Marcos used the 1972 typhoon floods in rebel-infested Luzon as an excuse to declare martial law, intending to set up a parliamentary-style government that would allow him to hold onto power. He immediately began suppressing the ongoing violent student demonstrations and arresting opposition politicians in both the Congress and the Convention. To the rebels he offered amnesty if they surrendered their weapons, and many members of the New People's Army, the military wing of the officially banned Communist Party of the Philippines (PKP), did so. On the other hand, the Moros mostly held out, and—with help from Muslim radicals in Malaysia and Libya—even spread their rebellion to the Sulu Archipelago. As Marcos collected unregistered firearms in the streets and countryside, he introduced a prohibition on strikes by organized labor, launched a land reform program, and granted important new concessions to foreign investors. They helped celebrate in turn the new parliamentary system under which Marcos became both president and prime minister, though he failed to convene the legislature called for by his new constitution.

The Moro resistance continued, reaching a peak in 1974, when the Sulu city of Jolo was all but destroyed in the fighting, causing Marcos to increase security there with 35,000 government troops. Afterward, guerrilla activity became sporadic. But now it was also as endemic as the rioting in Manila since Marcos's assumption of dictatorial power.

In 1978, when elections were finally held for an interim National Assembly, rigged results gave the opposition (led by formerly jailed senator Benigno S. Aquino [1932–83]) no seats, which sparked further unrest. In 1980, Aquino went into exile in the United States. In 1981, Marcos, under renewed pressure from the United States, suspended martial law and recalled the legislature. Though the National Assembly had token power, Marcos won a new six-year term in a virtually uncontested election. When Aquino attempted to return in 1983, he was assassinated by Marcos's military, which resulted in more rioting and another rigged election. Increasing internal and international pressure led to Marcos's resignation and a new election, which brought Aquino's widow, Corazon C. Aquino (b. 1933), to power in 1986. Marcos sought exile in the United States, where he died, in Hawaii, in 1989.

Thereafter, as the United States reduced its presence and its influence in the islands, rebel activity in the hills and the jungles decreased. The Moro groups degenerated into outlaw organizations, terrorizing rich tourists for ransom and justifying their greed as part of the late 20th-century radical Muslim attack on the international hegemony of the United States. The administration of Aquino was threatened by six attempted coups, and in 1992, Aquino decided against running for reelection.

Philippine Insurrection (1896–1898)

PRINCIPAL COMBATANTS: Filipino rebels vs. Spain

PRINCIPAL THEATER(S): The Philippines, especially Luzon in the north

DECLARATION: A rebel call to arms on August 26, 1896

MAJOR ISSUES AND OBJECTIVES: Independence and social justice

OUTCOME: The rebellion was defeated, but Spain's hold on the Philippines was weakened.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rebels, 30,000; Spanish 25,000

CASUALTIES: 2,000 combat deaths on both sides

TREATIES: Pact of Biak-na-bato, December 15, 1897

By the late 18th century, Spain's long colonial decline had resulted in the loss of its trade monopoly in the Philippines, which by the 1830s were open virtually without restrictions to foreign merchants. European demand for commercial agricultural products, such as sugar and hemp, gave birth to a class of Chinese-Filipino mestizos who, in time, provided the seeds of a revolutionary independence movement. A passion for nationalism and for reform also blossomed in the late 1800s among the sons of the Filipino elite, who eschewed the parochial schools of the islands for liberal educations in Europe. Among this group of talented overseas students was José Rizal (1861–96), whose political novels and leadership of the so-called Propaganda Movement had a huge impact on the islands.

In 1892, Rizal returned home to form a modestly reformist society called the "Liga Filipino," whose members were careful never to utter the word "independence."

Nevertheless, the always excitable Spanish colonial authorities arrested Rizal in 1892, exiled him to one of the more remote southern islands, and eventually executed him in 1896. Shocked by the arrest, Rizal's followers formed a secret revolutionary society called the "Katipunan," headquartered in Manila and dedicated to expelling the Spaniards from the islands. Under the leadership of a self-educated warehouse worker named Andres Bonifacio (1863–1897), the Katipunan made preparations for armed revolt.

Thus, even before the SPANISH-AMERICAN WAR, many Filipino freedom-fighters—inspired by José Rizal—had already taken up arms in opposition to Spain's corrupt colonial government. When the Katipunan's purpose was unmasked by government agents in the summer of 1898, Bonifacio called for an armed and immediate insurrection on August 26. But rebel attempts to secure independence for the islands failed. Outfought by the Spanish, Filipino revolutionaries were forced to retreat to northern Luzon, but their resistance became entrenched when the Spanish executed Rizal, now considered the father of the independence movement.

Challenging Bonifacio for leadership of the movement in Luzon was a new revolutionary firebrand named Emilio Aguinaldo (1869–1964). Mayor of the Luzon city of Cavite, Aguinaldo had also been arrested for treason by the Spanish, who intentionally crippled the Filipino leader by shooting him in the foot. Under Aguinaldo's leadership, Luzon became the center of the fighting. The province fell again under Spanish control by the end of 1897, when rebel leaders agreed to the Pact of Biak-na-bato. In return for Spanish promises to introduce reforms, Aguinaldo accepted some 400,000 pesos and exile in Hong Kong, where he and other rebel leaders continued to plot a Filipino revolution. With U.S. backing, Aguinaldo returned to the islands on May 19, 1898, after Spain went to war with the United States. When the victorious Americans proved themselves intent on colonizing the Philippines, Aguinaldo launched another rebellion—the PHILIPPINE INSURRECTION (1899–1902).

Philippine Insurrection (1899–1902)

PRINCIPAL COMBATANTS: United States vs. Filipino independence fighters

PRINCIPAL THEATER(S): Philippines

DECLARATION: Philippine Republic proclaimed, January 20, 1899; shots first fired on February 4, 1899.

MAJOR ISSUES AND OBJECTIVES: Filipinos, led by Emilio Aguinaldo, proclaimed the Philippine Republic, refused to recognize U.S. annexation of Cuba following the Spanish-American War, and launched an insurrection against American occupation.

OUTCOME: The independence movement was defeated but not permanently suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

U.S., 70,000; Filipino insurgents, 40,000.

CASUALTIES: United States, 1,073 killed in battle; 3,161 died of disease and other causes; 2,911 wounded. Filipino forces, 16,000 killed in battle. About 200,000 civilians died of disease, starvation, and other causes.

TREATIES: Treaty, May 6, 1902; U.S. proclamation ending the war and granting a general amnesty, July 4, 1902.

After the fall of Manila in the SPANISH-AMERICAN WAR, Philippine nationalist insurgents under Emilio Aguinaldo (1869–1964) reached an informal truce with the occupying forces of the United States. In January 1899, following the conclusion of the Peace of Paris with Spain, the United States announced annexation of the Philippines, having purchased the islands from Spain for \$20 million. Explaining his decision to annex the Philippines to a group of ministers visiting the White House, President William McKinley (1843–1901) said he had looked at all the options and decided he could not give the islands back to Spain, which would be cowardly and dishonorable; nor could he turn them over to Germany or France, America's rivals in the Orient, because that would be bad business and discreditable; nor could he leave them to themselves, since they were "unfit" for self-government and would soon have anarchy and misrule, worse than Spain's domination. There was nothing left for us to do, McKinley continued, but take "them all" and to educate the Filipinos, to "uplift" and "civilize" and Christianize them, and by God's grace do the very best we could by them, as our fellow men for whom Christ also died. And then, he concluded, he went to bed and went to sleep and slept soundly.

But Aguinaldo's rebels had proclaimed Philippine independence on June 12, 1898, and they now refused to accept annexation. On January 20, 1899, the Philippine Republic was proclaimed under the Malolos Constitution, with Emilio Aguinaldo as president. In February 1899, the Filipinos rose in revolt against U.S. colonial rule. A year earlier U.S. warships had brought Aguinaldo back from exile in China to lead his countrymen against Spain. Now that he and his *insurrectos* were demanding Filipino independence within a U.S. protectorate, what U.S. correspondents described as his "ingratitude" sparked outrage "back home" in the states.

McKinley claimed the fighting began when the insurgents attacked U.S. forces, though U.S. troops later testi-

fied that the occupying army fired the first shot. At any rate, the rebellion was under way, and the same *Harper's Weekly* that in early January had hailed Aguinaldo as a hero excoriated him as a savage in March. This "beast" had ordered his men, according to the magazine, to exterminate without compassion or distinction of age or sex all "the civilized race" in the islands. *Harper's* had merely sounded the clarion call for a propaganda war that would treat the Philippine insurrection as a replay of Theodore Roosevelt's (1858–1919) celebrated history *The Winning of the West*. Ironically, before it was over McKinley would be dead and the chief Rough Rider would be in the saddle of the presidency.

THE PHILIPPINES QUESTION AND AMERICA'S IMPERIAL IMPULSE

When Theodore Roosevelt returned from Cuba as the hero of San Juan Hill, he ran for governor of New York and made the Philippine "question" the centerpiece of his campaign. Not only did Roosevelt win the gubernatorial contest, but in 1900 he was nominated as McKinley's running mate in the president's bid for a second term. As in 1896, Populist sentiment ran strong through the Democratic Party, and its candidate—yet again William Jennings Bryan (1860–1925)—was in a strong position going into the election because of the party's critique of big business. But the key to the election became Bryan's anti-imperialism. With unremitting, even gleeful, demagoguery, vice-presidential candidate Roosevelt lashed out at Bryan by focusing on his unpopular foreign policy positions. Aided by the Republican press, Roosevelt identified Bryan as a backer of Emilio Aguinaldo, leader of the Filipino opposition to annexation, and in cartoon after cartoon, editorial after editorial, speech after speech, Bryan was denounced as a coward and a sissy.

After the election, when anarchist Leon Czolgosz (c. 1873–1901) assassinated McKinley at the Pan-American Exposition in Buffalo "TR" had what he called a "bully pulpit" from which to urge his imperial agenda. Many in Congress shared that agenda and, like the new president, compared the troubles in the Philippines to those recently settled with the American Indians on the western Plains. If Americans had not subjugated and dispossessed the Indian, argued Senator Albert Beveridge (1862–1927), there would be no America. If an American argued for Filipino independence, he was arguing that savages had a right to self-government. In taking the Philippines and crushing the natives, Americans weren't violating their most basic principles, they were instead only doing what their fathers had done, pitching the tents of liberty farther westward and continuing the march of the flag. Dissenters were "infidels" to America's manifest destiny.

The army high command was itself controlled by old Indian fighters who had learned their trade fighting in the Plains and Apache wars, and they adapted what they had

learned to defeat Moro tribesmen (see MORO WARS). As the U.S. Army in the American West used Indian scouts, now it also hired Filipino scouts. And when it came to setting up refugee camps or "pacifying" districts, they had picked up the tricks of doing so on Indian reservations, or perhaps during the Civil War in the antiguerrilla campaigns of Missouri, where the rules of civilized warfare had been suspended by decree. As with the Indian wars, then, so with the Filipino revolt. Once this foreign adventure became a war against savages, massacre became not only possible, but likely.

THE INSURRECTION

The fighting began on the night of February 4, 1899, when an insurgent patrol challenged a U.S. guard post near Manila. On the eve of ratification of the Peace of Paris, the challenge was most likely calculated to embarrass and intimidate American forces, which had yet to be reinforced. The troops of VIII Corps were not overawed, however. Major General Elwell S. Otis commanding 12,000 U.S. soldiers against 40,000 insurgents (1838–1909), nevertheless responded vigorously with several attacks that drove back the insurgents and inflicted at least 3,000 casualties on the Filipinos. During February 22–24, insurgents under General Antonio Luna (1866–99) retaliated with a concerted attack on Manila, but U.S. forces led by General Arthur MacArthur (1845–1912) forced them into retreat and by March 31 had pushed the insurgents back to their capital and stronghold in Malolos. After this setback, Aguinaldo took flight, disbanded the formally constituted army, and instituted a guerrilla campaign. Reinforced U.S. forces took the offensive, carrying the war into southern Luzon, the Visayan Islands, Mindanao, and Sulu.

In general, U.S. firepower overwhelmed all the Filipinos could throw together. Before it was all over, the United States would send 70,000 troops, four times as many as it sent to Cuba, and they inflicted many more times the casualties. In the opening battle, Admiral George Dewey (1837–1917) steamed up the Pasig River and fired 500-pound shells into Filipino trenches, creating so many dead natives that the Americans used their bodies for breastworks. A British witness mourned: "This is not war; it is simply massacre and murderous butchery." And that was only the beginning. The *insurrectos* held out for three long years, and to do so against such odds, they had to have had the support of the population. General Arthur MacArthur, commander of the war, was reluctant to accept that fact. At first believing that Aguinaldo's troops represented only a faction and refusing to even think that all of Luzon was opposed to the Americans, he later admitted that he was "reluctantly compelled" to understand that Filipino guerrilla tactics depended upon almost the complete unity of action of the entire native population. This meant, of course, that every Filipino was the enemy.

In response, the army targeted Aguinaldo, who was captured by General Frederick Funston's (1865–1917) Filipino scouts on March 23, 1901. Aguinaldo was pressured into swearing allegiance to the United States and into issuing a proclamation calling for peace. By this time, however, the guerrilla war had taken on a life independent from its original leader. For the next year, U.S. forces were subject to sporadic attack until virtually all of the Filipino military leaders had been located, rounded up, and placed under arrest. The last of these leaders concluded a treaty with U.S. authorities on May 6, 1902, and the U.S. military administration of the islands was replaced by a U.S.-controlled civil government. Its first appointed governor was William Howard Taft (1857–1930), who would later become the 27th president of the United States.

THE OPPOSITION AND THE AFTERMATH

Despite what U.S. newspapers and magazines had reported openly during the fighting, federal officials responded to charges of brutality with what became typical dissimulation. Said Secretary of War Elihu Root (1845–1937): "The war in the Philippines has been conducted by the American army with the scrupulous regard for the rules of civilized warfare . . . with self restraint and with humanity never surpassed." Some were sickened by the slaughter and hated the war. In the four black regiments serving in the Philippines, many of the black soldiers established a rapport with the natives, and an unusually large number of them deserted. The Philippines "situation" aroused many prominent blacks and black congregations in the United States to militant opposition to the war. And they weren't the only ones. Invocations to savage war were one thing, actual atrocities another. As Howard Zinn notes, William James (1842–1910) cursed: "God damn the U.S. for its vile conduct in the Philippine Isles!" And Mark Twain (1835–1910) wrote in the *New York Herald*: "I bring you the stately matron named Christendom, returning bedraggled, besmirched, and dishonored from pirate raids in Kiao-Chou, Manchuria, South Africa, and the Philippines, with her soul full of meanness, her pocket full of boodle, and her mouth full of pious hypocrisies."

Eventually, even Secretary Root was forced to admit that there had been "marked severities," severities that became notorious when several officers involved in the activities at Samar were court-martialed. But Roosevelt and his allies were able to turn the Samar massacres from an embarrassment into renewed public support for the war by insisting even more vehemently than they had before on the "savage" nature of the Filipino rebels. Congress held investigations following the unsuccessful trials, and testimony that should have been damaging about freely employed water torture and similar "inhuman conduct" not within "the ordinary rules of civilized warfare" was vitiated by General J. Franklin Bell's (1856–

1919) observation that he had never been dressed down for taking the same or similar measures against the Indians and by General MacArthur's contention that he had simply been fulfilling the destiny of America's "Aryan ancestors." They used the myth of the American Indian wars to justify the Philippine slaughter, and in doing so fully resuscitated old frontier metaphysics to rally the imperial impulse of a new domestic policy. Teddy Roosevelt was launched on a campaign to build up the navy into a two-ocean force and make America policeman of the world. By 1904, he could employ the Philippines "question" yet again to defeat William Jennings Bryan in the presidential elections and get on with his plans.

Phocas's Mutiny (602)

PRINCIPAL COMBATANTS: Phocas vs. Emperor Maurice of the Byzantine Empire

PRINCIPAL THEATER(S): Constantinople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mutinous troops protested pay cuts and harsh living conditions; Phocas led them in an assault upon the emperor.

OUTCOME: The emperor and his sons were assassinated, and Phocas was acclaimed emperor by the army.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown
TREATIES: None

The Byzantine centurion Phocas (d. 610) led a mutiny by Byzantine soldiers who were protesting severe winter conditions and a cut in pay they had suffered at the end of the **BYZANTINE-AVAR WAR** (595–602) against the Mongolian Avars from the Volga River area. The enraged troops overthrew their designated commander, Priscus, and replaced him with Phocas, who then led them in a march on Constantinople, where they overran the royal palace and assassinated Emperor Maurice (c. 539–602) as well as his five sons. Phocas was then elevated to the throne.

Piedmontese Revolt (1821)

PRINCIPAL COMBATANTS: Piedmont constitutionalists vs. the House of Savoy

PRINCIPAL THEATER(S): Piedmont, Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Piedmont liberals wanted independence from Sardinia and the rule of King Victor Emmanuel I.

OUTCOME: Victor Emmanuel I was forced to abdicate, but the even more reactionary new king, Charles Felix, brutally crushed the rebellion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The 1814 Congress of Vienna, ending the Napoleonic Wars, made possible, in theory, the restoration of the old order throughout Europe, although this proved impossible in practice, and in Italy gave rise to decades of struggle by freedom fighters such as those who formed the secret political society known as the Carbonari (or Charcoal Burners). Already founded during the period of French control, this cabal of the bourgeoisie, with its vaguely nationalist and decidedly republican agenda, spread from its lodges in the south throughout Italy to the Marches and the Romagna, to Milan and the Piedmont.

In the Piedmont, a considerable wing of the nobility, liberal and cultivated, was quite hostile to the reactionary policies of the restored king of Sardinia, Victor Emmanuel I

(1795–1824), whose hegemony included the Piedmont. The Carbonari rebels, with their constitutional hopes, allied themselves with these nobles. When the king declined to accept a constitutional monarchy, the groups entered into a conspiracy, which had the covert support of the successor-designate to the throne, Charles Albert (1798–1849), of the house of Savoy. Between March 9 and March 13, 1821, the conspiracy spawned a revolt, planned by the military and the bourgeoisie, which spread from Alessandria to Turin and ultimately forced Victor Emmanuel I to abdicate in favor of his brother, Charles Felix (1765–1831). No sooner was Charles Felix enthroned, however, than he turned against the rebels and opposed the constitution. On April 8, 1821, Charles Felix allied Sardinia with Austria, and a combined Austro-Sardinian force invaded Piedmont and easily defeated the rebel forces at the Battle of Novara. Charles Felix turned his wrath on the army, purging it of disloyal officers and executing three liberal ringleaders.

"Pig" War (1906–1909)

PRINCIPAL COMBATANTS: Serbia (with Russian aid) vs. Austria-Hungary

PRINCIPAL THEATER(S): Serbia and Austria-Hungary

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Serbia wanted to achieve economic independence from Austria-Hungary.

OUTCOME: A more favorable trade treaty was negotiated between Serbia and Austria-Hungary.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: No combat ensued; but the nations prepared to mobilize their armies.

CASUALTIES: None

TREATIES: Commercial treaty of 1909

Serbia sought to free itself from economic dependency on Austria-Hungary by importing French munitions and establishing a customs union with Bulgaria, which would mean that high-tariff Austro-Hungarian goods would not be able to compete in the Serbian market. Austria-Hungary responded in 1906 by barring the importation of Serbian pork. For its part, Serbia secured international investment to open more international export markets for its pork. Serbia also pressed Bosnia-Herzegovina, provinces of the Austro-Hungarian Empire, to provide an outlet to the Adriatic Sea.

When Russia, pursuing a pan-Slavic policy, backed Serbia's actions, war between Russia and Austria-Hungary loomed. Russia backed down, however, in response to a 1909 German ultimatum. Once Russian aid to Serbia was

cut off, Serbia and Austria-Hungary concluded a new trade treaty; however, Serbia's own pan-Slavic nationalism continued unabated. Its activity, both public and secret, stirred up an independence movement in Bosnia-Herzegovina, creating the conditions that sparked WORLD WAR I.

Pima Revolt, Second (1751)

PRINCIPAL COMBATANTS: Pima Indians vs. colonial Spanish overlords

PRINCIPAL THEATER(S): Northern Arizona

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Pima attempt to overthrow colonial Spanish domination

OUTCOME: Indecisive; Pimas remained under Spanish rule

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Spanish, 17 by Oacpicagigua's hand, others unrecorded; Pima, unknown

TREATIES: None

In 1751, 50 years after the First PIMA REVOLT, the Pima Indians of upper Pimeria Alta, many of them descendants of earlier rebels who had fled north, followed Luis

Oacpicagigua in a rebellion against the colonial Spanish overlords.

Oacpicagigua had once served the Spanish as captain-general of the western Pimas but had come to believe that the influx of Spanish settlers would eventually force his people into slavery. Accordingly, Oacpicagigua secretly worked to unite many Pimas, Papagos, Sobaipuris, and Apaches in an organized resistance.

On the night of November 20, 1751, Oacpicagigua and some of his men attacked 18 Spaniards whom he had been entertaining at his home in Saric. All were killed except for Padre Nentvig, who escaped to spread the alarm. But it was too late. During the succeeding weeks, rebels attacked missions and ranches in Caborca, Sonoita, Bac, and Guevavi.

The raids were destructive, but they did not coalesce into the general revolution Oacpicagigua had hoped for. The Sobiapuris and the Apaches backed out of the action at the decisive moment, and many Papagos and Pimas also failed to participate.

Spanish officials dispatched an army under the colonial governor, who, after several months of combat, finally quelled the insurrection. Luis Oacpicagigua managed to evade execution by a pledge to rebuild the churches destroyed during the uprising. In fact, he failed to keep this promise, and the people he had led never fully submitted to Spanish rule. For the next century and a half, they waged sporadic guerrilla warfare against the Spanish, then the Mexicans, and finally, in their turn, the Americans.

Polish-Bohemian War (1305–1312)

PRINCIPAL COMBATANTS: Poland vs. Bohemia

PRINCIPAL THEATER(S): Poland

DECLARATION: Effective Polish declaration of independence, 1305

MAJOR ISSUES AND OBJECTIVES: Polish independence from Bohemia.

OUTCOME: Under Ladislas of Kujavia, Poland secured its independence and the principalities of Little Poland and Great Poland were united into a sovereign kingdom.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

As a result of the HAPSBURG-BOHEMIAN WAR, King Wenceslaus II (1271–1305) achieved full control over Bohemia. He embarked on a reign that greatly augmented the power and prestige of the kingdom. In 1300, he won victories in Little Poland, which gained him the Polish

crown, so that he now ruled both Poland and Bohemia. However, the authority of Wenceslaus II did not survive his passing. Upon his death in 1305, his son, Wenceslaus III (1289–1306), was beset by challenges to his right to rule Poland, and en route to his coronation as Poland's king in 1306, he was assassinated in Olomuoc, a town in Moravia.

Into the vacuum created by Wenceslaus III's death stepped Duke Ladislas "Lokietek" (1260–1333), a renowned Polish champion from Kujavia. His ambition was to unify the disparate principalities of Poland and thereby gain independence from Bohemia. In the year before the murder of Wenceslaus III, he secured the backing of the Polish church and retook Little Poland from the Bohemians. Following the death of the Bohemian monarch, he campaigned in Great Poland, winning several decisive victories. By 1312, he was in a position to unite Little and Great Poland, and, having accomplished this, he was finally crowned King Ladislas I in 1320.

Polish-Bohemian War (1438–1439)

PRINCIPAL COMBATANTS: Partisans of King Albert II vs. partisans of Ladislas III; Ladislas III vs. Slovakian Hussites

PRINCIPAL THEATER(S): Bohemia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Bohemia and Slovakia

OUTCOME: The Hussites achieved control of much of Slovakia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Truce of 1439

Albert II (1397–1439), Hapsburg (Austrian) king of Germany, succeeded to the throne of the Holy Roman Empire that had been occupied by his late father-in-law, Sigismund (1368–1437). Because Sigismund had ruled both Hungary and Bohemia, Albert II assumed rule over these kingdoms as well. This did not sit well with a faction that supported the bay-king of Poland, Ladislas III (1424–1444), as candidate for Holy Roman Emperor and ruler of Hungary and Bohemia.

In 1438, the partisans of Albert II and Ladislas III clashed. The war seemed about to end, however, almost before it had begun when Albert II fell in battle while campaigning against the Turks in 1439. However, after he assumed the Hungarian throne in 1440, the 16-year-old Ladislas found himself facing new opposition, from Slovakian Hussites (religious radicals, followers of the nationalist and religious dissident Jan Hus [1369–1415]) led by John Jiskra z Brandysa (d. 1470). The Hussites had control of Slovakia before the end of 1440. As for Ladislas, he never had the opportunity to resolve the power struggle between his throne and the Hussites. In 1444, at only 20 years of age, Ladislas III was killed in battle against the Turks at Varna on the coast of the Black Sea.

Following the death of Ladislas III, one of his commanders, General John Hunyadi (1387–1456), proclaimed himself "overseer" of Slovakia. He was challenged by Jiskra z Brandysa, but Hunyadi, a skilled tactician and strategist, repeatedly defeated him in battle, culminating in the Battle of Lucenec in 1451. A truce was concluded, by which Jiskra z Brandysa retained some control over Slovakia.

Polish Civil War (1573–1574)

PRINCIPAL COMBATANTS: A variety of Polish factions

PRINCIPAL THEATER(S): Poland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Following the death of King Sigismund II Augustus and amid liberal reforms, Poland was thrown into chaos.

OUTCOME: General civil war ended with the election of the duc d'Anjou to the Polish throne, but the violence resumed when he stepped down after a 13-month reign.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

When Poland's King Sigismund II Augustus (1520–72) died in 1572 without issue, the choice of successor to the throne was left to the Polish people. This matter added to the political chaos that prevailed as a result of opposition to the Union of Lublin, by which Poland had been

formally united with Lithuania. A congress was convened in Warsaw in April 1573 to select a new king from among foreign contenders; the hope was that installation of a foreign-born monarch would avoid many conflicts among supporters of domestic candidates.

However, the liberal reforms that followed upon the Compact of Warsaw (January 28, 1573) so constrained the power of the Polish monarch that, 13 months after he was elected Polish king, Henry of Valois (1551–89), duc d'Anjou, returned to France to assume the throne there as Henry III following the death of his brother, Charles IX (1550–74) of France. Henry's departure reawakened the dormant civil war, and this time it was the Polish nobles who brought in a new king, Prince Stephen Bathory (1533–86) of Transylvania. The nobles enforced his coronation by military means.

Polish Civil War (1768–1773)

PRINCIPAL COMBATANTS: Confederation of Bar (with French, Ottoman, and Austrian support, but not direct military involvement) vs. the government of Stanislaus II Augustus (with Russian military aid and Prussian political support)

PRINCIPAL THEATER(S): Poland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Poland; subsequently, the partition of parts of Poland among Russia, Prussia, and Austria

OUTCOME: Stanislaus II Augustus, effectively a Russian puppet, remained on the throne; about one-third of Poland was partitioned among Russia, Prussia, and Austria.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: First Partition of Poland, five treaties, July 25, 1772, September 18, 1773, March 15–18, 1775, February 9, 1776, and August 22, 1776

The conclusion of the SEVEN YEARS' WAR in Europe in 1763 left both Austria and Prussia dissatisfied—Austria had failed in its bid to regain Silesia from Prussia; Prussia had failed to acquire Saxony. Meanwhile, Russia was making advances against its traditional rival, Ottoman Turkey,

and Catherine II (the Great; 1726–96) was anxious to forestall any aggression from a frustrated Austria. In 1764, she engineered the election of a puppet monarch, Stanislaus Poniatowski (1732–98) to the Polish throne, thereby making that hapless nation a virtual Russian satellite. Her plan was to use Poland as a means of placating both Prussia and Austria in order to maintain a balance of power in Europe that would protect her flank as she carried out her campaign against Turkey.

Some Poles resisted, especially when the new king, Stanislaus II Augustus, under pressure from Catherine, granted full rights to non-Catholic Poles. The Confederation of Bar was a league of Polish Catholic noblemen formed to counter Russian influence in Poland and to fight against equality for Protestants and Russian Orthodox Poles. The Bar sought to compel Stanislaus to abdicate. In this, the Bar enjoyed support from France and from the Ottomans, both wanting to halt Russian expansionism.

In June 1770, Catherine sent troops into Poland to intervene in the civil war that had developed between the Confederation of the Bar and the government of Stanislaus—whom the Bar had declared deposed. The Russian forces easily defeated the smaller, ad hoc army of the Confederation of the Bar, but Austria now threatened to intervene. Like France and the Ottomans, Austria feared Russian expansion. In response to the Austrian threat, Catherine turned to Prussia's Frederick II (1712–86, Frederick the Great). Although Frederick had no desire to trigger a general European war, he did want to expand into Polish territory, and so Catherine was able to play her Polish card. In a series of five treaties in 1772, Poland was partitioned: Russia gained part of northeast Poland, Austria annexed Galicia, and Prussia acquired Polish Pomerania and Ermeland. Overall, Poland was forced to cede about one-third of its territory.

Many Poles were alienated by the policies of King Sigismund III (1566–1632), who was anti-Catholic, who sent Polish armies to secure the Swedish throne, who compromised Polish nationalism by courting Austria, and who sought to curtail the Polish constitution to increase his power over parliament. Cracow's governor, Mikolaj Zebrzydowski (fl. 1605–07), led other Polish nobles in a militant protest of the king's order for a standing army to be constituted under royal authority. Zebrzydowski presented a list of demands to the king. When these were rejected, he led a violent rebellion, which prompted Sigismund to recall his armies from Sweden to put down the rebels. Zebrzydowski was defeated in a July 1607 battle, but his point had been made. In 1609, the Polish parliament proclaimed an amnesty for all the rebels, and the supremacy of the constitution was affirmed. Thus the rebellion, though militarily defeated, secured the preeminence of the Polish Catholic nobility in politics and the subjection of the Crown to parliamentary rule.

The conflict is often called Zebrzydowski's Insurrection.

Polish Rebellion (1715–1717)

PRINCIPAL COMBATANTS: Polish people and nobles vs. Augustus II

PRINCIPAL THEATER(S): Poland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The people rebelled against the presence, thievery, and general destructiveness of Saxon troops quartered throughout Poland.

OUTCOME: The king's threat to summon Russian troops prompted the negotiation of peace.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: In the hundreds among civilians and military alike.

TREATIES: 1717 agreement on Saxon troop withdrawal and limitation on the size of the Polish standing army.

Saxon troops quartered in Poland by King Augustus II (1670–1733) during the Second (or Great) NORTHERN WAR wreaked havoc on the populace with acts of theft and vandalism. With the support of the Polish nobility, a popular uprising erupted, and armed clashes between the people and the king's troops became frequent. Soon, the army ran amok—far beyond the king's ability to control it. Polish citizens were slain by the hundreds, and the people, in return, waged intensive guerrilla warfare against the army, bringing about substantial losses. At length, Augustus appealed to the Russian czar for aid. Fearing that Poland would now be overrun by Russians, the Polish nobles intervened and entered into negotiations with the king's government. By agreement in 1717, the Saxon army would withdraw from Poland, and Polish standing forces would be reduced to 18,000 troops.

Grommada), *A History of Poland*, new ed. (New York: Dorset Press, 1992); W. F. Reddaway, et al., eds., *The Cambridge History of Poland*, 2 vols. (reprint, Cambridge, UK: Cambridge University Press, 1971).

Polish Rebellion (1794)

PRINCIPAL COMBATANTS: Nationalist forces under Thaddeus Kościusko vs. Russia and Prussia

PRINCIPAL THEATER(S): Poland

DECLARATION: March 1794, uprising declared

MAJOR ISSUES AND OBJECTIVES: Kościusko wanted to recover territory lost in the First and Second Partitions of Poland.

OUTCOME: The rebellion was crushed and Poland was totally dismembered by the Third Partition; Poland effectively ceased to exist as a nation.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Nationalists, 90,000 plus 50,000 peasants; Russians, 65,000; Prussians, 25,000

CASUALTIES: Nationalists, 29,000 killed or wounded; Russians, 9,100 killed or wounded; Prussians, 573 killed or wounded

TREATIES: Second Partition of Poland, January 23, 1793; Third Partition of Poland, October 24, 1795

Humiliated by the high-handed encroachments on their sovereignty by the major European powers during the first partitioning of Poland 20 years earlier (see the POLISH

CIVIL WAR (1768–1773), the Poles had reformed and strengthened their government, abolishing the trappings of what had been a hopelessly outmoded feudal state and replacing their weak elective monarchy with hereditary kingship. Now, afraid that Poland might indeed revive as a nation and fight to recover its land, Russia launched a pre-emptive invasion and concluded the second partition of Poland in 1793, which gave Russia most of eastern Poland and Prussia Gdansk and the region known as Great Poland.

Poland, not even invited to sign this set of agreements, broke out in a national revolt in 1794. Thaddeus Kościusko (1746–1817), a veteran of the American Revolution, led other exiled Polish nationalists in planning the rebellion from his headquarters in Leipzig, Germany.

Kościusko went to Cracow in March 1794, where he recruited the support of disaffected Polish army officers. This secured, he proclaimed a national uprising and assumed dictatorial powers. His first military objective was Russian-held Warsaw. During the advance on the Polish capital, he encountered Russian forces and defeated them. This victory inspired a general popular uprising.

Under Kościusko's leadership, three-quarters of the territory lost as a result of the First and Second Partitions was recovered. Although both Warsaw and Vilna were taken from foreign hands, a combined Prussian-Russian army defeated Kościusko at Kulm (Chelmno). When Cracow fell to the Russians on June 15, a panic spread among Poles in Warsaw, who feared the work of spies and traitors. The city was gripped by a rash of executions, until Kościusko personally restored order.

Warsaw girded for a siege, which lasted a month before Prussian and Russian forces suddenly lifted it in September 1794 (their presence was required to put down uprisings in Prussian-occupied areas of Poland).

By the fall of 1794, Kościusko had seized control of Great Poland, but he had lost Lithuania to Russia. At last, at the Battle of Maciejowice on October 10, 1794, Kościusko was defeated and taken prisoner. The rebellion collapsed both suddenly and violently when the Russian invaded the Warsaw suburb of Praga on November 3, 1794. The 22,000 Russian troops defeated the 25,000 Polish defenders, killing as many as 13,000 combatants and 7,000 noncombatants and taking 11,000 prisoners.

Poland was now subject to a Third Partition, concluded on October 24, 1795, which divided among Russia, Prussia, and Austria what remained after the Second Partition. In effect, Poland ceased to exist as a nation.

Polish Rebellion (1830–1831)

PRINCIPAL COMBATANTS: Polish nationalists vs. Russia

PRINCIPAL THEATER(S): Poland

DECLARATION: Rebellion commenced on November 29, 1830.

MAJOR ISSUES AND OBJECTIVES: The rebels sought to free Poland from Russian control.

OUTCOME: The rebellion, disorganized, was ultimately crushed, and Poland was incorporated into Russia as a Russian state.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Nationalists, 81,000; Russians, 127,000

CASUALTIES: Nationalists, 15,000–20,000 killed; Russians, 15,000 killed

TREATIES: None

Called the November Insurrection to distinguish it from the Polish Rebellion (1863–1864), which became known as the January Insurrection, this conflict began when Russia's czar Nicholas I (1796–1855), hoping to take advantage of the French Revolution of 1830, made plans to invade France and Belgium using the Polish army, which he supposed to be under his autocratic control. But among the many conspiratorial revolutionary groups Poland was producing at the time, there was a secret society—the National Association—formed by Polish troops with the object of coordinating an uprising against Poland's Russian overlords. As a result of the FRENCH REVOLUTION (1830), the Polish rebels believed their efforts would receive strong support from France.

The rebellion broke out in Warsaw on November 20, 1830, when Polish officers and troops at the military academy acted on their fear of an imminent Russian takeover of the academy and, ultimately, the army itself in keeping with Nicholas's plan. Russian cavalry companies were attacked, and an assault on the Warsaw residence of Russian grand duke Constantine (1779–1831) was mounted. Soon, almost the entire Polish army, liberated convicts, and the general Polish citizenry joined in a chaotic uprising. The result was not a revolution, but mob violence on a massive scale. After Russian authorities fled for their lives, Polish general Josef Chlopicki (1771–1854) proclaimed a revolutionary dictatorship and declared that the Russian succession to the Polish throne was at an end.

Czar Nicholas I (1796–1855) responded to the Polish rebellion by sending large numbers of troops into the country. Despite some Polish successes, the Russians advanced deep into Poland but were fought to stand at the Battle of Grochow on February 25, 1831. The Russians

went into winter quarters, and during the resulting lull in combat, the Poles, never well organized, began to fight among themselves, so that when the fighting resumed in the spring the rebels were considerably weakened. The Russians triumphed at the Battle of Ostrołęka on May 26, 1831, then advanced on Warsaw, which fell to them on September 8, 1831. This rebellion collapsed, and rebel leaders fled the country.

The czar now cracked down on Poland harder than ever before. Poland was not merely annexed but incorporated into Russia as a Russian state. Nicholas I was determined to stamp out any vestiges of Polish nationality. His tyranny, however, only served to intensify already powerful Polish patriotism.

Polish Rebellion (1863–1864)

PRINCIPAL COMBATANTS: Polish nationalists vs. Russia

PRINCIPAL THEATER(S): Poland

DECLARATION: Rebellion proclaimed, January 22, 1863

MAJOR ISSUES AND OBJECTIVES: The nationalists wanted to liberate Poland from Russian control.

OUTCOME: Russia crushed the rebellion and made Poland a Russian province.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Nationalists, 5,000–8,000 killed; Russians, 5,000 killed

TREATIES: None

The CRIMEAN WAR (1853–56) and turmoil caused by the Eastern Question (the threat to Europe's balance of power posed by the crumbling of the Ottoman Empire) led Russia's Czar Alexander II (1818–81) to take a more conciliatory stance toward Poland. Hoping to pacify the Poles, Alexander introduced a series of comparatively liberal reforms, but the salutary effect of these was mitigated by the autocratic policies and manner of the Russian authorities in Poland itself. By the beginning of the 1860s, even moderate Poles had been radicalized, and the country was gripped by mass demonstrations calling for independence. Once again seeking to placate the Poles, Alexander II installed his brother Constantine (1827–92) as viceroy in Warsaw, instructing him to give the Poles local voting rights. The Poles responded with an assassination attempt,

provoking Constantine to crack down by issuing an order to conscript Polish rebels into the czar's army. This provoked the rebels to form a revolutionary assembly, and on January 22, 1863, an armed rebellion erupted, quickly spreading across Poland and into Lithuania.

The rebellion took the form of a guerrilla war, poorly conducted by young men inexperienced in military matters, but nevertheless persistent. When the Western powers—Britain, France, and Austria—attempted to mediate, Russia reacted with greater determination to subdue Poland once and for all. French emperor Napoleon III (1808–73) promised the rebels military aid (he wished to counter Prussia's support of Russia in Poland) but failed to deliver adequately. By May 1864, superior Russian forces had suppressed the guerrillas and had put an end to the secret rebel governments set up in Warsaw and Lithuania. Russian authorities executed or exiled everyone suspected of having participated in the rebellion. All of Alexander's mildly liberal reforms were reversed. Poland was made a Russian province, and laws were enacted to stamp out Polish culture and language.

The net result of the January Insurrection, as it was called to distinguish it from the POLISH REBELLION (1830–1831), known as the November Insurrection, was to extinguish all hopes that the Poles might create an autonomous national state for the next 50 years.

Polish Succession, War of the (1733–1738)

PRINCIPAL COMBATANTS: Stanislaus I Leszczyński (backed by France, Spain, and Sardinia) vs. Augustus III (backed by Russia and Austria)

PRINCIPAL THEATER(S): Poland, Rhineland, Italy, and Austria

DECLARATION: October 10, 1733

MAJOR ISSUES AND OBJECTIVES: Succession to the Polish throne following the death of Augustus II

OUTCOME: After an Austrian victory in the decisive Battle of Bitonio, the supporters of Stanislaus yielded to the supporters of Augustus III, who became king of Poland. In addition, the war led to a redistribution of Italian territories and inflated Russia's influence over Poland.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: In Poland—pro-Hapsburg forces: 30,000 Russians, 10,000 Saxons; pro-Stanislaus forces: large but unknown number of Poles and a small French reinforcement of 1,950. In the Rhineland—no estimates for the large French

900 Polish-Swedish War for Livonia, First

invasion force or the overall Hapsburg resistance. In Italy—40,000 Spanish and 30,000 French-Sardinian troops; 50,000–60,000 Hapsburg forces.

CASUALTIES: At least 50,000 Frenchmen killed or wounded overall and more than 30,000 Austrians. Overall figures for other belligerents were not tabulated, although the Spanish lost 3,000 men at Bitonto alone.

TREATIES: Treaty of Vienna, November 18, 1738

When Poland's King Augustus II (1670–1733) died on February 1, 1733, Austria and Russia supported the succession of his son Frederick Augustus (1696–1763), elector of Saxony, to the throne. Most Poles, and certainly the major Polish nobles, preferred Stanislaus I Leszczyński (1677–1766), who, as the father-in-law of Louis XV (1710–74), had the backing of both France and Spain. In fact, Stanislaus had been the Poles' king once already for a brief five years after the Swedes, back in 1704, helped to depose Augustus in the Second (or Great) NORTHERN WAR—temporarily as it turned out. In any case, the Polish sejm (Diet, or parliament), consisting of some 12,000 delegates, on September 12 elected Stanislaus king.

This the Hapsburgs' ally, Russia, could not abide, and quickly dispatched an army 30,000 strong toward Warsaw. With the approach of the Russians, both Stanislaus and most of the Diet's delegates fled, the king, pursued by Russian and Saxon troops, to Danzig. Meanwhile, the Russians occupied the city and forced a rump parliament of some 3,000 to declare Frederick Augustus as Poland's new king, Augustus III, on October 5, 1733.

In response to the mobilization of the Russian army, France had formed anti-Hapsburg alliances with Sardinia on September 26 and Spain on November 7. They declared war on Austria on October 10. With some dispatch, Don Carlos (1716–88), the Spanish *infante* (heir apparent), led a Spanish army of 40,000 across Tuscany and the Papal States to Naples, defeated the Austrians at Bitonto on May 25, 1734, conquered Sicily, and was crowned king of Naples and Sicily (25 years later, he would become Spain's Charles III). The French war, however, did not proceed so smoothly. After overrunning Lorraine when they invaded the Rhineland, the French were effectively checked in southern Germany by the Hapsburg forces; the French-Sardinian forces invading Lombardy could not manage to take Mantua, and the small French contingent sent by sea to relieve the Russian siege of Danzig failed miserably.

Danzig fell in June 1734, but by then Stanislaus had escaped to Prussia. Although the Poles organized the Confederation of Dzików in November 1734 to support his cause, they were no match for the Russians and Augustus. Worse for the Poles, the Spaniards and the Sardinians fell to bickering, fracturing the Italian campaign of 1735. Worried that the British and the Dutch might join the fighting as Hapsburg allies, the French made a hasty, half-

baked peace with Austria on October 3, 1735, which was followed by the definitive Treaty of Vienna on November 18, 1738. Don Carlos was allowed to retain Naples and Sicily but he had to give the Hapsburgs both Parma and Piacenza, which he had inherited in 1731, and to renounce his claims to Tuscany. Stanislaus renounced the Polish throne and was compensated for this with the dukedom of Lorraine. Augustus III was recognized as the rightful Polish king.

Polish-Swedish War for Livonia, First (1600–1611)

PRINCIPAL COMBATANTS: Sweden vs. Poland

PRINCIPAL THEATER(S): Livonia (Estonia and portions of Latvia)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Possession of Livonia

OUTCOME: Undecided; Sweden occupied parts of Livonia but failed to gain control of the region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the major Battle of Kirchholm, Sweden fielded 14,000 men, Poland 3,500

CASUALTIES: Unknown (but the Poles claimed 9,000 Swedish dead)

TREATIES: Armistice of 1611

Long an area of contention among Sweden, Poland, and Russia, the Baltic became the locus of fighting yet again when Sweden invaded and occupied most of Estonia and Livonia in 1600. They were halted by the Poles at the fortress city of Riga, where Herman Jan Karol Chodkiewicz (1560–1621) launched a counterattack, driving the Swedes out of most of Livonia with victories at Dorpat (Tartu) and Revel (Tallinn), but failing to secure complete control over the disputed region.

Then, in 1604, Charles IX (1550–1611), the newly declared and ambitious Swedish king, landed a fresh army of 14,000 in Estonia and marched on Riga to try his fortunes against Chodkiewicz. The two armies met at the battle of Kirchholm, where the Poles mustered only some 3,500 men—although 2,500 of them were horsemen in Poland's heavy cavalry, hailed as the best in Europe. They mounted a savage, reckless charge that swept the Swedes

from the field and themselves forever into Polish history. They not only won the battle, they came very close to capturing Sweden's warrior king himself, and Polish chroniclers would soon be claiming that the bodies of some 9,000 Swedish soldiers littered the abandoned battlefield. Afterward, the war fizzled, and continued only in sporadic fighting until ended by truce in 1611.

Grommada), *A History of Poland*, new ed. (New York: Dorset Press, 1992); W. F. Reddaway, et al., eds., *The Cambridge History of Poland*, 2 vols. (reprint, Cambridge, UK: Cambridge University Press, 1971).

Polish-Swedish War for Livonia, Second (1617–1629)

PRINCIPAL COMBATANTS: Sweden vs. Poland

PRINCIPAL THEATER(S): Livonia (Estonia and portions of Latvia), Courland (southwestern Latvia), and northern Prussia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Possession of Livonia and Baltic ports

OUTCOME: Sweden triumphed, acquiring Livonia and the use of major Prussian ports.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Sweden: more than 32,000; Poland: 9,000; 7,000 Austrians.

CASUALTIES: Unknown, but deaths from disease far outnumbered combat casualties.

TREATIES: Truce of Altmark (1629)

The long Baltic Sea contest between the Poles and the Swedes flared up once again in 1617, six years after the death of Sweden's Charles IX (1550–1611) and the armistice that ended the First POLISH-SWEDISH WAR FOR LIVONIA. Charles's son, Gustavus II (1594–1632), having already faced Denmark from 1611 to 1613 in the War of KALMAR and fought the Russians in the inconclusive RUSSO-SWEDISH WAR (1613–1617), now turned to Poland, hoping to take advantage of the Poles' distractions with both the Russians and the Turks (see RUSSO-POLISH WAR [1609–1618] and POLISH-TURKISH WAR [1614–1621]). He quickly reconquered much of the Baltic coast of Livonia in 1617, then just as quickly arranged a two-year armistice. Come 1620, however, he was back, with an army of 16,000, which he led against Riga. The city fell in September of the following year, and Swedish forces overran all of Livonia and southwestern Latvia, then known as Cour-

land. From here, they invaded northern Prussia, taking much of that territory and posing a threat to Poland's Baltic outlet by 1626.

A Polish counterattack, led by Herman Stanislaw Koniecpolski (1591–1646), threatened these Swedish conquests, but in May 1627 Gustavus broke the Polish offensive at Tczew, where 9,000 Poles, including the famed Polish heavy cavalry that had destroyed his father's army a generation before, were routed. Gustavus then returned to Sweden to bring back to the Polish borderlands some 32,000 reinforcements, which in 1628 he used to drive south and extend his conquests. At this point, the Holy Roman Empire intervened, dispatching a corps of 7,000 men to the aid of Polish king Sigismund III (1566–1632) and halting the Swedish advance. The Baltic coast, however, remained in Gustavus's hands.

By 1628, the war became one of attrition and deadlock. Anxious to enter the THIRTY YEARS' WAR—Gustavus agreed to the Truce of Altmark in 1629, securing most of the conquests he had made during the war.

Grommada), *A History of Poland*, new ed. (New York: Dorset Press, 1992); W. F. Reddaway, et al., eds., *The Cambridge History of Poland*, 2 vols. (reprint, Cambridge, UK: Cambridge University Press, 1971).

Polish-Turkish War (1484–1504)

PRINCIPAL COMBATANTS: Poland vs. Ottoman Empire and Moldavia

PRINCIPAL THEATER(S): Moldavia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Moldavia sought autonomy from both Poland and the Ottoman Empire.

OUTCOME: Combat between Poland and the Ottoman Empire ended indecisively with a truce. Moldavia achieved victory over the Poles but was forced to maintain its autonomy from the Ottoman Empire by paying an annual tribute to the sultan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

The largest single force was the Polish invasion army of 1485, 20,000 men.

CASUALTIES: Unknown

TREATIES: Truce of 1492 (Poland–Ottoman Empire), Truce of 1500 (Poland–Ottoman Empire); Treaty of 1504 (Moldavia–Ottoman Empire)

Moldavia, which Poland had annexed in the late 15th century during the reign of King Casimir IV (1427–92), became the subject of conflict between Poland and the

Ottoman Empire. In 1484, the Turkish navy took Kiliya at the mouth of the Danube River and Akkerman (Belgorod-Dnestrovsky) at the mouth of the Dniester in an effort to sever Poland from outlets to the Black Sea. Casimir responded by forming an anti-Ottoman league and marched 20,000 troops into Moldavia to eject the Turks. From here, in 1485, he advanced against Kolomyia on the Pruth River. Cornered, Bayazid II (1447–1513), the Ottoman sultan, sued for peace. Although the disposition of the captured fortresses of both sides was never settled, Casimir and Bayazid concluded a truce.

The Polish-Ottoman truce ended with the death of Casimir in 1492. Sporadic fighting broke out, and in 1496 Poland's new king, John I Albert (1459–1501), Casimir's son, launched a major campaign that allied Poland with King Stephen (c. 1433–1504, Stephen the Great) of Moldavia. The objective was to keep the Turks out of Moldavia; however, Stephen came to believe that John I Albert wanted to depose him. Therefore, Moldavian forces resisted Polish intervention and defeated the Poles at the Battle of Suceava in 1497. Taking advantage of Stephen's preoccupation with his erstwhile allies, Ottoman forces invaded Moldavia, but finding the winter unusually severe, they withdrew in 1498 after fighting only a few minor engagements. Hostilities between the Poles and the Turks were definitively ended by a truce in 1500, but the Moldavians refused to sign on, and combat between them and the Ottomans continued at a low level until Stephen died in 1504. At that time, Moldavia agreed to pay the Ottoman sultan an annual tribute in exchange for autonomy.

Further reading: Norman Davies, *God's Playground: A History of Poland*, 2 vols. (New York: Columbia University Press, 1982); O. Halecki (with additional material by A. Polonsky and Thaddeus V. Grommada), *A History of Poland*, new ed. (New York: Dorset Press, 1992); W. F. Reddaway, et al., eds., *The Cambridge History of Poland*, 2 vols. (reprint, Cambridge, UK: Cambridge University Press, 1971).

Polish-Turkish War (1614–1621)

PRINCIPAL COMBATANTS: Poland vs. the Ottoman Empire

PRINCIPAL THEATER(S): Moldavia and Wallachia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Poland attempted to gain control of Moldavia and Wallachia from the Ottomans.

OUTCOME: The Ottoman Empire retained control of the area.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Maximum Polish forces 75,000; Ottoman forces were somewhat smaller.

CASUALTIES: Polish casualties in Moldavia approached 10,000 killed.

TREATIES: Truce of 1621

By the 17th century, the Ottomans were once again in control of Moldavia as well as Wallachia. Poland encouraged and aided anti-Ottoman rebellions in these areas. The Ottomans responded with fierce raids against the Polish Ukraine. To put an end to these, a 10,000-man Polish army under General Stanislas Zolkiewski (d. 1620) invaded Moldavia where, joined by Cossacks and Moldavians, it defeated a substantially more numerous Ottoman-Tatar force at the Battle of Jassy on September 20, 1620.

Osman II (1604–22), the Ottoman sultan, responded by marching an even larger force from Constantinople into Moldavia, which forced the Poles into retreat. Despite the Poles' attempt to withdraw, the Ottoman forces engaged them in Moldavia and destroyed the army, killing Zolkiewski. A new Polish army of 75,000 troops under Stanislas Lubomirski (1583–1641) fought to a bloody draw at the Battle of Chocim on the Dniester in 1621, prompting the sultan to agree to a truce. Although no further major battles were fought, sporadic raiding continued on both sides.

Grommada), *A History of Poland*, new ed. (New York: Dorset Press, 1992); W. F. Reddaway, et al., eds., *The Cambridge History of Poland*, 2 vols. (reprint, Cambridge, UK: Cambridge University Press, 1971).

Polish-Turkish War (1683–1688)

PRINCIPAL COMBATANTS: Poland vs. the Ottoman Empire

PRINCIPAL THEATER(S): Polish Ukraine

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Poland sought to regain from the Ottoman Empire control of the Polish Ukraine.

OUTCOME: The Poles regained western Ukraine, but the Ottoman Empire retained the province of Podolia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Ottoman Empire, as many as 250,000 men in a single campaign; the Poles commanded far fewer numbers—at Zorawno, the Ottoman Empire fielded 200,000 men to the Poles' 20,000.

CASUALTIES: Unknown

TREATIES: Treaty of Buczacz, 1672; Treaty of Zorawno, October 16, 1676

Polish forces were in the process of suppressing a Cossack rebellion in the Polish Ukraine when a massive force of a quarter-million Turks under Sultan Muhammad IV (1641–91) bore down on the much smaller force of John Sobieski (1624–96). As Sobieski retreated, the Turks took

Podolia province and, in 1672, occupied the fortress of Kamieniec. Unable to muster forces sufficiently large to counter the invasion, Polish king Michael (1638–73) signed the 1672 Treaty of Buczacz, ceding to the Ottoman Empire all of Podolia and relinquishing to an Ottoman protectorate the Polish Ukraine. However, the Polish parliament refused to ratify the treaty, and proud Poles rallied behind John Sobieski to resume the war.

Sobieski's troops scored a major triumph at the Battle of Chocim on November 11, 1673, and the Turks withdrew from Polish territory. King Michael had died the preceding day, so that when Sobieski returned to Warsaw, he was elected king, to reign as John III.

The Ottoman Turks were not finished, however. In 1675, 150,000 Turks and Tatars invaded and once again seized Podolia but were ejected by a much smaller Polish force at the Battle of Lvov. Nevertheless, the Turks pressed on with an augmented general invasion in 1676. John found himself unable to raise an army larger than 20,000 men to go up against the new 200,000-man invasion force. Incredibly, outnumbered 10 to 1, John defeated the invaders at the Battle of Zorawno in October 1676. The Ottoman defeat was not militarily definitive, but the sultan was so impressed by what John III had done that he agreed to the Treaty of Zorawno on October 16, 1676, by which the Ottoman Empire returned to Poland much of western Ukraine, retaining only Podolia.

Pompey-Pirate War (67 B.C.E.)

PRINCIPAL COMBATANTS: Roman forces under Pompey the Great vs. Mediterranean pirates

PRINCIPAL THEATER(S): Mediterranean coastal regions

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Elimination of piracy in the region

OUTCOME: Pompey scored a rapid victory.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Roman general and statesman Pompey the Great (106–48 B.C.E.) was commissioned by the Senate to campaign throughout the Mediterranean and its littorals (up to 50 miles inland) for the purpose of defeating the widespread piracy endemic to the region. Conducting a sweep of 90 days, Pompey routed the pirates who plagued the eastern and western Mediterranean. His brilliant victory earned him praise from the Senate—and a grant of dictatorial powers.

Pontiac's Rebellion (Pontiac's Conspiracy; Pontiac's War) (1763–1764)

PRINCIPAL COMBATANTS: Ottawa, Delaware, Iroquois Indians vs. colonial British forces and settlers

PRINCIPAL THEATER(S): The Ohio country

DECLARATION: No formal declaration; on April 27, 1763, Pontiac urged Potawatomi and Huron to join his raid on British Detroit

MAJOR ISSUES AND OBJECTIVES: An attempt by an Indian confederation to reclaim lands lost in the French and Indian War

OUTCOME: Inconclusive; Pontiac gained no lands and was forced to pledge obedience to the king of England.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

At Fort Detroit, May 1763: British, 120; Pontiac, 300

CASUALTIES: British forces entire garrisons wiped out at Fort Venango (June 16, 1763) and Fort Presque Isle (June 20, 1763); Delaware Indians, in addition to battle-induced casualties, suffered a smallpox epidemic when Simon Ecuyer presented their chiefs with smallpox-infected gifts.

TREATIES: September 7, 1764

The Ottawa chief Pontiac (1720–69), for whom the rebellion is named, was actually only one among several Indian leaders who collaborated in resistance to English encroachment on their land. The “rebellion”—a term born of the white perspective on the events—included Delaware, Iroquois (principally the Seneca), and Shawnee in addition to the Ottawa.

The conflict began with the fall of French-held Detroit to the British during the FRENCH AND INDIAN WAR on November 29, 1760, and General Jeffrey Amherst's (1717–97) decision (in February of the next year) to abolish the French custom of giving gifts to the Indians, in

particular their supply of ammunition. Following the edict, a religious leader known as the Delaware Prophet began preaching that the Indians should reject all the ways of the white man. British military authorities interpreted the Delaware Prophet's preachings as part of a widespread conspiracy against forts and settlements. General Amherst dispatched Major Henry Gladwin (1729–91) with reinforcements to Detroit.

Perhaps this action forestalled the raids, for nothing happened until 1763, when France capitulated in the French and Indian War, ceding virtually all of its territory to Britain. This prompted Pontiac to call a grand council on April 27, 1763, urging the Potawatomi and Huron to join his Ottawa in an attack upon Detroit.

Pontiac planned to enter Fort Detroit, with some warriors, on pretext of making a social call, then, having gained entrance, commence battle. The operation was scheduled for May 7, but Gladwin learned of the plan and twice foiled it.

Frustrated, Pontiac began raiding the settlers in the vicinity of the fort, then, joined by Wyandot, Potawatomi, and Ojibwa, began firing into the fort itself. After six hours, the attackers withdrew.

Following this battle, on May 10, Pontiac called for a parley, and Captain Donald Campbell (c. 1735–63) left the fort to negotiate. No sooner was Campbell outside of the fort than he was seized by the Indians and held hostage. Pontiac massed a large number of warriors and demanded the surrender of the fort. When Gladwin refused, Pontiac laid siege while also ambushing and raiding settlers in the vicinity of the fort.

Pontiac also managed to win the support of French settlers and farmers and was able to unleash widespread attacks against many forts. On May 16, 1763, Fort Sandusky fell. On May 25, Fort Saint Joseph was taken. Two days later, Fort Miami (near present-day Fort Wayne, Indiana) was breached. On the 28th, a relief column bound for Detroit was ambushed, resulting in heavy casualties. On June 1, Fort Ouiatenon (Lafayette, Indiana) was taken. And Fort Michilimackinac, in Michigan, was overrun soon after.

Following the fall of Michilimackinac, attacks began farther east. Forts Pitt, Ligonier, and Bedford in Pennsylvania were all besieged but managed to hold out. About June 16, 1763, Senecas killed the entire 15- or 16-man garrison at Fort Venango (Franklin, Pennsylvania). On June 18, the Senecas moved on to Fort Le Boeuf (Waterford, Pennsylvania) and burned it. Joined by Ottawas, Hurons, and Chippewas, the Senecas attacked Fort Presque Isle (Erie, Pennsylvania) on June 20, torching it and killing the garrison after promising it safe conduct.

When a group of Delawares demanded the surrender of Fort Pitt on June 24, Simon Ecuyer, acting commander, refused. He summoned the Delaware chiefs to the fort for

a parley and presented them with a handkerchief and two blankets—from the fort's smallpox-ridden hospital. This early instance of biological warfare not only caused the attackers to retreat but apparently created a smallpox epidemic within the tribe.

Forts Niagara and Detroit both survived long sieges, and Fort Detroit was periodically able to launch offensives, one of which, on July 4, 1763, resulted in the death of two Indians, including the nephew of Wasson, an important Chippewa chief.

On August 5, Colonel Henry Bouquet (1719–65) was leading a relief column to Fort Pitt, when he was attacked at Edge Hill, Pennsylvania, by a party of Delawares, Shawnees, Mingos, and Hurons. Despite being outnumbered, Bouquet prevailed on August 6, 1763. Called the Battle of Bushy Run, after the stream beside which Bouquet was camped, the battle turned the tide of Pontiac's Rebellion against the Indians.

The siege at Detroit was lifted in September, and, on October 3, 1763, Pontiac at last agreed to a peace, but a treaty was not concluded until September 7, 1764, following two more major English offensives. By virtue of the treaty, Pontiac and the other chiefs involved in the "rebellion" pledged obedience to the king of England.

The conflict had been costly, more on civilians, white and Indian alike, than on the military. At least 2,000 white settlers died. The Indian death toll, especially when the effects of smallpox are taken into consideration, was doubtless even greater.

As to Pontiac, he kept the peace until 1769, when he was assassinated as he was leaving a trading post in Cahokia, Illinois. The Indian who killed him may have been in the employ of local British traders.

Portuguese Campaigns against Diu (1509–1547)

PRINCIPAL COMBATANTS: Portugal vs. Egypt and Gujarat
PRINCIPAL THEATER(S): Diu, an island in the Arabian Sea
DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Portugal wanted to seize Diu in order to control commerce on the Arabian Sea.

OUTCOME: Portugal conquered the island and other key ports.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The contest for preeminence in the East Indian spice trade pitted Portugal against Egyptian Muslim trading interests. In 1509, Portugal sank an Egyptian fleet off Diu, an island in the Arabian Sea that was a possession of the Indian Muslim state of Gujarat. But it wasn't until 1531 that the Portuguese mounted a major campaign against Diu itself, a land mass from which the possessor could control commerce on the Arabian Sea by dominating key ports. The island was defended by a combination of Egyptian and Gujarat troops, who resisted siege and attack for two years, before finally surrendering in 1533.

In 1538, the Gujaratis attempted to retake Diu, but failed, losing the ports of Goa and Daman in the process. During 1546–47, the Gujaratis mounted a new siege against Diu, which would have succeeded had not a Portuguese relief expedition made a timely arrival from Goa.

Portuguese-Castilian War (1140)

PRINCIPAL COMBATANTS: Portugal vs. Castile and Léon

PRINCIPAL THEATER(S): Portugal

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Independence of Portugal and the disposition of Galicia

OUTCOME: The matter was settled by a tournament in Portugal's favor.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Zamora, 1143

In 1139, Count Alfonso Henriques (1112–85) triumphed over the Moors at the Battle of Ourique and then declared Portuguese independence from Castile and Léon, which were ruled by his cousin, Alfonso VII (d. 1157). Thus Alfonso Henriques became the first king of Portugal. This achieved, he pursued the claim of his mother, Teresa (an

illegitimate daughter of Alfonso VI of Castile), to western Galicia (northwest Spain). The following year, 1140, Alfonso VII responded by invading Portugal. With Spanish troops occupying his kingdom, Alfonso Henriques met with his cousin, and it was decided to settle the matter of the Galician claims not with a full-scale war but with a tournament between Portuguese and Castilian knights at Val-de-Vez. When the Portuguese champions proved triumphant, the Castilian king was as good as his word. The Galician matter was settled, and, by the Peace of Zamora in 1143, Alfonso VII formally recognized Alfonso Henriques as king of Portugal.

Portuguese-Castilian Wars (1369–1388)

PRINCIPAL COMBATANTS: Portugal (with English alliance) vs. Castile (with French alliance)

PRINCIPAL THEATER(S): Portugal and Castile

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Independence of Portugal from Castile; succession to the Castilian throne

OUTCOME: Portugal become independent; the English claim to the Castilian throne was abandoned.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Alcoutin, 1371; Treaty of Windsor, 1386; Peace of Bayonne; Portuguese-Castilian peace treaty, 1411

The war between Portugal and Castile may be regarded as a phase of the HUNDRED YEARS' WAR. Pedro I (the Cruel; 1320–67), king of Portugal, disputed possession of the throne of Castile with Count Henry of Trastamara (1333–79). In 1367, however, Pedro fell to an assassin. Pedro's son Ferdinand I (the Handsome; 1345–83) succeeded to the Portuguese throne, whereupon a number of Castilian towns pledged allegiance to him. Despite this, in 1369, Henry of Trastamara assumed the Castilian throne as Henry II and decided on a preemptive strike against Portugal to prevent his rule from being progressively undermined.

Henry invaded, and by 1371 Ferdinand I, having suffered defeat, acceded to the Peace of Alcoutin, by which he ceded claim to Castile and made an arrangement to marry Henry's daughter. When, however, Ferdinand immediately demonstrated his bad faith by engaging in an

affair with Leonor Teles (d. 1386), a married Portuguese noblewoman, Henry II invaded again.

Henry successfully besieged Lisbon, the Portuguese capital, and compelled Ferdinand not only to give up a number of castles but also to sever his alliance with England's John of Gaunt (1340–99), who had a claim to the Castilian throne through marriage to the elder daughter of Pedro I.

Thus circumstances stood in 1372. Seven years later, when Henry II died, Ferdinand merely picked up the English alliance where he had left it. In 1380, John of Gaunt allied with Ferdinand for an invasion of Castile. Gaunt's expeditionary force arrived the following year, led by his brother, Edmund of Langely (then earl of Cambridge, later duke of York) (1362–85), who betrothed his son Edward to Ferdinand's only legitimate child, Beatrice. But in August 1382, halfway through the campaign, Ferdinand came to terms with the Castilians, agreeing now to marry Beatrice to a Castilian prince, and John of Gaunt's forces withdrew.

Beatrice became the wife of the prematurely decrepit King John I (1358–90) of Castile; at least when Ferdinand died, Leonor Teles became regent in her name, and Castile claimed the Portuguese Crown when, in 1383, Ferdinand I—a failed sovereign detested by his people—died.

The people of Portugal effectively repudiated Ferdinand's capitulation to Castile and, defiantly opposing Castile's claim on Portugal, elevated the bastard son of Pedro I, John (grand master of Aviz; 1357–1433) to the position of defender of the realm. The popular forces drove Leonor Teles out of Lisbon. She fled to Santarem, where she was met by Castilian invaders in 1384. They sent her packing to a convent for her protection.

The Castilian invaders laid siege to Lisbon, but the onset of plague and almost universal opposition from the people of Portugal caused the siege to collapse. King John I and his forces returned to Castile.

With the Castilians out of the country, the Portuguese Cortes (parliament) elevated John of Aviz to the Portuguese throne on April 6, 1385. He led forces in a series of sieges against pockets of resistance to his rule. This action moved John I of Castile to form an alliance with France and, once again, invade Portugal.

The invasion culminated in the Battle of Aljubarrota, outside of Lisbon, fought on August 14, 1385. Although the Portuguese were outnumbered by the combined Castilian and French forces, their English archers were instrumental in defeating the invaders, who, once again, withdrew from the country. This battle may be said to have secured the independence of Portugal.

The Treaty of Windsor, concluded in 1386, established a long-term alliance between England and Portugal, giving John of Gaunt the backing he needed to assert his claim to the throne of Castile. With Portuguese aid, he invaded Castile in 1387 but was repulsed. He settled for a

compromise in 1388 by concluding the Peace of Bayonne, by which he renounced his claim to Castile in return for a cash settlement. Although Portugal had concluded a truce with Castile in 1387, a full and formal treaty was not signed until much later, 1411.

Portuguese Civil War (1449)

PRINCIPAL COMBATANTS: Alfonso V vs. the duke of Braganza and Pedro, duke of Coimbra

PRINCIPAL THEATER(S): Coimbra, Portugal

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The king's brother persuaded him that Pedro was disloyal.

OUTCOME: Pedro and his supporters were defeated in battle and slain.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Alfonso fielded as many as 30,000 men against a far inferior force.

CASUALTIES: Numbers unknown, but Pedro and almost all of his army were killed.

TREATIES: None

When Alfonso V (1432–81) became king of Portugal in 1438, he was still a child, and his uncle, Pedro (d. 1449), duke of Coimbra, became regent, despite the opposition of the powerful Braganza family, related to the king through the duke of Braganza, also named Alfonso (d. 1461), who was an illegitimate son of John I of Aviz (1357–1433). Although Pedro managed to arrange for the young king to marry his daughter Isabella in 1446, the Braganzas continued to poison Alfonso V's mind against his uncle, who was forced to resign his regency. Seeking to avoid confrontation, Pedro withdrew to his lands in Coimbra. The Braganzas, however, did not cease their calumnies, and an increasingly manipulated Alfonso V demanded the surrender of Pedro's arms. When Pedro refused, the duke of Braganza urged the king to go to war. Braganza's troops were soundly defeated by Pedro's partisans at the Battle of Panella. Alfonso then raised an army of 30,000 and advanced to the Alfarrobeira River where, on May 21, 1449, Alfonso defeated the much smaller forces of Pedro, who, together with most of his army, fell in battle.

Portuguese Civil War (1481–1483)

PRINCIPAL COMBATANTS: King John II vs. various nobles

PRINCIPAL THEATER(S): Portugal

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The king sought to curtail the power of a corrupt nobility.

OUTCOME: With popular support, King John II suppressed the abuses practiced by the nobles.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

When John II (1455–95) ascended the Portuguese throne in 1481, he reacted perhaps to the open-handed and negligent rule of his father, Alfonso V (1432–81), who had been something of a puppet to the powerful Braganza family. He immediately set about curtailing the power of a nobility grown not only powerful but also quite corrupt by convening the Cortes (parliament) at Évora in 1481. The king forced restrictions on the great families and demanded a detailed oath of homage from them. When they responded by joining conspiracies against the king, John countered through a merciless purge, meting out death on the field as well as judicial executions. Indeed, the suspicion of treason served the king's purposes very well, allowing him to arrest Fernando II, duke of Braganza, and many of his followers. Although it was rumored the king had killed two of his conspiratorial cousins on the spot, that is, in his own castle, the duke at least was sentenced to death and executed in 1484 at Évora. The ruthless suppression of the aristocracy had lasted three years, and enjoyed strong support from the Portuguese middle class and peasantry, who were tired of inefficient, exploitative, and generally abusive government.

Portuguese Civil War (1823–1824)

PRINCIPAL COMBATANTS: King John VI vs. his rebellious son, Dom Miguel

PRINCIPAL THEATER(S): Portugal

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Restoration of an absolutist monarchy—under Dom Miguel

OUTCOME: Failing to obtain popular support, Dom Miguel ultimately stepped down and was exiled.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Despite two major royalist attempts to overthrow the constitutional monarchy and reinstall an absolutist government, Portugal drafted a democratic constitution in 1823.

The first rebellion began in Vila Real; the second, bigger, insurrection originated in Vila Franca de Xira and was sponsored by Dom Miguel (1802–66), third son of King John VI (1769–1826). On April 30, 1824, Dom Miguel and his forces attacked Lisbon, receiving support from the troops of the Lisbon garrison, who acclaimed him king. Dom Miguel brought in his mother, Queen Carlota Joaquina, and all the advisers of John VI fled the capital. In the meantime, Dom Miguel arrested Lisbon's chief of police and others loyal to John VI, then installed into high military office his followers.

What Dom Miguel had failed to calculate, however, was the loyalty of the people toward John VI. Without popular support, Dom Miguel's coup collapsed, and the young man was compelled to beseech forgiveness from his father. John VI responded by exiling Dom Miguel to Vienna. John VI now authorized the constitution.

Portuguese Civil War (1826–1827)

PRINCIPAL COMBATANTS: Miguelites vs. constitutionalists (backed by Great Britain)

PRINCIPAL THEATER(S): Portugal

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Miguelites supported an absolute monarchy for Portugal, while the constitutionalists supported a constitutional monarchy.

OUTCOME: With British aid, the constitutionalists triumphed, forcing Dom Miguel to accept constitutional government.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown; the British interventionist force, highly effective, consisted of only 5,000 men.

CASUALTIES: Unknown

TREATIES: None

With the death of John VI (1769–1826), his son, Pedro I (1798–1834) of Brazil, was recognized as King Pedro IV of Portugal. After promulgating a constitutional charter for Portugal, emulating Britain's parliamentary democracy, Pedro remained emperor of Brazil but abdicated the Portuguese throne in favor of his infant daughter Maria da Gloria (1819–53), with the proviso that she become betrothed to Dom Miguel (1802–66), his younger brother. Dom Miguel was pledged to accept constitutional government; however, his absolutist supporters, dubbed Miguelites, clashed with the constitutionalists under General John Carlos de Oliveira e Daun Saldanha (1791–1876). The Miguelites overran and occupied Lisbon, while the constitutionalists operated out of Oporto. In 1827, a 5,000-man British expeditionary force landed at Lisbon and engaged the Miguelites. Only after Miguel agreed to honor Pedro's constitutional charter did the British leave. Miguel was duly appointed regent.

Portuguese Conquest of Ceuta (1415)

PRINCIPAL COMBATANTS: Portugal vs. the Moors

PRINCIPAL THEATER(S): Ceuta, Gibraltar Strait

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Portugal wanted a toehold in Africa.

OUTCOME: Ceuta, poorly defended at the time, fell.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

When John of Aviz (1357–1433) came to the throne of Portugal during the PORTUGUESE-CASTILIAN WARS (1369–1388), he founded a new dynasty that, despite the misgiv-

ings of many among the nobility and clergy, was immensely popular with the common folk. As he consolidated his hold on Portugal, his conquests came to represent what historians describe as the victory of the country's national yearnings over the feudal attachments of the traditional order. Because so many of the older nobles held tenaciously to Castile, John I rewarded his followers at their (and the crown's) expense, fostering a commerce that continued to flourish with the marriage of his daughter, Isabella, to Philip the Good (1396–1467) of Burgundy and the consequent closer trade relations between Portugal and Flanders. Almost naturally, then, with the onset of peace in 1388, John and his soldiers of fortune turned to Moorish Africa as an outlet for their frontiering ways and launched the great age of Portuguese expansion. Standing smack in their path was Ceuta, the fortress guarding the Strait of Gibraltar.

When the Moorish sultan left Ceuta all but undefended to put down a revolt in the Maghreb (part of Morocco, Algeria, and Tunisia), King John I of Portugal acted. Seeking in part to gain a little favor, as a crusader, with a standoffish pope and the still seething Spanish, John set sail with his sons from Lisbon on July 25, 1415. Among the boys was young Prince Henry (1394–1460), the king's third son, who John hoped would gain some valuable experience with the expedition and who would become known to history as Henry the Navigator. The fleet anchored at Tarifa, then launched the assault. Despite the skeleton crew, the fortress withstood the first attack. Townspeople as well as Moors from the mountains came to the defense of the fortress, but it yielded to a second Portuguese assault on August 24, 1415. From this foothold, Portuguese conquest would expand onto the mainland of Africa, and Ceuta became a redoubtable Portuguese outpost, which withstood repeated assaults by the Moors and others.

Portuguese Conquests in India and the East Indies (1500–1545)

PRINCIPAL COMBATANTS: Portugal vs. Indian, Egyptian, and Ottoman Empire

PRINCIPAL THEATER(S): India and the East Indies

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest and commercial domination

OUTCOME: The Portuguese gained control of large parts of coastal India and Ceylon (Sri Lanka)

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Alliances among the Muslim powers

On June 7, 1494, the Treaty of Tordesillas asserted Portugal's right—as opposed to Spain's—to the exploration of Africa and the seaway to India, and three years later Vasco da Gama (c. 1469–1524) set sail with four ships on the first expedition to India. They reached Calicut on the Malabar coastline in the spring of 1498 and set up a trading post. In the autumn of 1499, the survivors sailed into Lisbon, laden with all the rich spices and trade goods of the Orient, and Portuguese exploration became an opiate of national ambitions in the East. Converting the pagans and crushing the infidels became the clarion call of a Portugal intent on muscling its way into the Muslim trade monopoly along the Mediterranean and growing rich beyond imagining off the traffic in exotic merchandise.

Portugal's plan called for no immediate colonies. Instead, Portuguese sailors would establish commercial trading posts from the East Indies to the Arabian Sea and protect them with garrisons patrolled by the well-armed Portuguese fleet. But when the first Portuguese viceroy, Francisco de Almeida (c. 1450–1510), arrived in 1505, he made immediately clear the impact of the region's new traders by backing the Cochin rajah against the Calicut sultan. The Portuguese may not yet have been colonizers officially, but they fired off the cannon of every departing export-laden ship as a kind of fireworks display to impress the local Hindus and deflate the local Muslims with Portugal's imperial majesty.

Little wonder that Mahmud Begarha, sultan of Gujarat, formed an alliance with Kansu al-Gauri of Egypt in 1508 to counter the Portuguese assault. This led to the naval Battle of Dabul later in the year. Although the battle ended inconclusively, Almeida's son Lorenzo (d. 1508) was killed. While Almeida made plans to avenge Lorenzo's death, Afonso de Albuquerque (1453–1515) arrived in India to replace Almeida as viceroy. Almeida responded by imprisoning Albuquerque, then, during January–February 1509, he raided Muslim ports, razing Goa and Dabul. In February, Almeida attacked the Muslim fleet at Diu. Achieving total surprise, he destroyed the fleet, then returned to Cochin. The battle reestablished Portuguese supremacy at sea, the chief ingredient of Portugal's new-found wealth and power in the East. As for Almeida, his vengeance secured, he at last heeded the Portuguese king's order to acknowledge Albuquerque as the new viceroy.

Now installed, Albuquerque led a military expedition to Malaya and captured Goa in 1510. The following year, he took Malacca, establishing a military base from which he sent expeditions to the Moluccas during 1512–14. In the meantime, Goa rebelled against the Portuguese invaders, but Albuquerque managed to put down the revolt.

In 1513, the viceroy led an expedition to Aden, to which he unsuccessfully laid siege, then, two years later, took Ormuz, which would serve as a Portuguese stronghold for a century and a half. Despite his triumphs on behalf of Portugal, Albuquerque was recalled in 1515. He died on the voyage back to Europe.

Albuquerque had established a powerful Portuguese presence in India and the Indies. A great fort was built at Columbo, Ceylon (Sri Lanka), in 1518, which Portuguese traders used to establish an important presence in Burma. The new Portuguese viceroy, Numbo da Cunha (fl. 16th century), led an expedition of conquest to Diu, which fell to him in 1528.

During 1536–37, Sultan Bahadur of Gujarat (fl. 16th century) formed an alliance with the Ottoman Turks. In response, the Portuguese viceroy invited Bahadur to negotiations—only to have him captured and assassinated. Despite the death of Bahadur, the Ottoman fleet coordinated with a Gujarat land force to attack and lay siege to Diu. The Portuguese defenders managed to repulse the attackers. It was 1546 before a new Indian-Ottoman alliance was concluded, but Muslim forces repeatedly failed to evict the Portuguese.

Portuguese-Dutch Wars in the East Indies (1601–1641)

PRINCIPAL COMBATANTS: Netherlands vs. Portugal

PRINCIPAL THEATER(S): East Indies and coastal India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Domination of trade (chiefly spices)

OUTCOME: Over the course of four decades, the Dutch displaced the Portuguese as masters of the East India trade.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Extremely variable

CASUALTIES: Unknown**TREATIES:** Armistice of 1608

At the beginning of the 16th century the Portuguese had broken the Muslim monopoly on trade with the Orient (see PORTUGUESE CONQUESTS IN INDIA AND THE EAST INDIES). They controlled Goa as the chief port of western India; Hormuz, the key to the Persian Gulf; and Malacca, the gateway from the Indian Ocean to the South China Sea. Portugal maintained a string of fortified trading posts along the coast of East Africa and on the Indian gulf, as well as on the shores of Ceylon. The Portuguese had established trading settlements from Bengal to China, and they were the major foreign trade influence in the Spice Islands. If never in total control of the Oriental trade, they certainly dominated it until the joining of the Portuguese and the Spanish Crowns deprived the Dutch of their traditional trade with Lisbon and sent them seeking spices at their source. In 1601, the Dutch made the diplomatically critical move of concluding an alliance with the ruler of Ceylon (Sri Lanka). Dutch and Ceylonese forces defeated the Portuguese on the island, driving them off.

In 1602, Dutch naval forces defeated the Portuguese fleet near the Banda Islands in east Indonesia. Three years after this, in 1605, the Portuguese were forced off the island of Amboina (Ambon), and the Dutch compelled the Portuguese to agree to a 12-year armistice. In 1619, the Dutch returned to the offensive, taking and destroying the Javanese town of Jakarta and building Batavia adjacent to it, a walled fortress town that became headquarters of the powerful Dutch East India Company.

Batavia was more than a trading center. It became military headquarters for a sustained war against the remaining Portuguese interests in the East Indies. Also subject to attack were the British and any native powers that resisted Dutch domination. Through a combination of naval and land offensives, the Dutch acquired full control over Amboina, Banda, Ceylon, Java, and Ternate, as well as lesser areas. In this way, they came to dominate the East Indian spice trade.

With Dutch power consolidated in the East Indies, the Dutch launched attacks on Portuguese India and on Point de Galle, the Portuguese port-stronghold in Ceylon. This bastion fell to the Dutch in 1640. Emboldened by this victory, Dutch forces laid siege to Malacca, the most important Portuguese port on the southern Malay Peninsula. After enduring a long siege, the city fell to the Dutch in 1641. This marked the end of Portuguese hegemony in the East Indies and the culmination of Dutch supremacy there.

Portuguese-Mogul War (1631–1632)

PRINCIPAL COMBATANTS: Moguls vs. Portuguese**PRINCIPAL THEATER(S):** Hugli, Bengal**DECLARATION:** None**MAJOR ISSUES AND OBJECTIVES:** The Moguls sought to crush the Portuguese traders, who had monopolized Bengal trade and oppressed the natives.**OUTCOME:** The major Portuguese trading base of Hugli was taken.**APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:**

Moguls, 150,000; Portuguese, 1,100 defenders of Hugli

CASUALTIES: Moguls, 1,000 killed; Portuguese, all of the defenders were either killed in battle or subsequently executed; most of the civilian inhabitants of Hugli were killed as well.**TREATIES:** None

From Hugli, in the Ganges-Brahmaputra delta, the Portuguese had been conducting an immensely profitable Indian trade since 1537. Portuguese interests enjoyed a monopoly on salt production and the tobacco trade and, in fact, managed most of Bengal's trade, cutting the Moguls out of the profits. Even worse, Portuguese traders routinely kidnaped Muslim as well as Hindu children and sold them into slavery.

At last, on June 24, 1631, Shah Jahan (1592–1666), the Mogul emperor, sent 150,000 troops under Qasim Kahn, the governor of Bengal, against Hugli, which was defended by a mere 300 Portuguese and a native Christian force of 700. Shah Jahan's army held Hugli under siege for three months before it finally collapsed. Many of the townspeople drowned in an effort to escape by boat. Only 400 people survived to surrender, and these were subsequently put to death (in 1635) for refusing to convert to Islam. About 1,000 of Shah Jahan's troops were killed in the assault on Hugli, which was greatly reduced in importance as a trading port.

Portuguese-Moroccan War (1458–1471)

PRINCIPAL COMBATANTS: Portugal vs. Muslims in Morocco

PRINCIPAL THEATER(S): Morocco

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Alfonso V the African of Portugal wanted to defeat the Muslims in the name of Christianity.

OUTCOME: The Portuguese acquired Tangier in 1471.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

The Portuguese fielded a maximum of 30,000 troops; Muslim numbers, unknown.

CASUALTIES: Portuguese casualties were heavy in the first assault on Tangier, with battle deaths in excess of 10,000.

TREATIES: None

After the fall of Constantinople to the Ottomans in 1453, Portugal's King Alfonso V (the African; 1432–81) and Castile's King Henry IV (1425–74) united in a crusade against the Muslims. Henry's task was to attack the Moors in Granada, Spain, and Alfonso was to conquer the Muslims in Morocco, Africa. In the first of three military expeditions against Morocco, Alfonso led 25,000 men across the Strait of Gibraltar, with the objective of attacking Tangier. Advisers, however, persuaded him to lay siege to Alcázarquivir (Ksar el-Kebir) instead. He did so, and the city quickly fell to him.

Alfonso was slow to capitalize on his triumph. He did not launch his second expedition, the attack on Tangier, until 1464, and when he did, he met with catastrophe. His army was badly defeated, and he himself barely escaped. Meanwhile, that same year Henry reconquered Gibraltar from the Muslims. Alfonso's defeat discouraged him from continuing his crusade, but when the Portuguese sailors in 1468 captured and burned Anfa, a Muslim port on the Atlantic at the site of modern Casablanca, a reinvigorated Alfonso led about 30,000 men on his third and final expedition, a new assault on Tangier. Massacring Muslim civilians along the way, Alfonso's troops assembled before a city that had been deserted by its terrified inhabitants. Alfonso seized it. Castile, meanwhile, despite Henry's conquest, collapsed into political chaos, as factions among the nobility fell to feuding in the absence of a strong monarch.

Portuguese-Moroccan War (1578)

PRINCIPAL COMBATANTS: Portugal vs. Muslim Morocco

PRINCIPAL THEATER(S): Morocco

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: King Sebastian of Portugal wanted to overthrow the Muslim sultan and install a pro-Christian pretender.

OUTCOME: Total defeat for Portugal

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Portugal, 25,000; Morocco, 70,000

CASUALTIES: Portugal suffered losses of 8,000 dead, including Sebastian and the pretender to the throne of Fez; 15,000 were taken prisoner.

TREATIES: None

In 1578, contrary to the wishes of Pope Gregory XIII (1502–85) and King Philip II (1527–98) of Spain, Portugal's king Sebastian (1554–78)—a religious zealot, who wished to subject Muslim Morocco to Christian rule—led 25,000 mostly mercenary troops in a crusade to replace Morocco's current sultan, 'Abd al-Malik (d. 1578), with a more pliable pretender, the former, now deposed sultan, al-Mutawakkil (d. 1578). Landing at Tangier, weighed down by artillery and an army unfamiliar with desert warfare, Sebastian encountered the far superior, 50,000- to 70,000-strong, forces of Sharif 'Abd al-Malik at Ksar el-Kebir (Alcázarquivir). On August 4, 1578, at the so-called Battle of the Three Kings (the sultan, the pretender, and Sebastian), the Portuguese advance withered under the fire of Morocco's mounted harquebusiers, and as the Christians retreated to Larache on the coast, many drowned or surrendered in crossing the Wadi al-Makhazin, which was at high tide. Among the casualties were Sebastian and the pretender, both of whom drowned.

Many in a stunned Portugal refused to believe that Sebastian had been slain, and in later years, he was looked on as a savior who would someday return to rescue Portu-

gal from Spanish domination. In reality, the death of the head-strong young Sebastian, without heir, brought the Portuguese empire under Spanish control for the next 60 years.

On the other hand, although the already seriously ill 'Abd al-Malik, died the morning after the battle (thus the European name of the battle), the victory provided the Muslim soldiery with a rich booty and Morocco a new prestige in Europe, enhancing both its diplomacy and its commerce.

Portuguese North Java Wars (1535–1600)

PRINCIPAL COMBATANTS: Portugal vs. the Muslim states in northern Java

PRINCIPAL THEATER(S): Northern Java

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest and commercial domination

OUTCOME: Through a long series of very small wars, the Portuguese gained control of northern Java.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the 16th century, Portugal established itself as the chief power in Malaysia by capturing Malacca, using it as a base from which to create a well-defended trading empire throughout the region. For the last two-thirds of the century, Portuguese trading interests chronically warred with the small Muslim states that constituted northern Java. These wars consisted of largely inconclusive battles, in which, nevertheless, the Portuguese almost always prevailed. Over a long period, the power of the Muslim rulers in this region diminished, so that Portugal could claim victory in the region.

Further reading: C. R. Boxer, *The Portuguese Seaborne Empire* (New York: Knopf, 1969); A. J. R. Russell-Wood, *The Portuguese Empire, 1415–1808* (reprint, Baltimore: Johns Hopkins University Press, 1998).

Portuguese-Omani Wars in East Africa (1652–1730)

PRINCIPAL COMBATANTS: Portugal vs. Oman (and native African forces)

PRINCIPAL THEATER(S): East Africa and coastal islands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: For the natives, political liberation; for Portugal and Omani, commercial domination of the East African trade in slaves and gold

OUTCOME: Both the Portuguese and Omani presence in the region was diminished, then removed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Extremely variable

CASUALTIES: Unknown

TREATIES: Various agreements between native rulers and Portuguese and Omani interests

Although commonly practiced in Africa itself, especially by the Arabs, and once widespread in the ancient Mediterranean world, slavery had nearly died out in medieval Europe before it was revived by the Portuguese during the time of Henry the Navigator (1394–1460). Beginning with his enslavement of Berbers in 1442, Portugal's intrepid explorers populated Cape Verde, Fernando Po (now Bioko), and São Tomé mostly with black slaves, many of whom they eventually took home. As Europe expanded into the New World, the traffic in slaves expanded, too, along with the new discoveries of gold that helped fund it. By the mid-17th century, based on the island of Mombasa, off the coast of Kenya, the Portuguese controlled the East African slave trade and the trade in gold. Suffering under the Portuguese yoke for many years, the Mombasan natives appealed in 1652 to the sultan of Oman (on the Arabian Peninsula) for military aid in driving off the Portuguese. The sultan dispatched a fleet to attack Zanzibar, a Portuguese-controlled island south of Mombasa. This began a long state of warfare between the Omanis and the Portuguese, which was both a war for trade domination—the prize being the commercial exploitation of the African east coast—and a religious conflict between the forces of Islam and the forces of Catholic Christianity.

The next major phase of combat came in 1687, when a former ruling house of Pate, an island nation off Kenya, asked the Portuguese to help it regain its realm from Omani control. The Portuguese suffered from poor intelligence information. Approaching Pate, they were con-

fronted by a substantially superior Omani fleet, which forced them to retreat to Mombasa.

In 1696, the Omani fleet attacked Mombasa, laying siege against Fort Jesus. The spectacular siege spanned three years before the beleaguered Portuguese finally capitulated, having lost all trading outlets north of Cape Delgado. The Omani ruler installed a garrison at Fort Jesus, which mutinied in 1727. Seeing that the Omani presence was weakening, the king of Pate again appealed to Portugal for help in finally driving the Omanis from his island. Oman itself was beset by internal disorder and could not reinforce Pate or Mombasa. The Portuguese easily prevailed against them and quickly reestablished a slave trading post at Zanzibar.

Inevitably, conflict developed between the natives and the returned Portuguese. A massive native uprising laid siege to the Portuguese installations in Zanzibar, Mombasa, and Pate, and by 1730 all of the Portuguese had again fled. They retreated to Portuguese colonies in western India (Goa) and in Mozambique (Portuguese East Africa).

Portuguese Revolution (1640)

PRINCIPAL COMBATANTS: Portugal vs. Spain

PRINCIPAL THEATER(S): Lisbon, Braga, and Évora, Portugal

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The people of Portugal wanted an end to Spanish overlordship.

OUTCOME: A popular uprising ejected the Spanish colonial government and replaced it with a Portuguese king.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Restive under the Spanish yoke, the people of Lisbon, Braga, and Évora rioted in 1640 and rallied behind the leadership of John (1605–56), duke of Braganza, the highest noble in Portugal. The Spanish overlords summoned the nobles and army of Portugal to Madrid, but, by that time, under John's leadership, the popular uprising had expelled the Spanish governor from Portugal (on December 1, 1640). Instead of obediently traveling to Madrid, the nobles in Portugal's Cortes (parliament) offered John the Portuguese crown, and he accepted, becoming King John IV two weeks after the fall of the Spanish colonial government.

Portuguese War against Ternate (1550–1588)

PRINCIPAL COMBATANTS: Portugal vs. Ternate

PRINCIPAL THEATER(S): Ternate, Indonesia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The sultan of Ternate sought to drive out the Portuguese and to exact vengeance for the murder of Sultan Hairun.

OUTCOME: The Portuguese were defeated on Ternate.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: More than 500 Portuguese died on a siege of their garrison.

TREATIES: None

In the 16th century, Portugal expanded its commercial empire into the Arabian Sea and the East Indies, seeking trade in pepper and other spices, and defending that trade with ample amounts of gunpowder. By mid-century, Portugal had set its sites on the island of Ternate, in the Malaccas. There, Portuguese forces did battle with the army of Sultan Hairun (d. 1570) off and on for years, beginning in 1550. In 1570, Portuguese agents assassinated Hairun, an act that escalated warfare under the sultan's successor Baabullah (fl. 1570s), who pledged undying enmity for the Portuguese. The vengeful new ruler attacked and laid siege to the Portuguese fort on Ternate. The installation held out for four years, from 1570 to 1574, before Baabullah finally breached its defenses and massacred the entire garrison. Beleaguered in Malacca, which was held under siege by the Achanese, and under attack elsewhere, the Portuguese had been unable to relieve the siege of Ternate. In April 1606 a combined Spanish-Portuguese fleet recaptured the island, which the Portuguese held until the Dutch began to dominate the South Pacific in 1595.

Pottawatomie Massacre See KANSAS-MISSOURI BORDER WARS.

Powhatan War (1622–1644)

PRINCIPAL COMBATANTS: Indians of the Powhatan Confederacy vs. England's Virginia colony

PRINCIPAL THEATER(S): Virginia

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: The Indians were resisting colonial incursions onto Powhatan lands.

OUTCOME: Powhatan agreed to formal boundaries to pledge loyalty to the king of England, and to submit their choice of future tribal chiefs for the Virginia governor's approval.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Virginians, 347 in 1622, 400 in 1644; Powhatan, 200 after being served poisoned food

TREATIES: Signed in October 1646

The English colonists who settled Jamestown, Virginia, encountered Indians who were members of a remarkable confederacy of at least 32 Algonquian-speaking tribes (a total of perhaps 10,000 people) distributed among 200 villages and held together by a revered chief named Wahun-sen-a-cawh (or Wahunsonacock) (c. 1550–1618), whom the English named Powhatan after the town in which he lived. Generations of schoolchildren have learned the story of Captain John Smith (1580–1631), who accompanied the first 105 Jamestown settlers. Captured by some of Powhatan's men in December 1607, he was taken before Powhatan and saved from execution by the chief's 13-year-old daughter Pocahontas (c. 1595–1617), who also facilitated Smith's adoption by the tribe. Once Smith had won Powhatan's favor, he was able to obtain corn from the Indians, which saved the colonists from starvation.

The settlers were remarkably ungrateful to the Indians and, although an active trade grew up between them, the Virginians and the Powhatans (as the member tribes were known) distrusted and resented one another. Friction between the two groups increased in proportion to the colonists' hunger for land as the Virginians began cultivating tobacco for export. Planters wanted to usurp the Indians' already cleared and cultivated fields and even proposed taking Powhatan prisoner in order to gain control of his people.

Although that scheme was not carried out, Sir Thomas Gates (fl. 1585–1621) (who later became the colony's governor) murdered some Indian priests, and, in 1613, Samuel Argall (1572–1626), mariner and colonist, kidnapped Pocahontas, who was held hostage for a time. Her subsequent marriage to colonist John Rolfe (1585–c. 1622) may well have forestalled the war that these and other outrages might have otherwise provoked. In any event, whatever Powhatan may

have felt about the English, he valued trade with them and managed to preserve peace until his death in 1618.

Powhatan's half brother Opechancanough (d. 1644) succeeded him as sachem of the confederation, and, although he promised friendship with the colonists, war was not long in coming.

In 1622 a planter named Morgan disappeared. His servants claimed that an Indian named Nemattanow (or Nematanou), prominent among the Powhatans, had ordered his death, and Nemattanow was killed. For this, Opechancanough vowed revenge, and the colonists likewise hurled threats. Opechancanough apparently backed down, renewing his pledge of friendship only to launch an all-out raid on every English settlement along the James River on Good Friday, March 22, 1622. By the end of that day, 347 settlers had been killed—about one-third of the colony.

In response to the assault, colonist patrols attacked Indians indiscriminately up and down the coast. There were no formal battles or campaigns, just 14 years of murder and raiding, punctuated by occasional peace conferences. It was not until 1632 that an uneasy truce, born of mutual exhaustion, was concluded. It lasted 12 years, until April 18, 1644, when Opechancanough, now old and blind, launched a coordinated offensive against the James River settlements. More than 400 colonists were killed in a series of lightning raids, but, as quickly as they had come, the attackers withdrew.

Virginia's Governor William Berkeley (1606–77) retaliated with a campaign of burning and destruction, but by March 1646, the Virginia assembly had had enough of war, and it negotiated with the Indians. Berkeley, who differed sharply with the assembly's decision, personally led a party of soldiers to Opechancanough's village, took the aged sachem prisoner, and brought him back to Jamestown. Although Berkeley commanded that the chief be treated with courtesy and respect, a mob taunted him, and one of the men who was guarding him shot him dead.

With the death of Opechancanough, Berkeley agreed with the assembly to conclude a peace, which they did in October 1646. Under that peace, the Powhatans pledged loyalty to the king of England, agreed that the appointment of future chiefs would be approved by the governor, and agreed to formal boundaries.

Barbour, *The Three Worlds of Captain John Smith* (Boston: Houghton Mifflin, 1964).

Praguerie (1440)

PRINCIPAL COMBATANTS: French nobility vs. King Charles VII of France

PRINCIPAL THEATER(S): Poitou and Bourbon

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The nobles challenged the authority of the king.

OUTCOME: The rebellious nobles were defeated and agreed to an uneasy peace.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Cusset, 1440

French nobles rebelled against their king, Charles VII (1403–61), in emulation of a similar revolt in Prague, Bohemia—hence the name. The spirit of rebellion—in France as well as Bohemia—was fostered by the general political instability created by the HUNDRED YEARS' WAR, which diminished the authority of the king and enhanced the power of the nobles. As early as the spring of 1437, some of those princes excluded from the royal council had begun plotting a seizure of power. They did not manage to pull it off, but their schemes provoked King Charles into attempting to curb further mischief by forbidding the aristocracy to raise and maintain private armies. This, the first of his great military reforms, threatened the captains of the realm's mercenary military. Many nobles, including the dauphin (Charles's own son, later Louis XI, 1423–83), united with these mercenary leaders in a revolt at Poitou in February 1440. Royalist forces put down the rebels there, sending them into Bourbon country, where, under Charles, duke of Bourbon (1401–56), they were again defeated.

The rebels negotiated the Peace of Cusset, which ended the uprising and secured generous treatment of the rebels. However, conflict between the king and the nobles continued for decades.

Procopius's Eastern Revolt (366)

PRINCIPAL COMBATANTS: Procopius's rebels vs. Eastern Roman Empire

PRINCIPAL THEATER(S): Constantinople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Procopius usurped the throne of the Eastern Empire.

OUTCOME: The revolt was short-lived; Procopius was defeated and executed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Roman general Procopius (d. 366), in service to Julian (331–363, known to history as “The Apostate”), seized control of Constantinople and its environs in 366. He then declared himself emperor but was attacked and defeated by generals Arbetio (fl. fourth century) and Lupicinus (fl. fourth century) in service of Valens (c. 328–378), brother of Valentinian I (321–375) and coemperor of the Roman Empire. Procopius was captured and summarily executed.

Pueblos, Conquest of the See SPANISH CONQUEST OF THE PUEBLOS.

Pueblo Uprising (Popé's Rebellion) (1680)

PRINCIPAL COMBATANTS: Pueblo Indians vs. Spanish colonizers

PRINCIPAL THEATER(S): Pueblo country of present-day Arizona and New Mexico

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: The Pueblo Indians attempted to overthrow Spanish rule.

OUTCOME: Inconclusive; after chasing the Spanish to present-day El Paso, Popé's oppressive rule lasted eight years; once the Spanish regained control of Santa Fe, all pueblos submitted to Spanish rule within four years.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: For the Pueblo assault on Santa Fe, 500; for the Spanish, about 50

CASUALTIES: Spanish, 400 settlers, 21 missionaries; Pueblos, unknown

TREATIES: None

The Spanish conquerors of the American Southwest combined a zealous concern for the souls of the native population—dispatching an army of missionaries and erecting scores of missions—with a heartless policy of exploitation of labor through the *encomienda* system, by which each

colonist was granted designated Indian families—sometimes the inhabitants of several towns—from whom he could exact labor as well as commodity tribute. By the middle of the 17th century, after 50 years of life under this system, the Pueblo Indians concluded a desperate alliance with their hereditary enemies, the Apaches (the name itself is derived from the Zuni word for “enemy”), and made several attempts at rebellion, but were defeated each time.

During the 1670s, the Apaches and Pueblos launched an all-out campaign of guerrilla terrorism throughout the Spanish Southwest. Two years of this activity virtually strangled Spanish colonial trade, and Governor Antonio de Otermin (fl. 1677–83) acted against those he deemed most responsible for the rebelliousness, arresting 47 Pueblo “medicine men,” three of whom he hanged and the remainder imprisoned. Among the latter was Popé (d. c. 1688), from the important Tewa Pueblo.

Popé was released after several years and went into hiding in Taos, where he secretly organized a large-scale, highly coordinated rebellion.

It was an ambitious project, not only because absolute secrecy was vital, but also because none of the pueblo towns would act without the unanimous consent of its council, and that meant Popé had to persuade a wide variety of individuals to participate. Once this was accomplished, he had to coordinate the strike among the widely dispersed pueblos, for he realized that the only hope for success lay in coordinated action.

Popé dispatched runners to the various towns, each bearing a knotted cord designed so that the last knot would be untied in each pueblo on the day set for the revolt: August 13, 1680. When, despite his precautions (including the murder of a loose-tongued brother-in-law), word of the plot leaked out, Popé launched the assault on the 10th.

Despite the change in plan, the rebellion proved devastating. The Taos, Pecos, and Acoma missions were burned to the ground and the priests killed. Lesser missions also fell, and scores of haciendas were destroyed. On August 15, Popé and his army of 200 advanced on Santa Fe, the colonial capital, killing 400 settlers and 21 of 33 missionaries. Although the Santa Fe garrison was outnumbered 10 to 1, the 50 defenders did have a brass cannon, with which they held Popé at bay for four days. But then the city fell.

Popé entered Santa Fe and installed himself in the palace Governor Otermin had hurriedly evacuated on August 21. Before his onslaught, some 2,500 settlers fled far downriver as far as present-day El Paso, Texas, abandoning all their property.

Like so many “liberators” before and after him, Popé became a dictator, if anything, more corrupt and oppressive than any Spaniard had been. For eight years he plundered and taxed his people, ruling them with terror. When

Popé died c. 1688, the pueblos were in a chronic state of civil war and were easy pickings for the Spanish.

In 1689, the Zia Pueblo fell to colonial forces, and in 1692, Governor Don Diego da Vargas (fl. 1691–97) retook Santa Fe. Within another four years the pueblos had again submitted to Spanish rule—with the single exception of the Hopis, whom the Spanish seem simply to have overlooked.

Pugachev's Revolt (1773–1774)

PRINCIPAL COMBATANTS: Peasant rebels led by Pugachev vs. the armies of Catherine II of Russia

PRINCIPAL THEATER(S): Steppe region of Russia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Pugachev claimed to be the rightful czar and promised to abolish serfdom and end oppression.

OUTCOME: The rebellion was crushed and Pugachev executed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Pugachev's forces, 15,000; government forces, unknown

CASUALTIES: About 20,000 of the 200,000 rebels who took part in the revolt were killed. At Ufa, 75 government troops were killed or wounded; at Fort Tatischev, 2,000 killed; at Kazan, 291 killed or wounded.

TREATIES: None

After Czar Peter III (1728–62) was secretly murdered by the courtiers of Catherine II (the Great; 1729–96) during the RUSSIAN REVOLUTION (1762), a number of pretenders had appeared, hoping to lead the Russian peasants against a German-born empress they despised. One of these, a Volga Cossack named Fedot Bogomolov (d. 1772) appeared, claiming to be the missing Peter and displaying the “czar's signs,” scars in the shape of a cross. His revolt, however, was quickly crushed, and he was captured, brutally tortured and mutilated, and sent into exile in Siberia, dying en route.

The same year saw by far the most successful of these Cossack revolts raised against Catherine. In November 1772, a man named Emelyan Ivanovich Pugachev (1726–75) appeared among the Yaik Cossacks, claiming to be the

“deposed” czar. In September 1773, Pugachev emerged from the steppes east of the Volga, backed by an army of 4,000, seized Fort Tatischev, with its 1,400 defenders, and executed all the officers. Immediately, Bashkir tribesmen and factory peasants flooded into his camp, and by the end of the year Pugachev commanded some 15,000 rebels.

It was a ragtag bunch—1,500 Cossacks, 5,000 tribesmen, 1,000 workers, and the rest made up of serfs, Tatars, and Kalmyks—but they had 100 cannon, and by 1774, they were ready to attack and laid siege to the Ural River towns of Ufa and Orenberg. These failed, but Catherine’s imperial forces were at first unable to halt the growing rebellion, and Pugachev attacked and ravaged Kazan and then Saratov.

As news of these actions spread through the countryside, the oppressed lower orders of Russia began to see Pugachev as their savior. But he could not long sustain his rabble in the field. An imperial army under Count Aleksandr Suvorov (1729–1800) crushed Pugachev’s forces at Tzadtsyn (Volgograd) in September 1774. Pugachev himself was captured but managed to escape, only to suffer betrayal at the hands of one of his own lieutenants. Recaptured, he was brought to Moscow and executed in 1775. His rebellion prompted a reactionary backlash, which actually bolstered the practice of serfdom in Russia.

Punic War, First (264–241 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. Carthage

PRINCIPAL THEATER(S): Sicily and the Mediterranean Sea

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome and Carthage fought for control of the island of Sicily.

OUTCOME: Rome won control of western Sicily and forced Carthage to pay a large indemnity.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The Battle of Messina in Sicily in 264 B.C.E. precipitated full-scale war between Rome and Carthage. This battle began after an attack by the Syracusans, under Hieron II (d. 216 B.C.E.), and the Carthaginians on the Mamertines, the Campanian mercenaries hired by Syracuse to hold the seaport of Messina. The Mamertines called on Rome for help, and the Carthaginians took control of the city. The Roman army then repelled the Carthaginians, and the Syracusans allied themselves with Rome. The Romans

invaded western Sicily and besieged Agrigentum, a Carthaginian stronghold.

Carthage sent Hanno (fl. third century B.C.E.) with an army to relieve Agrigentum in 262, but he was defeated. At that point, Rome controlled most of the island of Sicily.

At Mylae in 260, the Roman fleet won a battle against the Carthaginians by using new methods of naval warfare—the *corvus*, a narrow plank employed to form a bridge to the enemy ship, and fore and aft turrets from which missiles were hurled. After invading the islands of Corsica and Sardinia, Rome turned her attention to northern Africa. Setting sail with about 150,000 soldiers and sailors, a Roman fleet of 330 ships clashed with the Carthaginians at Cape Ecnomus off the coast of Sicily. After a decisive victory, the Romans continued toward Carthage and landed 20,000 troops under M. Atilius Regulus (fl. third century B.C.E.), who won a victory at the Battle of Adys in 256 and offered terms to the Carthaginians. These terms, however, were so severe that the Carthaginians rejected them and continued fighting. To bolster their strength, the Carthaginians engaged the aid of Xanthippus and a band of Greek mercenaries.

The hiring of Xanthippus proved to be beneficial to the Carthaginians. At the Battle of Tunis in 255, he defeated Regulus by using his cavalry, elephants, and phalanx of Greek mercenaries to good advantage. Approximately 2,500 Romans managed to escape back to their ships.

The following year, Carthage reinforced her strongholds on Sicily and recaptured Agrigentum. Suffering from the loss of nearly 100,000 soldiers when the Roman fleet went down in a storm, Rome nevertheless mounted an amphibious assault at Panormus in northwestern Sicily. In 251, at the Battle of Panormus, the Roman consul L. Caecilius Metellus (d. 221 B.C.E.) defeated the Carthaginian general Hasdrubal (d. 221 B.C.E.), who lost his entire force of elephants in Sicily. The Carthaginians sued for peace and sent the Roman general Regulus, who had been held hostage since the Battle of Tunis, to Rome to negotiate terms. Legend holds that Regulus advised his fellow Romans to reject Carthage’s proposals and then returned voluntarily to Carthage to honor his parole. He was then tortured to death.

The next major engagement took place at Drepanum. The Roman and Carthaginian fleets, each of about 100 warships, fought a battle that resulted in the loss of 93 Roman ships and 8,000 men, and a victory for Carthage. The Carthaginian commander Hamilcar Barca (c. 270–228 B.C.E.) then repulsed the Romans at Eryx. Barca fought off Roman assaults in western Sicily for the next five years, between 247 and 242. Rome continued to rebuild her military force and in 242 captured the Carthaginian strongholds of Lilybaeum and Drepanum.

The final battle of the First Punic War occurred on the Aegates Islands in 241. The Roman commander, L. Lutatius Catulus (fl. third century B.C.E.), won a decisive

victory, sinking 50 Carthaginian ships and capturing 70 others. The Carthaginians sued for peace, evacuated Sicily, and agreed to pay an indemnity of 3,200 talents over the next 10 years. Rome continued to hold western Sicily as her first overseas province, whereas Syracuse remained in control of the eastern portion of the island.

Punic War, Second (219–202 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. Carthage

PRINCIPAL THEATER(S): Spain, Africa, and Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Carthage, under the leadership of Hannibal, sought revenge for her loss in the First Punic War with Rome.

OUTCOME: Rome defeated Carthage and extracted from her a large indemnity and a promise to keep the peace.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Carthaginians, forces, 59,000; Romans, 87,000

CASUALTIES: At Trebia River, Carthaginians, 5,000; Romans, 30,000. At Lake Trasimene, 30,000 Romans. At Cannae, Carthaginians, 6,000; Romans, 54,000. At Zama, Carthaginians, 35,000

TREATIES: None

After being defeated in the First PUNIC WAR, Carthage relinquished her claims to Sicily and established a colony in eastern Spain. Known as New Carthage, the colony was ruled first by the Carthaginian general Hamilcar Barca (c. 270–228 B.C.E.), who had been victorious in the first war at Eryx and in western Sicily. When the general's son, Hannibal (247–183 B.C.E.), became ruler of the colony in 221, he set out to punish Italy for the crippling defeat Carthage suffered at her hands in the earlier conflict. In 221, he besieged Saguntum, the only city in Spain south of the Ebro River not under Carthage's control. Saguntum, a Greek stronghold, was an ally of Rome, and when Hannibal refused to call off the siege, Rome declared war on Carthage. After an eight-month siege, Hannibal stormed Saguntum, thereby capturing the city from which he would launch his invasion of Rome.

Battle of Cannae, 216 B.C.E.

Realizing that Rome controlled the sea, Hannibal decided to carry out his invasion by land. Setting out in March 218, Hannibal crossed the Ebro River with 90,000 men. After gaining control of the region between the Ebro and the Pyrenees, he left a garrison there to maintain his line of communication back to Spain and entered Gaul with about 50,000 infantry, 9,000 cavalry, and 80 elephants.

From July to October 218, Hannibal marched through Gaul. Having heard of Hannibal's approach, Rome sent Publius Cornelius Scipio (237–183 B.C.E.) to Massilia (Marseilles) to cut off the Carthaginians' route. Hannibal evaded this block by turning north up the Rhone Valley. Scipio sent the bulk of his force to Spain and returned with a small army to the coast of northern Italy.

Hannibal then faced a formidable challenge: the snow-covered Alps. He managed to cross the mountains in 15 days but sustained heavy losses due to the climate and attacks by mountain tribes. Twenty thousand infantry, 6,000 cavalry, and a few surviving elephants reached the Po Valley.

Hannibal first engaged his enemy at the Battle of the Ticinus River, where he defeated the Roman army under Scipio in November 218. The following month, at the Battle of the Trebia River, Hannibal's army, reinforced by recruits from Gaul, enticed the Romans to attack across the river while Mago (d. 203 B.C.E.), Hannibal's brother, struck the Roman flank and rear. Roman losses totaled about 30,000; Hannibal lost about 5,000. The Cisalpine Gauls were pleased with Hannibal's victory over Rome, their longtime enemy, and about 10,000 Gallic soldiers attached themselves to the Carthaginian military.

Hannibal then took up winter quarters in the Po Valley near modern-day Bologna. In March, he was ready to press on. His army of 40,000 crossed the Apennine passes north of Genoa, marched along the seacoast, and pushed through the Arnus marshes to the Rome-Arretium road. The Roman commander, Gaius Flaminius (d. 217 B.C.E.), rushed to meet Hannibal in battle, but the Carthaginian strategist had set an ambush for his enemy at Lake Trasimene. When the entire Roman force had marched into a narrow defile, Hannibal ordered his cavalry to close the northern end and his infantry to attack the Romans' east flank. In the ensuing battle, one of the bloodiest ambushes in history, 30,000 Romans were killed or captured.

Over the next several months, from May to October 217, the Romans engaged in delaying tactics and sought only to harass Hannibal's approaching army. At Geronium, the Roman commander, M. Minucius Rufus (fl. early 200s B.C.E.), engaged Hannibal and was nearly defeated but was saved by the arrival of Quintus Fabius (d. 203 B.C.E.), dictator of Rome. Hannibal quickly withdrew.

While Hannibal continued his push for Rome, his armies in Spain were forced to withdraw from the Ebro line. In Africa, the Romans persuaded the king of Numidia to rebel against Carthage in 213, but this outbreak was put down by Hasdrubal (d. 221 B.C.E.) and a Numidian prince

named Masinissa (c. 240–148 B.C.E.). Hasdrubal returned to Spain, but there the Romans had regained control of Saguntum.

Meanwhile, the Romans organized 16 legions (80,000 infantry and 7,000 cavalry) to battle Hannibal's army of 40,000 infantry and 10,000 cavalry. On August 2, 216, at the Battle of Cannae, Roman consul Terentius Varro (fl. early 200s B.C.E.) sent 11,000 men to attack Hannibal's camp. As the rest of the Roman army—72,000 infantry and cavalry—pushed Hannibal's central line back toward the Aufidus River, the Carthaginian infantry wings wheeled inward and the cavalry struck from the rear. The Romans were surrounded, and a slaughter ensued. Compared to Hannibal's losses of 6,000, the Romans suffered staggering casualties: 50,000 killed and 4,500 captured.

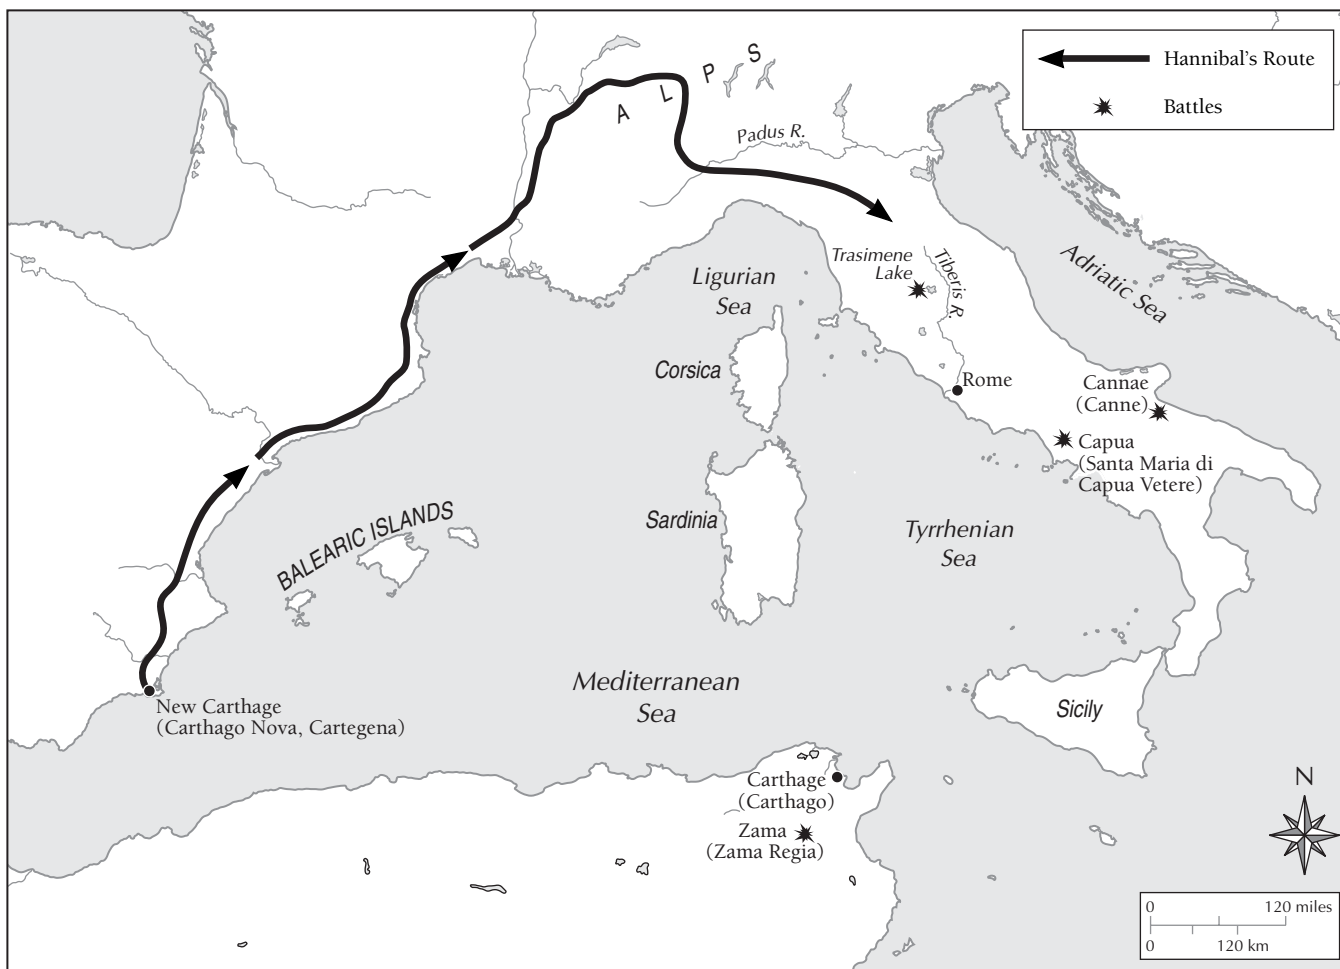

Despite three crippling defeats—at Trebia, Lake Trasimene, and Cannae—Rome persevered. The new commander, Marcus Claudius Marcellus (c. 268–208 B.C.E.), raised an army by pressing all able-bodied men into service. His two legions marched south from Rome to shore up the support from Rome's allies. At the First and Second Battles of Nola, Marcellus gained a victory against Hannibal, further encouraging Rome's allies to remain loyal. After the indecisive Third Battle of Nola, Hannibal marched toward the seaport of Tarentum, while his brother Hanno was defeated at Beneventum.

Beginning in 213 B.C.E., Marcellus besieged Syracuse, and in 211 he overwhelmed the garrison. Hannibal was successful at Tarentum in 212, but the Romans then besieged Capua, and Hannibal was forced to send Hanno (fl. third century B.C.E.) to the city's aid. The Romans foiled Hanno's attempts and resumed their siege. Hannibal attacked the Romans at the First Battle of Capua, brought supplies to Capua, and moved on to the south coast.

Over the next winter, the Romans increased their efforts to capture Capua, keeping the city cut off from any aid from the Carthaginians. Hannibal's army of 30,000 men made another attempt to relieve the city but was repelled. Instead of withdrawing in defeat, Hannibal pushed on toward Rome to try to draw the enemy force at Capua back to the capital city. The ploy failed, however, and Capua surrendered to the Romans in 211.

At the Second Battle of Herdonia, Hannibal defeated Roman proconsul Fulvius Centumalus (fl. early 200s B.C.E.) and went on to Numistro, where he defeated Marcellus. Suffering a crisis of leadership, the Roman Senate called on 25-year-old Publius Cornelius Scipio (also known as Scipio Africanus) to take charge of the Roman army in Spain. This new commander soon gained control of territory north of the Ebro and then marched to New Carthage, while his fleet blockaded the city. The town fell in 209.

Battles followed at Tarentum, Asculum, Baecula, and Grumentum. The next major engagement, the Battle of the Metaurus in 207 B.C.E., began when Hasdrubal withdrew his Carthaginian army, as reinforcements for M. Livius Salinator's (fl. early 200s B.C.E.) Roman army arrived on the

Hannibal's transalpine invasion of Rome, 218–201 B.C.E.

scene. Hasdrubal's forces got lost during the withdrawal and were forced to prepare for battle quickly at dawn. During the battle, Gaius Claudius Nero (fl. early 200s B.C.E.) attacked Hasdrubal from the rear. This surprise attack demoralized the Carthaginians, who lost more than 10,000 men, including Hasdrubal, in the battle. Hannibal learned of his brother's death when the Roman army catapulted the severed head of Hasdrubal into Hannibal's camp.

The Roman army continued to press the advantage, and at the Battle of Ilipa in 206, Scipio's army of 48,000 defeated 70,000 Carthaginians, thereby ending Carthaginian rule in Spain. In 204, Scipio invaded North Africa with an army of 30,000. During the winter of 203, Scipio attacked the Carthaginian and Numidian camps at night, wiping out the entire army, and then renewed his siege of Utica. The Carthaginian Senate soon sent for Hannibal, and the general set sail from Italy. Upon his arrival, the Senate helped him raise a new army. He then marched to Zama with 45,000 infantry and 3,000 cavalry in an attempt to draw Scipio's army away from Carthage. The

ploy worked, and Scipio soon followed Hannibal toward Zama with 34,000 infantry and 9,000 cavalry. At the Battle of Zama in 202, the Romans quickly smashed the first two lines of Carthaginian infantry as the Roman and Numidian cavalry drove Hannibal's cavalry off the field. At first, the third line of Carthaginians, the hardened veterans of many battles, held their own, but when the Roman and Numidian cavalry attacked the line from the rear, the battle was over. More than 20,000 Carthaginians were killed in the battle, and 15,000 were taken prisoner. Carthage sued for peace, surrendered all warships and elephants, and gave up control of Spain and her Mediterranean islands. Carthage also agreed to seek the permission of Rome before engaging in war and to pay Rome 10,000 talents over the next 50 years.

Punic War, Third (149–146 B.C.E.)

PRINCIPAL COMBATANTS: Rome and Carthage

PRINCIPAL THEATER(S): Northern Africa

DECLARATION: 149 B.C.E.

MAJOR ISSUES AND OBJECTIVES: Rome wanted to keep Carthage under its control and prevent her from waging war on Numidia.

OUTCOME: Rome utterly destroyed Carthage, sold the surviving Carthaginians into slavery, and took control of North Africa.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Only 50,000 of 225,000 Carthaginians survived the destruction of their city.

TREATIES: None

Fifty years after the end of the Second PUNIC WAR, hostilities broke out between Carthage and Rome's ally Numidia, despite promises made at the close of the Second Punic War by Carthage to gain permission from Rome before waging war. The Roman Senate demanded that Carthage cease operations against Numidia, send 300 hostages to Rome, surrender her weapons, and dismantle her battlements. Carthage complied with these demands but refused to accede to Rome's final demand: to abandon the city of Carthage and move the population inland. In 149, Rome

sent a large force to Carthage, but the Carthaginians mounted a strong defense and managed to thwart Roman's attack. In 147, Scipio Aemilianus (c. 185–129 B.C.E.) arrived in Africa with the Roman army and blockaded the city of Carthage by land and sea. After holding out for three years, the city fell in 146 B.C.E., following a house-to-house conflict. At the end of the battle, 78 percent of the Carthaginian population had perished from starvation, disease, or in battle. The Roman Senate ordered the city completely destroyed and sold all survivors into slavery.

Quadruple Alliance, War of the (1718–1720)

PRINCIPAL COMBATANTS: Spain (with Scottish Jacobites) vs. Britain, France, Netherlands, and Austria (the Quadruple Alliance)

PRINCIPAL THEATER(S): Spain, Sicily, and Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Philip V of Spain sought the French Crown and an extension of Spain's territory.

OUTCOME: Philip V of Spain renounced his Italian holdings in return for a pledge from Austria that his son would inherit the duchies of Parma, Piacenza, and Tuscany.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Spain, about 48,000; Jacobites, 1,000; Quadruple Alliance, 51,000

CASUALTIES: Spain, 30,000 killed or wounded; Jacobites, 200 killed or wounded; Quadruple Alliance, 15,000-plus killed or wounded (mostly Austrian)

TREATIES: Treaty of The Hague (February 17, 1720)

At the death of Louis XIV (1638–1715) of France, his grandson Philip V (1683–1746) of Spain sought the French Crown for himself. At the same time, Philip's second wife, Elizabeth Farnese (1692–1766) of Parma, wanted to secure the family's holdings in Italy for her children. Opposing Philip in his quest for France were Britain, Holland, and Austria. These three countries, along with France, formed the Quadruple Alliance on August 2, 1718,

to stop Philip from occupying Sardinia and Sicily. Later that month, a British fleet transported Austrian troops to Sicily, and 21 British warships under Admiral George Byng (1663–1733) defeated a Spanish naval force of 29 ships off Cape Passaro on the southeast coast of Sicily. Byng captured or destroyed 7 ships of the line, 9 frigates, and 4 smaller Spanish crafts, and the Spanish commander Don Antonio Castañeda (d. 1718) was mortally wounded. The way was then clear for the Austrian troops to seize Messina, Sicily, from Spanish control. The first attempt by a force of 21,000 Hapsburg troops was repulsed by the Spanish at Francavilla, and 3,100 Hapsburgs fell. However, a new attack in October 1719 took Messina, albeit at a cost of 5,200 killed or wounded out of a force of 18,000.

While the war raged in Sicily, Spain sent an expedition to Scotland to aid the Jacobites in a planned revolt against England. Although the initial force of 29 ships and 6,000 troops, sent in April 1719, wrecked in a storm, never reached its destination, a smaller Spanish force of 300 troops under George Keith (1693?–1778), earl of Marischal, did reach Scotland. There they were joined by 1,000 Highlanders under Rob Roy MacGregor (1671–1734) and other Scottish chiefs. This combined force faced British troops at Glenshiel on June 10, 1719, but fled or surrendered after a brief British bombardment.

In April 1719, 30,000 French troops invaded Spain and ranged over the northern part of the country with little resistance until November, when bad weather and disease prompted a withdrawal.

By December 1719, Philip had regained his senses. The French Crown was not to be his, and his efforts in Scotland to aid the Jacobites against the king of England had come to nothing. On February 17, 1720, he signed

the Treaty of The Hague, by which he renounced his claims in Italy in return for a promise by Austria that the duchies of Parma, Piacenza, and Tuscany would be inherited by Charles (1716–88), his eldest son. Also included in the treaty was a provision that Sicily would be ceded to Austria and Sardinia to Savoy.

Queen Anne's War (1702–1713)

PRINCIPAL COMBATANTS: Colonial England and its Indian allies vs. colonial France and its Indian allies

PRINCIPAL THEATER(S): Eastern seaboard of North America, from Nova Scotia to Florida

DECLARATION: War in Europe declared, May 2, 1702; no formal declaration in North America

MAJOR ISSUES AND OBJECTIVES: American theater of the War of the Spanish Succession was a struggle for dominance in North America.

OUTCOME: The French retained New France, including Cape Breton and Prince Edward Island, but lost Newfoundland, Hudson Bay, and Acadia; Abenakis and other French-allied Indians pledged loyalty to Britain's queen Anne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: English: 5,200 in the Caribbean; 6,500 in North America; French: unknown.

CASUALTIES: English, 270 people killed at Deerfield, Massachusetts, and 1,600 shipwrecked in an attempted assault on Quebec; otherwise casualties were light; 200 dead in New England, 150 in the Carolinas. French and Indians: 60 French and Spanish soldiers in the North and 50 Indians (but many more were killed among the southern tribal allies of the French)

TREATIES: Treaty of Utrecht, July 13, 1713

Queen Anne's War was the American phase of a larger European conflict, the War of the **SPANISH SUCCESSION**. Britain, Holland, and Austria, fearing an alliance between France and Spain, formed the Grand Alliance after Charles II (1661–1700) of Spain, a Hapsburg, chose a Bourbon as his successor. When Charles II died in 1700, the French naturally supported the king's chosen successor, a grandson of Louis XIV (1638–1715). Britain, Holland, and Austria supported an obscure Bavarian prince,

and the issue sparked war, which was declared on May 4, 1702.

In the American colonies, Queen Anne's War began on September 10, 1702, when the South Carolina legislature sent troops to seize the Spanish fort and town of St. Augustine, Florida. After a British naval expedition sacked the town, a force of 500 South Carolina colonists and Chickasaw Indian attacked the fort. Failing to penetrate it, they pillaged what little was left in the town and then burned it.

A cycle of raids and retribution began until former South Carolina governor James Moore (c. 1640–1729) led militiamen and Chickasaws through the territory of the Appalachian Indians of western Florida during July 1704. This expedition ravaged seven Appalachian villages—virtually annihilating the tribe—and destroyed 13 of the 14 Spanish missions in the country.

The way was now open to invade French Louisiana territory and the settlements on the Gulf. The French bribed Choctaw, Cherokee, Creek, and Chickasaw in an attempt to gain alliances. The Chickasaws remained pro-English, and the Cherokee maintained neutrality. Although some elements of the Creek Indians did side with the French, it was the Choctaws who proved France's most powerful ally, stopping Moore's advance.

In the North, the French had developed more extensive alliances with the Indians, especially the Abenakis of Maine. On August 10, 1703, English settlers plundered the Maine house belonging to the son of Jean Vincent de l'Abadie, baron de St. Castin, whose trading post had been similarly attacked in April 1688, during **KING WILLIAM'S WAR**. Through marriage, the younger St. Castin was deemed an Abenaki chief, and the attack touched off Indian raids all along the northern New England frontier.

Among the towns hardest hit was Deerfield, Massachusetts, a prosperous village of 41 houses and 270 people, which had borne the brunt of numerous raids during **KING PHILIP'S WAR** and **King William's War**.

Farther north, in Nova Scotia, a superannuated Benjamin Church, hero of **King Philip's War**, led 550 men into Acadian French territory, terrorizing the villages of Minas and Beaubassin on July 1 and 28, 1704. During August 18–29, a mixed force of French and Abenakis retaliated by destroying the English at Bonavista, Nova Scotia.

For the most part, Queen Anne's War dragged on in the North as well as the South as a litany of raids and individual murders. Some larger actions were attempted, as when the English unsuccessfully attempted to take Port Royal, Nova Scotia, in 1706, and the French and Spanish assaulted Charleston, South Carolina, from the sea but likewise failed to take the city. The French were successful in capturing St. Johns, Newfoundland, on December 21, 1708.

In an effort to garner more support from the mother country, the colonies sent a delegation of English-allied Mohawk chiefs to the court of Queen Anne (1665–1714) in 1710. The monarch was so impressed that she sent land

reinforcement to the colonies under Colonel Francis Nicholson (1655–1728) and a fleet under Sir Francis Hobby (fl. early 18th century). Together, they reduced Port Royal on October 16, 1710, and, the following summer, all Acadia fell to the English.

Even more ambitious was a naval expedition against Quebec, which, however was shipwrecked at the mouth of the St. Lawrence River with the loss of 1,600 men. The next year, in 1712, another assault against Quebec likewise failed. However, by this time, Louis XIV of France could no longer foot the bill of this far-flung war, the original cause of which had been rendered moot in any case when the Bavarian candidate supported by the Grand

Alliance died. Louis's grandson ascended the Spanish throne by default.

By the Treaty of Utrecht, concluded on July 13, 1713, France ceded Hudson Bay and Acadia to the English but retained Cape Breton Island and other small islands in the St. Lawrence. The Abenakis and other French-allied Indians promised to become loyal subjects to Queen Anne.

R

Rajput Rebellion against Aurangzeb

(1675–1707)

PRINCIPAL COMBATANTS: Rajputs and Sikhs vs. the Mogul Empire

PRINCIPAL THEATER(S): Northern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Rajputs and allied Sikhs sought to overthrow Mogul rule after Aurangzeb instituted a campaign of oppression against non-Muslims.

OUTCOME: Aurangzeb prevailed in straight combat but became bogged down in a long, ruinous guerrilla conflict.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

In 1658, Aurangzeb (1618–1707) crowned himself emperor of India at Delhi and commenced a program of persecution of non-Muslims. In 1675, he turned in particular against the Sikhs and Rajputs, who responded by fanatically devoting themselves to wiping out Aurangzeb and all Muslims.

Led by the Mewar Durgadas, the Rajputs staged a massive rebellion during 1675–81, managing to drive out the Mogul garrisons of Aurangzeb. In 1681, Aurangzeb's own son, Akbar (d. 1704), joined the Rajputs in rebellion. Aurangzeb defeated the young man, who fled for his life to Persia.

The rebellion of the Rajputs deprived Aurangzeb's army of one of its most valuable assets, the Rajput cavalry, which rendered Aurangzeb vulnerable to the rising power

of the Marathas. Aurangzeb decided to move preemptively against the Marathas and prevailed against them during 1686–89 but was then plagued by a long guerrilla conflict with their supposedly defeated forces. This marked the beginning of a long decline, during which Aurangzeb's empire became bankrupt, its soldiers mutinous, and its far-flung empire impossible to hold together. Aurangzeb's death in 1707 marked the end of Mogul hegemony.

Rashtrakutan-Cholan War (c. 940–972)

PRINCIPAL COMBATANTS: The Rashtrakuta vs. Chola dynasties of India

PRINCIPAL THEATER(S): India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Rashtrakuta dynasty sought to expand its territory into southern India.

OUTCOME: The Chola dynasty was overwhelmed in battle by the Rashtrakuta dynasty and lost much territory.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

As former vassals of the Chalukyas, the Rashtrakutas grew more powerful from the eighth century onward and began

to annex territory including Malwa to the north. The Rashtrakutan king, Krishna III (fl. 939–968), also began preparing to annex land that formerly belonged to the Pallavas. This region, however, was being claimed by the Cholas under Parantaka I (fl. 907–953). The Cholas took Nellore from the Rashtrakutas, but Krishna and Indra IV (r. ended 973), his successor, battled the Cholas and gained territory in the Vengi and Tamil plains and the Chola capital at Kanchipuram. With these territorial gains, the Rashtrakutas controlled southern India. The CHALUKYAN-RASHTRAKUTAN WARS, ending in 975, brought a decline to the Rashtrakuta dynasty and prominence to a western Chalukya dynasty.

Ravenna, Revolt in (726–731)

PRINCIPAL COMBATANTS: The army of the Byzantine Empire vs. military force raised by Pope Gregory II in Italy

PRINCIPAL THEATER(S): Northeast Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Leo III, Byzantine emperor, sought to strengthen the Christian Church by banning the worship of images; the Italian clergy vehemently opposed the edict.

OUTCOME: The army raised by Pope Gregory II repelled the advance of the Byzantine army.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 726, Byzantine emperor Leo III (c. 675–680 to 741) forbade the worship of images in the Roman Catholic Church. This edict by the emperor, who became known as the Iconoclast, was an attempt to remove “frills” from the church and make it better able to compete with the fast-growing, simpler Muslim faith. When most of the Italian clergy disagreed with Leo’s edict, the emperor decided to enforce compliance by sending a military force to Ravenna, the Byzantine capital in Italy. There the Byzantine army clashed with the army of Pope Gregory (669–731), who drove back Leo’s army and forced it to retreat to Constantinople. This battle further pointed to the growing schism between the Orthodox Church of the Byzantine Empire and the Roman Catholic Church.

Razin’s Revolt (1665–1671)

PRINCIPAL COMBATANTS: Cossack and peasant army led by Stenka Razin vs. imperial Russian forces

PRINCIPAL THEATER(S): Lower Volga and Caspian Sea region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Razin sought relief from czarist oppression.

OUTCOME: Although Razin acquired a substantial number of followers, his rebellion was crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Razin’s army, 20,000; Czarist forces, 30,000

CASUALTIES: Total deaths, including civilians, 100,000+

TREATIES: None

Although often serving as military assets of the czars, the Cossacks also staged numerous revolts against them, the most celebrated being that of Stenka Razin (d. 1671), a Cossack *hetman*, or leader.

In the summer of 1670, at the head of 7,000 Cossack warriors, Razin took Tsaritsyn, then advanced down the Volga River, picking up more followers. In June, some 10,000 Cossacks attacked and captured Astrakhan, killing 441 of the 6,000 czarist troops defending the city. This triggered a larger rebellion among the Cossacks; by mid-September some 20,000 were under arms, advancing in two columns, up the Volga and up the Don.

At Simbirsk, 4,000 Cossacks repeatedly assaulted the garrison of *streltsy* (czarist musketeers) who held the city. After repelling the onslaught three times, the defenders were finally reinforced by a relief column of 6,000 men. Razin attempted to intercept the column but was defeated at the Battle of Sviyaga River on October 1. Thus Simbirsk was saved, and the rebel cause was dealt a severe blow.

In the meantime, on the Don, a Cossack force was defeated at the Battle of Korotoyak. Combined with the defeat outside of Simbirsk, this setback brought the Cossack advance to a standstill and presented czarist forces with an opening for a smashing counteroffensive. Many Cossacks at this point deserted Razin and collaborated with the czarist army. At Kagolnik, on April 14, 1671, Razin was defeated. Taken prisoner, he was tortured for two months until, on June 6, 1671, he was publicly drawn and quartered in Moscow’s Red Square.

The death of Razin all but extinguished the rebellion. Some 30,000 *streltsy* and militiamen were dispatched to Astrakhan in August 1671 to mop up the last rebel holdouts. The city fell to the czarist army on November 26.

Red Cloud's War *See* BOZEMAN TRAIL, WAR FOR THE.**Red Eyebrow Revolt** (c. 17 C.E.)

PRINCIPAL COMBATANTS: Xin (Hsin) emperor Wang Mang vs. peasant rebels in Shandong (Shantung)

PRINCIPAL THEATER(S): Yellow River region of Shandong

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: When the Yellow River flooded in 17, desperate peasants rebelled against the unpopular usurper of the Han dynasty.

OUTCOME: The rebellion, while suppressed, sapped Wang's strength and caused his rule to spiral out of control.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

First and only emperor of the Xin ("New") dynasty, Wang Mang (33 B.C.E.–C.E. 23) was the nephew of the dowager empress of the decadent Han dynasty in China. He had served as her chief minister for a decade or so before he disposed of the infant emperor, Ru-zi (4 C.E.–?), to whom he was acting as regent and seized the Chinese throne for himself. The sweeping reforms he introduced, such as abolishing slavery and imposing an income tax, alienated the powerful Chinese landlords. He tried to justify these changes as a revival of the Zhou (Chou) dynasty's "Golden Age," but his argument failed to win over the landlords. As for the peasants, they were oppressed by his massive levies to fund the invasion and annexation of the tribal lands of the nomadic Xiongnu (Hsiung-nu).

Around the year 17 C.E., heavy rains caused the Yellow River to flood, bursting through dikes neglected by Wang Mang's government and driving tens of thousands of peasants from their homes. As a result, a peasant revolt, led by an aggressive Chinese woman named Mother Lu (fl. early first century), broke out in Shandong (Shantung) Province. Inspired by a religious fanaticism, the rebels painted their eyebrows red to make themselves resemble demons. The revolt reached such proportions as to sap Wang's military strength and cause the invasion of Xiongnu territory to fail. Thereafter, Wang—unable to withstand the combined opposition of aristocratic warlords and desperate peasants—faced a succession of revolts at home, causing him to lose much of Turkestan, which had long been under Han control. As anarchy swept China, Wang Mang was killed in another revolt, and the Han dynasty was soon restored to power.

Red River Rebellion (1869–1870) *See* RIEL'S FIRST REBELLION.**Red River War** (1874–1875)

PRINCIPAL COMBATANTS: Comanche and Kiowa Indians vs. United States

PRINCIPAL THEATER(S): Indian Territory (Oklahoma), Texas, and Kansas

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Kiowa-Comanche raids on white settlers and resistance to confinement on reservations

OUTCOME: Kwahadi Comanche, for the first time ever, consent to live on the reservation; 74 militant chiefs are exiled to Castillo de San Marcos, Florida.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Indians, about 1,200 warriors; U.S. Army, fewer than 1,000

CASUALTIES: Indians, 84 killed; army, 2 killed, 7 wounded

TREATIES: None

After President Ulysses S. Grant (1822–85) proclaimed a policy of conciliation and peace in dealing with the Indians of the West, the Kiowa, mainly led by Chief Satanta (1830–78) raided throughout neighboring Texas, withdrawing to the reservation for refuge. In response to complaints from outraged Texans, General William Tecumseh Sherman (1820–91) made a personal tour of inspection of the reservation and nearby Fort Sill.

As Sherman's wagon train approached the area, on May 18, 1871, Satanta, Satank (c. 1810–70), Big Tree (c. 1847–1929), and about 100 Kiowa braves ambushed a 10-wagon train, killing eight teamsters and stealing property. Ironically, they had let pass a smaller train—which (unknown to them) carried General Sherman, who ordered the arrest of Satanta, Big Tree, and Satank. They were transported to Texas to stand trial for murder. Satank was shot en route during an escape attempt; Satanta and Big Tree were convicted in a Texas court and sentenced to hang. However, the sentences were commuted to prison terms, and in 1873 Satanta and Big Tree were paroled.

Once released, Satanta and Big Tree led new raids in the Texas Panhandle, prompting General Sherman to launch the major offensive that came to be known as the Red River War. By this time, the Kiowa had been joined by Comanche and Cheyenne and conducted ever more destructive raids. On June 27, Comanches and Cheyenne hit a white hunter village at Adobe Walls in the Texas Panhandle; on July 12, the Kiowa chief Lone Wolf (c. 1820–79) ambushed Texas Rangers at Lost Valley; throughout this period, warriors struck at ranchers and wayfarers in Kansas and Texas.

Sherman launched a campaign in the Staked Plains region of the Texas Panhandle, a campaign made especially arduous by a severe drought, which, on September 7, suddenly yielded to torrential rains that rendered travel all but impossible. Cut off from support, Colonel Nelson A. Miles (1839–1925) held off an Indian siege for three days, from September 9 to September 11, before the attackers finally withdrew.

Colonel Ranald Mackenzie (1840–89) commanding the 4th Cavalry, was attacked on the night of September 26 near Tule Canyon. Mackenzie struck back in the morning, chasing the attackers to the Palo Duro Canyon, where he destroyed a combined Kiowa-Comanche-Cheyenne village. During the fall, other troops burned more villages, leaving the Indians poorly supplied for the winter.

During the late fall and winter, parties of Kiowa and Cheyenne straggled in to Forts Sill and Darlington to submit to life on the reservation. On June 2, 1875, more than 400 Kwahadi Comanches consented to live on a reservation—the first time they had done so in their history.

Satanta, together with other Kiowa war chiefs, surrendered on October 7, 1874. Satanta was sent to the Texas state penitentiary, from which he had been previously paroled. On March 11, 1878, he leaped to his death from a window. Seventy-four other militant chiefs were exiled to Castillo de San Marcos, a former Spanish fortress in St. Augustine, Florida.

Reform, War of the (1857–1860)

PRINCIPAL COMBATANTS: Mexican Conservatives vs. Liberals (Constitutionalists)

PRINCIPAL THEATER(S): Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The conservatives fought against the implementation of the reforms of the constitution of 1857.

OUTCOME: After losing many battles, Liberal forces finally turned the tide, defeated the Conservatives, and installed Benito Juárez as president; he instituted the reforms of the 1857 constitution.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Conservatives, about 25,000; Liberals, 35,000

CASUALTIES: 70,000 combatants and civilians killed

TREATIES: None

The Mexican constitution of 1857 introduced reforms supported by the Liberals and opposed by the Conservatives, prompting them to revolt. In January 1858, General Félix Zuloaga (1814–76), a Conservative leader, led forces that overran Mexico City and forced the constitutional president, Benito Juárez (1806–72), to flee to Veracruz. Zuloaga assumed presidential powers, then was replaced by another Conservative, Miguel Miramón (1832–67). In the meantime, Juárez rallied the weak militia of the Liberals, which repelled Conservative attempts to take Veracruz, in March 1859 and March 1860. Despite these victories, the Conservatives, whose forces were both better equipped and better led than those of the Liberals, seemed likely to prevail. The Conservatives were also willing to fight on the most ruthless terms, throwing the nation into a bitter and bloody civil war. Indeed, during the first two years of the conflict, most of the triumphs went to the Conservatives. Their greatest victory was at the Battle of Ahuaululco de los Pinos on October 29, 1858, in which the Liberal army was ignominiously routed. Although the Liberal commander, General Santos Degollado (d. 1861) lost every engagement he fought, he managed to keep the army intact, and this accomplishment bought time for Juárez to plead successfully for support from the United States, which sent arms and funding to the Liberals.

Not through military victory but by staying in the war did the Liberals ultimately prevail. In March 1859, General Miramón renewed his offensive against the Liberals, attempting again to push Juárez out of Veracruz. Miramón found himself defeated not by Liberal arms so much as by tropical diseases endemic to the Mexican lowlands. Taking advantage of the debilitated state of the Conservative army, Degollado led his forces in an assault against Mexico City, only to be defeated, yet again, at Chapultepec in April 1859.

Juárez ordered the confiscation of church property to raise funds to continue the battle against the well-financed Conservatives. With his forces now better armed, he put them in the charge of Jesus Gonzalez Ortega (1824–81), who won a striking victory against the Conservatives near Guadalajara and then at Calderón, both in 1860. On December 20, 1860, Ortega led Liberal forces to a mighty victory against Miramón at the Battle of Calpulalpam. This victory laid bare Mexico City, into which Juárez rode in triumph on January 1, 1861. With the war suddenly reversed in the Liberals' favor, Juárez assumed the presidency and implemented the reforms of the 1857 constitution.

Scholes, *Mexican Politics during the Juárez Regime, 1855–1872* (Columbia: University of Missouri Press, 1969).

Regulators' Revolt (1771)

PRINCIPAL COMBATANTS: Regulators (militant frontiersmen) vs. colonial militia

PRINCIPAL THEATER(S): Carolina backcountry

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Disaffected Carolina frontiersmen rebelled against corrupt, unresponsive, tax-hungry, and repressive royal colonial government.

OUTCOME: The Regulators were suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Regulators, 2,000; militia forces, 1,200

CASUALTIES: Six Regulators executed; other minor casualties

TREATIES: None

After the English victory in the FRENCH AND INDIAN WAR, many Americans were proud to be part of the triumphant British Empire, but many others felt oppressed and outraged by the series of taxes and duties the Crown imposed on the colonies in an attempt to recoup some of the expense of the long wilderness war. The towns of New England, especially Boston, harbored the strongest streak of radicalism and ultimately agitated for and organized the Revolution. In the frontier regions, much of the population was Tory in sympathy (i.e., loyal to Britain), but many on the frontier were disaffected, feeling that the East Coast centers of government, as well as the mother country across the Atlantic, cared little about the inland settlements. The alienation of the frontier was intensified by George III's (1738–1820) Proclamation of 1763, which fixed the Appalachians as the absolute western limit of white settlement. Although most of the organized demonstrations against British authority in the pre-Revolutionary years took place in the cities and towns of the East Coast, the first armed preludes to outright revolution occurred on the frontier.

The poor farmers of the western counties of North Carolina were among those with grievances against the Tidewater aristocrats who held the reins of colonial government. In 1768, they formed an association to protest what they saw as unjust taxation and thoroughly corrupt justices of the peace, who had been sent from the East to administer law for the frontier. In 1769, the association turned militant, as a group of farmers and settlers formed the Regulators, a political and paramilitary vigilante band. The Regulators won control of the provincial assembly, which sufficiently alarmed the British colonial governor, William Tryon (1729–88), to prompt him to dissolve the assembly before it could take any action.

Cut off even from quasi-legal action, the Regulators increasingly turned to vigilante violence. For example, when a lawyer convicted of extortion was freed by the provincial magistrate, the Regulators pillaged the court-

house and assaulted the lawyer. In response to this and similar acts, the colonial government passed the Bloody Act (1771), which proclaimed the rioters guilty of treason. Amid escalating tension later in 1771, Governor Tryon dispatched 1,200 militiamen into the area. They confronted some 2,000 Regulators on May 16, 1771, at the Battle of Alamance Creek. Although outnumbered, the militiamen were much better armed and disciplined. After soundly defeating the Regulators, they arrested a number identified as ringleaders. Six Regulator leaders were subsequently hanged, and the others were compelled to swear allegiance to the eastern Tidewater government. With this single battle and subsequent punishment, the Regulators' Revolt ended.

Religion, First War of (1562–1563)

PRINCIPAL COMBATANTS: Catholics vs. Huguenots (with English aid) in France

PRINCIPAL THEATER(S): France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Huguenots sought religious freedom.

OUTCOME: A degree of tolerance was granted to the Huguenots.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Catholics, 23,000; Huguenots, 15,000 (including 3,000 English troops)

CASUALTIES: Military losses were about 4,000 killed on each side; Huguenot civilian losses were about 3,000 killed.

TREATIES: Peace of Amboise (March 1563)

On March 1, 1562, supporters of the Catholic duke François de Guise (1519–63) killed a congregation of Protestants at Vassy. This massacre was instigated by the granting of limited toleration to the Protestants by Catherine de' Medici (1519–85), the queen mother who took control of the throne at the death of King Francis II (1544–60). The Catholics, under François de Guise, the Constable de Montmorency (Anne, duc de Montmorency; 1493–1567), and Prince Antoine de Bourbon (1518–62), king of Navarre, and the Protestants, under Louis I de Bourbon, prince of Condé (1530–69), and Comte Gaspard de Coligny (1519–72), admiral of France, were soon pitted against each other in a battle known as the First War of Religion. Louis de Condé and Gaspard de Coligny ordered the Huguenots to seize Orléans to retaliate for the Vassy massacre and called on all Protestants in France to rebel. In September 1562, the English sent John Dudley (fl. 16th

century) of Warwick to help the Huguenots, and his force captured Le Havre. About one month later, the Catholics defeated Rouen, a Protestant stronghold. One of the leaders of the Catholic movement, Antoine de Bourbon, was killed during the attack. The Huguenots continued to rise in rebellion, and in December 15,000 Protestants under Condé and Coligny marched north to join the English troops at Le Havre. En route, they encountered about 19,000 Catholics at Dreux. The Catholics under Guise were victorious, but one of their leaders, Montmorency, was captured, as was the Protestant leader Condé. On February 18, 1563, Guise was killed while besieging Orléans. Peace was finally secured in March when Montmorency and Condé, both prisoners since the Battle of Dreux, negotiated a settlement at the request of Queen Catherine. The Peace of Amboise stipulated a degree of tolerance. The opposing sides then combined forces to push the English from Le Havre, which fell on July 28, 1563.

See also RELIGION, SECOND WAR OF; RELIGION, THIRD WAR OF; RELIGION, FOURTH WAR OF; RELIGION, FIFTH WAR OF; RELIGION, SIX AND SEVENTH WARS OF; RELIGION, EIGHTH WAR OF; and RELIGION, NINTH WAR OF.

Further reading: R. J. Knecht, *The French Civil Wars, 1562–1598* (New York: Pearson Education, 2000); R. J. Knecht and Mabel Segun, *French Wars of Religion* (New York: Addison-Wesley Longman, 1996).

Religion, Second War of (1567–1568)

PRINCIPAL COMBATANTS: Catholics vs. Huguenots in France

PRINCIPAL THEATER(S): France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Huguenots sought religious freedom.

OUTCOME: A degree of tolerance was granted to the Huguenots.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 16,000 French (Catholics); 3,500 Huguenots

CASUALTIES: Numbers unknown, but heavy on both sides

TREATIES: Peace of Longjumeau (March 1568)

The Peace of Amboise (July 28, 1563), which stipulated a greater degree of tolerance between the Catholics and the Huguenots in France, ended the First WAR OF RELIGION. However, peace lasted only four years. On September 29, 1567, the Huguenots under Louis de Bourbon, prince de Condé (1530–69), and Comte Gaspard de Coligny (1519–72) tried to capture the royal family at Meaux. Although they were unsuccessful, other Protestant bands threatened Paris and captured Orléans, Auxerre, Vienne, Valence, Nîmes, Montpellier, and Montaubon. At the Battle of St. Denis, a force of 16,000 men under Constable de Montmorency (Anne, duc de Montmorency; 1493–1567),

attacked Condé's small army of 3,500. Despite the long odds, the Huguenots managed to remain on the field for several hours. Montmorency, aged 74, was killed during the fray. This war ended on March 23, 1568, with the Peace of Longjumeau by which the Huguenots gained substantial concessions from Queen Catherine de' Medici (1519–85).

See also RELIGION, THIRD WAR OF (1568–1570); RELIGION, FOURTH WAR OF; RELIGION, FIFTH WAR OF; RELIGION, SIX AND SEVENTH WARS OF; RELIGION, EIGHTH WAR OF; and RELIGION, NINTH WAR OF.

Further reading: R. J. Knecht, *The French Civil Wars, 1562–1598* (New York: Pearson Education, 2000); R. J. Knecht and Mabel Segun, *French Wars of Religion* (New York: Addison-Wesley Longman, 1996).

Religion, Third War of (1568–1570)

PRINCIPAL COMBATANTS: Catholics vs. Huguenots in France

PRINCIPAL THEATER(S): France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Huguenots sought religious freedom.

OUTCOME: A degree of tolerance was granted to the Huguenots.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Catholics, 18,000; Huguenots, 16,500

CASUALTIES: Catholics, 1,000 killed or wounded; Huguenots, 8,400 killed or wounded

TREATIES: Peace of St. Germain, August 8, 1570

The Third War of Religion broke out on August 18, 1568, when Catholics attempted to capture Louis de Bourbon, prince de Condé (1530–69), and Comte Gaspard de Coligny (1519–72), the primary Protestant leaders. The Royalist Catholics continued to suppress Protestantism. Sporadic fighting occurred throughout the Loire Valley for the remainder of 1568. In March 1569, the Royalists under Marshal Gaspard de Tavannes (1509–73) engaged in battle with Condé's forces in the region between Angoulême and Cognac. Later in March, Tavanne crossed the Charente River near Châteauneuf and soundly defeated the Huguenots at the Battle of Jarmac. Although Condé was captured and murdered, Coligny managed to withdraw a portion of the Protestant army in good order. About three months later, help for the Huguenots arrived in the form of 13,000 German Protestant reinforcements. This enlarged force laid siege to Poitiers. Then on August 24, 1569, Coligny sent Comte Gabriel de Montgomery (c. 1530–74) to Orthez, where he repulsed a Royalist invasion of French-held Navarre and defeated Catholic forces arranged against him. Royalist marshal Tavanne then relieved Poitiers and forced Coligny to raise the siege. The major battle of the Third War of Religion occurred on October

3, 1569, at Moncontour. The Royalists, aided by a force of Swiss sympathizers, forced the Huguenot cavalry off the field and then crushed the Huguenot infantry. The Huguenots lost about 8,000, whereas Royalist losses numbered about 1,000. The following year, however, Coligny marched his Huguenot forces through central France from April through June and began threatening Paris. These actions forced the Peace of St. Germain, which granted many religious freedoms to the Protestants.

Religion, Fourth War of (1572–1573)

PRINCIPAL COMBATANTS: Catholics vs. Huguenots in France

PRINCIPAL THEATER(S): France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Huguenots sought religious freedom.

OUTCOME: A degree of tolerance was granted to the Huguenots, and a group of moderate Catholics formed a new political party known as the Politiques.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

A massacre of 3,000 Protestants and their leader Louis de Bourbon, prince of Condé (1530–69), precipitated the outbreak of the Fourth War of Religion between Catholics and Protestants in France. After the massacre of St. Bartholomew's Eve in Paris, August 24, 1572, Prince Henry IV of Navarre (1553–1610) took charge of the Protestant forces. Marked primarily by a long siege of La Rochelle by Royalist forces under another Prince Henry, the younger brother of Charles IX (1550–74), this Fourth War of Religion resulted in the Protestants' gaining military control over most of southwest France. However, at least 3,000 more Huguenots were massacred in the provinces before the war ended.

The St. Bartholomew's Day Massacre outraged even Catholic moderates, who, seeking to counter the extremes of the Catholic Royalists, formed a new political party, the Politiques, to negotiate with the Protestants and establish peace and national unity.

Religion, Fifth War of (1575–1576)

PRINCIPAL COMBATANTS: Catholics vs. Huguenots in France

PRINCIPAL THEATER(S): France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Henry, duc de Guise; and his Royalist faction wanted to take the French throne away from Henry III, who was more tolerant of religious differences than they.

OUTCOME: The Royalist Catholics under Henry, duke de Guise, formed a Holy League with King Philip of Spain to secure the French throne for the Catholics.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Mousieur, May 5, 1576

Protestants and Catholics in France had been fighting sporadically since 1562 in the First War of RELIGION, the Second War of RELIGION, the Third War of RELIGION, and the Fourth War of RELIGION when violence again erupted in 1575. In the most important action of this war, Henry, duc de Guise (1555–88), led the Catholic Royalists to victory at the Battle of Dormans. Aligned against Guise, however, were not only the Protestants under Henry IV of Navarre (1553–1610) but also the Politiques, moderate Catholics who wanted the king to make peace with the Protestants and restore national unity. Henry III (1551–89) was not wholeheartedly in support of Guise, and he offered pledges of more religious freedom to the Protestants at the Peace of Mousieur, signed on May 5, 1576. Guise refused to accept the terms of the peace and began negotiating with Philip II (1527–98) of Spain to organize a Holy League and secure Spain's help in capturing the French throne.

Religion, Sixth and Seventh Wars of (1576–1577, 1580)

PRINCIPAL COMBATANTS: Catholics vs. Huguenots in France

PRINCIPAL THEATER(S): France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Huguenots sought religious freedom.

OUTCOME: After subduing the Protestants, Henry III wavered in his determination to carry out the terms of the Peace of Bergerac.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Bergerac (1577)

The Sixth War of Religion between the Catholics and Protestants in France included only one campaign and was settled by the Peace of Bergerac of 1577. During this period, Henry III (1551–89) tried to persuade the Holy League, formed in 1576 by Catholic leader Henry, duke de Guise (1555–88), and Philip II (1527–98) of Spain, to support an attack on the Protestants. Henry succeeded in subduing the Protestants but wavered in his determination to carry out the terms of the Peace of Bergerac.

The Seventh War of Religion in 1580, also known as the “Lovers’ War,” had little to do with hostilities between the Catholics and Protestants. Instead fighting was instigated by the actions of Margaret, the promiscuous wife of Henry IV of Navarre (1553–1610). Over the next five years, Catholics, Protestants, and the moderate Politiques (see RELIGION, FOURTH WAR OF; RELIGION, FIFTH WAR OF) all engaged in intrigue in their attempts to name a successor to the childless Henry III. Although Henry of Navarre was next in line by direct heredity, the Holy League maneuvered to ensure that Henry, duc de Guise, would gain the throne after the reign of Charles de Bourbon (1566–1612), proposed as the successor to Henry III.

See also RELIGION, FIRST WAR OF; RELIGION, SECOND WAR OF; RELIGION, THIRD WAR OF; RELIGION, FOURTH WAR OF; RELIGION, FIFTH WAR OF; RELIGION, EIGHTH WAR OF; RELIGION, NINTH WAR OF (1589–1598).

Religion, Eighth War of (1585–1589)

PRINCIPAL COMBATANTS: Catholics vs. Huguenots in France

PRINCIPAL THEATER(S): France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Catholic Royalists in France wanted to ensure that one of their numbers would be named successor to the childless Henry III.

OUTCOME: King Henry named the Protestant leader Henry of Navarre as his successor.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Catholics, 8,700+; Huguenots, 6,500

CASUALTIES: Catholics, 3,400 killed; Huguenots, 200 killed

TREATIES: None

The Eighth War of Religion, also known as the “War of the Three Henrys,” pitted the Royalist Henry III (1551–89), Henry of Navarre (1553–1610), and Henry de Guise (1555–88) against each other in a struggle over succession to the French throne. The war began when Henry III withdrew many of the concessions he had granted to the Protestants during his reign. At the Battle of Coutras on October 20, 1587, the army of Henry of Navarre, 1,500 cavalry and 5,000 infantry, smashed the Royalist cavalry—1,700 lancers—and 7,000 infantry. More than 3,000 Royalists were killed; Protestant deaths totaled 200. Especially effective against the Royalist was the massed fire of the Protestant arquebuses, primitive muskets.

Despite the Protestant victory at Coutras, the Catholics under Henry of Guise prevailed at Vimoy and Auneau and checked the advance of a German army marching into the Loire Valley to aid to Protestants. Henry’s next victory was in Paris, where he forced the king to capitulate in May 1588. In subsequent intrigues, Henry de Guise and his brother Cardinal Louis I de Guise (1527–78) were assassinated. Fleeing the Catholics’ rage over the murders, Henry III sought refuge with Protestant leader Henry of Navarre. The king failed to find permanent safety and was assassinated, stabbed to death, by a Catholic monk on August 2, 1589. On his deathbed, the king named Henry of Navarre his successor. The Catholics refused to acknowledge him king, insisting instead that Cardinal Charles de Bourbon (1566–1612) was the rightful ruler of France. This conflict sparked the NINTH WAR OF RELIGION.

See also RELIGION, FIRST WAR OF; RELIGION, SECOND WAR OF; RELIGION, THIRD WAR OF (1568–1570); RELIGION, FOURTH WAR OF; RELIGION, FIFTH WAR OF; RELIGION, SIXTH AND SEVENTH WARS OF; and RELIGION, NINTH WAR OF

Further reading: R. J. Knecht, *The French Civil Wars, 1562–1598* (New York: Pearson Education, 2000); R. J. Knecht and Mabel Segun, *French Wars of Religion* (New York: Addison-Wesley Longman, 1996).

Battle of Coutras, October 20, 1587

Religion, Ninth War of (1589–1598)

PRINCIPAL COMBATANTS: Catholics vs. Huguenots in France

PRINCIPAL THEATER(S): France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Protestants in France sought religious freedom.

OUTCOME: Henry III, although he had returned to the Catholic faith, issued the Edict of Nantes, which proclaimed religious freedom for French Protestants.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Catholics, 26,000; Huguenots, 20,000

CASUALTIES: Catholics, 13,550 killed or wounded; Huguenots, 12,040 killed or wounded

TREATIES: Edict of Nantes (1598)

The naming of Henry of Navarre (1553–1610) as successor to the French throne sparked the final War of Religion between Protestant Huguenots and Catholics in France. Insisting that Charles, duke de Bourbon (1566–1612), was the rightful successor to Henry III (1551–89), the Catholics enlisted the aid of the Spanish. Charles, duke of Mayenne (1554–1611), the younger brother of Henry of Guise (1555–88), led the Catholic efforts.

At the Battle of Arques on September 21, 1589, Henry of Navarre (1553–1660) ambushed Mayenne's army of 24,000 French Catholic and Spanish soldiers. Having lost 600 men, Mayenne withdrew to Amiens, while the victorious Navarre, whose casualties numbered 200 killed or wounded, rushed toward Paris.

A Catholic garrison near Paris repulsed Navarre's advance on November 1, 1589. Not to be daunted in his quest for the throne, Henry withdrew but promptly

proclaimed himself Henry IV and established a temporary capital at Tours.

Henry of Navarre won another important battle at Ivry on March 14, matching 11,000 troops against Mayenne's 19,000. Mayenne lost 3,800 killed, whereas Navarre suffered only 500 casualties.

Civil war continued unabated. Between May and August 1590, Paris was reduced to near starvation during Navarre's siege of the city. Maneuvers continued, especially in northern France until May 1592; however, in July 1593 Henry of Navarre reunited most of the French populace by declaring his return to the Catholic faith. His army then turned to counter a threat of invasion by Spain and the French Catholics allied with Mayenne.

On March 21, 1594, Henry of Navarre entered Paris in triumph and over the next few years battled the invading Spanish: at Fontaine-Française on June 9, 1596, at Calais on April 9, 1596, and at Amiens on September 17, 1596. No further major campaigns ensued.

On April 13, 1598, Henry of Navarre ended the decades of violence between the Catholics and the Protestants by issuing the Edict of Nantes, whereby he granted religious freedom to the Protestants. Then on May 2, 1598, the war with Spain ended with the Treaty of Vervins, whereby Spain recognized Henry as king of France. The next major conflict between the Catholics and Protestants in France occurred 27 years later when the Protestants rose in revolt in 1625 and the English joined their cause in the ANGLO-FRENCH WAR (1627–1628).

Rhodesian Civil War (1971–1980)

PRINCIPAL COMBATANTS: White supremacist Rhodesian government vs. black rebels

PRINCIPAL THEATER(S): Rhodesia (Zimbabwe) and neighboring Zambia and Mozambique

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The black majority sought control of the government.

OUTCOME: Rhodesia gained independence as Zimbabwe.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Rhodesian government forces, 58,700; rebels, 20,000+

CASUALTIES: Total lives lost, 21,000 within Rhodesia/Zimbabwe; 6,000 in neighboring Zambia and Mozambique; the overwhelming majority of casualties were among black civilians and the rebel forces.

TREATIES: A 1979 London-based peace conference produced no formal treaty, but the war was resolved by the election of 1980.

Prime Minister Ian Smith (b. 1919), head of the white supremacist government of Rhodesia (Zimbabwe), broke away from the British Commonwealth in 1965 and, despite the fact that he represented only 250,000 whites in an overwhelmingly black nation of six million people, declared independence for the nation under his leadership. This provoked sporadic guerrilla warfare, which developed into a full-scale civil war in December 1972.

From December 1972 to December 1975, the black rebels proved unsuccessful against the white Rhodesian security forces. During this period, 720 rebel guerrillas were killed, whereas only 75 government troops died. The situation began to improve for the rebels at the end of 1975 when they acquired bases in newly independent Mozambique (see MOZAMBIKAN WAR OF INDEPENDENCE). The rebels began to attack on two fronts—Mozambique and Zambia. Nevertheless, they were outnumbered, mustering by 1976 about 20,000 men against a total of 58,700 government army, air force, reserve, and police personnel. Moreover, the insurgents were divided between forces loyal to the Zambian-based Zimbabwe African People's Union (ZAPU) and the Mozambique-based Zimbabwe African National Union (ZANU).

Despite the strain of fighting a two-front war, Rhodesian government forces continued to enjoy success against the divided rebels, whom they called “terrs”—terrorists. However, each year took a greater toll on both sides, and a pattern of raid and reprisal developed, culminating (on September 2, 1978) in the downing of a Rhodesian airliner by a rebel-fired SAM-7 missile. This moved Prime Minister Smith to arrange a compromise by turning over leadership to a majority black government under a moderate black leader, Bishop Abel Muzorewa (b. 1925). Guerrilla leaders who were not included in the government, however, continued the war, claiming that Muzorewa was a white puppet.

Elections early in 1980 brought the two most important “outlaw” rebel leaders to power. Robert Mugabe (b.

1924) was elected president, and Joshua Nkomo (1917–1999) became vice president. With this Rhodesia became Zimbabwe, and the war ended.

Riel's First Rebellion (Red River Rebellion) (1869–1870)

PRINCIPAL COMBATANTS: Métis rebels vs. Canadian government

PRINCIPAL THEATER(S): Red River area of Manitoba

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: When the Hudson's Bay Company transferred ownership of Rupert's Land to the Canadian government, the Métis people, living in the Red River settlement included in the transfer, feared they would lose their traditional rights and rebelled.

OUTCOME: Setting up a provincial government at present-day Winnipeg, the rebels petitioned to be included in the new province of Manitoba, which Canada was forming out of the vast Rupert's holdings. When fighting broke out between the Métis and local English settlers, Canada repressed the rebellion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Métis: 10,000 (4,000 of whom were "mixed blood" Scottish and English settlers); Canadian numbers unknown

CASUALTIES: Numbers unknown, but losses light on both sides.

TREATIES: None

Sometimes called the "Métis Messiah," Louis David Riel (1844–85) was a leader of the Métis peoples of western Canada. Riel's father, also named Louis (fl. early 19th century), had organized a brief rebellion against Hudson's Bay Company rule over the Red River Settlement (present-day Manitoba) in 1849, when the boy was not yet five years old, and he grew up surrounded by anti-English and anti-Canadian feeling. Sent to study for the priesthood in Montreal, the youthful Riel there gave the first evidence of the moodiness, distraction, and quarrelsome personality that would seem to the Métis messianic but would lead the Canadian government to confine him for a while in mental asylums in Quebec. Possibly distraught by the death of his father, Riel gave up the priesthood; scorned by the white parents of his lover when he proposed marriage, Riel returned to the West.

In 1869 the Hudson's Bay Company turned Rupert's Land, the company's vast holdings in the Canadian West, over to the British Crown. When the government launched a survey as the first step in transferring those lands to Canadian jurisdiction, the Métis at Red River

reacted with fear and anger. Generally of mixed French and Indian ancestry, the Métis believed, with good cause, that neither their land rights nor the separate culture they had developed over centuries would be respected by the English-speaking Canadians. Given his father's status, Riel quickly became their spokesman after standing firm against a party of surveyors who were trying to enter the settlement. Under his leadership, the Red River people established the Comité National des Métis, which blocked the region's new Canadian governor William McDougall (1822–1905) from entering the territory and seized nearby Fort Garry (Winnipeg).

The 6,000 Métis turned for help to local English-speaking settlers, 4,000 or so of them also "mixed bloods" with Scottish or English fathers and grandfathers and often lumped together with the Métis by white Canadians as *bois brûlé*, or "scorched wood." Because they too were leery of the Canadians, they joined with the Métis in a provisional government headed by Riel. In 1870, the Red River Settlement negotiated with the Canadians to become part the province of Manitoba. Though both parties came to terms, the agreement was shattered when rebellious Métis court-martialed and executed some local sympathizers with the Canadian cause for bearing arms against the state. One of them—an obscure Irishman named Thomas Scott (d. 1870), who had threatened to kill Riel—became a martyr for white Canadians.

Canada's government in Ottawa responded by denying the rebel Métis amnesty, and the rebels fled to Métis settlements on the Saskatchewan River. Riel ensconced himself in Fort Garry when Ottawa sent Colonel Garnet Wolseley (1833–1913) in August to "maintain order" in Manitoba. When Wolseley and his British regulars arrived, Riel gave up the fort without a fight on August 24, 1870. He too fled the area. That year, the Red River area was incorporated into the new Manitoba Province, which granted many of the rights—such as separate French schools for the Métis—demanded by Riel and his rebels.

George Woodcock (Edmonton: University of Alberta Press, 1986); Joseph Kinsey Howard, *Strange Empire: Louis Riel and the Métis People* (1952; reprint ed., Toronto: Lewis and Samuel, 1974); Charles Phillips, "Louis David Riel" and "The Metis," in *Encyclopedia of the American West*, ed. Charles Phillips and Alan Axelrod, vols. 3 and 4 (New York: Macmillan Reference USA, 1996).

Riel's Second Rebellion (Northwest Rebellion) (1885)

PRINCIPAL COMBATANTS: Métis rebels vs. the Northwest Mounted Police and the Canadian army

PRINCIPAL THEATER(S): Saskatchewan, Canada

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: When the Métis, who had removed to Saskatchewan after Riel's First Rebellion, and other Indians in the area began to feel the impact of the westward settlement of English-speaking whites, they called on their exiled leader, Louis David Riel, who returned from the United States to head up a second revolt.

OUTCOME: The resistance was crushed, and Riel was tried for treason and executed, helping to create a bitter legacy the impact of which is still felt today between French-speaking and English-speaking Canadians.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rebels, 400+; Canadian government forces, 8,000+

CASUALTIES: Rebels, 35 killed; Canadian government forces, 40 killed, 115 wounded

TREATIES: None

In the Canadian parliamentary elections of 1873 following RIEL'S FIRST REBELLION, the leader of that rebellion, Louis David Riel (1844–85) was elected as the new province of Manitoba's representative. Denied his seat, he was reelected in 1874, and again the government declined to let him hold office. The following year Riel was banished from all of Canada. Caught on Canadian soil, he was thrown into a Quebec mental institution for two years—between 1876 and 1878. After he was released, he headed south to Montana, took out papers for American citizenship, and began calling himself David—rather than Louis—Riel. Back in Canada, four members of the Thomas Scott jury, who had ruled on the case of the white Canadian court-martialed and executed by the rebel Métis during the first rebellion, were murdered. Another was beaten within an inch of his life and left for dead just across the border in the United States. White-Métis racial tension escalated; Métis land was appropriated, and the Métis people were harassed and scorned by white Canadians arriving in the new Canadian West.

Riel had been teaching at a Jesuit mission school near Sun River for several years when the Métis in Saskatchewan appealed to him in 1884 to return to Canada to help them fight off the growing number of English settlers and the Canada Pacific Railway, which ominously had begun to survey their lands. Hailed as a messiah, the perhaps mentally unstable Riel refused all compromise with the Canadians. Turning his back on Canada's legal channels of redress and protest, Riel deliberately provoked Canadian authorities. Once again, he set up a provisional government, this time in Saskatchewan. Growing increasingly suspicious of those around him, including some of his oldest friends, Riel broke with the Catholic Church in the spring of 1885, declared a new Métis provincial government, and enlisted local Indians in his fight against the whites. In March, he defeated a force of the Northwest

Mounted Police and attacked settlers along Frog Creek. Canada sent its army out after Riel, which defeated the Métis guerrillas at Bartoche on May 12, 1885.

Tried for treason at Regina, Riel refused to plead insanity, as his lawyers recommended, before an English-speaking jury. The jury found him guilty and sentenced him to hang. After a number of postponements, the government carried out the execution on November 6, 1885. Riel's death became a national scandal, provoking outbursts of protest among French Canadians in Quebec and a bitter controversy over Catholic (and French-speaking) schools in Manitoba and Quebec. For the Métis, and for French-speaking Canadians in general, Riel remained a martyr though English-speaking Canadians continued mostly to consider him a madman. Both attitudes remained common even in the early 21st century, when cultural tensions spawned more than a century before continued to mar the relations between Canada's ethnic groups.

Rif War (1893)

PRINCIPAL COMBATANTS: Rif tribesmen vs. Spanish colonists at Melilla

PRINCIPAL THEATER(S): Morocco

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Spain wanted to subdue the Rif, who raided the Spanish enclave of Melilla.

OUTCOME: The Rif were suppressed, and the sultan of Morocco agreed to pay an indemnity.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Rif numbers unknown; Spanish troops, 25,000

CASUALTIES: Unknown

TREATIES: Treaty of Fez (1894)

Spanish possessions along the northern Mediterranean coast of Morocco were threatened by Muslim Berbers known as the Rif, because they lived in the Rif region of Morocco. The sultan of Morocco proved unable to suppress the Rif, whereupon Spain fortified its Melilla enclave there. Nevertheless, Melilla was besieged by the Rif, provoking a public outcry in Spain. Accordingly, in November 1893 the Spanish government to Melilla dispatched 25,000 troops, who pushed the Rif back. The following year, the Treaty of Fez (1894) was concluded between Spain and the

sultan of Morocco, who agreed to pay Spain a war indemnity of 20 million pesetas and to conduct a punitive campaign against the Rif. For its part, Spain was given explicit leave to complete its fortification of Melilla, creating a buffer zone between it and Morocco.

Rif War (Abd el-Krim's Revolt) (1919–1926)

PRINCIPAL COMBATANTS: Spain and France vs. Rifs

PRINCIPAL THEATER(S): Morocco

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Rifs under Abd el-Krim wanted to establish Morocco as an independent republic.

OUTCOME: Initial victories against Spain alone were decisive; later, the Rifs lost to an alliance of France and Spain.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Spain, 150,000; France, 160,000; Rifs, 80,000–120,000

CASUALTIES: Spain, 50,000 killed; France, 10,000 killed; Rifs, 30,000 killed or wounded

TREATIES: Paris Conference of June 16–July 10, 1926

In the largest anticolonial rebellion of the early 20th century, Spanish possessions in northern Morocco came under attack in the east by the Rif—66 Berber tribes living in the Rif Mountain region—led by Abd el-Krim (1882–1963), and in the west by Moroccans under Ahmed ibn-Muhammad Raisuli (1875–1925).

The first uprisings occurred in 1919. While troops under the Spanish high commissioner of Morocco, Damaso Berenguer (1873–1953), succeeded against those led by Raisuli, General Fernandez Silvestre was dealt a devastating defeat by Abd el-Krim's Rifs. The general, together with 13,000 out of 20,000 Spanish troops engaged, fell at the Battle of Anual on July 21, 1921, utterly defeated by a mere 6,000 Rif warriors.

In the wake of this disaster, panic gripped the colony, and Spain withdrew from eastern Morocco. Abd el-Krim immediately set up the Republic of the Rif, with himself as president. His triumph against Silvestre drew to his side a huge army of between 80,000 and 120,000 rebel warriors. With the Spanish out of the way, Abd el-Krim moved next against the French, his object being to gain control of all Morocco. Leading 20,000 men out of his large army, he took many French outposts as he marched to Fez in 1925. Forty-three of 66 French outposts and blockhouses fell to Krim's advance.

Krim's triumph prompted the French to reinforce their army, to 60,000 by July and to 160,000 by the end of the

year. Moreover, traditional rivals for the Moroccan prize, France and Spain now joined forces. Spain's dictator General Miguel Primo de Rivera (1870–1930) led a combined Spanish-French expeditionary force that landed at Alhucemas Bay on Morocco's Mediterranean coast in September 1925. He advanced against Abd el-Krim's headquarters at Targuist, while from the south a 160,000-man French army led by WORLD WAR I hero Marshal Philippe Pétain (1856–1951) moved northward, boxing the Rif troops into an area north of Taza. This combined attack rapidly turned the tide of the war. In the face of vastly superior forces—some 360,000 men in all, the largest army mobilized for colonial warfare to that time—Abd el-Krim surrendered on May 26, 1926, and suffered exile to the island of Réunion. At a Paris conference held during June 16–July 10, 1926, France and Spain restored the borders of their Moroccan zones as established by a 1912 treaty.

Robert's Revolt (921–923)

PRINCIPAL COMBATANTS: Robert, count of Paris, vs. Charles III, king of France

PRINCIPAL THEATER(S): France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Robert sought to depose the king.

OUTCOME: Charles III was toppled, but Robert died in battle; the throne was occupied by the Carolingian duke Rudolph of Burgundy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Robert I, count of Paris (c. 865–923), rebelled against Charles III (the Simple; 879–929) of France after his many military successes increased both his prestige and his ambition. Initially, Robert enjoyed great success against Charles, forcing him to retreat to Lorraine. In June 922, the nobles elected Robert king at Reims, and he was crowned on the 29th. Charles, however, recruited an army in Lorraine and marched to Laon. The following year, on June 15, 923, Charles engaged Robert at the Battle of Soissons. Although

the forces of the count emerged victorious, Robert himself fell, apparently killed in a duel with Charles.

Rudolph (d. 936), the Carolingian duke of Burgundy, assumed the throne and went on to triumph against the Normans and the men of Aquitaine.

Rogue River War (1855–1856)

PRINCIPAL COMBATANTS: “Rogue” Indians vs. United States

PRINCIPAL THEATER(S): Oregon-California border region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Deteriorating relations between white settlers and marauding Indians, exacerbated by the memory of an Indian “massacre” of Oregon missionaries and by the local territorial officials’ policy of removing Indians to reservations, broke out into a minor war that involved reluctant federal troops.

OUTCOME: The Indians were defeated and removed to a reservation.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: “Rogue” Indians, 200; United States, est. 180

CASUALTIES: Indians 48+ killed; U.S. 38 killed, 25 killed or wounded

TREATIES: None

Following the WHITMAN MASSACRE of 1847 and the reprisal led by Cornelius Gilliam (d. 1848), Indian-white relations in the Northwest steadily deteriorated until, by 1854, Indians and whites fell into the habit of shooting each other on sight. Fearful and outraged settlers called for aid from the regular army. General John E. Wool (1784–1869), who commanded the U.S. Army’s Department of the Pacific, was charged with policing the Indian situation in the Northwest. One of a distinct white minority who favored reason and moderation in dealing with the Indians, Wool soon found himself facing not only an Indian “situation” but a white “situation” as well. The general not only refused to annihilate the Indians, as the settlers loudly demanded, but repeatedly and publicly excoriated the citizenry of Oregon for their lust after Indian extermination. By the autumn of 1855, the army found itself caught between Indians and settlers.

Settlers called the Takelma and Tututni, who lived near the Oregon-California border, “Rogue” Indians because they repeatedly attacked travelers along the Siskiyou Trail near the Rogue River. In August, drunken Indians killed 10 or 11 miners along the Klamath River. In retaliation, whites killed some 25 Indians—though not those who had killed the miners; they had fled. The Rogue

River War was now under way, and, in September 1855, the local violence was intensified by rumors of a developing war between Yakamas and whites east of the Cascades. As whites began to menace all Indians, hostile or not, Captain Andrew Jackson Smith (fl. mid-19th century), commanding Fort Lane, found it necessary to offer Indian men, women, and children the protection of the fort. Before Lane could admit all of the endangered Indians into the fort, however, a band of settlers raided a nearby camp, killing 23 “Rogue Indians,” including old men, women, and children. The next day, October 17, Indian war parties took revenge, killing 27 settlers in the Rogue Valley and burning the hamlet of Gallice Creek.

With the bulk of General Wool’s regulars engaged in fighting the Yakamas, Walla Wallas, Umatillas, and Cayuses in what was now being called the Yakama War, Captain Smith could do little with his small garrison except keep it from being overrun itself. By the time relief was scheduled to arrive at Fort Lane, the Rogue River War actually seemed to be winding down of its own volition. The Takelma and Tututni chiefs known to the whites as Limpy, Old John, and George (all fl. mid-19th century), weary of warfare, agreed to surrender to Captain Smith at a place called Big Meadows. Apparently at the very last minute, the chiefs thought better of it and instead mustered some 200 warriors for an attack on Smith’s 50 dragoons and 30 infantrymen. The element of surprise was lost when two Indian women informed Smith of the planned attack. Outnumbered, the captain did the best he could, deploying his men on a hilltop that offered a good defensive position.

When it came, the attack was fierce and unrelenting. The soldiers dug in the night after the first day of fighting. Morning revealed that 25 men had been killed or wounded. By the afternoon of May 28, 1856, the Indians were massing for a final assault.

At that moment, with the good timing of a bad Hollywood western, the promised reinforcements arrived, commanded by Captain Christopher C. Augur (served 1843–85). Overjoyed, Smith rallied his men for a downhill charge as Augur’s infantry charged up from the rear. It was one of the few times that a classic military charge was effective against Indians, as Smith and Augur played out the cliché situation in which victory is snatched from the jaws of defeat. Indeed, the “Rogues” were so utterly routed that within the month all had surrendered and meekly submitted to life on a reservation.

Rohilla War (1774)

PRINCIPAL COMBATANTS: The Rohillas vs. the Marathas (and, subsequently, Oudh), aided by British East India Company mercenaries

PRINCIPAL THEATER(S): Rohilkhand, India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The British wanted to maintain Oudh as a buffer against the Marathas and to this end aided the nawab of Oudh in defeating the Marathas and in annexing Rohilkhand.

OUTCOME: The Marathas were pushed out of Oudh and Rohilkhand, the Rohillas were subjugated, and Rohilkhand was annexed to Oudh.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Rohillas were Afghans who had been displaced by the forces of Nadir Shah (1688–1747) of Persia and settled in Rohilkhand, north-central India by 1740. When the Marathas menaced them in 1771, they asked for aid from the nawab of Oudh, Asaf-ud-Daula (1749–97), who sent mercenary troops. The Rohillas, however, failed to pay the troops, who attacked Oudh, already beleaguered by Maratha forces.

At this point, Warren Hastings (1772–1818), Britain's governor-general of Bengal, intervened. He believed Oudh was vital to British interests as a buffer between Maratha and the British settlements in eastern India. Therefore, Hastings dispatched to the nawab a brigade of soldiers in the employ of the British East India Company. Together, the nawab's troops and the British mercenary brigade pushed back the Marathas. This left the British mercenaries free to move against the Rohillas, whose territory the nawab had decided to annex. The Rohillas were defeated at the Battle of Miranput Katra in February 1774, whereupon Oudh annexed Rohilkhand. Oudh was enlarged, and Hastings had thus gained an augmented buffer against the Marathas. Parliament belatedly impeached Hastings for having exceeded his authority, but he was acquitted upon trial, and Britain had made a further step in what would be its ultimate conquest of India.

Roman-Alemannic War (271)

PRINCIPAL COMBATANTS: Alemanni invaders vs. Rome

PRINCIPAL THEATER(S): Northern and central Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Alemanni invaded Italy and sought to take Rome itself.

OUTCOME: After suffering defeat, Emperor Aurelian rallied and drove the Alemanni out of Italy; although triumphant, he took steps to reduce the Roman Empire and to protect Rome future invasions.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

By 270 C.E. the Alemanni, Germanic tribespeople, who were highly successful in their attacks against the Romans, had overrun the Agri Decumates (Baden-Württemberg) on Rome's German frontier. From here, joined by the Jutungi and the Vandals, they invaded northern Italy and were met at Placentia (Piacenza) on the Po River by a Roman army under Emperor Aurelian (c. 212–275). The Alemanni dealt Aurelian a severe defeat and advanced down the Italian Peninsula toward Rome. Undaunted, Aurelian regrouped and rallied his troops, then gave chase, overtaking the Alemanni at Faro, in central Italy. Here Aurelian triumphed, driving the Alemanni north. Unwilling to relinquish the initiative, Aurelian pursued the retreating barbarians to Pavia, where he forced them to a stand in a battle that nearly destroyed the invading forces. Surviving Alemanni dispersed into the Alps.

Although he was ultimately victorious, Aurelian was greatly abashed by the invasion. He ordered a withdrawal from Agri Decumates and erected a chain of forts on the south bank of the Danube. By the end of the 270s, the city of Rome itself had been walled.

Roman-Armenian War (93–92 B.C.E.)

PRINCIPAL COMBATANTS: Rome (with Parthia) vs. Armenia

PRINCIPAL THEATER(S): Cappadocia, Asia Minor

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome sought to drive the Armenians out of Cappadocia, a client state.

OUTCOME: Roman legions triumphed over the Armenian invaders.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

940 Roman-Armenian War (72–66 B.C.E.)

CASUALTIES: Unknown

TREATIES: Alliance between Rome and Parthia, 92 B.C.E.

Seeking to expand his power and his kingdom, Tigranes I (the Great; c. 140–55 B.C.E.), king of Armenia, annexed parts of eastern Asia Minor, then allied himself with the Pontine emperor Mithradates VI (the Great) (r. 120–64 B.C.E.) and, in 93 B.C.E., to invade the Roman protectorate of Cappadocia, in east-central Asia Minor. With Parthian king Mithradates II (the Great; r. 123–86 B.C.E.), the Roman praetor and military commander Cornelius Sulla (138–78 B.C.E.) formed an alliance against Tigranes and the Pontine Mithradates. Yet even before Parthian reinforcements arrived, the Roman legions drove the Armenians out of Cappadocia. Tigranes was thus defeated by Roman arms alone.

Roman-Armenian War (72–66 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. Armenia and Pontus

PRINCIPAL THEATER(S): Armenia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome sought to punish Mithradates VI (the Great), king of Pontus, who had taken refuge with his son-in-law, Tigranes I (the Great) of Armenia; when Tigranes refused to surrender Mithradates, Rome sought the conquest of Armenia.

OUTCOME: Mithradates returned to Pontus, and Armenia fell to Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

After Mithradates VI (the Great; r. 120–64 B.C.E.) king of Pontus, was defeated by Rome in the Third MITHRADATIC WAR, he took refuge with Tigranes II (the Great) (c. 140–55 B.C.E.) of Armenia. Tigranes II had brought a unity to Armenia that would last 500 years, and this “King of Kings” (as he was called) gladly gave sanctuary to his father-in-law, Mithradates VI. Lucius Licinius Lucullus (c. 110–56 B.C.E.), commanding the Roman legions against Mithradates, demanded that Tigranes surrender the fugitive. When Tigranes refused, Lucullus attacked and overran Armenia, looting its capital city, Tigranocerta, on October 6, 69. From the base he established in the fallen capital, Lucullus set out to subjugate all of Armenia. However, the difficult mountainous terrain and inhospitable

climate of Armenia proved more formidable. While Lucullus’s legions were struggling with weather and topography, Tigranes and Mithradates raised and trained a new army, only to be defeated by the Romans at the Battle of Artaxata in 68. Following this victory, Lucullus, determined to capture the new Armenian capital, drove his reluctant and exhausted troops northward until they mutinied, refusing to march farther. Lucullus had no choice but to retreat to the valley of the Euphrates. Mithradates responded to this retreat by returning to Pontus, where he was determined to take a stand once again against the Romans. Lucullus followed, but was recalled to Rome in 66 before he could give battle.

In 66, Pompey the Great (106–48 B.C.E.) led Roman forces against Armenia, defeating Tigranes with the aid of his disloyal son. The Armenian king agreed to Roman vassalage.

Roman Civil War (88–82 B.C.E.)

PRINCIPAL COMBATANTS: Lucius Cornelius Sulla vs. his Roman rivals

PRINCIPAL THEATER(S): Italy and the environs of Rome

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Roman Empire

OUTCOME: Sulla converted or defeated all rivals and was named dictator for life.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Sulla, 40,000; opposition substantially smaller

CASUALTIES: Unknown

TREATIES: None

In 88 B.C.E., the tribune Publius Sulpicius Rufus (124–88 B.C.E.) led a democratic revolt against the dictatorship of Lucius Cornelius Sulla (138–78 B.C.E.) while Sulla was on his way to fight the First MITHRADATIC WAR. Sulla quickly returned and crushed the incipient revolt, then set out for Greece again. The very next year, a new uprising of democrats, this one led by Lucius Cornelius Cinna (d. 84 B.C.E.), began. This time, the democrats seized power, and Caius Marius (157–86 B.C.E.), who had conspired with

Rufus and then fled with other rebels to Africa in 88 B.C.E., returned. Marius set up a tyrannical and despotic regime in 86, and although he died later that year, Cinna continued his despotic rule.

Seeking to neutralize the power of Sulla, Cinna dispatched Gaius Flavius Fimbria (d. 84) to replace him as commander in the East during the ongoing First Mithradatic War. Sulla, however, managed to persuade Fimbria to join his side, and in 83, reinforced with Fimbria's troops, Sulla marched back to Italy. Resistance from Italian tribes and from Romans he neutralized either by defeating the opposing forces in battle or winning them over to his cause. Desperate, those who opposed Sulla attempted to capture the city of Rome itself. Sulla and his allies met the rival forces at the Colline Gate and there destroyed them in November 82. The Senate immediately named Sulla dictator for life.

See also ROMAN CIVIL WAR, GREAT.

Further reading: P. A. Kildahl, *Caius Marius* (New York: Twayne, 1968); Rex Warner, tr., *The Fall of the Roman Republic: Six Lives—Marius, Sulla, Crassus, Pompey, Caesar, Cicero* (New York: Penguin, 1972).

Roman Civil War, Great (50–45 B.C.E.)

PRINCIPAL COMBATANTS: Caesar's legions vs. the Roman army of Pompey

PRINCIPAL THEATER(S): Spain, Egypt, Africa, Asia Minor

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Julius Caesar sought to cement his control over the Roman Empire.

OUTCOME: Caesar succeeded in subduing all opponents and was appointed dictator of Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Caesar, 60,000; Pompey, 180,000

CASUALTIES: At the great Battle of Pharsalus (August 9, 48 B.C.E.), Caesar lost 230 killed, and 2,000 wounded, whereas Pompey lost 15,000 killed and wounded, and 24,000 prisoners.

TREATIES: None

Having conquered Gaul, Julius Caesar (100–44 B.C.E.) was a military hero. The Roman Senate, fearful of his power, ordered Caesar to relinquish his province of Gaul, disband his army, and return to Rome. Caesar refused. Instead he crossed the Rubicon River with his army into Italy, despite the fact that the Roman law forbade generals from entering Italy proper with their armies without permission from the Senate. Pompey (the Great; 106–48 B.C.E.), having been appointed sole consul by the Senate, took his army and most of the Senate into Greece, where he hoped to increase his forces to battle Caesar. Caesar entered Rome and took control of the city.

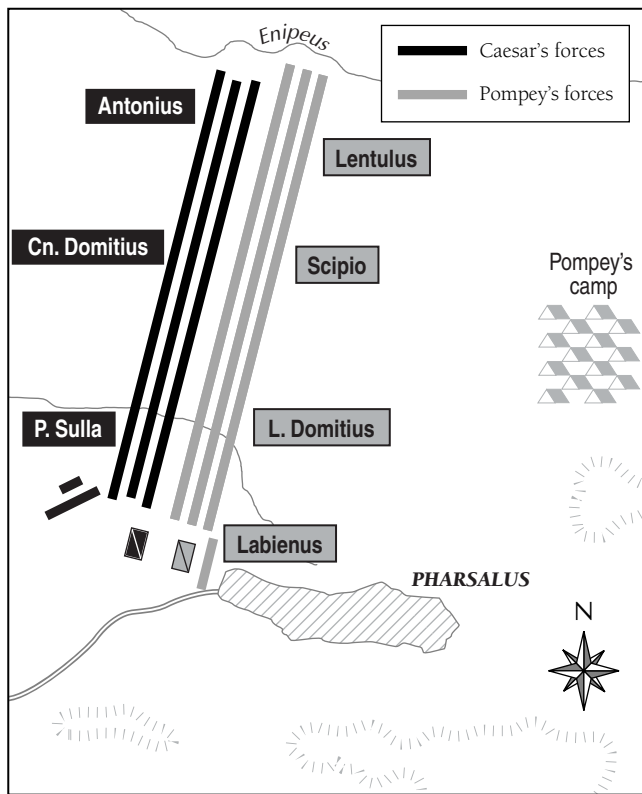

ILERDA CAMPAIGN

Rather than pursue Pompey in Greece, Caesar turned toward Spain. First, however, he was forced to take the city of Massilia (Marseille). Lucius Domitius Ahenobarbus (d. 48 B.C.E.), a supporter of Pompey, had arrived in Massilia with a small force and persuaded the city to declare its allegiance to Pompey. Caesar used three legions under Gaius Trebonius (d. 43 B.C.E.) to besiege the city, while the others proceeded to the passes of the Pyrenees. There they were able to block the advance of Pompey's armies under Lucius Afranius (d. 46 B.C.E.) and Marcus Petreius (fl. 50–44 B.C.E.). These two Pompeian generals then waited for Caesar at Ilerda while the rest of Spain was held by Vibellius Rufus (fl. 50–44 B.C.E.) and Marcus Varro (116–27 B.C.E.). At Ilerda, Caesar's 37,000-strong army confronted the Pompeian force in July 49 B.C.E. Caesar had decided not to destroy the Pompeian army but to try to capture it, thereby adding to his force by recruiting captives. As Afranius and Petreius began their withdrawal from Ilerda, Caesar outmaneuvered them and cut off their retreat. They returned to Ilerda, where Caesar surrounded them and captured their water supply. On August 2, 49, the two Pompeian leaders surrendered, their legions were disbanded. Caesar then gained control over Gades (Cadiz) and marched to Massilia. Upon his arrival, Massilia surrendered on September 6, 49 B.C.E. Caesar returned to Rome, and in October 49, the senators who had remained in Rome appointed him dictator.

Meanwhile, Gaius Curio (d. 49 B.C.E.), Caesar's legate, had gained control of Sicily and had moved on to Africa. There he faced a Pompeian force under Attius Varus (fl. 50–48 B.C.E.) and his ally Juba (c. 85–46 B.C.E.), king of Numidia. Curio defeated the allies near Utica but was himself defeated at the Bagradas River on August 24, 49.

SIEGE OF DYRRHACHIUM

Caesar, deciding to pursue Pompey, set sail on January 4, 48, with seven legions and a few cavalry. Landing to the south of Pompey's base at Dyrrhachium, Caesar then sent his ships back to Brundisium to pick up Mark Antony (82/81–30 B.C.E.). Pompey's troops got word of Caesar's attempt to join Mark Antony's forces with his own and blockaded Antony in Brundisium. Pompey, with nearly 100,000 men, moved from eastern Epirus (southern Albania) to Dyrrhachium. By March 48 Antony was able to break out of Brundisium, and he joined Caesar in a siege of Pompey's numerically superior forces in Dyrrhachium. On July 10, Pompey's army broke through the lines of investment, while Caesar withdrew his forces to Thessaly. In July and August, the two armies camped on either side of the Pharsalus plain. On August 9, 48, Caesar's outnumbered army soundly defeated Pompey, who fled in disguise to the coast, where he set sail for Egypt. The battle had inflicted 2,200 casualties on Caesar and 15,000 on Pompey. About 24,000 Pompeian troops were taken prisoner.

Battle of Pharsalus, 48 B.C.E.

EGYPTIAN CAMPAIGN

Caesar and 4,000 of his men pursued Pompey to Egypt, but upon their arrival in Alexandria they were told that Pompey had been assassinated by his associates. The former Pompeians had also encouraged Ptolemy XII (c. 112–51 B.C.E.) and his sister Cleopatra (69–30 B.C.E.) to defy Caesar, who had taken up positions in a portion of Alexandria. From August 48 until January 47, the former Pompeians laid siege to Alexandria. Learning that his ally Mithradates of Pergamum (fl. 50–44 B.C.E.) had arrived at the Nile River, Caesar slipped out of Alexandria with part of his force. In February at the Battle of the Nile, Caesar and Mithradates completely defeated Ptolemy and the Roman-Egyptian army. Over the following months, Caesar established control over Egypt and placed Cleopatra, who had become his ally and his lover, on the throne with her younger brother Ptolemy XIII (63–47 B.C.E.).

PONTIC CAMPAIGN

In April 47, Caesar set sail for Syria with a portion of his army. There he had plans to defeat Pharnaces (fl. 50–44 B.C.E.), king of the Bosphorus Cimmerius, who had taken advantage of the Roman civil war to reestablish the kingdom of Pontus. At the Battle of Zela in May 47, Caesar defeated Pharnaces and sent to Rome his message, “*Veni, vidi, vici*” (“I came, I saw, I conquered”). He gave control

of the kingdom of Pharnaces to his ally Mithradates of Pergamum.

AFRICAN CAMPAIGN

After returning to Rome, where he subdued a mutiny by many of his veteran legionnaires who wanted to be discharged from the army and rewarded for their victories, Caesar sent 25,000 men first to Sicily and then to Africa, where he confronted the remnants of the Pompeian force defeated earlier in Spain and Greece. Under the leadership of Metellus Scipio (d. 46 B.C.E.) and Caesar’s former lieutenant Labienus, the army also included a Numidian force under King Juba. Caesar arrived at Ruspina and, maneuvering away from this base, was encircled by the army of Labienus. Caesar broke free of the encircling army and returned to Ruspina, where he was blockaded by the army of Scipio and Juba. In December 47 and January 46, Caesar marched inland and laid siege to Thapsus. At the Battle of Thapsus in February 46 the Pompeian-Numidian army, earlier decimated by illness and desertions, attacked Caesar’s troops and was completely defeated. Having subdued Africa, Caesar returned to Rome in May 46.

SPANISH THEATER

Caesar did not remain long in Rome, however. In December 46, he sailed to Spain and took control of the force he had left there after the Ilerda campaign. In Spain, Roman-Pompeian troops who had fled Africa after the Battle of Thapsus had rallied under Pompey’s sons. At the Battle of Munda on March 17, 45, Caesar attacked the army of Gnaeus Pompey (d. 45 B.C.E.) and Labienus (d. 45 B.C.E.) in their hilltop positions but was nearly defeated. Rushing to the center of the battle line, Caesar was able to forestall panic, and his reinvigorated army surged forward. The battle was a massacre; 30,000 Pompeians were killed. Labienus was killed, and Gnaeus Pompey was captured and executed. Sextus (fl. 48–34 B.C.E.), the younger brother of Gnaeus Pompey, escaped along with a remnant of the Pompeian fleet. Caesar marched through Spain and then returned to Rome, in July 45. His reign there as monarch of the Roman empire was now undisputed, but it lasted only a short time. On March 15, 44 B.C.E., Caesar was assassinated by a group of Roman senators alarmed at the despotism of his rule. Following his death, Rome was ruled by Caesar’s grandnephew Octavian (63–14 B.C.E.) (later known as Augustus), Mark Antony, and Marcus Lepidus (d. c. 77). This Second Triumvirate faced another round of civil war, which lasted from 43 to 31 B.C.E.

See also ROMAN CIVIL WAR (43–31 B.C.E.).

Further reading: Julius Caesar, *Civil War* (after 49 B.C.E.; trans. and reprint ed., New York: Penguin, 1976); Philip Matyszak, *Chronicle of the Roman Republic: The Rulers of Ancient Rome from Romulus to Augustus* (New York and London: Thames and Hudson, 2003).

Roman Civil War (43–31 B.C.E.)

PRINCIPAL COMBATANTS: Marc Antony, Octavian and Lepidus (“Second Triumvirate”) vs. Pompey and other Roman generals leaders of the Roman Senate; subsequently, the Triumvirs fought among themselves.

PRINCIPAL THEATER(S): Roman Empire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Following the murder of Julius Caesar, his friend, Marc Antony, his heir, Octavian, and Roman general Lepidus formed the Second Triumvirate to punish those responsible, then fell to fighting among themselves.

OUTCOME: Over the course of little more than a decade, Octavian destroyed Caesar’s enemies, defeated his rivals, and consolidated the Roman state under his rule as Augustus Caesar.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Triumvirate, 120,000; Pompey, perhaps 80,000 maximum

CASUALTIES: Unknown

TREATIES: Treaty of Brundisium (40 B.C.E.) and Treaty of Tarentum (37 B.C.E.)

Following the Punic Wars (see PUNIC WAR, FIRST; PUNIC WAR, SECOND; PUNIC WAR, THIRD), the Roman Republic began to lose its authority as Rome itself expanded toward a worldwide empire. By the time Julius Caesar (100–44 B.C.E.), began his rise to power, the old peasant militia of the Republic had become a professional army, the soldiers of which owed their allegiance not to the Roman state, much less to the Senate, but to the individual generals upon whom their fortunes literally depended. Inevitably, Rome’s legions became a political tool. For a generation, Rome’s fate was decided by powerful generals, as its politics became volatile and expensive. From this combination three men emerged within a few years to claim leadership of the state—a renowned and revered general named Gnaeus Pompey (106–48 B.C.E.); a wealthy landowner, speculator, and moneylender named Marcus Crassus (115–53 B.C.E.); and Julius Caesar himself, the scion of an obscure patrician family but also a skilled writer, spellbinding orator, astute politician, and accomplished general. The three men formed a coalition, an informal compact called later the “First Triumvirate.”

After Crassus was killed in a foreign war in Parthia (see ROMAN-PARTHIAN WAR [55–36 B.C.E.]), Pompey col-
luded with a powerful oligarchy in the Senate to trump up charges of treason against Caesar, who had been appointed governor of Gaul (see GALLIC WARS). Ordered to return alone to Rome to face the charges, Caesar came instead with his extensive and loyal army, and Pompey fled to Egypt, where he was put to death by the nominally independent country’s teen-aged king, Ptolemy XIII (63–47 B.C.E.). Caesar, arriving in Egypt in pursuit of Pompey,

quickly replaced Ptolemy with Ptolemy’s sister, Cleopatra (69–30 B.C.E.). Cleopatra and Caesar became lovers; she was pregnant with Caesar’s child when he returned to Rome to a hero’s welcome and a humbled but secretly seething Senate (see GREAT ROMAN CIVIL WAR). Declared dictator, he announced his intentions to assume the position for life, which led the Senate oligarchy to plot his assassination. On March 15—the Ides of March—in 44 B.C.E. some 60 senators surrounded Caesar in the forum as he presided over the assembly and stabbed him 23 times.

News of Caesar death reached Caesar’s 18-year-old grandnephew and protégé, Gaius Octavian (63–19 B.C.E.), in Appollonia, a Greek city on the Adriatic coast, where he was completing his education. Octavian rushed back to Italy to find he had been named in the dictator’s will as his adopted son and heir. Urged on by his stepfather and others, Octavian decided to take up what was bound to be a perilous inheritance, and he proceeded on to Rome, where he would discover there were others vying for the position his dead “father” had created—Caesar’s chief lieutenant, the swaggering and handsome Mark Antony (82/81–30 B.C.E.); Caesar’s second in command, Marcus Aemilius Lepidus (d. 13/12 B.C.E.), who succeeded the great Roman as chief priest in the state religion; and two powerful senators, Marcus Junius Brutus (85–42 B.C.E.) and Gaius Cassius Longinus (d. 42 B.C.E.), who had led the assassination conspiracy.

Antony, who had assumed he would be Caesar’s heir, had taken possession of his papers and assets, and refused to hand over any of Caesar’s funds. Upon his arrival in Rome, Octavian paid from his own pockets the late dictator’s bequests that Antony had refused to pay and underwrote the public games instituted by Caesar to ingratiate himself with the Roman populace. In the process, Octavian managed to win considerable numbers of Caesar’s former troops to his cause. Brutus and Cassius left Rome, more or less ignoring the new pretender to power, and took command of the eastern half of the empire. The Senate, encouraged by Cicero (106–43 B.C.E.), broke with Antony and swung its support to the young man who was now calling himself Gaius Julius Caesar. Cicero had assumed that Octavian (as historians by tradition continue to refer to him before he assumes the title “Augustus”) would be easier for the Senate to manipulate than either Antony or Lepidus, and eventually he would pay for that mistake with his life.

After several months of battling for supremacy, the three men agreed to a division of power in a coalition called the “Second Triumvirate.” Formed in part to seek retribution against Caesar’s assassins, this triumvirate, unlike the first, became official when the Senate in 43 B.C.E. granted to the triumvirs five years of autocratic power in order to reconstitute the fractured state. Antony and Octavian hunted down the two leading tyrannicides in Macedonia, where both Brutus and Cassius chose suicide on the battlefield rather than capture at Philippi. The

triumvirs then turned on Rome itself, drawing up a list of proscribed enemies and executing 200 senators and 2,000 nobles. Among the condemned senators, at Antony's insistence, was Cicero, whose head and hands were nailed to the Rostra in the forum, one nail—in mockery of the great orator's eloquence—driven through his tongue. Finally, the triumvirs had Julius Caesar officially recognized as a god of the Roman state, which enhanced Octavian's prestige. To Antony, the coalition's senior partner, went the Eastern Empire and Gaul.

Upon his return to Italy, Octavian found himself embroiled in the Perusine War against Antony's brother, Lucius Antonius (fl. 43–31 B.C.E.) over the settlement of Octavian's veterans. Pompey's son, Sextus Pompeius (67–35 B.C.E.), was causing trouble as well, having seized Sicily and Rome's sea routes. To appease Sextus and win time to finish the Perusine conflict, Octavian married one of his relatives, Scribonia (divorced 40 B.C.E.) but this did not stop Sextus from making overtures to Antony once the war was concluded. Meanwhile, Antony had formed a strong political bond with Egypt's wealthy queen and Caesar's former lover, Cleopatra. Soon that bond became a romantic one as well. Octavian was no doubt relieved when Antony rejected Sextus's blandishments. In 40 B.C.E., Octavian and Antony reached a fresh understanding in the Treaty of Brundisium.

Under the new agreement, Octavian was to have the whole of the Western Roman Empire, including Gaul and excepting Africa, which went to Lepidus. Italy itself was declared neutral ground, although in fact it was controlled by Octavian. Antony kept the eastern half of the empire, but having spent—much to the dismay of Rome—the previous winter with Cleopatra, he now agreed under the treaty to a marriage with Octavian's sister, Octavia (69–11 B.C.E.). The treaty delighted the peoples of the empire, east and west, because it seemed to promise an end to generations of social strife and occasional civil war. Just as Antony was closely linking his future to Octavian by marrying into his family, Octavian sought to strengthen his ties to the Senate aristocracy, many members of which supported either Antony or Sextus, by a new marriage of his own to Livia Drusilla (58–29 B.C.E.).

The goodwill established by the treaty did not last, and in the long run provisions of the treaty themselves became sources of discord. Reconciliation with Sextus proved abortive, and Lepidus, unhappy with his portion of power, rebelled. Antony's true love lay in Egypt, not in Italy, but when he returned to Cleopatra the insult was not only to his new wife but to her brother as well. In 37 B.C.E., with Antony's reluctant help, Octavian destroyed Sextus (see OCTAVIAN'S WAR AGAINST POMPEY). In 36 B.C.E., when Lepidus attacked, Octavian defeated him and placed him under guard for the rest of his life. In 32 B.C.E. Octavian renounced the triumvirate outright, and Antony responded by divorcing Octavia. Urged on by Octavian, the next year the Senate declared war on Antony. Octavian

himself accompanied the Roman ships that defeated Antony and Cleopatra at the Battle of Actium in 31 B.C.E. (see OCTAVIAN'S WAR AGAINST ANTONY). Like Brutus and Cassius before them, the pair chose suicide over capture by the ruthless Octavian.

Octavian went on to reign as Caesar Augustus, the first Roman emperor. The Republic had died, replaced by the rule of a single strong man. Under such rule would grow a Roman Empire whose glory became the touchstone of civilization thereafter. But such rule also created the problem of succession, which the empire never solved. Instead, the habit of political assassination, having brought Augustus to power, would plague his empire throughout its history.

Roman Civil War (68–69 C.E.)

PRINCIPAL COMBATANTS: Vindex and Galba vs. Nero; Rufus and Galba vs. Vindex; Otho vs. Galba and, separately, Vitellius; Vespasian vs. Vitellius

PRINCIPAL THEATER(S): Mostly Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ascension to the imperial throne of Rome

OUTCOME: After a succession of rebellions and ascensions, Vespasian was proclaimed emperor of Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

This Roman civil war began as a revolt against Nero (37–68), the ruler among whom none of the legion of “bad” Roman emperors is more infamous for sadistic, corrupt, and incompetent rule. Gaius Julius Vindex (d. 68), legate (governor) of Gaul, led a revolt against Nero in 68 B.C.E. and was joined by Servius Sulpicius Galba (3–69), legate of Spain. At the urging of Vindex, Galba's troops proclaimed him emperor. In the meantime, however, the legate of Upper Germany, Lucius Verginius Rufus (15–69), led an army against Vindex and crushed his revolt, Vindex committed suicide. Although Rufus's troops wanted to proclaim him emperor, Rufus refused and threw his support behind Galba. When the Praetorian Guard—the emperor's own bodyguard—joined Rufus in this acclamation, the Senate proclaimed Galba emperor and condemned Nero, who promptly killed himself.

Yet the matter of Roman rule was hardly resolved. 69 C.E. would become known as the “Year of the Four Emperors,” as, in turn, four contenders occupied the

imperial throne. Galba was only the first. Aulus Vitellius (15–69), legate of Lower Germany, accepted acclamation as emperor by his legions, which he led toward Italy. Galba, in the meantime, was slain by the very Praetorians who had acclaimed him but now supported Marcus Salvius Otho (32–69), legate of Lusitania (modern Portugal) and a longtime opponent of Nero. Otho won recognition from the Senate as emperor, then marched against the advancing Vitellius. At the First Battle of Bedriacum (near Cremona, Italy), on April 16, 69, Vitellius was victorious. Defeat prompted Otho to commit suicide, leaving the way clear for Vitellius to complete his march on Rome, where he was acclaimed emperor by the Senate.

During this time, however, in Judea, Vespasian (9–79) was proclaimed emperor by his troops and with the additional support of the legates of Syria and Egypt, who sent a large combined army under Antonius Primus (fl. first century) into Italy. Antonius triumphed over Vitellius at the Second Battle of Bedriacum (fought probably in November of 69). Vitellius himself was assassinated in Rome on December 20, 69, as Antonius's army arrived in the capital. On December 21, the Roman Senate ratified Vespasian as the new emperor of Rome.

Roman Civil War (193–197)

PRINCIPAL COMBATANTS: Severus vs. (variously)

Pescennius Niger and Slodius Septimus Albinus

PRINCIPAL THEATER(S): Chiefly Byzantium and Gaul

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the imperial Roman throne

OUTCOME: Severus defeated his two rivals and assumed the throne, effectively initiating a military dictatorship of the empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Commodus (161–192)—yet another of Rome's "bad emperors"—reigned from 180 to 192, when he was assassinated. He was succeeded by the elderly Publius Helvius Pertinax (126–193), who sought to restore Rome to moral and financial soundness by introducing a program of severe austerity, beginning with the imperial court. The Praetorians bridled at this and, in 193, assassinated Pertinax. The throne was offered for sale to the highest bidder. The claimant was Marcus Didius Julianus (133–193), who, however, was immediately confronted by three rivals, each of whom was a general and enjoyed the backing of the

legions they respectively commanded. In Britain, Clodius Septimus Albinus (d. 197) pressed his claim. In Pannonia (Hungary), it was Luscus Septimus Severus. In Syria, the claimant was Pescennius Niger (d. 194).

On his way to Rome, Severus quickly usurped power, the Senate having just ordered the execution of Didius Julianus because it resented the manner in which he had assumed power. Severus set to work purging and reforming the treacherous Praetorian Guard, then neutralized opposition from Albinus by (quite deceitfully) promising him succession to the throne. During his march toward Rome, Severus also dealt with Pescennius Niger, defeating him at the Battle of Cyzicus in 193, again at Nicaea later in the year, and finally at Issus in 194. Severus's pursuing legions caught up with Niger as he fled from the last battle and promptly executed him.

Despite the death of Niger, Byzantium, a stronghold of forces loyal to him, held off a siege by Severus. He persisted and in 196 at last overran the city, which his troops mercilessly sacked. By this time, however, conflict between Severus and Albinus had reached a boil, and Albinus preemptively declared himself emperor. He led his British legions into Gaul, where he clashed with the Pannonian legions under the command of Severus. At the Battle of Lugdunum (Lyon, France) in 197, Albinus met his end, and Severus turned the wrath of his legions against the city of Lugdunum, leveling it.

Following his victory over Albinus, Severus marched his legions back to Macedonia to resume the ROMAN-PARTHIAN WAR (195–202). Over the empire of Rome, Severus created a military dictatorship, supplanting with the army the power formerly enjoyed by the Senate.

Roman Civil War (235–268)

PRINCIPAL COMBATANTS: Publius Licinius Egnatius Gallienus vs. many rivals and pretenders, in addition to Germanic invaders

PRINCIPAL THEATER(S): Italy and the northern and eastern borders of the Roman Empire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the imperial throne and survival of the empire

OUTCOME: Gallienus successfully retained his throne, albeit of an increasingly imperiled and reduced empire, until he was assassinated by his own troops.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Like the ROMAN CIVIL WAR (43–31 B.C.E.), this period was less a discrete war than an epoch of internal conflict often verging on outright anarchy. During this period, the empire was assailed not only by intense political and economic instability but by continual menace and incursions from Germanic peoples, and, between 251 and 265, an epidemic of plague. Only the long tradition of military discipline among the legions kept Rome from immediate collapse during this time. Nevertheless, even the legions suffered from pervasive corruption and debility.

The reign of Publius Licinius Egnatius Gallienus (253–268) was dubbed the “Reign of Thirty Tyrants” because of the number of petty rulers (according to the historian Edward Gibbon, 19 rather than 30) and others who vied for the imperial throne. Armed conflict was endemic throughout three decades, although Gallienus enjoyed remarkable success in retaining power over his increasingly attenuated empire. His life and reign came to an end in 268, when he was assassinated by members of his own legions during a campaign to crush a rebellion in Milan.

Bury (New York: Modern Library, 1995); Ramsay MacMullen, *Corruption and the Decline of Rome* (New Haven, Conn.: Yale University Press, 1990); E. A. Thompson, *Romans and Barbarians: The Decline of the Western Empire* (Madison: University of Wisconsin Press, 2002).

Roman Civil War (238)

PRINCIPAL COMBATANTS: Thrax (Gaius Julius Verus Maximinus) vs. (variously) Clodius Pupienus Maximus, Decimus Caelius Balbinus, Gordianus I, Gordianus II, Gordianus III, and his own troops

PRINCIPAL THEATER(S): Carthage and Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the imperial throne

OUTCOME: Thrax defeated most of his external enemies but was killed by his own troops; Gordianus III became emperor.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The reign of Gaius Julius Verus Maximinus (173–238)—known as Thrax, in honor of his Thracian birth—was consumed in battles against invading Germans. Thrax’s continual absence from Rome cost him recognition by the Senate, which in 238 proclaimed Clodius Pupienus Maximus (d. 238) and Decimus Caelius Balbinus (d. 238) co-emperors of Rome. In the meantime, disaffected Roman

legionnaires in northern Africa proclaimed Gordianus I (158–238) emperor. Superannuated, Gordianus I conferred co-emperor status on his son Gordianus II (192–238). The young man, however, was soon killed in battle in Carthage by supporters of Thrax. After this, his father committed suicide, and Gordianus III (c. 224–244), grandson of Gordianus I, was proclaimed emperor by the Senate, which now formally deposed Thrax. In response, he advanced into northeastern Italy, where he laid siege against Aquileia. The siege settled into a frustrating stalemate, during which Thrax’s own restive troops assassinated him.

With Thrax disposed of, the Praetorian Guard now made its preference known by killing Pupienus Maximus and Balbinus, thereby affirming the Senate’s choice of Gordianus III as emperor.

Roman Civil War (284–285)

PRINCIPAL COMBATANTS: Carinus vs. Diocletian

PRINCIPAL THEATER(S): Moesia (modern Bulgaria)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Emperor of the West, Carinus wanted to become emperor of the East as well.

OUTCOME: Although militarily victorious, Carinus was killed by one of his own troops, and Diocletian became sole emperor of a united Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Marcus Aurelius Carinus (d. 285), who long served as administrator and *virtual* emperor of the West, was proclaimed emperor of the West in fact upon the death of his father, Marcus Aurelius Carus (c. 223–283). In the East, however, the Roman legions proclaimed Diocletian (245–313) emperor. Carinus was not content with rule only in the West and therefore led an army against Diocletian.

Initially, Carinus enjoyed a heartening success in small engagements in Moesia (Bulgaria) and seemed destined to win a major victory against Diocletian at the Battle of Margus (Morava). However, at the height of the combat he was suddenly killed, apparently by one of his own troops. This catapulted Diocletian to victory and to imperial rule over both the Western and Eastern Empires. In a single stroke, the civil war was over.

Bury (New York: Modern Library, 1995); Ramsay MacMullen, *Corruption and the Decline of Rome* (New Haven, Conn.: Yale University Press, 1990); E. A. Thompson, *Romans and Barbarians: The Decline of the Western Empire* (Madison: University of Wisconsin Press, 2002); Stephen Williams, *Diocletian and the Roman Recovery* (London: Routledge, 1996).

Roman Civil War (306–307)

PRINCIPAL COMBATANTS: Maxentius vs. Severus (with help from Galerius)

PRINCIPAL THEATER(S): Environs of Rome

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the imperial throne.

OUTCOME: Severus was killed, and Maxentius proclaimed himself emperor; however, four other contenders made the same claim, and the empire was essentially divided among them.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Diocletian (245–313) introduced a host of military and administrative reforms that helped stave off the disintegration of the Roman Empire. However, aged and ailing, he abdicated in 305 C.E., thrusting the beleaguered empire into yet another civil war. Years earlier, the emperor had taken pains to appoint successors—giving the Eastern Empire to Galerius (d. 311) and the Western to Constantius I (250–306)—but conflict developed. Constantius died in 306, and the army chose his son, Constantine I (c. 280–337), to succeed him. Galerius, however, supported Severus (d. 307) as emperor of the West. The situation was further clouded by the claim of Maxentius (d. 312), who, aided by his father, Maximian (d. 310), met the armies of Galerius and Severus in battle just outside of Rome. Severus was suddenly deserted by his forces and threw himself on the mercy of Maximian, who responded by having him executed. This ended a year of great turmoil, and, in 307, Maxentius proclaimed himself emperor. Within three years, however, he was joined by four other self-proclaimed emperors. An uneasy peace—riddled with schemes and conspiracies—was maintained, none of the five contenders wishing to risk their hold on the piece of the now-fragmented Roman Empire he respectively ruled.

versity Press, 1990); Stephen Williams, *Diocletian and the Roman Recovery* (London: Routledge, 1996).

Roman Civil War (311–312)

PRINCIPAL COMBATANTS: Constantine I the Great vs. Maxentius

PRINCIPAL THEATER(S): Environs of Rome

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the imperial throne of the West

OUTCOME: Constantine, victorious, became emperor of the Western Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At Milvian Bridge, Constantine fielded 50,000 men against Maxentius's 75,000; total strength, 311–312: Constantine, 100,000; Maxentius, 170,000

CASUALTIES: Unknown

TREATIES: None

Constantine I (the Great; c. 280–337) opposed Maxentius (d. 312), his rival emperor, by invading northern Italy with 40,000 men. In rapid succession he triumphed at Susa, Turin, and Milan, each time winning brilliant victories against numerically superior forces. After victories at Brescia and Verona, Constantine marched on Rome. With reinforcements, Constantine had about 50,000 men when late in 312 he was met at the Tiber, just outside of Rome, at Milvian Bridge by a 75,000-man army under Maxentius. Constantine won an outstanding victory that gave him the throne of the Western Empire. The early church historian Pamphili Eusebius of Caesarea (c. 260–before 341) created an enduring legend about the battle, writing that Constantine had a vision of a flaming cross, bearing the legend *In hoc signo vinces*—“By this sign conquer”—and there and then converted to Christianity in exchange for victory. In fact, Constantine did not convert until he was on his deathbed in 337, but in 313, with Licinius (270?–325), emperor of the East, he issued an edict proclaiming toleration of Christianity in the Roman Empire.

Further reading: G. P. Baker, *Constantine the Great and the Christian Revolution* (New York: Rowman and Littlefield, 2001); Edward Gibbon, *The Decline and Fall of the Roman Empire*, 3 vols., edited by J. B. Bury (New York: Modern Library, 1995); Ramsay MacMullen, *Corruption and the Decline of Rome* (New Haven, Conn.: Yale University Press, 1990).

Roman Civil War (313)

PRINCIPAL COMBATANTS: Licinius vs. Maximinus (Daia)

PRINCIPAL THEATER(S): Thrace and western Asia Minor

DECLARATION: None

948 Roman Civil War (314–324)

MAJOR ISSUES AND OBJECTIVES: Maximinus wanted to seize the Eastern Empire from Licinius.

OUTCOME: Maximinus was defeated and yielded territory to Licinius, who lived out the rest of his life as the unchallenged emperor of the Eastern Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Licinius, 30,000; Maximinus, 70,000

CASUALTIES: Unknown

TREATIES: None

Maximinus (Daia) (d. 313) opposed Licinius (c. 270–325), Roman emperor of the East, in 313. He led an army of 70,000 across the Bosphorus and attacked the emperor's much smaller force of 30,000 at Thrace. Despite his superiority of numbers, Maximinus was beaten back into Asia Minor. Licinius then led his veterans of the Danubian campaigns in a counterattack against Maximinus in western Asia Minor, defeating him at the Battle of Tzirallum and sending his rival into full retreat. Soon after this battle, Maximinus died, and Licinius annexed the territory he had controlled. From this point on, Licinius reigned, without further contest, as the emperor of the East.

Further reading: G. P. Baker, *Constantine the Great and the Christian Revolution* (New York: Rowman and Littlefield, 2001); Edward Gibbon, *The Decline and Fall of the Roman Empire*, 3 vols., edited by J. B. Bury (New York: Modern Library, 1995); Ramsay MacMullen, *Corruption and the Decline of Rome* (New Haven, Conn.: Yale University Press, 1990).

Roman Civil War (314–324)

PRINCIPAL COMBATANTS: Constantine I (the Great) vs. Licinius

PRINCIPAL THEATER(S): Pannonia (Hungary), Thrace, Asia Minor, Hellespont

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Licinius, emperor of the East, wanted to seize control of the West from Constantine I.

OUTCOME: Constantine I defeated Licinius and had him executed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: In Pannonia, Constantine commanded 20,000, Licinius, 35,000; by the First Battle of Adrianople, each army consisted of 120,000–150,000 men

CASUALTIES: Totals unknown, but Licinius lost 35,000–50,000 men at Adrianople (July 3, 323)

TREATIES: None

Licinius (c. 270–325), emperor of the Eastern Empire, attempted to ignite a revolt against his western counterpart, Constantine I (the Great; c. 280–337) in 314. In

response, Constantine led 20,000 soldiers in an invasion of the East, narrowly defeating Licinius's forces in eastern Pannonia (Hungary) later in the year. He pursued Licinius's retreating army, which took a stand at Mardia and lost decisively there. Licinius then agreed to acknowledge Constantine as emperor of all Roman European holdings, save Thrace. In turn, Constantine renounced his perquisites as "senior" emperor. Left unresolved, however, was the disposition of the Christians, Constantine advocating toleration, Licinius objecting. Still, an uneasy peace endured until 323 C.E., when Constantine, in pursuit of marauding Goths, made an incursion into Thrace, thereby reigniting war with the Eastern Empire.

In the new conflict, Constantine seized the initiative, attacking Licinius's army at Adrianople (Edirne) on July 3, 323. Shortly after this land victory, Flavius Hulus Crispus (305–26), Constantine's son, led a 200-ship fleet against Licinius's superior 350-ship fleet and defeated it at the Hellespont (Dardanelles). Totally defeated, Licinius fled deep into Asia Minor. He recruited a new army and returned to confront Constantine's forces at the Battle of Chrysopolis (Scutari) in September 323. After an exceptionally hard-fought battle, Licinius was defeated and once again fled the field only to surrender later. He was executed as a traitor.

Further reading: G. P. Baker, *Constantine the Great and the Christian Revolution* (New York: Rowman and Littlefield, 2001); Edward Gibbon, *The Decline and Fall of the Roman Empire*, 3 vols., edited by J. B. Bury (New York: Modern Library, 1995); Ramsay MacMullen, *Corruption and the Decline of Rome* (New Haven, Conn.: Yale University Press, 1990).

Roman Civil War (350–351)

PRINCIPAL COMBATANTS: Constantius vs. Magnentius

PRINCIPAL THEATER(S): Italy and Yugoslavia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Constantius sought to punish the murderer of his brother Constans and to reunite the Roman Empire under his rule.

OUTCOME: Constantius defeated Flavius Popilius Magnentius and became the sole emperor in 351.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the Battle of Mursa (351), each army numbered about 100,000 men.

CASUALTIES: At Mursa and in the retreat following the battle, Magnentius lost 12,000 men killed, Constantius lost 15,000.

TREATIES: None

In 337 C.E., when Constantine I (c. 280–337) died, the Roman Empire was divided among his three sons. Constantine II (c. 317–40) inherited Gaul, Spain, and Britain;

Constantius II (317–361) received Greece, Thrace and the East; Constans (c. 323–350) became ruler of Italy, Africa, and Illyricum (the Balkan Peninsula). Constantine II invaded Italy almost immediately. After he was killed in an ambush near Aquileia, a large city used as a port of entry for Italy and a key defense zone, in 340, Constans seized his holdings. But Constans himself fell victim to an intrigue when his general, Flavius Popilius Magnentius (d. 353), led a revolt against him and killed the Roman ruler. Magnentius then declared himself emperor. Constantius was occupied in a war with Shapur II (309–79) of Persia at this time. Once peace was secured, Constantius marched west to have a showdown with the murderer of his brother. Reaching Illyricum, modern Dalmatia and an important but troublesome Roman province, he found that his sister, Constantina (d. 354), had crowned Magnentius Augustus. The armies of Constantius and Magnentius (about 100,000 men each) marched toward lower Pannonia—modern Hungary, a major frontier province. At the Battle of Mursa (Osijek, Yugoslavia), Constantius's army proved more maneuverable and superior. His troops enveloped the left flank of Magnentius's army, on September 28, 351, and his cavalry charged through the Gallic legions. Magnentius lost about 12,000 soldiers and withdrew to Italy. Constantius's army—which suffered as many as 15,000 casualties—pursued Magnentius, but at the Battle of Pavia, Magnentius was victorious. Despite that victory, the Roman populace rose against him, and he retreated to Gaul, where not only the local populace but his own army turned against him. Magnentius committed suicide in 353, and Constantius became the sole Roman emperor.

Further reading: G. P. Baker, *Constantine the Great and the Christian Revolution* (New York: Rowman and Littlefield, 2001); Edward Gibbon, *The Decline and Fall of the Roman Empire*, 3 vols., edited by J. B. Bury (New York: Modern Library, 1995); Ramsay MacMullen, *Corruption and the Decline of Rome* (New Haven, Conn.: Yale University Press, 1990).

Roman Civil War (360–361)

PRINCIPAL COMBATANTS: Constantius II vs. Julian

PRINCIPAL THEATER(S): Constantinople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A jealous Constantius II sought to punish his cousin Julian for accepting the title of emperor from soldiers in Gaul.

OUTCOME: Constantius died before confronting Julian, who became the legitimate emperor and continued the war against Persia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Julian was able to raise an army of 95,000 in the wake of this conflict.

CASUALTIES: Unknown

TREATIES: None

After Muslim Persians invaded the Christian kingdom of Armenia, Roman emperor Constantius II (317–61) took an army to the East to wage war against the Persians. Constantius was defeated in the war and sent word to his cousin Flavius Claudius Julianus (Julian) (331–63) to come to his aid. Not only was Constantius anxious for victory against the Persians, but he also wanted to remove from Gaul Julian and the cream of the Roman Legions faithful to him. Julian represented a grave threat to Constantius's power. Famed for his conversion to Christianity, Julian was extremely popular among his men, who had waged successful wars in Gaul against the Franks and Alemanni. Julian's soldiers refused to leave Gaul and defiantly proclaimed Julian emperor. Constantius, hearing of this rebellion, rushed toward Constantinople from the East; Julian hurried across southern Germany and parts of Austria, Hungary, and Yugoslavia to meet his cousin in battle. During the march, he learned that Constantius had fallen ill in Asia Minor and had died. At that moment, Julian repudiated Christianity—becoming known to history as Julian the Apostate—in order to claim the throne as emperor of the Roman Empire. This done, he turned his attention to Persia and raised an army of 95,000 men, the largest expeditionary force Rome had ever assembled in the East.

Bowersock, *Julian the Apostate* (Cambridge, Mass.: Harvard University Press, 1997); Robert Louis Wilken, *The Christians as the Romans Saw Them* (New Haven, Conn.: Yale University Press, 2003).

Roman Civil War (394) *See* ARBOGAST AND EUGENIUS, REVOLT OF.

Roman Conquest of Britain (43–61 C.E.)

PRINCIPAL COMBATANTS: Rome vs. British tribesmen

PRINCIPAL THEATER(S): Britain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome sought to subjugate the British tribes and securely attach the region to the Roman Empire.

OUTCOME: Rome won complete control of Britain by 61 C.E.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Roman legions, 50,000; tribal numbers unknown

CASUALTIES: Unknown

TREATIES: None

Although Julius Caesar (43–61) had first invaded Britain during the GALLIC WARS of 58–51 B.C.E., the British tribes remained unsubdued. Emperor Claudius I (10 B.C.E.–54)

sent Aulus Plautius (fl. 43–61), commander of four Roman legions and auxiliaries, to the region in 43 C.E. He landed at Rutupiae (Richborough, Kent), and was soon reinforced (in 44) by troops under the personal leadership of Claudius, who brought elephants intended to overawe the tribesmen.

Aulus Plautius and Claudius defeated the Catuvellauni and Trinovantes, and drove the Catavellauni chieftain, Caratacus (fl. 43–61), into Wales. Along the route of his retreat, Caratacus recruited support from the Silures and Orgovices of Wales and appealed to Queen Cartimandua (fl. 30–70) of Brigante. Cartimandua treacherously betrayed him to Roman authorities. Nevertheless, Caratacus made numerous raids into Roman-held territory before he was defeated at the Battle of Caer Craddock (in modern Shropshire) in 50. He was sent, a prisoner, to Rome.

By 61, not only were Londinium (London), Camulodunum (Colchester), and Verulamium (St. Albans), the three main population centers, firmly a part of the Roman Empire, but the British frontier of Wales was as well. The last major resistance was BOUDECCA'S REVOLT (from 60 to 61).

Roman Eastern War (113–117)

PRINCIPAL COMBATANTS: Rome and Armenia, Assyria, and Parthia

PRINCIPAL THEATER(S): Armenia and Mesopotamia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome sought to secure extend her reach into Armenia and Mesopotamia.

OUTCOME: Rome annexed Armenia and Assyria as provinces and gained control of Parthia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After Osroes (c. 109–129) of Parthia violated an ancient treaty concluded in 20 B.C.E. by placing a puppet ruler on the Armenian throne, Emperor Trajan (53–117) of Rome set out with an army to evict the puppet. In 144 he invaded Armenia, overthrew the king, and annexed the region as an imperial province. From here, Trajan moved into Mesopotamia and established the province of Assyria. Continuing his advance, he targeted Babylon but turned his forces around when Assyria and Armenia suddenly rose in rebellion and, in disarray, were invaded by Parthia. Osroes now exploited the fragmented state of Roman forces in Mesopotamia and Assyria by attacking. By 115,

Trajan found himself cut off, but after suffering a defeat at Hatra, he managed to consolidate and reunite his forces, so that by 116 he regained control of the region.

Trajan placed on the throne of Parthia a nobleman loyal to the Romans, Publius Aelius Hadrianus (known as Hadrian) (76–138). Nevertheless, the succession of battles had exhausted the aged Trajan, who died on the return journey to Rome. Hadrian thus became emperor of Rome and made peace with Parthia in the process, forsaking the projected Roman program of conquest east of the Euphrates River.

Roman Eastern War (162–165)

PRINCIPAL COMBATANTS: Rome vs. Parthia

PRINCIPAL THEATER(S): Armenia and Mesopotamia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Parthia sought to oust the Romans from Armenia and Mesopotamia.

OUTCOME: Rome subdued Parthia and regained control of Armenia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 162, Vologasus III (fl. 147–191), king of Parthia, invaded Armenia and defeated the Roman army stationed in the province. Vologasus continued into Mesopotamia and crushed Roman garrisons stationed there. Newly installed, Emperor Marcus Aurelius (121–180) sent his righthand man and virtual assistant emperor Lucius Aurelius Verus (130–169) with a Roman army to the East. Operating from Antioch, Verus regained Armenia by 163, while, over the next two years, Avidius Cassius (d. 175) led a Roman counteroffensive at Seleucia and Ctesiphon, the capital of Parthia. This prompted Parthia to sue for peace, after which many of the Roman soldiers returned home. En route to Italy, the troops were infected by plague, which spread throughout the Roman Empire. The resulting depopulation made it impossible for Rome to hold Parthia.

Roman-Etruscan Wars See ETRUSCAN-ROMAN WARS, EARLY; ETRUSCAN-ROMAN WARS, LATER.

Roman Gothic War, First (249–252)

PRINCIPAL COMBATANTS: Rome vs. Goths

PRINCIPAL THEATER(S): Danube River region to northern Greece

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Goths sought to exploit internal dissension in Rome to invade the Roman frontier.

OUTCOME: Rome bought transitory peace with tribute money.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown, but Gothic numbers reported as “great”

CASUALTIES: Unknown

TREATIES: A tribute agreement, probably more or less formalized

Cuiva (fl. 240s–250s), king of the Goths, led a very large army across the Danube and confronted the Roman legions at Philippopolis (in modern Bulgaria). The legions were soundly defeated, and Cuiva rolled over them, penetrating into northern Greece. Here, Emperor Decius (201–251) mounted a major defensive campaign against the Goths, blocked them, then forced them to fall back into the marshes south of the Danubian mouth.

Cuiva now found himself in a corner, and in 251 the Battle of Forum Terebronii was fought at a distinct Roman advantage. However, desperation made the Goths that much more determined. Cuiva’s forces held out, and when Romans under C. V. Tribonianus Gallus (d. 253) faltered, then failed to maintain the initiative and press home the attack, Cuiva made his move. The Goths launched a counterattack that devastated the Roman legions. Decius fell in battle, leaving Gallus to make a craven truce. He not only allowed the Goths to retain the spoils of war and to withdraw—intact—across the Danube but also accepted a tribute agreement, bribing Cuiva to refrain from further invasions or raids.

Roman Gothic War, Second (252–268)

PRINCIPAL COMBATANTS: Rome vs. Goths

PRINCIPAL THEATER(S): Danube River and Aegean region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Goths violated the peace concluded after the First Gothic War.

OUTCOME: The Goths gained control of most of the Aegean region, except for Greece.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

No sooner had the Goths agreed, in exchange for tribute, to refrain from incursions into Roman territory (see ROMAN GOTHIC WAR, FIRST) than they once again crossed the Danube. Aemilianus (d. 253), legate of Moesia, rushed to repel the invasion and soundly defeated this Gothic incursion. Flushed with victory, Aemilianus rushed back to Rome in a bid to seize the throne. He succeeded, only to be assassinated by his own troops, whereupon Marcus Aurelius Claudius (d. 268) assumed command on the Danube under emperors Valerian (r. 253–259) and Gallienus (r. 259–268) and stoutly resisted further Goth incursions.

Battles were sporadic during the period of Marcus Aurelius Claudius’s command, but the Goths did not recross the Danube; however, Goth “sea rovers” plied the Black Sea and raided the coasts of Moesia, Thrace, and northern Asia Minor from 252 to 268. Valerian dispatched a series of expeditions to end these depredations but fared miserably, especially in shore actions during 257–258. Worse for Rome, the Goths were joined by a related tribe, the Heruli, with whom they expanded inland from their Black Sea beachheads. Combined Goth-Heruli raiders devastated parts of the Caucasus, Georgia, and Asia Minor, notoriously sacking Ephesus, where in 262 they destroyed the Temple of Diana, famed as one of the Seven Wonders of the World. From Asia Minor, the raiders invaded Greece and captured or sacked Athens, Corinth, Sparta, Argos, and other towns during 265–267.

For the most part, the raiders enjoyed unalloyed triumph, except for sharp defeats at the hands of Odaenathus (d. 267/268) and Publius Herennius Dexippus (c. 210–after 270). The latter managed to drive the invaders out of central Greece by 267. Thus, except for Greece, the Goths and Heruli controlled most of the Aegean region when the Second Roman Gothic War wound down in 268.

Roman Gothic War, Third (270)

PRINCIPAL COMBATANTS: Rome vs. Goths

PRINCIPAL THEATER(S): Danube River region, Moesia (lower Danube area), and Dacia (encompassing most of Romania)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: After the death of Emperor Claudius, the Goths decided to exploit Roman internal disorder.

OUTCOME: The Goths were driven out of Moesia, but Dacia was lost to Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Gallienus (r. 259–268) was succeeded as emperor by Claudius II (214–270), known as Gothicus. His death in 270 prompted the Goths to recross the Danube and invade Moesia and Dacia. Aurelian (c. 212–75), who had succeeded to the throne, confronted the incursion with considerable vigor and managed to drive the Goths out of Moesia. However, he decided on a course of discretion rather than valor when it came to Dacia, which he decided to sacrifice as a lost cause. He evacuated as many Roman colonists as he could, resettled them in Moesia, and left Dacia to the Goths.

Further reading: Edward Gibbon, *The Decline and Fall of the Roman Empire*, 3 vols., edited by J. B. Bury (New York: Modern Library, 1995); Peter Heather, *The Goths* (London: Blackwell, 1996); Ramsay MacMullen, *Corruption and the Decline of Rome* (New Haven, Conn.: Yale University Press, 1990).

Roman Gothic War, Fourth (367–369)

PRINCIPAL COMBATANTS: Rome vs. Visigoths and Ostrogoths

PRINCIPAL THEATER(S): Thrace

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In response to pressure from invading Huns, the Visigoths and Ostrogoths invaded Roman-held Thrace.

OUTCOME: The Ostrogoths and Visigoths were granted permission to settle certain frontier regions of the empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Formal agreement that Visigothic settlement would remain north of the Danube

During the continued unrest that followed the ROMAN CIVIL WAR (360–361), the rebel Procopius (fl. 360s) had been

aided by various Gothic mercenaries. In response, Valens (c. 328–78), emperor of the East, captured and imprisoned some of the mercenaries. This was met with protests from the Visigothic king, Athanaric (d. 381), who sent an army into Roman-held Thrace. In the meantime, pressure from invading Huns was driving both Visigoths and Ostrogoths westward, into Thrace and other Danubian regions. The fighting that resulted was largely confused and indecisive—until 369, when a concerted Roman offensive resulted in a substantial victory. Athanaric agreed that his Visigoths would remain north of the Danube. However, the continued advances of the Huns soon wrecked the peace, as more Gothic tribes settled in Thrace and then, after the fact, sought Valens's permission to resettle there. Valens agreed and also released his Gothic prisoners; however, he simultaneously invaded Visigothic territory north of the Danube. Moreover, Roman officials within the region Valens had allotted for Gothic settlement preyed upon the settlers, robbing them and extorting tribute from them.

Further reading: Thomas S. Burns, *A History of the Ostrogoths* (Bloomington: Indiana University Press, 1991); Edward Gibbon, *The Decline and Fall of the Roman Empire*, 3 vols., edited by J. B. Bury (New York: Modern Library, 1995); Peter Heather, *The Goths* (London: Blackwell, 1996); Ramsay MacMullen, *Corruption and the Decline of Rome* (New Haven, Conn.: Yale University Press, 1990).

Roman Gothic War, Fifth (377–383)

PRINCIPAL COMBATANTS: Rome vs. Visigoths and allied Germanic tribes

PRINCIPAL THEATER(S): Thrace and Moesia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Goth depredations within Roman territory combined with Roman abuse of Goth settlers to create a new war.

OUTCOME: The Romans negotiated a peace permitting the Goths to remain on Roman lands in exchange for military service.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Goths and allies, 100,000–200,000; Roman strength at the Second Battle of Adrianople (August 9, 378), 60,000

CASUALTIES: 40,000 Romans fell at the Second Battle of Adrianople (August 9, 378)

TREATIES: Agreement to exchange Goth settlement rights for Roman military service.

Following the Fourth ROMAN GOTHIC WAR, Goth settlers poured into Roman-controlled Thrace in large numbers. For their part, the new settlers were often wild and unruly; Roman officials were abusive. The inevitable result was friction that rapidly escalated into a new Roman Gothic war.

This time, the Goths decided to find strength in numbers by making alliances with other Germanic tribes,

including the Ostrogoths. Roman negotiators sought to act preemptively by attacking the Visigoth leaders Fritigern (d. 380) and Alavius (d. 377) at a parley in 377. Alavius was killed, but Fritigern escaped and led a vengeance counterattack against Romans under Lupicinius (fl. 370s–380s) at Marianopolis (modern Shumla, in eastern Bulgaria). After victory in this exchange, Fritigern united with other Goth leaders between the lower Danube and the Black Sea (the area of modern Dobruja).

The Roman emperor Valens (c. 328–378) dispatched legions to Thrace, forcing the Goths to fall back and confining them to the marshes south of the Danube's mouth. The Goths and their allies took a stand here at the Battle of the Salices or Willows. The Romans failed to make a decisive move, and Fritigern was able to withdraw with his forces intact.

His retreat was neither furtive nor abject. He led his troops through Thrace and Moesia, raiding, pillaging, and destroying, often in concert with Alans, Sarmatians, and even Huns. In response, Valens called on his nephew and co-emperor, Gratian (359–383). However, by 378 the Gothic tribes had formed a powerful alliance. Gratian was delayed in his arrival in Thrace by Frankish and Alemanni incursions in Gaul. After disposing of this menace, he made his way toward Thrace during the summer of 378. Even without Gratian's assistance, Valens's forces had made substantial gains against the barbarians during July and August 378. Perhaps as many as 200,000 Visigoths, Ostrogoths, Sarmatians, Alans, and Huns were held at bay in a wagon camp near Adrianople by August. It would have been prudent for Valens to await the arrival of Gratian before pushing the attack; however, craving glory, Valens led his 60,000 troops against the Goth camp on August 9, 378. This Second Battle of Adrianople resulted in disaster for the legions, which were overwhelmed by horsemen. Forty thousand Romans died, including Valens. Nevertheless, the Goths proved unable to take Adrianople and, instead, once again fell to destructive raiding throughout Thrace.

Gratian assumed full function of emperor of the West and recruited Theodosius I (c. 346–395) as the new emperor of the East, charging him with defending against the barbarians. Theodosius was as wise as Valens had been rash. He did not attempt to sweep the Visigoths (and others) from Thrace but instead continually harassed them with small, sharp actions. Exhausted, the barbarians agreed to negotiate, and in 383 an unprecedented agreement was made whereby the Visigoths were permitted to live unmolested in designated areas of Thrace in exchange for military service to Rome.

Roman Northern Frontier Wars

(24 B.C.E.–16 C.E.)

PRINCIPAL COMBATANTS: Rome vs. Germanic tribes

PRINCIPAL THEATER(S): Bavaria, Austria, Hungary, and France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Republic of Rome struggled to hold back the invasion of Germanic tribes from the north.

OUTCOME: Rome was forced to abandon the colonization of Germany.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

This period saw the beginning of the great Pax Romana, a time of relative peace punctuated by some military operations in the north. To secure the border protecting Gaul and Italy, Emperor Augustus (63–14 B.C.E.) sent his legions to the north to capture more territory and provide a buffer between Rome and the Germanic tribes. In 51 B.C.E. he founded Aosta in northern Italy and took control of Illyria (Yugoslavia) and Moesia (northern Bulgaria). In 16 B.C.E., Augustus went to Gaul to take personal command. His stepsons Tiberius (42 B.C.E.–37 C.E.) and Drusus (13 B.C.E.–23 C.E.) led punitive expeditions in Rhaetia (Bavaria), Noricum (Austria) and Pannonia (western Hungary) and annexed these regions to the Roman Empire. Drusus was victorious against the Germanic tribes in Gaul, marched to Germany, and won a battle at the Lippe River, traditional battlefield between the forces of Rome and the German tribes. At the death of Drusus, who had injured himself in a fall from his horse, Tiberius continued the campaigns in Germany. He put down tribal revolts in 4 C.E. and uprisings in Pannonia and Illyria between 6 and 9 C.E., leaving Publius Quintilius Varus (d. 9 C.E.) in Germany with five legions and several auxiliary forces. Varus angered the commander of one of the auxiliaries, Arminius (c. 18 B.C.E.–19 C.E.), a young German chief of the Cherusci tribe, which although not the most powerful of the German tribes, was the most famous. Planning his revenge on Varus, Arminius staged a rebellion in the region between the Visurgis and Aliso. Varus and 20,000 soldiers, accompanied by some 10,000 non-combatants, crossed the Visurgis and entered the Teutoberg Forest. When the legions became mired in the forest's muddy trails, Arminius and his followers deserted from the Roman ranks and attacked a Roman detachment. Varus continued to press northward, but his progress was

slowed by his lengthy baggage train and by the number of noncombatants among his columns. After several days, the Germans—mostly Cherusci—broke through the legions. Twenty thousand Roman troops were killed, and Varus and his surviving officers committed suicide. Although Tiberius continued punitive expeditions against the Germans between 11 and 16, Rome, whose people were stunned by the annihilation of Varus's legions at Teutoberg, was forced to establish the Rhine and Danube rivers rather than the Elbe as the boundaries of her holdings in Germany, and tribal warfare and internal violence were rampant in Germany for the next several centuries.

Further reading: Edward Gibbon, *The Decline and Fall of the Roman Empire*, 3 vols., edited by J. B. Bury (New York: Modern Library, 1995); Ramsay MacMullen, *Corruption and the Decline of Rome* (New Haven, Conn.: Yale University Press, 1990).

Roman-Parthian War (55–38 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. Parthia

PRINCIPAL THEATER(S): Parthia and Rome-Parthian borderlands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Pompey (of the First Triumvirate) craved the glory of conquest.

OUTCOME: The Roman legions were defeated in two major attempts at invasion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Rome, 39,000; Parthian forces larger

CASUALTIES: Rome lost 4,000 killed and 10,000 prisoners at Carrhae (53 B.C.E.)

TREATIES: None

In 55, the Roman governor of Syria, Aulus Gabinius (d. 47), aided Mithradates III (d. 54 B.C.E.), who had been forced into exile by his brother Orodes II (d. 37/36 B.C.E.), in his bid to regain the Parthian throne. Orodes, however, defeated Mithradates III at the Battle of Seelucia in 55 and captured and killed him the following year.

Gabinius's action opened the door to a Roman invasion of Parthia. An army of 39,000 under Marcus Licinius Crassus (c. 115–53 B.C.E.) commenced a campaign in Carrhae during 54–53. Shortly after crossing the Euphrates, the Romans were set upon by Parthian cavalry and archers. The legions assumed defensive positions, whereupon the Parthians besieged them, continually attacking at long distance with arrows. At last, Crassus dispatched 6,000 men under his son, Publius Crassus (55–15 B.C.E.), to attack the Parthian cavalry so that the main Roman force could break out. The Parthians fell back, only to counterattack with great ferocity. Four thousand Romans fell, and another 10,000 were taken prisoner.

The Carrhae campaign left Mesopotamia in Parthian hands and cemented an enmity between Rome and Parthia, leading to sporadic, bloody, and inconclusive combat from 53 to 38 B.C.E., mostly provoked by Parthian invasions of Roman-held Syria.

Further reading: Neilson C. Debevoise, *Political History of Parthia* (Chicago: University of Chicago Press, 1969); Mark Dunster, *Parthia* (London: Linden, 1979); Plutarch, "Life of Crassus," in *The Fall of the Roman Republic: Six Lives: Marius, Sulla, Crassus, Pompey, Caesar, Cicero*, trans. Rex Warner (New York: Penguin, 1972).

Roman-Parthian War (56–63)

PRINCIPAL COMBATANTS: Rome vs. Parthia

PRINCIPAL THEATER(S): Armenia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Both empires wanted to control Armenia.

OUTCOME: A Parthian king was placed on the Armenian throne with the proviso that he acknowledge the Roman emperor Nero as his overlord.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents survive

The first century C.E. was a time of great turmoil in Southwest Asia. Parthia, the greatest kingdom in the region, was often at odds with Rome, even though both Parthia and Rome had a common enemy in the barbarians to the north. It was over control of one of the northern regions, Armenia, that the war of 56–63 was fought. In 56, Rome controlled Armenia through a puppet ruler, Radamistus (d. 56) who was killed in 56. Upon his death, Vologesus I (fl. 51–77), king of Parthia (northern Iran), attempted to put his brother Tiridates (d. c. 73) on the Armenian throne. The Roman emperor Nero (37–68) responded by ordering Corbulo (d. 67), his military commander in Asia Minor, to install another Roman puppet. Accordingly, in 57, Corbulo led an army into Armenia, ousted Tiridates, and replaced him with a pliant ruler, Tigranes VI of Cappadocia (d. 62). Because Vologesus was using his army to quell internal disorders at the time, he did not oppose the invasion; however, in 61, he mounted an invasion of Armenia and defeated Corbulo's legions. With the Romans out of the country, Tiridates was reinstated, and Corbulo wisely allowed Nero to save face by negotiating his agreement to permit Tiridates to rule, provided Tiridates acknowledge Nero as his overlord.

Roman-Parthian War (195–202)

PRINCIPAL COMBATANTS: Rome vs. Parthia

PRINCIPAL THEATER(S): Mesopotamia (modern Iran)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome sought to curtail Parthian incursions into Armenia and then to annex some part of Parthia itself.

OUTCOME: Parthia was almost totally defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: None

Mesopotamia had been under nominal Roman rule since the reign of Marcus Aurelius (121–180), but during the ROMAN CIVIL WAR (193–197), which pitted rivals for the imperial throne against one another and thereby fragmented Roman power, the Parthian king Vologesus IV (fl. 191–209) invaded Armenia and laid siege against the Mesopotamian city of Nisibis. It was not until Lucius Septimus Severus (146–211) won out against his rivals to become sole emperor of Rome that the Roman legions were able to mount a credible response, even though Severus had to deal with other potential rivals. In 196, the emperor led his forces across the Euphrates to capture the great Parthian city of Seleucia. From the conquest, the legions attacked Ctesiphon, which also fell to them. Severus then marched north, forcing Vologesus to lift his siege of Nisibis and retreat into the mountains.

Only Hatra, defended by a formidable Parthian force, remained firm. The legions hammered this objective fruitlessly in 197 and again in 199; however, Nisibis was returned firmly into Roman hands, and Severus made it his capital to govern the Roman province he carved out of the defeated Vologesus's realm. Hatra remained unbreached, a lonely Parthian outpost and a constant thorn in the emperor's side.

Roman-Persian War (230–233)

PRINCIPAL COMBATANTS: Rome vs. Persian Empire

PRINCIPAL THEATER(S): Roman-Persian borderlands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome sought to counter the aggression of the newly expanded Persian Empire.

OUTCOME: Rome regained its Mesopotamian possessions and reestablished the Roman-Persian frontier.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: None; no formal peace was established

Ardashir I (d. 241)—also known as Ataxerxes I—king of Persia, rebelled against his Parthian masters in 226 and, by the following year, had not only shed the Parthian yoke but conquered Parthia itself, to found the Sassanid dynasty. From this vast conquest, he moved on to lay claim to all of Asia Minor; in 230–231 he led an invasion into Roman Mesopotamia and boldly asserted Persian sovereignty by minting coins in the invaded region.

At first, the Roman emperor, Marcus Aurelius Alexander Severus (c. 208–235), attempted political negotiation with Ardashir. One of the abler emperors and generals of the late Roman period, Alexander led a three-pronged invasion of Persia after negotiations collapsed. But Alexander was more courageous than experienced, and his “prong” of the invasion was defeated. The other two Roman forces fared better, however, yet also failed to achieve decisive victories. Ardashir held his ground, but suffered severe losses and was unable to turn his defensive action into a counterattack. Thus the war ended in a draw, although both sides declared victory—Rome with more justification, since, strategically, the war reestablished the empire's frontier.

Further reading: A. T. Olmstead, *History of the Persian Empire* (Chicago: University of Chicago Press, 1972); Josef Wiesehofer, *Ancient Persia, 550 B.C.–A.D. 650* (New York: St. Martin's Press, 1998).

Roman-Persian War (241–244)

PRINCIPAL COMBATANTS: Rome vs. Persia

PRINCIPAL THEATER(S): Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Persia, under Shapur I, continued its Sassanid program of expansion by invading Syria; Rome countered.

OUTCOME: Persia gave up Syria, and the prewar Persian-Roman frontier was reestablished.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: Presumably a formal agreement reestablishing status quo ante bellum

The second of the Sassanid kings of Persia, Shapur I (d. 272), son of the dynasty's founder, Ardashir I (d. 241), and, for a time, coruler with his father, continued Ardashir's practice of nibbling at the Roman borderlands to expand the Persian Empire. Even before Ardashir's death, he mounted a major invasion of Syria, conquered much of it, and besieged the great city of Antioch. Shapur counted

on Rome's internal strife to weaken the empire's ability and will to respond; however, Marcus Antonius Gordianus III (c. 224–244), emperor of Rome, in company with his best general (and father-in-law), Gaius Furius Sabinus Aquila Timesithesus (d. 243), marched into Syria in 242 and met Shapur's forces at the Battle of Resaena on the upper Araxes River the following year. The battle proved decisive, and Shapur withdrew from Syria.

Timesithesus and Gordianus were anxious to capitalize on their victory by driving into Persia itself. But Timesithesus died late in 243 and the next year Gordianus was assassinated, possibly at the instigation of his successor, Philip (c. 204–249) (called Philip the Arabian). Having no desire to press the campaign against Shapur any further, Philip negotiated a peace that reestablished the prewar Persian-Roman frontier.

Further reading: A. T. Olmstead, *History of the Persian Empire* (Chicago: University of Chicago Press, 1972); Josef Wiesehofer, *Ancient Persia, 550 B.C.–A.D. 650* (New York: St. Martin's Press, 1998).

Roman-Persian War (257–261)

PRINCIPAL COMBATANTS: Rome vs. Persia; Persia vs. Palmyra

PRINCIPAL THEATER(S): Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Persian king Shapur I sought conquest of Syria.

OUTCOME: Rome was defeated and Emperor Valerian taken captive—although Shapur himself suffered a serious defeat at the hands of a Palmyran prince.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

As with the ROMAN-PERSIAN WAR (241–244), internal disorder in Rome encouraged Shapur I (d. 272) to seize the opportunity to attack. He moved into Armenia, which his forces conquered by 258. Shapur had installed a Persian puppet on the Armenian throne, he then stabbed with raiding forces into Mesopotamia and Syria, plundering the important city of Antioch later in 258. Roman emperor Valerian (d. c. 261) was able to make an effective response to this. He expelled the Persians from Antioch but was unable to follow up this victory with a triumph over Shapur's main forces, which remained very much intact. Valerian lost the Battle of Edessa in 260, and Shapur blocked, then surrounded, the Roman armies. In a desperate situation and seeking to avoid the destruction of his legions, Valerian sued for peace and was taken captive. Leaderless, the Roman army panicked and instantly surrendered. Valerian was hauled off to Persia, where he died a prisoner.

Unopposed, Shapur overran Syria, retook Antioch, then redoubled raids into all the Roman regions of the East, including Cilicia and Cappadocia, both of which he devastated, although he met stout resistance in Cappadocia. In the end, Shapur was defeated not by Rome but by Palmyran forces, which attacked Shapur's booty-laden army as it returned to Persia. The defeat was so severe that Shapur ended his aggression against Syria and Asia Minor.

Roman-Persian War (282–283)

PRINCIPAL COMBATANTS: Rome vs. Persia

PRINCIPAL THEATER(S): Upper Mesopotamia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome wanted to retake Mesopotamia from Persia.

OUTCOME: Upper Mesopotamia was retaken, and Rome negotiated peace with the Persians; however, internal intrigue resulted in the deaths of Emperor Carus and his son Numerianus, and ultimately resulted in the elevation of Diocletian as emperor of Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of 283; no document survives

Marcus Aurelius Carus (c. 223–283), a Praetorian who became emperor of Rome, together with his son Marcus Aurelius Numerianus (d. 284), invaded Persian-occupied Mesopotamia in 282, retaking upper Mesopotamia, along with the Persian provincial capital of Ctesiphon. From here, Carus advanced east of the Tigris, presumably with the intention of invading the Sassanid Empire. Before Carus proceeded much farther, however, Persia's king Bahram I (d. 276) sued for peace and negotiated a settlement with the Romans.

The legions did not vacate Persian territory after the peace, however, but resumed their march eastward, deep into Sassanid territory. The invasion was halted by the sudden death of Carus in 283. The cause of death was officially recorded as a lightning bolt, but most scholars believe he had been the victim of assassination, killed by the prefect of the Praetorian Guard, Arius Aper (d. 285).

The death of Carus turned the Roman legions back toward Rome, and Numerianus was now jointly emperor with his brother Carinus (d. 285). Before the Roman army reached the Bosphorus, however, Numerianus was killed. Arius Aper was accused of having assassinated him, and Diocletian (245–313), a commander who had served under Carus, personally executed the Praetorian

prefect. After this action, the army proclaimed Diocletian emperor.

Roman-Persian War (295–297)

PRINCIPAL COMBATANTS: Rome vs. Persia

PRINCIPAL THEATER(S): Upper Mesopotamia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome wanted to retake upper Mesopotamia from the Persians.

OUTCOME: After suffering a decisive defeat in a surprise attack along the Tigris, Narses made vast concessions to Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rome, 25,000; Persia, 100,000

CASUALTIES: Unknown

TREATIES: Peace of Nisibis, 297

Throughout the third century, Persia had taken advantage of the internal disintegration of the Roman Empire to move against often weakly held Roman provinces. Narses (d. c. 302), king of Persia, invaded Armenia in 295 and removed the Roman puppet Tirdates III (c. 238–314) from the throne. This provoked the Roman caesar of the East, Galerius (d. 311), to assemble a small force, which included Tirdates and a cadre of Armenian exiles, and attack Narses. After defeating small Persian forces in Mesopotamia, Galerius and his army were routed near Carrhae in 296. This was the very scene of the defeat of Crassus (c. 115–53 B.C.E.) in the ROMAN-PARTHIAN WAR (55–38 B.C.E.).

Emperor Diocletian (c. 245–313?) publicly chastised Galerius but allowed him to retain his command. The following year, Galerius regrouped and reinforced his army, then advanced against the Persians once again. Commanding 25,000, he encountered a vastly superior Persian force of 100,000 near the upper Tigris but nevertheless managed to surprise it. The element of surprise served him well, and the Persian force, though larger, was nearly destroyed. Galerius and his men ran riot, looting the treasures carried by the army and capturing Narses's harem as well as his family. The Persian emperor desperately sued for peace and concluded the Peace of Nisibis in 297, whereby Persia restored all of upper Mesopotamia to Rome and, in addition, ceded five provinces northeast of the Tigris. Narses also acknowledged Tiridates III as king of Armenia. In return, the Persian emperor's harem and family were restored to him.

Roman-Persian War (337–364)

PRINCIPAL COMBATANTS: Rome vs. Persia

PRINCIPAL THEATER(S): Armenia and Mesopotamia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Persia sought to regain upper Mesopotamia and Armenia from the Romans.

OUTCOME: War was, for the most part, chronic and indecisive—until the death of Emperor Julian disordered the Roman legions and left Persian emperor Shapur II essentially free to possess the disputed territories.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rome, 95,000; Persian strength unknown

CASUALTIES: Unknown

TREATIES: None

Constantius II (317–361), son and heir of Constantine I (the Great; c. 228–337), inherited the throne of the Eastern Empire upon the death of his father in 337. Immediately, he was assailed by the forces of Persia's Shapur II (309–79), who was determined to regain Armenia and northern Mesopotamia from Rome. Presumably, Shapur was motivated to a large degree by religious zeal. Initial Persian raids into these regions inaugurated a long, sporadic state of war between Rome and Persia, which, however, resulted in only the sketchiest of historical records.

It is believed that the war encompassed nine great battles, of which the best known is Singara (Sinjar, Iraq), which may have taken place in 344 or as late as 348. While it is known that Constantius at first prevailed, historians are divided on the ultimate issue of the battle. Some believe the Romans succeeded in capturing Shapur's camp, only to be driven out of it in a nighttime counterattack. Others hold that the battle ended in a draw.

Singara was the scene of a Roman offensive. Repeatedly, however, Shapur seized the initiative and put the legions on the defensive. Three times he attacked the Mesopotamian fortress of Nisibis (337, possibly in 344, and again in 349), and three times he was repulsed by the Roman defenders.

The first major phase of the war ended in 350 with a truce, as both Constantius and Shapur became preoccupied with other threats to their empires. However, in 358, war recommenced with a new Persian invasion of Armenia. The Romans valiantly held the fortress of Amida (in Diyarbekir, Turkey) against a 73-day siege. The siege not only proved costly to Shapur but forced him to delay his campaign until

the end of winter. But in 359 he pressed on, capturing Singara and Bezabde, two Roman fortress towns. Constantius rushed to the region with reinforcements but was unable to retake Bezabde. He summoned aid from his cousin Julian (331–363), who assembled a force of 95,000 legionnaires during 363–363, then invaded early in 363. At Ctesiphon on the Tigris River, Julian coordinated a brilliant amphibious assault on Shapur's position. The Persian army was badly cut up and retreated into the city of Ctesiphon. Unfortunately for Julian, promised aid from the Armenians did not materialize, and he decided not to lay siege to Ctesiphon but to penetrate farther into Persian territory. The invaders, however, were greeted by a Persian scorched-earth policy and soon found themselves short of supplies. Julian therefore began a withdrawal to the north, traveling up the Tigris with the intention of establishing a new base of operations in Armenia. It was during this retreat that Shapur again showed himself, repeatedly attacking the Roman columns with light cavalry. In one attack, at night against a Roman camp, Julian was mortally wounded.

Julian was replaced by Flavius Claudius Jovian (d. 365) as commander of the legions. That general quickly buckled. Fearing a fatal shortage of supplies, he sued for peace. Shapur shrewdly kept the hungry army waiting with deliberately drawn-out negotiations. On the verge of starvation, Jovian agreed to cede to Persia all provinces east of the Tigris as well as the major Roman fortresses, including Nisibis. On behalf of Rome, Jovian further renounced suzerainty over both Armenia and the Caucasian region. He led his emaciated army abjectly back to Antioch. On his way back to Constantinople in 365 Jovian died suddenly and mysteriously, quite likely the victim of assassination.

Roman-Persian War (421–422)

PRINCIPAL COMBATANTS: Rome vs. Persia

PRINCIPAL THEATER(S): Mesopotamian provinces of Persia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome sought to compel Persia's king Bahram V to reinstate a policy of toleration of Christianity.

OUTCOME: After suffering a number of minor defeats, Bahram agreed to tolerate Christianity throughout the Persian Empire in exchange for a Roman pledge to tolerate Zoroastrianism throughout Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of 422

When King Bahram V (d. 439)—known as Gor (“the Wild Ass”)—ascended the Sassanid throne, he overturned the policy of religious toleration maintained by his father, Yazdegerd I, assassinated in 420, and instituted a program of violent persecution against Christians—or, at least, allowed his powerful chief minister, Mihr-Naresh (fl. fifth century) to persecute them. Rome responded by attacking Bahram's forces in Mesopotamia, inflicting a series of defeats against him in minor battles. Thoroughly intimidated, Bahram V sued for peace and agreed by treaty to tolerate Christianity throughout his empire. Rome, in turn, agreed to tolerate the dominant religion of Persia, Zoroastrianism, and the balance of Bahram V's reign became known not for religious persecution but for a combination of romantic chivalry and noble huntsmanship.

Roman-Persian War (441)

PRINCIPAL COMBATANTS: Rome vs. Persia

PRINCIPAL THEATER(S): Persia's Mesopotamian provinces

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome sought to compel Persia to reinstate its former policy of toleration of Christianity.

OUTCOME: Persian king Yazdegerd II agreed to reinstate the toleration policy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents survive

Although Bahram V (d. 439) had agreed not to persecute Christians in Persia (see ROMAN-PERSIAN WAR [421–422]), his son and successor, Yazdegerd II (d. 457), reinstated violent persecution, thereby provoking intervention from Rome. At first Rome sought to achieve a diplomatic solution, but when this failed, a small number of troops were sent to harass Persian forces in Mesopotamia. Like his father, Yazdegerd was easily intimidated, and nothing more than a brief foray into the Persian provinces was sufficient to persuade him to reaffirm his father's agreement to pursue a policy of toleration.

Roman-Persian War (502–506)

PRINCIPAL COMBATANTS: Rome (Eastern Empire/Byzantine Empire) vs. Persia

PRINCIPAL THEATER(S): Roman Armenia and Roman Mesopotamia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Persian king was provoked by Rome's refusal to help Persia pay tribute to the White Huns.

OUTCOME: After many initial reverses, Roman forces defeated the Persians and the prewar frontier was reestablished.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Frontier agreement of 506

Anastasius I (430?–518), emperor of the Eastern Empire, refused the appeal of Persian king Kavadh I (d. 531) for financial aid to help him pay tribute owed to the White Huns (Ephthalites), who had been instrumental in regaining the throne for Kavadh after he was deposed by his brother. His refusal was motivated by a desire to halt Persian expansion along the Black Sea; however, the effects of the refusal were compounded by unwelcome Roman incursions into Armenia. Provoked, Kavadh invaded Roman Armenia in 502 and captured the principal city, Theodosiopolis (Erzurum, Turkey) and, in 503, followed this triumph with a victory in Roman Mesopotamia when Amida (Diyarbakir, Turkey) fell to Persian forces after a 90-day siege.

Anastasius was able gradually to mount an effective counterattack and, during 504–506, repeatedly defeated Persian forces after initially repulsing an attempt to take Edessa (in modern Greece). After Amida was retaken by Anastasius's forces in 506, Kavadh sued for peace and agreed to the restoration of the Roman-Persian border on its prewar terms.

Roman-Persian War (539–562) See JUSTINIAN'S SECOND PERSIAN WAR.

Roman-Persian War (572–591)

PRINCIPAL COMBATANTS: Persia vs. Rome and the Turks
PRINCIPAL THEATER(S): Persia, Macedonia, Media, and Armenia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Persia sought territorial expansion at the expense of the East Roman Empire

OUTCOME: Persia was defeated, suffered civil war, and made peace with Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Roman army at the time of the intervention (590), 60,000; Persian forces at this time numbered about 40,000

CASUALTIES: Unknown

TREATIES: Truce, 573–575; peace treaty between Maurice of Rome and Chosroes II of Persia, 591

Chosroes I (d. 579), emperor of Persia, sent an expeditionary force into Roman Mesopotamia after Justin II (d. 578), emperor of Rome, struck a threatening alliance with the Turks in support of an uprising among Christian Armenians. Simultaneously, Chosroes fought a defensive action against the Turks in the East.

Chosroes's grandson, also named Chosroes (591–628), laid siege to Dara and dispatched forces to raid Syria. The Persians penetrated as far as Antioch. Rome, recognizing that the war it had provoked was going badly, sued for peace and secured a three-year truce spanning 573–575. During this period, the Romans—and the Persians—prepared for an expanded war.

In 575, Chosroes dispatched his grandson into Roman territory again but was driven out of Cappadocia; in 577, the Roman general Justinian (527–565) defeated young Chosroes at the Battle of Melitene, just west of the upper Euphrates River. This drove the Persian forces to the west. Justinian exploited the advantage he had gained by invading Persian Armenia, advancing to the Caspian Sea, where he established a base and constructed a fleet of warships late in 577.

In 578, Justinian invaded Assyria, which prompted the elder Chosroes to sue for peace. This was negotiated when the old man died in 579, and the new Persian king, Hormizd IV (r. 579–590), repudiated his father's negotiations, refusing to yield any territory. The war, therefore, continued—and continued to go badly for the Persians. They lost most of Armenia and were forced to withdraw from the Caucasus. For their part, the Turks overran Khorasan, penetrating as far as Hyrcania on the Caspian Sea. Within Persia, the reign of Hormizd IV proved disastrous. His tyranny provoked internal dissent and rebellion.

By 588, the Sassanid Empire of Persia was on the verge of collapse. At that point General Bahram Chobin (d. 591) performed a miracle: ambushing a larger Turkish force, he achieved a complete victory at the Battle of the Hyrcanian

Rock. By pressing his advantage, he pushed the Turks out of most of the area south of the Oxus River (near Mus), but was defeated at the hands of the Roman emperor Maurice (539–602) at the Battle of Nisibis later in the year. This loss resulted in a Persian withdrawal to Armenia. Still later, in 589, Bahram sought to regain lost ground by going on the offensive at the Battle of the Araxes. After this defeat, Hormizd ordered Bahram's relief, but the general refused to relinquish command. He now turned against the unpopular Persian emperor, whom he overthrew. The younger Chosroes now assumed the throne, but Bahram again refused to yield and seized the throne for himself. Chosroes found refuge with Persia's Roman enemies.

Emperor Maurice took advantage of the Persian disarray by supporting Chosroes against Bahram. He dispatched a Roman army under Narses via Assyria to restore Chosroes. Simultaneously, Roman legions advanced into Media. Bahram met Narses in battle at the Zab River. Outnumbered (60,000 to 40,000), Bahram was defeated, fled, and was killed. Restored to the throne as Chosroes II, the new Persian ruler made peace with Rome.

Romanus's Early Campaigns (1068–1069)

PRINCIPAL COMBATANTS: Byzantine Empire vs. the Seljuk Turks

PRINCIPAL THEATER(S): Syria, Media, Anatolia (Turkey)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Romanus rebuilt his army and mounted campaigns to protect his Byzantine Empire from attacks by the Seljuk Turks.

OUTCOME: Romanus drove the Turks out of the Byzantine Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Romanus IV Diogenes (d. 1072) married Eudocia Macreom Dolitissa (fl. 11th century), the widow of Constantine X (d. 1067) in 1067. The new ruler of the Byzantine Empire spent his first year on the throne rebuilding the empire's armies, which had been allowed to deteriorate over the previous 25 years. His first action was against the

Seljuk Turks, who had set up winter quarters in Phrygia and Pontus. At the Battle of Sebastia, Romanus defeated Alp Arslan (d. c. 1030), the Seljuks' leader, and forced him to withdraw to Armenia and Mesopotamia. Romanus then struck in Syria against Arabs who had risen against the Byzantine rule there. He next marched to Cappadocia, where he drove off the Turks. He pressed onward to Akhlat, the Turkish stronghold on Lake Van. Part of his army moved to Media, where it was defeated by Alp Arslan. The Seljuk Turk leader then raided into Anatolia, but Romanus devised a clever attack and defeated the Turks at the Battle of Heraclea. By the end of the campaigns of 1069, Romanus had driven the Seljuk Turks out of the Byzantine Empire.

Roman War against Pyrrhus of Epirus

(281–272 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. Tarentum (forces led by Pyrrhus of Epirus)

PRINCIPAL THEATER(S): Southern Italy

DECLARATION: Tarentum against Rome

MAJOR ISSUES AND OBJECTIVES: Tarentum sought to stem Roman expansion in the region.

OUTCOME: Tarentum succeeded in its objective, but at great cost.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rome, 70,000; Pyrrhus, 70,000

CASUALTIES: Rome lost 7,000–15,000 killed at Heraclea (280), and Pyrrhus lost 4,000–11,000; each side lost about 11,000 men at Asculum (279 B.C.E.)

TREATIES: None

When Tarentum (in southern Italy) feared that Roman expansion would soon engulf it, that city-state declared war on Rome and sought aid from Pyrrhus (319–272 B.C.E.), king of Epirus. He arrived with 20,000 infantrymen and some 3,000 Thessalian and Epirote cavalry troopers and set up as ruler of the Greek city-states of southern Italy.

In 280, Publius Valerius Laevinus (fl. 280s–270s B.C.E.) led about 35,000 Romans against what was now 30,000 troops deployed by Pyrrhus at Heraclea on the Siris River. Pyrrhus brilliantly deployed his elephants, surprising and overwhelming the Romans, who had never seen such creatures. He effected a rout, driving the legions across the Siris and inflicting 7,000 to 15,000 deaths. Pyrrhus's losses were also heavy, between 4,000 and 11,000 killed. Later congratulated on this victory, Pyrrhus reportedly replied, "One more such victory and I am lost."

Thereafter a “Pyrrhic victory” described a triumph not worth its cost.

Pyrrhus advanced toward Rome and, learning that a new Roman-allied army was marching to intercept him, recruited a force that may have numbered 70,000 and included Samnites and Greeks. In 279, Pyrrhus’s forces clashed with the Roman-allied army (also numbering perhaps 70,000) near Asculum (modern Ascoli, Italy). The first day of battle proved indecisive, but the second day was carried by Pyrrhus, again largely because of judicious use of elephants. However, this time there was no rout, and the Roman forces withdrew intact. Both sides sustained heavy losses of about 11,000 each, and Pyrrhus himself was seriously wounded. Like Heraclea, Asculum was a “Pyrrhic victory.”

Following Asculum, Pyrrhus answered a call for aid from Syracuse on the island of Sicily, this time against the Carthaginians, who had laid siege to Syracuse. During 278–76 B.C.E., Pyrrhus repeatedly prevailed against the Carthaginians but never drove them off the island. Worse, his struggle against the Carthaginians prompted them to conclude an alliance with Rome. Despite this, Pyrrhus might well have come to control all of Sicily had he stayed; however, in 275 he returned to the southern Italian mainland and fought the Battle of Beneventum against Roman forces. At first, it looked as if Pyrrhus’s elephants would yet again carry the day, for they drove the Romans against the walls of their own camp. At a critical moment, however, the Romans managed to turn the elephants back against the attackers, creating great confusion and panic. The Romans exploited this success with a sharp counter-attack that defeated Pyrrhus, who suffered heavy losses. Later in 275, Tarentum fell to the Romans, and Pyrrhus departed the field.

Roman War with the Quadi and Sarmatians (374–375)

PRINCIPAL COMBATANTS: The Quadi and Sarmatians vs. the Roman Empire

PRINCIPAL THEATER(S): Romania, Bulgaria, Austria, Hungary, and Yugoslavia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Quadi wanted the Roman Empire to remove the fortification it had erected from Quadi territory.

OUTCOME: Romans battled the Quadi and their allies the Sarmatians until the death of Valentinian.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The invading Huns pushed the Germanic people known as the Quadi westward into Dacia (Romania), where they settled in about 359. They remained there with little to do with the Roman Empire to the south until Emperor Valentinian I (321–375) ordered fortifications constructed on the south bank of the Danube River in Quadi territory. Gabinus (d. 374), the Quadi king, at first tried to appeal to the fort commander but was killed for his efforts by the Roman general Marcellinus (330–395). The Quadi then rose in protest with the Sarmatians. They swept across Moesia (Bulgaria) and Pannonia (Austria, Hungary, and Yugoslavia). In 374, the Roman army under Theodosius (c. 346–395) forced the Sarmatians to make a separate peace in Moesia, while Valentinian marched into Quadi territory in 375 and wreaked havoc in the region. The Quadi then sent envoys to Valentinian to ask for peace. Valentinian became so angry at their attempts to blame the war on Roman incursions into Quadi territory that he suffered a stroke and died. Flavius Gratianus (Gratian) (359–383), his son, then became emperor in the West, and the Quadi lived in peace until they invaded Italy with the Visigoths in 405.

Roman War with the Cimbri and Teutones (104–101 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. the Germanic tribes of Cimbri and Teutones

PRINCIPAL THEATER(S): Gaul and northern Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The barbarian tribes of Cimbri and Teutones sought to invade the territory of the Roman Republic.

OUTCOME: Rome defeated the barbarian tribes of Cimbri and Teutones.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: At the Battle of Vercellae (101 B.C.E.), 140,000 Cimbri were killed and 50,000 captured.

TREATIES: None

In about 109 B.C.E. the Germanic tribes of the Cimbri and the Teutones migrated through Switzerland to Gaul. At the Rhone River, they were met by and they defeated the Roman army of M. Junius Silanus (fl. second century B.C.E.). Disaster struck the Romans again in 105 at the Battle of Arausio (Orange), where the Roman army was nearly annihilated and some 40,000 Roman noncombatants were also killed.

In 104, Caius Marius (155?–86 B.C.E.), who had been fighting in Numidia, took command in Gaul. As the Cimbri and Teutones prepared to invade Italy, Marius made sweeping military reforms and recruited new troops. He fortified his camp at the Rhone and Isere rivers in preparation for new assaults. In 102, the barbarian tribes divided their forces. The Teutones moved toward Italy, but Marius's army ambushed the horde at the Battle of Aquae Sextae (Aix-en-Provence), killing 90,000 and capturing 20,000. The Cimbri, however, managed to move through Switzerland and the Brenner Pass and to defeat a Roman force in the Adige River valley in northern Italy. They continued toward the south into the Po River valley. Marius hurried his forces back to Italy, where they thoroughly defeated the Cimbri horde at the Battle of Vercellae in 101. About 140,000 barbarians were killed, and more than 50,000 were captured. No further attacks from Gaul threatened Italy.

Roman War with the Vandals (468)

PRINCIPAL COMBATANTS: Rome vs. the Vandals

PRINCIPAL THEATER(S): The Mediterranean

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Emperor Leo I of the Eastern Roman Empire wanted to push the Germanic Vandals out of the Mediterranean region.

OUTCOME: The Roman general Basiliscus was defeated near Cape Bon (Tunisia), and the Vandals retained control of the Mediterranean.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rome, more than 100,000 men; Vandal numbers unknown

CASUALTIES: Unknown

TREATIES: None

Having been pushed from the Danube River basin, Gaul, and Spain, the Germanic Vandals, an ancient tribe originally from Denmark, relocated to North Africa in 429. Under the leadership of King Gaiseric (390–477), the Vandals began increasing their territory in the Mediterranean region, making Carthage their capital in 439. In 455, the Vandals marched on Rome and sacked the city. Withdrawing to Carthage with Licinia Eudoxia (c. 422–480), widow of Emperor Valentinian III (419–455), as their hostage, by 468 the Vandals had gained control over Roman Africa, Sicily, and other eastern Mediterranean islands. Leo I (c. 400–74), emperor of the Eastern Roman Empire, sent his brother-in-law Basiliscus (d. 478) to attack the Vandals at their North Africa base. Basiliscus postponed the attack

for so long that the Vandals were able to decimate the Roman fleet at Cape Bon (Tunisia). As for Basiliscus, he fled back to Constantinople with his large but unused army. The Vandals continued to hold power in the Mediterranean region, and the Eastern Empire made peace with the Vandals in 476.

Roman Wars with Veii (438–426 B.C.E., 405–396 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. Veii

PRINCIPAL THEATER(S): Central Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome sought to end the Etruscan dominance in central Italy.

OUTCOME: Rome won a prolonged siege of Veii and became the leading state in central Italy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Located about 10 miles to the northwest of Rome on the banks of the Tiber River, the Etruscan state of Veii was first engaged in war with Rome between 438 and 425 B.C.E. At the siege of the Veii outpost Fidenae, King Tolumnius (d. c. 430) of Veii was killed. Although asked to come to Veii's aid, few other Etruscan states entered the fray. Rome won the siege of Fidenae in 426 and went on to besiege the state of Veii for nine years. Realizing that the Romans would soon reach Veii after the defeat of Fidenae, the citizens of Veii fortified their city. Veii at last fell to the Romans in 396 after the troops of Marcus Furius Camillus (d. c. 365) crawled through tunnels into the city, which they sacked. The people and territory of Veii were absorbed by Rome. As a result of the siege of Veii, Rome had established a new career path for its citizens by offering regular payments to troops in the field. The Roman Republic by this time was the leading state in central Italy.

Rome, Celtic Sack of (390 B.C.E.)

PRINCIPAL COMBATANTS: Celts vs. Etruscan Rome

PRINCIPAL THEATER(S): Rome and environs

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Celtic expansion

OUTCOME: The Etruscan city-state of Rome was sacked, except for the Capitol.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Celts (Senones) of Britain first invaded Italy about 450 B.C.E., and they made a full-scale assault against Rome in 390 (some authorities say 387), achieving victory against Roman (Etruscan) forces at the Battle of Clusium (or Clisium). Rome, during this period an Etruscan city-state, appealed to its neighbors for military aid, and, in violation of accepted behavior for diplomats, Roman ambassadors rushed to the defense of the Clusium. In response, the Celts, led by Brennus (fl. latter fourth century B.C.E.) (the Welsh word *breinin* is the equivalent of “king”) marched on Rome itself. Celtic forces routed the Roman army at Allia, then went on to overrun and sack Rome, destroying everything except the Capitol.

The Celtic sack of Rome had a profound long-term effect on the Roman collective psychology. Even centuries later, after the rise of Roman power and after Rome had subjugated most of the Celtic kingdoms, fear of the Celtic threat persisted and influenced Rome’s aggressive foreign policy.

Roses, Wars of the (1455–1487)

PRINCIPAL COMBATANTS: Two houses of the English nobility—the Yorks vs. the Lancasters.

PRINCIPAL THEATER(S): England

DECLARATION: The intrigue and fighting was continuous.

MAJOR ISSUES AND OBJECTIVES: These were dynastic conflicts, fought between two factions both to seize immediate control of the kingdom and to achieve an uncontested claim to the throne.

OUTCOME: In effect, the wars led to the founding of a new ruling house, the Tudor family, whose monarchs were to bring strong and relatively stable government to England.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but concentrated in the partisan nobility

TREATIES: None

Less a series of wars in the traditional sense, the Wars of the Roses were a sequence of intrigues, rebellions, and attacks that took place over the dozen years from 1455 and 1487, in three distinct stages. Between 1455 to 1464, what began as a battle between rival factions under the weak Lancaster king Henry VI (1421–71) became in the end a war for possession of the crown, which settled briefly on the head of House of York candidate Edward IV (1442–83). In the second phase, from 1469 to 1471, renewed factional wrangling led to dynastic war between Edward IV and supporters of Henry VI, who was (also briefly) restored to the throne. The final stage, from 1483 to 1487, consisted of outright dynastic war and led to the accession of Henry VII (1457–1509), the first Tudor king. The wars are familiar to the English reading public as the backdrop and sometimes subject of a number of Shakespeare’s historical plays, best known among them, perhaps, *Richard III*. They were first called the “Wars of the Roses” many years later by Tudor propagandists—the idea being that the warring houses of Lancaster (represented by a red rose) and York (represented by a white rose) had been reconciled in the Tudor ascendancy, thus replacing an insecure age of upheaval and unrest by orderly times of peace and prosperity.

Although both the Lancasters and the Yorks had some claim to the monarchy through descent from the sons of Edward III (1312–77), a Lancaster had actually sat on the throne since 1399. If it had not been for the near anarchy rampant in England during the middle of the 15th century, the Yorkists might never have made a bid for power. But after the death of Henry V (1387–1422), the Lancasters did not acquit themselves well in France, where the HUNDRED YEARS’ WAR ground to a halt, having done little for the English but bankrupt the government and discredit Lancastrian rule. Great lords with private armies commanded the English countryside, where lawlessness ran rife and taxation hung heavy. The catalysts of struggle between York and Lancaster lay in the long minority of Henry VI. Henry proved to be a simpleton, slouching toward madness, and was from the start under the thumb of his ambitious queen, Margaret of Anjou (c. 1430–82). Her party, the Beauforts, had allowed the English position in France

to deteriorate and caused the English themselves to turn to the Yorkists with the fall of Bordeaux in 1453.

That year Henry lapsed into insanity, causing a powerful baronial cabal, backed by Richard Neville (the “King-maker”; 1428–71), earl of Warwick, to make its move. The barons invested Richard (1411–60), duke of York, as protector of the realm. When Henry recovered his sanity in 1455, he brought the Beauforts back to court, reestablishing Margaret’s authority. York took up arms, in self-protection as well as ambition. At the battle of St. Albans on May 22, 1455, York proved victorious, and an uneasy truce followed. Civil war broke out again four years later, when York rose once more in rebellion. The Yorkists had some initial success before they scattered following defeat at Ludford Bridge on October 12, 1459. Many fled to France, where Warwick was regrouping the Yorkist forces. In June 1460, they returned to England, where Warwick and Richard’s son and heir Edward (1470–83) decisively defeated the Lancastrian forces at Northampton on July 10. Thereafter, York tried to lay claim to the throne but settled instead for the right to succeed upon the death of Henry. Because this effectively disinherited King Henry’s son, also named Edward, Queen Margaret continued her strident opposition.

Gathering forces in northern England, Margaret led the Lancastrians on a surprise attack and killed York at Wakefield in December. She then marched south toward London, defeating Warwick on the way at the Second Battle of St. Albans on February 17, 1461, which left the Yorkist cause in the hands of the 18-year-old Edward of York. On February 2, he had defeated a Lancastrian force at Mortimer’s Cross, and now he too was marching on London. Arriving before Margaret on February 26, within the week the young duke of York was proclaimed King Edward IV at Westminster, on March 4. Then, with what was left of Warwick’s army, Edward chased Margaret north to Towton, where they would fight the bloodiest battle of the war. At Towton, Edward won a complete victory for the Yorkist cause. Henry, Margaret, and their son Prince Edward fled to Scotland. The first stage of the Wars of the Roses drew to a close as the fighting waned, except for seesaw struggles for the castles of Northumbria between 1461 and 1464 and the reduction of a few pockets of Lancastrian resistance, such as the battles of Hedgeley Moor and Hexham in April–May 1464.

The next round grew from disputes within the Yorkist ranks. Warwick and Edward fell out over foreign policy, and Warwick and his cronies found themselves increasingly passed over at court. Soon Warwick was fomenting rebellion with the king’s ambitious brother George (1449–78), duke of Clarence. By 1469 civil war had broken out once more as Warwick and Clarence backed risings in the north. By July, they had defeated Edward’s supporters at Edgecote (near Banbury), and soon they took the king himself prisoner. However, Edward was rescued by March 1470. He regained control of his govern-

ment and forced the conspirators to flee to France. There they allied themselves with the French king Louis XI (1423–83) and their former enemy, Margaret of Anjou.

Warwick and Clarence returned to England in September 1470, defeated and deposed Edward, and restored the crown to Henry VI. Edward himself now fled with his supporters to the Netherlands. Securing aid from Burgundia, he returned to England in March 1471. Edward outmaneuvered Warwick long enough to regain the loyalty of his brother, the duke of Clarence. The two joined forces to defeat Warwick at Barnet on April 14. That same day, Margaret landed at Weymouth. When she learned of Warwick’s disastrous defeat, she turned west and rushed toward the safety of Wales. But Edward’s army beat hers to the River Severn; at the battle of Tewkesbury on May 4 Edward captured Margaret, destroyed her forces, and put her son to death. Shortly afterward, he had Henry VI murdered in the Tower of London.

Edward’s throne was safe for the rest of his life, but when he died in 1483 his brother, Richard (1461–83), the duke of Gloucester, disregarded the claims of his nephew, the young Edward V, and had himself crowned Richard III. In doing so, he alienated many Yorkists, his only natural constituency. These men now turned to the House they had so long opposed and to the last hope of the Lancastrians, Henry Tudor (later Henry VII). Backed by the Yorkist defectors, allied with the French, Henry rebelled. As all readers of William Shakespeare know, Henry defeated and killed Richard at Bosworth Field (on August 22, 1485). The next year Henry married Edward IV’s daughter Elizabeth of York (1466–1503) thus uniting the Yorkist and Lancastrian claims. There was still some persuading to do, some malcontents to put down. It was only when Henry defeated a Yorkist rising supporting the pretender Lambert Simnel (*see* SIMNEL’S REBELLION) on June 16, 1487, that what Henry’s descendants would call the Wars of the Roses came to a close.

More recent historians have downplayed the significance of these wars, claiming that the Tudor writers and later historians following their lead exaggerated the level of casualties and the extent of the disorder they caused. Most of the fighting was limited not merely to the nobility but to the two factions and those most closely associated with them, so that even at the height of the fighting, most common people continued about their everyday business. The conflicts did not much disrupt the growing prosperity and the rising standard of living of ordinary men and women in England in the second half of the 15th century, though the political crisis they created no doubt had a larger effect. Their most lasting impact was probably to produce the new dynasty of the Tudors—a lusty, expansive, and confident lot who would take England to glories no previous rulers, Lancaster or York, would have imagined possible.

Ruandan (Rwandan) Civil War (1959–1961)

PRINCIPAL COMBATANTS: Tutsi (and Twa) tribe vs. Hutu tribe

PRINCIPAL THEATER(S): Ruanda (Rwanda), Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The oppressed Hutu rebelled against the dominant minority Tutsi.

OUTCOME: The Hutu prevailed, but the stage was set for further civil war.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but some 150,000 Tutsis became exiles.

TREATIES: None, except for a UN-sponsored referendum effectively ending Tutsi rule

The German defeat in WORLD WAR II resulted in the transfer of the former East African colony to a Belgian protectorate, Ruanda-Urundi, under the aegis of the United Nations. In 1959, after UN-supervised elections, the Belgian administrators granted self-government to Ruanda-Urundi. This sparked a revolt of the long-suppressed and long-oppressed Hutu against the Tutsi (Watusi). The Tutsi traditionally dominated the region, culturally and economically as well as in government, even though they constituted only 15 percent of the population. The Hutu, the majority tribe, were long held in servitude by the Tutsi. As the Tutsi moved to seize the power granted by Belgium, the Hutu commenced a war not only against the Tutsi but their allies the Twa (pygmies).

The war was bloody and bitter, but the Hutu prevailed. In a 1961 UN-sanctioned referendum, the vast majority of Ruandans voted to depose the Tutsi king and replace him with a republic. On July 1, 1962, Ruanda officially became independent. Following the elections and independence some 150,000 Tutsis went into exile. Many of them would invade their former country in 1963. This and other Tutsi-Hutu conflicts became the basis of the disastrous RWANDAN CIVIL WAR of 1990–94.

Russian-Bulgarian War (969–972)

PRINCIPAL COMBATANTS: Kievan Russia vs. Bulgaria

PRINCIPAL THEATER(S): Bulgaria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Kievan prince Sviatoslav sought territorial conquest.

OUTCOME: Some of Bulgaria fell to Sviatoslav, who, however, provoked war with the Byzantine Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

This war is important because it relates to the BYZANTINE-RUSSIAN WAR of 970–972, which erupted over a dispute as to how Bulgaria should be divided between Russia and the Byzantine Empire. During 967–969, combined Russian and Byzantine forces invaded Bulgaria. In 969, Kievan Russians led by Prince Sviatoslav (d. 972) sought to exploit the disarray in Bulgaria created by the death, in 927, of the Bulgarian czar Symeon (d. 927). Sviatoslav led an army into Bulgaria, took Philippopolis, then captured the new Bulgarian ruler, Boris II (d. 984). After this, the Russians overran the country. The Bulgarians resisted, but it was ultimately Russia's erstwhile Byzantine ally that transformed the war into one between Byzantium and Russia. The Byzantine emperor, John Tzimisces (925–976), moved in 970 to check the Russian advance. This resulted in exhausting and inconclusive combat for the next two years.

Russian Civil War (1425–1453)

PRINCIPAL COMBATANTS: Internecine dispute within Muscovy (ancient Russia) and between Muscovy and the Tartars

PRINCIPAL THEATER(S): Muscovy (Russia)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the throne of Muscovy

OUTCOME: Ultimately, the reign of Ivan III the Great was assured.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The reign of Basil II (1415–62) was marked by universal anarchy in Russia. He came to the throne at age 10 as grand prince of Moscow following the death of his father, Basil I (1371–1425), in 1425. Immediately, the boy's uncle, Yuri (d. c. 1434), attempted to seize control of Russia with the support of the Tartars. This put him in opposition to the *boyars* (nobility), who supported Basil II. However, in 1432, the boyars suddenly transferred their allegiance to Yuri because of a dispute over an arranged marriage between Basil and a boyar girl. Assisted by the boyars, Yuri managed to seize control of Moscow, but his death in 1434 abruptly ended his royal ambitions. His ineffectual son, also named Yuri (d. after 1432), half-heartedly attempted to capitalize on his father's gains but was quickly defeated, taken captive, and blinded.

In 1446, Dimitri Shemiaka (d. 1453), another of Yuri's sons, prince of Galicia (part of Poland), allied himself with other princes and effectively conquered Muscovy in 1446. Basil, captured, was blinded—but, inexplicably, Dimitri Shemiaka restored Basil to the throne in 1447.

In 1447 and, again in 1451, the Tartars invaded, the second invasion reaching the walls of Moscow itself. The defeat of Yuri and his son left the Tartars as Basil II's only significant threat. The Muscovites managed to repel the Tartar invasions, successfully defending the walled city of Moscow, even though the Tartars sporadically gained the advantage and even once captured Basil, holding him for an exorbitant ransom.

During the 1450s, Basil II's son Ivan (1440–1505) invaded Galicia, defeating Dimitri Shemiaka and forcing him into exile at Novgorod. Despite his blindness, Basil began to unify Muscovy, laying the foundation for the empire that would grow under the rule of Ivan—as Czar Ivan III (the Great).

Russian Civil War (1604–1613) See TIME OF TROUBLES, RUSSIA'S.

Russian Civil War (1917–1922)

PRINCIPAL COMBATANTS: “Red” Soviet (communist, Bolshevik) revolutionary government vs. “White” czarist counterrevolutionaries (with varied foreign interventions)

PRINCIPAL THEATER(S): Russia, Siberia, and the Baltic states (Latvia, Lithuania, Estonia)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Following the communist victory in the Bolshevik Revolution of 1917, this civil war was essentially a counterrevolution to overthrow the new Soviet (communist) regime.

OUTCOME: The counterrevolution was defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Soviet Red Army, 5,427,273 (but only 498,891 effective peak strength); White, 317,800 effective peak strength

CASUALTIES: Soviet Red Army, 418,768 battle deaths, 283,079 deaths from disease and other causes, 536,725 wounded; Whites, 175,000 battle deaths, 150,000 deaths from disease and other causes

TREATIES: None

Almost immediately following the triumph of the communist regime in the BOLSHEVIK REVOLUTION (1917), the Don Cossacks revolted on December 9, 1917, in the first organized counterrevolutionary opposition. These men joined czarist loyalists known as the Whites by the end of 1917 and created an army of 3,500, which soon grew to about 5,000 and repeatedly engaged Bolshevik militia forces over an 80-day period called the First Kuban Campaign, or the Ice March. The most experienced of the White commanders, General Lavr Kornilov (1870–1918), fell in battle on April 13, 1918, but the White forces continued to grow. Under General Anton Denikin (1872–1947), some 9,000 counterrevolutionary troops rallied by the summer of 1918, including 3,500 fierce Cossacks. With these troops, Denikin launched the Second Kuban Campaign and by October had seized the Kuban region from Bolshevik control. Following this triumph, the White ranks swelled to 40,000, and a full-scale civil war was at hand.

Encouraged by the success of the counterrevolutionary movement, a number of foreign powers, hostile to the Bolsheviks, intervened on behalf of the Whites. Japan occupied Vladivostok in December 1917 and committed 74,000 soldiers to action in Siberia. Small numbers of French and Greek troops fought in the Ukraine and occupied Odessa until April 8, 1919. A combined U.S., British, and French expeditionary force seized the ports of Murmansk (June 23, 1918) and Archangel (August 1, 1918), retrieving materiel they had sent to the now-fallen czar. This materiel they now turned over to the Whites. Yet the commitment by the major powers to the civil war was never compelling, and the Americans (some 5,800 men) were withdrawn in August 1919 from northern Russia after losses of 144 killed in action, 100 dead from other causes, and 305 wounded. French and British forces withdrew in September and October—the Royal Navy having done considerable damage to Bolshevik naval forces on the Baltic. Two Russian battleships were sunk, as were five destroyers, two submarines, a cruiser, and a submarine depot ship. The British lost one submarine, two destroyers, and 10 smaller craft.

In August 1918, the United States deployed 8,358 men—two regiments—to Siberia, less to aid the Whites directly than to prevent the Japanese from seizing the Russian Maritime Provinces should the Bolsheviks prove victorious. The Americans reinforced 4,000 Canadian, 3,000

French, and 2,000 British troops already in place. These forces engaged in skirmishes with the Bolsheviks for two years before withdrawing in April 1920. By that time, the Japanese had mostly withdrawn, though they did not completely evacuate Siberia until October 25, 1922. While few casualties were suffered among the foreign and Bolshevik forces in these engagements, Bolshevik partisans attacked the pro-czarist stronghold of Nikolaevsk on May 25, 1920, killing 700 Japanese troops and slaughtering as many as 6,000 civilians.

Although the major foreign powers did not throw major troop support behind the White cause, they did contribute significant quantities of munitions. The Whites also received aid from the so-called Czech Legion, 50,000 poorly equipped but experienced troops formerly belonging to the Austro-Hungarian army who had recently been released from WORLD WAR I prisoner-of-war camps. The legion seized control of the Trans-Siberian Railroad in June 1918 and advanced along the line into eastern Russia. As they approached Yekaterinburg, the village in which Bolshevik partisans were holding the deposed czar, Nicholas II (1868–1918), his wife, and children, the partisans apparently panicked and summarily executed the royal family. In this sense, the last of the Romanov dynasty fell victim not to the Bolshevik Revolution but to the civil war that followed.

As the Czechs and Whites pressed their offensive, a provisional anti-Soviet government was established at Omsk. Former Imperial Russian navy admiral Alexander Kolchak (1874–1920) seized control of the Omsk government and thereby effectively proclaimed himself head of the White government. Rallying to him, the Whites advanced deeply into eastern Russia with an army of about 120,000 men. In December 1918, this force captured Perm and took some 30,000 Bolshevik prisoners.

The White momentum of late 1918 continued into the next year. Ufa fell in the spring of 1919 and was followed by the wanton massacre of 670 Bolshevik prisoners of war. Thinly deployed across a 700-mile front, the Whites continued to advance until Leon Trotsky (1879–1940), one of the primary architects of the Bolshevik Revolution, at last organized a truly effective Red Army force of 119,214 men. Beginning in late April, General Mikhail Tukhachevsky (1893–1937) led this army in a counteroffensive against the Whites, compelling Kolchak to make a long fighting retreat through the summer and fall of 1919.

On June 6, 1919, the Red Army's most distinguished commander, Mikhail Frunze (1885–1925), retook Ufa, killing about 3,000 White soldiers. Throughout the fall, Kolchak's forces suffered one defeat after another, losing nearly 20,000 killed or wounded during September–October. Kolchak himself was captured and executed on February 7, 1920, and about 40,000 Whites became POWs. In the meantime, the Czech Legion fought an eastward retreat along the Trans-Siberian Railroad, reaching

Vladivostok, from which 57,459 men (the entire legion and associated units) were evacuated and thereby removed from the fighting. This left only the so-called White Guards, mostly Cossacks, in Siberia. The White Guards became a much-feared guerrilla force that murdered untold thousands of civilians.

While fighting, often irregular and disorganized, raged in Siberia, Red forces took the offensive in the Baltic, invading Latvia, Lithuania, and Estonia during 1918–19. German and Allied troops, bitter enemies in the just-concluded World War I, were sent to the Baltic States, forcing the Bolsheviks to withdraw back into Russia by spring 1919. Estonia then became a staging area for a White counteroffensive. A White army of 18,500 marched across the Estonian frontier into Russia on October 6, 1919, and made a daring assault on Leningrad (St. Petersburg). Trotsky rallied 24,000 civilian defenders from the city. Soon reinforced to a strength of 73,000, these fighters repulsed the White army, forcing it back into Estonia.

A third front of great importance, in addition to Siberia and the Baltic, was the Don River region in the Ukraine and southern Caucasus. Here Trotsky built up his largest Red Army force, 380,000 combat-capable troops, by January 1919. Fighting on this huge front was exceptionally fierce and at first greatly favored the Whites. The northern Caucasus fell to the Whites by early 1919, Tsaritsyn (later Stalingrad) was conquered on June 17, 1919, and 40,000 Reds became POWs. Kiev, capital city of the Ukraine, was taken by White forces on September 2. By this time the Whites had found a powerful ally in Ukrainian nationalists, who turned their wrath not only against the Reds but also against Ukrainian Jews. Estimates of Jews slaughtered by the nationalists vary from 31,071 (the actual burial count) to 100,000, and some estimates reach 200,000.

By October 1919, the White offensive had largely swept the Reds out of southern Russia, and White forces were now on the march to Moscow. At Tula, however, a large city on the road to Moscow, a massive 175,000-man Red Army force counterattacked the White advance of some 100,000 men. The White army collapsed, unit by unit, and began a retreat back into the Ukraine. The Reds pursued, and, on December 17, 1919, retook Kiev. The White army retreated all the way to the Black Sea, where its survivors were evacuated by Allied ships in March 1920. A small White force under General Peter Wrangel (1878–1928) remained in Crimea, but otherwise the counterrevolution seemed to have been defeated.

The sudden demands of the RUSSO-POLISH WAR (1919–1920) briefly revived White hopes. Wrangel rebuilt an army of 40,000 and went on a new offensive north of the Sea of Azov. Unfortunately for Wrangel, however, the war with Poland soon ended, allowing Trotsky to release more Red Army troops against the offensive. General Frunze led about 130,000 Reds in a vast sweep of the

Crimea, driving Wrangel and the entire remainder of the White military as well as many sympathizing civilians, a total of 145,693 men, women, and children, to seek evacuation to Constantinople aboard a fleet of 126 British ships. With the end of the evacuation on November 15, 1920, the major phase of the Russian Civil War ended—although sporadic and disorganized violence, mostly from anarchists, continued into 1922.

See RUSSIAN CONQUEST OF CENTRAL ASIA.

Russian Conquest of Central Asia

(1604–1689)

PRINCIPAL COMBATANTS: Russia vs. peoples of the region and the Manchu Chinese

PRINCIPAL THEATER(S): Central Asia and the Chinese frontier

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Territorial expansion and conquest

OUTCOME: The Russians were remarkably successful in expanding their holdings until the Manchu retaliated in the border country; here, the Russians backed down after a long war of raiding and attrition.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Extremely variable

CASUALTIES: Unknown

TREATIES: Treaty of Nerchinsk, 1689

Russian expansion into Central Asia began with the founding of the settlement of Tomsk on the middle Yenisei River. From here, Russian settlement progressed, sometimes violently, to the upper Yenisei, where Yaniseisk, a fort, was built in 1618. In 1628, Russian expansion had reached the middle Lena River. Kirensk was founded in 1630, followed two years later by Yakutsk. In 1639, Russian settlement reached the Sea of Okhotsk, the first Russian outpost on the Pacific.

Throughout the 1640s, culminating in 1652, Russian armies fought the Buryat Mongols, ultimately defeating them and thereby gaining control of Lake Baikal and the surrounding territory. Simultaneously, during 1643–46, Russian forces set out from Yakutsk and reached the Chinese frontier. In 1644, they were at the mouth of the

Kolyma River, which put Russia into contact with the Arctic Ocean. Two new settlements were established, Okotsk in 1648 and Irkutsk and Khabarovsk in 1651. With this, commander Verofey Khabarov (fl. 17th century) erected forts throughout the Amur Valley and, to the north, the land of the Daur.

Russian penetration to the doorstep of China touched off skirmishes and pitched battles from 1653 to 1685. Although the Manchus had little enough interest in the Amur Valley, they were outraged by the persecution of Chinese settlers at the hands of Russian conquerors in the region. This prompted frequent Manchu raids against Russian positions in the valley. The ceaseless raiding wore the Russians down, and in 1660 a Manchu army forced the Russians out of the Amur Valley. This triggered a three-year war between Russia and Manchu China (1683–85). The result was the permanent ouster of the Russians from the Amur region. Russian czar Peter I (the Great; 1672–1725), ruling jointly with his half brother Ivan V (1682–96), concluded the Treaty of Nerchinsk with the Manchus in 1689, which brought peace and prosperous trade between China and Russia for some 175 years.

Russian Conquest of Finland

See RUSSO-SWEDISH WAR.

Russian Conquest of Merv (1884–1885)

PRINCIPAL COMBATANTS: Russia vs. Merv

PRINCIPAL THEATER(S): Merv, Turkmenistan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Russian colonial expansion

OUTCOME: Merv fell in a sustained campaign.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

By 1881, Russia had annexed virtually the entire Transcaspian Region (see RUSSIAN CONQUESTS IN CENTRAL ASIA [1864–1881]). The only Moslem principality of Central Asia that retained its independence was Merv. Once the Russians established control elsewhere in the region, the surrender of Merv became inevitable. A sustained campaign during 1884–85 resulted in the annexation of the principality and pushed the Russian border to the

doorstep of Afghanistan. This heightened tension between the Russians and the British, since their colonial interests now threatened to encroach on one another.

Russian Dynastic War (972–980)

PRINCIPAL COMBATANTS: Struggle among heirs to the medieval Russian throne, Oleg, Yaropolk, and Vladimir

PRINCIPAL THEATER(S): Russia and Kiev

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Sole possession of the Russian throne

OUTCOME: After defeating and killing Oleg, Yaropolk was in turn defeated, then executed, by Vladimir, who become sole ruler of Russia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Russia in the Middle Ages was a fragmented, feudal realm, and when the powerful Prince Sviatoslav (d. 972) died in 972, he left Russia in the hands of his three sons, Oleg (d. 977?), Yaropolk (d. c. 979), and Vladimir (956–1015). Almost immediately, they began to fight each other for sole possession of the throne. Combat was indecisive until 977, when Yaropolk's Kievan forces defeated Oleg's Drevlian army, and Oleg apparently fell in battle; his death was not confirmed, but he disappeared forever. Alarmed by Yaropolk's success, Vladimir sought an alliance with Scandinavia but managed only to recruit the costly services of Norse mercenaries. It proved a sound investment. Vladimir used them to obtain control of Polotsk in 978 and the following year Novgorod as well. In 980, Vladimir's forces marched on Kiev and took Yaropolk prisoner. He then surrendered Kiev without giving battle—and was soon executed, leaving Vladimir sole ruler of feudal Russia.

Langer, *Historical Dictionary of Medieval Russia* (Lanham, Md.: Scarecrow Press, 2002); David Nicolle, *Medieval Russian Armies 838–1252* (London: Osprey, 1999).

Russian Dynastic War (1015–1025)

PRINCIPAL COMBATANTS: Struggle among the heirs of Grand Prince Vladimir (with Polish intervention)

PRINCIPAL THEATER(S): Kiev and Novgorod

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the thrones of Kiev and Novgorod

OUTCOME: Yaroslav emerged triumphant over his brothers.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Like his father Sviatoslav (d. 972), before him (*see* RUSSIAN DYNASTIC WAR [972–980]), Grand Prince Vladimir (956–1015) left on his death in 1015 a Russia divided among contending heirs—a situation that created inevitable conflict.

Vladimir's nephew Sviatopolk (d. 1021) sought sole rule and did not hesitate to murder his younger brothers Boris and Gleb (both died 1015) immediately following his uncle's death. This made him sole ruler of Kievan Russia and earned him the sobriquet of “the Damned”). In the meantime, however, another of Sviatopolk's brothers, Yaroslav (d. 1054), heir to the Novgorod throne, marched on Kiev, attacked Sviatopolk, and sent him fleeing to Poland to the protection of his father-in-law, Boleslav I (d. 1054). With Boleslav, Sviatopolk recruited a large army—precise numbers unknown—and invaded Russia, driving Yaroslav's forces back into Kiev, then all the way back to Novgorod.

In this way, Sviatopolk regained Kiev, but, always treacherous, suddenly betrayed his father-in-law and turned against his Polish allies. This gave Yaroslav an opening to counterattack Sviatopolk. He deftly allied his forces to those of the spurned Poles and attacked Kiev, defeating Sviatopolk, who was killed in battle. Yaroslav was now grand prince of Kiev and Novgorod. Subsequently, yet another heir, Mstislav (d. 1036), successfully fought Yaroslav for a portion of the realm. Yaroslav drove him east of the Dnieper, where Mstislav ruled independently until his death. However, Yaroslav remained sole ruler of Kiev and Novgorod.

Langer, *Historical Dictionary of Medieval Russia* (Lanham, Md.: Scarecrow Press, 2002); Robert Mitchell and Nevill Forbes, trans., *Chronicle of Novgorod, 1016–1471* (New York: Best Books, 1914).

Russian-Krim Tartar War *See* RUSSIAN-TARTAR WAR.

Russian-Manchu War (1660)

PRINCIPAL COMBATANTS: Russia vs. Manchu China

PRINCIPAL THEATER(S): Manchu borderlands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Manchu sought to prevent a Russian invasion.

OUTCOME: The Russians were ejected from the region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In the course of the RUSSIAN CONQUEST OF CENTRAL ASIA (1604–89) Russian attacks along the Manchu borderlands resulted in a strong retaliation by Manchu forces. Little is known about military operations in this region at the time, but, within a brief span, Russian troops were pushed out of the Amur River area and also from positions occupied near the Sungari River.

Further reading: Geoffrey A. Hosking, *Russia: People and Empire, 1552–1917* (Cambridge, Mass.: Harvard University Press, 1996).

Russian-Manchu War (1683–1685)

PRINCIPAL COMBATANTS: Russia vs. Manchu China

PRINCIPAL THEATER(S): Amur Valley, near the Manchu border

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Manchus reacted to Russian persecution of Manchu and Chinese settlers in the Amur Valley.

OUTCOME: The Russians were ejected from the valley for a second time.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Nerchinsk, 1689

During the late phase of the RUSSIAN CONQUEST OF CENTRAL ASIA (1604–89), Russians reoccupied the Amur Valley, from which they had been ousted in the RUSSIAN-MANCHU WAR (1660). They conducted a program of persecution of Chinese and Manchu settlers in the region. This provoked a response from Manchu China in the form of frequent raids against Russian settlers in the valley. The Manchus intensified the raiding, ultimately conducting well-developed military campaigns against the Russians, whom, for a second time, they had succeeded in driving out of the Amur Valley. Four years later, the Treaty of Nerchinsk established a prosperous peace between Russia and China, based on trade and enduring for some 175 years.

Russian Rebellion against the Mongols (1381–1382)

PRINCIPAL COMBATANTS: Mongols (White Horde) vs. Russians

PRINCIPAL THEATER(S): Northern and central Russia, especially Moscow and environs

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: The White Horde conquered much territory, including Russia, but failed to hold onto it.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Across a broad front, the Russians mounted a rebellion against their Mongol occupiers beginning in 1381. However, within a year, Toktamish (r. c. 1376–c. 1395), who had become khan of the White Horde—thanks to the support of the great Tamerlane—suppressed the rebellion in northern and central Russia. On August 23, 1382, Toktamish overran and captured Moscow, unleashing wholesale slaughter within the city.

Fortunately for the Russians, Toktamish soon turned against Tamerlane, and the forces of the two fell to fighting during 1385–95. Under Dmitri Donskoi (1350–89), Russia was able to regain not only Moscow but many other holdings lost to the Mongols.

Halperin, *Russia and the Golden Horde: The Mongol Impact on Medieval Russian History* (Bloomington: Indiana University Press, 1987); Geoffrey A. Hosking, *Russia and the Russians: A History* (Cambridge, Mass.: Harvard University Press, 2001).

Russian Revolution (The Revolution of 1762) (1762)

PRINCIPAL COMBATANTS: Catherine I the Great vs. Czar Peter III

PRINCIPAL THEATER(S): Russia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Catherine wanted to depose her husband and become czarina of Russia.

OUTCOME: Catherine succeeded in accomplishing a bloodless coup d'état—although, afterward, Peter III was killed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: None except for Peter III, killed in a “brawl” several days after the coup.

TREATIES: None

Although often called the Revolution of 1762, this brief struggle was a coup d'état by Catherine I (the Great; 1729–96) to overthrow her dim-witted husband, Czar Peter III (1728–62). He had undermined Russian national solidarity by attempting to impose on the Russian Orthodox Church his own Lutheran beliefs and practices. Seeing an opportunity to both save Russia and acquire absolute power, Catherine, a woman of extraordinary intellect and vision, ambitious, ruthless, and pragmatic, conspired with her lover Grigori Orlov (1734–83), a highly placed courtier whose brother Aleksei (1737–1809) was an influential army officer, to win over the army to her cause. When Peter attempted to mount a campaign to assist his native Holstein in its effort to annex Schleswig, his troops, who had no respect for him, refused to join the effort, and the time was therefore ripe for the coup.

While Peter was absent from the royal court, Catherine, Grigori Orlov, and the imperial guard traveled to St. Petersburg, where on July 9, 1762, the Russian senate and the Orthodox Church acclaimed her ascension to the throne. She was crowned czarina almost immediately. From the throne, she quickly proclaimed Peter's removal and led her troops to nearby Oranienbaum, where Peter was staying, to compel his abdication. He did so, without the necessity of bloodshed, on July 10. It is unlikely that the dissolute and feckless Peter would have posed a continuing threat to Catherine's power; however, Aleksei Orlov arranged an altercation a few days later, which resulted in Peter's death. Thus Catherine managed the permanent removal of her husband and rival.

Russian Revolution (1905)

PRINCIPAL COMBATANTS: Russian peasants, workers and others vs. the czarist government

PRINCIPAL THEATER(S): Russia, especially St. Petersburg and Moscow

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Various groups had different objectives; the major objective was to liberalize the Russian government.

OUTCOME: The czar promised reform but delivered repression.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: By 1906, 3,611 government officials had been killed, along with about 1,500 soldiers; 15,000 rebels died, and 20,000 were wounded.

TREATIES: None

By the late 19th century, Russia seethed with discontent among many classes, including the rising industrial proletariat and the rural peasantry but also among the nobility and ethnic peoples in the border regions. This discontent intensified during the RUSSO-JAPANESE WAR (1904–05), in which Russia suffered a costly and humiliating defeat that dramatically illustrated the ineptitude and corruption of the old czarist regime.

On January 22, 1905, an Orthodox priest, Father Georgi Gapon (c. 1870–1906), led workers in a march on the czar's Winter Palace in St. Petersburg to present Nicholas II (1868–1918) with a petition of grievances. Unknown to the marchers, the czar was absent at the time, but government troops fired on the unarmed petitioners, killing 70 and wounding perhaps 300 in what became the infamous “Bloody Sunday.”

Rage swept Russia, touching off a rash of workers' strikes. When Nicholas's minister of the interior, Vyacheslav Plehve (1846–1904) proposed placating the people with a new moderate constitution, leftists were emboldened to take more extreme action. Plehve, a much-hated reactionary and architect of turn-of-the-century pogroms, was assassinated by a bomb blast on July 28, 1904. Next, during October 20–30, 1905, a general strike gripped all of Russia. During this period of intense ferment, a radical Soviet (council) of Workers' Deputies formed under the leadership of Leon Trotsky (1879–1940), and a more moderate Constitutional Democratic Party was also created. In the meantime, in rural districts, peasants occupied or vandalized the property of their landlords, while the urban proletariat demanded civil rights reforms and general pardons.

Yielding to the advice of his prime minister, Count Sergei Witte (1849–1915), Czar Nicholas II allowed the promulgation of the October Manifesto (on October 30, 1905), which granted broad civil liberties, promised a new constitution, and created an elected Duma, or national parliament.

On the surface, the relatively bloodless revolution seemed to have succeeded. However, the czar had bargained in bad faith and openly supported the “Black Hundreds,” right-wing terrorists who assaulted radicals, workers, and other suspected revolutionaries. On December 16, 1905, the czar approved the roundup of some 200 members of the St. Petersburg Soviet. Their arrest and imprisonment effectively crushed the organization but incited the Moscow Soviet to organize a violent insurrection that government troops brutally suppressed after five

days of street combat. As for the Duma, it was dissolved in 1906 after elections produced an anti-czarist majority, even though the government had engineered a narrow franchise to eliminate radical elements.

Russian-Tartar War (1571–1572)

PRINCIPAL COMBATANTS: Russia vs. Krim Tartars
PRINCIPAL THEATER(S): Russia, especially Moscow
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: The Krim raided Russia for loot and prisoners to ransom.
OUTCOME: Initial raids were devastating; the Krim were eventually driven out of the country.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Tartars, 40,000; Russian numbers unknown
CASUALTIES: Reportedly, 60,000 Muscovites died and 100,000 captives were taken from the city.
TREATIES: None

While Russian czar Ivan IV (The Terrible; 1530–84) was engaged in one of his numerous wars with the Turks (*see* RUSSO-TURKISH WAR [1568–1569]), repulsing an Ottoman invasion of Astrakhan, the khan of the Krim Tartars (a Crimean Tartar group) staged cavalry raids along the Crimean frontier with Russia, then penetrated as far as Moscow itself on May 24, 1571. Mounting a full-scale assault, the Krim breached the walls of the then lightly defended city and burned most of it, save the Kremlin. It is reported that 60,000 Muscovites died in the rampage and 100,000 prisoners were taken before the attackers were finally repulsed in 1572 by Russian forces returned from the Turkish front. Later in the year, the Krim Tartars closed within 30 miles of Moscow but were checked at the Battle of Molodi, during July 29–August 2. The Krim were soundly defeated at a cost of some 3,000 Russian musketeers. Although the Tartars withdrew from Muscovy (the ancient Russian territory), they remained a menace for many more years.

1998); E. H. Parker, *A Thousand Years of the Tartars* (London: Kegan Paul, 2001).

Russo-Afghan War (1885)

PRINCIPAL COMBATANTS: Russia vs. Afghanistan
PRINCIPAL THEATER(S): Russian-Afghan border region
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: Russia and Afghanistan disputed their frontier; Britain contemplated intervention to prevent Russian possession of Afghan routes into India.
OUTCOME: Combat between Russian and Afghan forces was short, sharp, and one-sided (favoring the Russians); threatened British military intervention never materialized; the border dispute was resolved primarily through negotiation.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: Unknown
TREATIES: Agreement of September 10, 1885

Disputes over the Russian-Afghan border were frequent in the 19th century, and in 1884, Russian troops occupied the border city of Merv; the following year, they crossed the border and ejected Afghan forces from the Penjdeh region. At this point, the British, who were part of an Anglo-Russian boundary commission established to resolve the Russian-Afghan border dispute, prepared to intervene militarily to protect the city of Herat. This was felt to be essential to the defense of British India. The prospect of British intervention prompted the Russians to back down and agree to an interim settlement, whereby Russian forces would hold their present positions pending ultimate resolution of the border.

On March 30, 1885, Russian troops, violating orders to stay in place, attacked the Afghans at Ak-Teppe, dealing them a severe defeat. The British government decided to withhold a military response and instead negotiated an agreement of September 10, 1885, which gave Russia the Penjdeh district in exchange for Afghan possession of the Zulfkar Pass—the vulnerable gateway to India. Within two years, the Anglo-Russian commission settled the entire Russian-Afghan border dispute.

Adamec, *Historical Dictionary of Afghanistan* (Lanham, Md.: Scarecrow Press, 1997); Martin Ewans, *Afghanistan: A Short History of Its People and Politics* (New York: HarperCollins, 2002); Svatopluk Soucek, *History of Inner Asia* (New York: Cambridge University Press, 2000).

Russo-Finnish War (“Winter War”) (1939–1940)

PRINCIPAL COMBATANTS: Soviet Union vs. Finland
PRINCIPAL THEATER(S): Finland

DECLARATION: Russia invaded on November 30, 1939, without a declaration.

MAJOR ISSUES AND OBJECTIVES: The Soviets wanted Finland as a buffer zone against anticipated German aggression.

OUTCOME: After a hard-fought 104-day war, costly to the Soviets, Finland surrendered.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Soviet Union, 710,578; Finland, 350,000

CASUALTIES: Soviet Union, 126,875 killed, 264,908 wounded; Finland, 23,157 killed, 43,557 wounded

TREATIES: March 12, 1940

Despite having concluded with Germany a nonaggression pact on August 23, 1939, the Soviet government feared an eventual Nazi invasion and was anxious to secure its borders for defense and to obtain buffer zones to absorb anticipated German attacks. One such buffer zone was secured by invading and annexing the eastern third of Poland, and also by annexing small Baltic and Balkan states. This left only one area of critical vulnerability: The Russo-Finnish border, from which Leningrad (St. Petersburg) lay only 20 miles distant, well within reach of Finnish artillery. All things being equal, the Russian government was willing to respect Finland's independence, but Moscow planners believed that Germany planned to effect a landing in Finland and use it as a base from which to attack into Russia.

At first, the Soviets sought a military alliance with the Finns. This was rejected by the Finnish government as a violation of its policy of neutrality. Although Finland assured Russia that it would oppose any German landings—or, for that matter, any Russian incursion—Russia demanded what it called certain “concrete guarantees,” which, as the Finns saw it, violated their neutrality. Negotiations between Finland and the USSR became increasingly heated. Then, on November 26, 1939, four Soviet soldiers were killed, and nine were wounded when seven artillery shells were fired near the Russian village of Manila. According to the Russians, the shells had been fired by the Finns; however, the Finnish artillery was actually stationed so far behind the border that it was impossible for Finland to have fired these shots. Clearly, the incident had been Russian in origin—an excuse to go to war with Finland. The so-called “Manila shots” were the justification for Russia's invasion of Finland on November 30, 1939.

The Russians launched an aerial bombardment of Helsinki on the first day of the war, accompanied by an attack along the Mannerheim Line with seven Soviet divisions. Although outgunned and outnumbered, the Finns had the advantage of superior tactics, which used the snow and rugged terrain to advantage. All along the border, the Soviets were repulsed. Then, under Colonel Paavo Tavela (1897–1973), a Finnish counterattack hit the Soviets hard at Tolvajärvi. By December 23, however, the

counterattack had petered out. Still, Soviet losses were heavy: 4,000 killed, 5,000 wounded, compared to only 630 Finns killed and 1,320 wounded.

If Soviet ground forces performed poorly, the Red Air Force produced even more disappointing results. Aircraft flew more than 44,000 sorties and dropped 7,500 tons of ordnance on Finland yet produced no decisive effect.

The Finns refused to remain on the defensive. On the eastern border, the 9th Finnish Division scored a great victory at Suomussalmi during December 11–January 8, destroying two entire Soviet divisions; some 27,500 Red Army soldiers were killed. North of Lake Ladoga, separating Russia and Finland, the Finns attacked at Great Mottis, destroying an entire Soviet division in January 1940.

Yet the Soviets refused to cut their losses. If the Finns had superior commanders and better tactics, the Soviets had almost limitless numbers and Stalin's equally limitless will to commit these numbers to battle, even to slaughter.

Of 2,500 aircraft deployed, the Soviets lost 725; of 3,200 tanks, they lost 1,600. Soviet casualties were staggering—126,875 killed out of 710,578 deployed. Nevertheless, Soviet strength remained far superior, and the Finns knew they could not long hold out. The Finns sued for peace and on March 12, 1940, accepted a Soviet puppet government—although, ostensibly, Finland remained independent. Finland also ceded the strategically valuable Karelian Isthmus and Viipuri. Never happy with the March 12, 1940, treaty, Finland joined the German invasion of the Soviet Union in June 1941.

Trotter, *A Frozen Hell: The Russo-Finnish Winter War of 1939–1940* (Chapel Hill, N.C.: Algonquin Books of Chapel Hill, 2000); Olli Venvilainen, *Finland in the Second World War: Between Germany and Russia* (London: Palgrave Macmillan, 2002).

Russo-Japanese War (1904–1905)

PRINCIPAL COMBATANTS: Russia vs. Japan

PRINCIPAL THEATER(S): Korea, Manchuria, and the North Pacific

DECLARATION: Began with a surprise Japanese attack on February 8, 1904, after which Russia declared war.

MAJOR ISSUES AND OBJECTIVES: When imperial Russia refused to accept the demands of a Japan grown equally imperial in the previous half-century, the Japanese launched a surprise attack on the Russian fleet, intending to take Manchuria and Korea with a war of expansion.

OUTCOME: Russia was defeated, Japan became a world power, and a naval arms race began that ultimately contributed to World War I.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Russia, 1,365,000; Japan, 1,200,000

Russo-Finnish War, 1939-1940

CASUALTIES: Russia, 71,453 killed, 141,800 wounded; Japan, 80,378 killed, 153,673 wounded

TREATIES: Treaty of Portsmouth, September 5, 1905.

On February 8, 1904, the Japanese fleet laid siege to a Russian naval squadron anchored at Russian-controlled Port Arthur on the coast of the Liaodong (Liaotung) Peninsula in southern Manchuria. Japan's surprise attack on Russia launched one of the largest armed conflicts the world had ever witnessed, a war that saw the first large-scale use of automatic weapons and in which for the first time in modern history an Asian country defeated a European power.

For half a century Japan had watched with apprehension the Russian Empire expand into eastern Asia, threatening Japan's own imperial designs. Since Russia had begun the construction of the Trans-Siberian Railroad in 1891, it had looked longingly toward China's huge Manchurian province. After the decadent Manchu dynasty lost a war with Japan in 1894, China had entered into an anti-Japanese alliance with Russia, granting the czar rights to extend the railroad across Manchuria to Vladivostok and giving Russia in the process control over an important strip of Chinese territory. In 1898, Russia pressured the Chinese into leasing the strategically important Port Arthur (today called Lu-shun), and in 1903 Czar Nicholas II (1868–1918) reneged on his agreement to withdraw his troops from Manchuria, making the military occupation of the Liao-tung Peninsula permanent. With Russia's navy stationed at Port Arthur and its army occupying the peninsula, it seemed to the Japanese only a matter of time before the czar would stake a claim to Korea, which lay just to the east of Manchuria like a dagger pointed at the heart of Japan.

Since defeating China, Japan had been building up its army, and by the turn of the century it enjoyed a marked superiority over Russia in the number of ground troops in the Far East. All that held the Japanese in check was Great Britain, which ruled the sea with its all-powerful navy. However, Britain abandoned its policy of "splendid isolation"—namely, its refusal to enter into official alliances with any national power—in 1902 and signed a treaty with Japan in order to stop the headlong expansionism of Nicholas II. Confident of Britain's neutrality, Japanese military leaders began planning for the war that world leaders, certainly not unaware of the constantly escalating hostility between Russia and Japan, had long expected.

Late in 1903, Russia and Japan undertook talks, with the Japanese proposing that each side should recognize the other's special interests and economic rights in both Manchuria and Korea. But the Russians responded in a desultory fashion, and the Japanese ambassador broke off the negotiations in a fit of pique on February 6, 1904. Three days later Japan sank two Russian warships at Chemulpo (Inchon, Korea) and torpedoed the main

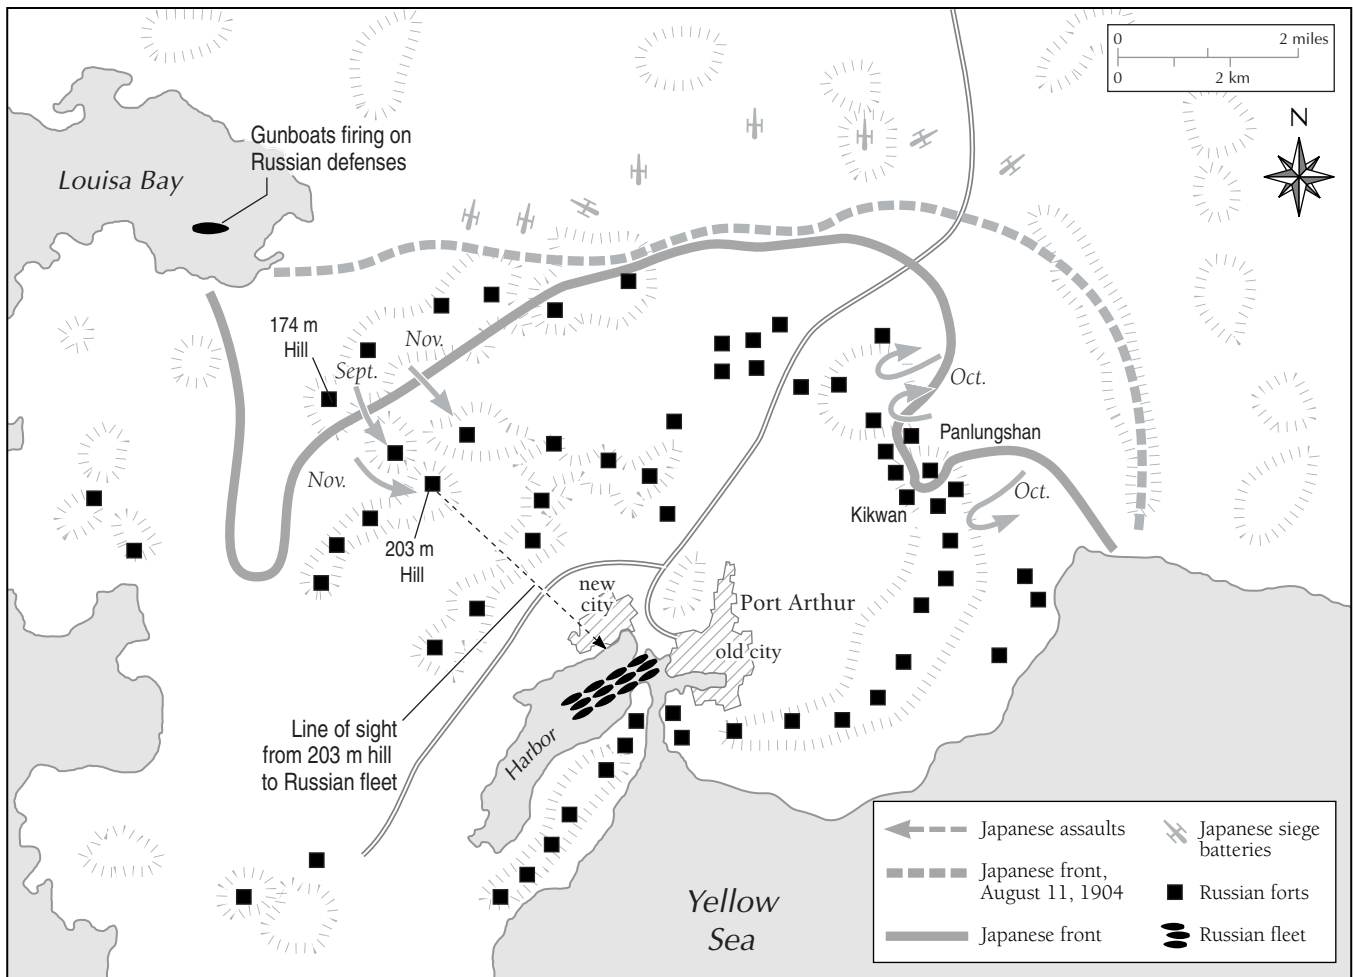

Russian fleet at Port Arthur. When the attack came, Japan was a small country little known in the West, and Russia was one of Europe's five Great Powers. Most of the world expected Russia to make short work of the island kingdom. No country, certainly not Japan's new-found ally Britain, much less Russia itself, imagined the Japanese could so easily debilitate the czar's Pacific fleet. However, there was little the czar could do, since the rest of the Russian navy in the area remained icebound at Vladivostok.

More shocking was the speed with which Japan's army overran Korea and crossed the Yalu River into Manchuria. Having achieved superiority at sea, Japan was able to send thousands of troops into both Korea and Manchuria. By May 1 vast areas in those countries belonged to the Japanese, and by September the Russians had been driven north and west to Mukden (Shenyang), and Port Arthur itself was surrounded. Russian ground forces fought back in two bloody but indecisive battles before retreating farther north. After a long, grueling siege, Port Arthur fell on January 5, 1905.

Nicholas, his czarina, and imperial court—all under the influence of the half-crazed monk Grigory Yefimovich Rasputin (c. 1872–1916)—was slow to react to Japanese advances. Yet overmatched and outgunned, Nicholas refused to back down, vaguely trusting in God rather than sound military action to defend the honor and glory of Russia. Before the fall of Port Arthur, Nicholas dispatched his large Baltic Fleet to the Pacific. On its way to Vladivostok, it suffered the same fate as the Pacific fleet the year before. Caught in the straits off the Japanese islands of Tsushima, the Russian navy fought the Battle of Tsushima, which lasted two days and resulted in the complete destruction of the Russian fleet at the cost of three Japanese torpedo boats. Meanwhile, during the same month in Manchuria, the Japanese took the offensive again, winning the Battle of Mukden.

Although many Japanese troops died, within little more than a year, Japan brought the mighty Russian Empire to its knees. The consequences of Japan's great victory were swift and far-reaching. Theodore Roosevelt (1858–1919), a U.S. president who scarcely concealed his own imperial ambitions, offered to mediate a peace. A conference was held at Portsmouth, New Hampshire, between August 9 and September 5, 1905, where a peace treaty was signed on September 5, 1905. Japan's conquest of Korea was recognized. It gained control of the Liao-tung Peninsula and Port Arthur—and the South Manchurian Railroad that led to Port Arthur. A humiliated Russia meekly agreed to evacuate southern Manchuria.

Within two months of signing the treaty, Nicholas II was faced with a revolution. Ragged Russian workers, starving peasants, and dispirited soldiers rose up en masse to plead for succor from their "Little Father," only to have their pleas and bodies crushed under the hooves of

Siege of Port Arthur, June 1, 1904–January 2, 1905

Cossack horses. Though Nicholas suppressed the RUSSIAN REVOLUTION (1905), he did so only after buying off middle- and upper-class reformers by issuing the October Manifesto, a kind of constitutional charter.

Russia never recovered from the war and the revolution. As for Japan, its victory, costly though it was, proved a turning point for Asia, which awoke to the fact that Europe was not invincible.

Russo-Lithuanian War See RUSSO-POLISH WAR (1499–1503).

Russo-Persian War (1722–1723)

PRINCIPAL COMBATANTS: Russia vs. Persia (with the peripheral involvement of the Ottoman Empire)

PRINCIPAL THEATER(S): Caspian coastal region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Russia sought to counter Ottoman expansion by occupying as much of Persia as possible.

OUTCOME: Russia acquired significant control of the Caspian Sea, but nearly provoked a war with Turkey.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of St. Petersburg, September 12, 1723

The first quarter of the 18th century saw the almost fatal collapse of Persia, which was invaded by Afghan armies (PERSIAN-AFGHAN WAR [1726–38]) and by the Ottomans (TURKO-PERSIAN WAR [1730–36]), as well as the Russians. To counter Ottoman expansion toward the Caspian Sea,

Czar Peter I (the Great; 1672–1725) decided to move against weak, Ottoman-dominated Persia, and he overran and took Derbent in 1722. In 1723, he captured Baku and Resht. The Ottomans responded by invading Georgia (then part of Persia) and taking its capital, Tiflis. This counterthrust moved Peter to conclude the Treaty of St. Petersburg with Persia on September 12, 1723. By this treaty, Russia annexed the Caspian coast between Derbent and Resht, whereas the shah received in return the services of Russian troops to keep order in his unstable kingdom.

The treaty provoked protest from the Ottoman Empire, which, backed by Britain, challenged Russia's acquisition of control of the Caspian Sea. War now threatened to break out directly between Russia and the Ottomans but was averted by the Treaty of Constantinople in 1724, which ceded western Persia to Turkey and northern Persia to Russia, including the Caspian territory gained in the 1722–23 war.

Russo-Persian War (1804–1813)

PRINCIPAL COMBATANTS: Russia vs. Persia (and rebel forces in Georgia and Karabakh)

PRINCIPAL THEATER(S): Georgia and Karabakh in the Caucasus

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Persia sought to aid rebels in these regions to prevent Russian annexation.

OUTCOME: After much inconclusive combat, the decisive Battle of Aslanduz resulted in an overwhelming Persian defeat and the capitulation of Persian and rebel forces.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: At the Battle of Aslanduz (October 13, 1812), 10,000 Persians were killed or wounded; two months later, 4,000 Persians died in the fall of Lenkoran.

TREATIES: Treaty of Gulistan, 1813

In 1800, Russia annexed Georgia and Karabakh, regions in the Caucasus that had been controlled by Persia. Resistance was immediate, and rebels within these regions secured Persian aid. Thus, when Russian forces laid siege against rebel-held Erivan in 1804, they were forced into retreat by the arrival of Persian troops commanded by Shah Fath Ali (c. 1762–1835) and Crown Prince Abbas Mirza (1789–1833). The pair had defeated the Russians in a three-day battle at Echmizdin and thus, unexpectedly, broke through to relieve Erivan.

Following the end of the Erivan siege was a long period of desultory and ultimately inconclusive war, which the Russian czar, Alexander I (1777–1825), sought to end by ordering a massive surprise attack against a Persian army led by Abbas Mirza. The Battle of Aslanduz was a defeat so stunning that the shah of Persia formally ceded Georgia, Karabakh, and additional Caucasian territories to Russia in the 1813 Treaty of Gulistan. The peace did not prove permanent, as war erupted again 12 years later as the RUSSO-PERSIAN WAR of 1825–1828.

Russo-Persian War (1825–1828)

PRINCIPAL COMBATANTS: Persia vs. Russia

PRINCIPAL THEATER(S): Georgia and Persia

DECLARATION: Persia against Russia, 1825

MAJOR ISSUES AND OBJECTIVES: Persia denounced the Treaty of Gulistan and attempted to retake Georgia, which it had ceded to Russia.

OUTCOME: Persia suffered total defeat and was forced to make crippling and humiliating concessions to Russia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Persia, 30,000; Russia, 15,000

CASUALTIES: Persian losses are unknown; Russian battle deaths reached 5,000.

TREATIES: Treaty of Turkomanchi, 1828

The death of Nadir Shah (1688–1747) brought a long decline in the Persian Empire, which became most acute early in the 19th century. Dispute over certain aspects of the Treaty of Gulistan, which ended the RUSSO-PERSIAN WAR (1804–1813) and by which Persia ceded Georgia to Russia, Karabakh, and other Caucasian regions, prompted the shah, Fath Ali (1771–1834), to denounce the treaty, especially in the face of Russia's formal annexation of the territory. The treaty abrogated, Persia launched an attack in Georgia with the aim of retaking it, but defeat at the Battle of Ganja (September 26, 1826) ended the offensive ignominiously. Modern Russian artillery created panic throughout the Persian cavalry, the Persian line broke, and the Persians fled.

Taking advantage of the rout at Ganja, Russian forces pursued the retreating Persians into Persia. General Ivan Paskevich (1782–1856) led his troops against Erivan and Tabriz, both of which fell to him in October 1827. To make matters worse for the Persians, the onset of winter caused the army to break up, leaving the Persian capital

city of Tehran vulnerable. Paskevich's army took Tehran and captured the principal Persian artillery arsenal.

With its capital and a major means of its defense in Russian hands, the Persian government capitulated. The shah concluded the Treaty of Turkomanchi, which moved the Persian-Russian border back to the Aras River, conceded to Russia the exclusive right to station warships on the Caspian Sea, levied an indemnity against Persia, and gave to Russia generous commercial and territorial privileges. The defeat put Persia in a much worse situation than it had found itself at the conclusion of the 1804–13 war, and its days as a formidable military power were over. However, the cost to Russia was also great: 5,000 of the 15,000-man army in the region were lost. And there was worse. Although the shah's government had been defeated, Shamil tribesmen waged a chronic guerrilla war in the Caucasus, which proved a severe drain on czarist forces in the region for years to come.

Barrett, *At the Edge of Empire: The Terek Cossacks and the North Caucasus Frontier, 1700–1860* (Boulder, Colo.: Westview, 1999); Ariel Cohen, *Russian Imperialism: Development and Crisis* (Westport, Conn.: Greenwood, 1996); Michael Khodarkovsky, *Russia's Steppe Frontier: The Making of a Colonial Empire, 1500–1800* (Bloomington: Indiana University Press, 2001).

Russo-Persian War (1911)

PRINCIPAL COMBATANTS: Russia vs. Persia

PRINCIPAL THEATER(S): Northern Persia (Iran)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Claiming that they were looking out for Russian interests following the Persian Revolution of 1906–09, Russian forces occupied a portion of Persia and backed an abortive counterrevolution. After clashing with revolutionary Persia's American treasurer, the Russians threatened full-scale invasion, unless the American was removed.

OUTCOME: The revolutionary government was overthrown by coup d'état, and the new Persian government acceded to Russian demands for the removal of the American official. The war ended.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

This brief conflict was touched off by William M. Schuster (1877–1960), an American hired as the treasurer-general of Persia. His mission was to sort out the nation's finances, which had been left in chaos by the PERSIAN REVOLUTION (1906–1909). In the aftermath of the revolution, Russia sent troops to occupy Kazvin, a city in

northern Persia, claiming that the military presence was necessary to protect Russian interests in the city. Schuster protested and clashed with the Russians, pointing out that the Russian occupation violated an Anglo-Russian accord of 1907. Furthermore, it was clear to Schuster that the Russians decided to back an attempt by the former shah of Persia, Muhammad Ali (1872–1925), to carry out a counterrevolution and reclaim control of the country. Although the czarist government had previously opposed Ali, he was preferable to an upstart republic. The counterrevolution failed, but the Russians refused to withdraw their troops and twice presented the new Persian national assembly with demands for Schuster's removal. The assembly rejected the demands in November 1911, and Russian troops committed various atrocities in Tabriz, northern Persia. They next invaded and conquered Azerbaijan, then marched toward the Persian capital, Tehran.

At this point, exploiting the pressure exerted by the Russians, the regency government (which ruled during the minority of Ahmed Shah [1898–1930]) conspired with the cabinet to carry out a coup d'état on December 24, 1911. Once the regents had seized power, they promptly dissolved the revolutionary assembly and established a governing directory. Among the first acts of this body was to accede to the Russian demand for Schuster's withdrawal. With that, the Russians withdrew to Kazvin, and the war ended, but Russia continued to dominate Persian government until the fall of the Romanov dynasty in the BOLSHEVIK REVOLUTION of 1917.

Russo-Polish War (1019–1025)

PRINCIPAL COMBATANTS: Boleslav I, duke of Poland, vs. Sviatopolk, deposed Russian ruler of Kiev

PRINCIPAL THEATER(S): Region near Kiev

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Boleslav enlisted Polish aid in defeating his brother and rival, Yaroslav, grand prince of Novgorod; once this was accomplished, however, Sviatopolk planned to attack his Polish allies.

OUTCOME: The Poles preempted Sviatopolk's attack on them, and Boleslav I defeated Sviatopolk and his army, making large territorial gains in the process.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After Yaroslav (d. 1054), grand prince of Novgorod, defeated his brother, Prince Sviatopolk (d. 1021) of Kiev, Sviatopolk sought refuge in the court of Boleslav I (d. 1025), his father-in-law and the ruling duke of Poland. While in Boleslav's court, Sviatopolk roused Boleslav and other Poles to war against Yaroslav with the object of regaining territories earlier lost to Novgorod—and, of course, with the additional object of restoring him to the throne in Kiev.

Boleslav led a Polish army into Russia, engaging Yaroslav in 1020 at the Battle of Bug. After a protracted fight, Boleslav prevailed, advanced into Kiev, restored Sviatopolk to the throne, and occupied the city. No sooner was this accomplished, however, than Sviatopolk bristled under Polish domination. He decided to betray his father-in-law and laid plans to massacre the Polish army of occupation in Kiev. Unfortunately for Sviatopolk, his plan was discovered, which incited the Poles to riot. The Poles looted Kiev, then left the city, with Sviatopolk and his forces in pursuit.

At the Bug River, Boleslav's army suddenly wheeled about and attacked its pursuer. Sviatopolk's army was defeated and retreated to Kiev. Realizing that the Russian army was weak, the Poles laid siege to Kiev, which soon surrendered. Thus Boleslav amassed all territory bounded by the Elbe and the Bug rivers, and from the Baltic Sea to the Danube. Unwilling to rely on military conquest alone, Boleslav solidified his authority by securing papal sanction for his coronation by the archbishop of Ghiezno on December 25, 1024.

Russo-Polish War (1499–1503)

PRINCIPAL COMBATANTS: Russia vs. Poland-Lithuania

PRINCIPAL THEATER(S): Poland and Lithuania

DECLARATION: Ivan III (the Great) declared war on Alexander I.

MAJOR ISSUES AND OBJECTIVES: Ivan III of Russia acted punitively against his son-in-law, Alexander I, king of Poland-Lithuania, for having violated his marriage contract.

OUTCOME: A treaty gave Ivan III all territory he had already conquered and acknowledged him as czar of all Russia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of 1503, conceding territory and authority to Ivan III

Ivan III (the Great; 1440–1505), grand duke of Moscow, declared war on his son-in-law, Alexander I (d. 1506), king of Poland-Lithuania, over a dispute in Alexander's marriage contract with Ivan. The Russians invaded Poland, causing significant destruction and engaging Lithuanian troops in battle on July 14, 1500. Although the Russians emerged victorious in this battle, they were not able to wrest Smolensk from Lithuanian control. While the struggle for Smolensk was under way, the Livonian Knights—elite independent Polish troops—intervened on behalf of the Lithuanian forces. The Knights defeated the Russians at the Battle of Siritza, then laid siege against Pskov in 1502. However, they failed to take the city, and the resulting inconclusive combat soon exhausted all sides, prompting a treaty in 1503. In the end, Ivan III emerged the winner, retaining all territory he had conquered and earning acknowledgment as czar of all the Russias.

Russo-Polish War (1506–1508)

PRINCIPAL COMBATANTS: Russia vs. Poland and Lithuania

PRINCIPAL THEATER(S): Border region between Russia and Lithuania

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Russia sought to dominate Poland-Lithuania.

OUTCOME: The opponents never engaged in full-scale war; by the time both sides were ready to do so, a truce had been concluded, one mainly beneficial to Russia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Light

TREATIES: Truce of 1508

This was an escalation of a dispute between Sigismund I (1467–1548), duke of Lithuania and king of Poland, and Basil III (1479–1533), grand duke of Moscow. Basil III controlled the services of a number of lesser foreign princes. He ordered them to conduct a major campaign against Lithuania, sparing nothing. As these commanders were on the verge of embarking and as Sigismund I prepared to mount a large-scale defense, some desultory combat took place; however, preparations consumed so much time that by 1508, when the armies were ready to clash, a truce was concluded. By the terms of this agreement, Russia retained all conquered territories. The truce did not resolve the tension between Russia, the Poles, and the Lithuanians, and warfare would resume in the RUSSO-POLISH WAR (1512–1521).

Further reading: Samuel Fiszman, ed., *Polish Renaissance in Its European Context* (Bloomington: Indiana University Press, 1989); Janet Martin, *Medieval Russia, 980–1584* (Cambridge, U.K.: Cambridge University Press, 1995); Saulius Suziedelis, *Historical Dictionary of Lithuania* (Lanham, Md.: Scarecrow Press, 1997).

Russo-Polish War (1512–1521)

PRINCIPAL COMBATANTS: Russia vs. Poland-Lithuania (and Crimean Tatar allies)

PRINCIPAL THEATER(S): Smolensk, Moscow, Russian-Tartar frontier areas

DECLARATION: Grand Duke Basil III of Moscow against Sigismund I of Poland-Lithuania, 1512

MAJOR ISSUES AND OBJECTIVES: Basil renewed war against Poland-Lithuania when he discovered a secret agreement between that kingdom and the Tartars.

OUTCOME: Russia gained control of contested Smolensk.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: 30,000 Russians lost at the Battle of Orsha

TREATIES: Treaty in 1517 and definitive armistice in 1521

About 1512, Poland concluded a treaty with the Tartars (Crimean Tatars), who agreed to attack their frontier with Muscovy-Byelorussia. The grand duke of Moscow, Basil III (1479–1533), discovered the agreement and decided to reopen the war between his country and Poland-Lithuania that had been fought periodically over more than a decade (see RUSSO-POLISH WAR [1499–1503] and RUSSO-POLISH WAR [1506–1508]).

Basil began with sieges against Smolensk, which was in Lithuanian hands. Two sieges were mounted in December 1512, both failed to breach the city walls. Basil backed away and conducted raids elsewhere, accumulating other Lithuanian-held territory. Two years after the first sieges, he returned to the gates of Smolensk, mounted a new assault, and took the city in June 1514.

Elsewhere, the Russians did not fare so well. At the Battle of Orsha, some 30,000 Russians fell, and it became apparent to Sigismund I (1467–1548) of Poland-Lithuania that the Russian forces were thinly spread and were vulnerable. In 1517, he persuaded his Tartar allies to attack the Russians at Tula, south of Moscow. To Sigismund's surprise and consternation, the hard-pressed Russians managed to repulse the attack, and the Tartars soon withdrew.

With both sides weary of war, negotiations were commenced. But by this time, border warfare had become virtually reflexive, and even as representatives of Basil III and Sigismund I negotiated, the Tartars continued to clash with the Russians at the Crimean frontier. This warfare at

last ceased in 1521, when Basil III obtained a firm armistice that brought Smolensk under his control.

H. Parker, *A Thousand Years of the Tartars* (London: Kegan Paul, 2001); Saulius Suziedelis, *Historical Dictionary of Lithuania* (Lanham, Md.: Scarecrow Press, 1997).

Russo-Polish War (1534–1537)

PRINCIPAL COMBATANTS: Russia vs. Poland-Lithuania

PRINCIPAL THEATER(S): Russian-Polish frontier regions

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: King Sigismund I of Poland-Lithuania hoped to make territorial gains by exploiting the Russian chaos following the death of Grand Duke Basil III

OUTCOME: The Polish-Lithuanian offensive failed, and the war ended, by a truce, with Russia still in control of contested Smolensk.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Truce concluded in 1537; no larger treaty

The death of Basil III (1479–1533), grand duke of Moscow, put Muscovy in the hands of his widow as regent to his son, Ivan IV (1530–84), who would later rule as “Ivan the Terrible.” During his minority (1533–47), Ivan was well schooled in the brutality of Russian politics, living through the intrigue and murder that followed on the death of his father. Rightly fearing danger and treachery from all quarters, especially from her own family, Ivan's mother, Yelena Glinkskaya (d. 1538), ordered mass imprisonments. When Basil's brother was intercepted on the way to Sigismund I (1467–1548) of Poland-Lithuania, traditional foe of Muscovy (see RUSSO-POLISH WAR [1506–1508] and RUSSO-POLISH WAR [1512–1521]), she had him charged with treason. The seizure of Basil's brother prompted Sigismund to invade Russia and to incite rebellion in frontier regions. Although Sigismund mustered a sizable army, and even in the face of chaos in Muscovy, Polish and Lithuanian forces were forced into retreat. As was often the case, Russian forces prevailed by dint of their size. Smolensk, held by Russia only since the Russo-Polish War of 1512–1521, was retained by Russia, and the inconclusive war was ended with a truce.

Further reading: Samuel Fiszman, ed., *Polish Renaissance in Its European Context* (Bloomington: Indiana University Press, 1989); Janet Martin, *Medieval Russia,*

980–1584 (Cambridge, U.K.: Cambridge University Press, 1995); E. H. Parker, *A Thousand Years of the Tartars* (London: Kegan Paul, 2001); Saulius Suziedelis, *Historical Dictionary of Lithuania* (Lanham, Md.: Scarecrow Press, 1997).

Russo-Polish War (1609–1618)

PRINCIPAL COMBATANTS: Russia vs. Poland

PRINCIPAL THEATER(S): Russian-Polish frontier and Moscow and environs

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Exploiting Russian weakness during the “time of troubles,” Sigismund III of Poland attempted to seize the Russian throne.

OUTCOME: The Poles failed to achieve their principal objective, seizure of the Russian throne, but they did obtain control of Smolensk.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: The largest single invasion force was 30,000 Poles; at Smolensk, 70,000 Russian civilians joined 12,000 soldiers in the defense.

CASUALTIES: Russia lost 15,000 killed in the attempt to relieve Smolensk.

TREATIES: 15-year armistice signed on December 1, 1618

The beginning of the 17th century brought a long spasm of violent instability to Russia known as the “time of troubles” (see TIME OF TROUBLES, RUSSIA’S), Sigismund III (1566–1632) decided to exploit the time of troubles to usurp the throne of Muscovy for himself, like his grandfather, Sigismund I (1467–1548), king of Poland-Lithuania, had attempted to do during the RUSSO-POLISH WAR (1512–1521), when the death of Grand Duke Basil III left Russia similarly destabilized.

In 1609, Sigismund III led a large army in an invasion of Russia and laid siege to Smolensk. While he did this, he called upon all Poles living in Russia to rise up. Basil IV Shuiski (d. 1612), a Russian warlord, led an army of 30,000 to the relief of Smolensk but was ambushed by a much smaller Polish force under Stanislas Zolkiewski (d. 1620). The Russians were defeated at the Battle of Klushino in September 1610. Basil IV Shuiski fled the field and made for Moscow, where, word of his defeat having preceded him, he was immediately deposed. With the city leaderless, it readily fell to Polish forces on October 8, 1610. (Smolensk would hold out longer, but yielded early the following year.)

Muscovites offered the Russian throne to Ladislav (1595–1648), son of Sigismund III, pursuant to an earlier treaty (Treaty of Smolensk). Surprisingly, Sigismund balked at this; he wanted himself and not his son on the Russian throne. Instead of accepting the Russian offer, he

used German troops, in addition to his own Polish forces, to storm the Kremlin and establish his government. This incited a popular uprising among Muscovites and the peasantry of the surrounding area. The Kremlin was attacked; Sigismund responded by burning much of Moscow. This did not lift the siege of the Kremlin. When Sigismund III (who, fortunately for himself, had not yet traveled to the Kremlin in person) sent a force to relieve the Kremlin, Russian citizens intercepted and defeated it. The Kremlin fell to the Russians.

In 1613, a measure of stability was brought to Russia by the election of Michael Romanov (1596–1645) as czar. Defeated and demoralized Polish troops retreated to the frontier, from where they continued to wage sporadic and desultory war. In 1617, Ladislav rallied his forces for a new assault on Moscow. When the attack was defeated, Ladislav agreed to a 15-year armistice on December 1, 1618. At great cost, the Poles had failed to seize the Russian throne but had gained control of long-contested Smolensk. As for Russia, it saw the commencement of the Romanov dynasty, which would endure until the FEBRUARY (MARCH) REVOLUTION and the BOLSHEVIK REVOLUTION, both of 1917.

Platanov, *The Time of Troubles: A Historical Study of the Internal Crisis and Social Struggle in Sixteenth- and Seventeenth-Century Muscovy* (Lawrence: University Press of Kansas, 1970); Saulius Suziedelis, *Historical Dictionary of Lithuania* (Lanham, Md.: Scarecrow Press, 1997).

Russo-Polish War (1632–1634)

PRINCIPAL COMBATANTS: Russia vs. Poland

PRINCIPAL THEATER(S): Smolensk and environs

DECLARATION: Russia against Poland, 1632

MAJOR ISSUES AND OBJECTIVES: Russian czar Michael Romanov wanted to reclaim sovereignty over Smolensk.

OUTCOME: The Russians were defeated, renounced Smolensk and associated territories but received in return a pledge from Polish king Ladislav IV to make no future claim on the Russian throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Russia, 35,000; Poland, 40,000

CASUALTIES: Russia lost 27,000 men, a casualty rate of 77 percent.

TREATIES: Treaty of Polianovka, 1634

The RUSSO-POLISH WAR (1609–1618) ended with a 15-year armistice and the delivery of Smolensk into Polish

hands. With the approaching expiration of the 15-year period, Russian czar Michael Romanov (1596–1645) laid plans for a campaign to recover Smolensk. Although the armistice was not scheduled to expire until 1633, the death of Poland's king, Sigismund III (1566–1632), in 1632 prompted Michael to take action sooner. Arguing that the armistice was valid only during the reigns of both signatories, in September 1632 he ordered Russian troops to lay siege to the walled city of Smolensk. The Poles, who had relied on the armistice, garrisoned Smolensk lightly with only 3,000 men and were therefore overwhelmingly outnumbered. Nevertheless, they defended the city in the expectation of the arrival of a relief force under Poland's Ladislas IV (1595–1648). However, when food and water ran out, the defenders gave up the city after a three-month siege.

In the meantime Ladislas's army engaged and defeated a Russian force under Boris Shein (fl. 17th century), which they pursued to Smolensk. When the Russian took refuge inside the captured city, it was now the Poles who laid siege. After six months, the Russian army surrendered, in February 1634. By that time, only 8,000 of Shein's 35,000 men were still alive.

By the Treaty of Polianovka, Czar Michael Romanov formally ceded Smolensk to Poland, along with the surrounding province and a large swath of the north-eastern Baltic coast. On his part, Ladislas willingly renounced all future claims to the Russian throne and acknowledged Michael Romanov as rightful czar. As for Boris Shein, his heroism was poorly rewarded. Back in Moscow, he was seized by the czar, who saw in him the perfect scapegoat. Boris was tried and executed for treason.

Russo-Polish War (1654–1656)

PRINCIPAL COMBATANTS: Russia vs. Poland (with Tartar aid at the end of 1655)

PRINCIPAL THEATER(S): Ukraine, Lithuania, Poland

DECLARATION: Russia on Poland, 1654

MAJOR ISSUES AND OBJECTIVES: The war began as Cossack retaliation for losses suffered in Chmielnicki's Revolt, 1648–54, but expanded into a Russian attempt to regain Ukraine and make territorial gains in Lithuania.

OUTCOME: Russia made gains in Lithuania before Russia and Poland made an alliance against their common enemy, Sweden.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Russia, more than 100,000; Tartars, 150,000, Poland, numbers far inferior to Russian forces

CASUALTIES: At Vilna (July 28, 1655), 20,000 Lithuanians and Poles died.

TREATIES: Treaty of Nimieza, 1656

After suffering defeat in the Ukraine at the hands of Poland during CHMIELNICKI'S REVOLT, the Cossack leader Bogdan Chmielnicki (c. 1593–1657) allied his Cossack forces with regular Russian troops to attack Polish occupiers of Kiev and Smolensk. This initiated the Russo-Polish War of 1654–1656.

With the Poles under attack in Kiev and Smolensk, Czar Alexis (1629–76) personally led an army of 100,000 against Polish forces in Lithuania. Overwhelming the Poles with superior numbers, Alexis quickly occupied much of Lithuania. In the meantime, Poland was also attacked by Sweden in 1655 (see NORTHERN WAR, FIRST), and its forces thus spread even more thinly. Alexis took advantage of this to proclaim himself grand duke of Lithuania, while combined Russian-Cossack armies ranged across the Ukraine, retaking most of the territory that had been yielded to Poland. From the Ukrainian frontier region, these forces also launched a succession of raids into Poland itself; however, in November 1655, a force of 150,000 Tartars under Mahmet Girei (fl. 1650) switched allegiance from Russia to the Poles and attacked Chmielnicki, driving his forces back. Thus the Russians failed to complete the conquest of Ukraine.

Fearing a full-scale Russian invasion, Poland's John II Casimir (1609–72) fled to Silesia, then negotiated an alliance with Holy Roman Emperor Leopold I (1640–1705). In the meantime, however, Poland was in the hands of invading Russians and Swedes. The presence of the Swedes made the czar eager to conclude a treaty with John II Casimir. The Russians withdrew from the territories of John II Casimir, and were free to mount a concentrated attack on Swedish forces in Swedish Livonia, part of modern Poland, at the time occupied by Sweden.

The war between Russia and Poland was ended by the Treaty of Nimieza, of 1656, which constituted an alliance against the common Russian-Polish enemy, Sweden.

See also RUSSO-SWEDISH WAR (1656–1658).

Russo-Polish War (1658–1667)

PRINCIPAL COMBATANTS: Russia vs. Poland (with Ukrainian and Tartar aid)

PRINCIPAL THEATER(S): Ukraine and Lithuania

DECLARATION: Poland on Russia, 1658

MAJOR ISSUES AND OBJECTIVES: Poland aimed to end Russia's occupation of Lithuania.

OUTCOME: Despite a series of strong Polish victories, internal strife within Poland put Russia in an advantageous negotiating position; Smolensk and Kiev reverted to Russia for a specified period of two years, the Ukraine was divided between Russia and Poland, and the Cossacks were put under the joint control of Russia and Poland.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Russia, 150,000; Polish-Ukrainian forces, 40,000

CASUALTIES: At Konotop (1659), Russia lost 30,000 men.

TREATIES: Treaty of Andrusovo, 1667

The RUSSO-POLISH WAR (1654–1656) ended with a Russian-Polish alliance against Sweden. As soon as that three-year pact expired, however, John II Casimir (1609–72) of Poland resumed warfare against the Russians, who had invaded and occupied Lithuania in the earlier war. Initially, the Polish forces were beaten at the Battle of Vilna and the Battle of Kaunas. In Ukraine, however, a Russian army of 150,000 was driven off with the loss of 30,000 killed. The Poles also regrouped and rallied, mounting a fierce counterattack that drove the Russian army out of Lithuania. Some 60,000 Russians were defeated at Lvov in 1660 by 40,000 Poles and Tartars. Sustaining momentum, the Polish forces went on to invade the regions surrounding Vitebsk and Polotsk later that year.

The Russian loss of Lithuania was bad enough, but the defeat and rout of a better-equipped and larger Russian army by an inferior force of Poles—allied with Tartars—under George Lubomirski (1616–67) was devastating. The Russian forces limped away from the Battle of Lubar in 1660, and an associated Cossack army was similarly defeated a short time afterward.

After the crushing defeat at the Battle of Lubar, the Russians were unable or unwilling to mount any major counteroffensive. Warfare degenerated into sporadic border clashes until the Poles organized an aggressive drive to victory at the Battle of Lublin in 1664. This set the stage for what promised to be peace negotiations favorable to the Poles; however, internal strife during LUBOMIRSKI'S REBELLION (1665–67) caused chaos throughout the Polish leadership. Despite its heavy losses, Russia now found itself in an advantageous negotiating position, and the Treaty of Andrusovo of 1667 obligated Poland to cede Smolensk and Kiev to Russia for a period of two years. The Ukraine was divided between Poland and Russia along the Dnieper River, and the Cossacks were put under the combined control of the Russians and Poles. (Although control of Kiev was to revert to Poland after two years, the Poles in fact never regained control of the Ukrainian city.)

versity Press, 1989); Michael F. Hamm, *Kiev* (Princeton, N.J.: Princeton University Press, 1993).

Russo-Polish War (1919–1920)

PRINCIPAL COMBATANTS: Bolshevik Russia vs. Poland

PRINCIPAL THEATER(S): Poland and Ukraine

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Bolshevik government sought control over Polish territory.

OUTCOME: The seesaw course of the war ended with a major Polish triumph and the imposition of an eastern border for Poland within the Ukraine.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Russia, 757,000; Poland, 737,767

CASUALTIES: At the turning-point Battle of Warsaw (August 25, 1920), Russia lost 100,000 killed, wounded, or captured; Poland lost 4,362 killed, 21,751 wounded.

TREATIES: Treaty of Riga, March 18, 1921

Bolshevik Russian forces took advantage of the withdrawal of German forces from Poland following the armistice that ended WORLD WAR I to invade Poland. By February 1919, elements of the Red Army had crossed the Bug River and were engaged by Polish forces led by Jozef Pilsudski (1867–1935), which drove the Bolsheviks back across the Polish frontier and into the Ukraine as far as the Berezina River.

In the aftermath of World War I, the Supreme Council of the Allies assigned an eastern Polish border that was within Russia, but the Bolsheviks sought to establish the border farther west, along the actual war front. As for Pilsudski, he sought an even more eastern border, that of 1772, which encompassed the entire Ukraine. Pilsudski allied Polish forces with anti-Bolshevik Ukrainians led by Simon Petlyura (1879–1926) and advanced against Kiev. The city was besieged on April 25, 1920, and fell to Pilsudski on May 7. This incited a determined Bolshevik counterthrust, which pushed the Polish forces out of Kiev and also out of Vilna, Lithuania. Under the command of Mikhail Tukhachevskiy (1893–1937), the Red Army pursued the retreating Poles all the way to the outskirts of the Polish capital, Warsaw. Aided by a French force under Maxime Weygand (1867–1965), the Poles took a stand outside of their capital and defeated the Red Army after a costly 10-day battle. One hundred thousand Russians were killed, wounded, or captured.

The repulse from Warsaw severely depleted the Bolshevik invading forces, and the Poles took advantage of this to pursue the retreating Russians. On August 31, 1920, Poland unleashed Europe's last full-scale cavalry offensive, defeating Russian forces at Zamosa. On September 12, the Poles advanced along the Pripet Marshes,

and on September 26 defeated the Russians at the Niemen River. A battle on the Shchara River followed, the next day, in which 50,000 Russians were taken prisoner. The Bolsheviks sued for peace, and an armistice was imposed on October 12. This was followed by the Treaty of Riga, concluded on March 18, 1921, by which the Soviet government was compelled to accept Poland's territorial claims along the lines that had been specified by Pilsudski.

Russo-Swedish War (1240–1242)

PRINCIPAL COMBATANTS: Swedish, Danish, and Lithuanian forces vs. Novgorod

PRINCIPAL THEATER(S): Neva River region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Swedish coalition wanted territory claimed by Novgorod.

OUTCOME: Russian troops under Alexander Nevski defeated the coalition.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace agreement concluded at Novgorod, 1242.

Sweden, Denmark, and Lithuania were eager to exploit the disarray created by the Second MONGOL INVASION OF RUSSIA to gain territory for themselves and, not incidentally, to extend the reach of Christianity. The latter motive gained them the support of Pope Gregory IX (1147[?]-1241). Under a Swedish soldier-statesman named Birger (d. 1266), a combined army of Swedes, Danes, and Livonian knights invaded Russia, where they challenged Novgorod's claims on the Neva River and Gulf of Finland. Prince Alexander (c. 1220–1263) of Novgorod, champion of Orthodox Christianity, engaged Birger's forces near present-day St. Petersburg and won a great victory. He took the precaution of building a series of forts on the Neva, then returned home to Novgorod, where he was honored with the surname Nevski ("of the Neva") and is still celebrated as one of Russia's seminal heroes.

Still, the Swedish coalition was not finished. No sooner had Nevski left the region than they seized Pskov. The Livonian knights built a fort at Koporie on the Neva, extorted tributes from the people, and pillaged the region corresponding to modern Estonia. In response, Alexander Nevski returned with an army that drove the knights out of Koporie and Pskov, an action culminating in the celebrated April 5, 1242, "Battle on the Ice," fought on a

frozen channel leading to Lake Peipus. This ended the war, and Alexander returned to Novgorod, where a definitive peace was concluded. In later years, Russians would invoke the memory of Nevski and the Battle on the Ice to inspire resistance to invaders from Napoleon to Hitler.

Russo-Swedish War (1590–1595)

PRINCIPAL COMBATANTS: Russia vs. Sweden

PRINCIPAL THEATER(S): Estonia and Livonia

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: Russia wanted to wrest control of Estonia from Sweden.

OUTCOME: The two sides fought to a truce favorable to Russia; after reinforcing its army, Sweden resumed fighting and not only retained Estonia but acquired much of Livonia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Swedish strength at Narva, 20,000

CASUALTIES: Unknown

TREATIES: Armistice in 1591; treaty in 1593

Russian czar Feodor I (1557–98) hungered after Swedish-controlled northern Estonia and in particular wanted to acquire Reval (Tallinn), its principal city. At the urging of his chief adviser and power-behind-the-throne, Boris Godunov (c. 1551–1605), Feodor authorized an invasion. Godunov led a Russian army toward Narva, where it engaged and defeated a Swedish force of 20,000 men early in 1590. While laying siege to Narva, the Russians also menaced Estonia, which convinced Sweden to come to a one-year truce, granting Russia sovereignty over a number of towns, most notably the Baltic ports of Kaporye, Ivanogorod, and Yani, while delaying Russian occupation of Estonia. Sweden's John III (1537–92), however, soon grew impatient with these terms and decided to retake the ceded towns. Negotiations over Narva and northern Estonia were reopened, but John died during them, the talks collapsed, and the war resumed.

Sweden sought to exploit a Tartar threat against Russia by augmenting its forces in Estonia, but initially met with no success and, in 1593, concluded a treaty that allowed Russia to retain most of what it had gained. However, the peace was soon broken once again, as Swedish forces regained control of Estonia's Baltic coast and much of Livonia (including parts of modern Estonia and Latvia) by 1695.

Russo-Swedish War (1613–1617)

PRINCIPAL COMBATANTS: Sweden vs. Muscovite Russians

PRINCIPAL THEATER(S): Novgorod and Pskov

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Muscovites wanted to seize Swedish-held Novgorod; Swedes wanted to gain control of the Russian throne.

OUTCOME: Swedes ceded Novgorod to Moscow; they gained in return all territories on the Gulf of Finland; Russia relinquished claims on Estonia and Livonia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Stolbovo, January 26, 1617

During the internal Russian conflict known as the TIME OF TROUBLES, Muscovite forces attacked Novgorod, which was held by the Swedes, who had made a bid to gain control of the Russian throne, which, in the time of troubles, was very much in play. With the election of Czar Michael Romanov (1596–1645), however, the Swedes' hopes were dashed, and Sweden's Gustavus II (1594–1632) cast aside conquest by intrigue. He now opted for military action, launching an invasion of Moscow after first defeating the Russian expedition against Novgorod.

Despite his success at Novgorod, Gustavus was stopped in 1614 by the defenders of the formidable fortress of Pskov, which withstood a six-month siege. Short of supplies, his forces depleted, Gustavus withdrew his army and opened peace negotiations culminating in the Treaty of Stolbovo on January 26, 1617. By this agreement, the Swedes ceded Novgorod to Moscow, but gained all territories on the Gulf of Finland in return. Moreover, Russia relinquished claims on Estonia and Livonia.

Platanov, *The Time of Troubles: A Historical Study of the Internal Crisis and Social Struggle in Sixteenth- and Seventeenth-Century Muscovy* (Lawrence: University Press of Kansas, 1970); B. F. Porshnev, *Muscovy and Sweden in the Thirty Years' War, 1630–1635* (New York: Cambridge University Press, 1995).

Russo-Swedish War (1656–1658)

PRINCIPAL COMBATANTS: Russia vs. Sweden

PRINCIPAL THEATER(S): Estonia and Livonia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Russia wanted to reclaim lands lost to Sweden.

OUTCOME: Despite a driving offensive, the Russians lost to Sweden and withdrew from the contested lands.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Several thousand Russians fell at Riga (1656).

TREATIES: Truce concluded in 1658

This conflict may be regarded as a phase of the First NORTHERN WAR, during which Russian czar Alexis (1629–1676) decided to seize an opportunity to recover lands earlier lost to Sweden in the RUSSO-SWEDISH WAR (1613–1617). He concluded a hasty peace with Poland to end the RUSSO-POLISH WAR (1654–1656), so that he could concentrate his forces for an invasion of Swedish-held Livonia and Estonia.

The czar captured numerous towns and fortresses before massing his army outside of Riga, to which he laid siege during July and August 1656. The Swedes countered with a devastating sortie out of Riga, which overran the Russian lines, broke the siege, and resulted in the slaughter of thousands. Stunned, Czar Alexis fled the field. With the Russians gone, the Swedes generally reinforced their defenses throughout the Baltic area. This enabled them to withstand another Russian offensive in 1658, after which an abashed Alexis agreed to a truce, which endured well into the next century.

Platanov, *The Time of Troubles: A Historical Study of the Internal Crisis and Social Struggle in Sixteenth- and Seventeenth-Century Muscovy* (Lawrence: University Press of Kansas, 1970).

Russo-Swedish War (1741–1743)

PRINCIPAL COMBATANTS: Russia vs. Sweden

PRINCIPAL THEATER(S): Finland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Sweden wanted to regain Finnish territories lost to Russia.

OUTCOME: Greatly outnumbered, the Swedish army was soundly defeated, and Russia was confirmed in its possession of southern Finland.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Sweden, 17,000; Russia, 26,000

CASUALTIES: At Wilmanstrand, Russia lost 2,400 killed or wounded; Sweden lost 3,300 killed or wounded and 1,300 captured.

TREATIES: Treaty of Åbo, August 7, 1743

When the hawkish Hattar Party (literally, the “Hats”) gained control of Swedish politics, it yielded to French entreaties to start a war with Russia to regain lost territory. Although Sweden’s standing army consisted of only 20,000 men, the nation began hostilities in 1741. Russia’s superior army had been on a war footing since the freshly concluded RUSSO-TURKISH WAR (1736–1739). Accordingly, Russian troops took the offensive, winning the Battle of Wilmanstrand in Finland on September 3, 1741, inflicting 4,600 casualties (including 1,300 captured) on 6,000 Swedes engaged.

In the meantime, a bloodless coup put Elizabeth Petrovna (1709–62) on the Russian throne. Despite Russia’s triumph, she had no wish to press the war further and invited peace. Unwisely, the Swedes responded with unreasonable terms, and Elizabeth sent Russian troops to invade Finland again. They easily overran the main contingent of the Swedish army. Seventeen thousand Swedes laid down their arms at Helsingfors (Helsinki) on August 20, 1742, and fighting ceased.

Despite Russia’s overwhelming victory, peace negotiations dragged on for nearly a year before culminating in the Treaty of Åbo on August 7, 1743. The treaty provided that Russia would retain the southern part of its Finnish territory to the Kymmene River, which became the new border. Sweden’s childless Frederick I (1676–1751) further agreed to Elizabeth’s election of Holstein’s duke Adolphus Frederick (1710–71), a Russian ally, to inherit the Swedish Crown.

Russo-Swedish War (1788–1790)

PRINCIPAL COMBATANTS: Russia vs. Sweden

PRINCIPAL THEATER(S): Finland

DECLARATION: Made unilaterally by Gustavus III

MAJOR ISSUES AND OBJECTIVES: Acting without legislative authority, Gustavus III wanted to retake Finnish territories lost to Russia.

OUTCOME: A return to the status quo ante bellum

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Russia, 31 ships of the line, and 24 frigates; Sweden, 21 ships of the line and 13 frigates.

CASUALTIES: Russia lost four ships of the line; Sweden lost 12 ships of the line

TREATIES: Treaty of Wereloe, August 15, 1790

In 1788, Sweden’s Gustavus III (1746–92) saw that Russia was preoccupied with CATHERINE THE GREAT’S SECOND

WAR WITH THE TURKS. In June, acting without the approval of the Swedish diet, Gustavus invaded the Russian-held portion of Finland. Unfortunately for the Swedish king, many of his officers rightly deemed the war illegal and refused to fight. As a result, operations during 1788 and 1789 were failures, culminating in a disastrous defeat at the Finnish town of Fredrikshamm (Hamina).

Following Fredrikshamm, the dissident officers formed the Anjala League to negotiate peace with Russia’s Catherine II (the Great; 1729–1796). During this period, while the dissidents negotiated, Gustavus conducted a sea war, which became one of the greatest conflicts fought on the Baltic. By 1799, Sweden mustered 21 ships of the line and 13 frigates against 17 Russian ships of the line and eight frigates. On July 17, 1788, the Battle of Hogland pitted 20 Swedish ships against all of the Russian fleet’s ships of the line. Although the battle ended indecisively, the Swedes managed to capture a 74-gun Russian ship at the cost of a lesser 70-gun vessel. At Svensksund (August 24, 1789) and at Vyborg (July 3, 1790), the Russian fleet emerged victorious, although casualties were heavy on both sides. Svensksund was a duel between small coastal craft, 81 Russian boats versus 49 Swedish vessels. The Swedes lost 11 craft, the Russians two. At Vyborg, 31 Russian ships of the line and 24 frigates overwhelmed seven Swedish ships of the line, three frigates, and about 30 smaller warships and 30 transports. The engagement was a disaster for the Swedes, who lost some 5,000 men (many taken prisoner), although the bulk of the fleet was able to withdraw intact. Russia lost more than 2,000 killed or wounded.

Six days after Vyborg, the Swedes retaliated by mustering a very large mixed fleet of 196 ships against 141 Russian vessels in the Second Battle of Svenskund. At a cost of four ships and 181 killed, the Swedes sunk 64 Russian ships and inflicted 7,369 casualties, including 900 killed. This Swedish triumph staved off ignominious defeat at the hands of the Russians, who concluded the Treaty of Wereloe in 1790, restoring the status quo ante bellum.

Russo-Swedish War (1808–1809)

PRINCIPAL COMBATANTS: Russia vs. Sweden

PRINCIPAL THEATER(S): Finland

DECLARATION: Russia against Sweden, February 1808

MAJOR ISSUES AND OBJECTIVES: Seizing on Sweden's refusal to end its alliance with Britain, Russia invaded Finland in order to acquire that country.

OUTCOME: Russia prevailed; Finland became a Russian duchy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Russia, 9,000; Sweden, 11,000

CASUALTIES: At Revolax (April 27, 1808), 3,000 out of 4,000 Russians were killed.

TREATIES: Treaty of Fredrikshamm, September 17, 1809

The NAPOLEONIC WARS occasioned a great deal of diplomatic maneuvering among belligerents. After France and Russia made peace by the Treaty of Tilsit in 1807, they called on Sweden to end its anti-French alliance with Britain. Sweden refused, and Czar Alexander I (1777–1825) responded by invading Swedish-held Finland in February 1808 with an army under Mikhail Bogdonovich (1761–1818), prince Barclay de Tolly.

On April 16, 1808, 3,000 Russian troops laid siege to the fortress of Sveaborg, forcing the surrender of its 7,000-man garrison after scarcely a fight. Following this, the Russians marched unimpeded through Finland, which, by the end of 1808, the Swedes had evacuated.

The Swedes did score a major triumph at Revolax on April 27, 1808, when their 8,000-man force overwhelmed 4,000 Russians, killing all but 1,000 of them. The Battle of Orawis, on September 15, 1808, proved inconclusive. Meanwhile, at sea, Sweden held out well against the Russians. Nevertheless, the losses in Finland were too much for Sweden's King Gustavus IV (1778–1837), whose repressive autocracy was overthrown by a coup d'état on March 13, 1809, forcing him into exile. For its part, however, Russia refused to negotiate peace terms with the unstable provisional government that followed. The czar did not want to recognize a revolutionary regime; besides, he was not finished with his campaign of expansion. The Russians pressed the fight to the Åland Islands, which fell to the invaders, and then fought two battles in northern Sweden. After an 11,000-man Swedish army was trapped and held on the Ratun Peninsula in August 1809, Swedish forces totally evacuated Finland, and the new Swedish king, Charles XIII (1748–1818), negotiated the Treaty of Fredrikshamm with the Russians on September 17, 1809. Sweden formally ceded Finland and the Åland Islands to Russia. Finland thus became a Russian duchy.

Russo-Turkish War (1568–1569)

PRINCIPAL COMBATANTS: Russia vs. Ottoman Turks

PRINCIPAL THEATER(S): Astrakhan, on the Volga River

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Turkish grand vizier Muhammad Sokollu wanted to build a canal linking the Don and Volga; he needed to seize Russian-held Astrakhan to do this.

OUTCOME: Canal construction bogged down; the grand vizier failed to take Astrakhan; his troops withdrew, only to be lost at sea.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Muhammad Sokollu (1505–79), Ottoman grand vizier under Sultan Selim II (1524–74), devised a scheme to curb Russian expansion by digging a canal linking the Don and Volga rivers. This would allow Turkish vessels to pass between the Black and Caspian seas, giving Turkey direct access to Persia and Central Asia. To accomplish this objective, the grand vizier sent troops to Azov in 1568 in order to take Astrakhan from Russia. Soldiers marched up the Don River and began construction of the canal, but when they had progressed about a third of the way, engineering difficulties forced a halt.

Undaunted, the grand vizier ordered his ships portaged to the Volga. From this position, he invested Astrakhan on the Volga delta in 1569. The city, which had been in Russian hands for only 13 years, withstood the siege long enough for a relief column to arrive. At the approach of the column, the weary Turks withdrew. Although a major battle was avoided, all of the siege troops perished in a storm on the Black Sea as they returned home. The sultan responded by ordering Sokollu to attempt no more canals.

Russo-Turkish War (1678–1681)

PRINCIPAL COMBATANTS: Russia vs. Turkey

PRINCIPAL THEATER(S): Ukraine

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Turks wanted to acquire the Ukraine.

OUTCOME: After suffering severe casualties, the Turks withdrew and agreed to renounce their claims to the Ukraine.

988 Russo-Turkish War (1695–1700)

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Radzin, January 8, 1681

The origin of this war lay in Sultan Muhammad IV's (1641–91) refusal to honor what he deemed the overly generous terms of the Treaty of Zorawno, which ended the POLISH-TURKISH WAR (1671–77). He dispatched an army under Grand Vizier Kara Mustafa (d. 1683), determined to push the Russians and Poles out of the Ukraine.

Though the next two years the Turks ravaged the Ukraine, destroying many towns, they suffered heavy casualties and lost much of their artillery. When the Ukraine refused to yield, the Turks at last withdrew, and on January 8, 1681, the sultan concluded the Treaty of Radzin, renouncing all claims to Ukraine. By resisting the Turks, Ukraine prevailed, but at a terrible loss to the civilian population.

Russo-Turkish War (1695–1700)

PRINCIPAL COMBATANTS: Russia vs. Ottoman Turks

PRINCIPAL THEATER(S): Delta of the Don River

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Peter I the Great wanted to take the Turkish-held fortress-city of Azov.

OUTCOME: Despite heavy losses, the Russians took Azov.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Russia, 75,000; Turkey, 31,000

CASUALTIES: Some 32,000 Russians died; Turkish losses unknown

TREATIES: Truce, 1700

Acting on the advice of his Swiss-Scotch adviser François Lefort (1656–99), Czar Peter I (the Great; 1672–1725) made an assault on the Turkish-held city-fortress of Azov at the Don River delta. The czar personally led 31,000 men in this first siege in 1695. The assault failed, forcing the Russians to withdraw with heavy losses, including 2,000 killed in action.

Peter determined that the failure had occurred because, without a navy, he had been unable to blockade Azov. Within a year, Peter built a fleet and dispatched it to blockade the city. The fleet overcame Ottoman naval opposition, and Peter's land forces took Azov in July 1696. The cost, however, was great: more than 30,000 Russians

fell. Mindful of the cost, Peter resolved to ensure that the sacrifice would not be in vain. He decided to undertake a great expedition against the Ottomans in order to end permanently the threat they posed. In preparation, Peter toured Europe, seeking allies as well as knowledge of Western technical, scientific, and military advances. During the period of Peter's travels, the Hapsburgs concluded a peace in the AUSTRO-TURKISH WAR (1683–1699), which prompted Peter to abandon his Turkish plans to join Poland against Sweden in the Great Northern War. In 1700, Peter concluded a truce with the Ottoman Empire, trading the Russian Black Sea fleet for permanent possession of Azov.

Russo-Turkish War (1710–1711)

PRINCIPAL COMBATANTS: Russia vs. Ottoman Turks

PRINCIPAL THEATER(S): Moldavia (part of Romania)

DECLARATION: Turkey against Russia, 1710

MAJOR ISSUES AND OBJECTIVES: The Turks refused to surrender Sweden's king Charles XII to the Russians.

OUTCOME: Superior Turkish numbers defeated the army of Czar Peter I the Great, who had to relinquish the fortress-city of Azov, so hard won in the Russo-Turkish War of 1695–1700.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Russia, 54,000; Ottomans, 200,000

CASUALTIES: Unknown

TREATIES: Treaty of the Pruth, July 21, 1711

The warrior-king Charles XII (1682–1718) of Sweden suffered a disastrous defeat at the hands of the Russians during the GREAT NORTHERN WAR. With his army all but destroyed, Charles took refuge in Turkish Moldavia, whereupon, in October 1710, Czar Peter I (the Great; 1672–1725) demanded that the Ottoman sultan surrender his guest. In response to this imperious demand, the sultan made war against Peter.

With the Turks arrayed along the Russian border, the recklessly overconfident czar led 54,000 soldiers in an invasion of Moldavia in March 1711. He was met by 120,000 Ottoman infantry men and 80,000 cavalry, which pushed the Russians back to the Pruth River, trapping him against this natural barrier as he anxiously awaited reinforcements from Slavs, Moldavians, and Wallachians, with whom he had secret alliances. When these troops failed to materialize, Peter had no choice but to negotiate a peace,

and he was indeed fortunate that he had the opportunity for such negotiations. Had the Ottomans chosen to attack Peter his badly outnumbered forces would almost surely have been destroyed. As it was, the Treaty of the Pruth, signed on July 21, 1711, compelled Russia to return Azov (acquired at great cost in the RUSSO-TURKISH WAR [1695–1700]) to the Turks and to dismantle its border fortresses. The czar also had to grant Sweden's Charles free passage back to Sweden—but the bellicose monarch remained among the Turks for three more years, trying unsuccessfully to persuade the Ottomans to launch an all-out war against Russia.

Massie, *Peter the Great: His Life and World* (New York: Ballantine Books, 1987); Alan Warwick Palmer, *The Decline and Fall of the Ottoman Empire* (New York: Barnes and Noble Books, 1995); François Marie Arouet de Voltaire, *Lion of the North: Charles XII of Sweden* (Madison, N.J.: Fairleigh Dickinson University Press, 1981).

Russo-Turkish War (1722–1724) *See* RUSSO-PERSIAN WAR (1722–1723).

Russo-Turkish War (Austro-Turkish War) (1736–1739)

PRINCIPAL COMBATANTS: Russia (with Austria) vs. Ottoman Turks (with Tartar allies)

PRINCIPAL THEATER(S): Ukraine

DECLARATION: Russia on the Ottoman Empire, 1736

MAJOR ISSUES AND OBJECTIVES: Russia wanted to secure possession of the Turkish Ukraine.

OUTCOME: Despite initial gains, Russia agreed to an unfavorable peace after its Austrian allies abandoned the war.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the Battle of Khotin (August 17, 1739), Russia deployed 68,000 men, Turkey 90,000.

CASUALTIES: Total Russian casualties have been estimated at 100,000 dead, as a result of battle, disease, and general privation. Austria lost about 20,000 men. Turkish losses are unknown.

TREATIES: Treaty of Nissa, October 3, 1739

The War of the POLISH SUCCESSION was among the European conflicts that brought into play a complex network of alliances and enmities. When Russia discovered that France had solicited military aid from the Ottoman Empire during that war, Russia declared war on the Ottomans in 1736. Russian forces were dispatched to Turkish areas north of the Black Sea. However, having

struck an alliance with the Tartars, the Ottomans severely punished the invaders, who withdrew into the Russian Ukraine, having lost 30,000 men out of a force of 58,000. The withdrawal brought Tartar raids into the Ukraine, so costly that Russia's ally, Austria, declared war on the Turks in January 1737.

Austrian armies invaded Bosnia, Wallachia, and southern Serbia. The fortress city of Nish fell, but a Turkish counter offensive forced Austria to withdraw. In the meantime, in the Turkish Ukraine, Russian and Turkish armies contended for Azov and Ochakov, frequently taking, losing, and retaking these cities. The French mediated a peace agreement, which was honored more in the breach than in the observance, and the Turks fought their way along the Danube toward Belgrade during 1738. The Austrians fared poorly against the Turks in the Balkans, but the Russian army, under Count Burkhard C. von Münnich (1683–1767), defeated 90,000 Turks with his 68,000 Russians at Chocim (Khotin) on August 17, 1739. After this, he took Jassy (Iași), Moldavia's capital.

Münnich was preparing to invade Constantinople (Istanbul), the Ottoman capital, when Austria, Russia's ally, signed a separate peace at Belgrade on September 18, 1739, following the fall of that city to the Turks. The Austrians ceded Belgrade, northern Serbia, parts of Bosnia, and Wallachia to the Turks, who were now free to turn all of their attention to Münnich's army. The prospect of a concentrated attack by the Turks was enough to prompt the Russians to negotiate peace. By the Treaty of Nissa, signed on October 3, 1739, Russia relinquished all that it had conquered, save the often-contested Azov. Russia agreed to dismantle the town's fortifications and further agreed that Russian naval vessels would stay out of the Sea of Azov and the Black Sea.

Russo-Turkish War (1806–1812)

PRINCIPAL COMBATANTS: Russia (with British alliance) vs. Ottoman Empire (with French alliance)

PRINCIPAL THEATER(S): Moldavia, Wallachia (Romania) and waters off Constantinople

DECLARATION: Ottoman Empire on Russia, November 6, 1806

MAJOR ISSUES AND OBJECTIVES: Russia and the Ottomans contended for control of Moldavia and Wallachia.

OUTCOME: The war ended indecisively, by means of a British-mediated peace; Moldavia and Wallachia remained under Ottoman control, but Russia gained Bessarabia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At Batin (September 7, 1810) Russia fielded 22,000 against 35,000 Turks.

CASUALTIES: At Batin, Russia lost 2,000 killed or wounded, Turkey 5,000 killed or wounded and 5,000 captured.

TREATIES: Armistice of 1807; Treaty of Bucharest, May 28, 1812

France, locked in combat with Russia during the NAPOLEONIC WARS, took every opportunity to weaken its opponent. The French ambassador to the Ottoman Empire encouraged Sultan Selim III (1761–1808) to declare war on Russia because of its interference with Ottoman affairs in Moldavia and Wallachia. The declaration came on November 6, 1806, prompting Russia to invade Moldavia and Wallachia. However, the first major battle—indeed, the most important engagement of the war—came not on land but at sea. The Battle of Lemnos (or Athos) took place on June 30, 1807, when 10 Russian battleships tangled with 10 Ottoman ships of the line, five frigates, and five smaller vessels. Although outgunned, the Russians defeated the Ottoman squadron, sinking three ships of the line and three frigates. This was sufficient to prompt an armistice in August 1807, which endured until October 21, 1809, when a force of 30,000 Turks defeated 15,000 Russians at the Battle of Tataritza in Bulgaria. Despite the victory, the Turks lost 2,000 men versus 1,000 casualties among the Russians. At Bazardjik on June 3, 1810, Russian forces, 23,000 strong, overwhelmed a 5,000-man Turkish garrison, killing or wounding 3,000 and taking the rest captive.

The Ottomans regained the initiative at Schumla on June 23–24, 1810, using 30,000 men to defeat a Russian force of 20,000. On August 2, the Russians replied with a victory at Tachlimechle, inflicting 3,000 casualties on an Ottoman force of 30,000. This was followed by a series of Russian victories in Bulgaria, including a large battle at the Danubian city of Batin on September 7, 1810, when 22,000 Russians decisively defeated 35,000 Turks, inflicting 5,000 Turkish casualties, killed or wounded, and capturing another 5,000 Turks. In the meantime, the Russians laid siege to Turkish-held Rustchuk from July 20 to September 26, 1810, killing or wounding 6,000 of 15,000 Ottoman defenders, but in the process losing 3,000 killed and 5,000

wounded. The Russians fared better at Lovca, Bulgaria, on February 11, 1811, driving out a Turkish garrison of 10,000. A Second Battle of Rustchuk, on July 4, 1811, was a magnificent Russian victory—20,000 Russians decisively defeated 60,000 Turks. The Turks gained a measure of revenge at Giurgevo, Romania, on September 9, 1811, but their victory was short-lived. On September 10, a Russian counterthrust forced the Turks to surrender Giurgevo and compelled the Ottoman government to sue for peace. By the Treaty of Bucharest (May 28, 1812), Bessarabia was ceded to Russia, but Moldavia and Wallachia were returned to Ottoman control.

Russo-Turkish War (1828–1829)

PRINCIPAL COMBATANTS: Russia vs. Ottoman Empire

PRINCIPAL THEATER(S): Wallachia (part of Romania), Caucasus, and Crimea

DECLARATION: Russian on the Ottoman Empire, April, 26, 1828

MAJOR ISSUES AND OBJECTIVES: Ostensibly, Russia had come to aid the cause of Greek independence; other objectives included territorial gain.

OUTCOME: The Turks were repeatedly defeated, Russia made territorial gains, the Ottomans agree to pay an indemnity, and Greece was granted independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Russia 113,920; Ottoman Empire, 80,000

CASUALTIES: Russia, 42,515 dead; Ottomans, 80,000 dead; most succumbed to disease.

TREATIES: Treaty of Adrianople, September 16, 1829

Russia declared war on the Ottoman Turks on April 26, 1828, ostensibly in aid of Greece during the GREEK WAR OF INDEPENDENCE; however, the Russian czar was moved less by nationalist or republican zeal than by hunger for territory. Besides, the Turks were at an especially low ebb during this time. Militarily weak, they were highly vulnerable.

Russian armies successfully besieged Braila in Wallachia, then crossed the Danube to assault the Turkish fortresses at Ruschuk (Ruse) and Widdin (Vidin). Another Russian force captured the city of Varna after a three-month siege in 1828. Simultaneously, in the Caucasus, the Russians took Kars and penetrated as far as Akhaltsikhe, where, after scoring a victory, they were stopped by Kurds.

The next year, 1829, began badly for the Turks as well. They lost Silistra and suffered defeat at the hands

of Russian general Hans Diebitsch-Zabalkansky (1785–1831) at Tcherkovna (June 11) and at Sliven (August 12). Eight days after the second victory, Diebitsch-Zabalkansky marched into Adrianople (Edirne)—although his army was exhausted and suffering from the effects of plague. Disease was a far more formidable enemy than any opposing army. Of the 42,515 Russians who died in this war, 29,658 succumbed to disease. Likewise, most of the 80,000 Turks who perished were victims of plague and other scourges.

Elsewhere, Russia was also victorious. Erivan (Yerevan) fell to the Russians, though Diebitsch-Zabalkansky had already agreed to the Treaty of Adrianople on September 16, 1829, by which the Danubian Principalities (Moldavia and Wallachia) were made semiautonomous, and by which Russia gained control of the mouth of the Danube. The treaty also granted all peaceful states access to the Turkish straits—and granted Greece its independence. Additionally, the Ottoman Empire agreed to pay heavy war reparations and confirmed (Russian) Orthodox freedom of religion in its territories.

Russo-Turkish War (1877–1878)

PRINCIPAL COMBATANTS: Russia (with Romanian allies) vs. Ottoman Empire

PRINCIPAL THEATER(S): The Balkans

DECLARATION: Russia on the Ottoman Empire, April 24, 1877

MAJOR ISSUES AND OBJECTIVES: Russia wanted to secure religious freedom for Orthodox Serbs oppressed by the Ottomans; Russia also wanted to expand its territory.

OUTCOME: Romania and Serbia became independent; Bulgaria, enlarged at the expense of the Turks, became semi-autonomous under Russian authority.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Russia, 933,726; Ottoman numbers unknown

CASUALTIES: Russia, 117,621 killed; Ottoman Empire, 90,000; most deaths were from disease.

TREATIES: Treaty of San Stefano, March 3, 1878

In the name of pan-Slavism, 19th-century Russian czars supported the Balkan states in their bid to gain independence from the Ottoman Empire. This motivated the war that Russia declared on April 24, 1877. It began with mostly desultory naval action as Russian land forces assembled and prepared to cross the Danube. It was not until June 23, 1878, that the first Russian units made the crossing, only to find themselves bogged down in a five-

month siege against the fortress of Plevna in Bulgaria. Fanatical defenders hurled back two Russian assaults, inflicting terrible casualties. On July 20, 1878, 3,000 of 6,500 Russian attackers fell. Ten days later, 7,305 Russians were killed or wounded (out of a force of 30,000) in another unsuccessful assault. The third attack, or “Great Assault,” came on September 11 and pitted 95,000 Russians against a garrison of 30,000 plus other defenders. Over the next two days, the Russians lost 18,600 killed or wounded, and still Plevna remained in Turkish hands—although the siege remained in place.

The Turks could not hold out forever. On the night of December 9–10, they attempted a breakout but were driven back with the loss of 5,000 killed or wounded and some 43,340 captured. At this, the Turks surrendered, and the 143-day siege ended. Russian losses in this operation topped 50,000 men.

Following the fall of Plevna, Russia concentrated on Ottoman forces south of the Shipka River. At the Battle of Senova on January 8–9, 1878, a 36,000-man Ottoman army collapsed. This was followed on January 17 by the fall of the Ottoman-held fortress town of Plovdiv, a success that allowed Russian forces to advance to the doorstep of Constantinople. This action prompted an armistice on January 31, 1878.

In the meantime, war raged on another front, the Caucasus. Here, the opposing armies were evenly matched at about 70,000 each. At the Battle of Aladja Dagh (October 15–18, 1877), Russian forces killed or wounded 6,000 Turks and captured another 12,000; Russian losses were light,—1,600 killed or wounded. The victory put the Russians in position to invest the great fortress at Kars, which they stormed on November 17, 1877. The attackers inflicted 7,000 casualties on the Turkish garrison of 24,000 before the fort surrendered.

Turkish losses in the Balkans and on the Caucasus front prompted the Ottoman government to agree to the Treaty of San Stefano on March 3, 1878, by which it recognized the independence of Serbia, Montenegro, Romania, and Bulgaria. Even more important, the war had rendered the Ottoman Empire effectively obsolete. It no longer figured as a major power in Eurasian politics; became known as the “sick man of Europe.” To achieve this, Russia had mobilized 933,726 troops, of which 117,621 died. As in other wars with the Ottoman Empire, the greatest enemy was disease. More than 80,000 Russian deaths were the result of plague and other maladies. Two-thirds of Turkish losses, which amounted to about 90,000 men, were also due to disease.

Rwandan Civil War (1959–1961) See RUANDAN (RWANDAN) CIVIL WAR.

Rwandan Civil War (1990–1994)

PRINCIPAL COMBATANTS: Hutus vs. Tutsis in Rwanda

PRINCIPAL THEATER(S): Rwanda

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Rwandan government

OUTCOME: Genocide against the Tutsis, panic among the Hutus; control of the government was ultimately divided between the tribes.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Extremely variable, with much civilian involvement

CASUALTIES: 10,000 combatants on both sides in guerrilla warfare; 500,000–1,000,000 civilians slain by Hutu troops and death squads

TREATIES: Arusha Accords, August 1993 and July 1994

The African nation of Rwanda (formerly Ruanda) achieved independence from Belgium, then engaged in the bloody RUANDAN (RWANDAN) CIVIL WAR of 1959–61, emerging from it as Rwanda. The 1959–61 conflict pitted the majority Hutu tribe against the Tutsi, who, although a minority, were socially, economically, and politically dominant. Following the first civil war, many Tutsi fled to neighboring Uganda. For more than 30 years, resentment simmered among the exiles, who created the Rwandan Patriotic Front (RPF) and, beginning in 1990, infiltrated Rwanda. Their goal was to reclaim the nation under Tutsi control.

The Tutsi invasion came at a bad time for the Hutu government of Rwanda. The nation was chronically poor—the departure of the Tutsi having contributed to this poverty—and was beset by drought and famine. Unable to feed its people, let alone resist an invasion, the Hutu government concluded the Arusha Accords in August 1993, ceding considerable power to the Tutsi. Before the accords could be implemented, however, Hutu president Juvénal Habyarimana (c. 1937–94) intervened and sabotaged the

peace process. He backed down to some extent, however, as the Tutsi became increasingly menacing. By this time about 10,000 lives had been lost in guerrilla fighting. Habyarimana granted some cabinet posts to Tutsis, and he agreed to fly to Tanzania to participate in a 1994 conference on the Tutsi-Hutu problem. On April 6, 1994, during the flight back to Rwanda, Habyarimana's plane exploded—apparently as a result of Hutu sabotage, a hard-line Hutu element objecting to any rapprochement with the Tutsis.

After the assassination of Habyarimana, chaos reigned in Rwanda. During a period of 14 weeks, the Hutu army and special Hutu death squads rampaged throughout the country, killing hundreds of thousands of civilians (estimates vary from 500,000 to 850,000). Targeted victims of this genocide were mostly Tutsis, but many Hutu moderates were also slain.

The Hutu genocide against the Tutsis prompted some three million Hutus to flee Rwanda for fear of Tutsi reprisals. The reprisals were not forthcoming, but the refugee problem created by the mass exodus was deadly for the region. The Tutsis did capture the Rwandan capital on April 6, 1994—the day of Habyarimana's death—but fighting continued. Government officials were assassinated, and between April 6 and the beginning of July, a genocide of perhaps as many as one million Tutsis and moderate Hutus was perpetrated by organized bands of militia known as the Interahamwe.

The RPF continued to pour into Rwanda, and civil war raged concurrently with the genocide for two months. French forces intervened in June, an action that helped to quell the genocide. However, the RPF quickly defeated the Rwandan army, the surviving members of which fled across the border to Zaire, with some two million civilian refugees in their wake. The civilians sought refuge in Zaire, Tanzania, and Burundi.

On July 4, 1994, the RPF took Kigali. The war officially ended on July 16, 1994, with full implementation of the so-called Arusha Accords. A UN peacekeeping mission remained in Rwanda until March 8, 1996. Genocide and war crimes trials began in 1996 and as of late 2003 were still under way. Low-level fighting continued throughout Rwanda.

S

Sacred War, First (c. 590 B.C.E.)

PRINCIPAL COMBATANTS: Phocian city of Crisa vs. the Greek city-states of the Amphictyonic League

PRINCIPAL THEATER(S): The area around Delphi at the foot of Mount Parnassus on the Gulf of Corinth

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Crisa, in control of Delphi, was charging Greek pilgrims a toll to visit the shrine of Apollo and its oracle.

OUTCOME: Crisa was destroyed; free access to the shrine was assured; the influence of Thebes increased; the Delphic oracle became a central voice in Panhellenic policy; and the way was smoothed for the growth of the quadrennial Olympic Games.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

Delphi, seat of the most important of ancient Greece's temples and home of the oracle of Apollo, lay in Phocis on the steep lower slope of Mount Parnassus near the Gulf of Corinth. Inhabited at least since Mycenaean times (14th century B.C.E.), Delphi was considered by the Greeks to be the center of the world. According to Greek myth, Zeus had released two eagles, one from the east, the other from the west, and commanded them to fly to the center. When they met at Delphi, the spot was marked by a stone, known as the *omphalos* ("navel"), around which the temple was constructed. According to the legend, originally the oracle

at Delphi belonged to Gaea, the Earth goddess, and was guarded by her serpent son, Python, but later the sun-god Apollo slew Python and founded his own oracle.

In any case, by the sixth century B.C.E. the temple at Delphi was under the control of the nearby Phocian port city of Crisa, which charged tolls for pilgrims from other Greek cities to visit the shrine. Many considered the tax sacrilegious. When the "dwellers around" Thermopylae formed the Amphictyonic League to administer the temporal affairs of the Greek city-states' religious shrines and conduct the Pythian Games, the religious controversy over the fees became politicized. By 590 B.C.E., Crisa found itself the target of a war launched by the league and supported by Cleisthenes (fl. sixth century), tyrant of Sicyon. Besieged on its landward side by the forces of the Amphictyonic League and its port blockaded by Cleisthenes' fleet, Crisa fell and was destroyed.

The war gave the league control of the shrine, which established free access to the Delphic oracle and opened Phocis to the influence of the Thessalian city-states, especially Thebes, and also advanced the fortunes of Cleisthenes. Delphi joined the league, and by 582 B.C.E. the Pythian Games had been reorganized as the Panhellenic Olympics, which were held at Delphi every four years. As a result, the prestige of the Delphic oracle reached new heights, consulted not only in private matters but also on affairs of state, its utterances often swaying international policy. Because the oracle was always consulted whenever any of the Greek city-states launched a colony, its fame spread to the limits of the Greek-speaking world.

Warde Fowler, *The City-State of the Greeks and Romans* (Honolulu: University Press of the Pacific, 2002); Peter John Rhodes, *The Greek City States: A Source Book* (Norman: University of Oklahoma Press, 1986); Raphael Sealey, *A History of the Greek City States, 700–338 B.C.* (Berkeley: University of California Press, 1977).

Sacred War, Second (c. 449–448 B.C.E.)

PRINCIPAL COMBATANTS: Athens vs. Sparta; Amphictyonic League vs. Phocis

PRINCIPAL THEATER(S): Delphi

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: At issue was control of the city and shrine of Delphi.

OUTCOME: Athens alienated the Amphictyonic League by making a separate peace with Sparta; Phocis retained control of Delphi.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Presumably a formal treaty between Athens and Sparta, 448 B.C.E.

The Second Sacred War marked Sparta's entry into the affairs of the Amphictyonic League. When Phocians seized control of Delphi, asserting as their right the administration of the city and its shrine, the Amphictyonic League asserted a counterclaim. Sparta sent troops in support of the league, to expel the Phocians from the city of Delphi. Although this operation was apparently bloodless, it incited Pericles of Athens (c. 495–29) to support the reinstatement of the Phocians. However, Athens and Sparta did not come to blows but rather concluded a peace treaty, which in turn outraged the Amphictyonic League. As a member of the league, Athens had no right to conclude a treaty independently of it. Thus Thebes rose up in rebellion against Athens. Although Athenian forces were unable to quell the rebellion, Phocis remained in control of Delphi. Because of Athens's betrayal of the league, Phocis and Athens were no longer allied. Despite the tension and uncertainty that resulted, this situation endured, peacefully, for nearly a century.

Sacred War, Third (355–346 B.C.E.)

PRINCIPAL COMBATANTS: Thebes (with Macedon) vs. Phocis

PRINCIPAL THEATER(S): Delphi and environs

DECLARATION: Thebes on Phocis, 355

MAJOR ISSUES AND OBJECTIVES: The original cause of war was the Phocian refusal to pay a fine levied by the Amphictyonic League, which led to war between Thebes and Phocis and brought into Greece the ambitious Philip of Macedon.

OUTCOME: Philip made important territorial gains in Greece, and Phocis was severely punished by the Amphictyonic League.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Philocrates, 346 B.C.E.

Thebes and other Thessalonian members of the Amphictyonic League accused Phocis, their longtime enemy, of cultivating lands sacred to Apollo. For this offense, the league levied a fine on Phocis and also against Sparta, which, in 382, had illegally seized Cadmea at Thebes in the THEBAN-SPARTAN WAR of 379–71 B.C.E.

Phocis, led by Philomelus (d. 354), defied the league's demand for payment. Instead, with covert aid from Sparta, a Phocian army captured the shrine of Delphi, as well as its treasury, in 355. In response, Locria unsuccessfully tried to expel Phocis from Delphi. Athens and Sparta concluded a new peace. Thebes, however, declared war on Phocis, and at the Battle of Neon in 354 defeated the Phocians, ultimately forcing their withdrawal in 353.

Into the fray stepped Philip of Macedon (382–36), who saw an opportunity to gain a greater foothold in Greece. Philip came to the aid of Thebes in its war against Phocis. This prompted the allied Athens and Sparta to come reluctantly to the aid of Phocis in order to check the ambitious Philip. Nevertheless, during 351–47 B.C.E., Philip's forces helped Thebes subdue and conquer Phocis. In a show of brilliant diplomacy, Philip negotiated with Athens even as he contributed to the defeat of its ally Phocis. Athens concluded with Macedon the Peace of Philocrates in 346, which gave Philip what he wanted—domination over northern and central Greece, including Thermopylae and Delphi. Phocis, the cause of the war, was punished by the Amphictyonic League.

Sacred War, Fourth (Amphissonian War) (339–338 B.C.E.)

PRINCIPAL COMBATANTS: Amphictyonic League vs. Delphi; Macedon vs. Athens and Thebes

PRINCIPAL THEATER(S): Delphi and Thebes

DECLARATION: Amphictyonic League on Delphi, 339 B.C.E.

MAJOR ISSUES AND OBJECTIVES: The Amphictyonic League wanted to punish Delphi for refusing to pay a fine levied against it; Philip of Macedon, fighting in support of the league, became aggressive, and the war escalated.

OUTCOME: Philip led Macedon to dominance over the Hellenic world, creating the Panhellenic League to replace the Amphictyonic League.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Demades, 338 B.C.E.

The Fourth Sacred War was fought ostensibly for some of the same reasons as the **THIRD SACRED WAR**: Delphi's attempts to cultivate sacred lands—this time in the otherwise petty city of Amphissa, a member of the Amphictyonic League—and its refusal to pay the subsequent fines. But since the league relied ultimately on Philip of Macedon (382–336 B.C.E.), the war was clearly intended to serve as the pretext for his final and triumphant involvement in Greece. Designated the leader from the first, Philip entered Greece toward the end of 339. Delphi was quickly defeated, but Philip's aggression terrified Athens—especially after he captured Elatea in Boeotia—prompting Demosthenes (c. 384–322 B.C.E.) of Athens to call for an alliance with the city's traditional enemy, Thebes. The Athenians and Thebans fought Macedon to a standstill in 339, but the following year, Philip won the Battle of Chaeronea in August 338. No good reliable account of the battle exists, though it ended in total victory for Philip and shaped the entire subsequent history of the Hellenic world. Classical accounts credit Philip's son, young Alexander the Great (356–23), with major contributions to the battle, and they describe a feigned retreat by the Macedonians.

Afterward, Athens and Thebes concluded the Peace of Demades, whereby Thebes acceded to occupation by Philip's army. Athens was allowed to retain its great fleet, but Macedon now emerged as the dominant power in the Greek world. In 337, the Amphictyonic League gave way to the Panhellenic League, which was dominated by Macedon and its king Philip.

Saffarid Revolt (866–876)

PRINCIPAL COMBATANTS: Saffarids vs. Tahirids (and, subsequently, Abbasids)

PRINCIPAL THEATER(S): Persia (Iran) and frontier areas

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Saffarids sought to overthrow the Tahirids.

OUTCOME: The Tahirids were overthrown, and the Saffarids gained control of most of Persia and Khorosan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In Seistan, encompassing southwestern Afghanistan and Baluchistan, the frontier warriors known as the Saffarids rebelled against the Tahirid rulers who had been appointed by the seventh Abbasid caliph al-Ma'mun (786–833). The Saffarid rebels, led by the brilliant Yakub ibn Laith (d. c. 879), rose to dominance, conquering most of Persia and Khorosan and overthrowing the Tahirids by 872. This accomplished, Yakub ibn Laith made an assault on Baghdad, which Abu Ahmad al-Muwaffak, brother of the Abbasid caliph Ahmad al-Mu'tamid, managed to repulse. The Saffarids failed to take the city.

Saint George's Day Revolt See **ESTONIAN REVOLT**.

Saka and Andhra Wars (50–51 B.C.E.)

PRINCIPAL COMBATANTS: Sakas vs. Andhras

PRINCIPAL THEATER(S): Central and north-central India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest of the region

OUTCOME: The Andhras successfully repulsed the Saka invaders, who withdrew precariously to the Indus Valley.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Sakas were nomads driven out of the Punjab by invading Scythians. Pressed by these invaders, the Sakas, in turn, pushed toward the south and east in search of new land. At first, they were successful in clearing away the Andhras; however, this people rallied under a semilegendary ruler, Vikramaditya, who successfully arrested the progress of the nomadic invaders. Sometime between 50 and 1 B.C.E., Vikramaditya succeeded in pushing the Sakas back into the Punjab. This left the Andhras in control of north-central and central India. The Sakas, in the meantime, held onto the Indus Valley region, but their hegemony was threatened from the northwest.

Sakdal Uprising (1935)

PRINCIPAL COMBATANTS: Philippine rebels vs. government forces

PRINCIPAL THEATER(S): Luzon, in the central Philippines

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Denied access to political office, armed and discontent Filipino peasant rebels of the Sakdal Party rose up and took control of government buildings throughout Luzon.

OUTCOME: The rebellion was suppressed, its leader exiled, and the Sakdal Party outlawed and disbanded.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: 100-plus rebels

TREATIES: None

In the 1930s, landless Filipino peasants, many of whom worked under miserable conditions on the large plantations in central Luzon, began to express their frustration and anger by joining the Sakdal movement founded and led by Benigno Ramos (fl. 1930–35). *Sakdal* means “accuse” in Tagalog, and Ramos’s movement placed the blame for the troubles of the Filipino masses on the United States and called for immediate Philippine independence, land reform, and lower taxes for the poor. Clearly opposed to the dominant Nationalist Party, which was willing to accept “gradual” independence from the United States, the Sakdalistas drew inspiration from Mahatma Gandhi’s (1869–1948) civil disobedience movement in India, which urged nonparticipation in government, boycott of elections, and withholding taxes. By the mid-1930s, the movement had developed into a political party, and the Sakdals garnered a significant number of votes in the Philippines’ 1934 fall elections. When this failed to translate into a

voice in official Filipino affairs, throngs of armed Sakdals took to the streets on the night of May 2, 1935. By the next morning they had control of the government buildings in 14 towns throughout Luzon. Government troops, backed by the United States, quickly suppressed the rebellion, and before the day was out at least 100 peasants had been slain in brutal violence. Ramos, however, escaped and fled to Japan. The Philippine government declared the Sakdal Party illegal and saw to its disbanding.

Saladin’s Holy War (1187–1189)

PRINCIPAL COMBATANTS: Muslim forces of Saladin vs. various Crusader armies

PRINCIPAL THEATER(S): Palestine

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: When crusaders repeatedly broke truces with the Muslims, the new sultan of a united Syria and Egypt, Saladin, flexed his muscle by declaring a jihad (holy war) and invading the Latin Kingdom of Jerusalem.

OUTCOME: The crusaders were defeated, Palestine and Jerusalem fell to Saladin, and Europe launched a Third Crusade to recover the Holy City.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Muslims, 20,000; Christians, about the same number

CASUALTIES: Unknown

TREATIES: None

In 1169 a new Muslim leader came to power in the Middle East, Saladin (c. 1137–93), whose strong rule united Syria and Egypt and put the new sultan in a position to challenge the crusader control of Palestine. In 1187, after the unscrupulous Reginald of Châtillon (d. 1187), lord of Krak and Montreal in the Kingdom of Jerusalem, had for the second time broken crusader truces with Saladin by plundering a Muslim caravan, Saladin, the chief warrior of Islam, declared a jihad (holy war) on the Latin Kingdom of Jerusalem. In June, Saladin invaded Palestine, besieging the town of Tiberias on the Sea of Galilee with an army of about 20,000. Under the generalship of Guy of Lusignan (1129–94), the Christians raised an army of about the same size, then marched straight into the desert, where Reginald, Guy, and Raymond (c. 1140–87), count of Tripoli, were surrounded by the Muslims and then attacked. At the Battle of Hattin on July 4, Saladin separated the crusader infantry from its cavalry, then overwhelmed each separately. Raymond and a small force of

cavalry attempted to cut their way through Saladin's lines, but Raymond was mortally wounded, and the rest of the crusaders were killed or captured. As a prisoner, Reginald—castigated for breaking the truce—refused to renounce Christianity and become a Muslim; Saladin had him beheaded. Guy, on the other hand, was paroled upon his ceding of the port of Ascalon and his promise to fight no more. Saladin continued his conquest of Palestine, taking Jerusalem in October 1187. For more than a year afterward, he cautiously skirmished with Christians around Tyre. In 1189, Saladin's investment of Acre was thwarted first by a small crusader force led by Guy of Lusignan, then by the arrival of reinforcements under England's Richard I (Lion-Heart; 1157–99), who had embarked on the THIRD CRUSADE.

Salim's Revolt See MOGUL CIVIL WAR (1600–1605).

Salvadoran Civil War (1977–1992)

PRINCIPAL COMBATANTS: Anti-government left wing vs. pro-government right wing

PRINCIPAL THEATER(S): El Salvador

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The installation of a conservative, repressive civilian-military government provoked rebellion from leftist guerrillas.

OUTCOME: The war was politically indecisive, coming to an end, apparently, from sheer exhaustion on all sides.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Most forces unorganized, numbers unknown

CASUALTIES: Estimated 80,000 deaths nationwide

TREATIES: Peace accord, January 16, 1992; permanent cease-fire effective as of February 1, 1992

With the installation of a conservative, repressive civilian-military government in El Salvador, unrest spread throughout the small Central American nation as left-wing and pro-government right-wing factions fought a guerrilla war. Instead of set battles, the civil war was conducted as a series of kidnappings, murders, warrantless arrests, and tortures. Amid this anarchic violence, a military coup overthrew the government on October 15, 1979. The military junta attempted to impose a general cease-fire but to no avail. Then, on March 24, 1980, the archbishop of El Salvador, Oscar Arnulfo Romero (1918–80), a champion of human rights, fell victim to a right-wing assassin as he

celebrated mass in the capital city of San Salvador. The nation and the world were stunned and outraged, but the violence only escalated. At Romero's funeral, terrorists exploded bombs and fired into the crowd of mourners. Thirty-one persons were killed, and 200 were wounded. On December 4, 1980, the violence of the Salvadoran Civil War touched the United States when the bodies of four U.S. Catholic churchwomen were found in El Salvador. They had been raped and brutally murdered. The U.S. government responded to the atrocity by temporarily cutting off economic and military aid to El Salvador.

There was even worse to come. In December 1981, Salvadoran government forces massacred 750 men, women, and children in El Mozote during a sweep of rebel forces. By this time, the Salvadoran countryside was a killing field; leftist guerrillas, supported by Cuba and Nicaragua, raided the provinces, hitting police stations and military outposts in an often successful effort to harvest guns and ammunition. About one-third of the nation fell into leftist hands. Meanwhile, right-wing "death squads" continued to sweep through rural El Salvador as they had from the beginning, now ostensibly hunting guerrillas as well as those they had long labeled "subversives," but often killing civilians, especially Jesuit priests and nuns as well as labor and political organizers, indiscriminately. Thousands perished.

The U.S. government supported a succession of right-wing as well as more moderate centrist governments. But even with U.S. support, the government was unable to defeat the rebels, most of whom were members of the Farabundo Martí National Liberation Front (FMLN), a hard-line Marxist group. As the bloodletting continued, the FMLN rejected a multinational Central American peace plan in 1987 and failed to respond to a unilateral cease-fire declared by the government. Yet, by this time, although the government had not cleared out the FMLN, the rebels were making little headway, militarily or politically. The FMLN organized a massive offensive during the national elections of March 1989, simultaneously attacking 20 towns. This gained the leftists nothing and, indeed, probably helped to propel the right-wing National Republican Alliance (ARENA) to power. Alfredo Cristiani (b. 1947) was elected president. Yet the electorate was soon disillusioned with the new administration, which was rife with corruption. Sensing weakness, the FMLN launched in November 1989 a new offensive, which prompted Cristiani to meet with the leftists in a series of United Nations-mediated negotiations that consumed 21 months. At last, on January 16, 1992, a peace accord was hammered out. On February 1, a permanent cease-fire was imposed. The FMLN slowly disbanded, and the government reduced its military forces by 50 percent. Pursuant to the peace accords, the government introduced a host of political and economic reforms. The civil war had resulted in the death of perhaps 80,000 Salvadorans and had produced a vast

number of refugees. During the more than decade-long struggle, the Salvadoran economy, always precarious, had entirely collapsed. It may be said that the civil war ended from sheer exhaustion on both sides.

Salvadoran Revolt (“The Slaughter”; La Matanza) (1931–1932)

PRINCIPAL COMBATANTS: Military vs. coffee barons; right-wing military forces under General Maximiliano Hernández Martínez vs. left-wing followers of Augustín Farabundo Martí

PRINCIPAL THEATER(S): El Salvador

MAJOR ISSUES AND OBJECTIVES: Military leaders sought to stabilize Salvador’s government and economy; communists sought to overthrow rule of Martínez and take control.

OUTCOME: The military coup was successful; the peasant revolt failed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: 10,000 rebels and civilians were executed.

TREATIES: None

El Salvador was directly controlled by a powerful clique of coffee barons with friendly ties to commercial interests in the United States until the Great Depression, which unsettled the world economy in 1929 and devastated Salvador’s major export business, wrecked its economy, and increased the already considerable misery of its people. In response, a group of military leaders staged a coup and installed General Maximiliano Hernández Martínez (1882–1966) as president in December 1931. A month later, in January 1932, Augustín Farabundo Martí (d. 1932), head of the recently formed Salvadoran Communist Party, organized a two-day revolt by farm workers. With as much speed as ease, Hernández and his army suppressed the rebellion, summarily executing some 10,000 of those he suspected of participating in the uprising. The revolt and its brutal ending—called in Salvador *la matanza*, or “the slaughter”—scarred the history of the nation and, in many ways, dictated its future. For the revolt, which not only eliminated the threat from the left but also destroyed most of the

lingering vestiges of Indian culture, taught the landed elite the value of a military dictatorship. Afterward, a succession of military governments controlled the nation until 1979.

Salvadoran Revolt (1948)

PRINCIPAL COMBATANTS: Military officers vs. forces of President Salvador Castañeda Castro

PRINCIPAL THEATER(S): El Salvador

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Young military officers sought to install a reform government by overthrowing the current president.

OUTCOME: The coup was accomplished quickly and a new leader installed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but not extensive

TREATIES: None

From 1931 to 1944, the impoverished Central American nation of El Salvador was ruled by a military dictator, President Maximiliano Hernández Martínez (1882–1966), who came to power on a wave of repression known bitterly in El Salvador as *la matanza* (“the slaughter”) (*see* SALVADORAN REVOLT [1931–1932]). Personally honest and austere, Hernández sought to model himself politically after the fascist dictators of Europe, but he became best known to Salvadorans for his fascination with the occult arts. His regime survived a coup in April 1944, but he resigned from office the following month when a general strike launched by university students brought the nation to a standstill. Despite the unrest, Hernández’s lower-level military men remained in control, and there was no real change in government; one of their own, Salvador Castaneda Castro (c. 1880–1965), took up residence in the presidential palace. While continuing its hard line on Salvadoran liberties, Castaneda’s government made a few half-hearted concessions—promoting reforms in education and labor and advocating the union of El Salvador and Guatemala.

Instead of saving his presidency, this combination of faint-hearted reform and hard-line repression proved Castaneda’s undoing. In 1948, he became the target of an uprising led by young army officers and called by some the “Majors’ Revolution.” It called for full-scale reform and installed a junta headed by Major Oscar Osorio (1910–69). This coup d’état, which lasted from December 12 to December 14, gave rise to policies and political prac-

tices that would dominate Salvador's government for the next 30 years. Elected to a six-year term as president in 1950, Osorio organized the Revolutionary Party of Democratic Unification (Partido Revolucionario de Unificación Democrática, or PRUD) and launched a variety of true reforms, including such projects as the development of hydroelectric dams and urban housing. He extended collective bargaining rights to urban workers, but in the main his reforms were aimed at encouraging economic growth, and they were of most benefit to the middle class.

Samil Independence Movement (March First Movement) (1919–1920)

PRINCIPAL COMBATANTS: Korean nationalists vs. Japanese soldiers and police

PRINCIPAL THEATER(S): Korea

DECLARATION: Proclamation of Independence, 1919

MAJOR ISSUES AND OBJECTIVES: Koreans, chafing under 10 years of Japanese rule, attempted to garner world support for independence.

OUTCOME: Although the movement failed to achieve Korean independence, Japanese reforms allowed Koreans some measure of self-government. The movement also fostered the establishment of the Korean Provisional Government and drew worldwide attention.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Japan, total unknown; 7,000 Koreans killed and 13,000 wounded

TREATIES: None

Long an independent and proud nation, Korea bristled when, in 1910, Japan annexed the country against its will. At the conclusion of WORLD WAR I, Koreans petitioned the peace commission in Paris to acknowledge them as an oppressed people entitled to self-determination. When the commission ignored them, the Koreans decided to take matters into their own hands.

On March 1 (or *sam-il* in Korean), 1919 (the commemoration day of the Korean emperor), 33 religious and cultural leaders gathered in the capital city of Seoul to sign and read before a huge crowd the Proclamation of Independence. Supporters of Korean independence gathered in towns throughout the country to read the document and to call on international leaders to pressure Japan into ending colonial rule.

Before Japanese soldiers and police suppressed the movement completely a year later, more than 2 million Koreans took part in 1,500 demonstrations. Although the

demonstrations were peaceful, Japanese authorities killed or wounded nearly 23,000 Koreans. An additional 46,000 demonstrators were arrested, of whom some 5,000 were imprisoned.

Once the demonstrations were squelched, the Japanese government conceded a few reforms and granted Koreans a voice in their own governance. Some Koreans, however, remained dissatisfied and in 1919 established a Korean Provisional Government in the Chinese city of Shanghai. The provisional government allowed Korea to make some progress toward independence from Japan. It quickly contacted independence groups at home and abroad, and by 1922 all Korean resistance groups in Manchuria had unified under its leadership. Its leaders published a newspaper, the *Independent*, and sent emissaries to the United States and Europe to keep their plight on the world stage. Still, there was not much the provisional government could do at home against the entrenched Japanese occupation. Totalitarian Japan effectively suppressed all nationalistic dissension in Korea, even prohibiting use of the Korean language in the later 1930s. Internationally, the coalition behind the provisional government ultimately fell apart, with some leaders turning to the United States for moral support, while others looked for military aid for the revolution in Manchuria from the Soviets, and still others were drawn to the right-wing anti-Japanese Chinese Nationalists of Chiang Kai-shek (1887–1975).

In the ensuing years, the failure of the Samil Independence Movement enhanced the rise of the Korean Communist Party. When Korea finally regained its independence after Japan's defeat in WORLD WAR II, the Communists were ready. In spite of the division of Communist North Korea and democratic South Korea at war's end, both countries observe March 1 as a national holiday.

Samnite War, First (343–341 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. the Samnites

PRINCIPAL THEATER(S): Campania region of Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: At the behest of the Latin League, Rome sought to stop incursions by the Samnites into the Campania.

OUTCOME: Internal problems in the Roman army prompted a negotiated peace, which displeased the Latin League.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of 341

1000 Samnite War, Second (Great)

Toward the end of the fifth century B.C.E., Rome began to expand on the Italian Peninsula at the expense of the Etruscans and other Latin states. In the path of Rome's rapid rise to hegemony over Italy south of the Po valley lay the Samnites. This warrior people, a collection of related Oscan-speaking tribes living principally in the southern Apennine Mountains in what is today Abruzzi, Italy, were not politically unified. Rome's expansion was likely responsible for linking these tribes militarily to oppose their common enemy. According to the Romans, this first in a series of three wars with the Samnites began when Campania, allied with the Romans in the Latin League, called on Rome for military assistance to resist Samnite raids. Although Roman historians tended to paint all the city's imperialism in the colors of justified self-defense against outside aggression, it is probably true that the Campanians, fighting with the Samnites over the town of Capua, sought the backing of Roman military might, the first of many times Rome would go to war at the behest of a weaker ally already at war. Once invited in, the Romans usually wanted to stay. Rome tended not only to conquer the adversary but also to absorb the ally.

In any case, troops were dispatched, and in 342 B.C.E. they emerged victorious from the relatively minor Battle of Mount Gaurus. However, dissension within the Roman ranks proved as formidable a foe as the Samnites themselves. After suffering a series of mutinies, Rome decided to appease the Samnites rather than continue fighting them. A treaty of 341 ceded to the tribes several settlements in the Campania. When this aroused anger within the Latin League, Rome embarked on a course of extending its "protection" to the rest of the Campania. In other words, the Campania itself was now suddenly firmly attached to Rome—a major addition to Rome's growing strength and a new source to satisfy its increasing need for manpower. The absorption of Campania provoked the other Latins in the Latin League to take up arms against Rome to maintain their independence in the LATIN WAR (340–338 B.C.E.), which resulted in the abolishment of the league.

Harris, *War and Imperialism in Republican Rome, 327–70 B.C.* (Oxford: Clarendon, 1985); E. T. Salmon, *Roman Colonization under the Republic* (Ithaca, N.Y.: Cornell University Press, 1969).

Samnite War, Second (Great) (327–304 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. the Samnites

PRINCIPAL THEATER(S): Campania region of Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The war began with a struggle over control of Naples and expanded to encompass control of all southern Italy.

OUTCOME: After initial successes, the Samnites and their allies suffered a series of defeats, which ultimately left Rome as the dominant power in Italy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty between Rome and the Samnites, 304 B.C.E.

After the brief First SAMNITE WAR (343–341 B.C.E.), which resulted in Rome's major acquisition of the rich land of Campania and its capital Capua, and the consequent LATIN WAR from 340 to 338 B.C.E., Rome found itself master of central Italy and spent the next decade in further conquest and colonization. Not surprisingly the Romans soon confronted new Samnite tribes—war-toughened, Oscan-speaking peoples from the rugged mountainous terrain of the southern Apennines, though the current tribes lived in the middle Liris (modern Liri) River valley. The encounter sparked the Second, or Great, Samnite War, during the first half of which Rome suffered serious defeats.

The Samnites had lent their support to those Latins in Naples opposed to the sway of Rome, and Rome responded by besieging Naples, the city now garrisoned by Samnites. Under pressure of the siege, the Samnites peacefully evacuated the city, which in typical Roman fashion was made a Roman ally. The alliance, in turn, presented a fresh cause for war, and the Samnites ambushed Roman legions in the Apennines at Caudine Forks in 321 B.C.E. Trapped in a narrow canyon the legions were compelled to surrender. Rome was forced to sign a five-year treaty. Roman historians later tried to deny this humiliation, inventing stories for Roman consumption of Rome's refusal to accept the peace and of the revenge it took against the Samnites, but the truth was that, although Roman legions were without peer in open battle, they were overmatched in the mountains. The Samnites yoked their prisoners like slaves and marched them out of the mountains, an ignominy Rome was not willing to let stand.

Roman military leaders resolved not only to regroup but also to retrain for fighting on the Samnites' mountainous territory. According to the Roman chroniclers, Rome had always used hoplite tactics, borrowed from the Etruscans. Now, faced with the success of the Samnites, the city's legions adopted the mountain tribes' manipular system. From above, the manipular formation looked like a modern checkerboard, with solid squares of soldiers separated by empty squares. Far more flexible than the solid masses of hoplite formation, the system was ideal for maneuvering on rugged terrain, and Rome continued to use it to deploy its legions throughout the history of the republic and into its imperial age.

By 317, the legions were prepared to resume the war, only to suffer a crushing defeat in 316 at the Battle of Lautulae. From this, however, recovery was more rapid, and in 315 it was the Romans, under Caius Maenius, who defeated the Samnites, at the Battle of Ciuna. This victory

returned control of the Campania to Rome and put the Samnites on the defensive.

In typical Roman fashion, fortified colonies were established on the frontier with Samnium, so that the border region was now well defended. Rome laid the first of its many military roads, the famed *Via Appia*—the Appian Way—from Rome to Capua, thereby ensuring rapid transport, supply, and communication with the frontier. In response to these developments, the Samnites roused the Etruscan cities of the north to rise up against Rome. Roman legions suppressed the rebellion at the Battle of Lake Vadimo in 310 and compelled the Etruscans to make peace by 308. With the Etruscan alliance cut off, the Samnites stirred rebellion among neighboring tribes in the central Apennines, but the Romans also put down these uprisings.

In 305, Titus Minucius led the legions in a siege of Bovianum, a Samnite stronghold. When a Samnite force under Statius Gellius attempted to relieve Bovianum, the legions not only repelled the relief columns but also decimated Gellius's forces—though Minucius also fell in battle. Defeat at Bovianum sent the Samnites to the peace table, and a treaty was concluded in 304, leaving Rome the major power in all Italy.

Harris, *War and Imperialism in Republican Rome, 327–70 B.C.* (Oxford: Clarendon, 1985); E. T. Salmon, *Roman Colonization under the Republic* (Ithaca, N.Y.: Cornell University Press, 1969).

Samnite War, Third (298–290 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. the Samnites (in alliance with the Gauls, Etruscans, and Sabines)

PRINCIPAL THEATER(S): Umbria, Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Samnites and their allies sought to check Rome's northerly expansion.

OUTCOME: The Samnites and their allies were thoroughly defeated, but Samnium was admitted to an alliance with Rome rather than rendered subject to Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Rome is known to have fielded at least five legions, about 30,000 men.

CASUALTIES: At the decisive Battle of Sentium: Rome, 8,200 casualties; Samnites and Gauls, 25,000 killed and 8,000 made prisoner

TREATIES: Presumably a formal treaty ended the war in 290 B.C.E. and created a Roman-Samnite alliance.

The Great Samnite War (*see* SAMNITE WAR, SECOND [GREAT]) ultimately ended in a Roman victory that helped make Rome master of all Italy. The Third Samnite War was

a last and a desperate attempt by the Samnites to escape the inevitable Roman hegemony and to remain independent. They persuaded the Etruscans, the Sabines, and the Gauls to join them in checking the northward expansion of Rome. The allies raided Roman frontier outposts, but when the Gauls and Samnites went up against five Roman legions at Sentinum (Sassoferrato, Umbria) in 295, they were defeated. The Roman generals Quintus Fabius Maximus Rullianus (d. c. 291 B.C.E.) and Publius Decius Mus attacked Samnite and Gallic forces but were threatened when the Gauls' chariots broke the Roman left. Decius was able to rally his legions—though he himself fell in the action—and the Gauls were pushed back. In the meantime, on the Roman right, the Samnites were routed. This exposed the Gauls' flank, which Fabius attacked, breaking the Gallic line. While the running battle was being fought, other Roman units hit the Samnite camp, killing the allied commander, Gellus Equatius. Roman losses were heavy, at 8,200 killed and wounded, but the Gauls and Samnites lost at least 25,000 killed and another 8,000 prisoners.

After Sentinum, the Roman legions laid waste to the countryside, but the Samnites continued to resist, even after they were again defeated at the Battle of Aquilonia in 293. It was 290 B.C.E. before the Samnites finally sought peace. In recognition of their extreme gallantry—and perhaps recognizing the folly of attempting to enforce abject submission—Rome accepted the Samnites as allies rather than subjects. In any event, Rome was now the unquestioned master of Italy.

Samoa Civil War (1880–1881)

PRINCIPAL COMBATANTS: Samoan tribal groups

PRINCIPAL THEATER(S): Samoa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Following the establishment of commercial treaties with the United States, Germany, and Great Britain and the death of "King" Malietoa Talavou, Samoa's traditional tribal warfare developed into civil war among various groups contending for recognition by the imperialist powers.

OUTCOME: The faction led by Malietoa Laupepa won, with the backing of the imperialists, and he became king.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

1002 Samoan Civil War (1887–1889)

Although historians disagree sharply about the reasons—and the significance, if any—of the so-called new imperialism of the late 19th and early 20th centuries, they do not dispute that some new departure from past policies did occur. This new era was characterized by an acceleration in colonial acquisitions and the entry onto the field of a number of new players, including the United States, Germany, and Japan, all of which were undergoing the kind of rapid industrialization England—and to some extent, France—had experienced earlier. These colonizing efforts disrupted the traditional societies of indigenous peoples around the globe, especially in Africa and the Pacific, and often led to rebellion and civil war, in which the great powers of Europe were often implicated and frequently involved.

As is often common in hunter-gatherer cultures, erratic tribal warfare had long characterized Samoa. By 1879, however, the United States, Germany, and England had all signed treaties that gave them commercial and other rights, and in 1880 all three agreed to recognize Malietoa Talavou (d. 1880) as Samoa's "king." Consequently, when he died a year later a civil war broke out between groups contending for power and the backing of the imperialists. Eight months of sporadic fighting followed, at the end of which Malietoa Laupepa (d. 1898)—having gained the recognition of the foreign powers—ascended to the throne.

Samoan Civil War (1887–1889)

PRINCIPAL COMBATANTS: German-backed Samoan "king" Tamasese vs. rebels under tribal chief Mataafa

PRINCIPAL THEATER(S): Samoa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Germany responded to the unrest in Samoa created by its commercial policies by deposing the current king, Malietoa, and replacing him with the more pliant Tamasese. The new king's unpopularity gave rebel leader Mataafa the opportunity he had been seeking even under the old king, and Mataafa launched a rebellion.

OUTCOME: The rebels won a few victories, leading the Germans to overreact and threaten to bring in marines, at which point the United States and Great Britain began to apply pressure of their own. As a result, Malietoa was restored to power, after agreeing to grant the foreigners further concessions. The civil war ended, but Mataafa remained a threat.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In the decade following the SAMOAN CIVIL WAR (1880–1881), the imperial powers—the United States, Germany, and Great Britain—who had helped spark the conflict took control more thoroughly, catching up Samoa in their own jockeying for influence and prestige half a world away. Increasingly, the natives of this island chain in the South Pacific chafed under the commercial and political revolutions in their culture created by the arrival of these foreign powers.

They resented, for example, the heavy taxes imposed on them by a German trading company, which insisted that those who could not afford to pay the taxes mortgage their lands to the company. In support of this commercial land piracy, German warships offloaded troops to back a local chief, Tamasese (fl. 1880s), whom the Germans helped to proclaim *tafaifa*, or "king of all Samoa," exiling the old king, Malietoa Laupepa (d. 1898), who had come to power with the backing of all the imperial powers. A popular chief, Mataafa (d. after 1899), rebelled against Tamasese in September 1888.

The German consul at Apia, on the island of Upolu, took charge of the war effort and led Tamasese's tribesmen against the insurgents, with a German gunboat affording the Germans' client king protection from offshore. At Mulinu'u Point, Mataafa's forces routed Tamasese's warriors; in response the gunboat shelled rebel villages. The Germans had overplayed their hand, and both British and U.S. officials lodged protests with the German government. Meanwhile, Mataafa's followers plundered German plantations and destroyed a contingent of German troops who had invaded the islands. An infuriated German consul then declared martial law and requested Berlin to send two companies of marines.

Wilhelm II's (1859–1941) government denied the request, mainly because it feared that sending the marines might cause the United States to intervene. Under the guidance of all three foreign powers, Tamasese was removed and Malietoa reinstated as king. In turn, Malietoa granted the United States, Great Britain, and Germany new administrative rights in addition to their commercial arrangements. Malietoa, more than ever, was a foreign puppet, and Mataafa, the rebel leader, remained at large and a threat.

Samoan Civil War (1893)

PRINCIPAL COMBATANTS: Samoan natives led by Mataafa vs. native forces of King Malietoa Laupepa

PRINCIPAL THEATER(S): Samoa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rebel Mataafa made a bid for power.

OUTCOME: King Malietoa retained his throne after German and British intervention; supporters of rebel leader Mataafa fled to the Marshall Islands.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The intervention of Germany, Britain, and the United States in the resolution of the SAMOAN CIVIL WAR (1887–1889) restored native leader Malietoa Laupepa (d. 1898) as king of the Samoan Islands while binding him more tightly to the control of the three powers. Testing the monarch's strength, long-time rebel leader Mataafa (d. after 1899) attacked the king's forces in defiance of a royal summons to the capital city of Apia. The king's soldiers, however, repelled the rebels and cornered them on the island of Manono. The arrival of British and German naval vessels brought a cease-fire and Mataafa's surrender. A German ship effected the exile of the defeated rebel to the Marshall Islands. Malietoa thus rebuffed this threat to his throne, but his death in 1898 set off the SAMOAN CIVIL WAR (1898–1899).

See also SAMOAN CIVIL WAR (1880–1881).

Samoan Civil War (1898–1899)

PRINCIPAL COMBATANTS: Forces of long-time rebel leader Mataafa, supported by Germany vs. Samoans loyal to King Malietoa Laupepa's heir, supported by American and British forces

PRINCIPAL THEATER(S): Samoa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: At the death of Malietoa Laupepa, Mataafa gained the Samoan throne with German backing. British and U.S. forces backed Malietoa's son, and war ensued.

OUTCOME: Samoa's monarchy was abolished; Germany gained possession of the western islands; the United States obtained the islands in the east.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Treaty of 1899

Exiled to the Marshall Islands at the conclusion of the SAMOAN CIVIL WAR (1893), longtime rebel Mataafa (d. after 1899) boarded a German ship and sailed in triumph into the capital city of Apia upon the death of Malietoa Laupepa (d. 1898). Backed by German influence in the Samoan

Islands, Mataafa secured the throne at the expense of Malietoa's son, Tanumafili. The sovereign's heir enjoyed the support of many natives, as well as the British and U.S. consuls. Fighting broke out between the loyalists of the two leaders, each side buttressed by their imperialist allies. By January 1899, the conflict had reached the streets in the capital. Within weeks, British and U.S. warships offset Mataafa's advantage, but they were unable to pacify the island's interior regions before the arrival of a peace commission on May 13, 1899. Composed of representatives of Germany, Britain, and the United States, the commission secured a cease-fire.

The commission worked out an agreement by which both factions relinquished their firearms in exchange for monetary gains. Both sides also agreed to abolish not only the Samoan monarchy but the unity of the Samoan Islands as well. The western islands, including Savaii and Upolu, and Samoa's capital city, Apia, became the possession of Germany. The United States took over the eastern islands and established the capital at Pago Pago. The British remained content with nothing in Samoa; Germany and the United States agreed to recognize Britain's interests in Tonga and the Solomon Islands, however.

Sand Creek Massacre (Chivington Massacre) (1864)

PRINCIPAL COMBATANTS: Cheyennes and Arapahos vs. the United States

PRINCIPAL THEATER(S): Colorado Territory

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Territorial governor's attempt to usurp mineral-rich Indian lands

OUTCOME: After the massacre, the Cheyenne and Arapaho went to war as the U.S. Congress held hearings and American public opinion turned against the army.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

United States, 700; Indian numbers unknown

CASUALTIES: Cheyennes, 137; Arapahos, 26 (110 of the slain Indians were women or children); United States, 14 killed, 39 wounded

TREATIES: None

The Sand Creek Massacre, a surprise attack by the U.S. Army on an unarmed and peaceful Cheyenne camp on November 29, 1864, shocked and outraged many Americans, led to

congressional and military investigations, and went down in history as a shameful blight on the already checkered record of the country's treatment of Native Americans.

In 1864, when Colorado's territorial governor, John Evans (1814–97), failed to secure mineral-rich Cheyenne and Arapaho hunting grounds in exchange for reservations, he called upon Colonel John M. Chivington (1821–94), military commander of the territory, to sweep the Indians out, even though, of all the Plains tribes, the Cheyennes and Arapahos had given the whites the least excuse for a fight and the majority of Cheyennes were inclined toward peace. A militant faction, a group of young warriors known as the Hotamitanio, or Dog Soldier Society, provided Chivington with incidents sufficient for him to declare all Cheyennes to be at war. He launched a number of attacks, which provoked Indian counterattacks. During the crisis, Governor Evans and Colonel Chivington formed the 3rd Colorado Cavalry, composed of short-term, 100-day enlistees drawn mainly from the territory's wide-open, violence-prone mining camps.

By winter, large numbers of Indians, led by Black Kettle (c. 1804–68), an older chief opposed to the youthful and tempestuous Dog Soldiers, were asking for peace. Evans and Chivington met with the Cheyennes and Arapahos and told them that those Indians who wanted peace should submit to military authority by laying down their arms at a local fort. The Indians left the meeting and marched to Sand Creek, 40 miles northeast of Fort Lyon, where they planned to talk with Major Wynkoop, who issued rations to them. The army, however, had little tolerance for Wynkoop's humanitarianism, and on November 5, one of Chivington's officers relieved Wynkoop as commander of the post, cut the Indian rations, and demanded surrender of their weapons. Some of the soldiers, without provocation of any kind, opened fire on a group of unarmed Arapahos who had approached the fort to trade buffalo hides for rations. By the end of November, most of the 3rd Colorado had gathered at Fort Lyon.

Meanwhile Black Kettle and his Cheyennes were still camped peacefully at Sand Creek, believing they had abided by Evans and Chivington's order to submit to military authority and believing, above all, that they were at peace. Chivington deployed his 700-man force, which included four howitzers, around the camp. When some of Chivington's officers protested that an attack on a peaceful village was murder, Chivington could barely restrain himself, shouting that he had come to kill Indians, believed it was his right to kill them, and would use any means at his disposal to kill them.

The presence of a surrounding army alarmed Black Kettle's people. But the chief had faith in Wynkoop. To calm his people—and to signify his loyalty and peaceful intentions—Black Kettle hoisted an American flag and a white flag of truce over his lodge. In response, the troops opened fire and charged. The unarmed Indians—warriors, old men, women, and children—ran in panic. Uncon-

scionable atrocities were committed: Children's heads were shattered with clubs, women were eviscerated, warrior corpses were castrated. Two hundred Cheyennes, two-thirds of them women and children, and nine chiefs were killed. Black Kettle escaped.

Far from disheartening the Indians, as Chivington had hoped, the Sand Creek Massacre galvanized their resolve to fight. Southern Sioux, Northern Arapahos, and Cheyennes united in a spasm of vicious revenge raids during late 1864 and early 1865, called by the U.S. Army the CHEYENNE AND ARAPAHO WAR of 1864–68. Except for Black Kettle, who still desperately hoped for peace, the chiefs gathered more allies as a result of the attack for a quick strike against the military presence in Colorado. On the other hand, news of the massacre and mutilation of men, women, and children shocked and outraged public opinion in the East and caused a wave of condemnation that led to investigations, first by the congressional Committee on the Conduct of the War, then by a joint committee of the Senate and House, then by a three-man military commission. Congress and the army brass denounced Chivington, who—having left the army—escaped discipline. The peace offensive in Washington hampered, but did not halt, General John Pope's (1822–92) conduct of war in the field against the Cheyenne and the Arapaho.

Santo Domingo, Revolution in (1844)

PRINCIPAL COMBATANTS: Nationalists of Santo Domingo vs. Haitian ruling forces

PRINCIPAL THEATER(S): City of Santo Domingo

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Santo Domingo independence from Haitian rule

OUTCOME: Santo Domingo regained its independence and reestablished the Dominican Republic.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After Christopher Columbus (1451–1506) first landed on Santo Domingo in the 15th century, the eastern two-thirds of the island of Hispaniola enjoyed only a few glorious weeks of complete and total independence. In 1821, Haiti, on the western end of the island, conquered the new republic shortly after it declared itself free of Spanish rule. Nationalists in Santo Domingo chafed under the harsh rule of Haiti, which had its own internal wars and instabilities.

In the 1830s, Santo Domingan revolutionary Juan Pablo Duarte (1813–73) returned after completing his European education and organized La Trinitaria, a secret society determined to regain the country's independence and spread liberalism. Taking advantage of the overthrow of Haitian president Jean-Pierre Boyer's (1776–1850) corrupt and inept regime in 1843, Duarte attempted to free Santo Domingo of Haiti's rule. His first attempts failed, and he fled the country. In the following year, however, Duarte's supporters continued the revolution, and he returned to join them. The rebels succeeded in capturing the city of Santo Domingo and a nearby fortress on February 24, 1844. They proclaimed an independent Dominican Republic and expelled the Haitian rulers.

Haiti continued the struggle, however, by sending 30,000 troops to the region. At Azua on March 19, nearly 300 Haitians were killed or wounded by Dominican forces under Pedro Santana (1801–64). Fighting continued through 1856, when the last of the Haitian army withdrew after a Dominican victory at Savana Larga.

Sanusi Revolt (1915–1917)

PRINCIPAL COMBATANTS: Sanusi rebels vs. Great Britain

PRINCIPAL THEATER(S): Libyan Desert (Egypt)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Traditional opponents of Western colonialism, the Sanusis (instigated by the Turks) attempted to drive British forces out of the Libyan Desert.

OUTCOME: The revolt was put down and the Sanusis driven back into Libya proper.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the early 20th century, European (first French and then Italian) colonization of Libya was resisted by a number of native factions, including the Sanusiyah Brotherhood, known to the Europeans as the Sanusis. The brotherhood was founded in 1837 by Muhammad bin Ali al-Sanusi (1791–1859), a Sufi mystic who might (in today's terms) be described as a militant Islamic fundamentalist, opposed to all violations of Muslim purity, including the incursion of Westerners.

During WORLD WAR I, the German-allied Ottoman Turks persuaded the Sanusis to attack British forces occupying the Libyan Desert of Egypt. The first attacks were launched in November 1915 and required the diversion of substantial British reinforcements to counter them. Early in 1916, during February and March, the British mounted a counteroffensive against the Sanusis, driving them in retreat to the Suva Oasis. There they stayed until 1917, when British forces captured the oasis and pushed the remaining Sanusis back into Libya.

The Sanusi Revolt had come to an end, but the power of the Sanusis was by no means neutralized. In Libya, they remained a continual menace to the Italians, and, after Italy's defeat in WORLD WAR II, the Sanusis were there to seize control of Libya. It was a Sanusi, Idris I (1890–1983), who became the first king of independent Libya in 1951. Idris was deposed in a coup led in 1969 by the present dictator of Libya, Muammar al-Qaddafi (b. 1943).

Sargon's Conquests of Sumer (c. 2325 B.C.E.)

PRINCIPAL COMBATANTS: Akkad vs. Sumer

PRINCIPAL THEATER(S): Sumer and Asia Minor

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Imperial expansion and conquest

OUTCOME: Akkad conquered Sumer and vast realms in Asia Minor.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** Unknown

Sargon of Akkad (r. c. 2334–2279 B.C.E.) came to the throne around 2334 B.C.E. Little is known of him or of the Semitic people he led; however, he was certainly a prodigious empire builder, who pushed his territorial holdings far into the northwest, reaching into Asia Minor and ultimately attaining the coast of the Mediterranean. He defeated the forces of Uruk, which had dominated Sumer, and then took all of the cities along the middle Euphrates. He asserted control of the silver region of Anatolia (Turkey) and captured Susa, the Elamite capital in present-day western Iran. Sargon may even have reached Egypt, Ethiopia, and India. Totally engulfed in his career of conquest was the great ancient realm of Sumer. It is believed that the empire Sargon created lasted at least two centuries after his death.

Satsuma Revolt (1877)

PRINCIPAL COMBATANTS: Samurai of Satsuma vs. Japan's Meiji empire

PRINCIPAL THEATER(S): Satsuma, southern Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The samurai rebelled against what was effectively their dissolution by the Meiji emperor.

OUTCOME: The rebellion was put down by a large peasant army after an eight-month struggle.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Samurai, 40,000; forces of the emperor (not the regular army), 65,000

CASUALTIES: 20,000 rebels, killed or wounded; 6,278 Meiji troops killed, 9,523 wounded.

TREATIES: None

In feudal Japan, the samurai were the great hereditary warrior class. They endured from the 12th to the 19th century. In 1867, Japan was formally and finally unified under Mutsuhito (1852–1912), who reigned as Meiji, and the Tokugawa shogunate (military dictatorship), which had ruled Japan since the 17th century, came to an end. Although the daimyos, feudal lords under the shogunate, peacefully relinquished their domains to the emperor and accepted the infusion of the modern age under what was called the MEIJI RESTORATION, the samurai resisted the change and clung to the old ways.

In an effort to placate them, in 1871, the Japanese Crown granted the samurai generous pensions and empowered them to engage in any business or agricultural pursuits they desired. In 1873, the samurai were offered the option of taking their pensions in single lump-sum payments; three years later, this option was declared mandatory. The order bred further discontent among many of the samurai, as did a decree forbidding the wearing of swords except by military officers. To relinquish the wearing of the two swords was a far greater insult than even the commutation of the pension.

The Meiji military had little trouble putting down most of the various samurai groups who rose up in response to these insults, but in southern Japan on the island of Kyushu an aging but proud warrior named Saigo Takamori (1827–77) led the Satsuma clan in a last stand. Using both modern and traditional weapons, the Satsuma warriors posed a genuine military threat to the new regime. Beginning with some 15,000 rebels on January 29, 1877, Saigo besieged the imperial castle at Kumamoto. Over the course of the next few months he built up a force that reached 40,000 and that required Meiji to buttress his imperial army with a peasant draft. When some 50,000 of these new troops arrived to relieve the garrison, they surrounded and defeated the rebels. All in all, the Satsuma samurai would lose some 20,000 killed or wounded compared to the 6,278 killed and 9,523 wounded out of the 65,000 total troops deployed by the emperor. But it was the death of Saigo Takamori in a battle outside of Kagoshima Castle on September 24, 1877, that brought the revolt to an abrupt end. Without a leader, Saigo's inner circle committed *seppuku* (ritual suicide), and the others surrendered.

Savoyard Invasion (1602)

PRINCIPAL COMBATANTS: Savoyards (with Spanish support) vs. Swiss

PRINCIPAL THEATER(S): Environs of Geneva, in Switzerland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: The Savoyards, repulsed outside of Geneva, withdrew from Switzerland.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

At the beginning of the 17th century, Switzerland was a loose confederation of contentious cantons, so divided that

warfare was frequent even within the cantons, typically over religious issues. The House of Savoy, always viewing the loose Swiss Confederation as territory ripe for conquest, secured Spanish support for an invasion. The Savoyard invaders made it as far as the outer defenses of Geneva before skilled Swiss troops repulsed them, and they rapidly withdrew from the cantons. This was one of many armed conflicts that presaged the THIRTY YEARS' WAR.

Saxon Raids: Early Raids (c. 205–369)

PRINCIPAL COMBATANTS: Saxons vs. Britons and Roman legions

PRINCIPAL THEATER(S): Britain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Pillage

OUTCOME: Raiding was very costly; the great raid of 367 resulted in major devastation; order was restored by General (later Emperor) Theodosius.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Although no written historical records of the early Saxon raids of Roman Britain exist, archaeologists believe that raiding began in the early third century. The raiders were a mixture of Germanic tribes, which the Romans collectively labeled “Saxons.” Apparently, raids were sporadic until about 250, when they became regular and severe enough to warrant the erection of fixed fortifications along the shore from Kent to the location of modern Portsmouth. Clearly, the first nine forts—those erected by 250—were not sufficient; by 300, there was a chain extending as far west as Cardiff, in Wales. London, by now the major city of the Roman colony, was enclosed by a wall, and the town of York was also heavily fortified.

The Saxons indulged in raids rather than full-scale invasion; their object was not conquest, but pillage—and terror to expedite pillage. As far as can be determined, the staging areas for the raids were in Boulogne and Cherbourg.

In 367 there occurred a battle of sufficient magnitude to merit recording in annals. The Saxons exploited the withdrawal of Roman troops, who had been recalled to Rome to resist barbarian attack. Unimpeded by the legions, the Saxons dealt a major blow to the Britons, who lost their “count of the Saxon shore”—essentially the chief

military leader—and the duke in command of the “northern army.” These blows laid England open to massively destructive raids, which caused many settlements to be abandoned. It was not until Theodosius (c. 346–95), a Roman general who later became emperor, took command that the Saxons were driven out and some semblance of peace and order restored.

Saxon Raids: Invasion of Britain by Angles, Saxons, and Jutes (c. 407–500)

PRINCIPAL COMBATANTS: Britons vs. Saxons and Picts, then Britons vs. Jutes (Saxons, Angles, Frisians, Franks, and Jutes)

PRINCIPAL THEATER(S): Britain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Pillage and conquest

OUTCOME: The Saxons established kingdoms in Wessex and Sussex; the Britons united in Armorica (“Little Britain”).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents survive

The first disastrous period of Saxon raids against Britain was ended in 369 by forces under General (later Emperor) Theodosius (c. 346–95) (*see* SAXON RAIDS: EARLY RAIDS). When Roman legions were again withdrawn from Britain to defend Rome itself against barbarian invasion, the Saxon raids resumed. This was about the year 407.

In contrast to the earlier raids, those of this second period often penetrated far inland. Up to 429, combat followed the usual pattern of raids—pillaging—without discrete battles. However, in 429, Verulamium (St. Albans) was attacked by Saxons allied with Picts. This developed into a major battle, in which the Britons collapsed; British rule disintegrated under the combined onslaught of Saxons, Picts, and Scots. An appeal was made to Rome for military assistance in 446, but to no avail.

In the power vacuum created by the raiding, various warlords took charge of whatever territory they could control. One of these, a Briton named Vortigern (d. c. 461), employed mercenary Jute barbarians to fight the Picts. The Jutes, who included an admixture of Saxons, Angles, Frisians, and Franks as well as Jutes proper, rebelled against Vortigern over an issue of payment. The mercenaries secured reinforcements from relatives and other tribes, then attacked Aylesford in 455 and Crayford in 457, both of which fell to them. By 475, they had established the

kingdom of Kent—and thus the Saxons (along with others) created a lasting presence in Britain.

The chaos drove many Britons westward to Armorica, or Little Britain, leaving Sussex and Wessex to the Saxons, who established kingdoms in these places by 477 and 495, respectively. Over the next decade, the Britons became increasingly united and well prepared to war with the Saxons (see SAXON RAIDS: ARTHUR'S DEFENSIVE WARS; SAXON CAMPAIGNS IN SOUTH-CENTRAL BRITAIN).

Saxon Raids: Arthur's Defensive Wars

(c. 500–537)

PRINCIPAL COMBATANTS: Britons vs. Saxons

PRINCIPAL THEATER(S): Britain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rallying behind King Arthur, the Britons sought to recover territory lost to the Saxons.

OUTCOME: Defeating the Saxons with a cavalry attack, Arthur confined the Saxons to territory east of the Fosse Way and firmly established Briton hegemony west of that road.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Beginning about 400 C.E., Britain suffered invasion by various Norse tribes (see SAXON RAIDS: INVASION OF BRITAIN BY ANGLES, SAXONS, AND JUTES). The Saxons had established kingdoms in Sussex and Wessex (495), whereas the Britons had, by 500, become united in Armorica ("Little Britain"). Sometime before 516 they rallied behind a chief known to history as Artorius, presumably the King Arthur of legend. By 537 Arthur had engaged the Saxons in a major battle at a place called Badon Hill, which historians believe corresponds to the modern Liddington Badbury. Arthur used cavalry in a swift offensive against the Saxons, to whom battle on horseback was entirely unknown. Overwhelmed, the Saxons suffered a decisive defeat, and withdrew east of the Fosse Way, a long-established Roman road. The Britons now became preeminent in the west.

Saxon Raids: Saxon Campaigns in South-Central Britain (534–600)

PRINCIPAL COMBATANTS: Internecine conflict among the Saxons; then, Saxons vs. Britons

PRINCIPAL THEATER(S): Britain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Pillage and expansion

OUTCOME: The Britons were defeated and weakened, but internecine conflict among the Saxons prevented the Saxons from fully exploiting the Britons's defeat.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Variable during this long period

CASUALTIES: Unknown, but very heavy among the Britons

TREATIES: None

By the middle third of the sixth century, the Saxons who had come to Britain as invaders had set up the separate kingdoms of Kent, Sussex, Wessex, East Anglia, Essex, Northumbria (Bernicia and Deira), and Mercia—the so-called Saxon Heptarchy. Among these kingdoms, raiding was frequent, as were conflicts to acquire territory and political dominance. The Britons, confined primarily to the west, looked on until 552, when they launched an offensive across the Fosse Way at Searoburh (Old Sarum). The Saxon defenders repulsed the attack, then mounted a counteroffensive, which drove the Britons back and put the Saxons in a favorable position for seizing the initiative from the Britons. This they did in 556. Saxon forces crossed the Fosse Way and won important victories, then held fast. They did not renew the offensive until 571, again emerging generally victorious. The crowning disaster for the Britons came in 577, at the Battle of Deorham (Dyrham, near Bath). The Britons of Dumnonia were decimated here.

Despite decisive victories, the Saxons did not press their advantage, failing to occupy Dumnonia. Until the beginning of the seventh century, they continued to prey upon the Britons in sporadic raids, but, so far as out-and-out war was concerned, they fought mainly among themselves.

Scandinavian Revolt (1433–1439)

PRINCIPAL COMBATANTS: Swedish, Danish, and Norwegian rebels vs. Kalmar Union

PRINCIPAL THEATER(S): Sweden

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Swedes rebelled against the oppressive rule of Erik of Pomerania, ruler of the Kalmar Union of Sweden, Denmark, and Norway.

OUTCOME: As Erik became increasingly tyrannical, Denmark and then Norway joined Sweden in revolt, and Erik was deposed as king of Denmark and as ruler of the Kalmar Union.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The Kalmar Union, which comprised Denmark, Sweden, and Norway, was ruled by a Dane, Erik of Pomerania (1382–1459)—Erik VII—who appointed Danes and Germans to administrative posts in Sweden and interfered in the affairs of the church. His bellicose foreign policy forced him to impose heavy taxes and troop levies on Sweden, which especially burdened and angered Sweden's peasantry. Finally his war with Holstein (*see* KALMAR WAR WITH THE HANSEATIC LEAGUE) prompted a Hanseatic blockade of the Scandinavian states in 1426 and cut off the import of salt and other necessities and the export of ore from Sweden. This, along with the oppressive taxation, the disruptive troop drafts, and the onerous "foreign" officialdom, led to a revolt by Bergslagen peasants and miners in 1434, while the war still raged. The rebel leader, Engelbrekt Engelbrektsson (d. 1436), marched his ragtag and impromptu army against the Danish governor, successfully attacking castles and evicting many of the hated Danish bailiffs and German officials.

Around the nucleus of Engelbrektsson's grassroots force, people from the Swedish provinces of Upland, Vermland, and Södermanland joined the revolt, which soon extended to parts of Norway and certain towns of the powerful Hanseatic League. Propelled by popular force, the rebellion formed a coalition with the national council, which at the 1435 national meeting in Arboga named Engelbrekt "administrator" of Sweden.

With the rebellion under way, Erik of Pomerania negotiated with the nobility of Sweden—which opposed the uprising of the peasantry—to create a new alliance of Denmark and Sweden with the object of reestablishing Erik on the throne. In an effort to end Engelbrektsson's power, the Swedish nobility forced the council to abolish the post of administrator, but then it went beyond this by allowing Erik to turn his army loose upon the Swedish coast. The troops caused great destruction; the council rebelled by reestablishing the administrator post and naming to it nobleman Karl Knutsson (c. 1408–70) along with Engelbrekt. Soon after, Engelbrekt was murdered by a nobleman, and Karl Knutsson became the sole Swedish regent.

Meanwhile, Erik defied the Swedish council, the new administrator, and his own people, the Danes, who now

demanded constitutional reforms to limit his absolute sovereignty. In Denmark and Sweden, Erik of Pomerania was officially deposed in 1439, and Norway followed suit three years later.

A new Kalmar Union was formed, along constitutional lines, and the Danish council elected Erik's nephew, Christopher of Bavaria (1418–48), as king in 1440. Karl Knutsson gave up his regency, receiving, in return, Finland as a fief, whereupon the Swedish council also accepted Christopher as their new king.

Scandinavian War (1026–1030)

PRINCIPAL COMBATANTS: Norway and Sweden vs. Denmark

PRINCIPAL THEATER(S): Norway and Denmark

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Olaf II of Norway wanted to end Danish hegemony in his country.

OUTCOME: Despite an alliance with Sweden, Norway, twice defeated at sea, failed to end Danish hegemony.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Descended from Norway's pagan royalty, Olaf Haraldson (c. 995–1030) was a Viking whose exploits in the Baltic as a young man brought him to England in 1009, where he joined English ruler Ethelred II ("the Unready"; c. 968–1016) against the Danes in 1013 (*see* VIKING RAIDS IN ENGLAND, LATER). When the Danes began to again gain the upper hand in England, Olaf sailed off, first to France, then to Spain. It was in France, in 1013, that he accepted Christianity and was baptized.

Returning to Norway two years later, Olaf launched a series of conquests of territory previously held by Denmark, Sweden, and some of the Norwegian nobility. By 1016 he had consolidated his hold over all Norway. Over the next 12 years he not only built a base of support among the aristocracy in the interior opposed to Denmark's hegemony in the Baltic but tirelessly pushed on them his Christian faith, using missionaries he brought back from England. In fact, the Church of Norway dates from 1024, when Olaf and his ecclesiastical advisers established a religious code at Moster, considered by many to be Norway's first national legislation.

In 1026, after a 10-year respite from Danish domination, Canute II (the Great; c. 995–1030) king of England and Denmark, threatened to conquer Norway and restore Danish territorial rights. To resist this, Olaf II struck an alliance with Anund (d. 1051) of Sweden and launched a naval attack against the Danes. The attack was repulsed with the defeat of the Swedish fleet at the Battle of Strangebjerg in 1026. However, while Canute was leading this battle, Olaf and Anund invaded Denmark by land.

In 1028, after Canute's return, a new naval battle was launched, which resulted in an even worse defeat for the combined Swedish and Norwegian fleets at the Battle of Helgeaa. Beaten, Anund returned to Sweden. Olaf continued to resist. Canute—who, on the one hand, controlled the trade routes to the west of Norway and, on the other, was likely to rule more indirectly than the Christianizing Olaf—now won the support of leading Norwegian chieftains and forced Olaf to flee to Russia in 1028. At Kiev he took refuge with the relatives of his Swedish wife.

In 1030, Olaf attempted to reconquer Norway after recruiting a new army from Sweden with the help of Anund. But he was defeated and killed by a superior force, consisting of Norwegian peasants and Danish warriors, in the Battle of Stiklestad, one of the more celebrated battles in Viking lore. As a result, long afterward a legendary aura surrounded his death.

Indeed, talk of various miracles accompanying his death, along with his missionary work, led the Christian church to canonize him in 1031, after which his popularity spread rapidly. Soon churches and shrines in his honor cropped up in England, in Sweden, and in Rome for this new saint, ultimately the last to be accepted both by the Roman Catholic and by the Eastern Orthodox churches.

Scandinavian War (1448–1471)

PRINCIPAL COMBATANTS: Sweden and Norway vs. Denmark

PRINCIPAL THEATER(S): Sweden

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: At issue was Danish hegemony in Sweden.

OUTCOME: After a long struggle among many factions, Denmark's King Christian I was decisively defeated at the Battle of Brukeberg, near Stockholm, and the Danish hegemony over Sweden ended permanently.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

When the Danish council elected Christopher of Bavaria (1418–48) King Christopher III in 1440, it was in hopes of forming a new Kalmar Union along constitutional lines that might prove more acceptable to Swedes who had mounted the SCANDINAVIAN REVOLT of 1433–39. In the event Swedish regent (or administrator) Karl Knutsson (c. 1408–70) gave up his control in exchange for Finland as a fiefdom, and the Swedish council also officially accepted the new king. But when Christopher died without heirs, the Swedes elected Knutsson as King Charles VIII, hoping the Danes too would accept him as head of the union. Instead the Danes elected Christian of Oldenburg (1426–81) their new King Christian I. For its part, Norway chose Charles, not Christian, as king, but at a meeting of the Danish and Swedish councils in 1450 the Norwegians agreed to give up Charles's claims on Norway in order to help settle the conflicting claims. Parties to the councils' meeting also agreed that whichever king lived longest would inherit the union or that a new joint king would be elected when both were dead.

Charles refused to have any part of these compromises, and war broke out between the two countries. But Charles's obstinacy cost him. Already under pressure from the Swedish clergy, which hated him, he lost the support of the nobles and the people. In February 1457, he fled the country, and Christian was popularly acclaimed "king of Scandinavia."

It did not take long before Christian's oppressive tactics of domestic government, including burdensome taxation and the use of a government police force, made him unpopular. When Christian added to this a dispute with the church over funds, the Swedish bishop of Linköping nullified all obligations of allegiance to Christian and mustered military forces for a rebellion. Thousands soon joined in the uprising, and the king's armies were forced into headlong retreat all the way to Stockholm. After taking a brief stand, the Danes capitulated, and Christian returned to Copenhagen. Charles VIII was recalled to the Swedish throne in 1464.

In 1465, Christian, still occupying the Danish throne, reached out to the archbishop of Uppsala, Sweden, who agreed to organize a Swedish force opposed to Charles. Later in the year, Charles was defeated in battle and, once again, departed the throne and fled the country. Christian, however, did not step in but allowed the archbishop of Uppsala to assume the reins of government. Partisans of the departed Charles plotted against the archbishop, who called on Christian for military aid in 1466. In the meantime, Charles's supporters formally renounced Danish rule and again called for the return of their king. Now Sweden was divided between supporters of Charles and supporters of Denmark and Christian. Charles, however, returned to Sweden with a sizable army and defeated the Danes and their supporters.

Peace negotiations were under way when Charles died in 1470, leaving the government in the hands of Sten

Sture (c. 1440–1503), “administrator” of Sweden. Sten organized a new military force, which he led against Christian at the Battle of Brukeberg, outside of Stockholm, on October 10, 1471. Sten dealt Christian a decisive defeat, which ended the Danish hegemony in Sweden.

Schleswig-Holstein Revolt (1848–1849)

PRINCIPAL COMBATANTS: Denmark (with Swedish aid and diplomatic aid from England, Austria, and Russia) vs. Prussia

PRINCIPAL THEATER(S): Schleswig-Holstein

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Prussia sought to expand into the region by aiding German-speaking locals in rebellion against Denmark, which controlled Schleswig-Holstein.

OUTCOME: Denmark prevailed, with military and diplomatic aid from several countries.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Denmark, 3,500 killed; Prussia, 2,500 killed

TREATIES: Convention of Malmö, August 26, 1848; Treaty of Berlin, 1850

The German-speaking Danish provinces of Schleswig and Holstein revolted against their Danish overlords in 1848, partially at the instigation of Prussia, which sent military aid in the form of an army of occupation under General Friedrich Heinrich von Wrangel (1784–1877).

Sweden responded with military aid to Denmark; England also supported the Danes, threatening naval action against Prussia. When both Austria and Russia threw their support behind Denmark, the Prussians withdrew, leaving the “Schleswig-Holstein Question” unsettled.

The war consisted of two distinct rounds of combat—the first spanning April 10 to August 26, 1848, and the second, March 25 to July 10, 1849. The second round of fighting came after the Convention of Malmö (August 26, 1848), and peace was not fully and formally established until the Treaty of Berlin in 1850. That treaty restored Danish rights to the provinces, but a second war (the DANISH-PRUSSIAN WAR of 1864) would erupt over rival claims.

See also SEVEN WEEKS' WAR.

Schleswig-Holstein War See DANISH-PRUSSIAN WAR.

Schmalkaldic War (1546–1547)

PRINCIPAL COMBATANTS: Schmalkaldic League (nine Protestant German states) vs. the Holy Roman Empire

PRINCIPAL THEATER(S): Germany

DECLARATION: Holy Roman Empire on the Schmalkaldic League, 1546

MAJOR ISSUES AND OBJECTIVES: The Holy Roman Emperor, Charles V, wanted to destroy the power of the Protestant Schmalkaldic League.

OUTCOME: The Schmalkaldic League was decisively defeated and broken at the Battle of Mühlberg.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the culminating Battle of Mühlberg, the Schmalkaldic League fielded 9,000 men against 13,500 papal and imperial troops.

CASUALTIES: Schmalkaldic League casualties at Mühlberg were very heavy; papal and imperial forces lost only 50 men.

TREATIES: None

Feeling menaced by the Holy Roman Empire, nine Protestant German states (Hesse, Saxony, Brunswick, Anhalt, Mansfeld, Magdeburg, Bremen, Strassburg, Ulm) formed the Schmalkaldic League in 1531 as a defensive alliance. The Holy Roman Emperor, Charles V (1500–58), took no action against the league and, in fact, did not so much as deign to recognize its existence until 1544. Two years later, in 1546, he decided to act against it.

Using as a pretext the Protestants' refusal to attend the Council of Trent convened by the church, Charles declared war on the Schmalkaldic League. It was an ill-timed declaration, because he had not bothered to marshal the forces to back it. For its part, however, the league failed to act quickly, when it could easily have defeated unprepared imperial forces. The first battle did not take place until April 24, 1547, at Mühlberg (near Leipzig). By this time, imperial forces, under Don Fernando Álvarez de Toledo, Duke of Alba (1508–82), were well prepared, whereas the dilatory league had not gathered all of its strength; in fact, it had even lost some forces that defected to the Holy Roman Empire. Thirty-five hundred imperial troops allied with a papal army of 10,000—13,500 troops in all—engaged 9,000 German Protestants under John Frederick (1503–54), elector of Saxony, and Philip (1504–67), landgrave of Hesse. The result was disaster for the forces of the league, which suffered heavy losses, compared to only 50 casualties on the Catholic side. Both Protestant commanders, John Frederick and Philip, were taken prisoner, and the war abruptly ended. In 1548, the Protestant leaders were ignominiously exhibited at the Diet of Augsburg, which, despite triumph

over the German Protestants, failed to resolve dissension within the Holy Roman Empire.

Scottish Barons' Revolt (1488)

PRINCIPAL COMBATANTS: James III vs. his dissident nobles

PRINCIPAL THEATER(S): Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Always a weak monarch, James nevertheless regained control of his crown after being deposed in the Anglo-Scottish War of 1482, only to face another revolt from his discontented barons.

OUTCOME: After the conspirators captured his son, James was captured and killed at the Battle of Sauchieburn; his son was crowned king, and the leading dissident became regent.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In the ANGLO-SCOTTISH WAR (1482), James III (1452–88) of Scotland had been removed from the throne by his own brother, Alexander (c. 1454–85), duke of Albany, in league with a dissident Scottish baron, Archibald “Red” Douglas (1449–1514), and England’s Edward IV (1442–83). Captured by Albany at Lauder, James was forced to watch as Douglas hanged his favorites. Afterward, given the fact that James had never been popular with the Scots, Albany arrogantly dismissed his elder sibling back to Edinburgh as he set up his own rule. By March 1483, however, James had regained some ground and was sufficiently powerful to expel Albany from Scotland. Still, even without England to support the discontented among his subjects, James was unable to ward off revolts. In 1488, two powerful border families, the Homes and the Hepburns, once again backed by “Red” Douglas, raised a rebellion and captured James’s 15-year-old son, the future king James IV (1473–1513). The king tried in vain to come to terms with the conspirators, then fled to Stirling Castle. The keep treasonably refused him entrance, and he was forced to turn and face the rebels at Sauchieburn. Thrown from his horse and cap-

ured, James III was stabbed to death by one of his assailants, whose name remained anonymous. James IV was crowned king, and Douglas became his regent.

Scottish Invasion of Ireland (1315–1318)

PRINCIPAL COMBATANTS: Scots invaders under Edward and Robert Bruce vs. Anglo-Irish defenders of Ireland

PRINCIPAL THEATER(S): Ireland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Bruces wanted to conquer Ireland, with Edward as king.

OUTCOME: Despite initial success, the invaders were ejected by an Anglo-Irish army under Roger de Mortimer.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Edward Bruce (d. 1318) was the brother of the famed Scots nationalist leader Robert Bruce (1274–1329), known as Robert the Bruce. Edward pressed his hereditary claim to the earldom of Ulster by invading Ireland with some 6,000 men in 1315. At the Battle of Connor, he engaged and defeated the forces of the then-earl of Ulster, then went on to recruit the allegiance of the people of Connaught and West Meath, who gave him more than an earldom. By acclamation, Edward was crowned king of Ireland in 1316, and many rallied to Edward’s side.

In 1317, Edward invaded southern Ireland (as far as Limerick) with his brother Robert but began to lose the support of the people as the cost and brutality of the invasion escalated. The Bruces invaded in hit-and-run fashion and failed to establish strongholds, so once a sizable Anglo-Irish force was mustered by the English lord lieutenant of Ireland, Roger de Mortimer (c. 1287–1330), the Scottish invaders were pushed back to Ulster. Discouraged, Robert the Bruce returned to Scotland, leaving his brother Edward to face Mortimer alone. Edward fell at the Battle of Faughard, near Dunkirk, in 1318.

Scottish Revival See BRUCE'S REVOLT.

Scottish Uprising See CROMWELL'S SCOTTISH CAMPAIGN.

Scottish Uprising against Mary, Queen of Scots (1567–1568)

PRINCIPAL COMBATANTS: Mary, Queen of Scots vs. the Protestant lords of Scotland

PRINCIPAL THEATER(S): Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: After the mysterious death of Mary, Queen of Scots' husband, Lord Darnley, the Protestant lords sought to capture her and neutralize her power as well as that of her new husband, the earl of Bothwell.

OUTCOME: Mary's forces were defeated. Bothwell escaped, but Mary was captured, escaped, and was subsequently held by Elizabeth I of England, who, many years later, ordered her execution.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Mary's forces numbered about 6,000; the forces of the Protestant lords were superior in number.

CASUALTIES: Protestant lords, 300 killed; losses among Mary's army are unknown, but were doubtless higher.

TREATIES: None, save the abdication of Mary, Queen of Scots

Mary, Queen of Scots (1542–87), was raised Catholic by her grandmother's family in France. After the death of her husband, French king Francis II, she returned in 1561 to a Scotland become newly Protestant following the uprising against the regency of her mother, Mary of Guise (1515–60) (see SCOTTISH UPRISING AGAINST MARY OF GUISE). Not only was the young queen Roman Catholic, she was also next in line to the throne of England's resolutely Protestant monarch, Elizabeth I (1533–1603). Not surprisingly Mary had many enemies, both in her own court and Elizabeth's, at home and in England, though she remained the hope of the Scottish (and, secretly, English) Catholics. Much to Elizabeth's chagrin Mary soon married Henry Stuart, earl Darnley (1545–67), whom she had met in France after her first husband's death, and soon the two had produced a son, James (1566–1625), who would indeed ascend to both the Scottish throne and, after Elizabeth's death, the English.

Even before the birth of James, however, it became evident to Mary what everyone else already knew—that, despite his superficial charm, Darnley was a lazy, arrogant, thoroughly disreputable, probably syphilitic drunk. Demented by jealousy of Mary's secretary, David Riccio,

Darnley had him murdered in 1566, then betrayed his accomplices, who in turn showed Mary her husband's written agreement to the murder.

Unable to clear himself with her, Darnley remained an embarrassment to all. Three months after the birth of their son on June 19, 1566, Darnley's strangled body was discovered in a garden near the couple's temporary residence in Edinburgh, which itself had that very night been destroyed by a mysterious explosion, all while the queen was conveniently away.

Not surprisingly, Mary was suspected of having conspired to murder her husband, a crime that turned both Catholics and Protestants against her. She added insult to injury by suddenly marrying James Hepburn (c. 1536–78), fourth earl of Bothwell, just three months after Darnley's violent demise. It was generally believed that Bothwell was Mary's co-conspirator in the death of Darnley, and the Protestant lords, claiming that they had to "save" Mary from Bothwell, mounted a military campaign to apprehend her as well as her new husband.

Bothwell and troops loyal to him ran into the Protestant forces led by Mary's illegitimate half brother, James Stewart (1531–70), earl of Moray, at Cranberry Hill on June 15, 1567. Bothwell's men broke and ran. Moray's troops seized Mary, but Bothwell escaped, fled, and eventually found refuge in Scandinavia. Mary was compelled to abdicate in favor of her infant son, now proclaimed James VI.

Mary subsequently escaped from prison at Lochleven Castle and mustered a loyal force of 6,000. This small army was defeated by Moray's superior force at the Battle of Langside on May 13, 1568. The fighting was intense, however, and Moray lost at least 300 men. Mary fled to England, where she foolishly sought the protection of her cousin, Elizabeth I. Recognizing that Mary was a Catholic rival for the English throne but unwilling to execute a fellow sovereign, Elizabeth held Mary more or less a prisoner for the next 18 years, until her implication in an assassination plot against Elizabeth prompted the English queen to order Mary's execution.

Scottish Uprising against Mary of Guise (1559–1560)

PRINCIPAL COMBATANTS: Protestant Scots (and English military forces) vs. Catholic Scots (and French military forces)

PRINCIPAL THEATER(S): Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Aided by the English, the Scots Protestants fought to overcome Catholic resistance to the Reformation in Scotland; the Catholic cause was championed by the Scots regent, Mary of Guise, with French military aid.

OUTCOME: The intervention of the English and the death of Mary brought about the collapse of the Catholic resistance and the creation of a Protestant national church for Scotland.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Edinburgh, 1560

With the death of Scotland's James V (1512–42) in 1542, his widow, Mary of Guise (1515–60), assumed power as regent for their daughter Mary (later Mary, Queen of Scots [1542–87]) and continued to promote Catholicism as the state religion. However, she was confronted by a rapidly growing reform movement, which culminated in 1559 in the First Covenant. Promulgated by some among the Scots nobility, the First Covenant called for a reformed national church, which both the Scottish clergy and Scotland's parliament rejected. This in turn provoked Protestant theologian John Knox (1505–72) to preach a provocative sermon that unleashed rioting throughout Scotland. Meanwhile, Mary of Guise, preoccupied with the machinations between the English and the French in their competition to marry off her daughter the queen favorably for their respective sides, had finally seen Mary Stewart (Stuart) betrothed to the French dauphin (heir to the throne) in 1558. Thus, Mary of Guise turned to the French for military aid as Protestant mobs attacked and plundered Scotland's churches, and the Protestant reformers took up arms to forestall her actions against them. The rioting was anti-French as well as anti-Catholic, and the decisive issues of the revolt were ultimately as much political and military as strictly religious.

England's Elizabeth I (1533–1603), seeking to defend Protestantism but more surely to check any French presence in the British Isles, dispatched a fleet and an army to Scotland. The English forces laid siege to the French at Leith, Scotland, for six months without resolution until Mary died in 1560. With that, Catholic resistance to the Protestant Reformation in Scotland dimmed, and the Treaty of Edinburgh (1560) effected the withdrawal of all foreign troops from Scotland and established, under the leadership of John Knox, the Kirk of Scotland, the Scottish national church. More immediately to the point, though Scotland had been neutralized by the withdrawal of French and English troops, it nevertheless lay nearer England than France. This gave Elizabeth and England a great advantage over the Catholic Mary, Queen of Scots, when she left France, where she had been raised and wedded, for the land of her birth (after her husband's death in 1560).

Scottish War (1295–1296)

PRINCIPAL COMBATANTS: Scotland vs. England

PRINCIPAL THEATER(S): Scotland and Scots-English borderlands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: England's Edward I sought hegemony over Scotland. John Balliol led the Scots in resistance.

OUTCOME: The forces of Balliol were brutally suppressed, and Edward I conquered Scotland, deeming it a forfeited fief.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: At the Battle of Berwick, thousands of Scots civilians were slaughtered.

TREATIES: Scots homage to Edward I, 1296

The reign of King Alexander III (1241–86), who effectively resisted the constant English claims to hegemony over Scotland, came to be regarded by the Scots as a golden age of peace and prosperity. Trouble appeared on the horizon, however, when his death left his granddaughter, the infant Margaret (d. 1290), Maid of Norway, heir to the throne and Scotland's interim government in the hands of noble "guardians."

Seizing the opportunity to realize an ancient English dream, the union of England and Scotland, the English king Edward I (1239–1307) negotiated the Treaty of Brigham with Norway's Erik II (fl. 1280–99), which called for the marriage of Margaret to Edward's son, Edward of Caernarvon (1284–1327), who would later reign in England as Edward II. The Scottish assembly approved the arrangement, but four years after her grandfather, young Margaret herself died, and, with her, almost two centuries of more or less amicable relations between Scotland and England.

The uncertainty her passing created regarding the proper succession to the Scottish throne further whetted the appetites of Edward and his successors to assimilate Scotland. When 13 well-grounded claims were made to the Scottish throne, Edward announced he would be the judge of their merits, and the Scots had initially no reason to object. But when it emerged that, instead of playing the role of independent outside arbiter, he saw himself instead as any Scottish king's feudal overlord who could dispose of Scotland as a fief, dissatisfaction began to brew.

The claimants themselves, who had more to lose by antagonizing Edward than by courting the Scots, generally

acknowledged his overlordship, and the nobility by and large followed their lead. However, the group of prominent laymen and church officials known as “the community of the realm” declined to commit itself beforehand to whomever Edward chose. In any event, contenders were Robert Bruce (1274–1329) and John Balliol (1249–1315); Edward I chose Balliol in 1291, who was duly crowned king of Scotland the following year.

When Edward, assuming Balliol’s compliance, sought to assert his overlordship by accepting appeals from law suits adjudicated in Scottish courts and by calling up Balliol to go fight for England in France, the Scots took up arms instead against Edward. Balliol girded for war against England and concluded an alliance with France in 1295. By 1296, Scots troops were mobilized and deployed along the borderlands, poised to invade northern England. Edward, however, counterattacked. On May 28, 1296, Edward hit the Scottish-held town of Berwick-upon-Tweed, overran and sacked the town, then slaughtered Scots by the thousand. Balliol was taken prisoner, and Edward’s forces went on to penetrate deeply into Scotland, capturing the mighty castles of the realm, including Edinburgh, Stirling, Perth, and Elgin.

To the victorious Edward, the Scots now paid homage. He did not bother to occupy the country, however. Instead, he stole the Stone of Scone, legendary symbol of Scots power and legitimacy—any king crowned on the stone is considered to be the rightful ruler of the Scots. (The Stone of Scone become part of the royal coronation chair of Britain; currently, however, the stone is on loan to Scotland and is housed in Edinburgh Castle.) Scotland was now without a king of its own choosing and was deemed a “forefeited fief” of England—effectively, an annexed land under government by a committee of three English commissioners and guarded by military garrisons deployed throughout the realm.

Scottish War (1314–1328)

PRINCIPAL COMBATANTS: Scotland vs. England

PRINCIPAL THEATER(S): Scots borderlands and northern England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Under Robert the Bruce, the Scots sought full and legal independence from England.

OUTCOME: After Robert defeated England’s Edward II at the Battle of Byland, the war settled into low-level skirmishing until it was definitively concluded by the Treaty of Northampton, which gave Scotland independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Northampton, 1328

In 1314, Robert the Bruce (1274–1329) led his Scots forces on raids into northern England. Beginning the following year and continuing into 1318, James Douglas (“Black Douglas”; c. 1286–1330) took up the raiding activity while Robert the Bruce joined his brother Edward (d. 1318) in an Irish campaign (see SCOTTISH INVASION OF IRELAND). In 1318, the Scots retook the stronghold of Berwick-upon-Tweed, which the English had captured in 1296 (see SCOTTISH WAR [1295–1296]). The year after this, Douglas led a diversionary force into a raid on Yorkshire, where they emerged victorious in the minor Battle of Myton. As for Robert the Bruce, he studiously avoided engaging the English until 1322, when Edward II (1284–1327) of England mounted an invasion of Scotland, which Robert checked at the Battle of Byland, north of York, on October 14. Edward’s army was routed, and the king narrowly escaped capture by fleeing the field and hiding in Yorkshire. A truce was officially declared in 1323, but it was frequently violated, with border incursions on both sides. In 1328, the Treaty of Northampton finally granted Scotland full and legal independence from England.

Second Triumvirate, Wars of the See ROMAN CIVIL WAR (43–31 B.C.E.); ROMAN-PARTHIAN WAR (55–36 B.C.E.).

Selangor Civil War (1867–1873)

PRINCIPAL COMBATANTS: Rival chiefs of Selangor, Malaysia, with Chinese immigrant alliances and British intervention

PRINCIPAL THEATER(S): Selangor, Malaysia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The chiefs of the upper Klang River disputed with those of the lower Klang (and the sultan of Selangor), principally over economic matters, especially the division of lucrative tin tariffs.

OUTCOME: With British aid, the lower-river chiefs prevailed; the intervention set the stage for the establishment of a British protectorate over Selangor in 1874.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Selangor was a state in southwest Malaya, which was governed by several chiefs, who were divided into two opposing groups. The dispute began over whether to recognize Abdul Samad as sultan in 1860, but it soon centered on economic matters, in particular on the lucrative collection of duties on tin-ore exports. By the late 1860s, the dispute had escalated into war, with the chiefs of the upper Klang River fighting the chiefs of the lower Klang as well as the sultan of Selangor. The situation was complicated during the early 1870s by Chinese immigrant tin miners. The miners belonged to two rival Chinese secret societies, the Ghee Hin and the Hai San. The Ghee Hin was allied with the upper Klang faction, whereas the Hai San was united with the lower Klang group. The involvement of the Chinese miners shifted the principal theater of the war to the miners' camps, which lay deep in the Selangor jungles.

In 1873, British authorities intervened, giving military aid to the chiefs of the lower river, and in 1874, Selangor became a British protectorate.

Seminole War, First (1817–1818)

PRINCIPAL COMBATANTS: Seminole and Creek Indians vs. the United States (with friendly Creek allies)

PRINCIPAL THEATER(S): Florida

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Land disputes between white settlers and Seminole and Creek Indians led the Indians to fight for their land and the United States to protect settlers against Indian attack and to annex Indian lands.

OUTCOME: Inconclusive; Spain ceded Florida to the United States.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

United States, 800 regulars, 900 Georgia militia and Creek allies; Seminoles and hostile Creeks, unknown

CASUALTIES: 300 blacks, 30 Seminoles at Negro Fort; others, significant but totals unknown

TREATIES: None

As the WAR OF 1812 drew to a close, the British built a fort in Spanish Florida at Prospect Bluff along the Apalachicola River. In the summer of 1815, the garrison abandoned the fort, leaving it to Seminoles and a band of fugitive slaves. It came to be called “Negro Fort.” The existence of the outpost outraged southern slaveholders, because it served as a refuge for their fugitive “property.”

Major General Andrew Jackson (1767–1845) ordered an attack on Negro Fort, largely aimed at recovering as many fugitive slaves as possible. Unfortunately, the skipper of a gunboat involved in the assault, on July 27, 1816, decided to heat a cannonball red hot, fired it with an extra-heavy charge, and scored a direct hit on Negro Fort’s powder magazine. The tremendous explosion that followed killed 300 blacks and 30 Seminoles, bringing the Seminole tribe to the brink of war.

General Duncan Lamont Clinch (1787–1849) exacerbated the already critical situation by distributing arms captured from the fort to the Coweta Indians, who were his allies. Friction between whites and Seminoles increased until November 1817, when a Seminole chief named Neamathla, who lived in a village called Fowl Town, warned Brigadier General Edmund Pendleton Gaines (1777–1849) that he would kill anyone who trespassed on his land. Gaines responded by attempting to arrest Neamathla. The chief evaded the force sent after him, but troopers destroyed Fowl Town and killed four warriors and a woman.

The villagers, including a half-breed Seminole-Creek leader named Peter McQueen, retaliated nine days later by attacking Fort Scott, killing about 40 people, including soldiers, their wives, and children.

Jackson was dispatched to Fort Scott, where he organized a force of 800 regulars, 900 Georgia volunteers, and a large number of friendly Creeks (led by William MacIntosh [c. 1775–1825]). In March 1818, they rebuilt Negro Fort as Fort Gadsden and, from it, launched an all-out offensive against the Seminoles, driving through the Mikasuki Seminole towns in the vicinity of present-day Tallahassee and pursuing the Indians to St. Marks, a Spanish town where the fugitives sought refuge. The Indians vacated it before Jackson and his army arrived, but Jackson took possession of St. Marks anyway on April 7, 1818, despite Spanish sovereignty.

On April 12, Jackson attacked Peter McQueen’s camp in a swamp near the Econfina River, killing 37 warriors and taking captive almost 100 women and children, including the future Seminole leader Osceola (c. 1800–39), aged 14 at the time.

Jackson advanced to Suwannee Town, which had been deserted by the time he reached it, then took Spanish Pensacola on May 26, 1818, an act that prompted Spain to abandon Florida and ultimately cede its territory to the United States.

After the cession, Jackson left Florida, and the First Seminole War came to an inconclusive end.

Seminole War, Second (1835–1842)

PRINCIPAL COMBATANTS: Seminole and Creek Indians vs. the United States

PRINCIPAL THEATER(S): Florida and Georgia

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Seminole resistance to U.S. policy of removal to Indian Territory

OUTCOME: Inconclusive, though about 3,000 Seminoles agreed to removal; the United States simply stopped pursuing the Indians who refused to leave Florida and Georgia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 250 warriors; United States, thousands

CASUALTIES: United States, 1,500; Seminoles, thousands died; about 4,000 Indians were removed from Florida.

TREATIES: None

The First SEMINOLE WAR of 1817–18 ended inconclusively. From the period of that war to 1830, when the U.S. Congress passed the Indian Removal Act, providing for the “removal” of eastern tribes to “Indian Territory” reserved for them west of the Mississippi River, the Creeks and Seminoles of Georgia and Florida were subject to harassment, discrimination, and abuse officially sanctioned by the states involved. As if these depredations were not bad enough, a devastating drought in 1831 brought great hardship to the tribe, prompting Seminole leaders to sign a provisional removal treaty on May 9, 1832, which stipulated that removal was conditional on tribal approval of the site selected for resettlement.

Seven Seminole representatives were sent to examine the proposed site. Before they returned, however, other tribal representatives were coerced into signing a final

treaty binding the Seminoles to leave Florida by 1837. The tribe at large repudiated this treaty as fraudulent, but President Andrew Jackson (1767–1845) himself ignored their challenge and passed the treaty on to the Senate for ratification. In the meantime, the seven Seminoles returned from their expedition with a negative report on the site. Secretary of War Lewis Cass (1782–1866) made the repugnant proposition even more distasteful by decreeing that all tribes removed to Indian Territory would be lumped into a single political unit.

During this period of anxiety and outrage, Osceola (c. 1800–1839), a Seminole (some say Creek) known to the whites as Billy Powell, emerged as the central leader of the Seminole resistance. Early in the winter of 1835, an infantry company at Fort King, near the present city of Ocala, Florida, was reinforced by four companies of mixed artillery and infantry. Fort Brooke (at Tampa) was also reinforced at this time with three artillery companies. Twenty miles north of Fort King, General Duncan Lamont Clinch (1787–1849), now in command of all Florida troops, owned a plantation he called Auld Lang Syne, which was now occupied by his troops. It was clear to Osceola that the whites were preparing for war. Osceola likewise organized his own forces.

In October 1835, the Seminoles held a secret council of war. Six chiefs remained in favor of accepting removal. Osceola vowed to kill any who failed to come around to his point of view, and in November he made good on his threat by murdering Charley Emathla, the most prominent among those who had decided to move west.

Following the murder, Indian agent General Wiley Thompson (d. 1835) and General Clinch girded for war. The Seminoles named Osceola war chief, with Jumper and Alligator as his lieutenants. With Philip (called King Philip), leader of the Seminoles east of St. John's River, he coordinated attacks on plantations, then led his people deep into the impenetrable swamp lands near the Withlacoochee River, southwest of Fort King. Beginning in December 1835, Osceola launched a number of raids on farms and settlements, always careful to destroy vital bridges and roads in order to make military response difficult.

The first formal battle of the war—the Battle of Black Point—took place on December 18, 1835, west of the town of Micanopy. After plundering a wagon train, Osceola defeated a force of 30 mounted militiamen who happened on the scene.

Osceola's reconnaissance was uncannily accurate, and he was able to launch a devastating ambush of a relief column sent to Fort King. On December 28, 1835, Osceola and a small band of warriors raided a sutler's store outside of the fort, killing the owner and three others. When Wiley Thompson showed up, Osceola killed him as well. Simultaneously, Alligator and Jumper ambushed a relief column of 110 men, killing 107.

When they learned that General Clinch intended to attack Seminole villages near the Withlacoochee River,

Osceola and Alligator set out with 250 warriors to ambush a force Osceola knew to be more than 700 strong. He sprung his trap at noon on New Year's Eve, killing four men and wounding 52 (one mortally), and causing Clinch to break off his offensive.

These clashes, which came at the beginning of the war, were the only decisive battles in what became seven years of guerrilla resistance. No fewer than nine U.S. Army commanders tried and failed to evict the Seminoles from Florida and Georgia. One, General Thomas Jesup (1788–1860), succeeded in capturing Osceola, on October 21, 1837, but not through a feat of military genius. He simply requested a conference and, under a flag of truce, took Osceola captive. The leader fell ill in his prison cell at Fort Moultrie, South Carolina, and died on January 30, 1838.

Alligator and an Indian called Billy Bowlegs (c. 1810–c. 1864) continued to lead the resistance, but the unity of the Seminoles began to dissolve. Between 1835 and 1842, about 3,000 consented to “removal.”

The war ended in 1842—not as the result of any battle or victory or treaty but because the government simply stopped trying to locate and remove any more Seminoles. The cost had been too high. For every two Seminoles sent west, one soldier died—1,500 in all. In terms of cash, the war had cost the U.S. government \$20 million.

Seminole War, Third (1855–1858)

PRINCIPAL COMBATANTS: Seminole followers of Billy Bowlegs vs. the United States and Florida officials

PRINCIPAL THEATER(S): Florida

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: An insult and the Indians' refusal to accept removal to Indian Territory

OUTCOME: Seminoles removed to Indian Territory in exchange for a cash settlement; a final peace made in 1943.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No treaty but an 1858 cash settlement

In 1855, a party of surveyors working in the Great Cypress Swamp stole or destroyed crops belonging to followers of Billy Bowlegs, one of the Seminole die-hards who had not accepted removal to Indian Territory during the Second SEMINOLE WAR. The Indians demanded compensation or—at the very least—an apology. Securing neither, the Seminoles sporadically attacked settlers, traders, and trappers in Florida from 1855 to 1858.

Outraged citizens called on the army and the militia, but these forces were largely useless against Indians thoroughly familiar with the dense swamplands, where they were virtually invisible.

The Third Seminole War was a fitful conflict that came to an end when Seminoles who had earlier moved to Indian Territory were brought back to Florida to negotiate on behalf of the whites. At length Billy Bowlegs and his followers were persuaded to accept a cash settlement in return for immigrating to Indian Territory.

Sepoy Rebellion See INDIAN MUTINY.

Serbian Uprising, First (1804–1813)

PRINCIPAL COMBATANTS: Serbia (with Russian assistance) vs. the Ottoman Empire

PRINCIPAL THEATER(S): Serbia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Serbia sought autonomy within or full independence from the Ottoman Empire.

OUTCOME: The war for independence made excellent initial progress, but when Russia was forced to withdraw its support from Serbia under pressure from the demands of the Napoleonic Wars, the Ottoman Empire retook the nation.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Serbia, 2,000; Russia, 2,500; Ottomans, unknown

CASUALTIES: 1,800 Serbs sold into slavery; 200 prominent Serbs beheaded in 1814

TREATIES: Treaty of Bucharest, 1812

Toward the end of the 18th century, a tide of nationalism rose in Serbia, which was a part of the Ottoman Empire. By the beginning of the 19th century, the oppressive adminis-

tration of the Janissaries—an elite Turkish mercenary corps, barely under the control of the Ottoman sultan—in the province (or *pashalik*) of Belgrade pushed the Serbs to outright rebellion under the brilliant peasant leader George Petrovich (1762–1817), known as Karageorge (“Black George”) because of his swarthy appearance.

In 1805, the Sublime Porte (the Ottoman government) rejected Karageorge’s demand for Serbian autonomy, but by December 1806, Karageorge had driven the Janissaries out of Belgrade and Serbia itself. In the meantime, Karageorge formed an alliance with Russia, which was fighting one of its many wars against the Turks at the time (see RUSSO-TURKISH WAR [1806–1812]). Russia sent a token force in 1807, which nevertheless helped the Serbs win a major victory at Stubik. Then, in 1810, the czar dispatched an additional 2,500 troops, and the combined Serbo-Russian forces defeated the Ottoman army at the Battle of Varvarin and at Loznica in 1810. This effectively liberated Serbia.

Independence proved short-lived. In 1812, during Napoleon Bonaparte’s (1769–1821) great invasion of Russia, the czar concluded a treaty with the Sublime Porte at Bucharest. With the Russian threat neutralized, the Turks turned their full attention against Serbia, with the object of reannexing the country. The Ottoman armies invaded and brushed aside Serb resistance. Karageorge fled to Austria, and Ottoman soldiers overran Belgrade where they carried out orders to kill Serbian males over the age of 15 and to enslave women and children. Serbia was wholly under Ottoman control once again.

Further reading: Paul Coles, *The Ottoman Impact on Europe* (New York: Harcourt, Brace and World, 1968); John K. Cox, *The History of Serbia* (Westport, Conn.: Greenwood, 2002); Dimitrije Djordjevic, *The Balkan Revolutionary Tradition*, trans. Stephen Fischer-Galatai (New York: Columbia University Press, 1981).

Serbian Uprising, Second (1815–1817)

PRINCIPAL COMBATANTS: Serbia vs. the Ottoman Empire

PRINCIPAL THEATER(S): Serbia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: This was a second bid for Serbian independence, under a new leader, Milosh Obrenovich.

OUTCOME: Serbia was granted a significant degree of autonomy as an “autonomous principality” within the Ottoman Empire, but with Russia serving as a guarantor of protection.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

One of the rivals of Karageorge (1762–1817, “Black George”) (see SERBIAN UPRISING, FIRST), Milosh Obrenovich (1780–1860), organized a new uprising against the Ottoman overlords of Serbia in 1815. The action was swift and sweeping, and the Turks rapidly agreed to grant Serbia a significant measure of autonomy. When Karageorge returned to Serbia in 1817, Milosh had him assassinated and was subsequently proclaimed prince of Serbia by the Serbian national assembly. The assassination sparked a feud between the followers of Karageorge and those of Milosh that lasted 100 years and undermined Serbia’s efforts to seek full independence. It was not until 1827 that Milosh was able to extract from the Sublime Porte (the Ottoman government) recognition of his title as hereditary, an important step toward expanded autonomy. International recognition of Serbia as an “autonomous principality” came in 1830. The country existed under an uneasy arrangement between the Ottoman Empire and Russia, in which the Sublime Porte held suzerainty over Serbia, which, however, enjoyed the protection of Russia.

Further reading: Paul Coles, *The Ottoman Impact on Europe* (New York: Harcourt, Brace and World, 1968); John K. Cox, *The History of Serbia* (Westport, Conn.: Greenwood, 2002); Dimitrije Djordjevic, *The Balkan Revolutionary Tradition*, trans. Stephen Fischer-Galatai (New York: Columbia University Press, 1981).

Serbo-Bulgarian War (1885–1886)

PRINCIPAL COMBATANTS: Serbia vs. Bulgaria

PRINCIPAL THEATER(S): Bulgaria

DECLARATION: Serbia against Bulgaria, 1885

MAJOR ISSUES AND OBJECTIVES: Bulgaria sought annexation of Eastern Rumelia, which prompted Serbia to demand certain territories from Bulgaria and further to demand a halt to Bulgarian expansion.

OUTCOME: Bulgaria gained the initiative against Serbia; however, Austrian intervention on the side of Serbia brought Bulgaria’s Prince Alexander to the bargaining table. A border between Serbia and Bulgaria was established, and Bulgaria’s annexation of Eastern Rumelia was affirmed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the culminating Battle of Pirot, Serbia fielded 40,000 men against 45,000 Bulgarians.

CASUALTIES: At the Battle of Slivnitsa, Serbs, 2,000 killed or wounded; Bulgarians, 3,000 killed or wounded. At Pirot, Serbs, 2,000 killed or wounded; Bulgarians, 2,500 killed or wounded.

TREATIES: Treaty of Bucharest, 1886

The 1878 Conference of Berlin brought an end to two Balkan wars, the RUSSO-TURKISH WAR (1877–78) and the

SERBO-TURKISH WAR of 1876–78. In 1885, however, the peace was shattered by a Bulgarian invasion (led by Prince Alexander Joseph of Battenberg [1857–93]) of Eastern Rumelia (the southern portion of Bulgaria). This prompted Serbia, starved for territory, to demand that Alexander cede to it Bulgarian lands. A new international conference was convened in an effort to negotiate controls on Bulgarian expansion and resolve Serbia's new demands. The conference quickly broke down, and Serbia declared war on Bulgaria, beginning the conflict with an invasion.

Alexander responded swiftly. The Bulgarians forced a battle at Slivnitza, near Sofia, during November 17–19, 1885. Although Serbia's Milan I (1854–1901) personally led 25,000 troops against only 15,000 Bulgarian defenders, Alexander and his general, Stefan Nikolov Stambolov (1854–95), not only stood their ground but also counterattacked with devastating effect. The Serbs countered the counterattack, but in the end the Bulgarian lines held and the Serbs withdrew. Serb losses were 2,000 troops to the Bulgarians' 3,000. After the Bulgarian victory at Slivnitza, Alexander's 45,000-man force engaged 40,000 Serbs at Pirot during November 26–27, with 2,500 and 2,000 casualties to the respective forces.

The defeat of Serbia greatly alarmed Austria, which was Serbia's protector. What had begun as a Serbian invasion of Bulgaria now seemed likely to become a Bulgarian takeover of Serbia. Austria therefore intervened. Faced with the overwhelming military resources of Austria, Alexander agreed to an armistice in 1886, then concluded the Treaty of Bucharest, which reestablished the former border separating Bulgaria from Serbia and affirmed Alexander's annexation of Eastern Rumelia. At the war's conclusion, Bulgaria remained the most powerful nation in the Balkans until WORLD WAR I.

Serbo-Turkish War (1876–1878)

PRINCIPAL COMBATANTS: Serbia and Montenegro vs. the Ottoman Empire

PRINCIPAL THEATER(S): Herzegovina and Serbia

DECLARATION: Serbia against the Ottoman Empire, June 30, 1876

MAJOR ISSUES AND OBJECTIVES: Serbia sought full independence from the Ottoman Empire not only for itself but for Herzegovina, Bosnia, and Montenegro as well.

OUTCOME: Serbia and Montenegro (as well as Romania) gained independence; Herzegovina and Bosnia were

separated from the Ottoman Empire, only to be annexed to Austria-Hungary.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Serbs, 98,000; Montenegro, 24,000; Ottoman Empire, 126,000

CASUALTIES: Serbs, 5,000 killed, 9,500 wounded, 7,000 missing or captured; Ottomans, unknown

TREATIES: Treaty of San Stefano, 1878; Treaty of Berlin, 1878

Much of the conflict between the Ottoman Empire and the Balkan states was not strictly political but religious. Christian Serbs often chafed under the rule of Muslim Turks. In 1875, Christians in Herzegovina and Bosnia rose up against their Muslim overlords. The rebels appealed to Serbia, now an autonomous entity within the Ottoman Empire, for aid. This appeal prompted Serbia, which was emboldened by promises of support from Russia, to declare war on the Ottoman Empire on June 30, 1876. On July 1, Montenegro followed suit. That nation defeated the Ottoman Turks in Herzegovina and occupied the country throughout the war. The Serbs, however, bore the brunt of an Ottoman counterattack and, when the promised Russian help failed to materialize, found themselves in serious difficulty.

After invading Serbian territory, the Ottoman forces defeated the Serbs at the first Battle of Aleksinac on August 9, 1876. So costly was this defeat that the Serbs appealed to the great powers of Europe for mediation. In the meantime, however, the Turks fought the second Battle of Aleksinac on September 1, 1876, prompting the Serbs to sue for peace. An armistice was declared; however, Serbia violated the truce within three weeks. Russia demanded an end to Ottoman aggression but did nothing to back up that demand. Themselves emboldened, the Turks pressed their offensive, bringing all of Serbia under their control. In 1877, a new armistice was declared and a peace, mediated by the great powers, was hammered out.

While Serbia had been beaten into submission, the conflict between Russia and the Ottoman Empire grew hot and resulted in the RUSSO-TURKISH WAR (1877–78). That conflict was ended by the 1878 Treaty of San Stefano, which also formally ended Serbia and Montenegro's war against the Ottoman Empire. Britain, however, was dissatisfied with the terms of the treaty and called for the Conference of Berlin (see SERBO-BULGARIAN WAR), which resulted in a treaty that gave Serbia, Montenegro, and Romania full independence, but awarded Bosnia and Herzegovina to Austria-Hungary.

Serb Rebellion (1150–1152)

PRINCIPAL COMBATANTS: Serbia vs. Byzantine Empire

PRINCIPAL THEATER(S): Serbia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Serbia sought independence from Byzantine rule.

OUTCOME: The rebellion was extinguished.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

In 1143, Manuel I Comnenus (c. 1120–1180) assumed the Byzantine throne. It was a time of chaos, as the Turks contested for control of the empire and much of the empire was in rebellion. Manuel was successful against the Turks, driving them out of their strongholds in Isauria by 1145. He also established a productive alliance with Venice to hold off Norman incursions. During this struggle, which spanned 1147 to 1158, the Serbs, long under Byzantine domination, rebelled. A desultory war began in 1150 and did not end until 1152, when Manuel was able to divert sufficient resources to the Serbian front to subdue the rebellion. From this victory, he went on to an invasion of Hungary.

Serb War of Independence (1180–1196)

PRINCIPAL COMBATANTS: Serbia vs. the Byzantine Empire

PRINCIPAL THEATER(S): Serbia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Serbian independence

OUTCOME: After a long war against a failing empire, Serbia achieved independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The SERB REBELLION of 1150–52 ended with the defeat of the rebels and the reassertion of Byzantine control over the Serbs. The death of the highly capable Byzantine emperor and military commander Manuel I Comnenus (c. 1120–80) brought renewed chaos to the empire as the regent Andronicus I Comnenus (c. 1110–85) seized power from the child

emperor Alexius II (c. 1168–83), then had him murdered. With the imperial government in disarray, Serb forces under Stephen Nemanja (fl. 1159–1217) commenced a new rebellion against Byzantine rule. In contrast to the first rebellion, this war was sustained over a long period, and the weakened Byzantine government proved unable to suppress the rebels. Nemanja declared independence in 1196.

Sertorian War (80–72 B.C.E.)

PRINCIPAL COMBATANTS: Lusitanian rebels (led by Sertorius) vs. Rome

PRINCIPAL THEATER(S): Lusitania (Portugal and a portion of Spain)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome struggled to suppress a rebellion led by Sertorius.

OUTCOME: After many successes, Sertorius was defeated by a combination of superior numbers mounted against him and by the mutiny of his own forces.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

When Lucius Cornelius Sulla (138–72 B.C.E.) became dictator of Rome in 82 B.C.E., following the ROMAN CIVIL WAR (88–82 B.C.E.), he embarked on a campaign of vengeance on all who had opposed him, including the recently appointed governor of Lusitania (Portugal and a portion of Spain), Quintus Sertorius (d. 72 B.C.E.). In 81, hunted by Sulla, Sertorius fled to North Africa, but in 80 the people of Lusitania asked him to return and lead them in a revolt against Rome. Sertorius decided to do so, and he met the forces of the new governor at the Battle of the Baetis River (Guadalquivir) before the year was out. Sulla dispatched an army under the command of Quintus Metellus Pius (d. c. 64 B.C.E.) to end the revolt, but the skillful Sertorius defeated him as well. Sertorius came to control all of Portugal and almost all of Spain by 77 B.C.E.

Pompey the Great (106–48 B.C.E.) led a new Roman army from Italy over the Pyrenees to reinforce Metellus. Sertorius defeated them both in a daring series of campaigns between 76 and 73. Rome's answer to these defeats was to pour in additional troops, which gradually began to turn the tide against Sertorius and his limited resources. Under pressure, Sertorius became tyrannical in the treatment of his army, which stirred his forces to mutiny. Marcus Perperna (d. 72 B.C.E.), his chief lieutenant, conspired to murder Sertorius, then took command of the army—which he promptly led to defeat at the hands of Pompey. Marcus was captured and executed.

Servile War, First (First Slave War) (135–132 B.C.E.)

PRINCIPAL COMBATANTS: Slaves laboring in Sicily vs. Rome

PRINCIPAL THEATER(S): Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Some 70,000 slaves rebelled against their masters and the Roman legions sent to suppress them.

OUTCOME: After three years of combat, the legions suppressed the rebellion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Approximately 70,000 slaves rebelled; the legions sent against them were smaller in number but better armed and organized.

CASUALTIES: Unknown

TREATIES: None

Also known to history as the First Slave War in Sicily, the conflict was the direct result of the inhuman treatment to which Sicilian plantation operators subjected the slave labor furnished by the many conquests of the Roman legions, which imported not only entire foreign communities but also their native leaders. In addition, the Romans gave free reign to slave shepherds, whom they armed and allowed to roam about the countryside. These shepherds served as communication links among slave plantations.

The First Servile War began in 135 B.C.E. when Eunus (d. c. 132 B.C.E.), a Syrian slave, led approximately 70,000 of his fellows against the plantation owners. The slaves defeated the first Roman force sent against them in 135, and it took two more tries before the Roman legions could restore order. In the end, defeating the slaves was a straightforward but costly matter of applying the brute force of the legions over a period of three years. At the final defeat, Eunus was captured and executed.

The revolt indicated the stress that Rome's growing conquests were placing on the social fabric of Italy.

Servile War, Second (Second Slave War) (104–99 B.C.E.)

PRINCIPAL COMBATANTS: Slaves laboring in Sicily vs. Rome

PRINCIPAL THEATER(S): Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Slaves rebelled against their masters.

OUTCOME: The slaves enjoyed many successes before the rebellion was finally and brutally crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Also known as the Second Slave War in Sicily, this conflict, like the First SERVILE WAR, was triggered by the extremely harsh treatment to which Roman slaves were subjected. History records the names of three slaves—Salvius, Tryphon, and Athenion—as the leaders of the rebellion, which was initially very successful. After overrunning the rural areas and gaining control of most of them, the rebels besieged the cities, bringing them to the point of starvation. The first army Rome sent against them was defeated, but a second suppressed the revolt.

See also SERVILE WAR, THIRD.

Further reading: P. A. Brunt, *Italian Manpower, 225 B.C.–A.D. 24* (Oxford: Clarendon, 1971, reissued 1987), and *Social Conflicts in the Roman Republic* (London: Chatto and Windus, 1971); Keith Hopkins, *Conquerors and Slaves* (Cambridge: Cambridge University Press, 1981).

Servile War, Third (Gladiators' War; Spartacus's Revolt) (73–71 B.C.E.)

PRINCIPAL COMBATANTS: Roman slaves vs. Rome

PRINCIPAL THEATER(S): Southern Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Spartacus, the leader of the revolt, planned to lead his followers to freedom in Thrace.

OUTCOME: Spartacus enjoyed many early successes, but when his army twice divided, the slaves were defeated by Roman armies.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Spartacus had an army as large as 90,000.

CASUALTIES: Almost all of the slaves were eventually captured and executed, at least 6,000 by mass crucifixion.

TREATIES: None

The most famous of slave rebellions, this one engulfed all of southern Italy. Spartacus (d. 71 B.C.E.), a Thracian who served in the Roman army, and probably deserted, who led bandit raids, and who was caught and sold as a slave, had been selected to perform as a gladiator. In 73, he and about 70 other slave-gladiators broke out of a gladiator training school in Capua and hid on Mount Vesuvius. With remarkable speed, they recruited other slave-gladiators, fugitive

slaves, and others, amassing a force of at least 90,000 men. Engaged against two Roman armies sent to suppress them, the slaves were victorious and raided Italy south of the Apennines.

In 72, Spartacus divided his forces, allowing German and Gallic slaves to follow another leader while he retained leadership of the rest. The Gauls and Germans were defeated in battle in Apulia during 72 B.C.E., but Spartacus and his followers pressed northward, hoping to flee to Thrace. When his men, at the last minute, refused to leave Italy, preferring plunder to safety, Spartacus returned to southern Italy. There a Roman army led by Marcus Licinius Crassus (c. 115–53 B.C.E.) fought him at the Battle of Brundisium (Brindisi, Italy). There, hemmed in by Crassus's eight legions, Spartacus divided his army. The Gauls and the Germans were the first to suffer defeat. When subsequently Spartacus fell in battle, his remaining followers were easily beaten. Six thousand of those who surrendered were crucified by Crassus along the Appian Way. Others who escaped were mercilessly hunted and pursued by forces under Pompey the Great (106–48 B.C.E.). They were executed wherever they were caught.

Both militarily competent and humane, Spartacus was compelled to lead an uprising that not only inspired terror throughout Italy but also made him an icon for rebellion down through the ages. Although his revolt was not aimed at social revolution, beginning especially in the late 18th century, radicals frequently invoked his name—as did, most famously, Karl Liebknecht, Rosa Luxemburg, and the other members of the German Spartacus League, who launched their own uprising in 1919 (see SPARTACUS [LEAGUE] REVOLT).

Shaw, trans. and ed., *Spartacus and the Slave Wars: A Brief History with Documents* (London: Palgrave Macmillan, 2001).

Seven Reductions, War of the (1754–1756)

PRINCIPAL COMBATANTS: Spain and Portugal vs. the Jesuit-led Guaraní Indians

PRINCIPAL THEATER(S): Banda Oriental (southern Uruguay, South America)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Jesuits incited an Indian rebellion in an effort to block a swap with Portugal of seven Spanish “reductions” (missions) in exchange for the Portuguese river port of Colonia.

OUTCOME: The uprising was suppressed, the Jesuits were removed from Portuguese colonial government, and, after

much delay, the exchange of the reductions for Colonia took place.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

1,600 Spaniards and 1,200 Portuguese; 3,000–4,000 Guaraní

CASUALTIES: In second expedition: 3 Spaniards killed, 2 Portuguese killed, 30 from both armies captured; 1,511 Guaraní killed, 154 captured; out of 30,000 Indians in the missions, more than half died or fled into the forests.

TREATIES: None

By the middle of the 18th century, the great Jesuit “reductions”—the name the church gave to its missions in South America—had grown so powerful as to operate with something of the autonomy of a sovereign state. In 1750, after years of fighting over possession of the Banda Oriental along the Rio de la Plata in southern Uruguay, Spain and Portugal came to a *modus vivendi* that established new boundaries, basically exchanging seven Spanish reductions along the Uruguay River for a Portuguese trading settlement on the Rio de la Plata. Not incidentally, the agreement, which placed Jesuit reductions under two separate jurisdictions, was an assault on Jesuit hegemony and was opposed both by the order itself and by the British, who conducted a healthy trade with the missions.

Once it became clear that Spain and Portugal were prepared to cooperate against the missions, the British backed away from confrontation, but the Jesuits incited rebellion among the Guaraní Indians, and in July 1754, 2,000 Spanish and 1,000 Portuguese troops marched on the reductions. The Jesuits could recruit from an Indian population of nearly 100,000, and the Guaraní effectively harassed the allied troops, who bogged down in the local swamps and lost control of their supply lines. A November truce, which left the problems unresolved, ended the fighting for a while. In late 1755 a second expedition of 1,600 Spaniards and 1,200 Portuguese marched against the heart of the resistance movement, the Seven Reductions. They met a force of Guaraní defenders numbering nearly 1,680, later reinforced to almost double that strength. The deciding battle came on February 10, 1756, at Caaibate. It ended disastrously for the Jesuits and the Indians, with 1,511 killed and 154 taken prisoner, as compared to token Spanish-Portuguese casualties. By May all seven reductions had fallen, and of the nearly 30,000 Indians living in the towns attached to those missions, around 16,000 had died or fled into the forests. The Guaraní as a people were forced to immigrate to Brazil, and the Jesuit ringleaders of the rebellion were tried and executed in Lisbon, Portugal. In 1759, Sebastião José de Carvalho e Mello (1699–1782), *marquês de Pombal* and prime minister of Portugal, engineered the removal of all Jesuits from key governmental offices, including colonial offices. It was not until 1777, however, that Spain formally acquired Colonia.

Seven Weeks' War (Austro-Prussian War) (1866)

PRINCIPAL COMBATANTS: Prussia (with Italy) vs. Austria (with Bavaria, Saxony, Hanover, Hesse, Württemberg, and Baden)

PRINCIPAL THEATER(S): Germany, Bohemia, Italy

DECLARATION: Prussia on Austria, June 14, 1866

MAJOR ISSUES AND OBJECTIVES: Prussia sought to unite and dominate the German states.

OUTCOME: Prussia's victory over its major rival Austria was an essential step toward unifying Germany under Prussian rule.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Prussia, 437,262; Italy, 200,000; Austria, 407,223;

Austria's German allies, 137,000

CASUALTIES: Prussia, 4,454 killed, 16,217 wounded, 910 prisoners, 785 missing; Italy, 1,633 killed, 3,926 wounded, 5,085 prisoners, 553 missing; Austria, 9,123 killed; 35,236 wounded, 12,365 missing, prisoner numbers unrecorded; Austria's German allies, 1,147 killed, 5,430 wounded

TREATIES: Armistice, July 26, 1866; Treaty of Prague on August 23, 1866

Also called the Austro-Prussian War, this brief conflict was a key step in Chancellor Otto von Bismarck's (1815–98) campaign to establish Prussia as the preeminent German power, the nucleus around which a genuine German nation would coalesce. Prussia's archrival for dominance was Austria, and Prussia attacked it vigorously. Aside from the war's crucial political significance, it would prove a tactical milestone as well, as the first European war in which railroads played a major role. Prussia used its extensive rail network to maneuver and advance quickly. This immediately gained Prussia the advantage, and the general in chief, the brilliant Helmuth von Moltke (1800–91), never let the advantage slip. Second only to the Prussian railroads in tactical significance was firepower. Prussia had advanced artillery and breechloading small arms. The Austrians had older artillery and still labored with slow, muzzle-loaded rifled muskets.

Of the war's eight major battles, the Prussians suffered a reversal only at the first, Langensalza (June 27–29, 1866), and this at the hands of the Hanoverians, not the Austrians. Even so, the Hanoverian victory was a hollow one; that state's king was forced to surrender in the face of an overwhelming Prussian concentration.

In all other exchanges, the Prussians were victorious. The decisive campaign took place in Bohemia, where three Prussian armies fought the allied Austrian and Saxon army. The Battle of Trautenau (June 27, 1866) resulted in a four-to-one ratio of Austrian casualties versus Prussian. Additional skirmishes culminated in the decisive battle of the war, Königgrätz (also called the Battle of Sadowa), on

July 3. The greatest battle fought since Waterloo in 1815, it resulted in more than 13,000 Austrian and Saxon casualties (killed and wounded) versus some 9,000 Prussian losses (killed and wounded).

Only against Prussia's Italian allies did Austria prevail, at Custoza (June 24) and, in the war's one major sea battle, off Lissa, on July 20, 1866. Only the great Italian nationalist Giuseppe Garibaldi (1807–82) won Italian victories against Austria, in small exchanges in the Tyrol fought during the course of the brief war.

Austria sued for peace and concluded an armistice on July 26, 1866. By the Treaty of Prague (August 23, 1866), Austria ceded Venetia to Italy, and far more important, Austrian emperor Franz Josef I (1830–1916) agreed to Austrian exclusion from German affairs. Thus the way was paved for the unification of Germany under Prussian rule in 1871.

Seven Years' War (1756–1763)

PRINCIPAL COMBATANTS: Britain and Prussia vs. Austria, France, Russia, Saxony, Sweden, and—after 1762—Spain
PRINCIPAL THEATER(S): Germany and Central Europe; the British and French colonies in North America, the Caribbean, and India

DECLARATION: Frederick II of Prussia launched a surprise, preemptive attack on Austria on August 29, 1756.

MAJOR ISSUES AND OBJECTIVES: The war may be viewed in most measures as a larger-scale continuation of the issues that had ignited the War of the Austrian Succession, 1740–1748: the contest between Prussia and Austria for possession of Silesia and for political dominance in central Europe, and the struggle between Britain and France for military and naval supremacy and for colonial dominance.

OUTCOME: The conclusion of the war—and its North American phase, called the French and Indian War—not only brought an interval of peace to Europe, it also reshaped the colonial world. France lost to Britain all of its North American possessions, except Louisiana, which it had earlier ceded to Spain; French troops were excluded from Bengal, thereby ending the French imperial drive in India and laying the foundation for British domination of India; in Africa, France yielded Senegal to the British. France retained a few colonies: Saint Pierre and Miquelon (in the Gulf of Saint Lawrence); Saint Lucia, Haiti, Guadeloupe, and Martinique (in the West Indies); and Pondichéry and Chandernagor (in India). Spain recovered Cuba and the Philippines, which it had lost in the course of the

war, but ceded Florida to Britain. As a result, Britain developed its colonies and became a major sea power, whereas France grew to prominence on the Continent of Europe.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Prussia, 143; Hanoverians, Hessians, and Brunswickers, 50,000; Great Britain, 215,000; Austria, 150,000; France, 125,000; Germans loyal to Marie-Therese—60,000; Russia, 170,000; Sweden, 50,000

CASUALTIES: Estimates vary widely up to 868,000, including 260,000 fighting for the Hapsburgs and 180,000 Prussians; for French and English figures see the French and Indian War.

TREATIES: Treaty of Paris, February 10, 1763, for Great Britain, France, Spain and Portugal; Treaty of Hubertusburg, February 15, 1763, for Prussia and Austria (encompassing Hungary and Bohemia)

As historians have frequently pointed out, the Seven Years' War and the FRENCH AND INDIAN WAR grew directly out of earlier conflicts: the War of the League of Augsburg (in North America, KING WILLIAM'S WAR), the War of the SPANISH SUCCESSION (in North America, QUEEN ANNE'S WAR), and the War of the AUSTRIAN SUCCESSION (in North America, KING GEORGE'S WAR).

The Seven Years' War was a world war, in reality two conflicts—one fought in central Europe between Prussia and the coalition led by Austria, the other overseas in India and North America between Great Britain and France—linked by France's involvement in much the same way as American involvement linked the European and Pacific fronts in WORLD WAR II. With more than 30 battles around the world, it was the last time all the old regimes of Europe's great powers engaged in combat before the FRENCH REVOLUTION (1789–1799) changed not only the ways wars were fought but also the reasons for fighting them.

An intense if ambiguous prelude to the war came in North America, where British and French interests had begun sporadic fighting in 1754, but in Europe, clear-cut hostilities commenced on August 29, 1756, when Frederick II (the Great; 1712–86) of Prussia, seeking to preempt an attack from Maria Theresa of Austria (1717–80) and Elizabeth of Russia (1709–61), launched a surprise offensive through the electorate of Saxony, a minor Austrian ally. Frederick's strategy was to defeat Austria and Russia with a quick war, but despite some early victories, Frederick was unable to achieve the kind of success that would have checked the political consequences of his act. Frederick had launched his attack because he was certain that Austria and Russia had plans for a campaign in the following spring aimed at reclaiming Silesia, the former Hapsburg province seized by Prussia during the War of the Austrian Succession.

At first, Frederick's gamble seemed to pay off. From the start his worry had been Saxony, an ostensibly neutral principality actually under Hapsburg sway. The Elbe River formed the border between Saxony and Brandenburg, the core of the Hohenzollern monarchy. Indeed the Saxon frontier was only some 50 miles from Frederick's Berlin capital and thus a good gateway into the heart of his holdings. The threat grew more real when a Saxon princess married the heir to the French throne. In Frederick's eyes, this freed Austria and Russia to collude against him, since they could now assume French support. Whereas, before the outbreak of the war, Frederick—fearful that further conflict in Europe would threaten his rich holdings in prosperous Silesia—had been careful to conduct a pacific foreign policy, he now sought by force of arms to neutralize the threat of Saxony.

Frederick quickly defeated the Saxon army, allowing the Saxon leadership to go into exile, but drafting the rank and file into the Prussian army (most of them eventually deserted). He easily rebuffed a counterattack by the Austrian military, but in the long run, instead of staving off a joint Austrian-Russian invasion, he ensured only that France would fight actively beside Austria to defeat Prussia. Soon he found himself involved in a desperate struggle that embroiled nation after nation. Even second-rate Sweden aligned itself against Prussia. Meanwhile, Frederick, pleased with his success in Saxony, was still anxious to keep the war short, since he had limited resources and unlimited enemies. Frederick's advance into Bohemia, despite a hard-fought victory at Prague on May 6, 1757, led to a devastating Prussian defeat at Kolin in June. Russian forces marched into East Prussia in August, and Austrian troops overran Berlin, occupying it for several days in October. Frederick came back with massive victories at Rossbach on November 5 and at Leuthen the next month, thereby saving his kingdom from conquest. Moreover, these victories bought him the time he needed to orchestrate the major campaigns of the next four years.

The nations aligned against Prussia failed to coordinate their forces adequately. Great Britain provided some finance and maintained an army in northwestern Germany to defend Hanover (a British royal possession) from French attack. Although Frederick won the day at Zorn-dorf in 1758 and again at Leignitz and Torgau in 1760, the victories were costly, draining his resources and causing a steady decline in his military fortunes. When he met the Russians at Kunersdorf on August 12, 1759, his forces were soundly defeated, and by the start of 1762 the Austrians had moved into Saxony and Silesia, and Russians held Prussian Pomerania. Although Frederick's position appeared hopeless, he was rescued by the death of the Russian empress Elizabeth in January 1762, for she was succeeded by Peter III (1728–62), who was a great admirer of Frederick. Peter summarily withdrew from the war, leaving Austria to face Prussia alone. This prompted an Austrian treaty

with Prussia, the Treaty of Hubertusburg, on February 15, 1763, which affirmed Prussian sovereignty over Silesia.

Meanwhile, Britain and France fought the bulk of their war on the soil of their contested colonial possessions, especially those in North America and India. In May 1756, about two years after the outbreak of hostilities on the Virginia frontier, Britain declared war on France. Both sides called upon colonial militias and Indian allies to do much of the fighting, but the British, who had treated the native peoples poorly, had fewer Indian allies than the French. Moreover, the British regular army officers who had been sent to take charge of the war regarded colonial troops with contempt. Both of these factors contributed to early English defeats at the hands of the brilliant French commander, General Louis-Joseph, marquis de Montcalm (1712–59). The British fort at Oswego on Lake Ontario fell in 1756, and in 1757 Fort William Henry at the south end of Lake George was taken. With British colonial fortunes at their nadir, William Pitt the Elder (1708–78) became Britain's new prime minister and instituted new policies of increased aid to the American colonies, which included a reformed attitude toward the Indians as well as colonial troops. At the same time, France was finding it increasingly difficult to support its colonies. The tide of the French and Indian War began to turn in favor of the English in 1758, and 1759 brought victory after victory, culminating in the fall of Quebec to the British during September 12–13, 1759. In 1760, Jeffrey, Lord Amherst (1717–1797) completed the conquest of Canada by taking Montreal, and by the end of the year, the French hegemony in North America had come to an end.

This did not mean an immediate end to the war, however. Except for a handful of “traditional” military engagements, the French and Indian War was largely a guerrilla war, fought more by settlers against Indians (allied with French or British interests) than by one army against another. Combat continued between the British and the Cherokee Indians in the south until 1761, and between settlers and Indians throughout the Ohio country.

In 1762, Spain entered the conflict late on the side of France and was quickly neutralized by British sea power. On February 15, 1762, Martinique fell to the English, followed by St. Lucia and Grenada. On August 12, 1762, Havana yielded to a two-month siege, and Manila fell on October 5. On November 3, France concluded the secret Treaty of San Ildefonso with Spain, in which it ceded to that country all of its territory west of the Mississippi and the Isle of Orleans in Louisiana. By the Treaty of Paris, concluded on February 10, 1763, France ceded all of Louisiana to Spain and the rest of its North American holdings to Great Britain. The king of France had abandoned his Indian allies—and the New World—entirely. The English, after seven bitter and often inept years of combat, had at last forced the surrender of New France. Yet this proved less a boon to Great Britain than it did to her colonists, who were free to turn the full force of their

rapacity against the Indians. With the French and Spanish removed from the frontiers, the Indians were left without foreign support for their resistance to British expansion. As colonists migrated inland, connections with the mother country grew increasingly tenuous, and, for their part, even coastal colonials no longer felt as dependent on Britain for defense. Thus the Treaty of Paris provided some of the conditions under which an increasing number of colonists began to think of independence. The close of the Seven Years' War may therefore be read as an opening chord in the prelude to the AMERICAN REVOLUTION.

The document that ended the Seven Years' War on the Continent framed the conflict in terms of a dispute between monarchs rather than nations. Clearly, both sides were highly motivated to end the war quickly. Frederick recognized that his resources were exhausted, whereas Maria Theresa understood that further prosecuting the war without Russia and Sweden was hopeless. The settlement between them was direct and personal, and out of such bonds was the fabric of European diplomacy created at the time.

Thus, where the Treaty of Paris, among Britain, France, and Spain, reshaped the world, the Treaty of Hubertusburg, between Prussia and Austria, restored the status quo ante bellum, but most significantly confirmed Prussia's retention of Silesia, the disputed area that had largely provoked the present conflict as well as the earlier War of the Austrian Succession.

Shah Jahan's Revolt (1622–1626)

PRINCIPAL COMBATANTS: Khurram (Shah Jahan) vs. his father, Jahangir

PRINCIPAL THEATER(S): India, chiefly the Deccan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Khurram (Shah Jahan) disobeyed his father's command to fight in Afghanistan; the disobedience was treated as rebellion.

OUTCOME: Khurram finally submitted to his father and was forgiven.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** None

When Shah Abbas I (the Great; 1557–c. 1628) launched his second attempt to seize Kandahar from the Mogul Empire, the Mogul ruler Jahangir (1569–1627) commanded his son, Khurram (1592–1666, later known as Shah Jahan, builder of the Taj Mahal) to lead an army from the Deccan to Afghanistan to fight Abbas. Khurram did not want to leave India at what he felt was a critical time, with his father ailing, close to death, and his own succession to the throne near, but subject to the dangerous intrigues of the empress, Nur Jahan (d. 1645). He therefore disobeyed his father, sending him a message that he needed to wait for the end of the rainy season. Nur Jahan decided to interpret this delay as an act of rebellion, and she persuaded Jahangir of this, inducing him to reprimand his son severely. Khurram did decide to advance, in 1623, but he marched toward Agra, not far-off Kandahar. He attempted to take the old court city of Fatehpur Sikri, failed, then retreated into the Deccan.

Khurram and his forces were pursued by an army under Mahabat Khan (d. 1634), who pushed him into Bengal, then pursued him back again into the Deccan. In the course of evading Mahabat Khan, Khurram acquired additional followers, but he was worn out by the pursuit. By 1626, he surrendered to his father, who, to the consternation of Nur Jahan, forgave him and appointed him governor of the Deccan state of Balaghat.

Shaka Zulu's Wars of Expansion (1819–1828)

PRINCIPAL COMBATANTS: Forces of Shaka Zulu vs. clans and tribes adjacent to the Zulus

PRINCIPAL THEATER(S): Zululand and Natal, Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Tribal expansion

OUTCOME: Shaka Zulu spread Zulu dominance across an area encompassing modern Zululand and much of Natal.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Shaka Zulu's army, 30,000; opposition numbers unknown

CASUALTIES: Unknown

TREATIES: None

Shaka Zulu (1785/87–1828), who had risen to rule the Zulu people of modern Zululand in 1816–19 (see ZULU CIVIL WAR [1817–1819]), led the largest and most

formidable native army in Africa—30,000 men—in a ruthlessly aggressive campaign to conquer neighboring clans. Shaka compelled all those conquered to absorption within the Zulu tribe. In this manner, all of the region now encompassed by Zululand and a portion of what is now Natal came under the dominion of Shaka Zulu.

Shaka was a brilliant military strategist and tactician but a gratuitously cruel ruler. The death of his brother Nandi (d. 1827) seemed to remove the only curb on his tyranny. After 1827, Shaka's rule became irrationally destructive, and he was assassinated on September 22, 1828, by his half brothers.

Shang-Zhou Dynastic Wars (c. 1027 B.C.E.)

PRINCIPAL COMBATANTS: The Zhou (Chou) vs. the Shang

PRINCIPAL THEATER(S): China, principally southern Henan (Honan)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Shang domains

OUTCOME: The Shang were defeated by the Zhou, which commenced an 800-year dynasty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Unknown

Little is known about the military means by which Wu Wang (fl. 12th century B.C.E.)—the “martial king” of the Zhou—established his authority over the former Shang domains of China, but about the year 1027 B.C.E. he displaced the Shang by winning the Battle of Mu Yu and established in the region the Zhou dynasty, which was destined to last 800 years. As for Wu Wang himself, he died very soon after conquering the Shang and establishing the Zhou dynasty. Zhou Kung (fl. 12th century B.C.E.) served as regent for seven years after Wu Wang's death. Zhou Kung apparently created a governmental structure so durable that it served the dynasty throughout its 800-year reign.

Shays's Rebellion (1786–1787)

PRINCIPAL COMBATANTS: Paramilitary “Regulators” vs. Massachusetts volunteer force

PRINCIPAL THEATER(S): Western Massachusetts

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Economically oppressed frontiersmen menaced the Continental Arsenal at Springfield, Massachusetts.

OUTCOME: The “rebellion” was suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Regulators, variable; at Springfield, 1,500; Massachusetts volunteers at Springfield, 4,400

CASUALTIES: Two executions; three Regulators killed at the Springfield Arsenal

TREATIES: None

The United States was not kind to the veterans of the AMERICAN REVOLUTION who had created the new nation. Demobilized troops of the Continental Army received little, if any, of the back pay due them. What payment they did collect was typically in so-called Continental notes, which were of such little value that the phrase “not worth a Continental” entered popular speech. Even the states that had approved the issue of these notes now refused to accept them in payment of taxes. The lot of former officers improved when they were compensated mainly with land in the Ohio country, but enlisted veterans were left in the lurch. In rural Massachusetts, the veterans were especially hard pressed. They had not been paid, their crops brought dismal prices in a postwar depression economy, and they were subject to heavy taxation endorsed by the state’s conservative governor, James Bowdoin (1726–90). The situation was most acute in western Massachusetts, where citizens felt themselves cheated of equitable representation by the provisions of the state constitution of 1780. Finding no relief from the government, these westerners began banding together in a paramilitary movement called “the Regulation.” “Regulators” were groups of 500 to 2,000 men who, armed with clubs and muskets, marched on circuit court sessions with the object of intimidating the magistrates and postponing pending property seizures until the next gubernatorial election, which, they hoped, would replace the conservative Bowdoin with a more liberal governor.

For some five months, Regulators were active in Northampton, Springfield, and Worcester, as well as smaller towns. Strictly by means of intimidation, they succeeded in keeping the courts closed; no shots were fired, and there were no casualties. However, members of the new national government who favored a strong concentration of federal authority saw the “rebellion” in western Massachusetts as an opportunity to demonstrate the urgency of their position. George Washington’s (1732–99) future secretary of war, Henry Knox (1750–1806), personally investigated conditions at Springfield, where, he believed, the Continental arsenal was vulnerable. Knox reported to the national government that the Regulation was indeed a full-scale rebellion, led by one Daniel Shays

(c. 1745–1825), a former captain in the Continental army. Knox, who advocated not only a strong central government but also a strong standing army, portrayed “Shays’s Rebellion” as the work of radicals and anarchists who wanted to abolish private property, to erase all debts, and generally to incite a civil war. Knox knew that neither Massachusetts nor the federal government was in a position to finance an army to oppose the Shaysites, so he collaborated with Governor Bowdoin in appealing to Boston merchants to finance a force of 4,400 volunteers under General Benjamin Lincoln (1733–1810), a Revolution veteran.

Lincoln led his force to the Springfield Arsenal and there, during January 24–25, 1787, confronted 1,500 Regulators under Shays, Luke Day (fl. 18th century), and Eli Parsons (fl. 18th century). Lincoln fired a cannon into the assembled Regulators, killing three and sending the others into flight. Lincoln pursued and captured a number of “ringleaders.” Several were tried for treason, two were hanged, and the Regulator movement came to an end. As for the namesake of the “rebellion,” Shays fled to Vermont and later was granted a pardon.

Except for the final encounter, Shays’s Rebellion consisted of a series of peaceful demonstrations against a catastrophic taxation policy during a postwar depression. Knox and other Federalists, however, stirred fears that Shays’s Rebellion was a civil war in the making and would soon spread to all 13 states. This fear provided a large portion of the impetus to convene, in Philadelphia in May 1787, a constitutional convention, which scrapped the weak Articles of Confederation and drew up a constitution mandating a strong central government to which the states were ultimately subordinate.

Richards, *Shays’s Rebellion: The American Revolution’s Final Battle* (Philadelphia: University of Pennsylvania Press, 2002); David P. Szatmary, *Shays’s Rebellion: The Making of an Agrarian Insurrection* (Amherst: University of Massachusetts Press, 1980).

Sheepeater War (1879)

PRINCIPAL COMBATANTS: Sheepeater Indians of Idaho vs. United States

PRINCIPAL THEATER(S): Idaho

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Retribution for an Indian attack upon a mining camp

OUTCOME: Sheepeaters surrendered and were removed to Fort Hall Reservation.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Sheepeaters, 35 warriors; United States, 50 men

CASUALTIES: Five Chinese miners; others unrecorded
TREATIES: None

At the conclusion of the BANNOCK WAR, General Oliver O. Howard (1830–1909) reported that hostilities had been entirely concluded in Idaho. However, a number of Bannocks who did not surrender took refuge among the so-called Sheepeaters in the Salmon River Mountains. The Sheepeaters were renegade Shoshonis and Bannocks, who were neither friendly nor entirely hostile to whites until the fugitive Bannocks incited them to raid a prospectors' camp on Loon Creek, killing five Chinese miners in May 1879.

General Howard sent a small detachment of troops to locate the murderers. The result was the "Sheepeater War," which was waged against no more than 35 warriors, yet forced soldiers to pursue the enemy over some of the most rugged wilderness in the nation.

Lieutenant Henry Catley's (fl. late 19th century) command was ambushed on July 29 by 15 warriors, who bottled up his troopers in the canyon of the Big Creek. Abandoning all his baggage and supplies, Catley retreated with his 50 men and was subjected to court-martial by General Howard for having fled before a substantially inferior force.

On August 13, 1879, Captain Reuben F. Bernard's (1832–1903) cavalry joined Catley's infantry and Indian scouts. The Sheepeaters eluded the force but on August 20 attacked an army supply train. They were driven off, but soldiers were too exhausted to pursue. Howard called off the campaign as fruitless.

In September, Lieutenant Edward S. Farrow (1855–1926) set out against the Sheepeaters again and succeeded in capturing two women and two children on September 21. One of the prisoners told them that the warriors were tired and could not withstand much more pursuit. Farrow, his own command exhausted, kept up the pursuit through the end of the month. After a four-day snowstorm, 51 Sheepeaters and a few Bannocks surrendered on October 1 and 2. Most of the fugitive Bannocks, however, were never located. The Sheepeaters were sent to the Fort Hall Reservation.

Sheridan's Campaign (Southern Plains War) (1868–1869)

PRINCIPAL COMBATANTS: Cheyenne Indians and allied tribes vs. the United States

PRINCIPAL THEATER(S): Western Kansas and eastern Colorado

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The United States was trying to force the Indians of the American West onto reservations; the Cheyenne "Dog Soldiers" and warriors from other tribes launched a resistance to concentration on reservations.

OUTCOME: The Cheyenne were defeated and reported to the reservations.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Cheyenne and allies, 1,000; United States, 1,050; Pawnee scouts, 50

CASUALTIES: Indians, 200–300 killed, included 100 or more women and children; U.S. civilians, 94 killed, 9 wounded, 5 raped; U.S. troops, 22 killed, 14 wounded

TREATIES: None; the Cheyenne were forced to honor the terms of the Fort Laramie Treaty of April 28, 1868.

After the American Civil War (*see* UNITED STATES CIVIL WAR), the United States moved aggressively to confine its western Native American tribes to a series of reservations, a campaign that a number of the tribes openly resisted, often breaking into war and peace factions. In charge of handling the Indian "problem" was former Civil War general William Tecumseh Sherman (1820–91), in command of all the western forces of the U.S. Army. His favorite field commander was another Civil War officer, a cavalryman, General Philip H. Sheridan (1831–88). Together they would deploy a strategy against the Indians of the American West that Sherman developed during the Civil War. It was what he called "total war"—combat directed not against military objectives alone but at the civilian population as well, in order to destroy a people's very will to fight. Sheridan would take Sherman's concept of total war to an effective extreme by conducting against the Native Americans a series of winter campaigns, aimed at hitting the Indians when they were most vulnerable. Sheridan's officers were soon to learn that such ruthless campaigns were almost as hard on the American soldiers as they were on the Indians.

The first of the tribes to experience Sherman's total war were the Cheyenne of the central and southern Great Plains, who had so recently handed General Winfield Scott Hancock (1824–86) a costly defeat (*see* HANCOCK'S CAMPAIGN). Despite an ambitious treaty signed at Fort Laramie on April 29, 1868, the Cheyennes were still sharply divided into a peace faction and the implacable, warlike "Dog Soldiers," who refused confinement to any reservation. Joining with various members of the Brule and Oglala Sioux and Arapahos, the Dog Soldiers continued to raid throughout 1868 in western Kansas and eastern Colorado, killing a total of 79 settlers, wounding nine, and appropriating a great deal of livestock. While the Dog Soldier faction was engaged in raiding, the Cheyennes at large agitated for the guns and ammunition they had been

promised by another treaty. The Indian Bureau fearfully delayed issuing the promised weapons until repeated threats of war convinced officials to begin distribution.

As usual, communication was poor, and 200 Cheyenne, who had not heard about the bureau's decision, launched raids against settlements on the Saline and Solomon rivers, killing 15 men, raping five women, burning ranches, and running off stock. Even as the peace factions of the Cheyenne as well as the Arapaho marched off toward the reservations, the Dog Soldiers and other warlike factions stepped up raids throughout western Kansas and eastern Colorado.

General Sherman declared that these Indians needed to be soundly whipped, the ringleaders hanged, their ponies killed, and enough of their property destroyed to impoverish them. Sherman instructed Sheridan to proceed with such an all-out offensive. Sheridan's innovative plan was to mount his unprecedented winter campaign, when the Indians, occupied with surviving the harsh elements, were least prepared—or able—to fight.

Sheridan began in the early autumn of 1868, sending Major George A. Forsyth with 50 handpicked men to patrol settlements and travel routes. On September 17, the small company was set upon by 600–700 Dog Soldiers and Oglala Sioux in western Kansas. Forsyth's party took refuge on an island in the all but dried-up Arikara Fork of the Republican River, using their repeating carbines to hold off the Indians. When one of their most prominent warriors, Roman Nose (d. 1868), was slain, the dispirited Cheyennes broke off the fight and laid siege to the island. Two of Forsyth's men managed to slip through the Indian lines and summon reinforcements, who relieved the besieged troopers after eight days.

As to the winter campaign proper, Sheridan decided on a three-pronged strategy. One column would approach from Fort Bascom, New Mexico, another from Fort Lyon, Colorado, and the third, under Sheridan's favorite cavalry officer, Colonel George Armstrong Custer (1839–76), from Fort Dodge, Kansas. They would converge on the Indians' winter camps on the Canadian and Washita rivers, in Indian Territory.

It was Custer who found the first encampment, at the Washita River on November 27, 1868. His 7th Cavalry charged into the slumbering Indian village, killing warriors, women, and children indiscriminately. Worse, the village he had attacked was led by Black Kettle (c. 1804–68), a staunch champion of peace. Among the 103 Indians killed, 93 were women, old men, and children—and Black Kettle, who was cut down with his wife.

The brutality of Washita sent large numbers of Cheyennes marching off to the reservation. After the battle, Major (later Brigadier General) Eugene Carr (1830–1910) and Major Andrew Evans scoured the plains north and west of the Washita, flushing out stragglers. On Christmas Day of 1868, Evans discovered a Comanche village consist-

ing of 60 lodges at Soldier Spring, on the north fork of the Red River, and a Kiowa camp a short distance downstream. He launched a devastating attack on both settlements. Two hundred Comanches and Kiowas returned to counterattack but withdrew after a day-long battle. Although some of the Indians who had been engaged at Soldier Spring sought refuge among the Kwahadi Comanches, most, exhausted, surrendered to Forts Cobb and Bascom.

Washita and Soldier Spring seemed to vindicate Sheridan's winter strategy, but since winter campaigning was almost as hard on the troops as it was on the Indians, the army was unable to capitalize on its victories.

It was not until March 1869 that Custer was again able to move, this time marching into the Texas Panhandle. On March 15, he discovered the villages of Medicine Arrows and Little Robe at Sweetwater Creek. Aware that the Indians held two white women hostage, Custer called for a parley; during the talks he seized three chiefs. He sent one back with surrender terms, threatening to hang the other two if the terms were unmet. The Cheyennes, weary of war, surrendered and promised to retire to the reservation.

The Cheyennes failed to report to the reservation, and the Dog Soldiers, led by Tall Bull (d. 1869), renewed their attacks, joining forces with the Northern Cheyennes in the Powder River country. On July 11, 1869, the 5th Cavalry, commanded by Major Carr, surprised the Dog Soldiers' camp at Summit Springs, Colorado. Tall Bull was killed, and the Dog Soldiers were finished in western Kansas. The balance of the Cheyennes trudged off to the reservation.

Shi'ite Rebellion (762)

PRINCIPAL COMBATANTS: Abbasid Caliphate vs. Shi'ite rebels

PRINCIPAL THEATER(S): Abbasid Caliphate (Iraq)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rebellion of one Islamic faction against another

OUTCOME: The Abbasids ended the rebellion in a single decisive battle.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** None

Al-Mansur (fl. 754–75) succeeded Abu'l Abbas (fl. 750–54) as caliph of the Abbasid Caliphate (Iraq). This touched off a period of turbulence as other Abbasids rebelled against the succession; however, during 762–66, Al-Mansur gained a firm hold on the realm and established a new capital at Baghdad. No sooner had he completed this, however, than the rival Islamic sect, the Shi'ites, rebelled against him. He quickly crushed the rebellion by triumphing over Shi'ite forces at the Battle of Bakhamra in 762.

Shi'ite Rebellion (814–819)

PRINCIPAL COMBATANTS: Shi'ite Alid rebels vs. Abbasid caliph Allah al-Ma'mun; subsequently, alienated Sunni subjects vs. Allah al-Ma'mun

PRINCIPAL THEATER(S): Mecca, Medina, and Baghdad

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Alids wanted to replace the Sunni caliph with a Shi'ite; when the caliph acted to pacify the Shi'ites, the Sunnis deposed him.

OUTCOME: Allah al-Ma'mun was able to regain control of the caliphate.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** None

In 814 the Abbasid caliph Allah al-Ma'mun (785–833) attempted to bring about an end to the conflict between the Shi'ite Muslims, who believed in the divine right to rule of Ali ibn Abi Talib (c. 600–661) and his descendants, and the Sunni Muslims, who accepted the three caliphs who had preceded Ali. This attempt at reconciliation triggered a rebellion by Shi'ites known as the Alids, who overran and occupied the holy cities of Mecca and Medina, then captured all of southern Mesopotamia. From this position of power, they threatened Baghdad, the Islamic capital.

Under al-Ma'mun's orders, his greatest commander, Harthma ibn 'Ayan, led the imperial forces against the Alid rebels and defeated them. Abu'l Saraya (d. 818), their leader, was taken captive and executed. This done, al-Ma'mun decided that a conciliatory gesture was in order, and so he named Ali ar-Rida (d. 818), a Shi'ite, as his successor. Although this may have pacified the Shi'ites, it out-

raged the Sunnis, who overthrew al-Ma'mun and drove him out of Baghdad. They elevated his uncle, Ibrahim (779–839), descended from the third caliph, to the throne. Subsequently, ar-Rida died from poisoning—no one knows who poisoned him. However, in August 819, al-Ma'mun returned to Baghdad from exile in Merv, leading a large army. He regained control of the caliphate, retook the throne, and launched a new and successful offensive against the Alids. With ar-Rida out of the way, the Sunnis had nothing further to protest.

See also MUSLIM CIVIL WAR (657–661).

Shimabara Revolt (1637–1638)

PRINCIPAL COMBATANTS: Converted Japanese and foreign Christians vs. military troops of the Iemitsu, third Tokugawa shogun

PRINCIPAL THEATER(S): Southern Japan, especially Nyushu Island

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The shogun attempted to wipe out Christianity, which he saw as a challenge to Japan's traditional society.

OUTCOME: Christianity was abolished in Japan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

40,000 Christians; 100,000 Tokugawa shogun troops

CASUALTIES: All but 105 Christians; shogun troops, unknown

TREATIES: None

A lone Portuguese priest first introduced Catholicism to the isolated islands of Japan in 1549. More missionaries followed, and they succeeded in converting vast numbers of Japanese to the Christian faith. Christianity spread in Japan for seven decades, in spite of the ruling shogun's (military dictator's) frequent banning of the religion, expulsion of its clergy, and enforcement of *sakoku* ("closed country"). Catholicism had spread widely and deeply in Japan's southern regions, taking root most strongly on the Shimabara Peninsula of Kyushu Island and on the Amakusa Islands.

In 1623, Iemitsu (1604–51), third ruler of the Tokugawa shogunate (military dictatorship), came to power. New prohibitions on the practice of Christianity were accompanied by the unspeakable torture and execution of the foreign and Japanese faithful. Japanese citizens were required to sign up as parishioners at Buddhist temples, which guaranteed annually that their members were not Christian. Suffering years of such violence, thousands of converts staged an open revolt against the shogun. In addition to religious persecutions, the rebels protested the

shogun's oppressive land policies, heavy taxation, and a ban on travel and contact with the world beyond Japan's shores.

Fighting continued until early 1638, when nearly 20,000 rebels converged on an abandoned castle on the Shimabara coast. There, they gathered their families (numbering another 20,000) and took a stand against 100,000 of the shogun's troops. The Christians withstood attacks against the castle for four months, even surviving the shelling of the castle by a Dutch warship conscripted into the shogun's cause. By mid-April, however, the rebels had depleted their food and ammunition. The shogun's army stormed the castle, killing all but 105 Christians.

The Christians' struggle against persecution was part of greater battles in the Tokugawa shogun's efforts to consolidate control over the islands. In the short term, after the massacre at Shimabara, there were no known Christians in Japan, but for a few Dutch merchants. In the long term, the Tokugawa dynasty ruled Japan for the next 250 years.

Shimonoseki War (1863–1864)

PRINCIPAL COMBATANTS: The Choshu daimyo (warlord) vs. the United States, Great Britain, France, and the Netherlands

PRINCIPAL THEATER(S): Straits of Shimonoseki, Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Choshu daimyo sought to prevent foreign vessels from trading with Japan.

OUTCOME: United States, Great Britain, France, and the Netherlands successfully joined in a naval effort to neutralize the daimyo's resistance and to ensure open trade with Japan. The conflict greatly facilitated the opening of Japan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Western allies, 17 warships, crewed by some 5,000 men who put ashore a landing force of 1,400 British, 350 French, 250 Dutch, and one squad of American troops; strength of daimyo's forces, unknown

CASUALTIES: Few among the allies but including at least 5 Americans killed, 6 wounded and 13 British killed, 50 wounded; daimyo casualties unknown, but probably heavy in proportion to the numbers engaged.

TREATIES: Treaty of 1864 with the daimyo of the Choshu clan

In the mid-19th century, the northern shore of Japan's Straits of Shimonoseki was controlled by the Choshu clan, whose daimyo threw his support behind the Japanese political faction that advocated the expulsion of all foreigners from the country. In accordance with this view,

two of the daimyo's ships attacked an American vessel anchored at the entrance to the strait, on June 26, 1863. This attack was followed the next month with assaults on French and Dutch ships from shore-based artillery. The U.S. Navy responded by sinking two of the daimyo's vessels, and a French warship bombarded a village, razing it, and destroyed a shore battery. These actions did not deter the Choshu daimyo, whose batteries continued to fire on any foreign vessel that approached within range.

In March 1864, the British consul at Edo (Tokyo) organized other Western powers to make a concerted armed response to the daimyo's actions, the object being to force Japan to abide by existing trade treaties. On September 5, 1864, a coalition flotilla of 17 warships from Great Britain, the United States, France, and the Netherlands advanced into the Straits of Shimonoseki and methodically pounded shore batteries along the Choshu coast. After three days of bombardment, all the artillery positions had been destroyed. Having neutralized the daimyo's ability to resist, the allied naval commanders, at the mouths of their cannon, negotiated a treaty with the daimyo, whereby he guaranteed the safe and free passage of foreign trading vessels and agreed not to fortify the straits and to allow open trade at the port of Shimonoseki. The treaty also levied a large indemnity on the Choshu government.

The brief "war," resolved by a small flotilla, had a profound effect on Japan. It ended the last resistance to foreign trade and foreign influence; indeed, it triggered an opposite trend: the embrace of many aspects of foreign culture, particularly where technology and weaponry were concerned. From this point on, Japan became an industrial and military force to be reckoned with.

Siamese-Burmese War (1548)

PRINCIPAL COMBATANTS: Burmese troops of the Toungoo regime vs. Siamese forces of the Ayutthaya dynasty

PRINCIPAL THEATER(S): Southern Burma (Myanmar) to Central South Siam (Thailand)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ayutthaya made a preemptive strike against Burma's expansionist maneuvers.

OUTCOME: Siam repelled Burma's advances.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: The Siamese queen and her daughter died in the fighting.

TREATIES: None

Toungoo king Tabinshwehti (1512–51) came to power in 1531 and spent much of the next two decades consolidating various Burmese kingdoms under his rule. By 1546, he had moved from Toungoo (northeastern Lower Burma) north to take Upper Burma from the Shans. He then headed south to capture the Mon kingdom of Pegu in Lower Burma, including territory along the eastern coastal plains—land once held by the powerful Ayutthaya regime of Siam. When he claimed the central Irrawaddy River valley, he declared himself “king of all of Burma.” He had ambitions to next take the Arakan kingdom in the west.

His troops moved to the western coast to lay siege to the Arakan capital of Mrohaung. Meanwhile, the Ayutthaya king, Maha Chakkraphat (fl. 16th century) expected Tabinshwehti to extend his expansion into Siam. Ayutthaya forces made a preemptive strike on the Burmese town of Tavoy, once part of the Siamese empire. Tabinshwehti turned his troops from Mrohaung, gathered some Portuguese mercenaries, and headed east, chasing the Siamese all the way from Tavoy to their capital city in central Siam, which the Burmese besieged.

During the siege, the Siamese king found himself in difficulties and was rescued by his wife, Suriyodaya (d. 1548), disguised as a soldier. Her efforts were successful—her husband was freed—but the adventure cost her her life. The queen's daughter also died in the fighting. Burmese forces captured the king's son, Rameshvara (d. 1564), and son-in-law too.

Despite the decimation of the Siamese royal family, the war turned badly for Tabinshwehti. After the four-month siege of the capital city, the Burmese king had depleted his supplies of war materials. Defeated, he was forced to free his royal captives in exchange for his troops' safe passage home.

Siamese-Burmese War (1563–1569)

PRINCIPAL COMBATANTS: Forces of the Toungoo dynasty of Burma vs. the Ayutthaya armies of Siam

PRINCIPAL THEATER(S): Siam (Thailand)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Fearing an alliance between the Shan provinces of the Burmese empire with the neighboring Siamese dynasty, Bayinnaung contrived an attack on Siam.

OUTCOME: Burma defeated Siam, which remained under Burmese rule for 15 years.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In the decades preceding the SIAMESE-BURMESE WAR (1548), the Toungoo king of Burma, Tabinshwehti (1512–51), expended much of his own energies and his kingdom's resources in a series of military maneuvers designed to unite the independent realms of Burma (Myanmar). He succeeded, for a time, in conquering the Shan of Upper Burma and the Mon of Lower Burma. But when he tried in 1548 to add parts of the Ayutthaya kingdom (Thailand) to his domain, he met with a defeat that cost him his wife, Suriyodaya (d. 1548), his daughter, and his will to continue. He turned to drink and neglected the business of state.

Perhaps seeing an opportunity in 1551, the Mon people of the Burmese kingdom took up arms against the king, whom they assassinated in 1551. But Tabinshwehti's brother-in-law, Bayinnaung (1515–81), quickly smashed the revolt and ascended the throne.

Bayinnaung could control the Toungoo dynasty no better than his kin. Fearing that the Shan might align with the Ayutthaya kingdom against him, in 1563 he contrived a cause to invade Siam: he had demanded that the Siamese king, Mahachakrabarti (d. 1569), send a sacred white elephant to the Burmese capital. When no elephant arrived, Bayinnaung went to war. Employing Portuguese mercenaries and buying Portuguese cannon, Bayinnaung headed south and east with the cannon mounted atop wooden towers. In 1564, his forces overran the Ayutthaya capital.

The Siamese people had no taste for a war, and Mahachakrabarti knew it. He negotiated a peace that called for him to turn over resistance leaders, including one of his sons, to the Burmese king. In response to this betrayal, the Siamese nobility rebelled, and another of Mahachakrabarti's sons, Mahindra (d. 1569), took control of Siam. He failed to recapture lands recently lost to Burma, and his father was able to regain the throne in 1568. The treachery within Mahachakrabarti's family, however, continued to bedevil the Siamese king. His son-in-law Maha Dhammaraja

1034 Siamese-Burmese War (1584–1592)

(d. 1590) allied with Bayinnaung against him, and Mahachakrabarti seized his own granddaughter as hostage. Bayinnaung used the kidnapping as a reason to send another, this time massive, attack against Siam, crushing the city of Ayutthaya in a 10-month siege.

On August 30, 1569, shortly after Mahachakrabarti's death, the Burmese entered the city with the aid of traitors. His son Mahindra died in captivity; his son-in-law Maha Dhammaraja ascended the Siamese throne as the vassal and lackey of his benefactor, Bayinnaung. For the next 15 years, Siam remained under Burmese rule, but if Bayinnaung had succeeded in conquering the entire Chao Phraya Valley, he had exhausted Burma's resources doing so. After his death, the kingdom would break to pieces. Not only would the Mon revolt and the Siamese regain their independence, but also the Portuguese, whom Bayinnaung used as hirelings but was careful to keep at arm's length, managed to carve out a kingdom of their own at Syriam.

Siamese-Burmese War (1584–1592)

PRINCIPAL COMBATANTS: Siam vs. Burma

PRINCIPAL THEATER(S): Siam (Thailand)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: After 15 years of Burmese domination, Siam renounced its allegiance to Burma's king.

OUTCOME: Siam threw off Burmese subjugation.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: The crown prince of Burma died at the Battle of Nong Sa Rai.

TREATIES: None

Following its defeat in the SIAMESE-BURMESE WAR (1563–1569), the Siamese kingdom remained subjugated to the king of Burma (Myanmar), Bayinnaung (1515–81), who had bankrupted Burma with his conquests. Nevertheless, upon his death in 1581, his son, Nanda Bayin (d. 1599), held Siam for a few years. Troubles began, however, in 1584 when Phra Naret (c. 1555–1605), governor of Siam's northern provinces, renounced his allegiance to the Burmese king. The king mounted a two-pronged attack against Siam but was rebuffed.

Strengthening his forces, Nanda Bayin forged ahead with three armies in late 1586, all converging on Siam's capital of Ayutthaya. For the first five months of the fol-

lowing year, the Burmese armies bombarded the city but were forced again to retreat—as much by disease and a shortage of supplies as by Phra Naret's resistance.

The Burmese ruler retreated, only to return in 1590, when he failed again to reconquer the Siamese. Nanda Bayin's nemesis, Phra Naret, in the meantime became King Naresuan, ruler of all Siamese lands in rebellion. Nanda Bayin mounted a final assault in 1592, headed by Crown Prince Minkyizwa (d. 1592). A large Burmese army faced Phra Naret's forces at the Battle of Nong Sa Rai; the two leaders faced off in hand-to-hand combat, each aboard an elephant. When the Burmese crown prince was killed, his troops retreated. Siam's subjugation by Burma had ended, and the man who had won this independence for the Siamese, King Naresuan, came to be regarded as a national hero by Thailand.

Wood, *A History of Siam: From the Earliest Times to the Year A.D. 1781, with a Supplement Dealing with More Recent Events* (New York: AMS, 1974).

Siamese-Burmese War (1593–1600)

PRINCIPAL COMBATANTS: Siam vs. Burma

PRINCIPAL THEATER(S): Burma (Myanmar)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Having thrown off the shackles of Burmese rule, Siam went on the offensive.

OUTCOME: Siam failed to conquer Burma, but the war left Burma disunited.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Emboldened by his success in driving the Burmese from his homelands, King Naresuan (c. 1555–1605, formerly known as Phra Naret) went on the offensive. Having felled Burma's (Myanmar) Crown Prince Minkyizwa in 1592 at the Battle of Nong Sa Rai (*see* SIAMESE-BURMESE WAR [1584–1592]) and liberated Siam (Thailand) from 15 years of subjugation, the king of Siam ventured into Burmese territory on the Malay Peninsula.

Naresuan took the peninsular town of Tavoy and the surrounding Tenasserim provinces in 1593. Traveling northward, his forces captured Moulmiem and Martaban in the next year.

The king's pursuit of the Burmese was not much delayed by his strikes into nearby Cambodia and Chiangmai (northwest Thailand). In 1594, Naresuan captured the Cambodian capital city, Lovek, and put the country under his suzerainty. After aiding Chiangmai in resisting a Laotian attack in 1595, he made the ruler of that province a vassal to the Siamese throne. These victories made Naresuan stronger in his relentless push into Burma.

By 1596, Naresuan's forces pushed Burmese troops back from the Malay Peninsula to the capital city of Pegu, where civil war broke out. Naresuan took advantage of the unrest, attacking the city and occupying it for a time. The rebels of Pegu then took matters into their own hands. After assassinating Burma's King Nanda Bayin (d. 1599), they reorganized and managed to drive the Siamese out of Burma. The effort, however, was costly. Burma reverted back to a disorganized group of petty states.

Lieberman, *Burmese Administrative Cycles: Anarchy and Conquest, c. 1580–1760* (Princeton, N.J.: Princeton University Press, 1985); David K. Wyatt, *Thailand: A Short History* (New Haven, Conn.: Yale University Press, 1984); W. A. R. Wood, *A History of Siam: From the Earliest Times to the Year A.D. 1781, with a Supplement Dealing with More Recent Events* (New York: AMS, 1974).

Siamese-Burmese War (1607–1618)

PRINCIPAL COMBATANTS: Burma vs. Siam (Thailand) (with Portuguese aid)

PRINCIPAL THEATER(S): Burma (Myanmar) and Chiangmai (northwest Thailand)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Burma sought control of Siamese-held provinces.

OUTCOME: The war was resolved by a 1618 treaty, which gave Chiangmai to Burma and Tavoy to Siam.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Burmese-Siamese treaty, 1618

As a result of the BURMESE CIVIL WAR (1599), Pegu was destroyed and Burma descended into anarchy. Into this situation stepped Anaukpetlun (d. 1628), monarch of Ava, an Upper Burmese province. He saw an opportunity to bring new unity to Burma by taking control of major towns. In 1607, Prome (Pye) fell to him. Three years later he captured Toungoo, and Syriam in 1613. After these conquests, Anaukpetlun advanced into Tavoy and Tenasserim, areas of southeastern Lower Burma held by Siam. During 1613–14,

Tavoy fell to Anaukpetlun, although it was later retaken. Portuguese and Siamese forces successfully defended Tenasserim against the invaders. This restored the western border of Siam.

While fighting in Burma, Anaukpetlun dispatched another force to invade Chiangmai, a Siamese kingdom in what is today northwest Thailand. The Burmese laid siege to the city of Lampang, but the contest remained a draw through 1618, when Burma and Siam concluded a peace by which Burma regained control over Chiangmai in exchange for conceding control of Tavoy to Siam.

Siamese-Burmese War (1760)

PRINCIPAL COMBATANTS: Burma (Myanmar) vs. Siam (Thailand)

PRINCIPAL THEATER(S): Siam

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Perennial rivalry between Burma and Siam.

OUTCOME: Burma invaded Siam but retreated when the Burmese leader fell ill and died.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 20,000 Siamese; probably a like number of Burmese

CASUALTIES: Unknown

TREATIES: None

In 1760, Siam sent 20,000 men into the narrow Tenasserim province of its longtime rival Burma to seize the city of Tavoy. But Burma, which had seen its fortunes flag in Southeast Asia over the previous century, was now under the rule of a new dynasty, founded by Alaungpaya (1714–60), the greatest military leader in Burmese history, who had revived the empire with victories over the Mons of southern Burma (see BURMESE CIVIL WAR [1753–1757]) and Manipur (see BURMESE-MANIPURIAN WAR [1755–1758]).

Not only did Burma counterattack, but also in April Alaungpaya marched against the Siamese capital, Ayutthaya (north of Bangkok). But when Alaungpaya fell sick and died at the age of 46 during the siege, the Burmese abandoned the expedition and retreated across the frontier to deal with an internal struggle over the succession.

Further reading: G. E. Harvey, *A History of Burma* (London: Frank Cass, 1967); William J. Koenig, *The Burmese Polity, 1752–1819* (Ann Arbor: Center for South and Southeast Asian Studies, University of Michigan, 1990); David K. Wyatt, *Thailand: A Short History* (New Haven, Conn.: Yale University Press, 1984); W. A. R. Wood, *A History of Siam: From the Earliest Times to the Year A.D. 1781, with a Supplement Dealing with More Recent Events* (New York: AMS, 1974).

Siamese-Burmese War (1764–1769)

PRINCIPAL COMBATANTS: Burma (Myanmar) vs. Siam (Thailand) and Laos

PRINCIPAL THEATER(S): Siam and Laos

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Burmese expansion and Siamese response

OUTCOME: Burma invaded Siam and Laos but was driven out by Phya Taksin, who assumed the Siamese throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Alaungpaya (1714–1760), who founded a new Burmese dynasty, died during the retreat from a failed invasion of Siam, which further embittered Burma against its archrival, the very autonomy of which seemed to make the imperialistic Alaungpayas both more insecure and more bellicose.

Alaungpaya's death was followed by an internal power struggle that left his second son, the ambitious and expansionist Hsinbyushin (d. 1776), king of Burma. He renewed the war against Siam in 1764. Stopping first to invade the repeatedly contested Chiengmai, Hsinbyushin overran this northwest region of Thailand, then invaded Laos.

With the Chiengmai and Laotian conquests completed, Hsinbyushin turned south and marched on Ayutthaya, capital of Siam. Some 50,000 Burmese troops surrounded the city. On January 20, 1766, a similar force of Siamese soldiers went out to meet the invaders. In the battle, outside the walls of the city, a fusillade of musketry panicked the Siamese advance force, which stampeded back into the ranks of its own army. Thousands of Siamese died as the Burmese pressed their advantage.

Now Burma maintained a siege, its covering force of 3,000 battering the year round, even during Thailand's usually debilitating monsoons, when the series of redoubts built by the besiegers on high ground became a string of islands surrounding Ayutthaya. Siam sent 10,000 more men to relieve the town, but the besiegers held them off. In December Siam made one last effort to break the

siege with a gunboat attack on the redoubts; the attack proved a costly failure.

Finally, in April 1767, the Burmese filled tunnels they had dug under the city walls with straw and firewood and set them ablaze. The walls buckled and collapsed, and the Burmese stormed the city. They killed several thousand, including the Siamese king, Ekat'at (d. 1767), and took 30,000 prisoners, whom they enslaved. The Burmese invaders looted and vandalized the capital, so severely damaging the city that later the Siamese capital was moved to Thon Buri, and afterward to Bangkok.

The Burmese commander, General Maha Nawraha, died just before the surrender, but Phya Taksin (1734–83), the Siamese general defeated by the forces of Hsinbyushin, escaped capture. He personally mustered a new army, and managed to drive the Burmese from Siam in 1769. The triumphant Phya Taksin assumed the Siamese throne and turned his attention to rivals for his crown. These he defeated in 1769, effectively bringing a measure of unity to Siam. He would reconquer all of Chiengmai in the SIAMESE-BURMESE WAR (1775–1776).

See also BURMESE-CHINESE WAR (1765–1769); SIAMESE-VIETNAMESE WAR (1769–1773).

Siamese-Burmese War (1785–1792)

PRINCIPAL COMBATANTS: Siam vs. Burma

PRINCIPAL THEATER(S): Siam (Thailand) and Burma (Myanmar), especially regions of Tavoy and Tenasserim

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Burmese expansion

OUTCOME: Burma failed in its bid to invade and conquer Siam, but it did retake two Siamese-controlled regions it had formerly held.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Under King Bodawpaya (d. 1819), Burmese forces invaded Arakan, a kingdom on the western border of Burma. Bodawpaya annexed his coastal conquest in 1784 and took 20,000 prisoners, who became slaves.

Fresh from this triumph, Bodawpaya resolved to defeat Burma's archrival, Siam. He led his army east in a headlong invasion, which was quickly repulsed with heavy losses. Despite this decisive defeat, Bodawpaya persisted in fighting what became a sporadic war of attrition. The Siamese loosened their grip on Tavoy and Tenasserim, two former Burmese possessions.

Siamese-Cambodian War (1587)

PRINCIPAL COMBATANTS: Siam (Thailand) vs. Cambodia

PRINCIPAL THEATER(S): Burma (Myanmar), Siam (Thailand), and Cambodia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Outraged by the conduct of Siam's Prince Phra Naret, Cambodia's King Sattha severed an anti-Burmese alliance with Siam and attacked his erstwhile ally.

OUTCOME: At first on the defensive, Siam counterattacked and invaded Cambodia, withdrawing only because of supply difficulties.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

In 1587, King Sattha (c. 1576–96) of Cambodia threw his kingdom's support behind Prince Phra Naret (c. 1555–1605) of Siam, who declared his realm's independence from Burma. Sattha sent troops under the command of his brother to aid Phra Naret in his war of independence, specifically to reinforce an attack on Burmese forces in Chiangmai (northwest Thailand) in April 1586. A dispute between Sattha's brother and Phra Naret, apparently over some breach of etiquette or other slight, prompted the Siamese prince to impale the Laotian captives he held. Appalled, Sattha abruptly abrogated Cambodia's alliance with Phra Naret and invaded southern Siam in 1587. His troops captured the city of Prachim (Prachin Buri).

At this point, Sattha sought an alliance with colonial and trading interests, the Spanish based in Manila and the Portuguese. When no help was forthcoming, Sattha broke off his pursuit of the retreating Siamese, and Phra Naret, sensing weakness, counterattacked. The Siamese now seized the initiative and forced the Cambodians into retreat. Phra Naret retook Prachim, then invaded Cambodia, overrunning and occupying the cities of Battambang and Pursat. His troops marched all the way to the Cambodian capital of Lovek before overstretched lines of supply and communication forced his withdrawal. The war ended inconclusively but with Phra Naret's pledge to return to Cambodia in order to punish King Sattha for having betrayed the alliance.

Siamese-Cambodian War (1593–1594)

PRINCIPAL COMBATANTS: Siam (Thailand) vs. Cambodia

PRINCIPAL THEATER(S): Cambodia

DECLARATION: None

1038 Siamese-Cambodian War (1603)

MAJOR ISSUES AND OBJECTIVES: King Naresuan of Siam sought vengeance on King Sattha of Cambodia, who had abrogated an alliance against Burma in the Siamese-Cambodian War of 1587.

OUTCOME: Naresuan conquered Cambodia and annexed it under a Siamese military government.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Siam, more than 100,000; Cambodian forces, unknown

CASUALTIES: Unknown

TREATIES: None

In the SIAMESE-BURMESE WAR (1584–1592), Phra Naret (c. 1555–1605)—now Naresuan of Siam—turned his attention to Sattha (d. 1596) of Cambodia, who had abrogated an alliance against Burma in the SIAMESE-CAMBODIAN WAR (1587). Naresuan was bent on revenge.

In May 1593 Naresuan led a 100,000-man army into Cambodia, easily taking Battambang and Pursat (Pouthisat). From here, he advanced on the Cambodian capital city of Lovek, which he had failed to take in the earlier war. Reinforcing armies took Siemreab, Bassac (Champassak, Laos), and other northern Cambodian settlements, then linked up with the main force under Naresuan.

In response to the invasion, Sattha sought aid from Spanish colonial officials in Manila, but it arrived too late. Determined to fight to the finish, he launched counterattacks against siege forces around Lovek. Despite this effort, the capital fell to the Siamese in July 1594. Sattha took flight, finding refuge at Luang Prabang. A broken man, he died two years later in exile. Left behind was Sattha's brother, Prince Srisuphanma (d. 1618), who was held captive while Naresuan annexed Cambodia, putting it under the rule of a Siamese military governor.

In 1596, a Spanish expedition arrived in Cambodia intending to give aid to the new deposed king. When the Spaniards found a usurper in his place, they sacked the Chinese quarter of Phnom Penh, then attacked the palace. Ultimately, in 1597, they found one of Sattha's sons in Laos, and placed him on the Cambodian throne as Baron Reachea II (d. 1599).

Siamese-Cambodian War (1603)

PRINCIPAL COMBATANTS: Siamese army in support of Srisuphanma, brother of Sattha vs. Cambodian resisters

PRINCIPAL THEATER(S): Cambodia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: King Naresuan wanted to install a vassal ruler on the Cambodian throne.

OUTCOME: Srisuphanma was enthroned.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Siamese troops, 6,000; Cambodian resisters, unknown

CASUALTIES: Unknown

TREATIES: None

As a result of the SIAMESE-CAMBODIAN WAR (1593–94), King Sattha (d. 1596) of Cambodia was overthrown by King Naresuan (c. 1555–1605, Phra Naret) of Siam (Thailand) in revenge for a breached alliance (see SIAMESE-CAMBODIAN WAR [1587]). However, in 1597, Spanish forces came belatedly to Sattha's aid. The king had died in 1596, but the Spanish killed a usurper and installed one of Sattha's sons on the throne as Baron Reachea (d. 1599). This action did not sit well with most Cambodians, who resented the imposition of a king by a foreign power. In 1599, the Cambodians rose against Spanish troops occupying Phnom Penh, killed them, overthrew the Spanish-sponsored monarch, and then suffered through a succession of three incompetent and corrupt princes. At last, the queen mother pleaded with Naresuan to bring Prince Srisuphanma (d. 1618), the brother of Sattha, to the throne. With Naresuan's support, Srisuphanma led 6,000 Siamese troops into Cambodia, brushed aside resistance, and assumed the throne as Baron Reachea IV, a vassal nevertheless to Naresuan. The brief Spanish interlude in Cambodia marked the last significant European contact with the Cambodian court until France began colonizing Southeast Asia in the mid-19th century.

Siamese-Cambodian War (1622)

PRINCIPAL COMBATANTS: Siam vs. Cambodia

PRINCIPAL THEATER(S): Cambodia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: After Cambodia declared independence from Siamese domination, the Siamese king invaded in an attempt to regain dominion over its vassal.

OUTCOME: The invasion failed, and Cambodia gained its independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

As a result of the SIAMESE-CAMBODIAN WAR (1603), Prince Srisuphanma (d. 1618), assumed the Cambodian throne—calling himself Baron Reachea IV Srey Sauryopor—as the vassal of Siam’s (Thailand’s) King Naresuan (c. 1555–1605). In 1618, Srey Sauryopor died, whereupon his son, Chettha II (d. 1625), succeeded to the throne, proclaimed an end to Cambodia’s vassalage to Siam, and declared the kingdom independent. In order to strengthen his position, Chetta took the careful step of seeking aid from the Nguyen lords of south Vietnam.

The successor to Naresuan, Songtham the Just (also called Intharaja II [d. 1628]), sent an amphibious force to restore Siamese dominion over Cambodia in 1622. The sea component of the force never engaged in combat, and the land army, deceived by guides, was led into a Cambodian ambush. After suffering serious losses, the Siamese retreated. Songtham the Just attempted to recruit the aid of British and Dutch trading interests to support a renewed invasion. The Europeans did not furnish aid, however, and Songtham was unable to regain control of Cambodia.

Meanwhile, Chetta had married a Vietnamese princess, which led to a demand from the Nguyens to allow Vietnamese settlement in Cambodian territory farther south in their kingdom, around modern Ho Chi Minh City. As a result, whenever challengers made rival claims to the Khmer throne, they always sought the backing of either the Vietnamese or the Thais, inevitably at a cost to the Cambodians in land or sovereignty.

Siamese-Cambodian War (1714–1717)

PRINCIPAL COMBATANTS: Siam (Thailand) vs. Cambodia

PRINCIPAL THEATER(S): Cambodia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Siam invaded Cambodia to counteract growing Vietnamese power there.

OUTCOME: The invasion was successful, and Cambodia’s king became a vassal of the Siamese throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 1714, the newly crowned king, Prea Srey Thomea (fl. 1710s), was overthrown by his uncle, former king Keo Fa (d. c. 1720). The coup d’état was aided by troops from Viet-

nam and Laos. Prea Srey Thomea escaped to Siam, where he appealed to King Bhumindaraja (Phra Chao Thai Sa [1681–1733]) for aid in regaining his throne. Bhumindaraja was willing to help, if only to block the buildup of Vietnamese influence in Cambodia. In 1715 and 1716, Bhumindaraja sent two small armies into Cambodia in attempts to overthrow Keo Fa but failed both times. At last, in 1717, Bhumindaraja mounted a major invasion, sending a large force through Siemréab in the north and a smaller force, with naval support, by way of the Gulf of Siam in the south.

The southerly force was engaged at the Battle of Banteay Meas by a Cambodian army allied with a Vietnamese force. Overawed, the Siamese fleet hurriedly withdrew, and was destroyed by a storm. In the north, however, the larger force prevailed against lesser resistance and marched on the Cambodian capital, Udong. At this point, however, Bhumindaraja betrayed Prea Srey Thomea by agreeing to allow Keo Fa to remain on the throne in return for his vassalage. Prea Srey Thomea never regained the throne.

Siamese-Cambodian War (1831–1834)

PRINCIPAL COMBATANTS: Siam (Thailand) vs. Cambodia and Vietnam

PRINCIPAL THEATER(S): Cambodia, southern Vietnam, eastern Laos

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Siam sought to gain control of Cambodia during a period of Cambodian unrest.

OUTCOME: With Vietnamese aid, the Cambodian king, Ang Chan II, was restored to his throne and the Siamese were driven out of the kingdom; however, Cambodia now became a vassal state of Vietnam.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Totals unknown; Vietnamese forces, at least 15,000

CASUALTIES: Unknown

TREATIES: None

Since Cambodia’s Chetta II (d. 1625) invited the Vietnamese to help him against his traditional Siamese foes in the SIAMESE-CAMBODIAN WAR (1622), Thailand and Vietnam had increasingly vied for influence over the Khmer. By the early 19th century the two were fighting for outright control of Cambodia.

Before the CAMBODIAN REBELLION of 1811–12, Ang Chan II (1791–1835) had followed the traditional practice of paying tribute to both the Siamese and the Vietnamese,

but it had not helped him when his brother sought Siamese help to usurp the throne. With the backing of the Vietnamese, who had offered him sanctuary, Ang Chan regained the Cambodian throne. Vassalage to Vietnam then became his fate until 1831, when he was again confronted by an invasion from Siam. The Siamese made incursions into the north, penetrated south, and scored a major victory at the Battle of Kompong Chang, which sent Ang Chan once more fleeing from his throne to seek refuge again in Vietnam in 1832. The Siamese forces in pursuit invaded southern Vietnam, taking the towns of Chau-doc and Vinh-long. However, they were confronted by a larger Vietnamese army, which forced them into retreat. In the meantime, in Cambodia and part of Laos (the Siamese-controlled east), a popular uprising was mounted against the Siamese overlords. Thus beleaguered, the Siamese were also challenged, in 1833, by a 15,000-man Vietnamese army, which restored Ang Chan to the Cambodian capital of Udong and, ultimately, the throne. The price was one with which Ang Chan was already quite familiar—vassalage to Vietnam.

Wood, *A History of Siam: From the Earliest Times to the Year A.D. 1781, with a Supplement Dealing with More Recent Events* (New York: AMS, 1974).

Siamese Civil War (1610–1612)

PRINCIPAL COMBATANTS: Forces of Siamese king Songtham the Just vs. Japanese palace guards and Laotian allies of the guards

PRINCIPAL THEATER(S): Siam (Thailand)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Japanese guards rebelled against Songtham the Just in support of another candidate for the throne.

OUTCOME: Songtham defeated the Japanese guards' allies, a contingent of Laotian troops, and quelled the rebellion among the guards themselves, thereby retaining the throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

At the beginning of the 17th century, many Japanese refugees fled their nation and the tyranny of the Tokugawa shogunate (military dictatorship). They settled in Siam and became, under Yamada Nagmasa (d. 1632), members

of the palace guard at the capital city of Ayutthaya. In this service, the refugees grew rapidly in prestige.

In 1619, Songtham the Just (Intharaja II [d. 1628]) succeeded to the Siamese throne. The Japanese palace guard rebelled in support of a pretender. As the rebellion got under way, Laotian troops invaded from the north. They claimed to support the Japanese palace guards but clearly had their own designs on Siam. They took the village of Lop Buri, adjacent to Ayutthaya, the Siamese capital. Songtham the Just called out his troops to evict the Laotian forces. This succeeded but touched off a revolt among the Japanese guards. Songtham responded wisely—he put down the revolt but recognized the existence of a long-term problem. Accordingly, he allowed the guards to maintain their military position and status in exchange for their cession of the important citadel at Phetchabun. Stability thus returned to the Siamese capital and to Siam.

Further reading: David K. Wyatt, *Thailand: A Short History* (New Haven, Conn.: Yale University Press, 1984); W. A. R. Wood, *A History of Siam: From the Earliest Times to the Year A.D. 1781, with a Supplement Dealing with More Recent Events* (New York: AMS, 1974).

Siamese Civil War (1630–1636)

PRINCIPAL COMBATANTS: Usurper king Phra Chao Prasatthong vs. forces of the legitimate royal family, Japanese palace guards, various other rivals, and the province of Pattani

PRINCIPAL THEATER(S): Siam (Thailand)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Phra Chao Prasatthong was ruthless in securing the throne for himself.

OUTCOME: Phra Chao Prasatthong held the throne but at a terrible cost to his country; the province of Pattani broke free and maintained throughout his reign almost total autonomy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Totals unknown; typical of Phra Chao Prasatthong's ruthlessness was his execution of at least 3,000 prominent persons, including many in the legitimate royal family.

TREATIES: None

Phra Chao Prasatthong (d. 1656) dethroned the sons of Siam's former king, Songtham the Just (Intharaja II [d. 1628]), whom he poisoned. With these actions, Phra Chao Prasatthong became king of Siam but touched off an especially violent civil war. Many factions were opposed to him. He attempted to eliminate each rival, beginning with

Yamada Nagamasa (d. 1632), the leader of the Japanese palace guard in the capital city of Ayutthaya. (For an explanation of the role of the Japanese palace guard, see SIAMESE CIVIL WAR [1610–1612]). Like Songtham the Just, Yamada was assassinated by poisoning. The refusal of the Tokugawa shogun in Japan to acknowledge Phra Chao Prasatthong as king prompted him to turn on the Japanese palace guard, which he attempted to slaughter to a man; most, however, escaped by sea. In all, however, Phra Chao Prasatthong managed to execute 3,000 persons prominent in the Siamese government, including many of the original royal family.

The tyranny and violence of Phra Chao Prasatthong's reign incited continual rebellion. The most successful was that in the province of Pattani. Despite an army Phra Chao Prasatthong sent there, the rebels prevailed, and Pattani became an autonomous, if not truly independent, province.

Siamese Civil War (1733)

PRINCIPAL COMBATANTS: Rivals to the Siamese throne, Prince Aphaï and Boromokot

PRINCIPAL THEATER(S): Siam (Thailand)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the Siamese throne following the death of King Bhumindaraja

OUTCOME: Boromokot defeated and killed Prince Aphaï and all other potential rivals.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

As often happened in Siamese government, the death of the king brought a dispute over succession, which resulted in civil war. King Bhumindaraja (Phra Chao Thai Sa [1681–1733]) died in 1733, igniting a struggle for power between his son, Prince Aphaï (d. 1733), and Bhumindaraja's brother, Boromokot (d. 1758). Boromokot indeed held a royal title, *uparat*, which carried with it the status of heir apparent; however, the wish of Bhumindaraja was clearly that Prince Aphaï should succeed him. Unfortunately, Bhumindaraja had been unable to effect an unambiguous change in his brother's status as *uparat*. Thus the succession was in dispute.

Aphaï led an army against forces loyal to Boromokot. Aphaï's army was at first confident of victory, then suddenly deserted the prince as Boromokot's forces advanced

upon the palace. Aphaï had no choice but to flee, and Boromokot seized control of the palace as well as of the capital city, Ayutthaya. He ordered troops to pursue Aphaï and Aphaï's brother, both of whom were run to ground in a swamp and executed on the spot. This accomplished, Boromokot presided over the slaughter of all of his enemies, wherever they were found. Approximately 300 Chinese residents in Ayutthaya rose up in rebellion and stormed the palace, but Boromokot's troops killed them all. Thus, before the year was out, Boromokot had killed or neutralized all of his rivals and was secure on the throne. Until his death in 1758, his reign was without further challenge.

Siamese-Laotian War (1826–1829)

PRINCIPAL COMBATANTS: Siam vs. Laos

PRINCIPAL THEATER(S): Siam (Thailand) and Laos

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Laotian king Chao Anou invaded Siam, seeking conquest.

OUTCOME: Chao Anou was defeated and killed, and Laos became subject to Siamese hegemony.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

During the 18th century, the three Laotian city-states, always at loggerheads among themselves, also tried to maintain their independence from Burma (Myanmar) and Siam, the dominant (and rival) powers in western Indochina. Weak to begin with and made weaker by their internecine squabbles, the Laotian city-states—Vien Chan, Luang Prabang, and Champassak—had all fallen to Siamese invasion in 1778. Siam placed each in the hands of a Siamese commissioner. The three kings of Champassak, Vien Chan, and Luang Prabang might rule in their respective kingdoms, but they had to pay tribute to Bangkok, and appointments to their respective thrones were made in Bangkok.

In 1826, the (as it turned out) last king of Vien Chan, Chao Anou (1767–1835), attempted to shake off the Siamese yoke. First, he strengthened ties between Vien Chan and the Vietnamese, whose influence in Indochina had been growing steadily since the early 1600s (see SIAMESE-CAMBODIAN WAR [1622]) till it rivaled that of Siam. After making an alliance with Viet emperor Minh

Mang (1792–1841), Chao Anou secured from Bangkok itself governorship of Champassak for his son, extending his sway over most of the region constituting modern Laos. Chao Anou was therefore poised for war when he responded to intelligence—faulty, as it turned out—that a British fleet was about to attack Bangkok, capital of Siam. Chao Anou saw his opportunity to invade Siam. Under pretext of defending that country against the British, who had only recently defeated Burma, he marched three armies—from Vien Chang, Roi Et, and Ubon—in a converging campaign into Siam. The Siamese refused to accept Chao Anou’s “defense” and effectively rallied to repulse the invasion forces. The armies were pushed back to Korat and Ubon.

In 1827, the Siamese mounted a major counterattack against the Laotians at the Battle of Nong-Bua-Lamphu. Spanning seven days, the battle pushed the Laotian forces northward across the Mekong River. The Siamese doggedly pursued, devastating Vien Chang. Desperate, Chao Anou hid in the jungle, leaving his people to a hard fate of slaughter and slavery.

In 1828, Chao Anou obtained from the emperor of Vietnam troops with which he hoped to retake Laos. On the march toward Vien Chang, the Vietnamese deserted Chao Anou, whose greatly diminished remaining forces were defeated. Once again the king fled for his life, this time to Tran Ninh, north of Laos. Unfortunately for Chao Anou, Siam was threatening to invade Tran Ninh, and the king offered them Chao Anou in exchange for peace. The Laotian king was transported back to Bangkok in a cage and there was put to death by torture. Siam annexed Vien Chan, the first step toward the creation of a great empire.

Siamese-Vietnamese War (1769–1773)

PRINCIPAL COMBATANTS: Siam vs. Vietnam

PRINCIPAL THEATER(S): Cambodia and Siam (Thailand)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Vietnam wanted to gain control of Siam’s vassal, Cambodia.

OUTCOME: After a long, seesaw campaign, Siam succeeded in reestablishing its vassal king on the Cambodian throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

By the mid-18th century, Cambodia had long been dominated by Siam. In the east, however, Vietnam had made incursions into Cambodia and had effectively taken control of the eastern provinces of the country. In 1769, Vietnam made a major play for power in Cambodia by helping to depose Ang Non (d. 1779) and placing his brother on the Cambodian throne. Instigated by Vietnam, the new king discontinued tribute payments to Siam. In response, Siamese king Phya Taksin (1734–82), having recovered and defended Siam’s fortunes in the SIAMESE-BURMESE WAR (1775–1776), now led an army into the Cambodian provinces of Siemréab and Battambang. The following year, 1770, Vietnamese forces attacked Trat and Chanthaburi in Siam by way of retaliation. Phya Taksin, in turn, invaded Cambodia with ground and sea forces, taking Banteay Meas, Phnom Penh, and lesser objectives in rapid succession. The Siamese army marched toward the Cambodian capital at Banteay Pech, forcing the Vietnamese-backed king to flee for his life. The Siamese then restored Ang Non to the Cambodian throne, and the vassalage to Siam was reestablished.

Almost immediately after the invasion, Vietnam sent new armies against Siam. One force invaded and occupied Rach Gia on the Siam Gulf, while another sailed up the Mekong River to Phnom Penh, Cambodia, defeated the small Siamese occupying force, and once again evicted Ang Non from the throne, restoring his brother. Siamese forces regrouped and responded, however, and steadily pounded away at the new Vietnamese army. By 1773 the Vietnamese force had melted away, and by 1775 Ang Non had been yet again restored to the throne.

Siamese-Vietnamese War (1841–1845)

PRINCIPAL COMBATANTS: Siam (Thailand) and Cambodian popular insurgents vs. Vietnam

PRINCIPAL THEATER(S): Cambodia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Siam supported a popular uprising against Vietnamese overlords in Cambodia.

OUTCOME: Vietnam was defeated, but a compromise peace was reached, dividing rule of Cambodia between Vietnam and Siam, with Siam predominating and its candidate installed on the Cambodian throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** Treaty of 1845

As a result of the SIAMESE-CAMBODIAN WAR (1831–1834), Ang Chan II (1791–1835) had, with the help of Vietnam, regained his throne from a Siam-sponsored usurper. As the Cambodians were soon to discover, however, they had simply slipped from Siamese suzerainty into Vietnamese vassalage. After Chan's death, the Vietnamese ruled even more directly through a puppet queen whom the king had married, in part, to secure Vietnamese backing in the war. As Vietnam's hegemony grew increasingly oppressive, the Cambodian people grew increasingly restive, and in 1841 they staged a violent uprising and slaughtered many of their overlords. But without help they could not expel the Vietnamese, who held 50 garrisons; they turned to Bangkok, where Chan's youngest son, Duong (1796–1860), lived in exile. Siamese king Rama III (d. 1851) was only too happy to help against the Vietnamese, and he sent an army of invasion under the same general P'ya Bodin who had deposed the father to install the son. In late 1841, Duong returned under Siamese military escort from exile to assume the Cambodian throne.

Vietnam did not take the Siamese intervention lightly. From its many garrisons throughout Cambodia, it waged war against both Cambodian guerrillas and the Siamese army. Outnumbered, the Vietnamese garrisons were cut off and defeated—yet they refused to withdraw and relinquish Cambodia, but kept fighting. Vietnamese persistence wore down the Siamese will to achieve absolute victory, and in 1845 a treaty was concluded sharing rule of Cambodia between Siam and Vietnam, with Siam predominating. Duong was formally recognized by both sides as king, and he was crowned Ang (“king”) Duong in 1848.

Sicilian-Byzantine War (1147–1158)

PRINCIPAL COMBATANTS: Sicily vs. the Byzantine Empire, papacy, and Holy Roman Empire

PRINCIPAL THEATER(S): Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dominance over much of Italy

OUTCOME: Sicily emerged as the most powerful of the Italian powers.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Extremely variable

CASUALTIES: Unknown

TREATIES: Peace between Sicily and the pope, 1157; peace between Sicily and the Holy Roman Empire, 1158

Roger II (1095–1154), the Norman king of Sicily, was bent on conquest and aggressively pushed Sicily to dominance over Apulia, Calabria, and Capua, thereby threatening the power of the papacy, curbing the Holy Roman Empire, and even challenging the Byzantine Empire by menacing its territories in the West. The price Roger paid for his aggression was the enmity of all these powers: the pope, Eugenius III (or Eugene; d. 1151), the Holy Roman Emperor, Frederick I Barbarossa (c. 1125–90), and—most of all—the Byzantine emperor, Manuel I Comnenus (c. 1120–80).

While Roger II warred, he also practiced skilled diplomacy, throwing his support behind factions within the papal power structure who opposed the pope, and backing rebels within the Holy Roman Empire. His goal was always to drive a wedge between the Holy Roman Empire and the Byzantine Empire to prevent an alliance that would have been disastrous for him. While he manipulated these powers, Roger invaded Corfu and Neapolis, devastated Euboea, and raided Thebes. He did this with relative impunity, as the Holy Roman Empire and the Byzantines failed to act. The death of Conrad III (1093–1152) of Germany also aided Roger II, by forestalling a planned Byzantine–Holy Roman Empire campaign against Sicily.

At last, however, the papacy and the Holy Roman Empire struck an alliance under which Eugenius promised Frederick Barbarossa the imperial crown Rome had so far withheld and that the rights of the empire would be maintained. The successor of Eugenius III, Pope Adrian IV (c. 1100–59), honored the Treaty of Constance and crowned Frederick emperor on June 18, 1155, in Rome. Emperor Frederick I then prepared to invade Sicily, but with the sudden death of Roger II the year before, many of the German princes saw no reason to attack a no longer aggressive Italy, which was passing through a crisis as Roger's son William I (d. 1166) secured his succession in the face of Byzantine aggression against various Norman holdings. In any case, the vassal princes evidently took a wait-and-see attitude and refused to give Frederick the support necessary to

attack the Sicilian kingdom. But then William I resumed his father's combination of military aggression and crafty diplomacy. William attempted to conclude a treaty with Manuel I Comnenus but was refused, so he made peace with Venice, thereby neutralizing the war fleet upon which the Byzantines depended. Unwilling to stand idly by, however, Manuel I Comnenus cooperated with papal forces in an invasion of Italy. He took Capua from the Sicilians in 1155 but was in turn defeated at the Battle of Brindisi the following year. The defeat was so stunning that the pope backed out of his alliance with Manuel and made a separate peace with William in 1157. Capua was returned to William, and he was additionally confirmed in his rule of Sicily, Apulia, Naples, Amalfi, Salerno, and the Marsi. This hardly sated his appetite for conquest, however, and in 1158 he raided the coastal regions of the Greek empire, compelling Manuel I Comnenus to make peace and pulling the papacy into an alliance directed against Frederick I Barbarossa, who retained his own ambitions for conquest in Italy.

Sicilian-Byzantine War (1170–1177)

PRINCIPAL COMBATANTS: Sicily and Venice vs. the Byzantine Empire

PRINCIPAL THEATER(S): Italy and the Aegean

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Norman Sicily's continuing program of aggressive expansion in Italy

OUTCOME: The war ended in a draw, with Venice and Sicily still allied.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The SICILIAN-BYZANTINE WAR (1147–1158) initiated the aggressive expansion of Norman-ruled Sicily under Roger II (1095–1154) and his son William I (d. 1166). The last Norman king of Sicily, William II (1154–89), continued to push a program of dominance and squared off against Norman Sicily's traditional adversary, the Byzantine Empire, under Manuel I Comnenus (c. 1120–80). William

II allied Sicily with the Venetians, who, in 1170, found themselves driven from the Aegean, and with the Genoese, who possessed a formidable navy that William was determined to keep out of Byzantine hands.

Manuel I Comnenus, his many campaigns straining the empire's resources, initially sought to mend fences with William II by offering a dynastic marriage with his daughter, but he withdrew the offer in 1172, presenting her to a prince of the Holy Roman Empire instead. At this, William II threw his military backing behind the Venetians, who—engaged in a decade of war against the Byzantines—had already won victories at the Battles of Ragusa (Dubrovnik) and Chios in 1171. William supported an 1173 Venetian campaign against Ancona, but this proved indecisive. For all practical purposes, the war ended with the Battle of Ancona—or rather petered out; however, a state of hostility continued between Sicily and Venice on the one hand and the Byzantine Empire on the other through 1177, when even sporadic combat finally ceased. Warfare would not resume for another eight years.

Mango, ed., *Oxford History of Byzantium* (New York: Oxford University Press, 2002); John Julius Norwich, *Byzantium: The Decline and Fall* (New York: Alfred A. Knopf, 1995).

Sicilian-Byzantine War (1185)

PRINCIPAL COMBATANTS: Norman-ruled Sicily vs. the Byzantine Empire

PRINCIPAL THEATER(S): Balkans and the region around Constantinople (Istanbul)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The last of Sicily's Norman kings, William II, decided to exploit unrest in the Byzantine Empire by invading it.

OUTCOME: Initially very successful, the Sicilian forces were finally driven out of the empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Sicily, 80,000; Byzantine forces, smaller

CASUALTIES: Unknown

TREATIES: None

The militarily aggressive Byzantine emperor Manuel I Comnenus (c. 1120–80) had not only failed to fulfill his dream of restoring the Roman Empire, he had also undermined Byzantium's ability to survive. His death threw Constantinople into a crisis over succession. Alexius II Comnenus (c. 1168–83) ascended the throne, only to be deposed and assassinated in 1183 by his uncle, Andronicus I Comnenus (c. 1110–85). Observing the state of extreme

instability in the Byzantine government, William II (1154–89) of Sicily, whose previous war with the Byzantine Empire had ended in an unsatisfactory draw (see SICILIAN-BYZANTINE WAR [1170–1177]), decided to attack. He sent a force of 80,000 troops through the Balkans and into Albania, overrunning and taking Durazzo (Durrës) and then Salonika (Thessaloníki). These conquests brought him to within striking distance of the Byzantine capital, Constantinople (Istanbul). As his army waited in the outskirts of Constantinople, Andronicus I Comnenus agreed to negotiate a peace. During talks, the Sicilians violated the truce by attacking. Unfortunately for the Sicilian forces, the attack proved indecisive and served only to enrage and unify the Byzantines, who counterattacked, driving the invaders west. They fell back on Salonika, where the Byzantine army forced a battle, defeating the invaders.

William II resolved to mount a new invasion, but he died before it could get under way, and his successors failed to take up the project again.

Sicilian Vespers, War of the (1282–1302)

PRINCIPAL COMBATANTS: Sicilian rebels and Aragon vs. Angevin and French forces

PRINCIPAL THEATER(S): Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Sicilian rebels wanted freedom from oppressive Angevin rule and proclaimed Pedro III of Aragon king of Sicily.

OUTCOME: After 20 years of war, and despite a separate peace concluded between Aragon and the Angevin Empire, Sicily won an end to Angevin rule.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Anagni, 1295, and Peace of Caltabellotta, 1302

King Pedro III (1239–85) of Aragon, rival to the throne of Sicily occupied by the Angevin king, Charles I (1226–85), responded to the plea of Sicilians following the SICILIAN VESPERS REBELLION AND MASSACRE by invading Sicily in 1282. The Sicilian rebels eagerly proclaimed Pedro their king. For his part, Charles had been caught unawares. He was absent in Calabria, where he was devising an assault against Constantinople (Istanbul) as part of his plan to

expand the Angevin Empire into the East. Forced to drop these plans, he rushed forces into Sicily and was met there by Pedro's Aragonese and Sicilian rebels. Meanwhile, Charles's friend, Pope Martin IV (c. 1215–85), excommunicated Pedro and offered the declared-vacant throne to Philip III (the Bold) (1245–85), king of France, or one of his sons. Thus Charles was indirectly aided by his nephew, the king of France, as well as the papacy.

Roger de Loria (c. 1245–1304) won two naval engagements against the Angevins off the coast of Messina in 1283 and off Naples the following year, then went on to defeat the fleet of France's Philip III (1245–85), who sent military support to Charles. These early naval battles were among the few truly decisive engagements in a war that ground on for two decades. Sicily became a battleground between the Angevin rulers and those of Aragon. Peace seemed at hand with the Treaty of Anagni of 1295, by which Aragon's James II (c. 1260–1327, son and heir of Pedro III) ceded control of Sicily to the Angevins in return for the throne of Sardinia and Corsica. However, this arrangement hardly satisfied the determined Sicilian rebels, who wanted nothing less than liberation from oppressive Angevin rule. The rebels proclaimed Frederick II (1272–1337), brother of James II, their king in 1295 and continued to fight the Angevins to exhaustion. In 1302, the Peace of Caltabellotta secured the removal of the Angevin king, the formal enthronement of Frederick II, and the blessing of a new pope, Boniface VIII (c. 1235–1303), in both of these acts.

Ultimately, after 20 years of intermittent war, the mainland of southern Italy remained in the hands of Charles's successors, but the island of Sicily ultimately fell under the control of Pedro's house of Aragon.

Sicilian Vespers Rebellion and Massacre (1282)

PRINCIPAL COMBATANTS: Sicilian militants vs. Angevin overlords

PRINCIPAL THEATER(S): Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A spontaneous uprising quickly became a massacre and cause for war.

OUTCOME: The rebellion and massacre ignited the War of the Sicilian Vespers, 1282–1302.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: 2,000 Angevin French living in Sicily were massacred in the uprising.

TREATIES: None

After years of Norman rule, Sicily fell under the domination of the Angevin Empire and Charles I (1226–85), king of the Two Sicilies (Naples and Sicily). The reign of Charles was oppressive and tyrannical, creating great resentment among his Sicilian subjects. An explosion was inevitable. It came on Easter Monday, March 30, 1282, when Sicilians attending vespers at the church of Santo Spirito outside of Palermo were taunted and insulted by a group of Angevin French soldiers. Tempers flared, and the Sicilians attacked and killed a number of the troops. This ignited a general uprising in Palermo and, from Palermo, throughout Sicily. The speed of the rebellion was dazzling and terrible. During the night of March 30–31, Sicilian mobs massacred Angevin French living in Sicily; some 2,000 died in that single night. Realizing that reprisals were inevitable, the Sicilians appealed to the Aragonese and their king, Pedro III (1239–85)—the rival of Charles I for the Sicilian throne—to come to their aid. Thus began the lengthy WAR OF THE SICILIAN VESPER, which lasted until 1302.

Sikh Golden Temple, Siege of the (1984)

PRINCIPAL COMBATANTS: Indian government troops vs. Sikh separatist extremists

PRINCIPAL THEATER(S): Amritsar, Punjab, India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The army sought to suppress an uprising by Sikh extremists who sought autonomy from the Indian government.

OUTCOME: The principal Sikh extremist stronghold, the Golden Temple in Amritsar, was captured.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Indian army, 12,000; Sikh extremists, more than 3,000

CASUALTIES: Indian army, 84 killed, 262 wounded; Sikh extremists, 492 killed, 86 wounded, 1,500 captured

TREATIES: None

During 1984, Sikh extremists embarked on a war of terror throughout India's Punjab. In this region, Sikhs represented the majority of the population. Most Sikhs sought greater political autonomy within India, but an extremist fringe staged an outright revolt. In early June 1984, when protests and civil disobedience became widespread in the Punjab city of Amritsar, 12,000 troops of the Indian army were dispatched to restore order. The Golden Temple (the Harmandir) at the heart of Amritsar, the holiest place of the Sikhs, was identified as a refuge and stronghold of the militant extremists. The Indian army laid siege to the tem-

ple and then, on June 6, stormed it. A major firefight broke out, the temple's 3,000 defenders responding to the attack with machine guns, anti-tank missiles, and other weapons. Nevertheless, the army outgunned and outnumbered them. Sixty-four Indian soldiers were killed, nearly 500 Sikhs perished, and 1,500 Sikhs were taken prisoner.

The attack on the Golden Temple was followed by other Indian army operations against additional Sikh places of worship identified as extremist havens. During the week after the Golden Temple siege, 1,000 Indians were killed in violence that raged through the Punjab. Indian prime minister Indira Gandhi (1917–84) herself became a casualty of the violence when, on October 31, 1984, she was assassinated by two of her Sikh guards. Rioting that followed the assassination resulted in the killing of 2,717 people, mostly Sikhs.

Sikh War, First (1845–1846)

PRINCIPAL COMBATANTS: Britain vs. Punjab Sikhs

PRINCIPAL THEATER(S): Punjab region of India

DECLARATION: None, but the Sikhs invaded British India on December 11, 1845.

MAJOR ISSUES AND OBJECTIVES: British colonial forces exploited a weakness in the Punjab government to invade the region and seize territory.

OUTCOME: After the British captured Lahore, the Punjab government made important territorial cessions.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Punjab "Khalsas," 100,000; British forces were smaller, 12,000–15,000 men.

CASUALTIES: Sikhs, 7,000 killed; British, 934 killed, 2,660 wounded, 86 missing

TREATIES: 1846 treaty ceding certain Punjab territories

By the close of the second decade of the 19th century, British hegemony in India was complete, save for the Punjab, where the 100,000-man Sikh army of Khalsas—the "soldier-saints"—held sway. None of the fighting forces on the subcontinent were better armed and trained or so well organized as the turbaned soldiers of the Sikhs, and British colonial officials considered this army too formidable to attempt to suppress. Therefore, the British did not disturb the Punjab government of Ranjit Singh (1781–1839) for many years. In 1839, when the First AFGHAN WAR broke out between the British and the Afghans, Ranjit Singh not only refused to contribute troops to the conflict but also barred British soldiers from traversing his territory. This

planted seeds of enmity that grew when Ranjit Singh died later in 1839, leaving the Punjab government weak and factionalized. Seizing the opportunity, the British provoked a war. It worked. A 20,000-man Sikh army crossed the Sutlej River into British India on December 11, 1845. Sir Hugh Gough (1779–1869) led an Anglo-Indian army of some 12,000 out to meet them at Mukdi on December 18. The stiff encounter cost the Sikhs more dearly, at 2,000 casualties, than the British, at 872, but it also saw the death of General Robert Sale, hero of the first Afghan War, before the Sikhs retired from the field.

At the battle of Ferozeshah on December 21–22, the second of the four major battles of the war, the British casualties (694 dead, 1,721 wounded) were the heaviest ever suffered by the empire in a single battle in its colonial wars in India. Most of the damage to the British had come from the Khalsa artillery; and Sikh losses too were heavy, at some 2,000 dead and 3,000 wounded. The third battle came on January 28, 1846, at Ailwal, when 20,000 men under Sikh commander Runjoor Singh were intercepted and defeated by General Harry Smith's (1787–1860) 12,000 troops. Smith suffered 600 casualties, Singh 3,000. Thus the toll mounted. On February 10, Gough crossed into Sikh territory and sent his 15,000 men against entrenched Khalsas at Sobraon, prying the Sikhs loose and chasing them into the nearby Sutlej. Eight thousand Sikhs were killed or wounded, while the British casualties barely topped 2,300, 300 of those dead, 177 of them British rather than Indian troops.

Gough then captured the Sikh capital of Lahore after a three-month campaign, on March 9, 1846. Without a strong leader and despite the presence of the Khalsas, the new Punjab government concluded a treaty with the British in 1846, retaining autonomy but relinquishing the Punjab Kashmir and the territory lying between the River Beas and the River Sutlej. It had been a brief but costly war, however, during which the Sikhs had given the British more trouble than any other of their Indian colonials. And the Sikhs, looking for revenge, were not done yet.

Sikh War, Second (1848–1849)

PRINCIPAL COMBATANTS: Sikhs vs. Great Britain

PRINCIPAL THEATER(S): Punjab, India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Sikhs sought independence from British dominion.

OUTCOME: At first, British colonial forces lost ground, but, reinforced, they staged a series of offensives that put the entire Punjab definitively under British control.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Anglo-Indian forces, 24,000; Sikhs, 34,000

CASUALTIES: Anglo-Indian forces, 1,500 killed; Sikhs, 5,000-plus killed

TREATIES: None

The treaty that ended the First SIKH WAR ceded much valuable Punjab territory to the British and fueled anew a Sikh independence movement. Two years after the first war ended, a Sikh revolt broke out on April 20, 1848, led by Mulraj, governor of Multan in the Punjab, which killed two British agents and then swept the Punjab. Outnumbered British colonial forces were badly beaten in 1848 and, early in 1849, barely eked out a victory at the Battle of Chilianwala. There Sir Hugh Gough (1779–1869), the victor of the first Sikh War, lost 238 killed or missing and 277 wounded out of the 1,096-man 24th Regiment, though the Sikhs may have lost as many as 8,000 killed or wounded. However, the British, regrouped and reinforced, staged a series of sustained counterattacks. Gough won the war at Gujarat on February 21, 1849, when his 24,000 men stormed the Sikhs' fortified camp of 34,000, pushing them from their positions and gaining final control of the entire Punjab. The British accepted the Sikhs' surrender on March 12, 1849.

British colonial authorities set up colonial government in the region, and annexed the Punjab to British India.

Further reading: Khushwant Singh, *A History of the Sikhs*, 2 vols. (Princeton, N.J.: Princeton University Press, 1963–66); Tarlochan Gill Singh, *History of the Sikhs* (Toronto: Canada Centre, 1989).

Silesian War, First (1740–1742)

PRINCIPAL COMBATANTS: Prussia vs. Austria

PRINCIPAL THEATER(S): Silesia (region between modern Poland and the Czech Republic)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Frederick the Great of Prussia wanted to acquire Silesia; Maria Theresa of Austria opposed him.

OUTCOME: Prussian forces defeated the Austrian army, and Prussia acquired Silesia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Prussia, 40,000; Austria, 20,000

CASUALTIES: At Mollwitz, the war's only major battle, Prussians, 2,500 killed and wounded; Austrians, 5,000 killed, wounded, or taken prisoner

TREATIES: Treaty of Breslau, 1742

Following the death of her father, Holy Roman Emperor Charles VI (1684–1740), Maria Theresa (1710–80) found

herself assailed by several claimants challenging the Pragmatic Sanction of 1713, which guaranteed her possession of Austria and the other Hapsburg domains (among them Hungary and Bohemia) in Europe. European powers were poised to carve up the loose empire. Frederick II (the Great; 1712–86) of Prussia asserted a dubious claim to sovereignty over Silesia, part of the lands attached to the Bohemian Crown, then offered Maria Theresa a military alliance with Prussia in exchange. He further pledged his vote to achieve for her husband, Francis I (fl. 1745–65), election to Holy Roman Emperor. When Maria Theresa declined Frederick's offer, he led an army of 40,000 in an invasion of Silesia in 1740, confronting an Austrian army of perhaps 4,000. After a campaign lasting less than two months, Frederick had seized Silesia. France, Spain, Bavaria, and Saxony rallied to Frederick's cause. Great Britain, which had come to blows with Spain over colonial and trade issues in North and Central America in the War of JENKINS' EAR in 1739, sided with Maria Theresa.

In 1741, Maria Theresa sent an army of 20,000 to evict Frederick, but his superbly trained infantry—about 30,000 men—met the Austrians at the Battle of Mollwitz on April 8, 1741. In a brilliant stroke, Frederick took the Austrians by surprise, and a fierce battle ensued. The Austrians struggled valiantly to regain the initiative, making five counterattacks, all-out cavalry charges, from their entrenchments. Although the Austrian charges routed Frederick's cavalry, his infantry held its position and ultimately drove the Austrians from their entrenchments. Austrian losses were 5,000 killed, wounded, or taken prisoner. Prussian losses, in killed and wounded, numbered 2,500.

Mollwitz was the only major battle of the First Silesian War, but it may also be viewed as an early opening battle in the much greater War of the AUSTRIAN SUCCESSION, which for eight years engulfed Central Europe and spread to North America (as King George's War) and colonial India (as the First CARNATIC WAR). Meanwhile, the First Silesian War was ended by the Treaty of Breslau, mediated by Britain. This treaty may also be viewed as Austria's separate peace with Prussia in the War of the Austrian Succession. As a result of the Treaty of Breslau, Frederick the Great acquired virtually all of Silesia.

Silesian War, Second (1744–1745)

PRINCIPAL COMBATANTS: Prussia vs. Austria and Saxony (in coalition with Britain, Holland, and Sardinia, which were not involved in combat in this war)

PRINCIPAL THEATER(S): Silesia and Bohemia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Frederick sought to check an attempt to deprive him of Silesia, which he had gained in the First Silesian War.

OUTCOME: Frederick defeated Austria and Saxony and was confirmed in his possession of Silesia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Prussia, 80,000; combined Austrian and Saxon forces were similar in number

CASUALTIES: At the war's biggest battle, Hohenfriedeberg, Saxons and Austrians, 4,000 killed or wounded, 7,000 taken prisoner; Prussians, 2,000 killed or wounded

TREATIES: Treaty of Dresden, 1745

After having started the War of the AUSTRIAN SUCCESSION, 1740–48, by invading Silesia (see SILESIA WAR, FIRST), Frederick II (the Great; 1712–86) of Prussia signed a separate peace with Hapsburg empress Maria Theresa of Austria (1717–80) when she lost her first encounter with him. Prague fell to his allies the French and Bavarians that same year. She ceded Silesia to Prussia in 1742, hoping thereby to secure Frederick's neutrality as she moved to retake Prague and secretly allied herself to Great Britain, Holland, Sardinia, and Saxony. Her victories at Prague and Naples reassured her allies and worried Frederick, who grew more vexed as, thus bolstered, the Austrians drove the French toward the Rhine, where they were met and defeated by the British in June 1743. Using Maria Theresa's no longer quite secret coalition as a pretext, Frederick reentered the conflict on the side of France and Spain in 1744, preemptively invading Bohemia (part of Maria Theresa's Holy Roman Empire) in 1744, using a massive force of 80,000 troops, twice the number he had successfully employed in the First Silesian War.

In September 1744, Frederick took the Bohemian capital of Prague, but he suffered a crippling counterattack by Austrian forces, which sent him into a 100-mile retreat back to Silesia. Frederick regrouped and resumed the offensive in 1745, fighting the Battle of Hohenfriedeberg on June 3. Here he attacked the Saxons in their camp at Strigau and defeated them before the Austrians could arrive to reinforce. Once the Austrians did approach, Frederick wheeled about and routed them. The Prussians suffered 2,000 casualties versus combined Saxon and Austrian losses of 4,000 killed or wounded and 7,000 taken prisoner.

Hohenfriedeberg was followed by the Battle of Hengersdorf on November 24, in which Frederick intercepted an Austrian army en route to Berlin as part of a two-pronged Austro-Saxon attack on the heart of Prussia. Frederick attacked the Austrians and scattered them. Frederick's ally, Leopold I (1676–1747) of Anhalt-Dessau, checked the advance of the Saxon column at the Battle of Kesseldorf, near Dresden, on December 15.

The defeat of the forces of Austria and its coalition brought about the Treaty of Dresden in 1745, by which Frederick was confirmed in his acquisition of Silesia. Although Frederick's victory in this war importantly influenced the larger and overlapping War of the Austrian Succession, these victories did not bring an end to that war.

Simmel's Rebellion (1486–1487)

PRINCIPAL COMBATANTS: Yorkist rebels vs. royalist troops of Henry VII

PRINCIPAL THEATER(S): Stoke, England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A Yorkist band attempted to seize the English throne in this coda to the Wars of the Roses.

OUTCOME: The rebels were crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

This bizarre episode may be regarded as a kind of coda to the Wars of the ROSES (1455–85). Elizabeth of York (1465–1503), daughter of Edward IV (1442–83), was both the queen of the Lancastrian king of England, Henry VII (1457–1509), and often one of his bitterest Yorkist enemies. In 1486, she conspired with her sister, Margaret of Burgundy (1446–1503), and John de la Pole (1464–87), the earl of Lincoln, to recruit one Lambert Simnel (c. 1475–1525) and train him to impersonate Edward V, who was imprisoned in the Tower of London and was the son of Edward IV. (It is now believed that Edward was murdered while imprisoned.) The original idea was to rally popular support for Edward's claim to the throne. However, the plan was changed, and in 1486, Richard Simon (or Symonds), the Oxford priest who first came up with the impersonation plot, took Simnel to Ireland, claiming that he was Edward, earl of Warwick, who as the son of Richard III's (1452–85) elder brother George was yet another Yorkist claimant to the throne. As a result, a number of Yorkists did rally to the false Warwick's cause, and in May 1487, Simnel—as Warwick—and a band of supporters (who proclaimed him king), led by John de la Pole, invaded England, where they were met by Henry VII's troops at the Battle of Stoke on June 16, 1487. At first, Henry's troops fared poorly under the combined assault of Pole's English and Irish soldiers, who were augmented by German mercenary crossbow archers. However, royalist reinforcements arrived and sent the Irish into retreat. The English and Germans continued to fight for about three hours before

they too were overwhelmed. Although most of the rebels were killed, Simnel was taken prisoner. Henry magnanimously pardoned him; a possibly credible legend holds that he became a scullion in the royal kitchens.

Sino-French War (1883–1885)

PRINCIPAL COMBATANTS: China and Tonkin (northern Vietnam) vs. France

PRINCIPAL THEATER(S): Tonkin and Formosa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: France pushed for colonial possessions in Southeast Asia.

OUTCOME: France gained a protectorate over Annam and its client, Tonkin (central and northern Vietnam).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

French, 17,000; Chinese and Vietnamese, 30,000

CASUALTIES: French, 4,500 killed in battles with the Vietnamese, 4,200 killed in battles after Chinese entered the war, 5,200 died of disease; Chinese and Vietnamese troops, at least 10,000 killed

TREATIES: Treaty of Tientsin, June 9, 1885

By the late 19th century, French colonial interests had expanded into Southeast Asia, encompassing Cochin China (southern Vietnam), Annam (central Vietnam), and Cambodia. At the time, these were possessions of the steadily weakening Chinese empire. As French interests increasingly penetrated these areas, the king of Annam, nominal vassal of the Chinese, called upon the Chinese government for military aid in stopping the French. In 1873, an incursion of some 171 French soldiers captured the Hanoi citadel in Tonkin (northern Vietnam), then went on to conquer much of the Red River Delta before they were killed by Black Flag Chinese guerrillas (so called because of the color of their banners). A pogrom against Vietnamese Christians swept the countryside in 1874, resulting in some 20,000 deaths; the French withdrew from Tonkin completely for a decade.

Then in April 1883, French troops overran and captured Hanoi in Tonkin, which was under the nominal control of the Annamese king. In the absence of immediate

Chinese aid, the king of Annam had no choice but to conclude with the French a treaty granting that nation a protectorate over Tonkin as well as Annam itself. Belatedly, Chinese troops arrived in Tonkin to aid native armies in repelling the French. However, French naval forces acted preemptively against the Chinese port of Foochow, causing extensive destruction there in 1884. Chinese forts on Formosa (Taiwan) resisted French incursions, but these collapsed in 1885.

In the meantime, the French did not fare as well in Tonkin, where Chinese soldiers and Black Flag guerrillas once again drove them out. Yet the prospect of continued war seemed too costly to China, to the native troops, and, for that matter, to France. Therefore, the French concluded the Treaty of Tientsin with China on June 9, 1885. By it China agreed to recognize the French protectorate over Annam and withdrew its troops from Tonkin. France returned Formosa and the Pescadores Islands to China.

Sino-Indian Border Dispute (1959–1962)

PRINCIPAL COMBATANTS: China vs. India

PRINCIPAL THEATER(S): Aksai-Chin plateau, Chinese-Indian border region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dispute over the Chinese-Indian border following Indian independence from Britain

OUTCOME: After chronic warfare and a single decisive engagement (in which the Chinese were victorious), both sides withdrew several miles from the disputed region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After India won its independence from Great Britain in 1947, it asserted its border with China as that established by the British. The Chinese position was that the border, established by an imperialist power, was de facto illegal and therefore open to negotiation. Specifically, China asserted a claim to the Aksai-Chin plateau and the so-called McMahon Line in the Northwest Frontier Agency.

The dispute was not an open conflict until 1959, when India sent troops into the Aksai-Chin region only to discover that the Chinese—entirely without Indian knowledge—had built a road through the region from China to western Tibet and had erected entrenched fortifications

manned by Chinese troops. From 1959 to 1962, fighting, much of it serious, was chronic between Chinese and Indian troops. Full-scale war always loomed as a possibility in what became an extremely volatile region. Negotiations repeatedly failed. At last, the Indian government defiantly ordered its troops to cross the line controlled by the Chinese. China made formal diplomatic protest, which the Indians ignored, refusing to return to their side of the line. In response, a large Chinese army attacked on October 20, 1962, both in Ladakh, east of Kashmir, where they quickly overran some 43 Indian posts, and in the Northeast Frontier Agency, where the fighting was most intense. Trained and equipped for mountain warfare (this Himalayan war was fought probably at the highest altitude of any war in history), the Chinese simply overwhelmed the Indian defenses in two surges, which practically wiped out the smaller and less well equipped Indian force. The Indians withdrew, and China, having proven its point, declared a cease-fire on November 21, 1962. It then withdrew its forces a number of miles behind its lines.

Sino-Indian War (648–649)

PRINCIPAL COMBATANTS: China (and Nepal) vs. Indian kingdom of Kanauj

PRINCIPAL THEATER(S): Kanauj, India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Chinese ambassador Wang Xuanzi (Wang Hsuan Tze) led a Nepalese-Chinese army to punish the usurper of the Kanauj throne for acting against a Chinese diplomatic embassy.

OUTCOME: The usurper, Arjuna, was defeated, captured, and returned to China as a prisoner.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

By the early 640s, the Indian kingdom of Kanauj had established cordial relations with the Chinese government, and in 647, China's emperor, Taizong (T'ai Tsung; 598–649), sent a delegation to make a state visit to the king of Kanauj. At the Indian court, the delegation soon discovered that the king who had established good relations with China had died and had been replaced by a usurper, Arjuna (fl. mid-seventh century). He quickly appropriated the valuable gifts the Chinese officials had brought with them and ordered their execution. The Chinese ambassador, Wang Xuanzi (fl. mid-seventh century),

and another official managed to evade Arjuna's henchmen and escaped India via Nepal. Here they took it upon themselves to recruit an army, which was reinforced by Chinese cavalry. Wang personally led this force in an invasion of Kanauj, where he laid siege against the capital, which soon fell to him. He captured Arjuna, who was returned to China a prisoner.

Sino-Japanese War (1894–1895)

PRINCIPAL COMBATANTS: China vs. Japan

PRINCIPAL THEATER(S): Korea and Liadong (Liaotung) Peninsula (China) and Shantung province (China)

DECLARATION: August 1, 1894, Japan and China made mutual declarations

MAJOR ISSUES AND OBJECTIVES: China and Japan fought over control of Korea.

OUTCOME: China was very decisively defeated and forced to make many territorial, political, and economic concessions.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Japan mobilized 353,000 men, of whom 100,000 served in combat; Chinese numbers are unknown, but certainly less than those for Japan.

CASUALTIES: Japan, 1,177 battle deaths; 15,860 died from disease and other causes; China, unknown, but estimated at twice the Japanese losses. Wounded numbers unknown, but 5,400 Chinese became casualties at Pyongyang, September 16, 1894.

TREATIES: Treaty of Shimonoseki, April 17, 1895

For centuries a pawn in the power struggles between Japan and China, Korea had remained independent mainly because neither of the two Asian giants was ever strong enough to take the Hermit Kingdom from the other. That changed in the late 19th century, when both Korea and China were wracked by internal rebellions fomented by warlords and political figures. As they had grown weaker and more fragmented, Japan's long-established militarism was being honed by its absorption of modern technology; which inclined the Japanese toward confrontation. Then, in 1894, the Tonghak Society rebelled against the Korean government. Reeling under attack, it called on China and Japan for aid. The Korean government understood that it was putting itself very much at risk, but it had little choice. In the event both China and Japan responded avidly and quickly, quelling the rebellion but then, predictably, refusing to recall their armies after the rebellion had been ended.

In July 1894, Japanese forces attacked the royal palace at Seoul and took the royal family captive. The Japanese proclaimed a new puppet government, which instantly repudiated all Korean treaties with China. The puppet government then formally requested that the Japanese expel all Chinese troops from Korea. War between Japan and China broke out on July 25, 1894, when Japanese ships sank the *Kowshing*, a transport ship ferrying reinforcements to the Chinese garrison in Korea. Nearly a thousand Chinese were killed, either going down with the ship or being machine-gunned in the water by the Japanese. On August 1, 1894, China and Japan declared war on one another.

On land, the Japanese hit the Chinese hard at the northern capital of Pyongyang on September 16. There some 12,000 Chinese troops learned what it meant to fight a modern army equipped with weapons a century old and with even more ancient tactics. The 14,000 Japanese easily drove them from their entrenchments before killing or maiming some 5,400 of them, not quite half the army. After this defeat, the Chinese rapidly withdrew and were soon driven off the Korean peninsula. While the land war proceeded apace, the Japanese and Chinese fleets clashed at the Battle of Yalu River on September 17, 1894. The Chinese fleet was crippled, although at significant cost to the Japanese. Despite losses, the Japanese navy exploited its victory on the Yalu by capturing Port Arthur (at the tip of the Liaotung Peninsula in northeastern China) on November 21, 1894. On February 12, 1895, Japanese land and naval forces defeated the Chinese at the Battle of Weihaiwei in Shantung province.

With the one-sided war a complete disaster for China, the Chinese government sued for peace in March 1895 and concluded the Treaty of Shimonoseki on April 17, 1895, by which China ceded Formosa (Taiwan) and the Pescadores Islands to Japan and recognized the independence of Korea (which, in fact, was now a Japanese puppet state). China was furthermore compelled to open four new ports to Japanese traders and to pay a crushing indemnity to Japan. For its part, Japan bowed to the wishes of European intermediaries (Russia, France, and Germany) in giving up a demand for territory on the Chinese mainland.

Sino-Japanese War (1937–1945)

PRINCIPAL COMBATANTS: Japan vs. China

PRINCIPAL THEATER(S): China and French Indochina

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Japan sought conquest of China and the installation of a Japanese-controlled puppet government.

OUTCOME: Through most of the period 1937–45, Japanese forces occupied much of China; the nation's liberation came only with the defeat of Japan on all other fronts in World War II.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Chinese army at the beginning of hostilities, nearly 1.8 million; Japanese military, 462,000 regulars, 1.5 million reservists, and 150,000 Mongolian and Manchurian troops.

CASUALTIES: Chinese, 1.3 million killed, 1.7 million wounded, 130,000 missing (official Chinese figures); Japanese, 388,000 killed

TREATIES: See World War II: Pacific

Japan had been pursuing an aggressive policy of imperial expansion at the expense of China since 1931, and in 1932 annexed Manchuria as Manchukuo. The ongoing conflict erupted into a full-scale war, which merged with World War II in 1941.

On July 7, 1937, Japanese troops stationed in North China fought with Chinese troops near the Marco Polo Bridge at Luguogiao (Lukouchiao), just outside of Beijing (Peking). The Japanese troops were ostensibly on night maneuvers, but the resulting “China Incident” had clearly been provoked by Japan as a pretext for a massive invasion. This, the start of the Sino-Japanese War, might also be deemed the true beginning of World War II.

The National Government Army of China, led by Generalissimo Chiang Kai-shek (Jiang Jieshi; 1886–1975), numbered some 2 million troops; however, his troops were poorly equipped and poorly trained. They were supported by a Communist guerrilla army of 150,000, which suspended its struggle against the Nationalists in order to fight the common enemy, the Japanese invaders. Chinese forces faced a Japanese force of about 462,000 augmented by 150,000 Manchurians and Mongolians. The Japanese troops were well trained, equipped with the most modern weapons, and had superb leadership. The Manchurian and Mongolian auxiliaries, although not as well equipped or as well led, were nevertheless still superior to the Nationalist Chinese forces. The Japanese army had a large reserve to call upon, and the nation was an industrial giant, its industries already geared for a major war of conquest.

On July 28, 1937, Japanese forces made short work of Beijing and the city fell quickly. Tianjin (Tientsin) fell the next day, and from this point Japanese forces steadily marched west and south, brushing aside almost wholly ineffectual Chinese resistance. The westward-marching forces soon took the province of Chahar and part of Suiyuan. The force advancing southward closed in on Nanjing (Nanking), Hankou (Hankow; Wuhan), and Xi'an (Sian), but also met stiffer resistance from the Chinese regular

army as well as from partisan forces. The Japanese advance was also hampered by stretched supply lines. Nevertheless, by December 27, 1937, Japanese troops had taken Jinan (Tsinan), capital of Shandong (Shantung) Province, which gave Japan control of the area north of the Yellow River.

While Japanese forces fought for the territory north of the Yellow River, an amphibious Japanese assault landed at Shanghai on August 8. Here Chinese defenders resisted with great tenacity, forcing Japan to pour in more and more reinforcements. The Japanese air force unleashed heavy raids against the city, but the defenders kept the invaders pinned down on the beaches for a full two months. However, the pressure of yet more reinforcements began to wear down the defenders, and on November 8, 1937, Shanghai fell to the Japanese.

The only bright spot for the Chinese during 1937 was the Battle of Ping-xin-guan (P'ing-hsin-kuan) on September 25, in which the Japanese 5th Division was surprised and defeated in the Wutai Mountains (northern Shanxi [Shansi]) by the Chinese 115th Division—a communist unit of the Eighth Route Army. An important victory in itself, the triumph had significant propaganda impact, and it allowed the Communists to take control of northwest China. Important Communist Chinese guerrilla bases were established *behind* Japanese lines. Despite this defeat, Japanese forces captured Nanjing on December 13 and launched an appalling orgy of murder, rape, and senseless destruction. If anything, the rape of Nanjing instilled in the Chinese a will to resist that was fiercer than at any time earlier in the terrible year.

A side event of the brutal invasion was the *Panay* Incident on December 12, in which Japanese aircraft attacked British and U.S. gunboats moored near Nanjing. The USS *Panay* was sunk and a British boat severely damaged. Not wishing to provoke war with the United States, the Japanese subsequently apologized and paid an indemnity for the loss.

The year 1938 began with Japan renewing its offensive in northern China. The conquest of Shandong was complete before the end of January. The Japanese continued to advance toward Nanjing and Hankou but were delayed by attacks from the regular Chinese army and by guerrilla forces. By April, the Japanese had control of the rail lines but little else leading to Nanjing and Hankou.

In April 1938, at Taierzhuang (Taierchwang), General Li Zongren (Li Tsung-jen) led regular and guerrilla forces exceeding 200,000 in an envelopment of a Japanese army of 60,000. After much fighting, the Japanese broke out, but at the cost of one-third of their force. Although the victory was a cause for Chinese jubilation, the Japanese invaders quickly recovered and renewed the assault from the north in May and June. Suzhou (Suchow) fell on May 20, followed by Kaifeng on June 6. By the end of the month, the vital Beijing-Nanjing railroad was in Japanese hands. In the meantime, Nationalist leader Chiang Kai-

shek made another bargain with the Communists, agreeing to support another Communist force, the New Fourth Army, which was led in battle through east-central China by Yeh Ting (Yeh T'ing; 1897–1946).

From Kaifeng, Japanese forces marched west to capture the rail junction at Zhengzhou (Chengchow) to enable an advance down the railroad to Hankou. To forestall this action, the Chinese purposely destroyed the dikes holding back the waters of the Yellow River during June and July, flooding the countryside, drowning many Japanese troops, destroying great quantities of equipment, and bringing the advance to a halt. Almost immediately, however, the Japanese army shifted southward and recommenced the advance on Hankou. Although resistance by Chinese ground forces was bloody and determined, Japanese air support forced the surrender of Hankou, temporary capital of Chiang's Nationalist government. Chiang Kai-shek evacuated the city and reestablished his capital and headquarters at Chongqing (Chungking) in the rugged Sichuan (Szechwan) Province. While this was taking place, a new Japanese amphibious force landed near Hong Kong on October 12 and quickly marched inland to take Guangzhou (Canton), which fell on October 21. China's two major seaports were now controlled by Japanese forces.

Although the Japanese army had inflicted devastating losses on the Chinese, by the beginning of 1939 the war was proving inconclusive. Vast tracts of China were occupied, but popular resistance took a heavy toll on the invaders. At this point, doubtless with an eye toward the much larger war that loomed ahead elsewhere, the Japanese high command modified its strategy, shifting from a program of rapid conquest to one of attrition. Before the end of 1939, Japanese forces captured all of China's remaining seaports in an effort to strangle the nation. By the beginning of 1940, only two tenuous supply routes fed into China: the tortuous Burma Road, winding up from British Burma (Myanmar) to Kunming, and a narrow-gauge railroad running from Haiphong, French Indochina, to Kunming.

Although Chiang Kai-shek and his strange-bedfellow allies, the Chinese communists, continued resistance, the Japanese established a puppet government at Nanjing for occupied China. It was presided over by a well-respected Chinese politician, Wang Jingwei (Wang Ching-wei; 1883–1944), who never succeeded in bringing about the defection of any of Chiang's supporters.

With much of China occupied, the Japanese moved against Indochina in June of 1940. France, having surrendered to Germany (see WORLD WAR II: OUTBREAK AND EARLY GERMAN CONQUESTS), was in no position to resist Germany's ally Japan, and the Vichy administrators of French Indochina yielded permission to the Japanese to land forces. This closed the supply route from Haiphong to Kunming.

Next to close was the Burma Road. At this point, Japan and Great Britain were not yet at war, and the British, under threat of invasion from Germany, had no desire to begin warfare against Japan. When the Japanese demanded that the British in Burma close the Burma Road, Prime Minister Winston Churchill (1874–1965) reluctantly acceded. China was thus cut off from the world.

Yet Chiang Kai-shek and communist leader Mao Zedong (Mao Tse-tung; 1893–1976) refused to give up. Between August 20 and November 30, 1940, Mao led an intensive series of guerrilla raids in the provinces of Shanxi, Chahar, Hebei (Hopeh), and Henan (Honan), doing substantial damage to Japanese rear echelons. Japan, in the meantime, occupied Indochina during September and established bases from which it could make additional air attacks on Chinese territory and pour in more land forces. Shortly after the occupation, on September 26, U.S. president Franklin Roosevelt (1882–1945) embargoed scrap iron and steel shipments to Japan, precipitating a sharp decline in U.S.-Japanese relations, even as Japan formally concluded the Rome-Berlin-Tokyo Axis with Nazi Germany and Fascist Italy on September 27.

Beginning in 1941, Japanese forces conducted periodic punitive raids against Chinese Communist forces. Over the next three years, these raids would keep the Chinese Communist Eighth Route Army continually on the defensive and would cost it some 100,000 casualties. To make matters worse, the Nationalist-Communist alliance, never very secure, began to break down. When the New Fourth Army, operating south of the Yangtze River in Anhui (Anhui), refused to cross the river to attack Japanese troops, Chiang Kai-shek moved Nationalist forces into the region. In response, in late December 1940 the New Fourth Army began to cross the river, leaving only 10,000 troops and its headquarters on the south bank. Nationalist forces attacked this element, destroying it and creating a crisis in relations with Mao Zedong.

On the diplomatic front, the Japanese concluded a neutrality treaty with the Soviet Union on April 13, 1941, and the U.S. government froze Japanese assets in the United States on July 26. In a climate of increasingly hostile relations, Washington quietly approved the formation of the American Volunteer Group, better known as the Flying Tigers, a mercenary air force of about 100 U.S. fliers led by retired U.S. Army captain Claire L. Chennault (1890–1958). The deployment of the Flying Tigers was complete by December 1941. In the meantime, in October, Hideki Tojo (1885–1948) became Japan's premier, completing the delivery of that nation's government into military hands. The stage for a world war was now fully set. For the remainder of the Sino-Japanese War of 1937–1945, see WORLD WAR II: CHINA-BURMA-INDIA THEATER.

Sino-Korean War (610–614)

PRINCIPAL COMBATANTS: China vs. Korea

PRINCIPAL THEATER(S): Korea

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The emperor of China wanted to reestablish northern Korea as a vassal state.

OUTCOME: A combination of Korean resistance and an uprising at home ruined the Chinese invasion of Korea.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In the period corresponding to the early Middle Ages in Europe, Korea was divided into three separate kingdoms. The two northern kingdoms, Koguryo and Paekche, had been vassals of China, and by the seventh century, although now independent, they still retained close ties with that larger realm. Sui-dynasty Chinese emperor Yangdi (Yang-ti; 569–618) attempted to reestablish the former relation of vassalage, demanding that the Korean king of Koguryo acknowledge Yangdi as overlord. When the Korean king refused, the Chinese emperor ordered an invasion.

Twice the Chinese invaded, only to be repulsed by fierce Korean resistance. The emperor personally led a third invasion force, which made excellent progress. However, at the point of consummating his conquest, Yangdi was informed of a rebellion in China, at Loyang, his capital city. He had no choice but to break off the invasion and raise the siege against his capital. He lost control of the situation, however, and was forced to flee for his life to southern China. All thought of Korean conquest fled with him. The emperor was subsequently killed in exile.

Sino-Korean War (645–647)

PRINCIPAL COMBATANTS: China vs. Koguryo (kingdom of northern Korea)

PRINCIPAL THEATER(S): Koguryo

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Tang (T'ang) emperor wanted to expand China into Korea.

OUTCOME: China invaded twice and was twice repulsed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Three decades after Emperor Yangdi (Yang-ti; 569–618) attempted to reestablish northern Korea as a vassal of China in the SINO-KOREAN WAR (610–614), Emperor Taizong (T'ai Tsung; 598–649) of the Tang dynasty invaded the Korean Peninsula, again in an effort to expand the Chinese empire. Like Yangdi, Taizong concentrated on the northern kingdom of Koguryo. His armies succeeded in capturing several cities, but unyielding Korean resistance, combined with the harsh winter of the north, sent Taizong packing in 645. He did not renew his campaign of invasion in earnest until 647 but once again was driven out of Koguryo.

Further reading: Woodbridge Bingham, *The Founding of the T'ang Dynasty: The Fall of Sui and Rise of T'ang* (New York: Octagon Books, 1970); Yihong Pan, *Son of Heaven and Heavenly Qaghan: Sui-Tang China and Its Neighbors* (Bellingham, Wash.: Center for East Asian Studies, Western Washington University, 1997).

Sino-Korean War (660–668)

PRINCIPAL COMBATANTS: China and Silla (kingdom in south Korea) vs. Koguryo and Paekche (in northern Korea), with Japanese alliance

PRINCIPAL THEATER(S): Northern Korea

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The northern kingdoms attacked Silla, which appealed to China for aid.

OUTCOME: The northern kingdoms were conquered, resulting in the enlargement of Silla and the acquisition by China of most of Koguryo, a long-sought-after prize.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Koguryo and Paekche, the two kingdoms making up the northern part of the Korean Peninsula, entered into an alliance to attack Silla, the kingdom of south Korea. In response, Silla called on Gao Zong (Kao Tsung; 628–683), emperor of China, for military aid. China had repeatedly attempted conquest in Korea (see SINO-KOREAN WAR [610–614] and SINO-KOREAN WAR [645–647]), without success, so the appeal for aid seemed to Gao Zong a great opportunity.

The emperor dispatched a large Chinese army via Manchuria into Koguryo, while a Chinese fleet struck Paekche along its coast. Japan entered the war during 662–63 on behalf of Paekche, but its land and sea forces proved inadequate and were defeated. The Japanese navy incurred the greatest losses; it was almost totally destroyed.

As a result of Chinese intervention, Paekche was conquered and incorporated into Silla, which became a Chinese vassal state. Farther north, however, Koguryo continued to resist. At last, in 668, combined Chinese and Sillan forces captured the north's capital city, and Koguryo yielded. Silla acquired all of the area south of the Taedong River, whereas the greater part of Koguryo was annexed to China.

Further reading: Woodbridge Bingham, *The Founding of the Tang Dynasty: The Fall of Sui and Rise of Tang* (New York: Octagon Books, 1970); Yihong Pan, *Son of Heaven and Heavenly Qaghan: Sui-Tang China and Its Neighbors* (Bellingham, Wash.: Center for East Asian Studies, Western Washington University, 1997).

Sino-Tibetan War (641)

PRINCIPAL COMBATANTS: China vs. Tibet

PRINCIPAL THEATER(S): Chinese-Tibetan frontier

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Believing China weak, Tibet's ruler attempted an invasion.

OUTCOME: The invasion was decisively repulsed, but China's emperor immediately reestablished cordial relations by sending the Tibetan ruler an imperial bride.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Marriage agreement of 641

This war was the result of a diplomatic misunderstanding. Srong-brtsan-sgam-po (c. 608–50), king of Tibet, established cordial relations with China's emperor Taizong (T'ai Tsung; 598–649) in 634 by sending an ambassador. In 638, Taizong returned the courtesy by sending a delegation to Tibet. This action Srong-brtsan-sgam-po mistook not as an act of friendship between equals but as a sign of Chinese weakness, signifying either China's fear of Tibet or an ignominious appeal for aid from it. Seeking to exploit that seeming weakness, Srong-brtsan-sgam-po demanded that the Chinese emperor deliver to him an imperial princess as a bride. This Taizong indignantly refused to do, and in 641 Srong-brtsan-sgam-po led an invasion force into China. He had underestimated the numbers and skill of China's frontier infantry, which quickly defeated the invaders and drove them back into Tibet. Although Taizong had won a decisive victory, he wanted to avoid a multifront war; China was already

involved in combat with the Eastern and Western Turks. Accordingly, he now complied with the Tibetan monarch's original request and sent Srong-brtsan-sgam-po an imperial wife. This cemented an alliance between the two monarchs and their kingdoms.

Beckwith, *The Tibetan Empire in Central Asia: A History of the Struggle for Great Power among Tibetans, Turks, Arabs, and Chinese during the Early Middle Ages* (Princeton, N.J.: Princeton University Press, 1993); Henk Blezer, ed., *Tibet, Past and Present* (Leiden, Neth.: Brill Academic, 2001); Alex McKay, ed., *History of Tibet* (London: Taylor & Francis, 2003).

Sino-Tibetan War (763–821)

PRINCIPAL COMBATANTS: China vs. Tibet

PRINCIPAL THEATER(S): Chinese-Tibetan frontier

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Tibetans sought immediate gain by raiding the Chinese frontier.

OUTCOME: Raiding was chronic over many years; only after China concluded two important alliances were the Tibetans decisively defeated and an enduring peace enforced.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Extremely variable over many years

CASUALTIES: Extremely variable over many years, mainly affecting Chinese civilians in the border regions.

TREATIES: Treaty signed in 821

Civil war in China during the eighth and ninth centuries rendered the country vulnerable to outside attack, which Tibetan king Khirisong Detsen (r. 755–97) skillfully exploited to stage repeated invasions over a long period of time. Later Tibetan monarchs continued these incursions, which were mostly hit-and-run raids. Some invasions penetrated deeply and did considerable damage. Khirisong Detsen's raid on Xi'an (Ch'ang-an), a government capital, in 763 resulted in widespread death and destruction in that city. Worse, the Chinese-Tibetan borderlands were in a continual state of terror and turmoil. Tibetan troops were especially prodigal in their attacks, destroying property and murdering people with reckless abandon.

On many occasions, the Chinese mounted effective defenses against the Tibetan incursions, but because the raids were not full-scale invasions—attempts to occupy the country—Tibetan forces simply withdrew under attack, only to return later from their mountain strongholds. In an effort to mount a more permanently effective resistance to the raiding, the Chinese Tang emperor Dezong (Te Tsung; 768–804) struck an alliance with Muslims in the west and made a looser alliance with Nanchao, a Thai kingdom, both directed against Tibet. Only with the overwhelming

force mobilized as a result of these alliances was China able to score a decisive victory against Tibet, the ruler of which, Tri-tsug Detsen (r. 815–38), concluded a treaty with China in 821. The peace proved enduring.

Beckwith, *The Tibetan Empire in Central Asia: A History of the Struggle for Great Power among Tibetans, Turks, Arabs, and Chinese during the Early Middle Ages* (Princeton, N.J.: Princeton University Press, 1993); Henk Blezer, ed., *Tibet, Past and Present* (Leiden, Neth.: Brill Academic, 2001); Alex McKay, ed., *History of Tibet* (London: Taylor and Francis, 2003).

Sino-Tibetan War (1750–1751)

PRINCIPAL COMBATANTS: China vs. Tibet

PRINCIPAL THEATER(S): Tibet

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: China, seeking to control Tibetan affairs, suppressed a popular uprising in Tibet against Chinese influence.

OUTCOME: The uprising was suppressed, and China reasserted its control.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Tibet was at least nominally under Chinese control since 1662, but frequently revolted. One way in which the Chinese endeavored to preserve peace with Tibet along its western borderlands was by giving official sanction to the Dalai Lamas, the spiritual leaders of Tibet. The tradition spanned centuries and was carried out in part by two Chinese ministers, or *ambans*, stationed in Tibet in the capital city of Lhasa. Over the years, however, the *ambans* became increasingly involved in covert manipulation of the Tibetan government, and in 1750 the *ambans* contracted for the assassination of the Tibetan regent. Discovery of the plot triggered a fresh popular uprising. Tibetans in Lhasa targeted all Chinese living in the capital and there was a general massacre. This outrage prompted China's emperor Quianlong (Chien Lung; 1711–99) to send an army into Tibet. The expeditionary force had to traverse the difficult mountainous terrain of Tibet, but once that natural obstacle was overcome, the army took control of Lhasa and quickly suppressed the uprising. Nor did Chien Lung withdraw his troops after order was restored. Instead, he used them to enforce stricter Chinese domination over Tibetan government. The *ambans* were now given overt control over the Dalai Lama's political actions, and China even claimed a controlling voice in choosing a successor to the Dalai Lama. As if this were not enough, the Chinese sought to diminish the influence of the Dalai

Lama by enhancing the prestige and authority of Blo-bzang-dpal-Idan-ye-shes (1737–80), the Panchen Lama of Tashilumop, traditionally the number-two religious figure in Tibet. The Panchen Lama would become an office entirely subject to Chinese control. In effect, the Chinese had created a puppet administrator.

Sino-Vietnamese War (1979)

PRINCIPAL COMBATANTS: China vs. Vietnam

PRINCIPAL THEATER(S): Vietnam, near the Chinese border; also Yunnan Province, China

DECLARATION: China invaded Vietnam, February 17, 1979

MAJOR ISSUES AND OBJECTIVES: China invaded in retaliation for the expulsion of Chinese nationals from Vietnam, in response to Vietnamese invasions of Laos and Cambodia, and in reaction to Vietnam's increasing ties with the USSR, China's rival.

OUTCOME: At considerable cost and against stiff resistance, the Chinese conducted a reasonably effective punitive campaign but established no enduring presence on Vietnamese soil.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: China, 180,000; Vietnam, 120,000

CASUALTIES: Neutral observers estimate 10,000 battle deaths on each side; casualties, killed and wounded, probably exceeded 75,000

TREATIES: Despite negotiations in the Chinese-Vietnamese Reconciliation talks of April 19, 1979–March 6, 1980, no treaty was concluded; China unilaterally broke off hostilities.

China had been an important ally of North Vietnam during the VIETNAM WAR against South Vietnam and its principal ally and prop, the United States. Nevertheless, the Chinese–North Vietnamese alliance had always been an uneasy one, based exclusively on China's desire to foster communism in Southeast Asia. Ideology aside, China and Vietnam had been enemies for centuries. As the war with South Vietnam and the United States ground on, North Vietnam had increasingly turned from China to the Soviet Union for support. At the time, tension between China and the USSR ran high, and this served to alienate China from North Vietnam. Late in 1978, well after the Vietnam War had ended, Vietnam, now unified under communist rule, invaded Laos and Cambodia (Kampuchea), then expelled all Chinese living in Vietnam. This was sufficient to provoke war.

War between China and Vietnam began on February 17, 1979, with an invasion by 75,000 Chinese troops (out of 180,000 mobilized) at 26 points along the northern border. Although the Chinese managed to take several towns and villages, they were generally halted about 25 miles into Vietnamese territory. Resistance by Vietnamese army regulars and militia troops was fierce; the Chinese received a taste of what the American forces had experienced over many years.

Despite the reinforcement of Vietnamese troops by forces that had been occupying Cambodia, the Chinese held firm and, on February 20, captured the provincial capital of Lao Cai, followed on March 3, 1979, by Lang Son, another provincial capital and site of a great victory against the French in 1950. At about the time Lang Son fell, Chinese units reached Quang Yen, on the northern coast, about 100 miles from Hanoi, despite determined Vietnamese resistance.

The Chinese gains came at great cost. As in the Vietnam War, the Vietnamese forces displayed a seemingly inexhaustible capacity for self-sacrifice. However, Vietnamese strategy did not consist entirely of defense. While Chinese forces invaded, Vietnamese army forces staged a counteroffensive into China's Yunnan province. Chinese defensive forces responded quickly and drove this incursion back, but there was widespread shock over the temerity of the invasion.

Although China was generally successful against the Vietnamese, the cost of the war was high, and the Chinese summarily cut the war short, in effect declaring victory and departing the field on March 6, 1979, having, Chinese leaders declared, dealt sufficient punishment to the Vietnamese. Although all Chinese troops had evacuated Vietnamese territory before the end of March, border clashes continued on a chronic basis. Chinese and Vietnamese officials conducted sporadic peace talks but failed to conclude a formal and final treaty.

Snake War (1866–1868)

PRINCIPAL COMBATANTS: Snake (Northern Paiute) Indians vs. United States

PRINCIPAL THEATER(S): Oregon and Idaho

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Snakes attacked settlers and miners, whom they saw as invaders; the United States sought to pacify the Indians and place them on reservations.

OUTCOME: The Snakes were defeated and retired to reservations.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: About 1,500, including regulars and unorganized militia
CASUALTIES: Snakes, 329 killed, 20 wounded, 225 captured; United States, unknown

TREATIES: Unratified treaty of 1868 with seven Northern Paiute tribes

During the years of the UNITED STATES CIVIL WAR, the Yahuskin and Walpapi bands of the Northern Paiutes, popularly known as the Snakes, who inhabited southeastern Oregon and southwestern Idaho, periodically attacked miners in the region and became the focus of ineffectual campaigns conducted by Oregon and Nevada volunteers. When the Civil War came to a close, the campaign against the Snakes fell to the cavalry and infantry units of the regular army. Like the local volunteer groups, they enjoyed little success in neutralizing the chronic raids. The public raised an outcry against the U.S. Army, which in response reorganized its command in the area and placed General George Crook (1829–90) in charge.

Unlike many regular army commanders, Crook disdained pomp and ceremony as well as orthodox field methods. He studied Indian combat practices carefully and did not hesitate to use them himself. He also made extensive use of Shoshoni auxiliaries. Where cavalry commanders would not deign to trade their horses for lowly mules, Crook recognized that, as a pack animal in rough terrain, the mule was far superior to the horse. He used mules instead of the cumbersome wagon trains that always slowed columns in pursuit of Indians. This tactic suited the Snake War, which was not a series of formal battles but a nearly constant pursuit punctuated by guerrilla attacks. During the two-year war, Crook and his officers engaged the Snakes at least 40 times and, more important, kept them on the run. By the middle of 1868, with 329 killed, 20 wounded, 225 captured, and their most revered chief, Pauline (or Paulina; d. 1867), dead, the Snakes indicated their willingness to make peace. Another hitherto hostile chief, Old Weawea (fl. 1860s), led 800 Indians to Fort Harney on July 1, 1868, to talk to Crook.

Crook adopted the kind of hard line he deemed most effective in dealing with Indians. He threatened to pursue war to the point of exterminating the Snakes. Perhaps intimidated, certainly exhausted, all but a die-hard minority of Snakes submitted to life under the watchful eye of Fort Harney (from which they drew their rations) or retired to the Klamath and Malheur River reservations. A handful, however, remained at large, lying low until they joined the Bannocks and Cayuses in the so-called BANNOCK WAR of 1878.

Crook had effectively neutralized the Snakes just as the new U.S. president, Ulysses S. Grant (1822–85), put his “Peace Policy” into effect, a policy designed to produce “conquest through kindness” and to concentrate various tribes on reservations under civilian control, where the Indians could learn to be “civilized”—that is, to become self-supporting, educated, Christian farmers.

Soccer War (Football War) (1969)

PRINCIPAL COMBATANTS: El Salvador vs. Honduras

PRINCIPAL THEATER(S): Honduras

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ostensibly El Salvador wished to retaliate for insults to its national pride during a World Cup soccer playoff; in reality it fought to relieve pressure on its government from Salvadoran refugees expelled from an increasingly xenophobic Honduras.

OUTCOME: The war lasted four days, poisoned relations between the two countries, and settled few if any of the problems between the two.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: El Salvador: 5,000; Honduras: 5,000

CASUALTIES: El Salvador: 700 casualties, 107 killed in action; Honduras: officially 99 killed in action and 66 wounded, but in fact some 2,000 Honduran soldiers and civilians died

TREATIES: Organization of American States’ sponsored cease-fire, July 18, 1969

Known outside the United States as the “Football War,” 1969’s Soccer War between El Salvador and Honduras took its name from its outbreak during a three-game elimination match between the Salvadoran and Honduran national teams during the prelims of that year’s World Cup. But the roots of the conflict lay in the economic disparity between the two countries and the long shadow of international development and U.S. foreign policy. A small country, El Salvador had one of the region’s more developed economies and boasted a large and rapidly growing population. Like Guatemala, a major U.S. client state, El Salvador prospered under the Central American Common Market while next-door Honduras, larger but more sparsely populated and less developed, faltered. Thus by 1969 Hondurans had grown to despise the 300,000 or so Salvadorans who had drifted across the border and taken up residence in the roomier country as both an economic threat and an insult to national sovereignty.

The tense situation was made worse by Honduran president Oswaldo López Arellano (b. 1929), whose regime was in serious trouble. Mounting economic difficulties had spawned labor disputes and strikes, drawing criticism from both left and right, and violence-ridden, fraudulent municipal elections caught the eye of the U.S. embassy. As the political situation deteriorated, the desperate president López (and some private groups backing him) increasingly placed the blame for the country’s economic woes on the Salvadoran squatters. Invoking an old and long-dormant agrarian-reform law as a pretext, he evicted the immigrants from their homesteads and expelled them from his country. Images of displaced refugees filled El Salvador’s airwaves, and tales of their hardships its newspapers. Soon rumors of violence visited upon the displaced Salvadorans by the Honduran military spread throughout the countryside.

As Salvadorans continued to stream out of Honduras back to their crowded homeland, the two countries prepared to meet in soccer’s World Cup playoffs. There were disturbances at the first game in Tegucigalpa, Honduras, but they were relatively tame, by World Cup standards, compared to the second match in San Salvador, where Honduran fans got beaten up and the Honduran flag and national

anthem were openly insulted. Emotions were already raw for both sides, and when Honduras lost to El Salvador in the third game, rioting broke out everywhere. Rioters attacked Salvadoran residents in their country, including several vice consuls, killing and brutalizing dozens as tens of thousands Salvadorans joined the 17,000 or so who had already returned to the country of their birth.

Not only did the more-or-less state-sanctioned riot insult El Salvador's national pride and excite its jingoists, but also the growing influx of refugees put a strain on social services and threatened to provoke social unrest. With El Salvador's Christian Democrats, led by José Napoleón Duarte (1925–90), looming on the edge of the political stage, the Salvadoran president, Colonel Fidel Sánchez Hernández (1917–2003), found retaliation—war—against Honduras his most expedient option. On July 14 El Salvador's air force attacked targets inside Honduras, and its army invaded. The war was a brief one; despite Salvador's early air strike, Honduras's larger, more modern air force eventually dominated the skies. Salvador's 5,000-strong army, however, clearly bested Honduras's similarly sized force on the ground, pushing it back 24 miles and taking the town of Nueva Ocotepique before bogging down when it ran out of fuel—thanks to Honduras's bombing of El Salvador's oil storage facilities—and ammunition.

Meanwhile the Organization of American States (OAS) had met in emergency sessions and now called for an immediate cease-fire followed by a prompt withdrawal of El Salvador's ground troops. El Salvador ignored the OAS dictum for a few days while it demanded reparations for Salvadorans already evicted from Honduras and guarantees of safety for those who remained. At length, a cease-fire was set for July 18, talking full effect on July 20, but El Salvador's forces lingered until the OAS began threatening economic sanctions. The Salvadorans pulled out as OAS observers arrived to monitor the security of the remaining squatters. It took decades to repair the damage done by the four days of war. Though 2,000, mostly Hondurans, died, Honduras in general evinced a new sense of national pride—which, however, did not extend to the army, the poor performance of which led to a drop in public support. Trade between the two countries was disrupted completely, exacerbating their economic woes. Also, importantly, El Salvador had lost the economic safety valve Honduras had once provided its burgeoning population, a fact that fed civil unrest in the years to come.

Social War (357–355 B.C.E.)

PRINCIPAL COMBATANTS: Athens vs. the city-states of the Delian League

PRINCIPAL THEATER(S): Eastern Mediterranean

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The city-states in the Delian League sought social and political equality with Athens.

OUTCOME: Athens allowed the city-states to become independent in return for the right to maintain trade routes in the Aegean.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 357 B.C.E., the city-state Euboea (the modern Greek island of Évvoia) revolted against Athens and the Delian League, a confederacy of Greek city states, headquartered at Delos and dominated by Athens. Athens retaliated by raiding Euboea and generally tightening control over the other allies in the league. Instead of intimidating the other league members, their action served to provoke Chios, Rhodes, and Byzantium to follow the lead of Euboea and rebel against Athens's control. They demanded political and social parity with Athens. Unyielding, in 356 Athens laid siege to Samos, and the Athenian fleet sailed to Byzantium. At the Battle of Embata, off the Byzantine coast, the fleet was defeated. Yielding at last, Athens agreed to allow the allies independence in 355. Additionally, Athens gave up several harbors in the north but maintained trade routes in the Aegean. More significantly, the Delian League had been compromised, and Macedonia was thereby enabled to continue annexing territory.

Social War (219–217 B.C.E.)

PRINCIPAL COMBATANTS: Macedonia vs. Aetolia

PRINCIPAL THEATER(S): Eastern Mediterranean

DECLARATION: None

1060 Social War (91–88 B.C.E.)

MAJOR ISSUES AND OBJECTIVES: Philip V of Macedonia sought to bar Aetolia from allowing its citizens to practice piracy.

OUTCOME: Philip V was victorious in suppressing the revolt of Aetolia and thereby delayed the invasion of Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Peace of Naupactus (217 B.C.E.)

In 220 B.C.E., the Achaeans—people living on the Greek mainland and western Greek isles, as well as Rhodes and Crete—asked newly crowned king Philip V (238–179 B.C.E.) of Macedon to arbitrate a dispute with Aetolia, a fellow member of the Achaean, or Hellenic, League. Aetolia (a territory north of the Corinthian Gulf and bounded on the north by Epirus, on the east by Locris, and the west by Acarnania) had been sanctioning privateers—pirates. Philip ruled against Aetolia, which thereafter prepared for war. In 219, Aetolia attacked Macedonia, prompting Philip to undertake a string of decisive actions. He invaded the Peloponnese, punished Elis (an ally of Aetolia), and attacked Aetolia itself.

Materially, Philip gained nothing from the war; however, he was heralded as a great leader throughout most of Greece. Rome, recognizing the popularity of Philip and the Peace of Naupactus he negotiated in 217, delayed a contemplated invasion of the region for five years.

Social War (91–88 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. the people of southern and central Italy (a confederation called Italia)

PRINCIPAL THEATER(S): Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The people of southern and central Italy wanted Roman citizenship.

OUTCOME: By 88 B.C.E., most people of southern and central Italy were given full citizenship in Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Italia, 100,000; Roman numbers unknown, but certainly fewer

CASUALTIES: Unknown

TREATIES: None

Also called the Italic or Marsic War, the Social War was a rebellion of Rome's Italian allies (called the *socii*) who,

denied the right to vote as Roman citizens, sought outright independence from the republic. The war was triggered when Marcus Livius Drusus (d. 91 B.C.E.) introduced a bill in the Roman Senate in 91 B.C.E. to extend citizenship to everyone living on the Italian peninsula, including the *socii*. When Marcus was assassinated with no action having been taken on his bill, the Marsians of southern and central Italy revolted. Establishing a federation called Italia, the rebels made Corfinium (Corfu) their capital.

They were soon joined in rebellion by the Samnites, people of the south. Rome's initial response was to offer citizenship to those people who had not revolted—Umbrians, Etruscans, and Latins—and to others who abandoned the revolt immediately. This pacified some and certainly helped to contain the scope of the revolt; however, the war continued, and the hardcore rebels defeated forces under Lucius Porcius Cato (d. 89 B.C.E.) at Fucine Lake in 89 B.C.E. The slain Cato was succeeded by Gnaeus Pompeius Strabo (d. 87 B.C.E.), who was victorious against the rebels at Asculum later that year. The Roman Senate continued to work for a peaceful solution and in 89 offered citizenship to all who registered in two months' time. With the back of the revolt broken by Strabo's victory, nearly all people living in Italy accepted Roman citizenship and sovereignty by 88 B.C.E. This resulted in the political unification of Italy south of the Po River and transformed the Roman alliance with the *socii* into a genuine, unified nation.

Gardner, *Being a Roman Citizen* (London: Routledge, 1993); Ray Laurence and Joanne Berry, *Cultural Identity in the Roman Empire* (London: Routledge, 2001); Claude Nicolet, *World of the Citizen in Republican Rome* (Berkeley: University of California Press, 1988).

Somalian Civil War (1988–ongoing)

PRINCIPAL COMBATANTS: Feuding clans led by rival warlords

PRINCIPAL THEATER(S): Somalia, Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Seizure of power and authority in an anarchic political context

OUTCOME: Low-level civil war continued in a nation without viable government.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Forces of the warlords, unknown; UN peacekeeping forces (including U.S. troops), 28,000

CASUALTIES: Thousands, mostly civilian, including 1.5 to 2 million at or near starvation

TREATIES: None

Somalia, on the easternmost projection of the African continent (the "Horn of Africa"), is one of many African

nations once under the colonial control of Europe and now independent but plagued by such poverty that independence hardly set its people free. In 1960, the independent Republic of Somalia was created, but after its president, Cabdirashiid Cali Sherma'arke, was assassinated in 1969, a military coup led by Major General Maxamed Siyaad Barre (1919–95) replaced parliamentary government with a dictatorial Supreme Revolutionary Council. The new military dictatorship allied itself with the Soviet Union and invaded the Ogaden region of Ethiopia in an attempt to annex the territory. The Soviets rapidly shifted support to Ethiopia, defeating Siyaad's armies and creating chaos in already strife-torn and famine-ridden Somalia.

In the spring of 1988, Somali "government" was dominated by feuding clans. The Somali National Movement (SNM) rose up and began taking towns and military facilities in the north of the country. In these brutal campaigns, aimed at civilians, thousands were killed, and many thousands more were made refugees, fleeing to neighboring Ethiopia. Even as more and more of the country fell under the control of the SNM, Mogadishu, the Somali capital, remained in the hands of Siyaad Barre. However, in March 1989 government troops belonging to the Ogadeni clan mutinied in Kismayo. That rebellion was not put down until July. In the meantime, the SNM continued to seize control of more of the country. The violence became so intense that United Nations and other aid workers evacuated in May 1989. When Salvatore Colombo (1922–89), the Catholic bishop of Mogadishu, fell victim to an assassin's bullet on July 9, 1989, violence became universal within the capital, forcing Siyaad Barre to announce that he would hold multiparty elections. This did not satisfy the various rebel factions, which temporarily united to thwart the elections and then stage a coup against Siyaad Barre, who clung desperately to his title as 1990 came to a close.

The promise of free elections brought a brief intermission in the civil war, but rival clans, led by warlords, began the war anew. Although the warring factions were numerous and the relations among them complex, the major rivals by late 1990 were General Muhammad Farrah Aydid (1934–96), of the Hawiye clan and leader of the Somali National Alliance (SNA), and Ali Mahdi Muhammad (president, 1991–97), of a different subclan of the Hawiye clan and leader of the Somali Salvation Alliance (SSA). In January 1991, Siyaad Barre was at last dislodged from office (he subsequently fled the country) and was immediately replaced by Ali Mahdi. In September, however, Aydid, now chairman of the United Somali Congress (USC), challenged Ali Mahdi for the presidency. The result was renewed fighting in Mogadishu and, essentially, the end of organized government for Somalia; no one faction had sufficient support to established unambiguous rule.

As southern Somalia disintegrated, Muhammad Ibrahim Egal (d. 2002) led the secession, in May 1991, of northeastern Somalia, creating the breakaway Somaliland.

For a brief time, Egal achieved a certain amount of stability in the breakaway region, but fighting, led by factions opposed to secession, broke out in the regional capital of Hargeysa. The international community also generally refused to recognize the legitimacy of Somaliland.

The anarchic civil war devastated an already desperately poor nation and people. The delicate economy of Somalia was quickly destroyed. Organized farming was disrupted, then halted, by the war. Somalia's misery was compounded by a severe drought, and by the early 1990s, some 1.5 to 2 million Somalis were starving or close to starvation.

Beginning in 1992, U.S. president Bill Clinton (b. 1946) announced the U.S.-led and UN-sanctioned Operation Restore Hope to bring humanitarian aid and order to Somalia. In December 1992, the first of a contingent of 28,000 UN troops, including Americans, arrived to transport and distribute food and attempt to bring an end to the violence. By the end of March 1993, much food had been delivered, but U.S. and UN troops had not succeeded in disarming the militias of the various warlords. In June and July 1993, Aydid stepped up the violence, resulting in the deaths of many Somalis and some of the UN peacekeepers. The Clinton administration pushed to broaden the UN mandate to encompass concerted action against Aydid—up to and including killing him. This resulted in dissension among the nations participating in the UN action. In 1994, amid confusion of objectives, Aydid acted directly against U.S. forces in Somalia; 18 American soldiers were killed. Others were taken prisoner. American television beamed grisly images of a dead American soldier being dragged through the streets of Mogadishu. With that, the popular pressure to withdraw U.S. forces from Somalia increased. No one argued against the humanitarian purpose of Operation Restore Hope, but who could win a war in which there was no order to restore—only well-meaning UN peacekeepers operating at cross-purposes in a nation that offered nothing more than a choice among warlords and various versions of chaos? By March 1994, most U.S. and European troops had been withdrawn from Somalia. At this time too, Aydid and Mahdi had met in Kenya to hammer out a coalition government for Somalia.

Their meeting produced nothing but further discord, and fighting again flared in Mogadishu during May and December 1994. The next March, the 19,000 UN troops (all from African member nations) withdrew from Somalia, leaving Aydid and Mahdi both claiming leadership of the country and both occupying Mogadishu while their partisans fought one another. At this point, the Somali Salvation Democratic Front (SSDF) controlled the northeast. The rest of the nation was divided among three lesser factions. Aydid was dealt a severe blow when his chief lieutenant, Osman Hassan Ali (fl. 1990s), switched his allegiance to Mahdi. In a 1996 exchange of gunfire during

one of the innumerable skirmishes, Aydid was severely wounded. He died on August 1, 1996, and was succeeded by Hussein Aydid (b. 1965), his son.

The death of Aydid brought a lull in the chronic fighting, but Somalia remained fragmented, without even the semblance of central government. In 1998, factionalism within the SSDF led to formation of a new independent state in the northeast, Puntland, which has yet to be recognized by the international community. As of the end of 2004, a low-level civil war continues in a nation without a functioning government.

Sonderbund, War of the (1847)

PRINCIPAL COMBATANTS: Sonderbund (seven Catholic Swiss cantons) vs. Swiss federal government (“loyal” cantons)

PRINCIPAL THEATER(S): Switzerland

DECLARATION: Sonderbund against the government, November 4, 1847

MAJOR ISSUES AND OBJECTIVES: The Sonderbund opposed liberal Protestant reform in Switzerland.

OUTCOME: The Sonderbund “war” was quickly ended by Swiss federal troops in significantly superior numbers.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Sonderbund, 79,000; federal forces, 100,000

CASUALTIES: Sonderbund, 33 killed, 124 wounded; federal forces, 60 killed, 386 wounded

TREATIES: None

The Sonderbund (the “Separatist League”) was an alliance of seven Catholic cantons of Switzerland—Lucern, Uri, Unterwalden, Zug, Schwyz, Valais, and Fribourg—formed in 1845 against the forces of Protestant Swiss liberalism, which sought freedom of worship, a strong national government, and secular education (including the expulsion of the Jesuits from public education). Fighting in 1845 claimed 100 lives.

In 1847, the Swiss Diet (parliament) was controlled by a liberal majority, which voted legislation ordering the dissolution of the Sonderbund. This action moved the Sonderbund cantons to civil war on November 4, 1847.

However, the cantons’ appeal for outside aid fell on deaf ears, and the “war” collapsed (on November 24, 1847), almost as soon as it had begun. Swiss federal troops, under the command of Guillaume Henri Dufour (1787–1875), quickly overawed the outnumbered Sonderbund forces. The only significant battle was fought at Gislikon on November 23, 1847. Federal forces drove the Sonderbund from the field. Federal losses were 34 killed and 83 wounded, whereas the Sonderbund lost 12 killed and 45 wounded. Lucerne, center of Sonderbund strength, fell to federal forces within three weeks of the commencement of hostilities.

By way of reparations, the Sonderbund cantons were compelled to reimburse the federal government for the cost of the war, and the abortive rebellion served only to propel Switzerland to adopt the measures advocated by the liberals. Although a strong central government was adopted, local government on the canton level was preserved. This was the last armed conflict in which Switzerland engaged.

Song (Sung) Dynastic Wars (959–976)

PRINCIPAL COMBATANTS: Forces of Later Zhou (Chou) general Zhao Kuangyin (Chao K’uang-Yin) vs. the “Five Dynasties”

PRINCIPAL THEATER(S): China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Unification of China under a single emperor.

OUTCOME: Zhao Kuangyin prevailed against the Five Dynasties, becoming Emperor Taizu (Tai Tsu), first of the Song emperors.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Tang (T’ang) dynasty came to an end in 907 when Zhu Wen (Chu Wen; 852–912), a military commander, murdered Li Zhu (Li Chu; r. 904–07), the last Tang emperor, and assumed nominal control of China. The abrupt end of the Tang dynasty ushered in the Era of Five Dynasties, which amounted to 50 years of anarchy. It ended in 959, when Zhao Kuangyin (939–97), a general of the Later Zhou dynasty, waged war against one dynastic family after another until by 976 he had gained sufficient military advantage to earn proclamation as emperor by his troops. From 976 to 997, he reigned as Emperor Taizu.

Spanish-Algerine War (1775)

PRINCIPAL COMBATANTS: Spain vs. Morocco and Algiers

PRINCIPAL THEATER(S): Algiers

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: After unsuccessfully attempting to maintain peace between Spain and Muslim North Africa, Charles III sought to suppress the Muslim threat once and for all.

OUTCOME: Charles's army was decisively defeated in a single battle, and Muslim opposition to Spanish influence in North Africa increased significantly.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Spain, 18,000; Algiers and Morocco, unknown

CASUALTIES: Spain, several thousand; Algiers and Morocco, losses minimal

TREATIES: At issue was the Moroccan violation of a 1767 treaty between Morocco and Spain; no treaty ended the 1775 war.

Relations between Catholic Spain and the Muslim states of North Africa were always troubled. In 1767, Charles III (1716–88), king of Spain, concluded a treaty with Morocco, which settled long-held disputes, but in 1774 the sultan of Morocco, Mohammed II (r. 1757–90), suddenly broke the treaty by ordering all Christians out of the country and laying siege to Melilla. Spanish forces broke the siege and blamed the British for inciting the sultan to abrogate the treaty. In fact, the British were not at fault, and Charles III soon gave up looking for a scape-

goat. Instead, he abandoned all attempts at conciliation with the Muslim world and resolved to take decisive military action.

Charles dispatched an army of 18,000 men against the dey of Algiers, the key ally of Morocco. The Spanish forces were led by an Irish general, the fiery Alexander O'Reilly (1722–94), who commanded great confidence on account of his aggressive approach. To the stupefaction of Charles III, however, O'Reilly's forces were overwhelmed by Muslim defenders before they had even reached their objective, Algiers. The Spanish forces were total defeated. After losing thousands of men, O'Reilly withdrew, and instead of suppressing Muslim opposition to Spain, the single-battle 1775 war increased it many times.

Spanish-American War (1898)

PRINCIPAL COMBATANTS: The United States and nationalist forces in Cuba and the Philippines vs. Spain.

PRINCIPAL THEATER(S): Cuba, the Philippines, and Puerto Rico

DECLARATION: By the U.S. Congress on April 11, 1898; by Spain on April 24, 1898.

MAJOR ISSUES AND OBJECTIVES: American imperialists, using the excuse of Spanish atrocities in Cuba to whip up war fever among the American public and an explosion that destroyed the USS *Maine* as a spurious casus belli, launched a war of expansion against Spain in order to seize its holdings in the Caribbean and the Pacific.

OUTCOME: Spain was defeated; Cuba became a de facto U.S. protectorate; Guam, Hawaii, Puerto Rico, and the Philippines were annexed by the United States; Philippine nationalists launched a four-year insurrection against U.S. occupation; and the United States began to emerge from its tradition of isolation from world affairs and launch itself on a course of informal world empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Spain, 196,000; U.S., 72,339

CASUALTIES: Spain, 1,108 killed, 690 wounded; U.S., 385 killed, 1,662 wounded; 5,403 U.S. troops died of disease

TREATIES: Treaty of Paris, December 10, 1898

As a Spanish colony, Cuba—an island no more than 90 miles off the coast of Florida—had long been rebellious. When Cuban nationalists staged a major revolt against the repressive Spanish colonial government in 1895, Spain

sent General Valeriano Weyler (1838–1930) in February 1896 to put down the rebellion and restore order. Serving as military governor, Weyler's first act was to establish "reconcentration camps" for the incarceration of rebels as well as those accused of supporting or even sympathizing with them. Weyler began by rounding up Cuban citizens and putting them in the camps in order to keep them from covertly supplying the rebels. Many died of diseases contracted in the wretched environment, and Weyler's tyranny only bolstered the rebels' resolve. It also gave U.S. imperialists a means by which to turn American public opinion against Spain and permit the United States to embark on the road to world power.

On the threshold of the 20th century, the American public was generally isolationist, whereas elite businessmen and opinion makers were expansionists. President Grover Cleveland (1837–1908), whatever his personal sympathies may have been, did not want his country to become involved in a conflict between Spain and its Cuban colony, and William McKinley (1843–1901), who succeeded him in 1897, publicly expressed the same sentiments. Yet as the months of Spanish abuses continued, many in the United States agitated for intervention. Not only were the Spanish atrocities considered intolerable by American opinion makers, but American business interests and citizens, both plentiful on the island, were at hazard. Into the growing national debate jumped two rival newspaper giants, Joseph Pulitzer (1847–1911) and William Randolph Hearst (1863–1951), whose papers (the *New York World* and *New York Journal*, respectively) were engaged in a bitter war of their own—a circulation war—in which coverage of the situation in Cuba was a highly desirable spoil. The papers outdid each other in publishing sensational stories of valiant rebels fighting cruel Spanish overloads. Hearst called for the outright annexation of the island.

In the end, the war that grew out of these events had less to do with Cuba's desire for independence or with Spanish atrocities or the competition between the *World* and the *Globe* than with domestic developments within the United States in the decades leading up to it.

ECONOMY OF EXPANSION

For decades after the UNITED STATES CIVIL WAR, the American colossus had been preoccupied with expanding across the continent and developing in the West what many historians have called the country's "internal colony." Late in the century, with the subjugation of the American Indians, the United States found its internal colonizing of the West coming to an end. The 1890 census announced that sometime after 1880 the "frontier line" in the West had disappeared. (Not accidentally, 1890 was also the year of the massacre at Wounded Knee [see GHOST DANCE UPRISING], when federal troops machine-gunned 300 Sioux in the last major U.S. confrontation with Native Americans.) It was

becoming increasingly clear to the managers of the American economy, and the financial markets behind it, that the time had come for new colonies, and they began to look beyond the American continent.

This was especially the case after the Panic of 1893, which began when the bankruptcy of the Philadelphia and Reading Railroad shook the New York Stock Exchange into the biggest selling spree on record up to that point. In the severe depression that followed, banks called their loans; credit dried up; the Erie, the Northern Pacific, the Union Pacific, and the Santa Fe railroads all failed; and mills, factories, furnaces, and mines everywhere shut down. By the time the Panic of 1893 was over, 500 banks and 1,500 firms had fallen into bankruptcy, and a series of industrial strikes around the country had grown so violent that the country's municipalities began building local national guard armories to arm federal strike breakers. These events merely fired a fever already growing in the elite political and financial circles of American society. To the moneyed class it seemed that overseas markets for American goods might relieve the problem of underconsumption at home and that overseas sources of raw materials might weaken the position of an increasingly hostile labor force. In short, overseas colonies might prevent the kind of economic crisis that in the 1890s was bringing something approaching class war to America.

Young expansionists like Theodore Roosevelt (1858–1919) could be fairly explicit in their private views that foreign adventures should divert farmers and laborers from their preoccupation with economic ills, although in their public statements they dressed those views in the racist and "manly" terminology that had been the heritage of the American West since John O'Sullivan (1813–95) coined the phrase *manifest destiny*. But even McKinley, one of the still numerous, cautious old "stand patters" in the Republican Party, had stated some years before he became president that America wanted foreign markets for their surplus products. In Congress too the consensus was growing. In 1897, Indiana's Senator Albert Beveridge (1862–1927) declared that American factories were making more than the American people could use and that American soil was producing more than they could consume. Fate, he declared, had written the policy—the trade of the world must be and would be American.

Economically, such men were right. The United States outstripped all other imperialist nations with industrialized economies in its careful nurturing of business, throwing open its doors to European immigrants who flooded its cities after the Civil War in unprecedented numbers even as it erected high protective-tariff walls around its new markets. An economy already expanding before the war exploded into massive growth in the decades following Appomattox, and what in 1860 had been a second-rate industrial country—lagging behind England, Germany, and even France—had by 1890 taken the lead. The United

States had become the greatest free-trade market in the world—the value of its manufactured goods all but equaled the combined production of the three previous leaders. Farm products, especially tobacco, cotton, and wheat, had long depended on international markets for prosperity, and by then U.S. trade exceeded every country in the world but that of England. In the two previous decades, new investments by American capitalists overseas had reached a billion dollars. Oil, too, had become a major export. By 1891, John D. Rockefeller's (1839–1937) Standard Oil Company produced 90 percent of America's kerosene export and controlled 70 percent of the world market, and oil had grown second only to cotton as the leading export product.

Both industrialists and large commercial farmers—including some Populist leaders—were demanding expansion into foreign markets for their huge agriculture surpluses. What they had in mind was not necessarily foreign conquest but an open-door trade policy, such as the United States was then helping to impose on China—in other words, what historian William Appleman Williams called an “informal empire.” But even informal empires sometimes fed real expansion, as the filibusters and merchant seamen who had drifted into the occupation of Texas and California back in the middle of the 19th century could attest. In Cuba, American policy makers and newspapers claimed, it was necessary to rescue freedom-fighting rebels intent on overthrowing an abusive Spanish rule. The Spanish-American War, fought on that pretext, in reality announced the U.S. entry into the contest for world markets.

DOMESTIC DEBATE AND DECLARATIONS OF WAR

Not all Americans supported the war being whipped up by the circulation contest between Pulitzer's *World* and Hearst's *Journal*. Anti-imperialists, led by William Jennings Bryan (1860–1925) and Carl Schurz (1829–1906), rallied their forces in Congress against the warmongers, led by Roosevelt and Henry Cabot Lodge (1850–1924). Those arguing against intervention persuaded Congress to pass the Teller Amendment, which prohibited annexation of Cuba as the result of any U.S. action. Meanwhile, the business community had begun to rally. Newspapers and trade journals of the day were chock full of the bellicose sentiments of businessmen: Pittsburgh's iron industrialists claimed that the possibility of war had stimulated the iron trade; shipping merchants announced that an actual war would decidedly enlarge the business of transportation; banker Russell Sage (1816–1906) told the press that there was no question where the rich men stood; John Jacob Astor (1864–1912) and William Rockefeller (1841–1922) admitted they were feeling militant; and J. P. Morgan (1837–1913) believed further talk with Spain would lead nowhere.

One Washington newspaper talked about a “belligerent spirit” inhabiting the Navy Department, which was

being egged on toward war by arms manufacturers and supply contractors. That spirit was Teddy Roosevelt, McKinley's under secretary of the navy. From deep within the administration, Roosevelt kept up a steady pressure on the president for intervention in Cuba, turning his famous frontier theories (expounded in his multivolume history *The Winning of the West*) to the cause of Cuba. Basically, he argued that foreign adventure could renew the virility of the ruling Anglo-Saxon class just as the frontier once had done. He began forming a unit to fight under his command when the war came, consisting of the cowboys, hunters, sheriffs, Texas Rangers, a few outlaws, and a large number of former vigilantes he had met in his youthful travel about the American West. He called them the “Rough Riders,” which was the name of a segment of Buffalo Bill Cody's immensely popular Wild West Show, then touring the country.

At last, in January 1898, with the belligerent expansionists like Roosevelt pushing for war at home and with fighting and rioting general in Cuba, President McKinley dispatched the battleship *Maine* to Havana Harbor in order to protect U.S. citizens. On February 9, 1898, Hearst scored a journalistic coup by publishing a purloined private letter in which Enrique Dupuy de Lome (1851–1904), the Spanish minister to the United States, made insulting and derogatory reference to President McKinley. With the powder keg duly packed, all that was wanting was a match. That came on February 15, 1898: The *Maine* exploded in Havana, killing 266 sailors. A rapidly convened naval court of inquiry concluded that the ship had hit a Spanish mine (modern analysts believe that it was spontaneous ignition of the ship's magazine that caused the disaster). Hearst and Pulitzer papers vied with one another to demonize Spain. Americans soon raised the cry of “Remember the *Maine* . . . to hell with Spain!” It was a self-conscious echo of the battle cry of the TEXAN WAR OF INDEPENDENCE—“Remember the Alamo!”—and it proved highly effective. Spain tried to avert war by accelerating its withdrawal from Cuba, and President McKinley continued to temporize throughout the early spring.

The turning point came on March 21, 1898, when Boston's Henry Cabot Lodge informed McKinley that he had talked with bankers, brokers, businessmen, editors, clergymen, and other members of the city's elite, and that all of them, including the most conservative, wanted the Cuban question—which was, in reality, what to do about the succession of rebellious spasms that were disrupting American commerce—solved. Certainly these men were not motivated by a humanitarian concern for the suffering Cubans. Their eyes were on the large U.S. business concerns that had made major investments in the island, especially in sugar plantations. Although revolutionary unrest posed a threat to those investments, they understood that a successful revolution, if properly supported, could create an independent Cuban government that, beholden to the

United States, would be pliant and willing to make provisions favorable to business. Some, like Hearst, imagined that Cuba might even be annexed to the United States.

On March 25 an adviser in Cuba wired the White House a telegram informing McKinley that the large U.S. corporations on the island believed a war was coming and, what was more, welcomed it as a relief from the suspense and uncertainty of the current situation. Two days later, McKinley presented Spain with an ultimatum demanding an armistice with the rebels. When Spain did not reply, McKinley asked Congress for a declaration of war on April 11, but he made no mention of recognition for Cuba or of its independence, which had initially been given as the reasons for American intervention. Congress by joint resolution not only gave McKinley the power to intervene nine days later but also voted a resolution to recognize Cuban independence from Spain. It was an authorization for war and, in response, Spain declared war on the United States on April 24, 1898.

UNPREPAREDNESS

The bellicose aspirations of the United States were not proportionate to the nation's state of preparedness for war. Although the navy had benefited from Roosevelt's push for a program of expansion, which included the construction of modern battleships and the creation of an excellent officer corps, the post-Civil War army was tiny, at about 26,000 officers and men, spread over far-flung posts. A National Guard program enrolled about 100,000 more, but many of them were poorly trained. Although the army was equipped with up-to-date weapons, the National Guard made do with outmoded black-powder Springfield rifles. Perhaps even more critical was the army's lack of a coherent mobilization plan. No overseas deployment had ever been contemplated, and it was questionable whether National Guard units could be legally employed beyond the nation's borders.

In belated preparation for war, Congress passed a Mobilization Act on April 22, 1898, that enabled the use of National Guard units. The act initially provided for the recruitment of 125,000 volunteers, to which an additional 75,000 were soon added. A special 10,000-man force, christened "the Immunes" and consisting of persons "possessing immunity from diseases incident to tropical climates," was also authorized. The act more than doubled the authorized strength of the regular army as well, to about 65,000. By the end of the 10-week war, in August 1898, the regular army numbered 59,000 and the volunteer forces 216,000.

INITIAL STRATEGY

Amassing the required manpower was only part of the problem of prosecuting the war against Spain; indeed, enthusiastic men volunteered in ample numbers. The initial U.S. strategy, however, called not for committing ground

troops to Cuba, at least not before October and the end of the sickly rainy season, but for establishing a naval blockade of the island. This patient strategy, planners believed, would itself win the war; when the Spanish decamped, ground forces could occupy Cuba. Against the advice of senior planners, however, and bending to the public outcry for immediate, glorious action, Secretary of War Russell M. Alger (1836–1907) ordered regular infantry regiments to be transported to New Orleans, Tampa, and Mobile, ports from which they could be immediately dispatched to Cuba.

The disruption of the initial strategy strained logistics to the breaking point. Transportation, supply, and clothing all created tremendous problems, and inadequate sanitation and improperly prepared food, including tainted tinned meat, created severe crises. Corruption among contractors and red tape in the War Department were rife.

THE BATTLE OF MANILA BAY

The fact that the navy was far better prepared for a large-scale deployment averted disaster. Almost immediately after the war began, the United States was flooded by rumors of the approach of a Spanish fleet under Admiral Pascual Cervera y Topete (1839–1909), headed for the Atlantic coast. Although Rear Admiral William T. Sampson (1840–1902) had hoped to institute his Cuban blockade with every ship in the North Atlantic Squadron, several were detached under Commodore Winfield S. Schley (1839–1911) to stand guard against the approach of Cervera.

If the navy's Caribbean plans were thus attenuated, its war plan for the Pacific campaign, formulated as early as 1895–97, remained intact. Anticipating a conflict with Spain, the navy had resolved to attack whatever Spanish ships were stationed in the Philippines. The object was to destroy those ships, take Manila, and blockade the Philippine ports to cut off a vital source of revenue to Spain; moreover, U.S. possession of the Philippines would put the nation in a strong negotiating position to compel Spain to agree to the liberation of Cuba. In January 1898, well before the army even began planning for war, Roosevelt sent war-preparation instructions to naval commanders, including Commodore George Dewey (1837–1917). His Asiatic Squadron (five cruisers and two gunboats) was ordered to assemble in Hong Kong, coal, and prepare to sail directly to the Philippines.

The order to attack the Philippines came on April 24, and Dewey, fully prepared, made Manila Bay during the night of April 30. On May 1, he located the Spanish fleet at Cavite and launched a spectacular attack against the vessels of Admiral Patricio Montojo (1839–1917): four cruisers, three gunboats, and three decrepit auxiliary vessels. Although it was superior in numbers, the Spanish fleet was outgunned—and poorly managed. Dewey completely destroyed the fleet within a few hours, inflicting on

Admiral Dewey's operations at the Battle of Manila and Manila Bay, May–August 1898

the Spanish 381 casualties (killed and wounded), whereas not a single American sailor was lost (eight were wounded). With the Spanish ships out of the way, Dewey neutralized the Spanish shore batteries, took possession of Cavite, and blockaded Manila in anticipation of the arrival of land forces to occupy the city. On June 30, 10,000 troops, a mix of regulars and volunteers under General Wesley Merritt (1834–1910), reached Manila Bay and began debarkation. Acting in concert with Filipino guerrillas led by Emilio Aguinaldo (1869–1964), who was leading an indigenous fight for independence from Spain (see PHILIPPINE INSURRECTION [1899–1902]), and supported by Dewey's naval batteries, Merritt took the city of Manila on August 13.

NAVAL OPERATIONS AT SANTIAGO DE CUBA

By May 1898, General Nelson A. Miles (1839–1925) was prepared to lead army units from Tampa against Cuba, but the whereabouts of Cervera's fleet could not be ascer-

tained. Until this information was discovered, the attack would not be launched. U.S. naval vessels searched for Cervera, finally discovering, at the end of May, that he had slipped through the Cuban blockade and had put in at the bay of Santiago de Cuba. Admiral Sampson reconnoitered and determined that the Spanish fleet—its best ships, four modern cruisers and three destroyers—had indeed attained the safety of the heavily fortified bay. Sampson decided to blockade the fleet in the harbor, which he accomplished during May–July. In a daring operation, Lieutenant Richmond P. Hobson (1870–1937) sailed an obsolescent collier, the *Merrimac*, into the harbor mouth and scuttled it, hoping the hulk would effectively block the narrow channel. The gallant effort failed.

Unable to silence the Spanish forts with naval bombardment alone, Sampson called for army land forces to move against the batteries. Simultaneously, Sampson landed the marines carried by his squadron of five battleships, two armored cruisers, and assorted lesser vessels. They quickly overran the Spanish defenders of Guantanamo Bay and established a base of operations there. It was the first land skirmish of the war—and the marine base at Guantanamo exists to this day, the sole bastion of U.S. sovereignty on the island and place of confinement, in the early 21st century, for prisoners taken during the U.S. WAR ON TERRORISM.

THE ARMY EMBARKS

On June 14, V Corps, consisting of three divisions, 17,000 men, mostly regular army, under Major General William R. Shafter (1835–1906), left Tampa after many logistical delays. The loading of transports was especially haphazard. The concept of “combat loading”—including on each vessel the men together with their necessary supplies and equipment, in such a way that all could be unloaded in the order needed—was largely ignored, a fact that put the troops in great jeopardy should their landing encounter substantial resistance.

It was June 20 before the transport convoy arrived near Santiago, the troops having suffered under brutal tropical heat and in overcrowded, unsanitary conditions. Admiral Sampson wanted General Shafter to land at Santiago Bay and immediately storm the fort on the east side of the entrance to the bay to drive the Spanish from their guns. This accomplished, Sampson could clear the bay of mines and enter it to fight Cervera's fleet. Shafter, however, had not transported heavy artillery and therefore doubted that his troops could take the fort. He decided instead on a less direct approach. He landed at Daiquirí, east of Santiago Bay. Disembarkation began on June 22 and was not concluded until June 25, amid great confusion and the reluctance of civilians in vessels chartered for the landings to make shore approaches. Cavalry mounts were tossed overboard, left to swim ashore on their own. Many horses swam out to sea and were lost. Had the

Spanish commanders responded appropriately, they might have taken advantage of the chaos to wipe out the landing force. Spain had at least 200,000 troops in Cuba, of which 36,000 were stationed in Santiago. Combined with about 5,000 local insurgents (under General Calixto Garcia [1838–98]), the U.S. forces numbered only 22,000. Fortunately for the Americans, the Spanish did nothing to resist the inept landings.

BATTLE OF SANTIAGO

Elements of V Corps advanced west toward the high ground of San Juan, a series of ridges east of Santiago. The topography was ideal for the defenders, who were well entrenched. On June 23, Brigadier General Henry W. Lawton (1843–99) led the American vanguard along the coast from Daiquirí to take and hold Siboney, which became the principal base of operations. On June 24, Brigadier General Joseph Wheeler (1836–1906) took his dismounted cavalry units inland along the road to Santiago and captured Las Guasimas, engaging briefly the rear guard of a retreating Spanish force. Units of V Corps, now just five miles outside of San Juan Heights, paused to await the arrival of the rest of Shafter's divisions. But time suddenly seemed of the essence; Shafter observed how rapidly the tropical conditions debilitated his troops, and he also feared the onslaught of hurricanes. In view of these dangers, the general resolved on an immediate frontal attack against San Juan Heights. Shafter assigned an infantry division under Brigadier General Jacob F. Kent (1835–1918) to attack on the left and Wheeler's dismounted cavalry on the right. These 8,000 troops would be supported by Lawton's infantry and artillery, 6,500 men, who, simultaneously with the assault on San Juan Heights, would attack and take El Caney, a well-fortified village. This would cut off supplies to Santiago, including fresh water, and would block any possible Spanish reinforcements. Once El Caney was secured, Lawton was to join in on the main assault against San Juan. Finally, to deceive the enemy, Shafter detailed a freshly landed brigade to advance along the coast from Siboney as a diversionary feint.

The attack started at dawn on July 1 and immediately began to fall apart because of the merciless tropical heat and difficult terrain. Shafter, felled by heat stroke, was unable to direct the battle. As troops became bottled up along the congested main trail to San Juan Heights, Spanish gunners took devastating aim, sighting their guns on giant tethered Signal Corps balloons. To compound these problems, Lawton experienced a lengthy delay in taking El Caney, which was much more stoutly defended than had been anticipated. Nevertheless, Kent and Wheeler were able to make a vigorous assault on San Juan Heights by the middle of the day. Among the units participating were the 9th and 10th Cavalry—both African-American regiments—and the Rough Riders of the dashing Theodore Roosevelt, now a lieutenant colonel. These three cavalry regiments, all dis-

mounted, seized and occupied Kettle Hill, as Kent's infantry, under cover of continuous Gatling-gun fire, charged up San Juan Hill and overwhelmed the defenders, pushing them from their blockhouse and trenches. The Spanish retreated to a more strongly fortified inner line.

Despite a shaky beginning, Shafter had achieved his initial objectives, but at the higher-than-expected cost of 1,700 killed and wounded. Even more troublesome than the heavy battle casualties was the toll taken by illness, especially now that V Corps had to tackle the best-organized and most heavily fortified line of Spanish defense. Shafter notified Secretary of War Alger that he was contemplating a strategic withdrawal, five miles to higher ground. This would put his forces in a position both easier to supply and to defend; the additional elevation, Shafter hoped, would also bring a healthier environment. Alger understood but replied that the "effect upon the country would be much better" if Shafter avoided any retreat, even a strategic one. In view of this, Shafter appealed to the navy to enter Santiago Bay at once and attack the city. Naval commanders refused, and the American forces were thus temporarily stalled.

Just as the crisis of command seemed most acute, the will of the Spanish defenders of Santiago began to buckle. Short of food, water, and ammunition, the Spaniards resolved to abandon the city, and, without land support, Cervera felt he had no choice but to make a run out of port. On July 3, he began to move out. At the time, Admiral Sampson was ashore in a tactical debate with General Shafter. In his absence, Commodore Schley initiated the pursuit and, in the space of two hours, disposed of Cervera's fleet. The four cruisers, the pride of the Spanish navy, were severely damaged and run aground. A destroyer was also beached, and another sunk in deeper water. Although Schley diligently set about rescuing Spanish survivors, Cervera's losses were 474 killed or wounded; 1,750 sailors were taken prisoner. American losses were one killed and one wounded. The glory of the victory was subsequently marred by Sampson's unseemly attempt to claim credit for Schley's achievement.

Shortly after the defeat of Cervera, General Shafter persuaded the Spanish officials at Santiago to surrender unconditionally. The papers were signed on July 16, and 23,500 Spanish troops gave themselves up. Had General José Toral (fl. 1890s) been aware that the American troops surrounding Santiago were withering under the effects of heat and yellow fever, he surely would not have capitulated so eagerly.

LANDING ON PUERTO RICO

General Miles, leading more than 3,000 troops, sailed from Guantánamo on July 21 and landed at Guanica on the southeastern coast of Puerto Rico on July 25. He met almost no resistance and quickly advanced to the port town of Ponce. He secured this for a base of operations,

installing 10,000 troops who had arrived from the U.S. mainland during the first week of August. Miles then marched four columns toward San Juan and easily brushed aside the inconsequential resistance he encountered. Many Puerto Ricans enthusiastically greeted the American troops as liberators, but the campaign was suspended on August 13, when news reached Miles that Spain had signed a peace protocol.

HEALTH CRISIS

The overwhelming nature of the U.S. military victory in the Caribbean was being increasingly vitiated by the deteriorating health of Shafter's soldiers. As far more succumbed to yellow fever than to enemy bullets, a number of senior officers circulated a letter proposing evacuation of the army for sanitary and medical reasons. When the letter was made public, American officials worried that it would compromise the ongoing peace negotiations with Spain. Fortunately, it did not, but the army was moved to devote unprecedented resources to its Medical Corps in a concerted effort to understand the causes of yellow fever and to develop means of effectively combating it.

THE FALL OF MANILA

While U.S. soldiers triumphed and languished in Cuba, Dewey, during May and June, awaiting the arrival of land forces to occupy Manila, struggled to maintain cordial relations with Aguinaldo and the Filipino insurgents. It became increasingly apparent that the U.S. and Filipino agendas were far from identical. The United States wanted to annex the Philippines, while Aguinaldo wanted to achieve immediate independence. Fortunately, by the end of July, before a full-blown crisis developed, the VIII Corps, about 13,000 volunteers and 2,000 regulars under Major General Merritt, began landing near Manila. The army had learned valuable lessons from the Cuban landings, and those at Manila were far more efficient. By the beginning of August, 11,000 U.S. troops were arrayed to the rear of the Filipino insurgents just outside the city. Within Manila, as many as 15,000 Spanish troops were ready to make a defensive stand. Both Dewey and Merritt appealed to Madrid for a bloodless surrender, but the cause of Spanish honor seemed to demand at least a show of resistance. Thus, on August 13, the VIII Corps attacked, supported by Dewey's naval bombardment. Poor coordination between the U.S. troops and the insurgents threatened to incite the Spaniards to make more than a token resistance; the insurgents suddenly opened up on the barely resisting Spanish with unbridled violence. American officers intervened, persuaded the insurgents to cease fire, and the Spanish garrison surrendered. On August 14, the surrender was formalized—though, in fact, Madrid had signed a general peace protocol on August 12. Because Dewey had cut the submarine telegraph cable to Manila, word of the armistice had reached neither attackers nor defenders.

THE TREATY OF PARIS

Following the armistice, negotiations in Paris produced the Treaty of Paris, which was signed on December 10, 1898. Because moral objections to U.S. imperialism had produced the Teller Amendment to the declaration of war, forbidding the annexation of Cuba, U.S. negotiators at Paris did not seek to acquire the island but instead secured Spain's grant of independence for Cuba. The Teller Amendment did not extend to other Spanish possessions, however, and President McKinley pressed his negotiators to obtain Puerto Rico, Guam, and the Philippine Islands, for which the United States paid Spain \$20 million.

Imperialism so blatant did not sit well with many in the United States, and the Senate fight over ratification of the treaty was intense. Those who favored the treaty argued that annexation was an expression of America's duty to serve the world as an agent of civilization. On a less bombastic level, the acquisitions in the Pacific would give the United States a crucial advantage in trade with China. In the end, the treaty was ratified by a margin of 57 to 27—just two votes more than the two-thirds majority required.

If the strictures of the Teller Amendment prevented the annexation of Cuba, they did not prevent de facto U.S. occupation of the island. Fast on the heels of the army came American capital. Then came American-built railroads, American-operated mines, American-operated plantations. United Fruit moved into the Cuban sugar industry, the American Tobacco Company onto its tobacco lands. By 1901, an additional \$30 million had been invested, and 80 percent of Cuba's mineral exports were in American hands, mostly those of Bethlehem Steel. The army remained to protect such interests, and a series of strikes in 1899 and 1900 were brutally suppressed.

The newly independent nation drew up a constitution in 1900, but it neglected to incorporate provisions for the continuation of Cuban-U.S. relations. The United States made such provisions a necessary condition for withdrawal from the island. Secretary of State Elihu Root (1845–1937) drew up the provisions and attached them to the army appropriations bill of 1901. Sponsored by Senator Orville H. Platt (1827–1905), the amendment made Cuba, in effect, a U.S. protectorate by limiting the new nation's treaty-making capacity, curtailing its right to contract public debt, and securing Cuban land for U.S. naval bases. Most important, it reserved to the United States the right to intervene in Cuban affairs in order to preserve Cuba's independence and to protect "life, property, and individual liberty." Cubans might have asked if that meant their liberty or the liberty of American businessmen. When the Cuban constitutional convention met in 1901, the United States informed the new government that its army would stay unless and until the document included the Platt Amendment. The provisions of the Platt Amendment were incorporated into the Cuban constitution in 1901, and the United States withdrew its forces the following

year. Relations as defined in the Platt Amendment and the Cuban constitution were further formalized by treaty in 1903. In the end, there was no need to annex Cuba; the American army could return legally any time the United States wished.

Thus did the American empire, however informal, grow. In addition to the Cuba protectorate and the series of outright annexations of those countries not covered under the Teller Amendment—Puerto Rico, Guam, the Philippines—there were the Hawaiian Islands. These were not “won” in the war, but the imperialist momentum created by the war drove their acquisition. Already penetrated by American missionaries and pineapple plantation owners, who were now able to oust Queen Liliuokalani, only recently restored, Hawaii cost nothing; it was taken in time-honored traditions of the American West from the indigenous peoples themselves. Dubbed by John Hay (1838–1905) a “splendid little war,” the Spanish-American War had established the United States as a major power in the Far East and the dominant power in the Caribbean. It also triggered a four-year-long guerrilla insurrection in the Philippines, as Aguinaldo’s nationalists—once allied with the United States against Spanish domination—now fought the new American occupiers.

The insurrection became an issue in McKinley’s reelection. Roosevelt, now on McKinley’s ticket as vice president, took up the issue of putting down the Philippine rebellion and used it as a cudgel against the perennial Democratic candidate, the pacifist and populist hero William Jennings Bryan. McKinley won, but he did not have long to savor his victory. On September 6, 1901, McKinley was shot by an anarchist, Leon Czolgosz, while attending the Pan-American Exposition in Buffalo, New York, and died eight days later. Roosevelt assumed office and pursued the new imperialism with gusto. He was elected president in his own right in 1904, whereupon, on the basis of the experience in Cuba, he established a policy toward the Caribbean islands and Latin America that came to be known as the Roosevelt Corollary to the Monroe Doctrine.

The Roosevelt Corollary effectively made the United States an international police force for the region, a role that was destined to expand. Meanwhile, Roosevelt enthusiastically supported such initiatives as the construction of the Panama Canal, for which he not only practiced a subtle diplomacy with Britain and France but also engineered the creation of the new Republic of Panama (see PANAMANIAN REVOLUTION), expressly to provide the United States a canal zone. American muckrakers would come to call America’s imperial policies developed under Roosevelt “dollar diplomacy”; American businesses like United Fruit would prove every bit as effective as the British in taking control of foreign countries, especially in Central America, which the “yellow press” soon labeled “Banana republics.”

Before his two terms in office were over, Roosevelt—whose navy was growing (as was Japan’s and Germany’s)

into a threat for the British—would come to relish his role as “policeman” not just to the Caribbean but also to the world, especially following the RUSSO-JAPANESE WAR. It was a role once played by the British Empire, and it remained a controversial one in America’s domestic politics. Not until the great world wars of the 20th century had shattered the hold of isolationism would America truly assume the British mantle during the long cold war, and even then covertly and often behind the front of the United Nations.

Spanish Christian-Muslim War (912–928)

PRINCIPAL COMBATANTS: Muslim Arabs, Berbers, Muwallads fought with each other; all of these groups fought against the forces of Spain’s Christian kings.

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Spain

OUTCOME: The war established Abd-ar-Rahman III as caliph of Córdoba, the principal power in southern Spain.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Abd-ar-Rahman’s army, 40,000; strength of other forces unknown

CASUALTIES: Unknown

TREATIES: None

During much of the Middle Ages, southern Spain was hotly contested among Muslim groups and between Muslims and Christians. Early in the 10th century, Muslim Arabs, Berbers, and Muwallads—Spanish converts to Islam—fought over control of the al-Andalus region. In nominal control of the region was Abd-ar-Rahman III (891–961), the Umayyad emir, a Muslim and the most powerful of the Umayyads in Spain. He first attempted to suppress rebellion in al-Andalus by granting a blanket amnesty to the rebels. When this failed, he marched a 40,000-man army against Toledo, effectively the capital of Moorish Spain. Prevailing against rebel Arabs under Umar ibn Hafsun (c. 840–917), Abd-ar-Rahman gained control of southern as well as eastern Spain. Nevertheless, his forces still faced persistent guerrilla warfare.

While Abd-ar-Rahman continued to fight the Arab rebels in the southeast, Galicia (northwest Spain) was also engulfed in a war, which focused on the kingdom of León. Under Ordoño II (d. 923), Spanish Christians defeated the Moors and successfully resisted repeated Moorish incursions from the south. However, in 921, Moorish forces defeated Ordoño, who was allied with the king of Navarre, Sancho I Garcés (r. 905–926), at the Battle of Val-de-Junquera.

Ibn Hafsun's sons carried on the resistance against Abd-ar-Rahman as well as the Spanish Christian kings until 928, when these rebels finally surrendered. This did not bring an end to the struggle between Christians and Muslims, however, as Abd-ar-Rahman, who now declared himself caliph of Córdoba, engaged in frequent fighting with Christians at the frontier of his realm. Despite the ongoing border combat, Abd-ar-Rahman forced the Christian kings of León and Navarre to pay an extortionary tribute.

Spanish Christian-Muslim War (977–997)

PRINCIPAL COMBATANTS: Principally Spanish Moors vs. Christians

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Spain

OUTCOME: By the end of this long complex of wars, the Moors came to dominate most of the Iberian Peninsula.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Various alliances were made and broken.

The victory of Abd-ar-Rahman III (891–961) in the SPANISH CHRISTIAN-MUSLIM WAR (912–928) established Umayyad rule over most of southern Spain. However, Hisham II (d. c. 1013), caliph of Córdoba, proved such a weak ruler that he was quickly overthrown by the palace chamberlain and power behind the scenes, Muhammad ibn-Abi-Amir (939–1002), with military assistance from his father-in-law, General Kalib (d. 981). Not long after he had helped to install him in power, however, Kalib began to fear his son-in-law and decided to checkmate him by striking an alliance with Ramiro III (r. 967–84), Sancho II Garcés (r. 970–94), and Garcia I Fernandez (r. 970–95), the Christian rulers of León, Navarre, and Castile. Ibn-Abi-Amir responded to this with a preemptive invasion of Galicia (northwest Spain) in 977, defeating Kalib's forces and killing Kalib himself.

With Kalib out of the way, ibn-Abi-Amir established a full military dictatorship, then turned against the Christians, engaging the forces of León under Ramiro III at the Battle of Zamora in 981 and again at the Battle of Simancas. From both of these battles, ibn-Abi-Amir emerged with decisive victories that enabled him to assume the title al-Mansur bi-Allah (“victorious through Allah”). He assumed absolute rule over all Muslim Spain as regent and true power under Hisham II.

While it made him powerful, the victory of al-Mansur (Ibn-abi-Amir) did not bring stability to Spain. In 982, León was torn by civil war when Vermudo II (d. 999) usurped the throne with the assistance of al-Mansur's troops and troops sent by Sancho II Garcés, the Christian king of Navarre. Three years later, al-Mansur overran Barcelona, which he razed. In 987, Vermudo II banished the Córdoba mercenaries from his kingdom, fearing that they would turn against him. This action, however, cleared the way for al-Mansur to turn against his former ally, and, in 988, he ravaged León, which he then occupied.

From his newly established base at León, al-Mansur raided and invaded Castile. In 989, he leveraged popular discontent by fomenting an uprising. Once that was under way, al-Mansur used it as a pretext for invasion. He defeated Christian forces at Medinaceli, then imposed heavy tribute payments on the Christians in return for his “protection.” Having extorted what he could from Castile, al-Mansur turned his troops loose upon Galicia, allowing them to raid and pillage freely. By the end of this long complex of wars, the Moors had succeeded in conquering most of Iberia, including the regions encompassed by modern Spain and Portugal.

Spanish Christian-Muslim War (1001–1031)

PRINCIPAL COMBATANTS: Spanish Christians vs. Muslims; Ummayyad Muslims vs. Hammudid Muslims

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Spain

OUTCOME: Against the background of the ongoing struggle between Christians and Muslims in Spain, this period saw intensified internecine warfare within Muslim Spain, ultimately leading to the collapse of Moorish influence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

This war marked a turning point in the gradual Christian reconquest of Muslim Spain by bringing about a sharp decline in Moorish influence. The third of the long wars between Muslims and Christians in Spain, it began in 1001 when Muhammad ibn-Abi-Amir al-Mansur (939–1002) (see SPANISH CHRISTIAN-MUSLIM WAR [977–997]) led a large Muslim army up the Duero River against Christian rebels in Castile. At Caltanazar, he was attacked by a superior Christian force and had to retreat and then withdraw from the area. Al-Mansur died without having regained full control over Castile, and he was succeeded as regent of Córdoba by his son Abdulmalik-al-Mazaffar (d. c. 1004) under Caliph Hisham II (d. c. 1013).

Abdulmalik-al-Mazaffar assumed the regency in a climate of increasing dissension, but he nevertheless vigorously prosecuted military campaigns against the Christians and scored several victories before he died, apparently of natural causes, about 1004. His death came at a most inopportune time and triggered a full-scale civil war, during which Abdulmalik-al-Mazaffar's younger brother Sanjul (d. 1009) seized power. Not content with assuming the regency, Sanjul forced Hisham II to proclaim him his heir. This incited a rebellion at Córdoba, which forced the abdication of Hisham II in favor of Muhammad II Mahdi (d. 1010). Mahdi, however, did not assume the throne unopposed. Berber mercenaries supported their own candidate, Sulayman al-Mustain (d. 1016), and they conspired to bring about the assassination of Sanjul in 1009; then, with military aid from the Christian count Sancho Garcés of Castile (d. 1021), the Berber mercenaries carried off a coup d'état against Muhammad II in November 1009. Allied with Christian troops, the Berbers installed their candidate,

Sulayman, as caliph of Córdoba—after thoroughly looting the city.

The civil war greatly eroded the central authority emanating from Córdoba, and various Muslim emirates and kingdoms were established throughout Spain. Thus Muslim control over Iberia became increasingly fragmented. This prompted the deposed Muhammad II to strike an alliance with the Christian count Ramón Borrell (d. 1018) of Barcelona, who, together with his brother, Count Berenguer Ramon I (1018–35), helped lead a joint Christian-Muslim army against Córdoba. This force defeated the Berbers, but instead of retaking the city intact, the Christian-Muslim coalition put it to the torch.

The destruction of Córdoba created great instability, and as soon as the Christian-Muslim army pulled out of the city, Muhammad II was assassinated, and Hisham II rushed in to fill the vacuum. He did not hold the throne long, however. In May 1013, Hisham was again forced to abdicate in a struggle between the Ummayyad and Hammudid dynasties. His abdication left no clear successor, and anarchy ensued. The violence came to an end in 1031 with the total collapse of the Córdoba caliphate when Hisham III (d. 1036), nominal ruler at the time, resigned. Thus, as a result of internecine war, Moorish influence in Spain suddenly declined, and the Christians became the beneficiaries of Muslim dynastic war.

Safran, *The Second Umayyad Caliphate: The Articulation of Caliphal Legitimacy in Al-Andalus* (Cambridge, Mass.: Harvard University Press, 2000).

Spanish Christian-Muslim War (1172–1212)

PRINCIPAL COMBATANTS: Principally, Castile and other Christian kingdoms of Iberia, vs. the Almohad Muslims

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Spain

OUTCOME: The long struggle between Christians and the Almohad Muslims in Spain was fought out in a series of battles, culminating in the Castilian victory at the Battle of Las Navas de Tolosa.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Christian numbers at Las Navas de Tolosa are unknown; Almohad troops reportedly numbered 600,000

CASUALTIES: Christian casualties at Las Navas de Tolosa are unknown; Almohad casualties reportedly numbered 160,000 killed.

TREATIES: None

Alfonso VIII (1155–1214), Christian king of Castile, ascended the throne as an infant. The nobles were reluctant to acknowledge his authority after he came of age, and Alfonso had to fight them. Emerging victorious from the internecine struggle against the other Christian nobles, Alfonso then moved against the Almohad invaders, a Muslim group that had assumed dominance over much of Muslim Spain. To defeat the Almohads would not only be a victory for Christianity, but would also consolidate and ratify Alfonso's authority to rule.

By 1177, Alfonso had pushed the Almohads out of Cuenca and, from this triumph, went on to a series of others until the fateful Battle of Alarcos in south-central Spain on July 18 or 19, 1195. Troops under the Almohad caliph, Abu-Yusef Ya'qub al-Mansur (d. 1199), decisively defeated Alfonso's army, taking (they claimed) 30,000 prisoners, most of whom were subsequently slaughtered.

Alfonso and a core of followers survived the battle and fled to the northeast, transiting the Ciudad Real and taking refuge in the fortress of Calatrova. This necessary retreat laid Castile open to invasion by Christian troops from León and Navarre. Moors (Spanish Muslims) also attacked. Worse, in 1197, Calatrova fell to the Moors, and Alfonso made a humiliating peace. Nevertheless, in subsequent years, although beleaguered, Alfonso repulsed each new invasion attempt, buying Castile time to receive reinforcements from Pope Innocent III (1161–1216). With these troops, Alfonso seized the initiative and counterattacked against the Almohads and Moors. A series of Christian victories culminated in the Battle of Las Navas de Tolosa on July 16, 1212. The strength of Alfonso's coalition force of troops from Castile, León, Navarre, and Portugal must have been great, but it is said that the army under Muhammad al Nasin was even greater, reportedly numbering 600,000 men. Alfonso's coalition defeated the Muslims, inflicting a reported 160,000 deaths.

As a result of Las Navas de Tolosa, Alfonso won for Castile control of all central Spain and broke the back of Almohad hegemony in Iberia. It was one of the great reversals of power in all military history.

Reilly, *Medieval Spains* (New York: Cambridge University Press, 1993); Bernard F. Reilly, *Contest of Christian and Muslim Spain: 1031–1157* (London: Blackwell, 1995).

Spanish Christian-Muslim War (1230–1248)

PRINCIPAL COMBATANTS: Castile and León vs. the Moors

PRINCIPAL THEATER(S): Southern Spain (al-Andalus)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Spain

OUTCOME: Ferdinand III succeeded in reconquering Spain for Christianity.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Ferdinand III (1199–1252), king of Castile and León, fresh from victories in a dynastic dispute, led a military crusade aimed at stamping out Moorish hegemony in southern Spain. He began with an invasion of the Guadalquivir River valley, which harbored many Moorish strongholds. Ferdinand enjoyed success in several battles, culminating in the capture of Córdoba in 1236. This city had been the capital of Moorish Spain since the eighth century, and its capture was a great milestone in the Christian reconquest of Spain. Jaén, east of Córdoba, was taken 10 years later, and Seville, Moorish capital of al-Andalus, fell to him in 1248.

In his zeal to purge southern Spain of Islam, Ferdinand evicted Moors from their homes—and thereby created economic devastation throughout the realm. Nevertheless, Murcia came directly under Castilian control and occupation, whereas Granada remained nominally Moorish, but existed in vassalage to Castile as the Emirate of Granada. For all practical purposes, Spain had been reconquered from the Moors, although low-level guerrilla warfare, mainly with Granada, persisted for many years, until Alfonso X (1221–84), Ferdinand's son and heir, took Cadiz in 1262.

Reilly, *Medieval Spains* (New York: Cambridge University Press, 1993); Colin Smith, ed., *Christians and Moors in Spain (1195–1614)*, vol. 2 (Oakville, Conn.: David Brown Books, 1989).

Spanish Christian-Muslim War (1481–1492)

PRINCIPAL COMBATANTS: Spanish Christians vs. Muslim Moors

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Spain

OUTCOME: Ferdinand V's defeat of the Moors at Granada ended Muslim rule in Spain.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At Granada, Ferdinand had 50,000 men; this was doubtless the largest army he fielded. Moorish numbers are unknown.

CASUALTIES: Unknown

TREATIES: None

This was the culminating war in the Christian-Muslim struggle for possession and control of Spain. On December 26, 1481, Muley Abdul-Hassan (d. 1485), the Muslim king of Granada, made a surprise attack on the Christian Zahara fortress near the village of Ronda. His forces abducted the Christians and cast them into slavery. The action provoked retaliation in the form of a Christian counterraid on February 28, 1482, led by Rodrigo Ponce de León (1443–92), the Christian marquis of Cadiz, against Alhama, a Moorish town 25 miles from Granada. The Christians occupied Alhama on February 28, 1482, but were soon set upon by forces of Abdul-Hassan, who ordered a siege. At news of the approach of an army under Ferdinand V (1452–1516), king of Castile and Aragon, Abdul-Hassan raised the siege and departed the field. Ferdinand rode into Alhama on May 14, 1482. War would continue without remission for the next decade.

Ferdinand and his consort, Queen Isabella I (1451–1504), planned a siege of Loja, another Moorish stronghold. The operation was amphibious; land elements were assigned to lay siege to the town while a fleet blockaded the sea lanes to prevent Moorish reinforcement. The defeat of Ferdinand at the Battle of Loja on July 4 (some sources report July 1), 1482, was severe, precipitated by the king's loss of nerve before his objective. He withdrew from Loja and, in withdrawing, was attacked by the Loja garrison, which managed to inflict serious losses, not the least of which was the forced abandonment of Ferdinand's supplies and artillery.

In the wake of Ferdinand's defeat, the son of Abdul-Hassan, Boabdil (d. 1527), laid siege to Lucerna in April 1483, but as he withdrew from the siege he was taken captive by Christian forces. While held, he acknowledged the suzerainty of Ferdinand V over all Granada. This secured his release, whereupon his father, Abdul-Hassan, denounced the acknowledgment.

In the meantime, Ferdinand conducted a sweeping reorganization of his army, modeling it on French forces and adding contingents of highly capable Swiss mercenaries. Now Granada became the focus of an intensified Christian siege, both by land and sea. Isabella took active interest in the war, which she elevated to the stature of a religious crusade. In large part inspired by her, Castilian Christian forces took Ronda in May 1485 and Loja one year later. After Loja fell, the Spanish laid siege to Málaga, which was overrun and captured by Christian forces in August 1487, after a siege of four months. The Moors regrouped and consolidated their position in the fortresses of Baza and Almería. They held out in these strongholds for two years, but both finally succumbed to protracted Christian siege in 1489.

By 1490, all of southeastern Spain was under Castilian Christian control. Now Ferdinand focused all of his military effort against Boabdil, who was holed up with his Moorish forces in Granada. Ferdinand appealed to Boabdil to abide by his early acknowledgment of Christian

suzerainty over Granada. When he refused, Ferdinand, with 50,000 troops, commenced a siege of the city on April 26, 1491. The Moors sortied out for an attack only once, then, starving, surrendered on November 25, 1491 (some sources put this at January 2, 1492). This victory ended Muslim rule in Spain.

Spanish Civil War (1820–1823)

PRINCIPAL COMBATANTS: Liberal forces (under Rafael del Riego y Núñez) vs. royalists (with French aid)

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Spanish government

OUTCOME: The intervention of the French in 1823 turned the tide of this civil war against the forces of liberalism, and Ferdinand V was restored to his throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Riego's forces, 20,000; royalist numbers unknown, but French forces numbered 100,000.

CASUALTIES: Riego's forces, 600 killed, 2,900 wounded; royalist and French forces, 400 killed, 3,600 wounded

TREATIES: None

Ferdinand VII (1784–1833), reactionary, brutal, clumsy, and unpopular, rejected the reformist constitution of 1812, thereby provoking a simmering unrest throughout the nation and, in particular, within the ranks of the army. When Ferdinand decided to launch a campaign to retake the South American colonies Spain had lost to revolution—Argentina, Chile, Colombia, and Venezuela—he mustered an expeditionary force at Cadiz in January 1820. This proved a spectacular mistake. The troops were already discontented, and, at Cadiz, grew enraged by overcrowded camps, poor food, and withheld pay. Under Colonel Rafael del Riego y Núñez (1785–1823), they mutinied in the name of the Constitution of 1812. (The war is sometimes called the Riego Rebellion.) Abducting their commanding officer, the mutineers marched on the village of San Fernando, where they set up headquarters, then prepared to advance against the Spanish capital city of Madrid. Even before they began their march, however, Ferdinand VII relented and, on March 9, 1820, accepted the liberal 1812 constitution.

Thus far, the rebellion or civil war had been virtually bloodless; however, the king's embrace of the Constitution of 1812 and his consequent relinquishment of much of his power provoked a period of intrigue and conspiracy among royalists and liberals alike. During this time, leftist revolutionaries invaded the royal palace and held Ferdinand under house arrest for three years. Chaos intensified in Spain. Within the Madrid garrison there was a general mutiny, and Castile, Toledo, and Andalusia erupted into violent civil war.

Ferdinand VII, a prisoner, appealed to the Holy Alliance (Prussia, Russia, and Austria) for military assistance, but the alliance refused to intervene in a civil war. In October 1822, however, the Quadruple Alliance (France, Britain, Austria, and Holland) convened at the Congress of Verona, conferred upon France a mandate to invade Spain, crush the anti-royalist forces, and restore Ferdinand fully to his throne. France, no longer a revolutionary republic but now a reactionary monarchy, conducted the invasion with gusto, eager to restore an anointed monarch to his throne. The invasion (*see* FRANCO-SPANISH WAR [1823]) very quickly put Madrid in royalist hands and threw the insurgents southward, to Cadiz and Seville. The French made a concerted attack on Cadiz, entirely routing the anti-royalists. Ferdinand—whom the rebels had removed from Madrid—was rescued and restored to the throne. He decided to put an end to all reform. Unconditionally revoking the Constitution of 1812, he brought an end to constitutional government in Spain and reasserted absolute rule.

Further reading: Raymond Carr, *Spain, 1808–1975* (New York: Oxford University Press, 1990); Charles J. Esdaile, *Spain in the Liberal Age: From Constitution to Civil War, 1808–1939* (London: Blackwell, 2000); Christopher J. Ross, *Spain, 1812–1996* (New York: Oxford University Press, 2000).

Spanish Civil War (1840–1843)

PRINCIPAL COMBATANTS: Spanish royalists vs. Spanish liberals and anti-royalists

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The war began in the cities, after Maria Cristina, regent to Isabella II, encroached upon local autonomy. The war soon became a full-scale civil conflict.

OUTCOME: Operating from exile, Maria Cristina managed to engineer the overthrow of the liberal government and the reinstatement of Isabella II.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but limited in this entr'acte between the First and Second Carlist Wars.

TREATIES: None

Following the First CARLIST WAR (1834–39), Maria Cristina, regent to the child-queen Isabella II (1830–1904), attempted to abrogate the Constitution of 1837 and bring the Spanish cities, which, under the constitution, enjoyed a degree of sovereignty and autonomy, under full royal control. This action touched off urban riots and full-scale rebellion, and ultimately compelled Maria Cristina to accept the even more liberal earlier Constitution of 1812. Even this was not sufficient, however, to quell the uprisings when Maria Cristina's government attempted to install its candidates into local city offices. When Maria Cristina ordered General Baldomero Espartero (1792–1879) to lead the army against the rebels, he refused and thereby gained election as ministerial president (effectively prime minister). Under his leadership, a series of reforms greatly constrained royal authority, prompting Maria Cristina to take young Queen Isabella with her and into French exile in October 1840. From this remove, Maria Cristina fomented a rebellion against Espartero, who, in the meantime, had rendered himself unpopular by assuming arbitrary and dictatorial powers.

Espartero's forces quelled uprisings at Pamplona in October 1841 and at Barcelona in December of the following year. Despite these defeats for the regent, her agents in Spain gave aid and support to Colonel Juan Prim y Prats (1814–70), who fomented an uprising in southern Spain during 1843.

Under ever-increasing pressure, Espartero lost political ground. Late in 1843, General Ramón María Narváez (1800–68) led an army from Valencia and marched against Madrid, carrying out a coup d'état against Espartero. He fled to England, and forces loyal to the regent and the young queen occupied the capital. In November 1843, 13-year-old Isabella was handed the reins of the Spanish government, with General Narváez as ministerial president. Little was permanently settled, however, and Spain would erupt into the highly destructive Second CARLIST WAR just three years later.

Ross, *Spain, 1812–1996* (New York: Oxford University Press, 2000).

Spanish Civil War (1936–1939)

PRINCIPAL COMBATANTS: Fascist insurgents under Francisco Franco (backed by Germany and Italy) vs. the "Loyalist" government (backed by the Soviet Union and volunteers from Britain, France, and the United States, and including anti-fascist Italians and Germans)

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: On July 18, 1936, General Francisco Franco entered into a conspiracy of military men and right-wing political conservatives to overthrow the ruling left-wing Popular Front, leading a mutiny against the government and touching off the Spanish civil war.

OUTCOME: The Loyalist government was crushed, Franco became dictator of Spain, and the major combatants in World War II had staged a “trial run” of the combat to come.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Franco, 775,000; Loyalists, 500,000; in addition, numerous foreign volunteers and regular forces participated

CASUALTIES: Difficult to calculate, but estimated at 110,000 killed in Franco’s forces and 175,000 killed among the Loyalists; perhaps as many as 400,000 civilians died, most by execution, although some 15,000 were killed in air raids.

TREATIES: None

Constant bickering between the political extremes in Spain during the mid-1930s, exacerbated by the economic suffering during the worldwide Great Depression, doomed the centrist republic the Spanish had established in 1931. When the left-wing Popular Front won the elections in 1936, the new government insisted on radical social reforms that set the stage for a coup by the right-wing Falange, a fascist political party headed by General Francisco Franco.

THE RISE OF FRANCO

Francisco Paulino Hermenegildo Teodoro Franco-Bahamonde (1892–1975) was born on December 4, 1892. From an early age, he was destined for a military career, enrolling in the Toledo Academia de Infanteria in 1907 and graduating as a second lieutenant in 1910. Franco served with distinction in a 1912 war against Morocco, which led to his very rapid promotion. By 1920 he was deputy commander of the Spanish Foreign Legion in Morocco, serving with these forces during the Rif rebellion of Abd-el-Krim (1882–1963) during 1921–26. In 1923, he was promoted to full commander of the Foreign Legion, and in 1925 he was responsible for a brilliant assault on Alhucemas Bay that ultimately brought Spanish victory in the RIF WAR (1919–1926).

Franco’s spectacular performance earned him the distinction of becoming Spain’s youngest brigadier general in 1926, and two years later he took over as director of the Academia General Militar at Saragossa during the dictatorship of General Miguel Primo de Rivera (1870–1930). However, in 1931, after Republican forces overthrew the Spanish monarchy, Franco was accused of monarchist sympathies and was transferred to duty in the Balearic

Islands. His reassignment effectively removed him until 1934 from participation in the military’s many conspiracies against the new republic. That year, the government summoned him back to Spain to suppress a miners’ revolt in Asturias, a mission that earned Franco the respect of the conservative right wing and the hatred of the left. With the conservative faction now on the rise, he was named chief of the general staff in 1935. But—such were the Spanish politics of a turbulent period—the following year the left-wing Popular Front gained a majority in the elections, and Franco was once again “exiled,” this time to a command in the Canary Islands. Nevertheless, Franco was able to play a leading role in the military and conservative conspiracy that erupted, on July 18, 1936, into the Spanish civil war.

COURSE OF THE WAR

The war began when Franco flew to Morocco, took over the Spanish Foreign Legion garrison, and staged a revolt of army officers at Melilla. This revolt set off a series of others in army garrisons at Cadiz, Seville, Nourgos, Saragossa, Huesca, and elsewhere, and Franco airlifted a large contingent of the Foreign Legion to Spain in late July. These and other rebel troops, joined by insurgent “Nationalists,” overwhelmed government forces to take control of Spain’s south and west. During July and August, Franco led a motorized advance on Madrid but was repulsed by government forces during September and October. By then, the country was divided into government and Nationalist territories, and on September 29, 1936, the Nationalists established their own government, with Franco as head of state. In April 1937, Franco became head of the fascist Falange Party.

The Spanish civil war drew outside parties into a struggle between the political right and the political left, between fascism on the one hand and a range of left-wing political ideologies (from democracy to communism) on the other. The Falange gained support from Fascist Italy and Nazi Germany—40,000 to 60,000 Italian troops and some 20,000 Germans—whereas the government (or Loyalists, as they were often called) found support in thousands of volunteers from all over the world, including those from the United States who joined the famous Lincoln Brigade—perhaps 50,000 Soviet and communist-inspired “volunteers.” They came to fight in a “just war” against the seemingly inexorable forces of fascism. Among the volunteers was Ernest Hemingway (1899–1961), whose novel *For Whom the Bell Tolls*—centered around a Lincoln Brigade protagonist and published in 1940—portrayed the bitter ironies and high idealism of the war.

It was these international brigades, supporting the Loyalists, that stymied Franco at Madrid. (The city would withstand a 28-month siege before capitulating). Meanwhile, Franco imposed a centralized, autocratic rule on those portions of Spain under his control, and Britain and

France initiated an official policy of nonintervention, which their own citizens, as well as those of the other powers, continued to violate. In addition to “volunteers” and troops, other countries sent weapons and supplies, especially Germany, Italy, and the Soviet Union, in support of the sides they favored. With the help of the Italians, the insurgents captured Malaga in February 1937. German aerial bombing infamously secured their occupation of Guernica and Durango in April, and the terror from the skies became the subject of one of Pablo Picasso’s (1881–1973) best-known paintings. The Loyalists had other problems, many of them associated with sectarian strife in their own ranks and on the left. In May, they barely quelled an anarchist uprising in Barcelona, with much bloodshed and lingering ill will. The struggle forced the formation of a new Loyalist government, more under communist (read Stalinist) influence than ever.

Following an 80-day siege, on June 18, 1937, Bilbao fell to the rebels. A Loyalist counteroffensive captured Teruel late in the year, only to have it fall again to the insurgents in mid-February 1938. Then Joseph Stalin (1879–1953), his eyes steadily fixed on the USSR and its place in a dangerous world, halted Soviet aid to the communists fighting in Spain and, in fact, encouraged those under the influence of Moscow to betray their Popular Front comrades in any number of ways. Without support from the Soviets, leftist idealism proved no match against military aid to the right from Italy and Germany, and the Republican cause became hopeless. The fascists, holding much of Spain already, prepared a major offensive to capture Barcelona, seat of the Loyalist government since October 1937, and Franco’s troops, assisted by the Italians, took the city on January 26, 1939. Loyalist resistance throughout Spain collapsed.

With the fall of Madrid on March 28, 1939, the Spanish civil war ended, the Falangists were established in power, and Franco became de facto dictator of Spain. Although he did not formally ally himself with his benefactors, Mussolini and Hitler, maintaining instead an official policy of neutrality, it was always clear where Franco’s allegiance lay. He not only sent workers to Germany but created a volunteer Blue Division to fight for the Germans on the Russian front. It was not until the tide of the war manifestly turned against Germany that the ever-pragmatic Franco enforced a more genuine neutrality.

As to the Spanish civil war, for thousands of American, British, and other idealistic young men, it was the defining event of their generation—their opportunity to get into the fight against oppression and intolerance, in the form of fascism. For Italy and Germany, the conflict in Spain was not only an opportunity to secure a new ally, but also a convenient stage on which to rehearse for the much greater world war to come.

Despite pleas from the Western democracies, principally Britain and France, for moderation, a vengeful

Falange set up fascist tribunals that summarily tried, convicted, and executed scores of Loyalists. Nevertheless, the United States recognized Franco’s regime on April 1, 1939, mere days after the fall of Madrid.

Spanish Civil Wars in Peru (1537–1548)

PRINCIPAL COMBATANTS: Francisco Pizarro vs. Diego de Almagro; Cristóbal Vaca de Castro vs. Almagro; Gonzalo Pizarro vs. Núñez Vela, viceroy of Peru

PRINCIPAL THEATER(S): Peru

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of colonial Peru

OUTCOME: Gonzalo Pizarro emerged as governor of Peru.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

At Huarina (October 26, 1547), a total of 1,500 men were engaged.

CASUALTIES: Minimal, fewer than 100 total

TREATIES: None

The Spanish conquest of Peru in the 16th century was accompanied by internecine fighting within the colonial administration the conquistadores instituted. Even as the Spanish fought indigenous Indian resistance to conquest, they often vied with one another and, indeed, expended as much effort in such conflicts as in quelling native resistance.

Diego de Almagro (c. 1475–1538), one of the conquistadores, led an expedition in 1537 to rescue Cuzco, Peru, from Indian rebels. Once there, however, he laid claim to Cuzco and was opposed by the principal conquistador, Francisco Pizarro (c. 1475–1541), who took arms against him. Pizarro, after all, had commanded the garrison that had withstood the Indian attacks. After defeating Almagro at Las Salinas, on April 26, 1538, Pizarro executed him. Almagro’s son, however, swore vengeance against Pizarro and, with a band of partisans, stormed Pizarro’s palace on

June 26, 1541, and assassinated him. The young Almagro proclaimed himself governor.

In response to what was now clearly a rebellion, the Spanish government dispatched Cristóbal Vaca de Castro (d. c. 1571) to Peru as the new royal governor on September 16, 1542. Accompanied by a military force, Castro restored order in Peru by 1542 and saw to the execution of Almagro's son. In 1544, the Spanish king sent a viceroy to Peru, Blasco Núñez Vela (d. 1546), whose mandate was to curtail the virtually limitless power of the conquistadores by enforcing a set of so-called New Laws, which not only reined in the conquistadores but also guaranteed the Indians certain rudimentary rights. Predictably, the presence of Núñez angered and antagonized the conquistadores, one of whom, Gonzalo Pizarro (c. 1506–1548), younger brother of the assassinated Francisco, led a successful rebellion against Núñez, whose forces were defeated at the Battle of Anaquito on January 8, 1546. The defeat of the viceroy was decisive, Núñez himself was executed, and Gonzalo Pizarro claimed the post of Peruvian governor.

The following year, the Spanish Crown sent Pedro de la Gasca (1494–1565) to Peru to counter what was seen as Gonzalo Pizarro's insurgency. With 500 men, Gonzalo Pizarro defeated 1,000 under Gasca at Huarina on October 26, 1547. On April 9, 1548, however, Gasca led 2,000 men against Gonzalo Pizarro at Xaquixaguana. Pizarro was defeated, captured, and executed, thereby bringing the civil wars to an end.

Spanish Conquest of Chile (1540–1561)

PRINCIPAL COMBATANTS: Spanish conquistadores vs. Araucanian Indians

PRINCIPAL THEATER(S): Chile

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Spain sought to suppress Indian resistance to conquest.

OUTCOME: The conquest proceeded, but warfare remained chronic.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Spain, 3,000 maximum; Araucanian forces, 200,000

CASUALTIES: Spain, hundreds lost; Araucanians, approximately 130,000 killed between 1554 and 1557, the era of most intense conflict.

TREATIES: None

The conquistador Pedro de Valdivia (c. 1500–1553) led the first campaigns of conquest in Chile, which soon became a long series of wars between the invaders and the Araucanian Indians. After Valdivia was killed in battle in 1553, Spanish leadership was assumed by Garcia Hurtado de Mendoza (1535–1609).

The first major Araucanian assault came in July 1541 against the newly founded settlement of Santiago. The Spaniards withdrew from the town and took refuge on a nearby island for two years until a relief force arrived from Peru. Valdivia launched a new campaign against the Indians in 1550 but fell in battle with 50 of his men on December 24, 1553.

War was chronic throughout the 16th century—and, indeed, Araucanian resistance to Spain continued for 300 years, then continued even against the government of independent Chile until 1882. However, the major fighting ended in 1561, by which time Spain had general control over the region.

The biggest battle was fought at Mataquito (Peteroa) in April 1557 (700–800 Araucanians were killed, along with their leader Lautaro [d. 1557]), but between 1554 and 1557 it is estimated that some 130,000 Araucanians were killed out of a total population of 400,000.

Spanish Conquest of Cuba (1511–1515)

PRINCIPAL COMBATANTS: Spain vs. indigenous people of Cuba

PRINCIPAL THEATER(S): Cuba

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Culmination of Spanish conquest of Cuba

OUTCOME: Indian resistance was suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Spanish conquest of Cuba proceeded steadily in a series of brutal sweeps through the island by a small band of conquistadores under Diego de Velázquez (c. 1460–c. 1524), colonial governor of Hispaniola. There were no set-piece battles in what amounted to a campaign of relentless pacification that ended when anything resembling organized resistance ceased, in 1515.

Further reading: J. M. Cohan, tr., *Conquest of New Spain by Bernal Díaz del Castillo* (New York: Penguin, 1972); Jaime Suchlicki, *Cuba: From Columbus to Castro and Beyond* (New York: Brassey's, 1997).

Spanish Conquest of Mexico (1519–1521)

PRINCIPAL COMBATANTS: Spain vs. Aztec Empire

PRINCIPAL THEATER(S): Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Spanish conquistador Hernán Cortés sought to conquer and plunder the Aztec Empire under Moctezuma II (Montezuma).

OUTCOME: The Aztec Empire was destroyed, Moctezuma killed, and the Aztecs enslaved to Spain's New World empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Cortés, 600 men; Aztecs, unknown, but far more than Cortés

CASUALTIES: Unknown

TREATIES: None

When the European mercantile powers began exploring the Western Hemisphere in the 16th century, few New World expeditions, Spanish or otherwise, actually turned up gold, but a handful of discoveries were sufficient to fuel further expeditions. The most celebrated “discoveries” were those of Hernán Cortés (1485–1547).

In 1519, Cortés landed a small force of 600 at what is today Veracruz, Mexico, where he was greeted by ambassadors of the Indian king Moctezuma II (c. 1480–1520). They bore lavish gifts intended to appease, but Cortés only demanded more. In search of gold, Cortés marched upon Tenochtitlán—capital city of a people who called themselves variously the Mexicas, or the Aztecs. He launched his march by boring holes in the hulls of his own ships (he told his men it was the work of worms) so that there could be no turning back. Along the way to Tenochtitlán, he recruited allies among the ever-warring city-states of the far-flung and much-resented Aztec Empire. Despite widespread hatred of the Aztec rulers, recruitment was not always a peaceful exercise. The people of Cholula were won over only after Cortés slaughtered 3,000 of them in two hours.

Perhaps at the news of this, Moctezuma lost any heart he may have had for a fight. Perhaps he believed Cortés to be the incarnation of the birdlike god Quetzalcoatl, who created man out of his own blood. In any case, he opened his magnificent city to them.

As far as anyone can tell, the Aztec Empire as Cortés found it in 1519 was relatively new. Before the 14th century, the Aztecs appear to have been only one among several nomadic tribes wandering through Central America. Just as Spanish imperial ambitions claimed inspiration from the word of God, so the Aztecs claimed to have heeded the word and commandment of the war god Huitzilopochtli, who enjoined the tribe to conquer all about them and harvest the blood of the conquered. Thus driven, within the space of two centuries, the demands and the fruits of continual warfare created a vast, complex empire of dark beauty, extending from the Gulf of Mexico to the Pacific and from the Valley of Mexico south into Guatemala.

It is possible that the conquest of this Aztec Empire, might have been accomplished without wholesale killing had another European not appeared on the scene. Cuba's governor Pánfilo de Narváez (c. 1470–1528) was both inept and jealous of Hernán Cortés. Narváez conducted an expedition from Cuba to Mexico, intending to arrest his rival conquistador for overstepping the authority granted him. Cortés set out from Tenochtitlán to meet the governor's forces, leaving the imperial city in the hands of one Pedro de Alvarado (1485–1541). Overcoming Narváez's army proved no great task; Cortés suborned 900 of his opponent's men and employed them in defeating the balance of the expeditionary army. Narváez lost an eye in the battle, and it was he—not Cortés—who was placed under arrest.

While Spaniard fought Spaniard in the Mexican countryside, Alvarado, back in Tenochtitlán, initiated an action that was to typify white-Indian relations for the next four centuries. He turned his soldiers on the people, giving them leave to slaughter all men, women, and children. This provoked the people, who had so far meekly submitted to conquest, to rise up in heated rebellion. They laid siege to the palace where the Spaniards had taken refuge and where soldiers now held Moctezuma captive. Returning in the midst of this rebellion, Cortés took charge of his men and fought his way into and then out of the palace and city, plundering what he could as he went. During the evacuation—on June 30, 1520, called by the Spanish the *Noche Triste* (Sad Night)—Moctezuma was murdered. Spanish accounts claimed he had been assassinated by his own people; the Aztecs attributed his death to the Spanish.

Cortés was after more than an emperor's head and the palace loot. After crushing a revolt at Otumba on July 7, the conquistador prepared to retake Tenochtitlán. Ten months after the Spanish fled the city, they returned to besiege it, destroying Tenochtitlán's aqueducts and choking off the supply of food. The Aztecs held out for three months, but what thirst and starvation failed to do, smallpox—apparently carried to Mexico by a black slave in the service of Narváez—accomplished. On August 13, 1521, the city fell. Tenochtitlán, and all Mexico, belonged to Hernán Cortés and, of course, his Most Catholic Majesty, King Charles I (1500–58).

Tenochtitlán had been greatly reduced by three months of starvation and pestilence, but what remained, Cortés looted. He enslaved large numbers of Aztecs, branding each of them—probably the first instance of this most “Western” means of identifying chattel. He tortured the new king, Cuauhtemoc (c. 1495–1525)—successor to Cuitlahuac (dead of smallpox), who had succeeded Moctezuma—in an effort to recover the hoard of silver and gold Cortés had left behind in his hasty withdrawal from the city, but to no avail. Nevertheless, Cortés would make a fortune from the mining operations that yielded tin, iron, and other metals, and from harvests of cocoa and cotton he extorted as tribute from the vanquished Aztecs.

Lippincott, 1873); Hugh Thomas, *Conquest: Montezuma, Cortés, and the Fall of Old Mexico* (New York: Simon and Schuster, 1995); Tzvetan Todorov, *The Conquest of America* (New York: Harper and Row, 1984).

Spanish Conquest of New Mexico (1595–1628)

PRINCIPAL COMBATANTS: Colonizers under Juan de Oñate vs. Acoma Pueblo Indians

PRINCIPAL THEATER(S): New Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Oñate led an expedition into today's American Southwest to colonize the region.

OUTCOME: The Indians of the Southwest became subjects of the Spanish *encomienda* system.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Spain: 400; Pueblo and other Indians, unknown

CASUALTIES: Unknown

TREATIES: None

In 1595, the Spanish Crown authorized an expedition north from Mexico. Don Juan de Oñate (c. 1550–1630), born in western Mexico, the son of a rich mine owner, led this effort to explore and colonize the upper Rio Grande. In return for its permission to do so, the Crown forced him to spend a major portion of his substantial personal fortune—some half a million pesos—on the expedition. After three years of preparation, he set out in the spring of 1598, heading north in the historic tracks of Francisco Coronado (c. 1510–54) with 400 men, women, and children, 7,000 head of stock, and approximately 80 wagons.

On April 30, Oñate reached present-day El Paso, Texas, and claimed for his king all of what he called “New Mexico,” a province stretching from Texas through California. Oñate marched farther north, colonizing the pueblo country in earnest. Of all the pueblo towns, only one, Acoma, in western New Mexico, offered serious resistance.

Perched atop a steep-walled mesa, the pueblo village made a formidable objective. Yet Oñate's troops fought their way to the top, killed most of the town's warriors, and took 500 women and children captive. A few men over the age of 25 also had been captured. For their bravery in defending Acoma, Oñate sentenced them to the loss of one foot and 20 years of enslavement. He spared the women—and the children over 12—their hands and feet but made them slaves as well. He turned the children under 12 years of age over to the priests. Two Hopis had been visiting Acoma during the siege, innocent of everything but being in the wrong place at the wrong time. Still,

Oñate chopped off their right hands and sent them home, a warning to *their* pueblo about the consequences of fighting back.

For 15 years Oñate treated the Indians he had conquered so harshly that eventually the clerics who had accompanied him into “New Mexico” brought him before a Spanish court on charges of brutality and illegal enslavement. Found guilty, Oñate was fined and stripped of all honors, and the notion of large-scale settlement of “New Mexico” was abandoned. All during the Spanish colonial period, the region remained nothing more than a sparsely settled frontier.

Hammond and Rey Agapito, eds. and trans., *Don Juan de Oñate: Colonizer of New Mexico: 1595–1628* (Albuquerque: University of New Mexico Press, 1953); Marc Simmons, *The Last Conquistador: Juan de Oñate and the Settling of the Far Southwest* (Norman: University of Oklahoma Press, 1991); David J. Weber, *The Spanish Frontier in North America* (New Haven, Conn.: Yale University Press, 1992).

Spanish Conquest of Nicaragua (1522–1523)

PRINCIPAL COMBATANTS: Spain vs. indigenous peoples of Nicaragua

PRINCIPAL THEATER(S): Nicaragua

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: Nicaragua was pacified and conquered.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

As with the SPANISH CONQUEST OF CUBA, that of Nicaragua proceeded rapidly and not as a result of any particular battle or battles, but through a general pacification sweep and demonstration of force led by Gil Gonzalez Dávila (dates unknown) and Alonzo Niño (dates unknown).

Further reading: Charles Loftus Grant Anderson, *Old Panama and Castilla Del Oro: Narrative History of the Discovery, Conquest, and Settlement by the Spaniards of Panama, Darien, Veragua, Santo Domingo, Santa Marta, Cartagena, Nicaragua, and Peru* (London: Best Books, n.d.); Michael Wood, *Conquistadores* (Berkeley: University of California Press, 2001).

Spanish Conquest of the North American Southeast (1539–1543)

PRINCIPAL COMBATANTS: Conquistadores under Hernando de Soto vs. Cherokees, Seminoles, Creeks, Appalachians,

Choctaws Chickasaws, Tuscaloosas, and other tribes of Indians in the southeastern region of North America
PRINCIPAL THEATER(S): Georgia, the Carolinas, Alabama, Mississippi, Tennessee

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest and enrichment

OUTCOME: Thousands of Indians were slaughtered; de Soto lost half his men and his own life; no riches were acquired, but de Soto “discovered” for Spanish purposes the Mississippi River.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Spanish: 1,000; Indians: unknown, but in the tens of thousands

CASUALTIES: Spanish: 500 killed, 1,000 wounded; Indians: unknown, but 10,000 Tuscaloosas alone were killed at Mobile

TREATIES: None

Before retiring to Seville, the conquistador Hernando de Soto (c. 1496–1542) had taken part in the Spanish invasions of Central America and become Francisco Pizarro’s (c. 1475–1541) second in command during the SPANISH CONQUEST OF PERU. The wealth he brought home with him made him a gentleman and a good marriage, but when he read Cabeza de Vaca’s (c. 1490–1560) exaggerated claims of the riches of the vast region the Spanish then called Florida (Florida, the Carolinas, Georgia, Alabama, Mississippi, Tennessee), de Soto’s lust for gold was rekindled. He sold all his property to equip himself for a conquest of the region, an expedition Spanish king Charles I (1500–1558), to whom de Soto had lent money, was happy to endorse, naming de Soto *adelantado* of Florida and governor of Cuba.

De Soto’s small armada of 10 ships, containing 1,000 fighting men and eight secular priests, two Dominicans, a Franciscan, and a Trinitarian, made landfall in the Canary Islands on Easter Sunday, 1538, then sailed on for Cuba, where the new governor replenished his supplies and collected horses for his Florida expedition. He put one of his men in charge of local security and his wife in charge of state in Cuba and, ready at last, set sail in nine ships for the Florida gulf coast. The expedition landed two leagues from a local Indian village, Apalache (near present-day Tallahassee, Fla.), on Friday, May 18, 1539, where it wintered before spreading north and west into wild and unknown country. It would pass through lands already made hostile by the invasions of Pánfilo de Narváez (c. 1478–1528) (see SPANISH CONQUEST OF NORTH MEXICO [NORTH AMERICA]) and be told lies about vast wealth further on by Indians anxious to see them gone. Wandering aimlessly for three years, they would grow ever more frustrated and ever more brutal in their treatment of the North American Natives, with whom they would be, not surprisingly, constantly at war.

In March 1540, de Soto explored eastern and northern Georgia, then worked his way southwesterly through the Carolinas and Tennessee, led by Native guides he abducted along the way. Though he failed to find the gold he sought, he did collect a rich assortment of pearls at a place called Cofitachequi, in present-day eastern Georgia. Near Lookout Mountain, in southeastern Tennessee, de Soto and his men turned southward into Alabama and headed toward Mobile Bay, where they expected to rendezvous with their ships. But when he reached the province of Tuscaloosa in southern Alabama, where he had been told there was immense wealth, he ran into a huge confederation of hostile Indians at the fortified Indian town of Mauvila (near present-day Mobile), who offered the Spanish a more stubborn resistance than de Soto had yet to encounter. The Indians attacked the Spaniards in October 1540, in a battle that lasted nine hours. Though the Spanish ultimately prevailed, the fight cost them dearly. They lost nearly 70 men and almost all the 1,000 Spaniards—officers and soldiers alike—were wounded. In the end, however, these were as nothing compared to the Indian losses: 11,000 Indians were killed in the battle, and Mauvila was destroyed by a fire that also consumed the provisions of the Spaniards. If the Indians were decimated, the Spanish were severely crippled, losing most of their equipment and all their pearls.

De Soto spent a month resting and restoring his troops before turning north once again and heading inland to replenish his treasures. It was a fateful decision, with dire consequences. News traveled faster than Europeans could imagine among Native peoples and, moving northwest through Alabama and then west through Mississippi, de Soto’s party was attacked relentlessly by Indians. On May 21, 1541, the Spaniards saw for the first time the Mississippi River, the “Father of Waters” south of what is now Memphis, Tennessee. They crossed the river and tramped through Arkansas and Louisiana. Then, early in 1542, de Soto turned back to the Mississippi. Overcome by fever, he died in Louisiana, and his comrades buried his body beneath the waters of the great river. A remnant of the expedition (half the original party) made its way down the Mississippi on rafts, reaching Mexico in 1543.

Spanish Conquest of North Mexico (North America) (1527–1537)

PRINCIPAL COMBATANTS: Conquistadores under Pánfilo de Narváez and Álvaro Núñez Cabeza de Vaca vs. various Indians of the American gulf coast and Southwest

PRINCIPAL THEATER(S): Gulf coast region of the American Southwest

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The first Europeans to wander into the area we call today the American Southwest were lost. They served under Pánfilo de Narváez, who set out from Cuba in 1527 on an ill-fated Florida expedition, hoping to plunder the gulf coast.

OUTCOME: Narváez's ships sank, most of his men died, and Narváez himself vanished at sea. Only a small band of his men survived. Led by Narváez's second-in-command, Álvar Núñez Cabeza de Vaca, they found themselves shipwrecked somewhere along the bleak expanses of the Texas coast. Nearly a decade later, the survivors straggled in to Mexico City.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 400 Spaniards

CASUALTIES: All but four Spaniards; Indian casualties unknown.

TREATIES: None

Spanish conquistador Pánfilo de Narváez (c. 1478–1528) would prove to be as incompetent as he was covetous, and he had been most covetous of the conquests of Hernán Cortés (1485–1547). In 1520, under orders from Diego de Velázquez (c. 1460–1524?), governor of Hispaniola, Narváez had led an expedition from Cuba to Mexico intending to arrest Cortés for overstepping the authority granted him by Spain, only to be defeated and taken prisoner by the great conquistador (*see* SPANISH CONQUEST OF MEXICO).

Cortés's conquest would stimulate booty-seeking expeditions into the borderlands of the Spanish Empire, in what today is the southwestern United States. The earliest of these was led by Narváez, freed after a year in captivity under Cortés. Narváez was made governor of Cuba, which only fed the growing competition between Mexico and Cuba for exploration and conquest of North America.

In 1527 Narváez received a royal commission to subdue and plunder Florida, which, to the Spanish, meant everything north of the land Cortés had taken from the Aztecs. Narváez's second-in-command was Álvar Núñez Cabeza de Vaca (c. 1490–1560), who kept an account of the expedition, and who was probably the first European to travel extensively among the peoples of today's American Southwest.

Like others who would seek to eclipse the glory of Cortés, Narváez failed to realize that the conquest of Mexico had not merely been a matter of appropriating territory. Cortés had first looted, then exploited a great civilization, and a great civilization is—among other things—a nexus of immense wealth. In contrast, the borderlands that lay north of this civilization were for the most part populated by small groups struggling to survive.

Obsessed by dreams of wealth and renown, more eager than ever to outshine Cortés, Narváez combined all the

rapacity of his more famous rival with his own manifest lack of courage and tactical skill. Unwilling to acknowledge the reality of the new lands he explored, Narváez seemed almost determined to stumble into disaster. Cabeza de Vaca, already a war hero and himself apparently accustomed to command, chafed under the incompetent leadership of Narváez from the start.

Narváez and Cabeza de Vaca set sail on June 17, 1527, from the port of San Lucar de Barrameda with 600 men. They arrived in Santo Domingo two months later, and their troubles began immediately. During the month and a half the expedition spent on the island gathering provisions and rounding up horses, 140 men deserted to live with the Indians. After a stop in Santiago de Cuba, where Narváez recruited replacements, he sent Cabeza de Vaca with two of the expedition's ships to Trinidad, Cuba, for more supplies. A hurricane wrecked both ships, killing 60 men and 20 horses. After a four-month delay, the expedition set out for the mainland with 400 men and 80 horses. The ships promptly ran aground on shoals off the western point of Cuba, stranding the entire party for 15 days—until yet another storm floated them off.

It was the middle of April 1528, when the expedition at last touched Florida. Of the 80 horses, only 42 had survived the storms and other rigors of the sea passage—and most of those were too starved and exhausted to be of much use. But the men found a gold rattle amid some Indian fish nets, and that was motivation enough for Narváez. In a brief solemn ceremony, he claimed the country for the king of Spain, then decided to march inland while the ships continued to coast on to a port. Cabeza de Vaca argued that the pilots knew of no such port, that under no circumstances should the expedition forsake its ships before they rested in a secure harbor and knew precisely where they were, that the expedition would want for horses and, lacking an interpreter, could not even count on communication with the Indians, and that supplies were insufficient for a march to ports unknown. Far better, Cabeza de Vaca insisted, to reembark, find a port, secure it, and then set out in search of gold. Narváez would have none of it. Leading his troops too far inland for resupply from the sea, Narváez lost touch entirely with the vessels that might have rescued him, just as Cabeza de Vaca had predicted, and those ships soon set sail for home.

When Narváez reached the promised land of Apalachen, he dispatched 50 foot soldiers and nine cavalymen to invade the village. They found only women and boys in a dirt-poor town. The Spaniards strutted about the settlement until the menfolk appeared. Apparently having returned from hunting, the men of the village discharged a few arrows (one of which killed a horse), then fled. It was not much of a battle, but when the conquistadores learned that Apalachen was the largest and richest village in the country, they were crushed. The conquistadores wandered about the Florida panhandle for the better part of the summer. Malaria, complicated by dysentery, disabled a

third of the men by the beginning of August. Concluding they were doomed if they remained in the area, the conquistadores made efforts to return to Mexico. All but Cabeza de Vaca perished in the attempt.

Spanish Conquest of Peru (1531–1533)

PRINCIPAL COMBATANTS: Spanish conquistadores vs. the Inca

PRINCIPAL THEATER(S): Peru

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Spanish sought to conquer Peru, then exploit the Inca Empire for natural resources and slave labor.

OUTCOME: The Spanish conquered Peru, then fell to fighting among themselves.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Spanish, 164; Inca, potentially some 20,000 warriors, but few actually took up arms

CASUALTIES: Inca lost 4,000 killed at Teocajas on May 3, 1534; Spanish losses were 4 killed.

TREATIES: None

The only Spanish conquistador to rival Hernán Cortés (1485–1547) in his New World adventures (see SPANISH CONQUEST OF MEXICO) was Francisco Pizarro (c. 1475–1541), who twice attempted to invade the Inca lands of Peru, which, like Mexico, were rich in gold medallions and ornaments, in the 1520s. He succeeded upon a third try in 1531, when he sailed south from Darien (Panama) and landed at Tumbez (San Miguel) on the Pacific coast, just south of the equator, with a force of 180 men, 27 horses, and two cannon. There he waited for reinforcements to arrive under Diego de Almagro (c.1475–1538), then advanced inland with 62 cavalry and 102 infantry toward Cuzco, the Inca capital.

In order to effect his conquest, Pizarro brilliantly exploited the volatile political situation of Peru, which was plagued by civil and intertribal warfare between factions allied to rival heirs to the chieftainship. The conquistador told each group he met along his way that he had come as an enemy of the other, and he therefore proceeded essentially unopposed. At Cajamarca, on the way up the Andes to Cuzco, Pizarro encountered and pretended friendship for Atahualpa (c. 1500–1533), one of the contenders to the chieftainship, who boasted some

30,000 followers. When Pizarro's men began plundering Cajamarca, Pizarro negotiated an alliance with Atahualpa's brother and rival, Huascar (d. 1532), even as Atahualpa secretly worked to muster an army to expel the Spaniards. Before the Inca could assemble such a force, however, Pizarro lured him with 3,500 mostly unarmed men to the great square at Cajamarca on November 16, 1532. There Atahualpa—after listening to Pizarro's exhortations that the “emperor” become a Christian—made a great show of scornfully flinging the Bible to the ground, whereupon Pizarro's men opened fire from all sides, cutting the Incas to pieces, as Pizarro himself grabbed Atahualpa. He held the Inca chief for an outrageous ransom: one roomful of gold and another of silver. Incredibly, the ransom was delivered, but instead of releasing Atahualpa, Pizarro put him on trial for usurpation, idolatry, and polygamy. Pizarro found Atahualpa guilty and ordered his execution by strangulation on January 26, 1533.

Initially, the conquest of Peru proceeded more easily than that of Aztec Mexico. Maintaining control over the conquered territory, however, proved much harder. Though he moved against Cuzco, the Inca capital, which fell without bloodshed in November 1533, and thereby placed Pizarro briefly in control of the Inca Empire, the Incas soon revolted. Moreover, rivals to Pizarro—including Almagro—curried favor with contending Inca factions, maintaining the countryside in a state of continual warfare for years.

The next Inca stronghold to fall after Cuzco was Teocajas. On May 3, the Inca chief Ruminavi (d. 1534) was defeated and killed in battle here, when a mere 200 conquistadores inflicted 4,000 deaths, defeating an Inca force of 50,000. Spanish losses were 4 killed. Quito fell the next month. Almagro, who headed into Chile during July 1535, would soon return to Peru to plague Pizarro with civil war.

Spanish Conquest of Puerto Rico (1508–1511)

PRINCIPAL COMBATANTS: Conquistadores vs. the Arawak Indians

PRINCIPAL THEATER(S): Puerto Rico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Spanish conquest of Puerto Rico

OUTCOME: The conquistadores prevailed, although they failed to stamp out all Indian resistance.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Conquistadores, 120 men committed to combat; Arawak Indian strength is unknown.
CASUALTIES: Arawak casualties were heavy, certainly in the hundreds.
TREATIES: None

The conquistador Juan Ponce de León (c. 1460–1521) explored Puerto Rico (called by the Spanish version of its native name, “Boriquen”) and encountered the Arawak Indians, who welcomed him and his men. Soon, however, relations with the Arawaks deteriorated, as the Spanish, conforming to their ethic of conquest, pressed the Arawaks into quasi-slavery as gold miners. This abuse provoked desultory uprisings from 1508 to 1511, when the Arawak *cacique* (chief) Agueybana II (d. 1511) planned a major rebellion to encompass all of the island. Unfortunately for the Arawaks, Ponce de León’s informant network tipped him off to the plan; the conquistador, with 120 men, launched a preemptive attack, descending on the camp of Agueybana by night, attacking him and his men, then turning their wrath indiscriminately against every Indian they could find.

During the mayhem, Agueybana escaped, rallied surviving forces, and attacked the Spanish, but was defeated. Agueybana fell in the battle. Many of the survivors were intimidated into making peace with Ponce de León, while others escaped to nearby islands and united with the Caribs, their traditional enemies, against the invaders.

Spanish Conquest of South Mexico and Mesoamerica

See SPANISH CONQUEST OF MEXICO; SPANISH CONQUEST OF NICARAGUA; SPANISH CONQUEST OF YUCATAN.

Spanish Conquest of the Pueblos (1540–1542)

PRINCIPAL COMBATANTS: Spanish conquistadores (with Indian allies) vs. Pueblo Indians
PRINCIPAL THEATER(S): American Southwest
DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The conquests of Cortés and Pizarro in Central and South America stimulated hopeful Spanish expeditions north into the area of the present United States. Here the conquistadores met with no civilizations comparable to those of the Aztecs or Incas, but they did encounter persistent legends of gold and vague references to the Seven Cities of Cibola. These rumors and myths of untold riches were sufficient to fuel a series of expeditions culminating in the 1540–42 explorations of Vázquez de Coronado, who penetrated as far as present Kansas and who roamed throughout the Southwest.

OUTCOME: Coronado found only poor pueblo-dwelling Indians, whom he conquered and abandoned to a few priests.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Spanish, 600; Spanish-allied Indians, 50,000; Pueblo rebels, 12,000–22,000

CASUALTIES: Pueblos, 12,500 captured, of whom many were subsequently executed. Losses among the Spanish and their Indian allies are not known.

TREATIES: None

One of the Spanish soldiers of fortune—called *conquistadores*—much influenced by Cabeza de Vaca’s (c. 1490–c. 1560) account of the Narváez expedition (see SPANISH CONQUEST OF NORTH MEXICO) was Don Francisco Vázquez de Coronado (c. 1510–54). Born about 1510 in Salamanca, Spain, the second son of a noble family, Coronado had sailed for Mexico at age 25. There, he married into a socially prominent and wealthy family, quickly earning the respect of his contemporaries and appointment as a councilman in Mexico City. In 1538, he was elevated to governor of New Spain.

In the years since Pánfilo de Narváez (c. 1478–1528) had first launched his expedition into the Floridas, the conquistador Francisco Pizarro (c. 1475–1541) had destroyed the Incas in Peru and looted yet another great Indian culture (see SPANISH CONQUEST OF PERU), proving, if nothing else, that Cortés’s conquest (see SPANISH CONQUEST OF MEXICO) was no fluke—there was indeed more than one fortune to be found in the Americas. If there were fabulously wealthy civilizations south of Mexico, why not in the Northern Mystery—as the Spaniards had taken to calling the vast unknown region above the Rio Grande—as well?

In 1539, Coronado arranged for Estevanico (c. 1500–1539), the black Moorish slave, also known as Estéban, who had returned to Mexico City with Cabeza de Vaca, to lead a Franciscan friar, Marcos de Niza (c. 1495–1558), on a reconnaissance of the cities Cabeza de Vaca had heard about that lay farther to the north. In the minds of many, these cities already rivaled the capitals of Aztec Mexico and Incan Peru. Serving as Coronado’s advance guard,

Father Marcos was to prepare the way peacefully for the large expedition to follow.

But Estevanico had other plans. Scouting ahead of the friar and his retinue, he traveled from village to village demanding turquoise and women, until a tribe of Zuñis, angered by his actions, decided to tolerate him no longer. They executed him as a spy (which, technically, he was). Fray Marcos managed to draw within sight of the pueblo where Estevanico met his fate; he returned to Coronado nevertheless with more tales of great Indian wealth awaiting. He spoke of the (literally) fabulous seven cities of Cibola, the smallest of which, he claimed, was larger than Mexico City.

What he had actually seen—at a distance—was the crowded independent Zuñi pueblo of Hawikuh, which boasted a population of, at most, 800 Indians. It was but one of perhaps 130 such villages, each inhabited by from around 400 to around 2,000 natives. His report, however, struck a chord with Coronado and company, all of whom had been reared on the seven-cities legend.

Coronado intended to conquer such cities and appropriate their gold, but he took pride in the notion that he was no butcher like Cortés. As he gathered the forces for his expedition in February 1540 at the provincial capital of Compostela, he talked of avoiding the cruelties of the conquest of Mexico. He personally screened each volunteer, outfitting poor but worthy adventurers from his own purse with the advances they needed to buy horse, weapons, and equipment. Six months and 52,000 ducats later he was still telling the 300 Spanish men-at-arms, 240 cavalrymen, 600 foot soldiers, and some 800 local Indian “allies” (plus Fray Marcos and a few friars) that his was to be a “peaceful conquest,” the oxymoronic dream of many an imperialist to come.

Coronado was a man of his times, preferring to think of himself as a beneficent conqueror, bringing civilization to the continent’s “pagan” populace. After marching four months along Indian trails, across deserts, and over mountains, he and his men finally came into view of Hawikuh. He promptly sent a vanguard of 75 horsemen and 25 foot soldiers to the Zuñi village to announce that he, Coronado, was claiming the area for his king, the Holy Roman Emperor, based on His Holiness the pope’s donation of the entire hemisphere to Iberia. The Indians had best come down, submit to the Spanish Crown, and adopt Christianity, or he, Coronado, would be forced to make war against them.

To the Zuñis—who had heard neither of kings nor popes—Coronado’s high-minded rhetoric, even had they understood it, would no doubt have sounded at best like bluster. They refused to allow these strangers to enter their pueblo. The Indians who had come out to meet Coronado began throwing stones and shooting arrows at his troops.

In response and—according to Coronado—with the approval of the priests, the Spaniards shouted “Santiago!”—a battle cry invoking the patron saint they believed

had made them victors over the Moors—and charged. A dozen or so Zuñis fell under lance or gunshot, and the rest escaped up the ladders of their pueblo. As the Zuñis hurled rocks down from the ramparts, they managed twice to knock Coronado to the ground, but—protected by his helmet—he was unharmed. Better armed and armored, the Spanish soon overran the village.

Apparently, Coronado’s conquest of the American West was not going to be so peaceful as he supposed—nor, perhaps, so rewarding. The fabled Seven Cities of Gold he sought turned out to be nothing more than a collection of impoverished villages. While waiting for his main force to join him at Hawikuh, Coronado ordered his vanguard to pacify the other villages of “Cibola.” Showing little of the beneficence he had promised back in Mexico, he forced levies from the Zuñi and evicted them from their homes to quarter his men. When some of the men at Tiguex tired of the levies and struck back by killing a few Spanish horses, Coronado besieged and burned the pueblo, then burned the Zuñis who survived the siege. When the Spaniards heard from some of the Zuñis about a “rich” province to the north, their dreams of gold were rekindled. However, a hastily dispatched expedition of 20 men found only more pueblos, these belonging to the Hopis.

Coronado wintered among the Pueblos. He sent parts of his army a little farther north along the Rio Grande into Tiwa country. Searching each village they came upon, the Spaniards raided the pueblo of Alcanfor, looting food and clothes, raping Indian women, and destroying Indian crops. When the nearby village of Arenal fought back, the soldiers razed it, burned 100 Indians at the stake, and killed dozens of others. In the winter of 1540–41, Coronado’s forces destroyed 12 villages and a number of Pueblos in the Sangre de Cristo Mountains.

Coronado’s men returned with some hides, a few turquoise gifts, and—what was most encouraging to Coronado—more tales of a fabulously wealthy kingdom somewhere to the north and east. A Pawnee captive of the Tiwas, whom the Iberians called “the Turk,” spoke of a great river and of the opulent kingdom of Quivira, his homeland, to which he would be glad to lead the Spaniards.

Luckily for the Zuñi and the Hopi, Coronado took the Turk’s bait in the spring. He chased his dreams of fame and fortune throughout the summer and fall. But instead of a great river he found a huge gash in the earth, the Grand Canyon. Instead of Quivira, he found—beyond an ocean of grass he had to navigate with a compass—a Wichita village of clustered huts nestled in the Arkansas River valley among small fields of Indian corn, beans, and squash. Both the Grand Canyon and the Great Plains were unlike anything any European had ever seen, and the Spanish were as astonished by them as they were by the huge herds of buffalo—Coronado called them “cows”—that parted like a sea just long enough for his columns to pass. But they did not find a single nugget of gold.

Under intense interrogation, the Turk confessed that there had never been any gold or silver; it had been a plot, he said, by the Tiwas to lead the strangers far away into a place where they and their horses would languish and starve. It was a disheartened conquistador who, after having the Turk strangled to death, returned to winter again among the Pueblos. His men pleaded with Coronado to give up and head for home. Coronado capitulated, leaving behind two missionaries. In due time, the Indians dispatched them as well.

Although Coronado's expedition had found no treasure, it had succeeded in mapping today's American Southwest, and it laid the groundwork for Spain's eventual colonization of the region. Coronado was the first European to travel through the lands of the Zuñi, Pueblo, and Hopi Indians, and one of his lieutenants, Hernando Alarcon (fl. 1500s), was to be the first European to reach California. Today we might consider these major accomplishments, as the names of several sites in the West testify: the Coronado Mountains, Coronado Park, Coronado Trail, and Coronado Summit. But for the Spanish authorities at the time, Coronado was a failure, if not something even worse.

Upon Coronado's return to Mexico City in 1542, the imperial authorities—based on the reports of the expedition's clerics and the testimony of its soldiers—questioned his command and charged him with misconduct. The court of inquiry fined him for lack of judgment and discipline but failed to find any evidence of dishonesty or improper actions. He afterward resumed his political career and was reappointed councilman in Mexico City. Living out his life in the relative obscurity of that post, he died a dozen years later on September 22, 1554.

Spanish Conquest of Yucatán (1527–1546)

PRINCIPAL COMBATANTS: Spanish conquistadores vs. Indians of Yucatán

PRINCIPAL THEATER(S): Yucatán Peninsula, Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Spanish sought the further conquest of Mexico.

OUTCOME: The region came under Spanish control by 1546.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Fewer than 1,000 Spaniards; Indian numbers unknown

CASUALTIES: Unknown

TREATIES: None

The conquest of the Yucatán Peninsula began after the SPANISH CONQUEST OF MEXICO and was accomplished under Francisco de Montejo (1484–1550). The campaign proved even more difficult than the conquest of Mexico proper had been, as Montejo met formidable Mayan resistance. The first Spanish foray, which spanned 1527–28, resulted in a strategic withdrawal, and it was not until 1531 that Montejo mounted a new campaign. Whereas he had originally attacked from the east, he now approached from the west, but was repulsed, yet again, by well-organized Mayan resistance.

Montejo turned over command of the third campaign to his son, also named Francisco (fl. 1540s), who approached the task with far greater ruthlessness than his father. Instead of concentrating on the defeat of warriors, he waged total war on the Mayans, destroying every village he encountered and quickly establishing small Spanish garrison towns. The region was under Spanish control by 1542. The Indians mounted one strong revolt in 1546, but by this time the Spanish were sufficiently well established to put down the rebellion with iron brutality.

Spanish Conquests in North Africa (1505–1511)

PRINCIPAL COMBATANTS: Spanish Catholic forces vs. North African Muslims

PRINCIPAL THEATER(S): Algeria, plus Tunis and Tripoli

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Religious conquest of North Africa: the displacement of Islam by Christianity

OUTCOME: Most of Algeria and the major cities of Tunis and Tripoli came under Spanish Christian control.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Tribute agreements with rulers in Algiers, Tunis, and Tripoli

The Spanish military campaign in North Africa during this period was authorized and financed not by the royal government under Ferdinand II (1452–1516), but by the Catholic Church, in the person of the inquisitor general, Cardinal Francisco Jiménez de Cisneros (1437–1517). Using church revenues, he financed what he conceived as

a crusade against the Muslim infidels in North Africa, and in 1509 led one of the expeditions personally. Landing in the port of Oran, Algeria, Jiménez led the conquest of the city, installed a Christian garrison there, and, after taking Mers El Kebir, returned to Spain. The next year, a new expedition took the Algerian port of Bougie. With this foothold secured, Spanish forces captured Algiers and Tunis. Forces under Pedro Navarro (c. 1460–1528) took Tripoli at the end of the year. By 1511, the Spanish Christians extorted tribute agreements from the Muslim rulers of these cities.

Flushed with success, Jiménez was primed to continue his campaign of religious conquest but aborted this project when he received a papal summons for support against French religious dissidents. Before long the Spanish would find themselves severely challenged in North Africa by the Muslim forces of the Ottoman Empire.

Spanish-Moroccan War (1859–1860)

PRINCIPAL COMBATANTS: Spain vs. Morocco

PRINCIPAL THEATER(S): Morocco

DECLARATION: Spain against Morocco, October 22, 1859

MAJOR ISSUES AND OBJECTIVES: Ostensibly, Spain retaliated for attacks against its nationals living in its Moroccan possessions; Spain also wished to expand its Moroccan holdings.

OUTCOME: Poor planning resulted in heavy Spanish losses, but a mediated peace awarded Spain an indemnity and enlarged its Moroccan holdings moderately.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Spain, 43,069; Morocco, about 40,000

CASUALTIES: Spain, 1,152 battle deaths, 2,888 from disease; 4,994 wounded; Moroccan losses, about 6,000 dead

TREATIES: Treaty concluded April 26, 1860

For Spain, Morocco had been a coveted object of conquest since the late 15th century. No substantial headway was made until the war of 1859–60. In the fall of 1859, Muslim Arabs attacked Ceuta and Melilla, Spanish possessions in Morocco. In response, Spanish premier Leopoldo O’Donnell (1809–67) used damage claims by Spanish nationals as a pretext for a declaration of war against Morocco, the sultan of which refused to make adequate reparations for the attacks. O’Donnell personally led a 43,069-man Spanish army. Simultaneously, a naval blockade of Moroccan seaports was set up, but the landing of the Spanish troops was poorly planned. They became bottled up and bogged down along inadequate roads and fell prey to endemic diseases, especially cholera.

Narrowly outnumbered, the Moroccans were fierce fighters who took a heavy toll of the invaders. Nevertheless, when the far abler general Juan Prim y Prats (1814–70) took over direct command from the well-meaning but inept O’Donnell, a major Spanish victory was won on January 1, 1860, and, on February 4, the fortress of Tetuán fell to the Spanish. British mediators pressed both sides to come to an agreement, and a peace was concluded on April 26, 1860. Spain was awarded an indemnity, and its territory at Ceuta was enlarged. However, this peace was little more than a truce in a struggle that continued, with varying levels of intensity, until 1926, when Morocco came firmly into Spanish hands at last.

Spanish-Peruvian War (Spanish-Chilean War) (1866)

PRINCIPAL COMBATANTS: Peru, Chile, Bolivia, Ecuador vs. Spain

PRINCIPAL THEATER(S): The coasts of Chile and Peru

DECLARATION: January 14, 1866, by Peru

MAJOR ISSUES AND OBJECTIVES: Spanish contempt for South American independence.

OUTCOME: By treaty, Spain officially recognized Peru’s sovereignty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** Between Spain and Peru (mediated by the United States), 1879

Following the TALAMBO AFFAIR, Peru's General Mariano Ignacio Prado (1826–1901)—supported by Peruvians inflamed by Spanish contempt for their sovereignty and by Spanish demands for a large indemnity in response to Peru's maltreatment of Basque immigrants—staged a military coup and declared war on Spain on January 14, 1866. Peru concluded a defensive alliance with Chile's President Jose Joaquín Pérez (1800–90). Bolivia and Ecuador—like Pérez, fearing a return of Spanish power in South America—also joined the alliance and declared war. Wholesale deportations of Spanish subjects followed, and South American ports in the allied countries were closed to the Spanish fleet. The naval squadron under Admiral Casto Mendez Nuñez (c. 1830–c. 1880), which Spain had sent to seize the Chincha Islands during the Talambo dispute, caused considerable damage as Spanish warships bombarded the Chilean port of Valparaiso and the Peruvian port of Callao on March 31 and May 2 respectively. But Peruvian shore defenses repelled the attackers, and a week after the bombardment began—with the United States beginning to show interest in the war—Spain ceased hostilities. U.S. mediation eventually brought peace in 1871. Spain and Peru signed in 1879 a treaty in which Spain officially recognized Peru's independence. Chile, meanwhile, instituted a hurried naval program to modernize and improve her sea power, which became significant when the War of the PACIFIC between Chile and the allied Peru and Bolivia broke out, also in 1879.

Spanish-Portuguese Philippine Wars

(1570–1580)

PRINCIPAL COMBATANTS: Spain vs. Portugal**PRINCIPAL THEATER(S):** Philippine Islands**DECLARATION:** None**MAJOR ISSUES AND OBJECTIVES:** Control of the islands**OUTCOME:** Fighting on the islands was desultory, intermittent, and without decisive issue; however, Spain's annexation of Portugal in 1580 brought to an end the conflict in the Philippines.**APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:**

Unknown

CASUALTIES: Unknown**TREATIES:** None

Spain dispatched Miguel López de Legaspi (d. 1572) to the Philippines in 1570 to begin colonizing efforts there. In 1571, Legaspi established a strong Spanish presence at Manila, which served as his governmental and military headquarters. Throughout the 1570s, Spanish and Portuguese forces clashed in the Philippines in battles for control of the archipelago as well as neighboring Indonesian islands. The conflict never developed into a full-scale war. It came to an end not as a result of any battlefield resolution on the islands but because of Spain's victory over Portugal in Europe, which resulted in the Spanish annexation of that nation. Although the fighting stopped throughout what had been the Portuguese Empire, including Manila, the Spanish and Portuguese colonial systems persisted as separate entities even after the annexation.

Spanish-Portuguese War (1580–1589)

PRINCIPAL COMBATANTS: Spain vs. Portugal (with English aid in 1589)**PRINCIPAL THEATER(S):** Portugal**DECLARATION:** None**MAJOR ISSUES AND OBJECTIVES:** Succession to the

Portuguese throne and, therefore, control of Portugal

OUTCOME: Spain defeated Portugal, and Philip II of Spain ascended the Portuguese throne as well.**APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:**

Spain, 25,000; Portugal, 15,000

CASUALTIES: Spain, unknown; Portugal, about 2,000 killed**TREATIES:** None

The deaths of two Portuguese monarchs in quick succession, Sebastian (1554–78) in 1578 and Henry the Cardinal (1512–80) in 1580, precipitated a crisis as Philip II (1527–98) of Spain, uncle of Sebastian, took advantage of his nephew's passing to assert a hereditary claim to the Portuguese throne. He opened negotiations with Portugal even as he prepared a surprise invasion of the country with 25,000 troops. In the meantime, Antonio (1531–95),

the illegitimate nephew of Henry the Cardinal, was proclaimed king of Portugal, whereupon Philip invaded, and his troops occupied Évora, the seat of Portugal's royal court.

On August 25, 1580, Spanish troops under Fernando Álvarez de Toledo (1507–1582), duke of Alba, defeated a 10,000-man Portuguese peasant militia at the Battle of Alcántara. Antonio fled to Oporto, was defeated in battle there but managed to take ship for France in May 1581. All that remained in Portuguese hands was the Azores, to which Philip dispatched a fleet. To help the Portuguese hold the Azores, Catherine de Médicis (1519–89) sent troops. A Spanish assault against Terceira Island was repulsed with Franco-British aid in 1581. But a second, larger assault, 60 ships and 8,000 men, quickly defeated the defenders. The Azores fell to Spain, and Antonio remained in exile for the next nine years. In April 1589, the victory of the English over the Spanish Armada prompted Elizabeth I (1533–1603) to support Antonio's return to the Portuguese throne. She authorized an English invasion of Portugal, which failed when an expedition of 120 English ships was engulfed by a sickness that killed some 8,000 of 19,000 men deployed. Antonio returned to Paris, where he died in 1595. Portugal would remain in Spanish hands until 1640.

Spanish-Portuguese War (1641–1644)

PRINCIPAL COMBATANTS: Spain vs. Portugal

PRINCIPAL THEATER(S): Portugal and Spain

DECLARATION: Portugal on Spain, 1641

MAJOR ISSUES AND OBJECTIVES: John IV of Portugal sought to forestall any attempt by Spain to regain control over Portugal.

OUTCOME: Spain was defeated, and Portuguese independence effectively confirmed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Spain, 10,500; Portugal, numbers unknown

CASUALTIES: Spain, 3,000 killed or wounded; Portuguese losses unknown

TREATIES: Negotiations relating to the Thirty Years' War (1644)

As a result of the PORTUGUESE REVOLUTION of 1640, Spain lost the hold it had gained on Portugal (in the SPANISH-PORTUGUESE WAR of [1580–1589]), and John IV (1605–56) ascended the throne as king of a Portugal once again independent. He immediately made alliances with England, the

Netherlands, and France in order to bolster his position against Spain and forestall Spanish reconquest of his kingdom, which had already begun with several half-hearted Spanish feints and attacks. His 1641 treaty with France explicitly pledged that Portugal would make war on Spain, which John IV commenced in 1641 with quick attacks on Spanish fortifications at Elvas and Badajoz. With the curtain raised, both sides prepared for extended hostilities.

The Portuguese strategy was to drive a wedge between Andalusia, in southern Spain, and the rest of Spain, whereas Spain financed a Lisbon-based conspiracy to overthrow John IV. The Portuguese prevailed at the Battle of Olivença and in defending Beira, both in 1642. Under Mathias d'Albuquerque, Portuguese forces invaded Spain in May 1644 and defeated the Spanish at the Battle of Montijo on May 26.

In the meantime, peace negotiations began among most of the powers participating in the THIRTY YEARS' WAR, although Spain boycotted these negotiations until France dropped its demand that Spain recognize Portuguese independence. This hardly mattered, however, as Portugal had inflicted severe losses on Spain, some 3,000 killed or wounded. This demonstration of military force confirmed Portuguese independence, although official Spanish recognition would not come until 1688. The negotiations of 1644 had the effect of ending the Spanish-Portuguese War as well as the Thirty Years' War.

R. Russell-Wood, *Portuguese Empire, 1415–1808: A World on the Move* (Baltimore: Johns Hopkins University Press, 1998).

Spanish-Portuguese War (1657–1668)

PRINCIPAL COMBATANTS: Spain vs. Portugal

PRINCIPAL THEATER(S): Portugal and Andalusia, Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: After the death of Portugal's John IV, Spain attempted to reconquer Portugal.

OUTCOME: Spain formally acknowledged Portugal's independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Spain, 23,000; Portugal, 20,000

CASUALTIES: Spain, 4,000 killed or wounded, 6,000 taken prisoner; Portuguese losses unknown

TREATIES: Treaty of Lisbon, 1668

Prior to the SPANISH-PORTUGUESE WAR (1641–1644), Portugal's John IV (1605–56) concluded alliances with England, the Netherlands, and France in an effort to forestall any

1090 Spanish-Portuguese War (1735–1737)

Spanish attempt to reclaim Portugal from the independence it had won in the PORTUGUESE REVOLUTION of 1640. The death of John IV in 1656 brought renewed fears that Spain would once again attempt to reconquer Portugal. In anticipation of an invasion, Portugal opened up diplomatic channels to England, France, and Sweden, and, in the meantime, braced itself.

A Spanish invasion in 1657 at Olivenca went badly for the Portuguese, who surrendered the town to the Spanish troops. On the verge of counterattacking at Badajoz, the Portuguese thought better of it when Spanish reinforcements approached; however, in January 1659, Portuguese forces triumphed at Elvas.

In 1661, Spain's Philip IV (1605–65) sent 20,000 troops into Portugal. Initially, the Spanish under Don Juan (John of Austria, 1629–79), enjoyed success, defeating Portuguese forces in May 1662 at the Battle of Évora. The defeat was sufficient to shake the Portuguese government.

Don Juan went on from Évora to attack Ameixal on June 8, 1663. He was met by Portuguese troops under the German mercenary Frederick Herman Schomberg (1615–90). Schomberg had lost Évora, but he fought with great brilliance at Ameixal and defeated Don Juan. The Portuguese had fielded 17,000 men against 18,500 Spaniards. Schomberg went on to further victories at Valencia de Alcántara, Villaviciosa, and Montes Claras. In this latter battle, 23,000 Spaniards were defeated by 20,000 Portuguese, who inflicted 4,000 casualties and took 6,000 prisoners of war. Following his triumph at Montes Claras, Schomberg took the war deep into Spain, invading Andalusia in 1665.

Although Spain continued to fight, England's Charles II (1630–85) mediated a peace, by which Spain at last signed the Treaty of Lisbon in 1668 and thereby recognized Portugal's independence under the House of Braganza. Both sides returned conquered and occupied territory.

R. Russell-Wood, *Portuguese Empire, 1415–1808: A World on the Move* (Baltimore: Johns Hopkins University Press, 1998).

Spanish-Portuguese War (1735–1737)

PRINCIPAL COMBATANTS: Spain vs. Portugal

PRINCIPAL THEATER(S): Banda Oriental (Uruguay), South America

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Possession of Colonia and other Portuguese holdings in Banda Oriental (Uruguay)

OUTCOME: In response to British mediation, Spain returned Colonia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Spain, 2,000; Portugal, 1,000

CASUALTIES: Unknown

TREATIES: Treaty of 1737

This was a war fought in the La Plata region, roughly present-day Uruguay, where the South American colonies of Portugal and Spain met. The conflict consisted of desultory fighting between Spanish and Portuguese colonial forces in what was then the Portuguese South American colony of Banda Oriental (Uruguay) and focused on the garrison town of Colônia do Sacramento. The war was the direct result of Spain's involvement in the War of the Polish SUCCESSION from 1733 to 1738. Under Philip V (1683–1746), Spain supported the claim of Stanislas Leszczynski (1677–1766) to the Polish throne, which put Spain in an alliance with France against Austria. While fighting the European war, Philip V decided to revisit the longtime rivalry with Portugal and ordered his colonial forces to attack the Portuguese at Colonia, their stronghold on the Río de la Plata in Banda Oriental. Sailing in 7 ships, 2,000 Spanish troops took Colonia, which was defended by no more than 1,000 Portuguese troops. The Portuguese waged a campaign to secure its return. Fighting was inconclusive, and the war ended only after Spain was persuaded by British intermediaries to relinquish Colonia.

R. Russell-Wood, *Portuguese Empire, 1415–1808: A World on the Move* (Baltimore: Johns Hopkins University Press, 1998).

Spanish-Portuguese War (1762)

PRINCIPAL COMBATANTS: Spain (with France) vs. Portugal (with Britain)

PRINCIPAL THEATER(S): Portugal

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Spain sought territorial conquest within Portugal.

OUTCOME: Spain was driven out of Portugal.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Paris, 1763 (ended this war as well as the larger Seven Years' War and French and Indian War)

Spain's Charles III (1716–88) kept his nation neutral in the all-engulfing SEVEN YEARS' WAR (1756–63) until he concluded the Bourbon Family Compact with France against Britain in 1761, in an effort to block British designs against Spain. While fighting Britain, Spain invaded Portugal, taking Braganza and Aleida. The Span-

ish received military aid from France, and Portugal called upon Britain. Generals John Burgoyne (1722–92) and John Campbell (1705–82) led British troops to Portugal's aid, while a German mercenary, Count William of Schaumburg-Lippe (1724–77), successfully regrouped Portugal's battered army. The allies swept the Spanish out of Portugal by the end of 1762. This loss was added to Spain's other losses as the ally of France, which was the major loser in the Seven Years' War and the associated FRENCH AND INDIAN WAR.

Simultaneously with the war in Europe, Spain retook Colônia do Sacramento in Banda Oriental (Uruguay, South America), which it had relinquished to Portugal after the SPANISH-PORTUGUESE WAR (1735–1737), regaining the town after a siege that spanned October 5 to October 30. The Portuguese surrendered 2,335 men, 87 guns, and 26 ships to the Spanish.

An English flotilla attempted to recapture Colonia for its Portuguese ally on January 6, 1763, but without success. Portugal would, however, regain Colonia by terms of the treaty that ended the Seven Years' War in 1763.

Spanish Revolution (July Revolution) (1854)

PRINCIPAL COMBATANTS: Forces led by General Leopoldo O'Donnell and Antonio Cánovas del Castillo vs.

government forces of Maria Cristina

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Reform of the Spanish government

OUTCOME: The revolutionaries prevailed, a new government was formed, and Maria Cristina left in self-imposed exile.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Also called the July Revolution, this was led by General Leopoldo O'Donnell (1809–67) and Antonio Cánovas del Castillo (1828–97) against the government of the Spanish regent and queen mother, Maria Cristina (1806–78). Under her rule, Spanish government had become corrupt, inefficient, reactionary, and enormously unpopular.

The war began not in July but in June 1854, as revolutionary forces fought government troops inconclusively

outside of Madrid. While the military campaign stagnated, Cánovas published the *Manifiesto de Manzanares*, in which he pledged widespread government reform and thereby gained much popular support, especially within Madrid itself and the cities of Barcelona and Valladolid. This sparked, in July, major uprisings in all three of these cities, and the situation in the capital became especially chaotic. At the height of the uprising, the Spanish premier stepped down and the Crown agreed to the establishment of a so-called "Junta of Public Safety," in effect a provisional government. Isabella II (1830–1904) recalled from retirement Baldomero Espartero (1793–1879) to serve as premier and restore order to the country, and Espartero, in turn, chose O'Donnell as his minister of war. The combination of Espartero and, especially, O'Donnell raised the ire of Maria Cristina, who, however, soon found that she lacked the support to protest. She left Spain in self-imposed exile on August 28, 1854. What followed were 14 years of low-level civil war and rebellion, culminating in the SPANISH REVOLUTION (1868).

Spanish Revolution (1868)

PRINCIPAL COMBATANTS: Spanish rebels vs. Isabella II

PRINCIPAL THEATER(S): Spain

DECLARATION: Proclamation of Revolution, September 18, 1868

MAJOR ISSUES AND OBJECTIVES: With popular support, the rebels sought to end the reign of the corrupt and autocratic Isabella II.

OUTCOME: Isabella II was deposed and a new government installed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Although Isabella II (1830–1904) had instituted a reform government as a result of the SPANISH REVOLUTION (1854) (the so-called July Revolution), by 1868 she reinstated an outmoded and unresponsive autocratic governing style while conducting herself in an unseemly and scandalous manner. A coup d'état was fomented by a cabal of her ministers in July 1868 but collapsed, and the generals who had participated in the coup were banished to the Canary Islands.

When Isabella departed for France to conclude an alliance with Napoleon III (1808–73), Admiral Juan Bautista Topete y Carballo (1821–85) issued from Cadiz a proclamation of revolution on September 18, 1868. The proclamation triggered popular uprisings in Madrid and

throughout Spain. Isabella rushed back to Spain, only to find that the exiled generals had returned from the Canary Islands. One, Francisco Serrano (1810–85), led a successful engagement against government troops under Manuel Pavia y Lacy (1814–96) at the Battle of Alcolea outside of Córdoba on September 28. At this, Isabella fled to France and, on September 29, was proclaimed deposed.

This was the end of the brief revolution, but it left Spain seething in near anarchy. The revolutionaries hastily installed a radical provisional government, which proclaimed universal suffrage, freedom of the press, and the abolition of the Jesuits as well as all other religious orders. Serrano and another general, Juan Prim y Prats (1814–70), assumed leadership of the provisional government and quickly assembled the Cortes (parliament), which wrote and approved a new and more liberal constitution, but also voted to retain a monarchical government. Order was hardly restored, and in 1872, the very costly, bloody, and bitter Third CARLIST WAR would begin. By its end in 1876, some 50,000 lives would be lost.

Spanish Saharan War (1975–1991)

PRINCIPAL COMBATANTS: Polisario Front (of the Saharan Arab Democratic Republic) vs. Morocco

PRINCIPAL THEATER(S): Western Sahara (formerly Spanish Sahara)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Morocco and the Saharan Arab Democratic Republic (SADR) disputed sovereignty over the Western Sahara.

OUTCOME: A cease-fire has mostly held since 1991, but the dispute over a referendum of self-determination for the region continues as of 2004.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Morocco, 120,000 troops patrolling a defensive “wall of sand”; Polisario Front numbers are unknown

CASUALTIES: Numbers of killed and wounded are unknown; the ongoing warfare has produced many refugees, of whom about 165,000 live in camps in southwestern Algeria.

TREATIES: Treaty between Mauritania and SADR, 1980; United Nations–sponsored referendum on self-determination for the Western Sahara proposed in 1991; no referendum had been implemented as of 2004

Spain had repeatedly put down uprisings in the coastal strip of the Sahara it controlled. The two most serious occurred in 1957–58 and 1967–70. In May 1973, liberation groups created the Polisario Front, and Spain responded by

secretly negotiating with Mauritania and Morocco to block independence. On November 6, 1975, King Hassan II (1929–1999) of Morocco led 350,000 unarmed “volunteers” on a forced march—called the Green March—to occupy the disputed area. Troops from Mauritania also were sent into the area. Early the following year, Spain ceded the Spanish Sahara to Morocco (which received two-thirds of the territory) and Mauritania (which received one-third). Immediately after this, the Polisario Front (also called the Popular Front for the Liberation of Saguia el Hamra and Río de Oro), invaded both regions.

Backed by Algeria and Libya, the Polisario Front attacked both the Moroccans and the Mauritians in a bid to set up the Saharan Arab Democratic Republic (SADR). Mauritania bowed out in 1980, signing a treaty with the Polisario Front, ceding to it sovereignty over its third of the Spanish Sahara. Almost immediately, Hassan II of Morocco annexed the area Mauritania had ceded and occupied it. At this, the SADR government withdrew, established itself in exile, and was recognized by 40 nations. Thus legitimated, in 1981 SADR began a guerrilla war against Moroccan forces in the Spanish Sahara.

In response to the onslaught of the Polisario Front guerrillas, Moroccan troops built a system of defensive walls stretching from southern Morocco through the Spanish Sahara (now called the Western Sahara) and south to Cape Bojador. This so-called “Wall of Sand” was defended by 120,000 Moroccan troops. The wall was protected by minefields. In the meantime, the Organization for African Unity (OAU) and the United Nations separately worked to obtain a mandated referendum on self-determination in the Western Sahara. In 1988, Morocco at last accepted a UN-proposed self-determination referendum. However, the continued activity of Polisario guerrillas repeatedly postponed implementation of the referendum. It was 1991 before Morocco and the Polisario Front agreed to allow a UN-supervised referendum, and a cease-fire was put in place between Morocco and the SADR-backed Polisario.

Yet, while the war hung fire, the referendum continued to be postponed from one year to the next, as SADR and Morocco argued over voting lists and procedural matters. In 1997, UN secretary general Kofi Atta Annan (b. 1938) appointed former U.S. secretary of state James Baker (b. 1930) as a special UN envoy charged with attempting to settle the dispute. Progress was made in 1998 on acceptance of terms for a referendum on self-determination, but other issues, including the repatriation of refugees, surfaced, and the Polisario stood firm in its refusal to accept the latest UN-sponsored peace proposals. As of 2004, sporadic fighting continues between Moroccan forces and the Polisario Front, which was considerably weakened by a sharp reduction in support from Algeria. The future of Africa’s last remaining colony is uncertain.

Spanish Succession, War of the (1701–1714)

PRINCIPAL COMBATANTS: France and Bourbon Spain and their allies (Savoy, Mantua, Cologne, and Bavaria) vs. a new Grand Alliance of the Hapsburg Empire, England, the Netherlands, Brandenburg-Prussia, and most of the other German-speaking states of Europe

PRINCIPAL THEATER(S): Europe from the Netherlands and northern France to Bavaria and Central Europe to northern Italy and the Mediterranean Coast.

DECLARATION: September 7, 1701, Grand Alliance proclaimed; November 24, 1701, Philip V proclaimed king of Spain and Louis XIV invades Spanish Netherlands

MAJOR ISSUES AND OBJECTIVES: The issue remained, despite decades of various wars fought in numerous combinations, the balance of power in Europe. As the War of the Grand Alliance proved, the ambitions of France's Louis XIV could be held in check only by the determined and combined efforts of others, especially England and the Hapsburgs. When Louis claimed the Spanish Crown for his grandson, another great alliance was formed to prevent a Bourbon Spain.

OUTCOME: When the rest of Europe reached a settlement in 1713 at Utrecht, Holy Roman Emperor Charles VI fought on alone against France for more than a year before reaching a separate peace at Rastadt. Together, the two agreements formed the foundation of Europe's international relations. Not only did the war result in a basic equilibrium in Europe until about 1740, but it also gave birth to the English hegemony in North America, as Great Britain gained the Hudson Bay region, Nova Scotia, and Newfoundland. In addition, Spain ceded Gibraltar and Minorca to Great Britain and obtained the *asiento* (privilege) of exclusively introducing African slaves into Spain's American possessions—a right that was subsequently extended to general trading privileges. The war marked the end of French aggrandizement under the ancien régime and the dramatic diminution of Spain as a power among the European states.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: The Hapsburgs, 155,000; France, 170,000

CASUALTIES: Estimates vary widely from just under half a million to more than three-quarters of a million on both sides. These include Austria, 100,000 killed and wounded; Maritime states, England, Holland, 250,000 killed and wounded; German states and Denmark, 100,000 killed and wounded; Savoy, 50,000 killed and wounded; Portugal, 50,000 killed and wounded; Bavaria and Spain, 100,000 killed and wounded; France, 500,000 to 600,000 (figures include missing and captured as well as killed and wounded).

TREATIES: The Treaty of Utrecht on July 13, 1713, ended the War of the Spanish Succession as well as its North American phase, Queen Anne's War; the Treaty of Rastadt on March 16, 1714, ended the fighting between Charles VI and France.

HISTORICAL BACKGROUND

When the War for the Spanish Succession broke out in 1702, the ancien régime of Louis XIV (1638–1715) was already in decline. Louis, the “Sun King,” the first of the Continent's monarchs to define himself as “absolute,” had in many ways taught Europe what a nation could be; now, he was to pay for that lesson. Following his war with the LEAGUE OF AUGSBURG near the end of the century just past, Louis had been forced to renounce most of his great military conquests. With the end of this war, French fortunes would reach a nadir. Although heroic military efforts and clever diplomacy would allow Louis to recoup some losses in the future, French expansion under the ancien régime had come to a definite standstill.

The roots of the war lay in the growing decrepitude of the Spanish Empire. Louis had long wanted to create a Bourbon Spain. Back in 1659, he had agreed to marry King Philip IV (1605–65) of Spain's Austrian daughter, Maria Theresa (1638–83). The newlyweds had renounced any claim to the Spanish throne in return for Maria Theresa's magnificent dowry, but when the Spanish failed to pay, Louis declared the agreement void. When Charles II (1661–1700) acceded to the throne, Louis had to put off his goal, but he kept up such diplomatic and political pressure on the hapless Charles that the Spanish king agreed to allow a French claimant to the throne after his death.

At the same time, the Austrian Hapsburgs had also been harrying the ailing, incompetent, and most important, heirless King Charles with claims to some of his Iberian holdings that had already been recognized under earlier agreements. Before he could straighten out the mess with the Hapsburgs, the old king died and left a deathbed will ceding the whole of the empire to the duke of Anjou (1683–1746), the great-grandson of Philip IV, and the grandson of France's Louis XIV. The Sun King was happy to place a Bourbon on the throne in Madrid, but the Hapsburgs under Holy Roman Emperor Leopold I (1657–1705) would have none of it. Although Louis tried to appease the Hapsburgs with offers of land and other concessions recognizing many of their previous claims, they remained opposed.

The English and the Dutch, rising commercial powers, feared that the French might establish hegemony in Spanish America and the Spanish—that is, the southern—Netherlands. Even as Louis was preparing to proclaim his grandson Philip V king of Spain, these powers—the Hapsburg Empire, England, and the Netherlands—formed

another Grand Alliance with Brandenburg-Prussia and most of the other German states on September 7, 1701, against just such an eventuality. In response, upon the crowning of Philip on November 24, Louis XIV marched his troops into the Spanish Netherlands, provoking the Hapsburgs to declare war.

THE WAR

From 1701 to 1713, the Grand Alliance battled France and her allies on the continent while Britain and France contested control of North America from 1702 to 1713 (QUEEN ANNE'S WAR). Some of the earliest fighting came in Italy, where Louis had sent troops to occupy Rivoli and shore up his allegiance with Savoy, which ultimately failed and led Savoy to switch sides, joining the Grand Alliance in 1703. The major theaters of this long war, however, lay in the Low Countries and Germany, where—unlike in Italy and in the previous War of the GRAND ALLIANCE—large-scale battles took place, though, given the limits of current weaponry, with only localized results.

In any case, the alliance began the war with hard-driving initiatives in 1702, with the Austrians invading Alsace in July under Prince Louis (1655–1707), margrave of Baden. Meanwhile, an Anglo-Dutch force led by John Churchill (1650–1722), earl of Marlborough, captured the French fortresses along the Meuse between September 15 and October 15, a month's worth of work for which Churchill was created duke. In September, however, Louis XIV concluded an alliance with Bavaria. As a result, Louis of Baden, being chased by a French army, fled Alsace to return home to protect his lands from the Bavarians, who had already seized Ulm. Marshal (Claude) Duc de Villars (1653–1734) led the French to victory over Baden at Friedlingen on October 14, 1702, which allowed Louis to threaten the Hapsburg holdings directly.

Spring 1702 found Villars in the Black Forest on his way to joining Maximilian of Bavaria (1662–1726) at Ulm for a march on Vienna. Despite Villars's arguments for advancing on Vienna directly, Maximilian elected first to seize Tyrol and join the allied Italians under Marshal Louis Joseph, duc de Vendome (1654–1712), before taking Vienna. The Bavarian elector had made a major blunder. His troops occupied Tyrol easily enough, but the Austrians—with local help—chased them out by August, meanwhile preventing any linkage with Vendome. All this time, Villars was in the Danube Valley doing a more than credible job of staving off the alliance armies. After two major victories (at Munderkingen on July 31 and Hochstadt on September 20), he once again invited Maximilian to join him in a march on Vienna. When the elector demurred a second time, operations ground to a halt for half a year, during which time Villars was replaced.

By 1704, Franco-Bavarian forces were in position to invade Austria and take Vienna. Maximilian had collected around 55,000 French and Bavarian soldiers at Ulm, and

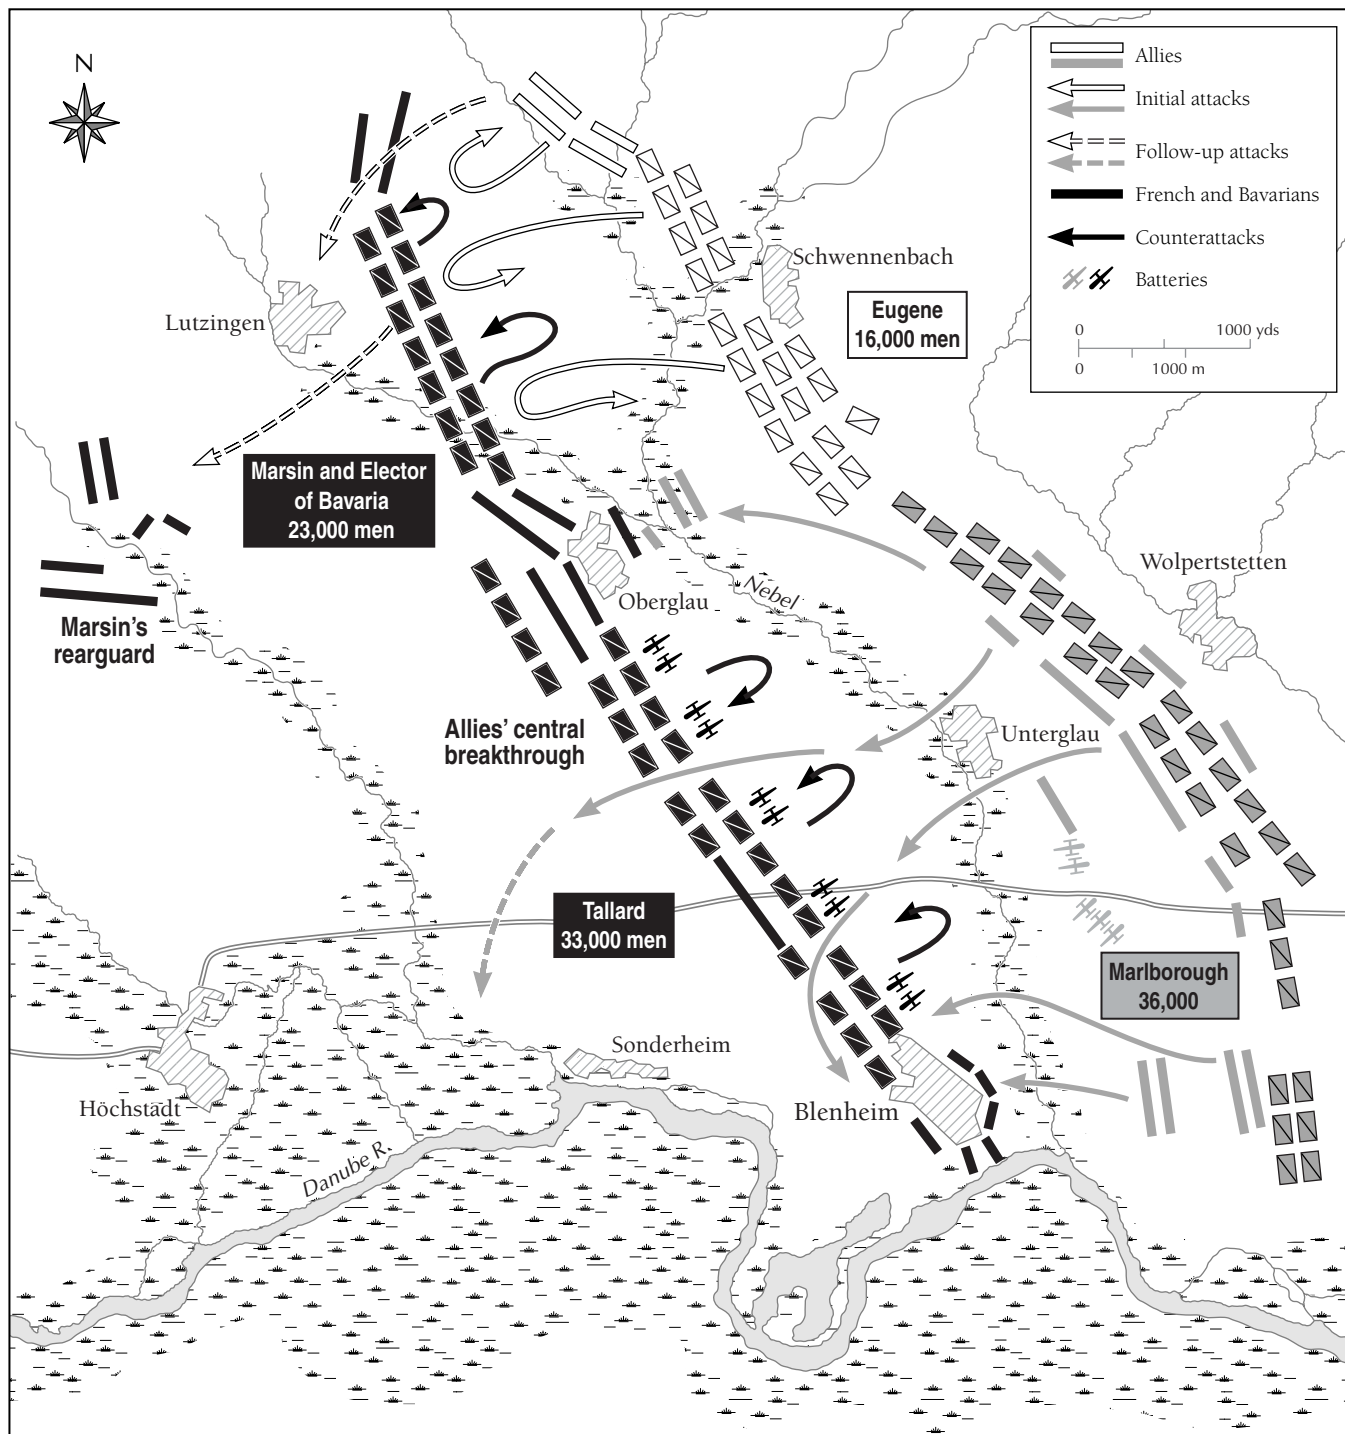

these were soon reinforced for the invasion by the 30,000-strong French army under Marshal Camille de Tallard (1652–1728). For the alliance, Marlborough's army of 36,000 was joined by 40,000 Hapsburg troops from Baden and Savoy in the advance down the Rhine. The two armies met at Blenheim in 1704; the French suffered their most crushing defeat of the war. In Marlborough's brilliant battle the French and Bavarians lost 38,600 men, including 6,000 dead. Approximately 14,000 were taken prisoner, one of whom was Tallard himself. The alliance lost 4,500 dead and 7,500 wounded.

With this battle, Marlborough ensured the safety of Vienna and drove the French from Germany. Maximilian was forced into exile, and the Hapsburgs annexed Bavaria. Both sides were exhausted by the fighting, and it took more than a year before either could generate much new effort. By 1706, however, the alliance was attacking the French with great force. Marlborough won another of his brilliant victories in the Low Countries at Ramillies in 1706, when his army of 62,000 met a French force of 60,000, drove them from the field, and gave chase. The French had suffered 8,000 casualties, the alliance half that. Over the next few months, Marlborough occupied the entirety of the Spanish Netherlands.

The French never recovered from these defeats. Driven out of Savoy also in 1706, their efforts to retake the Spanish Netherlands in 1708 failed, and after the severe defeat at Oudenarde on July 11 of that year, Louis sued for peace. The talks foundered, however, on Louis's refusal to join the alliance against his grandson, Philip of Spain. In 1709 Louis tried once again to regain the Netherlands, only to suffer the bloodiest defeat in the war at Malplaquet. Although he lost fewer men—12,500 to the alliance's 20,000—the French army of 90,000 was overmatched and driven from the field.

There followed several more years of indecisive maneuverings. In North America, English forces had taken Port Royal, the major French stronghold in Acadia (Nova Scotia and New Brunswick), but French colonials allied with Indians continued to harry, terrorize, and ravage the settlements of New England. When Emperor Joseph I (r. 1705–11) died in 1711, Charles III (1685–1740) of Barcelona became Holy Roman Emperor Charles VI. Because Charles was also the Hapsburg claimant to the Spanish Crown, the British began to worry that an outright victory would merely change France's self-aggrandizement into a genuine Hapsburg hegemony.

Despite Marlborough's brilliant battlefield triumphs, the British had taken notice of the stiffening of French resistance at Malplaquet. Reeling under the heavy price of its triumphs, the bellicose Whig government fell. Fearing an alliance between Austria and Spain, Queen Anne (1665–1714) recalled Marlborough (her armies in consequence suffered a defeat at the Battle of Denain in 1712) and commenced peace talks with France.

Battle of Blenheim, August 13, 1704

The twelve-year war of the Spanish Succession over Louis XIV's claim to the Spanish throne came to a close for most of the belligerents—England, Holland, and Austria on the one side, France and Spain on the other—in an international peace settlement (the Treaty of Utrecht) that set the stage for European politics and international relations for at least a generation. But Charles VI, as emperor

of the Holy Roman Empire and as a Hapsburg, was not happy with allowing a French Bourbon to sit on a Spanish throne he believed by right belonged to his House. He continued to fight the “Sun King” for another year or so. Not until March and September of 1714 did Charles come to an official settlement with the French in the treaties of Rastadt and Baden, and not even then—though he at least

admitted the war was over—did he fully accept the accord to which the rest of Europe had come during the previous spring and summer.

Despite the diplomatic formalities, the end of the War of the Spanish Succession marked the virtual disappearance of the Spanish from any real role in the affairs of the evolving European state system. Though a Bourbon (Philip V) did indeed succeed to the Spanish throne, the settlement kept the two nations—France and Spain—separate kingdoms, and they remained so permanently. Austria took control of the Spanish lands in Italy and the southern Netherlands, although the Dutch insisted they be allowed to throw up a line of fortresses there to serve as a barrier against the Hapsburgs. But the real winners were the English. In North America, Hudson Bay, Nova Scotia, and Newfoundland all fell onto English hands—or perhaps, because Scotland and England had been united in 1709, “British” hands would be more proper. From Spain Great Britain took Gibraltar and Minorca, the better to protect her expanding Mediterranean trade. In short, the settlements of the war not only promoted British commercial interests, but also confirmed her commercial supremacy.

In a broader sense, the Treaty of Utrecht established an equilibrium in Europe that would last virtually unchallenged until 1740. It set the terms for European politics and international relations for a generation. Its provision on African slavery became the basis for Britain’s general slave-trading privileges in Spanish America, and this in turn resulted in the gradual erosion of the Spanish hegemony in North America. In the long term effectively removing Spain from the centuries-long imperial struggles in the Western Hemisphere, the treaty cleared the field for the battle to continue ever more directly between France and England, although each new escalation of the North American fight inevitably involved jockeying for position in Europe as well.

There would be other wars in which Spain played a role, of course, and which spilled over into the Americas—the European struggle in the War of the AUSTRIAN SUCCESSION, for example, which the American colonists knew as the War of JENKINS’ EAR and KING GEORGE’S WAR, successively. Each flash of fire in the wilderness would hone the contention more finely to one primarily between France and England. The French, like the Spanish before them, were economically inhibited from supporting their colonies in the vast North American interior as grandly as the English could maintain their snug settlements along the Atlantic seaboard. Instead, they allied themselves more closely with the native populations, and, like the Spanish before them, intermarried with and converted the Indians. The British colonials were more wont simply to take their lands. Thus, when what historians would later call the “Great War for Empire” finally erupted in Europe at mid-century after several smaller conflicts, the British colonials in America, seeing Spain’s participation as hardly of any

consequence at all, described what the Europeans would call the SEVEN YEARS’ WAR more accurately from their point of view as simply the FRENCH AND INDIAN WAR.

Spartacus (League) Revolt (1919)

PRINCIPAL COMBATANTS: Communists led by Spartacus League vs. the Allied-established German Republic

PRINCIPAL THEATER(S): Berlin

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In the political chaos following World War I, the German communists tried to foment social revolution.

OUTCOME: The revolt was crushed by the proto-Nazi Freikorps, the Spartacus League leaders were murdered, and the Weimar Republic was established.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 2,000 revolutionary marines and supporters, plus thousands of demonstrators; German police and Freikorps, 30,000.

CASUALTIES: 1,200 demonstrators and revolutionaries killed in Berlin, 1,500 more nationwide; police and Freikorps, minimal

TREATIES: None

In 1918, following Kaiser Wilhelm II’s (1859–1941) hasty departure from Germany at the close of WORLD WAR I, young leftist revolutionaries formed the “Spartacus League,” led by Rosa Luxembourg (1871–1919) and Karl Liebknecht (1871–1919), and moved to take over the tottering government.

Years of seemingly senseless slaughter—at the behest of arrogant leaders, indifferent to the effect of their decisions on the lives of those they commanded and ruled—masses of workers, peasants, and soldiers were galvanized into a series of spontaneous uprisings throughout Europe as World War I drew to a close. In Russia, the relatively tiny Bolshevik Party ultimately took control of the inchoate mass revolt in 1917 with slogans calling for the end of the war and turned chaotic protest toward social revolution (see the BOLSHEVIK REVOLUTION). In Germany, the leading leftists were the Social Democrats, who had supported the nation’s war effort and who had no stomach for the kind of radical change being attempted by the Bolsheviks and being proposed by some German communists.

The situation in Germany was desperate. The kaiser had fled, and the Junker leaders of a defeated German

army were keeping a low profile. Workers and common soldiers organized into councils called *Rates*, Germany's version of Russia's *soviets*, and took control of the factories and the streets. Gangs of thugs and mercenaries—the so-called German “Freikorps” because of the number of demobbed German servicemen involved—ranged about at night, preying where and when they could on defenseless citizens and the propagandizing revolutionaries. The government was being run, more or less, by a six-man Council of People's Deputies. Though revolution was in the air, the council seized no property and conducted no purges of the old regime's once-powerful bureaucracy or the military caste that had led the country into war. The moderate head of the Social Democrats, Friederich Ebert (1871–1925), dominated the council, which set January 19, 1919, for elections to a new National Assembly and looked to the old regime's military officers to provide security.

Ebert was the kind of reformer who feared social revolution more than right-wing reaction, and when the People's Marine Division—1,000 sailors strong, joined by an equal number of supporters—showed up in Berlin in December 1918 to back the more radical three Independent Socialists on the council against Ebert and his Social Democrats, Ebert worried that a Bolshevik-style coup was in the making. He turned to the Junkers, creating an alliance that would cause blood to run in the streets of Berlin and pave the way for the rise of the Nazi Party. Ebert asked the sailors to leave Berlin. They mutinied instead. He ordered loyal troops to remove them. Thousands of demonstrators filled the streets, forcing Ebert's troops to withdraw, and the outraged Independents on the ruling Council of People's Deputies resigned in protest. With them gone, the council fired Berlin's police chief, an Independent Socialist named Eichorn (fl. 1920s), and once again radicals took to the streets, this time led by the week-old Communist Party. Ebert had created the very coup he feared. The Communist Party was headed by the far-left faction of Germany's Marxist revolutionaries, the once-tiny Spartacus League, and when party leaders declared that the council was deposed and they would assume power in its stead, the *putsch* became known as the Spartacus Revolt.

The Communists themselves were divided on the question of whether Germany was ripe for a complete revolution. Even if it was, Rosa Luxembourg—founder of the Spartacus League, one of Europe's most eloquent leftist leaders, and Lenin's only true theoretical rival in the international communist movement—opposed on principle the Bolsheviks' dictatorial and terrorist tactics. She was overruled by Karl Liebknecht, a former Social Democrat legislator and cofounder of the Spartacus League, who was for a Bolshevik-inspired takeover. Ebert panicked in any case. For some time, the German minister of defense, Gustav Noske (1868–1946), had been organizing Germany's street gangs into the mercenary Freikorps. From the beginning they had been under the clandestine control of

members of the former kaiser's officer caste. Now, Ebert authorized Noske to call them in.

Freikorps troops murdered both Luxembourg and Liebknecht on January 19, 1919, the day of the national elections. They attacked the mobs in the streets with a vengeance, as well as looting and raping. Over the next two months, the Freikorps killed 1,200 Berliners before viciously crushing a rebellion in Bavaria. During the elections, Ebert was swept into office on the tide of reaction, becoming president of a new republican government temporarily housed in Weimar, while Berlin was being cleaned up for Ebert's return. The Weimar Republic's constitution was the most liberal in the world, but it was written in the blood spilled by the very thugs who would become Adolf Hitler's brown-shirt stormtroopers, and the entire German military establishment was in the hands of men who not only despised liberalism, socialism, and communism but also hated the very concept of democracy. Instead of the workers' democracy imagined by those participating in the Spartacus Revolt, postwar Germany would be governed by the weak and decadent Weimar Republic, installed with the aid of men who despised it, the same men who within a decade would help boost Adolf Hitler (1889–1945) to dictatorial power.

Spartacus's Revolt See SERVILE WAR, THIRD.

Spartan-Achaean War (228–226 B.C.E.)

PRINCIPAL COMBATANTS: Sparta vs. Achaean League

PRINCIPAL THEATER(S): Peloponnese

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: Sparta and the Achaean League contested possession of city-states of the Peloponnese.

OUTCOME: Sparta triumphed, bringing about the rapid dissolution of the league.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Following the death of Alexander the Great (356–23 B.C.E.), Greece was torn by a series of wars among those who contended to inherit what he had conquered. The end of the so called Wars of the DIADOCHI left a splintered

1098 Spartan-Achaean War (193–192 B.C.E.)

and bickering collection of Greek city-states in its wake. By the end of the third century B.C.E., Macedonia and Sparta were the principal Greek city-states, with a third entity, the Achaean League (a confederation of Greek cities in Achaea), also a power to be reckoned with.

The leader of the league, Aratus of Sicyon (d. 213), at one time allied with Macedonia, wanted to bring all of the Peloponnese into the league. Cleomenes III (c. 260–19) of Sparta was opposed to such expansion and in 229 invaded disputed territory, persuading the Aetolian cities to ally themselves with Sparta. He also won a portion of territory around Manitea, in a section of Arcadia not yet under the league's control. The next year, Aratus captured part of this area, provoking Cleomenes to mobilize. In response, the Achaean league declared war on Sparta, but no grand battles ensued.

In 227, after a series of skirmishes the year before, Aratus was reelected as the League's general and launched a major attack on Lyceum. Defeated there, he went on to retake Mantinea. In 226, a Spartan revolt elevated Cleomenes to tyrant of Sparta, and he took up the war once again with renewed zeal. After recovering Mantinea, he invaded Achaea, shattering the league's army at Hecatombaeum. The league sued for peace but soon began to disintegrate. After 225, Macedonia and Sparta became the only contenders for hegemony in Greece until the rise of Rome, which gave new life to the league.

Spartan-Achaean War (193–192 B.C.E.)

PRINCIPAL COMBATANTS: Sparta vs. Achaean League (with Rome)

PRINCIPAL THEATER(S): Spartan seaports

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: The Achaean League sought to annex Sparta.

OUTCOME: Despite many victories against a weakened Sparta, the Romans refused to press the campaign; Sparta briefly joined the Achaean League, but was not annexed to it.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

This was an important episode in the Roman conquest of Greece, which spanned 215 to 146 B.C.E., culminating in

the ACHAEAN WAR. Badly weakened by the SPARTAN-ACHAEAN WAR (228–226 B.C.E.), the Achaean League (consisting of Dyme, Patrae, Tritaea, Phérae, Aegium, Bura, and Ceryhea) virtually ceased to exist until the Second MACEDONIAN WAR so drained Spartan resources that the Achaean League was given a motive and opportunity to revive. A treaty of 195 B.C.E. between the league and the Roman Republic granted the league control over certain Spartan seaports as a reward for military services rendered to Rome. However, the treaty did not grant the league full possession of the seaports. Philopoemen (c. 253–183 B.C.E.), the league's leading general, wanted not only to possess those, but also to gain control of Sparta itself.

In 193, a series of revolts broke out in the seaports, which Philopoemen exploited. Incited by Sparta's tyrant, Nabis (r. 207–192 B.C.E.), the revolts brought the seaports back under Spartan control. Moreover, Nabis made bold to besiege Gytheum in 193, an Achaean garrison town.

Philopoemen laid these affronts before the great Roman general Titus Quinctius Flaminius (c. 230–174 B.C.E.). The Roman readily agreed to fight. In advance of Flaminius's army, Philopoemen opened a campaign to recover Gytheum. It was completed by the Romans, thereby allowing the league's forces to pursue Nabis's army toward Mount Barbothenes (192 B.C.E.). There, Philopoemen all but annihilated the Spartan forces.

Next, Philopoemen set up a blockade of Sparta while he went on to ravage Laconia. However, Flaminius had had enough of the campaign and ordered his troops to stop fighting. Rome was simply unwilling at this point to press its advantages. Doubtless, this reluctance greatly lengthened the campaign to subjugate Greece. With his strong ally out of the picture, Philopoemen had no choice but to call off his campaign. A treaty restoring the status quo ante bellum was concluded with Sparta, and the Achaean League abandoned its plans to annex Sparta. Nevertheless, the Spartan defeat resulted in the assassination of Nabis in 192, after which Sparta briefly joined the Achaean League, thereby diminishing resistance to the eventual Roman conquest.

Forrest, *A History of Sparta: 950–192 B.C.* (New York: W. W. Norton, 1978); Michael Whitby, ed., *Sparta* (New York: Taylor and Francis, 2001).

Spartan-Achaean War (189–188 B.C.E.)

PRINCIPAL COMBATANTS: Sparta vs. Achaean League

PRINCIPAL THEATER(S): Sparta

DECLARATION: Achaean League on Sparta, 189 B.C.E.

MAJOR ISSUES AND OBJECTIVES: Elements within Sparta wanted to secede from the Achaean League; the league acted to crush the revolt.

OUTCOME: Sparta was subjugated to the league, although Rome intervened to moderate Achaean policy toward Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Spartan agreement to the authority of the league

The Achaean League had not abandoned its dream to gain control of the Peloponnese and annexed Messene and Elis. In 191, the league's general, Philopoemen (c. 253–183 B.C.E.), quelled a Spartan revolt—without, however, first securing the permission of Rome. Two years later, he repeated this affront, acting against Sparta after its troops attacked Las near Gytheum. Philopoemen (253–183 B.C.E.) presented Sparta with an unauthorized ultimatum—surrender those guilty of the attack or suffer a declaration of war. In response, the Spartans executed 30 pro-Achaean citizens, left the Achaean League, and looked to Rome for protection.

Philopoemen declared war, sending his armies to invade Laconia in 188. There he took 80–350 leaders of the Spartan secession prisoner. He tried them publicly, then executed them. Philopoemen ordered Sparta's city walls pulled down. Mercenaries, enfranchised helots, and any who opposed the league were exiled. Spartan laws were replaced by the league's codes.

The unyielding harshness of Philopoemen's new regime brought intervention from Rome, which introduced restrictions on the league's authority.

Spartan Revolt (332–331 B.C.E.)

PRINCIPAL COMBATANTS: Sparta and various southern Greek city states vs. Macedonia

PRINCIPAL THEATER(S): Southern Greece

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Chafing under Macedonian hegemony, the Spartans took advantage of the absence of Alexander the Great in Persia and Egypt to mount a revolt.

OUTCOME: Sparta and its allies were defeated at Megalopolis.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

While Alexander the Great (356–23 B.C.E.) was off conquering Persia and occupying Egypt (*see* ALEXANDER'S PERSIAN CAMPAIGN and ALEXANDER'S OCCUPATION OF EGYPT), King Agis II (d. 400 or 398 B.C.E.) of Sparta, with financial support from the Persians, roused several of the Greek city-states to revolt against Macedonian rule. By 332 B.C.E. most of the states in southern Greece had joined his rebellion, and together they besieged Megalopolis. Alexander's general Antipater (c. 397–19 B.C.E.) marched south and defeated the rebels outside the city in 331. After his victory, Antipater sent substantial reinforcements of infantry and cavalry to Alexander, and they joined him in Egypt.

Spokane War *See* COEUR D'ALENE WAR.

Stilicho's Wars with the Visigoths (War between Alaric and Stilicho) (390–408)

PRINCIPAL COMBATANTS: Visigoths vs. Rome

PRINCIPAL THEATER(S): Italy, the Balkans, and Greece

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: For the Visigoths, loot, prestige, and tribute; for the Romans, defense of the empire against barbarian invasion and depredations; for factions in Rome and Constantinople, the reunification of the Roman Empire under their hegemony

OUTCOME: After Stilicho was executed for treason in his attempt to usurp the throne of the eastern Roman Empire, the Visigoths were left with a free hand in Italy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Treaty between Stilicho and Alaric at Verona, 403

Under the Emperor Theodosius (c. 346–95), the Roman Empire enjoyed a stable, relatively peaceful and unified period of existence. Then, in 390, the Visigoths broke a

decade-long peace (see VISIGOTH RAIDS ON THE ROMAN EMPIRE, EARLY) by allying with the Huns to attack Thrace. Led by an 18-year-old military genius named Alaric (c. 370–410), the barbarian tribes devastated the entire region. The Goths' savagery so incensed Theodosius that he took the field against Alaric himself. When the imperial general Promotus was killed in 392, Theodosius replaced him with the Roman general Flavius Stilicho (c. 359–410), a former Vandal who understood barbarian warfare. Invigorated by the new leadership, the Roman legions tracked down and defeated the barbarian coalition. Alaric was persuaded to quit the field with the majority of his Visigoth forces still intact in exchange for a command in the imperial army.

The encounter would be only the first of a series of engagements between the two soldiers, and though Stilicho always seemed to best Alaric, the Roman general never completely defeated the Visigoth warrior, whose prestige increased with each encounter, as did the gold in his coffers and the territory over which he held sway. In the balance usually hung the future of the Roman Empire.

Alaric's Roman patron, Theodosius, died in January 395, leaving behind two heirs—Arcadius (r. 395–408) and Honorius (r. 395–423), both minors. The struggle over which of the two would succeed their father split the Roman Empire into East and West. Stilicho was appointed regent to the 11-year-old Honorius, whose champions held sway in the western regions of the empire; Rufinus (d. 395) served as regent to Arcadius in the East. Rumors abounded that soon one of the generals would march against the other to reunify the suddenly sundered empire.

Following Theodosius's death, Alaric left the imperial army and returned to the Visigoths, who immediately proclaimed him their king. The death of the emperor, the partitioning of the empire, and Alaric's elevation to king of the Visigoths, seriously disturbed the status quo.

Divided Rome cut off its subsidies to the Visigoths, which Alaric used as his excuse to begin raiding again. South and west into the Balkans swept Alaric's hordes, where they were essentially unopposed by the Roman army, the leaders of which bickered among themselves back in Rome and Constantinople. Marching into Greece, the Visigoths pillaged with impunity, destroying the famed Temple of Demeter in 396. They sacked Piraeus, the port of Athens, as well as Corinth, Megara, Argos, and Sparta. In northern Greece, only Thebes held out against the barbarian invaders. Finally, Rome responded: Stilicho led an army down the Italian Peninsula and into Greece, catching Alaric in Thessaly. Before he could defeat his barbarian rival, he was transferred back to Italy and ordered to surrender his command in Thessaly, at the request of Arcadius, who—directed by Rufinus—feared the ambition of his brother and his brother's general more than he did Alaric's vandalizing. Arcadius was perfectly within his rights, Thessaly being considered a part of the Eastern

Empire, and he assured Rome he could handle the Visigoths himself without its aid. That, however, was easier said than done, and in 397 Stilicho was back in Greece, where he blockaded the Visigoths in Arcadia. His strategy was undercut, however, when once again he was ordered back to Italy, this time to punish the Moors for refusing to ship grain to Rome.

Meanwhile, Alaric devastated the crucial province of Epirus. Arcadius responded by offering Alaric a bribe, just as his father had—if Alaric would once more abandon the field, Arcadius would not only allow him to keep Epirus but also make him *magister militum* (military governor) of Illyricum. It was an unfortunate reward and major strategic error from Stilicho's point of view, though perhaps less so from that of Arcadius and Rufinus, in that it put the king of the Visigoths in a perfect position to harass the western Roman Empire.

After a period of relative calm, Alaric allied with the Gothic leader Radagaisus (d. 405) to form a Danubian confederation of the Goths, Visigoths, Huns, Vandals, and Alans. By 401 northern Italy was under attack (see VISIGOTHIC RAIDS ON THE ROMAN EMPIRE: ALARIC'S FIRST INVASION OF ITALY). Savaging the region, the barbarian confederation had just mounted an offensive on Milan when, again, Stilicho marched out to meet them. This time the Roman general had reinforcements from Britain and the Rhine frontier, and he drove the confederation armies westward. The bloody showdown came at the Battle of Pollentia on Easter Sunday, April 6, 402. Both sides sustained heavy casualties in a Pyrrhic victory for Stilicho. Although he had captured Alaric's wife and family and forced Alaric himself to retire from the peninsula and regroup in Illyricum, Stilicho's forces were in no condition to pursue the retreating barbarians.

Within a year Alaric took the field again, besieging Verona in 403. This time Stilicho could have massacred the Visigoths, except he desired Rome's eastern throne. He developed a treaty with Alaric in 403 aimed at fostering an invasion of the "younger" empire, a plan that seemed to founder almost from the start.

To begin with, Alaric demanded a cash subsidy from the Senate in Rome; against Stilicho's strict admonishments the Senate foolishly complied, again leaving the young barbarian general with a gain when he should have suffered defeat, perhaps destruction. Then Alaric's confederate Radagaisus, instead of joining the invasion of the Eastern Empire, hied himself off to Italy, where he meant to take up raiding again, perhaps looking for his own cash settlement. Stilicho closed the ports of Italy to all eastern ships and instructed Alaric to hold Epirus and Illyricum. Two pieces of news caused Stilicho to abort his campaign: false reports of Alaric's death and the news of Radagaisus's Gothic invasion.

Stilicho marched north to put down the Goths, defeating Radagaisus at Fiesole in 405. Seeing Stilicho's plot go

awry and taking note of the Gothic loss, Alaric broke the treaty agreement, marched into Noricum (southern Austria), and took over the Gothic base there. He demanded another cash subsidy from the Senate in return for his troubles in the aborted attempt to reunify the empire, intimating that if the senators refused to pay he would march on Rome. Again Stilicho vehemently opposed the extortion; again the Senate voted to pay. In 407, Alaric received 4,000 pounds in gold.

Before Stilicho could take to the field in a final attempt to defeat the barbarian who for 16 years had been a constant thorn in his side, his own troops mutinied. A rumor (perhaps true) had spread that he intended to put his son on the throne in the West. Brought before his men on an allegation of treason, he was tried and executed in 407. Alaric, now totally unopposed, ranged the Italian Peninsula wreaking havoc and laying siege to Rome three times (see VISIGOTHIC RAIDS ON THE ROMAN EMPIRE: ALARIC'S SECOND INVASION OF ITALY). He sacked the ancient imperial capital on August 24, 410 (see VISIGOTHIC SACK OF ROME), the first time in 800 years Rome had been taken and the end of the Roman Empire in the West.

Streltsy, Revolt of the (1698)

PRINCIPAL COMBATANTS: *Streltsy* (czar's musketeer bodyguards) vs. mercenaries in the service of Peter I

PRINCIPAL THEATER(S): Moscow, Russia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: *Streltsy* wanted to overthrow Peter I and replace him with his late half brother's regent, Sophia Alekseyevna.

OUTCOME: The revolt was suppressed, many *streltsy* were killed, and the military unit disbanded; Sophia Alekseyevna was effectively imprisoned for life.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 22,200 *streltsy*; number of Peter's mercenaries was greater

CASUALTIES: More than 1,000 *streltsy* were executed by torture.

TREATIES: None

The *streltsy*, an elite corps of Russian musketeers, based in the Kremlin, who served as the czar's bodyguard, became over the years a political cabal that played an increasingly influential role in Russian government. They were a large force organized into 22 regiments of 1,000 men each. On

May 15, 1682, after the death of Feodor III (1661–82), son and successor of Czar Alexis (1629–76), they rebelled, killed scores of boyars (noblemen), and made Alexis's daughter Sophia (1657–1704) regent over the young Peter I (the Great; 1672–1725), successor to Feodor III, his late half brother. Their plan was to put Ivan V (1666–96) on the throne. Ivan proved short-lived, however, and in 1698 Peter drove Sophia from power.

For his part, Peter did nothing to ingratiate himself with the *streltsy*. He brought unwelcome reforms to the musketeer corps, calling upon the *streltsy* for higher levels of performance, and when Peter left on his famous European tour—determined to study European government and culture, with an eye toward introducing more reforms into Russia—the *streltsy* conspired to overthrow the czar and return to power the regent, Sophia Alekseyevna.

During the summer of 1698, 2,200 *streltsy* marched in support of Sophia. Peter, however, had been informed of the scheme and quickly returned to Russia. He used mercenary troops to suppress the *streltsy*. Once the musketeers had been neutralized, Peter, in most respects an enlightened ruler, executed more than 1,000 of them by various tortures. The *streltsy* corps was officially disbanded. Peter also instituted harsh measures against any others who indicated opposition to his reign. As for Sophia, her life was spared, but she was effectively imprisoned for life in a strict convent.

Suburb, Revolt of the See ARRABAL, REVOLT OF THE.

Sudanese War (First Mahdist War) (1881–1885)

PRINCIPAL COMBATANTS: Mahdists vs. Anglo-Egyptian government forces

PRINCIPAL THEATER(S): Sudan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A popular religious leader, the Mahdi, sought to expel foreign rulers from the Sudan.

OUTCOME: Dervishes under the Mahdi and his successor successfully liberated the Sudan from Anglo-Egyptian rule.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Mahdists, 70,000; Anglo-Egyptian troops, 20,000

CASUALTIES: Each side lost more than 15,000 killed.

TREATIES: None

Also called the First Mahdist War, this bloody conflict began after the Muslim religious leader Muhammad Ahmad (c. 1843–85) had attracted renown as a holy man, living on the island of Aba in the White Nile, in Sudan. Around him a pious and militant sect gathered, including a core of especially militant Dervishes (as the British called them). Perhaps in response to his own obvious influence, Muhammad Ahmad proclaimed himself the Mahdi, the “expected guide”—in effect a prophet. He declared a jihad (holy war) against Egypt, which was controlled by British colonial forces based in Cairo.

In response to the Mahdi’s declaration, Anglo-Egyptian authorities sent two companies (200 men) of Egyptian troops to Sudan to take the Mahdi prisoner. The troops were attacked by the Mahdi’s now numerous followers at the Battle of Aba on August 12, 1881, and sent into retreat, with the loss of 120 men,

After the Battle of Aba, the Mahdi and his followers established a camp in the Jebel Masa mountains of Kordofan province, Sudan. They transformed this into a formidable stronghold. A 2,000-man Anglo-Egyptian expedition attacked the Mahdi’s stronghold, but was ambushed and virtually annihilated. Fourteen hundred of the 2,000 men engaged were killed, on December 8, 1881. Shortly after this, another expedition was also defeated in May 1882.

The Mahdi’s victories drew even more Muslims to the side of the triumphant leader. Worse for the British, their Egyptian troops began to refuse to fight the Mahdi, whom many believed possessed supernatural or, indeed, holy powers. Growing ever stronger, in 1882, the Mahdi assumed the offensive, launching attacks on government garrisons and outposts throughout Kordofan. Emboldened by the fall of one garrison after another, the Mahdi led an attack on the city of El Obeid, which was defended by 4,000 Egyptian soldiers. Here, however, the superior British arms of the Egyptian defenders took their toll and drove back some 30,000 Mahdists, of whom 10,000 were killed. The attackers regrouped and settled in for a siege, determined to starve the defenders out. When a relief column was sighted, the Mahdists ambushed it, killing 1,500 of the 3,000-man force and effectively cutting off El Obeid from the outside world. On January 17, 1883, El Obeid surrendered.

In crisis, the British government organized a new Anglo-Egyptian army, 11,000 strong and equipped with artillery, to retake El Obeid. The force was continually attacked as it marched on its objective. The attacks intensified until, during November 3–6, 1883, it was annihilated. Unable to hold the Sudan, the British advised the Egyptians to abandon the country to the Mahdists. To ensure the safe evacuation of the great trading city of Khartoum, the daring British general Charles George Gor-

don (1833–85)—known as “Chinese” Gordon (*see* TAIPING REBELLION)—was dispatched. Unable to bring himself to abandon Khartoum to the Mahdi, Gordon decided to take a stand and defend the city instead of evacuate it. With a garrison of 8,000 badly demoralized Egyptian soldiers, Gordon valiantly held Khartoum against a Mahdist siege for nearly a year, waiting in vain for a relief force, which was held up while the British government debated the Sudanese situation. At last, on January 26, 1885, some 60,000 Mahdists breached the city walls, overran the fortifications, and slaughtered all of the defenders, including Gordon. The belated relief force arrived on January 28, but quickly withdrew.

The Mahdi died of natural causes five months after the fall of Khartoum, but a successor, Abdullah (1846–99), led the Mahdists to victory over Anglo-Egyptian rule in the Sudan.

Fradin, *Jihad: The Mahdi Rebellion in the Sudan* (Lincoln, Neb.: Authors Choice, 2003); Heinz Halm, *Empire of the Mahdi: The Rise of the Fatimids* (Boston: Brill Academic, 1996).

Sudanese War (Second Mahdist War) (1896–1899)

PRINCIPAL COMBATANTS: Anglo-Egyptian forces vs. the Mahdists

PRINCIPAL THEATER(S): Sudan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The English and Egyptians wanted to regain control of the Sudan from the successor to the Mahdi, Khalifa Abdullah.

OUTCOME: The Mahdists were defeated, and the British and Egyptians established a joint (“condominium”) government in the Sudan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Mahdists, 50,000; Anglo-Egyptian forces, 26,000

CASUALTIES: Anglo-Egyptians, 1,200 killed; Mahdists, 36,000 killed or wounded

TREATIES: None

As a result of the SUDANESE WAR (1881–1885), Sudan came under the control of the successor to the Mahdi, Khalifa (“adviser”) Abdullah (c. 1846–1899). The Egyptians and British had relinquished Sudan in that war, but by the end of the century, the region was being eyed hungrily by Italy and France, so the British decided to act preemptively by retaking the region from Abdullah. The result was a new Sudanese war, which is also called the Second Mahdist War.

Under British general Horatio Kitchener (1850–1916), an Anglo-Egyptian army of 18,000 (including Sudanese auxiliaries), marched south out of Egypt and up the Nile

into Sudan. Supporting his land forces with a riverborne gunboat flotilla, Kitchener proceeded overland methodically, ensuring a permanent line of supply and communication by building a railroad as he advanced. The Mahdists resisted stoutly and frequently, but the Anglo-Egyptian force took Firket on the Nile on June 7, 1896, and Dongola on September 21, 1896. Abu Hamed fell next, on August 7, 1897. Firket resulted in the loss of 800 Mahdists killed, 500 wounded, and 600 made prisoners. Mahdist losses at Dongola and Abu Hamed were similar. From these captured strongholds, Kitchener was able to mount an effective assault against the Mahdists at the Battle of the Atbara River on April 8, 1898, at the juncture of the Atbara and the Nile. This victory drove 16,000 Mahdists from the field and killed 3,000 of them. However, Atbara provoked a massive counterattack by some 50,000 Mahdist dervishes against Kitchener's 25,800 troops at the Battle of Omdurman, a village on the Nile River, just north of Khartoum, the Sudan's principal city. The September 2, 1898, attack was repelled by the superior arms of the Anglo-Egyptian troops—especially their machine guns, which took a heavy toll on the dervishes, who lost some 11,000 killed and 11,000 wounded or captured. After the Mahdists withdrew, Kitchener emerged for a counterattack and drove the Khalifa's troops from the field. After this, Kitchener conducted a mop-up operation, pursuing survivors to Kordofan, where they took a strong defensive stand. Kitchener held the Mahdists under siege at Kordofan for more than a year, but on November 24, 1898, they finally broke, were overrun, and killed or taken prisoner. Khalifa Abdullah fell in battle.

The Anglo-Egyptian victory in the 1896–99 war succeeded in retaking Sudan, which was ruled by a British-Egyptian “condominium” government. It is estimated that 18 years of Mahdist revolt, rule, and warfare cost some 300,000 lives, mostly civilian Sudanese, and mostly as a result of disease, famine, and general privation brought on by incessant combat.

Suez War See ARAB-ISRAELI WAR (1956).

Sugar War (Dutch War in Brazil) (1624–1629)

PRINCIPAL COMBATANTS: The Netherlands vs. Spain
PRINCIPAL THEATER(S): Brazil

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Dutch West India Company sought to expand its trading territory to include Brazil and to force Portugal and Spain out of the region.

OUTCOME: The Dutch remained firmly in control of Brazil until 1654 when the Portuguese colonists rebelled against them.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

A fleet of 26 ships belonging to the Dutch West India Company sailed to Bahia, Brazil, in 1624 and seized control of the port, then under the control of Spain and its annexed territory, Portugal. Spain responded by sending 52 ships under Fadrique de Toledo Osorio (fl. 17th century) to Bahia to battle the Dutch invaders under Piet Heyn (1577–1629). The Spanish troops were successful, but the following year the Dutch returned to Bahia and recaptured the city. Heyn's exploits were further enhanced by his capture of a Spanish treasure ship off the coast of Cuba in 1628. With these new riches, the Dutch West India Company sent 67 ships and 7,000 men to seize northeastern Brazil. The Dutch remained in the territory until 1654 when Portuguese colonists rebelled against their rule.

Sukhothai Revolt See THAI WAR (1371–1378).

Swedish Civil War (1066–1134)

PRINCIPAL COMBATANTS: Various Swedish warlords vs. magnates

PRINCIPAL THEATER(S): Sweden

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Sweden

OUTCOME: By about 1134, Sverker succeeded in establishing a viable central government.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Sweden during the 11th century was less Christianized than Denmark and Norway and was, indeed, a wild place.

In 1060, Stenkil (c. 1028–66) succeeded to the throne but was defeated in battle by the forces of Denmark and Norway by about 1063. Stenkil left no heir when he died. That and general dissatisfaction within Sweden led to a period of civil wars, which extended well into the 12th century. The cause of the wars was a combination of disputed succession to the throne and sporadic pagan efforts to resist Christianization. It was not until the ascension of Sverker (r. c. 1130–56), a warlord from Ostergötland, to the Swedish throne that an effective central government was established. He came to power about 1130. Within four years, the civil wars had ceased—only to be renewed in 1160, between Sverker's descendants and those of the pretender Erik Jedvardsson (d. 1160).

Swedish Civil War (1562–1568)

PRINCIPAL COMBATANTS: Followers of John, duke of Finland vs. forces of Erik XIV, king of Sweden

PRINCIPAL THEATER(S): Sweden

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the Swedish throne

OUTCOME: Enlisting the loyalty of the Swedish nobles, discontent with Erik XIV's brutal and erratic rule, John overthrew his half brother and succeeded to the Swedish throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 1562 Erik XIV (1533–77) succeeded to the throne of Sweden, which was contested by his half brother John, duke of Finland (1537–92). John married the sister of Sigismund I Augustus (1520–72), king of Poland, in a move to cement a Polish alliance and with an eye toward capturing the Swedish throne. Erik acted preemptively against John, however, invading his stronghold town of Åbo (Turku, Finland) and taking John prisoner.

Erik charged John with treason, and in what many around the Swedish king considered a sign of insanity, began to murder certain members of the noble Sture family, whom Erik suspected of conspiring with John. John himself, however, was released from prison after relinquishing Finland to Erik. Well aware that the Swedish nobility had

come to distrust and fear Erik for his actions against the Stures and for his general and increasing mental instability, John stirred up a rebellion among the Swedish nobles. This soon developed into a full-scale civil war. John led forces against the fortress of Stockholm in 1568 while Erik celebrated his wedding. Once the fortress had been seized, John settled in for a siege of the city itself. Considering his situation hopeless, Erik abdicated in favor of John. Erik was promised personal safety, but John, taking no chances, had him imprisoned within a year after his abdication. He died behind bars in 1577, presumably by poisoning at the hands of his jailers and by order of his half brother. In the meantime, John became John III of Sweden.

Swedish War (1630–1635)

PRINCIPAL COMBATANTS: Protestant Sweden vs. Saxony (with lesser German states) and the Catholic Holy Roman Empire

PRINCIPAL THEATER(S): Germany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Sweden's Gustavus II sought to prevent the Holy Roman Empire from suppressing Protestantism in Sweden and northern Europe generally.

OUTCOME: Despite many Protestant triumphs, the war ended somewhat inconclusively when the Holy Roman Empire agreed to abandon its Edict of Restitution, which had been directed against the Protestants.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

At the key Battle of Breitenfeld, there were 26,000 Swedes and 18,000 Saxons against an Imperial force of 32,000 to 40,000.

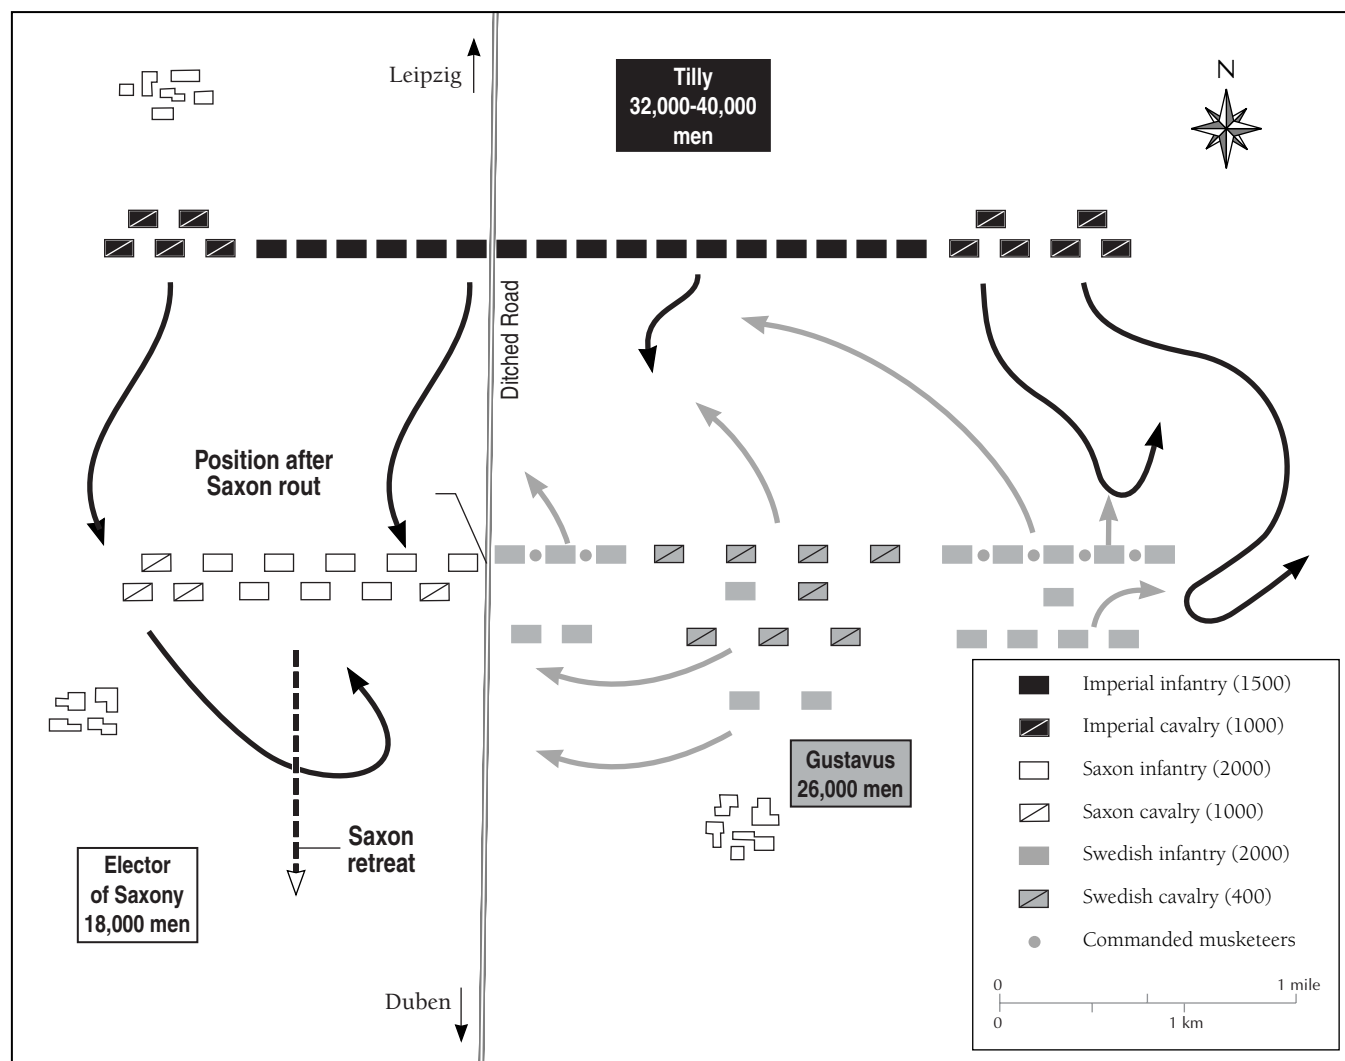

CASUALTIES: At Breitenfeld, the Imperial forces lost 7,000 men; the Protestants, 3,000.

TREATIES: Treaty of Bärwalde, 1631; no formal treaty ended the war

This war may be seen as a phase of the THIRTY YEARS' WAR from 1618 to 1648 or as a major conflict in its own right. As the forces of the Holy Roman Empire enjoyed triumph in Denmark during the Thirty Years' War, Lutheran king Gustavus II (1594–1632) of Sweden, fearing that the victories of the Holy Roman Empire would ultimately snuff out Protestantism in Sweden and the north generally, led an invasion force into Germany in June 1630 and began operations to seize Pomerania. In the meantime, under the brilliant general Johan, count of Tilly (1559–1632), the Imperial forces attacked, overran, and sacked Magdeburg, a free city dominated by Lutherans. This prompted the electors of Saxony and Brandenburg and a host of lesser German princes, all

Protestants, to throw their allegiance behind the campaign of Gustavus II. On the diplomatic front, Gustavus II had concluded the Treaty of Bärwalde, securing financial support from France, which, although Catholic, was opposed to the growing power of the Holy Roman Empire.

Thus, on September 17, 1631, Gustavus II entered the Battle of Breitenfeld, six miles north of Leipzig, well prepared and, despite Tilly's brilliance, emerged victorious. Gustavus's army at this battle consisted of 26,000 Swedes and 18,000 Saxons, against Tilly's 32,000 to 40,000 men. Although Tilly deployed his forces behind very well prepared defenses, his second in command, Count Gottfried zu Pappenheim (1594–1632), divided Tilly's forces by committing a major portion of the Imperial army to another battle north of Leipzig and east of Breitenfeld. In the end, Tilly lost 7,000 men, the Protestants 3,000. It was a key Protestant victory, and, viewed in the context of the Thirty Years' War, may be seen as the first Protestant triumph of that larger conflict.

Battle of Breitenfeld, September 17, 1631

After defeating Tilly, the Swedish-Saxon forces invaded the Rhineland, securing most of northwestern Germany and threatening the Holy Roman Empire itself by the beginning of 1632.

During April 15–16, 1632, the Swedish-Saxon forces engaged Tilly's army again, at the Battle of Lechs, which resulted in the death of the great Imperial general. Gustavus continued his triumphal campaign, taking Augsburg, Munich, and all of southern Bavaria. His objective now was Vienna, capital of the Holy Roman Empire. Count Albrecht von Wallenstein (1583–1634) led imperial forces against Gustavus at the Battle of Lützen on November 16, 1632. Gustavus's army outnumbered Wallenstein's 15,000 men, but Pappenheim approached southward from Halle with another 10,000, to even the odds. The Swedish-Saxon forces acted first, however, and attacked Wallenstein. While the battle was engaged, Pappenheim arrived with cavalry and checked a Swedish surge but was soon killed. Next to fall, however, was the great Gustavus, riddled with musket balls through the head, side, arm, and back. Command was assumed by Duke Bernhard (1601–75), and the death of their leader stirred Protestants to even more furious resolve. Under a withering attack, Wallenstein withdrew, abandoning his valuable artillery and leaving 3,000 men dead on the field. The Swedish-Saxon forces lost about half this number—but, most importantly, they had lost their great leader and would never regain the heart to continue the campaign. For their part, the imperial forces also suffered. Wallenstein's overweening political ambitions brought about his assassination in 1634, the same year in which the Swedish-Saxon army lost the important Battle of Nördlingen and, as a consequence, withdrew from Germany.

Ferdinand II (1610–70), the Holy Roman Emperor, agreed to abrogate the Edict of Restitution, which had been directed against the Protestants. This done, Saxony decided to make peace with the Holy Roman Empire, and the other German princes followed suit. Sweden, without the heart to go it alone, appealed for French aid but could no longer prosecute the war.

Swiss-Milanese War (1478)

PRINCIPAL COMBATANTS: Switzerland vs. Milan

PRINCIPAL THEATER(S): St. Gotthard Pass region, Italian-Swiss border

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Possession of the St. Gotthard Pass, a vital trade route.

OUTCOME: The Swiss asserted control of the pass, but the war failed to resolve permanently the border dispute between Switzerland and Milan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown, except that the Italian forces outnumbered the Swiss forces, which were nevertheless far more effective.

CASUALTIES: Unknown

TREATIES: None

A familiar dispute over the Swiss-Italian border triggered hostilities during this period, and when the Val Leventina renounced allegiance to Milan in 1475, Swiss troops laid siege against the city of Bellinzona near the disputed St. Gotthard Pass in the Lepontine Alps of southern Switzerland. The siege failed, but on December 28, 1478, a Swiss infantry force of pikemen and halberdiers triumphed over the Milanese at the Battle of Giornico. Numbers involved are not available, but it is known that the Swiss were significantly outnumbered, yet they fought with accustomed fierceness and overpowered the Milanese forces. This battle not only ended the war but also established the reputation of the Swiss soldier as a formidable mountain trooper, especially adept at close combat. No other army was ever more effective hand to hand than the Swiss with their trademark weapon, the long pike.

Despite the success at Giornico, most of the Swiss cantons declined to back further military effort against Milan, and possession of Bellinzona remained a subject of dispute until 1500, when the Swiss canton of Uri overran and took it.

Swiss Revolt (1798)

PRINCIPAL COMBATANTS: Switzerland vs. France

PRINCIPAL THEATER(S): Switzerland

DECLARATION: Berne (Swiss canton) on France, 1798

MAJOR ISSUES AND OBJECTIVES: Napoleon wanted to subjugate Switzerland.

OUTCOME: Within the space of less than a year, and often with decisive brutality, Napoleon conquered Switzerland.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: The bloodiest incident was the Massacre of Stanz, in which 1,127 citizens of the half-canton of Nidwalden were killed by French troops.

TREATIES: Peace accord concluded in July 1798

Switzerland sought to remain neutral in the wars that swirled around and followed the FRENCH REVOLUTION (1789–1799); however, the country occupied a strategic position on the Paris-Milan route via the Simplon Pass through the Alps. Napoleon Bonaparte (1769–1821) wanted to gain control of the pass. Berne dominated the Swiss region of Vaud at the end of the 18th century. Vaud chafed under its harsh rule, and Frédéric César de La Harpe (1754–1838) led a rebellion of Vaudois. Seeing an opportunity in this, Napoleon invaded Switzerland, grandly declaring his intention to help in the Vaudois struggle against Bernese oppression; however, instead of merely doing so, Napoleon brought about the creation of the Lemanic Republic from the Vaud region in January 1798. (It later became the canton of Lemane and then, in 1803, the canton of Vaud.)

Although the Lemanic Republic gave Napoleon control of the Simplon Pass, he soon hungered for more, and, by mid-1798, extended his foothold in Vaud to control of all Switzerland, which he caused to be renamed the Helvetic Republic. In response, Berne declared war on France and fought two battles against French forces on the same day, March 5, 1798. The Bernese emerged victorious from one encounter, but were badly beaten in the other and immediately sought terms with the French. The surrender of the Bernese prompted most of the other Swiss cantons to revolt against the French. Rebellions were successful at Lake Zug, Rothenturm, and Morgarten during the early spring of 1798, and the French called for a peace conference. This brought an armistice, during which most of the cantons accepted a French-authored constitution. One canton, Unterwalden, refused to observe the armistice or to accept the constitution and kept fighting through July, when the weight of far superior French forces finally brought about its surrender.

The final peace came in August 1798 and was entirely dictated by France, which dissolved the Swiss Confederation. (It would revive only with the final defeat of

Napoleon in 1815.) The French-dictated peace required Switzerland to render military aid to France and to permit Switzerland to be occupied by French forces. This peace did leave out the tiny half-canton of Nidwalden, which valiantly, stubbornly, and hopelessly held out against French domination until French forces killed 1,000 men, 102 women, and 25 children in the Massacre of Stanz in September 1798. As for the Helvetic Republic, it dissolved into anarchy and was replaced by a new Swiss Confederation created by Napoleon's Mediation Act of 1803.

Swiss War against Savoy (1403–1416)

PRINCIPAL COMBATANTS: Unterwalden and Uri (Swiss cantons; with later aid from other cantons) vs. duchy of Savoy

PRINCIPAL THEATER(S): Italian-Swiss border region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Alpine passes in the Italian-Swiss border region.

OUTCOME: Switzerland came to control the key passes by the end of the war.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

As the 15th century began the eight confederated Swiss cantons were surrounded by four menacing powers: the Hapsburg, Burgundy, Milan, and Savoy dynasties. During this period, the Italian-Swiss border was often the site of conflict (see SWISS-MILANESE WAR). Deciding that the best defense is a good offense, in 1403, two Swiss border cantons, Unterwalden and Uri, moved troops into the upper Ticino River valley as a first step in an aggressive southerly expansion into lands claimed by Italy. The bold move produced only desultory and sporadic armed exchanges until 1410, when the two invading cantons sought to force the war to a resolution by enlisting the aid of the

other cantons. Despite success in rallying such support, the duchy of Savoy was able in 1414 to push the Swiss out of the Val d'Ossola, which Unterwalen and Uri occupied. In 1416, the combined cantons invaded and managed to regain Val d'Ossola by the end of 1416. This took the major Alpine passes out of Italian control and into Swiss hands, thereby greatly increasing the integrity of the Swiss border region.

Syrian-Egyptian War, First (Seleucid War) (274–271 B.C.E.)

PRINCIPAL COMBATANTS: Syria (Seleucids) vs. Egyptians

PRINCIPAL THEATER(S): Palestine

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Syrians wanted to conquer Egyptian-held Palestine.

OUTCOME: Despite early land victories, the Syrians were beaten at sea and withdrew.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The death of Alexander the Great (356–23 B.C.E.) in 323 B.C.E. sent his Macedonian generals scurrying to carve up the empire he had won. The result was a century of struggle for control of Asia Minor known as the Wars of the DIADOCHI. By the third century B.C.E., the Ptolemies were dominant in Egypt, whereas the Seleucids controlled Syria. Then, in 274, Antiochus I Soter (324–261 B.C.E.) led the Syrians in an invasion of Palestine, which encompassed much of present-day Israel, Jordan, and Egypt. Ptolemy II Philadelphus (309–246 B.C.E.), ruler of Egypt, sent forces to combat the invaders. At first, the defenders fared poorly, especially on land. But after Ptolemy brought his powerful navy to bear, Antiochus suffered a series of defeats, and by the end of the war, Egypt controlled all the ports of the Mediterranean. The Syrians were forced to abandon their designs on Palestine, and defeat in this war heralded the decline of the Seleucid Empire, which would continue through the Second SYRIAN-EGYPTIAN WAR, the Third SYRIAN-EGYPTIAN WAR, the Fourth SYRIAN-EGYPTIAN WAR, and the Fifth SYRIAN-EGYPTIAN WAR.

Syrian-Egyptian War, Second (260–255 B.C.E.)

PRINCIPAL COMBATANTS: Syria (Seleucids) vs. Egypt

PRINCIPAL THEATER(S): Eastern Mediterranean coast

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Syria wanted to recover lands lost in the First Syrian-Egyptian War.

OUTCOME: The lands were recovered.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace was sealed by marriage.

The First SYRIAN-EGYPTIAN WAR resulted in the loss of Syrian port cities to Egyptian control. Antiochus II Theos (286–247 B.C.E.), who succeeded his father, Antiochus I Soter (324–261), renewed war with Egypt by invading Egyptian-held Syrian territory in 260. After recovering what his father had lost along the eastern Mediterranean, Antiochus restrained himself from invading Egyptian Palestine, as his father had done. Instead, he exploited the naval victory of Antigonos Gonatus (277–39 B.C.E.) against Ptolemy II Philadelphus (c. 308–246 B.C.E.) to coax favorable peace terms from Egypt. Antiochus II made peace with Egypt, relinquishing his wife, Laodice, to marry the daughter of Ptolemy II, Berenice (d. 246 B.C.E.).

Thus the Second Syrian-Egyptian War was concluded. Unfortunately, the marriage was marked by misery and discontent. Antiochus violated his peace agreement and left Berenice and their son to return to Laodice.

Syrian-Egyptian War, Third (Laodicean War; War of Berenice) (246–241 B.C.E.)

PRINCIPAL COMBATANTS: Syria (Seleucids) vs. Egypt

PRINCIPAL THEATER(S): Southern Asia Minor and Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The war was motivated by the Seleucid murder of the sister and nephew of Egypt's king; beyond this, the principal objective was conquest.

OUTCOME: The war brought the Ptolomies' empire to its height.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Second SYRIAN-EGYPTIAN WAR was ended, in part, by the marriage of Berenice (d. 246), daughter of Egypt's Ptolemy II Philadelphus (c. 308–246 B.C.E.), and the Seleucid (Syrian) king Antiochus II Theos (286–247 B.C.E.). Some time after, the couple had a son, Antiochus; however, growing restive in his marriage, Antiochus II Theos returned to the arms of his first wife, Laodice (fl. third century B.C.E.). Her lust for power, however, overcame any love she may have had for Antiochus II Theos, and she poisoned him and proclaimed her son, Seleucus II (d. 226 B.C.E.), king. In order to eliminate a rival claimant to the Syrian throne, in 246, she ordered her followers at Antioch to kill Berenice and the son she had borne to Antiochus II.

The murders moved her brother, Ptolemy II Euergetes (282?–21 B.C.E.), to make war on Syria. His army invaded Seleucid Syria and marched on Babylonia. His navy simultaneously recaptured the Mediterranean port towns gained by Egypt in the First SYRIAN-EGYPTIAN WAR and lost in the Second. Beyond this, a large portion of southern Asia Minor and Syria, as well as certain Aegean ports, fell to the army and navy of Ptolemy II Euergetes. In the cause of vengeance for the deaths of Berenice and her son, Ptolemy II Euergetes built his family's Egyptian empire to its greatest extent.

Syrian-Egyptian War, Fourth (219–217 B.C.E.)

PRINCIPAL COMBATANTS: Syria (Seleucids) vs. Egypt

PRINCIPAL THEATER(S): Palestine

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Syria wanted to recover territory lost in the Third Syrian-Egyptian War.

OUTCOME: After an initially successful invasion of Palestine, the Seleucids were defeated and withdrew.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Third SYRIAN-EGYPTIAN WAR was disastrous for the Seleucid Empire, which had already suffered precipitous decline as a result of the First SYRIAN-EGYPTIAN WAR and the SECOND SYRIAN-EGYPTIAN WAR. When he ascended the Seleucid throne in 223, Antiochus III (the Great; 242–187 B.C.E.) set about recovering what had been lost. But it was, in fact, a lost cause. The Seleucid dynasty was greatly diminished. Antiochus III mustered an army and invaded Egyptian-held Palestine. Remarkably, he advanced south almost to the Red Sea. But, in defense of Egypt, Ptolemy IV Philopator (c. 244–203 B.C.E.) assembled an army of his own and, in 217, fought the Seleucids at Raphia (Rafa). The invaders, deep in Egyptian territory, were cut off from sources of supply. Ptolemy won a complete victory, sending the Seleucid army in retreat from Palestine, which Egypt reclaimed.

Syrian-Egyptian War, Fifth (202–198 B.C.E.)

PRINCIPAL COMBATANTS: Syria (Seleucids) vs. Egypt

PRINCIPAL THEATER(S): Palestine

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Having suffered disastrous defeat in the Fourth Syrian-Egyptian War, the Seleucid Syrians wanted to recover Palestine.

OUTCOME: The Egyptians suffered total defeat, losing Palestine and possessions in Syria and Asia Minor.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace agreement was sealed by marriage.

Stunned by their severe defeat in the Fourth SYRIAN-EGYPTIAN WAR, the Seleucid Syrians, under Antiochus III (the Great; 242–187 B.C.E.), made another attempt to invade

1110 Syrian-Parthian War (141–139 B.C.E.)

and take Palestine. Again, the Seleucids were hampered by a lack of support from neighbors. Nevertheless, Seleucid forces routed the Egyptians at the Battle of Panium (or Panion) in 198, sending the Ptolemaic army under Scopas (fl. second century B.C.E.) into disarray so complete that Antiochus pressed on to take other Ptolemaic territories in Syria and southeast Asia Minor, with the exception of the island of Cyprus. Antiochus gained most of Egypt's Asian territories.

A peace agreement was concluded, which was sealed by marriage: Antiochus gave his daughter, Cleopatra I (fl. 193–176 B.C.E.) to Ptolemy V Epiphanes (210?–181 B.C.E.), in marriage. Despite this triumph, the Seleucid Empire continued to decay internally.

Syrian-Parthian War (141–139 B.C.E.)

PRINCIPAL COMBATANTS: Syria (Seleucids) vs. Parthia

PRINCIPAL THEATER(S): Asia Minor

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Syria intervened in order to liberate Greek city-state oppressed by Parthia.

OUTCOME: Despite early victories, the Syrian army was checked and Demetrius, the Seleucid king, was made a captive.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Mithradates I (fl. 171–38 B.C.E.)—also called Arsaces VI—king of Parthia, led his armies to victory against a number of Greek cities in Asia Minor. He made vassals of his conquests, oppressing them mercilessly. At length, the Greeks appealed to the Seleucid king of Syria, Demetrius II Nicator (d. c. 125 B.C.E.), to come to their aid and liberate them. After much delay, in 141, Demetrius agreed. He invaded Parthia, enjoying a string of victories that enabled him, in 140, to drive the Parthians out of Mesopotamia altogether. The following year, however, Demetrius was

betrayed by his own commanders. His army defeated, he was taken prisoner.

Demetrius languished as a captive for 10 years, a period during which Parthia, like its ally Egypt, declined. In 130, Demetrius's brother Antiochus VII Euergetes, or Sidetes (c. 158–129 B.C.E.), ascended the Syrian throne and fought the SYRIAN-PARTHIAN WAR (130–127 B.C.E.), which resulted in the expulsion of the Parthians from Syria and the acquisition of territory in Parthian-held Media. Among the conditions of peace was the release of Demetrius in 129. That the Parthians so readily agreed to this suggests that they believed the release was actually a cleverly subversive move. The Parthians reasoned that Demetrius and Antiochus would now contend for the throne, causing a civil war in Syria, which would create an opening through which the lost territory might be regained. However, Antiochus fell in battle during a Parthian raid, leaving Demetrius unchallenged, and no civil war erupted.

Syrian-Parthian War (130–127 B.C.E.)

PRINCIPAL COMBATANTS: Syria (with Scythian allies) vs. Parthia

PRINCIPAL THEATER(S): Parthia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Syria wanted to retake lands lost to Parthia.

OUTCOME: Both the Syrian and the Parthian kings perished in battle. The Syrians were partially successful in battle but nevertheless failed to retake the lost lands.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Hoping to build on his triumph in the SYRIAN-PARTHIAN WAR (141–139 B.C.E.), Antiochus VII Euergetes or Sidetes (c. 158–129 B.C.E.) penetrated more deeply into Parthia to regain more territory. Victorious in battle, he compelled the Parthian king Phraates (d. 128 B.C.E.) to free his brother, Demetrius II Nicator (d. c. 125 B.C.E.), whom he had held for 10 years.

Still hungry for conquest, Antiochus pressed his campaign into Media, hoping to gain more territory. However,

he fell in battle against Phraates's forces at the Median capital of Ecbatana (Hamadan, Iran) in 129. Despite this blow, the Scythian allies of Antiochus fought on, invading Parthia, where they reinforced the Syrian army. Stunned by this development, Phraates withdrew to regroup his forces in order to defend against the new threat. While personally leading a counterattack against the now combined Scythian and Syrian forces, Phraates was killed in battle. However, the Seleucid Syrians proved unable to retake the Parthian lands they had formerly controlled, and the Seleucid Empire resumed its long and now quite irreversible decline.

Syrian-Roman War (192–189 B.C.E.)

PRINCIPAL COMBATANTS: Syria (Seleucids) vs. Rome (with Rhodes and Pergamum)

PRINCIPAL THEATER(S): Asia Minor

DECLARATION: Rome on Syria, 192 B.C.E.

MAJOR ISSUES AND OBJECTIVES: Syria wanted Rome's compliance in the conquests of its ally Aetolia.

OUTCOME: Rome attacked a Syrian fleet, triggering a war that proved disastrous for the Syrians, who lost their seaports and became landlocked.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Syrian forces, 75,000; Roman-Pergamenian forces, 40,000

CASUALTIES: Unknown

TREATIES: None

Following the defeat of Macedonia at the Battle of Cynoscephalae in 197, during the Second MACEDONIAN WAR, the Aetolians of central Greece jockeyed for position to take Macedonia's place as the dominant state in Greece. After attacking the allies of Rome among the Greek states, they appealed to Syrian king Antiochus III (the Great; 242–187 B.C.E.) to intervene with Rome on their behalf.

Taking this as an invitation from the Aetolian League to invade Greece, Antiochus sailed with an army of 10,000 across the Aegean in 192 and was met by a Roman army at Thermopylae. Under the leadership of M. Acilius Glabrio (d. 152 B.C.E.), the Roman forces defeated Antiochus, who fled with the remainder of his forces back to Ephesus.

However, the naval fleets of Rhodes and Pergamum collaborated with the Romans against Antiochus's navy, winning three victories at sea, first at a location between Ionia and Chios (191 B.C.E.), then at Eurymedon and Myonessus, both in 190 B.C.E. The Romans capitalized on these triumphs by invading Asia Minor with an army under the command of two great generals, Publius Cornelius Scipio Africanus (237–183 B.C.E.) and his brother Lucius Cornelius Scipio (fl. second century). They met the Syrians at the Battle of Magnesia near Smyrna in December 190. After initial gains, Antiochus III made a serious tactical blunder by pursuing a flank of the Roman cavalry too far, laying himself open to encirclement by another Roman flank. This infantry force destroyed most of the Syrian army. As a result, Syria gave up all of its coastal territories, surrendered all but 10 of its warships, gave up its war elephants, and agreed to pay a heavy indemnity. Landlocked, Syria's power was greatly diminished.

Syrian War with Pergamum (224–221 B.C.E.)

PRINCIPAL COMBATANTS: Syria (Seleucids) vs. Pergamum

PRINCIPAL THEATER(S): Northern Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Pergamum wanted to expand into northern Syria.

OUTCOME: Syria successfully defended its territory.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Pergamum, a Greek city-state in northern Asia Minor, was founded by Alexander the Great (356–23 B.C.E.). In 230, Attalus I Soter (269–197 B.C.E.), king of Pergamum, triumphed over the Galatians, who lived in Galatia, central Asia Minor. This victory emboldened him to further expand his territory, at which he proved quite successful until his acquisitive course ran afoul of the Seleucid Syrians under Antiochus III (the Great; 242–187 B.C.E.).

Attalus invaded northern Syria, taking much territory there. In the absence of Antiochus, who was fighting in Palestine, his cousin, Achaeus (d. 214 B.C.E.), led an army against Attalus. In several hard-fought battles, Achaeus emerged victorious, slowly pushing the Pergamum invaders out of Syrian territory. By 221, Pergamum had contracted within its original borders. On his return from

112 Syrian War with Pergamum

Palestine, Antiochus attacked Pergamum and thereby regained control of most of central Asia Minor. Pergamum receded into the status of a marginal power.

Pergamum (Champaign-Urbana: University of Illinois Press, 1964); George Rawlinson, *Seven Great Monarchies of the Ancient Eastern World: Parthia and Sassania*, vol. 3 (Piscataway, N.J.: Gorgias, 2003); Susan Sherwin-White and Amelie Kuhrt, *From Samarkhand to Sardis: A New Approach to the Seleucid Empire* (Berkeley: University of California Press, 1993).

T

Taiping Rebellion (1850–1864)

PRINCIPAL COMBATANTS: Taiping rebels vs. Manchu government forces (with aid from the United States and Britain)

PRINCIPAL THEATER(S): Southern China

DECLARATION: The Taiping dynasty was proclaimed in 1852.

MAJOR ISSUES AND OBJECTIVES: By the mid-19th century the Manchu (Ch'ing) dynasty was so weak and corrupt that rebellion was almost inevitable.

OUTCOME: The Taiping rebels caused massive devastation and were remarkably successful until foreign powers intervened on the side of the Manchu.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: In the millions, among civilians

TREATIES: None

By the mid-19th century, the Manchu, or Ch'ing, dynasty of China was faltering badly as the nation became increasingly riddled with political, religious, and cultural factionalism. In an effort to purge China of foreign influence, Manchu authorities dispatched imperial troops to attack and dismantle a religious society based, at least in part, on Protestantism. To the dismay of the Manchus, the members of the society defeated the troops sent against them, and the scholar who led the organization, Hong Xiuquan (Hung Hsiu-ch'uan; 1814–84), immediately emerged as a popular political leader. His religious organization became the ad hoc nucleus of a rebellion against Manchu rule, a rebellion located primarily in southern China.

The first major objective of the rebellion was to acquire arms, accomplished by an 1852 assault on the government arsenal at Yochow. The rebels captured and looted this installation, then swept down the valley of the Yangtze River and attacked Nanking, which they overran and seized. Here Hong Xiuquan proclaimed a new dynasty for China, the Taiping—"Great Peace."

Now Taiping rebels raided and ravaged the countryside and villages throughout the south, moving with such ferocity and swiftness that imperial forces were almost totally ineffective against them. At last, in 1860, European and U.S. interests decided to exploit the unrest in China to win concessions from the Manchu government in exchange for assistance in suppressing the rebellion. U.S. military authorities helped arm and more effectively organize imperial troops to create the "Ever Victorious Army." In 1862, a British military officer, Charles George Gordon (1833–85), assumed command of the Ever Victorious Army and began a concerted campaign of reconquest, taking back from the Taiping rebels many of the towns, villages, and settlements they had captured. (For his exploits, Gordon would be known henceforth as "Chinese" Gordon; *see* SUDANESE WAR [1881–1885].) The success of the Ever Victorious Army inspired more Chinese who were loyal to the Manchu government to form volunteer armies of their own; they proved effective in suppressing the rebels.

The great turning point of the Taiping Rebellion came in July 1864, with the retaking of Nanking. By the following year, the last of the Taiping rebels were mopped up. Nevertheless, the cost of the rebellion had been tremendous. Either through direct military action or indirectly,

because of economic distress and the ruin of crops, millions of Chinese died during 1850–64. The rebellion fatally undermined the Manchu dynasty, which became increasingly dependent on the West and incompetent to govern the Chinese people.

Takauji, Revolt of (1335–1392)

PRINCIPAL COMBATANTS: Ashikaga Takauji vs. Go Daigo II

PRINCIPAL THEATER(S): Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Takauji sought to remove Go Daigo as emperor.

OUTCOME: Ultimately Takauji prevailed when Go Daigo's successor abdicated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: 1392 abdication of Go Daigo's successor

Ashikaga Takauji (1305–58) was a Hojo general who deserted the Hojo shogun (military overlord) to join Emperor Go Daigo II (1287–1338) in revolt against the Hojo. For his role in the successful revolt, Takauji expected to be made shogun. Go Daigo, however, insisted on personal imperial rule, whereupon Takauji rebelled against him, beginning in 1335. By 1338, Takauji had succeeded in expelling Go Daigo from the capital city of Kyoto. He set up another member of the royal family as emperor, this time with himself as dictator and shogun. Go Daigo, however, did not capitulate. Operating from a base in the mountains of Yoshino, south of Nara, he continued to oppose Takauji. The war continued without decision for a total of 56 years, ending in 1392, when Go Daigo's successor agreed to abdicate.

Talambo Affair (1862)

PRINCIPAL COMBATANTS: Peru vs. Spain

PRINCIPAL THEATER(S): Peru (Talambo plantation; Chinch Islands)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Spain's contempt for Peru's independence; Peruvian maltreatment of Basque immigrants

OUTCOME: Spain's seizure of the Chinch Islands led to a military coup in Peru and a declaration of war against Spain.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Minimal

TREATIES: January 27, 1865

In the mid-19th century long-standing troubles of Peru with Spain, which refused to recognize the independence of the South American country, came to a climax when a Spanish squadron seized Chinch Islands, 12 miles off Pisco on the Peruvian coast. The move came in response to the maltreatment of Basque immigrants in the so-called Talambo incident.

In 1862, Peruvian workers had assaulted a group of Basques laboring on the Talambo plantation. Spain sent Fernando de Naronha (fl. 1860s), a royal viceroy, to Peru to demand compensation. Peru, resentful of Spanish arrogance and Spain's contempt for its independence, refused to receive the envoy. Spain then dispatched troops to the Chinch Islands, valuable for their guano. The squadron took the islands on April 4, 1864. In the treaty that followed in 1865, there was little President Juan Antonio Pezet (1806–after 1871) could do but accede to Spanish demands to pay 3 million pesos for the return of Chinchas. Although Spain virtually recognized Peruvian sovereignty in the treaty, it did not do so officially, and the indemnity infuriated most Peruvians. Pezet was driven from office by General Ignacio Prado, who became president and declared war on Spain on January 14, 1866.

Taliban, United States's War against

See UNITED STATES'S "WAR ON TERRORISM."

Taliban Conquest of Afghanistan (1994–1996)

PRINCIPAL COMBATANTS: Taliban faction vs. competing Mujahideen forces

PRINCIPAL THEATER(S): Afghanistan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Afghan government

OUTCOME: The Taliban seized control of the Afghan government, but faced continuing opposition from a small group of Mujahideen

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Taliban numbers unknown; post-1996 Mujahideen resistance, about 15,000

CASUALTIES: More than 50,000 killed in Kabul during 1992–96

TREATIES: None

The AFGHAN CIVIL WAR (1979–1992) ended with the overthrow of the government of President Mohammed Najibullah (d. 1996) by the Afghan army on April 16, 1992. This cleared the way for competing factions of the Mujahideen, the popular military front that had defeated the Soviets during the civil war, to fight one another. Between January 1994 and February 1995, the Afghan capital city, Kabul, fell under almost continual rocket and artillery attack, a disaster that killed some 8,000 citizens and wounded perhaps 30,000 more.

From this chaos, a fundamentalist Muslim organization known as the Taliban arose and quickly gained power. First coming to prominence in the southern part of the country, it soon pushed northward, gathering strength and sweeping aside opposition. On September 27, 1996, Kabul fell to the Taliban, which sought out the deposed Najibullah and hanged him.

The city over which the Taliban now presided was 75 percent destroyed. Nevertheless, from the devastated capital the Taliban introduced an iron discipline into Afghan civil and religious life. Opposition was not tolerated, and by the end of 1996 the Taliban was in control of virtually all of the country, save for some diehard Mujahideen groups, fielding perhaps 15,000 men and under the nominal command of Ahmad Shah Massoud (1956–2001). A low-level guerrilla war against the Taliban continued. The anti-Taliban opposition, which barely held its own, would be boosted to victory by U.S. intervention in the UNITED STATES'S "WAR ON TERRORISM," which followed the terrorist attacks of September 11, 2001, against the United States.

Tamerlane's First War against Toktamish (1385–1386)

PRINCIPAL COMBATANTS: Tamerlane vs. Toktamish

PRINCIPAL THEATER(S): Urganj, Khwarizm, and Transoxiana (Uzbekistan and parts of Turkmenistan and Kazakstan)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Tamerlane was determined to punish and suppress the rebellious Toktamish, who attempted to take from him Urganj.

OUTCOME: Toktamish was driven out of the disputed region, and Tamerlane led terror raids throughout Urganj to punish those who had sided with Toktamish.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Toktamish (d. 1406) was a Mongol warlord whose rise was fostered by Tamerlane (Timur Leng [1336–1405]), the great Barlas Turk regarded as the greatest conqueror since Genghis Khan (c. 1167–1227). The son of a minor Tatar prince, Toktamish had been involved in a bid for the throne of Sarai in the 1370s. As a result of his failure there, he was forced to flee to Tamerlane's court, where he found not only respite, but also backing for a return to Sarai. This time he vanquished the tribal leaders who had opposed him and went on in 1381 to reunite for a brief time the major components of the tribal structure of the Golden Horde (see GOLDEN HORDE DYNASTIC WAR) and to attack Moscow. By the mid-1380s, he set about consolidating his gains.

In helping to elevate Toktamish to the Mongol throne, Tamerlane had assumed control of the territory of Urganj, formerly occupied by the Golden Horde. But as Toktamish's power grew, he was inevitably drawn into a struggle with Tamerlane himself. Violating the obligation of loyalty and fealty the Mongol khan owed to Tamerlane, Toktamish decided to take Urganj from the Turkish conqueror. When Tamerlane was absent on campaigns in the Caucasus, Toktamish conducted a furtive military action to take the Urganj capital, Samarkand, in 1385.

Although Toktamish enjoyed success in his advance on the capital, news of this campaign reached Tamerlane, who rapidly led an army from the Caucasus to Samarkand and actually reached the city ahead of Toktamish's forces. Seizing the initiative, Tamerlane made a preemptive attack, using his relatively small force against Toktamish's much greater army. Toktamish, however, was deceived

into believing this force was merely the vanguard of a much larger body of troops, and he quickly withdrew. Tamerlane gave chase during 1386, ravaging Urganj and taking revenge on the Jats of the White Horde, who had sided with Toktamish. A showdown with Toktamish himself would have to await a new campaign, TAMERLANE'S SECOND WAR AGAINST TOKTAMISH.

See also TAMERLANE'S INVASION OF INDIA.

Tamerlane's Second War against Toktamish (1391–1395)

PRINCIPAL COMBATANTS: Tamerlane vs. Toktamish

PRINCIPAL THEATER(S): Russia and Ukraine

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Tamerlane continued his pursuit of vengeance (begun in Tamerlane's First War against Toktamish) against the treacherous Toktamish.

OUTCOME: Toktamish was defeated at every turn and lost control of the Golden Horde, which quickly deteriorated as a military and political power; Toktamish himself continued to evade capture by Tamerlane.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Tamerlane (Timur Leng [1336–1405]) pursued his erstwhile protege Toktamish (d. 1406) through Urganj during TAMERLANE'S FIRST WAR AGAINST TOKTAMISH (1385–86), visiting great destruction on those populations that had aided him but failing to take Toktamish himself. In 1391, Tamerlane pursued Toktamish into the territory of the Bulgars (Great Bulgar state) and received intelligence that Toktamish and his forces were camped on the west bank of the Ural River. Logistically, Tamerlane's forces were not in an advantageous position for attack, because extensive reaches of desert separated his army from that of Toktamish. Nevertheless, determined to deal with the rebel once and for all, Tamerlane ordered the long, punishing march. As he approached the rear guard of Toktamish's army, Toktamish attempted to divert Tamerlane and his forces with bribes and protests of renewed loyalty. Tamerlane brushed these aside and attacked.

In the three-day-long Battle of the Steppes (at Kandurcha), Tamerlane fared poorly at first; Toktamish counterattacked his left flank and nearly rolled it up. The timely arrival of well-positioned reserves turned the tide; they circled around Toktamish and broke through his rear

positions. The effect of this action was intensified by rumors that Toktamish had been killed. Demoralized, Toktamish's forces were doomed to defeat. Toktamish himself, however, once again eluded Tamerlane and his desire for personal vengeance. He escaped to form an alliance with the Mamluk sultan of Egypt. Reorganizing a force incorporating the sultan's men, Toktamish made hit-and-run raids against Tamerlane's frontier throughout 1394. For his part, Tamerlane took a new tack, invading Russia and attacking Toktamish's Golden Horde capital, Sarai, which he sacked. Tamerlane then installed a new khan, dependent wholly on himself, and went on to seek out a fresh, direct confrontation with Toktamish.

In 1395, Tamerlane located Toktamish's forces at the Terek River and attacked him there, routing his army. Tamerlane once again pursued Toktamish, chasing him deep into the Ukraine. Periodically, Toktamish tried—always without success—to effect a reconciliation with his nemesis. On the run, Toktamish lost control of the Golden Horde, which quickly deteriorated as a political and military force as its leaders continued to fight each other for supremacy. In the end, all their subsequent attempts to restore political stability and commercial viability to the steppes failed.

Tamerlane's Invasion of India (1398–1399)

PRINCIPAL COMBATANTS: Mongol forces of Tamerlane vs. various defenders of India

PRINCIPAL THEATER(S): India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Unclear; the campaign constituted an extended raid; no territory was occupied.

OUTCOME: Tamerlane penetrated into India, carving a swath of devastation, then, although unopposed, withdrew.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: At Panipat (1398), Indian losses exceeded 100,000; Indian civilian casualties were devastating.

TREATIES: None

In the course of his conquests (*see* TAMERLANE'S FIRST WAR AGAINST TOKTAMISH and TAMERLANE'S SECOND WAR AGAINST TOKTAMISH), Tamerlane (1336–1405) deployed his advance units and entire right wing, under the command of his grandson, to the Punjab. These troops captured Multan in the spring of 1398. In the meantime,

Tamerlane's left wing invaded India via Lahore. Tamerlane personally led a force of handpicked men over the formidable Hindu Kush, turning south in September 1398 to join with his principal forces east of the Indus River. Once united, Tamerlane led his armies against Delhi, bringing the maximum of destruction in his wake.

On December 17, 1398, Tamerlane engaged the army of Mahmud Tughluk at the Battle of Panipat, defeating it totally, then executing 100,000 Indian prisoners of war. The victory cleared the way to Delhi, which fell instantly and was subjected to wholesale devastation.

After completing the rape of Delhi, Tamerlane advanced northward into the foothills of the Himalayas, where he stormed the fortress town of Meerut, overrunning that purportedly impregnable position. This accomplished, he turned west and marched back into the Punjab, cutting a wide swath of total destruction.

In March 1399, Tamerlane left India without occupying any territory. History has never adequately explained his motive for this campaign, which, at this historical remove, appears nothing more or less than an exercise in senseless destruction.

Further reading: Beatrice Forbes Manz, *The Rise and Rule of Tamerlane* (New York: Cambridge University Press, 1999); David Nicolle, *The Age of Tamerlane* (London: Osprey, 1990); Edward D. Sokol, *Tamerlane* (Lawrence, Kans.: Coronado, 1977).

Tang-Nanchao Wars (829–874)

PRINCIPAL COMBATANTS: Tang (T'ang) dynasty forces vs. armies of the Nanchao kings

PRINCIPAL THEATER(S): China and Vietnam

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Nanchao attempted to overthrow and replace the Tang dynasty.

OUTCOME: The Tang prevailed but suffered irreversible loss of influence and power.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Tang dynasty of China suffered decline during the ninth century, and as central authority diminished, the strength and boldness of warlords increased. Vassals of the Tang, most notably the Nanchao kings of Yunnan, openly rebelled. From 829 to 874, a state of chronic, if intermittent, warfare prevailed between the forces of the Tang and those of the Nanchao kings. Three times Nanchao armies invaded regions controlled by the Tang. Ch'engtu (Chengdu) was overrun twice, in 829 and again in 874, and Hanoi was invaded in 863. On all occasions, the Tang managed to

expel the Nanchao invaders. However, the war took a steady toll on the already weakening Tang, leaving Tang regions vulnerable to attack by Huang Zhao (Huang Ch'ao; d. 884), a popular Robin Hood figure who during 875–84 overran Loyang and Chang'an, declaring himself emperor in 880. Huang was finally defeated in 882—and committed suicide two years later—but the Tang, diminished in resources after each assault, was clearly doomed.

Tang-Tibetan War (848)

PRINCIPAL COMBATANTS: Forces of the Tang (T'ang) dynasty vs. Tibetans occupying Gansu (Kansu)

PRINCIPAL THEATER(S): Gansu, northwest China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Tang sought the expulsion of invading Tibetans.

OUTCOME: Despite the general decline of Tang power, the Tibetans were swiftly expelled.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the long decline of China's Tang dynasty in the ninth century, the Tibetans took advantage of the beleaguered state of Tang affairs—particularly the preoccupation with warding off invasions by the Nanchao kings of Yunnan (see TANG-NANCHAO WARS)—to attempt the recapture of Gansu in northwest China. Tibetans gradually occupied the region before they were expelled in a swift military action by the Tang in 848.

Taranaki War, First (1860–1861)

PRINCIPAL COMBATANTS: Great Britain vs. the Maori tribes

PRINCIPAL THEATER(S): Taranaki region, North Island, New Zealand

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The British sought possession of land ceded by a certain Maori sub-chief.

OUTCOME: Most of the land was seized and an uneasy truce maintained after retrocession of a small parcel of land to the Maori.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

1118 Taranaki War, Second

CASUALTIES: The entire period of the First, Second, and Third Taranaki Wars resulted in the loss of 54 percent of the Maori population, at least 27,000 persons.

TREATIES: Truce of 1861

In colonial New Zealand, as in the Indian Wars in the United States throughout the 19th century, tribal members frequently disputed land concessions and other agreements chiefs and other tribal members made with white government authorities. In 1859, a minor chief of the Maori tribe in the Taranaki region of North Island sold to British colonial interests land along the Waitara River. His tribe repudiated the cession and resisted confiscation of the land. Although the British had concluded the Treaty of Waitangi in 1840, whereby tribal veto of various agreements was allowed, authorities violated the treaty by attacking Maori strongholds, called *pas*. Resistance was stiff, and the British made little headway until they finally succeeded in overrunning the critical Te Arei Pa in 1861. This prompted the Maori to conclude a truce in return for the British retrocession of a modest parcel of tribal land.

The truce was an uneasy one, frequently punctuated by outbursts of violence over a 12-year period. It is estimated that during this time significantly more than half of the Maori population of 50,000 was killed. Historians sometimes refer to this period as the Second Maori War; others recognize a Second TARANAKI WAR (1863–64) also called the Waikato War, and a Third TARANAKI WAR (1864–72).

Further reading: Keith Sinclair, *The Origins of the Maori Wars* (Wellington: New Zealand University Press, 1957).

Taranaki War, Second (Waikato War) (1863–1864)

PRINCIPAL COMBATANTS: Great Britain vs. the Maori tribes

PRINCIPAL THEATER(S): Waikato River area, North Island, New Zealand

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The British sought to occupy the area.

OUTCOME: Guerrilla resistance was suppressed in the Waikato River region but persisted elsewhere on North Island through 1872.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Also known as the Waikato War and treated by some historians as part of a larger Second Maori War, this was a

resumption of the conflict taken up in the First TARANAKI WAR, which had ended in an uneasy truce. In April 1863, Sir George Grey (1812–98), the British governor-general of New Zealand, laid a military road directly into the disputed area of Waikato River. To do this, and to clear the way for European settlers, Grey attacked the Maori, driving them from Tataramaika “block.” The Maori responded with guerrilla attacks, which the British sought to suppress by neutralizing the *pas*, the Maori stronghold-fortresses, and counterattacking with riverborne gunboats and special ranger-style military units. The British were quite successful, suppressing guerrilla forces at Meremere and Rangiriri in 1863 and, the next year, destroying Orakau Pa. These triumphs put an end to Maori resistance in the Waikato River region, but elsewhere on New Zealand’s North Island guerrilla warfare continued as the Third TARANAKI WAR.

Further reading: Keith Sinclair, *The Origins of the Maori Wars* (Wellington: New Zealand University Press, 1957).

Taranaki War, Third (1864–1872)

PRINCIPAL COMBATANTS: Great Britain vs. the Maori tribes

PRINCIPAL THEATER(S): North Island, New Zealand

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The British—especially the British East India Company—sought to settle Maori lands.

OUTCOME: The war produced no clear-cut victor; however, by 1872, with all sides exhausted and the Maori resistance all but crushed, the war petered out.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown; but see this heading in First Taranaki War.

TREATIES: None

This was a resumption of the conflict between the British and Maori on New Zealand taken up in the First TARANAKI WAR (1860–61) and the Second TARANAKI WAR (1863–64). The Second Taranaki War had neutralized Maori resistance in the hotly contested Waikato River area but did not suppress resistance elsewhere on New Zealand’s North Island. Throughout this territory, the Maori Hau Hau, a religiously inspired warrior cult, its members motivated by a sincere belief that they were invulnerable and impervious to British bullets, fought with suicidal ferocity against British forces. At this point, the British government was eager to establish peace, but the British East India Company pushed for additional lands in New Zealand and continually provoked new outbreaks. A major attack was launched against the guerrillas at Wereroa Pa in 1865, resulting in a significant British

victory. Despite this, the guerrillas continued to block colonial expansion. In 1868, the resistance of the Maori Hau Hau was supplemented by that of a new group, also religious and military in nature, the Ringatu.

From 1865 on, none of the three combatant elements, the British, the Hau Hau, or the Ringatu, could claim any clear-cut victories. The war wound down in 1872—the fighting stopped—not through any resolution of conflict, any claim of victory, or any concession of defeat but as a result of exhaustion on all sides. Nevertheless, by this time, resistance had been so worn down that only a single portion of New Zealand, King County, remained closed to colonial settlement.

Tassilo's (of Bavaria) Revolt (763)

PRINCIPAL COMBATANTS: Forces of Duke Tassilo III vs. Franks under Pepin III

PRINCIPAL THEATER(S): Bavaria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Tassilo III sought independence from the overlordship of Pepin III.

OUTCOME: Tassilo prevailed, maintaining independence from 763 until he was deposed by Charlemagne in 788.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Frankish dukes of the Agilolfing family ruled Bavaria from about 555 to 788. In 763, one of these dukes, Tassilo III (730–97), revolted against Pepin III (c. 714–68), the first king of the Frankish Carolingian dynasty and father of Charlemagne (c. 742–814). Pepin defeated Tassilo in 757, when the duke first attempted to assert independent authority. The revolt of 763 was far more successful, and it was not until 788 that Tassilo III was finally deposed by Charlemagne, who incorporated Bavaria once and for all into the Carolingian empire and replaced this last of the Agilolfing dukes with a trusted deputy.

Tay Son Rebellion See VIETNAMESE CIVIL WAR (1772–1802).

Tecumseh's Uprising (1810–1811)

PRINCIPAL COMBATANTS: Tecumseh Northwest Indian alliance vs. United States

PRINCIPAL THEATER(S): Indiana

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Tecumseh hoped to form an pan-American Indian buffer state between the United States and Britain's North American colonies, thus checking white encroachment on Indian land in the Ohio Valley and beyond; the United States sought to break up the alliance, acquire all Indian lands east of the Mississippi, and ultimately to move the Indians into the newly bought lands of the Louisiana Purchase.

OUTCOME: Tecumseh's Indian alliance failed, and allies abandoned him; he led those who remained into the British camp as the War of 1812 broke out.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: United States, 1,000; Allied tribes, 350 to 700

CASUALTIES: United States, 50 killed, 120 wounded; Allied tribes, 50-plus killed, at least 120 wounded

TREATIES: None

Born into one of the 12 Algonquian-speaking tribes called collectively "Shawnee," Tecumseh (c. 1768–1813) would become the best-known Indian leader of his day to the general American public, and outside the Sioux chief Sitting Bull, arguably the best known in history. Born in Ohio, perhaps around Springfield, Tecumseh was the older brother of a Shawnee shaman named Tenskwatawa (1775–1837) and frequently called by whites "the Prophet." As a young man, Tecumseh had fought with distinction in the 40-year Algonquian resistance against Euro-American incursions in the Ohio Valley and the Old Northwest that began with the FRENCH AND INDIAN WAR, included PONTIAC'S REBELLION, and ended with the victory of "Mad" Anthony Wayne (1745–96) at the Battle of Fallen Timbers in 1794. Both his father and his two older brothers were killed during the long struggle, and following Fallen Timbers an embittered Tecumseh, forever a foe of the Americans, moved west to present-day Indiana, though he returned regularly to the Ohio Valley to hunt. During the last five years of the 18th century and into the first few years of the 19th he earned the admiration, respect, even affection of not only the Indians but also whites with whom he came into contact for his opposition to the traditional Algonquian practices of captive torture and ritual cannibalism, as well as for his veracity. Among the tribes of the Old Northwest he quickly became a one-man political power consciously modeling himself on Pontiac.

After the defeat of the Old Northwest tribes was finalized in the Treaty of Greenville in 1795, the trans-Appalachian frontier remained relatively peaceful, and an encouraged President Thomas Jefferson (1743–1826)

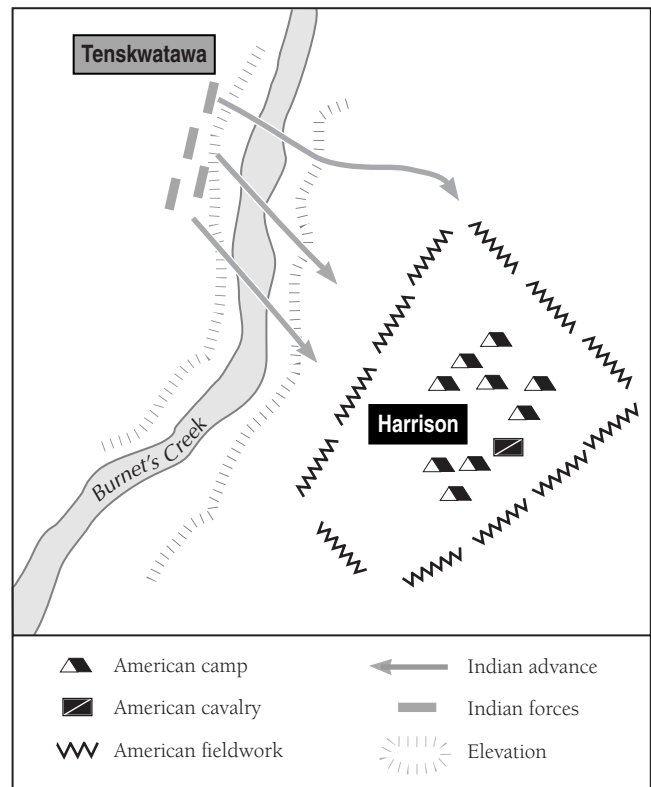

endorsed further white expansion into the West, directing the governor of the Indiana Territory, William Henry Harrison (1773–1841), to obtain “legal” title to as much Indian land as possible. Harrison, who made no effort to ensure that he dealt with legitimate tribal representatives, acquired 70 million acres in less than three years by a series of questionable treaties, resulting in growing dissension among the tribes. Tecumseh, a persuasive and charismatic leader of remarkable strategic acumen, realized not only that his tribe could not survive a prolonged peace that ushered in thousands of new settlers but also that his people were not powerful enough alone to endure a prolonged war.

Backed by his brother, who claimed inspiration from the Great Spirit, preached a mixture of Shaker-influenced doctrine and traditional beliefs, and called on Indians to cleanse themselves of the unclean white race, Tecumseh began to put together a trans-tribal Indian alliance. In 1807, Tecumseh established the alliance headquarters at the abandoned site of Fort Greenville on Indiana's Tippecanoe River. It quickly became known to the whites—who considered Tenskwatawa, not Tecumseh, the leader of the new “religious” movement—as Prophet's Town. Using the threat of war to intimidate Governor Harrison and to buy time, Tecumseh traveled in 1811 throughout the Ohio country and beyond, west to the Sioux and south to the land of the Chickasaw, Choctaw, and Creeks, preaching the need for an Indian confederation stretching from the Great Lakes to the Gulf of Mexico. Only as a unified, sovereign state, Tecumseh reasoned, could the Native Americans resist displacement and death or absorption and disappearance as a people.

While Tecumseh was gone, Tenskwatawa managed to embroil the Ohio Valley tribes that had already joined the alliance in a disastrous battle at Tippecanoe. The Shawnees, Delawares, Miamis, Potawatomis, Ottawas, Winnebagoes, Ojibwas (Chippewas), and Wyandots, angry about Harrison's treaties and defiantly ensconced at the old fort where Tecumseh had placed them, were joined by Black Hawk's Sac (Sauk) and Fox (Mesquakie); Harrison mustered his troops, attacked, and soundly defeated them. The Prophet was discredited. When Tecumseh returned from his largely unsuccessful recruiting expedition, he joined in the public rebuke of his brother. After the Battle of Tippecanoe, the Potawatomi, Winnebago, and Sac and Fox Indians, though shaken, remained loyal to Tecumseh. Wyandot followers of the militant chief Roundhead likewise adhered to the cause. But among the Delaware, Miami, and even Shawnee tribes there were wholesale defections. The alliance began to crumble.

At this crisis point, however, the United States and Great Britain commenced the WAR OF 1812. Tecumseh, who had approached the British in Canada in 1810 seeking support, only to be rebuffed, now eagerly embraced an alliance with England against the Americans.

For the proud chief who had preached abstinence from contact with the whites understood he had to rely

Battle of Tippecanoe, November 7, 1811

even more strongly on the less than stalwart British to realize his dream of an independent Indian state in the Ohio.

Temujin's Campaign against the Tartars

See GENGHIS KHAN'S UNIFICATION OF MONGOLIA.

Ten Thousand, March of the See ANABASIS, THE: MARCH OF THE TEN THOUSAND.

Ten Years' War (1868–1878)

PRINCIPAL COMBATANTS: Cuban rebels vs. Spain

PRINCIPAL THEATER(S): Cuba, principally the eastern portion of the island

DECLARATION: The *Grito de Yara*, October 10, 1868

MAJOR ISSUES AND OBJECTIVES: The rebels sought unconditional independence from Spain.

OUTCOME: The war ended with Spain's pledge to reform and liberalize Cuban government and to abolish slavery in Cuba.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Variable

CASUALTIES: Over 10 years, some 84,337 Spanish and 50,000 Cuban rebels were killed, in addition to some 100,000 noncombatants.

TREATIES: Treaty of Zanjón, February 10, 1878

This was essentially Cuba's first revolution against Spanish colonial rule. Spanish authorities ruled Cuba repressively, taxing the natives harshly, excluding them from representation in the government, and perpetuating slavery on the island. Under the arbitrary, autocratic, and corrupt rule of Isabella II (1830–1904), conditions were particularly harsh. Isabella's removal from power as a result of the SPANISH REVOLUTION (1868) inspired Cuban freedom fighters, under the general leadership of Carlos Manuel de Céspedes (1819–74), to proclaim a revolution at Yara in the southeastern province of Oriente on October 10, 1868. (Always a hotbed of discontent, Oriente would be the site from which Fidel Castro would launch the CUBAN REVOLUTION [1956].) The proclamation, or *Grita de Yara*, demanded immediate and unconditional independence for Cuba.

A decisive revolution, however, failed to materialize. Instead, the *Grita de Yara* inaugurated a decade of fruitless but bloody guerrilla warfare, in which some 235,000 Cubans and Spanish were killed, including noncombatants. Most of the fighting was concentrated in the eastern part of the island, where de Céspedes proclaimed a revolutionary republic in 1869. The Spanish were less concerned with the East, however, than with the economically more important West. Spanish forces never lost control of Havana; the major sugar plantations remained in Spanish hands and did not suffer interruption in production.

In the East, warfare was a series of raids alternating with reprisals. There were no set battles. A handful of revolutionary leaders emerged, including Antonio Maceo (1848–96), his brother José (1846–96), Tomás Estrada Palma (1835–1908), Máximo Gómez y Báez (1836–1905), and Calixto García Iníguez (c. 1836–98), but most prominent of all was the commander of Spanish forces, General Valeriano Weyler y Nicolau (1838–1930). He earned a reputation for unstinting and, indeed, gratuitous cruelty that spread beyond Cuba to the United States. By the close of the 19th century, Weyler was demonized in U.S. newspapers—such as those published by the Hearst and Pulitzer organizations—as “Butcher Weyler,” and his policies helped build a groundswell of American popular support for Cuban independence, which led ultimately to the

SPANISH-AMERICAN WAR (1898). Indeed, war between the United States and Spain was nearly touched off by an incident beginning on October 31, 1873, when the *Virginius*, a rebel-operated vessel running guns to Cuba, was seized by Spanish officials. The *Virginius* flew the U.S. flag, and American crew members were executed.

In 1877, the Spanish Crown dispatched General Arsenio Martínez de Campos (1831–1900) to Cuba to negotiate peace with the rebels on the basis of a Spanish pledge of extensive reforms. With both sides exhausted and persuaded of the futility of continuing the war, the Treaty of Zanjón was signed on February 10, 1878, and the shooting stopped. Though some accounts put the number of Spanish dead at 200,000-plus over the course of the Ten Years' War, only 166,228 ever served on the island, though the figures of 81,097 soldiers, 3,240 marines, 5,000 Cuban volunteers, and 50,000 rebels and 100,000 noncombatants dead are surely grim enough. Many more of the empire's forces perished from malaria and other tropical diseases than from insurgent firepower. The harshness did not stop with the fighting. The only treaty pledge the Spanish actually honored was the abolition of slavery, which itself was delayed until 1886. In other respects Spanish rule continued to be oppressive, and the Cuban revolutionary spirit soon revived.

Teutonic Knights' Conquest of Prussia (1233–1283)

PRINCIPAL COMBATANTS: Teutonic Knights vs. Prussia (with some assistance from Pomerania)

PRINCIPAL THEATER(S): Prussia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Teutonic Knights sought to conquer heathen Prussia in the name of Christianity.

OUTCOME: Over a protracted five-decade campaign, the Teutonic Knights thoroughly subjugated Prussia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but high among the Prussian civilian population

TREATIES: None

Like such other crusading orders as the Hospitalers and the Templars, the Order of the Teutonic Knights originated in Palestine during the 12th century, founded in Acre in 1198 by German crusaders. They grew immensely wealthy and powerful, winning the favor of pope and Holy Roman Emperor alike, receiving special privileges and

dispensations from the former and land in Italy, Greece, Germany, and Palestine from the latter. Not until 1211, however, did they move into eastern Europe, when King Andrew II (1175–1235) of Hungary invited them to defend his frontiers against the nomadic Cumans. When, in addition, they set up an independent state of their own, Andrew forcibly expelled them.

But a precedent had been set, and they got another offer almost immediately, this time from the Polish duke Conrad of Masovia, who wanted them to take on his hostile and heathen neighbors, the Prussians. Although he promised the knights the province of Kulmerland, including the Kulm fortress, plus any territory they might conquer, the grand master, Herman von Salza (d. 1239), was leery, given their treatment at the hands of the Hungarians. Not until Emperor Frederick II (1194–1250) personally guaranteed the order's rights to conquered territory—rights soon confirmed as well by Pope Gregory IX (c. 1145–1241)—did Salza give the signal to march north, ostensibly to conquer and convert the Prussians, with an eye toward creating a holy Catholic German state, officially under papal suzerainty but in fact under the knights' control.

They arrived, 20 knights and 200 sergeants, led by their hero Herman Balke, at Kulm in 1230, using the rivers as their invasion routes, marking their advance with a string of forts from which they expanded into the surrounding woods. As each new district fell, they set up communities of German knights and burghers to help colonize the pagan Prussians and feed the order's coffers and conquests.

Backed by powerful nobles, Polish now as well as German, they sent a steady stream of well-supplied fighters against the wicker shields and wooden forts of the Prussians, who fought ferociously and desperately against crossbows and advanced siege engines. Defeat may have been inevitable, but it was half a century in coming, and long before it came the Christians fell out among themselves. The duke of Masovia staked a claim of Polish suzerainty over the knights and, therefore, likewise over whatever lands they might conquer. This claim failed, and for the next five decades, the Teutonic Knights swept through Prussia, slowly but effectively bringing Prussia into the Christian fold.

In 1242, the Polish duke of Pomerania—a Baltic region, now part of Poland—grew fearful of what he saw as an ever-growing nation controlled by the warlike Teutonic Knights. He decided to act preemptively by fomenting an uprising among the Prussians. For nearly a decade, the knights faced increasingly organized opposition to their grand campaign but nevertheless continued to prevail.

The last two decades of the Prussian campaign were the most bloody. The Teutonic Knights treated the Prussian populations with great brutality, summarily exterminating all who resisted conquest. By 1283, all of Prussia, to the Neman River, had come into the hands of the Teutonic Knights.

Teutonic Knights' War with Poland (1309–1343)

PRINCIPAL COMBATANTS: Order of the Teutonic Knights vs. Poland

PRINCIPAL THEATER(S): Pomerelia (eastern Pomerania, Poland) and elsewhere in Poland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The knights exploited a Polish request to defend Pomerelia by seizing the region.

OUTCOME: Pomerelia was delivered into the knights' control.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Kalisz, 1343

Poland called on the Order of the Teutonic Knights to assist in resisting the attack of Brandenburg against the Polish territory of Pomerelia (eastern Pomerania). The knights, who had acquired control of Prussia in the five-decade-long TEUTONIC KNIGHTS' CONQUEST OF PRUSSIA, eagerly entered the conflict, driving the Brandenburgers out of Pomerelia; in 1309, the order seized the territory for itself, including the key port city of Danzig (Gdansk, Poland). In taking Danzig, the knights attacked not only Brandenburgers but also Polish troops and Danzig civilians. To consolidate the claim on Danzig and the order's control over it, the Teutonic grand master established his principal home and headquarters in a castle, Marienburg, adjacent to the city.

Having warded off Brandenburg occupation of Pomerelia, Ladislas I (1260–1333) of Poland lost the region—the only direct Polish access to the sea—to the Order of the Teutonic Knights. He attempted to persuade the pope—Clement V (1264–1314, reigned from 1305) and John XXII (1249–1334, reigned from 1316)—in whose service the knights had pledged themselves, to intervene. In the meantime, Ladislas concluded an alliance with Lithuania, longtime enemy of the knights. However, in 1331, Bohemian forces threatened Poland, and Ladislas focused his attention there. Taking advantage of the situation, the Teutonic Knights marched into Poland in 1331 and again in 1332. The Poles prevailed against the invaders at the Battle of Plowce on September 27, 1331, but this did not block the knights' advance. The order continued to raid and ravage territory throughout

northwestern Poland. In some areas, the knights seized and occupied territory.

In 1333, Casimier III (the Great; 1309–70) succeeded to the Polish throne on the death of Ladislas I and, 10 years later, concluded the Treaty of Kalisz, by which Poland regained the territory it had lost in exchange for giving the Teutonic Knights control of Pomerelia.

Teutonic Knights' War with Poland

(1454–1466) See THIRTEEN YEARS' WAR.

Teutonic Knights' War with Poland and Lithuania (1410–1411)

PRINCIPAL COMBATANTS: Order of the Teutonic Knights vs. Poland and Lithuania (with Bohemian mercenary auxiliaries and military aid from Russia)

PRINCIPAL THEATER(S): Mainly East Prussia (northeastern Poland)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The knights sought to break up the union of Poland and Lithuania and acquire more territory at the expense of these countries.

OUTCOME: The knights were defeated at the disastrous Battle of Tannenberg and were thereby neutralized as an offensive, expansionist threat.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Disastrously heavy among the Teutonic Knights—well into the thousands—almost all lost at the Battle of Tannenberg

TREATIES: Treaty of Thorn, February 1, 1411

Among the many conquests of the religious-military organization known as the Order of the Teutonic Knights was a portion of Lithuania called Samogitia. This region had fallen to the knights in 1398. In 1409, the grand duke of Lithuania fomented and supported an insurrection and uprising in Samogitia against the Teutonic Knights.

Having acquired control of Prussia in 1283 (see TEUTONIC KNIGHTS' CONQUEST OF PRUSSIA) as well as Pomerelia (eastern Pomerania; see TEUTONIC KNIGHTS' WAR WITH POLAND) and other German and Baltic territories, the knights were anxious to block an impending union of Lithuania and Poland. The provocative action of the Lithuanian grand duke propelled the knights into a full-

scale war against both Poland and Lithuania, beginning with the Battle of Tannenberg, in East Prussia (northeastern Poland), on July 15, 1410. The knights faced the forces of Poland's Ladislas II (1350–1434) and Bohemian mercenaries attached to him under the command of Jan Ziska (c. 1360–1424). Also allied with the Poles were Russian and Lithuanian troops. Ladislas and his auxiliaries and allies won a stunning victory, killing thousands of knights and breaking the back of the Order of the Teutonic Knights. Among the fallen were the grand master and many other top-level commanders.

In the wake of Tannenberg, the Teutonic Knights had no choice but to cede large tracts of Pomerania and Prussia to Poland and Lithuania. Yet the triumphant Polish-Lithuanian forces were unable to take the knights' stronghold base at Marienburg. The failure to break this position proved momentous. Unable to hold the territory they had taken from the Teutonic Knights, the Poles and Lithuanians withdrew, and the knights reclaimed what they had just ceded. Nevertheless, greatly diminished, the order was finished as an offensive threat. It concluded the Treaty of Thorn on February 1, 1411, ceding Samogitia and some other lands to Lithuania for a period to be terminated by the death of Ladislas II. (Upon the Polish king's death in 1422, the knights reneged but were defeated in three battles and permanently relinquished Samogitia.)

Texan War of Independence (Texan Revolution) (1836–1837)

PRINCIPAL COMBATANTS: Texas vs. Mexico

PRINCIPAL THEATER(S): Texas

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: When American immigration into Coahuila y Texas threatened to destabilize Mexico's northern provinces, Mexico attempted to halt Anglo settlement and reassert political control over Texas through a centralized government in Mexico City. The Texans rebelled and declared their independence.

OUTCOME: Texas became a republic and sought to join the United States; resistance to such annexation by Mexico and continuous border conflicts with the expansion-minded Texans became a major factor in the growing hostility that led to the U.S.-Mexican War.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Mexico: 5,000+; Texas, approximately 1,200

CASUALTIES: Mexico: 1,200–2,000; Texas: approximately 500

TREATIES: Treaty of Velasco (signed under duress by Santa Anna; recognized by the United States and Europe; repudiated by Mexico)

Long before the war of 1836–37, Spanish Texas was a hotbed of unrest (see MEXICAN REVOLTS [1810–1815]). Concerned about U.S. intentions after Andrew Jackson (1767–1845) annexed Spanish Florida for the expansion-minded democracy to the north (see SEMINOLE WAR, FIRST), Spanish authorities fell back on an age-old policy. They once again began trying to use westwardly migrating American settlers both as a barrier to Indian raiders as well as a block against U.S. expansion into Spain's North American holdings. To do so, they created the *empresario* system, a system aimed at encouraging immigration in order to make foreign settlers into loyal subjects of the Crown. However, the empresarios not only brought potential settlers to the region but also fanned the growing unrest among colonial Mexicans against Madrid, an unrest that ultimately resulted in Mexico's independence in 1821 (see MEXICAN REVOLT [1821]).

The colonization policy of the new Mexican republic closely followed that of Spain. The Mexican Colonization Law of 1824 guaranteed land, security, and exemption from taxes for four years to foreign settlers. Except that it required foreigners to pledge allegiance to Mexico, the revolutionary government placed few restrictions on immigrants. In many ways, the Mexican immigration policy resembled that of the United States, being intended to encourage economic growth and open new markets. In the long run, Mexico hoped to dilute the dangerous concentration of Americans in Texas by recruiting other immigrants, mostly from Europe, but in the short run it had little choice but to come to terms with the 3,000 Americans who by 1823 were already living as illegal aliens in the Mexican state of Coahuila y Texas. The new law was equal parts appeasement and co-option, an attempt to win the Americans' loyalty by making them landowners with a stake in the future and fortunes of the Republic of Mexico.

The Americans brought to Coahuila y Texas by men like Stephen Fuller Austin (1793–1836) (Mexico's foremost empresario and soon the "father" of the independent Republic of Texas) came from the hard-scrabble farms of Kentucky, the cotton plantations of Georgia, the swampy battlefields of Florida, and the wilds of Missouri. They destabilized the U.S.-Mexican borderlands with their disputatious political habits, their land hunger, their racial hatreds, and their propensity for hair-trigger violence. Although the settlers realized Mexico's hopes and revitalized the provincial economy, they nevertheless gave its officials pause. The new settlers may have called themselves citizens of Mexico, but they obviously still consid-

ered themselves Americans. Conflict between these "Texians" and Mexico took root from the very beginning.

The short-lived FREDONIAN REBELLION, which broke out in 1826 when the Mexican government revoked, without notice, a few land grants held by local troublemakers, was typical. The Texans saw it as an example of arbitrary rule, Mexicans as yet another gesture in the U.S. scheme to take Mexico's northern provinces. This impression was confirmed when President John Quincy Adams (1767–1848) offered to buy Texas for \$1 million. The offer was declined. Andrew Jackson upped the ante to \$5 million, but Mexico turned down that offer as well. Jackson replaced his negotiator and minister to Mexico, Joel R. Poinsett (1779–1851), with someone less scrupulous. On behalf of President Jackson, Anthony Butler (c. 1787–c. 1849) attempted bribery and usury (forcing on the Mexicans an unpayable loan with Texas as collateral) and advocated the use of force if necessary—a pattern of behavior already familiar, no doubt, to the many Cherokees living in the Texas borderlands.

REASONS FOR REBELLION

Such diplomacy only inflamed the situation in Texas, as it was perhaps intended to do. Historians have long debated the ultimate causes of the conflict that led to the Texas Revolution. Some have blamed religion. Most of the Texas settlers were southern Protestants; the Mexican government sanctioned Catholicism as a matter of national policy and nominally prohibited public worship by any non-Catholic sect. But in Texas, as in the other border provinces, the Catholic hierarchy could barely minister to its own flock, and neither Mexico nor Rome spent much time trying to impose the state religion on Texans. In fact, in 1834 Mexico guaranteed that "no person shall be molested for religious or political opinions provided the public order is not disturbed." Whatever else Texans might have wanted to fight for, there was no reason to fight for freedom of religion. Other historians have pointed toward slavery as a cause. The Texas settlers brought slaves with them to work the land and made it clear they would require more; the Mexican government proposed gradual but absolute emancipation in Texas and had already abolished slavery throughout the rest of Mexico. By 1829, however, Mexico compromised and granted Texas a presidential exemption from the decree abolishing slavery; Mexico's handling of its slaveholders could hardly be used as an example of its persecution of Texans.

The Texans also sought free trade with the United States, and they reacted with hostility to Mexican taxes and restrictions; they—along with many Tejanos—took to smuggling. Like Texas, other frontier states within Mexico, including California, the Yucatan, and New Mexico, resisted the move by centralists during the late 1820s and early 1830s to place all power in the hands of Mexico City. These provinces had numerous grievances—some justifi-

able, some petty—against the slow, cumbersome, and arbitrary Mexican legal system, and all of them complained about their lack of autonomy. But only the Texans seemed to be pushing for what amounted to a U.S. republic within Mexico.

The Texans saw themselves as superior to the Mexicans, whom they regarded as stupid, indolent, and priest ridden. There smoldered within the Texans a powerful resentment at having to answer to the authority of such people. From the perspective of the United States, Mexico was young, corrupt, and unstable. Texas was nearby and, despite considerable domestic opposition, Andrew Jackson's United States (where market forces were stimulating the rapid growth of the "Cotton Kingdom") wanted Texas—being inferior to the United States, Mexico did not deserve to keep it. Thus, the race distinctions previously aimed at slaves and Indians, long familiar to the American South and the United States's western frontier, came almost naturally as an excuse for the Texas Rebellion.

Mexico was not unaware of the problem. The popular Mexican press mercilessly caricatured the unwelcome "Anglo-Saxons." In 1827, the Mexican government, worried about the expansionist intentions of the United States, sent a commission under General Manuel de Mier y Teran (1789–1832) into Texas to investigate the influx of Americans.

By 1830, 7,000 *Norte Americanos* lived in Coahuila y Texas, outnumbering the Mexicans by more than two to one. On April 6 of that year, reacting to the Teran commission reports and seeking to stave off the U.S. "menace," Mexico enacted legislation that both augmented the number and size of garrisons in the province and attempted to stop U.S. immigration into Texas while encouraging it from European countries. The new laws—which "closed" the border to Americans, canceled empresario contracts, and prohibited the introduction of slavery—failed. They halted legal immigration, but anyone could cross the long border illegally. In 1833, Mexico again began admitting Americans. A fever raged to rush to Texas. By 1835, Texas had a population of only 3,500 Mexicans and 30,000 Americans. There were almost as many American slaves, 3,000, in Mexico's Texas as there were Mexicans.

GONE TO TEXAS

Many in this latest wave of Texans went by the acronym GTT, for the words "Gone to Texas" that they scrawled across notes or chalked on log-cabin doors when they pulled up stakes and migrated west. Traveling with them were the lawyers and land speculators who knew that a "free" Texas would be a profitable Texas. As Mexico in the 1830s drifted toward civil war between liberal federalists and conservatives who wanted to centralize control in Mexico City, a Texas independent of Mexico seemed ever more possible. Texas malcontents split into war and peace parties, the latter headed by Stephen Austin, the former

organized by the new up-and-comers and consisting mostly of GTTs, whom the more "respectable" early settlers called "War Dogs" or "Crazy-orians."

There were mob uprisings all over East Texas in the early 1830s, and a war with Mexico loomed just as Mexico faced a revolt by Antonio López de Santa Anna (1794–1876) and his federalist forces. In his first bid for power, Santa Anna hoped to overthrow Anastasio Bustamante's (1780–1853) xenophobic anti-U.S. government. Despite the Anglo-Mexican clashes and much political agitation, Austin and the majority of Texans were not prepared for out-and-out rebellion. In mid-1832, Sam Houston (1793–1863) arrived in Texas, possibly as an unofficial (i.e., secret) agent of Andrew Jackson. Certainly President Jackson had suggested that Houston go to Texas and had given him \$500, a passport, and instructions for some kind of confidential mission, if only to look over the situation. Within six months, Houston was the head of Texas's volunteer army and deeply engaged in its political maelstrom. Meanwhile, Austin had negotiated peace and pledged the Texans' support for General Santa Anna, who was at the time still professing liberalism. When Santa Anna emerged victorious, Texans felt they deserved favor for having supported his cause. It seemed a good point at which to present the new president with the grievances of the province, which included a petition for statehood within the Mexican Republic.

A Texas constitutional convention had met in 1833; the Texans had reiterated their grievances; Houston had drafted the state constitution; and Austin now carried the document to Mexico City. There for some five months he attempted to see Santa Anna. When he finally did gain an audience, the president expressed willingness to remedy all grievances except for the statehood demand. Still, it was more than Austin had expected, and he began his journey back to Texas—only to be arrested at Saltillo, returned to Mexico City, and imprisoned for a letter he had written urging Texas statehood. He spent the next two years in jail.

In 1835, Austin, an embittered man and broken in health, returned to Texas. During his two-year absence, the War Dogs had strengthened their position. In June 1835, 30 Texans forced the small garrison and customs house at Anáhuac to surrender, and although communities throughout Texas disavowed the revolt, Texas did not turn the rebels over to Mexico City. Santa Anna, meanwhile, had turned brutal, repudiating all of his liberal policies and proclaiming himself dictator of a centralized Mexico; worst of all (in the eyes of Texas slaveholders), he threatened to enforce Mexico's ban on slavery. Having decided that force was all the Texans understood, Santa Anna sent additional troops north at the end of 1835 to pacify the frontier. This time even Austin was in no mood or position to mediate. He too counseled revolt. Austin urged his fellow settlers to "Americanize" Texas and bring

the territory under the U.S. flag. He invited Americans to come to Texas “passports or no passports,” “each man with his rifle.” Violence was inevitable, he declared.

THE INSURRECTION BEGINS

No doubt Texas, with its overwhelmingly Anglo population, was bound to break away from Mexico. But, as it happened, the movement toward armed insurrection began in 1835, led by Sam Houston and heartily applauded by prominent Mexico City radicals, one of them the liberal former vice president Gomez (“Furioso”) Farias (1781–1858) whom Santa Anna had banished to the north the previous year. The event that precipitated the insurrection occurred on October 2, 1835, when the Mexican cavalry crossed the Rio Grande and demanded the surrender of a cannon in the town of Gonzales. The Americans quickly forged a small army and chased the Mexican force southward. Next, Austin himself led a force of 500 against San Antonio, where most of the retreating Mexican army, under General Martin Perfecto de Cós (1800–54), had taken refuge. The Texans dug in for a long siege in November. That same month, representatives of the 12 American communities of Texas convened to decide whether the territory was fighting for independence or a return to Mexico under the 1824 constitution. The vote was solidly against independence. A provisional government was created, but with the object of appealing to Mexican liberals to unite against Santa Anna so that Texas might rejoin a constitutionally governed Mexico.

Not immediately declaring independence did garner the Texans some *Tejano* support, but most *Tejanos*—and Mexican liberals in general—distrusted the Americans, and with good reason. The Texans had already sent a delegation, including Austin, to Washington, D.C., to test Andrew Jackson’s reaction to the possible annexation of Texas by the United States. Meanwhile, life for the ragtag army of siege was becoming increasingly miserable during a bitter East Texas winter. When their temporary commander decided to withdraw to winter quarters at Gonzales, frontiersman Ben Milam (1788–1835) challenged volunteers to attack the city with the cry, “Who will go with old Ben Milam?” On December 5, 300 Texans, their patience exhausted, forced their way into San Antonio. They fought the Mexican troops in the town’s streets, and General Cós retreated with 1,100 troops into the garrison’s barracks and armory at the Alamo. The Texans brought their cannon to bear against the Alamo’s walls, and Cós finally surrendered. After the taking of the Alamo, the Texans began to repair the fort so that the converted mission could be effectively defended.

Meanwhile, Sam Houston and Henry Smith (1788–1851), the elected governor of Texas, were urging independence and warning that a reprisal from Santa Anna himself was inevitable. But land speculators—men like Dr. James Grant (1793–1836)—feared that titles to the huge

tracts of land they had amassed (by bribing the corrupt Coahuila y Texas legislature) were as likely to be nullified by an independent Texas as by Santa Anna’s centralized government, and they persuaded a legislative council to dispatch a force to Matamoros, a Mexican town at the mouth of the Rio Grande that was known as a stronghold of liberals opposed to Santa Anna. By seizing Matamoros and uniting with the liberals, Grant and his cohorts hoped to inflame sentiment throughout Mexico for a revival of the old federalist system, thus creating a government friendly to their real estate claims.

But the mission, led by James Walker Fannin, Jr. (1804–36), busily engaged in the looting and despoliation of the Texas countryside and bogged down by indecision and divisive elements within Fannin’s command, never reached Matamoros. Ultimately, Fannin did as Sam Houston had asked from the start. As Houston suspected, Santa Anna was on his way north to punish the rebels personally. He had begun gathering an army at San Luis Potosí, the traditional spot from which Mexico had organized and outfitted expeditions to Texas. In January 1836, surrounded by his splendidly bedecked entourage and closely followed by his brilliantly polished, mounted staff, Santa Anna marched out with his army.

About that time back in San Felipe de Austin, Sam Houston told Governor Smith that unless the new constitutional convention, set for the coming spring, laid solid groundwork for a strong government, the country would be lost. The news he had received from the Alamo on January 16 was not encouraging. Lieutenant Colonel James Clinton Neill (1790–1845), the garrison’s commander, wrote to Houston that his men were tired, had not been paid, and were talking of going home to the United States. Not that Houston much cared—the one spot where he did not wish to make a stand was the Alamo. Even repaired and fitted with firing platforms, it was a poor excuse for a fortress. He had always believed San Antonio and the Alamo were too far away from San Felipe de Austin to be defended successfully. Far better, he thought, for the outnumbered Texans to fight a guerrilla war against Santa Anna out in the open—in the countryside familiar to volunteers.

The news from Goliad was also bad. Fannin was now threatening to strip the fort of men, munitions, and transport to launch the expedition on Matamoros after all. That meant the interior of Texas would lie exposed to Santa Anna. Houston decided to concentrate what strength he had left 60 miles east of San Antonio at Gonzales. He dispatched James (Jim) Bowie (1796–1836) to Lieutenant Colonel Neill in San Antonio, with orders to remove the Alamo’s guns, blow up the “fortress,” and abandon it. Meanwhile, Houston had been chosen by the convention to lead a commission to visit the Texas Cherokees in East Texas and negotiate with Cherokee Duwali and others a treaty that would ensure the Indians’ neutrality in the coming fight. Houston, who had spent part of his life liv-

ing among the Cherokees and who had been adopted into the tribe, and John Forbes (1797–1880) entered into these negotiations on February 22, 1836, and they had their treaty the next day. Houston's sojourn among the Indians, however, meant that he was absent from the scene when the Alamo was attacked.

SIEGE OF THE ALAMO

When Bowie reached San Antonio, he did not enforce Houston's orders. On the contrary, he and Neill decided that the Alamo was the major obstacle to any Mexican advance and resolved not to be driven from what they called a post of honor. Meanwhile, Santa Anna was approaching the Rio Grande, where he was to join with a force under the command of General Joaquin Ramirez y Sesma, who had originally gone north to reinforce Cós. When Santa Anna crossed into Texas, he showed up at San Antonio de Bexar with 2,000 soldiers. At the Alamo, Neill and Bowie, with little more than 100 men, were appealing for reinforcements. Fannin turned a deaf ear to these pleas, as he was still contemplating Matamoros from his loosely organized camp at Goliad. Another commander did bring aid, however, in the form of two dozen men—Colonel William B. Travis (1809–36), a GTR and early leader of the Texas War Dogs. Then on February 8, David (Davy) Crockett (1786–1836) arrived, leading a dozen men from Tennessee and seeking to revive a moribund political career by joining the Texans.

By February 11, 1835, Neill had left the Alamo, and command had passed into the hands of Jim Bowie and William Travis. Five days later, Santa Anna began his march up from the Rio Grande. Bowie and Travis had about 150 men to hold the Alamo. Travis had ample warning of the Mexicans' advance, but he did not believe the intelligence; he was sure Santa Anna would wait until spring to march his army through the barren country south of San Antonio. By that time, Texas and the world, Travis was sure, would have answered his repeated pleas for aid. But on February 25, the vanguard of Santa Anna's army entered San Antonio. Twenty-five noncombatants, mostly women and children, took refuge in the Alamo, and the siege began as a red flag was raised from a church steeple. It signified Santa Anna's intention to show no mercy, to take no prisoners. Travis responded by firing a cannon.

Jim Bowie was more cautious. Hearing a cavalry bugle, he took it as a signal that the Mexicans wished to parley. Bowie sent a messenger to Santa Anna and offered surrender on condition that the defenders be granted what the Texans had allowed General Cós and his men at the Alamo back in December—freedom to return to their homes unharmed. Santa Anna demanded unconditional surrender. Meanwhile, Bowie had grown ill and had also been injured in an accident while placing a cannon. Unable to stand, he was confined to his cot. Travis, during a lull after the first 24 hours of bombardment, wrote a dis-

patch "To the People of Texas & all Americans in the world," appealing again for reinforcements and promising "Victory or Death." One band of 25 men did finally materialize in San Antonio to reinforce the Alamo. They came from the militia at Gonzales, where Houston had gathered his forces. They had come against his orders.

After a week of unrelenting Mexican bombardment, not a single Texan had been killed in the Alamo, whereas Texas grapeshot and sharpshooters had taken their toll on Santa Anna's troops—though his army was augmented daily. Within the fort, the defenders busied themselves with the endless task of shoring up walls crumbling under cannon fire. The bombardment finally stopped. Santa Anna deployed some 1,800 soldiers for the final attack, and they rushed the fortress just before daybreak on Sunday, March 6, 1835.

It was a clumsy attack that resulted in huge casualties, but in the end, sheer numbers prevailed. In a frenzy, Santa Anna's army began to pour over the Alamo walls. The fighting was hand to hand in the open plaza of the compound. To some of the Mexicans at the time, as to Texas schoolchildren ever since, the Texans, who had survived 11 days of fierce bombardment, seemed larger than life. By 6:30 that morning, it was quiet at the Alamo. The battle had taken 90 minutes. Santa Anna paid dearly to reclaim the useless, once-abandoned, tumbled down old Franciscan mission; 600 of his men, fully a third of his army, and nearly all the Texans lay dead.

Santa Anna spared the women and children in the fort, charging one of them, Susannah Dickerson (1814–83), with the task of telling all Texas what had happened at the Alamo and warning that the same would befall any others who remained in revolt. Davy Crockett and other prisoners who had surrendered were executed on Santa Anna's orders. Thus Santa Anna unwittingly provided the Republic of Texas invaluable martyrs to the cause. Three days earlier, the constitutional convention in San Felipe de Austin had finally given Sam Houston what he wanted, a declaration of independence. Santa Anna now handed Houston the new-born republic's battle cry: "Remember the Alamo!"

THE WAR FOR INDEPENDENCE

The fall of the Alamo unnerved Colonel Fannin. He grew no calmer when Sam Houston ordered him to destroy Goliad's fort and retreat. Following delays marked by Fannin's indecision, on March 18 the volunteers slipped off into a thick fog, burning Goliad to the ground. Fannin's 400 men had so overloaded their horses, mules, and carts with booty that when they reached the steep banks of the San Antonio River they were unable to cross without offloading, then packing up again on the opposite shore. The additional delay allowed a force of 1,400 men under General José Urrea (1797–1849) to surround Fannin and his troops on the open river plain. Fannin pulled his

wagons into a hollow rectangle, from behind which his men stood off the Mexicans for two days, but Fannin was wounded during the fighting. On March 20, amid the wrecked wagons and the dead oxen, the men began discussing surrender. Fannin capitulated, much to the relief of the majority of his men. Six days later, however, Santa Anna ordered his general to execute all the rebels.

Santa Anna firmly believed he had broken the back of the Texas resistance, and at first he appeared to be right. The Texans panicked. In what became known as the “Run-away Scrape,” thousands—men, women, and children—bolted east for the border as the Mexican army continued its steady advance. The provisional government fled with them. Amid the refugee hysteria, there lurked an immense anger over the disasters at the Alamo and at Goliad and certainly a desire for revenge. Houston turned the panic and the passion to advantage, using them to forge an army. He talked about the value of strategic retreat. He assured his men that he was playing for time in order to build strength. Most of all, he constantly drilled those he enlisted, hoping at last to train an effective fighting force. It took a month, but on April 20, with an army grown to 800 troops, Houston felt ready to turn and make a stand.

Santa Anna was camped with 700 men on an open prairie west of the San Jacinto River just off Galveston Bay. Houston took up position and set the next day for an attack. At the last minute, Santa Anna was joined by reinforcements that swelled his ranks, but Houston ordered the attack anyway. The Battle of San Jacinto lasted 18 minutes. The massacre that followed took hours. When it was over, Houston’s troops had slaughtered 630 Mexican soldiers, more than all the Texans who had died at the Alamo and Goliad put together.

Santa Anna, captured disguised as a common soldier and trying to escape after the fighting had stopped, assumed he would be executed. But Houston instead forced Santa Anna to sign the “treaty” of Velasco. In exchange for his life, Santa Anna ordered all Mexican soldiers to leave Texas and recognized his former province as an independent republic. Although signed under duress, the treaty was nevertheless generally recognized abroad. Mexico, however, under new leadership, immediately repudiated the document. Not really knowing what to do with him, the Texans threw Santa Anna into jail for two months before dispatching him to Washington. Andrew Jackson treated Santa Anna courteously and received him as a head of state on January 19, 1837. As Jackson’s guest, Santa Anna discussed the state of affairs in Texas, and the two men agreed to disagree on Mexico’s recognition of Texas as an independent republic before Jackson sent him to Veracruz under naval escort.

THE LONE STAR REPUBLIC

The new Republic of Texas claimed the Rio Grande as its southern and western boundary, as a result of the Treaty of Velasco. Rejecting the Texas claim to independence, the

Mexican congress also rejected the new boundary; the traditional border of Texas under Spain and Mexico had been the Nueces River, north of the Rio Grande. In the first election held by the new republic in 1837, Texans overwhelmingly chose Sam Houston as president and agreed that he should seek annexation to the United States. Off and on for years, Texas diplomats would pursue such a goal with the successors of the Jackson administration. Jackson was reluctant to stir up further conflict with Mexico, and he delayed even recognizing the republic until shortly before leaving office. The U.S. Congress was caught up in the regional conflict between North and South, and many in Congress opposed annexation because Texas would eventually become a slave state.

In 1838, when Mirabeau B. Lamar (1798–1859) was elected president of Texas, the republic shifted its focus away from annexation and toward expansion. Lamar tried to negotiate with Mexico for recognition of its independence and the Rio Grande border but failed. The failure was unsurprising, because at the same time he was boasting about a greater Texas that would stretch across the continent and have ports of call on the Pacific Ocean. In 1841, Lamar sent an expedition to claim authority over and open trade with towns along the upper Rio Grande in territory that had always been New Mexico under Spain and Mexico. The expedition floundered; Mexican troops captured its starving remnants and tossed them in jail (where they remained until 1842). For a decade, neither side controlled the region between the Nueces and the Rio Grande.

Neither Texas’s border conflicts with Mexico nor its political struggles with the United States interfered with the steady stream of settlers pouring into the region. From an Anglo-American and African-American slave population of 40,000 in 1836, the number of Texans would grow to 142,000 by 1847. Faced with internal and external problems, including considerable debt, Sam Houston, after being reelected president, began playing up British and French interest in trading with Texas and keeping it independent. Such diplomacy matched poorly the desire of the United States to extend the nation westward (and to limit European influence on the subcontinent), and an expansionist lobby grew more powerful within the U.S. government. When Congress, torn by sectional strife, failed to ratify a treaty of annexation, Texas became a major issue in the 1844 presidential campaign. Dark-horse candidate James K. Polk (1795–1849), backed by the expansionists, won the election, and even before he took office he encouraged lame-duck president John Tyler (1790–1862) to push through Congress a joint resolution of annexation.

Texas welcomed the resolution and voted to accept annexation. An angry Mexico denounced the actions of the United States and withdrew its ambassador. As James Polk had hoped, the lines were clearly being drawn for UNITED STATES-MEXICAN WAR.

Thai War (1371–1378)

PRINCIPAL COMBATANTS: Thai kingdom of Ayutthaya vs. Thai kingdom of Sukhothai (with assistance from another kingdom, Chiangmai)

PRINCIPAL THEATER(S): Sukhothai (northern Thailand)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ayutthayan conquest of Sukhothai

OUTCOME: The conquest was completed, and Sukhothai became a client kingdom, subject to Ayutthaya.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None located

The war began in 1371 when Boromoraja I (d. 1388), king of Ayutthaya (south-central Thailand), invaded Sukhothai, the Thai kingdom to the north. Boromoraja hoped to exploit the weakness of Sukhothai under its incompetent ruler, Thammaraja II (d. 1409). Sukhothai was currently wracked by internal revolt. Although the prospects for conquest looked favorable, Boromoraja recognized a potential threat from China, which might come to Thammaraja's aid or seek to annex Sukhothai for itself. Boromoraja sent the Chinese emperor gifts by way of appeasement.

By 1372, Boromoraja's forces had captured the Sukhothai towns of Muang Nakhon, Phangkha, and Sengcharao. From these bases, the Ayutthayan army moved against Chakangrao the next year. This was the seat of two powerful chieftains, Sai Keo (d. 1373) and Kham Heng (fl. 1370s). Boromoraja had the first killed, and he drove the second out of the region.

At this point, having gained control of important portions of Sukhothai, Boromoraja halted his war for two years, resuming in 1376 by capturing the city of Phitsanulok, taking its chieftain Khun Sam Keo (d. c. 1376) prisoner, and casting the residents of this major city into abject slavery. He then went on to reattack Chakangrao, which was now defended by the chieftain Kham Heng,

who had returned to the city. Kham Heng had struck an alliance with another northern Thai kingdom, Chiangmai, to resist Ayutthayan invasion. Chiangmai regarded the continued independent existence of Sukhothai as important because the kingdom acted as a buffer between Chiangmai and the ever-aggressive Ayutthaya.

The forces of Chiangmai and Kham Heng laid an ambush for the Ayutthayan army but failed, and in a counterattack at Kamphaeng Phet, the allied army was badly defeated and all but completely destroyed. One important Sukhothai chieftain, Thao Phadong (fl. 1370s), managed to escape the general slaughter but was subsequently defeated in battle. Boromoraja's men rounded up many Sukhothai officials in a final effort to topple the government. In 1378, Ayutthayan forces laid siege against Kamphaeng Phet, as they had done earlier. With much of his kingdom devastated and his most important officials and commanders dead or held prisoner, Thammaraja II accepted Boromoraja's peace terms. He ceded the western portion of his kingdom, including the capital city of Kamphaeng Phet, to Boromoraja. Boromoraja permitted Thammaraja II to retain nominal rule of the remainder of Sukhothai as a vassal; however, the vassal king was required to remove his capital to Phitsanulok.

TREATIES: None

When the youthful (14-year-old) Sen Muang Ma (1373–1411) succeeded to the throne of the northern Thai kingdom of Chiangmai, his uncle, Prince Phrohms (fl. 14th century), decided to usurp the throne. His first attempts failed, and he contacted the most powerful of Thai rulers, Boromoraja I (d. 1388) of Ayutthaya (south-central Thailand) for military aid. Always prepared to expand his interests, Boromoraja dispatched an army to Chiangmai to

engage the forces of Sen Muang Ma. The two armies met in battle at Sen Sanuk, near the city of Chiangmai. The young king dealt a sharp defeat to Boromoraja's forces, which quickly retreated and then withdrew from the country entirely.

Sen Muang Ma's performance against the forces of Ayutthaya induced his uncle to reconcile with the king. As a token of loyalty, he presented Sen Muang Ma with a golden Buddha stolen from Kamphaeng Phet, a Thai city-state Prince Phrohms had captured and occupied. When Kamphaeng Phet protested both the theft and the occupation, Boromoraja personally led another army into Chiangmai, this time to aid Kamphaeng Phet. Under his leadership, the Ayutthayan forces were successful this time, and Kamphaeng Phet came under Boromoraja's rule; however, Boromoraja died on the return trip to his kingdom in 1388.

All was reasonably quiet throughout Thailand until 1390, when Sen Muang Ma decided to lead an army into Sukhothai (in central Thailand), with a pledge to aid that kingdom in winning its independence from Ayutthaya, to which it had become a vassal state. The king of Sukhothai, Thammaraja II (d. 1409), realized that the pledge of aid was nothing more than a thinly disguised invasion and that, with the powerful Boromoraja dead, the ambitious Sen Muang Ma intended to take over Sukhothai himself. Thammaraja preempted the invasion by attacking the army of Sen Muang Ma. The attack came as a surprise, and the Chiangmai army was defeated. Sen Muang Ma was forced to make his ignominious escape on the backs of two servants.

Thai War (1411)

PRINCIPAL COMBATANTS: Rival claimants to the throne of Chiangmai, Thailand, with military assistance from Ayutthaya, another Thai kingdom

PRINCIPAL THEATER(S): Chiangmai (northern Thailand)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the Chiangmai throne

OUTCOME: The issue was ultimately settled by single combat between two champions; Prince Sam Fang Ken ascended the Chiangmai throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The death of Sen Muang Ma (1373–1411), king of Chiangmai, created a dispute between his sons, Prince Sam Fang Ken (d. 1442) and Prince Yi Kumkam (fl. 1411–20), over succession to the throne. In an effort to secure the throne, Yi Kumkam obtained military aid from Intharaja I (d. 1424), king of the most powerful Thai kingdom, Ayutthaya (south-central Thailand). Intharaja commanded his vassal, Thammaraja III (d. 1419), king of Sukhothai (central Thailand), to lead an Ayutthayan army to Yi Kumkam's aid. Thammaraja directed the erection of a high earthen fort outside of the Chiangmai town of Phayao, with the object of creating a position from which cannon could bombard the town. The defenders of Phayao, however, also used cannon to fire on the earthen fort. The people of Phayao reportedly melted down decorative brass tiles to cast the needed cannon, with which they prevailed against the attackers, destroying the fort.

Although Phayao was saved, the Ayutthayans attacked the Chiangmai capital, also called Chiangmai, laying siege to it. The capital resisted stoutly, and, to break the standoff, Sam Fang Ken suggested that the succession issue be settled by single combat between two champions. Yi Kumkam agreed, and a combat between one Chiangmai and one Ayutthayan warrior ensued, lasting the next several hours. The Chiangmai was declared the victor after his opponent sustained a wound in the big toe. True to his word, Yi Kumkam renounced the throne, and he and his Ayutthayan supporters withdrew, pausing only to attack the town of Chiangmai and take many captives. These people would be used as slaves in Ayutthaya as indemnification of war costs.

In 1442, Sam Fang Ken (d. 1442), who had ascended the throne of the northern Thai kingdom of Chiangmai as a result of the THAI WAR (1411), was forced to abdicate by his sixth son, Prince Chao Lok (1411–87), who took the throne name of Sri Sutham Tilok. This triggered a dynastic war when the 10th son of Sam Fang Ken, Prince Chao Joi (d. c. 1446), refused to acknowledge Sri Sutham Tilok as king. He took his father to the town of Muang Fang and from this base began a war against his brother. Sri Sutham Tilok counterattacked, however, and overran Muang Fang, whereupon Chao Joi abandoned his father and fled to Thoen. Chao Joi persuaded the governor of Thoen to seek military aid from the most powerful of Thai kingdoms, Ayutthaya (south-central Thailand).

Boromoraja II (d. 1448) of Ayutthaya (south-central Thailand) was always eager to extend the reach of his power, and he immediately led an army to the assistance of Chao Joi. Before he could reach him, however, Sri Sutham Tilok, acting swiftly, ran Chao Joi to ground and killed him, along with the governor of Muang Fang. Boromoraja continued his advance into Chiangmai, taking many captives along the way. However, Sri Sutham Tilok made liberal use of Laotian spies, who infiltrated Boromoraja's army and warned of its approach. Chiangmai forces were thus able to block the advance. When the Laotian infiltrators cut off the tails of the Ayutthayan elephants, the animals stampeded, creating chaos within the Ayutthayan lines. Taking advantage of this, the Chiangmai warriors assumed the offensive and attacked fiercely. The Ayutthayans quickly broke and ran. Boromoraja, ill, lacked the heart and will to continue the campaign. He mounted a new assault in 1448, but it was abandoned after his death later that year.

Ayutthaya was the largest and most powerful of the Thai kingdoms. King Boromo Trailokanat (d. 1488) led an Ayutthayan force against Chiangmai, the Thai kingdom to the north. At the same time, a revolt took place in what had been Sukhothai, a central Thai kingdom that was now a vassal kingdom subject to Ayutthaya. The leader of Sawankhalok, a Sukhothaian town, appealed to Sri Sutham Tilok (1411–87), king of Chiangmai, for military assistance in an effort to regain independence for Sukhothai. Answering the call, Sri Sutham Tilok invaded Sukhothai but was beaten back by Ayutthayan forces. Once this was accomplished, Boromo Trailokanat seized the initiative and invaded Chiangmai, which was occupied in 1452.

Over the next four years, Chiangmai resisted occupation, and Sai Tia Kaphat (d. c. 1479), king of Laos, invaded Chiangmai, forcing the Ayutthayans out. In this seesaw war, Chiangmai troops then invaded Ayutthaya and even briefly occupied the important town of Kamphaeng Phet. At this point, in 1456, with all sides depleted, the war ended—but would resume five years later.

Thai War (1461–1464)

PRINCIPAL COMBATANTS: Ayutthaya vs. Chiangmai

PRINCIPAL THEATER(S): Thailand, mainly central and northwest

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Chiangmai sought to annex Ayutthayan territory.

OUTCOME: A successful Chiangmai invasion had to be aborted when the kingdom was threatened by Chinese invasion; Ayutthaya was thereafter able to repulse new Chiangmai invasion attempts.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Treaty of 1464

This was a renewed conflict (*see* THAI WAR [1451–1456]) between two kingdoms of Thai people—Ayutthaya, later known as Siam but at the time a relatively large kingdom in south-central Thailand; and the smaller Chiangmai, in

the mountainous jungles of the northwest. A Chiangmai army under King Sri Sutham Tilok (1411–87) invaded Ayutthaya, laying siege to the towns of Sukhothai and Phitsanulok. The offensive was interrupted, however, by an attack from the Chinese province of Yunnan. Sri Sutham Tilok withdrew from Ayutthaya to confront the Chinese invasion.

With the Chiangmai troops withdrawn, the Ayutthayan king, Boromo Trailokanat (d. 1488), moved his capital to Phitsanulok, where he could more effectively defend against a renewed assault. In 1463, the nighttime Battle of Doi Ba, near Chiangmai, resulted in a triumph for Boromo Trailokanat, who drove the invaders deeply into their own territory. The war was effectively at an end, although a formal peace, restoring the status quo ante bellum, was not concluded until the next year.

Thai War (1474–1475)

PRINCIPAL COMBATANTS: Ayutthaya vs. Chiangmai
PRINCIPAL THEATER(S): Thailand, mainly central and northwest

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ayutthaya sought territorial gains from neighboring Chiangmai.

OUTCOME: Ayutthaya gained some territory, but the war ended without definite conclusion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Despite the concluding peace after the THAI WAR (1461–1464), the rival kingdoms of Ayutthaya (south-central Thailand) and Chiangmai (northern Thailand) continued to skirmish. Whereas, in 1461, Chiangmai had invaded Ayutthaya, in 1474, the larger Ayutthaya attacked Chiangmai. Having seized the initiative, Ayutthayan forces pressed it relentlessly and fought the Chiangmai army under King Sri Sutham Tilok (1411–87) to a standstill. The king sought an end to hostilities, and fighting ceased for a decade. No formal treaty was concluded.

Thai War (1492)

PRINCIPAL COMBATANTS: Ayutthaya vs. Chiangmai

PRINCIPAL THEATER(S): Thailand, mainly central and northwest

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Chiangmai sought restoration of a stolen religious statue.

OUTCOME: The statue was returned.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, perhaps none

TREATIES: None

The perpetually warring Thai kingdoms of Ayutthaya (south-central Thailand) and Chiangmai (northern Thailand) typically battled over territory but in fact needed little provocation for war. The royal prince of Ayutthaya had spent time as a Buddhist priest in Chiangmai. When he returned to Ayutthaya, he took with him a crystal Buddha. Chiangmai's King Phra Yot (fl. 1487–95) demanded the return of the statue. The Ayutthayans refused, and Chiangmai invaded. Little if any resistance was mounted. Instead, almost instantly, the Ayutthayan king Rama Thibodi II (1472–1529) restored the purloined statue to Chiangmai. Hostilities ceased until the beginning of the next century (*see* THAI WAR [c. 1500–1529]).

Further reading: D. G. E. Hall, *A History of South-East Asia*, 4th ed. (New York: St. Martin's Press, 1981); David K. Wyatt, *Thailand: A Short History* (New Haven, Conn.: Yale University Press, 1984).

Thai War (c. 1500–1529)

PRINCIPAL COMBATANTS: Ayutthaya vs. Chiangmai

PRINCIPAL THEATER(S): Thailand, mainly central and northwest

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Fearing invasion, Chiangmai staged a preemptive attack on Ayutthaya, thereby triggering almost 30 years of sporadic warfare.

OUTCOME: By 1529, all Chiangmai invaders had been driven out of Ayutthaya.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Ayutthaya (south-central Thailand), by this time also known as Siam, continued to have a hostile relationship with its smaller neighbor, Chiangmai (northern Thai-

land). Because Ayutthaya was larger than Chiengmai, the smaller mountainous kingdom maintained a state of high defensive alert, occasionally seizing the initiative for a preemptive attack. From about 1500 through most of the first third of the 16th century, sporadic frontier warfare was chronic between the two rivals.

In 1507, King Ratana (fl. early 1500s) of Chiengmai launched a preemptive strike into Ayutthaya. At the Battle of Sukhothai, Ratana's army was repulsed. As was frequently the case, aggression on one side prompted aggression from the other, and in 1508 Ayutthaya launched an invasion of Chiengmai. The town of Phrae fell, but Chiengmai mounted a spirited defense that forced the invaders from the town and from the kingdom. Two years later, a new Ayutthayan invasion was mounted. Like the earlier foray, it too was repulsed.

From 1510 to 1515, border skirmishing continued steadily. This culminated in a 1515 Chiengmai invasion at Sukhothai and Kamphaeng Phet. King Rama Thibodi II (1472–1529) of Ayutthaya organized a formidable counteroffensive, which drove the Chiengmai not only out of the Ayutthaya but also well into their own territory, as far as the banks of the Wang River at Lampang. Here the Chiengmai forces made a stand and were defeated at the Battle of Lampang. The victorious Ayutthayan forces were given free rein to loot the town. Among the prizes "liberated" was a treasured statue of Buddha.

Over the next several years, with arms and military training supplied by Portuguese traders, Ayutthaya reclaimed Sukhothai and other Ayutthayan territory from the Chiengmai invaders. By 1529, Ayutthaya was clear of all Chiengmai forces.

Thai War (1660–1662)

PRINCIPAL COMBATANTS: Ayutthaya (Thai kingdom) vs. Chiengmai (Thai kingdom under Burmese control)

PRINCIPAL THEATER(S): Chiengmai (northern Thailand)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Under pretext of aiding Burma's king against the Chinese, King Narai of Ayutthaya mounted an expedition of conquest against Chiengmai.

OUTCOME: Narai achieved control of Chiengmai but lost it within two years, and the kingdom returned to Burmese control.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In contrast to earlier Thai wars, this conflict did not begin as the direct aggression of one Thai kingdom against another but as a result of the action of outside forces. A Manchu army from China attacked Ava, the capital of the kingdom of Burma (Myanmar), as it pursued Yong Li (Yung Li; d. 1662), a Ming pretender to the Chinese throne. The king of Burma fled Ava and sought refuge in Chiengmai, the capital of the Thai kingdom of Chiengmai. The Burmese king also requested aid and protection from King Narai (1632–88) of Ayutthaya (south-central Thailand, also called Siam). Simultaneously, the Mons, who were rebelling against the king in lower Burma, also appealed to Narai for aid. At this point, however, the Chinese troops withdrew from Burma, and officials of Chiengmai attempted to recall the Burmese king's request for aid. It was too late, as Ayutthayan troops were already advancing on Chiengmai. Ayutthaya's Narai had designs on Chiengmai, which was currently dominated by Burma.

A first attempt to capture the city of Chiengmai failed, but the second Ayutthayan assault succeeded. In 1662 the city and much of the kingdom fell to Ayutthaya. Narai now pressed into lower Burma itself.

Narai's triumph would prove short-lived. In 1664, Chiengmai rebelled against Ayutthayan rule and sent Narai's troops packing. The region returned to the control of Burma.

Theban-Spartan War (379–371 B.C.E.)

PRINCIPAL COMBATANTS: Thebes (with Athens, Athenian League, and Boeotian League) vs. Sparta (with Peloponnesian League)

PRINCIPAL THEATER(S): Thebes and Boeotia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Sparta wanted to maintain its dominant position among Greek city-states.

OUTCOME: Repeatedly defeating Sparta, Thebes emerged as the new dominant power among the Greek city-states.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the war's major battle, Leuctra, Sparta fielded 11,000 men against Thebes's 6,000.

CASUALTIES: More than 1,000 Spartans fell in the initial attack at Leuctra.

TREATIES: Treaty between Sparta and Athens and the Athenian League, 374 B.C.E.; Arcadian League formed, 371 B.C.E.

The King's Peace, which ended the CORINTHIAN WAR, stipulated that the Greek city-states would enjoy a large measure of autonomy. The King's Peace notwithstanding, Sparta emerged as the dominant power in the Hellenistic world, and it held sway over the other city-states, largely in an effort to placate Persia.

Of all the city-states, only Thebes posed a formidable threat to Spartan power. Sparta provoked Thebes by allowing the other city-states of the Boeotian League a degree of autonomy, while acting against Thebes by seizing the Cadmea, the Theban citadel, in 382. Next, Spartan forces incited a rebellion in Thebes, then intervened to extinguish it—blatantly circumventing and denying Theban internal authority. Finally, in 379, Spartan troops captured Olynthus, effectively cutting off Thebes by blocking routes of Athenian and Chalcidian military assistance.

Thebes retook the Cadmea in 379, then defeated two Spartan armies sent to relieve the force that had been holding the Cadmea. In 378, Thebes struck a direct alliance with Athens and built up power against Sparta. A new Athenian League was formed, which prompted Sparta's most powerful ally, Persia, to withdraw support from Sparta. With this, Spartan power collapsed. In an effort to regain power, Sparta invaded Boeotia in 377 and 376, then concluded a treaty with Athens and the Athenian League in 374. Sparta called a Pan-Hellenic peace conference in 371, which alienated Boeotia. In July of that year, at the Battle of Leuctra, the Theban general Epaminondas (c. 418–362 B.C.E.) fielded 6,000 troops against the Spartans' 11,000 under Cleombrotus (fl. 380–71 B.C.E.). Despite the disparity in numbers, Epaminondas outgeneraled his adversary by deploying his best troops on the left, from which position they drove back the Spartans at a cost of more than 1,000 Spartan lives. This blow enabled the smaller Theban army to outflank the Spartan force, and it sent Sparta in headlong flight from Boeotia.

Following Sparta's ignominious failure in Boeotia, rebellions swept the Sparta-dominated Peloponnesian League. Simultaneously, the Athenian and Boeotian Leagues united as the Arcadian League, which fielded a joint military police force. Thebes dominated the Arcadian League and thus replaced Sparta as the dominant power among the Greek city-states.

Thebes, Revolt of (1600 B.C.E.)

PRINCIPAL COMBATANTS: Theban nobility vs. Hyksos

PRINCIPAL THEATER(S): Upper Egypt

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Reestablishment of native control over Egypt

OUTCOME: The Hyksos were expelled from Upper Egypt.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Probably none; no documents survive

During the period between about 1800 B.C.E. and 1600 B.C.E., the Semitic Hyksos—the so-called “Shepherd Kings”—invaded Egypt, essentially overrunning the region by about 1700 B.C.E. For the next 100 years, the Hyksos more or less successfully dealt with any number of Egyptian uprisings against their overlordship. However, in 1600 B.C.E., the native nobility of Thebes organized a unified and effective action against the Hyksos, managing to drive them out of Upper Egypt. This paved the way for the development of the New Kingdom under the pharaohs, beginning in 1580 B.C.E.

Theodoric's Invasion of Italy (488–489)

PRINCIPAL COMBATANTS: Ostrogoths vs. Gepidae

PRINCIPAL THEATER(S): Northern Italy borderlands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: First phase in the projected conquest of Italy

OUTCOME: Theodoric invaded and positioned himself well to fight Odoacer.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Ostrogoths, 50,000–75,000; Gepidae, numbers unknown

CASUALTIES: Unknown

TREATIES: None

Theodoric the Ostrogoth (c. 454–526) came to power in 484 and was appointed in 488 patrician of Italy by Emperor Zeno (426–91) of the Eastern Empire. Zeno's strategy was to use Theodoric to neutralize Odoacer (c. 434–93), the first barbarian king of Italy. Theodoric invaded Italy from Novae (Sistova, Bulgaria), leading his entire kingdom, perhaps as many as 200,000 people, of whom 50,000 to 75,000 were warriors. Theodoric's advance was met by a Germanic tribe, the Gepidae, at the

Battle of Sirmium (near Belgrade) in 489. Theodoric overcame this resistance and by August 489 had completed crossing the Julian Alps into Italy to begin THEODORIC'S WAR WITH ODOACER.

Theodoric's War with Odoacer (489–493)

PRINCIPAL COMBATANTS: Theodoric vs. Odoacer

PRINCIPAL THEATER(S): Northern Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Theodoric sought to wrest control of Italy from Odoacer, who had overthrown the last Roman emperor.

OUTCOME: Theodoric and Odoacer agreed to joint rule; Theodoric murdered Odoacer, his sons, and his chief commanders, thereby assuming sole rule of Italy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Theodoric had an army of 150,000; Odoacer commanded similar, sometimes larger, forces

CASUALTIES: Unknown

TREATIES: Treaty establishing Theodoric and Odoacer as joint rulers of Italy, February 27, 493 (immediately abrogated)

Led by Theodoric (the Great; c. 454–526), the German “barbarians,” known as the Ostrogoths or East Goths, continually raided the frontier provinces of the Eastern Roman Empire. In a bold diplomatic move, the Roman emperor of the East, Zeno (426–91), co-opted Theodoric by appointing him patrician of Italy and commissioning him to enter Italy with an army and attack Odoacer (c. 434–93), who had overthrown Romulus Augustulus (fl. 475–76), the last Roman emperor of the West, in the final episode of the fall of Rome, and had become ruler of Italy.

Theodoric marched at the head of an Ostrogoth army of 150,000 across the Julian Alps and attacked Odoacer in several battles in northern Italy, most importantly at Sontius (Isonzo) and Verona, both in 489. Defeated in these two encounters, Odoacer withdrew to Ravenna, a formidable fortress-capital. Here he regrouped and received reinforcements from southern Italy. With these replenished forces, he assumed the offensive and in 490 counter-attacked Theodoric's army of siege massed around Ravenna. Theodoric's forces reeled under Odoacer's blows and retreated to Pavia. Odoacer pursued vigorously, but suddenly he had to detach about half of his force to defend against a Visigoth and Burgundian invasion. Theodoric was therefore able to prevail against Odoacer at the Battle of the Adda River on August 11, 490. Odoacer swiftly fell back on Ravenna, this time with Theodoric in pursuit.

Theodoric settled in for an epic siege of three and a half years. When a naval blockade was added to the land siege, Odoacer finally surrendered on February 27, 493. He agreed to joint rule of Italy with Theodoric.

To solemnize their treaty arrangement, Theodoric and Odoacer, together with their chief commanders, sat together at a great banquet. By prearrangement, Theodoric had his troops set upon Odoacer, his sons, and his commanders. All were murdered, and thus Theodoric became sole ruler of Italy.

Thirteen Years' War (1454–1466)

PRINCIPAL COMBATANTS: Poland vs. Order of the Teutonic Knights

PRINCIPAL THEATER(S): East and West Prussia

DECLARATION: Poland against the Teutonic Knights, 1454
MAJOR ISSUES AND OBJECTIVES: Poland sought the suppression of the Teutonic Knights and to recover Baltic territory lost to the knights in the Teutonic Knights' War with Poland and the Teutonic Knights' War with Poland and Lithuania.

OUTCOME: Poland prevailed, regained the desired territory, and reduced the Teutonic Knights to a Polish vassal order.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Second Treaty of Thorn, October 14, 1466

As a result of the TEUTONIC KNIGHTS' WAR WITH POLAND (1309–43) and the TEUTONIC KNIGHTS' WAR WITH POLAND AND LITHUANIA (1410–11), Poland lost significant territory on the Baltic and was cut off from its only outlet to the sea.

In 1454, Prussia revolted against the harsh rule of the Order of the Teutonic Knights, and Poland's Casimir IV (1427–92) supported the rebellion. He then went on to declare war against the Teutonic Knights. The initial engagement, at Chojnice, resulted in a Polish defeat, but Casimir grasped that this would be a war of attrition and that Poland was in a position to apply pressure to the knights, forcing a drain on their resources. By 1457, the knights could no longer afford to pay the mercenary troops on which they depended, and the knights surrendered their fortified capital at Marienburg to Poland.

The Poles pressed the attack. By 1462, the Teutonic Knights had withdrawn to East Prussia, where a Polish force attacked them at the Battle of Puck on September 17,

1462. Polish victory resulted in the fall of this important Vistula River fortress, near Tczew.

Repeated defeats compelled the knights to conclude the Second Treaty of Thorn on October 14, 1466, by which they ceded Pomerelia (a portion of Pomerania) and all of West Prussia to Poland. The Teutonic Knights were permitted to retain East Prussia, including a new capital city, Königsberg (Kaliningrad), but the grand master of the knights, once a figure of enormous power, was now merely a vassal, in service to Poland. Moreover, seeking to undermine the ethnic structure of the Teutonic Knights, Casimir demanded that Poles be permitted to join the order.

Thirty Days' War See GRECO-TURKISH WAR (1897).

Thirty Years' War (1618–1648)

PRINCIPAL COMBATANTS: The Holy Roman Emperor, Spain, Bavaria and other Catholic German states, Saxony and other Protestant German states (after 1635), the Papacy and various Italian states vs. numerous Protestant states and groups in the Empire, Saxony and other Protestant German states (until 1635), Transylvania, the Dutch Republic, Denmark (1625–1629), Sweden (from 1630), and France (from 1636)

PRINCIPAL THEATER(S): Germany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Religious and political freedom for the Protestants of the Empire, and especially of the Hapsburg lands (the emperor and the states of the empire); the atomization of Germany, territorial gains in north Germany, and a war indemnity (Sweden); territorial gains in Alsace-Lorraine and reduction of assistance between the Austrian and Spanish Hapsburgs (France); security for the “Protestant cause” in Germany (Denmark, the Dutch)

OUTCOME: The Empire became fragmented, with the emperor losing most of his political authority within Germany but consolidating his hold over his own territories; religion ceased to be a major precipitant of political conflict; Germany, although devastated by 30 years of conflict, enjoyed internal peace for almost a century; the foreign powers all gained their objectives, although the cost of doing so provoked serious political strains in most of them; Sweden briefly became a great power.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: The Imperial army commanded by Wallenstein in North Germany in 1628–29 probably approached 200,000 men;

Gustavus Adolphus probably directed the operations of 120,000 men in 1631–32; France maintained some 130,000 men, at least on paper, in 1635–36. Total number of men in battle, however, rarely exceeded 20,000 per side and normally numbered 10,000 or less—roughly half of them cavalry.

CASUALTIES: Perhaps 500,000 soldiers took part in the war, of whom perhaps two-thirds died in service; in addition civilian losses amounted to perhaps 4 million—20 percent of the total population of the Empire.

TREATIES: Hague Alliance (December 9, 1625); Peace of Lübeck (July 7, 1629); Truce of Altmark (September 26, 1629); Heilbronn League (April 23, 1633); Peace of Prague (May 30, 1635); Treaty of Hamburg (March 15, 1641); Peace of Westphalia (October 24, 1648).

The Thirty Years' War devastated Germany. The loss of people was proportionately greater than in WORLD WAR II; the displacement of people and the material destruction caused were almost as great; the cultural and economic dislocation persisted far longer. Although some areas of Germany—particularly in the northeast—escaped relatively lightly, losses in a broad swath of land between Pomerania in the northeast and the Black Forest in the southwest may have approached 50 percent, and the populations and economies of many areas did not recover their prewar levels for at least a generation. Other parts of Europe—particularly northern Italy and Denmark—also suffered temporary but acute devastation. The political influence of Germany crumbled and remained slight until reunification in the mid-19th century. Most foreign powers gained little from their intervention in the war: The Dutch and the Danes got nothing; France acquired only a few rights and territories in Alsace-Lorraine. Only Sweden did well, acquiring extensive lands in north Germany that made it briefly a great power, and the Holy Roman Emperor consolidated his power in the Hapsburg lands in east-central Europe but lost almost all authority within Germany.

CAUSES

The war originated with a dual crisis at the center of the European continent, one in the Rhineland and the other in Bohemia. Both areas lay on the extremities of the “Holy Roman Empire of the German Nation,” a state of 1,000 separate, semi-autonomous polities under the overall suzerainty of the Hapsburg dynasty. Many units were very small—such as those of the “Imperial Knights,” direct vassals of the Holy Roman Emperor and particularly numerous in the southwest, sometimes consisting of one village—whereas others rivaled in size fully independent states elsewhere, such as Scotland or the Dutch Republic. At the top came the lands of the Imperial Hapsburg dynasty itself, covering the elective kingdoms of Bohemia and Hungary, as well as Austria, the Tyrol and Alsace, with

8 million inhabitants (another branch of the family ruled Spain, the Netherlands, large parts of Italy, and substantial colonies around the globe). Next came Electoral Saxony, Brandenburg, and Bavaria, with more than 1 million subjects each; and then the Palatinate, Hesse-Kassel, Trier, and Württemberg, with 500,000 each.

Large or small, however, all states in the empire suffered from three weaknesses. First, they did not accept primogeniture; Hesse had been divided into four portions since 1567; the lands of the Austrian Hapsburgs underwent partition in 1564 and again in 1576. Second, many of the states were geographically fragmented; thus the Palatinate comprised an Upper County, adjoining the borders of both Bohemia and Bavaria, and a Lower County on the Middle Rhine. These two factors had, in the course of time, created in Germany a balance of power between the states. The territorial strength of the Hapsburgs may have brought them a monopoly of the imperial title from 1438 onward, but the other princes, when threatened, formed alliances the military strength of which equaled that of the emperor. However, the third weakness—the religious upheavals caused by the Protestant Reformation of the 16th century—changed everything; princes who had formerly stood together were now divided by religion. Swabia, for example, more or less equal in area to modern Switzerland, included 68 secular and 40 spiritual princes, as well as 32 imperial free cities. By 1618 over half these rulers, and almost exactly half the population, were Catholic; the rest were Protestant. Neither bloc was prepared to let the other mobilize an army. Similar paralysis was to be found in most other regions; the Reformation and Counter-Reformation had separated Germany into hostile but evenly balanced confessional camps.

THE CRISIS IN GERMANY

The Religious Peace of Augsburg in 1555 put an end to 30 years of sporadic confessional warfare in Germany between Catholics and Lutherans by creating a layered structure of legal securities for the people of the empire. At the top was the right (known as *cuius regio eius religio*) of every secular ruler, from the seven electors down to the imperial knights, to dictate whether their subjects' religion was to be Lutheran or Catholic (the only officially permitted creeds). The only exceptions to this rule were found in the imperial free cities, where both Lutherans and Catholics enjoyed (at least in theory) freedom of worship, and the Catholic ecclesiastical states, where bishops and abbots who wished to become Lutherans were obliged to resign first. The latter provision, known as the *reservatum ecclesiasticum*, gave rise to a war from 1583 to 1588, when the archbishop of Cologne declared himself a Protestant but refused to resign; in the end a coalition of Catholic princes, led by the duke of Bavaria, forced him out.

The "War of Cologne" proved to be a turning point in the religious history of Germany. Until then, the Catholics

had been on the defensive, losing ground steadily to the Protestants; afterward, Catholic princes began to enforce the *cuius regio* principle with rigor. In Bavaria, as well as in several ecclesiastical states, Protestants faced the choice of either conversion or exile. Most of those affected belonged to the Lutheran Church, already weakened by defections to a new creed that could scarcely boast a German adherent at the time of the Augsburg settlement—Calvinism. The rulers of the Palatinate (1560), Nassau (1578), Hesse-Kassel (1603), and Brandenburg (1613) all abandoned Lutheranism for the new confession, as did many lesser rulers and several towns. It is small wonder that the Lutherans came to detest the Calvinists even more than they loathed the Catholics.

These religious divisions intensified the confessional diversity within the empire. By 1600, the Catholics were firmly entrenched south of the Danube and the Lutherans northeast of the Elbe. But the areas in between formed an unstable patchwork of Calvinist, Lutheran, and Catholic. Donauwörth, an independent city just across the Danube from Bavaria, for example, was obliged (by the Peace of Augsburg) to tolerate both Catholics and Protestants; but for years the Catholic minority had not been permitted full rights of public worship. When, in 1606, the priests tried to hold a procession through the streets, they were beaten, and their relics and banners desecrated. The following year, however, when the Lutheran magistrates of Donauwörth flatly refused to permit their Catholic subjects freedom of worship, the Bavarians secured imperial permission to march into the city and restore Catholic worship by force (December 1607). They also banned Protestant worship and set up an occupation government that eventually transferred the city to direct Bavarian rule.

These dramatic events thoroughly alarmed Protestants elsewhere in Germany. Was this, they wondered, the first step in a new Catholic offensive against heresy? The Calvinist elector Frederick IV of the Palatinate (1583–1610) took the lead and on May 12, 1608, forming a Protestant association, to last for 10 years, for self-defense—the Evangelical Union. At first membership remained restricted to Germany, although some wished to extend it, but before long a new crisis rocked the empire and turned the German Union into a Protestant International.

THE CRISIS IN THE RHINELAND

The new crisis began with the death of John William (1562–1609), the childless duke of Cleves-Jülich, in March 1609. His duchies, occupying a strategic position in the lower Rhineland, included both Protestant and Catholic subjects, but both of the main claimants to the inheritance were Protestants: under the *cuius regio* principle, their succession would lead to the expulsion of the Catholics. Emperor Rudolf II (1576–1612) therefore refused to recognize the Protestant princes' claims. Because both belonged

to the Union, they solicited, and received, promises of military aid from their colleagues; they also received similar promises from the kings of France and England. This sudden accretion in Protestant strength caused the German Catholics to take countermeasures: a Catholic League was signed between Duke Maximilian of Bavaria (1597–1651) and his neighbors on July 10, 1609, soon to be joined by the ecclesiastical rulers of the Rhineland and receiving support from Spain and the papacy. Again, reinforcement for one side provoked countermeasures. The union leaders signed a defensive treaty with England in 1612 (cemented by the marriage of the union's director, the young Frederick V of the Palatine [1610–32], to the king of England's daughter) and with the Dutch Republic in 1613.

At first sight, all this resembles the pyramid of alliances patiently constructed by the statesmen of Europe 300 years later that plunged the continent into WORLD WAR I. But governments before 1914 feared political domination, whereas before 1618 they feared religious extirpation. Union members believed that some sort of Catholic conspiracy existed, aimed at rooting out all trace of Protestantism from the empire. Such fears were probably unjustified at this time: in 1609, pope and emperor lacked unity of purpose, and the last thing Maximilian wished to see was Hapsburg participation in the league—indeed, rather than suffer it he formed in 1613 a separate association of his own, and when that failed, he dissolved the league altogether in 1617. This reduction in the Catholic threat produced reciprocal moves among the Protestants. Although renewed fighting occurred in 1614 over Cleves-Jülich, the members of the Protestant Union had abandoned their militant stance by 1618, when the treaty of alliance came up for renewal. They declared that they would no longer become involved in the territorial wrangles of individual members, and they resolved to prolong their association for only three years more.

Although the existence of these militant confessional alliances helped to spread war across Germany after 1618, the continuity must thus not be exaggerated. Both union and league were the product of fear; but by 1618 the grounds for fear seemed to be receding. The Thirty Years' War was not triggered by events in the Rhineland but by developments in the lands of the Austrian Hapsburgs over the winter of 1617–18.

THE CRISIS IN THE HAPSBURG LANDS

Although the Cleves-Jülich crisis held the attention of western Europe in 1609, the eyes of observers farther east were upon Prague, the capital of Bohemia. That elective kingdom (which also included Silesia, Lusatia, and Moravia), together with Hungary, had come to the Hapsburg family in 1526. At first they were ruled jointly, but after 1564 the inheritance was divided into three portions: Alsace and Tyrol (known as "Further Austria") went to one family member; Styria, Carinthia, and Carniola

(known as "Inner Austria") went to another; only the remainder came to the new Hapsburg emperor, Maximilian II (1564–76).

By 1609, the fragmentation had advanced even further. Maximilian's eldest son, Rudolf II (1552–1612), ruled only Bohemia; all the rest of his father's territories had been acquired, the previous year, by a younger son (Matthias [1557–1619]). The new ruler had come to power not through strength or talent, however, but by the exploitation of the religious divisions of his subjects. In the course of the 1570s, the Protestants of Austria, Bohemia, and Hungary had used their numbers and their control of local representative assemblies to force the Hapsburgs to grant them freedom of worship. This went clearly against the *cuius regio* principle, and everyone knew it. In 1599 the ruler of Inner Austria, Archduke Ferdinand (1503–64), began a successful campaign of forcible re-Catholicization among his subjects. Rudolf II's decision to launch the same policy in Hungary shortly afterward provoked a revolt, and the rebels offered the Hungarian crown to Matthias in return for guarantees of toleration. The Bohemians then decided to exploit Rudolf's temporary embarrassment by pressing him to grant similarly far-reaching concessions to the non-Catholic majority of that kingdom. Rudolf's "Letter of Majesty," signed on July 9, 1609, granted full toleration to Protestants and created a standing committee of the representative assembly of the kingdom (the Estates), known as "the Defensors," to ensure that the settlement would be respected.

But Rudolf proved incapable of keeping to any one policy for long. In 1611, he tried to revoke the Letter of Majesty and to depose the Defensors by sending a small Hapsburg army into Prague, but a force of superior strength defeated the invaders, and the Estates resolved to depose Rudolf and offer their crown to Matthias. The emperor, broken in mind and body, died in January 1612; his brother, who also became Holy Roman Emperor later in the year, now ruled all the Hapsburg lands in the empire. But the alliance with the Protestant Estates that brought about Matthias's elevation did not long continue once he was in power. Instead, the new ruler now sought to undo the concessions he had made and looked for support to his closest Hapsburg relatives: to his brother Albert (1559–1621), governor-general of the Spanish Netherlands; to his cousin Ferdinand, ruler of Inner Austria; and to his nephew Philip III (1578–1621), king of Spain. All three, however, turned him down.

In 1609, Albert had succeeded in bringing the war between Spain and the Dutch Republic to a temporary close, with the "Twelve Years Truce." He did not wish to involve his ravaged country in supplying men and money to Vienna, and perhaps provoking countermeasures from Protestants nearer home. Archduke Ferdinand, although willing to aid Matthias to uphold his authority (not least because he regarded himself as heir presumptive to the

childless Matthias), was prevented from doing so by the outbreak of war between his Croatian subjects and the neighboring Republic of Venice (the "Uskok War," 1615–18). Finally, Philip of Spain was also involved in war: from 1613 to 1615 and from 1616 to 1617, Spanish forces in Lombardy fought the troops of the duke of Savoy over the succession to the childless duke of Mantua. Spain could therefore aid neither Matthias nor Ferdinand.

In 1617, however, papal diplomats secured a temporary settlement to the Mantuan question, and Spanish troops hastened to assist Ferdinand. Before long, Venice made overtures for peace and the archduke was able to join Matthias. The emperor, old and infirm, was anxious to establish Ferdinand as his heir and, in the autumn of 1617, the Estates of both Bohemia and Hungary agreed to recognize the archduke unconditionally as king-designate. On the strength of this, Ferdinand proceeded over the winter of 1617–18 to halt the concessions being made to Protestants. He created an overwhelmingly Catholic council of regency for Bohemia, which soon began to censor works printed in Prague and to prevent non-Catholics from holding government office. More inflammatory still, the regents ordered Protestant worship to cease in towns on church lands (which they claimed were not included in the Letter of Majesty).

The "Defensors" created by the Letter of Majesty objected strongly to these measures and summoned the Estates of the realm to meet in May 1618. When the emperor's representatives declared the meeting illegal, the Estates invaded the council chamber and threw two Catholic regents from the window (the "defenestration"), together with their secretary. Next, a provisional government was created (known as "the Directors"), and a small army was raised (*see* BOHEMIAN-PALATINE WAR).

OUTBREAK

Apart from the famous "defenestration," superficially the events in Prague in May 1618 differed little from those in 1609 and 1611. Yet those earlier crises did not trigger a 30-year struggle. The crucial difference lay in the involvement of foreign powers. In 1609 and 1611 the Hapsburgs, represented by Rudolf and Matthias, had given in to their subjects' demands; in 1618, led by Ferdinand, they did not. At first his defiant stance achieved nothing, for the rebel army expelled loyal troops from almost every part of the kingdom, while their diplomats secured declarations of support from Silesia, Lusatia, Moravia, and Austria. In May 1619, the rebels even laid siege to Ferdinand in Vienna. But within weeks they were forced to withdraw because a major Spanish army, partly financed by the papacy, invaded Bohemia.

The appearance of Spanish troops and papal gold in eastern Europe immediately reawakened the fears of the Protestant rulers of the empire. So when in the summer of 1618 the Bohemians deposed Ferdinand and offered the

crown to Frederick V of the Palatinate (1610–32), parts of whose territories adjoined Bohemia, he was favorably disposed. Some of the elector's advisers favored rejecting this offer, because they feared that acceptance might begin a general religious war; others pointed out that such a war was inevitable anyway when the Twelve Years' Truce, concluded between Spain and the Dutch Republic in 1609, expired in April 1621. They argued that allowing the Bohemian cause to founder would ensure that the conflict in the Netherlands would also be resolved in Spain's favor later, making a concerted Hapsburg attack on the Protestants of the empire both ineluctable and irresistible.

Frederick therefore accepted the Bohemian crown and in so doing rekindled the worst fears of the German Catholics. The Catholic League was recreated, and in December 1619 its leaders authorized the levy of an army of 25,000 men, to be used as Maximilian of Bavaria thought fit. At much the same time Philip III and Archduke Albert each promised to send a new army into Germany to assist Ferdinand (who had succeeded the late Matthias as Holy Roman Emperor).

THE TRIUMPH OF THE CATHOLICS, 1619–1629

The rebel Estates crowned Frederick V (1596–1632) king of Bohemia in October 1619, but already the Catholic net was closing around him. The axis linking Vienna with Munich, Brussels, and Madrid enjoyed widespread support: Rome and Genoa sent subsidies whereas Tuscany and Poland sent troops. Furthermore, states favorable to Frederick's cause remained neutral: Spanish diplomacy kept England out of the war, and French efforts persuaded the Evangelical Union to remain aloof from the Bohemian adventure of their leader. The Dutch Republic also did nothing, permitting a Spanish army to cross from the Netherlands and occupy the Rhine Palatinate in the summer of 1620, while the armies of the emperor and league, reinforced with Spanish and Italian contingents, invaded the rebel heartland. On December 20, in the first significant battle of the war, at White Mountain outside Prague, they routed Frederick's forces. The unfortunate prince fled northward, abandoning his subjects to the mercy of the victorious Ferdinand.

This was total victory, and it might have remained the last word but for events in the Low Countries. Once the Twelve Years' Truce expired in April 1621, the Dutch, fearing a concerted attack by both Spanish and Austrian Hapsburgs, decided to provide an asylum for Frederick and to supply diplomatic and, eventually, military assistance to his cause. In 1622, and again in 1623, armies were raised for Frederick with Dutch money, but they were defeated. The emperor's political position, however, also weakened considerably in the course of 1623. Although his armies won impressive victories in the field, their success reflected massive financial and military support from the Catholic League, controlled by Maximilian of Bavaria. Ferdinand II,

thanks to the Spanish and papal subsidies, maintained some 15,000 men himself; but the league provided him with perhaps 50,000. Thus Maximilian's armies had in effect won Ferdinand's victories and, now that all common enemies had been defeated, Maximilian requested his reward: the lands and electoral title of the outlawed Frederick of the Palatinate. Don Balthazar de Zúñiga (d. 1622), chief minister of Ferdinand's other major ally, Spain, worried about the potential consequences of acceding to this demand, but in October 1622 he died and no one else in Madrid, least of all his successor as principal minister, the Count-Duke of Olivares (fl. 1621–43), possessed practical experience of German affairs; in January 1623 the emperor conferred the electorate on Maximilian.

The electoral transfer provoked an enormous outcry, for it was clearly unconstitutional. The Golden Bull of 1356, universally regarded as the fundamental and immutable law of the empire, had ordained that the electorate should remain in the Palatine house in perpetuity; the transfer of 1623 thus undermined a cornerstone of the constitution, which many regarded as their only true safeguard against arbitrary rule. Inside Germany, a pamphlet war began, directed against Maximilian and Ferdinand; outside, sympathy for Frederick at last created for his cause an international body of support, which had been so conspicuously lacking. The Dutch and the Palatine exiles now encountered little difficulty in engineering an alliance involving France, England, Savoy, Sweden, and Denmark and dedicated to the restoration of Frederick to his forfeited lands and titles (the Hague Alliance, December 9, 1624). Its leader was Christian IV of Denmark (1577–1648), one of the richest rulers in Christendom, who saw a chance to extend his influence in northern Germany under cover of defending "the Protestant cause." He invaded in June 1625.

But the Protestants' diplomatic campaign had not gone unnoticed. In spring 1625 Emperor Ferdinand authorized Albrecht von Wallenstein (1583–1634), military governor of Prague, to raise an imperial army of 25,000 men, and to move it northward to meet the Danish threat. Wallenstein's approach forced Christian to withdraw, and when the Danes invaded again the following year, they were routed at the Battle of Lutter (August 26, 1626). The joint Imperial and league armies pursued the defeated forces: First they occupied the lands of north German rulers who had declared support for the invasion, then they conquered the Danish mainland itself. Christian made peace in 1629, promising never again to intervene in the empire. His allies had long since withdrawn from the struggle.

Just as the Battle of White Mountain had delivered the rebels into the emperor's grasp, so the Battle of Lutter delivered the rebels' German supporters. After the victories, accordingly, Ferdinand initiated important new policies that aimed to exalt the Catholic religion and his own authority. Widespread confiscation of land took place in

the Hapsburg provinces—perhaps two-thirds of the kingdom of Bohemia changed hands during the 1620s—and established a new class of loyal landowners (like Wallenstein). At the same time, the power of the Estates was curtailed, and freedom of worship for Protestants restricted (in some territories) or abolished (in most of the rest). Even a major rebellion in Upper Austria in 1626, provoked principally by the persecution of Protestants, failed to change Ferdinand's mind. Indeed, fortified by his success in the Hapsburg lands, he implemented new policies in the empire. To begin with, disloyal rulers were replaced (the Palatinate went to Maximilian, Mecklenburg to Wallenstein, and so on). Next, serious steps were taken to reclaim church lands that had fallen into Protestant hands. At first this was done on a piecemeal basis, but on March 28, 1629, Ferdinand issued the "Edict of Restitution," which declared unilaterally that all church lands secularized since 1555 must be returned at once, that Calvinism was an illegal creed in the empire, and that ecclesiastical princes had the same right as secular ones to insist that their subjects be of the same religion as their ruler. The last clause, at least, was clearly contrary to the terms of the Peace of Augsburg, which Protestants at least had come to regard as a central pillar of the Constitution. But Ferdinand allowed no opportunity for argument and ordered the Edict to be enforced immediately by the victorious Catholic armies.

The people of the Empire seemed threatened with arbitrary rule against which they had no defense, and this fear, skillfully exploited once again by Protestant propagandists, ensured that the war in Germany did not end in 1629 with the defeat of Denmark. Ferdinand may have won numerous military victories, but these victories lured him toward a serious political defeat. The pens of his enemies proved mightier than the sword.

THE CRISIS OF THE WAR, 1629–1635

If Maximilian of Bavaria desired the title of elector as his reward for supporting Ferdinand, Spain (for its part) demanded imperial support for its wars elsewhere in Europe—above all in Italy. The death of the last native ruler of the strategic states of Mantua and Montferrat in December 1627 created dangers in Italy that the Spaniards proved unable to ignore and temptations they proved unable to resist. Hoping to forestall intervention by others, Spanish forces from Lombardy launched an invasion, but the garrisons of Mantua and Montferrat declared for the late duke's relative, the French-born duc de Nevers. Nevers lacked the resources to withstand the forces of Spain alone, and he appealed to France for support. However, Louis XIII (1610–43) and Cardinal Richelieu (1585–1642; chief minister, 1624–42) engaged in a desperate war against their Calvinist subjects, could cross the Mont Cenis pass and enter Italy only when the rebels had been defeated, early in 1629. It was to meet this threat that, at the request of Philip IV of Spain (1621–65), the Emperor

sent some 50,000 troops, tipping the balance in the war for Mantua in the Hapsburgs' favor but critically weakening his own hold on Germany.

Gustavus Adolphus of Sweden (1611–32) had spent most of the 1620s at war with Poland seeking to acquire territory on the southern shore of the Baltic (*see* POLISH-SWEDISH WAR FOR LIVONIA, SECOND). Poland made numerous concessions in return for a six-year cease-fire in the Truce of Altmark (September 26, 1629), and Gustavus lost no time in turning his attention to developments in Germany. On July 6, 1630, he led a Swedish expeditionary force ashore near Stralsund with the declared intention of saving the “liberties of the empire” and preserving the security of the Baltic from Hapsburg aggression (*see* SWEDISH WAR).

Despite the defeat of the German Protestants and their foreign allies, Sweden enjoyed a far more favorable position than Denmark had possessed five years previously. Instead of the two armies that faced Christian IV, only one opposed Gustavus Adolphus, for in the summer of 1630 the emperor's Catholic allies in Germany—led by Maximilian of Bavaria—demanded the dismissal of Wallenstein and the drastic reduction of his expensive army. Ferdinand, with the bulk of his forces tied down in Italy, could not refuse, even though he thereby lost the services of the one man who might conceivably have retained all the imperial gains of the previous decade and united Germany under a strong monarchy.

The emperor and his German allies nevertheless remained united over the Edict of Restitution; no concessions in matters of religion and no restoration of forfeited lands would be allowed. The German Protestants therefore reluctantly made common cause with Sweden, the army of which swelled thanks to French and Dutch subsidies. In September 1631 at Breitenfeld, just outside Leipzig in Saxony, Gustavus's forces destroyed the main Catholic field army and in the winter of 1631–32 overran most of central Germany and Bohemia. The next summer they occupied Bavaria. Although Gustavus died in battle at Lützen, on November 16, 1632, his forces again proved victorious, and his cause was directed with equal skill by his chief adviser, Axel Oxenstierna (1583–1654), who crafted a military alliance that transferred much of the cost of the war onto the shoulders of the German Protestant states (the Heilbronn League, April 23, 1633). Swedish ascendancy was destroyed in 1634, however, when Spain sent a large army across the Alps from Lombardy to join the Imperial and Bavarian forces in relieving the besieged town of Nördlingen (September 6). The Swedes were beaten in the ensuing battle, and withdrew their forces in haste from most of southern Germany.

Yet Sweden, under Oxenstierna's skillful direction, fought on. Certainly its motives included a desire to defend the Protestant cause in Germany and to restore the deposed princes to their thrones. More important was the fear that if the German Protestants were finally defeated

the imperialists would turn the Baltic into a Hapsburg lake and might even invade Sweden. The Swedish government therefore desired a settlement that would atomize the empire into congeries of independent but weak states incapable of threatening the security of Sweden or her hold on the Baltic. Furthermore, to guarantee this fragmentation, Sweden desired sovereignty over certain strategic areas of the Empire—particularly the duchy of Pomerania on the Baltic coast and the electorate of Mainz on the Rhine.

Sweden's German allies, however, did not share these goals. They aimed, rather, at the restoration of the prewar situation—in which there had been no place for Sweden—and it soon became clear that they were prepared to make a separate settlement with the emperor in order to achieve this. No sooner was Gustavus Adolphus dead than the elector of Saxony, considered the foremost Lutheran prince of the Empire, put out peace feelers towards Vienna. At first John George (1611–56) was adamant about the need to abolish the Edict of Restitution and to secure a full amnesty for all, as preconditions for a settlement. But the imperial victory at Nördlingen made him less demanding. The insistence on an amnesty for Frederick V was dropped, and it was accepted that the edict would be applied in all areas recovered by Catholic forces before November 1627 (this covered all lands south of the Elbe, but not the Lutheran heartland of Saxony and Brandenburg). The emperor and the Saxons signed the Peace of Prague on May 30, 1635, and within a year most other German Lutherans also changed their allegiance from Stockholm to Vienna.

THE EUROPEAN WAR IN GERMANY, 1635–1645

This partial settlement of the issues behind the war led many in Germany to look forward to a general peace. Attempts were made to convert the Peace of Prague into a general settlement. At a meeting of the electors, held at Regensburg in 1636–37, Ferdinand II agreed to pardon any prince who submitted to him and promised to begin talks with the foreign powers to ascertain their terms for peace. But the emperor's death immediately after the meeting brought this initiative to nothing. Efforts by Pope Urban VIII (1623–44) to convene a general peace conference at Cologne proved similarly unavailing. Then, in 1640, the new emperor, Ferdinand III (1637–57), assembled the Imperial Diet for the first time since 1613 in order to find a solution to at least the outstanding German problems—the amnesty question and the restitution of church lands. He met with little success and could not prevent first Brandenburg (1641) and then Brunswick (1642) from making separate agreements with Sweden. The problem was that none of these attempts at peace were acceptable to the foreign powers involved in the war, yet no lasting settlement could be made without them.

Nevertheless the Peace of Prague transformed the Thirty Years' War. Instead of a struggle principally between the emperor and his own subjects, with some foreign aid,

it became a war of the emperor against foreign powers, the German supporters of which were normally few in number and limited in resources. Sweden, as noted above, had distinct and fairly consistent aims in its war: to secure bases in the empire, both as guarantees of its influence in the postwar era and as recompense for coming to the rescue of the Protestants; and to create a system of checks and balances in Germany that would prevent any single power ever again becoming dominant. If those aims could be achieved, Oxenstierna was prepared to quit.

However, because the Heilbronn League did not long survive the Peace of Prague, Sweden needed to find an alternative source of support in order to secure its objectives, and the only one available was France. Louis XIII and Richelieu had been subsidizing Sweden's war effort for some time. Now, in 1635, in the wake of Nördlingen, they signed offensive and defensive alliances with the Dutch Republic (February 8), Sweden (April 28), and Savoy (July 11); they sent an army into the Alps to occupy the Valtelline, a strategic military link between the possessions of the Spanish and Austrian Hapsburgs (March); and they mediated a 20-year truce between Sweden and Poland (September 12). Finally, on May 19, 1625, they declared war on Spain.

Yet France possessed different aims both from Sweden and from its German allies. France wished to defeat Spain, its rival for over a century, and her early campaigns in Germany were intended more to prevent Ferdinand from sending aid to his Spanish cousins than to impose a Bourbon solution on Germany—indeed France declared war on Ferdinand only in March 1636. Therefore, Sweden at first avoided a firm commitment to France, in order to leave the way clear for a separate peace should the military situation improve sufficiently to permit the achievement of its own particular aims. But the war did not at first favor the allies. French and Swedish forces, operating separately, failed to reverse the verdict of Nördlingen; despite the Swedish victory at Wittstock (October 4, 1636) and French gains in Alsace and the middle Rhine (1638), the Hapsburgs always seemed able to even up the score. Oxenstierna therefore abandoned his attempt to maintain independence and threw in his lot with France: In the Treaty of Hamburg (March 15, 1641), the two sides promised not to make a separate peace and instead to open joint negotiations with the emperor and the German princes for the satisfaction of the allies' claims at the Westphalian towns of Münster and Osnabrück. However, while the talks proceeded, the war would continue.

The treaty of Hamburg at last created a coalition capable of destroying the power both of Ferdinand III and of Maximilian of Bavaria. In general, France attacked Bavaria, and Sweden fought the emperor, but there was considerable interchange of forces and some effort to coordinate strategy. On November 2, 1642, the Hapsburgs' army met defeat in Saxony at the Second Battle of Breitenfeld, and the emperor avoided further reverses thanks only

to the outbreak of war between Denmark and Sweden (May 1643–August 1645). Yet even before Denmark's final surrender, the Swedes were back in Bohemia, and, at Jankow (March 6, 1645), they destroyed another Imperial army. The emperor and his family fled to Graz, while the Swedes advanced to the Danube and threatened Vienna. At the same time, French forces defeated Maximilian's army on August 3 at Allerheim.

Jankow and Allerheim constituted two of the truly decisive battles of the war, because they destroyed all possibility that the Catholics might obtain a favorable peace settlement. In September 1645 the elector of Saxony made a separate peace with Sweden and—like Brandenburg and Brunswick before him—withdrew from the war. Meanwhile, at the peace conference then in session in Westphalia, the imperial delegation began to make major concessions.

MAKING PEACE, 1645–1648

One hundred ninety-four European rulers, great and small, sent representatives to the Congress of Westphalia, and talks continued from spring 1643 through autumn 1648. Although negotiations proceeded simultaneously on all issues, the purely German problems tended to be resolved first—partly because they were already near to solution, and partly because the foreign diplomats realized that it was best to address public peace and the liberties of the empire. So in 1645 and 1646, with the aid of French and Swedish mediation, the emperor conceded all German territorial rulers a large degree of sovereignty (*Landeshoheit*), issued a general amnesty to all German princes, created an eighth electorate for the son of Frederick V (so that both he and Maximilian possessed the coveted dignity), abandoned the Edict of Restitution, and granted official toleration to Calvinism within the empire. The last two points caused the most bitter argument and led to the division of the German rulers at the Congress into two blocs: the *Corpus Catholicorum* and the *Corpus Evangelicorum*. Neither was monolithic or wholly united, and eventually the Catholics split into those who were prepared to make religious concessions in order to have peace and those who were not. A coalition of Protestants and pragmatic Catholics then succeeded in securing the acceptance of a formula that recognized all church lands in secular hands by January 1, 1624 (that is, before the gains made by Wallenstein's army), as Protestant and granted freedom of worship to religious minorities where these had existed by that same date. The Augsburg settlement of 1555 was thus overthrown, and it was agreed that any change to the new formula could be achieved only through the "amicable composition" of the Catholic and Protestant blocs, not by a simple majority.

The "amicable composition" principle was finally accepted by all parties early in 1648, thus solving the last German problem. But it did not lead to immediate peace, because of the difficulty of satisfying the foreign powers

involved. Apart from France and Sweden, representatives from the Dutch Republic, Spain, and many other non-German participants in the war were present and eager to secure the best settlements they could. The war in the Netherlands was the first to end; on January 30, 1648, Philip IV (1605–65) of Spain signed a peace that recognized the Dutch Republic as independent and agreed to liberalize trade between the Netherlands and the Iberian world. The French government, led since Richelieu's death (December 4, 1642) by Cardinal Mazarin (Giulio Mazarini [1602–61]), bitterly opposed this settlement, because it left Spain free to deploy all its forces in the Low Countries against France; France now concentrated on perpetuating the war in Germany. Although Mazarin had already signed a "preliminary agreement" with the emperor in September 1646, which conveyed parts of Alsace and Lorraine to France, in 1647–48 he started a new campaign in Germany in an attempt to secure more. On May 17, 1648, another combined imperial-Bavarian army was defeated at Zusmarshausen, and the French occupied Maximilian's lands.

Mazarin's desire to keep on fighting was thwarted by two developments. On the one hand, the pressure of the war on French taxpayers created tension that in June 1648 erupted into the revolt known as the "Fronde" (see FRONDE, WARS OF THE). On the other, Sweden finalized terms for a settlement. The emperor and the Diet offered the Stockholm government, still directed by Oxenstierna, half of Pomerania, most of Mecklenburg, and the secularized bishoprics of Bremen and Verden; a seat in the Imperial Diet; and 5 million thalers toward the wage arrears of the Swedish army. With so many tangible gains, and with Germany so prostrated that there was no risk of any further imperial attack, it was clearly time for Sweden to escape from the war.

France appeared to gain less—mainly the transfer of a bundle of rights and territories in Alsace and Lorraine—but Mazarin could nevertheless derive satisfaction from the fact that the final treaty, signed on October 24, 1648, firmly excluded the emperor from the empire and placed him under oath to provide no further aid to Spain. France therefore settled down to suppress the Fronde and to win the war against Philip IV. Nevertheless, the Austrian Hapsburgs had also made some gains in the war. No powerful estates and no Protestant worship remained in their territories (except in Hungary), and despite strenuous efforts by the Swedish diplomats at Westphalia, no lands confiscated from rebels and others had to be restored. The "Hapsburg Monarchy," born of disparate units but now entirely under the authority of the king-emperor, had become a powerful state in its own right. Purged of dissidents, the compact private territories of the Holy Roman Emperor remained large enough to guarantee him a place among the foremost rulers of Europe. In the empire, by contrast, the new stability rested upon division rather than unity. Although the territorial rulers had acquired, at Westphalia, supreme power in their localities and collec-

tive power in the Diet to regulate common taxation, defense, laws, and public affairs without Imperial intervention, in fact the "amicable composition" formula prevented any changes being made to the status quo.

The war also created a new diplomatic order in Europe, predicated on a balance of power with its fulcrum in a disunited Germany. The system depended on channeling the aggression of German princes from thoughts of conquering their neighbors to dreams of weakening them; the settlement of 1648 was long regarded as the principal guarantee of order and peace in central Europe. Thus, for almost a century, German rulers rarely went to war with each other—a strong contrast with the 100 years before 1618, which had been full of armed neutrality and actual conflict. The reason for the contrast was simple—the Thirty Years' War had settled both of the crises that had so disturbed the peace in the decades before it began.

Finally, the war helped to remove religion as a likely precipitant of political conflict. Although religion remained politically significant after 1648 (for instance in creating an alliance against Louis XIV [1638–1715] after 1685 (see GRAND ALLIANCE, WAR OF THE) or in unseating James II [1633–1701] of England in 1688; see GLORIOUS REVOLUTION), it no longer determined international relations as it once had done. Confessional considerations strongly influenced those Calvinist princes who took up arms against Ferdinand II, and as long as these men dominated the anti-Hapsburg cause, so too did the issue of religion, but they failed to secure a lasting settlement. Gradually the task of defending the "Protestant cause" fell into the hands of Lutherans—less militant and less intransigent than the Calvinists—and they stood ready to ally, if necessary, with Anglican England, Catholic France, even Orthodox Russia in order to create a coalition capable of defeating the Hapsburgs. Naturally such states had their own reasons for fighting; if upholding the "Protestant cause" featured among them, it seldom predominated. After 1625, therefore, the role of religious issues in European politics receded. This was, perhaps, the greatest achievement of the Thirty Years' War, for it thus eliminated the major destabilizing influence in European politics that had both undermined the internal cohesion of many states and overturned the diplomatic balance of power created during the Renaissance.

Thousand Days, War of a (1899–1903)

PRINCIPAL COMBATANTS: Colombian Conservatives vs. Liberals (with much infighting among the Conservatives)

PRINCIPAL THEATER(S): Colombia

DECLARATION: Coup d'état of July 31, 1900, propelled the nation into civil war.

MAJOR ISSUES AND OBJECTIVES: Control of Colombian government

OUTCOME: No great reform was achieved; Colombia was ravaged by the war and lost the province of Panama, which declared its independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Conservatives, 20,000; Liberals, 10,000

CASUALTIES: Estimated 100,000 died on all sides

TREATIES: None

Near the end of the 19th century, Colombia was wracked with civil violence as liberals rebelled against conservative president Rafael Núñez (1825–94) and his successor, Miguel Antonio Caro (1843–1909). In 1898, Caro was succeeded by another conservative, Miguel Sanclemente (1820–1902), but by this time the conservative party was beginning to show cracks, and liberals were eager to exploit growing dissension within the party. In 1899, a liberal revolt swept Colombia. During the tumult, Sanclemente's vice president, Jose Manuel Marroquín (1827–1908), overthrew the president in a coup on July 31, 1900. This only added to the disarray within both the government and the conservative party. Armed violence between conservatives and liberals intensified, as Colombia fell into civil war, during which the fragile economy of this impoverished nation shattered completely. The desperate economic conditions fueled further violence.

The shooting started on October 17, 1899, in Santander Province in an armed revolt against the Conservative-dominated central government. Although small—9,000 men at the outbreak of the war—the Colombian army contained the revolt, forcing a rebel retreat to the Venezuelan border. Simultaneously, government gunboats destroyed a Liberal flotilla on the Magdalena River at Los Obispos on October 24, 1899.

Undaunted by these defeats, the Liberals rallied and managed to win major victories in the Peralonso River valley during December 15–16, only to suffer a crushing defeat at Palonegro during a long battle that spanned May 11–26, 1900. This defeat badly crippled the Liberals as a conventional military force; however, rebel elements continued to fight a vicious guerrilla war from strongholds in the Andes.

In September 1902, government forces captured the guerrilla leader Cesáro Pulido (d. 1902) and summarily executed him. This prompted the surrender, on November 21, 1902, of the last of the Liberal forces. Fighting continued sporadically until June 1903.

It took Marroquín and his forces three years to suppress the civil war, at a cost, it is estimated, of some 100,000 lives on all sides. Although the last of the fighting ended in June 1903, additional fallout from the war came later in the year. Colombia was so weakened that it could do nothing when Panama, at the time a province of Colombia, seceded and declared its independence—encouraged and aided by the United States, which sought (and gained) acquisition of a “canal zone,” through which the long-desired Panama Canal would be dug.

Three Feudatories, Revolt of the (1674–1681)

PRINCIPAL COMBATANTS: Forces of Wu Sangui (Wu San-kuei), governor of Yunnan (with provinces of Guangdong [Kwangtung] and Fujian [Fukien]) vs. Kangxi (K'ang-hsi), Manchu emperor of China

PRINCIPAL THEATER(S): Southern China

DECLARATION: Wu declared independence of Yunnan in 1674.

MAJOR ISSUES AND OBJECTIVES: The emperor sought to suppress the power of the three feudatories (Yunnan, Kwangtung, and Fukien); in response, the governor of Yunnan, Wu San-kuei, fomented and led a long rebellion.

OUTCOME: The rebellion was ultimately suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Emperor Kangxi (1654–1722) rewarded each of the three Ming generals who aided the Manchus in overturning the Ming dynasty taking control of China, and creating the Manchu dynasty with the governorship of a feudatory (vassal state) in southern China. When the governors began to demand subsidies from the emperor and then asserted hereditary rights to the feudatories, Kangxi acted. In 1673, when the governor of the Guangdong feudatory retired from military command, relinquishing his army, Kangxi took advantage of the situation to abolish the feudatory. Realizing what this portended, Wu Sangui (1612–78), governor of Yunnan, refused the emperor's command that he pay homage and that he relinquish his

rights. Furthermore, Wu renounced all allegiance to the Manchus, and he proclaimed Yunnan independent. He mustered his forces and took control not only of Yunnan, but also of Sichuan (Szechwan), Guizhou (Kweichow), Hunan, and Guangxi (Kwangsi). He moved so swiftly and forcefully that the disinherited heirs of Guangdong and the still-active governor of Fujian, Shang Kexi (Shang K'o-hsi; fl. late 1600s) enthusiastically joined Wu's rebellion.

Emperor Kangxi ordered the full force of the imperial army against the rebels. He began with operations in Guangdong and Fujian but found himself bogged down in a slow, bloody war. Fortunately for the emperor, these former generals proved less competent in military matters than the Manchu commanders and the rebellion in these provinces was crushed.

Wu, who had by now declared himself emperor of the Zhou (Chou) dynasty, continued to fight, however. Patiently, Kangxi pushed his forces out of all the provinces, save for Yunnan and Sichuan (Szechwan). Wu persevered in resistance against imperial forces until he died in 1678, whereupon his son, Shang Zhixin (Shang Chih-hsin; d. 1710) took on the fight. Without Wu, however, the army slowly disintegrated, and the emperor succeeded in crushing the revolution by 1681. The emperor severely punished the leaders of the rebellion, executing all senior leaders. However, he was generous to the peasants who had supported the rebellion, reasoning that they had been forced, under pain of death, to do so. He also swiftly ordered all prisoners of war and women and children refugees returned to their homes. This combination of severity and popular generosity did much to reunify China. The emperor won the loyalty of the peasant classes, even as he put down rebellion at the highest level.

Three Henrys, War of the See RELIGION, EIGHTH WAR OF

Three Kingdoms' Civil Wars: Shu Dynastic Wars (220–264)

PRINCIPAL COMBATANTS: Shu dynasty vs. Wei dynasty

PRINCIPAL THEATER(S): China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Power contest among the three kingdoms, Shu, Wei, and Wu

OUTCOME: After achieving considerable influence and stability, the Shu was absorbed by the Wei.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

As the Han dynasty faded out of existence at the end of the second century and the beginning of the third, Cao Cao (Ts'ao Ts'ao; 155–220), a warlord, rose to seize the Chinese government. Cao's death in 220 brought to power his son, Cao Pi (Ts'ao P'ei; 187–226), who deposed the last Han emperor and proclaimed himself the first ruler of the Wei dynasty. With this, the former Han territories split into three: the Wei, north of the Yangtze River; the Shu, southwest of the Wei; and the Wu, to the southeast. The three new kingdoms fought three civil wars: Three Kingdoms' Civil Wars: Shu Dynastic Wars; THREE KINGDOMS' CIVIL WARS: WU DYNASTIC WARS (222–280); and THREE KINGDOMS' CIVIL WARS: JIN (CHIN) DYNASTIC WARS (265–280).

Liu Bei (Liu Pei; 162–223), a member of the Han family, established the Shu, or Shu Han, dynasty with a capital at Chengdu (Ch'engtu). Thanks to its chief statesman and general, Zhuge Liang (Chu Ko Liang; 181–234), the Shu grew powerful. However, the kingdom went into sharp decline following Zhuge Liang's death in 234. The Wei steadily eroded Shu territory until the Shu was entirely absorbed by the Wei, which, in 265, was seized by Sima Yan (Ssu-ma Yen; 236–90), who established the Jin (Chin) dynasty.

Three Kingdoms' Civil Wars: Wu Dynastic Wars (222–280)

PRINCIPAL COMBATANTS: Wu dynasty vs. Shu dynasty and Wei dynasty, severally

PRINCIPAL THEATER(S): China

DECLARATION: None; warfare was chronic during this period

MAJOR ISSUES AND OBJECTIVES: Power contest among the three kingdoms, Shu, Wei, and Wu

OUTCOME: The Wu enjoyed prosperity from about 250 to 280, when it was conquered by the Jin (Chin).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The Wu kingdom, the dynastic founder of which was Sun Quan (Sun Ch'uan; 182–252), had a capital at Nanjing

(Nanking) and stretched along the seacoast from the lower Yangtze River valley to below Tongkin. The kingdom reached its period of greatest power by about 250.

The Wu engaged in chronic warfare with the other two kingdoms, the Shu and the Wei, and enjoyed relative prosperity until 280, when it was conquered by the Ch'in in THREE KINGDOM'S CIVIL WARS: JIN (CHIN) DYNASTIC WARS.

For background on the Three Kingdoms, see THREE KINGDOM'S CIVIL WARS: SHU DYNASTIC WARS.

Three Kingdoms' Civil Wars: Jin (Chin) Dynastic Wars (265–280)

PRINCIPAL COMBATANTS: Wei dynasty vs. Wu dynasty

PRINCIPAL THEATER(S): China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Power contest

OUTCOME: The Wei dynasty conquered the Wu dynasty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

By 274, the Wei kingdom had triumphed over its chief rival, the Shu, and the following year, Sima Yan (Ssu Ma Yen; 236–290), the victorious Wei general, seized the Wei throne, proclaiming himself Emperor Wudi (Wu Ti), first of the Jin dynasty.

Having already defeated the Shu, Wu Ti turned his attention on the Wu kingdom, which he conquered in 280, thereby bringing an end to the era of the Three Kingdoms and, for a brief interval, unifying China. Wu Ti's central government did not outlast him, however. On his death in 290, China plunged into a period of anarchy that was not ended until the rise of Eastern China during 317–420.

For background on the Three Kingdoms, see THREE KINGDOMS' CIVIL WARS: SHU DYNASTIC WARS.

Three Sanchos, War of the (1068)

PRINCIPAL COMBATANTS: Castile vs. Navarre, and Aragon

PRINCIPAL THEATER(S): Navarre, Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Sancho II of Castile invaded Navarre (ruled by Sancho IV) in an attempt to gain territory; Sancho IV enlisted the aid of Sancho I of Aragon.

OUTCOME: Castilian forces were defeated and evicted from Navarre.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

This "war" was a subconflict of the CASTILIAN CIVIL WAR (1065–1072), during which Sancho II (c. 1038–72) of Castile sought to expand his kingdom by invading Navarre, which was ruled by his cousin, Sancho IV (1054–76). Under attack, Sancho IV called on his cousin, Sancho I (1043–94), king of Aragon, for aid. In 1068, Sancho II's Castilians were badly beaten and were evicted from Navarre.

Tibet, British Expedition to (1903–1904)

PRINCIPAL COMBATANTS: Great Britain vs. Tibet

PRINCIPAL THEATER(S): Tibet

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Isolated Tibet, located on a disputed border of British India, refused trade with the empire until the British government sent an expedition under intrepid explorer and soldier Francis Edward Younghusband.

OUTCOME: After several short but severe engagements, the Dalai Lama was forced to come to terms.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Britain, 500; Tibet, 6,000

CASUALTIES: British, 40 killed; Tibet, 2,700 killed or wounded

TREATIES: Anglo-Tibetan Treaty, September 6, 1904

By 1903, Indian-born Francis Edward Younghusband (1863–1942) had become not only a colonel in the British army but also an explorer whose travels in Central Asia allowed him to make major contributions to geographical research. Having entered the army in 1882, by 1887 he had crossed Central Asia from Beijing (Peking) to Yarkand (now in the Autonomous Region of Xinjiang [Sinkiang], China)

and continued on to India by way of the Mustagh Pass through the Karakoram Mountains, establishing that the range provided a water divide between India and Turkestan.

Thus, he was the perfect candidate to aid Great Britain's Lord Curzon (r. 1898–1905), viceroy of India, in his problems with Tibet. Repeated attempts to gain trading rights with the isolated and stubborn Tibetans had not only led to rejection by Thupten Gyatso (1876–1933), the 13th Dalai Lama, the country's supreme religious and political ruler, but had also caused the British to challenge the country's traditional borders with India. In July 1903, Lord Curzon authorized Younghusband, accompanied by a military escort, to cross the disputed Tibetan border, negotiate trade concessions, and stabilize Tibet's northern frontier.

When Younghusband's efforts failed, the British invaded. Commanded by Major General James Macdonald (1862–1927), British troops slaughtered 600 Tibetans at Guru in August 1904. Meanwhile, Younghusband marched on to Gyantze (Chiang-tzu), where he made a second, more concerted attempt to begin trade negotiations. This too proved unsuccessful; Younghusband marched into the Tibetan capital of Lhasa with a full complement of British troops and forced the conclusion of a trade treaty on the Dalai Lama. Later that year Younghusband was knighted for his efforts.

Tibetan Civil War (1727–1728)

PRINCIPAL COMBATANTS: Tibetan rebels vs. Manchu occupiers of Tibet

PRINCIPAL THEATER(S): Tibet

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Restoration of native Tibetan rule

OUTCOME: The civil war was quickly quelled.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

China, 15,000; Tibetan rebel numbers, unknown

CASUALTIES: Unknown

TREATIES: None

Tibet fell to domination by China as a result of the MANCHU CONQUEST OF TIBET in 1720, but disorder in the conquered land was frequent. During 1727–28, the general disorder coalesced into an organized uprising against the Manchu overlords. A Chinese army of 15,000 was dispatched to restore order, and the brief civil war was quelled by 1728. To ensure compliance with Chinese rule, the Dalai Lama was exiled for seven years.

Tiepolo's Rebellion (1310)

PRINCIPAL COMBATANTS: Forces of Bajamonte Tiepolo and the Querini family vs. the forces of Venice's ruling Great Council

PRINCIPAL THEATER(S): Venice

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Struggle for power among members of the patrician class

OUTCOME: The rebellion was suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Venice, a city-state on the north Adriatic coast of Italy, enjoyed a prosperous role as Europe's leading trade port and the West's commercial and cultural connection to Asia. In the 12th century, Venice became a republic governed by the Great Council of 45 and headed by a *doge*. Once a monarchical position, with the creation of the republic, the doge's job became administrative. The doge ran the affairs of the state with a six-member Minor Council, and the magistrates presided over administrative and judicial functions.

For two centuries, the Great Council was annoyed by families who tried to assert their control over the business of the council. The Great Council set rules of membership in 1268; these rules, in attempting to prevent any family from dominating the council, also restricted council membership to members of the city's ruling families. Venetians, shut out of government decisions, staged a popular rebellion in 1300 led by Marin Baocconio (fl. 1300s). The revolt was suppressed, and its leaders were hanged. Bajamonte Tiepolo (d. 1328) conspired with the patrician Querini family in 1310 to take over the government. When their plans were betrayed, they were forced to stage the revolt before all parts of the plot were in place. On June 14, 1310, Tiepolo and his followers seized the public square, where they were quelled by the forces of the doge, Pietro Gradenigo (1249–1311). The Querini leader was captured and executed, but Tiepolo managed to escape. Afterward a secret tribunal, the Council of Ten, was assigned the task of policing Venetians and protecting the republic from future assaults. In 1335, it became a permanent body and in time took over the financial and military affairs of Venice.

Timarchus's Revolt (c. 161–159 B.C.E.)

PRINCIPAL COMBATANTS: Rebel Babylonian forces under Timarchus of Miletus vs. the Seleucids

PRINCIPAL THEATER(S): Babylonia and Media

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Timarchus sought an empire.

OUTCOME: The revolt was initially successful, but Timarchus's reign as "great king" over Babylonia and Media was short lived.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The period of 162 to 143 B.C.E. was marked by widespread domestic strife within the Seleucid Empire in Syria. About 161, the governor of Babylonia, Timarchus of Miletus (fl. second century B.C.E.), rebelled against the Seleucid overlords. Moving aggressively, he threw off the Seleucid yoke and advanced against Media, which he soon conquered. Timarchus then crowned himself "great king." His reign was short-lived, however, as the Seleucid emperor Demetrius I (fl. 162–150 B.C.E.) defeated the forces of Timarchus in 159 and thereby restored to Seleucid control both Babylonia and Media.

Grossman, eds., *The Cambridge History of Iran: The Seleucid, Parthian and Sasanid Periods*, Part 1 (Cambridge: Cambridge University Press, 1993).

Time of Troubles, Russia's (1604–1613)

PRINCIPAL COMBATANTS: Rival factions backing contenders for the Russian throne

PRINCIPAL THEATER(S): Russia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The death of Czar Fyodor I threw Russia into a succession crisis, which created a period of anarchic civil war.

OUTCOME: The Time of Troubles was resolved by the elevation to the throne of Michael Romanov.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The death of Russia's Czar Fyodor (1557–98) in 1598 gave the czar's ruthless brother-in-law, Boris Godunov

(c. 1551–1605), an opportunity to manipulate his election as czar. Boris Godunov's elevation was not universally welcomed, and in 1604, amid sporadic violence and unrest in Russia, a cabal of *boyars* (Russian nobles) and Polish aristocrats formed an opposition. Together, they conspired to back a pretender to the throne, the so-called "false Dimitry," who was presented as the younger brother of Czar Fyodor and, therefore, Fyodor's lawful successor. (In reality, Fyodor's real brother, Dimitry [1581–91], had been assassinated in exile.) With the "false Dimitry" now in play, Boris Godunov suddenly died in 1605, whereupon Poles and Cossacks elevated the false Dimitry to the throne. He ruled for nearly a year before boyars opposed to him caused his assassination, and one of the boyars, Basil IV Shuiski (d. 1612), seized the throne. This touched off armed violence from the Poles and Cossacks.

Against the backdrop of renewed turmoil, a second false Dimitry materialized in 1608 and planted himself and an entourage in Tushino, a village outside of Moscow. While the new false Dimitry awaited developments that, he hoped, would propel him to power, Basil IV Shuiski fought two major battles against Polish and Cossack forces. He lost both battles, which gave the second false Dimitry the opening he needed to seize sufficient power to contend seriously with Basil for the throne. In 1610, however, boyar forces ousted Basil and murdered the second false Dimitry, suddenly leaving the throne vacant.

Over the next three years, the Russian throne became the focus of violent contests that plunged the nation into civil war. Two more false Dimitrys laid claim to the throne. One was killed by boyars in 1611 and another judicially executed in 1613 for the crime of pretending to the throne. With these two pretenders disposed of, the boyars offered the crown to Ladislav (1595–1648), the son of Poland's king. Simultaneously, another faction, the lesser landowners, offered the crown to the brother of Sweden's king. While the two factions disputed (*see* RUSSO-SWEDISH WAR [1613–1617]), the *zemstvo* (Russian assembly) elected Michael Romanov (1596–1645) as czar, thereby inaugurating Russia's longest-lived czarist dynasty.

Timoleon's War (344–339 B.C.E.)

PRINCIPAL COMBATANTS: Corinthian forces under Timoleon vs. the combined forces of Dionysius II, Hicetas, and the Carthaginians

PRINCIPAL THEATER(S): Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Timoleon attempted to liberate Syracusans from Dionysius's reign of terror.
OUTCOME: Dionysius and his allies were defeated; Timoleon established a peace that lasted 30 years.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: Unknown
TREATIES: None

In 364 B.C.E. Timoleon (c. 411–337 B.C.E.) earned the title “the scourge of the tyrants” for aiding in the assassination of his brother, Timophanes (d. 364), after the latter declared himself tyrant of Corinth.

In 344, the citizens of Syracuse on Sicily appealed to their mother city of Corinth for relief from the harsh tyranny of Dionysius II (d. 344). Corinth sent Timoleon, a statesman and general, to fight Dionysius and his ally, Hicetas (fl. third century B.C.E.), the tyrant of nearby Leontine (Lentini). When Timoleon arrived at Tauromenium in the summer of 344 he actually faced two opponents: Dionysius and the forces of Carthage, which had been summoned by Hicetas. Timoleon cleverly maneuvered his ships around the Carthaginians, who were waiting to entrap him. The Corinthians defeated the opposition by reputedly shrewd tactics, the details of which are not recorded. Dionysius was exiled to Corinth. Meanwhile, Timoleon set up a mixed constitution as a safeguard against future tyrants and invited emigrants from Greece and Italy to settle in his regime.

In the ensuing years, Timoleon undertook a campaign to purge Sicily of its tyrants. He fought a second battle against Carthaginian forces in about 341, which resulted in decisive victory and enduring peace with Carthage. The peace lasted almost 30 years, to be disturbed by AGATHOCLES' WAR AGAINST CARTHAGE, 331–306 B.C.E.

Toussaint Louverture, Revolt of (1791–1803)

PRINCIPAL COMBATANTS: Haitian slaves, mulattos, and free blacks vs. French colonial forces; under Toussaint Louverture, the slaves, mulattos, and free blacks were at times tenuously allied with the French against the Spanish and British

PRINCIPAL THEATER(S): Hispaniola (including Haiti)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Haitian rebels sought an end to slavery and to French rule.

OUTCOME: After a disastrously bloody war, Haiti became independent, albeit under the tyrannical rule of a native emperor.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Combatant Haitian slaves, mulattos, and free blacks 140,000; French troops (with Polish auxiliaries), 55,131 (plus additional French sailors)
CASUALTIES: Haitians, 348,000 natives killed; French, 45,000 troops and 10,000 sailors died, some in battle, most from disease
TREATIES: Treaty by which France officially recognized Haitian independence was not concluded until June 9, 1838.

Led by a black priest known only as Boukman (fl. late 18th century), 50,000 Haitian slaves rose against their French masters at Le Cap (Cap François) beginning on August 22, 1791. Within weeks of this so-called Night of Fire, François-Dominique Toussaint Louverture (1743–1803), a free black, took control of the rebellion and both organized and expanded it. Of the half-million slaves on the island, about 100,000 participated in the rebellion; added to this “army” were some 40,000 mulattos and free blacks. The white population of Hispaniola (the island that includes Haiti), about 30,000, now feared extermination.

On March 3, 1792, whites repulsed a slave attack on the gates of Port-au-Prince. Two thousand rebels fell; white casualties were about 100. Although the attack was repulsed, Port-au-Prince was besieged. With violence elsewhere, the death toll reached 2,000 whites and 10,000 slaves. Only the timely announcement of the abolition of slavery by the French government prevented wholesale massacre.

The cessation of slavery brought only a temporary halt to the uprising. On June 21, 1793, 5,000 French royalists attacked Cap François, slaughtering hundreds of blacks. The army soon disintegrated into a mob, however, and was counterattacked by 15,000 blacks and routed. In July 1794, blacks attacked the town of Fort Liberté, killing 900 whites. Despite these spasms of violence, Toussaint Louverture decided to align his forces with the revolutionary French to fight the Spanish and the British. In February 1799, Toussaint also had to fight 9,000 mulattos who had attempted to set up a breakaway nation in southern Haiti. After much butchery—including the outright slaughter of 10,000 mulattos—this campaign ended in November 1800 with the suppression of the breakaway movement.

After defeating the Spanish on Hispaniola during January 1801, Toussaint suppressed a rebellion led by one of his own generals, known only as Moyse, who was executed on November 29, 1801. A thousand of his followers were executed—shot, bayoneted, or tied to the muzzles of cannon barrels and blown to pieces.

Toussaint Louverture was in complete control of Hispaniola by the end of 1801, but he now faced reconquest by France. In February 1802, General Victor-Emmanuel Leclerc (1772–1802) and an army of 21,175 French regulars

landed. Toussaint and his forces resisted fiercely, and the war soon degenerated into an exchange of atrocities. On May 6, 1802, however, Toussaint accepted generous French terms for resolution of the war. Haiti would be free from slavery, although still subject to France. However, the next month, Toussaint was arrested and sent to a prison in the Jura Mountains, where he died on April 7, 1803.

The death of Toussaint sparked renewed warfare. The rebel strategy was to keep the French engaged, knowing that their continual exposure would render them vulnerable to yellow fever and other diseases endemic to Haiti. Although it is likely that the rebels would have prevailed even without disease, yellow fever proved a valuable ally. The approach proved highly effective; the French army withered under the onslaught of disease. In 1803, 20,000 French reinforcements were sent to the island, including a unit of 4,000 Poles (500 of whom defected to the rebels as a brigade dubbed Les Polonais). Although the French killed many rebels, disease and general attrition took a terrible toll on them. In October 1803, 16,000 Haitians laid siege to the 5,000-man French garrison at Le Cap. After holding out for more than a month, the French surrendered to a blockading British naval squadron. Thanks to the British, most of the French garrison escaped—except for 800 French prisoners, whom the Haitians drowned.

Haiti was free of the French but at a terrific cost: 348,000 slaves, free blacks, and mulattos out of a total native population of 700,000. Jean-Jacques Dessalines (1758–1806), who had assumed command of most of the rebel forces after the arrest of Toussaint Louverture, now proclaimed himself emperor of Haiti, creating a government every bit as tyrannical and brutal as that of the French.

Town War (German Town War) (1387–1389)

PRINCIPAL COMBATANTS: Principally the free (“Imperial”) towns of Germany vs. the feudal nobility of Germany

PRINCIPAL THEATER(S): Germany, especially southern Germany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Germany

OUTCOME: Undecided; warfare between the towns and the nobles ended without resolution of the underlying issues of power, control, and nationhood.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace settlement arranged by King Wenceslaus of Germany, Bohemia, and the Holy Roman Empire, 1389

The Town War, or German Town War, was a symptom of the disintegration of German political structure amid the dissolution of the Holy Roman Empire. During the chaotic close of the 14th century in Germany, various lords, landholders, and even the minor nobility created a host of private semi-states, often governed by secret courts (known as the *Veme*, which amounted to secret societies) and defended by private palace-guard-style armies. Amid this factionalization, Wenceslaus (1361–1419), king of Germany, Bohemia, and the Holy Roman Empire, struggled to assert control over various nobles, princes, lords, and others. All around him, town fought town. Various towns sought aggrandizement by annexing tracts of rural land, and they resisted taxation by higher authority—yet the towns also taxed one another, in the form of exorbitant tolls and tariffs.

With Wenceslaus ineffectually attempting to rule Germany from his remote Bohemian throne, the situation became increasingly anarchical. Against the weakness of Wenceslaus there emerged the ruthless Duke Leopold of Austria (fl. c. 1380–1410), who did not scruple to assert his oppressive rule wherever he could. His aggression prompted the towns of Swabia to form a league, which, allied with the Swiss Confederation, fought the army of Leopold and defeated it at the Battle of Sempach in 1386. The victory touched off intensified warfare among the towns and the nobles of Germany. The towns were independent enclaves within territory ruled by ancient feudal right, which dictated a determining geography of the Town War; the towns, as enclaves, were isolated from one another, whereas the surrounding territory controlled by the nobles was contiguous and allowed for easy movement of forces. In southern Germany especially, the towns were consistently defeated by the forces of the feudal nobility.

Warfare was ended in 1389 through the intercession of Wenceslaus, who favored the nobles; however, the underlying issues were hardly resolved, and violent unrest persisted for years to come, greatly retarding the development of Germany as anything resembling a nation.

Transvaal Revolt See BOER WAR, FIRST.

Transylvania-Hapsburg War (1645)

PRINCIPAL COMBATANTS: Transylvania and Sweden (with French and Hessian aid) vs. Hapsburg Austria-Hungary

PRINCIPAL THEATER(S): Austria and Bavaria

DECLARATION: Transylvania and Sweden against Hapsburgs, 1644 (war began the following year)

MAJOR ISSUES AND OBJECTIVES: Transylvania and its allies opposed the Hapsburg attempts to impose the Counter-Reformation on Transylvania.

OUTCOME: The Hapsburgs were defeated; Hungary gained independence; Transylvania was enlarged; the Protestant cause was successfully defended.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the major Battle of Nördlingen, the French-Hessian and Transylvanian-Swedish forces numbered more than 12,000; the Austrian-Bavarian forces also numbered about 12,000

CASUALTIES: At Nördlingen, losses among the French-Hessian and Transylvanian-Swedish forces were heavy, but Austrian-Bavarian losses were catastrophic, 5,000 men.

TREATIES: Peace of Linz, December 16, 1645

This conflict may be viewed as an aspect of the THIRTY YEARS' WAR or as a war tangential to it. During the period of the war, Transylvania was the eastern province of Hungary, which was controlled by the Hapsburgs. Throughout their empire the Hapsburgs enforced the Counter-Reformation, championing Catholicism at the expense of Protestantism. In stark opposition to this Hapsburg-sponsored Counter-Reformation stood Transylvania, under George I Rákóczy (1591–1648), champion of the Protestant cause. Sweden, a great Protestant power, struck an alliance with Rákóczy's Transylvania in 1644, and, together, the allies declared war on the Hapsburgs.

The first action of the war took place in 1645, when the Swedes invaded (for a second time) Bohemia and defeated Austrian infantry and Bavarian cavalry at the Battle of Jankau on March 6. While the Swedes advanced into Upper Austria, Rákóczy led Transylvanian forces north, toward Vienna. On August 3, 1645, the Transylvanian and Swedish armies linked up and, in conjunction with French and Hessian armies, fought the Battle of Nördlingen (Allerheim), in Bavaria. The battle, paramount in this war and important in the larger Thirty Years' War, began when a Weimarian-French force under Henri de La Tour d'Auvergne (1611–1675), vicomte de Turenne, having been defeated at the Battle of Mergentheim in May, joined forces with the army of France under Louis II de Condé (1621–86). Condé assumed command of the joint force and invaded Bavaria, as the Bavarian-Austrian army—the

imperial forces—retreated to the village of Allerheim, southeast of Nördlingen. Commanded jointly by Field Marshal Baron Franz von Mercy (c. 1590–1645) and General Johann von Werth (1595–1652), the imperial army dug into positions blocking the approach to the Danube. On August 3, Condé, with 12,000 men, attacked the Bavarian-Austrian forces, which also numbered about 12,000. The defenders held firm until Mercy was mortally wounded and his subordinates began to lose heart. Ultimately, the Austrian-Bavarian forces were driven back toward the Danube, incurring losses approaching 5,000. Condé's forces, however, had also suffered heavy losses, and when Condé himself fell ill, his army returned to France. Turenne had no choice but to retire to Philipsburg. However, the victory had clearly gone to the French and their Transylvanian-Swedish allies. These reversals prompted the Hapsburgs to agree to the Peace of Linz on December 16, 1645, which gave independence to Hungary, won more territory for Transylvania, and ensured the security of Protestantism in that country.

Transylvanian-Turkish War (1657–1662)

PRINCIPAL COMBATANTS: Transylvania vs. the Ottoman Empire

PRINCIPAL THEATER(S): Transylvania and Hungary

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Transylvania sought independence from Ottoman suzerainty.

OUTCOME: The Transylvanian rebellion was ultimately crushed and its principal leader, George II Rákóczy, killed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Under Ottoman rule, Transylvania nevertheless acted independently against Poland in 1657, which prompted the Sublime Porte (the Ottoman government) to withdraw its support of George II Rákóczy (1621–60), prince of Transylvania. The Porte deposed Rákóczy in 1657, but undaunted, he reassumed power in 1658 and mustered an army to fight the Turks. Besieged at the Transylvanian capital of Lippa, Rákóczy, recently returned from the First NORTHERN WAR, was able to defeat the attackers and break the siege. Later in 1658, the Ottomans joined forces with the Wallachians in an attack on Karlsburg. The assault resulted in the ruin of the town and the overthrow

of Rákóczy, who fled to his estate in Austrian Hungary. There he recruited a new army, and in 1659 returned to Transylvania and was again elevated to the throne. Ottoman forces in Buda (now part of Budapest) responded by invading Transylvania along a broad front, from Temesvar to Torda and Hermannstadt. Scene of a glorious victory in 1442, Hermannstadt now capped the Transylvanian defeat. From this and every battle, the Ottoman troops emerged victorious.

Rákóczy, reeling from one defeat to the next, called on Austria for military aid. To secure it, he ceded significant territory, trading land for troops, but the Austrians delayed, and while they idled, the Ottomans continued to rampage through northeastern Hungary and then into Transylvania during 1660. At the Battle of Fenes, Rákóczy was defeated and mortally wounded.

The death of Rákóczy did not end the Transylvanian rebellion against the Ottoman Turks. In 1661, Transylvanians elevated to the throne yet another prince, Janos Kemény (d. 1662), who defied the Ottoman yoke. Unfortunately for him, he commanded a mere 10,000 troops, was cut off from Austrian reinforcements, and was surrounded by Turkish forces near Segesvar (Sighișoara) in 1662. He was defeated and murdered. His death, at last, extinguished the rebellion in Transylvania, and the Turks quickly seated their own prince.

Trinidad and Tobago, Uprising in (1970)

PRINCIPAL COMBATANTS: Rebel forces vs. government forces (with U.S. and UK military assistance)

PRINCIPAL THEATER(S): Trinidad and Tobago

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ethnic and economic unrest created anger against the government.

OUTCOME: With some assistance and supply from the United States and Great Britain, the government forces prevailed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The twin-island nation of Trinidad and Tobago was afflicted by ethnic and racial unrest and chronic poverty, the ingredients of civil insurrection. During the late 1960s, militant black citizens—who comprised about 43 percent of the population—protested for black power and for government action to ameliorate economic problems.

Much of the militant protest was organized by sugar plantation workers, who formed the National Joint Action Committee, from which the uprising grew. The governor-general, Sir Solomon Hochoy (1928–1997), an East Indian (East Indians comprised 40 percent of the population but tended to be the social and power elite), declared a state of national emergency, barred all protests and demonstrations, imposed a strict curfew, censored the press, and arrested several of the most prominent black leaders. Far from quelling the unrest, these actions fanned the flames into a conflagration as rioting swept both islands, beginning on April 20. At this point, several hundred army troops declared their support for the black power advocates and mutinied. The troops stormed a government arsenal, from which they seized weapons, then went on to take hostages.

The governor-general of Trinidad and Tobago called on the United States for aid and received arms and other materiel. U.S. and Royal Navy vessels took up stations near the islands, ready to move if the government seemed seriously threatened. However, after less than a week of outright rebellion, on April 25, 1970, government forces succeeded in suppressing the rebels. The uprising had ended, but the governor-general persisted in applying measures that significantly limited the freedom and movement of citizens. At last, in July 1972, the state of emergency was lifted, and all political prisoners were released. In August, prisoners of war—soldiers whom the government had incarcerated—were also released.

Triple Alliance, War of the See PARAGUAYAN WAR.

Tripolitan War (1801–1805)

PRINCIPAL COMBATANTS: United States vs. “Barbary states”

PRINCIPAL THEATER(S): Tripoli, North Africa

DECLARATION: Tripoli (unofficially) on the United States, 1801

MAJOR ISSUES AND OBJECTIVES: The United States fought against the bribery and enslavement of sailors practiced by the Barbary pirates.

OUTCOME: The Barbary states piracy was suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown numbers of “Barbary pirates”; U.S. naval flotilla, several hundred U.S. sailors

CASUALTIES: Approximately 300 U.S. prisoners taken

TREATIES: Treaty of Tripoli, June 4, 1805

After the successful conclusion of the AMERICAN REVOLUTION, the new republic faced a number of serious military crises. The most critical was the unremitting guerrilla warfare between the Indians and settlers of the frontier regions, especially in the Ohio country. But the United States was also threatened from abroad, by the “Barbary pirates,” Muslim seafarers who had been operating from the so-called Barbary states (Morocco, Algeria, Tunisia, and Libya) off the coast of North Africa since the 17th century. These pirates were not simply criminals; rather, they enjoyed the financial and political backing of wealthy merchants and even political leaders. It is accurate to describe this “piracy” as an organized government activity.

To avoid harassment, capture, and confiscation of cargoes, “Christian” nations plying North African waters routinely paid “tribute” money to the Barbary (Berber) states. Initially, the United States, like other nations, paid the tributes demanded, but U.S. officials saw this as both an insult and a threat to American sovereignty. Accordingly, the United States won in a series of limited naval wars the right of free navigation in North African waters. These “Barbary Wars” spanned 1801–15, with the most concentrated action occurring in the Tripolitan War of 1801–05. The background of the wars goes back even further—for the United States at least to 1785, when Great Britain encouraged Algiers to capture two U.S. vessels. Thomas Jefferson (1743–1826), at the time American minister to France, attempted to recruit the aid of Portugal, Naples, Sardinia, and Russia, as well as France, in an anti-Algerian alliance. When France declined to cooperate, the alliance collapsed, and Britain encouraged further Algerian action in which 12 American ships were captured and more than 100 American sailors imprisoned. This prompted the United States to negotiate a treaty with the bey of Algiers in 1795, pledging tribute to secure release of the captives and to ensure freedom of navigation. Additional treaties were concluded with Tunis and Tripoli.

Despite the treaties, the idea of tribute never sat well with the U.S. government or with the American people, and there was a long delay in sending the tribute money. Shortly after the inauguration of President Jefferson in 1801, Pasha Yusuf Qaramanli (d. 1838), Tripoli’s ruler, unofficially declared war against the United States. Jefferson concluded a coalition with Sweden, Sicily, Malta, Portugal, and Morocco against Tripoli, which forced Qaramanli to back down. For the next two years, one U.S. frigate and several smaller vessels patrolled the Tripolitan coast. This mission proceeded successfully until the frigate USS *Philadelphia* ran aground in October 1803 and was boarded by Tripolitan forces, which captured 300 U.S. sailors, took the ship as a prize, and prepared to use it against the Americans. In February 1804, however, Lieutenant Stephen Decatur (1779–1820), with daring and stealth, entered Tripoli Harbor and burned the *Philadelphia*. After Decatur’s maneuver, Commodore Edward Pre-

ble (1761–1807) stepped up the bombardment of Tripoli, and Decatur was hailed as a great American naval hero.

Against the background of the ongoing bombardment, William Eaton (1764–1811), U.S. consul at Tunis, proposed an alliance with Ahmed Qaramanli, the brother Yusuf had deposed in 1795. Eaton also recruited an army of Arabs and Greeks and joined these to a contingent of U.S. Marines to support the restoration of Ahmed as ruler of Tripoli. Eaton’s force captured the city of Derne in 1805, just as the Jefferson government, which had neither opposed nor supported the Eaton plan, concluded a treaty of peace with Yusuf on June 4, 1805. The treaty ransomed the prisoners for \$60,000 and, although it made no explicit mention of the subject of tribute, it put a de facto end to the practice of tribute payment by establishing free and unhindered commerce between the United States and Tripoli. At home, the treaty was celebrated as a great triumph for the fledgling U.S. Navy.

Trojan War (c. 1200 B.C.E.)

PRINCIPAL COMBATANTS: Troy vs. Greece

PRINCIPAL THEATER(S): Troy, in Anatolia (Turkey)

Declaration: None

MAJOR ISSUES AND OBJECTIVES: According to literary tradition, the Greeks sought to recover Helen, the abducted wife of Menelaus of Sparta.

OUTCOME: Troy was destroyed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Trojan War is known only through the *Iliad* and the *Odyssey* of the Greek poet Homer (fl. 850 B.C.E.), although it is also known that the war figured in other preclassical works, now lost. Later authors, including the Roman Virgil (70–19 B.C.E.), in the *Aeneid*, also wrote about the war. The extent to which any of the accounts reflect history is unknown.

The war was fought between the early Greeks and the people of Troy in western Anatolia (Turkey). The most commonly accepted date for the Siege of Troy is c. 1184, and the war as a whole is dated to some time during the 12th or 13th century B.C.E.

Homer's account relates that Paris, the son of the king of Troy, abducted Helen, wife of Menelaus of Sparta. Menelaus's brother Agamemnon led a Greek expedition against Troy in an effort to recover Helen. The war raged for a decade without issue until the Greeks feigned a withdrawal, leaving behind them an enormous wooden horse. The Trojans opened their gates and pulled the horse within the city. Once the horse was inside, a Greek raiding party emerged from its hollow interior and threw open the gates of Troy to the concealed Greeks who lay without. Troy was sacked, its women abducted, and its men slain.

Trung Sisters' Rebellion (39–43)

PRINCIPAL COMBATANTS: Rebels led by the Trung sisters vs. China

PRINCIPAL THEATER(S): Northern Vietnam

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: After Trung Trac's husband was murdered for conspiring against China's Han rulers, she and her sister mounted a rebellion to oust the Hans.

OUTCOME: The rebellion was crushed, the Trung sisters committed suicide, and the Hans took over much of modern Vietnam.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rebels, 30,000; Chinese forces, unknown

CASUALTIES: Unknown

TREATIES: None

In China, after a brief period of anarchy under Wang Mang (33 B.C.E.–23 C.E.) (*see* RED EYEBROW REVOLT), the Han dynasty was restored in 24 C.E. by a warrior leader of the imperial clan, Liu Xiu (Liu Hsiu) (also known as Guang Wudi [Kuang-wu-ti; 6–57]), who seized control, secured internal order, and reestablished Chinese authority over most of the Han border regions. Beginning around 39, Guang Wudi expanded south, where a revolt was simmering in what is now northern Vietnam, led by Trung Trac (d. 43) and her sister Trung Nhi (d. 43). For over a century, since the Chinese conquest of Nam Viet, the bureaucratic-minded Han had been undermining the feudal society of the Vietnamese, installing corrupt and inefficient provincial administrations that drained Vietnamese nobles by extorting bribes and unjust taxes. The Trung sisters were part of an aristocratic independence movement given courage by China's troubled times just prior to the Han restoration. Trung Trac and her sister had joined the move-

ment after her husband was murdered by a Chinese official for conspiring with other lords to oust the Han.

The execution and other Chinese actions against the Vietnamese stirred rather than quelled rebellion. The sisters began rallying troops in 39, and on February 6, 40, Trung Trac appeared before some 30,000 rebel soldiers gathered at the Hat estuary. Arrayed in full armor, she inspired them to a vigorous campaign that within less than a year regained control of 65 citadels, including that at Luy Lau, scene of a battle that cost the Chinese dearly.

The Trung sisters proclaimed themselves co-queens of Vietnam and for the next two years managed to exclude Chinese military power from Vietnam. However, they lacked the enduring peasant support that had marked the Chinese revolts against Wang Mang. In 43, Guang Wudi dispatched his general Ma Yuan (14–49), an outstanding cavalry leader, to Tongking to crush the revolt. The sisters' untrained troops were soon overwhelmed by Ma Yuan's invading Chinese force. After first suffering a defeat at their capital near present-day Hanoi, the Trungs retreated to Hat Mon (Son Tay), where Ma Yuan caught up with them and decisively crushed their army. Disgraced, the sisters drowned themselves in the Red River. Ma Yuan went on to conquer Annam and Hainan.

Tukulor-French Wars (1854–1864)

PRINCIPAL COMBATANTS: The Tukulors vs. France and Mali

PRINCIPAL THEATER(S): Senegal and Mali, Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Under the charismatic religiopolitical leader, al-Hajji Omar, the Tukulor people rose from subjugation to fight against neighboring countries, particularly French colonial interests and Mali.

OUTCOME: The French successfully resisted Tukulor aggression; although the Tukulors conquered much of Mali, internecine fighting caused the dissolution of Tukulor power by 1890.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

France, 25,000; Mali, unknown; Tukulors, 50,000

CASUALTIES: France, unknown; Mali, unknown; Tukulor, 10,000 killed or wounded

TREATIES: None

The Tukulors were Islamic people who dominated the Senegal River valley of West Africa and formed the state of Tekrur. During the 11th century, the Tukulors pushed to the north and founded the Moravid dynasty, which ruled

Morocco. However, the Tukulors were themselves conquered by the forces of the Mali Empire during the 14th century and lived as a subject people for centuries until the advent of al-Hajji Omar (c. 1795–1864), mid-19th century founder of the Tijaniyya Brotherhood.

Omar was a Tukulor cleric who about 1848 had moved with his followers to Dinguiraye (in modern Guinea) with the intention of creating a new nation governed according to the strict precepts of his Islamic sect. To accomplish this, he trained a religious-military force and equipped it with European firearms, then set out on a jihad, a holy war, against his neighbors.

First confronted were the Bambara chiefdoms to his north. After these were defeated, Omar moved farther north, across the upper Senegal River, and against another Bambara kingdom, Kaarta. At this point, French colonial forces checked Omar, who then turned to the west and in 1861 quickly conquered the Bambara kingdom of Segu. This was followed by Macina. From these bases, the Tukulor extended their reach as far as the fabled trading city of Timbuktu (in modern Mali).

At its height, the Tukulor empire rivaled that of the Fulani to the east. However, it failed to achieve the internal spiritual cohesion Omar had hoped for. Many of his followers had little interest in religion and instead used conquest as a means of amassing personal wealth and power. The result was that many in the conquered Bambara and Fulani regions repeatedly rose against Tukulor authority. This opposition culminated in 1864, when Omar fell in a battle with the Fulani. Following his death, the empire was divided among his sons and commanders, who fought with one another as the French withdrew from active participation in the conflict and merely looked on, biding their time, then stepping in to pick up the pieces. In 1890, France seized control of both Segu and Senegal with little bloodshed.

Tupac Amaru's Revolt *See* PERUVIAN REVOLT (1780–1782).

Tupamaros' Reign of Terror (1963–1973)

PRINCIPAL COMBATANTS: Uruguay vs. the Tupamaros (Movement for National Liberation)

PRINCIPAL THEATER(S): Uruguay

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Tupamaros sought to overthrow the government and replace it with a Marxist regime.

OUTCOME: Given control of the government, the Uruguayan army ultimately crushed the Tupamaros rebellion—at the price of any semblance of liberty in Uruguay.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Uruguayan army, 18,000; Tupamaros, unknown

CASUALTIES: Uruguayan army, fewer than 100 killed; Tupamaros, 500 killed in combat (more died in detention)

TREATIES: None

Beginning in the late 1960s, a leftist terrorist organization known as the Tupamaros attacked the government of Uruguay with a campaign of assassinations, abductions, bombings, raids, and bank robberies. Taking their name from Tupac Amaru (d. 1572), the Inca leader who had defied Spain, the Tupamaros, soldiers of the Movement for National Liberation (MLN), boldly targeted police stations and military installations to obtain arms and ammunition, and they abducted prominent Uruguayans and the nationals of other countries in order to extort exorbitant ransoms to finance their cause. In some cases, the Tupamaros exchanged abductees for members of their organization who had been captured.

From July 31, 1963, when Tupamaros began their first armed action, until 1971, when about 100 Tupamaros made a spectacular prison break, Uruguayan police attempted to cope with the reign of terror. From 1963 until 1966, however, the Tupamaros acted with impunity, suffering but a single fatality. After the prison break, the Uruguayan army was called in to replace the police. Still, the Tupamaros activity continued unabated. When, on April 14, 1972, Tupamaros killed four prominent military officials (they were, in fact, leaders of a government-supported “Death Squad”), Uruguayan police raided a Tupamaro stronghold, killing eight rebels. The Uruguayan government then declared a “state of internal war” and imposed martial law nationwide. This situation escalated into the installation of a military government, as, on February 12, 1973, President Juan María Bordaberry (b. 1928) relinquished authority to the military and abolished Congress. Given a free hand, the army imposed brutal measures to crush the Tupamaros, including mass arrest and the liberal use of torture. Some 100 Tupamaros were killed before the end of the year, and another 600 captured, many of whom were doomed to die in custody. The pressure became so intense that the surviving Tupamaros—those who escaped the army’s dragnet—fled to Argentina, from where some continued to wage an anti-government campaign.

Although Tupamaro activity within Uruguay had been contained by 1972, the military continued to run the government and, on January 1, 1975, officially barred all Marxist political parties from the country.

Turkish War of Independence (1919–1923)

PRINCIPAL COMBATANTS: Kemalists (Young Turks, Turkish nationalists) vs. forces of Sultan Muhammad VI Vahideddin and Greek forces of occupation

PRINCIPAL THEATER(S): Turkey

DECLARATION: No formal declaration of war; independence was declared by the Fundamental Law of 1921.

MAJOR ISSUES AND OBJECTIVES: The Turkish nationalists sought independence from Greece and the establishment of a Turkish republic.

OUTCOME: Both objectives were achieved.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Turkish nationalists, 52,000+; Greek army, 125,000

CASUALTIES: Turkish nationalists, 13,000 killed, 35,000 wounded; Greeks, 30,000 killed, 40,000 wounded, 35,000 missing or taken prisoner

TREATIES: Treaty of Lausanne (July 24, 1923)

The Ottoman Empire had allied itself with the Central Powers during WORLD WAR I, and, following their defeat, Turkey was occupied by Greek forces. With the blessing of the Supreme Allied War Council, the Greeks occupied Adrianople (Edirne), Bursa, and Smyrna (Izmir), where a landing was effected under cover of an allied flotilla that included U.S. warships. The Turks offered no opposition, and Muhammad VI Vahideddin (1861–1926), last of the Ottoman sultans, was willing to surrender to what he believed was the inevitable: domination by Greece. However, Mustafa Kemal (later known as Atatürk; 1881–1938),

leader of the progressive Young Turk movement (see YOUNG TURKS' REVOLT) took up the reins of a Turkish nationalist resistance movement. His group, the Association of the Rights of Anatolia and Rumelia, opposed both the Greek occupiers and the government forces of the sultan (see GRECO-TURKISH WAR [1920–1922]).

Kemal set up a provisional parliament in Ankara, which he used as a platform from which to proclaim the sultan to be under the control of foreign powers. He urged all Turks to resist. Politically, against the backdrop of a low-level civil war, this appeal resulted in passage of a new Fundamental Law (constitution) in 1921. Sovereignty was returned to the Turks and their nation formally named Turkey. The international community began to respond favorably to the new government. Both France and Italy withdrew all forces from Anatolia by October 1921, and treaties were signed that year with the Soviet Union, the first European power to recognize Turkey.

The civil war now became a war for independence, which entirely merged with the war against the Greek occupiers. Kemal led the Turks to victory in that conflict, thereby establishing Turkish independence by the Treaty of Lausanne (July 24, 1923). The Turkish republic was formally proclaimed on October 29, 1923.

Turko-Egyptian War, First (1832–1833)

PRINCIPAL COMBATANTS: Egypt (with some French aid) vs. Ottoman Empire (with Russian aid); France and Britain mediated peace terms

PRINCIPAL THEATER(S): Gaza, Jerusalem, Acre, Aleppo, Damascus, Anatolia (part of Turkey)

DECLARATION: False declaration, Egypt vs. Acre, 1832

MAJOR ISSUES AND OBJECTIVES: Muhammad Ali, pasha of Egypt, sought vengeance against the Ottoman Empire for reneging on a pledge to give his son control of Syria.

OUTCOME: Egypt gained control of Syria and other territories.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Egypt, 100,000; Ottoman Empire, 400,000; Russia sent a contingent of 18,000 troops and a naval fleet in aid to the Ottomans.

CASUALTIES: Egypt, about 5,000 killed or wounded;

Ottoman Empire, about 10,000 killed or wounded

TREATIES: Convention of Kütahya, among Egypt, Ottoman Empire, France, Russia, and Britain, May 1833; Peace of Hunkiar Iskelessi between Ottoman Empire and Russia, July 8, 1833

The Sublime Porte (Ottoman government) promised to give Ibrahim (1789–1848), son of Muhammad Ali (c. 1769–1849), pasha of Egypt, control of Crete and Syria in return for Ibrahim's military assistance in overcoming Greek independence fighters in the GREEK WAR OF INDEPENDENCE (1821–32). When the Ottoman sultan partially reneged on the pledge—giving Ibrahim Crete but withholding control of Syria—Muhammad Ali planned an invasion of Syria. Muhammad Ali trumped up a quarrel with the pasha of Acre and used this as a pretext for sending Ibrahim at the head of an invading army in 1832. Egypt's forces took Gaza and Jerusalem early in the campaign, then laid siege to Acre, which fell soon after Gaza and Jerusalem. Next, Ibrahim's army attacked the Ottoman forces at Aleppo and Damascus. Mahmud II's (1784–1839) Ottoman troops were green, whereas Ibrahim commanded an army led by French veterans. The Ottomans lost both battles.

Having enjoyed an unexpected degree of success, Ibrahim invaded Anatolia (Turkey) itself. The city of Konya fell to him, and he prepared to take Bursa, which was a mere 50 miles from the Ottoman capital at Constantinople. The Sublime Porte sought Russian aid. The czar furnished a naval fleet and 18,000 troops, who reached Constantinople in 1833. Their arrival was sufficient to discourage Ibrahim, who aborted his planned attack on the capital.

Eager to avoid a widening crisis, France and Britain intervened and negotiated a treaty with Ibrahim in 1833. The treaty confirmed Muhammad Ali pasha of Egypt and Crete, and Egypt was given control of Syria as well as Adana. France and Britain undertook to prevent future Egyptian incursions, provided that Russia withdraw its troops from Constantinople. This was done, but then Russia and the Ottoman Empire separately concluded the Peace of Hunkiar Iskelessi, whereby the two nations made an offensive and defensive military alliance. The Sublime Porte granted Russia permission to close the Dardanelles in time of war, thereby barring the passage of warships. As for Muhammad Ali, in view of the Peace of Hunkiar Iskelessi, he warily regarded the Convention of Kütahya, negotiated through the French and British, as nothing more than a most tentative truce. Indeed, it proved unsatisfactory to all parties, and a Second TURKO-EGYPTIAN WAR began in 1839.

Turko-Egyptian War, Second (1839–1840)

PRINCIPAL COMBATANTS: Egypt vs. the Ottoman Empire (with aid principally from Britain)

PRINCIPAL THEATER(S): Syria and Egypt

DECLARATION: Egypt declared independence from Ottoman Empire, 1838; Ottoman Empire declared against Egypt, 1839

MAJOR ISSUES AND OBJECTIVES: Egypt sought independence from the Ottoman Empire.

OUTCOME: Thanks to the intervention of Britain (and the diplomatic cooperation of France and Russia), the rebellion was suppressed, and Egypt returned to the Ottoman fold.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Egypt, 100,000; Ottoman Empire, 400,000

CASUALTIES: Egypt, 20,000 killed or wounded; Ottoman Empire, 10,000 killed or wounded

TREATIES: Treaty of London, July 15, 1840

In 1838, Egypt declared independence from the Ottoman Empire by refusing to render further tribute payments to the Sublime Porte (Ottoman government). In response, Sultan Mahmud II (1784–1839) assembled an army and declared war on Egypt in 1839. He sent an invasion force by land and sea. These met with quick defeat at the Battle of Nizip (or Nizib) on June 23–24, 1839. Although the Turks massed 30,000 men, the Egyptians had heavy artillery, which won the day by smashing the Turkish infantry. The sultan's land forces were disloyal, and many accepted Egyptian bribes to desert. The troops who did fight were no match for Egyptian forces. As for the Ottoman navy, its principal commander turned traitor, sailing the fleet into Alexandria and turning it over to the Egyptians.

Because France supported Egypt—even sending French officers to lead the Egyptian army—Britain was deeply concerned that Russia would enter into the war on the side of the Ottoman Empire and that a major confrontation between European powers would develop. As it turned out, Russia had no desire for war and even voluntarily relinquished the right it had secretly negotiated by the Peace of Hunkiar Iskelessi (see TURKO-EGYPTIAN WAR, FIRST) to close down, at will, the Dardanelles. In 1840, Russia joined France and Britain in prevailing upon the Sublime Porte to make the pashalik of Egypt hereditary—a move that gave Egypt virtual independence—provided that Egypt returned the Ottoman fleet. The Ottoman sultan agreed, but Muhammad Ali (c. 1769–1849) of Egypt would settle for nothing short of absolute independence. This refusal resulted in European intervention. British warships bombarded Beirut and Acre, destroying the Egyptian forts there, then landed a small invasion force. The invaders collaborated with Arabs who were in revolt against Muhammad Ali and were able to defeat Egyptian occupation forces in Syria.

Reeling from defeat, Muhammad Ali backed down when the British threatened to bombard Alexandria, his capital. Muhammad Ali not only returned the Ottoman fleet but also agreed by the Treaty of London (1840) to

resume annual tribute payments to the Ottoman Porte. He completely withdrew his forces from Syria, and he reduced the size of his army. Clearly, it was thanks to the Porte's European allies that the Ottoman Empire survived.

Turko-Montenegrin War, First (1852–1853)

PRINCIPAL COMBATANTS: Montenegro (with unsolicited Austrian and Russian intervention) vs. the Ottoman Empire

PRINCIPAL THEATER(S): Montenegro

DECLARATION: De facto declaration of Montenegrin independence, 1851

MAJOR ISSUES AND OBJECTIVES: Montenegro, a vassal of the Ottoman Empire, sought independence.

OUTCOME: Danilo II, leader of Montenegro, effectively declared his nation's independence; Ottoman forces invaded but, through a combination of Montenegrin resistance and Austro-Russian intervention, withdrew.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: About 6,500 killed on both sides

TREATIES: None

The tiny Balkan nation of Montenegro was a subject client state (what was then called a vassal) of the Ottoman Empire but continually fought against the Ottoman yoke throughout the 19th century. Although it had for superior weapons and much larger forces, the Sublime Porte (Ottoman government) found it impossible completely to suppress the Montenegrin independence movement.

In 1851, Danilo II (1822–60), prince-bishop of Montenegro, divided the offices of prince and bishop, making the former hereditary. This was tantamount to declaring the independence of Montenegro, and the Ottoman Porte dispatched troops to Montenegro in 1852 to check such defiance, but they found the Montenegrins amply pre-

pared for their arrival. After several battles, the Turks retreated.

Observing the war between Montenegro and the Ottoman Empire was Austria, which eyed the small country jealously. Francis Joseph (1830–1916), the Austrian emperor, deployed troops along the border of Bosnia and Herzegovina, neighbors of Montenegro. With his troops in place, the emperor demanded that the Turks withdraw from Montenegro. At first, the Ottoman commander, Omar Pasha (1806–71), was defiant, but when Russia added its voice to that of the Austrians in 1853, the Turks backed down and withdrew. The First Turko-Montenegrin War ended without treaty and without definitive resolution, but with Austria poised to absorb the tiny country.

Turko-Montenegrin War, Second (1861–1862)

PRINCIPAL COMBATANTS: The Ottoman Empire vs. Montenegro

PRINCIPAL THEATER(S): Montenegro

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: With Montenegro close to anarchy following the death of its prince, Danilo II, the Ottoman Empire sought to reassert control over its ever-rebellious vassal.

OUTCOME: The war was ended by the Convention of Scutari, which essentially restored the status quo antebellum; that is, the de facto, but unofficial, independence of Montenegro.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: About 3,500 killed on both sides

TREATIES: Convention of Scutari, 1862

Danilo II (1822–60), principal leader of Montenegrin independence from the Ottoman Empire, died in 1860, leaving a power vacuum in Montenegrin politics, which created near anarchy. The Ottoman Empire, which had been forced to back down in the First TURKO-MONTENEGRIN WAR, fought from 1852 to 1853, saw an opportunity to reassert control over Montenegro and sent Omar Pasha (1806–71) at the head of a large invasion force in 1861. Omar Pasha's army laid siege against the ancient capital of Montenegro, Cetinje, where, despite the absence of Montenegrin leadership, resistance was stiff. Omar failed to take Cetinje, but he did overrun the rest of Montenegro.

The war was ended by the Convention of Scutari, by which Montenegro undertook neither to build forts on its borders nor to import arms. Although Montenegro did not

receive formal independence, the convention essentially restored the status quo antebellum, which was a status of de facto independence; however, when Montenegro joined Serbia in opposing the Porte in 1876, the Ottoman response came swiftly and massively. Only timely Russian intervention kept Montenegro (and Serbia) out of Turkish hands.

Turko-Persian War (1473) See VENETIAN-TURKISH WAR (1463–1479).

Turko-Persian War (1514–1517)

PRINCIPAL COMBATANTS: Ottoman Empire vs. Persia

PRINCIPAL THEATER(S): Persia and its possessions

DECLARATION: Turkey on Persia, 1514

MAJOR ISSUES AND OBJECTIVES: Sunni Sultan Selim I of the Turks instigated a holy war against predominantly Shi'ite Persia.

OUTCOME: Much of Persia was conquered before Selim I broke off the war to attend to the Mamluk-Ottoman War of 1516–1517.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Ottoman forces, 60,000; Persia, 50,000

CASUALTIES: At the Battle of Ridanieh (January 22, 1517), 6,000 Ottoman troops were killed or wounded; Persian losses were 7,000 killed or wounded

TREATIES: None

The chronic struggle between the Ottoman Empire and Persia was a contest for territorial domination and also a religious conflict initiated by the newly enthroned Turkish sultan, Selim I (1467–1520), a Sunni Muslim, against Persia, which was a Shi'ite Muslim nation; Selim believed that the Shi'ites were heretics and represented a pollution of Islam. Furthermore, the Persians, together with Shi'ites in Turkey, had supported Selim's brother and rival Ahmed (d. 1513), who was killed in the OTTOMAN CIVIL WAR (1509–1513).

Accordingly, in 1514, Selim I led an army of 60,000 Janissaries out of Adrianople on a tortuous march to Azerbaijan, intending to invade Persia. The Persians retreated before his advance, but that advance proved costly to Selim, whose troops suffered great hardship and hunger. The retreating Persians destroyed all crops and other means of sustenance along the route of their retreat. Nevertheless, at the first major battle, Chaldiran, on August 23, 1515, against 30,000–50,000 Persian cavalrymen,

Selim emerged victorious, then went on to capture Tabriz, which was only partially populated. Selim plundered what he could and then took vengeance against those who had remained in the city. His forces massacred all inhabitants, save for 1,000 skilled craftsmen, who were sent back to Constantinople as slaves useful to the Ottoman Empire.

Selim was unable to hold on to the conquered territory because, after the sack of Tabriz, the Ottoman army mutinied, returning to Amasya and Angora (Ankara), where it dispersed. However, within a few months, Selim launched a new campaign, in which he attacked the great Persian fortress of Kamakh, which gave him control over Kurdistan, formerly under the rule of the Safavids. Albistan also fell to the Turks, who made it a vassal state. However, the overthrow here of the Duldakir dynasty alarmed the Mamluks of Syria, who declared war, which resulted in the MAMLUK-PERSIAN-OTTOMAN WAR (1514–1517). This new conflict compelled Selim's full attention and forced him to abandon the campaign in Persia. Persia's Shah Ismail I (1486–1524) could have used Selim's vulnerability to his advantage by launching a counteroffensive against the Turks, but he and his people no longer had the stomach for war. The fighting between the Ottomans and the Persians was suspended for a full 10 years, until the TURKO-PERSIAN WAR (1526–1555).

Turko-Persian War (1526–1555)

PRINCIPAL COMBATANTS: The Ottoman Empire vs. Persia

PRINCIPAL THEATER(S): Persia and its territories, especially Mesopotamia (Iraq)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Ottoman Empire sought territorial expansion at the expense of Persia.

OUTCOME: The Ottoman Empire acquired significant territory but stopped short of the complete conquest of Persia because of a need to address internal and external military threats.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Ottoman army, 200,000; Persian numbers, unknown

CASUALTIES: Ottoman Empire, 50,000 killed or wounded; Persian losses unknown

TREATIES: Peace of Amasya, 1555

Although Shah Ismail I (1486–1524) of Persia did not directly counterattack the Ottoman forces of Sultan Selim I (1467–1520) when Selim broke off his invasion of Persia in the TURKO-PERSIAN WAR (1514–1517) to fight the MAMLUK-PERSIAN-OTTOMAN WAR of (1514–1517), the Safavid

Persians, who had lost Kurdistan to Selim in the 1514–16 war, did attempt to stir up rebellion in a variety of Ottoman provinces during the period following the war. During this time, the sultan who had succeeded Selim I, Süleyman I (the Magnificent; 1496–1566), was preoccupied with campaigns of conquest in Europe, and consequently he paid little direct attention to the Persian front. He took measures to oppose Safavid activists and infiltrators in eastern Anatolia (part of Turkey), and he also induced the Turkish Uzbeks of Transoxania to invade Persia from the east. Nevertheless, Süleyman was forced into direct war with Persia in 1526 because of a Turkoman uprising in Cilicia. The fighting continued in Karaman, when the Mamluks rebelled under the leadership of Kalendar-Oghlu (d. 1528). Finally, when the leader of Kurdistan defected to Persia, Süleyman had no choice but to open a battlefield there.

After several years of fighting on all of these fronts, Baghdad surrendered to the Sublime Porte (Ottoman government) in 1532. This encouraged Süleyman to continue his conquest of the Persian world. With an eye toward seizing control of all Mesopotamia (Iraq), he led 200,000 men in an invasion that overran Tabriz and Van in 1534. He then proclaimed a new Ottoman province at Erzurum. Baghdad fell in December 1534. Persian forces counterattacked in 1535, however, and retook Tabriz early in the year. The Persians' chief ally was the harsh winter weather, which took a toll on the poorly supplied Ottoman troops. Nevertheless, before the year ended, Süleyman recaptured Tabriz, then sacked it before returning to Constantinople, his own capital.

Despite his victories, Süleyman did not succeed in entirely suppressing Persian resistance. Fighting became chronic and costly in border regions. Tabriz and Van were retaken by Persian forces, only to be won again by Süleyman in 1548. The Safavid Persians periodically attacked Erzurum, and in 1552 seized it, after killing 3,000 Ottoman garrison troops in an ambush outside the city gates. The loss prompted Süleyman to lead a new campaign, which quickly retook Erzurum and then ravaged western Persia with a punitive operation.

At the end of 1554, the Persians were relieved to accept a truce offer from Süleyman. In a peace concluded at Amasya in 1555, he agreed to renounce Ottoman claims to Tabriz, Erivan, and Nakhjivan in exchange for complete control of Mesopotamia (Iraq), Erzurum, western Armenia, and most of Kurdistan. For Süleyman, it was a significant gain, but also a compromise. He understood that if he pressed on with an all-out war, all of Persia might well fall to his Ottoman Empire. On the other hand, instabilities within the Sublime Porte and threats from beyond the empire made such a complete commitment to war impractical and certainly dangerous.

Turko-Persian War (1578–1590)

PRINCIPAL COMBATANTS: The Ottoman Empire vs. Persia

PRINCIPAL THEATER(S): Persia and its possessions, especially Georgia, Azerbaijan, and Shirvan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Perceiving Persian internal instability, the Ottoman Empire sought conquest at Persian expense.

OUTCOME: A peace settlement restored the Ottoman Empire to the great extent it had enjoyed under Sultan Süleyman I the Magnificent.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Ottoman forces, 100,000; Persian forces, unknown

CASUALTIES: Ottoman forces, 20,000 killed or wounded; Persian losses unknown

TREATIES: Peace settlement, 1590

The death of Shah Tahmasp I (1514–76) in 1576 created a situation approaching civil war in Persia. Perceiving vulnerability, the Ottomans mounted a surprise invasion (via Crimea) in 1578. Georgia, at that time a Persian province, fell to the Ottoman Empire, and Daghestan in Persia itself was attacked. However, the Ottoman momentum soon flagged, even as the Persian forces organized more effective resistance. The Ottoman forces, about 100,000 strong, slowed themselves by devoting attention to capturing Kars, a major fortress, in Georgia (it fell in 1579) and capturing Erivan in Armenia (which fell in 1583). This served only to give the Persians time to mount an increasingly successful resistance, even as Ottoman logistics faltered. In 1584, the Ottoman armies constructed major defenses at Tiflis. All of these efforts cost even more time and resources. It was not until 1583 that Daghestan finally fell to the Ottomans, followed by Shirvan later in the year. However, about 20 percent of the invading army had been killed or wounded by this time.

From 1585 to 1588, the Ottoman armies targeted Azerbaijan, but they were stunned by powerful Persian counteroffensives, which managed to retake—albeit briefly—both Tiflis and Erivan. However, Persia began to suffer from internal dissension, and Uzbekistan, taking advantage of Persia's preoccupation with defending against the Ottoman Turks, attacked from the east. This distraction reduced the available Persian forces for combat against the Ottoman invaders, who defeated the Persians at Ganna and Karabagh in 1588.

Beleaguered from within and without, Persia finally sued for peace. During talks, in 1590, the Ottoman armies retook Tabriz and all of its dependent Azerbaijan territories. To forestall further losses, Persia agreed to Ottoman terms, yielding Georgia, Azerbaijan, Shirvan, and other provinces. These cessions reestablished the extent of the Ottoman Empire in the east as it had existed during its great height in the reign of Süleyman I (the Magnificent; 1496–1566).

Turko-Persian War (1603–1612)

PRINCIPAL COMBATANTS: The Ottoman Empire vs. Persia

PRINCIPAL THEATER(S): Ottoman-held former Persian territories and the Caucasus

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Persia's Abbas I (the Great) was determined to recover Persian territory lost to the Ottoman Empire in the Turko-Persian War of 1578–90.

OUTCOME: Persia prevailed and recovered all of its lost territory.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of 1612

Persia had ceded Georgia, Azerbaijan, Shirvan, and other provinces to the Ottoman Empire when it was defeated in the TURKO-PERSIAN WAR (1578–1590) and wanted to regain what it had lost. Continual warfare with the Uzbeks, however, put a new offensive out of the question until 1603. Shah Abbas I (the Great; 1557–1628) had been preparing for this since 1599, when he attempted to promote an anti-Ottoman alliance among European powers. When these attempts finally collapsed, Abbas took a new tack, sending Caucasian and Azerbaijani troops into Anatolia (Turkey). The shah recognized that the Ottomans were currently engaged in a war in Hungary—the AUSTRO-TURKISH WAR of (1591–1606)—as well as an internal revolt in some parts of the empire (by subjects who found Ottoman war-time taxation intolerable). Taking advantage of all this, the shah's army laid siege to Tabriz, which fell late in 1603. Erivan, Shirvan, and Kars were all retaken by the Persians during 1604.

Ottoman sultan Ahmed I (1589–1617) looked on as, one by one, the conquests of the previous war were lost. Enraged, he assembled a large army and attacked a much smaller Persian force, personally commanded by Abbas, at

Lake Urmia. The 1606 battle was a stunning defeat for the Ottomans, which allowed Abbas to seize Baghdad, Mosul, and Diarbekkh.

In the meantime, the Ottoman Empire made peace with its chief European adversary, Austria, by the Treaty of Zsitva-Török in 1606. Ahmed's plan was to use the Ottoman armies now freed up from the European war to fight the Persians. Yet these armies were never effectively brought into action, and by 1608 Abbas recovered all of the territory that had been lost in the Turko-Persian War of 1578–90. He went beyond this, ravaging the Caucasus and stripping the Ottoman Empire of most of its power and influence there. Abbas dictated the terms of a 1612 peace treaty, which left hard feelings among the Ottomans. These would become the cause of a new war, the TURKO-PERSIAN WAR of (1616–1618).

Turko-Persian War (1616–1618)

PRINCIPAL COMBATANTS: The Ottoman Empire vs. Persia

PRINCIPAL THEATER(S): Erivan and Tabriz and environs

DECLARATION: Ottoman Empire against Persia, 1616

MAJOR ISSUES AND OBJECTIVES: The Ottomans vainly sought to regain territory ceded to the Persians by the treaty that ended the Turko-Persian War of 1603–12.

OUTCOME: The Ottoman forces were defeated in both of their major campaigns, against Erivan and against Tabriz.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of 1618

The treaty that ended the TURKO-PERSIAN WAR (1603–1612) was, for all practical purposes, dictated by the victorious Persians and caused great discontent in the Ottoman Empire. A dispute over certain terms triggered a new war between the Ottomans and the Persians in 1616. At this time, a large Ottoman force laid siege against Erivan, one of the possessions Persia had recovered in the 1603–12 war. A combination of effective Persian resistance, counter-attack, and the onset of brutal winter weather forced the Ottomans to break off the siege and retreat. It was not until 1618 that the Ottoman Turks renewed the attack, invading the recaptured territories once again, this time attacking Tabriz. Persian commanders outgeneraled the Ottomans, however, and ambushed the principal Ottoman column, destroying a significant part of the Ottoman army.

The Ottomans sued for peace, and the new treaty that emerged merely reiterated and reinforced the harsh terms of the earlier document.

See also TURKO-PERSIAN WAR (1526–1555).

Turko-Persian War (1623–1638)

PRINCIPAL COMBATANTS: The Ottoman Empire vs. Persia

PRINCIPAL THEATER(S): Erivan and Baghdad

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Having lost Baghdad to Persia as a result of an internal power struggle, Sultan Murad IV was determined to regain it for the Ottoman Empire.

OUTCOME: By a treaty concluded in 1638, Baghdad was returned to the Ottoman Empire, which agreed to allow Persia control of Erivan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of 1638 giving Baghdad to the Ottoman Empire and Erivan to Persia.

This war between two traditionally rival powers began as an internal conflict within the Ottoman government of Baghdad. The pasha (governor) and the military struggled for control of the pashalik, and in 1621 a Janissary (elite mercenary force) conspiracy formed a governing faction that was more powerful than the pasha, Güzelce Ali Pasha (r. 1619–21). After effectively pulling off a coup d'état at the pasha's expense, the officer of the Janissaries, Ohrili Hüseyin (d. 1623), applied to the sultan himself for recognition as the new pasha. When this was not immediately forthcoming, he appealed to the Persian shah, Abbas I (the Great; 1557–1628), for military aid. Always eager to exploit Ottoman weakness, Abbas sent a small force—just as the sultan and Sublime Porte (Ottoman government) finally agreed to acknowledge the Janissary officer as the new pasha—Ohrili Hüseyin Pasha—of Baghdad. The new pasha instantly renounced all allegiance to Abbas. But it was too late. The Persians attacked and killed him in 1623, then overran Baghdad.

Suddenly finding themselves bereft of Baghdad, the Ottomans launched a campaign to recover the city. The first attempt, in 1625–26 collapsed because of a lack of artillery and a military mutiny. A second campaign fell victim to floods in 1629–30 and never reached its destination. Later in 1630, the Ottomans successfully fought the Persians at the Battle of Mihriban, then went on to ravage

Hamadan. However, the Persian defenders of Baghdad proved too strong, and the Ottoman forces retreated from an assault on the city.

A new Ottoman sultan, Murad IV (1609–40), prepared to launch a fourth campaign, but had to put it off to respond to more pressing threats from the Druse and rebels in the OTTOMAN-DRUSE WAR of 1631–35. With that war won, Murad, in 1635, invaded Persian territory and recaptured Erivan in 1636. From here, he marched on Baghdad. By this time, the Persians were resolved never to give up the city. Murad set up a siege, which lasted seven months before the defenders finally gave way in 1638.

With Baghdad retaken, Murad was prepared to discuss peace. It was agreed that the Ottoman Empire would retain Baghdad, whereas Persia would regain Erivan. The eastern border of the Ottoman Empire was fixed at the border of Mesopotamia with Persia.

See also JANISSARIES' REVOLT (1621–1622).

Further reading: Jason Goodwin, *Lords of the Horizon: A History of the Ottoman Empire* (New York: Henry Holt, 1999); David Morgan, *Medieval Persia, 1040–1797* (London: Longman, 1988).

Turko-Persian War (1730–1736)

PRINCIPAL COMBATANTS: The Ottoman Empire vs. Persia

PRINCIPAL THEATER(S): Armenia, Georgia, Persian Gulf, region of Baghdad

DECLARATION: Ottoman Empire against Persia, 1730

MAJOR ISSUES AND OBJECTIVES: Efforts to purge Persian territory of Ottoman influence and occupiers caused military incursions into Ottoman lands; this prompted a counterattack from Ottoman forces.

OUTCOME: The Persians were consistently successful against the Ottomans and managed to regain all territory lost during the conquests of Süleyman I (“the Magnificent”).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Ottoman forces, 80,000; Persian forces, 70,000

CASUALTIES: Ottoman forces, 20,000 killed or wounded; Persian forces, 30,000 killed or wounded

TREATIES: Treaty of 1736, restoring Persian territories

During the PERSIAN CIVIL WAR (1725–1730), Nadir Khan (1688–1747)—who later assumed power as Nadir Shah—launched a campaign to purge Persian holdings of Turks and Turkish occupiers. The effort often penetrated the Persian-Ottoman border and ultimately provoked the Ottomans to make a formal declaration of war.

In 1730, when Ottoman forces attacked, Nadir Khan was more concerned with punishing the rebellious Afghans in the PERSIAN-AFGHAN WAR (1726–1738); however, the Ottoman Empire could not afford to devote all of its mili-

tary resources to the campaign against the Persians. The JANISSARIES' REVOLT (1730) had diluted and weakened the Ottoman army, and Nadir Khan was able to counterattack at the Battle of Hamadan, winning back control over Armenia as well as Georgia. A Persian military campaign recovered Ardebil, lost earlier to the Ottomans, and, encouraged by this success, Nadir Khan invested in the creation of a navy, with which he patrolled the Persian Gulf. This greatly weakened Ottoman authority in the region. The only setback came at the Second Battle of Hamadan in 1732, when the Turks defeated the Persian forces there.

Otherwise, Nadir Khan was consistently successful, until he lost Baghdad in 1733. He had to withdraw before the advance of an 80,000-man Turkish relief army. Despite the retreat, Nadir Khan recovered and a short time later and retook Baghdad. In 1736, now as Nadir Shah—shah of Persia—he concluded the Treaty of Constantinople with the Ottoman Empire, which reestablished Persia's western border to its extent in the days before the conquests of Süleyman I ("the Magnificent" [1496–1566]).

Turko-Persian War (1743–1747)

PRINCIPAL COMBATANTS: The Ottoman Empire vs. Persia (with parallel internal strife in both nations)

PRINCIPAL THEATER(S): Ottoman Empire and Persia

DECLARATION: Persia against Ottoman Empire, 1743

MAJOR ISSUES AND OBJECTIVES: The issues of the Turko-Persian War of 1730–36 were never completely resolved; Persia's Nadir Shah made unreasonable religious demands; the Ottoman Sublime Porte (government) abused and tortured Persian diplomats.

OUTCOME: The war between the nations disintegrated as both suffered internal revolt.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Ottoman forces, 130,000; Persian forces 375,000

CASUALTIES: Ottoman forces, 58,000 killed or wounded; Persian forces, 10,000 killed or wounded

TREATIES: Formal peace concluded in 1747

During peace talks to end the TURKO-PERSIAN WAR (1730–1736), Persian negotiators refused to compromise on an apparently minor point, demanding that the Ja'fari, a small Shi'ite sect, be declared orthodox. On the Ottoman side, officials abused and even tortured Persian diplomats. Although the 1730–36 war was concluded, the bitter issues between the two governments persisted, and in 1743 Persia's Nadir Shah (1688–1747) declared a new war. He demanded the surrender of Baghdad to Persia, and when

he did not get it, he led an army of about 80,000 (out of 375,000 men under arms) against Constantinople (Istanbul). In the meantime, the Ottoman ulema, the Muslim legal council, ratified a jihad (holy war) against Persia. This prompted Nadir Shah to change his plan and march against Kirkuk, which he captured, and then against Arbil, which also fell to him. Next, Nadir Shah laid siege against Mosul, preparatory to attacking Baghdad. At this point, however, Mongol China menaced Persia, and, within Persia itself, uprisings in protest of high taxes broke out. These exigencies interrupted Nadir Shah's campaign.

In 1744, Nadir Shah resumed attacks on the Ottoman Empire by laying siege to Kars, an important fortress. Yet again, however, he had to break off his campaign against the Ottomans to return to the Persian province of Daghestan to put down an insurrection there. On August 3, 1745, he attacked at Erivan, again with about 80,000 men, winning a great victory against a Turkish force of 130,000. At least 20,000 Turks became casualties in this battle. Next, Nadir Shah returned to Kars and achieved an extraordinary victory against Ottoman forces along the Arpatschai River, driving the Ottoman army west. Ten thousand Turks fell in battle and another 18,000 were wounded. The desperate Turkish survivors raided and ravaged their own territory, which inflamed various districts throughout the Ottoman Empire.

As the violence became general throughout the Ottoman realm, so it spiraled out of control in Persian territory. Nadir Shah turned sadistic and vengeful. He attacked his own people and his own government. He ordered tortures, maimings, blindings, and executions for the merest infractions, imagined or actual. His reign of terror sparked general revolts in Persia from 1745 through the spring of 1746.

With civil strife rampant in both the Ottoman lands and Persia, the war between the Ottomans and the Persians petered out. In 1747, the peace was formalized when it was agreed that Baghdad would remain in Ottoman hands, and Nadir Shah withdrew his troublesome demand for Ja'fari recognition as orthodox. As a gesture of complete conciliation, the Ottoman Sublime Porte (Ottoman government) sent a new ambassador and diplomatic party to the court of Nadir Shah, only to find, on their arrival, that Nadir Shah had been assassinated and that the PERSIAN CIVIL WAR (1747–1760) had commenced.

Turko-Persian War (1821–1823)

PRINCIPAL COMBATANTS: The Ottoman Empire vs. Persia

PRINCIPAL THEATER(S): Anatolia (Turkey)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Persia retaliated against Ottoman aid to rebellion in the Persian province of Azerbaijan.

OUTCOME: The Ottoman army was defeated, but the Treaty of Ezurum made no substantive changes in borders or territories.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Erzurum, 1823

When the Ottoman Sublime Porte (Ottoman government) came to the defense of tribes rebelling against Persian rule in Azerbaijan, Crown Prince Abbas Mirza (1783–1833) of Persia led his newly reformed, equipped, and trained army against eastern Anatolia (Turkey) in 1821. Abbas Mirza enjoyed success near Lake Van and then triumphed at the Battle of Erzurum in 1821. Although this battle resulted in the rout of Ottoman forces, fighting continued in a desultory manner for the next two years until the Treaty of Erzurum was concluded, by which the two empires recognized existing borders. In sum, the war changed nothing, except to demonstrate the effectiveness of the Persian army, which, after defeat in the RUSSO-PERSIAN WAR (1804–1813) had been reformed according to European principles and had been trained by British officers, and to stop the Ottomans from aiding and abetting rebellion in Azerbaijan.

Turner's Rebellion (1831)

PRINCIPAL COMBATANTS: Black slaves vs. local whites

PRINCIPAL THEATER(S): Southampton County, southeastern Virginia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Presumably an attempt to achieve freedom; intended scope of the rebellion is unclear.

OUTCOME: The rebellion was crushed; many innocent blacks were killed in addition to the 20 known slave rebels executed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Turner's band, numbers unknown, but in excess of 20; white volunteers, militia, and mob, numbers unknown

CASUALTIES: Whites, 55 killed; Turner's band, 20 executed; other blacks, more than 100 murdered

TREATIES: None

Also called Nat Turner's Rebellion, this servile insurrection erupted on August 21, 1831, in Southampton County, southeastern Virginia, and was led by a fiery lay preacher, Nat Turner (d. 1831), slave on the plantation of Joseph Travis (d. 1831). Leading a band of an undetermined number of slaves, Turner killed Travis and every member of the Travis household before rampaging throughout the countryside, putting to the torch several plantations and killing 55 whites. Local militia forces engaged the slaves several times before the rebellion ended.

The spasm of violence triggered hysteria among local whites, who went on a rampage of their own, murdering at least 100 blacks who had nothing to do with the uprising. Turner and 19 of his followers were captured and executed.

Tuscarora War (1710–1715)

PRINCIPAL COMBATANTS: Tuscarora Indians vs. Colonial North and South Carolina

PRINCIPAL THEATER(S): North Carolina

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Tuscarora, reacting to colonial depredations, launched a resistance to further settlement; the colonies responded with a war of extinction.

OUTCOME: The Tuscarora were destroyed as a tribe; most survivors migrated north, ultimately to join the Iroquois "Five Nations" League as a sixth nation; a few remained on much diminished lands in North Carolina.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Colonial forces, militia and Indian allies, 2,000; Tuscarora, 1,200 warriors

CASUALTIES: Colonists, 200+ killed; Indian allies, unknown; Tuscaroras, 1,400 killed, 1,000 enslaved

TREATIES: Those Tuscarora who remained behind in North Carolina signed a peace treaty on February 11, 1715.

The Tuscaroras, who lived inland from the Atlantic sea-coast, along the coastal rivers of North Carolina, were initially inclined to be friendly to their colonial neighbors. By the first decade of the 18th century, however, they were suffering indignities and abuses, especially at the hands of local English traders. Plying the Tuscaroras with liquor, traders cheated them out of goods and territory—though, in the case of the latter, there was rarely even the semblance of a business transaction, as settlers simply squatted on the Tuscaroras' best land. Worse, traders began kidnapping Tuscaroras and selling them into West Indian slavery. As if this were not misery enough, Iroquois raiding parties from the north were ambushing isolated groups of Tuscarora hunters.

After enduring this situation for some years, the Tuscaroras, still wishing to avoid war, petitioned the government of Pennsylvania in 1709 for permission to migrate there. Authorities were willing to grant the necessary permission only if the Tuscarora settlers could secure a note from the government of North Carolina attesting to their good conduct. Although the Tuscaroras had shown great forbearance under considerable pressure, the North Carolinians refused to furnish the required certificate—allowing the Tuscaroras to leave would have meant relinquishing a valuable inventory of slaves.

About a year later in 1710, a band of Swiss colonists organized by an entrepreneur named Baron Cristoph von Graffenried (1661–1743) settled on a tract of North Carolina land at the confluence of the Neuse and Trent Rivers that they christened New Bern. There was a problem, however; the tract of land was already part of an extended Tuscarora village. Instead of attempting to negotiate with the Indians, von Graffenried complained to North Carolina's surveyor general, who affirmed that as far as the colonial government was concerned, the von Graffenried settlers held clear title to the land. The surveyor general told the Swiss promoter that he was perfectly within his rights to drive the Indians off without payment, which he did.

At dawn, on September 22, 1711, the Tuscaroras' forbearance at last gave way to violence. A raiding party attacked New Bern and other settlements in the area, killing 200 settlers, including 80 children. Von Graffenried managed to secure his release—as well as a pledge from the Indians not to attack New Bern again—by promising to make no war on the Tuscaroras. One of his settlers, William Brice (fl. early 18th century), thirsting for revenge,

was unwilling to abide by von Graffenried's promise. He captured a local chief of the Coree tribe, allied with the Tuscaroras, and burned him alive. The Tuscaroras, Corees, and other, smaller tribes, renewed their raids.

The situation was out of hand, and North Carolina officials sought aid from South Carolina. South Carolina dispatched Irish-born Colonel John Barnwell (c. 1671–1724) in command of 30 militiamen and 500 Indian allies, many of them Yamassees. The South Carolinian force took a great toll on Tuscarora settlements and those of their allies. Barnwell, heartened by his victories, his forces augmented by a contingent from North Carolina, directed an attack against the stronghold of the Tuscarora "king" Hancock (fl. early 18th century) in March 1712. The North Carolina men proved unreliable. Meeting fiercer opposition than they had anticipated, they broke ranks in a panic, and the assault failed. The Indians asked for a peace parley, but Barnwell refused. In response, the Tuscaroras began to torture their captives in full view of Barnwell's men. Finally, Barnwell agreed to withdraw in return for the release of the captives. The Tuscaroras agreed, and Barnwell returned to the New Bern settlement.

The North Carolina assembly angrily ordered him back to the front. Nothing less than the reduction of Hancock's "fort"—the Tuscaroras, like many eastern tribes, lived behind village palisades—was acceptable. Barnwell marched back in greater force, bullied Hancock into signing a peace treaty, then, marching back to New Bern, summarily violated his own treaty by seizing a party of Tuscaroras and selling them as slaves.

War was renewed in the summer of 1712, and North Carolina again appealed to South Carolina for help. This time, the neighboring colony sent Colonel James Moore (fl. early 18th century) with a force of 33 militiamen and 1,000 Indians. They arrived in November 1712, combined with North Carolina troops, and in March 1713 struck at the principal concentration of Tuscarora warriors. Hundreds of Tuscaroras died in this battle, and 400 were captured. The proceeds of their sale into slavery, at £10 each, helped defray the cost of the campaign. Many Tuscaroras who escaped death or enslavement migrated northward, eventually as far as New York, where they were given asylum among the Iroquois and, in 1722, were admitted into the Iroquois League as its "sixth nation." A smaller faction, led by a chief the English called Tom Blount (d. after 1732), remained in North Carolina, signing a peace treaty on February 11, 1715.

26th of July Movement (1953)

PRINCIPAL COMBATANTS: Cuban rebels led by Fidel and Raul Castro vs. government forces of Fulgencio Batista

PRINCIPAL THEATER(S): Santiago, Cuba

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Castro and his followers sought to overthrow the regime of Fulgencio Batista.

OUTCOME: The 26th of July Movement was suppressed but helped lead ultimately to the Cuban Revolution of 1956–59, which resulted in the overthrow of the Batista regime and the creation of a Marxist government under Fidel Castro's dictatorship.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Castro led about 200 rebels; government forces, which numbered 1,000 at the Moncada barracks, were overwhelmingly greater.

CASUALTIES: Nine rebels were killed in the assault on the Moncada and Bayamo army barracks, but 68 rebel prisoners were subsequently murdered; government forces lost 19 men at Moncada.

TREATIES: None

This was the first attempt at a Cuban revolution aimed at the overthrow of the government of Fulgencio Batista y Zaldívar (1901–73). On July 26, 1953, Fidel Castro (b. 1926) and his brother Raul (b. 1931), both leading Cuban dissidents, led 200 youthful Cuban rebels in an assault on the Moncada army barracks at Santiago, Cuba, while a simultaneous assault was carried out against the barracks at Bayamo. The assaults were gallant, but ill conceived and quickly repelled. Castro and 48 others escaped, 9 rebels were killed, and 120 captured, of whom 68 were subsequently murdered.

The Batista regime ordered brutal reprisals against the people of Santiago, revolutionaries and nonrevolutionaries alike, which prompted Fidel and Raul Castro to surrender themselves to Batista's forces on condition that the reprisals come to an end. Fidel Castro was sentenced to 15 years imprisonment on the Isle of Pines. After serving 11 months, however, he was pardoned in a general amnesty. He left Cuba for Mexico, where, in exile, he organized a far more formidable guerrilla movement, which resulted in the CUBAN REVOLUTION (1956–1959), the overthrow of the Batista regime, and the creation of a Marxist government under Castro's dictatorship, which has endured into the 21st century.

Although the 26th of July Movement was a military failure, it instantly elevated Castro onto the public stage

and made him a charismatic popular hero. It was thus an important step toward an ultimately successful revolution.

Tyler's Revolt (1381) See ENGLISH PEASANTS' REVOLT.

Tyre, Siege of (333–332 B.C.E.)

PRINCIPAL COMBATANTS: Alexander the Great vs. the City of Tyre

PRINCIPAL THEATER(S): Phoenician coast

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Tyre remained a stumbling block to Alexander's defeat of the Persian fleet and, thus, his Persian conquests.

OUTCOME: After a seven-month siege, Tyre fell and its inhabitants were sold into slavery.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Phoenicians, 8,000 killed, 30,000 captured and sold; Macedonians, unknown

TREATIES: None

Ancient Tyre, which had 250 years earlier withstood a 13-year siege from Babylonian king Nebuchadnezzar II (c. 630–c. 561 B.C.E), considered itself nearly impregnable before the arrival of Alexander the Great (356–23 B.C.E) in 333 B.C.E. Phoenicia's greatest commercial city, this strongly fortified city stood on an island half a mile off the Phoenician coast. To reach it, Alexander, fresh from his decisive victory at Issus and his seizure of Damascus (see ALEXANDER'S PERSIAN CAMPAIGN), began to build a causeway across the channel. The work was hampered by the Tyrians, who shot the workers and launched fireships from the city's two harbors to burn down the siege towers. Not until the Cypriot fleet had surrendered to Alexander did he make much headway in Tyre. With Cypriot ships and captured Phoenician vessels, Alexander was able to attack from the sea, tying ships in pairs to hold rams and using barges to catapult stones, spears, and incendiaries into the besieged city. Thus protected, the siege force reached the walls of Tyre. Still, it took seven months. Tyre's resistance cost the city 8,000 lives; 30,000 more of its citizens were sold into slavery when the city finally fell in 332 B.C.E.

With Tyre behind him, Alexander was now free to continue his march along the Mediterranean.

Tyrone's Rebellion (1594–1603)

PRINCIPAL COMBATANTS: Ireland and Spain vs. England

PRINCIPAL THEATER(S): Ireland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Disliking English taxes, English religion, and English rule, the Irish took advantage of the outbreak of war between Spain and England to stage a revolt.

OUTCOME: Following some initial success, the Irish rebellion was crushed; its leader, however, was pardoned and went into exile.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

England, 18,300; Ireland, 10,000

CASUALTIES: At Yellow Ford, English, 1,500 killed or missing; at Curliu Hills, 240 killed, 208 wounded; at Kinsale, 20 killed. Total Irish and Spanish losses at Kinsale, 1,200 killed; other totals, unknown.

TREATIES: None

In the 16th century, England's overseas commerce had begun to grow. The expansive and adventuresome spirit that had led the English "sea dogs" around the world now gained support from the birth of a Royal Navy. Old insular Britain was changing, and its obvious enemy was Spain, the nation then dominating the oceans and monopolizing the most lucrative colonial trade, especially that of the New World. Efforts to avoid the rivalry, such as the marriage of Mary I (1516–58) to Philip II (1527–98) of Spain had proved useless, and Elizabeth I (1533–1603) had been engaged in a decade of undeclared war with the Iberians—on the high seas, in America, and with the Netherlands—when the formal hostilities broke out that ultimately led to the arrival of the Spanish Armada (see *ANGLO-SPANISH WAR* [1586–1604]). The conflict was greatly intensified by its religious dimension. Spain was Catholic, England Protestant, and this difference provoked rebellion in the British Isles.

The Irish, chronically maltreated by the English, sharply resented the taxes Elizabeth I levied to maintain England's new presence in the world. Moreover, as Catholics, they hated her Protestant ecclesiastical policies.

Thus, the Irish were inclined toward Catholic Spain, and in 1594, Hugh O'Neill (c. 1540–1616), second earl of Tyrone, joined the already rebellious "Red" Hugh O'Donnell (c. 1572–1602) to unite the Celtic dissenters.

The most significant military action in 1594 came on August 7, when an English force of 600 foot and 46 cavalry, escorting a large supply train, was ambushed by 1,000 Irish infantry and 100 horsemen. Fifty-six English were killed and 69 wounded. The rest fled the field, abandoning the supply train. The exchange was dubbed the "Battle of the Biscuits," because the English left a multitude of biscuits and cakes behind as they fled. O'Neill appealed to Spain for assistance as rebellion in Ireland erupted into full-scale war with the English by 1595. O'Neill raised an army of 10,000 and defeated the English at Yellow Ford on the Blackwater River on August 14, 1598, the climax of a series of brief encounters during which O'Neill had bested the queen's top commanders.

In 1599, Elizabeth sent her favorite, Robert Devereaux (1567–1601), the earl of Essex, with 17,000 infantry and 1,300 cavalry, to crush the Irish rebels, but Tyrone's troops outmaneuvered him for more than a year, as they waited for Spain to respond to the call for aid. In 1600, Essex—after suffering a number of reverses—gave up and concluded a peace with the Irish forbidden to him by his queen. Elizabeth angrily recalled Essex, just in time for 3,814 Spanish soldiers under Don Juan D'Aquila (fl. 16th century) to arrive in Kinsale, Ireland, in 1601. The Spaniards took Kinsale, but the English—11,800 foot and 857 horse—led by Charles Blount (c. 1562–1606), Lord Mountjoy, kept D'Aquila's troops from uniting with Tyrone's men and laid siege to Kinsale on November 21, 1601. Disease and combat casualties reduced Mountjoy's force to 6,595 men fit for duty. Tyrone arrived with 6,500 Irish rebels, but the English responded with a vigorous cavalry charge executed during a severe thunderstorm on December 24. The combination of English ferocity and the fury of the storm apparently instilled panic in the Irish troops. A line of 1,800 pikemen broke and ran, prompting the Spaniards to retreat as well. Twelve hundred Irish and Spanish soldiers fell in this battle, whereas the English lost perhaps 20 men. On January 2, 1602, Aquila surrendered, and by 1603 O'Neill laid down arms and Tyrone surrendered as well. Both leaders were subsequently pardoned by King James I (1566–1625) and prudently went into voluntary exile. By 1603, the English had fully suppressed the uprising.

U

Ugandan Civil War (1978–1979)

PRINCIPAL COMBATANTS: Tanzania government and Ugandan rebels vs. Idi Amin's Ugandan regime (with aid from Libya)

PRINCIPAL THEATER(S): Tanzania and Uganda, principally the south

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In response to a Ugandan invasion of Tanzania, Tanzanian forces joined Ugandan rebel forces in a civil war to overthrow the brutal dictatorship of Idi Amin.

OUTCOME: The combined Tanzanian-Ugandan rebel forces successfully invaded Uganda, took the capital of Kampala, and overthrew Amin, who found refuge in Libya.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Tanzania and rebel forces, 20,000; Amin's forces, 21,000; Libyan forces, 2,700

CASUALTIES: Tanzania, 373 killed; Uganda rebels, 150 killed; Amin's forces, 1,000 killed; Libyan forces, 600 killed

TREATIES: None

Idi Amin (1924/25–2003), the vicious and unbalanced dictator of Uganda, asserted his belief that the Tanzanian government was stirring the border regions to rebellion. Accordingly, Amin dispatched 3,000 troops into Tanzania to the west bank of Lake Victoria on October 28, 1978. Driving about 20 miles into Tanzanian territory, the Ugandans declared the annexation of about 710 square miles of territory. Tanzanian military officials mounted a coun-

teroffensive with 7,000 troops but failed in an attempted crossing of the Kagera River on November 11. Nevertheless, on November 14, Amin announced that he was withdrawing from Tanzania. Government troops found the area of the invasion desolate; it had been burned over by the Ugandans. Perhaps as many as 1,500 civilians had been murdered. By way of response, Tanzanian forces invaded Uganda, penetrating 30 miles by November 27. At this point, a truce was declared, punctuated over the next several months by skirmishes and clashes.

Early in February 1979, Tanzania's president Julius K. Nyerere (1922–99) began actively supporting anti-Amin Ugandan exiles. Four thousand Tanzanian regulars accompanied 3,000 anti-Amin rebel exiles deep into southwestern Uganda. Although Amin mounted a defense with some 21,000 troops, his army soon proved mutinous and simply dissolved before the onslaught, which gathered in strength until it amounted to some 20,000 men, mostly Ugandan rebels. The only resistance remaining came from a contingent of Nubian mercenary troops (about 2,500) and a force of 2,700 Libyans sent by Libya's president Muammar al'Qaddafi (b. 1942) to aid Amin, a fellow Muslim. In March, at the Battle of Lukaya, 200 Libyans and 200 Amin loyalists were killed. The next month, most of the Libyans were evacuated during a two-day battle for Entebbe.

Following Entebbe, the Ugandan rebels and their Tanzanian supporters closed in on the capital city of Kampala, which they took and occupied on April 11, 1979. Amin, his forces reduced to some 2,000 men, fled to Jinja and then, under unremitting attack, to exile in Libya. This ended Amin's eight-year regime, during which perhaps as many as 300,000 Ugandans had lost their lives.

Ofcansky, *Uganda: Tarnished Pearl of Africa* (Boulder, Colo.: Westview, 1999); M. Louise Prouet, *Historical Dictionary of Uganda* (New York: Rowman and Littlefield, 1995).

Ugandan Religious Wars (1885–1889)

PRINCIPAL COMBATANTS: King Mwanga of Uganda vs. Anglican, Catholic, and Muslim missionaries and their converts; subsequently, the converts of these missionaries fought one another for dominance over Uganda.

PRINCIPAL THEATER(S): Uganda

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The war began with an effort to expel foreign missionaries from Uganda, then became a religious war among Anglican, Catholic, and Muslim factions within Uganda.

OUTCOME: The Anglican converts gained control of most of Uganda, leading to the creation of a British protectorate in 1894.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown; many civilians killed by King Mwanga

TREATIES: None

The influx of a variety of missionaries—Anglicans from England, Roman Catholics from France, and Islamic missionaries from the Arab world—into Uganda during the late 1870s alarmed the king of Uganda, Mwanga (fl. 1880s), who objected to so much foreign religious and cultural influence. In 1885, he resolved to eliminate the missionary presence from his kingdom and began by attacking and seizing the chief Anglican missionaries. When one, a bishop, approached from the east—the direction, according to Ugandan legend, from which would-be conquerors would approach—Mwanga's forces killed him. This was only the start of a program of persecution of Christians in Uganda. Particularly targeted were natives who had converted to Christianity. Some were burned at the stake.

Mwanga's plan was to round up all Christians and Muslims in Uganda, confine them to an island in Lake Victoria, and let them starve to death. His program of persecution, however, resulted in an uprising against him, and he fled from the throne. His brother Kikewa (fl. 1880s) replaced him and immediately attempted to make peace among the missionaries. He assigned each religion—Islam, Catholicism, and Anglicanism—an officially sanctioned post in Uganda. However, Muslim converts

now attacked a number of Christianized native chiefs. At first, the followers of these chiefs fled, but they soon regrouped and attacked the Muslims in a campaign of October 1889. The Muslims were defeated in the October action but counterattacked in November and achieved temporary victory. In February 1890, however, native Christian forces attacked the Muslims again and soundly defeated them. Beginning at about this time, disputes developed between followers of the Anglican missionaries and those of the Catholics. French Catholic converts attacked British-led Protestants in the Ugandan capital of Kampala but were defeated in the spring of 1892 and retreated to the Sese Islands in Lake Victoria. The Catholics created a stronghold on the islands and used it as a base from which they conducted operations against the Protestants. Before the end of 1892, however, British troops led Protestant forces in an assault on the Sese Islands and defeated the Catholics there. Survivors fled to the southern parts of Uganda. In the meantime, the Muslim converts found other territories. Most of Uganda, however, came under Anglican control, and Great Britain was able to assert a protectorate over Uganda in 1894.

Prentice, 1990); M. Louise Prouet, *Historical Dictionary of Uganda* (New York: Rowman and Littlefield, 1995).

United Irishmen's Revolt (1798)

PRINCIPAL COMBATANTS: Irish rebels vs. English government troops

PRINCIPAL THEATER(S): Northern Ireland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Irish Catholics (and others) wanted independence from Britain.

OUTCOME: The rebellion was quickly crushed, and the United Kingdom was created.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: England, 100,000; Ireland, 40,000; France, 3,000

CASUALTIES: English, 1,500 killed in battle; 10,000 died of disease; Irish, 7,900 killed, wounded or captured at New Ross, Vinegar Hill, Castlebar, Ballynamuck, and Killala. Irish total combatant and noncombatant deaths estimated at 50,000. At Lough Swilly, French losses included 425 killed and 1,870 captured.

TREATIES: None

The Society of United Irishmen was founded in 1791, inspired by the French Revolution. The organization's purpose was to secure parliamentary reform and legal equality for all Irish, and it was led by Belfast Presbyterian

merchants and Dublin intellectuals, most notably Wolfe Tone (1763–98) and James Napper Tandy (1740–1803). The United Irishmen garnered support among Presbyterian farmers in Ulster and among Roman Catholic peasants generally.

At first the United Irishmen advocated reform by peaceful means, but, after war broke out in 1793 between Great Britain and France, the society began to espouse out-right revolution. In April 1794, it even secured promises of aid from the French for any revolution. When British authorities acted harshly to suppress the United Irishmen, the organization went underground and became avowedly militant, entirely determined to foment rebellion.

Bolstered by anticipation of promised French aid, armed Irish mobs seized control of County Wexford, but were beaten back by British troops commanded by Gerard Lake (1744–1808) at the Battle of Vinegar Hill on June 21, 1798. In the meantime, Wolfe Tone led a French expeditionary force from the Continent only to be intercepted by a British squadron off Lough Swilly, County Donegal. The squadron easily overpowered the force, and Tone, captured, was tried and convicted of treason. He committed suicide before the court's sentence—death by hanging—could be carried out.

With the defeat at Vinegar Hill, the quelling of two other local revolts, and the death of Tone, the United Irishmen's revolt collapsed. The other principal rebel leader, Tandy, fled into French exile. In 1801, Great Britain was united with Ireland as the United Kingdom.

McFarland, *Ireland and Scotland in the Age of Revolution* (Edinburgh: Edinburgh University Press, 1995).

United States—Apache War (1871–1873)

PRINCIPAL COMBATANTS: Apaches vs. United States

PRINCIPAL THEATER(S): Arizona and New Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Apaches resisted Anglo-American settlements with lightning raids; the United States intended to end Apache raiding and concentrate the Indians on reservations under Grant's peace policy.

OUTCOME: The Apaches were temporarily defeated and the concentration onto reservations begun.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Nearly 5,000 U.S. troopers were engaged in the Apache Wars; Apache warriors from the various bands totalled only 2,000.

CASUALTIES: Apaches, 300–350 dead (including the Grant Camp Massacre), wounded unknown; United States, from September 1871 to September 1872, 44 killed, 16 wounded
TREATIES: None

The Apache heritage was one of raiding and warfare. Following the APACHE UPRISING during 1861 to 1865, there were several years of neither peace nor formal warfare, during which the Apaches resisted the advance of white American settlers and U.S. troops into the Southwest with swift raids and even swifter retreats to their mountain hideouts.

Not until April 15, 1870, with the establishment of the military Department of Arizona, did the U.S. government and its army fully confront the Apache "threat" to settlement. The department's first commander, General George Stoneman (1822–94), vitiated the army's purpose in creating the department when he established his headquarters not in Arizona but on the California coast. He also sought to deal with the Apaches in accordance with the "peace policy" of President Ulysses S. Grant (1822–85), designed as a "conquest by kindness" under which Native American tribes were no longer to be considered sovereign nations but wards of the state subject to civilian—not military—supervision. The Indians would be concentrated on reservations, where they would be "civilized": educated, Christianized, and taught to become self-supporting farmers. Accordingly, Stoneman had set up a series of "feeding stations" for Apaches who renounced raiding. Stoneman's remoteness from the scene, combined with his "benevolent" approach to what was at the time a military problem, brought accusations of spineless incompetence from the outraged citizens—and influential newspaper editors—of Arizona.

Conditions were ripe for a citizen uprising. Lieutenant Royal E. Whitman (d. 1913), in charge of Camp Grant, a feeding station on the lower San Pedro River, was performing his assignment well, cultivating the trust and cooperation of Aravaipa and Pinal Apache. As far as local settlers were concerned, Whitman was doing his job *too* well. They believed that Camp Grant served as a sanctuary for Indians between raids, and on April 30, 1871, six Americans, 48 Mexicans, and 92 Papago Indians attacked the Apache rancheria at Camp Grant, killing from 86 to 150 Indians, mostly women and children. Twenty-nine children were captured and sold into slavery.

The Camp Grant Massacre, as it came to be called, resulted in the replacement of General Stoneman by General George Crook (1829–90), who took command of the department in June 1871. President Grant wanted peace with the Apaches, and this is precisely what Crook hoped to achieve. He decided that the best way to achieve peace was to hand the Apaches a sound thrashing before begin-

ning negotiations. The notion brought him into conflict with Vincent Colyer (1825–88), Grant's secretary of the Board of Indian Commissioners, who compelled Crook to suspend operations until he had finished his negotiations. To his credit, Colyer made some inroads, but the citizens of Arizona continued to endure raids and terror. Crook issued an ultimatum to the Indians: Report to an agency by February 15, 1872, or be treated as hostile. This time, it was General Oliver O. Howard (1830–1909) who overruled him by opening up another peaceful dialogue.

Neither Colyer nor, initially, Howard had any success in dealing with the legendary Chiricahua Apache leader Cochise (c. 1810–74), and without the participation of Cochise, there could be no genuine peace with the Apaches. Finally, late in 1872, Howard enlisted the aid of frontiersman Thomas J. Jeffords (1832–1914), known to be a trusted friend of the Chiricahua leader, to escort him to “Cochise's Strong-hold,” where he at last succeeded in hammering out a tentative peace.

At least, he created a situation in which some 5,000 Apaches and Yavapais (a tribe distinct from the Apaches, but often called Apache Mohaves) claimed peaceful intentions and began to draw rations from a newly organized system of reservations. In fact, from 1871 to 1872 Apache raids continued unabated. It was difficult to distinguish between Apaches who professed peace in good faith and those who used the reservations as a cover for their crimes. In any case, Arizona settlers were unwilling to make distinctions. They demanded that Crook and his soldiers be turned loose upon the Apaches, and they threatened to force the army's hand by staging another Camp Grant Massacre. Faced with citizen anger and the realities of life in Arizona, the Indian Bureau at last authorized Crook to proceed—not to declare outright war but to campaign systematically against the Apaches.

Crook applied all that he had learned in fighting the Paiutes in Oregon and Idaho. He stressed the use of Indian scouts and auxiliaries, mobility, and determined pursuit until the enemy was engaged and defeated. He took charge of the U.S. troops in Arizona and New Mexico, split them into small squads, and sent them out first to find Apaches, then capture or kill them. On November 15, 1872, Crook began an ambitious sweep through Arizona, a winter campaign that aimed at the concentration of hostile Apaches in the Tonto Basin, where they could be dealt with at once and en masse. It was a relentless operation, involving continual pursuit, about 20 actual engagements, 200 Indians killed—76 at the Battle of Skull Cave (December 28, 1872) alone, where 100 Yavapais were cornered in a cave in a wall of Salt River Canyon, and the heavy fire resulted in ricocheting bullets that caused many deaths.

But the most punishing aspect of the campaign was the pursuit. Kept constantly on the move, the Indians were forced repeatedly to abandon shelter and provisions.

The Battle of Turret Peak (March 27, 1873) was the “last straw.” Under the command of Captain George M. Randall, elements of the 23rd Infantry surprised an Indian rancheria, killing 23. Throughout the spring and into the summer, Apaches dejectedly reported to reservations. Even more significantly, Crook managed to keep the peace for four years—an unprecedented span in so volatile a region.

United States—Apache War (Victorio's Resistance and the Geronimo Campaign) (1876–1886)

PRINCIPAL COMBATANTS: Apache “renegades” vs. United States

PRINCIPAL THEATER(S): Southern Arizona and New Mexico, and northern Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Apaches resisted permanent settlement on a reservation; the United States was trying to place all the Apaches on reservations and to track down and “bring to justice” those “outlaw” Apaches who refused resettlement.

OUTCOME: The Apaches were resettled on Arizona's San Carlos Reservation; the renegades—those who were not killed—were sent to prison in Florida.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Victorio, 150; Geronimo (and others) 400; United States, 3,000+ troops, 200 scouts

CASUALTIES: Apaches, 200 dead, wounded unknown; United States, 150 settlers dead, more than 100 troops, killed

TREATIES: None, though Geronimo and General Nelson A. Miles negotiated terms of surrender at Skeleton Canyon, Arizona, on September 4, 1886

On September 4, 1886, Apache chief Geronimo (1829–1909) surrendered to U.S. general Nelson A. Miles (1839–1925) in a canyon just north of Mexico after a decade of sporadic guerrilla resistance more effective as sensational newspaper copy than as true warfare. The final “capture” of the renegade Apache marked the surrender of Native Americans to what they experienced as the white invasion of the American West.

Born along Arizona's upper Gila River, Geronimo (his Apache name was Goyahkla) grew to manhood under Mexican rule. Mexican soldiers killed his mother, his wife, and his three children, and Geronimo's hatred of them was

implacable. Even Geronimo's fellow Apaches, the most feared of all the Indians of the Southwest, considered him a wild man. When Mexico ceded much of the Southwest to the United States after the UNITED STATES—MEXICAN WAR of 1846–48, the Americans too became the object of Apache hostility as the new intruders disrupted established Apache ways with their mines, ranches, and dusty small towns. After the United States conducted two sustained campaigns against the Apaches (see APACHE UPRISING and UNITED STATES—APACHE WAR [1871–1873]), most reported dejectedly to reservations.

Geronimo rode with the Chiricahua Apaches, whose chief was named Cochise (c. 1810–74) and whose homeland was in the Sierra Madre of Mexico. The first reservation established for the Chiricahuas in 1872 at least had included portions of their traditional lands. But life on the reservation did not much agree with the traditionally bellicose and restless Apaches, especially when game was scarce and their families hungry. Even after Cochise had agreed to settle on the Chiricahua Reservation, disgruntlement with the life there ran high, and young Apaches occasionally continued the raiding that had been a part of Apache existence for centuries.

As usual in dealing with Indian relations, the federal government did not help matters. In 1875, the United States decided to abolish the four separate reservations originally established in Arizona and New Mexico and remove all of the Apaches to one large Arizona reservation, San Carlos. Cochise had died in 1874, and the Chiricahua Apaches lacked the leadership that might have kept them together in resistance. Ordered to San Carlos in 1876, about half went, and the remainder scattered into Mexico. When the Apaches on New Mexico's Ojo Caliente Reservation, which the whites called Warm Springs, were ordered to San Carlos the following year, they, like the Chiricahuas, split, some scattering, some marching to the centralized Apache reservation.

San Carlos was an awful place—barren, miserably hot, overcrowded, and disease ridden. The agency there made little effort to provide sufficient rations, and it distributed what there was poorly. Here, in this desolate spot, two militant leaders arose among the Apaches, one a Warm Springs Apache chief named Victorio (d. 1880), the other a Chiricahua—Geronimo. For the next decade, Victorio or Geronimo and their followers repeatedly broke out of what they considered their imprisonment. Once free of the reservations, they were hard to find among the canyons and arroyos of southern Arizona and nearby Mexico. Roving bands led by Victorio and Geronimo terrorized much of the Arizona and New Mexico territories, killing prospectors, herders, travelers, whomever they ran across, and stealing horses and guns. If the U.S. Army came too close, they fled out of reach across the border into Mexico. From there, joined by Comanches and other renegades, they would once again pick up their raids over the border.

Victorio made the first break from San Carlos on September 2, 1877, leading more than 300 Warm Springs Apaches and a few Chiricahuas out of the reservation. For a month, they resisted the soldiers who chased them, but they were finally compelled to surrender at Fort Wingate, New Mexico. They were permitted, however, to return to their homeland at Ojo Caliente rather than to San Carlos while the U.S. government debated their fate. Within the year, the order came to return to San Carlos, and though most did so, Victorio once again bolted. With 80 warriors, he headed for the hills, trying vainly to return now and again to Ojo Caliente. In 1879, Victorio even attempted to settle with the Mescalero Apaches on their reservation, but the arrangement never worked. On September 4, 1879, Victorio led 60 warriors in a raid on the camp of Troop E, Ninth Cavalry, stationed at Ojo Caliente, killing eight soldiers and stealing 46 ponies. Following the raid, Victorio's forces were strengthened by the influx of Mescalero Apaches, who swelled his numbers to around 150 men. They set about terrorizing the Mexican state of Chihuahua and most of western Texas, southern New Mexico, and Arizona.

Mexico and the United States cooperated in the pursuit of Victorio, who managed to elude them for about a year. By the fall of 1880, however, Victorio's warriors began to wear out. Colonel George P. Buell (1833–83) took his regular infantry and cavalry and joined forces with Mexican irregulars commanded by Colonel Joaquin Terrazas (1829–1901) to run Victorio to ground in Chihuahua. When it became obvious they were about to make contact with the Indians, Terrazas summarily ordered Buell out of Mexico; he wanted the "honor" of destroying Victorio for himself. During October 15–16, 1880, Terrazas engaged Victorio at the Battle of Tres Castillos in hand-to-hand combat. Seventy-eight Indians died, including Victorio and 16 women and children. Those who escaped headed back for New Mexico to join Geronimo in a final effort to escape confinement at San Carlos.

Geronimo had been one of a number of Apache leaders who frequently gathered at Ojo Caliente to organize raids on local ranches and Anglo settlements. When U.S. government authorities realized that the reservation was being used as a headquarters for raiding and resistance, Ojo Caliente was ordered closed, and U.S. Indian agent John P. Clum (1851–1932) was dispatched to oversee the removal of 400 Warm Springs and Chiricahua Apaches to the San Carlos Reservation. The plan was for Clum to rendezvous with eight troops of the Ninth U.S. Cavalry to assist in the removal, but those forces had not arrived on April 20, 1877, when Clum reached the reservation. The Indian agent soon discovered that Geronimo was at Ojo Caliente, doubtlessly organizing violent resistance to the transfer to the hated San Carlos. Clum decided that he had to move decisively. Summoning a tiny force of Indian reservation policemen, he arrested Geronimo along with 16

other Apache leaders. By the time the cavalry arrived two days later, the Apache “renegades” were securely shackled.

Geronimo endured a year at San Carlos before he broke for Mexico. The year Victorio was killed, however, Geronimo—himself relentlessly pursued by Mexican troops—returned to San Carlos. It was during this second period on the reservation that Geronimo became associated with the Apache prophet Nakaidoklini (d. 1881). The prophet taught that generations of the dead and defeated Apaches would rise again and that the great old days, when the Apaches were all-powerful throughout the Southwest, would return. Nakaidoklini was a genuinely religious figure, who did not advocate violence but instead taught his followers to invoke the departed spirits by means of a dance analogous to the so-called Ghost Dance, which would soon be introduced among the reservation Sioux. Nevertheless, white authorities saw grave danger in Nakaidoklini and his teachings. On August 30, 1881, Colonel Eugene A. Carr (1830–1910), commanding Fort Apache, led a small force into the prophet’s village on Cibicu Creek and took Nakaidoklini into custody. Carr’s troops set up camp outside the village, whereupon 100 of the prophet’s followers attacked, and the White Mountain Apache scouts attached to the army mutinied. Carr’s command barely escaped destruction, but in the course of the fight Nakaidoklini was killed. Carr retired to Fort Apache, which fell under heavy attack.

In response to the siege of Fort Apache, army regulars rushed into the San Carlos area from all over the Southwest. By the end of September 1881, Nachez (Naiche [c. 1857–1921])—son of the Apache leader Cochise—Juh (c. 1825–83), Chato (c. 1860–1934), and Geronimo, with 74 braves, were again heading for Mexico. On October 2, they successfully fought off pursuing troops under the command of Major General Orlando B. Willcox (1823–1907), and, having crossed into Mexico, joined other renegades. When Willcox learned that the war leaders planned to reenter the United States in January 1882 to force an alliance with the Warm Springs Apaches, led by Chief Loco, he marshaled border patrols.

The anticipated invasion did not occur in January, but on April 19, 1882, an Apache war party skillfully evaded the patrols, rushed into the San Carlos Reservation, killed the reservation police chief, Albert D. Sterling, and compelled Chief Loco, along with several hundred Warm Springs Apaches, to return to Mexico with them. The return trip was bloody. Raids killed between 30 and 50 whites.

Lieutenant Colonel George A. Forsyth (1837–1915), with five troops of the Fourth Cavalry and a unit of scouts, pursued the Apaches without success until April 23, when a patrol found them in Horseshoe Canyon along the Peloncillos River. Forsyth attacked, but the Indians escaped, inflicting light casualties on Forsyth’s forces. Troopers of the Sixth Cavalry now gave chase, penetrating deeply into Mexico and attacking on April 28. The Apaches resisted the attack and slipped away.

Joined now by the main body of Forsyth’s command, the Fourth Cavalry continued south in pursuit of Geronimo’s band. On April 30, it encountered a unit of Mexican infantry commanded by Colonel Lorenzo Garcia (fl. 1880s), who claimed that his men had killed 78 Apache warriors and captured 33 women and children. With that, the Mexican colonel ordered the American military out of his country.

The army suffered another reverse on July 6, 1882, when a White Mountain Apache warrior named Natiotish (fl. 1880s), a militant follower of the slain Nakaidoklini, invaded San Carlos, killing the new police chief, J. L. “Cibicu Charley” Colvig (d. 1882), along with three of his officers. Following this, he led raids throughout Arizona and New Mexico’s Tonto Basin, prompting a large-scale search for him. Near General Springs, between Fort Apache and Fort Verde, the White Mountain chief set an ambush, aiming to destroy a Sixth Cavalry column led by Captain Adna R. Chaffee, Sr. (1842–1914). The ambush was discovered, however, and Chaffee’s troop was reinforced. In the ensuing Battle of Big Dry Wash on July 17, 1882, Natiotish suffered losses estimated at 16 to 27 dead, with many more wounded, and the White Mountain Apache raids came to an end.

Now the army could devote its exclusive attention to the Chiricahuas and the Warm Springs Apaches the Chiricahuas had drafted into alliance. These forces were led principally by Geronimo, whose adversary was now General George Crook (1829–90), newly appointed commander of the army’s Department of Arizona. In September 1882, Crook introduced a strong military presence on the San Carlos Reservation, carefully recruiting a host of Indian scouts and informants in order to infiltrate would-be pockets of resistance on the reservation.

American officials had negotiated a special treaty with Mexico on July 29, 1882, securing permission to conduct operations in pursuit of Geronimo on Mexican soil. Before launching his expedition into that country, Crook used Apache intermediaries to negotiate with Geronimo and his followers, who responded in March 1883 with raids on Mexican and American targets.

General William Tecumseh Sherman (1820–91) ordered Crook to move into Mexico. With 193 White Mountain Apache scouts, Captain Emmet Crawford (1844–83) and Lieutenant Charles B. Gatewood (1853–96) pursued Apache raiders into the most remote reaches of the Sierra Madre in Mexico. On May 15, 1883, they attacked the encampment of two important Apache leaders, Chato and Benito (1850–1945), killing nine warriors and destroying 30 lodges. This brought Geronimo and others to sue for peace. Only Juh remained at large.

Crook took a hard line, convincing Geronimo and the others to return to San Carlos. In actuality, only the Warm Springs Apaches—unwilling allies of the Chiricahua in the first place—immediately returned to San Carlos.

Geronimo and the other Chiricahuas did not arrive until March 1884. Once they arrived, they began to foment resistance on the reservation.

The first source of discord was a prohibition against a form of liquor called *tiswin*. The Indians defied the ban in May 1885, and Geronimo, Nachez, Chiricahua chief Chihuahua, and the aged chief Nana (1800–96), with 134 others broke for Mexico once again. Crook sent two forces in pursuit, one under Captain Crawford and Lieutenant Britton Davis (a troop of Sixth Cavalrymen and 92 scouts) and another led by Captain Wirt Davis (1839–1914) and Lieutenant Matthias W. Day (fl. 1880s) (a troop of Fourth Cavalry and 100 scouts), which crossed the Mexican border on June 11 and July 13, respectively. Crook additionally deployed some 3,000 soldiers to patrol the border country to keep the renegades from reentering the United States.

Despite the forces arrayed against him, Geronimo not only eluded Crawford and Davis but also slipped through the border patrols to terrorize Arizona and New Mexico. In October 1885, Crook recalled Crawford and Davis, re-equipped them, and sent them into Mexico again. In the meantime, early in November, Josanie (fl. 1880s), brother of Chihuahua, led a dozen warriors on a month-long 1,200-mile rampage through New Mexico and Arizona, during which 38 settlers were killed and 250 horses stolen. To add insult to injury, the raiders slipped back into Mexico undetected by the border patrols.

Under intense pressure from his commanding officers—Generals Sherman and Philip Sheridan (1831–88)—Crook sent Crawford at the head of two companies of scouts, White Mountain and Chiricahua Apaches; the hunters were of the same tribe as the hunted. Crawford's command discovered the Apache camp on January 9, 1886, in Sonora, Mexico. Geronimo and the others fled, but they were exhausted. They sent word to Crawford, and a conference was set for January 11. On the morning of that day, Captain Crawford was “accidentally” killed by Mexican militiamen. Thus the peace conference was postponed, taking place at Canyon de los Embudos, on March 25, 1886.

General Crook told Geronimo that the best he could hope for was two years of exile in the East. Geronimo capitulated, but on the way to Fort Bowie, Arizona, the place agreed upon for the formal surrender, the Apache leader encountered a whiskey peddler, drank heavily, and bolted yet again.

Crook, discouraged and in dispute with Sheridan, resigned and was replaced by General Nelson A. Miles, who sent a strike force under Captain Henry W. Lawton (1843–99) to neutralize Geronimo once and for all. Starting into Mexico on May 5, Lawton's men chased the Indians throughout the entire summer of 1886, covering some 2,000 miles without once actually engaging the enemy. Yet by the end of August Geronimo was again ready to talk. The Apache leader again accepted exile to a Florida prison—on condition that no less than General Miles accept his surrender in person. The general obliged, arriving at the agreed

upon point of surrender, Skeleton Canyon, Arizona, on September 4, 1886. Miles took Geronimo and his band to Fort Bowie, then shipped them off to Florida, marching them out of the fort to the strains of “Auld Lang Syne” played by the regimental band.

Eventually, the Chiricahua and Warm Springs Apaches were permitted to return to the West, but only as far as a reservation in Oklahoma. When Geronimo died, aged 80, at Fort Sill, Oklahoma, in 1909, he had been a legend among both Indians and whites for more than a generation.

United States Civil War: Historical Background (17th century–1861)

PRINCIPAL COMBATANTS: United States of America (California, Connecticut, Delaware, the District of Columbia, Illinois, Indiana, Iowa, Kentucky, Kansas, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, New Jersey, New York, Ohio, Oregon, Pennsylvania, Rhode Island, West Virginia, Wisconsin, the territories of Colorado, Dakota, Nebraska, Nevada, New Mexico, Utah, and Washington) vs. Confederate States of America (Alabama, Arkansas, Georgia, Florida, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas, and Virginia, plus partisans in Kentucky, Kansas, Missouri, New Mexico Territory, and the unorganized Indian Territory [Oklahoma])

PRINCIPAL THEATER(S): Eastern theater: Maryland, North Carolina, Pennsylvania, Virginia, and West Virginia; western theater: Alabama, Arkansas, Georgia, Louisiana, Mississippi, South Carolina, and Tennessee; trans-Mississippi theater: Arkansas, Indian Territory, Kansas, Missouri, New Mexico Territory, and Texas; at sea: points along the Atlantic seaboard and Gulf Coast; the Caribbean and the North Atlantic off England and Europe; the high seas.

DECLARATION: No formal declaration. The Confederate States of America fired on Fort Sumter on April 12, 1861, beginning the war. Union president Abraham Lincoln issued a call for troops on April 14, the day of Fort Sumter's occupation by Confederate troops, this proclamation being the “official” U.S. response. Calling the Confederate Congress into special session on April 29, Confederate president Jefferson Davis proclaimed the South would “meet,” not “wage,” the war now launched by Lincoln.

MAJOR ISSUES AND OBJECTIVES: The North fought to preserve the union established by the American Revolution and the Constitution, to assert the sovereign rights of the federal government over any individual state or section, and to outlaw slavery in the United States; the South fought to maintain the sovereignty of individual states against the power of the federal union, including the right to nullify irksome federal laws or to secede from that union entirely, and to protect the institution of slavery.

OUTCOME: The South was utterly defeated; slavery was abolished; and a program of social reconstruction, aimed at including freed slaves in the economic and political life of the South, was initiated under military occupation but ultimately failed to achieve its purposes.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Union, 1,556,000; Confederate, 850,000

CASUALTIES: Union, 359,528 killed, 275,175 wounded; Confederate, at least 258,000 killed, some 225,000 wounded

TREATIES: The end of the war was marked by a series of documents: Confederate general Robert E. Lee surrendered to Union commander Ulysses S. Grant on April 9, 1865, and a truce was agreed to that effectively brought the war to a close. But Lee had surrendered only his Army of Northern Virginia, and a more inclusive armistice—in effect, a peace treaty—was concluded on April 18 by William Tecumseh Sherman and Joseph E. Johnston in Raleigh, North Carolina. On April 21, the new president of the United States, Andrew Johnson, and his cabinet repudiated the Sherman-Johnston agreement, and on April 26 Johnston was forced to accept a narrower armistice, identical to the one Grant offered Lee. That day, the Confederate cabinet held its last meeting (in Charlotte, North Carolina) and dissolved. Various Southern commanders then surrendered under the terms of the armistice. The last fighting unit to surrender was that of Edmund Kirby Smith in Texas, on May 26, 1865, and the last general officer to surrender was the Cherokee Confederate brigadier Stand Watie, on June 23, 1865.

Provisional state governments were set up in the Confederacy and once those states “in rebellion” had ratified the 13th Amendment to the Constitution, which freed the slaves; had abolished slavery in their state constitutions; had repudiated debts incurred during the rebellion; and had declared the secession null and void, two presidential proclamations—the first on April 2, 1866, the second on August 20, 1866—officially ended the war.

This entry focuses on the causes and the outbreak of the U.S. Civil War. For actions related to the war in Pennsylvania, Virginia (and West Virginia), and North Carolina, and for the war’s resolution *see* UNITED STATES CIVIL WAR: EASTERN THEATER. For actions relating to the war in Alabama, Georgia, Kentucky, Louisiana, Mississippi, South

Carolina, and Tennessee *see* UNITED STATES CIVIL WAR: WESTERN THEATER. For actions relating to the war in Arkansas, Missouri, New Mexico, Oklahoma, and Texas *see* UNITED STATES CIVIL WAR: TRANS-MISSISSIPPI THEATER. For actions relating to the war on the Atlantic and Gulf Coasts and on the high seas *see* UNITED STATES CIVIL WAR: AT SEA.

Sovereignty—that of person over slave or of nation over section—lay at the heart of the issues for which the American Civil War was fought. At several points during the conflict peace overtures, usually from a beleaguered South but also from a beleaguered U.S. president, would be undertaken, always to founder on the question of sovereignty. Formulated in just such terms, these attempts at peace meant that the South would continue to mask its dedication to the “peculiar institution” of slavery with rhetoric about “states’ rights,” the combination that led to the outbreak of the Civil War. Even after the South, nearing physical and economic exhaustion, was ready nominally to give up Negro bondage, the question of sovereignty would remain a sticking point. Indeed, it would be under the banner of sovereignty—so-called “white sovereignty”—that a defeated South would try to deny emancipated slaves full participation in the American nation secured by the Civil War. Thus, the end of the fighting would not be a matter of treaties but of truces and amnesties granted by a sovereign nation to several states in rebellion. The restitution of a full civil peace would consist of amendments and legislation passed by Congress and—ultimately—of national presidential elections a decade later. None of this should obscure the fact that despite what the participants said at the time and Southern apologists have said since, the Civil War was fought to resolve the question of slavery. For it was only over the question of slavery that the South unequivocally asserted the sovereign rights of the individual states. All other matters—tariffs and sectional influence in Congress, for example—proved pliable to debate and compromise and legislative remedy.

ROOTS OF CONFLICT

In 1619, merely 12 years after the founding of Jamestown, Dutch traders first imported black slaves for sale to the Virginia tobacco farmers. At first, for the wealthy planters who bought them, black slaves represented nothing more than a new source of cheap labor, one that—unlike indentured servants who worked (at least in theory) for only seven years to repay their passage—would be perpetually under the planters’ control. In the early colonial period, few could afford the prohibitive costs of purchasing African slaves, so indentured servitude remained the predominant method by which planters exploited the labor force. Toward the end of the 17th century, the price of slaves began to fall, and as living conditions improved in the colonies, planters who bought slaves could expect to get a full lifetime of work from their chattel. Even at twice the price of indentured servants, African slaves had become a bargain.

Southerners were not the only Americans to engage in slavery as a means of economic improvement. The New England shipping industry relied on the importation of slaves as part of its “triangular” trade. The trade took many different forms, but in one version traders shipped molasses refined in the West Indies to New England for use in the distillation of rum. They then shipped rum to Africa in trade for slaves, whom they transported to the West Indies. New England slave traders then hawked the Africans on the auction blocks of Charleston, New York, and other busy port cities along the eastern seaboard. In the South, however, American slavery flourished both as an economic system—allowing a few planters to grow rich from the forced labor of the Africans who cultivated their tobacco, rice, indigo, and later, cotton—and as a system for strict racial control. The casual bigotry of the early European settlers became a virulent racism in the service of the South’s regionalist ideology. Planters and traders kept questions of morality and human decency in abeyance during the 17th and 18th centuries, when the economic benefits of slavery were evident for both the South and North and the balance of sectional interests could serve as a basis for compromise. But westward expansion of the new nation threatened that balance even as slavery developed into the South’s own “peculiar institution,” the bleak foundation of its cherished way of life, and grew increasingly irrelevant to the rapidly industrializing North.

“GINNING UP” THE “PECULIAR INSTITUTION”

The tensions inherent in the diverging economies of the two regions were underscored by slavery, and the institution from the beginning proved politically volatile. By the time of the American Revolution, the interests of the North and South were different enough that slavery was an issue in the drafting of the Declaration of Independence, and it would remain an issue in the subsequent drafting of both the Northwest Ordinance and the Constitution. Thomas Jefferson (1743–1826) had wanted to include a mention of the slave trade in the Declaration and blame the foul practice on George III (1738–1820), but other Southerners in the Continental Congress objected to any mention of slavery at all, and they prevailed. The Northwest Ordinance, probably the most important piece of legislation passed under the Articles of Confederation, because it determined how the United States would handle new lands, prompted the debate over whether slavery should be allowed to spread with the nation. A compromise was reached, barring slavery from the western lands “won” during the war but allowing slavery to flourish below the Old Northwest. The question of whether slaves were property or people was raised during the debates of the Constitutional Convention, where southerners wanted them considered property except when it came to representation in Congress, when they wanted them counted as people. Again a compromise was reached, each slave con-

sidered as three-fifths of a person at census time but otherwise treated like any other chattel.

As Congress debated the western land ordinances, one invention in particular exacerbated the problem of slavery by revolutionizing the production of cotton and making it a cash staple of southern agriculture. In 1793, Eli Whitney (1765–1825) invented the cotton gin, which made the processing of most Southern cotton economically feasible. Cotton production soared, the Southern economy boomed, and what had been only a secondary crop became “King Cotton.” As a result, the South became more dependent than ever on slave labor, and southern planters grew rabid in their promotion and adamant in their defense of the region’s “peculiar institution.” Slavery became increasingly the one issue over which neither side was willing to compromise. By the time of the Louisiana Purchase in 1803, the pattern was already in place if not yet obvious: New lands or policies would threaten to upset the regional balance of representation in Congress, the extension of slavery would become the flashpoint for a political crisis, a new compromise would be reached not quite satisfying to either side, and the nation would edge closer to outright civil conflict.

THE LONG DEBATE

In 1819, 22 U.S. senators were from northern states and 22 from southern states. This balance, carefully preserved with the admission of each new state since the Revolution, would be upset when Missouri petitioned Congress for statehood as a slaveholding state. After protracted and agonizing debate, Congress passed a two-part compromise in March 1820, called variously the Compromise of 1820 or the Missouri Compromise. First, Missouri would be allowed to join the Union as a slave state, but at the same time Maine, which had been part of Massachusetts, would be admitted as a free state. No one was completely satisfied by the compromise, but it did help to preserve the Union for some 30 years. Northerners were dissatisfied because the compromise failed to ban slavery from the Louisiana territories. Southerners were distressed that the law set a precedent for future congressional action regarding slavery. Although the law would remain in force until the Kansas-Nebraska Act of 1854, the positions on slavery began to grow more radical. During the 1830s, a secret network of individuals committed to helping escaped slaves find their way north to freedom became more thoroughly organized and acquired the name by which it would be known until the Civil War—the Underground Railroad. The anti-slavery newspaper *The Liberator* appeared in 1831, and the abolitionist crusade was in full swing in the North. Alarmed by the willingness of northern citizens to help the slaves, the southerners protested being deprived of their property. Northern states responded by enacting “personal liberty” laws prohibiting state officials from helping southerners recapture their runaway slaves. In 1842, the Supreme Court declared in

Prigg v. Pennsylvania that the states were not required to enforce the Fugitive Slave Act. The division between North and South widened and deepened.

Early in the 1830s, southerners had thought they found a solution to this northern “attack”—nullification. In 1832, Congress passed a new tariff that southerners, already outraged at the abolitionist fever spreading rapidly through the North, thought not merely excessive but also a deliberate attempt at destroying their economy. Radicals in the South Carolina legislature combined their hatred of abolition with their resentment of the new tariff and resolved that the state would not yield. On November 24, 1832, a special convention called by the state legislature passed the Ordinance of Nullification, which prohibited the collection of duties after February 1, 1833. In addition, the legislature called for raising and arming a military force. The state was determined to put the authority of the central government to a severe test, but South Carolinians did not realize how determined President Andrew Jackson (1767–1845) was to compel their compliance with federal law. He issued a “Proclamation to the People of South Carolina” in which he declared that “disunion by armed force is treason.” The South Carolina radicals backed down 10 days before nullification was scheduled to begin. When a compromise tariff was passed by Congress in March 1833, the state legislature repealed the Nullification Ordinance altogether. Although the crisis was averted, sectional tensions continued to mount. Radicals in South Carolina and elsewhere in the South came to believe that only secession from the Union would protect their way of life.

Leading South Carolina’s fight during the Nullification Crisis was native son John C. Calhoun (1782–1850), one of a triumvirate of senators who dominated the two decades before the Civil War. Another was Senator Daniel Webster (1782–1852), who represented Massachusetts (and, thus, New England) and was the Whig Party’s foremost spokesman for the Union at any cost. Between Calhoun and Webster was Henry Clay (1777–1852), a Whig but also a slaveholding Kentuckian who would become known as the “Great Compromiser.” The three hammered out a new political compromise, the Compromise of 1850.

The discovery of gold in California in 1848 brought to a boil the long-simmering sectional differences over slavery. More than 80,000 people from the eastern states and territories flooded into California in 1849 alone, making the establishment of a territorial government a necessity. The question of whether territories and new states would be slaveholding or free had been settled—so most people thought—by the Missouri Compromise of 1820, which prohibited slavery in all parts of the Louisiana Purchase north of the latitude of 36 degrees, 30 minutes. Then, in 1846, Representative David Wilmot (1814–68) of Pennsylvania, introduced an amendment to a bill appropriating \$2 million to facilitate negotiations with Mexico for “territorial adjustments” as a way of bringing an end to the

UNITED STATES-MEXICAN WAR. The Wilmot Proviso would have prohibited slavery in any land acquired by the United States as a result of the war. Opposing the proviso, Calhoun proposed four resolutions during February 19 and 20, 1847, that articulated the South’s position with regard to slavery. He held that the territories were the common and joint property of the states; that Congress, as agent for the states, had no right to make laws discriminating among the states and depriving any state of its full and equal right in any territory acquired by the United States; that the enactment of any national law pertaining to slavery would be a violation of the Constitution and states’ rights; and that the people had the right to form their state governments as they chose, the Constitution imposing no conditions for the admission of a state except that its government should be republican. Calhoun warned that failure to maintain a balance between the interests of the South and those of the North would result in civil war; if “trampled” upon, the South would resist.

During the next three years, various compromises on the issue of slavery in new territories and states were proposed and rejected. Faced with a widening gulf of irreconcilable positions, Senator Lewis Cass (1782–1866) of Michigan proposed that territories should be organized without mention of slavery. When the territory wrote its own constitution in preparation for admission to statehood, the citizens of the territory, not the federal government, would decide for themselves whether to be free or slave. Called “popular sovereignty,” the concept held great appeal for President Zachary Taylor (1784–1850), who was faced with the decision of what to do about California. He proposed that popular sovereignty be allowed to run its course and that California should be admitted directly as a state. The controversy over whether slavery would be allowed in California would be avoided, because no territorial government would be set up, and the state would determine the issue for itself.

Southern states were horrified by Taylor’s proposal. They reasoned that because not only California but also New Mexico would doubtless organize themselves as free states, the balance of slave versus free states as represented in the Senate would be destroyed. Some compensation was required, and the aging Henry Clay, who had been among the framers of the Missouri Compromise, worked with Daniel Webster to devise a plan that would satisfy the South. California would be admitted to the Union as a free state. Other territories in the Southwest would be organized without mention of slavery. The slave trade in the District of Columbia would be abolished, but the federal government would pass a stronger Fugitive Slave Law to prevent slaves from being declared free. The final leg of the complicated compromise called for the federal government’s assumption of debts slaveholding Texas had incurred before it was annexed by the United States. The Compromise of 1850 preserved the Union for the time being, but abolitionists saw the new Fugitive Slave Law as

caving into southern pressures, and, with the admission of California as a free state, and the likely admission of New Mexico and Utah as free states in the future, Southern states'-rights advocates saw the eventual end of any power they had in Congress. The rumblings of disunion were unmistakable.

In this highly charged climate, Harriet Beecher Stowe (1811–96) published a novel entitled *Uncle Tom's Cabin, or Life among the Lowly*, which more than any other piece of writing, whether political treatise or newspaper editorial, promoted popular support for abolition. Stowe reported that she had been moved to write the book after the passage of the Fugitive Slave Act. Telling the story of Tom, Eliza, and Eva, slaves under the control of the evil overseer Simon Legree, the novel became an immediate commercial success, selling 10,000 copies in one week and 300,000 within a year. Southerners were outraged, claiming that Stowe had no knowledge of slavery as it existed in the South and that she had exaggerated the mistreatment of slaves. Northerners discounted Southern criticism, and thousands of people who had been undecided over the issue flocked to the abolition movement.

If Congress thought it had permanently averted disaster with the Compromise of 1850, the Kansas-Nebraska Act revealed all of the act's weaknesses. When the territories of Nebraska and Kansas applied for statehood in 1854, Congress repealed the Missouri Compromise, which the Compromise of 1850 had already more or less gutted, and passed the Kansas-Nebraska Act, which left the question of slavery up to the popular sovereignty of the two prospective states. The act spawned a new anti-slavery Republican Party, and abolitionists in the North organized the Emigrant Aid Society to finance free settlers in Kansas. New England authors such as William Cullen Bryant (1794–1878) and John Greenleaf Whittier (1807–92) mounted one of history's great propaganda campaigns, quickly aided by newspaperman Horace Greeley (1811–72) and correspondents sent by eastern papers to report on the Kansas-Missouri border "situation." In response, thousands of pro-slavery Missourians flooded into Kansas to vote illegally and then return home to their farms. Overwhelming the Kansas settlers, the majority of whom were probably free-soilers, they elected a territorial legislature that immediately legalized slavery and won official recognition from the federal government. Free-soilers poured in from Iowa to settle the land, formed their own legislature, set their capital up at Lawrence, and petitioned Congress for admission as a free state. Open warfare broke out along the Kansas-Missouri border. A posse of Missourians raided Lawrence, setting fire to a hotel and a few houses, chopping up a printing press, arresting several free-state leaders, and killing three others in the process. A fanatical abolitionist named John Brown (1800–59) retaliated by murdering five pro-slavery settlers along the Pottawatomie Creek, then mutilating their bodies. By the time the federal government could join with

the governments of Missouri and Kansas to bring the guerrilla fighting in "Bleeding Kansas" more or less to an end in 1858, 200 people were dead and \$2 million worth of property had gone up in smoke.

While Kansas bled, the U.S. Supreme Court decided to enter the controversy over slavery by addressing in the Dred Scott case the question of Congress's power over the institution in the territories. A St. Louis slave, Dred Scott (c. 1800–58), had been trying to win his freedom through the courts. Scott had belonged to John Emerson (d. 1846), an army surgeon who was stationed first in Illinois, then in the Wisconsin Territory, and finally in Missouri. Scott had accompanied Emerson to each new station until the surgeon's death in 1846. Scott then sued Emerson's widow for his freedom, claiming that he was a citizen of Missouri and free by virtue of his travels with Emerson in Illinois, where slavery was banned by the Northwest Ordinance, and in the Wisconsin Territory, where it was banned by the Missouri Compromise. When the state court decided against him, he and his lawyers appealed to the Supreme Court. In a split decision written by Chief Justice Roger B. Taney (1777–1864), the Court ruled first that neither free blacks nor slaves were citizens and so could not sue in the federal courts. The Court also ruled that the Illinois law banning slavery had no force over Scott and his owners after he returned to Missouri, where slavery was allowed. In addition, the Court ruled that the Wisconsin Territory laws had no force either, because the Missouri Compromise that outlawed slavery there was unconstitutional, a violation of the Fifth Amendment, which prohibits the government from depriving an individual of property without due process of law.

Politically, the Dred Scott decision had an immediate impact. Republicans, struggling to get their new political party on sound footing, viewed the ruling as an attempt by Southern justices to destroy them. Northern and western Democrats saw the ruling as an attack on the policy of popular sovereignty. Northern abolitionists saw the ruling as an attempt by the Supreme Court, a majority of whose justices were from the South, to extend slavery by legal fiat. The Dred Scott decision changed the terms of the national debate on slavery and made the Civil War inevitable. By making it a property issue, the Dred Scott decision protected slavery from everything except a constitutional amendment, and that the South would never ratify.

ELECTING DISUNION

In the polarized political climate created by the Dred Scott decision, the new Republican Party became the leading force against slavery, and Abraham Lincoln (1809–65) emerged as its standard bearer. While the political debate ensued, John Brown left Bleeding Kansas to incite what he hoped would be a massive slave uprising in Virginia, thereby forcing the issue of abolition to a crisis in 1859 (see UNITED STATES CIVIL WAR: TRANS-MISSISSIPPI THEATER).

The following year, Republican candidate Lincoln won election as the 16th president of the United States. The Democratic Party had splintered, into northern and southern factions, thereby handing the election to Lincoln, who won a decisive majority in the Electoral College—180 votes to 123 for all rival candidates—but barely 40 percent of the popular votes of 1.9 million. Having refused to comment on slavery during the election, arguing that he had already made his position clear in his earlier campaign for the Senate, Lincoln may have won a few votes from northern moderates, but he provoked the outrage of southerners, who labeled him “Black Lincoln.” On December 20, 1860, South Carolina seceded from the Union. Within six weeks, five other states followed suit—Mississippi (January 9, 1861), Florida (January 10), Alabama (January 11), Georgia (January 19), and Louisiana (January 26). Delegates from the six states met in Montgomery in February 1861 to form a new government. The new Confederate States of America adopted a constitution modeled on that of the United States and named Jefferson Davis and Alexander H. Stephens (1812–83) provisional president and vice president until an election the following November could confirm their choices. None of the border states—eight of them, from Virginia to Missouri—seceded or joined the Confederacy immediately. Most of their people disliked the new administration in Washington but did not believe an unhappy election required them to leave the country. Many thought the cotton states were playing politics, using secession to get the North to make concessions guaranteeing southern “rights,” after which the seceding six would return. Texas soon (February 1) hitched its Lone Star to the CSA, but Virginia held out till May 4—after the shooting began and the CSA agreed to transfer its capital from Montgomery, Alabama, to Richmond, Virginia.

WAR BEGINS

In the months following the election, most Americans, including most in the border states, hoped to find some new compromise solution, as the country always had in the past, but it was all to no avail. On the night after Christmas 1860, six days after South Carolina had seceded from the Union, Major Robert Anderson (1805–71), U.S. Army, moved his garrison from the highly vulnerable Fort Moultrie, on Sullivan’s Island, South Carolina, to the stronger Fort Sumter. As if it were a sovereign nation, South Carolina protested this action to lame duck President James Buchanan (1791–1868). Buchanan decided to respond by reinforcing Anderson, but instead of dispatching a warship, he sent an unarmed merchant ship to supply reinforcements and ammunition. Before she sailed into Charleston Harbor, the South Carolinians fired upon her, and the *Star of the West* steamed away. A standoff developed, which endured into the first weeks of Lincoln’s presidency. On April 4, Lincoln informed South Carolina’s Governor Francis W. Pickens (1805–69) that the United

States would supply Fort Sumter with provisions. On April 8, Pickens sent the message on to provisional Confederate president Jefferson Davis (1808–89) in Montgomery. Davis immediately ordered Confederate forces in Charleston to demand an evacuation of the fort. If Anderson refused, they were to “reduce” the place to rubble. On April 12, acting as an officer of the Confederacy, General Pierre G. T. Beauregard (1818–93) commanded the harbor batteries to open fire on Fort Sumter. Anderson returned fire, and a fierce shelling of the fort followed. On April 13, out of food and nearly out of ammunition, Anderson surrendered. On Sunday, April 14, he hauled down his flag, Beauregard’s men moved into Fort Sumter, and the federal troops disembarked for New York. The Civil War had begun.

United States Civil War: At Sea (1861–1865)

PRINCIPAL COMBATANTS: Confederate and Union navies and privateers

PRINCIPAL THEATER(S): U.S. coastal waterways and the Atlantic Ocean

DECLARATION: See United States Civil War: Historical Background

MAJOR ISSUES AND OBJECTIVES: See United States Civil War: Historical Background

OUTCOME: See United States Civil War: Historical Background

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: See United States Civil War: Historical Background

CASUALTIES: See United States Civil War: Historical Background

TREATIES: See United States Civil War: Historical Background

This entry focuses on the United States Civil War actions relating to coastal waters and oceans. See UNITED STATES CIVIL WAR: HISTORICAL BACKGROUND for the causes and outbreak of the Civil War and major statistics relating to the war. For actions relating to the war in Pennsylvania, Virginia, and the Carolinas, and for the war’s resolution see UNITED STATES CIVIL WAR: EASTERN THEATER. For actions relating to the war in Alabama, Georgia, Kentucky,

Mississippi, and Tennessee *see* UNITED STATES CIVIL WAR: WESTERN THEATER. For actions relating to the war in Arkansas, Missouri, Louisiana, New Mexico, Oklahoma, and Texas *see* UNITED STATES CIVIL WAR: TRANS-MISSISSIPPI THEATER. Almost always, civil war is land war. The combatants, after all, live on the same continent. Nevertheless, the U.S. Navy played a crucial role in the capture of New Orleans and in the reduction of the Confederate forts on the Mississippi in the war's western theater). More important though far less glamorous, was the navy's role in making Winfield Scott's (1786–1866) "Anaconda Plan" a reality. As the strength of the Union fleet grew from 42 vessels (of which only three were steam powered) in 1861 to 641 ships by 1865, the blockade of Southern imports and exports became increasingly effective.

This did not stop Southern vessels from trying to run the blockade, and many sailors succeeded in doing just that. But the Confederate naval strategy was not limited to such evasive and defensive measures. Jefferson Davis's (1808–89) government knew that it could never hope to match the Union navy ship for ship. It had neither the money, the shipyards, the personnel, nor the time. Instead, the Confederate Navy, under Davis's naval secretary Stephen R. Mallory (1813–73), pitted its few vessels (many of which were skippered by private citizens rather than naval personnel) not against those of the U.S. Navy but against Union vessels of commerce—privately owned ships carrying goods.

The single most famous Confederate raiding vessel was not a privateer, however, but a craft commissioned by the Confederate Navy and built in ostensibly neutral England.

ADVENTURES OF THE CSS ALABAMA

The *CSS Alabama* was one of several warships clandestinely ordered by the Confederate agent in charge of procuring European arms, James D. Bulloch (1823–1901), from Laird Shipyards in 1861. British authorities sought to preserve the fiction of their neutrality by pretending that vessels such as the *Alabama* were being built for commerce, not war; therefore, no ships commissioned by the Confederates were actually armed in British docks. The ships were built in England, and so were the guns, but they were installed in some remote non-British location, such as the Azores. The U.S. government, however, knew the purpose of the ships the British were building, but despite the protests of the U.S. minister to the United Kingdom, Charles Francis Adams (1807–86), *Alabama* and similar vessels were launched.

Alabama evaded a Union sloop and braved a bad storm in the Irish Sea to rendezvous with the *Agrippina*, from which Captain Raphael Semmes (1809–77), a 53-year-old Maryland-born Alabamian, boarded her and took command. Semmes resigned from the U.S. Navy on February 15, 1861, and became the Confederacy's most remarkable sailor. From September 1862 until June 1864,

Semmes commanded the *Alabama*, preying upon the commercial shipping lanes, capturing or destroying 69 vessels, and, in the process, occupying a significant portion of the Union navy in futile pursuit of himself. The *Alabama* was the most famous and successful of the Confederate commerce raiders.

DUEL AT HAMPTON ROADS

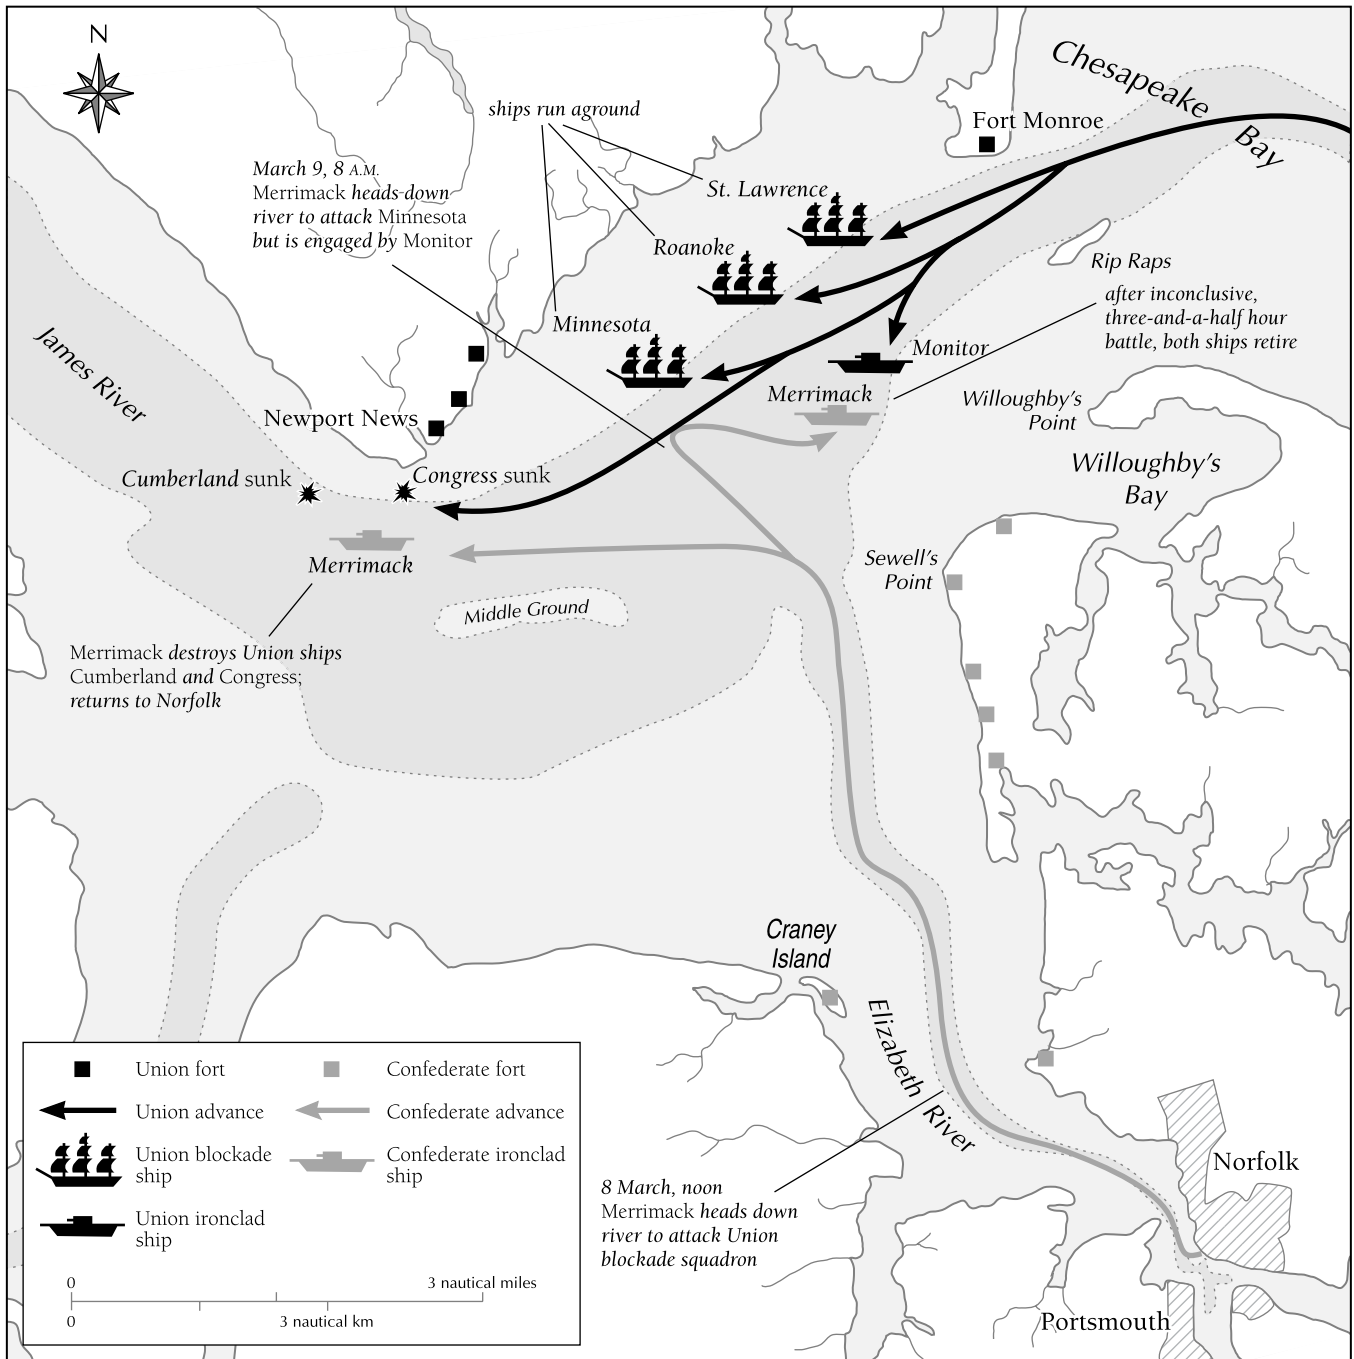

Meanwhile, the most famous sea battle of the Civil War had been shaping in Hampton Roads, Virginia. Out West, Ulysses S. Grant (1822–85) was taking forts and doing bloody work at Shiloh, while in the East, George McClellan (1826–85) was doing no more than jockeying for position, and Confederate blockade runners were active at sea. Thinly spread, the Union's "Anaconda" blockade had succeeded in capturing perhaps one in 10 rebel vessels (by the conclusion of the war, it was closer to one in three). But the embryonic Confederate Navy was not content with merely running the blockade. Its officers wanted to destroy it.

On the south shore of Hampton Roads was the Gosport Navy Yard, evacuated by Union forces at the beginning of the war. Before they left, they had scuttled the frigate *Merrimack* rather than let it fall into rebel hands. Northern naval officials had not thought the Confederates could do much with the *Merrimack* in any case, because the Union fleet was blockading the Roads, thereby sealing off the water route to Richmond.

Perhaps most Northerners shared the opinion voiced by William Tecumseh Sherman (1820–91) to a classics professor at the Louisiana Military Academy in December 1860—that Southerners were neither technologically inclined nor capable. Although it was true that the South's industrial capacity was dwarfed by that of the North, factories such as the Tredegar Iron Works in Richmond, using slave labor, turned out cannon and other weaponry. The works could also produce iron plates, with which Confederate engineers clad a slope-sided superstructure they built over the cut-down hull of the *Merrimack* after they refloated it and rechristened it the *Virginia*.

The prospect of an ironclad was terrifying. In the 1860s, the world's navies were making a slow transition from sail to steam-powered craft. Most modern ships were hybrids, rigged for sail but also equipped with steam engines driving sidewheels or screws (propellers). But even these hybrids were based on wooden hulls, which were vulnerable to naval artillery and to being rammed by vessels equipped with special ramming bows. An ironclad vessel could withstand bombardment while delivering a lethal pounding.

Fortunately for the Union navy, word of the *Merrimack*'s resurrection and conversion leaked out. In response, a contract was let to John Ericsson (1803–89), a Swedish-born New Yorker, to design and build a ship capable of killing an ironclad. Ericsson designed an ugly, flat raft of a vessel, equipped with his own invention, a revolving turret sporting two 11-inch guns. Importantly, unlike the

Battle of Hampton Roads (*Monitor vs. Merrimack/Virginia*), March 8–9, 1862

Merrimack conversion, the *Monitor* (as Ericsson's ship was called—a name soon applied to all steel-built or ironclad vessels with gun turrets, especially those designed for coastal bombardment) was not merely clad in iron and steel; it was built of it, from keel to superstructure.

Construction was put on a 100-day rush schedule, which Ericsson failed to meet. But when news came (from a Union sympathizer resident in Norfolk) that the *Merrimack/Virginia* was nearing completion, Ericsson redoubled his efforts, and the *Monitor* was launched on March 6.

Clumsy and barely seaworthy, likely to be swamped by anything resembling high seas, she looked, with her protruding turret, like a “tin can on a shingle” or a “cheese-box on a raft.”

Franklin Buchanan (1807–74), the former commandant of the Brooklyn Navy Yard, was made skipper of the *Merrimack/Virginia*. On March 8, he took her out to meet the wood-hulled Union fleet blockading Hampton Roads. *Merrimack/Virginia* was no more attractive than the *Monitor*, looking (according to one Union sailor) “like the roof

of a very big barn belching . . . smoke” and to another like “a huge half-submerged crocodile.” She had no turret; instead, her guns were fixed along her sides, poking out through narrow ports cut into her sloping ironclad sides. A stout iron ram was mounted on her prow.

The blockading vessels and the Union shore batteries opened fire on the *Merrimack/Virginia*, but the cannonballs bounced off her sides like rubber. The Confederate craft opened up on *Cumberland*, killing five marines, then rammed the ship, sending her to the bottom of the shallow water of the Roads. USS *Congress*, which had run aground and was immobilized, was the next to take *Merrimack/Virginia*'s fire. After the Union vessel burst into flame, it struck colors and surrendered.

Under fire from Union shore batteries, *Virginia* broke off the engagement at the end of the day, having by this time forced the USS *Minnesota* and two smaller Union frigates aground. In the meantime, as word of the battle traveled north, there was panic in Washington. It was reported that the invincible *Virginia* would now sail up the Potomac and train her guns on the capital. President Abraham Lincoln's (1809–65) cabinet convened for an emergency meeting and could think of nothing better to do than pray. However, on March 9, the new USS *Monitor* arrived in Hampton Roads and took up a position alongside the disabled *Minnesota*. At nine in the morning, the *Virginia* fired on the *Monitor*, and the two vessels pounded one another for the next three hours.

Encased within the *Monitor*'s iron pilothouse was the ship's skipper, Lieutenant John L. Worden (1818–97), who about noon put his face to one of the narrow observation slits in the pilothouse wall. At that moment, a shot exploded against the pilothouse, temporarily blinding him. The *Monitor* drifted out of control, and Lieutenant Catesby ap Roger Jones (1821–77), commanding the *Merrimack/Virginia*, assumed that his adversary was withdrawing. His own vessel damaged and taking on water, his crew exhausted, and his supply of powder almost gone, Jones also withdrew.

On balance, the duel of the ironclads in Hampton Roads was a draw—though the *Monitor* had saved the *Minnesota*, had prevented the Confederates from breaking the blockade of Richmond, and had averted another Union military disaster. The duel in Hampton Roads changed naval warfare forever, but more immediately, it determined the course of naval combat for the rest of the Civil War. The Union could—and would—build far more ironclads than the Confederacy, and they would become important additions to the blockade of the South.

THE FALL OF NEW ORLEANS

By the winter of 1862, the denizens of New Orleans—168,000 usually carefree people who made up the most populous city in the Confederacy—were worried. They had suffered much since the start of the war, and the troubles seemed to keep coming. Early the year before, U.S.

warships had arrived to close the mouth of the Mississippi River 100 miles south of the city, and the naval blockade had grown increasingly effective as 1861 wore on, all but destroying the rich international trade of the South's major port. As the wealthy and the well-dressed eyed the practically deserted docks and levees, once home to tall ships loaded with cotton and sugar and rice, they talked with growing certainty of a Federal attack on their city aimed at opening the length of the Mississippi to Yankee commerce. On barren Ship Island, south of Biloxi, Mississippi, a Federal army had been growing and for months had posed a threat to New Orleans, Mobile, and the Texas coast. Now came news that an army under Brigadier General Ulysses S. Grant was pushing south through Tennessee and had captured the crucial strongholds of Forts Henry and Donelson. No doubt he had New Orleans in his sights.

In the North, however, the powers that be were worrying about the two mighty strongholds that constituted the city's defense. Seventy-five miles below the city, facing each other across the great river, were a citadel built by the Spanish in 1790 and expanded two decades later named Fort St. Philip, and a modern pentagonal structure called Fort Jackson. Their reputation as impregnable was the reason that the option of a large-scale land assault on New Orleans from the north had dominated Union strategy as it had Rebel fears. But Union operations had gotten off to a slow start in the West, and the U.S. Army was beset by logistical problems, which prompted the Union to take a fresh approach. War Department officials increasingly looked to the navy.

David Dixon Porter (1813–91), one of the U.S. Navy's senior commanders, worked in secret to plan the assault, invasion, and capture of New Orleans. To lead the assault he recommended David Glasgow Farragut (1801–70), more than 60 years old and at present a member of the retirement board at Brooklyn Navy Yard. Farragut was without doubt the navy's most experienced sailor.

The plan called for Farragut to assemble his fleet on the lower Mississippi and then sail it past Forts Jackson and St. Philip. As the fleet steamed upriver, troops commanded by Major General Benjamin Butler (1818–93) were to land along Isle au Breton Sound and advance overland to attack the two forts. New Orleans's only remaining defense would be the weak Chalmette-McGehee fortifications four miles below the city.

Farragut's fleet consisted of two steam frigates, seven screw sloops, and nine gunboats, plus 20 schooners converted to carry mortars, artillery pieces designed to fire heavy 13-inch projectiles in a high trajectory that would be devastating against walled forts. The mortar boats were commanded by Porter. Farragut sailed his fleet into the mouth of the Mississippi and in mid-April began a week-long bombardment of Forts Jackson and St. Philip. Then, at 2 A.M. on April 24, having put the forts out of action, the Union fleet steamed upriver, dodging the blazing

unmanned fire rafts the Confederates launched against it. Other Confederate vessels offered combat but were quickly disposed of. Farragut's fleet soon broke through all opposition and steamed past the forts, which, cut off, surrendered.

General Butler marched his troops in to take possession of the fallen forts and the now defenseless city. New Orleans, and with it the mouth of the Mississippi, belonged to the Union again. The defeat of the Confederacy in the West, which had begun with Grant's capture of Forts Henry and Donelson, had progressed another giant step.

MOBILE BAY

Having been the prime force in the capture of New Orleans in 1862, Rear Admiral Farragut was soon running out of patience as commander of the squadron blockading the Gulf Coast. With New Orleans gone, the Confederates' principal Gulf port was Mobile, and despite the blockade, plenty of shipping still made it in and out of the harbor.

The only way to bottle up Mobile Bay was to capture it, but that would not be easy. Thirty miles long, the bay was defended by three forts, three gunboats, and a mighty ram named the *Tennessee*. Moreover, the channel that gave passage into the harbor was mined with (what were called in the 1860s) torpedoes. These were not the projectiles that submarines and other war craft launched during the two world wars of the 20th century but mines—tethered kegs (often they were beer barrels) that bobbed just at the surface of the water, packed with black powder, and would explode on contact with a vessel. The entire network of Confederate defenses was commanded by Franklin Buchanan, a man who had before the war served with Farragut. They knew one another well.

The odds, certainly, were against the Union's success. But Farragut liked to make his own odds. He considered the situation and decided to run the gantlet of the bay with a flotilla of four ironclad monitors and 14 conventional wooden vessels. The latter he lashed together in pairs, so that they could better endure the pounding they would get from the forts. At six on the morning of August 5, Farragut led in the flotilla. At first, Farragut stood on the deck of his flagship, *Hartford*. When the firing became intense and visibility was at a premium, the 63-year-old admiral climbed the rigging and ordered a sailor to lash him to the mast, so he would not fall if wounded. When the smoke of battle grew too thick for him to see, he untied himself, climbed even higher, then lashed himself to the rigging again.

The do-or-die moment came when one of the Union's monitors, the *Tecumseh*, struck a torpedo and sank. This gave the other captains pause, and the advance through the bay slowed, even as the Confederate bombardment continued. Farragut shouted to his flag captain, Percival Drayton, a phrase that has echoed through history: "Damn the torpedoes! Full speed ahead, Drayton!" The rest of the flotilla followed. One of the Confederate gunboats was

captured, and two more were damaged beyond use. Only the *Tennessee*, Franklin Buchanan commanding, remained in the fight.

Buchanan decided to use his ship for the purpose it was intended. He built up a head of steam and aimed his ram directly for the *Hartford*. Surprisingly, the collision caused little damage, and the Union vessels *Monongahela*, *Lackawanna*, and *Hartford*, ramméd the *Tennessee* repeatedly, by turns, at five-minute intervals. The *Tennessee* withstood this, and at one point the Union's choreography became so confused that the *Lackawanna* accidentally ramméd the *Hartford*—at almost exactly the point where Farragut was standing. The admiral narrowly escaped death.

Although the *Tennessee* endured pounding from the wooden ships, it could not survive long under fire from the ironclads. By 10 o'clock, the vessel was out of control, Buchanan had been badly wounded, his leg broken, and *Tennessee's* new captain, J. D. Johnston (1807–91), struck her colors.

Within the next two days, two of the Mobile Bay forts fell to the Union, and the last fort, Fort Morgan, surrendered on August 23. Farragut's victory at Mobile Bay was important certainly because it cut off a major source of supply to the Confederacy. But of even greater consequence is what it did to improve Abraham Lincoln's prospects for renomination. Opposed by Salmon P. Chase (1808–73), a member of his own cabinet, Lincoln was faced with Republicans who wanted to nominate the abolitionist John C. Frémont (1813–80) and a powerful Democratic candidate, George B. McClellan. With the fall of Mobile Bay, Lincoln's political prospects considerably brightened.

SUBMARINE SIDESHOW

In 1863, the Southern financier H. L. Hunley (d. 1863) commissioned and funded what is generally acknowledged as the first full-fledged submarine. Thirty feet long, five feet deep, and less than four feet wide, the *H. L. Hunley* was driven by a propeller powered by the human muscle of an eight-man crew turning a crankshaft. When water was let into her ballast tanks, the *Hunley* submerged and could stay underwater for about two hours, which was as long as the air held out. There was no working snorkel.

At the end of a 200-foot line, the *Hunley* towed a "torpedo" packed with 90 pounds of black powder. The submarine was to pass under a surface ship, blow some ballast to elevate a bit, then drag the towline against the target's keel. When the bow or keel made contact with the torpedo, the charge would blow a hole in the hull. General P. G. T. Beauregard (1818–93) predicted that the *Hunley* would mean the end of the Union blockade.

But the *Hunley* proved a grisly failure. She submerged beautifully, but getting back to the surface often presented a problem. During one test, while she was on the surface with her hatches open, a steamer next to her got under

way, flooding her with her wake. The *Hunley* sank with the loss of six crewmen; two men and the skipper were able to jump overboard before she went under. The vessel was refloated, and Hunley himself took command for some practice dives. On October 15, 1863, she dived in a burst of air bubbles. She did not resurface. A hatch had sprung a leak, and all hands, Hunley included, had drowned.

She was refloated a third time. When the hatch was opened, and Beauregard beheld the bodies of the doomed crew, he ordered that, from then on, the boat would be used only as a surface ram. On February 17, 1864, at 8:45 P.M., the *Hunley* rammed the nine-gun Union sloop *Housatonic*. Pierced through to the powder magazine, *Housatonic* was rocked by an explosion, heeled to port, and sank stern first. Five crew members were drowned, but the water in this part of Mobile Bay was so shallow that most of the crew saved themselves simply by clinging to masts and rigging, which remained above the surface as the ship hit bottom. The *Hunley* did not fare as well as its victim. Apparently, a hatch was left open, and the boat, swamped, went down with all hands.

DUEL ON THE HIGH SEAS

The *Alabama*'s illustrious career also came to a close. On Sunday, June 12, 1864, the USS *Kearsarge*, an eight-gun, 1,083-ton sloop with a crew of 162, was at anchor off the Dutch coast when Captain John A. Winslow (1811–73) received word that the *Alabama*, which he had been chasing for the better part of a year, had steamed into the French port of Cherbourg to discharge prisoners and take on coal. Winslow set sail immediately, reaching Cherbourg two days later. In deference to international law, Winslow assumed a position in the English Channel, just beyond the three-mile territorial waters limit—and he waited.

Raphael Semmes, commanding *Alabama*, was determined to fight his way out, and by the time he set sail, at 9:45 on Sunday morning, June 19, crowds of French onlookers were on hand to watch the battle. At 10:57, when the two vessels were a mile apart, *Alabama* opened fire with a 100-pound cannon. Semmes fired again and again, but Winslow was closing so fast that *Alabama*'s shots were all too high; the gunners could not adjust their trajectories quickly enough. Only after he had closed to half a mile did Winslow open fire, and with deadly accuracy. As noon approached, the *Alabama* began to sink. It disappeared under the waves at 12:24. *Kearsarge* took aboard 70 men, French boats picked up a dozen more, and a nearby British yacht, *Deerhound*, saved 42, including Semmes, who thereby evaded capture. After a tour of the Continent, Semmes returned to the Confederacy as commander of the James River squadron.

United States Civil War: Eastern Theater (1861–1865)

PRINCIPAL COMBATANTS: The United States of America vs. the Confederate States of America

PRINCIPAL THEATER(S): Maryland, North Carolina, Pennsylvania, Virginia, and West Virginia

DECLARATION: See United States Civil War: Historical Background

MAJOR ISSUES AND OBJECTIVES: See United States Civil War: Historical Background

OUTCOME: See United States Civil War: Historical Background

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: See U.S. Civil War: Historical Background

CASUALTIES: See United States Civil War: Historical Background

TREATIES: See United States Civil War: Historical Background

This entry focuses on the United States Civil War in the eastern United States—Maryland, North Carolina, Pennsylvania, Virginia, and West Virginia: the makeup of the two armies, the war's major commanders, and the war's resolution. See UNITED STATES CIVIL WAR: HISTORICAL BACKGROUND for the causes and outbreak of the Civil War and major statistics relating to the war. For actions relating to the war in eastern Kansas, Missouri, Texas, and the Southwest, and for the role of Native Americans in the war, see UNITED STATES CIVIL WAR: TRANS-MISSISSIPPI THEATER. For actions relating to the war in Alabama, Georgia, Kentucky, Mississippi, and Tennessee see UNITED STATES CIVIL WAR: WESTERN THEATER. For actions relating to coasts and oceans see UNITED STATES CIVIL WAR: AT SEA.

On the face of it, the Civil War was simple enough. The Confederate States—by June 8, 1861, there were 11 of them—were fighting for independence, while the Federal army was fighting to get them all back into the Union. The South, with a much smaller population, a severely limited economy, and a comparatively puny industrial capacity, seemed doomed. But the situation was not as simple as it seemed. The North was hardly unified in its will to fight. President Abraham Lincoln (1809–65) needed to keep focus on preserving the Union, even though his more radical Republican colleagues wanted the war to be one against slavery. But Lincoln knew that the majority of northerners were not radical Republicans and, at least at this point, would probably not be willing to fight a war to

end slavery. The border states—uncommitted wholly to North or South—would likely embrace the Confederacy if the war became a struggle for abolition. The South enjoyed more unity, at least at first. Its people saw themselves as defending their homeland, and this gave them a strength and advantage beyond what their numbers or “national” economy would suggest.

WINFIELD SCOTT AND THE NORTH'S INITIAL STRATEGY

The fall of Fort Sumter on April 14, 1861 brought demands in the North for an immediate, sweeping, and decisive military action. However, no one knew better than General Winfield Scott (1786–1865) that the U.S. Army, which numbered a paltry 16,000 officers and men at the time, was inadequate to put down a rebellion of the South. Scott, hero of both the WAR OF 1812 and the UNITED STATES-MEXICAN WAR, was general in chief of the army, and he had more military experience than anyone else, North or South. Scott decided that he needed time—time to build up the Union army. He proposed a two-pronged blockade of the Confederacy. He wanted to cut off Atlantic and Gulf ports, simultaneously sending 60,000 newly recruited troops and a flotilla of naval gunboats down the Mississippi to take New Orleans. By these two means, Scott proposed to cut off the South economically (it would be unable to import or export goods) and cut it in two geographically, East severed from West. While the breakaway states thus slowly but surely suffocated, additional assaults and offensives could be planned and then launched at will. On the map, Scott's strategy was certainly sound. The only catch was that the Southern coastline, with all its gulfs, inlets, twists, and turns, was about 3,500 miles long and offered some 180 ports, while the Union navy had pitifully few ships. Still it was a plan, and Abraham Lincoln announced it on April 19. The press, on both sides of the Mason-Dixon Line, derided it as “Scott's Anaconda” or the “Anaconda Plan,” criticizing it as not only impractical, but also inglorious. In fact, it would, over time, prove quite effective, albeit not decisive.

THE BORDER STATES

While buying time with the Anaconda, Lincoln and generals also had to move carefully with regard to the border states. Delaware, Kentucky, Missouri, and Maryland were slave states but had not voted to secede. For the Union, losing them might mean losing the war before it had hardly begun; for the Confederacy, gaining the border states would mean a great advantage. Although slavery was legal in Delaware, secession was never a significant issue, and the small state's loyalty to the Union was certain. Kentucky, however, sat on the fence. Its governor was inclined to secede, but its legislature was solidly pro-Union. The result was the state's declaration of neutrality, and neither Lincoln nor Confederate president Jefferson Davis (1808–89) wanted to risk disturbing this delicate

situation, which might propel Kentucky into the other camp. Although both the Union and the Confederacy unofficially raised troops in Kentucky, officially they left the state alone.

Missouri was another matter altogether. As in Kentucky, the legislature favored the Union, while Governor Claiborne F. Jackson (1806–62) was a secessionist. Shortly after the fall of Fort Sumter, Jackson attempted to seize the federal arsenal at St. Louis. When an aggressive Union army captain, Nathaniel S. Lyon (1818–61), blocked this effort, the governor's troops set up Camp Jackson on the outskirts of the city and bided their time.

Francis Blair (1821–75), from a powerful Missouri family and a friend of President Lincoln, persuaded the authorities in Washington that the Union general in command of the area, William A. Harney (1800–89), was far too passive about the continued threat the pro-Confederate troops posed, and Lyon was put in temporary command of Harney's brigade. He was soon promoted to brigadier general of volunteers and, on May 10, 1861, moved against Camp Jackson. He arrested the state militiamen there and, as he marched his prisoners through Saint Louis, found that he had incited a riot. Civilians shouted catcalls and pelted the Union soldiers with rocks. After one drunken St. Louisan wounded an officer with a random pistol shot, the Union troops returned fire, killing more than 20 civilians.

General Harney's policy had been to maintain something between a standoff and a truce with the governor's pro-Confederate forces. As in Kentucky, neither side wanted to take action that might tip Missouri one way or the other. Thrust into a position of authority, the fiery Lyon now repudiated Harney's prudent arrangement and marched off into southwestern Missouri to confront Jackson and his forces, sparking the fighting west of the Mississippi.

In both Kentucky and Missouri, pro-Confederate governors rejected Abraham Lincoln's call for troops after the South had fired on Fort Sumter. Maryland's pro-Union head of state—faced with considerable sympathy in his state for the Confederate cause—vacillated, sending men only to defend Washington, not to fight in the South. Given the fate of the Sixth Massachusetts Regiment as it passed through Maryland, the governor was right to move cautiously. On April 19, 1861, Colonel Edward F. Jones (discharged 1862) and his Bay State troopers were on the rails, heading toward Washington to garrison the beleaguered capital. When the troops changed trains in Baltimore, they were mobbed by Confederate sympathizers—toughs called “plug uglies,” after the plug-style hats they wore—who hurled stones and bricks at the troops of the Sixth Massachusetts and killed four of them. The soldiers opened fire, killing 12 Baltimoreans and wounding a score of others.

Three days later, a citizens' committee, whose members would never have deigned to speak to a plug ugly on

the street, called on President Lincoln to protest his “pollution” of Maryland soil. Lincoln retorted that his men were neither moles nor birds and could not get to Washington by digging under Maryland soil or flying over it; in response, Baltimoreans cut telegraph lines, sabotaged railroad tracks, and destroyed bridges. For a time, Washington was cut off from communication with the North. Lincoln ordered General Benjamin F. Butler (1818–93) to occupy Baltimore, empowering him to arrest and jail all pro-secessionists, including nine members of the state legislature and the city’s chief of police.

Finally, there was Virginia. The state’s mountainous western counties had long been hostile to the relatively prosperous Tidewater, the seat of government, which the struggling frontier people felt cared and did little for them. When Virginia seceded on April 7, 1861, the westerners seized the opportunity to break away. Adopting the Latin motto *montani semper liberi* (“mountaineers are always free”), they carved a new territory and tied their fortunes to its destiny and the Union’s. A fortnight later, Major General George B. McClellan’s (1826–85) small but significant victory against the Confederates at Philippi, (West) Virginia, on June 3 would make their choice secure, and two years later, West Virginia would be admitted into the United States as a new state.

Since Fort Sumter’s fall, Northern newspapers, spearheaded by Horace Greeley’s (1811–12) *New York Daily Tribune*, had been calling for decisive action. Instead, the secessions continued—Arkansas on May 6, North Carolina on May 20, deeply divided Tennessee on June 8. Meanwhile, Federal forces won another minor but promising skirmish in the future West Virginia but lost a third, the so-called Battle of Big Bethel (or Great Bethel) on the Virginia peninsula between the York and the James rivers on June 10. Then, at last, in July, with the Union army massed in Alexandria, Virginia, President Lincoln and Scott directed General Irwin McDowell (1818–85) to make a major move. He was to attack Confederate forces under P. G. T. Beauregard (1818–93) gathered on a creek called Bull Run, which was located athwart the best direct route to Richmond.

THE BATTLE OF BULL RUN (OR FIRST MANASSAS)

An almost carnival atmosphere pervaded the opening of the first major battle of the Civil War. On July 21, Washington’s high society rode out to nearby Centreville, Virginia, in carriages filled with picnic baskets and bottles of champagne, to view through field glasses and telescopes the action three miles off. The Union troops, too, most of them volunteers, had seemed in good spirits on the two-day approach march to the battlefield through the sweltering summer heat. Every few miles, they broke ranks to pick blackberries or to gather water.

The Confederate commander, P. G. T. Beauregard, had been alerted to the Union advance by means of uncen-

sored newspaper articles and spies. He had thrown up his defenses near a railroad crossing called Manassas Junction. There, across tiny Bull Run Creek, his 20,000 Rebels faced 37,000 Yankees under command of Irwin McDowell. The numbers would grow more equitable as Rebel reinforcements, led by General Joseph E. Johnston (1807–91), arrived from the Shenandoah Valley.

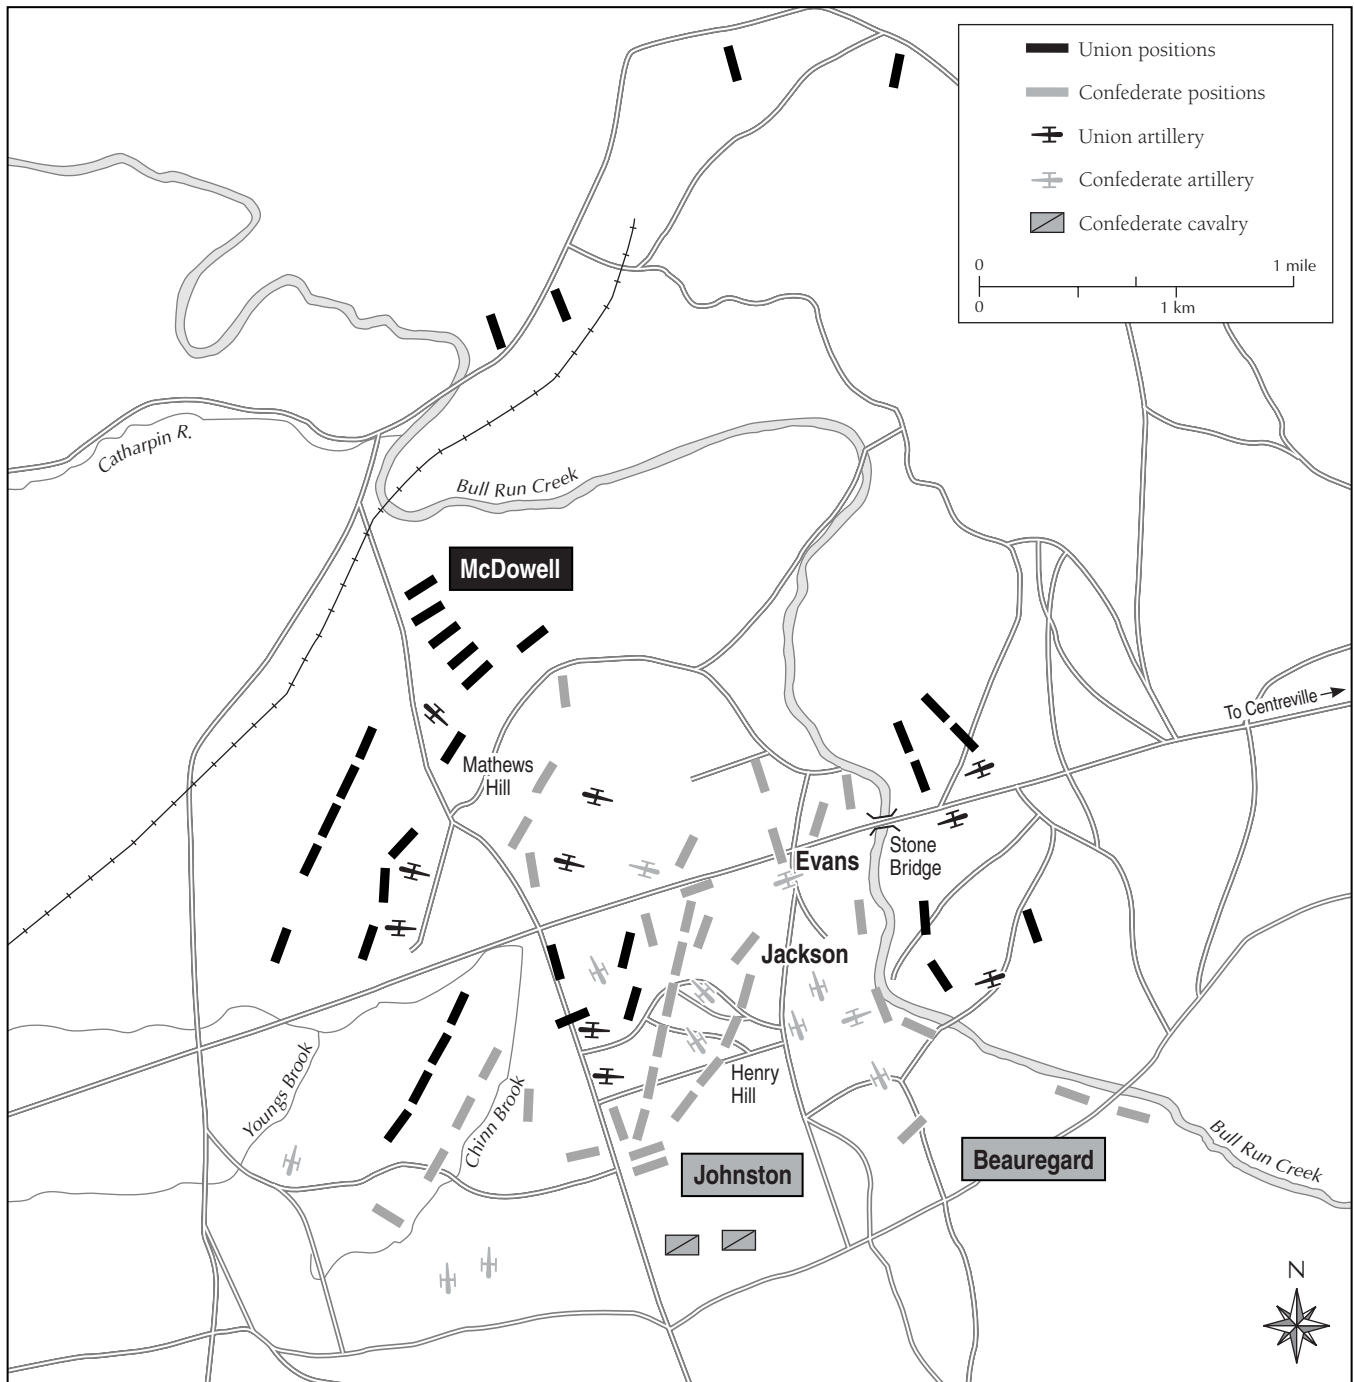

At first, the Northerners, cheered on by the civilian onlookers, seemed to carry the day, driving the Rebels from their positions and turning the Confederate left. But the Southerners took heart from the example of one Virginia brigade that held steadfastly to its position on a hill at the center of the Rebel line. The action earned the brigade’s commander, General Thomas J. Jackson (1824–63), his nickname, “Stonewall.” The Confederates rallied, and all afternoon the fighting seesawed back and forth. During a massive late-afternoon Confederate counterattack, the Union forces broke and ran—along with their noncombatant cheering section—all the way back to Washington. Jackson had ordered his men to “yell like Furies” as they chased the Yankees, and few of the latter ever forgot the first time they heard the eerie, high-pitched scream that came to be known as the “Rebel Yell.”

McDowell’s humiliating defeat would cost him his job. Yet the army of Beauregard and Johnston had not been much better organized, and Jefferson Davis, who would always tend to micromanage the South’s military effort, refused to allow a pursuit of the routed Union forces, thereby neglecting to capitalize on the victory.

GEORGE McCLELLAN AND THE “SIEGE” AT YORKTOWN

George Brinton McClellan (1826–85) had won minor victories in western Virginia, at Philippi on June 3, 1861, and at Rich Mountain on July 11. Although involving small numbers, Rich Mountain had secured for the Union the region that would become West Virginia.

In late October, McClellan sent a reconnaissance force under Brigadier General Charles P. Stone (1824–87) across the Potomac River to Ball’s Bluff, a steep hill about 30 miles upriver from Washington. Pressing the reconnaissance aggressively, the Federal forces were trapped on the top of the bluff. Among the first to fall in the fighting on October 21 was Colonel Edward D. Baker (1811–61), a U.S. senator and a close personal friend of Lincoln. Demoralized by the sight of the colonel’s body being carried from the front, a knot of inexperienced Union soldiers panicked and fled down the only path to safety—the bluff—and into boats that would take the men across the Potomac to the Maryland shore. The retreat became a rout, as, under intense fire from the Confederates, all tried desperately to find a place in the boats. Bunching together, the soldiers made an opportune blue-coated target. Federal losses were 49 killed, 158 wounded, and 714 captured or missing. Confederate losses were 33 killed, 115 wounded, and one missing.

First Battle of Bull Run, July 16–21, 1861

But McClellan emerged blameless from Ball's Bluff and was named first to replace McDowell as commander of the Army of the Potomac; he was subsequently named general in chief of all the Union armies, replacing the superannuated Winfield Scott.

In the wake of Bull Run, with its demoralization and shame, McClellan had reorganized, greatly augmented, and trained the Army of the Potomac and the rest of the Union forces. Yet as the final months of 1861 ticked away and dissolved into 1862, McClellan did nothing but continue to

train and drill his army, giving Lincoln cause to doubt his general. On March 11, 1862, Lincoln formally relieved McClellan as general in chief of the armies, returning him to command of the Army of the Potomac only. When the president urged him to lead this now drilled and polished force from Washington to Richmond, McClellan proposed a more roundabout plan. Instead of driving directly overland from Washington to the rebel capital, McClellan proposed to transport his army in ships to a position below General Joseph E. Johnston's lines, outflanking him, as it

were, by sea—and thereby avoiding a major battle. By the time McClellan got under way, Johnston had left his position at Manassas (site of the First Bull Run battle) and moved south to the Rappahannock River, closer to Richmond. Not only did this require McClellan to rethink his plan, but when Union forces inspected the abandoned Confederate trenches, they discovered that what they had thought were cannon were nothing more than logs painted black to simulate cannon. “Quaker guns,” the press called them. McClellan continued to delay his advance because he mistakenly believed that the Confederate army outnumbered him. However, if the enemy had moved south, so would he. McClellan decided to ferry his troops down to Fort Monroe, near Newport News and Hampton Roads, in the southeastern corner of Virginia, well below the Rebel capital. His plan was to land, then proceed north toward Richmond via the peninsula separating the York and James Rivers. That geographical feature gave the operation its name—the Peninsular Campaign.

The landing of the Army of the Potomac took place on April 4 under rainy, miserable conditions. Some 90,000 men slogged through the soup of a low-lying coastal mud flat; then, instead of attacking Yorktown—where George Washington had won the decisive battle of the AMERICAN REVOLUTION—McClellan’s mud-soaked soldiers laid siege to the place, on April 5, the Union commander still believing himself outnumbered. In reality, Confederate general Joseph E. Johnston had only 15,000 men at Yorktown, while McClellan commanded about six times that number. By digging in instead of attacking, McClellan presented Johnston with ample time to reinforce his position. He also gave Robert E. Lee (1807–70), whose training was as a military engineer, valuable time to create elaborate permanent defenses around Richmond.

“STONEWALL” JACKSON IN THE SHENANDOAH

Robert E. Lee was a master at leveraging his small army in ways that tied down large Union forces. Recognizing that Union commanders would commit a disproportionate number of men to defend Washington, he assigned “Stonewall” Jackson to sweep through Virginia’s Shenandoah Valley as if it were Washington’s vast backyard, in order to persuade the North that an invasion of the capital, from the West, was imminent. Since classical times, victorious generals had devised strategies to “divide and conquer” their enemies. Jackson’s Shenandoah Valley campaign was intended to compel the Union to divide its comparatively numerous forces, which could then be attacked and defeated in detail.

The first battle of the campaign was fought on March 23, at Kernstown, near Winchester. Jackson thought he was attacking the four-regiment rear guard of Union general Nathaniel Banks’s (1816–94) army but found himself up against an entire 9,000-man division. Suffering a sharp defeat, Jackson retreated. Yet this immediate tactical defeat

was quickly translated into a strategic triumph. For the battle convinced Northern leaders that an invasion was indeed afoot, and 35,000 men, under General Irvin McDowell, were detached from McClellan’s peninsula command and dispatched to reinforce the defense of Washington. McClellan was left with 90,000 men.

On May 8, Jackson fought another tactically undistinguished battle, managing to repulse Federal forces at McDowell, Virginia, but suffering in the process twice the casualties (498 versus 256) of the attackers. From his costly but effective victory at McDowell, Jackson deployed his cavalry to deceive Banks into thinking he was moving west, toward Strasburg. However, after picking up reinforcements, Jackson marched the main body of his army, now about 17,000 men, to the Federal outpost at Front Royal, Virginia, which he attacked on May 23. Jackson easily outfought Banks, netting 904 prisoners and, even more important, two cannon and a cache of arms. The Confederates appropriated so much in the way of supplies from Banks’s army that they dubbed him “Commissary Banks.”

Banks retreated toward Winchester, Virginia, having divided his forces on May 24, when Jackson hit one of his columns at Middletown. It was a reduced army that Jackson attacked at Winchester on May 25, quickly overwhelming Banks and sending his army in full retreat back across the Potomac. Jackson pursued Banks to Harpers Ferry, then tweaked Union commanders and politicians alike by feigning a Potomac crossing before turning southward.

Banks’s army was not the only Union force in the Shenandoah Valley. Some 16,000 men under General John C. Frémont (1813–90) attacked a Confederate bivouac at Cross Keys, Virginia, on June 8. His attack on Major General Richard S. Ewell’s (1817–72) bivouac was readily beaten back. One of Frémont’s abler subordinates, Brigadier General James Shields (1806–79), dispatched his vanguard under Colonel Samuel S. Carroll (1832–93) to raid Jackson’s position at Port Republic on June 8. The Confederate general narrowly escaped capture, driving Carroll off with artillery and an infantry regiment. The next day, Jackson attacked Brigadier General Erastus Tyler (1822–91), who had reinforced Carroll northeast at Port Republic. At first Tyler’s men seemed to prevail, but after hand-to-hand combat (a rare occurrence in this war), the Rebels captured an important Federal battery, while Frémont and his troops, stranded on the opposite bank of the flood-swollen South Fork, could only watch helplessly.

Despite his victory, Jackson realized that the columns of Shields and Frémont would unite; accordingly he pulled back, as did the Union forces. Jackson’s Shenandoah Valley campaign, perhaps the most spectacular and brilliant military maneuver of the entire war, had come to an end. Jackson had used some 17,000 men to occupy and immobilize 50,000 Union soldiers, thereby denying to McClellan the overwhelming numbers he felt necessary to attack Richmond. The Confederate capital was spared.

Meanwhile news of Union success on the Mississippi had begun reaching the East (*see* U.S. CIVIL WAR: WESTERN THEATER), and McClellan decided he was finally ready to move against Yorktown. To his acute embarrassment, the Confederates, under General John Bankhead Magruder (1810–71) (nicknamed “Prince John,” for his regal manner), had withdrawn from that position to move closer to Richmond. Cavalry commanded by General James Ewell Brown (“Jeb”) Stuart (1833–64) covered the withdrawal, and, on May 4–5, McClellan’s subordinates General George Stoneman (1822–94) and General Joseph Hooker (1814–79) engaged this rear guard at Williamsburg, the colonial capital of Virginia but now no more than a sleepy and rather decayed little town.

The battle was inconclusive, but McClellan claimed victory. He had, he claimed, chased Magruder out of Yorktown and chased Stuart out of Williamsburg. The northern press accepted “Little Mac’s” interpretation and congratulated him. Lincoln, however, fretted, and McClellan himself was about to reap the harshest reality of his Peninsula Campaign in a grinding series of battles that would be remembered simply as “the Seven Days.”

ROBERT E. LEE AND THE SEVEN DAYS (THE PENINSULA CAMPAIGN)

McClellan’s counterpart in the South—and soon his nemesis—was Robert E. Lee. Before the Civil War, few people had known Lee, though he had served with distinction in the UNITED STATES–MEXICAN WAR. Lee’s first field command, in western Virginia, proved worse than disappointing. On September 11, 1861, he attacked a Union position at Cheat Mountain in western Virginia, only to be tricked by some Union prisoners who persuaded him that the Cheat summit was held by 4,000 Union troops, far outnumbering him. In fact, only 300 Union soldiers held the summit, but Lee hesitated, lost the element of surprise, and soon found himself facing all-too-real Union reinforcements. After a two-day skirmish, Lee withdrew. Although his casualties were light, it had been a most inauspicious maiden battle for the general, whom the Richmond papers derided as “Granny Lee” and “Evacuating Lee.” Though he then performed important, if not exciting, work improving the coastal fortifications, and though—as Jefferson Davis’s personal military adviser—he had given Stonewall Jackson the idea and impetus for his Shendoah Valley campaign, Lee was not personally garnering much glory.

All that would change in “the Seven Days.” For the first time, Lee was placed at the head of a major army, which he renamed the Army of Northern Virginia and placed on the defensive against the ever-cautious McClellan. Lee had been given the command when Confederate general Joe Johnston was wounded during an early battle at Fair Oaks, a bloody draw on a rainy May 30, just outside Richmond, where 5,000 Union and 6,000 Confederate soldiers fell. In one of his first moves, Lee sent his

cavalry, under Jeb Stuart, on a spectacular reconnaissance mission around the entire of the Union forces, after which Lee launched a series of daring attacks.

On June 26, McClellan had at last mustered the will to mount an attack on Richmond, but Lee hit him first, at Mechanicsville, in the first battle of the Seven Days. Lee struck the Union right; the attack cost him 1,500 men, but he pressed on, determined to drive McClellan off the peninsula entirely. The fighting lasted a full week at such backwater spots as Gaines’s Mill and Savage’s Station and Fraser’s Farm. At Malvern Hill on July 1, Union artillery and rifle fire cut the Confederates to ribbons as they came charging up a long slope. During the course of the week, 15,000 bleeding Rebels were carried to Richmond, where every house was thrown open for the wounded.

By week’s end, Lee had lost twice as many men as his adversary, but he had won the psychological advantage. Though all but one of the battles were Union victories, McClellan reacted as if they were defeats, allowing himself and his huge army to be backed down the peninsula until he reached the protection of the Union gunboats on the James River on July 3. Despite the urging of Union officers under his command, an unnerved McClellan refused to counterattack a foe weakened by the loss of 20,000 men.

Lincoln himself sailed down to see his commanding general three days later, only to hear from McClellan that he had not actually lost, only failed to win because of Lee’s superior numbers. When he told his frustrated president that he needed 50,000, perhaps a 100,000 more men, Lincoln at length withdrew McClellan’s army from the peninsula and took steps to replace its faint-hearted leader.

SECOND BATTLE OF BULL RUN (SECOND MANASSAS)

Fed up with McClellan’s timidity after the Seven Days campaign, Lincoln finally relieved the “Young Napoleon,” replacing him with two veterans from the West. Henry “Old Brains” Halleck (1815–72) became general in chief of the U.S. Army, and John Pope (1822–92) took over McClellan’s troops north and west of Richmond. A condescending braggart, Pope was not only unpopular with his fellow officers but also was as despised by the common Union soldier as McClellan had been beloved. Confederate soldiers came to hate Pope for the harshness with which he treated Southern civilians. As soon as it was clear that McClellan no longer threatened Richmond, Lee—again defying traditional military doctrine—split his command in two and headed north to “surprise” the “miscreant” Pope.

Stonewall Jackson caught up with Pope’s troops on August 9 at Cedar Mountain near Culpeper Courthouse in Virginia and fought them to a draw, which some authorities deem a Confederate victory. Jeb Stuart struck next, raiding Pope’s headquarters, confiscating \$35,000 in cash, a notebook indicating the disposition of Union troops, and Pope’s dress coat. In a long, clockwise flanking march

that was fast becoming a typical Lee stratagem, Jackson first turned west, then east on August 26 to lead his 25,000 men on a remarkable two-day, 56-mile journey to cut Pope's railway communications. Although Herman Haupt (1817–1905), the North's railroading wizard, had the tracks repaired and the trains running within four days, Pope lost Jackson for two days, until he found him ensconced on Stony Ridge, overlooking the Manassas battlefield of the year before.

Boasting he would "bag the whole crowd," Pope launched an attack on August 29. The Rebels held, though late in the battle many of them were reduced to hurling rocks at the Yankees, having run out of bullets. Convinced they would flee, Pope was promising a relentless pursuit for the next day, just as the second half of Lee's command, under General James P. Longstreet (1821–1904), arrived at 2 P.M. Five divisions stormed into the Union flank along a two-mile front. By the time the fighting ended, the Union had suffered some 16,000 casualties, more than five times the number killed, wounded, or missing at the First Battle of Bull Run. Lincoln, his troops demoralized, his cabinet openly critical, his political enemies in an uproar, reluctantly sent the disgraced Pope off to fight Sioux in Minnesota (*see* UNITED STATES—SIOUX WAR [1876–1877]) and gave McClellan back his command.

ANTIETAM (SHARPSBURG)

In early September 1862, Lee invaded the North. The army he led looked like anything but an army of invasion. Rag-tag and exhausted, many of his men lacked shoes and ammunition. Yet Lee understood that the South could not win a long war of attrition. The North, with more men, money, and munitions, would surely prevail if the struggle went on long enough. Lee saw that the best hope for the South was to win over the border states—of which Maryland was the most important—gain international credibility, and, in the process, destroy the North's will to fight. Lee had driven McClellan from Southern soil and now hoped by attacking Maryland to persuade the British to recognize the Confederacy as an independent nation. On the other hand, Lincoln badly needed a victory in order to emancipate the South's slaves without such action seeming an act of desperation in the face of the South's many victories on the battlefield hitherto. After several weeks of marching—outgunned, undermanned, and overextended—Lee was on the verge of calling off the invasion when Stonewall Jackson announced he had taken the Federal arsenal at Harpers Ferry. Lee came to a halt and turned to face McClellan.

Meanwhile, something incredible had happened. Lee had earlier drawn up Special Order No. 191, which detailed his plan for opening the invasion of the North. Lee distributed copies of the document to his chief generals. Stonewall Jackson copied a set for General Daniel Harvey Hill (1821–89), who, having already been sent the orders by Lee, discarded the copy. (Recent scholarship suggests it may have been accidentally dropped by one of Jackson's

staff.) On September 13, Union troops occupied the campground Hill had just vacated. There a Union private, W. B. Mitchell (d. 1883), found the discarded document wrapped around some cigars. Realizing he had found something more important than cigars, Mitchell passed the paper to his superiors, who sent it to McClellan.

McClellan saw that Lee's plan was a hazardous one: He would divide his forces in two, with Jackson heading toward Harpers Ferry and Longstreet toward Hagerstown. McClellan was initially thrilled by the discovery of the order, but then began to fear a trap. He mistakenly believed Lee had twice the number of men he actually commanded, and he therefore hesitated, moving with an excess of caution. A part of McClellan's army under General Alfred Pleasanton (1824–97) fought an engagement against Hill at South Mountain on September 14. Although the Confederates yielded, more precious time was lost, giving Lee the time he needed to set up a defensive line at the western Maryland town of Sharpsburg, behind Antietam Creek.

At dawn on September 17, the Union's General Joseph "Fighting Joe" Hooker led the attack against Lee at Antietam, coming out of the north down the Hagerstown Pike. He drove back Stonewall Jackson's brigade so far, so quickly that Lee was forced to order up reserves. D. H. Hill and James Longstreet's Rebels joined the battle in the woods and the cornfields around a church belonging to a pacifist sect called the Dunkers or Dunkards. In late morning, a Yankee division broke through the Confederate line, only to be destroyed in a surprise counterattack by troops just arrived from Harpers Ferry. At midday, the fighting came to center on a sunken farm road called ever afterward "Bloody Lane."

In the afternoon, Union troops under Major General Ambrose B. Burnside (1824–81) tried to take the only bridge across the Antietam, which was within Rebel rifle range, while Brigadier General Robert A. Toombs's (1810–85) Georgians, hiding behind trees and rock walls, used the Yankees for target practice. When Burnside's battered troops established their bridgehead in midafternoon, the weight of the Union forces finally drove the Rebels back to the outskirts of Sharpsburg. The Northern army was in a position to cut off a Confederate retreat across the Potomac, but McClellan failed to press his advantage and refused to commit the essential reserves. Before dusk, yet another Confederate division, led by General A. P. Hill (1825–65), arrived from Harpers Ferry and smashed into Burnside's flank, destroying the North's momentum.

By dark, an eerie silence had fallen on the center of the battlefield. On the killing fields 6,000 lay dead, another 17,000 wounded. With barely 30,000 men left in his entire army, Lee stayed on, as if to taunt McClellan, whose mind seemed an open book to the Rebel commander. When McClellan once again refused the challenge, Lee and all his men slipped away on the 18th. McClellan had won a costly, if strategically vital victory, but he now appeared reluctant even to give chase to Lee.

Battle of Antietam, September 17, 1862

Lincoln grew impatient. He visited Antietam to see the situation there for himself. After his return to Washington, on October 1, he ordered McClellan to cross the Potomac and give battle to the enemy, but McClellan did nothing. Lee, in the meantime, sent Stuart back into the North. This time, it was not into Maryland, a contested border state, but into Pennsylvania, a solid, non-slavery state of the Union. Jeb Stuart, who had famously ridden around McClellan's army before the Battle of Mechanicsville at the start of the Seven Days, rode around him a *second* time, during October 9–12, 1862, to raid the Pennsylvania town of Chambersburg. The raid was of no great military significance—500 horses were captured and a machine shop was wrecked, along with several stores—but it tweaked the collective noses of the North. Stuart's cavalry troopers had bivouacked openly in the streets of a Union town in a Union state.

On October 26, McClellan finally began to march, but so slowly that Lee was able to interpose his army between the Federal forces and Richmond. On November 7, 1862, President Lincoln relieved McClellan, replacing him as commander of the Army of the Potomac with Ambrose Burnside. Lincoln did make use of Antietam as the occasion on which to issue his preliminary Emancipation Proclamation.

AMBROSE BURNSIDE AND FREDERICKSBURG

Like McClellan, Ambrose Burnside was extremely popular with his troops, but, in contrast to McClellan, he was modest and self-effacing, with little confidence in his capacity for leadership. He twice declined Lincoln's offer of command of the Army of the Potomac, accepting, with great reluctance, only upon the president's third entreaty. Even before he ordered a shot fired, Burnside blundered. He reorganized the structure of the army into three two-corps divisions, commanded by generals Edwin V. Sumner (1797–1863), Joseph Hooker, and William B. Franklin (1823–1903). This gave the Army of the Potomac an impressively streamlined appearance on paper, but it made movement in the field unwieldy. Nevertheless, he was determined to be the aggressive general for whom his president longed. Burnside marched south toward Richmond with 120,000 troops. In late November 1862, he reached a line of hills overlooking Fredericksburg, Virginia. The bridges across the Rappahannock River had been destroyed, so Burnside was forced to await the arrival of pontoons before he could cross and take the town. By the time they arrived, 17 days later, Lee had managed to entrench 75,000 troops in a six-and-one-half-mile line along the crest of the hills.

On December 11, the Federal forces began shelling Fredericksburg, setting much of the town on fire. Against what seemed token resistance, the Union soldiers crossed the river on six pontoon bridges under cover of their artillery and fought house to house, dodging Rebel snipers, to assume control of the city, which they then

looted. Burnside, believing that Lee expected him to cross the Rappahannock either above or below Fredericksburg, had opted for a frontal assault. Lee, hardly trusting his good fortune, had only lightly defended Fredericksburg in anticipation of this straight-ahead approach in order to reinforce Longstreet's men along the crest of Marye's Heights overlooking downtown. Now, Burnside had to face scaling those heights dead-on. The result was a disastrous Union defeat.

The Union assault came in two waves on December 13. Union general William Franklin attacked Stonewall Jackson on the left, while the main force under Hooker attempted to storm the heavily fortified Marye's Heights in front. Fourteen charges later, 13,000 Union troops lay dead, dying, or wounded—the same number of casualties the Union army had suffered on the killing fields at Antietam.

THE MUD MARCH

In contrast to McClellan, Burnside wanted desperately to please the administration in Washington. Unfortunately, the action he proposed was desperate indeed. After the useless bloodshed of Fredericksburg, he was determined to try to cross the Rappahannock again. He started to turn back to cross the river downstream from Lee's strong position, but some of Burnside's alarmed subordinates alerted Lincoln, who vetoed the movement. So the Army of the Potomac huddled in winter quarters until January 20, 1863, when Burnside began to execute what looked to be a much sounder strategy. He would envelop Lee's army via a river crossing called Banks's Ford. But a two-day torrent of icy rain transformed the scarred landscape into a quagmire, and the movement became known as the "Mud March." The all-too-symbolic spectacle of an entire army bogged down in impassable mud was too much for the Union and Lincoln to bear. On January 26, 1863, the president relieved Burnside as commander of the Army of the Potomac and replaced him with Joseph Hooker.

FIGHTING JOE HOOKER AND CHANCELLORSVILLE

Hooker had graduated from West Point in 1837 and served in the Second SEMINOLE WAR and in the U.S.-Mexican War, fighting alongside Lee and Jackson, long before anyone called him "Stonewall." Hooker now roused the Army of the Potomac out of its despair and restored its morale. He also revised and expanded role for the cavalry, fashioning it into a vitally important instrument of reconnaissance.

By the early spring of 1863, Hooker was in high spirits—his troops were well fed, well clothed, well armed, well trained, and in a state of restored morale. He had twice as many fighting men as Robert E. Lee's 60,000 troops, which stood uneasy guard outside Fredericksburg just across the Rappahannock River from Hooker's position. Boasting that he would show Lee no mercy, Hooker

split his force in three. He sent 10,000 cavalry upstream to cut Rebel supply lines. Another 70,000 infantry headed upriver to attack Lee's left, camping on the night of April 30, 1863, outside Chancellorsville. Hooker ordered his 40,000 remaining troops to feign an advance on Fredericksburg to keep Lee in place until the flanking attack was under way.

Lee, however, did not take the bait. Guessing correctly that the main threat lay at Chancellorsville, he left a mere 10,000 infantry under Colonel Jubal Early (1816–94) to hold Fredericksburg and marched the rest into battle on May 1. Hooker ordered his superior force to withdraw to defensive positions around the little Virginia crossroads after which the battle would be named. The next day, Lee split his troops again, sending Jackson and 30,000 foot soldiers—screened by Jeb Stuart's cavalry—on a flanking maneuver of his own across the enemy's front while holding his line against Hooker's main force with only 15,000 men. The battle lasted for two more days, until Hooker—seemingly mesmerized by Lee into never employing more than half his force at any one time—decided to retreat back across the river.

It was yet another remarkable but costly Southern victory. Although the Union had lost 17,000 men to Lee's 13,000, the figures represented only 17 percent of Hooker's army compared to nearly one-fourth of the Confederate forces. Among the 13,000 had been Stonewall Jackson, Lee's strong right arm, shot accidentally by his own pickets.

NEW STRATEGY, BRANDY STATION, WINCHESTER, AND STUART'S RAID

Lee saw that Chancellorsville had raised the spirits of the South, even as food, money, and men continued to dwindle away. He saw too that Chancellorsville had appalled and disheartened the well-fed and populous North. It was, he therefore decided, now or never. He had gambled at Second Bull Run and at Chancellorsville by doing what the textbooks said one must never do—divide forces in the face of the enemy—and he had won. Now he embarked on a gamble with even bigger stakes. He would again invade the North. His object was a swift, massive, and punishing raid to demolish the Union's will to continue the fight and thereby force a favorably negotiated peace. If Lee lost, the Confederacy might well lose its principal army and, with it, the war.

But there was one additional factor pushing Lee to an invasion of Pennsylvania. Lee recognized the significance of what Union general Ulysses S. Grant (1822–85) was accomplishing along the Mississippi. It was now almost June, and Lee understood that Vicksburg, last of the Confederate citadels on the great river, would ultimately fall. He knew that when it did, many of those western-based Union troops would be moved east. So Lee moved north, beginning on June 3. He divided his army into three corps. Leading the movement was a corps commanded by James

Longstreet, who, of Lee's three lieutenants, was the only one to raise objections to the scheme of invading Pennsylvania. He thought it far better to launch offensives within Virginia, while reinforcing Bragg in the menaced area of Chattanooga and sending troops west in an effort to turn the tables on Grant. But he swallowed his doubts and marched in obedience to Lee's command, pausing with his corps at Culpepper Court House, Virginia, while another corps, under Richard S. Ewell, advanced against piecemeal Union detachments still in the lower Shenandoah Valley. The third corps, commanded by A. P. Hill, remained at Fredericksburg, eye to eye with the Yankees there.

Hooker had a plan for responding to these movements. He proposed to ignore Lee's move and advance against Richmond, reasoning that this would soon bring Lee marching back southward. Badly shaken by his performance at Chancellorsville, Lincoln and his advisers ordered Hooker to pursue instead a defensive course only and follow Lee. So, on June 5, doggedly following Lee, Hooker ordered General John Sedgwick (1813–64) to make a reconnaissance to determine if the Confederates had left Fredericksburg. The result was a skirmish at Franklin's Crossing, Virginia, after which Hooker ordered a full-scale cavalry reconnaissance under Alfred Pleasanton to ascertain the extent and significance of Lee's movements. The result of this, on June 9, was the Battle of Brandy Station, the first real cavalry engagement of the Civil War and the largest cavalry engagement ever fought in North America. Twenty thousand horsemen were engaged, charging and countercharging for a full 12 hours. Union casualties numbered 936 killed, wounded, and captured; Confederate casualties were 523. In terms of losses and because Confederate general Jeb Stuart remained in possession of the field after the battle, Brandy Station must be counted a Union defeat. Yet in an important sense it was a Union victory. For the first time in the war, the Union cavalry, neglected by McClellan but brushed up and bolstered by Hooker, had more than stood its own against Jeb Stuart, who was by now legendary and believed to be unbeatable.

But Brandy Station also alerted Lee to the fact that Hooker knew of his movements. With his usual strategic acuity, Lee concluded that Hooker might now turn to advance on Richmond—the very plan Hooker had, in fact, proposed, but which had been overruled. On June 10, Lee dispatched Ewell to attack the remaining Union garrisons in the Shenandoah Valley, which would (Lee hoped) force Washington to recall the Army of the Potomac for its defense. Ewell's forces clashed with Union troops at Berryville (June 13) and Martinsburg (June 14). Most of the Union soldiers managed to evade capture in these two places, but Ewell's attack on Winchester (June 13–15) was a Union disaster. The Confederates bottled up the Union garrison in the forts west of the town, with the result that 4,443 soldiers became casualties, of whom 3,538 were taken prisoner. Ewell's losses were a mere 269.

The first units of the Army of Northern Virginia crossed the Potomac into Maryland on June 15. Stuart used his cavalry to create a counter-reconnaissance screen to prevent Pleasanton's Union cavalry from discovering Lee's objective—Washington or Pennsylvania. This resulted in a series of cavalry duels at Aldie, Virginia (June 17); Middleburg, Virginia (June 19); and Upperville, Virginia (June 21). Following these engagements, Stuart, still smarting from Brandy Station, thought of a way to redeem himself. While the main body of Lee's army joined the advance detachments in crossing the Potomac, wheeling toward the east, Stuart was to serve as Lee's "eyes," moving along the army's right flank and front to report on the whereabouts of Hooker's forces. Stuart had a choice of taking a short, direct route across the Potomac or a longer route clear around Hooker's rear and flank. He secured Lee's permission to take the longer way around, which, he argued, would give him an opportunity to raid Hooker's supply depots and lines. One cannot help suspecting, however, that Stuart, as vainglorious as he was skilled, wanted yet a third opportunity to make a dashing and spectacular ride around a Union army.

Stuart's "Gettysburg Raid" did allow the cavalryman to cut across and disrupt Hooker's supply lines, and he was also able to capture 125 U.S. Army wagons at Rockville, Maryland, as well as take some 400 prisoners in skirmishes at Fairfax Courthouse, Virginia (June 27); Westminster, Maryland (June 29); Hanover, Pennsylvania (June 30); and Carlisle, Pennsylvania (July 1). Still, the Union army proved to be more spread out and active than had been expected. The result was that the ride around the army took much longer than Stuart had anticipated, and, for 10 critical days he was out of touch with Lee. Because Stuart's cavalry was Lee's eyes, this meant that Lee advanced into Pennsylvania blind.

Robert E. Lee rarely allowed himself to be surprised, but without reports from Stuart, he could only assume that Hooker had not yet followed him across the Potomac. Lee therefore dispersed his forces in a long line, with the rear at Chambersburg, Pennsylvania, and the front of the army at York, 50 miles to the east. The fact was that Hooker had crossed the Potomac during June 25–26; it was not until June 28 that Lee learned that the entire Army of the Potomac was concentrated around Frederick, Maryland, directly south of the 50-mile-long and highly vulnerable flank of the Army of Northern Virginia.

Lee learned one other thing as well. The Army of the Potomac was no longer under the command of Joseph Hooker. Despite opposition from Secretary of the Treasury (and major political rival) Salmon P. Chase (1808–73) and others, Lincoln relieved him with the curmudgeonly Major General George Gordon Meade (1815–72).

GEORGE MEADE AND GETTYSBURG

An irascible temperament is one thing when it is accompanied by genius. But Meade, though competent, was no

genius. Yet he would find himself directing the great make-or-break battle of the war.

On June 30, 1863, the Confederates of A. P. Hill's division were foraging in the Pennsylvania town of Gettysburg in search of badly needed shoes and conducting reconnaissance. When the detachment reported that Gettysburg was occupied by Union cavalry, General Henry Heth (1825–99) secured General Hill's permission to take a brigade into town to clear it out.

The cavalrymen in Gettysburg were a division under General John Buford (1826–63). They were the advance guard of the main body of the Army of the Potomac, yet Lee, out of touch with the errant Stuart, was only just now learning how close that army was, thanks to a spy known to history only as Harrison. Based on Harrison's information, Lee decided that he must concentrate his army here, at Gettysburg. He reasoned that Meade's army was spread out, and that if he could quickly concentrate at Gettysburg, he could attack and destroy it in detail. With the Army of the Potomac battered on its own soil, the Northern will to fight might well collapse.

When John Buford reached Gettysburg, he immediately grasped the importance of holding the high ground called McPherson's Ridge, just west of town. He knew that he would be badly outnumbered, but he also knew that he would have the advantage of fighting from the high ground and that his men would be fighting with brand-new breechloading Spencer carbines, which would allow them to load and fire faster than the Confederates, who were armed with old muzzle-loading muskets.

The fighting began at 9:00 on the morning of July 1. Buford's dismounted cavalry held off the first waves of General Heth and General William Pender's (1834–63) Confederate infantry divisions while General John Fulton Reynolds's (1820–63) I Corps and General O. O. Howard's (1830–1909) XI Corps rushed to reinforce Buford. Reynolds's troops began to arrive by 10:30 in the morning, but by this time, the Confederates were massing and had built up superior strength. The I Corps commander took personal command of the celebrated 1,800-man "Iron Brigade" in McPherson's Woods, to the west of the ridge. Within minutes, the major general, the man many thought should have been in Meade's place, was shot through the head by a rebel sniper. John Reynolds died instantly.

After O. O. Howard and his XI Corps arrived, shortly before noon, the situation had become terribly confused. Union forces were repeatedly pushed back, only to rally and counterattack. When Howard, who assumed overall command in the field following the death of Reynolds, tried to join a division commanded by Major General Carl Schurz (1829–1906) to the beleaguered brigades of I Corps, the units failed to meet, and the combined strength of Confederate units under Generals Robert Rodes (1829–64), Jubal Early, and A. P. Hill at last drove the Union troops off McPherson's Ridge and their other positions west and north of Gettysburg. The blue-coated sol-

diers retreated into the town, fighting hand to hand near Pennsylvania College and ultimately retreating southeast of the town down the Baltimore Pike.

The first day's fighting ended in a Southern victory, but the battle was not over. The Union had lost the high ground of McPherson's Ridge, but rout of the Union forces had been stemmed, and what is more, it had been stemmed on yet more high ground: East Cemetery Hill, Cemetery Ridge, and Culp's Hill, running from due south to southeast of town. The Confederates occupied some high ground, too: Oak Hill, northwest of town, and Seminary Ridge, due west of Gettysburg.

Thus, toward the end of July 1 the armies were in place on hills separated by a mile of the fields and woods that lay to the southwest of town. It was not like Lee to leave a situation in such a static state, and indeed he had ordered Ewell to follow up on his initial rout of the Union army. Following up meant an attack, on July 1, against Cemetery Hill. But Lee's order was couched in ambiguous and indirect language, which was more of a request than a command. Ewell did not carry it out, because he believed his men needed a rest. The inaction would prove fatal.

Dawn of July 2 found Lee exhausted and sick, either with the diarrhea that was endemic in military camps or, some scholars have suggested, with the symptoms of a mild heart attack. Nevertheless, he met with his corps commanders to give detailed orders for an offensive he hoped would crush the enemy army. Stuart was still absent, and Lee was not fully aware of how many more Union troops were massing at Gettysburg, though he knew they were massing, and that made him all the more eager to strike vigorously to finish what had been started the day before.

As usual, it was Longstreet who dissented. He believed—rightly, as it turned out—that nearly all of the Army of the Potomac would be massing against the Confederates on this day. He feared that the Army of Northern Virginia would be overrun and overwhelmed. His advice was to pursue a policy of what he called “strategic offense—tactical defense.” That is, he proposed to manipulate the Union army into attacking the Confederate army where and when it was strategically advantageous to the Confederacy and, when attacked, to defend, inflicting great losses on Union forces. But Lee believed that to withdraw his army after it had won a victory would demoralize the men and result in losing this opportunity to win a decisive triumph.

The Union line was deployed in the shape of a giant fishhook. The hook's barb was just south of Culp's Hill, its turn was at Cemetery Hill, and the end of its shaft—its tie-end—at two hills, well to the south of town, known as Little Round Top and Big Round Top. Lee directed Longstreet to attack the Union left, the shaft of the fishhook running along Cemetery Ridge and terminating at the Little and Big Roundtops. Lee was northwest of the fishhook, where the curve met the shaft. Ewell, to the north and northeast, above the curve of the fishhook, was to be prepared to swing down to smash into the Union's right.

Despite the defeat of July 1, Meade now had almost 90,000 men at Gettysburg, opposing 75,000 Confederates, and the Union army's central position, surrounded by the Rebels, actually magnified this numerical superiority.

The southernmost Union corps, the tie-end of the fishhook terminating at the Roundtops, was commanded by Major General Daniel Sickles (1825–1914). He advanced impulsively, leaving Little Round Top undefended, save for a few signalmen. General Gouverneur K. Warren (1830–82), Meade's chief engineer, noticed this and realized in an instant that General John Bell Hood's (1831–79) division would seize that high ground and thereby be in position to crush the Union's flank, traveling right up the shaft of the Union fishhook, beginning at the tie-end.

Warren hurriedly rounded up a brigade led by Colonel Strong Vincent (1837–63) and sent it to occupy Little Round Top. Vincent was soon killed in the action. A brigade under Brigadier General Stephen Weed (1834–63) also fought Hood, and at the extreme south end of the Union flank was the 20th Maine, a battle-battered regiment commanded by Colonel Joshua Lawrence Chamberlain (1828–1914).

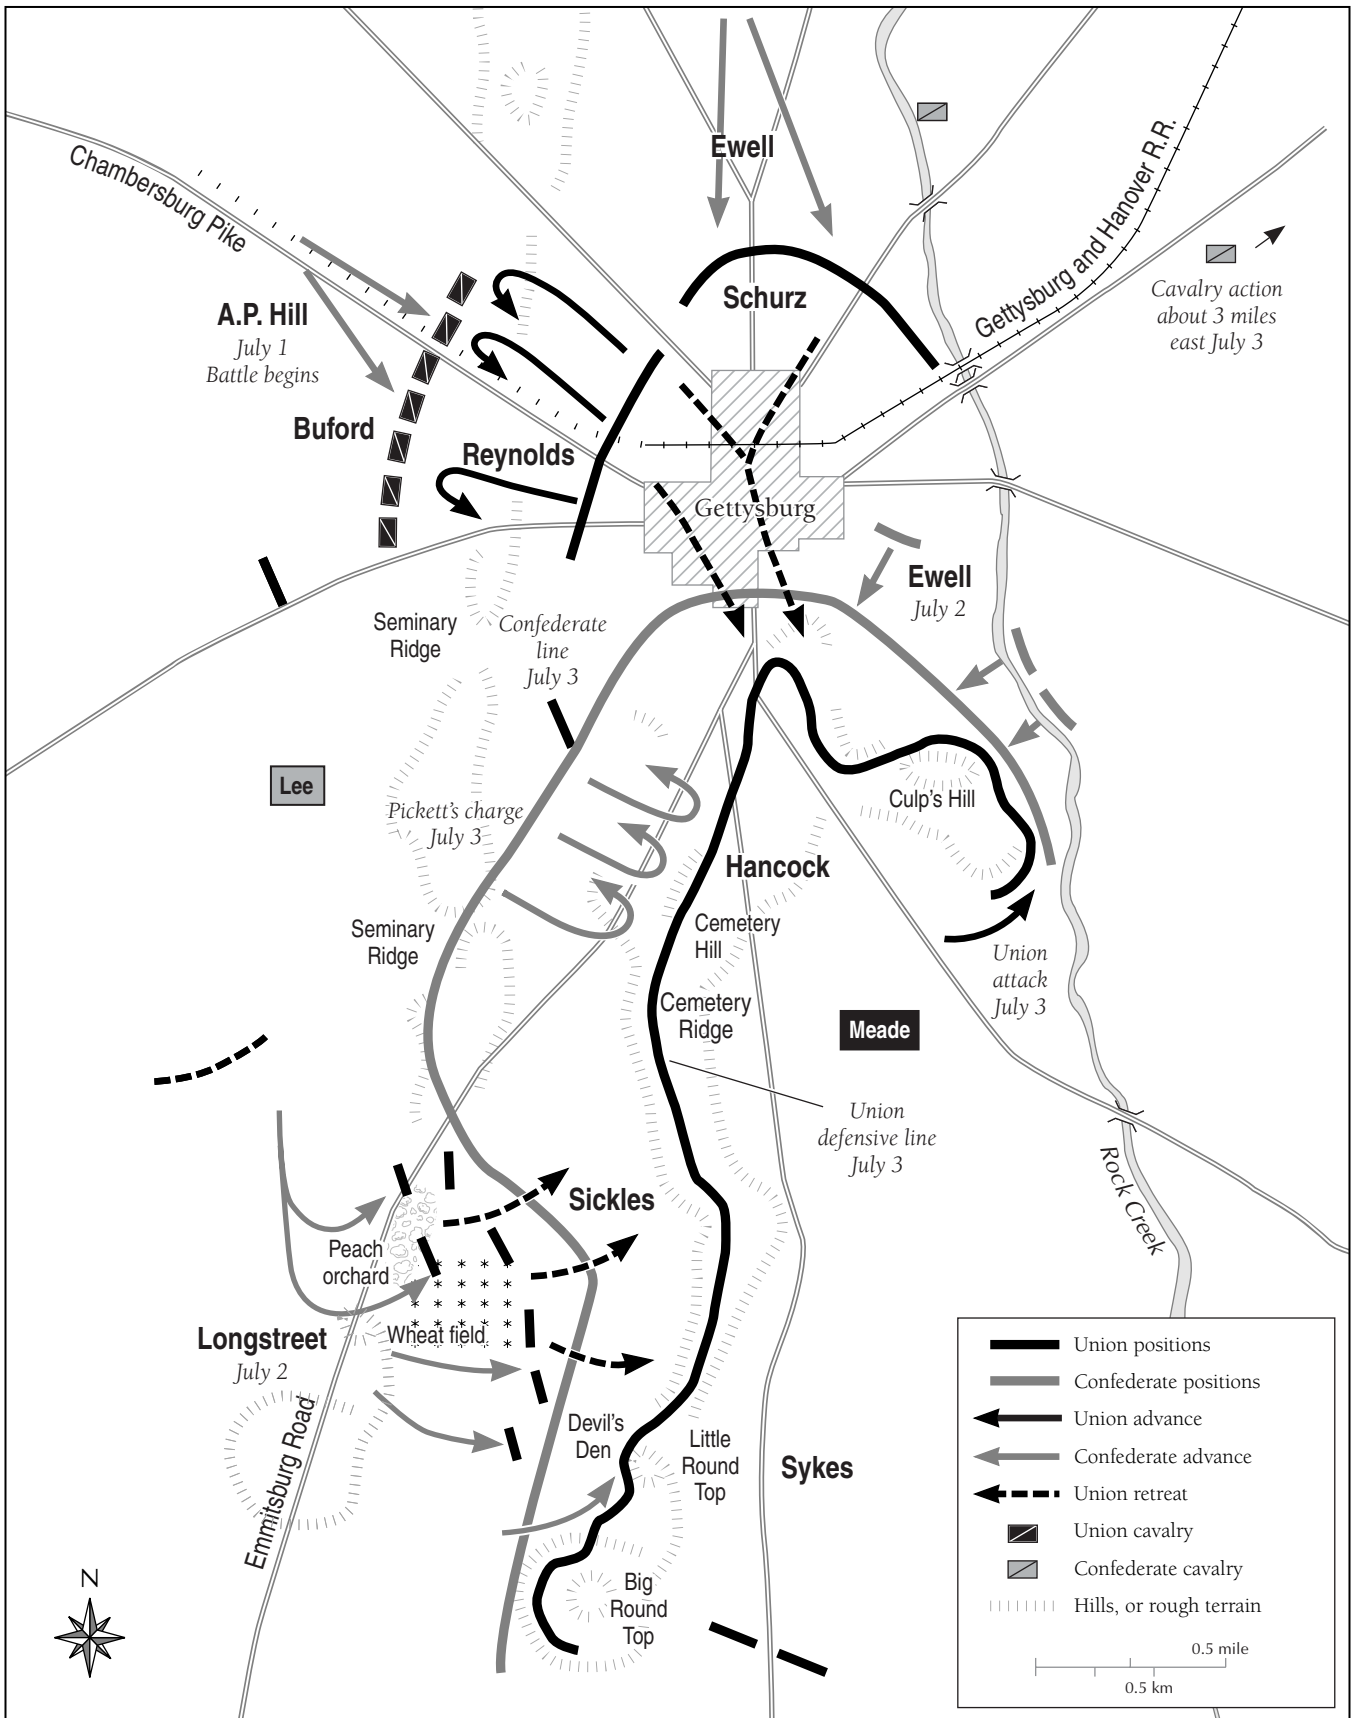

Chamberlain was not a professional soldier, but had been professor of rhetoric at Bowdoin College. He had taken a sabbatical in 1862 intending to study in Europe but joined the Union army instead, and now, with his regiment at less than half strength—under 500 men, including some deserters who had been put under his guard—he not only held off a superior force of Alabama troops but also defeated them. With his ammunition exhausted, a circumstance that would have prompted others to surrender, he led a fierce downhill bayonet charge, routing the Rebels.

The Confederates still held Devil's Den, below Little Round Top, and fired on the reinforced defenders of that hill from behind boulders. Action was hot too in the Peach Orchard and the Wheatfield, to the northwest of Little Round Top. In the Wheatfield, no fewer than six Confederate attacks were met by six Union counterattacks, leaving casualties and corpses thicker than any wheat harvest.

Sickles's impulsive advance might have meant Union defeat, but Longstreet was never able to coordinate his attacks—devastating as they were—to decisive effect, and Meade, as well as Major General Winfield Scott Hancock (1824–86), now leading II Corps, repaired Sickles's error by redeploying forces as needed to check each major Confederate attempt to break through.

At sundown, the Confederates attacked Cemetery, East Cemetery, and Culp's hills. The Union troops held on to all their positions except at Culp's Hill, but then counterattacked there at 4:30 on the morning of July 3 and, after seven hours of fighting, turned back the Confederates.

As July 2 melted into July 3, the Union army continued to hold its high ground, but, as Lee saw it, tenuously. For Lee, it was a most tempting situation. He had won significant victories on the first, and although he had failed to crush the Union army on the second, he believed that

Battle of Gettysburg, July 1-3, 1863

he had worn it down sufficiently to destroy it on the third. He now proposed an all-out attack. As usual, Longstreet protested the plan, but Lee insisted that too much blood had been invested to withdraw now.

Meade's forces had hardly been idle during the night and early morning. In addition to retaking Culp's Hill, they had improved their defenses and positioned final reinforcements, bracing for the attack. Both sides were bone tired as the warm morning of July 3 simmered into an oppressively sultry midday. The massive assault Lee had in mind was destined to be perhaps the single most celebrated operation of the war. It was also destined to be misnamed after the general assigned by Longstreet to form the brigades in preparation for the assault, Major General George Pickett (1825–75), a courageous and high-spirited officer, but hardly the most skilled of Lee's commanders. Pickett actually commanded just three of the nine brigades—nine brigades, a total of 15,000 men—massed for the attack.

By noon, they were arrayed—disciplined veteran soldiers perfectly aligned in battle ranks across an open field facing the Union soldiers dug in on Cemetery Ridge, a mile away. In preparation for the operation that came to be called “Pickett's Charge,” 150 Confederate cannon pounded the ridge, only to be answered by equally devastating fire from Union artillery. Such a duel of cannon was unprecedented in this conflict.

At 1:45 in the afternoon, those 15,000 men, in closely formed ranks, advanced. The Union replaced its solid ammunition with cannister (shot consisting of iron balls packed into cans), which burst apart, spraying the field of fire with hundreds of deadly projectiles. Still, the gray-uniformed men—those who did not fall—advanced. When they were close enough, the Union infantry, from cover and from the high ground, opened up with musket fire.

Two of the three Confederate generals in command of brigades fell in the charge, and the third was gravely wounded. All 15 regimental commanders engaged were killed or wounded. At a place called the Angle, 150 men led by Brigadier General Lewis Armistead (1817–63) actually succeeded in raising the Confederate colors above Cemetery Ridge, but they were soon cut down or captured.

Fifteen thousand men had charged Cemetery Ridge. Only 5,000 returned to Seminary Ridge. The failure of Pickett's charge ended the battle. The Union fielded 88,289 men at Gettysburg, of whom 3,155 were killed and another 14,529 were wounded, mortally wounded, or captured; 5,365 went missing. Of 75,000 Confederates engaged, 3,903 were killed, 18,735 were wounded, mortally wounded, or captured, and 5,425 were reported missing in action. The Combined Union and Confederate casualties were 51,112.

Meade had won a great victory—“great” in that to have lost at Gettysburg might well have meant the downfall of Lincoln, an attack on Washington, and a negotiated

settlement with an independent Confederate States of America. Yet Meade lacked the will to press his weary, battered army to pursue Lee's even wearier, more badly battered, and more greatly reduced forces. With the simultaneous collapse of Vicksburg in the West, Gettysburg was the irrevocable turning point of the war. On November 19, 1863, the president delivered a speech at the dedication of the Soldiers' National Cemetery at Gettysburg. Lincoln had been invited to speak at Gettysburg at the last minute. His appearance was an afterthought. The featured speaker was the great orator Edward Everett, whose remarks consumed two hours. But Lincoln's speech, concluded in two minutes, is beyond doubt the most profound oratorical monument ever erected to military achievement and human sacrifice.

GRANT TAKES CHARGE

Of all the men who had commanded the Army of the Potomac before him, George Meade was probably the most satisfactory. He led the army to victory at Gettysburg, one of the great turning-point battles of the war. Yet he too fell short, allowing Lee and the Army of Northern Virginia to limp away from what should have been total defeat. Only after three full years of war did Ulysses S. Grant emerge as the most adept practitioner of the “art” of this particular war, a general willing to fight, regardless of the cost. Recognizing this, Lincoln summoned him to Washington on March 9, 1864, to receive a commission as lieutenant general and to assume supreme command of all the Union armies. Grant understood that the taking of cities and strategic points and the occupation of Southern territory meant nothing as long as the principal Confederate armies remained in the field. Not with the occupation of land and the subjugation of cities would victory come, but only with the death of the Confederate armies. There were two main armies that needed to be killed: Robert E. Lee's Army of Northern Virginia and the Army of Tennessee, now under the command of Joseph E. Johnston, who had replaced Bragg after the loss of Chattanooga. Grant would attack Lee; he assigned William Tecumseh Sherman (1820–91) to attack Johnston.

As Sherman would advance on Atlanta, forcing Johnston to fight him in order to defend the city, Grant would advance on Richmond, less with the object of taking the Confederate capital than with the purpose of destroying the Army of Northern Virginia, which would rush to the capital's defense. In addition to the main body of the Army of the Potomac, Grant aimed two other armies at Richmond: the Army of the James, 33,000 men under General Benjamin Franklin Butler (1818–93), and a force in the Shenandoah Valley, led by General Franz Sigel (1824–1902). For the very first time in this three-year-old war, the Union army would make a truly coordinated movement—one army against Atlanta, and three against Richmond. The grand operation began on May 4, 1864.

THE WILDERNESS, SPOTSYLVANIA, AND COLD HARBOR

Grant's advance units camped on May 4 on the old Chancellorville battlefield among shallow graves opened by winter rains. The fighting began the next day, and chaos reigned. Units wandered about lost, firing on their own comrades, as benighted officers tried to maneuver by compass over a battlefield on which the opponents were intermingled. It was the first day of the six bloodiest weeks of the war, fought without break as Grant tried repeatedly to get around Lee's right flank, move on to Richmond, and end the war.

Grant lost 17,000 men during the first two days of the Wilderness Campaign. But instead of retreating, as others always had before him, he ordered his men south, much to their surprise and glee. Lee guessed correctly that he was headed for Spotsylvania and was waiting when Grant arrived on May 11. At dawn, Grant sent 20,000 men against the Confederate center and captured the Confederate breastworks along a curved salient called the Mule Shoe. Lee counterattacked and reclaimed the log works, but the battle continued, surging back and forth all day. The two armies lost 12,000 men, and Lee fell back; the fighting went on around Spotsylvania for several days.

Then the armies began to move again. Lee would seek to elude Grant for a while, then suddenly attack. Grant would try to skirt south and east to get around Lee, then stop and fight. For almost a month, the dogged Grant chased Lee through the wilderness down the length of Virginia. Then the two armies began a race for Cold Harbor, just off the Chickahominy River, southeast of Richmond.

Lee got there first and entrenched his troops for the all-out assault he knew the determined Grant would throw at him. Grant's buglers blew the charge at 4:30 A.M. on June 3, and 60,000 Union troops moved on an invisible enemy. The Confederate guns roared, and whole Union regiments disappeared in geysers of erupting dirt.

When it was over, not a Yankee was left standing. Counting casualties was almost impossible, but approximately 7,000 Union soldiers fell at Cold Harbor, the majority of them in the first eight minutes. Northern commanders refused to send any more of their soldiers to the slaughter, and for three days and three nights the two armies just sat there, neither commander willing to agree to a truce to collect the wounded or to bury the dead.

Nearly five acres were piled thick with the dead and the dying. A lucky few crawled to safety. At least one wounded soldier, unable to do so, slit his own throat in plain sight of his fellow combatants. By the time the litter bearers were finally let onto the battlefield, only two of the thousands of Union wounded were still alive. Grant himself later admitted that he regretted giving the order to attack at Cold Harbor as much as anything he had ever done.

SHERIDAN IN THE SHENANDOAH VALLEY

On June 27, 1864, Jubal Early set off from Staunton, chief town of Shenandoah Valley Virginia, with his army of 14,000, and invaded Maryland. It was not until July 5 that either Halleck or Grant took Early's offensive seriously and began scrambling to reinforce Washington's defenses. On July 9, Early's subordinate commanders attacked Union troops under Major General Lew Wallace (1827–1905) at Monocacy, Maryland, near Frederick, 40 miles northwest of Washington. The Union troops were routed, and the only reason Early did not pursue them was to avoid burdening his small force with Union prisoners. Of 6,050 Union troops engaged at Monocacy, 1,880 were wounded, killed, or missing. Early suffered fewer than 700 casualties out of the 14,000 troops he had in action. After Monocacy, Early menaced Baltimore with a brigade of cavalry, then marched with the main body of his army on Washington. Grant sent men from the Army of the Potomac to defend the capital, which also called on administrative troops and civilians to pitch in. Lincoln asked Grant to consider coming to Washington to direct its defense personally, but the commander persuaded the president that his presence at Petersburg was more important.

On July 11, Early reached the forts defending Washington itself. As the Confederates approached, the War Department cobbled together all available forces, including old soldiers from the Soldiers' Home and disabled veterans from the Invalid Corps. On the verge of ordering a general attack, Early was apparently dismayed by the appearance of the 25th New York Cavalry, a veteran unit, and suddenly withdrew. When the Army of the Potomac's VI Corps arrived on July 12, Early began a general withdrawal during the night of July 12–13, backtracking into the Shenandoah Valley.

Through the first week of August, Early harried Union units in the Shenandoah until Grant dispatched General Philip Henry ("Little Phil") Sheridan (1831–88) with 48,000 men to defeat Early and to neutralize the valley, taking the region out of the war once and for all. The valley was important for two reasons: First, it loomed as an avenue of invasion and a backdoor to Washington, as well as a means of access to Baltimore and Philadelphia; second, it served as the breadbasket of the Confederate armies.

This second reason required Sheridan to wage total war. Sheridan chased and pounded Early up the Shenandoah Valley while burning barns, burning crops, and destroying cattle. In turn, Sheridan's columns were continually harassed by guerrillas, the most famous of which was Colonel John Singleton Mosby (1833–1916), the "Gray Ghost of the Confederacy," leading the "Partisan Rangers."

Although Sheridan's forces outnumbered those of Early and guerrilla leaders like Mosby, combat was nevertheless sharp. At dawn on October 19, Early made at Cedar

Creek, Virginia, a surprise attack on the Union position so shocking that troops broke and ran in disordered retreat. Sheridan, who was just then riding back from a visit to Washington, ran into some of these soldiers and personally got them back into order and into the fight. By four that afternoon, he had staged a furious counterattack, turning a Union rout into a victory—Sheridan lost 5,665 men, killed, wounded, or missing, out of 30,829 engaged, and Early lost 2,910, killed, wounded, or missing, out of 18,410, as well as supplies and artillery—a successful conclusion to Sheridan's Shenandoah Valley Campaign.

PETERSBURG

The fighting in the Wilderness had ended when Grant slipped his army out of its trenches under the cover of darkness and crossed the Chickahominy, evidently heading toward Richmond. At least Lee thought so, and he rushed the majority of his troops to the outskirts of the city. Grant, however, actually had shifted left to the James River and to a new target, Petersburg, a communications center 30 miles south of the Confederate capital. If he took Petersburg, Grant reasoned, he could choke off Richmond just as he had Vicksburg the year before.

For once Lee was surprised, and when the first 16,000 Federal troops arrived at Petersburg on June 15, 1864, only 3,000 Rebels under Beauregard were on hand to defend it. The Union soldiers, commanded by General W. F. "Baldy" Smith (1824–1903), were combat weary, with the slaughter at Cold Harbor fresh in their memories, and they were slow to attack. When expected reinforcements got lost on the way and failed to arrive, Smith called off the fight with victory virtually in hand. Beauregard was reinforced, and the war went on as repeated assaults were beaten back and both sides settled in for a siege, which, it turned out, lasted 10 months.

Early in the campaign, toward the end of July, a regiment of Pennsylvania coal miners persuaded General Burnside to let them try a desperate gamble. They would dig a tunnel underneath the Confederate lines and blow a hole in them wide enough to march an army through. The first half of the plan worked remarkably well. The miners dug their tunnel, loaded it with explosives, and blasted a huge crater in the Rebel defenses that sent Southerners reeling back in terror. But an hour went by before the follow-up assault got started, and when it did, three divisions rushed into the hole instead of around it. They had forgotten even to bring ladders, and as they milled about in the 30-foot-deep pit, it occurred to both sides that they were trapped.

The Rebels regrouped and commenced firing, and that afternoon the Union troops surrendered. The Confederates took white troops captive, but they shot, bayoneted, and bludgeoned to death hundreds of black soldiers who approached them under a white flag.

As the siege continued, Union troops fought their way west, cutting off the last road into town from the south and threatening the last open railroad. Lee's army had by then begun to desert in large numbers, and as the spring of 1865 dried up the muddy roads after an exceptionally raw and wet winter, Lee realized it was only a matter of time; he knew he soon would have to abandon Petersburg—and with it, Richmond—if he wanted to keep his army from being encircled.
