The two kings led their armies separately through the Balkans, where Byzantine emperor Manuel I Comnenus (c. 1122–80) waited to provide transport to Asia Minor. After the Germans were forced to retreat at Dorylaeum, the two armies merged at Acre. Meanwhile, Zangi had perished before the crusade arrived, murdered in his sleep by his slaves, and his sons—Saif al-Din (d. 1218) in Mosul and Nur al-Din in Aleppo—succeeded him. The Frankish count of Edessa had but briefly regained his capital, which Nur al-Din retook almost at once. By the time the crusaders regrouped at Acre in 1148, Edessa looked impregnable. They decided instead to go after the potentially richer prize of Damascus.

The ill-advised plan to assault Damascus set the crusaders to arguing among themselves. Especially to the knights of Outremer, residents who knew the region well, the idea seemed foolish, because the ruler of Damascus was the Christians’ most reliable ally in the whole of Syria. Others argued the assault was necessary if the crusaders were determined to forestall a united Muslim Syria in the wake of Zangi’s death. In any case, the knights of the Second Crusade, when they reached Damascus, took up positions and prepared to lay siege to the city. Inside the Muslims of Damascus, realizing their extreme peril, decided they preferred the son of Zangi to a Frankish prince, and they sent for Nur al-Din. Thus, the crusaders’ actions and their greed promoted the very unity they argued they wished to forestall by attacking the city.

Occupied with his own troubles in the north, Nur al-Din nevertheless marched his army south to rescue Damascus. The crusaders, anxious to take the city before he could arrive, shifted their point of attack to a spot where the city’s walls were weak but where there was no water. The walls held, and the crusaders, parched and despondent, fell back from Damascus after four days of frustration and inconclusive fighting. Somewhat bewildered by their failure, they fell to blaming each other, and once they reached Christian soil, the Second Crusade simply dissolved. Seeing that Damascus was safe, Nur al-Din hurried back north, leaving the Damascenes for the moment independent and free of danger from Christian crusade or Muslim jihad. The Second Crusade, from which Europe and the Holy Land had hoped for so much, had failed miserably.

Crusade, Third (1189–1192)

PRINCIPAL COMBATANTS: Christian crusaders vs. the forces of Muslim leader Saladin

PRINCIPAL THEATER(S): The area around Jerusalem

DECLARATION: Papal bull, 1189

MAJOR ISSUES AND OBJECTIVES: When Saladin captured Jerusalem in a holy war against the Latin Kingdom, Pope Gregory VIII called for a crusade to regain the Holy City.

OUTCOME: Led by England's Richard I (the "Lion-Hearted"), the crusaders had much initial success but failed to reach Jerusalem. Instead, Richard and Saladin came to terms, concluding a five-year truce permitting Christians free access to holy places but reducing the Latin Kingdom to a coastal strip based at Acre.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Numbers unknown, but both sides suffered heavy losses.

TREATIES: Treaty of 1192 between Richard the Lion-Hearted and Saladin.

In 1188 the Kurdish general Salah a-Din Yusuf ibn Ayyub (1137–43), head of an Islamic army determined to retake land lost to Christian crusaders, engineered amid a string of victories the fall of Jerusalem (*see* SALADIN'S HOLY WAR). A distraught Pope Gregory VIII (r. 1187), with a great bull that linked the disaster in Palestine to the sins of Christians everywhere, summoned the Third Crusade, promising the remission of all sins to anyone who accepted the call in a repentant frame of mind. Ships from Brittany, France, Flanders, England, Germany, and Denmark, small squadrons of local volunteers, knights, and barons, and professional archers and spearmen all headed to fight the infidel who had become infamous in Christian Europe over the last decade under the name Saladin.

To crusaders already in the region who, supplemented by a trickle of early-arriving galleys from Norman Sicily, were now besieging the city of Acre in Tripoli—and in turn being besieged by Saladin's warriors—the news came that reinforcement was imminent. The 67-year-old emperor of Germany, Frederick Barbarossa (1123–90), it was said,

was marching eastward. Rumor had it, too, that Philip II Augustus (1180–1223) and Richard I (the Lion-Hearted; 1157–99), the feuding kings of France and England, had patched up their differences and were on the high seas with a huge combined army. Richard, in particular, was known as a fierce warrior, one who led his knights into battle personally and wielded his great sword with skill and abandon.

For once the Christians had enough money. For nearly four generations prominent European families had been supporting the Crusades, and their coffers were depleted, or so they said. In any case, recognizing the strains their kingdoms had begun to feel by the last decade of the 10th century, monarchs—with the pope backing them—had begun to look for new ways to come up with the funds to subsidize crusades. Philip and Richard both levied immense taxes to pay for this latest outing, amounting to some 10 percent of all the movable property belonging to those choosing not to go on crusade. It was called the "Saladin tithe," and the funds went to supplement other levies and contributions.

Frederick Barbarossa discovered he would have to fight his way across the Byzantine Empire territories because the Byzantines—who had started the Crusades in the first place by calling on the western pope for help when Constantinople was threatened by infidel hordes—had, assuming Saladin invincible, allied themselves with the Muslims. Barbarossa crossed Anatolia (Turkey), slaughtering thousands of Seljuks as he went, and fought his way into Christian-held territory. But when he tried to swim an especially wide river, he drowned, probably after suffering a heart attack. His leaderless German armies fell apart and fell back on Antioch. The Christians clearly would have to wait for the French and English fleet to break out of the double siege still going on, with the Christian army surrounding Acre and Saladin surrounding them.

The two kings landed in summer 1191. On the way Richard had stopped to take Cyprus from Isaac Comnenus (1025–61), a Greek rebelling against Byzantium who had recently installed himself as the new king (and concluded an alliance with Saladin). Then Richard sold the island to the Knights Templar after exacting a 50 percent tax from the liberated Cypriots. Now he and Philip began to squabble over who would be king of the soon-to-be-restored Jerusalem. The crusaders stayed unified enough to crush Acre, which surrendered in July, and to force Saladin to withdraw, but Philip, disgruntled with Richard's dominance in the crusade, took the first opportunity to head back to France. Once there, he attacked (with some success) Richard's territories on the Continent. Left in sole command, Richard marched on to Jaffa, the gateway to the best route to Jerusalem. Saladin's Turkish cavalry skirmished with Richard all along the way, and when the latter reached Arsuf, Saladin—waiting in ambush with his entire host—attacked. At Arsuf Saladin learned just how good a

general he was up against. Richard, a careful and skilled tactician, absorbed the ambush, letting Saladin commit his main forces to the battle, and when the Muslim rearguard charged too soon, the Lion-Hearted struck.

Afterward Saladin could get no Muslim army to face Richard again, so he withdrew into the hills of Judaea, destroying the countryside, poisoning wells, damming springs, and in general creating an artificial wilderness in an already arid land. Richard understood what Saladin was doing, and the Englishman was astute enough at logistics to realize as well that even if he took Jerusalem, the Christians would never be able to hold it. During the course of their fighting and maneuvering, Saladin had been extremely courteous to the foreign king, and Richard, in his turn, had come to appreciate both Saladin's manner and his skill. Something like an understanding grew up between them, if not a friendship, and both began to seek some road short of bloodshed out of the impasse they had created. At one point Richard even suggested to the astonished Saladin that Richard's sister might marry Saladin's brother, who would then rule all Palestine, Christian and Muslim together. Saladin rejected the idea but continued to work with Richard until, sometime in the autumn of 1192, they agreed to a treaty.

Under the five-year truce the Christian Franks were left in their coastal cities of the Holy Land, and the True Cross, housed in Jerusalem, was returned to them. In addition, Christians were allowed free passage to the city, which nevertheless stayed in Muslim hands. The Latin Kingdom was thus reduced to a coastal strip based in Acre.

Five months into the peace Saladin died of a fever. Revered by enemy and foe alike, his story and personality became celebrated in songs and plays, and a century later Dante Alighieri (1265–1321) gave Saladin an honored spot in hell in his *Divine Comedy*. Richard returned to England after some travail—which included being held for ransom by Philip II—to find that his brother John, ruling in his absence, had managed to botch the job and upset much of the kingdom, which paved the way, after Richard's death, for the signing of the Magna Carta.

Most of the Christian powers knew that the 1192 settlement was the best they could hope for, but it was not what they had wanted. The crusaders had set out to save their souls by recapturing the city where Christ had suffered for them, and the peace seemed too much a compromise. In 1197 Barbarossa's son, Henry VI (1165–97), tried again. Although he had learned enough from his father's mistakes to travel to the Holy Land by sea, he nevertheless—like his father—died suddenly en route, and the Germans, once again leaderless, managed to recapture only Beirut.

If the Third Crusade failed to achieve its major goal and free Jerusalem from Muslim control, it nevertheless resulted, however incidentally, in Richard Lion-Hearted's

historically significant capture of Cyprus. In the years to come, the island would serve first as a Christian outpost, then as a base of operations for new crusades, and ultimately as itself an important Christian kingdom.

Crusade, Fourth (1202–1204)

PRINCIPAL COMBATANTS: European crusaders, and Venetian adventurers, vs. Byzantium

PRINCIPAL THEATER(S): Hungary and Constantinople

DECLARATION: Called by Pope Innocent III, 1202

MAJOR ISSUES AND OBJECTIVES: Pope Innocent III promoted a new crusade to reclaim Jerusalem and the Holy Land; diverted by the Venetians to conquests in Hungary, the crusaders took up the cause of a pretender to the throne in Byzantium. *See* First CRUSADE for overview of issues and objectives of the Crusades.

OUTCOME: The Byzantine emperor was deposed, Constantinople sacked and looted, and Byzantium itself, whose salvation was the original impetus for the Crusades, all but destroyed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Numbers unknown, but losses heavy on both sides.

TREATIES: None

Despite growing tensions in Europe, Pope Innocent III (1160–1216) became the first to consider crusading on the magnitude imagined by Pope Urban II (1035–99) when he launched the movement with the First Crusade. Beginning in 1198 Innocent III approached the subject of a new expedition to the Holy Land through legates and encyclical letters floating about the West. In 1199 he levied a tax on all clerical incomes in order to support the campaign he was imagining, a precedent in both support for the Crusades and the establishment of systematic papal income taxes. He also commissioned Fulk of Neuilly (d. 1201) to declaim the praises of the operation. This, too, would become a tradition, as church-hired troubadours would travel about medieval Europe propagandizing the romance and adventure of crusading. At a tournament held by Thibault III (c. 1080–c. 1125) of Champagne,

several prominent French nobles would succumb to the romance and take up the cross. Several others would join later, among them Geoffrey de Villehardouin (1160–1213), who would go on to write a major account of the crusade.

Innocent then made contact with Venice to arrange for transportation, which proved a fateful step. The republic had long enjoyed special trading rights within the Byzantine Empire, and, not coincidentally, Venetian merchants, seen as shady and shrewd, had increasingly become the objects of Greek resentment and hostility. Byzantine emperor Manuel Comnenus (c. 1120–80) had ordered the arrest of all Venetians 30 years earlier, and a decade later an angry and aroused citizenry had massacred a large number of Latin traders in Constantinople and insulted a papal legate in the process. But it was not only that the Venetians were held in low esteem in Byzantium—they were also friendly with Egypt, now the central Muslim power in the Levant and the most likely target for a new crusade. Venice had close commercial ties to Cairo, which put the blind and ambitious doge, Enrico Dandolo (r. 1192–1205), potentially at odds with the pope. Nevertheless, Innocent III promised to pay, including an equal share in the conquests, and Venice promised to transport the crusaders to the Holy Land.

When the crusader army arrived in Venice during summer 1202, it was smaller than the pope had anticipated, in large measure because so many crusaders were traveling overland from France. But even given their reduced number, the crusaders did not have sufficient gold to cover the fare, so they agreed first to help Venice in laying siege to the Hungarian city of Zara. A number of the crusaders objected. Not only was this a diversion, it was a sin, because the city in question was Christian. Innocent III vetoed the plan as soon as he heard about it, but he was ignored. Frustrated but also fearful of jeopardizing the crusade itself, the pope offered the crusaders conditional absolution for the enterprise but refused to do the same for the Venetians.

Zara fell in November 1202, and the pope felt terrible about it. His worries about allowing a crusade to go forth with papal sanction but under secular leadership were borne out, and matters soon only grew worse. When Thibaut of Champagne died, leadership of the crusade went to Boniface of Montferrat (c. 1150–1207), a friend of Philip of Swabia (1176?–1208), a Hohenstaufen prince. Both men had married into the Byzantine imperial family, and before the crusaders had even departed Europe Alexius III (r. 1195–1203), Philip's brother-in-law and son of the blinded and deposed emperor Isaac Angelus (r. 1185–95 and 1203–04), arrived, making contact with the crusaders and seeking their aid in regaining the throne. When Innocent III became aware that Alexius was seeking to divert the crusade to Constantinople, he sent Boniface a letter excommunicating the Venetians and ordered him to publish it. Montferrat refused to do so. The pope sent

another missive, this one forbidding any attack on Constantinople. If it mattered, the letter arrived too late, after the fleet had left Zara.

Thus, in the summer of 1203 Constantinople fell to crusaders, who had originally come east to save Byzantium decades earlier from the infidels. Alexius III was deposed, and Alexius IV (r. 1203–04) was crowned co-emperor with his sightless father. There was little the pope could do but rant and fume back in Rome, reprimand the crusade leaders by post, and order them to proceed directly to the Holy Land and get on with the crusade. Perhaps he hoped a union of the churches might come of this and hence shore up the crusade, but if so, he was to be disappointed. A few of the crusaders left, but most of them stayed on in the city.

If the pope was powerless, the Byzantines were not, and angry Greeks soon assassinated their new emperor. In response the Venetians and the crusaders then seized power directly, taking over the city and the empire. They appointed 12 electors, half of them from Venice, half of them crusaders, and declared these men would choose an emperor who would rule over a fourth of the empire. A new patriarch would be appointed and have Hagia Sophia—the great cathedral known as the Church of Holy Wisdom—and a small amount of property designated to support the clergy. The other three-fourths of Byzantium would be divided among themselves. On April 14, 1204, Constantinople fell to pirate traders and the crusaders, and the greatest city in the world was pillaged by the rank and file, who massacred its inhabitants. After three days of wanton destruction, Constantinople's vast riches, its icons and relics, disappeared, only to turn up later in Europe—especially in Venice.

An apoplectic Innocent III castigated the crusaders and the Venetians in the strongest language he could imagine, but events had gone beyond his control, especially after his legate, on his own initiative, absolved the crusaders from their vows to go to the Holy Land. Now there was no hope that a friendly Byzantium would aid the crusade, much less work toward a reunion of East and West. When the violence died down and order was restored, the Venetians and the crusaders implemented their agreement. Baldwin of Flanders (1172–1205) became emperor, and Venetian Thomas Morosini (r. 1204–61) was chosen patriarch. Remnants of the Byzantine Empire remained outside their control—in Nicaea and at the eastern end of the Black Sea—which lasted until 1461. But the rift between the two churches only widened, and the Greek Orthodox believers intensified their popular resistance to any reunion. Byzantium itself, once a bulwark for Europe against invasion from the east, was shattered and no longer subject to salvation by crusaders or any one else.

Crusade, Fifth (1217–1221)

PRINCIPAL COMBATANTS: European crusaders vs. Egyptian Muslims

PRINCIPAL THEATER(S): Egypt

DECLARATION: Called by Pope Honorius, 1217

MAJOR ISSUES AND OBJECTIVES: Seeking to bolster the flagging energy of the crusading spirit, Popes Innocent III and Honorius III promoted a new crusade to retake Jerusalem, the last in which the church would become directly involved militarily. Supposed to lead the effort, Holy Roman Emperor Frederick II malingered, more worried about events at home than souls abroad.

OUTCOME: Coming close to success, the Fifth Crusade foundered because of the divided leadership of the crusaders between noblemen and churchmen. Both Frederick and the church came under harsh criticism. Meanwhile, a visit to the battle front by Francis of Assisi became the first step toward establishing monkish orders in the Holy Land.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Numbers unknown, but both sides took many prisoners.

TREATIES: Treaty of 1229

In Europe after the Fourth CRUSADE, the movement began to decline. The nobility grew disillusioned when the church promised the same religious indulgences for a Crusade against heretics in southern France or, a bit later, against secular opponents of the popes, such as infidels in the Holy Land. Regardless of the disenchantment of the high born, however, there remained in some sectors of medieval society, especially among the masses, at least some of the original spirit of the crusading enterprise. In 1212 even children fell victim to what, in effect, had always been a kind of mass hysteria. In the CHILDREN'S CRUSADE thousands of youngsters set out to free the Holy Land, only to be abused, lost, abandoned, or sold into slavery.

Citing the shame of that abortive crusade, Pope Innocent III (r. 1198–1216)—and after him Honorius III (r. 1216–27)—preached in favor of a new effort. In spite of—or perhaps as a diversion from—Innocent's other preoccupations, he revitalized efforts to organize yet another expedition. Setting aside his troubles with the kings of

England and France, his worries about heresy in Europe and the advance of Islam in Spain, his concerns over a civil war in Germany, and his effort to promote widespread reforms in the church, Innocent assigned priests and troubadours to produce new propaganda for the crusade and authorized new levies on clerical incomes to pay for it. At the Fourth Lateran Council of 1215, the church promulgated a final canon that, once again, prohibited selling weapons or military supplies to Muslims.

The young Holy Roman Emperor, Frederick II (1194–1250), promised Innocent he would lead the expedition, but after Innocent's death, the new pope, Honorius, allowed Frederick repeated postponements of his departure in order to clear up the confused state of affairs in Germany. Thus, the first wave of crusaders set off without their leader. They got to the Holy Land with no notion of what to do and therefore accomplished little before a Frisian fleet brought more Germans crusaders in May 1218 and, under the leadership of John of Brienne (c. 1170–1237), marched on toward Egypt. The plan, in the works since the THIRD CRUSADE, was to use a conquered Egypt as leverage to regain Jerusalem.

By August the crusaders had captured a strategic tower in Damietta, which gave them a stronghold in their town. But then the troubles began. In September an expedition organized by the papacy and made up primarily of French crusaders arrived under the command of a papal legate. Cardinal Pelagius (fl. 13th century) was as imperious as he was ignorant of military affairs, and what was worse—because he considered all crusaders to be under the jurisdiction of the church, i.e., himself—he refused to accept the leadership of John of Brienne. When the Muslims, by February 1219 weary of the siege and seriously alarmed for their future, offered peace terms that included the cession of Jerusalem, King John (1167–1216) and many of his crusaders were anxious to accept. After all, that was why they were there, to retake Jerusalem. But Pelagius, backed by the religious-military orders—Templars, Hospitalliers, and Teutonic Knights—and by the Italians, refused and insisted on awaiting reinforcements from Frederick.

Although Damietta finally fell on November 5, 1219, no further progress was made for more than a year. Meanwhile, the cardinal remained eerily optimistic, still expecting the Holy Roman Emperor to arrive any day and convinced, as only fanatics can be, by a rumor going round of the imminent approach of a legendary oriental Christian named King David. In July 1221 Pelagius ordered the crusaders to advance up the Nile River toward Cairo, but the seasonal floods for which the Nile was famous swamped his forces and necessitated their retreat. That led in turn to a truce of eight years and an exchange of prisoners. The terms, far less favorable than the Muslims offered two years earlier, did not include the return of Jerusalem.

Frederick never arrived, and the fifth would prove the last crusade in which the papacy played a direct role.

Although it was an impressive effort against a divided Muslim world that nearly succeeded, it did not prevent both Frederick II and the pope, as well as Pelagius, from coming under serious attack from disillusioned critics back in Europe. Most considered it a dreary episode, though St. Francis of Assisi (1181/82–1226) did provide some relief when the story was told of his arrival at the front with a request to cross the lines into Muslim-held territory. Allowed to do so by a reluctant Pelagius, the future St. Francis was received with urbane courtesy by the sultan. His visit to the east was the first step in establishing a Franciscan province in the Holy Land, a step soon taken as well by the Dominicans.

Crusade, Sixth (1228–1229)

PRINCIPAL COMBATANTS: European crusaders vs. Egyptian Muslims

PRINCIPAL THEATER(S): Jerusalem

DECLARATION: Called by Frederick II, 1228

MAJOR ISSUES AND OBJECTIVES: Seeking to wash away the stain of failure of the Fifth Crusade, Holy Roman Emperor Frederick II, though excommunicated by the pope for his tardiness in doing so, launched a new crusade to recoup Jerusalem and other holy ground.

OUTCOME: Denied support of the crusader states' ruling houses, Frederick negotiated a settlement with the sultan of Egypt, much weakened by internecine plots against his rule. Winning Jerusalem by diplomacy rather than bloodshed, Frederick received the blessing of the church once more and became absentee king of the Holy Land.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Treaty of 1229

Blamed for the failure of the Fifth CRUSADE, Holy Roman Emperor Frederick II (1194–1250) felt compelled to lead another into the Holy Land. Always a controversial figure, struggling continually with the papacy, Frederick, like many of the Holy Land barons but unlike most crusade leaders, was intellectually fascinated by Islam. Related by marriage to the ruling house of Jerusalem (Acre), he had claims to suzerainty over Cyprus as well. Although he

wished to make his son Conrad (1228–54) ruler of Acre, his eastern ambitions were inextricably tied up in his European plans for Sicily, Italy, the papacy, and Germany. Thus his crusade and his dealings with Cyprus and Jerusalem were part of a grander imperial design that failed to escape the notice of either the pope or the Holy Land barons.

After the Sixth Crusade was declared Frederick fell ill and failed to accompany the crusade's fleet when it left Italy in summer 1227. The new pope, Gregory IX (r. 1227–41), more suspicious and less patient than his predecessor, rejected the emperor's plea of illness, especially after he received envoys from Sultan al-Kamil (1180–1238) of Egypt. The sultan, threatened by the ambitions of his brothers, was disposed to negotiate, but the pope cut through the woolgathering by excommunicating Frederick for his failure to take up the crusader's sword with any alacrity. Thus, when Frederick finally departed a year later with the rest of his forces, he was in the awkward position of being a Christian crusader under the ban of the church.

He arrived in Cyprus on July 21, 1228. Although John of Ibelin (c. 1216–66), leading member of the influential clan of Ibelin, had already been named regent for the young Henry I (c. 1210–74), most of the other barons were willing to recognize the emperor as suzerain. The situation in Acre was potentially more difficult. The barons knew that Frederick's wife, Isabella (Yolande, 1212–28), daughter of the Acre noble John of Brienne (c. 1170–1237), had died, and they would only accept a regency for his infant son Conrad. Summoned by the emperor to Cyprus, John refused—despite Frederick's intimidations—to give up his lordship of Beirut and insisted the whole matter be brought before the high court of barons.

Setting the matter aside, Frederick headed for Acre, where he faced even more opposition. News of his excommunication had preceded him, and a number of the nobles refused to support his ambitions or his crusade. He was forced to rely on the Teutonic Knights—a German military-religious order that had remained in the east after an expedition in 1197—and his own small contingent of German crusaders. With little choice but to negotiate what he could not take by arms, Frederick began talks with Egypt's Sultan al-Kamil.

It was a unique moment in the history of the Crusades. Not by clash of arms, but by diplomacy alone did Frederick gain, under the treaty of 1229, Jerusalem, Bethlehem, and a corridor to the sea. These the sultan ceded to the Latin Kingdom for 10 years, making exception only for the Temple area, the Dome of the Rock, and the Aqsa Mosque, which remained in Muslim control.

The treaty was denounced by the more devout of both faiths, and when Frederick—still under excommunication—entered Jerusalem, the patriarch placed the city itself under interdict. No priest was present to crown

Frederick king of the Holy Land, so he placed the crown on his own head while one of the Teutonic Knights read the ceremony. Leaving his agents in charge, Frederick quickly returned to Europe to make peace with the pope. At San Germano the two met on July 23, 1230, and came to terms. The excommunication was lifted, and Frederick's position as sovereign of the Holy Land became legal and—once the patriarch, under orders by the pope, lifted the interdict—secure.

Crusade, Seventh (1248–1254)

PRINCIPAL COMBATANTS: European crusaders vs. Egyptian Muslims

PRINCIPAL THEATER(S): Egypt

DECLARATION: Called by King Louis IX, 1248

MAJOR ISSUES AND OBJECTIVES: When Jerusalem fell once again into Muslim hands, French king Louis IX called for a new crusade to protect the Holy Land, which a distracted Pope Innocent IV supported in part as good propaganda against the unruly Frederick II.

OUTCOME: The crusade was an utter failure, ending in the capture of Louis himself.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

15,000+ crusaders; Muslim numbers unknown

CASUALTIES: Unknown

TREATIES: May 6, 1250

At the close of the Sixth CRUSADE, Holy Roman Emperor Frederick II (1194–1250) had crowned himself king of the Holy Land and concluded a 10-year peace with the Muslims in the region, but he had not dealt so successfully with the well-established and preeminent Jerusalem baronage, leaving agents in charge of the crusader states while he returned to Europe. The barons bridled under Frederick's imperial style, and what followed his departure was not orderly government by agents of the emperor but civil war in Cyprus and Jerusalem.

The barons of both domains allied themselves with the Genoese, who—like the Pisans and Venetians—had not only extensive trade interests in the Holy Land but also large population enclaves there and in Byzantium. They were joined by Acre's mayor, John of Ibelin (c. 1216–66),

who had been elected by a community of bourgeois merchants. These factions resisted Frederick's imperial deputation, which had the support of the Pisans, Teutonic Knights, Bohemond V of Antioch (r. 1233–52), and a few other nobles. Standing aloof from the conflict were the clergy, the Templars and Hospitaliers, and the Venetians.

The baron's faction won the battle in Cyprus, and in 1233 Henry I became king there. But the resistance continued in Acre, even after the "Old Lord of Beirut," John of Ibelin, died in 1236. Refusing fealty to Frederick's son Conrad (1228–54) unless the man came to stay and rule in person, Acre's parliament named the queen dowager of Cyprus, Alice de Champagne (r. 1243–46), its regent. In the long run the barons triumphed, and their parliamentary rule replaced royal rule in the Levant. This failure of imperial administration only increased the growing divisions in the Holy Land.

These were exacerbated by changes in the Muslim world. Turkish tribes pushed west and south by the Mongols upset the balance of power in the region, and the Turks gained the support of Egypt. Despite the crusading efforts of Thibaut of Navarre (1201–53) and Richard of Cornwell (fl. 13th century), Jerusalem fell to Turkish and Egyptian Muslims in 1244, prompting a new crusade, the seventh, a year later in June 1245.

When cries for help began once again to reach Rome from the east, Pope Innocent IV (r. 1243–54) already had his hands full in Europe. He had just opened a great ecclesiastical council at Lyon, where he was dealing with a number of crises confronting the church—widespread protests against clerical abuses, the overweening ambitions of Frederick II in Italy, and the thunderous arrival of the Mongols in eastern Europe. Perhaps King Louis IX (1214–70) of France's declaration that he wished to lead a crusade proved a welcome distraction. In any case, unable to give the crusade his full attention, the pope gave it his official support and authorized Louis—devout, firm, and brave, the ideal crusader and probably in the pope's mind the antithesis of the troublesome Frederick—to collect the usual tax on clerical incomes.

Beloved by his people and respected by his peers abroad, Louis was a true believer, and he had no truck with the pope's attempt to use the crusade as a propaganda ploy against the emperor. He made careful preparations, establishing a peace with England, negotiating with Genoa and Marseille for transportation, and raising the money necessary from his own domains and from French towns, where many were growing weary of the constant drain on local resources. It took three years, but his fervor carried the day, and in August 1248, Louis embarked, trailing in his wake his queen, Margaret of Provence (1221–95), his brothers (Robert of Artois [1216–50] and Charles of Anjou [1246–85]), any number of distinguished French nobles, a small contingent of English crusaders, and a formidable army of 15,000 Frenchmen.

The Crusade reached Cyprus in September. Though Louis exchanged envoys with the Mongols, who might have helped in his campaign against Egypt, he decided against both a winter campaign and any fuller negotiations with the infidels. Not until May 1249 did he launch an expedition, and at first fortune favored his efforts. Crusaders recovered Damietta in June 1249, and reinforcements arrived in the form of Louis's third brother, Alphonse of Poitiers (1242–71). Meanwhile, the sultan of Egypt, Salih-Ayyub (r. 1240–49), had died, and Cairo had fallen into confusion and disarray. Because after some debate that city had become their objective, the crusaders went ahead, launching a poorly planned advance up the Nile.

In February 1250 Robert of Artois led a surprise attack on an Egyptian encampment two miles from Mansura. Defying more experienced advice, he rushed into the city and found himself trapped. A large number of knights had lost their lives before Louis arrived with his main army to win a costly victory on the city's outskirts, a victory that proved to be the crusaders' last, for the sultan's son, Turan-Shah (r. 1249–50), had arrived and taken control in Cairo, temporarily at least dominating the dissident factions and intercepting French supply ships from Damietta. Soon the crusaders were dying of hunger and disease, and Louis—reluctant to let go of his dreams of righteous glory—delayed a retreat. When he finally ordered one, he refused to lead it, despite the intense pleading of his advisers. Instead, he stayed behind to command the soldiers defending the rear, and he suffered their fate. Like them, he fell into Muslim hands as the Egyptian forces closed in.

The Muslims killed the captives, except for those nobles they held for ransom and the king. The queen, meanwhile, who had just given birth to a son, John Tristan (fl. 13th century), back in Damietta, pleaded with the Genoese and Pisan suppliers not to sail for home and leave the crusaders to starve before a treaty could be negotiated and the king's ransom arranged. They agreed, and on May 6, 1250, Louis was returned and Damietta given up. Once again ignoring his advisers, who urged him to return home immediately, Louis stayed behind for four years to negotiate the release of as many prisoners as possible and to oversee the strengthening of the kingdom's fortifications, trying to atone as best he could for the last true Crusade's utter failure.

Crusade, Eighth (1270)

PRINCIPAL COMBATANTS: European crusaders vs. Mamluk Muslims

PRINCIPAL THEATER(S): North Africa

DECLARATION: Called by King Louis IX

MAJOR ISSUES AND OBJECTIVES: When the new Mamluk sultan of Egypt began crushing the crusader states called the Latin Kingdom, France's Louis IX launched his second Crusade against the Muslims.

OUTCOME: Louis succumbed to disease, and his crusade collapsed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Indemnity, 1270

By the middle of the 13th century, Mongol hordes had overrun Mesopotamia, and in 1258 they took Baghdad, thus destroying the venerable Abbasid Caliphate. Two years later a new Muslim dynasty had arisen led by the bodyguards of the sultan. Former slaves, the Mamluks of Egypt defeated the Mongols in Syria and brought to a sudden stop their southward march. Caught between these two new powerful armies were the Muslim states of Syria and the crusader states of the Latin Kingdom. Some Christian kings such as Hethum of Armenia (r. 1226–69) and his son-in-law, Bohemond VI (1252–75) of Antioch-Tripoli, threw their lots in with the newly arrived pagan Mongols. Others, such as the barons of Acre, felt more inclined to pitch their tents with the Muslims, who they more-or-less knew and thought they understood, than with the warloving Mongols.

All of them misjudged the Mamluks, for Baybars (1223–77), the new Muslim sultan of Egypt who had come to power in 1260 by murdering his predecessor, was nothing like the chivalrous Saladin (see CRUSADE, THIRD) so admired by Richard I (the Lion-Hearted; 1157–99) and other crusaders. Ruthless and devoid of common decency, Baybars rounded off most of his conquests with massacres of Mongols and Christians, especially if they were in league. In 1265 he devastated Caesarea, Haifa, and Arsuf. The year after he swept into Galilee and destroyed Armenia. In 1268 he captured Antioch and slaughtered its inhabitants. Three years later came the fall of the Hospitaller fortress of Krak des Chevaliers.

Cries against these horrors and pleas for succor from the west had by then already reached Europe, and France's Louis IX (1214–70), already much troubled by his failures in the Seventh CRUSADE, began making new preparations for an expedition to the east in 1267. The Eighth Crusade never reached Baybars's domains. Most likely due to the political machinations of his brother Charles of Anjou (1246–85), Louis headed instead for Tunis. Charles,

recently named successor to the Hohenstaufens in Sicily, had forthwith defeated Conradin (1252–68), the last of that line, in 1268, and now he was involved in all kinds of intrigue along the Mediterranean and with grandiose schemes that included the taking of Byzantium.

In any case, there was precious little support in Europe for Louis's latest crusade. Nevertheless, he embarked from southern France in 1270 with his son John Tristan (r. 13th century) and headed for North Africa. There his army fell ill, and both he and his son were struck down by disease before Charles could arrive with his Sicilian fleet. Charles bargained for the remnants of Louis's army, offering an indemnity in exchange for being allowed to evacuate the troops, meanwhile leaving Prince Edward (1239–1307), on his way with reinforcements from England, in the lurch when he arrived too late to be of service to Charles's ambitions.

Crusade, Ninth (1271–1272)

PRINCIPAL COMBATANTS: Christians vs. Muslims

PRINCIPAL THEATER(S): Latin Kingdom of Jerusalem

DECLARATION: Called by Prince Edward

MAJOR ISSUES AND OBJECTIVES: Prince Edward hoped to rescue Louis IX.

OUTCOME: England's Prince Edward, arriving too late to aid Louis IX of France in the Eighth Crusade, concluded a truce and returned home.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: A truce at Acre in 1272

England's prince Edward (1239–1307) arrived in North Africa too late to rescue France's Louis IX from his failed efforts in the Eighth CRUSADE. He concluded a truce at Acre and then returned home upon acceding to the English throne in 1272. Soon the crusader cities began to fall to Muslim sieges: Antioch in 1268, Tripoli in 1289, and Acre—the last Christian outpost in the Holy Land—in 1291 (*see* CRUSADER-TURKISH WARS [1272–1291]), bringing the crusading era to a close.

It has long been recognized that the Crusades contributed to changes in the structure of European society in the 12th and 13th centuries. Even though the fighting did

not deplete European populations so drastically as once believed, exotic diseases (whether brought back by returning crusaders or aboard the ships of a more widespread trade) certainly did. Sectors of cities in the east acquired by the burgeoning Italian city-states allowed them to vastly extend their trade with the Muslim world and led to trading posts beyond the crusader frontiers that lasted well beyond 1291. This in turn speeded the development of shipbuilding techniques and further trade, as well as the rise of banking houses, which became indispensable to popes and kings alike. The Crusades may not have been essential to Europe's economic growth, as was once argued, but they certainly encouraged it, both capital formation and trade in exotic goods. After the Crusades the world was no longer so small as it had once seemed to Europeans and society no longer so local, so theologically fixed, or so ideologically safe.

Crusader-Turkish Wars (1100–1146)

PRINCIPAL COMBATANTS: Christian crusaders vs. the Seljuk Turks

PRINCIPAL THEATER(S): Aleppo, Anatolia, Ramla, and the Holy Land

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: This conflict followed the First Crusade and began as an effort to recover Bohemond I, prince of Antioch, a crusader captured by the Seljuk Turks.

OUTCOME: Bohemond was released, but in other respects the wars were inconclusive and served only to induce the pope to call for a Second Crusade.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Variable

CASUALTIES: Unknown

TREATIES: None

Bohemond I (c. 1056–1111), prince of Antioch, was returning from the First CRUSADE when his column was ambushed by Seljuk Turks near Aleppo. Captured, he was held prisoner at Sivas, Anatolia (central Turkey). Other major figures of the First Crusade, most notably Raymond IV of Toulouse (c. 1038–1105) and Stephen of Blois (1100–54), launched campaigns to secure the release of

Bohemond. Three major attempts were made during 1101–02, each resulting in defeat for the Europeans with considerable loss of life.

In the meantime, Baldwin I (c. 1058–1118), a crusader who now styled himself king of Jerusalem, took a different tack, confronting the Egyptians. Although he was outnumbered, Baldwin prevailed in the First Battle of Ramla in 1101, only to lose badly in the Second Battle of Ramla the following year. Undaunted, he re-formed a new army and with the help of Danish crusaders pushed the Egyptians out of Jaffa. By this time, 1103, Bohemond had gained release and returned to Antioch. In 1104 he mounted a new assault against the Muslims, engaging Turkish forces at the Battle of Harran, which he lost.

The next major engagement in the period between the First and the Second CRUSADE occurred in 1107, when King Sigurd I the Crusader (c. 1089–1130) of Norway led an army to the Holy Land to reinforce Baldwin and aid him in taking Sidon. From here Sigurd and Baldwin proceeded to Tyre, which they failed to wrest from Muslim hands by battle in 1109. Returning to his kingdom, Baldwin erected the crusader castle-fortress of Krad de Montréal, which was completed in 1115. From this stronghold he launched a new campaign into Egypt. It failed, Baldwin died, and he was succeeded as king of Jerusalem by his cousin Baldwin II (1217–73). This crusader repeatedly engaged Turkish forces in northern Syria without making any appreciable progress. In the meantime, Egyptian forces laid siege to Jerusalem in 1124 but were driven off. For the next two decades the situation in the Middle East and Holy Land was fairly stable, though punctuated by chronic fighting. Then in 1144 Edessa, long a crusader stronghold, fell to Muslim forces under Zangi. This defeat motivated the pope to call for the mounting of a Second Crusade.

Crusader-Turkish Wars (1272–1291)

PRINCIPAL COMBATANTS: The crusader states of the Middle East's Latin Kingdom vs. Mamluk Egypt and Mongol nomads

PRINCIPAL THEATER(S): The Holy Land, Palestine, and Syria
DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: With the defeat of the last Crusade, Muslim and Mongols in the Middle East sought

to topple the crusader kingdoms and drive out, kill, or enslave their populations.

OUTCOME: The crusader states were destroyed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

By the middle of the 13th century, both Muslims and Mongols were fighting not only each other in the Middle East but also regularly attacking the Christian crusader states of the Holy Land, Palestine, and Syria. Egypt's Mamluk sultan, Baybars (1223–77), took stronghold after stronghold from the crusaders. The Knights Templar surrendered Safed in 1268, Jaffa and Antioch in 1268, and the Knights Hospitaliers their great fortress near Tripoli in 1271, the year England's Prince Edward (1239–1307) arrived on the last European crusade to subdue the infidel Muslim Turks and pagan Mongols in the Holy Land—and failed (see CRUSADE, NINTH).

Europe was not unaware of the gravity of the situation in the east, but it had become unwilling, even unable, to give the kind of aid necessary to stop the reversals of fortune. As Pope Gregory X (1210–76) discovered when he made pleas for a new crusade at the Council of Lyon in 1274, the sense of common cause that so infused the First CRUSADE had simply vanished. Political tensions in Europe had increased, criticism of ecclesiastical politics—despite the reforms of the Fourth Lateran Council—had become more open, and crusading had grown prohibitively expensive as knights and foot soldiers alike sought service in royal armies for pay. Professional armies did not so willingly march behind the banner of the cross.

The crusader states were also falling prey to the same general malaise striking Europe. Quarrels among themselves were helping speed up their disintegration. Since the time of Frederick II (1194–1250) (see CRUSADE, EIGHTH), the holy kingdom had been ruled by absentee governors, and these successive regents failed to dominate the ever more powerful Jerusalem barons, resulting in the disintegration of the whole governing structure of the crusader states. Antioch-Tripoli, before its fall, grew increasingly estranged and through intermarriage ever closer to Armenia. In Acre, where lay the kingdom's seat of government, there was a commune of barons and bourgeois. Immigration had fallen off dramatically, and the old noble lineages were dying out or leaving, some residing in Cyprus, others serving as lords in name only in a Palestine actually under Muslim control. The military-religious orders, the Knights Templar, Hospitalier, and Teutonic, in constant conflict with one another, had also grown distinct from the local rulers, and they had extensive connections throughout Europe. Now criminals counted in high numbers among the bourgeois populations, and the growing crowds of Ital-

ians fought among themselves just as they did back in Italy. In Acre in 1256, the Genoese-Venetian rivalry, transposed beyond the Levant, broke into open warfare.

The pope tried his best to help, not only seeking renewed military aid but also taking an active diplomatic role, exchanging envoys with both the Mamluks and the Mongols and making the patriarchs of Jerusalem, appointed by him, papal legates. Neither absentee kings nor papal spokesmen could hold the Latin east together, and even the death of Baybars in 1277 only proved of temporary relief in staying the collapse of the crusader states. His successor, Sultan Qala'un (d. 1290), led Egypt to victory against the invading Mongols in 1281, all but ending the threat they posed to Muslim hegemony in his country. With the ineffectiveness of the Jerusalem administration becoming apparent even to the easterners, Il-Khan Abagha (1265–82) sent a deputy to the kings of Europe and the pope to seek a Christian-Mongol alliance, but his efforts proved in vain. Subsequently in 1289, Sultan Qala'un drove the crusaders from Tripoli. Acre, the last crusader stronghold in the Holy Land, was besieged by Mamluks in 1291 and after a desperate and heroic defense came to a disastrous end. On May 19 the city fell, and all its inhabitants were massacred or captured and sold into slavery. Afterward, every Christian castle along the Mediterranean was systematically destroyed.

Cuba, Black Uprising in (1912)

PRINCIPAL COMBATANTS: Cuban blacks vs. Cuban government

PRINCIPAL THEATER(S): Cuba

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The blacks rose in revolt against the social conditions that kept them at the bottom of Cuba's social and economic structure.

OUTCOME: The rebellion was quelled and many of the rebels killed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Rebels, 10,000; Cuban army, 5,000

CASUALTIES: 3,000 to 6,000 rebels killed; government forces suffered far fewer casualties.

TREATIES: None

Slavery may have ended in Cuba and the island may have become independent, but the lot of its African-descended population was little improved from the days of bondage. Still at the absolute bottom of Cuban social, economic, and political life, Cuba's blacks could see little hope of improvement unless they forced some change in their status and conditions. On May 20, 1912, the island's black population rose up in revolt. As with most of Cuba's revolts, past and future, this one began in Oriente Province, to which President José Miguel Gómez (1854–1921) dispatched his 5,000-man army to quell the restless blacks, led by Evaristo Esteño (d. 1912). His 10,000 rebels were poorly armed, and they had no military training. They were easily defeated by the government's forces on June 26 near Nipe Bay. Gómez's troops, commanded by a ferocious general named José Monteaugado, followed the defeat with several punitive expeditions. In all, some 3,000 to 6,000 rebels were executed, and Cuban blacks would fail to taste even a sip of social justice before Fidel Castro (b. c. 1926/27) launched the CUBAN REVOLUTION of 1956–59.

Cuban Revolt (1917)

PRINCIPAL COMBATANTS: Cuba's conservatives (with U.S. military aid) vs. Cuba's liberal opposition

PRINCIPAL THEATER(S): Cuba

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The precipitating factor was a disputed election.

OUTCOME: The incumbent president, Mario García Menocal, remained in office.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Mario García Menocal (1866–1941), Cuba's conservative incumbent president known for his friendliness toward foreign business interests, especially those in the United States, won a second term in an election that was marked by blatant fraud, including the presence of more votes cast than there were qualified voters and other irregularities. As a result partisans of the defeated liberal candidate, Alfredo Zayas (1861–1934), protested through legal channels, obtaining a judgment from the Cuban supreme court ordering new elections in certain provinces to be held in February 1917. This did not satisfy all the liberal protestors, who rose in armed rebellion before the new elections were held.

In Santa Clara José Miguel Gómez (1858–1921) prepared insurgent forces, which he planned to lead into

Havana and there overthrow the Menocal government. Menocal, however, appealed for volunteers and hurriedly purchased arms from the United States. With these forces and weapons he successfully intercepted and blocked the advance of the rebels. In the meantime, Menocal asked U.S. president Woodrow Wilson (1865–1924) for direct military aid, pledging to back the Allies in WORLD WAR I, in which the United States had joined. Accordingly, Wilson authorized a small detachment of marines to land at Santiago in Oriente Province, a nexus of liberal activity. The marines maintained order in this area while Menocal's troops dealt with the rebellion elsewhere. By March the rebellion had been suppressed. True to his word, Menocal declared war on Germany on April 7, 1917, and was inaugurated for his second term on May 20. To maintain order Menocal asked for—and received—a regular garrison of U.S. troops. They would remain on station in Cuba through 1923.

Cuban Revolts (1930–1933)

PRINCIPAL COMBATANTS: Students and other revolutionaries vs. the government of Gerardo Machado y Morales

PRINCIPAL THEATER(S): Cuba

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: President Machado increasingly assumed dictatorial powers, which incited students and other revolutionaries to rebel.

OUTCOME: The Cuban situation became increasingly unstable, leading to the installation of Fulgencio Batista y Zaldívar as dictator of Cuba.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 40,000 hard-core revolutionaries; 100,000 Cuban government troops

CASUALTIES: Unknown

TREATIES: None

Gerardo Machado y Morales (1871–1939), who was elected president in 1924, secured a constitutional amendment extending the presidential term to six years, then achieved reelection in 1928. Having firmly ensconced himself in office, Machado assumed dictatorial powers, which provoked strident student agitation at the University of Havana beginning in 1930. The government responded harshly, imprisoning or shooting those students identified as ringleaders. At last, in August 1931,

some 40 young revolutionaries landed at Gibara, marched on the police station, seized it, and then took over the town hall. From here the revolutionaries distributed small arms to the townspeople. Thus armed, this motley army marched on Holguín, where government forces engaged and routed them.

The defeat did not crush the movement against Machado. Revolutionary societies sprang up all over Cuba, most notably a secret organization comprised of middle-class revolutionaries known only as ABC, which made generous use of guerrilla warfare techniques, especially sabotage and terrorism. These, in turn, provoked extremely harsh government reprisals, which steadily escalated the level of violence throughout the island. At last, in June 1933 the revolutionary groups agreed to accept the mediation of U.S. ambassador Sumner Welles (1892–1961), who worked to quell the violence. When a general strike brought another violent confrontation between government forces and revolutionaries—who by now included large numbers of ordinary citizens—the army itself rebelled against Machado. In a military coup of August 12, 1933, he was driven from office and was replaced by Carlos Manuel de Céspedes y Quesada (1871–1939), who lasted less than a month. A new military coup expelled him from office on September 5. Its leader was an army sergeant, Fulgencio Batista y Zaldívar (1901–73), who backed the candidacy of Ramón Grau San Martín (1887–1969), a University of Havana professor.

After San Martín was proclaimed president, most of the Cuban officer corps continued to oppose the rebellion. Some 300 officers barricaded themselves in the Hotel National and were not ejected until October 2, 1933, after bombardment with land-based artillery and naval artillery. A total of 20 of the holdouts were killed, as were 80 of Batista's men. An American national, a bystander, also died.

The following month dissident army officers as well as members of ABC, which was as dissatisfied with Batista as it had been with Machado, appropriated three aircraft on November 8 and bombed Camp Colombia, the central military base in Havana. Some 2,000 anti-Batista insurgents were attacked at the Havana airport, however, and 20 were killed. Another 400 were captured, but the rest withdrew on November 9 to Atarés Castle, on a hill just outside Havana. After a hard-fought battle the insurgents surrendered. Although they left the castle under a flag of truce, perhaps 200 of the rebels were summarily executed by machine gun fire.

The successful assault on Atarés Castle ended the anti-Batista phase of the rebellion. While San Martín served as nominal president, Batista was the real power, wielding dictatorial authority that would not end until the CUBAN REVOLUTION of 1956–59 led by Fidel Castro (b. 1926/27).

See also CUBAN REVOLT; CUBAN WAR OF INDEPENDENCE.

Further reading: Jaime Suchlicki, *Cuba: From Columbus to Castro and Beyond* (New York: Brassey's, 2002); Robert Whitney, *State and Revolution in Cuba: Mass Mobilization and Political Change, 1920–1940* (Durham: University of North Carolina Press, 2001).

Cuban Revolution (1956–1959)

PRINCIPAL COMBATANTS: Rebel bands led by Fidel Castro vs. the forces of Cuban dictator Fulgencio Batista

PRINCIPAL THEATER(S): Cuba

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A revolutionary movement led by Fidel Castro sought to overthrow the tyrannical regime of Fulgencio Batista and bring a Marxist government to Cuba.

OUTCOME: On new year's eve 1959 Cuban guerrillas under the leadership of Fidel Castro marched toward Havana. As the populace of the island's capital rose up in support of the "Fidelistas," the brutal Cuban dictator Fulgencio Batista fled the country in the early morning hours of new year's day. The Cuban Revolution succeeded and became a model for third world Marxist regimes.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Maximum rebel army of 3,000; about 12,000 in the Cuban army loyal to Batista

CASUALTIES: Fewer than 100 rebels killed; probably about 500 Batistianos died in battle and another 800 may have been executed later.

TREATIES: None

The United States's intervention in the Cuban struggle for independence from Spain, which resulted in the SPANISH-AMERICAN WAR of 1898, was in large part motivated by a desire to protect U.S. business interests on the island. Although the United States officially guaranteed Cuban independence, it had also made itself the arbiter of that independence. In truth, of course, business ties and the United States's "interests" in the fate of Cuba continued to make the island a de facto dependency, and U.S. companies often exploited cheap Cuban labor, engaged in corrupt practices, and encouraged corruption among Cuban government officials.

Cuban leaders, seeking to maintain their profitable relationship with U.S. interests, were characteristically oppressive. Such was Gerardo Machado y Morales (1871–1939), who was overthrown in a coup led by Fulgencio Batista y Zaldívar (1901–73) and Carlos Manuel de Céspedes y Quesada (1871–1939). In 1933 Batista led another coup, which ousted Céspedes (see CUBAN REVOLTS.) In the manner of many Caribbean and Central American "strong men," Batista was elevated to high military command—he served as army chief of staff—rather than elective office.

From his military position he governed by means of a series of civilian puppet presidents until 1940, when he was finally elected to the office himself. After serving a term Batista left Cuba to enjoy the fruits of his regime as a retiree in Florida but returned to Cuba in 1952 and, through a bloodless coup, once again became president.

Batista's second regime was even more repressive and corrupt than his first, making deals not only with U.S. business interests but with U.S.-based organized crime. Batista's depravity became so obvious that by the end of the 1950s President Dwight D. Eisenhower (1890–1969) canceled scheduled arms sales to the regime. In the meantime, Cuban opposition to Batista was mounting, and Fidel Castro Ruz (b. 1926/27) emerged as a leader of the movement.

Castro had been born on August 13, 1926 (some sources report 1927) on a farm in Mayari municipality, Oriente Province, and received a rigorous Catholic education, including training at a Jesuit boarding school, which instilled in him a sense of spartan order and discipline. From the University of Havana he obtained a law degree in 1950 and became active in the social-democratic Orthodox Party, earning a reputation as an eloquent opponent of Batista. On July 26, 1953, Castro turned words into deeds and led an assault on the Moncada army barracks, a government armory. Captured, Castro was sentenced to 15 years of imprisonment but was granted amnesty in 1955 after serving only two years.

Castro went into self-exile in Mexico, where he founded the 26TH OF JULY MOVEMENT and prepared to carry out revolution in a Cuba already seething with insurrection. On November 30, 1956, Castro and 81 others, including the charismatic guerrilla leader Ernesto "Che" Guevara (1928–67), returned to Cuba loaded with arms and ammunition. Met by Batista's forces, the guerrillas were apparently routed, and Castro was reported dead. Actually, he and his followers had set up a secret base camp in the isolated Sierra Maestra Mountains. From there, where neither the army nor the police could find them, much less dislodge them, they conducted a successful guerrilla war between 1957 and October of 1958. In 1957 the guerrillas kidnapped 10 American civilians and 28 sailors, but they later released them without harm in response to angry protests from the U.S. government and the world press.

Meanwhile, Batista's tyranny grew more brutal throughout Cuba, and admiration at home and in the international press for the dashing and bearded revolutionaries who defied him increased at the same pace. By the time Castro emerged from hiding in fall 1958 to take the offensive and call for "total war" against Batista's regime, several hundred sympathizers had joined the initially tiny rebel band, and covert sympathy among Cuba's population was surprisingly widespread. Castro captured Santa Clara, the capital of Las Villas Province, on December 31, 1958. Realizing that all popular support for his government had vanished, Batista—his forces in disarray—fled

the country with his family on new year's eve, 1959, taking the loot he had hoarded and leaving the Cuban government in the inept hands of a three-man military junta. On January 8 Castro led his motley band—swelled by the celebrating crowds of a liberated people—into Havana and occupied the capital.

The day before the United States had declared its official recognition of Castro's government, and the Cuban army took no measures to stop the guerrilla heroes. To the contrary, most of the military had already switched sides, and the officers welcomed Castro with open arms. A provisional government was quickly formed, and Castro took the title "premier." Partly his warm reception came because at the time Castro was not an avowed communist. He had conducted the revolution in the name of anti-imperialism, nationalism, and general reform—all palatable enough to official Washington.

Yet, shortly after taking up the reins of government, Castro became defiant and bellicose, particularly concerning the United States and the degradations it had historically visited on his country. Without doubt, under Castro the living conditions of the masses dramatically improved, and the Cuban people supported Castro's nationalization of foreign-owned properties and industries, most of them American. Those who resisted Castro's new direction for Cuba found themselves subject to arrest, imprisonment, exile, or execution, and many of them followed Batista's example and fled, frequently to Florida. On May 7, 1960, Castro announced the resumption of diplomatic relations with the Soviet Union (which had been broken off by Batista), and by the middle of the year he explicitly aligned his nation with the USSR, at which point Soviet premier Nikita Khrushchev (1894–1971) warned that he would defend Cuba against U.S. aggression, even to the point of thermonuclear war. Suddenly, an outpost of Soviet-style communism was only 90 miles from the city of Miami.

Castro menaced the U.S. naval base at Guantánamo Bay, and on November 1, 1960, President Eisenhower declared that the United States would take "whatever steps are necessary to defend" the base. On January 3, 1961, he severed diplomatic relations with Cuba. Eisenhower's successor, John F. Kennedy, authorized a covert invasion of Cuba by some 1,400 anti-Castro Cuban counterrevolutionaries supported by the Central Intelligence Agency. The BAY OF PIGS INVASION, April 15–20, 1961, was a total failure: ill-conceived, hastily staged, and based on the CIA-spawned fiction that large numbers of Cubans would rise up to support the invasion, though Cuban refugee leaders, Bay of Pig veterans, and U.S. security agencies excused their blunders and miscalculation by insisting that they failed to recapture Cuba largely because the invaders did not receive the air support they had been promised.

The fiasco allowed Castro to consolidate his power further, and the very fact that an invasion—backed by the United States—had been attempted forced him further

into the arms of the Soviets. In December 1961 he declared an outright alliance with the Soviet Union. To ensure that the United States thought twice before attacking Cuba again, Castro allowed the Soviets to build bomber and missile bases on the island. Because the Soviets intended to deploy nuclear weapons on the island, the building and arming of the bases were conducted in secret, but U.S. spy planes discovered the construction before the missiles were deployed, precipitating the Cuban missile crisis of October 22–November 2, 1962 (see COLD WAR). The world's two nuclear superpowers stood "eyeball to eyeball" in Secretary of State Dean Rusk's famous phrase, each waiting for the other to "blink."

In the end the Soviets agreed to remove their missiles in exchange for a U.S. promise not to invade—or back an invasion of—Cuba again, and Castro remained defiant. On February 6, 1964, he cut off the water supply to Guantanamo Naval Base—a gesture of harassment rather than a serious threat, because the base was equipped with its own self-contained desalinization plant. In July 1964, when the Organization of American States instituted sanctions against the island, Castro permitted refugees to leave for the United States in a series of what Cuban expatriates and some U.S. officials called "freedom flights" that continued from November 1965 until August 1971, bringing about a quarter of a million Cubans out of the country. When the United States continued to encourage Cubans to immigrate over the next two decades, despite Castro's reintroduced prohibitions, he threw open the gates of the island's jails and allowed not only Cuba's political internees but its hardened criminals to leave for Miami. Many blamed these "Mariels" (named after one of Cuba's toughest prisons), for increased violence in the streets of Miami and the renewed growth of its drug-trafficking underworld.

Castro regained a large measure of prestige when he was elected chairman of the Nonaligned Nations Movement in 1979, but he generally failed as an economic reformer at home, for which he blamed, with some justice, the U.S. economic boycott of the island. Despite its financial woes, Cuba became the model for revolutionary movements throughout Central and South America, often supplying ideological guidance and tactical advisers and occasionally supplying weapons and equipment, mostly Soviet-built, as well. The well-trained Cuban army offered the service of its troops to the socialist factions in third world hotspots of the cold war, most famously those fighting in the ANGOLAN CIVIL WAR of 1975 in Africa. With the decline of the Soviet Union in the 1980s and its collapse at the end of the decade, Castro lost his principal source of economic aid. Yet, perhaps through sheer force of personality, he has continued to hold sway over the island, a considerable accomplishment in the volatile world of Caribbean politics.

Cuban War of Independence (1895–1898)

PRINCIPAL COMBATANTS: Cuban rebels vs. Spain

PRINCIPAL THEATER(S): Cuba

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Cuban rebels wanted independence from Spain.

OUTCOME: The war brought liberal promises from Spain, but it also served to commit the United States to fighting on behalf of Cuban independence in the Spanish-American War, which created an independent Cuba.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rebels, 53,774; Spanish forces, 205,000

CASUALTIES: Rebel military casualties, 5,180 killed in action (3,437 died of disease); Cuban civilian deaths are estimated at 300,000, mostly in “reconcentration” camps; Spain, 9,413 killed in action or died of wounds (53,000 died of disease).

TREATIES: Treaty of Paris, December 10, 1898, ending the Spanish-American War

Spanish political and economic oppression of its colonial possession Cuba led to the TEN YEARS' WAR, fought from 1868 to 1878, which brought Spanish promises of reform. As these went unfulfilled, new cries for revolution arose. The focus of the Cuban revolutionary movement was the Partido Revolucionario Cubano, which was located in exile in New York City. The party orchestrated a powerful popular movement in Cuba, paving the way for the return of exiled revolutionary leaders, including, paramountly, José Julián Martí (1853–95), Antonio Maceo (1848–96), Máximo Gómez y Baez (1836–1905), and Claixto Garcia Iñiguez (1836?–98). Along with these men came a legion of exiled freedom fighters, who organized indigenous forces into a guerrilla movement that quickly proclaimed a new republic in eastern Cuba.

From their outposts in the east, the guerrillas conducted a war of attrition against the Spanish overlords. The guerrillas studiously avoided open or set battles but gradually pushed the guerrilla war westward, toward Havana. As the capital fell under threat, Spain put its forces under the command of the ruthless and aggressive general Valeriano Weyler y Nicolau (1838–1930), who

had fought successfully against the rebels during the Ten Years' War. Weyler stopped fighting a holding action and instead took the offensive, penetrating deeply into the rebel-held east. He removed guerrilla influence by a policy of mass arrests and removal of civilians suspected of guerrilla sympathies. These persons were incarcerated in “reconcentration camps,” which foreshadowed the concentration camps of WORLD WAR II Europe. They were crowded, filthy, and poorly supplied. In them thousands languished and died of disease, starvation, and general neglect. U.S. journalists covering this situation exposed the camps—and it was these, perhaps more than any other single factor, that began to stir war fever in the United States, which would culminate in 1898 in the SPANISH-AMERICAN WAR.

By the end of 1896, Weyler had succeeded in bottling up the rebels in the east. However, in the face of mounting international criticism, Spain not only closed the reconcentration camps, it also recalled Weyler (known in the United States as “Butcher Weyler”). Most important, it offered Cuba home rule. But all of this was too little too late.

By 1898 Cuban rebels had been fighting for independence from Spain for three years. American businessmen had been interested in the Cuban revolt from the start because of its commercial possibilities. They had already made substantial economic investment in the island, \$50 million or so in sugar plantations, railroads, and mining. Throughout 1898 the opinion began to grow among major American businessmen, as it had been growing among opinion makers (such as newspaper publishers) and politicians, that it would be best to get Spain out of Cuba entirely. It would end the shameless mistreatment of the Cubans, and it would lead to more secure and therefore increased investments, but it could not be done without war. And the war could not be left to the Cuban rebels, since they would not necessarily protect American interest. That left intervention. The United States dispatched the battleship *Maine* to Havana harbor to “protect American interests” in Cuba. The subsequent sinking of the *Maine* in 1898—apparently an accident, but thought at the time to be the work of Spanish forces—triggered the Spanish-American War and brought about full independence for Cuba.

Cuman Invasion of Russia (1054–1136)

PRINCIPAL COMBATANTS: The Cumans vs. Kiev (seat of central power in Russia)

PRINCIPAL THEATER(S): Kiev and Ukraine

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: The Cumans occupied and severely weakened but never conquered Kiev and Russia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Russia was largely a fragmented feudal realm during this period, but what unity the region achieved was by virtue of the vigorous rule of a prince of Kiev, Yaroslav the Wise (d. 1054), who reigned from 1019 to 1054. He defended his lands successfully against incursions by the Poles and Pechenegs, but at the end of his reign Russia was invaded by a new, fiercer people: the Cumans, a Turkish warrior tribe. Their coming in 1054 brought a plague upon Kiev that endured into the next century. The descendants of Yaroslav continuously fought the Cumans, whose depredations steadily degraded the economy and influence of Kiev. This caused the principalities of Novgorod and Suzdal, subject to Kiev, to rise and prosper, becoming effectively independent from their Kievan overlords.

In 1113 Vladimir II Monomakh (1053–1125) came to the throne of Kiev and mounted a determined war against the Cumans. He succeeded in keeping them from overrunning the principality, but the effort so weakened Kiev that in 1157 Andrei Bogoliubski (c. 1111–74), prince of Suzdal, was able to conquer Kiev from his cousin, Mstislav II the Daring.

Cypriot War (1963–1964)

PRINCIPAL COMBATANTS: Greek Cypriots vs. Turkish Cypriots (with military aid from Turkey)

PRINCIPAL THEATER(S): Cyprus

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Turkish Cypriot minority rebelled against what they believed to be oppression by the Greek Cypriot majority.

OUTCOME: A Turkish uprising was quelled through UN diplomatic intervention and an effort by Cypriot lawmakers to guarantee and protect the rights of the Turkish Cypriot minority.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Greek Cypriots, 10,000; Turkish Cypriots, unknown

CASUALTIES: Greek Cypriots, 174 killed; Turkish Cypriots, 364 killed or missing

TREATIES: None

Cyprus was long the object of dispute between Greece and Turkey. On August 6, 1960, the independent Republic of Cyprus was created in an effort to resolve conflict by preventing annexation by either Turkey or Greece. Independence did not bring peace to the island itself, however, as conflict continued chronically between Cyprus's Greek majority and its Turkish minority. The president of Cyprus, a Greek Orthodox clergyman, Archbishop Makarios III (1913–77), pledged never to join Cyprus to Greece, but this did not placate the Turks on the island, who continually protested that they were being oppressed by the Greek majority. In the meantime, the governments of Greece as well as Turkey supported the Greek and Turkish Cypriots in various acts of protest, many violent. Great Britain intervened in an effort to extract from Greece and Turkey a non-interference pledge, but to no avail. At last, toward the end of 1963, Turkish Cypriots, outraged by Greek attempts to revise the Cypriot constitution, began a campaign of street fighting. As violence increased the United Nations dispatched a peacekeeping force to the island in March 1964. At this, Turkey threatened to invade Cyprus but was stopped by diplomatic pressure from the United States. In the meantime, the UN peacekeepers were proving ineffectual, and in August 1964 Turkish aircraft attacked Greek Cypriots. Makarios turned to the Soviet Union and Egypt for aid, but this was forestalled by UN diplomacy, which managed to broker an 11th-hour cease-fire.

During the period of the cease-fire, the Greek-dominated Cypriot government enacted laws to protect the rights of the Turkish Cypriot minority. The violence quickly faded, although an undercurrent of hostility persisted, creating a climate of uneasy peace.

Cypriot War (1974)

PRINCIPAL COMBATANTS: Greek Cypriot National Guard vs. invading Turkish forces

PRINCIPAL THEATER(S): Cyprus

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Growing from tensions unresolved by the Cypriot War of 1963–64, the 1974 war began with a coup against Cypriot president Archbishop Makarios III.

OUTCOME: An unsettled peace on an island now partitioned into Greek and Turkish regions

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Greek Cypriot forces, 12,950; Turkish forces, 40,000

CASUALTIES: Greek Cypriots, 4,500 killed, 1,614 missing; Turkish Cypriots, 1,000 killed; Turkish invaders, 300 killed, 1,200 wounded

TREATIES: Cease-fires, July 22, 1974, July 30, 1974, and August 16, 1974

Greek Orthodox archbishop Makarios III (1913–77) had become Cypriot president in the newly independent island's first general election in 1960, but his difficulties with both Turkey and Turkish Cypriots led to the CYPRIOT WAR (1963–1964). The war ended with an uneasy peace under a United Nations mandate that satisfied no faction.

In the new general election of 1968 an overwhelming majority reelected Makarios, and in 1973 he ran unopposed for a third term. Nevertheless, according to many Greek leaders in both Cyprus and on the mainland, this new president was not the same Makarios who in the early 1960s had led the call for “enosis,” or union, with Greece. Angered by the perception that he became content with Cyprus's independence after his reelection, Greek dissidents—some of them members of the Athens-based terrorist organization EOKA (Ethnikí Orgánosis Kipriakou Agónos, National Organization of Cypriot Struggle)—tried to assassinate him in 1970 and 1973.

Makarios survived these attacks only to find himself under siege by dissident Greek Orthodox bishops, who voted to deprive Makarios of his archbishop's robes but were subsequently overruled by higher church officials. Reeling from these assaults on his authority, Makarios was finally overthrown in July 1974 in a military coup carried out by the Greek Cypriot National Guard under the command of officers from the regular Greek army. The archbishop fled to London, where he set up a government in exile, and a former EOKA member was proclaimed president.

With Cyprus in profound crisis, the United Nations proved ineffectual, and an emergency conference held in London among the various Cypriot factions, Britain, Greece, and Turkey broke down. The result was an inva-

sion of Cyprus by the Turkish army, which fought the Greek Cypriot National Guard and regular Greek forces and won from them control of northeastern Cyprus, the portion of the island on which most Turks lived. The inhabitants of this region voted to secede from Cyprus and form an independent state. At this point the United Nations successfully brokered a cease-fire (July 22, 1974), which brought a halt to the major fighting, although sporadic incidents continued, swelling into full-scale outbreaks when the military government of Greece fell. A new cease-fire was declared on July 30, by which the combatants pledged to hold their positions. With the war thus frozen, the United Nations established a buffer zone between the Greek and Turkish territories, and independently of the United Nations, Britain, Greece, and Turkey arranged a cease-fire on August 16, 1974, with the Cypriot Turks, who controlled the entire northeastern portion of Cyprus, about 40 percent of the island. Makarios was then readmitted to Cyprus and reestablished as the nation's president, acknowledging Cypriot Turkish autonomy in the northeast but opposing formal partition of Cyprus into two separate countries.

Czechoslovakia, Invasion of (1968)

PRINCIPAL COMBATANTS: Czech liberals vs. Soviet communist hard-liners

PRINCIPAL THEATER(S): Czechoslovakia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Czech leadership attempted to advance a series of liberal reforms and achieve a degree of autonomy from Soviet domination.

OUTCOME: Despite apparent initial Soviet acceptance of the Czech reforms, the USSR cracked down on the Czechs and militarily forced conformity with traditional Soviet communism.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 600,000 Soviet and Soviet-bloc invaders

CASUALTIES: 70 Czechs killed, several hundred wounded; 71 Soviets killed, 87 wounded, and 85 dead from other causes.

TREATIES: None

Since the end of WORLD WAR II Czechoslovakia had been tightly held within the orbit of the Soviet Union. During the 1960s a period of liberalization slowly began, which accel-

erated with the elevation of Alexander Dubček (1921–92) to the office of first secretary of the Czech Communist Party. Dubček rapidly introduced a series of democratic reforms to Czechoslovakia, including giving free reign to the press, inviting criticism of Czech society and government, establishing cultural and economic relations with the West, and generally attempting to establish a genuinely independent, albeit nominally communist, Czech state. Dubček further promised a new constitution in which individual liberties would figure paramountly. He called it “communism with a new face,” and this period of so much promise was dubbed by participants the “Prague Spring.”

The initial Soviet response to the liberal movement in Czechoslovakia was surprisingly open and amicable. Then, suddenly and without warning, Soviet troops with Soviet-bloc auxiliaries from Bulgaria, Hungary, Poland, and East Germany invaded Czechoslovakia on the night of August 20, 1968, brushing aside the light resistance they

met. Clearly, Soviet premier Leonid Brezhnev (1906–82) and the Kremlin saw the Prague Spring as a threat to their long season of domination over Eastern Europe. Some 600,000 troops, complete with heavy equipment—mostly tanks—rolled through Prague and occupied key points throughout Czechoslovakia. Dubček and the other liberals were arrested, compelled to confess the error of their ways, and forced to resign. The rollback of liberal reforms was completed by the early spring of 1969, and the following year more extensive purges, mass arrests, and even programs of religious persecution swept the country. Hard-line Soviet communism was restored throughout Czechoslovakia and was not lifted until the general collapse of the Soviet Union began in the late 1980s.

D

Dacian War, First (101–102)

PRINCIPAL COMBATANTS: Roman Empire vs. Dacia

PRINCIPAL THEATER(S): Dacia (Romania)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Emperor Trajan sought security for the Roman provinces around the Danube River.

OUTCOME: King Decebalus recognized Rome as overlord of the kingdom of Dacia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

During the reign of the Roman emperor Trajan (53–177), Decebalus (d. c. 107), king of Dacia, threatened the security of Rome's provinces near the Danube River. Emperor Trajan invaded Dacia (Romania) and captured the capital of Sarmizegethusa. Decebalus agreed to become a vassal of Rome. Trajan returned to Rome and ordered a permanent stone bridge to be built across the Danube.

See also DACIAN WAR, SECOND.

Further reading: Dumitru Berciu and Bucar Mitrea, *Duco-Romania* (Geneva: Nagel, 1978).

Dacian War, Second (105–107)

PRINCIPAL COMBATANTS: Roman Empire vs. Dacia

PRINCIPAL THEATER(S): Dacia (Romania)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: King Decebalus sought to drive Roman soldiers from Dacia.

OUTCOME: Emperor Trajan utterly defeated the Dacians and made the region a province of Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

After the First DACIAN WAR, in which Emperor Trajan (53–117) forced King Decebalus (d. c. 107) of Dacia to become a vassal of Rome, Decebalus rose against a Roman garrison and attacked an ally of the empire. Trajan again invaded the kingdom, seized the capital, and hunted down the Dacians who had supported the king. Decebalus then committed suicide. Trajan made Dacia a province of Rome and brought in settlers from Asia Minor and Syria. To commemorate his victory over Dacia, he ordered the building of a stone column with carved relief depicting the Dacian campaign.

Further reading: Dumitru Berciu and Bucar Mitrea, *Duco-Romania* (Geneva: Nagel, 1978).

Dacke's War (Dacke's Rebellion, Småland Uprising) (1542–1543)

PRINCIPAL COMBATANTS: Catholic peasants in southern Sweden vs. forces of King Gustavus I

PRINCIPAL THEATER(S): Småland, a southern province of Sweden

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: The harsh taxation and anti-Catholic policies of Gustavus I

OUTCOME: Although the Swedish king's forces put down the rebellion, the king modified his autocratic rule.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: King Gustavus I organized a cease-fire in November 1543, but when the rebels disbanded the king regrouped and attacked the rebel holdings again in February 1544.

Dacke's War helped moderate the harsh policies of King Gustavus I (1496–1560). The Reformation in Sweden took an interesting turn in 1536, when the Swedish church officially broke with the Catholic Church to form an evangelical Swedish national church. The Swedish church was truly a reformed Catholicism, and the Swedish Reformation appeared to be truly aimed at reforming the policies of the Catholic Church. In 1538, however, Gustavus began to turn to German Lutheranism and its dogma of clerical subjugation to the king. Gustavus's conversion caused a rift between the Lutheran sect and the Swedish reform sect, swiftly degenerating into the violent Reformation tactics prevalent at the time in southern Europe.

Gustavus appointed George Norman superintendent of the Swedish church in 1539 in an attempt to meld the two churches together, but with an emphasis on Lutheranism. Norman imposed the "German period," so-called because of its doctrine and its Teutonic efficiency, ruthlessly enforcing the Reformation policy of the king, carrying out extensive visitations on Catholics, and plundering their churches of valuables. In southern Sweden, a predominantly Catholic region due to its proximity to the old Holy Roman Empire, the Reformation was yet another grievance against the king. Even before Norman's work in the border regions of Småland and Blekinge, the Catholic economy had been bleak because Gustavus's trade policies all but ruined the region's trade with neighboring Denmark.

Under the leadership of a fugitive named Nils Dacke (d. c. 1543) and fomented by the remaining Catholic clergy, Catholics and merchants from Småland rose up against the king and his policies in spring 1542. They murdered the tax collectors and attempted to seize power. To that end they offered their support to Svante Sture (1517–67), a powerful nobleman, to ascend the throne, but he refused, leaving the insurgents temporarily rudderless. They quickly rebounded, however, and defeated the king's forces in the fall. After the victory the rebellion began to spread to the north. Fearing a revolution, Gustavus organized a truce in November 1542. Under the agreement Gustavus would reform the tax code and ease the Catholic persecutions in exchange for a cessation by Dacke and his forces of their attempt to overthrow the monarchy.

As soon as the rebel forces disbanded, however, Gustavus reinforced his own troops in Smaland and sought to destroy the rebels. Dacke reorganized what he could of his army but was crushed in February 1544, presumably dying in action. Gustavus ordered the executions of all the rebel leaders and exacted a harsh punishment on Småland, ordering heavy monetary reparations. However, because of the spread of the uprising to the north, Gustavus was forced to abandon the German edicts and return to the evangelical Swedish church.

Nordstrom, *The History of Sweden* (Westport, Conn.: Greenwood Publishing Group, 2002); Michael Roberts, *The Early Vasas: A History of Sweden, 1523–1611* (Cambridge: Cambridge University Press, 1968); Franklin Daniel Scott, *Sweden: The Nation's History* (Carbondale: Southern Illinois University Press, 1988).

Dahomeyan-French War, First (1889–1890)

PRINCIPAL COMBATANTS: Dahomey tribes vs. France

PRINCIPAL THEATER(S): Coast of West Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Dahomey attacked to forestall further French colonizing of their tribal lands.

OUTCOME: The Dahomey ceded two port cities in exchange for an annual tribute paid to their king.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: France, 31 killed, 106 wounded; Dahomey, unknown

TREATIES: Treaty of 1890

In the rush by the European powers to colonize Africa in the latter half of the 19th century, France and Great Britain—who for centuries had been imperial rivals—were in keen competition not only with each other but also with the newcomers, Germany and Italy. They, along with Spain, Portugal, and Belgium, also old hands at colonizing, each sought to carve themselves off a piece of what was then called the "Dark Continent" for exploitation and profit. Along the way they would occasionally have to fight one another as well as the native Africans, and a host of little wars flickered on the edges of Africa decade in and decade out.

Beginning in 1883 French expansion centered mainly in West Africa along the frontiers of Dahomey (Benin) and in the upper Niger River, where the French conquered the Tukulors and other tribes. In 1885 the British proclaimed control over the lower Niger River region to check further French advances, but by 1889 the two powers signed agreements whereby Britain ceded to France the city of

Cotonou on the coast of Dahomey. The native Dahomeyans, of course, had no say in the matter, and they responded by attacking a French force that landed at Cotonou. Fierce fighting, typical of the African conquests, ensued. The French were fascinated by one remarkable feature of the Dahomeyan army—its female soldiers. To the surprise of the French, these Amazons certainly fought as boldly and (even more surprisingly) as well as the men. However well they fought, neither the warrior women nor their fellow soldiers could forestall the inevitable. In 1890 the Dahomey signed a treaty that ceded Cotonou and another coastal port, Porto-Novo, to the French in exchange for an annual payment to King Behanzin (fl. 1889–94).

Dahomeyan-French War, Second (1892)

PRINCIPAL COMBATANTS: Dahomey “rebels” vs. colonial France

PRINCIPAL THEATER(S): West Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Launching a “punitive” war against the Dahomey king for slave-trading and attacking a French gunboat, the French aimed to annex Dahomey tribal lands.

OUTCOME: The Dahomey were overwhelmed, the king was deposed, Dahomey became a French colony, and sporadic uprisings continued.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: France, 3,600; Dahomey, 10,000 warriors, including 800 Amazons

CASUALTIES: France, 81 killed, 436 wounded; Dahomey, 3,625 killed or wounded

TREATIES: None; Dahomey was annexed officially in 1894

As the European powers scrambled into Africa in the late 1890s and grabbed pieces of the “Dark Continent” to colonize and exploit the native populations, some of them—the British and the French in particular—salved their consciences (and placated their bleeding hearts back home) by abolishing the ages-old African slave trade, which allowed them to claim they were “civilizing” the blacks even as they took their lands, slaughtered native armies, and put them to work in European trades and industries. Such was the case in West Africa, where the French had gained a toehold in the First DAHOMEYAN-

FRENCH WAR at two coastal ports in exchange for annual tribute to the Dahomey king.

The trouble was that King Behanzin (fl. 1889–94) was a slaver, and he saw no reason to suspend his business, grim and evil as it was, in favor of the kind of trade in which the French colonials wished him to engage. He continued to make slave raids into neighboring areas; when he was opposed, he also attacked a French gunboat. Both his nefarious trade and his attack provoked another war with France. In fall 1892 a French-Senegalese army under General Alfred-Amedée Doods (1842–1922) landed in Dahomey and engaged the “rebel” native forces. Doods’s superior numbers and firepower made short work of the Dahomeyans. Behanzin raised and abandoned his capital at Abomey before the French entered it on November 17, 1892. He fled to the north where he held out for a little more than a year. When he surrendered in early 1894 Behanzin was exiled to Martinique in the West Indies while his kingdom was annexed. Though Dahomey became in name a French colony, native resistance would continue through 1899.

Damascene War (280–279 B.C.E.)

PRINCIPAL COMBATANTS: Egypt vs. Syria

PRINCIPAL THEATER(S): Damascus

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Ptolemy II Philadelphus, the second Macedonian king of Egypt, sought to extend his power into Syria.

OUTCOME: Egypt defeated Syria and captured a sizable stretch of territory, ensuring future strife between the Ptolemaic and Seleucid dynasties.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

The Damascene War was the first of a series of struggles between the Syrians and the Macedonian kings of Egypt. Ptolemy II Philadelphus (309–246 B.C.E.), the second Macedonian king of Egypt, did much to increase the power and beauty of his kingdom. He developed agriculture and commerce and made Alexandria a leading center of the arts and sciences. Some of his expansion he accomplished by skillful diplomacy, but he also took advantage

of rival kingdoms who were having political and military difficulties, such as the Seleucids and Antigonids, to extend his rule into Syria, Asia Minor, and the Aegean. He also asserted his influence in Ethiopia and Arabia. Long envious of the Seleucid kings of Syria, he attacked Damascus, their capital city, in 280 B.C.E., and all but destroyed the Syrians under King Antiochus I Soter (324–261 B.C.E.). The loss of a wide expanse of territory to the Egyptians virtually ensured the continuation of such wranglings in the First SYRIAN-EGYPTIAN WAR, which is also known as the Seleucid War.

Danish Civil War (1137–1157)

PRINCIPAL COMBATANTS: The three pretenders to the throne of Denmark, Canute V, Sweyn III, and Waldemar I, and their various German allies, Conrad III and Frederick Barbarossa

PRINCIPAL THEATER(S): Denmark

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: When Erik II died without heirs, the path to power in Denmark lay open for the three major aspirants, who fought each other in various combinations.

OUTCOME: After a modus vivendi had been reached dividing the kingdom among the three, Sweyn had Canute assassinated only to fall to an attack from Waldemar, who became the uncontested king.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

At the beginning of the 11th century, Denmark had been one of the leading powers of northern and western Europe, and by the close of the 12th century it would be so again. In between, however, the country was much weakened by overextended conquests, wars with neighboring states, and dynastic struggles, which on occasion brought Denmark to the verge of disintegration. None of those events was more destructive than the dynastic struggles that followed the death of Danish king Erik II Emune (d. 1137).

The problem stemmed from the fact that Erik II died without heirs. As three princes laid claim to the throne, disunity threatened Denmark, and its political and social life became chaos. Canute V (d. 1157) and Sweyn III (d. 1157) were each elected king in different regions of the country, which spawned a civil war. The third claimant, Waldemar (1131–82), then allied himself with Sweyn, driving Canute to seek aid from German king Conrad III (1093–1152) in order to keep fighting the war. Conrad's

nephew Frederick Barbarossa (c. 1123–90), who would later become the Holy Roman Emperor, intervened basically on Sweyn's side, granting him the crown and sending Canute off to rule Zealand (Sjælland) under Sweyn's reign. The settlement that grew out of Barbarossa's meddling pleased none of the pretenders, but Waldemar preserved a precarious peace when he persuaded Canute to accept lands in Jutland and Skåne (in extreme southern Sweden) rather than Zealand. But Sweyn's subsequently harsh rule was something Waldemar could not mend, and the dynastic struggle began again, this time leading to a division of the Danish kingdom among all three claimants. When they met to celebrate the peace, Sweyn attempted to assassinate his co-rulers, and he succeeded in having Canute murdered. Waldemar escaped and took up arms against Sweyn, who he defeated and had put to death in Jutland near Viborg in 1157. As the now undisputed king of Denmark, Waldemar would lead the country once again to glory, earning for himself the title of Waldemar I the Great.

Danish-Estonian War (1219–1227)

PRINCIPAL COMBATANTS: Denmark vs. Estonia (with Russian allies)

PRINCIPAL THEATER(S): Estonia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Denmark wanted to gain sovereignty over Estonia and to enforce Catholic Christianity there.

OUTCOME: For seven years Denmark managed to maintain sovereignty over the region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Religious divisions developed in Livonia (Estonia and part of Latvia) after the Christianization of the south. In response Denmark's King Waldemar II (1170–1241) consolidated the support of the Christian Livonian Knights of the Sword and the bishop of Riga to launch a holy war against Estonians whose allegiance was to Russia's Greek Christian Church.

The Danish monarch sailed his forces across the Baltic Sea to Reval (Tallinn). Seeing that they were greatly outnumbered, the Estonian-Russian forces entered into peace negotiations in an effort to stall for time until reinforcements could arrive. Once they had attained sufficient strength, the Estonians launched a surprise attack, driving the Danes back. Waldemar, in turn, gathered German reinforcements and launched a counteroffensive, crushing the Estonian-Russian forces in 1219. He took Reval and burned it, then built a fortress on the site, garrisoning it with troops whose mission was to enforce the conversion to Catholic Christianity.

In 1223 Waldemar was taken prisoner by one of his north German vassals and held for two years before buying his freedom with the promise to give up all his conquests but Estonia proper and nearby Rügen, only to lose these, too, in 1227 to the Germans when he was defeated at the Battle of Bornhoved. The following year he did regain sovereignty over the region through an agreement with the Brothers of the Sword (Livonian Knights).

Danish-Prussian War (Schleswig-Holstein War) (1864)

PRINCIPAL COMBATANTS: Denmark (with Swedish and British military allies) vs. Prussia (with Austrian allies)

PRINCIPAL THEATER(S): Schleswig-Holstein

DECLARATION: Prussia on Denmark, 1864

MAJOR ISSUES AND OBJECTIVES: Control of Schleswig-Holstein

OUTCOME: The Prussians and Austrians gained possession of the duchies.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Danish forces, 47,389; Prussian forces, 63,500; Austrian forces, 20,000

CASUALTIES: Denmark, 1,435 killed, 808 missing and presumed dead, 690 died of disease, 3,159 wounded, 1,181 missing; Prussia, 738 killed, 310 died of disease, 1,581 wounded, 104 missing; Austria, 227 killed, 812 wounded, 61 missing

TREATIES: Treaty of Gastein, 1865

In the mid-19th century Denmark's national aspirations were aroused (and thwarted) by the conflict with Germany over what had become known as the Schleswig-Holstein question. Having lost Norway, the Danish monarchy

held dearly to the duchies of Schleswig and Holstein as two of the three pillars of its kingdom of Denmark, this despite the fact that the majority of Holstein's people were German, both culturally and linguistically, and that Schleswig was divided between a Danish-speaking and a German-speaking population. It was when the German liberals in Schleswig began speaking out against autocratic rule and demanding a separate constitution and an affiliation to Holstein and the German Confederation that a Danish National Liberal movement also emerged. These Danish nationalists demanded that Schleswig be incorporated into Denmark. In 1848, when Denmark's National Liberal government officially adopted this policy (known as the Eider Policy after the Eider River that formed the southern boundary of Schleswig), the Schleswig-Holsteiners took up arms (see SCHLESWIG-HOLSTEIN REVOLT [1848]). Backed by the Prussian military, the rebellion proved too much for the Danish army, even with aid from Sweden. The negotiated end of the revolt, while reaffirming Danish rights to Schleswig-Holstein, also forced Denmark to pledge that it would not attempt to tie Schleswig closer to itself than to Holstein, which in effect meant that Denmark had to abandon the Eider Policy. Finally, Denmark agreed that the constitution adopted by the Danes in June 1849 was to apply only to itself, leaving the future of the two duchies in a political limbo the Prussians clearly hoped one day to change.

That day came early in 1864, when Prussian troops under Prince Frederick Charles (1828–85), in cooperation with an Austrian force, once again invaded Schleswig-Holstein. The Danes' position was hopeless. Though they mobilized some 70,000 men, only 48,000 were ever in the field at one time. Meanwhile, Prussia could commit nearly 64,000 and Austria 20,000. Thus, it was no surprise that the invasion force met with little resistance, nor that by August 1, 1864, Denmark had sued for peace, relinquishing its rights to the duchies. By the Treaty of Gastein, concluded in 1865, Schleswig and Holstein were put under joint Prussian-Austrian rule. Subsequently, Prussia's prime minister, Otto von Bismarck (1815–98), provoked the SEVEN WEEKS' WAR in order to wrest administration of Schleswig from Austria.

Danish-Swedish War (1497–1500)

PRINCIPAL COMBATANTS: Denmark vs. Sweden

PRINCIPAL THEATER(S): Sweden

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Denmark's King John I attempted to assert his right to rule over Denmark, Norway, and Sweden in accordance with the Kalmar Union; he was opposed by Sweden under the Swedish elder Sten Sture.

OUTCOME: Sweden was defeated, John was crowned king of the three countries, and reconciliation was achieved with Sture.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Agreement with Sten Sture, 1500

The election of John I (1455–1513) as king of Denmark also made him king of Norway and Sweden in accordance with the terms of the Kalmar Union, by which the three countries combined their thrones. Norway readily accepted John, who wanted to reduce the power of the nobility and create a strong popular monarchy, but he was repudiated by the Swedish administrator Sten Sture the Elder (c. 1440–1503). In response, John invaded Sweden in 1497 and seized the union's capital, Kalmar. Sture besieged Uppsala, the city in which Swedish kings were traditionally crowned. His forces also checked John, who was moving against Stockholm.

In the meantime, the Danes fought and defeated Sture's Dalecarlian reinforcements before they could join his main force, and Sture surrendered. He accepted an offer of control of Finland and the Bothnias (territory surrounding the Gulf of Bothnia). The way was now clear for the coronation of John as king of the three countries. As an added diplomatic measure, the new king named Sture grand master of the kingdom.

Danish-Swedish War (1501–1512)

PRINCIPAL COMBATANTS: Denmark vs. Sweden

PRINCIPAL THEATER(S): Denmark

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Swedish rebels allied with Lübeck and the Hanseatic League fought for Sweden's independence from the Kalmar Union and the rule of the Danish king John I.

OUTCOME: After 12 years of fighting, the "rebellion" was suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Treaty among Lübeck, the Hanseatic League, and Denmark, 1512

As Sweden's regent after 1470, Sten Sture the Elder (c. 1440–1503) had reduced the German influence over Swedish municipalities and strengthened Sweden's legal institutions. Though he had been unable to prevent Sweden's state council from accepting the Danish king John I (1455–1513) as king of Sweden (and thus the Kalmar Union, under which the thrones of Denmark, Sweden, and Norway were united), he had managed to delay it until 1483. Sten Sture's influence in Sweden continued when he became grand master of the kingdom following the DANISH-SWEDISH WAR (1497–1500). To undermine his standing, John's son Christian (1481–1559) and others spread rumors of a scheme hatched by Sten Sture to topple John and usurp the Kalmar throne. King John summoned Sten Sture to explain the rumors, whereupon the wily grand master showed up with a large armed guard. This display sent John scurrying to his Swedish stronghold and thence to Denmark. John left 1,000 troops to guard the Swedish citadel and his queen.

Sten Sture assembled allies from Lübeck and other Hanseatic ports and gathered a substantial force of Swedish troops as well. He took the town of Örebro, then laid siege to Stockholm. With John's 1,000 troops outmatched, his queen surrendered, and Sten Sture's Swedish forces captured all the major Swedish cities except for Kalmar and Borgholm, which were still held by John.

Emboldened by Sture's actions, southern Norway allied itself with Sweden in 1502. However, Christian brutally punished the Norwegian rebels he captured, thereby intimidating all of Norway back into submission. This accomplished, Christian led a Danish force into Sweden and quickly captured two fortresses in Västergötland, ruthlessly killing their defenders. Before Christian could confront Sture, he died (1503), and his successor, Svante Nilsson Sture (c. 1460–1512), failed in his attempt to capture Kalmar and Borgholm. In the meantime, John convened a tribunal, which proclaimed the Swedish rebels traitors, whereupon Holy Roman Emperor Maximilian I (1459–1519) ruled that rendering aid to the Swedes was treason against the empire. This decree notwithstanding, the Hanseatic towns continued to aid Sweden in sporadic warfare against Denmark.

In large part due to dissension over aid to Sweden, the Hanseatic League became torn with internal dissension, and fitful warfare broke out during 1509–11 among Lübeck, various of the Hanseatic towns, and Denmark. At last, in 1512 Lübeck and the Hanseatic League signed a peace agreement that ended their support for Sweden. With this, the war ended.

Danish-Swedish War (Scandinavian Seven Years' War) (1563–1570)

PRINCIPAL COMBATANTS: Denmark vs. Sweden

PRINCIPAL THEATER(S): Sweden and Danish Norway

DECLARATION: Sweden on Denmark, 1563

MAJOR ISSUES AND OBJECTIVES: War was triggered over a series of Danish insults to Sweden, including Denmark's use of the Swedish coat of arms as part of its own coat of arms.

OUTCOME: The war produced few lasting gains for either side except for minor territorial gains on the part of Denmark and the right to incorporate the Swedish triple-crown device into its coat of arms.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Sweden, 1,263 killed, 608 wounded, 100 captured; Denmark, 2,600 killed or wounded, 500 captured

TREATIES: Treaty of Stettin, 1570

The cause of the war was the insistence of Denmark's King Frederick II (1534–88) on using Sweden's coat of arms on his shield. Defiantly, in response, the Swedish king Erik XIV (1533–77) took the Danish arms into his shield. Next, Frederick further provoked Sweden by arresting three of its ambassadors and harassing Swedish shipping.

The proverbial last straw came when Frederick intercepted a love letter Erik sent to Queen Elizabeth I (1533–1603) of England—who he had unsuccessfully sought to wed. Erik declared war. In what many military historians see as the first significant warfare between sailing fleets, the Baltic rivals fought seven major sea battles between 1563 and 1566. Off Bornholm on May 21, 1563, the Swedish squadron of 8 ships with some 500 guns, commanded by Admiral Jakob Bagge (1502–77), forced the surrender of Danish admiral Jacob Brokenhaus's (1521–77) 81-gun Danish flagship, *Hercules*, and two frigates after four hours of fighting. A year later off Öland on May 30, 1564, Bagge's 23-ship fleet ran across a combined Danish-Lübeck flotilla of 35, and in two days of fighting the Swedes lost their 173-gun flagship, *Mars*, a massive warship, and took on many casualties, while the Danish-Lübeck force fared better, losing one ship and suf-

fering damage to six others but with lighter casualties. The greatest battle afloat, however, took place between Bornholm and Rügen on July 7, 1565, when Danish casualties under Admiral Otto Rud (1520–65) totaled some 2,200 killed and 500 captured on his 36 ships as opposed to Swedish losses of 762 crewmen killed and 608 wounded on the 49 warships of Admiral Klas Horn (c. 1518–66). The Danes lost their 90-gun flagship, *Jegermeister*. Sweden had one ship sunk and lost another, *Gyllende Lejon*, to fire, but Admiral Horn (who was killed later in the war) celebrated a major victory.

On land the war was by contrast unremarkable. To Frederick's side came the nobility of Holstein, Schleswig, and Lübeck. Their forces united at Halland in southwestern Sweden and laid siege against Elfsborg (Älvsborg). In the meantime, Erik's army moved into the Danish province of Skåne in southern Sweden. The Swedes also quickly captured territory in Norway, which was under Danish rule. However, they lost these lands in subsequent battles. The same held true of the Danes, who soon were forced to relinquish their acquisitions.

By 1568 both sides were exhausted, and when they concluded the Treaty of Stettin in 1570, the status quo ante bellum was, for the most part, restored (except that Sweden gave to Denmark Gotland and Elfsborg in addition to a reparation payment). They did, however, manage to settle the dispute over the royal insignia. Denmark was permitted to use Sweden's arms, at least for the time being, whereas Sweden was barred from incorporating the Danish or Norwegian arms in its crest.

Danish-Swedish War (1643–1645)

PRINCIPAL COMBATANTS: Denmark vs. Sweden (with Dutch allies)

PRINCIPAL THEATER(S): Denmark

DECLARATION: Sweden on Denmark, 1643

MAJOR ISSUES AND OBJECTIVES: Denmark feared Swedish domination of the Baltic.

OUTCOME: Sweden made territorial and economic gains.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Bromsebro, 1645

Denmark's King Christian IV (1577–1648) had intervened in the THIRTY YEARS' WAR not only to support the Protestant

faith he practiced but also to secure a strong presence in Germany as a foil to Swedish expansion. Instead, he was soundly defeated in 1626 (see DANISH WAR [1625–1629]).

By contrast, Sweden continued to triumph during the course of the long and sporadic war, causing Christian much anxiety and no little envy. He concluded a hasty alliance with Holy Roman Emperor Ferdinand III (1608–57), which in turn prompted the Swedes to send troops under Lennart Torstensson (1603–51) into the Baltic region, where they took Schleswig-Holstein and Jutland.

The Danes dispatched a naval force, defeating a Swedish and Dutch fleet on July 1, 1644, then bottling up the entire Swedish fleet in Kiel Bay. Within a short time, however, Dutch and Swedish vessels were able to sink 17 Danish ships near Lolland, Denmark, and the land invasion of Denmark proceeded rapidly. His country overrun, Christian had no choice but to sign the harsh Peace of Bromsebro in 1645, by which he ceded to Sweden the two Baltic islands of Gotland and Oesel as well as some Norwegian territory. Denmark also exempted Swedish-bound goods from shipping tolls through the Øresund.

See also DANISH-SWEDISH WAR (1675–1679).

Danish-Swedish War (Scanian War) (1675–1679)

PRINCIPAL COMBATANTS: Denmark (with Brandenburg allies) vs. Sweden

PRINCIPAL THEATER(S): Skåne, in southwest Sweden

DECLARATION: Denmark on Sweden, 1675

MAJOR ISSUES AND OBJECTIVES: The Danes wanted to recover the province of Skåne, lost in the First Northern War.

OUTCOME: Despite brilliant naval victories, the Danes failed to recover Skåne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At sea, 6,500 Danes, 9,000 Swedes. On land, 11,000 Danes, 8,000 Swedes.

CASUALTIES: Unknown

TREATIES: Treaty of Lund, 1679

King Charles XI (1655–97) of Sweden fought alongside King Louis XIV (1638–1715) of France during the Third DUTCH WAR. Seeing an opportunity to recover Skåne, a

former Danish province in southern Sweden, which had been lost in the First NORTHERN WAR, Denmark's king Christian V (1646–99) entered the ongoing war by allying with the Dutch and invading Skåne in 1675.

A Danish fleet commanded by Admiral Niels Juel (1629–97) dealt the Swedish navy a severe blow at the Battle of Jasmund, off Rügen, on May 25, 1676. He pitted his 15 Danish and 10 Dutch battleships and their 1,727 guns against Sweden's 27 battleships and 10 frigates mounting 2,184 cannons. Sweden lost three of its big ships (among them the 126-gun *Kronan* and 801 of its 842-man crew and the 94-gun *Svard* and 619 of its 670-man crew). On June 11, 1677, Juel, commanding 11 ships, captured five of seven ships sent against him by the Swedes, and on July 1 he won his greatest victory in Kiøge Bay off Copenhagen when, commanding 19 capital ships, six frigates, and three fireships, he killed or wounded 1,500 Swedish sailors and captured 3,000 more along with the seven battleships he took and the three others he sank from a Swedish fleet of 25 capital ships, 11 frigates, and six fireships.

On land, however, it was the Swedes who triumphed. Charles repeatedly bested the Danes and their Brandenburg allies during 1676–78, including a battle at Skåne in 1676. At Lund in December Charles led 8,000 Swedes against the 11,000 Danes under Christian and won a bloody victory that cost Denmark 5,000 men and Sweden 3,000, half of them killed in action. At last, the Treaty of Lund was concluded, restoring the status quo ante bellum. Skåne remained a Swedish territory.

Further reading: Ingvar Andersson, *A History of Sweden* (Westport, Conn.: Greenwood Publishing Group, 1975); John Henry Stopford Birch, *Denmark in History* (Westport, Conn.: Greenwood Press, 1975); Byron J. Nordstrom, *The History of Sweden* (Westport, Conn.: Greenwood Publishing Group, 2002); Stewart P. Oakley, *A Short History of Denmark* (New York: Praeger, 1972).

Danish War (1625–1629)

PRINCIPAL COMBATANTS: Denmark vs. Holy Roman Empire (Hapsburg, Austria)

PRINCIPAL THEATER(S): Baltic coastal region

DECLARATION: Denmark on Holy Roman Empire

MAJOR ISSUES AND OBJECTIVES: Retaliation for the disruption of Danish toll collection

OUTCOME: Denmark was repeatedly defeated, resulting in its submission to the Holy Roman Empire in return for a guarantee of the sovereignty of its territories.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Battle of Lutter: Denmark, 18,000; Holy Roman Empire, 20,000

CASUALTIES: Battle of Lutter: 4,000 Danes killed, 2,000 captured; Hapsburg casualties much lower

TREATIES: Treaty of Lübeck, 1629

This conflict was spawned by the THIRTY YEARS' WAR, during which the Hapsburg Austrians disrupted Denmark's toll collection from ships passing to and from the Baltic Sea. Seeking to establish a foothold in Germany from which to check Swedish ambitions, Protestant King Christian IV (1577–1648) of Denmark decided to attack the forces of the Holy Roman Empire, which was dominated by the Hapsburgs. He attempted but failed to secure an alliance with Holland and Britain. Lacking allies, his army was badly beaten at the Battle of Lutter during August 24–27, 1626, by Holy Roman troops under the brilliant general Johan, count of Tilly (1559–1632). The disastrous battle resulted in the loss of half of Christian's men. The defeat, combined with one suffered at the Battle of Dessau on April 25, 1626, by Danish-German forces, combined with yet another rout at the hands of Count Albrecht von Wallenstein (1583–1634) in the Battle of Wolgast on September 8, 1628, forced Denmark to break off the war. The Danes did succeed in defending a siege against Stralsund on the Baltic coast in 1628, but by the Treaty of Lübeck (June 7, 1629), Christian pledged not to meddle in German affairs and was guaranteed the sovereignty of his lands in return.

TREATIES: None

With Denmark torn by the DANISH CIVIL WAR of 1137–1157, the country was vulnerable to the depredations of the Wends, pagan Slavs who inhabited the island of Rügen in the Baltic Sea, off the German coast. Their prey was Danish (and German) shipping, which they pirated.

Despite the demands of the civil war, King Waldemar I the Great (1131–82) of Denmark set out to subdue the Wends. Acknowledging the Hohenstaufen emperor Frederick I Barbarossa (c. 1125–90) as his overlord, Waldemar joined forces with Henry the Lion (1129–95), duke of Sax-

ony, and Albert the Bear (c. 1100–70), margrave of Brandenburg, both of whom had been unsuccessfully battling the Wends since 1147. With the blessing of the church, an army was dispatched under Absalon (1128–1201), a famed Danish commander, and the bishop of Roskilde (later bishop of Lund). The Danes laid siege to the Wend fortress at Arkona on Rügen. In 1168 the fortress fell, and the Wends surrendered. The Danes immediately set about forcibly converting the Wends to Christianity, demolishing their pagan idols and temples.

Danish War with Holstein (1348)

PRINCIPAL COMBATANTS: Denmark vs. Holstein

PRINCIPAL THEATER(S): Funen (Fyn) Island and the Jutland Peninsula

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Denmark wanted to gain control of Funen Island.

OUTCOME: The Danes prevailed, recovering Funen as well as gaining control of the Jutland Peninsula.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Nebbegaard, 1348

King Waldemar IV (c. 1320–75) of Denmark wanted to unite his fractious Danish kingdom and moved to regain control of Funen (Fyn) Island, which was held by Holstein (a duchy in northwestern Germany) as collateral on a Danish debt. Waldemar's initial assaults were legal in nature—and partly successful. In 1348 the Holstein courts offered Waldemar the Treaty of Nebbegaard, whereby he recovered half of Funen and was provided favorable terms for recovering the other half. However, the treaty soon fell into dispute, and Waldemar took up arms, capturing Gamborg Castle. Holstein yielded Funen to Denmark, which also gained control of the Jutland Peninsula. The unhappy nobility of Holstein, however, would aid the Jutland magnates in a revolt in 1350, marking the first in a series of uprisings against the formidable power wielded by Waldemar.

Danish War with the Hanseatic League, First (1361–1363)

PRINCIPAL COMBATANTS: Denmark vs. the Hanseatic League

PRINCIPAL THEATER(S): Skåne (in southern Sweden) and Denmark

DECLARATION: Hanseatic League on Denmark, 1361

MAJOR ISSUES AND OBJECTIVES: The Hanseatic League wanted Denmark to relinquish Skåne to Sweden.

OUTCOME: The league failed in its objective, and Denmark forced it to curtail its trade privileges.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of 1363

Intent on recovering Skåne, Danish lands lost to Sweden, King Waldemar IV (c. 1320–75) seized on Sweden's preoccupation with dissension in Norway (then under its control) to make an assault on Skåne in 1360. The Danes seized the territory and were attacked by a Swedish peasant army at Gotland in 1361. The Danes defeated the force and proceeded to conquer the important city of Wisby (Visby), a center of Swedish Hanseatic trade. In response the Hanseatic League—a coalition of European trading partners—joined Sweden as well as Mecklenburg and Holstein to oppose the Danish conquests. So began the First Danish War with the Hanseatic League.

The league typically used bribes to foreign leaders to protect its commercial interests, and when these proved inadequate, it might resort to embargoes or blockades. But only in extreme cases would it engage in organized warfare, and this was one. Hanseatic forces overran and sacked Copenhagen, but King Waldemar's artillery managed to turn back the Hanseatic fleet at the Battle of Helsingborg in 1362, and the league bowed to peace terms in 1363, sharply curtailing its trade privileges. Waldemar also took the diplomatic step of marrying his daughter to King Haakon VI (1339–80) of Norway in 1365 in order to cement relations between Denmark and Norway.

Danish War with the Hanseatic League, Second (1367–1370)

PRINCIPAL COMBATANTS: Denmark (with Brandenburg, Brunswick, and Pomerania) vs. Hanseatic League (with Sweden, Mecklenburg, Holstein, and Danish dissidents)

PRINCIPAL THEATER(S): Denmark

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The league wanted to recover trading rights lost in the First Danish War with the Hanseatic League.

OUTCOME: The League recovered its rights.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Stralsund, 1370

Grown restive under the trade restrictions imposed after the FIRST DANISH WAR WITH THE HANSEATIC LEAGUE, the league in 1367 gathered as allies Sweden, Mecklenburg, Holstein, and even certain dissident Danish nobles. The alliance attacked while Denmark's King Waldemar IV (c. 1320–75) was preoccupied with internal civil strife. Waldemar precipitously fled to Germany, leaving his privy council in charge. He recruited a number of allies—Brunswick, Brandenburg, and Pomerania—and launched an attack on the league's forces from the rear. Despite this aid, Denmark suffered a series of defeats and signed the Peace of Stralsund in 1370, whereby the Hanseatic League recovered its broad trade rights and privileges, and, thus, its supremacy in the Baltic. Waldemar was given safe conduct back to Denmark, which he had to open to the Hanseatic League's trade. Over the next 30 years, the league would claim a membership of about 100 towns, most of them German, and though basically a mercantile association, it would attempt to maintain order at home among its members and security abroad for them.

Oakley, *A Short History of Denmark* (New York: Praeger, 1972); Bent Rying, *Danish in the South and North* (Copenhagen: Royal Danish Ministry of Foreign Affairs, 1981).

D'Annunzio's War (1919–1920)

PRINCIPAL COMBATANTS: Gabriele D'Annunzio vs. Italian government

PRINCIPAL THEATER(S): Fiume (Rijeka)

DECLARATION: November 12, 1920, D'Annunzio on Italy

MAJOR ISSUES AND OBJECTIVES: D'Annunzio sought to claim Fiume, in dispute between Yugoslavia and Italy, for Italy.

OUTCOME: D'Annunzio held Fiume for a year and a half but fled under Italian bombardment of the city.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

D'Annunzio led an army of 1,000 to Fiume; his occupation force numbered 8,000

CASUALTIES: D'Annunzio's forces, 53 killed

TREATIES: Two treaties bear on the war, the Treaty of London (1915) and the Treaty of Rapallo (1920), but no formal treaty ended D'Annunzio's occupation of Fiume.

Following the conclusion of WORLD WAR I, both Italy and Yugoslavia laid claim to the Dalmatian port city of Fiume (Rijeka), which the Treaty of London, concluded secretly in 1915, assigned to Yugoslavia. Negotiations over Fiume dragged on, wearing thin the patience of certain Italian nationalists, prominent among whom was the poet, novelist, and self-styled soldier Gabriele D'Annunzio (1863–1938). He gathered about him a band of filibusters, who marched against Fiume, “liberating” (that is, seizing) it on September 12, 1919.

D'Annunzio set himself up as dictator of the city-state, his rule enforced by a black-shirted army (whose uniforms inspired those of the Fascists under Benito Mussolini [1883–1945]). Although D'Annunzio claimed that he had taken Fiume on behalf of Italy, the Italian government opposed him and his action, as did the other European states. Ignoring his rule there, Italy and Yugoslavia concluded the Treaty of Rapallo (November 12, 1920), by which Fiume became a free state. At this, D'Annunzio declared war on Italy. The combat, however, was brief. His forces fled when Italian vessels bombarded the city on December 27, 1920.

Following D'Annunzio's departure, Fiume was rocked with dissent and violence. A 1922 fascist coup overthrew the government, and Italian troops were brought in to restore order. Mussolini, who originally embraced (if at a distance) the flamboyant but popular D'Annunzio, ultimately placed him under a kind of unofficial house arrest to keep him from causing more mischief. The Italians remained as occupiers through part of WORLD WAR II. In 1947 Fiume was at last awarded to Yugoslavia.

David's Wars of Conquest, King (1010–973 B.C.E.)

PRINCIPAL COMBATANTS: David vs. (variously) Philistines, Ammonites, rebels led by his son Absalom, and rebels led by the king of Seba

PRINCIPAL THEATER(S): Jerusalem, Syria, and environs

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: David sought to unite the Jews under his rule and to defeat and conquer all external enemies.

OUTCOME: David was remarkably successful in defeating external as well as internal enemies.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Unknown

Little is known about King David's (d. c. 962 B.C.E.) successful wars of conquest beyond their general contours. He began by defeating the Philistines, then recruited from among their number sufficient soldiers to make up a sizable fraction of his own army. Backed by this augmented force, David reunited the fractious Jews, then went on to conquer Palestine. It is clear that he also came to dominate most of Syria.

David defeated all the Jews' external enemies, including the Ammonites. According to the Old Testament, it was during this war, while his army was in the field, that David committed adultery with Bethsabee (or Bathsheba) and brought about, indirectly, the assassination of Urias (or Uriah), her husband.

Although he prevailed against external enemies, David was assailed by his own rebellious son Absalom (fl. c. 1020 B.C.E.), who he exiled for three years, then recalled, but kept in disfavor for two more years before restoring him to his former dignity. Outraged by his father's treatment, Absalom spent the next four years undermining David's authority among the people, at last proclaiming himself king at Hebron. Taken by surprise, David fled Jerusalem. Absalom, however, made the strategically fatal error of delaying the pursuit of his retreating father. The delay made it possible for David to muster his forces and defeat the rebels at the Battle of Manahaim, where Absalom was slain. Although he returned to Jerusalem in triumph, David was soon confronted by another rebellion under the king of Seba at the Jordan River, which, however, he quickly suppressed.

Deccan Revolt See AURANGZEB, WARS OF; MOGUL CIVIL WAR (1657–1659).

Decembrists' Uprising (1825)

PRINCIPAL COMBATANTS: A group of dissident military men (the “Decembrists”) vs. the government of Czar Nicholas I

PRINCIPAL THEATER(S): St. Petersburg, Russia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Decembrists sought to incite revolt by refusing to pledge allegiance to the new czar.

OUTCOME: The rebellion was quickly crushed, though its symbolic significance survived to kindle a tradition of revolution in Russia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: About 80 revolutionary troops and civilians; five Decembrist leaders were subsequently executed.

TREATIES: None

The Decembrists, members of Russia's first significant revolutionary movement, attempted and failed to overthrow the government of Czar Nicholas I (1796–1855) in December 1825. Most of the revolutionaries were young upper-class army officers, a diverse group who sought varying degrees of representative government. The more extreme among them wanted to abolish serfdom as well. Some had participated in the Russian occupation of France after the NAPOLEONIC WARS or served elsewhere in Europe; a few had been Freemasons; others were members of secret patriotic and, later, revolutionary societies in Russia (the Union of Salvation, the Union of Welfare, the Northern Society, the Southern Society); all had been influenced by the radicalism of the Napoleonic era.

Following the death of Czar Alexander I (1777–1825) on December 1, 1825, a dispute arose over who would succeed him. The Decembrists (as they would now come to be known) pledged the troops garrisoned in St. Petersburg, troops they controlled, to Alexander's older brother, Constantine (1779–1831), who they felt favored a constitution. They were unaware, however, that Constantine had secretly renounced his rights to the throne in favor of his younger brother, Nicholas. But Constantine delayed a public announcement of the arrangement, and Nicholas, therefore, hesitated to take the throne. During the resulting confusion, an antigovernment plot of the Northern Society became known. It persuaded some troops in St. Petersburg to refuse to take a loyalty oath to Nicholas I when he at last ascended the throne. Without a real plan, three regiments of St. Petersburg troops gathered in Senate Square (renamed Decembrist Square after the BOLSHEVIK REVOLUTION [1917]) on December 26 and defiantly refused to pledge allegiance to Nicholas.

The Decembrist rebels, however, had arrived too late in Senate Square to stop Russian government officials from taking the oath of allegiance to the new czar. Still, the Decembrists refused to disperse and refused to vow allegiance to Nicholas I. They were joined by civilians, who hurled stones at the loyal officials. Government forces fired on the Decembrists and their civilian adherents, using artillery loaded with grapeshot. After an hour

of combat, the rebels dispersed. Colonel Prince Sergei Trubetsky, who was to be the provisional dictator, fled immediately.

The nation tottered on the brink of all-out revolution as a military uprising brewed in the south, where the Cherignigov regiment staged an insurrection. However, Paul Pestel (1794–1826), leader of an important Kievan rebel group, was quickly captured, and the military uprising was crushed by January 15, 1826. Without effective leadership or military coordination, civilian support for the Decembrists soon collapsed.

Czar Nicholas I launched an extensive investigation in which he personally participated that resulted in the trial of 289 Decembrists, the execution of five of them, the imprisonment of 31 others, and the banishment of the rest to the dreaded wastes of Siberia. Despite its lack of direction, quick suppression, and grim consequences for its leaders, the Decembrist Uprising became a significant symbol in Russian history. The Decembrists' martyrdom inspired generations of dissidents and gave rise to a strong revolutionary tradition in czarist Russia that would culminate in the revolutions of 1917 and the fall of the czars.

Delhi Massacre See PERSIAN INVASION OF MOGUL INDIA.

Delhi Sultanate Raids in South India (1307–1313)

PRINCIPAL COMBATANTS: Delhi vs. the Deccan region of India

PRINCIPAL THEATER(S): The Deccan region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The sultan of Delhi wanted to gain control of the riches in the Deccan.

OUTCOME: The sultan retained control of the Deccan until the middle of the 14th century.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Upon assuming power as the second Khalji dynasty sultan of Delhi in 1296, Ala-ud-Din (fl. 1296–1316) became increasingly interested in the riches of south India. The Muslim sultan and his slave-general Malik Kafur (d. 1316) entered the Deccan region in 1307 during a mission not only to collect tribute but to plunder the treasures of the

Yadavas. Successful in their conquest of Deogir, the pair made the ruler of the Deccan region a vassal of Delhi. Two years later, in 1309, the sultan undertook another raid and captured Warangal. From there the campaign proceeded to the south and took control of the Hoysala and Madurai. The sultan's army reached the coast opposite Ceylon. Only Orissa remained beyond the sultan's reach. More interested in collecting tribute and carting off treasures than in imposing a new regime on the local populace, the sultan did not depose local administrators. Instead, he installed tribute collectors, and when a locality refused to pay, retribution was swift. In 1313 the Devagiri ruler was deposed after the sultan's raiders swept through the area when tribute was not made. The sultan retained control of the Deccan until the middle of the 14th century.

Delhi Sultanate Wars with Ghazna and Ghur (1208–1228)

PRINCIPAL COMBATANTS: Delhi vs. Ghazna and Ghur (Afghanistan)

PRINCIPAL THEATER(S): Northern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Iltutmish sought to strengthen his control in northern India and to gain power over the Punjab region of southern India.

OUTCOME: Iltutmish gained control of the Punjab for the Delhi Sultanate.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 1206 Muhammad of Ghur (d. 1206), one of the founders of Muslim rule in India, was assassinated in Lahore. He was succeeded by his slave lieutenant, Qutb-ud-Din (d. 1210), founder of the so-called slave dynasty, who took the name Aibak. Upon Aibak's death in 1210, the Turkish general Iltutmish (fl. 1211–36) came to power. He extended the control of the sultanate to all of northern India. Delhi was the sultanate's primary capital. Ghur (Ghowr, Afghanistan) was the secondary capital. Although Iltutmish had been successful in gaining the throne and

extending the reach of the sultanate, rivals continually challenged his succession. In 1208 he defeated a slave general at Ghazna in present-day Afghanistan. In addition to these rivalries, Iltutmish faced unrest between the Ghurids and the Khwārizm-shah dynasty over control of Khwārizm. In India he subjugated the Hindu chiefs. In 1215, when Tah-ud-din Yldiz (d. 1215) was driven from Ghazna by Khwārizm forces, Iltutmish defeated him at Tarain in the Punjab. War then broke out between the Mongols and Persia, and Khwārizm refugees poured into Iltutmish's sultanate. In 1221 the Mongol warrior Genghis Khan (c. 1167–1227) chased the Khwārizm prince Jalal-ad-Din (d. 1231) into the Punjab, but Iltutmish refused to offer him asylum. He pursued the prince through the Indus valley and then westward into Persia. Genghis Khan, still chasing Jalal-ad-Din, made forays into the Punjab, but through diplomacy Iltutmish forced him to withdraw. Iltutmish used to his advantage the chaos created by Jalal-ad-Din in Lahore and Multan and managed to wrest control of the Punjab from Nasir-ud-Din Qabacha (fl. 1220s) in 1228.

Delhi Sultanate Wars with Gujarat and Malwa (1299–1312)

PRINCIPAL COMBATANTS: Delhi vs. Gujarat and Malwa

PRINCIPAL THEATER(S): Gujarat and Malwa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Delhi sultan Ala-ud-Din sought to reestablished Delhi's dominance over Malwa and Gujarat.

OUTCOME: Ala-ud-Din regained control over Gujarat and Malwa.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The death of Balban (d. 1287), Delhi's sultan, in 1287 sparked an intense struggle for power between the Afghans and the Turkish nobility. During this period of unrest, Gujarat and Malwa withdrew from their tributary relationship with Delhi. In 1290 the Turkish nobility won the power struggle and formed the Khalji dynasty, which ruled until 1320. When Ala-ud-Din (fl. 1296–1316) came to the throne as the second Khalji ruler, he set out on a

course to restore Delhi's finances by putting down the rebellion of the Hindu princes. In 1299 his forces attacked Gujarat and subdued it. He next turned to Malwa, and despite the invasions of the Mongols in 1305 and 1306, he captured Ranthambhor in 1301, Chitor in 1303, and Mandu in 1305 after a series of bloody sieges. At Chitor the defenders undertook the rite of *jauhor*, whereby they threw their wives and children upon a funeral pyre and then staged a suicidal charge against Ala-ud-Din's army. He also seized Malwa's fortresses of Siwana in 1308 and Jalor in 1312.

Delhi Sultanate Wars with Jaunpur

(1414–1493)

PRINCIPAL COMBATANTS: Delhi vs. Jaunpur

PRINCIPAL THEATER(S): Delhi

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Delhi sought to gain control over the Muslim kingdom of Jaunpur in the central Ganges valley.

OUTCOME: The Lodi sultanate of Delhi annexed Jaunpur in 1493.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Following TAMERLANE'S INVASION OF INDIA in 1398, the power of Delhi decreased, and Malwa and Gujarat became separate Muslim kingdoms. In 1414 the last ruler from the Tughluk dynasty died, and the Sayyid dynasty was established, with Tamerlane's (1336–1405) viceroy, Khizur Khan (fl. 1440s), as ruler. Delhi had been diminished greatly from its former power, consisting only of the city of Delhi itself and a small region around it. Delhi struggled to maintain control of this small area, whereas the kingdom of Jaunpur flourished, practicing a degree of religious tolerance and justice unseen before in any Muslim state. In the Punjab, however, trouble for Jaunpur was brewing as a Timurid (Afghan) dynasty named Lodi consolidated its strength and began a push to the east to force the Sayyids out of power in 1451. In 1452 Jaunpur was drawn

into a battle for its very existence. By 1479 part of the kingdom was annexed to Delhi, but the fighting continued. In 1493 Sikander Lodi (fl. 1489–1517) completed the full annexation of Jaunpur, and the Lodi holdings soon stretched across northern India from the Punjab to the border of Bengal.

Jackson, *Delhi Sultanate: A Political and Military History* (Cambridge and New York: Cambridge University Press, 1998).

Demetrius, War of (239–229 B.C.E.)

PRINCIPAL COMBATANTS: Macedonia vs. the Achaean and Aetolian Leagues of Greece

PRINCIPAL THEATER(S): Greece

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Demetrius II sought to maintain control over Greece.

OUTCOME: By defeating the Aetolian and Achaean Leagues, Demetrius maintained power over Greece.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

After the deaths of the Diadochi, successors to Alexander the Great's (356–323 B.C.E.) vast Macedonian Empire (see DIADOCHI, WARS OF THE), Antigonus II (c. 319–239) became ruler of Macedonia. In 239 his son Demetrius II (c. 278–229) came to the throne of Macedonia. Maintaining control over Greece continued to be a primary objective of the kingdom. As a boy, Demetrius gained renown by defeating and dethroning Alexander of Epirus (d. c. 263) and marrying a princess of Epirus, thereby cementing his hold over that portion of the empire and securing Macedonia from further threat there for the moment. The Achaean and Aetolian Leagues, however, posed a more difficult problem. On his accession, the two leagues allied themselves against Demetrius, and in 237 he invaded Boeotia, which split the alliance. In 229 Demetrius died, and his heir, the nine-year-old Philip V (238–179), and his regent continued to face troubles in Greece with the loss of Epirus and Athens in 229 and the beginning of the SOCIAL WAR (219–217 B.C.E.).

Devolution, War of (1667–1668)

PRINCIPAL COMBATANTS: Spanish Netherlands vs. France

PRINCIPAL THEATER(S): The Netherlands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: France and Spain vied for ownership of the Spanish Netherlands.

OUTCOME: France gained several fortresses and towns in the Spanish Netherlands, and the Franche-Comté region reverted to Spanish control.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Aix-la-Chapelle, May 2, 1668

Devolution was a local custom governing land inheritance in parts of the Spanish Netherlands. In some provinces daughters of a first marriage took precedence over sons of subsequent unions. Thus, when Spain's king Philip IV (1605–65) died, Louis XIV of France (1638–1715) claimed the Netherlands for Philip's first-born daughter (and, not incidentally, Louis's wife) Marie Therese (1638–83) as opposed to her younger half brother, the sickly epileptic Charles II of Spain (1661–1700). Even if Louis admitted that his queen had renounced her rights to the Netherlands when they were married, she did so only in exchange for a large dowry—and Spain had never delivered the promised dowry. In any case, he would have the Spanish Netherlands, even by force if necessary.

In Europe the parties affected by Louis's pronouncement reacted variously. The United Provinces (or independent Netherlands) remained uncommitted in the matter due to a previous treaty; Spain was unable to exert influence due to an ongoing war with Portugal; and England remained neutral due to the provisions of a secret treaty. French troops under Henri (1611–75), vicomte de Turenne, invaded the Spanish Netherlands in 1667 and easily captured Lille, the major city in Flanders. Other troops under Louis II de Condé (1621–86) occupied the Franche-Comté region in February 1668. When Spain granted independence to Portugal, and England, Sweden, and Holland allied themselves against an expanding France, Louis stopped the war and negotiated the Treaty of Aix-la-Chapelle on May 2, 1668, by whose terms France gained several fortresses and towns in the Spanish Netherlands and Spain regained possession of the Franche-Comté region.

Diadochi, Wars of the (323–275 B.C.E.)

PRINCIPAL COMBATANTS: The successors of Alexander the Great; later, Celtic invaders vs. Macedonians

PRINCIPAL THEATER(S): The Macedonian Empire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: At the death of Alexander, the Diadochi engaged in 40 years of war, murder, and intrigue to determine who would rule the vast Macedonian Empire; this was followed by a massive invasion of Celts.

OUTCOME: At the death of the last of the Diadochi, the Macedonian Empire was divided among three dynasties: the Ptolemies, the Seleucids, and the Antigonids.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

At the death of Alexander the Great (356–323 B.C.E.) in 323 B.C.E., the highest-ranking leaders among his retinue vied for control of the vast Macedonian Empire. Known as the Diadochi, or “successors,” the men included Perdiccas (d. 321), Alexander's prime minister named regent by the dying king; Antipater (d. 310), regent in Greece and Macedonia from 334 to 323; Eumenes, a staff secretary; Ptolemy I Soter (c. 364–c. 283) and Lysimachus (c. 355–281), Alexander's personal aides; Craterus (c. 370–321), Polyperchon (fl. c. 317–16), Antigonus (c. 382–301), and Cassander (358–297), infantry division commanders; and Demetrius (336–283), commander of a cavalry squadron. Although all of these men were well skilled in the arts of war, none had the administrative ability to manage the vast Macedonian Empire.

The first flare up of hostilities, the LAMIAN WAR, occurred in Greece, where Athens and many of the other cities rose in revolt in 322. Antipater and Craterus crushed the revolt at the Battle of Crannon, and the Macedonian navy annihilated the Athenian navy at Amorgos.

There followed a period of murder, intrigue, and bribery. Between 321 and 319 Perdiccas, Craterus, and Antipater died. Other Diadochi played roles in the deaths of Perdiccas and Craterus. Ptolemy bribed some of Perdiccas's troops to rise in mutiny against their leader and kill him; and Eumenes killed Craterus as he invaded Cappadocia. In 317 Antigonus and Eumenes faced off at the Battle of Paraetakena in Iran. This battle was indecisive, and the combatants engaged in another battle the following year. Eumenes was then killed by mutineers who had been bribed by Antigonus.

In 311 the surviving Diadochi arrived at a truce whereby Cassander was to serve as ruler of Macedonia until Alexander IV Aegeus (d. 311), the son of Roxana (d. 311) and Alexander the Great, came of age. According to the terms of the truce, Thrace and Chersonese went to Lysimachus; Egypt, Palestine, and Cyprus went to Ptolemy; Asia Minor and Greece went to Antigonus; and the huge territory east of the Euphrates River went to Seleucus I (c. 358–280). The truce did not last long. In 311 Cassander assassinated Roxana and Alexander IV, thereby ending the line of Alexander the Great.

The Battle of Salamis in Cyprus in 308 brought a decisive victory by Demetrius, the son of Antigonus, over Menelaus, the brother of Ptolemy. The following year Demetrius built on this victory by invading Greece and Palestine. Capturing Athens and much of Greece, he moved against Palestine, but as he approached Egypt he was repelled by Ptolemy.

Demetrius then attacked Ptolemy's garrisons on the island of Rhodes in 305. After a two-year siege Demetrius was forced to withdraw to Greece.

In 301 Antigonus and Demetrius squared off against Seleucus and Lysimachus at the Battle of Ipsus. After Antigonus and some 22,000 of his Macedonian troops were killed in battle, Demetrius established a foothold in western Asia Minor. Cassander was then named king of Macedonia, but he died in 297.

In 294 Demetrius murdered the son of Cassander and seized the Macedonian throne, but his rule was short-lived. In 294, King Pyrrhus (319–272) of Epirus allied himself with Ptolemy and Lysimachus to drive Demetrius out of Macedonia. The deposed king fled to Asia Minor, and after his troops deserted him he surrendered to Seleucus.

Between 283 and 280 the struggles of the Diadochi ended as the few survivors died. Ptolemy died in 283, and Seleucus and Lysimachus went to war. At the Battle of Corus in 281, Seleucus killed Lysimachus in hand-to-hand combat and succeeded to the throne. In 280 Ptolemy Keraunos, the disinherited son of Ptolemy I Soter (c. 364–c. 283) (one of Alexander the Great's personal aides and the ruler of Egypt), murdered the king, thus ending the 40 years of struggle among Alexander's successors. By the time of Seleucus's death in 280, Alexander's vast empire was torn apart. The Seleucid dynasty controlled Syria, Mesopotamia, and Persia; the Ptolemies ruled Egypt and Asia Minor; and the Antigonids ruled Macedonia.

The following year, 279, the Diadochi were swamped by a wave of Celtic invaders. The army of Celts swept over Macedonia, Greece, Thrace, and Asia Minor. Establishing the kingdom of Galatia, the Celts faced Ptolemy Keraunos in battle. Ptolemy Keraunos was killed in the battle in 277. The son of Demetrius, Antigonus II Gonatus (c. 320–239), won back control of Macedonia and drove out the Celts in 276. The following year the Galatian-Celts were finally subdued by Antiochus I (c. 324–c. 261), the son of Seleucus.

Diodotus's Revolt (255 B.C.E.)

PRINCIPAL COMBATANTS: Diodotus vs. Antiochus II

PRINCIPAL THEATER(S): Bactria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Independence of Bactria from Syria

OUTCOME: Diodotus prevailed, and under his rule Bactria became independent from Syria.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Following the death of Alexander the Great (356–323 B.C.E.), Macedonian influence in the eastern provinces of the empire he had amassed rapidly declined. During 321–302 Seleucus (c. 358–280) reconquered much that had been lost to Alexander, and Syria once again came under Seleucid control. The Seleucid king of Syria, Antiochus II Theos (286–247), however, suffered rebellion led by the Seleucid satrap of Bactria, Diodotus I (fl. third century B.C.E.), in 255.

Diodotus successfully wrested Bactria from Antiochus's rule and established it as a kingdom independent from Syria. He then went on to expand his realm, conquering Sogdiana, then moving eastward toward the Indus and westward into Parthia.

Dionysius War, First (398–397 B.C.E.)

PRINCIPAL COMBATANTS: Syracuse vs. Carthage

PRINCIPAL THEATER(S): Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dionysius the Elder wanted to rid Sicily of domination by Carthage.

OUTCOME: Carthage was forced to relinquish its outposts in eastern and central Sicily.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 398 B.C.E., Dionysius the Elder (c. 430–367 B.C.E.), tyrant of Syracuse, led 80,000 troops to sack Motya, a major stronghold of Carthage in Sicily. Under the leadership of Himilco (d. 396), the Carthaginians attacked the Syracusan fleet and laid siege to Syracuse. Dionysius, however, won support from the Spartans and utterly defeated the Carthaginians. Carthage then abandoned its outposts in eastern and central Sicily. Devastated by his loss to Dionysius, Himilco committed suicide in 396.

Dionysius War, Second (393–392 B.C.E.)

PRINCIPAL COMBATANTS: Syracuse vs. Carthage

PRINCIPAL THEATER(S): Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Carthage attempted to regain control of its outposts in Sicily relinquished to Syracuse after the First Dionysius War.

OUTCOME: Syracusan forces once again defeated the Carthaginians and forced them to relinquish more territory in Sicily.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After the First DIONYSIUS WAR in which Dionysius the Elder (c. 430–367 B.C.E.), tyrant of Syracuse, forced the Carthaginians to abandon their outposts in eastern and central Sicily, Carthage renewed war with the Syracusans in 393 but was no match for the overwhelming strength of Dionysius's forces. The tyrant forced Carthage to sign a treaty whereby Syracuse gained control of most of Sicily and the Carthaginian territories of Apulia and Calabria in southern Italy. Carthage was able to retain only a few small outposts in western Sicily, and 10 years of peace followed.

Further reading: John Boardman, Jasper Criffen, and Oswyn Murray, eds., *The Oxford History of Greece and the Hellenistic World* (New York: Oxford University Press, 1991); Alfred J. Church and Arthur Gilman, *The Story of Carthage* (Cheshire, Conn.: Biblio-Moser, 1998).

Dionysius War, Third (382–376 B.C.E.)

PRINCIPAL COMBATANTS: Syracuse vs. Carthage

PRINCIPAL THEATER(S): Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dionysius sought to drive the Carthaginians out of their few remaining outposts in western Sicily.

OUTCOME: The Carthaginians defeated the Syracusans at Cronium and regained control of western Sicily.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After the First and Second DIONYSIUS WARS, in which the Syracusans defeated Carthage and gained control of most of Sicily, Dionysius the Elder (c. 430–367 B.C.E.) attacked the Carthaginians in western Sicily. Victory was not to be his in this engagement. The Carthaginians defeated him at Cronium near Palermo. Western Sicily once again became a Carthaginian territory, and the boundary between Syracusan and Carthaginian lands in Sicily was established at the Halycus, or Platani, River.

Further reading: John Boardman, Jasper Criffen, and Oswyn Murray, eds., *The Oxford History of Greece and the Hellenistic World* (New York: Oxford University Press, 1991); Alfred J. Church and Arthur Gilman, *The Story of Carthage* (Cheshire, Conn.: Biblio-Moser, 1998).

Dionysius War, Fourth (368–367 B.C.E.)

PRINCIPAL COMBATANTS: Syracuse vs. Carthage

PRINCIPAL THEATER(S): Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dionysius sought to drive the Carthaginians out of the territories in western Sicily they had gained during the Third Dionysius War.

OUTCOME: The Carthaginians defeated the Syracusans during the blockade of Lilybaeum, or Marsala.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the First and Second DIONYSIUS WAR, the Syracusans defeated Carthage and gained control of most of Sicily. The Third DIONYSIUS WAR, however, brought defeat to the Syracusans, and Carthage once again gained much territory in central and western Sicily. In 368 B.C.E. Dionysius the Elder (c. 430–367), tyrant of Syracuse, attacked the Carthaginian outposts and blockaded Lilybaeum. He was killed during the blockade, however, and victory fell to the Carthaginians. Dionysius II (d. 344), who succeeded his father as leader of the Syracusans, halted the conflict between Syracuse and Carthage, and peace lasted until TIMOLEON'S WAR in 344.

Dipo Negoro's War *See* JAVA WAR, GREAT.

Dominican Republic Civil War (1965–1966)

PRINCIPAL COMBATANTS: Socialist rebels vs. the rightist military junta

PRINCIPAL THEATER(S): Dominican Republic

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Army dissidents aided by leftists sought to regain control of the Dominican Republic government.

OUTCOME: A centrist, Joaquín Balaguer, was elected president, and troops maintaining peace in the country were withdrawn.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Following the assassination of Dominican dictator Rafael Trujillo (1891–1961), his heirs and political followers tried but failed to hang on to power. After they were driven out, the country took a turn toward true democracy, and in 1963 the moderate reformist Democratic Revolutionary Party took power behind its leader, Juan Bosch (1909–2001), the first democratically elected president of the Dominican Republic. The country's military conservatives remained powerful, however, and army leaders deposed President Bosch after seven very unstable months on September 25, 1963, installing a civilian triumvirate. The following April army dissidents and leftists overthrew the triumvirate, and riots erupted in the capital city of Santo Domingo. Leaders of the navy and air force, aided by anti-Bosch army leaders, regained control of much of the capital and formed a junta to rule until free elections were held. Fighting between the leftists and rightists continued, and fearing a Cuba-style takeover, U.S. president Lyndon B. Johnson (1908–73) sent marines and paratroops to the country on April 28, 1965, to protect Americans and prevent a communist coup.

On May 5 a cease-fire was reached between the leftists led by Colonel Francisco Caamaño Deno and the junta led by Brigadier Antonio Imbert Barreras. The following day the Organization of American States (OAS) agreed to maintain a peacekeeping force made up of troops from Venezuela, Brazil, Guatemala, Costa Rica, Honduras, Paraguay,

and the United States in the war-torn country. Hostilities broke out again when the military junta attacked rebel forces in Santo Domingo and drove them out of the city. By May 23 the United States began reducing its forces in the country as the OAS Inter-American Armed Force became operational. Toward the end of the summer of 1965, the OAS Peace Commission brokered an agreement between the rival factions to install a government under provisional president Hector García-Godoy. Peace was broken again by riots instigated by the leftists and a general strike in February 1966, but on June 3 elections were held. Centrist Joaquín Balaguer (1909–2002) was elected, and by the end of that month OAS forces began withdrawing from the country.

Dorian Invasions (1120–950 B.C.E.)

PRINCIPAL COMBATANTS: Dorians vs. Mycenaeans

PRINCIPAL THEATER(S): Greece

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Dorians sought domination over the Peloponnese.

OUTCOME: Through waves of invasions lasting about 170 years, the Dorians became the dominant culture on the Peloponnese.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The Peloponnese bore witness to three major invasions in prehistory: the Mycenaeans who invaded in about 2000 B.C.E. and took the place of the Anatolian culture; the Achaeans who invaded between 1500 and 1400; and the Dorians. From their native lands in Epirus and southwestern Macedonia the Dorians came to present-day Greece in two waves, a minor one in about 1400 B.C.E. and a major one beginning in 1120 B.C.E., some 80 years after the TROJAN WAR. Entering the region by land or by sea, the Dorians forced residents east to the Aegean islands and to Asia Minor. By 950, the date by which the invasions were over, the Dorians had established colonies in Italy, Sicily, and Asia Minor. This group of people were known as Heraclids in Greek legend. Heracles' son Hyllus ruled the Hylleis, one of the three major tribes of the Dorians.

Dorr's Rebellion (1842)

PRINCIPAL COMBATANTS: Dorrists vs. the state of Rhode Island

PRINCIPAL THEATER(S): Rhode Island

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A faction of Rhode Island citizens attempted to alter the state constitution to extend the franchise to all white males in the state.

OUTCOME: Rebellion was suppressed, Dorr imprisoned, and the state constitution ultimately changed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Well into the 19th century the state of Rhode Island was still using for its state constitution the original 1663 charter from the British Crown, that established the colony. Among other things, the charter restricted the franchise to white male landowners and their first-born sons. This provision kept more than half the adult male population disenfranchised. For years groups had been trying to have a new constitution drawn up or at least have the onerous provision changed.

One of the more vocal opponents of the provision was Thomas Wilson Dorr (1805–54), a Providence lawyer and member of the state legislature. Dorr organized the People's Party and called for a constitutional convention in October 1841. The People's Constitution was drawn up providing for white male suffrage regardless of property ownership.

This act caused the state legislature to take notice and call for a state convention to discuss the matter. In November delegates gathered in Providence to frame the Landholders' Constitution, which, although more expansive than before, stopped short of universal white male suffrage. Incensed, the People's Party took the People's Constitution to a vote in a statewide referendum in December, and it was ratified by an overwhelming margin. The state legislature submitted the Landholder's Constitution in March 1842, and it was narrowly defeated, meaning the government still operated under the 1663 charter.

Seeing no other recourse, the Dorrists set up a separate government under the People's Constitution with Dorr as governor. The legitimate governor, Samuel King, sensing violence, called upon President John Tyler (1790–1862) to send in federal troops. Tyler agreed to do so only if the confrontation turned violent and urged the two sides to reach a settlement peacefully. The Dorrists attempted to seize the state arsenal in Providence in the summer, and King called out the state militia, who defeated the Dorrists. The defeat quickly ended the revolt, and Dorr's government collapsed. Dorr was captured and sentenced to life in prison, but the sentence was later commuted to time served. In winter

1842 the state legislature finally submitted a constitution expanding the franchise to all white males.

Douglas Rebellion (1455)

PRINCIPAL COMBATANTS: House of Douglas vs. forces of King James II

PRINCIPAL THEATER(S): Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Attempts by the House of Douglas to control the Scottish Crown

OUTCOME: Eventually, Scotland's House of Douglas was destroyed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Resulting in the extinction of the House of Douglas and the subsequent strengthening of King James II (1430–60) of the House of Stuart, the Douglas Rebellion was the culmination of decades of Douglas family opposition to the Scottish Crown. Since the beginning of the 15th century, the House of Douglas made several haphazard attempts either to gain control of the Scottish throne outright or at least to manipulate it for its own ends. The latter was not always difficult because every Stuart king had ascended the throne as a minor. When James II ascended the throne at the age of seven in 1437, the fifth earl of Douglas (d. 1439) was named regent, establishing Douglas supremacy, but only for a while. The House of Stuart, wary of Douglas's continuing opposition to its rule and realizing that the struggle would end only with the ruin of one of the two houses, determined to take action against the Douglas forces.

With the fifth earl's death in 1439, Stuart supporters plotted the death of the primary Douglas descendants the following year. In fall 1440 William, the sixth earl of Douglas, and his brother David, the seventh earl, were invited to join the young king for dinner but instead were tried by a kangaroo court and quickly put to the scaffold. Much of the Douglas holdings were dispersed throughout the kingdom, and it appeared the Stuarts had sounded the Douglas death knell.

However, William (c. 1425–52), the eighth earl of Douglas, began to rebuild his family's fortunes. By his marriage with his cousin Margaret Douglas, the "Fair Maid of Galloway," he acquired Galloway and Wigtown. He acquired the estate of Bothwell from the king himself, with whom William at first stood in high favor. William, however, intent on revenge and power, aligned himself against the king with some of Scotland's most powerful nobles. These alliances and a stirring victory on the banks of the Sark River in 1448 revived the prestige of Douglas.

With the House of Douglas in order, William hoped to plot the downfall of the king. The king, however, hearing of William's alliances, had other plans. Not realizing that the king was aware of his alliances, William accepted an invitation to dine with the king in February 1452 at the king's castle in Stirling. Immediately James assailed William for his deviant diplomacy and demanded the entente be dissolved. William steadfastly refused, and James set upon him with a dagger. The earl lay dead. The House of Douglas demanded justice, but the confrontation quickly devolved into a challenge to royal authority in the courts. The royal magistrate sided with James in that an alliance against the Crown was a traitorous act and had to be dealt with by extreme measures.

William's brother James (1426–88), the ninth and last earl of Douglas, called on his brother's allies to move against the king's forces. The Douglas forces quickly seized Inverness and used it as a base of operations for its revolt. The king, however, had a substantial army and marched into the Douglas holdings in March 1455, laying waste to the territory and subjugating the residents. Two months later the king's forces intercepted the rebels and crushed them at the Battle of Arkenholm on May 12, 1455. James and his followers were driven into exile in England, ending the revolt. The king now claimed the Douglas lands for the Crown. With James's death in 1488, the House of Douglas was no more.

Dózsa's Rebellion (Hungarian Peasants' Revolt) (1514)

PRINCIPAL COMBATANTS: Hungary's peasants vs. Hungarian lords and nobles

PRINCIPAL THEATER(S): Hungary

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Following an era in which Hungarian magistrates curtailed peasants' freedoms, the peasants, assembled in support of a Crusade that was cancelled, refused to disband and instead marched against their masters.

OUTCOME: The rebellion was suppressed, and the Hungarian Diet imposed even more restrictive laws on the peasant class.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Peasant forces, 100,000; nobles, unknown

CASUALTIES: Unknown

TREATIES: None

Under a weak King Vladislas II (fl. 1490–1516), the magistrates of Hungary laid on the peasant class a system of taxes and tithes that obliged them to deliver one-ninth of their produce to their lords. On April 16, 1515, when the cardinal Tamas Bakocz called for volunteers to join a Crusade against the Turks, some 100,000 discontented peasants answered the appeal. György Dózsa (1470–1514), who had distinguished himself for valor in wars against the Turks, was named the leader of the peasant army. When the Crusade was suspended on May 23, the peasants, without food or clothing, refused to disband and vowed not to reap their lords' fields at harvest time. They further announced their intention to overthrow the nobles and end the oppression of the lower classes.

The peasants attacked their lords as promised, destroying hundreds of manor houses and killing thousands of nobles. They attacked fortresses at Ards, Lippa, and Vilagos and laid siege to Temesvár. At Temesvár they were confronted by the lords' forces under the leadership of John Zapolya (1487–1540), governor of Transylvania and later king of Hungary. Zapolya's victory was thorough and brutal.

Dózsa was captured with his lieutenants, and on July 20 the peasants' leader was burned alive. By October the rebellion was thoroughly crushed, and the Hungarian Diet punished the peasants for their insurrection. The entire class of peasants were condemned to "real and perpetual servitude," bound permanently to their nobles' lands. The diet increased the number of days peasants had to work for their lords, raised peasant taxes paid to the state, and ordered them to pay for damages caused by the rebellion.

Drake's Caribbean Raids (1585–1586)

PRINCIPAL COMBATANTS: Drake's English fleet vs. Spanish colonists

PRINCIPAL THEATER(S): The Caribbean, a portion of the South American coast, and Florida

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: To harass and extract treasure from colonial Spain

OUTCOME: The raids succeeded in their objectives.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Sir Francis Drake (c. 1540–96) had proven himself the greatest sailor in an age of great English men of the sea. He was knighted in 1580 for his daring raids on Spanish colonies and treasure ships as well as for his expeditions of exploration, which resulted in territorial acquisition. Not least of his many triumphs was his circumnavigation of the globe.

During 1585–86 Drake led an English fleet of 29 ships to attack Spanish colonies in the Caribbean, ordered by his queen, Elizabeth I (1553–1603), to wreak as much damage as he could on Spain's overseas empire. His bid to take the Spanish treasure fleet failed, but his brutal assault on Santo Domingo, Hispaniola, yielded a heavy ransom after Drake burned most of the settlement. From Santo Domingo Drake proceeded to the treasure city of Cartagena (in Colombia), which he sacked, extorting a heavy ransom from its inhabitants.

Having taken a good deal of valuable Spanish artillery and a great deal of money, Drake returned to England, stopping only to plunder the Florida coast and burn the city of St. Augustine. The effect of his triumphs in the West Indies were nothing short of cataclysmic for Spain. Not only did Spanish credit, morale, and war readiness suffer heavy blows, the losses nearly sank the Bank of Spain and the Bank of Venice, to whom Philip II (1527–98) was greatly in debt. The Augsburg Bank in Germany refused to extend Spain further credit. Two years later Drake would also play a major role in defeating the Spanish Armada (see *ANGLO-SPANISH WAR* [1586–1604]).

Druse Rebellion (1925–1927)

PRINCIPAL COMBATANTS: Druse rebels and Syrian and Lebanese nationalists vs. French colonial governments in the Middle East

PRINCIPAL THEATER(S): Syria and southern Lebanon

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Druse, opposed to foreign control and angered by anti-Druse “tyranny” within Syria, launched a rebellion that spread to southern Lebanon.

OUTCOME: The French declared Lebanon a republic, and the Druse rebellion collapsed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

France, 70,000; Druse forces, 3,000

CASUALTIES: Frances, 4,000 killed; Druse forces, 1,000 killed or wounded; 1,500 Syrian civilians killed

TREATIES: None

Born in Cairo nine centuries earlier, the small, close-knit, and mysterious religious sect known as the Druse (or Druze) had thrived despite the fact that they allowed no conversions to their religion, no lapses from it, and no intermarriage with those of other faiths. Based in Islam, Druse beliefs were as eclectic as they were closely guarded, involving a mixture of Jewish, Christian, Gnostic, and Neoplatonic teachings in a doctrine of fervent monotheism that gave the Druse a clear identity and made them fiercely loyal to one another. Throughout their turbulent history they had at times played politically crucial roles in the Middle East, as they would in 1925.

Those Druse living in Syria at the time were chafing under the French mandate by which the country was governed, essentially because the French colonials made no effort to restrain their puppet governor's tyrannical treatment of them. When they made attempts to approach the French high commissioner, General Maurice Sarrail, with their grievances he pointedly ignored them, perhaps because they made no secret of their opposition to foreign control of Syria as well. On July 18, 1925, they launched a rebellion under Sultan al-Atrash (fl. 1914–27) and soon controlled most of the countryside. Syrian nationalists joined the Druse, and together they forced the French to withdraw from Damascus on October 14. On October 18 the French launched a two-day bombardment of the city with tanks and airplanes that took the lives of 500 civilians, but the rebels held.

Over the course of the following year the rebellion spread into southern Lebanon, also under French control, and on July 18, 1926, the French were back in Damascus. French forces gathered in fortified encampments outside the city and launched a 48-hour artillery and aerial bombing attack that again inflicted great damage and loss of life (including 1,000 Syrian civilians) but again failed to crush the rebellion. The fighting dragged on for another year. On May 23, 1927, the French declared Lebanon a republic, and the following month the Druse rebellion collapsed. Despite an amazing display of bravery that saw Druse horsemen charge French tanks, the tribesmen were subdued, and Druse leaders fled to Transjordan as French

military officers, impressed by Druse bravery, tried to ensure conditions of harmony.

Druse Rebellions (1600–1635)

PRINCIPAL COMBATANTS: Druse rebels vs. Ottoman Empire

PRINCIPAL THEATER(S): Lebanon and Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Druse under Fakhr-al-Din II first revolted against the Ottoman vassal government of Tripoli and won back their rule over the Lebanon area; then they plotted with Europe's Christian powers to take back the Holy Land from the Turks; and finally they continued their expansions by conquering most of Syria.

OUTCOME: The Ottomans at length captured and executed Fakhr, ending Druse influence in the region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: At the end of the first rebellion in 1607, the Ottomans and Druse agreed to a vassalage-tribute relationship; in the two renewed rebellions, from 1610–13 and 1631–35, there were no treaties.

In 1017 in Cairo a relatively small, tight-knit and mysterious religious sect appeared led by Hamzah ibn Ali (985–1021). The members called themselves *muwahhidun* ("monotheists") but were generally known as the Druse (or Druze), which was derived from the name of Hamzah's subordinate, Muhammad ad-Darazai. Based on Ismaili teachings, Druse religious beliefs combine elements of Jewish, Christian, Gnostic, and Neoplatonic traditions in a doctrine of fierce monotheism that makes for remarkable group cohesion and amazing loyalty among the sect's members. Because the Druse permit no conversion, either away from or into their religion, and forbid intermarriage, perhaps only their strong sense of identity explains how they have managed to survive for nearly 1,000 years of turbulent and occasionally politically significant history. One of those points at which the Druse became just so significant was in the various Druse Rebellions of the 17th century.

During that period the Ottoman Empire continued its slow decline, the military strength on which it relied deteriorating rapidly as its army of Janissaries—originally slaves of the sultan, now a privileged social class recruited from the Muslim population—grew ever more lax and unruly. Before 1600 in present-day Lebanon, power rested with the Yamani party, traditionally headed by the ruler of Tripoli. But Fakhr-al-Din II (1572–1635), prince of the

Druse, wished to change that and return power to his family. Toward that end the Druse prince cultivated friendships among *both* Sunnis and Shi'ites, seeking their support for his Kaysis party against the Yamani, even as he built up his own private army. He also realized he could ill afford discord among the Christian sects and thus became the first to unite the Druse and Marionite districts of Beirut. By 1600 the Sublime Porte (Ottoman government) along with the Yamani had become alarmed by Fakhr's ambitions, especially after he had taken control of Sidon and Beirut on the coast. Then the Druse leader joined in a revolutionary alliance with Janbulad, the Kurdish governor of Klis.

When Janbulad was defeated by the Ottomans, he fled to Fakhr in Lebanon, where fighting had begun between Fakhr's Kaysis party and the Yamani. The Porte vacillated, favoring first one party and then the other, until Fakhr's victories began to mount and the Ottomans decided to back the probable winner. Despite Janbulad, the Turks threw in with Fakhr, who triumphed over the Yamani in 1607. Ensnared in his mountain kingdom, Fakhr made a temporary truce with the Porte, and to prevent Ottoman interference in his emirate he regularly sent ambassadors and bribes to Constantinople (Istanbul).

In 1610 Fakhr renewed his revolt, this time plotting with European Christian princes, including the pope and the leaders of the Holy Roman Empire, Spain, and Tuscany, to help them recover the Holy Land. He had seized Baalbek and was threatening Damascus before the Ottoman Turks, launching a combined land and sea invasion, overthrew him and forced him to flee to Italy in 1613. A year later he was back, once again fomenting rebellion. When the Ottomans went to war with Persia in 1623 (see **TURKO-PERSIAN WAR [1623–1638]**), opportunity knocked for the inveterate insurgent.

During the Persian war Fakhr gained control of much of Syria, and in 1631 he defeated a Turkish army attempting to go to winter quarters in Syria between Persian campaigns. In 1633 the Turks again mounted a land and sea invasion, and at a decisive battle just north of Damascus Fakhr's son was defeated and killed. The Druse leader once again took refuge in the mountains, but two years later the Turks captured him, took him back to Constantinople, and beheaded him on April 3, 1635.

CASUALTIES: Unknown**TREATIES:** None

Essentially a revolt of the urban upper class, the Dutch Civil War failed because it did not appeal to either the urban lower classes or to the rural populations in the outlying areas. In light of the Dutch Republic's defeat at the hands of the British in 1784, the Patriot Party was formed to promulgate the best interests of the republic, essentially a "Dutch for the Dutch" movement. Members thought the best opportunity to resolidify Dutch influence was by aligning the republic with Britain's traditional rival, France. Stadholder William V (1748–1806) was adamantly opposed to such an alliance, and in fact, if any alliance were proffered, he would have liked to see it made with Germany.

The Patriot Party gained a footing in the States General in 1785, and when William continued to refuse a Dutch-French alliance, the urban elite who supported the Patriot Party revolted. William attempted to fight the rebels, but he soon lost control of the States General and had few resources available as a result. Fortunately for William, while he was unable immediately to suppress the rebels or gain any satisfaction from the States General, the insurgency did not spread.

In 1787 William made an alliance with Emperor Joseph II (1741–90) of Austria, and Prussian troops were sent in to defeat the rebels that same year. With the Patriots defeated, the republic, led by William, became increasingly hostile to France. In 1793, however, the French invaded, conquering the Dutch Republic, renaming it the Batavian Republic, and forcing William to flee.

Forces of William I, 50,000; other combatants, unknown

CASUALTIES: Unknown**TREATIES:** None

On August 24, 1815, the United Kingdom of the Netherlands was established, and the Netherlands and Belgium were joined under one ruler, William I (1772–1843). The peace lasted only 15 years. On August 25, 1830, the Belgians rose against William I in Brussels, and fighting broke out between civilians and Dutch troops. On October 4, 1830, Belgium declared its independence from the Netherlands, and throughout the course of that month, the Dutch took up a position in the citadel of Antwerp and began a bombardment of the city. By November 4 an armistice was declared, and on December 20, 1830, the United Kingdom was dissolved. On August 2, 1831, 50,000 Dutch troops under William I invaded Belgium, but the French came to the aid of the Belgians. Troops under Etienne Maurice Gérard pushed the Dutch troops back, and by December of the following year they had forced the Dutch, led by David Hendryk Chassé at the Antwerp citadel, to surrender. The Dutch at last recognized Belgium's independence on April 19, 1839.

Dutch-Portuguese Brazilian War See SUGAR WAR.**Dutch-Portuguese Wars in West Africa**

(c. 1620–1655)

PRINCIPAL COMBATANTS: Dutch traders vs. Portuguese traders**PRINCIPAL THEATER(S):** West coast of Africa (with some action in Brazil)**DECLARATION:** None**MAJOR ISSUES AND OBJECTIVES:** Supremacy of trade

OUTCOME: The Dutch broke the Portuguese trade monopoly in West Africa.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Portuguese seafarers and traders established outposts along the western coast of Africa in search of gold, ivory, and slaves. Through much of the 15th and 16th centuries the Portuguese enjoyed a virtual monopoly on west coast trade, especially in slaves. By the early 17th century, however, Portugal was challenged by the Dutch, who built forts at Mouri, Gorée Island, and Rifisque. Frequently, Dutch and Portuguese traders came to blows, attacking one another at sea as well as on land.

During the period 1637–42 Dutch forces attacked the Portuguese fortifications at Elmina and Axim (on the coast of Ghana), the port of Luanda (in Angola), and even São Tomé and parts of Brazil. For their part, the Portuguese fought back effectively, managing to regain control along the Bakongo coast and in Guinea. They did not recover portions of Ghana and the Gold Coast, and they never restored their previous monopoly.

Dutch War, First (1652–1654)

PRINCIPAL COMBATANTS: Holland vs. England

PRINCIPAL THEATER(S): The English Channel and North Sea

DECLARATION: England on Holland, July 1652

MAJOR ISSUES AND OBJECTIVES: England wished to maintain superiority on the seas and in maritime trade.

OUTCOME: England defeated Holland in this war and forced Holland to abide by the Navigation Act of 1651.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: English: 118 warships (at Gabbard); Dutch: 116 (at Schvenigen)

CASUALTIES: In major sea battles: Dutch, 3,000 killed, 4,500 wounded, 2,000 captured; English figures, much lower: 2,000 killed and wounded

TREATIES: Treaty of Westminster, 1654

This conflict, essentially a naval war, was caused by competition between England and Holland over maritime trade. The war began in the English Channel near Dover on May 19, 1652, when Admiral Robert Blake's (1599–1657) fleet

of 20 ships engaged a Dutch fleet under Maarten Tromp (1597–1653) after the Dutch refused to allow Blake to search a Dutch East Indies convoy. The English claimed the right to conduct such searches due to the Navigation Act of 1651, which had decreed that imports were to be handled by English ships with predominantly English crews. After war was officially declared in July 1652, several naval engagements were fought. At the Battle of Kentish Knock on September 28, 1652, Blake's fleet of 60 ships defeated the Dutch under Cornelius Witte de Witt. On November 30 at the Battle of Dungeness, Maarten Tromp led a fleet of 80 ships to victory off England's southern coast. The following year battles occurred off Portland, at Beachy Head, and at Gabbard Bank. From June to July 1653 the English blockaded the Netherlands. To escape the blockade Maarten Tromp engaged the English admiral George Monck (1608–70) in a diversionary action and slipped away on July 25. The final engagement of the war was on July 31, 1653, at the Battle of Scheveningen. The Dutch fleet of 116 ships attempted to break through the blockade, but the English fleet of a similar number of ships was victorious in the 12-hour battle. Losses for the Dutch included Maarten Tromp, 1,600 sailors, and 30 men-of-war. After this last engagement there were no further significant battles, and the Dutch sued for peace. Peace was reached on April 5, 1654, with the signing of the Treaty of Westminster, by whose terms Holland agreed to indemnify English merchants who had been harmed and to respect the Navigation Act of 1651. Of particular note in this war was the issuance of English fighting instructions, which called for line-ahead formation of the ships in the fleet to make use of the broadside maneuver. It was a naval first.

Dutch War, Second (1665–1667)

PRINCIPAL COMBATANTS: Holland vs. England

PRINCIPAL THEATER(S): African coast, West Indies, England, the Netherlands, and Denmark

DECLARATION: English attacks on West African ports in 1663

MAJOR ISSUES AND OBJECTIVES: England and Holland competed for trade supremacy.

OUTCOME: Through the Treaty of Breda, England gained possession of New York, and the maritime laws were altered slightly in favor of the Dutch.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: In the major sea battles: English, 22,000 sailors; Dutch, 22,000 sailors

CASUALTIES: In major sea battles: English, 3,200 killed or wounded, 2,000 captured; Dutch, 14,500 killed or wounded

TREATIES: Treaty of Breda, July 21, 1667

Trade competition between the English and Dutch fostered this maritime war. In 1663 the English attacked the West African ports that were integral parts of the Dutch slave trade and the following year seized New Netherlands (New York). In May 1665 the Dutch recaptured the African ports and attacked Barbados. After a declaration of war, at the Battle of Lowestoft Lord Jacob van Wassenaer Opdam (d. 1665) led a fleet of 100 Dutch ships to seize English supply vessels en route from Hamburg. English prince James (later King James II) (1633–1701), Prince Rupert (1619–82), Earl Edward Montagu of Sandwich (1625–72), and Sir William Penn (1621–70) rushed to the area with a fleet of 150 ships and defeated Opdam, who died in the bloody battle. Opdam, Dutch admiral Eghert Meussen Kortenaer (1604–65) and English admiral John Lawson (d. 1665) were killed. The Dutch fleet (after losing 30 ships) slipped away under the cover of Cornelis Tromp (1629–91). Because of James's decision to refrain from pursuing the fleeing Dutch fleet, he was removed from command, and the earl of Sandwich succeeded him. In August 1665 at the Battle of Bergen, Sandwich was repulsed by Danish shoreline defenses after he had pursued a Dutch merchant convoy from the Indies into Bergen harbor. England then declared war on Denmark. France entered the war in January 1666, and about six months later, from June 1–6, Monck and Michiel de Ruyter (1607–76) were engaged in the Four Days' Battle. Monck sent Prince Rupert's squadron of 25 ships out to intercept a French force that was due to arrive soon from the Mediterranean. De Ruyter's 80 ships sailed to meet Prince Rupert. The English attacked off the North Foreland on June 1, but Dutch reinforcements arrived and Monck began to withdraw on June 2. The two forces engaged each other in a tremendous battle in which 20 English ships were lost. On June 4 Monck and Prince Rupert withdrew to the Thames, which de Ruyter quickly blockaded. On July 25, 1666, Monck broke through the blockade and defeated de Ruyter. Monck then sailed to the coast of the Netherlands, attacked Vlie Channel, and destroyed 160 Dutch vessels anchored there.

Over the course of the next 10 months, the Dutch and the English, both worn down from constant warring and from the disastrous effects of the Great Plague, began peace negotiations. This ended abruptly when de Ruyter in June 1667 led a Dutch fleet up the Thames and

destroyed 16 English ships at Chatham. Again mindful of the need to end the expensive war, the parties negotiated the Treaty of Breda, signed on July 21, 1667. The terms of this treaty modified trade laws in favor of the Dutch and gave possession of New Amsterdam to the English. In addition, France received Acadia (in Nova Scotia) from England, and England received some islands in the West Indies from France. Despite this treaty, the English, Swedish, and Dutch began to fear the French aspirations of expansion in the Spanish Netherlands, and they entered into the Triple Alliance to prevent such an occurrence. Charles II (1630–85) then reversed the English policy by signing the Treaty of Dover with Louis XIV (1638–1715). By this treaty the English would provide naval support to France during its operations against the Netherlands in return for an annual pension to Charles.

Dutch War, Third (1672–1678)

PRINCIPAL COMBATANTS: France and England vs. Holland, Spain, Germany, Denmark, and Sweden

PRINCIPAL THEATER(S): Europe

DECLARATION: March 1672

MAJOR ISSUES AND OBJECTIVES: King Louis XIV wanted to expand France's territory.

OUTCOME: France continued its expansion throughout Europe.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At sea: French and English, 33,000+; Dutch, 21,000; Danes, 6,500; Swedes, 9,000. On land: Dutch/Allies, 200,000; French, 130,000

CASUALTIES: Major battles at sea: Dutch, 2,700 killed and wounded; Danes, 350 killed and wounded; Sweden, 1,500 killed and wounded; English, 950 killed, 1,100 wounded; French, 800 killed and wounded. Major battles on land: Dutch/Allies, 21,000 killed and wounded; French, 11,000 killed and wounded

TREATIES: Treaties of Nijmegen (August 10 and September 17, 1678) and the Treaty of St. Germain (June 29, 1679)

At the end of the Second DUTCH WAR, Louis XIV (1638–1715) of France was plotting to secure control of the Belgian Netherlands, but the Triple Alliance formed by England, Sweden, and Holland barred him from this

region. Undaunted, Louis bribed Swedish officials to secure Sweden's withdrawal from the alliance and offered an annual pension to Charles II (1630–85) of England if he would help the French gain the desired territory. In 1672 the French king attacked Holland, and England joined the fray. Holland's navy, under Michiel de Ruyter (1607–76), held the English and French fleets back while the Dutch opened the dikes, by causing massive flooding and saving Amsterdam from French invasion forces under Henri L. d'A. Rochefort. Meanwhile, the war was becoming increasingly unpopular in England, and the English navy failed at attempts to blockade and invade Holland.

The English withdrew from the war in 1674 at the urging of Parliament and turned against France. Holland, Spain, and Germany formed coalition armies and attempted to invade France, and in January 1674 Denmark joined the coalition. French troops defeated a Spanish army in Sicily in 1674, and from May to June of 1674 Louis recovered control of the Franche-Comté. The French were successful against the Dutch allied forces at the Battle of Seneffe in 1674 and against the Germans in the Rhineland, particularly at the Battles of Sinzheim (June 16, 1674), Enzheim (October 4, 1674), and Turckheim (January 5, 1675). In 1678, having overrun much of Holland and fearing a reentry of England into the war, Louis decided to negotiate for peace. On August 10, 1678, the Netherlands signed the Treaty of Nijmegen, pledging its neutrality in return for the restoration of its territories lost in the war. Spain signed another Treaty of Nijmegen

on September 17, 1678, which stipulated that Spain would regain control of Charleroi, Binche, Oudenarde, Ath, Courtrai, Limburg, and Ghent, whereas France would rule Franche-Comté and other areas. The Treaty of St. Germain with Brandenburg called for the elector to surrender nearly all the territory he had conquered in Pomerania to Sweden. Louis XIV, pressing his advantage, then set up courts, called "chambers of reunion," to determine which dependencies were actually part of all the various towns and territories France had received according to the terms of the treaties. This process resulted in France's control of Strasbourg, the occupation of Luxembourg and Trier, and the permanent annexation of Lorraine.

E

Easter Uprising (1916)

PRINCIPAL COMBATANTS: Irish nationalists vs. Great Britain

PRINCIPAL THEATER(S): Dublin

DECLARATION: Patrick Pearse's declaration of independence, April 24, 1916

MAJOR ISSUES AND OBJECTIVES: On Easter Sunday 1916 a handful of Irish nationalists staged a not very popular revolt in Dublin that the British responded to with a massive show of force.

OUTCOME: The British commander quashed the Easter Rebellion and, by summarily executing the participants, made it into a rallying point for Ireland's resistance to England's 300-year-old colonial occupation, provoking a crisis that lasted most of the 20th century.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 1,760 Irish rebels; 20,000 British troops

CASUALTIES: A total of 450 dead, mostly British, and 2,614 wounded

TREATIES: None

The so-called Irish Question rose to a boil when Britain's Liberal Party achieved a great electoral victory in 1906 and came to parliament under the leadership of H. H. Asquith (1852–1928). Throughout the previous century the issue of Irish Home Rule time and again divided the Liberal governments headed by William Gladstone (1809–98). Twice a bill was introduced; twice it was defeated; twice it cost the Liberals an election. In 1906 it surfaced yet again when Liberal David Lloyd-George (1863–1945) offered to withdraw his radical budget, which was provoking a showdown with the House of Lords, if Asquith would support a third Home Rule bill. When the 1911 Parliament

Act reduced the power of the lords, it seemed as if Home Rule might indeed finally pass. That possibility led Irish Protestants to react by insisting that the Ulster provinces be excluded. Hot-blooded Irish Unionists formed the Ulster Volunteer Force to ensure that the Protestant north remained in the union by any means necessary.

Back in Ireland nationalist revolutionaries gained sympathy and support from those alienated by the pro-British Unionists' attitude. By the end of 1914 the Fenians of the Irish Republican Brotherhood (IRB), which in time would become the Irish Republican Army (IRA), had completed their plans for revolution. Sir Roger Casement (1864–1916) went to Germany seeking aid, but he managed to obtain only a few obsolete arms. His arrest on his return to Ireland in April 21, 1916, scuttled the nationwide uprising the IRB had scheduled, yet a handful of the faithful went ahead with the plan to seize Dublin three days after Casement's arrest.

That Easter Sunday (April 24, 1916) was quiet in Dublin. Because it was a holiday, many Dubliners were off at the races. With a 1,560-man contingent of Irish Volunteers and 200 more from the Irish Citizen Army, rebel leaders Patrick Pearse (1879–1916) and James Connolly (1870–1916) marched into town. Only a few curious passersby looked on with amazement as the rebels stormed the largely deserted General Post Office, and Pearse declaimed from the front steps: "Irishmen and Irishwomen: In the name of God and the dead generations from which she receives her old tradition of nationhood, Ireland, through us, summons her children to her flag and strikes for her freedom." In short, Ireland had just declared its independence from Great Britain.

The Easter Uprising lasted scarcely a week. Bitter fighting continued for five days, and although the Irish

made advances initially, reinforcements arrived and the British, within a week, had a force of more than 20,000 men. By Thursday the British army had captured strong positions in the city and shelled the post office. On Saturday, April 29, with more than 450 dead and 2,614 wounded, Pearce surrendered. The British commander, however, would accept no deals—only unconditional surrender from the Irish nationalists. Pearse, in order to avoid further slaughter of Dubliners, agreed. What little initial support there had been for the doomed revolt had by then evaporated, and Dubliners jeered as rebels were led off in chains. That was when, having quashed the rebellion, General Sir John Maxwell (1859–1929), commander of the British troops, made his big mistake. He summarily ordered the execution of 15 insurrectionists and ran to ground members of the tiny Sinn Féin, the nationalist organization he presumed was behind the uprising. By May 12 more than 2,000 “rebels” had been imprisoned, and many IRB leaders, including Pearse (May 3) and Connolly (May 12), had been executed.

It mattered less that Maxwell was wrong about Sinn Féin than that he was harsh. His brutality inspired a new patriotism, and Irish citizens joined Sinn Féin in droves, transforming it into Ireland’s most powerful organization as the slain rebels became martyrs to the cause. In the wake of the uprising, a surviving IRB leader—Eamon de Valera (1882–1975)—came to prominence and demanded a republican government. A provisional government was set up, an Irish court system was established, and the IRA was organized to resist British administration and secure official recognition for the republic. THE ANGLO-IRISH CIVIL WAR was under way.

Eastern Empire—Vandal War See ROMAN WAR WITH THE VANDALS.

Ecuadoran Civil War (1830–1834)

PRINCIPAL COMBATANTS: Liberal rebels vs. conservative government

PRINCIPAL THEATER(S): Ecuador

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The liberals sought to overthrow the conservative government of General Juan José Flores in the newly independent Ecuador.

OUTCOME: Flores captured the liberal leader, Vicente Rocafuerte, then worked out a power-sharing arrangement with him.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Political deal between the two opposing leaders, 1834

In early fall 1830 Ecuador declared its independence from Greater Colombia and became a republic under the presidency of General Juan José Flores (1800–64). Flores was a Venezuelan who had been part of the army of liberation under Simón Bolívar (1783–1830). He now ruled as anything but a democrat, however, assuming dictatorial powers under the repressive constitution of 1830. He maintained his grip on the country with military force using an army composed mostly of foreigners.

Flores’s capital was in Quito, a mountain town with a reactionary population isolated from the more dynamic liberalism of the coast. As conservative sentiment hardened at Quito, a liberal movement crystallized in the seaport city of Guayaquil. From 1830 to 1834 low-level armed confrontations between liberal and conservative forces were frequent. At last, in 1834 Vicente Rocafuerte (1783–1847) led a major liberal rebellion in a campaign that sought to sweep foreigners, especially Flores’s foreign troops, out of Ecuador. Flores prevailed, however, and captured Rocafuerte. Realizing that to kill Rocafuerte would only intensify the liberal rebellion by creating a martyr to the cause, Flores, remarkably, struck a deal with the imprisoned rebel. The two decided to alternate in the presidency. In 1835 Rocafuerte began his term, with Flores serving as commander in chief of the army.

Ecuadoran-Colombian War (1863)

PRINCIPAL COMBATANTS: Ecuador vs. New Granada (Colombia)

PRINCIPAL THEATER(S): Ecuadoran–New Granadan border region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ultimately at issue was the position of the border between the two nations.

OUTCOME: The New Granadan forces soundly defeated the Ecuadorans, who sued for peace, concluding a treaty that resolved the border dispute.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the culminating Battle of Cuaspad, Ecuador fielded 6,000 troops against 4,000 New Granadans.

CASUALTIES: At the Battle of Cuaspad, Ecuadoran losses were 1,500 killed and wounded, 2,000 captured; New Granadan losses were slight.

TREATIES: Treaty of 1863 ending the war and resolving the underlying boundary dispute

The border between Ecuador and New Granada (Colombia) was long in dispute. New Granada saw an opportunity to gain ground after 1861, when Gabriel García Moreno (1821–75) became Ecuadoran president. In an effort to bring unity and stability to the country, the new president embraced the Catholic Church, effectively investing it with much governmental authority. His reasoning was that the church was the closest approach available to a common denominator among the people of Ecuador and was therefore most likely to bring a rapid sense of unity. In fact, García Moreno's embrace of the church incited much popular opposition, and the liberal president of New Granada, Tomás Cipriano de Mosquera (1798–1878), sent military support to the Ecuadoran rebels in the hope of precipitating a coup, which would ultimately benefit New Granada.

To meet what amounted to an invasion, García Moreno dispatched a 6,000-man army under General Juan José Flores (1800–64) in a counterinvasion of New Granada. These troops were met by about 4,000 New Granadans at the Battle of Cuaspad on December 6, 1863, the only important battle of the brief war. The New Granadan army was personally led by President Mosquera, and it crushed the invaders. Losses to the Ecuadoran troops were at least 1,500 killed and wounded and 2,000 taken prisoner. In contrast, barely 300 Colombians died for their victory. Ecuador immediately sued for peace, and a treaty was drawn up to end the war and resolve the border dispute.

COLOMBIAN WAR OF INDEPENDENCE.

Edward the Black Prince, Raids of (1355–1356)

PRINCIPAL COMBATANTS: England vs. France

PRINCIPAL THEATER(S): Languedoc region of France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The raids were an English attempt to bring about a rapid conclusion to the HUNDRED YEARS' WAR.

OUTCOME: The raids were highly destructive and culminated in the great Battle of Poitiers.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: England, 8,000; throughout the raids the English faced inferior forces, only to meet 80,000 French troops at Poitiers.

CASUALTIES: Unknown

TREATIES: None

This episode may be considered a phase of the Hundred Years' War. In 1355, having concluded a truce with France, Edward III (1312–77), king of England, sought definitive peace by proposing that France cede Aquitaine to England. France's king, John II (1319–64), rejected this proposal, an action that incited Edward III and, later, his son, Edward the Black Prince (1330–76), to lead a lightning invasion of France in the hope of forcing a quick resolution to the interminable conflict between France and England. The Black Prince was so-called because of his penchant for black armor. One of the original Knights of the Garter, he was sent to France with independent command when Edward III had to return to England to cope with an uprising in Scotland. The Black Prince led his 8,000 troops on a series of highly destructive raids in the Languedoc region. In 1356 he advanced up the Loire River, where he was confronted at Poitiers by 80,000 French troops under John II in what would be one of the great battles of the Hundred Years' War.

Egyptian Revolt (273)

PRINCIPAL COMBATANTS: Rome vs. Egypt

PRINCIPAL THEATER(S): Egypt

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The pretender Firmus sought to capture the Egyptian throne.

OUTCOME: Roman emperor Aurelian quickly put down Firmus's revolt and executed him.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Late in the third century Syria, Egypt, Mesopotamia, and most of Asia Minor were ruled by the widow of Odaenathus (d. c. 267), Queen Zenobia (d. after 274). The Roman general Lucius Domitius Aurelianus (c. 212–275), who was proclaimed Emperor Aurelian of Rome, defeated Zenobia and her general, Zabdus, at the Battle of Immae in

271. Zenobia fled to Palmyra, her desert seat, and was there besieged by Aurelian. Zenobia surrendered in 272, and Aurelian granted her control of Palmyra and environs. No sooner did Aurelian and his army depart, however, than Zenobia declared her independence from Rome. Aurelian quickly returned to Palmyra, reestablished the siege, and stormed the city. Sacking the capital, he captured Zenobia and took her in chains back to Rome, where she was paraded in 274.

In the meantime, during the second siege of Palmyra, a pretender to Zenobia's Egyptian throne, Firmus, exploited the Roman siege and the queen's internal exile by proclaiming himself emperor of Egypt. He found ready followers, and a revolt developed. Aurelian took a force from siege duty in a march to the Nile valley, where he quickly extinguished the claims of the pretender and his adherents. Firmus was captured and summarily executed.

Egyptian War against the Wahabis

See WAHABI WAR.

Eight Saints, War of the (1375–1378)

PRINCIPAL COMBATANTS: Florence (and a coalition of Italian city-states, paramountly Milan) vs. the Papal States

PRINCIPAL THEATER(S): Florence and surrounding region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Pope Gregory XI wanted to return the papal seat from Avignon, France, to Rome; he was compelled first to overcome an antipapal rebellion led by Florence.

OUTCOME: The papal forces crushed the rebellion, and Gregory XI restored the Holy See to Rome. Under a treaty with Florence the papacy rescinded Florentine excommunication in return for an indemnity payment.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Tivoli (July 1378)

This war between Florence (and a coalition of Italian city-states) and the papacy was incited by Pope Gregory XI's (1330–78) proposal to move the seat of the papacy from Avignon, France, back to Rome after almost 70 years of exile in the so-called Babylonian Captivity. Florence led an Italian revolt against the pope beginning in 1375, which moved Gregory to excommunicate all Florentines in 1376.

In response Florence struck an alliance with Milan. The two powers conducted a war against the papacy. The Florentine high command consisted of an eight-member council known as the Otto di Guerra, nicknamed the "Eight Saints."

Cardinal Robert de Geneva (d. 1394) led a papal army in 1377 against the Italian city-states, soundly defeating the Otto di Guerra's army and laying waste to much of the countryside. After putting down the revolt Gregory returned the papacy to Rome and concluded a peace with Florence. In exchange for an indemnity of 200,000 florins, Gregory XI rescinded the order of excommunication he had imposed against Florence.

Thibault, *Pope Gregory XI: The Failure of Tradition* (Lanham, Md.: University Press of America, 1986).

Eighty Years' War (Dutch War of Independence) (1568–1648)

PRINCIPAL COMBATANTS: Spain vs. the Netherlands

PRINCIPAL THEATER(S): The Netherlands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Protestant northern provinces of the Netherlands sought independence from Catholic Spain.

OUTCOME: The southern provinces remained the Spanish Netherlands, while the northern provinces, known as the United Provinces, won independence after 80 years of sporadic warfare.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Spain, 86,000; Netherlands, 30,000

CASUALTIES: Spain, 70,000; the Netherlands, 30,000

TREATIES: Peace of Westphalia

In 1555 Holy Roman Emperor Charles V (1500–58) gave the Netherlands (including the present day Netherlands, Belgium, Luxembourg, and the French provinces of Flanders and Artois) to his son Philip II (1527–98) of Spain. Philip remained in the Netherlands until 1559, when he withdrew and ruled his land from Spain. War, high taxes, and government centralization were Philip's policies in the region. Political and religious riots broke out in 1566 and spread throughout the Netherlands. William of Orange (1533–84), stadtholder of Holland and Zeeland, emerged in a prominent role at this time as a mediator between the people and the government.

In 1567 Philip sent Fernando Alvarez de Toledo y Pimentel, the duke of Alva (1507–82), and a Spanish army

to Brussels to take control of the territory. During a reign of terror 12,000 people died. In 1568 Holland and Zeeland rebelled, sparking a lengthy war for independence. Having fled to Germany during the reign of terror, William raised an army and sent it under the leadership of his brother Louis of Nassau (1538–74) to the northern Netherlands.

On May 23, 1568, Louis's army of 3,000 defeated a small German-Spanish force led by John, duke of Arenberg. About two months later the Duke of Alva lured Louis into battle in the northern Netherlands. The royalists carried the day, crushing Louis's army. The rebels lost about 6,000 to 7,000 men at the Battle of Jemmingen, while the royalists lost only 100.

In October 1568 William invaded the southern Netherlands with an army of 25,000 men. Alva, with 16,000 men, outmaneuvered William and wiped out his rear guard at Jodoigne on October 20. William retreated into France and then into Germany, unable to recruit Netherlanders along the way due to the ferocity of Alva's reign of terror.

Between 1569 and 1572 William commissioned Dutch privateers, known as the "Sea Beggars," to attack Spanish ships and raid the Netherlands seacoast. These raids culminated in the Sea Beggars' capture of Brill.

Throughout the Low Countries, except for Amsterdam and Middelburg, the rebel forces repulsed the Spanish. William and Louis turned toward the southern provinces. In control of Mons, Louis then faced a besieging force of Alva, which repelled William's attempts to provide relief.

In city after city Alva slowly regained control of the southern and eastern provinces. With a combination of military skill and atrocities, he captured garrisons and massacred civilians and military personnel alike. Haarlem fell after a seven-month siege, but at Alkmaar, 20 miles northwest of Amsterdam, in October 1573 his force of 16,000 men was unable to take the city. He laid siege to the city but soon found that the Dutch were willing to undermine the dikes rather than surrender. The citizens of Alkmaar opened the dikes and flooded the land. Comte Bossu attempted to bring his inland Spanish fleet to the aid of the besiegers but was defeated on the Zuyder Zee in October 1573. Alva then resigned, and Alkmaar became the first city in the Netherlands to successfully resist the rule of Philip II. Alva's successor, Luis de Requesens (1528–76), continued the Spanish strategy of attempting to cut off the interior cities from the coastline. Luis de Requesens sent General Valdez with a force of 80,000 men to Leiden on the Oude River. Valdez surrounded the city with 62 fortified strong points and then began the long wait for the inhabitants to be starved into submission. William of Orange ordered the dikes south of the city cut on August 4. The Sea Beggars then moved through the floodwaters toward the city. By October 2 the Dutch fleet was able to throw food to the starving citizens of Leiden, and the revolt moved to the south.

On October 3, 1576, members of the Spanish garrison at Antwerp mutinied against their officers because they had not been paid in some time. They sacked Antwerp for two days and nights with incredible ferocity. In the violence, known as the "Spanish Fury," about 8,000 people died. All the provinces of the Netherlands then united to sign the Pacification of Ghent on November 8, 1576. When negotiations broke down in 1577, the Netherlands States General raised an army of 20,000 men under Sieur Antoine de Goignies. The Spanish did not back down. Instead Don Juan of Austria (1547–78), aided by reinforcements under Alexander Farnese (1545–92), attacked the Dutch at Gembloux on January 31, 1578. The Dutch lost about 6,000 men; the Spanish, 20. Don Juan regained control of the south from February to September 1578. After Don Juan's death on October 1, Farnese became viceroy. The northern provinces then established a confederation, the Union of Utrecht, which signaled the beginning of the modern period of Holland's history.

Alexander Farnese then captured cities throughout the southern Netherlands, from Maastricht on the Maas River in March 1579 to Antwerp in August 1585. At Maastricht the citizens cut the dikes and flooded the approaches to the city, but the Spanish troops, numbering some 20,000 men, pressed on. They established 11 strong points around the city and four months later stormed the place. Farnese was furious that 4,000 Spanish troops had been lost during the siege, so he ordered the slaughter of 8,000 inhabitants of Maastricht. He was then named duke of Parma.

For the rebels a change in leadership came unexpectedly when William of Orange was assassinated on July 10, 1584. His son Maurice of Nassau (1567–1625) became stadtholder at the age of 17.

In 1585 the English intervened in the war, which to that point had spanned 17 years. Robert Dudley, earl of Leicester, came to the aid of the Netherlands with his army of 6,000 English troops. Although granted sweeping powers by the Netherlanders, Leicester was inept, and after the death of his lieutenant, Philip Sidney (1554–86), he withdrew. William's son Maurice was named captain and admiral-general.

In 1589 Philip II ordered the duke of Parma to the aid of the French Catholics battling Henry of Navarre (1553–1610). Taking advantage of Parma's absence, Maurice liberated Breda in a surprise attack. Maurice continued on to Zutphen and Deventer, where he won victories in June and July of 1591. He then faced Parma along the Waal River near Arnhem, but Philip again ordered Parma to France, this time to relieve Rouen, under siege by Henry of Navarre. Maurice now struck quickly by both water and road and captured Hulst and Nijmegen. His string of successes continued beyond the death of Parma in 1592 to the Battle of Turnhout on January 24, 1597. There the rebel forces, after making a 24-mile march in nine hours, routed the Spanish army under Count Jean de Rie of Varas. Over

the next few years the Spanish made no headway in their attempts to regain control of the Netherlands.

In 1600 Maurice, under orders from the States General, invaded Flanders. His army crossed the Scheldt River and routed the Spanish blockaders of Ostend. On July 2 Maurice sent a detachment to Leffingham Bridge over the Yser River with orders to halt the approach of Albert of Austria, the new Spanish viceroy and son-in-law of Philip II, on his way to try his hand at conquering the rebels. The Spanish reached the bridge first and destroyed the Dutch detachment. Later that day the two armies engaged. Albert ordered his reserves into that fray, but by then it was too late for the weary Spanish. Exhausted by their long march of several days, the Spanish force collapsed under a general attack by the Dutch.

Between 1601 and 1604 the Spanish besieged Ostend. The Dutch, losing 20,000 men during the siege, fared better than the Spanish, who lost as many as 60,000 men due to casualties or disease. While the siege was under way both England and France negotiated peace terms with the Spanish, thereby leaving the Dutch alone in their struggle against the Spanish. The States General ordered Ostend to surrender on September 20, 1604.

Over the next three years the Dutch managed to retain control of the sea. After the victory of Admiral Jacob van Heemskerck at the Battle of Gibraltar, the Spanish agreed to a truce.

War resumed in 1621 after a 12-year period of peace. While part of the Spanish military was involved in the THIRTY YEARS' WAR between the Hapsburg dynasty and France, Sweden, Denmark, and England, the Dutch army won victories at Breda and Maastricht, captured a Spanish fleet off Cuba, and destroyed another fleet at Downs. The Spanish sought peace, and in the Peace of Westphalia in 1648, which ended both the Thirty Years' War and the Eighty Years' War, Spain retained control of the southern states—the Spanish Netherlands—while the United Provinces of the north won their independence at last.

Emboadas, War of the (1708–1709)

PRINCIPAL COMBATANTS: Two Brazilian groups, the Paulistas vs. the *emboadas*

PRINCIPAL THEATER(S): Minas Gerais region of Brazil

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The two groups contested possession of gold mines in Minas Gerais.

OUTCOME: The *emboadas* outnumbered the Paulistas and eventually forced them out of the region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: 100 killed

TREATIES: None

Late in the 17th century gold deposits were discovered in Brazil's Minas Gerais region. Predictably, this led to increasing conflicts between the original Portuguese-Indian settlers of the region, who were based in São Paulo and were therefore called Paulistas, and newcomers, chiefly European immigrants from Portugal, known as *emboadas*, meaning "feather legs," a euphemism for "trespassers." By the early 18th century the *emboadas* outnumbered the Paulistas, and a general civil war erupted with the sole object being possession of the gold mines. The *emboadas* enjoyed the support of the colonial government, which regarded the Paulistas as ungovernable at best and downright disloyal at worst. The *emboadas* more than held their own against the more established Paulistas in a series of clashes from December 1708 to December 1709 that cost about 100 people their lives. Outnumbered, the Paulistas relinquished control of the mines, left Minas Gerais, and migrated west to Mato Grosso.

Emmet's Insurrection (1803)

PRINCIPAL COMBATANTS: United Irishmen vs. British authorities in Ireland

PRINCIPAL THEATER(S): Dublin

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The United Irishmen wanted to overthrow the British in Ireland.

OUTCOME: Premature and uncoordinated, the insurrection was a failure, resulting in the capture and execution of Emmet.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: About 100 insurrectionists actually engaged.

CASUALTIES: Emmet and 21 other rebels were executed; 50 people were killed during the uprising.

TREATIES: None

Robert Emmet (1778–1803) was a leading light of the Society of United Irishmen, a radical revolutionary group founded in 1791 and inspired by the French Revolution. Its objective was to achieve parliamentary reform and legal equality for all Irish. Among its organizers were Belfast Presbyterian merchants and, preeminently, the Dublin

intellectual Wolfe Tone (1763–98). The United Irishmen garnered support among rural Presbyterians in Ulster and among Roman Catholic peasants. After war broke out in 1793 between Great Britain and revolutionary France, the society turned from advocating reform to urging violent insurrection. In response British authorities moved harshly against it—an action that served only to inflame passions all the more.

During 1800–02 Emmet traveled to France, where he and other United Irishmen leaders developed their plans for an uprising, which was to be aided by the French. Emmet returned to Ireland and stockpiled arms in secret caches, biding his time for the right moment to strike. Unfortunately, one of the caches blew up, alerting authorities to the revolutionary movement and therefore prompting Emmet to act prematurely. The insurrection began on July 23, 1803, but was plagued by confusion and a complete lack of coordination: One major rebel contingent never arrived, while a second dispersed, assuming that the revolution had been called off. A third contingent waited for the signal to act—but no one ever gave it.

Nevertheless, Emmet and about 100 followers futilely stormed Dublin Castle. Easily repulsed, they withdrew, and Emmet hid in the mountains of Wicklow. When he returned to Dublin to see his fiancée, he was captured, tried for treason, and hanged on September 20, 1803. Before the sentence was carried out Emmet made a stirring speech that inspired Irish nationalists of many generations.

English Barons' Revolt (1387)

PRINCIPAL COMBATANTS: Supporters of King Richard II vs. English barons led by the duke of Gloucester

PRINCIPAL THEATER(S): England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the English throne

OUTCOME: Although the nobles asserted their control over King Richard II, eventually the king solidified his power and got rid of his most ardent opponents.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Ascending the English throne at the age of 10 in 1377, Richard II (1367–1400) reigned under the aegis of his uncle and regent, John of Gaunt (1342–99), duke of Lancaster. John's regency was not unduly harsh nor were there

any apparent attempts to supplant Richard on the throne, but Richard was an able youth and chafed at having a regency over him. He had, for example, successfully negotiated the suppression of a terrorist uprising when he was only 14. When he reached the age of majority, Richard quickly replaced John and elevated his two brothers and friends to high positions in the government. Gaunt, lusting for power of his own, left for Spain in 1386.

The youthful Richard and his policies rankled the powerful English barons, led by Thomas of Woodstock (1355–c. 1397), duke of Gloucester. The group of lords appellant also included Thomas Arundel (1353–1414), Henry of Derby (1366–1413, also known as Henry Bolingbroke, later Henry IV), the son of John of Gaunt, Thomas II de Beauchamp (d. 1401), earl of Warwick, and Thomas Mowbray (c. 1366–99), earl of Nottingham. The lords openly challenged the king's authority in Parliament, and the situation came to a head in the session of 1386, when Richard sought a parliamentary grant to take the field against a suspected French invasion. Instead, Parliament rebuked the king and chastised him for his selection of ministers. Richard, incensed by its insolence, reminded Parliament that he could dissolve the body and bade members mind their own business. They refused and agreed to legislate funding only when Richard dismissed his chancellor, Michael de la Pole (fl. 1383), earl of Suffolk. Parliament also imposed an 11-member commission on the king to oversee his activities for one year. Richard called on the House of Commons to send him a delegation for an explanation of parliamentary behavior. In place of explanation, the House of Commons sent Gloucester and Arundel.

The two lords cited an obscure rule of English common law that required Parliament to review governmental administration on an annual basis. Richard acquiesced and dismissed Suffolk, naming Arundel's brother chancellor. However, the lords revealed their vindictive nature by impeaching Suffolk and pushing for a conviction. After receiving one they also imposed a royal commission to supervise Richard's actions in exchange for the military funding Richard sought. Richard, however, limited the commission's authority for one year, from November 1386 to November 1387. Richard promptly dismissed Parliament and left London. In the following months he refused to call Parliament and went about the countryside personally soliciting support against the lords. He successfully avoided the commission for the majority of its tenure. The lords, meanwhile, worried that the commission's term would run out before it could bend the king to its will.

The moderates on the commission appealed for a meeting between Richard and the hard-liners, led by Gloucester. The call went out for Parliament to convene on February 3, 1388, for the first time in more than a year. Meanwhile, Robert de Vere (1362–92), duke of Ireland, was in the west raising support for the king when he heard of the meeting. Attempting to make his way back to

London along the Severn River with the meager force he had raised, he was met by Gloucester, Derby, and the appellants' forces at the Battle of Radcot Bridge on December 20, 1387. The undermanned royalist troops were quickly overrun, and de Vere barely escaped.

With his army defeated Richard had no alternative but to give in to the lords. His position on the throne was tenuous. In fact, there is speculation that he might have been temporarily deposed only to be restored within days to avoid a protracted power struggle. When Parliament convened on February 3, it showed itself the willing agents of the appellants. In what would be called the "Merciless Parliament," four of Richard's ministers, including Suffolk and de Vere, were executed, while others were imprisoned or stripped of any position of nobility. The lords essentially ruled England for the next 11 months until Richard was able to break Gloucester's hold on Parliament. He would not gain total control again until 1397, but when he did he did so decisively: In that year Arundel was convicted of treason and executed, Gloucester was imprisoned and murdered, and Warwick was banished.

English Civil War (1215–1217)

PRINCIPAL COMBATANTS: Forces of the English Crown and the English barons, vs. forces of the French dauphin, Louis

PRINCIPAL THEATER(S): Central, southwestern, and southeastern England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The barons invited Louis to assume the English throne.

OUTCOME: After the death of King John, the barons deserted Louis, who withdrew from England.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Kingston-upon-Thames, September 12, 1217, in which the rebels were granted amnesty, and Louis agreed not to support any future rebellion. The moderate nature of the treaty helped place Henry III's reign on a firmer footing.

In 1215 the ongoing power struggle between King John (1167–1216) and the English barons culminated in John's grudging agreement to the Magna Carta, which ceded considerable power to the barons. Seeking to void the Magna Carta, John obtained from the pope a decree nullifying it. This enraged the barons, who with the support of many Englishmen invited Louis, dauphin of France (1187–1226; later Louis VIII), to assume the English throne in lieu of

John. In the meantime, however, John had hired French mercenaries to fight the barons and made significant progress against them. He avoided major battles but was able to consolidate control of western and central England. During this time John also successfully repulsed an invasion by Scotland's king Alexander II (1198–1249).

In 1216 John died, and at this juncture the dauphin invaded England, swiftly overrunning the southeast, where English forces finally contained him. In the meantime, nine-year-old Henry III (1207–72) was crowned to rule under a regent, William Marshal (c. 1146–1219), who in 1217 led English forces in a naval victory against Louis at Dover, then attacked the French army that was laying siege to Lincoln. But Marshal's most significant victory was political. Unlike John, he voluntarily acceded to many of the barons' demands, prompting them to desert the French cause. Without the backing of the barons, Louis had no choice but to withdraw and conclude a peace with Marshal. The war was ended by the Treaty of Kingston-upon-Thames (September 12, 1217). On behalf of Henry III, Marshal granted the rebels amnesty, and Louis agreed not to support any future rebellion. The wise and moderate nature of the treaty was instrumental in placing the reign of Henry III on a sound footing.

English Civil War (1263–1265) *See* BARONS' WAR.

English Civil War, First (1642–1646)

PRINCIPAL COMBATANTS: The king's supporters in England, Ireland, and Scotland vs. Parliament's supporters in England and Scotland. Both sides received limited help from the continental powers—chiefly France, Germany, and the Low Countries.

PRINCIPAL THEATER(S): England, but with important engagements in Wales, Scotland, and Ireland

MAJOR ISSUES AND OBJECTIVES: Parliamentary demands for an end to arbitrary government and taxation, the extirpation of the threat of Roman Catholicism ("popery"), and distrust of Charles I led to a quarrel over control of the sword and a declaration of war by the king against Parliament.

OUTCOME: After a slow beginning the forces of Parliament were ultimately victorious in the field, resulting in the king's surrender. His refusal to yield on key political and religious issues, however, led to a fresh outbreak of hostilities in 1648 and his execution the following year.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Parliament, 40,000+; Scots (parliamentary under Leven), 20,000; Scots (Covenanters under William Baillie), 7,000; Scots (royalists under Montrose), 5,000; Charles I, 30,000+.

CASUALTIES: England: Parliament, 28,000 killed including few noncombatants, widespread devastation in the Midlands, Yorkshire, and the West Country. Royalists, 34,000 killed. Scotland: Covenanters, 12,300; Royalists, 2,400.

Deaths from disease must have been at least as high as the numbers killed on the battlefield.

TREATIES: None

The First Civil War was the costliest conflict ever waged on English soil in terms of casualties, devastation, and financial expense. To some historians the events of the 1640s, culminating in the execution of the king in 1649, may be regarded as the first major European revolution. Not only was there bitter conflict between the supporters of king and parliament, the events of the battlefield gave rise to intense debate on religion, constitutional sovereignty, and political thought.

CAUSES

The causes of the civil war were far reaching, although armed conflict could have been avoided almost until the beginning of 1642. Charles I (1600–49) had an exalted conception of his role as monarch. If not a thoroughgoing absolutist, he believed that his authority derived from God and denied that he was accountable to the people or their elected representatives. When Parliament proved uncooperative (1626–29), he resolved to govern without Parliament. He did this for 11 years (1629–40). He might have been able to continue indefinitely had not rebellion in Scotland against his attempt to impose an Anglican brand of worship on that nation depleted his treasury and revealed the unpopularity of his regime in both kingdoms (see BISHOPS' WAR, FIRST; BISHOPS' WAR, SECOND). Forced to summon Parliament once again, he found it unsupportive of his war against the Scots and determined to reform the abuses of prerogative government. Unparliamentary taxation was declared illegal; the Star Chamber and other prerogative courts were abolished, a Triennial Act was passed, and the present Parliament was declared indissoluble without its own consent.

Issues deeper still continued to divide king and Parliament. Charles's attempts to move the Church of England away from Calvinism toward a more Catholic worship and an Arminian theology (which upheld the doctrine of free will) alarmed many who saw in these efforts a "popish" conspiracy to return England to the Roman fold. Religious fear was compounded by growing mistrust of the king. Many were persuaded that Charles would retaliate against his opponents at the first opportunity. Distrust of the king was exacerbated by rebellion in Ireland, which flared up in

October 1641 (see IRISH REBELLION, GREAT). In England it was widely believed that Charles had encouraged the Catholic-led rebellion and therefore could not be entrusted with the army that had to be raised to put it down. The struggle for the power of the sword together with Charles's refusal to countenance puritan reform of the church led directly to his declaration of war against Parliament in August 1642. The difficulty of governing a multiple kingdom was a root cause of the war. However, there could have been no war had Charles not gained a party between 1640 and 1642. The royalist party in 1642 consisted of those who wished to defend the established church and the *Book of Common Prayer*, resented the Scots presence in England, and feared the disintegration of the social order.

THE DISPOSITION OF FORCES

In January 1642, having failed to arrest the ringleaders of the parliamentary opposition, Charles fled the capital, leaving it in the hands of his enemies. Control of London, with its population approaching 400,000, its immense financial resources, its administrative importance, its vast arsenal, and its preeminence as England's largest port was crucial advantage to the parliamentary side throughout the war. London and its region responded quickly to the call for manpower, money, and weapons, as did the nearby "home" counties. Many other counties were divided and tried to keep out of the war, but Parliament quickly asserted its control over East Anglia, which, with its rich agriculture, was a storehouse of provisions and money at all times. Parliament was also successful in taking control of Hull, the second greatest fortress in the kingdom. Most ports and cloth towns threw their support behind Parliament. For his part, the king drew support from Wales, the counties of the west Midlands, Lancashire, Yorkshire, and Cornwall. Having lost the administrative levers of power, he had to depend to a much greater extent on voluntary contributions of men, money, and matériel. Recruitment was sluggish at first, but by October 1642 he had mustered about 24,000 men. The main parliamentary army under Robert Devereux, earl of Essex (1591–1646), was close to 26,000.

Through a combination of bad luck and poor judgment Charles lost control of the navy several months before he fought his first battle on land. The consequences of Parliament's command of the sea were momentous. Vice Admiral Robert Rich (1587–1658), earl of Warwick, was able to block the flow of munitions from abroad. Parliamentary naval supremacy diminished the king's prestige and also made European powers reluctant to intervene in English affairs.

THE BATTLE OF EDGEHILL

In early October the king left his stronghold in the west Midlands to march on London. Essex's move to block his

Major battles of the First English Civil War

path led the two armies to a confrontation on a gently sloping field below the village of Edgehill in Warwickshire. Both armies arranged themselves with brigades of foot soldiers in the middle, flanked by cavalry and dragoons on the wings. Reserves of foot and horse stood in the rear. After an ineffective artillery duel Prince Rupert (1619–82) ordered his cavalry on the right wing to advance. He soon drove the parliamentary cavalry under Sir James Ramsey off the field. A critical blunder was committed by Sir John Byron's (c. 1600–52) two regiments, which formed the second line of Rupert's wing. Ignoring their commander, they joined in the chase when they should have stayed to attack the undefended flank of parliamentary infantry. Much the same happened on the royalist left wing: Henry Lord Wilmot's (d. 1658) charge swept away Basil Lord Fielding's regiment, and George Lord Digby (c. 1611–76), commanding Wilmot's second line, joined in the pursuit. When Sir Jacob Astley led the advance of royalist infantry, he was virtually without cavalry support. A bitter struggle raged between the infantries of the two armies, but the advantage lay with Essex, who still had two cavalry regiments left to throw into the fray. With the help of his reserves he was now able to push the whole royalist army back. Nightfall brought fighting to a standstill. The next day neither side had any stomach for a renewal of the action, so the king ordered his men back to quarters, while Essex retreated to Warwick. Losses on both sides were almost equal—about 1,500 men in all. The king had lost his former commander in chief, the earl of Lindsey, and Sir Edmund Verney, knight marshal of England, and several other officers had been wounded. Essex had lost his kinsman Colonel Charles Essex and his page, Colonel Lord St. John.

The battle of Edgehill was a strategic victory for the king, because the road to London was now clear. But the king chose to proceed cautiously, which allowed Essex's army to enter the city from the north, where it was joined by 6,000 well-armed soldiers of the London militia. On the morning of November 13 a parliamentary army of some 24,000 men was drawn up on the common at Turnham Green, a few miles west of the city, to face the royalist invader. All day long the armies faced each other without engaging. In the end Charles wisely pulled his men back and returned to Oxford for the winter.

In 1643 signs appeared of a comprehensive royalist strategy to approach London from the southwest, the center, and the north. While the king consolidated his position around Oxford, Sir Ralph Hopton (1596–1652) recruited a formidable little army in Cornwall. He and Sir Henry Wilmot won a number of victories of steadily increasing scale: at Braddock Down (January 19, 1643) against Colonel William Ruthin (c. 1598–1668), and again at Saltash on the 22nd; against the Earl of Stamford at Stratton (16 May); and against Sir William Waller (c. 1598–1668) at Lansdown Hill and Roundway Down (July 5 and 13). In the latter battle Waller lost his entire army in one conclusive encounter, as Wilmot drove his cavalry to plunge headlong

over a concealed escarpment, breaking their own and their horses' necks. Essex, with his army stationed only a few miles away, had failed to come to Waller's aid.

This was the low point of the war for Parliament. With its grip on the Severn valley broken, Bristol and Gloucester were imperiled. In the south Essex's army had wasted away to 5,500, while the earl of Newcastle dominated the north with his army of 8,000, 6,000 of whom were crack infantry. His cavalry were an elite force led by Sir Marmaduke Langdale and George Goring. The northern parliamentary army, never more than 6,000 strong under Ferdinando Lord Fairfax (1584–1648) and his son Sir Thomas (1612–71), were always dangerous, but after a number of lesser engagements, Newcastle beat them decisively at Adwalton Moor near Bradford (June 30) and drove them back to Hull.

The arrival of the queen in Oxford the next month with 3,000 troops and supplies at last gave Charles numerical superiority over Essex. This infusion of strength enabled Prince Rupert to take 12,000 men and storm Bristol, the second port of the kingdom. Nathaniel Fiennes (son of Lord Say and Sele), with only 1,800 men, put up a valiant defense but was later court-martialled for losing the city.

At this juncture a concerted royalist pincer movement against the center might have won the war, but Charles chose instead to protect his rear by turning and besieging Gloucester. When Essex came to the relief of the city, Charles abandoned the siege and blocked Essex's way back to London. The two armies, about equal at 14,000 men each, fought a pitched battle at Newbury, where many royalist cavalry were lost, and Essex's reputation was temporarily restored. Parliament recovered more ground in the north and south. At Winceby in Lincolnshire combined forces from the northern parliamentary army under Sir Thomas Fairfax and the Eastern Association under Edward Montagu (1602–71), earl of Manchester—7,500 in all—destroyed and dispersed between 2,300 and 2,800 horse cavalry and dragoons under Sir William Widdrington. This first major victory of Roundhead cavalry over their royalist opponents boosted the morale of the parliamentary cavalry and obliged Newcastle to abandon his march on London. In the south Hopton's 5,000 horse and foot soldiers suffered a series of defeats at the hands of Sir William Waller. This put an end to the royalist three-pronged strategy to occupy London. By the close of 1643 the armies of both sides were nearly at the end of their tether. The following year, however, would see the arrival of outside help.

In December 1643 the Scots undertook to bring an army of 20,000 to England in exchange for a parliamentary promise to establish a Presbyterian Church on the Scottish model. Although an acceptably Presbyterian church never came into being, the Scots were prompt in fulfilling their side of the bargain. On January 19 Alexander Leslie (c. 1580–1661), earl of Leven, crossed the Tweed with 21,500 troops. In six months they would take part in the second most critical battle of the civil war.

In the meantime James Butler (1610–88), earl of Ormonde, had concluded a truce, or “cessation,” with the Roman Catholic Confederates in Ireland. This enabled the king to bring in 17,600 troops, mainly infantry, from that kingdom. Contrary to Parliament’s allegation that they were papists, the great majority were Protestant Englishmen. Nevertheless, whatever military advantage the king may have gained by this access of strength was offset by the propaganda loss he suffered for his apparent appeasement of Roman Catholicism and Irish nationalism.

Some of the Irish recruits went to strengthen Hopton’s army, which rose to 6,000 by early March 1644. On March 29 he met Sir William Waller’s substantially larger army of 8,600 at Cheriton near Winchester, where it was annihilated. The effect on royalist morale was profound, for the parliamentary cavalry demonstrated a second time that they could take on and beat the king’s cavalry.

THE BATTLE OF MARSTON MOOR

The next crisis point was York, where Parliament was massing three armies against William Cavendish, earl of Newcastle-on-Tyne (c. 1593–1676): Leven’s Scots (now down to 16,000), Ferdinando Lord Fairfax’s northern army (5,000), and the Earl of Manchester’s Eastern Association Army (9,000), for a total allied force approaching 30,000. Lord Newcastle had to retreat behind the walls of York on April 18, with 6,000 foot soldiers. His 6,000 horse soldiers he sent south to Newark, where they were reunited with George Goring. Rupert now set out from Oxford once again, criss-crossing the country in search of troops. On June 14 his uncle Charles wrote instructing him “immediately [to] march . . . with all your force, to the relief of York.” At this point the prince had 7,000 top-quality horse soldiers and at least 7,000 foot soldiers. Together with Newcastle’s 5,000 cavalry men he had a force well fewer than 20,000, less than two-thirds as big as the allied force. Given the disparity in numbers, Newcastle was reluctant to fight, and on the day of battle he did not muster his troops until several hours after Rupert’s men were on the move. The allies had their own problems: They were divided both ethnically and in their leadership. Hearing of Rupert’s approach and knowing the terror of his name, they abandoned the siege of York on July 2. Rupert then pursued them with his cavalry, on the understanding that Lord Eythin would bring up the infantry later that day. Spying Rupert’s approach, Leven turned the allied armies around and drew them up on Marston Ridge. At about 6 P.M. he ordered his huge army down the hill. Soon the foot soldiers in the center were engaged, neither making much headway. On the allied left wing Oliver Cromwell (1599–1658), heading the Eastern Association cavalry, bore down on Lord Byron’s regiments, swept them away, and then turned to break down the adjacent infantry. However, he was forced to leave the battle early with a wound to the neck. On the allied left the fortunes were reversed. Sir Thomas Fairfax, leading the Northern Association cavalry, became

tangled in a maze of hedges and was vanquished by Goring at the head of the Northern cavalry. Goring also disposed of the second line under John Lambert (1619–84), and even a reserve brigade of Scots under the earl of Eglinton. One regiment, that of Sir Charles Lucas, resisted the temptation to attack the Scots baggage train and instead began to hack away at the flank of the Scots infantry on the right side of the allied line. At this point Newcastle threw in the last royalist cavalry reserve under Sir William Blakiston against the allied center, which was held by Lord Fairfax’s Yorkshire foot soldiers, with the Scots forming the second and third lines. Blakiston smashed through all three lines, spreading panic among the allied infantry.

By now smoke shrouded the field, and the daylight was almost gone. Concluding that they had lost the battle, Lords Leven and Fairfax fled. But Rupert and Lord Eythin were nowhere to be seen, either; Newcastle appears to have been the only senior royalist commander on the battlefield. Suddenly the situation was transformed. Sir Thomas Fairfax had led his men around to the back of the royalist army, where he found a bandaged Cromwell at the head of a virtually intact cavalry brigade. In combination they took on Goring once again, this time besting him. This disposed of the last of the royalist cavalry, for Sir Charles Lucas’s troopers had been badly mauled by Sir William Baillie’s well-drilled pikemen.

Night had fallen, but the fight continued. Under a harvest moon the royalist infantry stood their ground, refusing quarter. For a while neither cavalry nor infantry could break their ranks, so unshakeable were the pikemen. Even when their square formation was broken they fought on, the wounded lying on their backs, goring with their swords or pikes the bellies of the horses who rode over them. At the end of the day the grim toll was 4,150 royalist dead to only 300 on the allied side. Remarkably, the victory had hung in the balance for much of the day. Newcastle’s failure to cooperate allowed Leven to seize the initiative. Both Cromwell and Sir Thomas Fairfax played a special role, as the Eastern Association cavalry became the chief instrument of allied victory. With the royalist infantry shattered, the war in the north was over.

LOSTWITHIEL

On the other hand, Parliament was in danger of losing the south. While the earl of Manchester dawdled around Lincoln, Waller failed to come to the help of Essex, who was recklessly plunging deep into royalist territory in Cornwall. Charles had decided to pursue him and by now had an army equal to Essex’s 10,000. The Cornish were hostile, and Hopton’s and Sir Richard Grenville’s local forces brought the king’s strength up to 16,000. All through August the royalists skillfully closed the net around the dispirited parliamentarians. At Lostwithiel, Essex reached the end of the road. With defeat staring him in the face, he ordered his cavalry to cut their way through the enemy lines and escape to Plymouth. The earl slipped away by

boat, leaving Major-General Skippon to surrender the 6,000 infantry. It was the most resounding royalist victory of the war.

THE CREATION OF THE NEW MODEL ARMY

The seething discontent on the parliamentary side with Essex, Manchester, and Waller now boiled over in a torrent of scathing abuse. Public contempt was only deepened when their combined forces failed to crush the much inferior royalist army at Newbury in October and when Manchester failed to stop Charles from relieving Donnington Castle with a force half the size of his own. In self-exculpation Manchester had declared to his council of war: "If we beat the king ninety-nine times he would be king still, and his posterity; and we subjects still. But if he beat us once we should be hanged and our posterity undone."

At the beginning of December the war party in the Commons threw its energy into a "Self-Denying" resolution that would have excluded all members of either house from military or civil appointments for the duration of the war. Thwarted by the House of Lords, where Essex and Manchester commanded a majority, the war party outflanked aristocratic opposition by creating a new force under the command of Sir Thomas Fairfax—the New Model Army—from which all members of Parliament were excluded. With their own armies now starved of resources, the discredited leaders had no alternatives but to resign. In February the lords swallowed their pride and permitted the ordinance for the New Model to become law. At the beginning of June the commons voted to exempt Oliver Cromwell from the provisions of the Self-Denying Ordinance, which had finally been passed in April.

NASEBY

His last-minute readmission to the army allowed Cromwell to play a leading role in the battle of Naseby on June 14th, 1645. Commanding barely 9,000 troops, Charles faced an enemy force that at nearly 17,000 was almost twice the size of his. The opposing armies faced each other on two low hills. The parliamentary left wing comprised five-and-a-half regiments of cavalry arranged two deep under the leadership of Commissary General Henry Ireton (1611–51). The right wing under Cromwell was a trifle heavier and was drawn up three lines deep instead of the usual two. The left wing's slight inferiority in numbers was more than compensated for by the stationing of Okey's crack regiment of dragoons behind the hedges on the far left at right angles to the line of battle. Between the two wings of cavalry were eight infantry regiments drawn up in two lines, with a "forlorn hope" of 300 musketeers in front. The royalist forces were drawn up in similar fashion but without the dragoons. Prince Rupert commanded the cavalry on the right; Langdale, whose numbers were distressingly thin, the northern cavalry on the left. The infantry under Astley occupied the middle; behind it was the reserve, consisting of the king's lifeguards and Rupert's

Bluecoats. The absence of Goring's 5,000 men was to prove a fatal weakness to the royalists.

After a brief artillery exchange the battle commenced about 11 A.M. The battlefield, unimpeded by hedges, was about a mile wide. Taking advantage of a terrain favorable to cavalry, Rupert led his right wing against Ireton and soon swept him off the field in spite of his nearly two-to-one superiority in numbers. Instead of halting his men then and throwing them against the exposed flank of Skippon's infantry, he permitted them to carry on their pursuit for a mile until they came upon Fairfax's baggage train. A valuable hour was wasted before Rupert could bring his men back to the battlefield. Meanwhile, the parliamentary center was losing ground to Astley's infantry. Though outnumbering their adversaries, they were demoralized by the wounding of Skippon and Ireton. Events on the royalist left, however, proved crucial. As Langdale's men joined the battle, they came up against the superior weight of Cromwell's regiments. It was now that Cromwell demonstrated his greater ability as a cavalry commander. Having pushed Langdale back as far as Rupert's Bluecoats, he permitted only two regiments to pursue and scatter them. He then crossed the field with part of his remaining forces and attempted to rally Ireton's fragmented divisions, summoning Okey's dragoons to help. He and Fairfax then charged from opposite sides into the main body of the royalist infantry. Having restored order to the parliamentary line, Fairfax next coordinated a general charge by his whole army, being careful to ensure that the cavalry did not leave the flanks of the infantry exposed by too impetuous an advance. Facing the monolithic approach of the New Model, the remnant of the king's army now turned tail and fled. To Cromwell belongs the credit for choosing the ground, setting the troops in order, and decisively breaking Langdale's cavalry. But contemporary accounts agree that Fairfax, by taking over the right wing after Cromwell's first charge, by synchronizing the advance of horse and foot, and by seeing to the "timely coming on" of the reserves, clinched the victory. It was a relatively cheap one: only 150 men lost in comparison to nearly 1,000 for the king in addition to 4,500 prisoners from the infantry, 2,000 cavalry, and the king's file of secret letters. The publication of excerpts from these letters, with their evidence of his dealings with the Irish rebels, would do irreparable damage to Charles's reputation in England. The one consolation for the royalists was that their cavalry had got away virtually intact.

The events of the next year were little more than a mopping up operation for the New Model Army. After recapturing Leicester Fairfax set out on forced marches for the southwest. He chased Goring away from Taunton, and then, helped by the 2,200 cavalry men and dragoons of Massey's Western Brigade, Fairfax encircled and routed Goring at Langport on July 10. The cost in lives was not high: about 300 royalists and a tenth that number of parliamentarians. But by knocking out Goring's cavalry before they could be reinforced from Wales, Fairfax had effectively

won the war in less than four weeks. The royalist stronghold at Bridgwater fell to him 12 days later, and the retreating royalists were quarantined in Devon and Cornwall. Before tightening the noose in the southwest it was decided to invade Bristol, the king's chief port and principal magazine. Even though Rupert only disposed of 1,500 defenders, against 9,000 to 10,000 under Fairfax, the lengthy outworks and high walls made the city a hard nut to crack. Six days of bombardment failed to dent the walls, and in the end the infantry had to scale them, open the gates from the inside, and let the cavalry enter. A measure of the royalists' despair at the loss of Bristol was Charles's dismissal of Rupert afterward. Cromwell, for his part, exploited the victory to address an impassioned appeal to Parliament for liberty of conscience for religious dissenters.

Over the next several months royalist strongholds tumbled like ripe fruit into the laps of the parliamentary commanders: Bath, Sherborne, Basing House, Tiverton, Dartmouth, Torrington, Plymouth, Exeter, Launceston, Bodmin. The civilian population welcomed an army that scrupulously paid for everything it took. By April 1646 the west was sewn up, and Fairfax turned his attention to the king's headquarters at Oxford. Seeking to avoid bloodshed and also to spare the city's intellectual and aesthetic treasures, Fairfax allowed the governor, Sir Thomas Glemham, to surrender on easy terms. Before this last humiliation was played out, Charles had slipped away and ridden to Newark, where he delivered himself into the hands of the Scottish army. Refusing to accept the overwhelming verdict of the battlefield, he would spend the next year and a half negotiating and plotting at various times with the English Presbyterians, their rivals the Independents, the Scots, and hoped-for friends in Rome, France, Holland, Denmark, and Ireland. Thanks to the king's stubbornness civil war would erupt once again in the spring of 1648.

English Civil War, Second (1648–1651)

PRINCIPAL COMBATANTS: English royalists (with Scots allies) vs. Parliament

PRINCIPAL THEATER(S): Scotland and northern England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Parliament and the forces of the monarchy struggled over control of England.

OUTCOME: Parliament prevailed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Royalists and Scots, 24,000; Parliamentary forces, 8,000

CASUALTIES: Royalists and Scots, 3,909 killed; parliamentary forces, 2,045 killed

TREATIES: None

After suffering defeat at the Battle of Oxford in 1646, Charles I (1600–49) fled to Scotland, thereby ending the First ENGLISH CIVIL WAR. With Charles gone, the so-called Long Parliament set about attempting to reform the English government and church. When Charles, in Scotland, declined to respond to Parliament's attempt to introduce a Presbyterian system into the Church of England, the Presbyterian Scots became alienated from the king and ransomed him to Parliament. Charles was held at Holmby House while Parliament continued to debate. In the meantime, the army reacted against Parliament's Presbyterian proposals, and in response Parliament took steps to disband the army. Parliament offered Charles a limited monarchy, but the army, led by Oliver Cromwell (1599–1658), resisted this as well and kidnapped the king. Charles managed to escape, however, and took refuge on the Isle of Wight while he continued to negotiate with foreign powers, with Parliament, and with Scotland, again promising the Scots church reform in an agreement of December 28, 1647. It was this agreement that triggered full-scale renewal of warfare, or the Second English Civil War.

Kent, Essex, and Wales each saw royalist uprisings, which Cromwell's army put down. The Scots also invaded at Preston in northern England. Cromwell successfully repulsed the invasion here in 1648 and followed this victory with Pride's Purge, which rid Parliament of Presbyterians—on the grounds that Presbyterians were all royalists. What was left of Parliament, the so-called Rump Parliament, brought Charles I to trial for treason, and he was executed on January 30, 1649. This made Parliament the ruling body of England, with Oliver Cromwell as lord protector.

Operating from Scotland, Charles II (1630–85) directed Scottish rebellion against England. Cromwell led the parliamentary army to the outskirts of Edinburgh in 1650 and was confronted by royalist forces under Sir David Leslie (1601–82). Cromwell was held outside Edinburgh and ultimately retreated to Dunbar for supplies. He marched on Edinburgh again but was outmaneuvered by Leslie and once again forced back to Dunbar. Leslie seized the initiative and marched to a position south of Dunbar to block Cromwell's route back to England. Leslie wanted to hold Cromwell at Dunbar, where his army was suffering from a lack of food and an abundance of inclement weather. The ministers of the Scottish Kirk, however, feared that Cromwell might escape by sea, and they ordered Leslie to attack. Cromwell saw Leslie's movement and by night redeployed his army. On his right a force of dragoons and artillery were deployed to hold the flank. The majority of his troops were then concentrated on the right flank. This enabled him to surprise Leslie by the

nature of his defense. Cromwell then took the offensive and drove the royalists back in disarray.

The Battle of Dunbar, September 3, 1650, resulted in the destruction of the Scots army, with some 3,000 Scots killed and 10,000 captured in a little more than an hour of fighting. Cromwell completed his march on Edinburgh and took the city.

Following this defeat Charles II overcame the objections of Sir David Leslie and led a new mostly Scots army in an invasion of England in 1651. Cromwell dispatched forces under John Lambert (1619–84) to harass the Scots on their march, while he led an army on a parallel route south. Charles Fleetwood (c. 1618–92) assembled a new parliamentary force, which joined those of Cromwell and Lambert at Warwick on August 24, 1651. Charles and his army arrived in Worcester the day before. Here he resupplied his forces and built hasty fortifications.

Cromwell now enjoyed a two-to-one advantage over the royalists. Fleetwood and Lambert crossed the Severn River to the south of Worcester, while Cromwell drew the rest of his forces up to the east of the city. From this position he began an artillery bombardment, which prompted Charles to sally out against Cromwell's artillery battery. Charles was quickly driven back. For their part, however, Fleetwood and Lambert were having difficulty approaching the city and were repeatedly prevented from crossing the bridges over the Severn. Cromwell responded by building a bridge of boats. He led his infantry across, attacked the royalist forces, then, in concert with Lambert, at last pushed the royalists back from their bridges.

Seeing that Cromwell had badly mauled his northern troops, Charles attacked to the east. At first his attack drove the parliamentarians back, and Cromwell was forced to recross the Severn, but after three hours of fighting Cromwell drove the royalists back into the city, which he surrounded. The royalist army was defeated, but Charles II managed to escape—and would spend six weeks wandering through England before he found a boat that would evacuate him to France. Still, the defeat had been decisive, and the Second English Civil War was ended.

English Conquest of Wales (1282–1284)

PRINCIPAL COMBATANTS: England vs. Wales

PRINCIPAL THEATER(S): Wales

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: England's Edward I sought to reconquer Wales from Prince Llewellyn ab Gruffyd and bring it back into the English fold.

OUTCOME: Edward succeeded but faced continual rebellion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

England's Edward I (1239–1307) resolved to reconquer Wales, which under the leadership of Prince Llewellyn ab Gruffyd (d. 1282) had achieved virtual independence from English rule. Once independent, the Welsh frequently raided the border country. It was these provocations that Edward found intolerable, and he fought Llewellyn at the Battle of Radnor in May 1282. Although Llewellyn fell at this battle, his longbowmen inflicted many casualties on the forces of Edward. Nevertheless, this victory brought Wales under nominal English rule—with emphasis on the word *nominal*, for Edward was compelled to campaign for the next two years throughout Wales to suppress ongoing rebellion. In the course of these campaigns, he adopted the potent Welsh longbow and thus brought the English forces to rapid parity with the Welsh.

English Dynastic War (1135–1154)

PRINCIPAL COMBATANTS: Matilda, daughter of Henry I vs. Stephen of Blois, nephew of Henry I

PRINCIPAL THEATER(S): England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Possession of the throne following the death of Henry I

OUTCOME: A compromise was reached whereby Stephen would rule until his death and would be succeeded by Matilda's son, Henry II.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Winchester, 1154 (ratified at Westminster)

Henry I (1068–1135) of England died in 1135, having previously arranged with the barons for the succession of his daughter Matilda (1102–67) to the throne. Henry had thus sought to block the ascension of his nephew Stephen of Blois (c. 1097–1154). After Henry's death, however, the

barons together with the clergy offered the throne to Stephen, who immediately proved weak and indecisive. England was wracked with violent anarchy, and by 1138 the barons, who had elevated Stephen to the throne, were in full revolt against him. Their objective was to replace him with Matilda.

In 1139 forces loyal to Matilda under the command of her half brother Robert (d. 1147), earl of Gloucester, joined the fray. The result, for the most part, was a series of violent but inconclusive battles until the Battle of Lincoln (1141), at which Stephen was taken prisoner. Matilda, though uncrowned, assumed the throne—and immediately proved herself even less palatable than Stephen had been. Rebellion of an anarchical nature intensified. Matilda ordered an attack on Wolvesey Castle in Winchester, which was still held by Stephen's forces. While laying siege to the castle, Matilda's troops were attacked by another force loyal to Stephen. Taken by surprise, the besieging force was routed on September 14, 1141, and Robert, earl of Gloucester, was taken prisoner as he fled through Stockbridge. Matilda obtained his release by freeing Stephen, thereby losing what little advantage she had gained in the seesaw conflict. Within a year Matilda was driven from the throne and, indeed, driven from England. Stephen resumed his ineffectual rule.

Beginning in 1148 warfare was renewed by supporters of Matilda's son Henry Plantagenet (1133–89), duke of Normandy. Again, combat was chronic and indecisive during a period known as the “English Anarchy.” In January 1153 Henry Plantagenet landed in England and marched against Wallingford, where Stephen's troops held the north bank of the Thames. The Battle of Wallingford commenced but soon ended in a draw, as neither side could make significant headway in the January ice and snow. Exhausted by this battle and years of war, the two sides concluded a truce whereby Stephen would continue to reign until his death, upon which he would be succeeded, without dispute, by Henry Plantagenet (who would reign as Henry II).

English Invasions of Ireland (1394–1399)

PRINCIPAL COMBATANTS: England vs. the Irish clans

PRINCIPAL THEATER(S): Ireland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Richard II sought to subdue the unruly Irish chieftains.

OUTCOME: A short-lived peace on terms favorable to Richard was established but quickly broken.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The throne Richard II (1367–1400) inherited at age 10 was beset by multiple rebellions, including revolts in Ireland. In 1394 Richard II invaded Ireland in an effort to put down warfare among rival clans. Richard handled this problem chiefly through a show of arms. Little fighting took place before 50 Irish chieftains acknowledged their submission to Richard II, who also bestowed knighthood on five Irish kings. The Irish peace was short-lived. In 1398 Richard's chief Irish administrator, the lord lieutenant, was killed in battle against rebellious clans. Once again, Richard led an army into Ireland, but the invasion proved abortive. The outbreak of **HENRY OF BOLINGBROKE'S REVOLT** back in England demanded his immediate attention. He withdrew from Ireland, leaving that country in a state of chronic rebellion and the death of his lord lieutenant unavenged.

English Peasants' Revolt (Wat Tyler's Rebellion) (1381)

PRINCIPAL COMBATANTS: English peasant “army” vs. Richard II

PRINCIPAL THEATER(S): England, especially Kent, Essex, and London

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The oppressed peasantry sought tax relief and other economic reforms.

OUTCOME: After much violence the rebellion was put down.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Rebel strength was at least 100,000.

CASUALTIES: “Battle” deaths unknown; various government officials were assassinated; 1,500 rebels were hanged.

TREATIES: None

Also known as Wat Tyler's Rebellion, the revolt of the English peasants was one of many spasms of violence that threatened the troubled reign of Richard II (1367–1400). By the later years of the 14th century, England had been swept by plague and severe economic depression, its resources drained by the **HUNDRED YEARS' WAR**. As usual, those hardest hit could least afford to endure hardship. The English peasantry languished in great want and suffering, and English journeymen demanded higher wages.

In response the government attempted to institute wage controls, which angered and alienated the journeymen. When they did receive higher wages, the villein class (peasant serfs associated with the English villages) rose in anger, for they received no wages at all. To make matters worse, John of Gaunt (1340–99), regent to the youthful Richard II, imposed poll taxes in an effort to finance the ongoing Hundred Years' War.

In 1381 one of John's tax collectors decided to make a determination as to whether the daughter of a Kentish man, Wat Tyler (d. 1381), was of the taxable age of 15. He publicly stripped her naked and roughed her up. Hearing her screams, Tyler came to her aid and bashed in the tax collector's skull with a hammer. The crowd that had gathered around the commotion cheered, and Tyler soon found himself the leader of a disorderly "army" of rebellious west Kent men. Tyler's group joined another led by two itinerant priests, John Ball (d. 1381) and Jack Straw (fl. 1381). Now a mob army of about 100,000 men marched on London. Along the way and in the town, they broke open prisons and summarily beheaded every judge and lawyer unfortunate enough to fall into their hands. Tyler, Ball, and Straw had decreed that none of their peasant army be allowed to loot. However, they were given free rein to destroy whatever valuables they found.

After the rebels attacked and burned John of Gaunt's castle, Richard II met with the leaders, promising them reform and granting to them and their followers full pardons, but emotions were running high. The presence of the rebels from Essex and Kent had ignited the passions of London's peasantry. A mob stormed the Tower of London, assassinated Simon Sudbury (fl. 1375–81), the archbishop of Canterbury, and other government officials, and thereby succeeded in reversing the positive steps Richard had taken with Tyler and Straw. Richard called another meeting with Wat Tyler. He then ordered the lord mayor of London to "set hands on" the rebel, and Tyler was assassinated, stabbed through the throat and stomach in full view of the crowd. Richard immediately confronted the mob and declared Wat Tyler a traitor. "I'll be your leader," legend has it that he told them. Remarkably, the peasants fell in line behind the king and were dispersed by his army.

Leaderless, the peasants began drifting back to their homes. Richard, immediately reneged on his pardons. He took a large number of rebels prisoner and subjected them to sham trials presided over by Judge John Tresilian, who threatened jurors with death if they failed to return convictions. Approximately 1,500 rebels were hanged, and the rebellion was crushed.

English Revolution *See* GLORIOUS REVOLUTION.

Esopus War (Dutch-Indian Wars) (c. 1655–1664)

PRINCIPAL COMBATANTS: Dutch colonists and Mohawk Indians vs. Esopus and Minisink Indians

PRINCIPAL THEATER(S): Lower Hudson River valley of New York

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Dutch with their Mohawk allies tried to establish a trade monopoly over the Hudson valley tribes, who resisted what would amount to tribal conquest.

OUTCOME: The Esopus and others were forced to come to terms with the Dutch.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: 1664

The Esopus War was an extended conflict between the Dutch settlers of New Netherland and the Esopus Indians of the lower Hudson valley begun during the mid-1650s and ending in 1664. The source of the conflict was principally the Dutch desire to assert absolute control over the Esopus, particularly in matters of trade, which the Indians resisted. In the so-called PEACH WAR of 1655, the New Netherlanders fell into a dispute with Indians on Manhattan while Governor Peter Stuyvesant (1592–1672) was absent from the colony. A war broke out that spread to Esopus (present-day Kingston, New York), before Stuyvesant could return to make peace, ransom hostages, and set down laws restricting the actions of mostly Algonquian Indian tribes (*see* ALGONQUIAN-DUTCH WAR).

Though Manhattan itself was never again subjected to Indian attack, the Esopus in the Hudson valley continued their raiding, and in May 1658 Dutch settlers there appealed to Stuyvesant for aid. Once again the governor managed to subdue the raids and make peace with the Indians, supervising the building of a palisade around the village of Esopus much like the one the Dutch had already erected in Manhattan (hence the name "Wall Street"). But in August the Indians resumed their attacks, this time along the Hudson, and Stuyvesant once again was called on for help. By October 1658 the Dutch were seeking an alliance with the powerful Susquehannock Indians, who agreed to intervene in the Esopus War.

To be sure, the Susquehannock were not overly fond of the Dutch, but in order to achieve favored trading status with them, they joined forces with their own traditional enemy, the Mohawk, to pressure the Esopus into coming to terms with the Dutch. The new peace lasted until 1663, when the Esopus—unhappy with the harsh terms

Stuyvesant and his Mohawk and Susquehannock allies had imposed on them—renewed their raiding. This time the Dutch not only completely defeated the Esopus, they confiscated their tribal lands, forcing them to sign a treaty in 1664 that gave the settlers the entire Esopus valley.

Estonian Revolt (St. George’s Day Revolt) (1343–1345)

PRINCIPAL COMBATANTS: Estonian peasants vs. Danish and German nobles and the Teutonic Knights of Prussia

PRINCIPAL THEATER(S): Northern Estonia, especially in and around Reval (Tallinn)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Oppressed Estonian peasants wanted to overthrow their overlords.

OUTCOME: The rebellion was crushed by the intervention of the Teutonic Knights.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Totals unknown; in initial violence rebels killed more than 1,800 nobles.

TREATIES: None

On April 23, 1343 (St. George’s Day), Estonian peasants staged a major revolt against their Danish and German overlords. For this reason the Estonian Revolt is sometimes called the St. George’s Day Revolt. The uprising was the culmination of years of chronic violence between the Estonian peasantry and the German and Danish nobles who held Estonia as a fiefdom and who had long abused the peasants, despite treaties and agreements guaranteeing their rights. The St. George’s Day Revolt began in the Harjumaa district of Estonia and spread rapidly to surrounding areas and to Oesel (Saaremaa) Island. At least 1,800 nobles were quickly slain, and the peasant army laid siege to the city of Reval (Tallinn). The besiegers called on the Swedish forts in Finland for aid in taking the city, whereas Reval’s defenders secured assistance from the Teutonic Knights of Prussia. The intervention of the Knights brought a truce, during which the Knights called for a peace conference. At the conference they treacherously murdered the peasant leaders in the hope of dealing the revolt a decapitating blow. The Knights then routed the leaderless peasant army before Swedish reinforcements could arrive from Finland.

The major part of the rebellion had been crushed, but King Waldemar IV (c. 1320–75) of Denmark had lost his state for attempting to govern Estonia. Because the Teu-

tonic Knights were still occupying the region, Waldemar sold them northern Estonia in August 1346. The Teutonic Knights, in turn, bestowed the administration of the region to a related order, the Livonian Knights.

Estonian War of Independence (1917–1920)

PRINCIPAL COMBATANTS: Estonia vs. Soviet Russia

PRINCIPAL THEATER(S): Estonia and Soviet-Estonian border region

DECLARATION: Estonian independence declared on November 28, 1917

MAJOR ISSUES AND OBJECTIVES: Estonia fought for its independence from Soviet Russia.

OUTCOME: The Soviets recognized Estonian independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Estonian army, 75,000; Estonian Defense League, 119,000; Soviet Red Army, 160,000

CASUALTIES: Estonia, 3,588 dead, 13,775 wounded; no figures available for the Red Army

TREATIES: Treaty of Dorpat (Tartu), concluded on February 2, 1920

Before WORLD WAR I Estonia was controlled by Russia. During the war, on November 28, 1917, Estonia declared its independence. The newly established Bolshevik government responded by invading the country, to which the Germans, in turn, responded by sending an army of occupation. Backed by the Germans, Estonia declared its independence a second time on February 24, 1918. By this time the Bolshevik government had concluded a “separate peace” with Germany in World War I by signing the Treaty of Brest-Litovsk, which required the cession to German control of the Baltic states, Estonia, Latvia, and Lithuania. The cession proved short-lived, however. With Germany’s defeat in World War I on November 11, 1918, the Bolsheviks renounced the Treaty of Brest-Litovsk and on November 28, 1918, invaded Estonia. The Estonian army had been formed just a few days earlier, on November 16, 1918, and was small, largely untrained, and equipped only with weapons sent by Great Britain and Finland or captured from the enemy. At the beginning of the war, the Estonian army fielded a mere 2,200 men against an invading force of 9,000. While the Estonians built up their forces, the defenders conducted a general strategic retreat into the interior. Within the first six weeks of the war, the defenders had yielded almost half the country to the Soviet invaders. By January 1919 the disparity in strength between the two armies had been greatly reduced, and the advance of the Soviets was checked. Beginning on January

7 the Estonian forces, assisted by Finnish volunteers and a British squadron, commenced a general counteroffensive, which pushed the invaders out of the country by the end of the month.

By the fall of 1919, Estonian forces had grown to a regular army of 75,000 men and a Defense League of 119,000. The Soviets eventually committed 160,000 men to the war. In October 1919 Estonian general Nikolai N. Yudenich (1862–1933) turned the tables on the Soviets by launching an invasion against Petrograd (St. Petersburg). Under Soviet leader Leon Trotsky (1879–1940), a defense force was hastily assembled to repel the invasion, and Yudenich withdrew into Estonia. The point, however, had been made, and the Soviets, in the throes of their own RUSSIAN CIVIL WAR (1917–1922), realized they could no longer afford to devote military resources against Estonia. By the Treaty of Dorpat (Tartu), concluded on February 2, 1920, the Soviet government recognized Estonian independence.

Ethiopia, British Expedition in (British-Abyssinian War) (1867–1868)

PRINCIPAL COMBATANTS: British and Indian troops and dissident tribes vs. forces of Emperor Tewodros II of Ethiopia

PRINCIPAL THEATER(S): Ethiopia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: An Anglo-Indian force sought to liberate British consular officials imprisoned by Ethiopian emperor Tewodros.

OUTCOME: The Anglo-Indian force fought its way to the city of Magdala, and in the face of impending capture Tewodros committed suicide.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Anglo-Indian, 13,088; Tewodros II's forces, unknown

CASUALTIES: Anglo-Indian forces, 845 killed or wounded; Tewodros II's forces, 700+ killed

TREATIES: None

The petty Ethiopian chieftain named Kasa (1818–68) seized control of the country and crowned himself emperor Tewodros II in 1855. The early years of his reign were peaceful and beneficial to the country, but in his later years his behavior became erratic. In 1867 he imprisoned British consular officials at Magdala because he was angry that Queen Victoria (1819–1901) had not responded to a request for British aid. In retaliation an expeditionary

force made up of about 13,088 British and Indian soldiers landed at Zula on the Red Sea coast. Under the leadership of Robert C. Napier (1810–90), this army moved inland across the mountains, gathering support from tribal enemies of the emperor along the way.

Napier led his forces against those of Tewodros II at Arogee on April 10, 1868. In a one-sided battle some 700 of the emperor's troops were killed, while the British and their auxiliaries lost 2 killed and 18 wounded. In a frenzy of despair and outrage over this defeat, Tewodros ordered the deaths of several hundred Abyssinian members of rival clans. These individuals were pushed off a 300-foot precipice from the fortress of Magdala. When Magdala itself was taken by the British on April 13, 1868, Tewodros shot himself to avoid capture. Napier freed the British consular prisoners and sacked the city. The country immediately fell into a civil war over the issue of succession to the throne.

Ethiopian Civil War (1868–1872)

PRINCIPAL COMBATANTS: Chieftains seeking to succeed Tewodros II to the Ethiopian throne

PRINCIPAL THEATER(S): Ethiopia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Three rivals sought succession to the throne of Tewodros II: Tekla Giorgis, Kasa Mercha, and Menelik.

OUTCOME: Kasa Mercha was crowned emperor as Yohannis IV but was continually opposed by Menelik.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Ethiopian emperor Tewodros II (1818–68) sought to reestablish a strong monarchy to create a cohesive Ethiopian state. Toward this end he conducted a successful military campaign against the rebellious Shewa region but soon found himself confronted by rebellions in other provinces as well. During the first six years of his reign, Tewodros was able to put down these rebellions, and from roughly 1861 to 1863 Ethiopia was relatively peaceful. Yet it remained vulnerable, and by 1865 a new crop of rebels, including the Shewan leader, Menelik (1844–1913), emerged. To bolster his rule Tewodros sought aid from the British government, proposing a joint expedition for the conquest of Jerusalem. The would-be allies fell out,

however, and Tewodros took a number of British representatives hostage. In response in 1868 a British expeditionary force was dispatched from India to secure release of the hostages. When the British force stormed Tewodros's stronghold, the emperor committed suicide. (See ETHIOPIA, BRITISH EXPEDITION IN.)

His death threw Ethiopia into chaos and opened the door to widespread rebellion and civil war. In particular, Tewodros's clumsy attempt to reform the church by taxing or confiscating church lands had earned him many powerful enemies in the church while gaining little support outside it. A number of leaders rushed in to fill the power vacuum left by the emperor's death. Tekla Giorgis took over the central part of the highlands, whereas Kasa Mercha (1831–89), governor of Tigray and covetous of the throne himself, refused to recognize his authority. Menelik of Shewa, however, came to terms with Tekla Giorgis in return for his promise to respect the independence of Shewa. This settled for the time being, Tekla Giorgis attacked Kasa Mercha, hoping to subjugate him. However, his small army, equipped with modern European weapons, defeated Tekla Giorgis, and in 1872 Kasa Mercha was crowned emperor at the ancient capital of Aksum. He assumed the throne name of Yohannis IV.

Despite his pledge to Menelik to respect Shewan independence, Yohannis struggled to bring the region under his control. He succeeded some six years later. Nevertheless, Menelik, who proclaimed himself king of Shewa, consolidated his power in the region and extended his rule over the neighboring Oromo to the south and west. Menelik would successfully claim the throne after the death of Yohannis in 1889.

Ethiopian-Egyptian War (1875–1877)

PRINCIPAL COMBATANTS: Ethiopia vs. Egypt

PRINCIPAL THEATER(S): Ethiopia's Red Sea coast

DECLARATION: Ethiopia on Egypt, 1875

MAJOR ISSUES AND OBJECTIVES: Egypt sought to establish colonies along Ethiopia's Red Sea coast.

OUTCOME: Egypt held some coastal cities for a time (and the inland city of Harar until 1887) but was generally pushed out of Ethiopia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Toward the end of the 19th century, as the disintegration of the Ottoman Empire steadily accelerated, Ismail Pasha (1830–95), khedive of Egypt and only nominally an Ottoman vassal, embarked on a campaign of Egyptian colonization along Ethiopia's Red Sea coast. By 1875 Ismail Pasha had taken a number of Ethiopian ports as well as the inland city of Harar. To counter the Egyptian incursions, Ethiopian emperor Yohannis IV (1831–89), although beset by internal conflict (see ETHIOPIAN CIVIL WAR), declared war on Egypt. Yohannis attacked and retook Aussa during the first year of the war, then in 1876 was victorious in a battle fought near Gura. Ismail Pasha counterattacked in 1877 at Gura and Gondar but was successfully repulsed by Yohannis. After this defeat the Egyptians withdrew from Ethiopia.

Further reading: Carol Ann Gillespie, *Ethiopia* (New York: Chelsea House, 2002); Harold G. Marcus, *A History of Ethiopia* (Berkeley: University of California Press, 2001); Harold G. Marcus, *The Life and Times of Menelik II: Ethiopia 1844–1913* (Lawrenceville, N.J.: Red Sea Press, 1995).

Ethiopian-Eritrean Guerrilla War

(1961–ongoing)

PRINCIPAL COMBATANTS: Eritrea vs. Ethiopia

PRINCIPAL THEATER(S): Eritrea and the Ethiopian-Eritrean border region (especially Badame)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In the first phase of the conflict (1961–91), the issue was Eritrea's bid for independence from Ethiopia; in the second phase (beginning in 1998), the issue was control of the Badame region, hotly contested between Eritrea and Ethiopia.

OUTCOME: Eritrea achieved its independence, but the border war between Ethiopia and Eritrea continued.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Totals unknown; the largest single Eritrean guerrilla organization fielded 10,000 men.

CASUALTIES: More than 250,000 (mostly civilians) during the first phase of the war

TREATIES: None

The British seized Eritrea from Italian control early in WORLD WAR II and governed the region as a protectorate until 1952, when it was given the status of an autonomous province of Ethiopia. Possession of Eritrea was important to Ethiopia because it afforded that country access to the Red Sea. Eritrea soon chafed under its subjugation to Ethiopia, which imposed itself culturally and politically on the region. Amharic, the language of Ethiopia, was decreed the official language of Eritrea, and all government administrators were Ethiopian. Friction increased

steadily until in 1961 the Cairo-based Eritrean Liberation Front (ELF) directed an armed struggle against Ethiopian authority. For almost a decade rebellion was chronic yet ineffectual, largely because the Eritrean nationalists disputed among themselves. Finally, in 1970 a new nationalist force made its appearance, the Eritrean People's Liberation Front (EPLF), which mustered about 10,000 guerrillas. Yet another party soon materialized, the ELF/PLF. All three parties were mutually hostile, expending much of their resources fighting one another rather than the Ethiopian government.

In 1967 the Ethiopian government staged a massive operation against Eritrean dissidents, forcing many Eritreans out of the country and into Sudan. In 1971 Ethiopia declared martial law in Eritrea, but resistance continued. All sides were hampered by famine (especially in 1973 and 1975) and by the demise of the imperial government of Ethiopia, which led to widespread rebellion within Ethiopia proper throughout the later 1970s. When neighboring Somalia invaded the Ogaden region of Ethiopia in 1978 (see ETHIOPIAN-SOMALI BORDER WAR), Ethiopia called on the Soviet Union and the Cuban government for military aid to drive the Somalis out. This accomplished, the Ethiopian government next returned its attention to Eritrea, launching major offensives against the guerrillas in 1978 through 1979. Still, Eritrea resisted.

In the meantime, with the fall of Haile Selassie (1892–1975), the latest dictator, Mengistu Haile Mariam (b. 1937), transformed Ethiopia into a brutal totalitarian communist regime. He unleashed a campaign of great ferocity against the guerrillas in Eritrea as well as Ogaden and Tigre. Instead of diminishing resistance, however, the campaign served only to harden and augment the guerrilla movement. In 1990 Mengistu lost Soviet support, and the guerrillas made significant inroads. The important port town of Massawa fell into rebel hands, and the EPLF menaced the capital, Addis Ababa, with invasion. It was, however, yet another nationalist guerrilla group, the Ethiopian People's Revolutionary Democratic Front (EPRDF), that, in league with the Tigre People's Liberation Front (TPLF) and the Oromo Liberation Front (OLF), succeeded in overthrowing Mengistu in 1991. The EPLF then took control of Eritrea, which attained full independence on May 3, 1993. At least a quarter million people had died in the three-decade struggle, which was renewed beginning in 1998, when Eritrea and Ethiopia fell to disputing over Badame, a border region in northern Ethiopia.

The conflict quickly flared in Badame. Instead of guerrilla action, both sides relied heavily on tanks, artillery, and air power. Eritrea brought the war to the civilian population by bombing towns in northern Ethiopia, and Ethiopia retaliated with air raids on Asmara, capital of Eritrea. In June both sides accepted a partial cease-fire—a moratorium on air raids—brokered by Rwanda and the United States, but by fall 1998 and spring

1999, full-scale fighting resumed. Even some years into the 21st century, the issue remained unresolved.

Further reading: Carol Ann Gillespie, *Ethiopia* (New York: Chelsea House, 2002); Harold G. Marcus, *A History of Ethiopia* (Berkeley: University of California Press, 2001); Bahru Zewe, *A History of Modern Ethiopia, 1855–1974* (Athens: Ohio University Press, 2001).

Ethiopian-Somali Border War (1963–1988)

PRINCIPAL COMBATANTS: Ethiopia vs. Somalia

PRINCIPAL THEATER(S): The Ogaden region of Ethiopia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ethiopia and Somalia contested possession of Ogaden, a border region.

OUTCOME: Ethiopia withdrew from the disputed area.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown; however, famine, brought on by years of war, created casualties in the hundreds of thousands. Some 1.3 million residents of Ogaden were made refugees in the course of the war.

TREATIES: A peace agreement concluded on April 3, 1988, brought an end to most of the fighting.

The Republic of Somalia was formed in 1960 by the union and independence of the former Italian Somaliland and British Somaliland. Almost immediately, the new republic sought expansion into the former French Somaliland (Djibouti) as well as Kenya and a region known as the Haud, much of which was located in the Ogaden region of Ethiopia. The Somali claim on the Haud was tenuous at best. When Somalia had been a British protectorate, administrators had granted the Somalis the right to graze their livestock in the region. Based on this Somalia now asserted its claim, and armed clashes in Ogaden became increasingly frequent beginning in 1963. The struggle heated up in the 1970s, which were especially turbulent times for Ethiopia, struggling not only against Somalia but against nationalist guerrillas in Eritrea (see ETHIOPIAN-ERITREAN GUERRILLA WAR). The discovery of oil in Ogaden made the disputed region that much more valuable, and the fall of Haile Selassie's (1892–1975) government in 1974 brought great instability, which led to a short-lived Somali revolt in Ogaden.

In 1978 Ethiopia called on the Soviets and Cubans for assistance in ejecting the Somalis from Ogaden. After a temporary withdrawal the Somalis returned, and the Ethiopians responded with bombing raids on Somali towns along the border. For the next 10 years a low-level guerrilla conflict was fought within the disputed borderland. In 1980 the United States gave Somalia modern weapons in exchange for the use of certain military bases.

The escalation of the war resulted in a massive influx of refugees from war-torn Ogaden into Somalia, which was quickly overwhelmed by some 1.3 million starving persons. The United States rushed in food and other supplies. In the meantime, however, two major Somali guerrilla factions together with a host of smaller units continued to fight for possession of Ogaden.

In 1988 the Somali National Movement (SNM), a faction opposed to the Somali government, incited a major rebellion in Hargeysa, a regional capital, and laid siege to the port of Berbera. Somali government forces put down this rebellion by the end of the year. With both the governments of Somalia and Ethiopia beleaguered by rebellion, the two sides hammered out a peace agreement on April 3, 1988, whereby Ethiopia withdrew from the disputed region and Somalia, in turn, pledged to withdraw all support from antigovernment organizations in Ethiopia.

Harbeson, *The Ethiopian Transformation: The Quest for the Post-Imperial State* (Boulder, Colo.: Westview Press, 1988); Harold G. Marcus, *A History of Ethiopia* (Berkeley: University of California Press, 2001); Bahru Zewe, *A History of Modern Ethiopia, 1855–1974* (Athens: Ohio University Press, 2001).

Ethiopian Unification (1854–1856)

PRINCIPAL COMBATANTS: Lij Kassa (subsequently Emperor Theodore II) vs. Ras Ali and Ras Ubie, and, separately, Emperor John III

PRINCIPAL THEATER(S): Abyssinia (Ethiopia)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Unification of Ethiopia under Lij Kassa

OUTCOME: Lij Kassa emerged victorious to become Emperor Theodore II.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Ethiopia—more commonly known as Abyssinia during the 19th century—was a collection of warring tribal chieftains until the emergence of Lij Kassa (c. 1818–68), who defeated the combined forces of rival chieftains Ras Ali and Ras Ubie at the Battle of Gorgora on the shores of Lake Tana in 1854. This victory gave Lij Kassa complete control over all of Ethiopia's northern and central districts. In 1855 Lij Kassa defeated and overthrew John (or Yohannes) III, nominal emperor of Abyssinia and then conquered the heart of Ethiopia, Shewa (Shoa) Province. With this con-

quest completed Lij Kassa crowned himself emperor as Theodore II.

The new ruler made dynamic moves to modernize Ethiopia and to reform the government. His removal of the capital from Gondar to Magdala in 1856 symbolized the unification of the kingdom. Theodore II drew heavily on the counsel of two British advisers. Their deaths, together with the death of his wife, undermined the emperor's mental health, and he degenerated into a paranoia that prompted extreme and arbitrary acts of cruelty.

Etruscan-Roman Wars, Early (c. 509–308 B.C.E.)

PRINCIPAL COMBATANTS: Etruscan city-states vs. Rome

PRINCIPAL THEATER(S): Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome sought the conquest of Etruscan Italy.

OUTCOME: Etruria steadily lost ground, becoming confined to a corridor between the Apennine Mountains and the forest of Cumae.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents exist

The influx into Italy of the Anatolian (Turkish) people we know as the Etruscans brought conflict with the Latin peoples of the region. Etruscan settlers founded Rome by consolidating a number of Latin villages and established in this city-state the Tarquin dynasty. A coup in 509 B.C.E. replaced the last Tarquin king with the Roman republic and initiated warfare between the new forces of Rome and the Etruscans, who held sway over about 40 percent of Italy.

The Etruscan military leader Tarquinius Superbus (d. c. 503 B.C.E.) attacked Rome in an effort to retake the city. The forces of an Etruscan ally, Clusium (Chiusi), overran Rome, but then Lars Porsena, the king of Clusium, claimed the prize for himself. To dislodge his erstwhile ally, Tarquinius joined forces with the Sabines, some Latins, and the Greeks of Cumae to attack the Clusian army in Rome. This effort failed, and Tarquinius withdrew to Cumae, where he died, defeated and broken.

Roman forces then emanated from their central city-state to conquer the Etruscan city-states. Veii (Veio) became the object of a decade-long war from 483 to 474. Veiiian counteroffensives nearly toppled Rome, which concluded a 40-year truce. The war was renewed in 438 as the

First Roman War with Veii. This was followed by a second truce period, which was broken in 405 by the Second Roman War with Veii.

The ultimate loss of Veii—whose citizens were sold into mass slavery—greatly eroded the Etruscan grip on Italy. Sutrium and Nepi fell to the Romans in 387, followed in 384 by Caere and Pyrgi. The city-state of Tarquinii resisted Roman conquest fiercely from 358 to 351, extracted a truce from Rome, then made a desperate alliance with Sutrium, which together rose up against the Romans. This rebellion was put down by 309, the same year in which Perugia (Perugia) fell into Roman hands. At this point Rome came to displace most of Etruria save for territory between the Apennines and forest of Cumae.

Etruscan-Roman Wars, Later (c. 302–264 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. Etruscans (with Gallic and Epiroan allies)

PRINCIPAL THEATER(S): Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome sought to complete its conquest of Etruria; Etruria resisted.

OUTCOME: Despite a long guerrilla war, the Etruscan city-states fell under Roman domination and relinquished all independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Etruscan-Gallic forces lost 25,000 at the Battle of Sentium; civilian losses late in these wars were much higher.

TREATIES: No documents exist.

The long series of Early ETRUSCAN-ROMAN WARS (c. 509–308 B.C.E.) was ended by a truce, which was quickly broken. The first new outbreak came at Arrentium (Arezzo) about 302 B.C.E. when citizens rose up against the Cilnii family, Etruscan rulers who were allied with the Romans. A Roman force was sent to intervene but was ambushed and defeated. After regrouping the Romans outflanked a would-be ambush at the Battle of Rusellae (Roselle) and defeated the rebels by overwhelming them with skillfully deployed cavalry units. This resulted in a two-year truce, which, however, was not taken as binding by many of the rebels. These diehards recruited allies among the Gauls and others. A major battle was fought near Volterra in 298, resulting in an Etruscan-Gallic loss, and an even big-

ger disaster followed at Sentium in 295, when the rebels lost 25,000 men. This shook loose the towns of Rusellae, Perugia, and Volsinii (Bolsena) by 294.

The devastating defeat of the Etruscans and their allies ushered in a 40-year truce and extracted for Rome punishing indemnities. Yet again, despite the formal truce, a new Etruscan-Gallic counteroffensive was mounted in 283. Two battles were fought at Lake Vadimo, both resulting in defeat for the Etruscans and the Gauls. Epirus came to the aid of the Etruscans in the form of a force led by the able King Pyrrhus (319–272), who attacked Rome. While Epirus made headway, the Etruscans buckled at Vulci and Volsinii, which left Pyrrhus no choice but to abandon Rome and retreat to Tarentum (Taranto) on the coast of southern Italy. This resulted in the ROMAN WAR AGAINST PYRRHUS OF EPIRUS.

As a result of their defeat, both Vulci and Volsinii lost their independence from Rome. Vulci submitted, but Volsinii rebelled against the Roman conquerors in 264. This proved a disastrous mistake, as Roman forces overwhelmed and devastated the city.

From this point on Etruria was at least nominally a Roman possession. In actuality, throughout the region a low-level guerrilla war ensued during which Etruscan rebels sabotaged Roman war efforts elsewhere. Continual Etruscan provocation incited the Roman commander Lucius Cornelius Sulla (138–78) to embark on a punitive campaign throughout Etruria. Devastated, the Etruscans lost their grip on the last free cities, Valathrii (Volterra), in 80, and Perugia (Perugia) 40 years later.

Eucratides Revolt *See* BACTRIAN-PARTHIAN WAR.

Eureka Stockade Miners' Rebellion (1854)

PRINCIPAL COMBATANTS: Australian immigrant miners vs. government forces

PRINCIPAL THEATER(S): Australian gold fields, principally the Eureka gold field

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Miners protested government overregulation and oppressive taxation and sought the right to vote.

OUTCOME: The “rebellion” at Eureka was put down, but the social movement with which it was associated flourished.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At Eureka, 400 government troops vs. about 150 miners

CASUALTIES: 30 killed at the Eureka stockade; many other casualties in the surrounding area

TREATIES: None

This incident was more in the nature of a riot than a full-scale rebellion. Gold was discovered in Australia in 1851, triggering an influx of immigrants similar to the California Gold Rush of 1849. To regulate immigration and the management of the mines, the British government passed a series of restrictive laws, the most hated of which was the licensing of mines. Prospectors were required to purchase costly government licenses before beginning to work a claim. This barred many prospectors from the gold fields, and, even for those who could ante up the fee, it posed a great financial risk if the mine did not pan out. In addition to the licensing fees, miners were subjected to frequent and arbitrary government inspections that were intended to do nothing more or less than exercise control over the miners.

As mostly new immigrants, the miners had no vote and, therefore, no legal means of protesting the laws. Instead, they launched a series of spontaneous demonstrations, one of which in 1854 grew sufficiently violent that the government dispatched troops to put it down. The confrontation incited a movement for universal suffrage throughout Australia. With emotions running high and much of the country in turmoil, the government stayed its hand until irate miners began publicly burning licenses to show their contempt for government authority. At this, more troops were deployed. In response to the deployment, the miners of the Eureka gold field formed themselves into military-style units, hastily built a stockaded fort, and stockpiled whatever weapons they could find. In December 1854, 400 government troops stormed the stockade, which was manned by 150 miners. The stockade was overrun, the defenders routed, and 30 miners killed. The troops did not stop with the taking of the Eureka stockade but next rode through the mining camp, killing a few miners and wounding many more. Although while the Eureka incident ended armed rebellion among the miners, it served only to strengthen and perpetuate the general movement throughout the Australian working class for universal extension of the franchise.

Australia: Melbourne University Press, 1993); Robert Hughes, *The Fatal Shore: The Epic of Australia's Founding* (New York: Random House, 1986).

Euthydemus's Revolt (230 B.C.E.)

PRINCIPAL COMBATANTS: Euthydemus vs. Diodotus

PRINCIPAL THEATER(S): Bactria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Euthydemus sought control of Bactria.

OUTCOME: Euthydemus achieved a successful coup and became king of Bactria.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Following the death of Alexander the Great (356–323 B.C.E.), the Macedonian Empire he had amassed began to disintegrate, especially in Bactria and Parthia (see DAIDOCHI, WARS OF THE). In 255 Diodotus II (fl. Third century B.C.E.), Seleucid satrap of Bactria, rebelled against his Seleucid overlord, Antiochus II Theos (286–247) and created an independent kingdom. This he expanded by first conquering neighboring Sogdiana and then expanded to the east, approaching the Indus River, and to the west, penetrating Parthia.

Under Seleucus II (d. 226), an army attempted to retake Bactria and the other territories from Diodotus, but in league with Arsaces II, Diodotus defeated Seleucus—who was forced to abort his campaign to defend against a revolt by his brother. Diodotus was thus left to rule over Bactria, but years of battling had strained his resources, and he fell victim in 230 to the Greco-Macedonian warlord Euthydemus (fl. late Third century B.C.E.). In a coup, Euthydemus killed Diodotus and instantly assumed control of the expanded kingdom of Bactria.

F

Falkland Islands War (Islas Malvinas War) (1982)

PRINCIPAL COMBATANTS: Argentina vs. Great Britain

PRINCIPAL THEATER(S): Falkland Islands and associated islands

DECLARATION: No declaration

MAJOR ISSUES AND OBJECTIVES: Argentina wanted to assert sovereignty over the British-held Falkland Islands and associated islands.

OUTCOME: Argentina suffered a decisive loss and yielded sovereignty to Britain.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

British, 25,000; Argentina, 166,000

CASUALTIES: British, 235 killed, 777 wounded; Argentina, at least 655 killed

TREATIES: Cease-fire, June 14, 1982

The Falkland Islands, off the coast of Argentina in the South Atlantic, called by the Argentines the *Islas Malvinas*, were disputed territory since the 17th century. Britain formally occupied the Falklands in 1833 and expelled Argentines living there; however, Argentina persisted in asserting its claims to the islands—even as the population of British nationals and their descendants grew. On February 27, 1982, negotiations between Argentina and Great Britain over Falklands sovereignty broke down, eliciting a threat from Argentina to settle the matter “by other means.” At this time, Argentina was governed by the bellicose Leopoldo Fortunato Galtieri (1926–2003), who was spoiling for a war he believed would greatly bolster his flagging support from a nation in

deep economic and political distress. Inflation had soared to more than 600 percent, while production and wages plummeted. The military dictatorship ruling the country had cracked down on dissent by means of “disappearances”—the abduction and murder of dissidents. Unrest was growing.

On March 19, 1982, a group of Argentine scrap metal salvagers working on South Georgia Island, one of the islands in the Falklands group and escorted by Argentine troops, raised the Argentine flag. Britain’s call on Argentina to remove the military personnel received no response. A few days later, on March 26, 1982, the Argentine government decided to invade the islands by launching Operación Rosario. Argentine admiral Jorge Anaya had planned the invasion to coincide with a key national political holiday, either the revolution anniversary on May 25 or Independence Day, July 9, but the eruption of mass union demonstrations in late March prompted Galtieri to move D-Day up to April 2, 1982. On this day, the Argentine navy landed thousands of troops on the islands, which were defended by a severely outnumbered detachment of Royal Marines. After a brief resistance, the marines withdrew, on orders of Governor Rex Hunt (b. 1921), and were evacuated, with the governor, by air to Montevideo, Uruguay.

On April 3, Argentine troops seized the South Georgia and South Sandwich islands after a brief battle in which an Argentine helicopter was forced down and four Argentine troops killed. Next, General Mario Menéndez (b. 1924) was proclaimed military governor of the Falklands and associated islands. Although the invasion and occupation were immediately popular in Argentina, as Galtieri had hoped, the United Nations Security Council passed

Resolution 502 calling for the withdrawal of Argentine troops from the islands and the immediate cessation of hostilities. Backed by the resolution, British prime minister Margaret Thatcher (b. 1925) dispatched the First Royal Air Force to Ascension Island.

While the British built up forces in the area, Argentina drafted young men into the army and, without training them, sent some 10,000 to the islands. In the meantime, on April 8, 1982, U.S. secretary of state Alexander Haig (b. 1924) began a mediation effort. Two days later, the European Economic Community (EEC) levied trade sanctions against Argentina, and Haig flew from London to Buenos Aires for talks with the Argentine government. By April 19, talks had broken down, and on April 23, the British Foreign Office advised British nationals in Argentina to leave. Two days later, a small British commando force landed on South Georgia Island and retook it. Royal Navy forces attacked and disabled the Argentine submarine *Santa Fe*, and the commander of the Argentine forces on South Georgia signed an unconditional surrender. Argentine forces on the island did not fire a single shot.

While the action on South Georgia Island was taking place, the main British task force approached the Falklands. On May 1, British carrier-based aircraft attacked the Port Stanley airfield and shot down three Argentine aircraft. The next day, Galtieri responded positively to a peace proposal submitted by Fernando Belaúnde Terry (1912–2002), president of Peru. The British, however, kept up the pressure. The submarine HMS *Conqueror* sank the Argentine cruiser *General Belgrano*, which was outside the war zone and sailing away from the islands. Almost 400 Argentine sailors died, prompting Galtieri to reject the proposal. The war continued.

On May 4, Argentina launched air attacks with French-built Exocet air-to-surface missiles, one of which sank the British destroyer HMS *Sheffield*, with the loss of 20 men. A single British Harrier jet was also shot down. By May 7, the United Nations entered peace negotiations, but, on May 9, the British escalated the war by bombarding the islands from the sea as well as the air. The Argentine trawler *Narwal* was sunk, and, on May 11, the Argentine supply ship *Isla de los Estados* was also sunk. Three days later, three Argentine Skyhawk fighters were shot down amid warnings from Prime Minister Thatcher that a peaceful settlement “may not be possible.” That night, a British Special Forces unit raided Pebble Island, destroying 11 Argentine aircraft on the ground, and, on May 18, the Thatcher government rejected a United Nations peace proposal. Three days after this, the British landed a major force near Port San Carlos, on the northern coast of East Falkland. From this beachhead, British infantry advanced south to capture Darwin and Goose Green, turning here toward the principal city of Port Stanley. Yet even while these British triumphs were being achieved, HMS *Ardent* was sunk by an Argentine air

attack, although nine Argentine aircraft were also lost in the attack. Another British warship, HMS *Antelope*, was sunk on May 23, and yet again the cost to Argentina was high, at 10 aircraft and seven more the following day.

HMS *Coventry* was attacked from the air and badly damaged on May 25, and a British commercial vessel, MV *Atlantic Conveyor*, was damaged by an Exocet missile. It sank three days later, with the loss of 12 British seamen. On May 28, against a backdrop of more air raids on Port Stanley, the British 2nd Battalion, Parachute Regiment, secured Darwin and Goose Green in the war’s major land battle. The British fielded 600 men against 1,400 Argentines in well-prepared positions, but nevertheless won the battle. British losses were 17 killed, whereas approximately 200 Argentine soldiers fell in battle and 1,400 surrendered. The following day, British warships and Harrier fighters bombarded Argentine positions, preparatory to a new British advance on May 30. The town of Douglas fell to British troops, as did Teal Inlet. On the 31st, Mount Kent was taken, and Port Stanley was now surrounded.

With a clear advantage, Britain held firm on its cease-fire demand for unconditional surrender, vetoing a Panamanian-Spanish cease-fire resolution in the UN Security Council on June 4. On June 8, Argentine aircraft attacked the British landing craft *Sir Galahad* and *Sir Tristram* at Port Pleasant, killing 50 men. Undaunted, British troops attacked Mount Longdon on June 12 in a battle against well-prepared positions that concluded with hand-to-hand combat. Twenty-three British troops were killed and 47 wounded. Argentine losses were 50 dead and many more wounded. With victory at Mount Longdon, other positions soon fell to the British; however, the cruiser HMS *Glamorgan* was badly damaged by an Exocet missile, with the loss of 13 British lives.

On June 14, the major Argentine garrison at Port Stanley was defeated in the culminating battle of the war, prompting Argentine commander Mario Menendez to agree to “an unnegotiated cease-fire . . . with no other condition than the deletion of the word unconditional” from the surrender document. Six days later, after reoccupying the South Sandwich Islands, Britain formally declared an end to hostilities. The 72-day war had cost 235 British killed and 777 wounded; the number of Argentine casualties is unknown, but at least 655 were killed. British sovereignty over the Falklands was affirmed, Margaret Thatcher was propelled to great popularity among the British, and Galtieri was forced to resign. Although Argentina decisively lost the war, the Argentine people ultimately benefited. With the resignation of Galtieri and the disintegration of his military junta, Argentina was started toward the restoration of democratic government.

Fascist March on Rome (1922)

PRINCIPAL COMBATANTS: Fascist Blackshirts vs. the Italian government

PRINCIPAL THEATER(S): Northern Italy and Rome

DECLARATION: March was announced on October 26, 1922.

MAJOR ISSUES AND OBJECTIVES: Despite Benito Mussolini's efforts to mythologize the March on Rome as one of the most momentous events in history, it was a brief and relatively peaceful show of Fascist power, which nevertheless propelled Mussolini to the position of prime minister, from which he ultimately became absolute dictator of Italy. Brief as it was, the March on Rome was, in effect, Italy's Fascist revolution.

OUTCOME: Mussolini was named Italy's prime minister.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Blackshirt marchers, 26,000 (more arrived later); government troops defending Rome, 12,000

CASUALTIES: Very few in northern Italy; none in Rome itself

TREATIES: None; Mussolini's appointment as prime minister ended the action.

The summer of 1922 saw an escalation in the turbulence that had beset Italy following WORLD WAR I. Among the welter of political factions, the Fascists, led by Benito Mussolini (1883–1945), emerged as strongest. Mussolini, an autodidactic blacksmith's son and a former schoolteacher, had pursued a career as a socialist journalist, in which capacity he argued strongly against Italy's entry into World War I. But, in the single most momentous decision of his life, he suddenly broke with the Socialists and urged Italy's entry into the war on the side of the Allies. Expelled by the Socialist Party for this reversal, Mussolini started his own newspaper in Milan, *Il popolo d'Italia*, and in its pages propounded the message of what became the Fascist movement. After service as a private in the Italian army during World War I, he resumed publication of his newspaper, and on March 23, 1919, with poet, novelist, romantic patriot, and glamorous adventurer Gabriele d'Annunzio (1863–1938), he and other war veterans founded a new party, the *Fasci di combattimento*. The Italian word *fascio* ("bundle" or "bunch") suggested union, and the *fascis*, a bundle of rods bound together around an ax with the blade protruding, was the ancient Roman symbol of power.

Fascism may have originated with the socialist Left, but it was almost immediately transformed into radical right-wing nationalism—a vision of re-creating in modern Italy the imperial grandeur of ancient Rome. Intoxicated by this vision, powerful landowners in the lower Po valley, important industrialists, and senior army officers joined Mussolini, who formed squads of thugs, the Blackshirts, whom he deployed in a street-level civil war against Socialists, Communists, the Catholic political party, and

Liberals. Acting against a weak and inept government, Mussolini's black-shirted followers seized power on March 26 in Bologna, Milan, and other major cities. Emboldened, Mussolini called for the resignation of Italy's Liberal premier Luigi Facta (1861–1930) and the formation of a new, Fascist-dominated government. His demand was shrill, and he threatened civil war if Facta failed to step down.

By October 28, 1922, the Fascists felt powerful enough to stage the march on Rome they had announced two days earlier. The plan called for them to begin at midnight. The Blackshirts already held the key industrial cities of northern Italy. Now they would assemble on October 28 at three rallying points north of Rome: at Santa Marinella near Civitavecchia, at Monterotondo, and at Tivoli. Once assembled, the three columns were to advance on Rome itself. Prior to the advance, one of Mussolini's lieutenants, Italo Balbo (1896–1940), sent a secret squad into Rome to plant bombs that could be set off in an emergency to discourage any government resistance.

Meanwhile, the ineffectual Facta had announced on October 27 that the nation was in a state of insurrection and authorized the army to maintain law and order. He ordered General Emanuele Pugliese, commanding 12,000 troops in Rome, to prepare the city for an invasion. In Milan, Bologna, Turin, and Genoa, the army also took control. But although the army obeyed government orders to deploy, it was clear that most of the troops and their commanders were sympathetic to the Fascists and, once in place, the army did very little to interfere with Fascist insurrectionists. In some places, the army stood by as Blackshirts commandeered rifles and machine guns, and at least in one instance, in Siena, soldiers actually delivered guns to Blackshirts occupying that city.

Facta responded by persuading Italy's king Victor Emmanuel III (1869–1947) to proclaim a state of siege, which would allow the government to declare martial law and deal summarily with the Fascists. At the last minute, however, the king refused to sign the proclamation, and, on October 28, Facta resigned. The king had been led to believe that as many as 100,000 Fascists were on the march, when, in fact, there were only 26,000. Pugliese's well-equipped and well-positioned 12,000 troops could easily have crushed the march and ended the rise of Mussolini and fascism. Not only did the king mistake the size of the march, he also doubted the loyalty of the army—and rightly so.

In truth Mussolini did not so much lead this march as follow it. During the deployment, Mussolini himself remained in Milan, awaiting the outcome of the operation. Hailing the March on Rome as a revolution, Mussolini demanded that King Victor Emmanuel III form a coalition government with his party, granting Mussolini himself dictatorial powers for one year. Upon Facta's resignation, the king had asked Antonio Salandra (1853–1931) to form a government and to offer Mussolini and other key Fascists

appointments in the cabinet. Mussolini declined, announcing he would accept nothing less than the position of prime minister. On October 29, with many more Fascist units arriving in Rome, the king offered him that post. Mussolini arrived in Rome aboard a railroad sleeping car on October 30, 1922. By the time he got off the train, tens of thousands of Blackshirts occupied the city. They surrounded the royal palace and hailed Mussolini as their leader.

During that first year, Mussolini radically reshaped Italy's economy, slashed government expenses for public services, reduced taxes on industry to encourage production, and streamlined the rickety government bureaucracy. For many observers, the single most symbolic evidence of Mussolini's reforms was the fact that he introduced a new discipline into the notoriously undependable Italian railroad system, and "Mussolini made the trains run on time" became a cliché that characterized the early years of his regime. (The claim, incidentally, happened to be untrue: Mussolini merely made sure the trains *ran*, by crushing the railroad labor unions, but their schedules remained as unpredictable as ever). Mussolini replaced the king's guard with his own Fascist *squadristi* and a secret police force, the Ovra. He made bellicose moves against Greece and Yugoslavia, and brutally suppressed the strikes that, in the past, had continually crippled industry. In 1924, Mussolini publicly relinquished his dictatorial powers and called for new elections—but rigged the outcome by obtaining legislation that guaranteed a two-thirds parliamentary majority for his party regardless of the popular vote.

When the popular Socialist leader Giacomo Matteotti (1885–1924) dared to voice opposition, exposing Fascist criminality, he was murdered. The opposition press attacked fascism, and Mussolini responded by summarily establishing single-party rule, imposing strict censorship, and dispatching thugs to silence all opponents by whatever means were necessary. To consolidate his power base among Italian capitalists, he abolished free trade unions and secured the support of the Catholic Church by the Lateran Treaty of 1929, which established the Vatican under the absolute temporal sovereignty of the pope. Now called *Il Duce* (the Leader), Mussolini began flexing his foreign policy muscle and placed Italy in the center of the prewar turmoil that had begun to plague Europe. Weakened by years of failing diplomacy, the European foreign policy establishment allowed Mussolini, with a mixture of bombast and caution, to play a leading role in the League of Nations (before he abruptly withdrew in 1937), to influence the Lausanne Conference (which set the boundaries of postwar Turkey and gave Italy several islands); guarantee the Locarno Pact (which allowed Germany into the League of Nations), and recognize the Bolsheviks (just as ostracized Germany would). Indeed, it was Italian diplomatic attempts to counter French influence in the successor states of the old Austro-Hungarian Empire that led in part to the creation of the Little Entente.

As a result, by the end of the 1920s fascism had become stylish and attractive to the rich, especially to the decadent aristocracy of *Mittel Europa*. The old-line "nobles" were on the defensive: they had led the world to war and in the process nearly destroyed themselves as a class, along with millions of common people. With the collapse of the four great empires of the *ancien régime*—the Hohenzollern, Hapsburg, Romanov, and Ottoman—they were left with very few countries in Europe to rule any longer, and even their money was not safe in a Europe gone mad with postwar stock-market speculation. Lacking real power, the best they could imagine was pleasure (which they called beauty), lots of it, and they chased it with real abandon, concentrating on clothes, on bearing, and on style. Fascism, according to Janet Flanner (1892–1978), who covered high culture in Paris for the *New Yorker* under the pen name Genêt, seemed to them an exciting political innovation.

Run-of-the-mill Fascists were more directly involved in the party and took to the movement with a deadly seriousness. Its growing popularity would recommend it to one Adolf Hitler (1889–1945), who saw in Mussolini a precedent-setting role model, perhaps a future ally, though Mussolini was the one striding across Europe as the future *führer* languished in jail (see "BEER HALL PUTSCH"), writing a premature memoir about the struggles in his life and the life of his adopted country since the end of the Great War.

Mussolini would remain head of state for two decades and indeed would lead Italy into an alliance with Hitler—then, into defeat in WORLD WAR II.

Fatimid Conquest of Egypt, Palestine, and Syria (969)

PRINCIPAL COMBATANTS: Fatimids vs. Abbasids, Ikhshidites, and Carmathians

PRINCIPAL THEATER(S): Egypt, Palestine, Syria region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest and control of the region

OUTCOME: The Fatimids took and successfully defended Egypt, Palestine, and Syria.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The Fatimid dynasty dominated North Africa and, later, the Middle East from about 909 to 1171. Taking its name

from Fatima (c. 605–633), the daughter of the prophet Muhammad—from whom the Fatimids claimed descent—rulers of the dynasty tried unsuccessfully to displace the Abbasid caliphs as leaders of the Islamic world. In contrast to earlier rulers and would-be rulers, the Fatimids refused to acknowledge the Abbasid caliphs in any way whatsoever. The Fatimids denounced them as usurpers, saying they, the Fatimids, were the true descendants of the Prophet. Thus their goal was not merely to create another regional sovereignty, but to found a new caliphate.

Ja'far (fl. 10th century), one of the leading Fatimid generals, led a force against the dynasty's Ikhshidite forces in Syria and in Palestine between Jerusalem and Jaffa. In a major battle at Ramleh, in 969, Ja'far defeated these forces and thus took Egypt. The Fatimids also defeated the Ikhshidites at the Battle of Gizeh (also 969). During 970–971 and, again, between 974 and 975, the Carmathians (a Muslim sect similar to the Assassin sect) invaded Egypt and Palestine, but were repulsed by the Fatimid armies.

Fatimid Conquest of Morocco (922)

PRINCIPAL COMBATANTS: Fatimids vs. Idrisid dynasty

PRINCIPAL THEATER(S): Morocco

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest of Morocco

OUTCOME: The Fatimids defeated the Idrisid dynasty and gained control of Morocco; they were not seriously challenged until 975.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Unknown

By the end of the eighth century, Idris ibn Abdulla (d. 820), a descendant of the prophet Muhammad, established an independent emirate encompassing Morocco and western Algeria. This became the basis of the Idrisid dynasty, which reigned in the region from about 800 to 922. In that year, the Fatimids (see FATIMID CONQUEST OF EGYPT, PALESTINE, AND SYRIA for Fatimid background information), under the military leadership of 'Obaidallah (c. 846–c. 934), defeated the Idrisids in Morocco. The people of this region readily accepted Fatimid suzerainty. However, the Omayyads of Spain and other factions (Berbers

and Idrisid remnants) challenged Fatimid control beginning about 975. For the last quarter of the century, Morocco was in civil turmoil as a result.

Fatimid Shi'ite Revolt (902–909)

PRINCIPAL COMBATANTS: Fatimid Shi'ites vs. Aghlabids

PRINCIPAL THEATER(S): Region of modern Tunisia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Overthrow of the Aghlabids and replacement by the Fatimids, as true descendants of the line of Muhammad

OUTCOME: The Shi'ite Fatimids prevailed, and the Fatimid dynasty was established in the region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Unknown; presumably none

The Fatimid dynasty (for Fatimid background, see FATIMID CONQUEST OF EGYPT, PALESTINE, AND SYRIA) was established at Kairouan (in modern Tunisia) during 902–909 when Abu Abdullah al-Husain (fl. 10th century), known as al-Shi'i, led Fatimid Shi'ites in a revolt against the ruling Aghlabids. The Fatimid Shi'ites claimed sole descent from Fatima, daughter of the prophet Muhammad, and condemned the Aghlabids (among many others) as usurpers without right to rule. Following the defeat of the Aghlabids, 'Obaidallah al-Mahdi was elevated to caliph. It was he who formally established the Fatimid dynasty in the region.

Bonner and Heinz Halm, *Empire of the Mahdi: The Rise of the Fatimids* (Boston: Brill Academic, 1997); Michael Brett, *The Rise of the Fatimids: The World of the Mediterranean and the Middle East in the Fourth Century of the Hijra, Tenth Century CE* (Boston: Brill, 2001); Muhammad-Husagh al-Tuba-Tabai, *Shiite Islam* (Albany: State University of New York Press, 1975).

February (March) Revolution (1917)

PRINCIPAL COMBATANTS: Workers, students, and others vs. forces loyal to Czar Nicholas II

PRINCIPAL THEATER(S): Petrograd (modern St. Petersburg) and Moscow

DECLARATION: The revolution began spontaneously.

MAJOR ISSUES AND OBJECTIVES: Ultimately, an end to czarist rule in Russia

OUTCOME: The czar abdicated in favor of a provisional government headed by Prince Lvov.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The violence that broke out in Petrograd (modern St. Petersburg) on February 23, 1917 (by the Old Style, Julian calendar then used in Russia), or March 8, 1917 (by the New Style, Gregorian calendar), may be considered the first phase of the **BOLSHEVIK REVOLUTION** (1917) or as a separate conflict.

The violence erupted in an outbreak of strikes and riots in protest over low (or no) wages, hunger, the disastrous conduct of **WORLD WAR I**, corruption, and general oppression. Over hours and days, the strikes spread and the rioting increased, spreading to the universities, where students took up the chant of “Bread, peace, and freedom.” In response to the outbreak, Czar Nicholas II (1868–1918) ordered troops to act against the rioters and strikers, but the Petrograd garrison refused to fire on their own countrymen. Word of this act of mutiny soon spread to Moscow, where soldiers mutinied and rebelled on March 10. Outnumbered police attempted to restore order, only to be beaten back and killed. Believing that the Duma, Russia’s parliament, was responsible for the outbreak, Nicholas ordered its prorogation on March 11. However, the members of the Duma defied his order and remained in session.

Faced with a full-scale revolt, Nicholas withdrew troops from the World War I front and ordered them to advance into Petrograd. However, front-line commanders refused to send the troops.

In the meantime, in Petrograd, the striking workers elected a council—a soviet—of representatives, who organized militant resistance to the czar. The Duma did not want the revolution to proceed in such a radical direction, so, on March 15 (March 2, Old Style), members created a provisional government under the leadership of Georgy Yevgenyevich, prince Lvov (1861–1925). Czar Nicholas now abdicated, stepping down from a throne the Romanov dynasty had occupied for more than 300 years.

Fenian Raids (1866, 1870)

PRINCIPAL COMBATANTS: Irish Americans vs. British Canadians

PRINCIPAL THEATER(S): Niagara border region between the United States and Canada

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: In an effort to depose British rule in Ireland, the Fenian Brotherhood of New York, an organization of Irish immigrants, hoped to instigate a war between the United States and Canada, a British dominion, thereby siphoning off the British forces stationed in Ireland.

OUTCOME: Fenians were unsuccessful in precipitating a war.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: June 1, 1866, attack, Fenians, 1,500; Canadians, unknown

CASUALTIES: Unknown

TREATIES: No formal treaty

Although a direct precursor to the 20th-century Irish independence movements, the Fenian Raids failed miserably and essentially ended the organization in the United States. Beginning in 1858 with the secret formation of the Irish Republican Brotherhood (IRB) in Ireland by James Stephen (fl. 19th century), the Irish independence movement took a new direction in its fight against Great Britain and its Protestant occupation of Ireland. Stephen, along with John O’Mahony (1816–77), was a veteran of the 1848 Young Ireland Revolt, and the two hoped to enlist aid from the United States. O’Mahony was sent to New York to establish the Fenian Brotherhood, a name from Irish mythology, in an attempt to send recent Irish immigrants back to Ireland along with guns and money. The plan was to foment civil insurrection, and at the same time encourage a mutiny of Irish troops in the British army. The plan, however, was stymied in both 1865 and 1866 when the Irish Americans failed to provide the necessary men and equipment.

Meanwhile, in the United States, O’Mahony had trouble convincing the Irish Americans to back his plan. Many Irish Americans felt it would be better to involve the United States by allying their new homeland with the Irish in an open war with Great Britain. They proposed precipi-

tating a war by raiding British-held Canada, on the assumption the United States would intervene only if the British Canadians attempted to attack the Fenians, who would then claim they were American citizens and demand support from their government. It was a thin supposition and, ultimately, an inaccurate one.

The radical Fenians gained control, deposing O'Mahony in October 1865 and establishing the "Irish Republic" in New York. The Irish Republic declared itself a government in exile, although it had no consent from the IRB in Ireland. James Stephen hastily sailed for America in April 1866. When he tried to denounce the proposed Canadian expedition and to reassert a policy of insurrection on Irish soil alone he was himself deposed.

The Fenian forces launched an attack against the Canadian island of Campobello in the Bay of Fundy on April 12, 1866. In a joint expedition between the British and American navies, the Fenians were easily defeated at Eastport, Maine. The British intercepted a shipment of arms intended for the Fenians, while the Americans, under General George G. Meade (1815–72), dispersed the Fenians in Eastport. Two months later, the Fenians attempted another invasion, this one more successful. A Fenian brigade of 1,500 under Colonel John O'Neill (1838–74), embarking from Buffalo, New York, on the U.S. side of the Niagara River, defeated a Canadian militia company at Fort Erie on the night of June 1, 1866, and ravaged the town for three days before the invaders were finally driven back to Buffalo. The following week, secondary raids departed from St. Albans, Vermont, and Malone, New Hampshire, aimed at taking Quebec. The campaigns were quashed when American troops heard of the plan.

Rather than come to the aid of the Fenians, the U.S. government worked in concert with British officials to suppress the Fenian plan. In March 1867, the Fenians finally sent the sought-after supplies to the IRB aboard *Erin's Hope*, but the British government was tipped off, and the ship was captured, along with IRB leaders. Outraged by the fate of *Erin's Hope*, Irish in five counties in the homeland staged an impulsive uprising, but it was easily crushed by the Royal Irish—later Ulster—Constabulary. However, the Irish American troops captured in Canada and in Ireland by the British were treated as British subjects, something that angered the American government and intensified already strained relations between the two nations. The tension between the United States and Britain buoyed the hopes of the Fenians, and they planned another Canadian invasion.

The Fenians, again led by O'Neill, crossed the border at Frankfort, Vermont, and again at Malone, New Hampshire on May 25, 1870. The raid lasted two days but was no more successful than the first. The Fenians were all rounded up by May 27. Opposed by both the Catholic Church and the federal government, the Fenians disbanded in January 1876 to join the Land League and its

Home Rule movement, which eventually led to the creation of the Irish Republican Army. The Fenian Brotherhood died with O'Mahony in 1877.

Ferrarese War (1482–1484)

PRINCIPAL COMBATANTS: Venice vs. Ferrara (and allied cities)

PRINCIPAL THEATER(S): Milanese and Ferrarese territory, Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Venetians sought to compel Ferrara to comply with Venetian convention rights.

OUTCOME: Militarily, Venice suffered a number of defeats, but nevertheless concluded an alliance with Milan, which allowed it to extend its territory inland.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Peace of Bagnolo, 1484

The policy of Renaissance Venice was aggressively to expand and defend its trading rights, which were often secured by various conventions with other Italian states. When Ferrara reclaimed certain rights it had conceded to Venice, the Venetian government secured sanction from Pope Sixtus IV (r. 1471–84) to take military action. Ferrara found allies in Genoa, Florence, Siena, Naples, and Milan. This made a formidable alliance, and the Venetian position deteriorated precipitously when papal troops, going up against Florence, were defeated at Castello and then at Rimini. Deciding to cut his losses, Sixtus concluded a five-year treaty with Florence and its allies.

Venice thus lost its papal army, and the pope further commanded Venice to break off the war. However, Venice refused and took the initiative at the Battle of Argenta, defeating the Ferrarese force. In response, the allies of Ferrara took concerted action, dispersing the Venetian fleet on the Po River. On land, Venice suffered defeat in Milan as well as on Ferrarese territory.

By 1483, Ferrara managed to regain most of its lost territory, but the alliance with the other Italian states was clearly dissolving. Capitalizing on the developing weakness of its rival, Venice offered peace terms. By the Treaty of Bagnolo, Venice secured its convention rights over Ferrara, thereby regaining the territories of Rovigo and Pole-sine. Venice had certainly not won the war in any military sense, yet it managed to negotiate a peace that extended its territory as far inland as it would ever reach.

Ferrarese War against the Papal States (1512)

PRINCIPAL COMBATANTS: Ferrara vs. the Papal States

PRINCIPAL THEATER(S): Ravenna and vicinity

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Alfonso I of Ferrara sought papal territory as a means of avenging himself on the pope, who had excommunicated him.

OUTCOME: Ferrara lost the war, but was able to make peace with the popes who succeeded Julius II.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Pope Julius II (r. 1503–13) excommunicated the d'Este duke of Ferrara, Alfonso I (1486–1534), because he had opposed the papal alliance in the War of the HOLY LEAGUE. Alfonso responded to excommunication by striking an alliance with France and against the papal forces as well as its Venetian and Spanish allies. Alfonso seized Ravenna, but Swiss forces attacked Milan, defeating the French there and pushing them out of the territory. With the French neutralized, the armies of the Holy League attacked Ferrara and defeated the army of Alfonso. This returned the Medici to power in Florence, but the death of Pope Julius II in 1513 ensured the continuance of d'Este rule in Ferrara. However, Alfonso I and his successors took great pains to maintain cordial relations with the papacy.

Fetterman Massacre (1866)

PRINCIPAL COMBATANTS: United States vs. Sioux and Arapaho Indians

PRINCIPAL THEATER(S): Northern Wyoming

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: As part of the force sent to Fort Phil Kearney to protect the Bozeman Trail against Sioux attack, the brash Captain Fetterman was decoyed into an ambush.

OUTCOME: Fetterman's small force was destroyed and parts of the Bozeman Trail were closed as a result.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 1,500 Sioux and Arapaho; Fetterman, 79 U.S. troops, and 2 civilians

CASUALTIES: U.S.: 82 dead; Sioux and Arapaho casualties were minimal.

TREATIES: None

Largely because of public fascination with the personality of "General" George Armstrong Custer (1839–76), his famed "massacre" in 1876 at the Battle of Little Bighorn (see UNITED STATES-SIOUX WAR [1876–1877]) all but obliterated memory of a similar defeat of the U.S. Army by Plains Indians 10 years earlier. On December 21, 1866, at the foot of the Bighorn Mountains near present-day Story, Wyoming, more than 1,500 Sioux, Cheyenne, and Arapaho warriors decoyed 79 soldiers and two civilians under the command of Captain William Judd Fetterman (c. 1833–66) into an ambush that none survived. The Fetterman Massacre, remembered by Indians as the battle of "100 in the Hand," was the high point of Red Cloud's War (see BOZEMAN TRAIL, WAR FOR THE), a campaign by Sioux groups and their allies to protect shrinking hunting grounds from destruction by growing numbers of wagon trains traveling over the Bozeman Trail through present-day Wyoming to Virginia City, Montana, where gold had been discovered in 1862. Red Cloud (c. 1822–1909), an extraordinary Oglala Sioux leader, joined with others to organize sustained resistance.

In the spring of 1866, the U.S. Army ordered units of the 18th Infantry Regiment to secure the trail by maintaining Fort Reno on the Powder River and establishing two additional posts at intervals to the northwest. Political connections brought command of the expedition to Colonel Henry Beebe Carrington (1824–1912), a lawyer who had organized the regiment in Ohio at the outset of the Civil War, but who had remained behind to continue with recruiting and administrative work while the regiment fought through Tennessee and Georgia. Reaching the Powder River country, Carrington divided his troops among the fort sites on the trail and personally and meticulously directed construction of an elaborate central stockade called Fort Phil Kearney. The Indians continued their traditional hit-and-run attacks against soldiers and travelers alike, while Carrington complained that he had neither adequate manpower nor weapons to do more than fend them off.

Historians today debate Carrington's conduct as did the battle-seasoned officers under his command at the

time. None of them felt more frustrated than Captain Fetterman, who had been commended for gallantry in the Civil War. Urging Carrington to take the offensive, Fetterman allegedly boasted that "with 80 men I could ride through the Sioux nation." Given command of a unit assigned to drive Indians away from a wood-hauling detachment, Fetterman apparently disobeyed orders not to pursue them. He died with all his men in an ambush long planned by the Indians.

In a celebrated ride of 236 miles through snow, John "Portugee" Phillips brought word from the fort of the "massacre," which generated a national outcry. Official investigators recorded criticism of Carrington but did not blame him for the disaster.

Wagon travel and Indian attacks resumed while the United States, recognizing that railroads would likely make the trail obsolete, sought new treaties with the Indians. But Red Cloud accepted no peace terms until the United States in 1868 closed traffic on the Bozeman Trail, abandoned the forts, and agreed to recognize the Powder River country as "unceded Indian territory," completing the Indians' victory.

Finnish War of Independence (1918–1920)

PRINCIPAL COMBATANTS: White faction (with German allies) vs. Red faction (with Bolshevik support)

PRINCIPAL THEATER(S): Finland, especially Karelia

DECLARATION: Finnish independence declared December 6, 1917.

MAJOR ISSUES AND OBJECTIVES: Finland declared independence from Russia.

OUTCOME: Finland won its independence, and the White faction defeated the Red.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Whites, 80,000 (plus 12,000 Germans); Reds, 130,000 (plus 10,000 Russians)

CASUALTIES: Whites, 5,300 killed, 7,300 wounded; Germans, 950 killed or wounded; Reds (including Russians), 5,500 killed in combat, and 8,380 executed, 69,400 taken prisoner

TREATIES: Treaty of Dorpat (Tartu), concluded on October 14, 1920

Finland had been under Russian control since 1809, but, in the chaos of the conclusion of World War I (see WORLD WAR I: BALKANS) combined with the disruption wrought by the FEBRUARY (MARCH) REVOLUTION in Russia, Finland declared its independence.

Immediately, the nation shattered into two factions. The Reds (or Red Guards) sought independence, but on communist terms. This group fielded an army of some 140,000, including 10,000 Russian Bolsheviks. The Red cause was strongly supported by the Russian communists. The Conservative Party—the Whites—also favored independence, but sought to defeat the Reds. Numbering about 80,000 and brilliantly led by Baron Carl Gustaf von Mannerheim (1867–1951), the White forces were augmented by 12,000 German troops. Although the German government was desperately engaged in the final stages of World War I, the kaiser was resolutely anticommunist.

The Whites, though numerically inferior, were better equipped and better led. Between January 28 and May 15, 1918, the White forces were consistently victorious, enjoying their greatest triumph at the Battle of Tampere on April 6. Incurring only 600 killed, the Whites inflicted 5,500 battle deaths among the Red Guards and their Bolshevik auxiliaries. Additionally, 3,000 Reds were summarily executed after the battle, and some 9,500 were destined to die in White P.O.W. camps, which, by the end of the war, held 69,400 prisoners.

Following Tampere and the Battle of Vyborg (April 29), the Whites instituted a reign of terror in Finland, in which perhaps another 5,000 Reds were rounded up and executed.

A Finnish republic was proclaimed on June 17, 1919, which triggered sporadic combat between Finland and Russia over western Karelia. This was ended by the Treaty of Dorpat (Tartu), concluded on October 14, 1920. Finland's independence was reaffirmed, and the nation gained the disputed Arctic port of Pechenga.

Firmus's Revolt (371–372)

PRINCIPAL COMBATANTS: Moors vs. Romans

PRINCIPAL THEATER(S): Mauretania (now part of Morocco and Western Algeria)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rebellion against Roman rule over the Moors

OUTCOME: The rebellion was crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Firmus (fl. c. 372–c. 375) was a leader of the Moors who rose up in rebellion against the Romans. For almost two years, he led resistance that very nearly drove the Romans out of Mauretania. The arrival of a Roman legion under Theodosius (346–395) put a decisive end to the revolt. Firmus evaded capture, then killed himself rather than fall into Roman hands.

"Five Days" Revolt (1848)

PRINCIPAL COMBATANTS: Milanese citizens vs. Austrian army

PRINCIPAL THEATER(S): Milan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Milan rebelled against Austrian rule.

OUTCOME: Milan gained a brief period of independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Austrian troops, 12,900; unknown number of Milanese

CASUALTIES: Austrian, 600 killed or wounded; Milanese, 430 killed

TREATIES: None

During the revolutionary year of 1848, when rebellion tore at the Hapsburg Empire, Italy was in the forefront and, shortly after violence broke out in Sicily (January 12, 1848), Milan also rose up against its Austrian masters.

On March 18, 1848, Milanese citizens erected no fewer than 1,650 barricades in the streets of the city and, in the course of five days of fighting, drove a 12,000-man Austrian garrison—under command of the illustrious Josef Radetzky (1766–1858)—in addition to 900 gendarmes, out of the city. This triumph came at the cost of 430 citizen casualties, among them 28 pro-independence women; however, it inspired rebellion elsewhere in Italy.

The Austrians regained control of Milan before the end of the year.

Five Pecks of Rice (190–215)

PRINCIPAL COMBATANTS: Followers of the Way of Five Pecks of Rice vs. emperors of the Han

PRINCIPAL THEATER(S): Sichuan (Szechuan) region of China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Han wanted to end the autonomous existence of a cult-state known as the Way of Five Pecks of Rice.

OUTCOME: After 25 years of warfare, the "rebel" leader Zhang Lu (Chang Lu) was persuaded by a grant of property and titles to surrender.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

A popular uprising inspired by Taoist thought, Wu-tou-mi (The Five Pecks of Rice) swept through China at the end of the Han dynasty (206 B.C.E.–220 C.E.), undermining the government.

The movement was begun by Zhang Ling (Chang Ling c. 34–c. 156), the figure generally identified as the founder and first patriarch of the Taoist church in China. Zhang earned his early renown as a spiritual healer. His patients paid him five pecks (a peck equals one-fourth a bushel, about eight quarts) of rice annually (this may have been dues paid to his cult), and the name of the movement his religion inspired took its name from this fee. Zhang's grandson, Zhang Heng (fl. second century), carried on his grandfather's work. Zhang Heng's son, Zhang Lu (fl. third century), continued. By this time, poverty was general across China and had created a climate of social and political discontent. Seeing the opportunity to create a popular movement, Zhang Lu created an army and proclaimed an independent theocracy, which introduced a host of enlightened institutions, including free wayside inns for travelers and humane treatment for criminals. Additionally, the new state promoted Taoism.

Operating with another Taoist leader, Zhang Xiu (Chang Hsiu; fl. third century), Zhang Lu expanded his sphere of influence, spreading rebellion throughout the vast Sichuan Province. The two leaders fell to disputing, however, and Zhang Lu killed Zhang Xiu. This signaled the disintegration of the Five Pecks movement, and in 215 Zhang Lu capitulated to the Han's most important military commander, Cao Cao (Tsao Tsao; 155–220). Cao Cao possessed sufficient wisdom to control Zhang Lu not through intimidation or punishment, but by coopting him with lofty rank and a substantial fiefdom.

The Five Pecks of Rice continued to loom importantly in Chinese history, and Mao Zedong (Mao Tse-tung; 1893–1976) took inspiration from it.

Flammock's Rebellion (1497)

PRINCIPAL COMBATANTS: Cornish rebels vs. Henry VII of England

PRINCIPAL THEATER(S): Taunton and London, England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Cornish followers of Thomas Flammock protested a royal tax.

OUTCOME: The rebellion was quickly crushed, and its leaders executed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Thomas Flammock (d. 1497), a Cornish lawyer and landowner, led a rebellion in response to a tax King Henry VII (1457–1509) levied to finance a military campaign against Scotland (see WARBECK'S REBELLION). Flammock held that the northern barons were exclusively responsible for defending the Scots frontier and that, therefore, the tax on all England was unjust. With Michael Joseph (d. 1497), Flammock led a protest to London. Whether by accident or design, the protesters became a violent mob as they made their way to the capital. At Taunton, they killed the local provost, then marched to Wells, where they persuaded a local nobleman, Lord Audley (d. 1497), to join their ranks. From Wells, they proceeded to London, where, on June 22, 1497, at Deptford Strand, they were met by royal troops. Henry's soldiers quickly crushed the rebels, and Flammock, along with the other leaders, was arrested, tried, convicted of treason, and executed.

Florentine-Milanese War (1351)

PRINCIPAL COMBATANTS: Florentine Guelfs vs. Milanese-allied Ghibellines

PRINCIPAL THEATER(S): Tuscany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Milan sought to acquire Florentine territory.

OUTCOME: Florence suppressed Milanese expansionism and purged Ghibelline officeholders throughout much of Tuscany.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Giovanni Visconti (1290–1354), ruler of Milan, sought to acquire control of Bologna. After taking the city in 1350, he leagued with the Ghibelline Party of Tuscany to invade territory controlled by Florence. This assault was resisted, and the Milanese advance was halted at Scarperia. Florentine forces took the initiatives and pushed the invaders back into Bologna.

Determined to recover, Visconti regrouped for a new assault, but succumbed to illness before the attack was launched. The Florentines exploited the disruption in Milanese leadership to purge Ghibelline officeholders in territories controlled by the rival Florentine Guelfs. The result was the promotion of papal interests, which the Guelf supported, over those of the Holy Roman Empire, which the Ghibellines favored.

Florentine-Milanese War (1397–1402)

PRINCIPAL COMBATANTS: Milan vs. cities of northern and central Italy

PRINCIPAL THEATER(S): Tuscany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Milan fought an undeclared war of expansion.

OUTCOME: Milan acquired much territory in northern and central Italy, but the sudden death of the rapacious Gian Galeazzo Visconti caused the abandonment of the assault on Florence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Gian Galeazzo Visconti (1351–1402), ruler of Milan, seized Verona, Padua, Pisa, Siena, Perugia, and other cities in northern and central Italy. Having put much of Tuscany under his personal control, Visconti prepared to

take Florence. Fortunately for the city, Visconti succumbed to plague just as he was about to attack in September 1402. The territory Visconti had taken in northern and central Italy was carved up among his heirs. Instead of increasing Visconti family power, this had the effect of diluting it, and Florence made no further attempts against Milan.

See also FLORENTINE-MILANESE WAR (1351).

Florentine Revolt (1343)

PRINCIPAL COMBATANTS: Florentine citizens vs. Signore Walter of Brienne

PRINCIPAL THEATER(S): Florence

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Florentines wanted to overthrow Walter, whose government and economic policies were oppressive.

OUTCOME: Walter was driven out of Florence, and a commercial republic established in place of his dictatorship.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Signore Walter of Brienne (d. 1353), ruler of Florence, imposed a tyrannical regime of heavy taxes. Resentment within the city developed against Walter, who responded by allying himself with Tuscany and Bologna to conduct a campaign of intimidation and terror. Walter's agents arrested 300 prominent Florentines suspected of plotting the overthrow of Walter. The arrests incited a general revolt, and Florentines laid siege to Walter in his palazzo. The siege stretched into weeks and months. Walter's Tuscan and Bolognese allies deserted him. In desperation, Walter grudgingly directed the bishop of Florence to make certain reforms, but these concessions were too little too late. The Florentine mob stormed the palazzo, killing many of Walter's retainers. Walter himself escaped, fleeing the city, never to return. Remarkably, released from Walter's political and economic repression, Florence became a prosperous commercial republic and a center of art and culture.

Florentine War against the Great Company (1358–1359)

PRINCIPAL COMBATANTS: German mercenaries (the Great Company) vs. Florentine defenders

PRINCIPAL THEATER(S): Tuscany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A mercenary band raided Italy and threatened Tuscany and Florence; Florence resisted.

OUTCOME: Blocked from entering Tuscany, the Great Company withdrew.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

It was common practice in the 14th century to use mercenary troops. While this reduced the pain and expense of warfare for many Italian states, there was always the risk of mercenaries turning against their clients. The Great Company, German mercenaries hired by an alliance of Italian princes to fight Milan, rebelled when, in 1358, the alliance could no longer afford to pay the troops. The Great Company raided and plundered much of Italy. Florence set up blockades on the mountain passes into Tuscany, and an army of mountain peasants fought the Great Company to a standstill at the Battle of Scafell Pass, July 24, 1358. Although the Great Company continued to loom near Florentine territory, as if preparing an invasion, the mercenaries withdrew by 1359.

Florentine Wars against Pisa (1313–1406)

PRINCIPAL COMBATANTS: Florence vs. Pisa and its defenders

PRINCIPAL THEATER(S): Pisa and vicinity

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Florence wanted to annex Pisa to acquire an outlet to the sea.

OUTCOME: After almost 100 years of chronic warfare, Pisa fell to a Florentine siege.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Extremely variable

CASUALTIES: Unknown

TREATIES: None

Throughout most of the 14th century and into the 15th, a chronic state of warfare existed between Florence and Pisa. The issue was simple: Florence sought to annex Pisa as a means of gaining access to the sea via its port. The fighting was indecisive, reaching its greatest level of intensity during 1362–64.

During this period, Pisa hired the celebrated English mercenary, Sir John Hawkwood (1320–94), known in Italy as Giovanni Acuto, to lead its defense. Certainly one of the most skilled commanders of the Middle Ages, Hawkwood was a veteran of service with Edward III (1312–77) in the HUNDRED YEARS' WAR and probably saw action at Crécy and Poitiers. After the peace of Bretigny, he formed his own free company of soldiers, including many Englishmen and Gascons. He took part in the Siege of Avignon (1361) and the Battle of Brignais (1362), then led his army to Italy to serve in the city states' wars there. The defense of Pisa was his first major commission; he would later serve Milan, Rome, Naples, Padua, and finally Florence, where he was captain-general for 14 years.

Through Hawkwood's efforts, Pisan independence was preserved for years. Seeking a more permanent solution, Pisa negotiated the protection of French king Charles VI (1368–1422), but in 1405, Florence struck a bargain with Charles in which he handed over Pisa in exchange for Florentine support of Benedict XIII (r. 1394–1423), the antipope backed by France. Thus Pisa's protector betrayed the city.

The wars were not quite ended, however, as Pisans rebelled against Florentine rule. This provoked Florence to lay siege against Pisa by land and sea, an action that starved the city into submission on October 9, 1406. Florence thereby acquired the seaport it had long sought.

Florentine War with the Papal States (1485–1486)

PRINCIPAL COMBATANTS: Florence (in aid of Ferdinand I of Naples) vs. the Papal States

PRINCIPAL THEATER(S): Florence and Naples

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Lorenzo de' Medici of Florence supported Ferdinand I of Naples against a rebellion, which was backed by Pope Innocent VIII.

OUTCOME: Lorenzo prevailed, and Ferdinand I remained on the Neapolitan throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Neapolitan barons, with the support of Pope Innocent VIII (r. 1484–92), rebelled against Ferdinand I (1423–94), king of Naples, in the NEAPOLITAN REVOLT. Lorenzo de' Medici (1449–92), ruler of Florence, sent troops to aid Ferdinand in suppressing the rebellion. In response, papal forces invaded Florentine territory. Lorenzo's army not only repulsed the invasion, but also advanced into Naples and drove the invaders from there as well.

By the end of the revolt in 1486, Lorenzo had served his ally Ferdinand well and, in the process, recovered the city of Sarzana, lost to Genoa in 1478.

Fox Resistance (1712–1733)

PRINCIPAL COMBATANTS: The French-allied Ojibwa and the English-allied Fox

PRINCIPAL THEATER(S): Western shore of Lake Michigan in the modern states of Illinois and Wisconsin

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Ojibwa wanted to eliminate Fox trading competition.

OUTCOME: The Fox were badly beaten and the tribe greatly diminished.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but heavy among the Fox

TREATIES: None

In 1722 New York's governor William Burnet (1688–1729) approached the Senecas, westernmost of the Iroquois tribes, in an attempt to wrest profitable Iroquois trade from the French. In response, Louis-Thomas Chabert de Joncaire (1707–c. 1766), Indian agent for the French, persuaded the Senecas to permit enlargement of the French fortifications at Niagara. Burnet, in turn, obtained authorization from the

British Crown to build Fort Oswego on the eastern shore of Lake Ontario to check the French trade expansion. To this development, Marquis de Vaudreuil (1698–1778), governor of New France, responded by once again approaching the Senecas with a request to allow him to further strengthen the French fort at Niagara, replacing its wooden palisades with walls of stone. Although the Senecas again acquiesced, they struggled to maintain neutrality in the growing conflicts between the French and English, an increasingly difficult posture. Already, the Mohawk, easternmost of the Iroquois tribes, had openly allied themselves with the English and had thereby gained a trade advantage. Throughout the 1720s, the Iroquois tribes began actively playing the French against the English in an effort to achieve a balance of power they perceived as beneficial. Suddenly the Iroquois tribes moved closer to the English side when, in 1729, a combination of French and Indians, chiefly Ojibwa, attacked the Fox, whose territory was the western shore of Lake Michigan in the present states of Illinois and Wisconsin. The Fox Indians were far-western allies of the Iroquois—and the Iroquois, in their ongoing but imperiled effort to monopolize inland trade, needed all the western allies they could get. (See BEAVER WARS.)

Since at least the late 17th century, the Fox had been sporadically at war with the Ojibwa tribe, also called Chippewa, who were concentrated in present-day northwestern Wisconsin. The French, who established profitable trading relations with the Ojibwa, aided that tribe in its ongoing contest with the Fox. In response, the Fox repeatedly harassed French traders and raided their frontier outposts.

In 1712, the Fox assaulted the French fort at Detroit. The attack was destructive, but not decisive. Detroit held out against the Indians. Historians label the period of sporadic combat between the French and Fox that spanned 1712 to 1733 the “Fox Resistance.” It was not, however, a single long war, marked by a more or less orderly progress of battles and campaigns, but rather a period of raiding by the Indians and counterraidering by the French and their allies. The Fox raids reached their height during the 1720s and greatly disrupted trade between New France and the Ojibwa. Indeed, the very lifeline connecting New France in the north with Louisiana in the south—Lake Michigan, the upper Mississippi, and the portages connecting them—was attacked and threatened.

Realizing that the survival of French settlements in North America was in jeopardy, French colonial authorities met with Ojibwa allies in a series of councils to determine an overall strategy. The most ambitious solution suggested was outright extermination of the Fox tribe. The French leaders deemed this impractical and decided instead to round up the Fox and “relocate” them to Detroit, where the well-armed garrison of the fort could monitor and control their activities.

To effect the concentration of Fox, combined French and Ojibwa forces mounted several campaigns, which had little success. Nevertheless, the French-Ojibwa initiative became increasingly powerful, and by 1729 attacks against the Fox became more fierce. Fox casualties were so heavy that, in 1730, French-Ojibwa policy turned from the objective of concentration back to the original objective of tribal extermination. Despite aid from the Sac tribe (with which, over the years, the Fox would become increasingly identified), the Fox were forced to flee east, to territory controlled by the English-allied Iroquois, where they hoped to find safe harbor. A large number of Fox were captured and killed in flight in the great Fox massacre of 1730. The Fox resistance quickly diminished and petered out entirely by 1733.

The collapse of the Fox tribe left only a single Algonquian tribe unallied with the French west of Iroquois territory. Without the Fox to serve as a buffer, the Iroquois’s most formidable trading opponent, the Potawatomi of the Michigan-Chicago-Green Bay region, were positioned to end Iroquois efforts to achieve a trade monopoly in the west, in essence to defeat the Iroquois and bring an end to the long series of Iroquoian Beaver Wars.

For the English, the defeat of the Fox tribe was a blow, but it was not without benefit. With the Fox neutralized, the Iroquois were now motivated to cement a frank alliance with the English.

Franco-Austrian War (1477–1493)

PRINCIPAL COMBATANTS: Austria vs. France and the Netherlands

PRINCIPAL THEATER(S): Burgundy and Flanders

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Maximilian of Austria sought to maintain and then recover control of Burgundy and other territories.

OUTCOME: Although Maximilian gained much for Austria, Burgundy remained in French hands.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Peace of Arras of 1482; Peace of Senlis of 1493

The death of Charles the Bold (1433–77), duke of Burgundy, in the BURGUNDIAN-SWISS WAR (1474–1477) presented King Louis XI (1423–83) of France the opportunity

to lay claim to Burgundy. He was about to do so when Mary of Burgundy (1457–82), the daughter of Charles the Bold, married Archduke Maximilian (1460–1519) of Austria, thereby securing her succession to the Burgundian throne. Unwilling to renounce Burgundy, Louis XI invaded Burgundy, but was defeated at the Battle of Tournai in 1477.

Two years after Tournai, the forces of Louis and Maximilian met at the Battle of Guinegate on August 7, 1479. The French cavalry trounced Maximilian's mounted forces, but the Flemish infantry under Maximilian's command held the field against the French. The French Free Archers, an important militia adjunct to Louis's army, fled the field and brought about the defeat of the French. The wily Louis turned his defeat to some advantage, however. He successfully sued for a cease-fire and then secretly used the time to conspire with the Flemish city-states under the nominal control of Maximilian. Louis incited rebellion, which prompted Maximilian to conclude the Peace of Arras of 1482, whereby Maximilian sought to placate France by betrothing his infant daughter to the French dauphin. The dauphin received a dowry consisting of Burgundy in addition to Artois and Franche-Comté.

Maximilian's agreement effectively undercut the power of his own son, Philip. Nominally ruler of Burgundy, he now had to rule through agents from the Netherlands while Burgundy paid heed to French advisers. In an attempt to reclaim Burgundy for his son, Maximilian waged war against the Netherlands, then, named Holy Roman Emperor, occupied St. Omer in Flanders. He led two minor invasions of Burgundy in 1486 and 1487, but made peace with France in 1489, just in time to fight the rebels in Flanders.

The Flanders revolt was put down by 1492, which freed Maximilian to renew his war with France. He triumphed at the Battle of Dournon in 1493, prompting the Peace of Senlis, by which France ceded Artois and Franche-Comté to Austria. Because the French dauphin had jilted his daughter, Maximilian also recovered her. However, Burgundy remained in French hands.

Franco-Austrian War (1809) *See* NAPOLEON'S WAR WITH AUSTRIA.

Franco-Barbary Pirates War (1664–1669)

PRINCIPAL COMBATANTS: France (with Venetian alliance) vs. the Barbary pirates

PRINCIPAL THEATER(S): Waters off the Algerian coast

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: France's Louis XIV sought to suppress Barbary predation against his commercial fleet.

OUTCOME: The pirates were largely suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

France sent some 7,000 land troops in addition to a small fleet; Barbary numbers are unknown.

CASUALTIES: France lost 400 sailors as POWs; losses of other belligerents are unknown.

TREATIES: Treaty between France and Algiers, 1666; alliance with Venice, 1664

The state-sanctioned Muslim pirates of the Barbary Coast routinely preyed on Christian commerce vessels, including those of France. In 1664, Louis XIV (1638–1715) decided to take action against the pirates and sent a naval squadron to bombard Djidjelli, Algeria. This assault was repulsed, and 400 French sailors were taken prisoner. Louis made repeated naval assaults on Algiers, finally forcing the dey to agree to cease piracy.

When piracy resumed, Louis XIV entered into an alliance with Venice against the Ottoman Empire, of which the Barbary pirates were an instrument. He dispatched a fleet together with a land force of 7,000 men to Candia (Crete) in operations that more thoroughly suppressed the pirates.

Franco-Burgundian Wars (1464–1465, 1467–1477)

PRINCIPAL COMBATANTS: France vs. Burgundy

PRINCIPAL THEATER(S): Burgundy and Lorraine

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Charles the Bold wanted to achieve independence for Burgundy and, ultimately, to overthrow Louis XI of France.

OUTCOME: Burgundian independence was achieved for a time.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Conflans, 1465; Peace of Arras, 1482

When King Louis XI (1423–83) moved to transform feudal France into a modern nation-state by strengthening his central authority at the expense of the nobility, he met with much resistance. The leader of the opposition was Charles the Bold (1433–77) of Burgundy, principal organizer of the League of Public Weal (*Ligue du bien public*) in 1464, an alliance among the nobles to resist Louis. As Charles organized the upper nobility, Louis garnered the support of the lesser gentry and the bourgeoisie. France prepared for war with Burgundy.

Louis pitted his army against that of Burgundy at the Battle of Monthéry on July 13, 1465. Under the comte de Charolais (1433–77), the Burgundians achieved a narrow victory, and Louis grudgingly signed the Treaty of Conflans, by which he returned territory he had seized from various nobles. Additionally, Charles received lands along the Somme River.

Louis never reconciled himself to the terms of the treaty. Having ceded the Somme territories, he stirred the region to revolt against Burgundy. Charles responded with a new campaign against Louis, intending to achieve outright independence for Burgundy. Louis countered with skilled diplomacy to disband the League of Public Weal. This accomplished, he attempted negotiations with Charles at Péronne in 1468. However, the king's timing was particularly poor. At this moment, a revolt, instigated by the king's own agents, had broken out in Liège, and Charles took Louis captive. To ransom himself, Louis made concessions that extended Charles the Bold's hegemony all the way to the Rhine.

Not satisfied with all that he had gained, Charles was determined to end the threat Louis posed once and for all. He schemed with England and other states to destroy Louis and divide France among them. The French king discovered the plot and checked it, again through adroit diplomacy, by making favorable peace treaties or, failing that, bribing Burgundy's allies. At last, in 1473, Holy Roman Emperor Frederick III (1415–93) refused to crown Charles king of Burgundy, thereby decisively denying Burgundy the status of an autonomous kingdom. By this time, however, Charles had conquered vast territories, including Lorraine in 1475, and, despite the decree of the Holy Roman Emperor, had effectively freed Burgundy from French control. It required a combined French, Swiss, and German (Holy Roman Empire) army to invade Burgundy in 1477. In a battle outside Nancy, fought on January 5, 1477, principally by the formidable pikemen and halberdiers of the Swiss infantry, Charles fell. Without their leader, the Burgundians yielded to Louis. This submission was formalized in 1482 by the Peace of Arras, which formally returned Burgundy to France. Burgundy thus ceased to be an independent power.

Franco-German War (942) See OTTO THE GREAT, CONQUESTS OF.

Franco-German War (978–980)

PRINCIPAL COMBATANTS: France vs. Germany

PRINCIPAL THEATER(S): Lotharingia (Lorraine)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Lothair of France sought to recover Lotharingia from Otto II, German king and Holy Roman Emperor.

OUTCOME: Lothair aborted the campaign and renounced his claims to Lotharingia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Numbers unknown, but certainly few or none due directly to combat

TREATIES: None

In 925, France lost Lotharingia (modern Lorraine) to Germany. In 978, Lothair (941–986), the Carolingian king of France, launched an invasion of Lotharingia to reclaim the territory, despite the fact that Otto II (955–83), king of Germany and the Holy Roman Emperor, was his liege lord.

Otto regarded the invasion as an act of rebellion by his vassal, and he responded swiftly after Lothair successfully assaulted Aachen (Aix-la-Chapelle), in whose cathedral no less a figure than Charlemagne (c. 742–814) was buried. Otto scorned a defensive posture and instead seized the initiative with an invasion of France. His aggression apparently induced Lothair to reconsider his action. No sooner did Otto invade than the Carolingian sought reconciliation with his liege. In 980, therefore, before the war began in earnest, Lothair unilaterally repudiated his claims.

Peace was restored, but it failed to outlive Otto II. When the Holy Roman Emperor died in 983, three-year-old Otto III (980–1002) assumed the throne. His right to succession was disputed and triggered a civil war. Seeing

the weakness of disunity in his German adversary, Lothair was quick to launch a second invasion of Lotharingia in 985, only to die before the year was out. Under his inept successor, Louis V (c. 967–987), known as “Louis the Sluggard,” the invasion simply collapsed.

Franco-Prussian War (1870–1871)

PRINCIPAL COMBATANTS: France vs. Prussia (with allied German states)

PRINCIPAL THEATER(S): France

DECLARATION: France on Germany, July 19, 1870

MAJOR ISSUES AND OBJECTIVES: The nominal cause of the war was the Prussian-backed, French-opposed candidacy of a Hohenzollern prince for the Spanish throne. The deeper issue, however, was Prussia's growing power in Germany, which Emperor Napoleon III correctly saw as a threat to French security. Prussia's extraordinarily astute prime minister, Otto von Bismarck, deliberately exploited the issue of the Spanish succession to goad France into an act of war designed to frighten the south German states

into joining the North German Confederation organized in 1867, with Prussia as the dominant member.

OUTCOME: The Franco-Prussian War was momentous for European civilization, bringing about the fall of the Second French Empire and marking the end of French hegemony in continental Europe, providing the impetus for the creation of the German Empire, and figuring as the first modern European war, in which both combatant nations used railroads, the telegraph, modern rifles, and modern rifled, breech-loading artillery. The very unstable postwar peace in Europe would last until the outbreak of WORLD WAR I.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Germany: 380,000 men in three armies, with 95,000 held in reserve; France: 224,000 in eight army corps

CASUALTIES: France, 60,000 killed, 140,000 wounded; Prussia (and allies), 28,400 killed, 88,600 wounded

TREATIES: Treaty of Versailles, February 26, 1871; Treaty of Frankfurt, May 10, 1871

HISTORICAL BACKGROUND

By the middle of the 19th century a Pax Britannica among the Great Powers had been established due to the indisputable supremacy of the British navy. With no country in a position to challenge Great Britain's dominance of the seas, the period between the NAPOLEONIC WARS and the 1870s saw an evident reduction in conflicts among European powers. They did not disappear entirely: There were wars against colonial peoples by the colonizing nations; there was some revolutionary turmoil on the Continent. In France such turmoil led to the rise of Napoleon III (1808–73). On the whole, however, Europe was relatively calm compared to the constant fighting for colonial possessions back in the 18th century, or the rise again of intense rivalry between the Great Powers in the late 19th and early 20th centuries.

During the Pax Britannica, the British Empire became the world's champion of free trade and took the lead in such progressive matters as abolishing slavery. But these very measures opened the Continent to greater industrial development and sparked the move toward national unification, especially in Italy and Prussia, that shattered the peace.

The new Prussian premier Otto von Bismarck (1815–98), one of the more remarkable diplomats in European history, was inspired by the diplomatic and bellicose successes of Italy's able chief minister, Camillo di Cavour (1810–61), in creating a new Italian state under his Piedmontese king (see ITALIAN REVOLUTION; ITALIAN WAR OF INDEPENDENCE). The Prussian minister was determined to copy those triumphs. Reforming Prussia's politics when necessary, engaging in aggressive warfare if need be, willing to aggrandize his country through negotiations when possible, Bismarck would in the end not only unite Germany

under Prussia and defuse liberal and radical agitation almost completely within his new state, but he would also launch a whole new era in international relations.

In 1866, ignoring the express objections of his king, Wilhelm I (1797–1888), Bismarck provoked a war within the aging German Confederation—the SEVEN WEEKS' WAR—in order to destroy Austria's dominance of the league and thus unite the German states under Prussian hegemony. As a result, the old league was replaced by Bismarck's new North German Confederation. Bismarck then seduced the still independent southern German states into joining the North German Confederation, playing off their hatred of Napoleon III, who would come to regret his role in giving birth to the confederacy. In 1870, when Bismarck tried to place one of Kaiser Wilhelm's Hohenzollern relatives on the Spanish throne, Napoleon panicked. The last thing he wanted was Germans on both sides of him, giving rise to the potential for a Prussian-Spanish two-front war against France. The result was another short and brutal but even more momentous conflict, the Franco-Prussian War.

COURSE OF THE WAR

On July 13, 1870, the Prussian king sent a message to Napoleon III reporting an innocuous meeting with the French ambassador. Bismarck, edited this—the so-called Ems Telegram—to imply an exchange of insults. In receipt of the telegram, the French course seemed either to accept a diplomatic defeat or go to war. With his government's prestige faltering at home, Napoleon III judged that he could ill afford to suffer an insult at the hands of Prussia, and he declared war on July 19, 1870.

Unfortunately, Napoleon III had failed to consider that a military defeat was far worse than a diplomatic one. His armies were badly outnumbered and, even worse, out-generated. There was no comparison between the efficient German offensive, planned and executed by General Helmuth von Moltke (1800–91), and the haphazard French mobilization.

The Prussians concentrated three superbly equipped armies totaling 380,000 men on the Rhine River frontier: one with 60,000 men under General Karl von Steinmetz (1796–1877), between Trier and Saarbrücken; one with 175,000 men under Prince Friedrich Karl (1828–85), between Bingen and Mannheim; and one with 145,000 men under Crown Prince Friedrich Wilhelm (1831–88), between Landau and Germersheim. Officially commanded by Wilhelm I, these armies were actually run by Moltke and his soon-to-be-legendary general staff, who had predicted—based on excellent intelligence—the entire French order of battle and whose objective was the utter destruction of the French armies in the field followed by the fall of Paris. The Prussians' one concern was the possibility that Austria might intervene on behalf of the French, so they held 95,000 troops in reserve to face that potential threat.

The French, on the other hand, had some 224,000 men in eight separate army corps that lay stretched out behind the frontier (from Thionville to Strasbourg) back to the fortresses at Metz, Nancy, and Belfort. The individual units were below full fighting strength and scantily armed. Actually transporting these men to battle was something of an afterthought to Napoleon and his generals, who improvised. Lacking any intelligence whatsoever about the enemy, Marshal Edmond Leboeuf (1809–88), France's less than competent war minister, sent the armies under his command into the field with no real plan of battle. Napoleon ordered a general advance and the French people shouted "On to Berlin!" as the soldiers marched by.

Not until the first skirmish between the French and Germans occurred on August 2, 1870, at Saarbrücken did Napoleon group his troops into real armies—the Army of Alsace (the three southernmost corps), commanded by Marshal Patrice Mac-Mahon (1808–93) and the Army of Lorraine (the remaining five corps) under Marshal Archille F. Bazaine (1811–88). Even then, no staffs were created for the armies and both generals had to make do with their individual corps staffs.

Bazaine led his army east, but withered before the German onslaught, losing the battle of Mars-la-Tour on August 16, before taking a misguided stand on August 18 at the battle of Gravelotte. There Moltke's armies blocked the French march toward Verdun and attacked, suffering heavy losses before the French, failing to counterattack, were defeated. The French retreated to the fortress at Metz, where the Germans bottled them up some four weeks after the war had begun.

When the main French army under Mac-Mahon (accompanied by Napoleon) tried to relieve Bazaine, it too was surrounded and trapped by the Germans at Sedan on August 31. The next day, the French tried in vain to break out of Sedan. On September 2, Napoleon III, invited to lead the last charge, refused to sacrifice any more men to the superior German firepower (the French had lost 17,000; the Germans 9,000 men). He drove out under a white flag to surrender as an individual to the king of Prussia. The French commanders then surrendered their army of 83,000 men.

News of the humiliation of Sedan reached Paris two days later, and the Third Republic was proclaimed. In its name, the Government of National Defense deposed Napoleon and sent its new foreign minister, Jules Favre (1809–80), to negotiate with Bismarck. Favre quickly broke off the talks when the Germans demanded Alsace and Lorraine. On September 23, the Prussians besieged Paris. Léon Gambetta (1838–82), the leading figure in the new French government, escaped the city in a balloon and fled to the countryside, where he organized new French armies. But these could no more defeat the Germans than had the armies under Mac-Mahon. On October 27,

Bazaine finally capitulated at Metz. On January 28, the provisional French government sued for peace, and the siege was lifted.

The armistice allowed France three weeks in which to elect a national assembly with authority to negotiate a peace in the republic's name. When the elections created an assembly overwhelmingly in favor of peace, the Treaty of Versailles was negotiated, signed by Adolphe Thiers (1797–1877) and Favre on February 26, and ratified on March 1. Between that date and the conclusion of the formal Treaty of Frankfurt on May 10, 1871, the new republican government was threatened by a radical insurrection that briefly placed the Paris Commune in power (see FRENCH CIVIL WAR). When the Commune was suppressed, the draconian Treaty of Frankfurt went into effect.

Germany annexed Alsace and Lorraine; France was saddled with a \$1 billion indemnity; Germany occupied northern France till the money was paid; and Kaiser Wilhelm I was proclaimed emperor of the new German Empire at the Hall of Mirrors in the Palace of Versailles (where the French once crowned their kings) on January 18, 1871. The treaty marked not only the creation of the empire but also the birth of the French Third Republic and signaled the coming to prominence of one of the greatest diplomats in European history.

THE WAR'S LEGACY

After 1871, Otto von Bismarck made it clear that his new empire was satisfied with its position as far as the continent of Europe was concerned. Still, he would loom over continental affairs for three decades—from 1862 to 1890—and determine the course of European history. During his 19 years as Germany's imperial chancellor, Bismarck employed a clear-eyed if sometimes ruthless diplomacy to install a network of interlocking alliances aimed at isolating Russia and keeping a defeated France weak and demoralized. By the 1878 Congress of Berlin, the “Iron Chancellor” had, in effect, moved the capital of continental Europe from Paris, or perhaps Vienna, to Berlin, where it was more comfortable for him to maintain single-handedly Europe's balance of power.

Bismarck's “system” came to work so well, in fact, that world politics seemed, for a while, to enjoy something like an equilibrium reminiscent of the recent Pax Britannica. Indeed, Europe seemed to be entering an age of political and social progress. Germany and Italy were unified countries, instead of the old patchwork of central European principalities that had been engaged in internecine warfare since the days of the Holy Roman Empire. The venerable empires of Russia, Austria-Hungary, and Ottoman Turkey still prevailed, and the budding breakup of eastern and southeastern Europe into small disputatious states had yet to threaten the general stability of these ancient regimes. The industrial age, with its demands for large-scale capital investment and economies of scale, had ren-

dered inconsequential many formerly powerful European states, such as the Netherland and Sweden, which were too small, or Spain, which was—in today's economic jargon—underdeveloped. Unless their own interests were directly involved, these lesser powers had little or no say in the affairs of the Great Powers, who were the sole arbiters of European politics.

Nothing like Europe's diplomatic system existed in the rest of the world, and it managed to keep Europe at peace, very dangerously at peace as it turned out, till the whole continent broke into flames during World War I.

Franco-Spanish War (1648–1659)

PRINCIPAL COMBATANTS: France vs. Spain

PRINCIPAL THEATER(S): Northern France

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: Control of regions in northern France

OUTCOME: Spain was defeated, resulting in the elevation of France as the dominant power in Europe and the establishment of a permanent French-Spanish border at the Pyrenees Mountains.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: The French and Spanish each fielded 20,000+ troops in any given engagement.

CASUALTIES: It is believed that the war cost a total of 200,000 lives.

TREATIES: Peace of the Pyrenees, November 7, 1659

The Treaty of Westphalia ended the THIRTY YEARS' WAR in 1648—except in the case of France and Spain, which prolonged the conflict until 1659.

The first phase of the Franco-Spanish War, from 1648 to 1653, overlapped with the Wars of the FRONDE, then continued as an independent conflict until 1659. The principal commanders were the two greatest military figures of the Thirty Years' War, Henri Turenne (1611–75) for

France and Louis II de Bourbon, prince de Condé (1621–86)—the “Great Condé”—for Spain.

Although fighting was general during the early phase of the war (for this, see the Wars of the Fronde), the first great campaign of the conflict did not come until 1654, when Turenne relieved the Spanish siege of Arras by defeating Condé in battle on August 24. The Spanish lost 3,000 killed or wounded. Two years later, on July 16, 1656, at Valenciennes, held under French siege, Condé avenged himself on Turenne by routing the French siege army, killing or wounding 4,400 French troops.

The culminating battle of the war, however, was a victory for Turenne. The Battle of the Dunes, fought on June 14, 1658, took place at Dunkirk, northern France. Turenne, in command of an army of 21,000 (including 3,000 English Parliamentary troops sent by Oliver Cromwell [1599–1658]) laid siege to the 3,000-man garrison of the Dunkirk fortress. Condé mustered a force of 16,000 (which included 2,000 British Royalists opposed to Cromwell) to relieve the siege. In four hours of battle, however, Turenne inflicted 4,000 casualties at a cost of 400 killed and wounded. Dunkirk surrendered 10 days later, and the Peace of the Pyrenees was concluded on November 7, 1659.

Franco-Spanish War (1823)

PRINCIPAL COMBATANTS: France vs. Spanish rebels

PRINCIPAL THEATER(S): Spain

DECLARATION: Action authorized by the Congress of Verona, October 1822

MAJOR ISSUES AND OBJECTIVES: The restoration of King Ferdinand VII, who had been overthrown by Spanish revolutionaries

OUTCOME: The rebels were defeated and Ferdinand restored.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: France, 100,000; Spain, unknown

CASUALTIES: France, 3,000 killed or wounded; Spain, 3,500 killed or wounded

TREATIES: None

During the 1820s, Spain was torn by revolutionary and civil strife in the SPANISH CIVIL WAR (1820–1823). The Congress of Verona, created in the post-Napoleonic period to stabilize European affairs, watched with increasing alarm. Finally, in October 1822, after Spain's King Ferdinand VII (1784–1833) was captured by revolutionaries, the Congress authorized France to intervene in order to restore Ferdinand to his throne.

On April 17, 1823, when Louis Antoine de Bourbon, duc d'Angoulême (1775–1844), crossed the Pyrenees into Spain, his army of 100,000 was greeted warmly by the Basques and Catalonians. He sent one force to besiege San Sebastian, while, with the main part of his army, he attacked Madrid, which was the seat of the revolutionaries. Under fire, the rebel government fled to Seville while the military fell back on Cadiz and the commander in Madrid secretly surrendered to the duke, who gave him safe conduct to France. Without their leader, the garrison at Madrid was powerless to halt the advancing French, who took the city and set up a Spanish regent, who would rule until Ferdinand's return.

With this conquest behind them, the French forces marched south to lay siege against the revolutionary forces commanded by Colonel Rafael del Riego y Nuñez (1785–1823), who was holed up with the remaining rebel forces at Cadiz. The French defeated Riego at the Battle of Trocadero on August 31, 1823, taking the twin forts there, and Cadiz fell on September 23, 1823. Liberated, King Ferdinand was restored to the throne. At the behest of the French, he pledged amnesty for the revolutionaries, but no sooner was he restored than he ordered a round of summary executions.

Frankish-Alemannic War (496)

PRINCIPAL COMBATANTS: Ripuarian and Salian Franks vs. Alemanni

PRINCIPAL THEATER(S): Vicinity of Cologne, on the Rhine River

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Franks wanted to expel the Alemanni from the kingdom of Cologne.

OUTCOME: Frankish King Clovis was successful in expelling the Alemanni.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: None

The Germanic Alemanni tribe invaded the Riparian Franks' kingdom of Cologne on the Rhine in 496. The Riparians secured aid from the Salian Franks led by King Clovis (c. 466–511). As the Alemanni advanced across the Rhine toward Lorraine, Clovis met them at Tolbiacum (Zülpich, near Cologne), where the Alemanni at first seized the initiative. Clovis personally rallied his troops, however, leading a gallant charge that routed the invaders and ensured that the Alemanni would never cross the Rhine again. Legend has it that Clovis prayed to his wife's god, promising to convert to Roman Catholicism if God granted him victory. Whether the legend is true or not, Clovis did convert in 496.

Frankish-Avarian War (791–796)

PRINCIPAL COMBATANTS: Franks vs. Avars

PRINCIPAL THEATER(S): Central Danube River valley

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Franks under Charlemagne and Pepin wanted to expel the Avars from the central Danube region.

OUTCOME: After much fruitless pursuit and evasion, the Avars were defeated; they submitted to Charlemagne's rule.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: None

The Avars had built an empire between the Adriatic and the Baltic Seas and between the Elbe and Dnieper Rivers from the sixth through eighth centuries, but by the end of this period internal discord had weakened them. When the Mongolian branch of the Avar people invaded the central Danube River valley and supported themselves by raiding nearby settlements, Charlemagne (742–814) and his son Pepin (d. 810) led an assault on them. Repeatedly, the Avars managed to avoid a showdown battle by eluding Frankish pursuit. Exhausted, Charlemagne finally decided that it was prudent to return home to develop the defenses of his eastern borderlands. It fell to Pepin to engage and

defeat the Avars. In 796 he led an army across the Hungarian Plain, surprising the tribe and driving it across the Tisza (or Theiss) River. The attack had come so swiftly and with such deliberate force that the Avars abandoned a vast treasure of loot, which the Frankish commander Eric of Friuli (fl. eighth century) discovered and shipped back to Charlemagne.

Having suffered military rout, dispossession, and impoverishment, the Mongolian Avars began to submit to Charlemagne's authority at the end of the war in 796. By 805, the last of the Avars had sworn fealty to Charlemagne.

Frankish-Burgundian War *See* BURGUNDIAN-FRANKISH WAR (500).

Frankish-Byzantine War (803–810)

PRINCIPAL COMBATANTS: Franks vs. Byzantine Empire

PRINCIPAL THEATER(S): Venetia and Dalmatia, on the Adriatic coast

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: Charlemagne, king of the Franks, wanted possession of Venetia and Dalmatia.

OUTCOME: Charlemagne decided to forgo conquest of Venetia and Dalmatia in return for Byzantine recognition of him as emperor of the West.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: Unrecorded agreement between Nicephorus I and Charlemagne, 810

Charlemagne (742–814), the great king of the Franks, led a war scholars characterize as a “desultory” series of campaigns against the Byzantines for possession of Venetia and Dalmatia, territories on the Adriatic coast. Charlemagne intermittently fought on land and on sea. At last, in 809 Byzantine emperor Nicephorus I (d. 811) was faced with a threat from the Bulgars (in the BULGARIAN-BYZANTINE WAR [808–817]) and could no longer afford to wage even a desultory war to defend against the assaults of Charlemagne. In 810, therefore, Nicephorus sought terms, and Charlemagne negotiated Byzantine recognition of him as emperor of the West. In return, Charlemagne restored most of what he had conquered, except for Istria, a peninsula on the Adriatic.

Knopf, 2001).

Frankish Civil War, First (670–679)

PRINCIPAL COMBATANTS: Frankish kingdom of Neustria vs. Frankish kingdoms of Austrasia and Burgundy

PRINCIPAL THEATER(S): Neustria (France, north of the Loire River)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Neustria wanted to consolidate and dominate the three Frankish kingdoms.

OUTCOME: Neustria briefly dominated the Frankish kingdoms during a period of chronic internecine warfare, which ended with the assassination of the Neustrian leader Ebroin.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Two tribes, the Salians and the Ripuarians, dominated the Franks, whose lands were divided into three kingdoms: Neustria (western Gaul—modern France, north of the Loire), Austrasia (eastern Gaul, the region north of the Loire and west of the Rhine), and Burgundy. Neustria and Austrasia were largely Salian, and Burgundy had been conquered by the Ripuarians. Each kingdom had its own king as well as a “mayor of the palace,” effectively prime minister. Toward the end of the fifth century, the Austrasians set up a hereditary kingship under the Merovingian dynasty, named after its founder Merovee (fl. 448–458). In contrast, kings of the other two kingdoms were subject to election.

In 670, a Neustrian, Ebroin (d. 681), sought to unite the kingdoms under a single mayorship. He was opposed by Leodegar (Leger) (d. 679), a Burgundian, who took him prisoner. Ebroin managed to escape, however, and, in turn, captured Leodegar. He then ordered the assassination of Leodegar, and he proclaimed himself mayor of both Neustria and Burgundy. This touched off sporadic civil war, which had no set battles but was, rather, a series of low-level combats. The bloodshed petered out by 679, but hostilities prevailed until the assassination of Ebroin in 681.

Frankish Civil War, Second (687)

PRINCIPAL COMBATANTS: The three Frankish kingdoms, Austrasia, Neustria, and Burgundy

PRINCIPAL THEATER(S): Neustria

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: Dominance and union of the three Frankish kingdoms

OUTCOME: The Frankish kingdoms were united under Pepin II of Neustria, laying the foundation of the Carolingian dynasty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

An interval of peace followed the First FRANKISH CIVIL WAR. In the Frankish kingdom of Austrasia, Pepin II of Heristal (d. 714) acted as mayor of the palace (the equivalent of prime minister) from 680 to 714. With considerable diplomatic aplomb, he managed to fend off the renewed ambitions of Neustria for dominance over his kingdom and Burgundy, the third of the Frankish realms. However, in 714, a new king, an infant of the Merovingian dynasty, was enthroned for Austrasia. Seeing an opportunity to dominate Austrasia, the mayor of Neustria’s palace and its king rallied the nobility of Neustria as well as Burgundy to make war on Austrasia.

The war’s single important battle, at Tetry (in the Somme region of northern France) in 687, resulted in Austrasian control of Thierry. It was by no means a titanic military engagement, but it had consequences far greater than its relatively limited scope and intensity. As a result of the battle, Pepin II effectively unified the three Frankish kingdoms and founded the Carolingian line, elevating himself from the status of mayor to king. Thus, the battle was an important step in the rise of France.

Further reading: Patrick J. Geary, *Before France and Germany: The Creation and Transformation of the Merovingian World* (New York: Oxford University Press, 1988).

Frankish Civil War, Third (714–719)

PRINCIPAL COMBATANTS: Charles Martel vs. the grandsons (and successors) of Pepin II of Heristal

PRINCIPAL THEATER(S): Austrasia

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: Succession to the Frankish throne and dominance of the three Frankish kingdoms

OUTCOME: Charles Martel effectively united the Frankish kingdoms under himself, adding Aquitaine to the Frankish holdings.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown
TREATIES: None

Under Pepin II (d. 714), as a result of the Second FRANKISH CIVIL WAR, the three Frankish kingdoms were united. Following his death, the realm was again divided among three grandsons (his sons having died before him), with his widow serving as regent for all three. To eliminate any claims on her authority, she ordered Pepin II's illegitimate son, Charles Martel (688–741), imprisoned; however, he escaped to become mayor of the Austrasian palace (in effect, prime minister of the Frankish kingdom of Austrasia).

Charles Martel held Austrasia against Neustria. He defeated Neustrian forces at the Battle of Amblève (near Liège, Belgium) in 716, then scored an even more decisive victory at the Battle of Vincy (near Cambrai) in 717. This put him in position to install a compliant puppet as king of Neustria.

The impressive rise of Martel awed the Burgundians, who chose not to oppose him, but, rather, voluntarily submitted to his suzerainty. Aquitaine—which, unlike Burgundy, was never one of the Frankish kingdoms—also bowed to Martel in 719 rather than face a fight. Aquitaine sought protection from Muslim raids (see FRANKISH-MOORISH WAR, FIRST).

Although the dynasty is named for him, Charles Martel was not the first Carolingian (that was Pepin of Landen). Indeed, he was the last Carolingian to serve only as mayor. His son Pepin the Short (c. 714–768) became the first Carolingian king (he also functioned as mayor).

Frankish Invasion of Italy *See* GOTHIC (ITALIAN) WAR.

Frankish-Moorish War, First (718–732)

PRINCIPAL COMBATANTS: Franks vs. Moors
PRINCIPAL THEATER(S): Southern and west-central France
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: The Moors invaded France; France acted to repel them.
OUTCOME: Despite deep Moorish incursions, Frankish forces under Charles Martel pushed the invaders out of France.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: Unknown
TREATIES: None

In 718 the Moors of Spain invaded Aquitaine, capturing Narbonne in 719. Eudo (Eudes, fl. eighth century), ruler of Aquitaine, ceased his opposition to Charles Martel (688–741) and accepted his suzerainty to secure assistance in repelling the Moors (see FRANKISH CIVIL WAR, THIRD). Thus Eudo acquired a substantial Frankish army and engaged the invaders at the Battle of Toulouse in 721. Here Eudo defeated the Moors and killed Samah (d. 721), the Muslim governor of Spain. Leaderless, the invading force became fragmented, and Eudo pushed the Moors back across the Pyrenees. The Moors returned, however, in 725–726, to invade Septimania (southern France). This was quickly followed by a major Moorish offensive under Abd-al-Rahman (d. 788) against Eudo. Eudo suffered defeat at the Battle of Garonne, which was followed by the burning of Bordeaux. The Moors penetrated into west-central France, laying waste to large tracts of Aquitaine. Raiding reached up the Rhône Valley as far as Besançon and the Vosges.

Eudo once again appealed to Charles Martel for aid. Martel invaded northeastern Aquitaine in 731 and routed the Moors, pushing them, once again, back into Spain. This action concluded the First Frankish-Moorish War by the following year and earned Charles his sobriquet “Martel”—Charles Martel, or Charles “the Hammer.”

Further reading: Paul Fouracre, *The Age of Charles Martel* (New York: Addison-Wesley, 2000).

Frankish-Moorish War, Second (734–759)

PRINCIPAL COMBATANTS: Franks vs. Moors
PRINCIPAL THEATER(S): Southern France
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: The Franks needed to repel frequent Moorish incursions and raids.
OUTCOME: Raiding continued until Charles Martel succeeded in driving the Moors out of Septimania.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: Unknown
TREATIES: None

After suffering defeat at the hands of Charles Martel (688–741) in the First FRANKISH-MOORISH WAR, the Moors refrained from major invasions, but persisted in making hit-and-run raids into southern France, which Frankish forces under Eudo (Eudes, fl. eighth century) repelled. The death of Eudo in 735, however, prompted his sons, Hatto and Hunold, to rebel against Charles Martel, who had rushed in to fill the power vacuum created by that death. Martel invaded Aquitaine and compelled Hatto and Hunold to acknowledge his suzerainty. While this power struggle played out, Moorish raiding intensified. Moors

seized Arles temporarily, then raided up the valley of the Rhône. Martel campaigned in the Rhône valley beginning in 734. It was not until 737, however, that he faced two decisive battles. Martel defeated the Moors at Valence and, two years later, at the Battle of Lyon.

Charles Martel died in 741, leaving his sons Carloman (716–54) and Pepin the Short (714–68) to serve jointly as mayor. They had principal responsibility for defending the Frankish kingdom, but, after 747, when Carloman took holy orders, Pepin was left to preside over—and defend—the kingdom alone. He seized the initiative against the Moors, driving them out of Septimania and across the Pyrenees into Spain. He then annexed Septimania to France.

Pepin the Short's campaign in Septimania proved decisive. The Moors did not invade again. By this time, too, Navarre and Asturias, firmly established as Christian kingdoms in northern Spain, blocked passage of any would-be Muslim invaders.

Frankish-Visigothic War See VISIGOTHIC-FRANKISH WAR.

Fredonian Rebellion (1826–1827)

PRINCIPAL COMBATANTS: Followers of land agent Hayden Edwards vs. Mexico

PRINCIPAL THEATER(S): East Texas

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: American immigrants into the Nacogdoches area of East Texas revolted against the Mexican government in late 1826 and early 1827 when Mexico City revoked the land grant on which they had settled.

OUTCOME: After proclaiming the region to be an independent republic named Fredonia, the insurrectionists fled back to the United States in the face of advancing Mexican troops.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rebels, 200; Mexico, unknown, but far superior

CASUALTIES: No battle deaths

TREATIES: None

Empresarios were land agents appointed by Mexico to promote settlement of Anglo-American families in the Southwest. Mexico instituted the empresario system shortly after winning its independence from Spain in 1819, and it proved popular in the province of Coahuila y Texas throughout the 1820s, especially after the Mexican gov-

ernment enacted a new Mexican Colonization Act in 1824, which legitimized what had been the informal role of the land agent and provided for his compensation. In all this, Mexico was following an ages-old Spanish policy of preempting the westward expansion of the United States into its territories by rewarding westering Americans with land in exchange for becoming loyal citizens of the territories into which they wandered.

Hayden Edwards (1771–1849), a native of Virginia, obtained his empresario license in 1825 from the Mexican government. Edwards's grant, like those of Missouri's Stephen Austin (1793–1836), another famous empresario, allowed him to settle Anglo-Americans in eastern Texas and provided him with a large tract of land. Edwards's holdings lay around the Nacogdoches area partially bordering the Neutral Ground, an area whose ownership had been disputed by the United States and Mexico since the Louisiana Purchase—and tensions over this area increased after Andrew Jackson (1767–1845) claimed Florida in the First SEMINOLE WAR. Within Edwards's grant were squatters, descendants of Spanish colonists who had settled in the region in 1779, members of various Indian tribes, as well as a motley crew—including slave runners and pirates. Edwards ordered all residents to produce proof of ownership or pay him for the value of the land they claimed. Stephen Austin, aware from his own experiences of the sensitive nature of the issue, wrote to Edwards on a number of occasions warning him to proceed with caution.

Ignoring that advice, Edwards soon found himself facing stiff opposition, mostly from long-time Mexican residents of the region. What was more, his adversaries petitioned Mexico City for protection. In May 1826, a beleaguered Edwards left his brother Benjamin (c. 1780–1837) in charge of his affairs in Texas and took off for Louisiana to recruit more settlers and, thus, more allies. The following month, when Mexican relations with the empresario deteriorated over the unresolved and increasingly angry land-title disputes, the government revoked his grant and banished Hayden Edwards from Texas.

In response, Benjamin Edwards began recruiting volunteers to his brother's cause and, in December 1826, led a band of 30 in an attack on the Old Stone Fort. They took the fort, raised a flag bearing the words "Independence, Liberty, and Justice," and declared the area to be the Republic of Fredonia. The ranks of the insurrectionary army, allied with some Cherokee Indians, swelled to 200, and occupied Nacogdoches as the rebellion's leaders produced a constitution, which was adopted on December 31, 1826. In January 1827, when a large contingent of Mexican troops approached Nacogdoches, Benjamin Edwards and his followers fled to Louisiana. Hardly six weeks old, the Fredonia Rebellion came to an abrupt and inglorious end.

The rebellion was an indication of the trouble the empresarios were bringing to Texas along with thousands of Anglo-American families. Because the empresarios were

so successful at the very task Mexico had set for them—providing favorable opportunities for immigrant settlers—they began to upset the political balance in the province. The Mexican government had been growing gradually to distrust the land agents and their settlers, and the Fredonia fracas only confirmed their fears. Thus the rebellion was an important landmark in the growing political volatility that eventually led to the TEXAN WAR OF INDEPENDENCE.

French and Indian War (1754–1763)

PRINCIPAL COMBATANTS: British and British-American colonists, and some Indian tribes vs. French and French-Canadian colonists, and numerous Indian societies including the Abenaki, Cherokee, Delaware, and the mission Indians of New France

PRINCIPAL THEATER(S): Upper Ohio Valley, New York, Nova Scotia, Canada, Carolinas

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Anglo-French colonial border disputes provoked imperial intervention and coalesced with a European and global conflict over territory and trade. Indian societies allied with New France sought to reverse and avenge British colonial encroachment on their lands.

OUTCOME: Britain conquered New France; Europe accepted British claims to all of North America east of the Mississippi River, bringing an Indian war of resistance, 1763–65; British colonists resisted and revolted, because of imperial taxation to cover some costs associated with this war.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

British: more than 25,000 British-American volunteers and militia, 34,000 British regulars, and fewer than 1,000 Amerindian allies. French: 8,000 Canadian militia, 5,600 French regulars, fewer than 3,000 *troupes de la marine*, and more than 4,000 Amerindian allies

CASUALTIES: British imperial and colonial, 5,758; French imperial and colonial, 2,025; Amerindian, 317

TREATIES: Treaty of Paris (February 10, 1763)

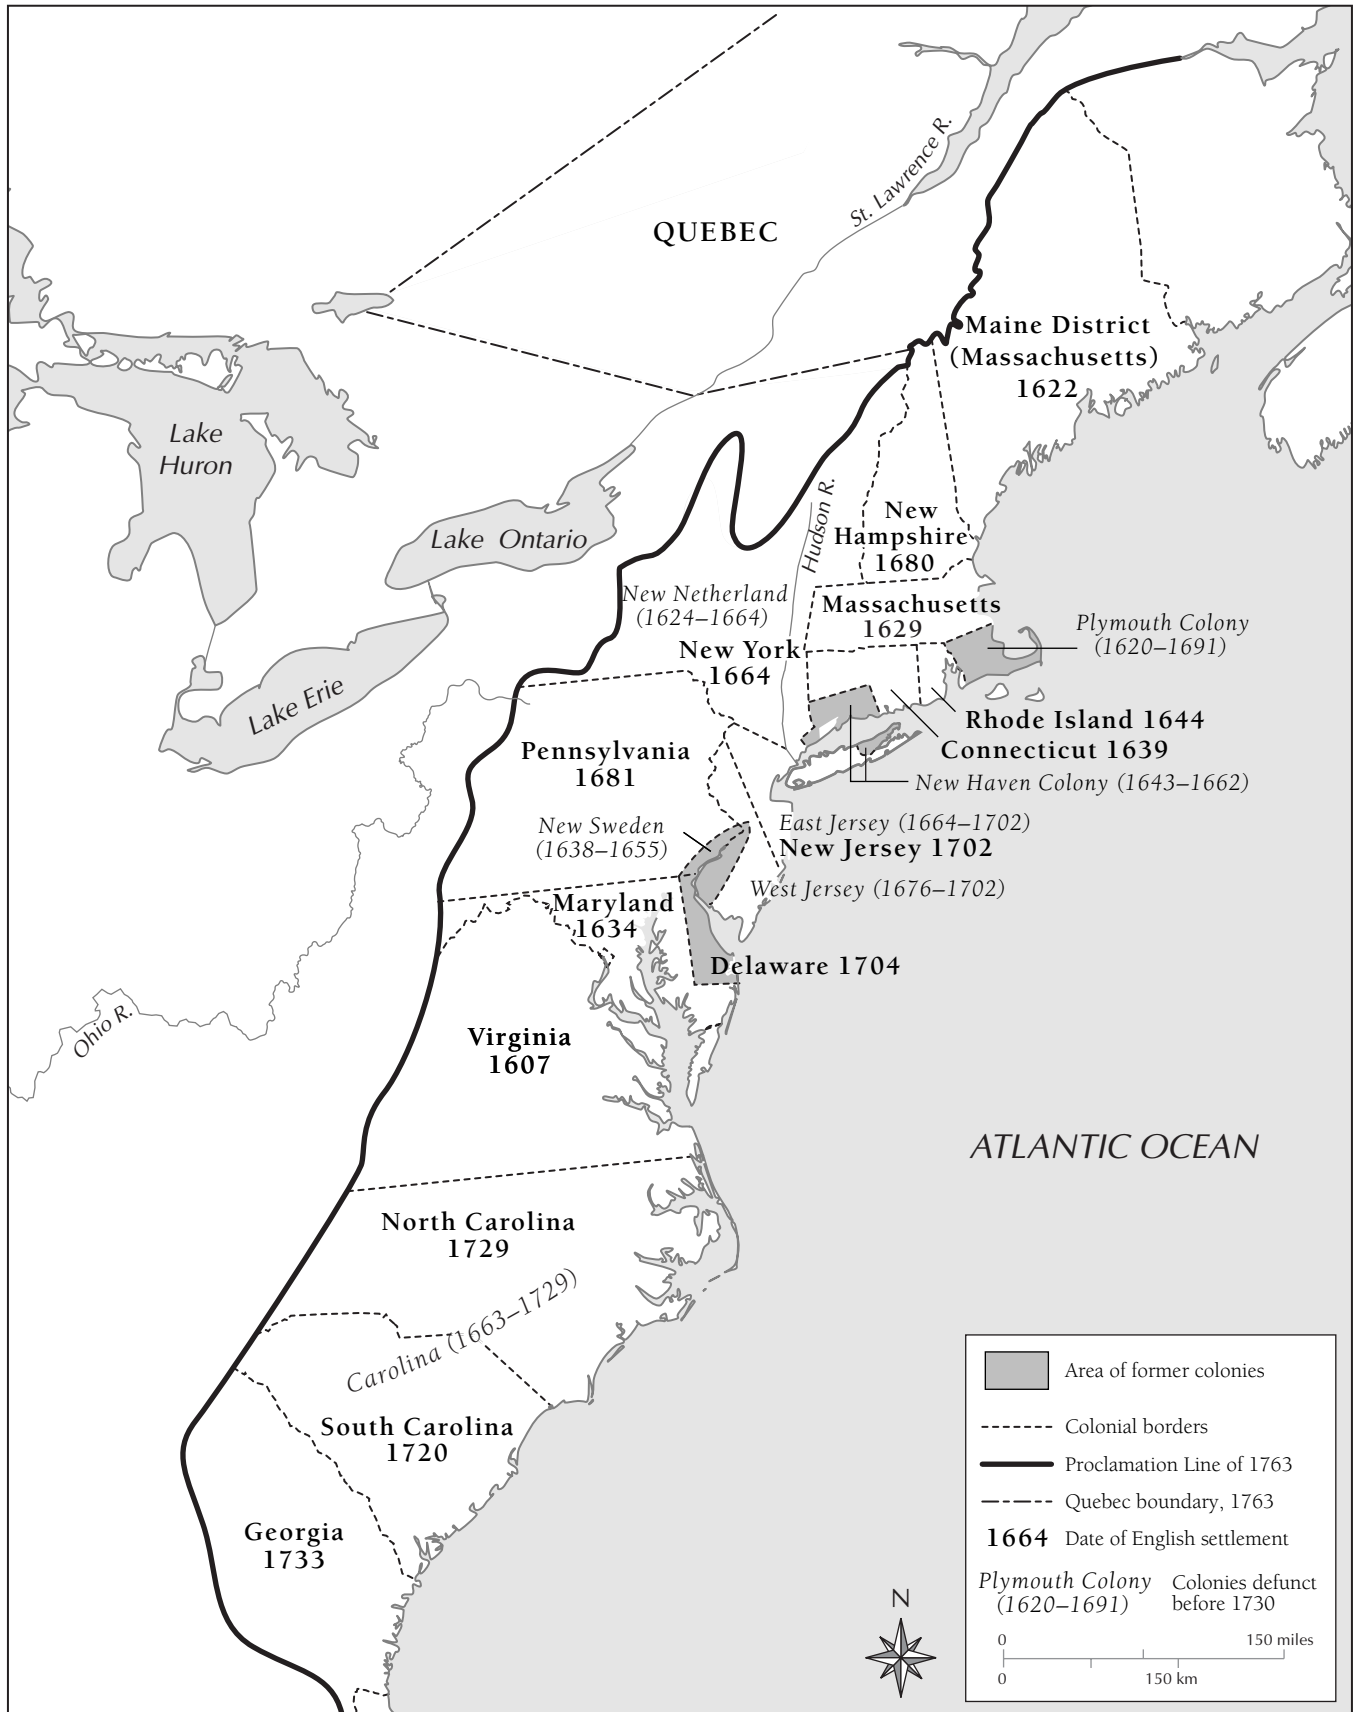

As the climactic resolution to an Anglo-French struggle for dominance in North America, the French and Indian War was rooted in a century and a half of intercolonial rivalry that extended from the fur outposts of Hudson Bay to the plantations of Louisiana and the West Indies. This war was also part of two other, even longer struggles that would not be resolved in 1763. One was between

Amerindian societies and the European colonists who invaded their hunting and farm lands. With widespread Amerindian adoption of the flintlock musket in hunting and warfare, sustained Amerindian resistance came to require a reliable European supplier of guns and gunpowder. New France, less populated and more dependent upon the fur trade than the British colonies, was widely preferred as an ally. Strengthening this weaker European contender helped continue a struggle that Amerindians had every reason to prolong. The other epic struggle in which this war was a major episode was the Anglo-French contest in Europe and overseas. Unprecedented British and French imperial commitment of ships, troops, and money drew the North American conflict into a European (SEVEN YEARS' WAR) and global clash as never before. The "French and Indian War" was a British colonial term still used to describe the North American theater of that conflict. The war that began at the forks of the Ohio River came to include battles and sieges as far apart as Prague, Quebec, Havana, and Manila, followed by elaborate peace negotiations in Paris.

OHIO ORIGINS

The upper Ohio Valley had been marginal in the half-century of intense Anglo-French commercial rivalry before 1740. Denuded of valuable furs and far from major Canadian routes to the Mississippi Valley, this intertribal hunting ground had become home to Shawnee, Delaware, and Mingo migrants from farther east. During the War of the AUSTRIAN SUCCESSION (called "KING GEORGE'S WAR" by British colonists), Pennsylvania traders began exploiting the wartime shortage of French trade goods in this area, and supporting an anti-French "Indian Conspiracy of 1747." That same year, Virginia land speculators organized the Ohio Company of Virginia, the first of several competing companies eager to appropriate land.

New France responded with an armed diplomatic tour of the upper Ohio Valley in 1749 under Pierre-Joseph Céleron de Blainville (1693–1759), who expelled British traders and left lead plates proclaiming French sovereignty. However, he met open hostility in councils held with Seneca, Delaware, Mingo, Shawnee, and Miami leaders. Miami chief Memeskia of Pickawillany, a new and well-positioned Miami trading town that was pro-English, was particularly outspoken. Blainville lacked the troops to disrupt Pickawillany, but in June of 1752 some 240 Ottawa and Ojibwa looted the storehouses, captured three British traders, and killed and ate chief Memeskia. Amerindians noticed that the distraught Miami received no help from their Six Nations or Pennsylvanian allies. The next year Canadian governor Michel-Ange Duquesne de Menneville (1702–78) sent 1,500 men to construct three forts between Lake Erie and the forks of the Ohio River. Veteran Canadian explorer, interpreter, and soldier Jacques le Gardeur de Saint-Pierre (1701–55) commanded new Fort

British colonies at the time of the French and Indian War, 1754-1763

Le Boeuf that fall and politely refused a request by the Ohio Company to leave. The message was delivered by George Washington (1732–99), a young Virginia militia officer, surveyor, planter, and Ohio Company stockholder.

The Ohio contest became bloody early in the summer of 1754. Having secured formal British permission to use force to oust the French, Lieutenant Governor Robert Dinwiddie (1693–1770) of Virginia raised a new 159-man Virginia Regiment of the destitute and the drafted whom Washington led toward the forks of the Ohio River. On May 28 they ambushed a Canadian reconnaissance party, capturing 21 and killing 10, including ensign Joseph Coulon de Villiers de Jumonville. This peacetime “assassination of Jumonville” eventually became a European diplomatic incident; more immediately it prompted retaliation by some 500 French, Canadians, and mission Amerindians led by Jumonville’s brother.

Aside from the ambush, Washington’s tactics were conventional. He took his recruits back to a small improvised stockade, aptly named Fort Necessity, which they attempted to strengthen with trenches and firepits. This venturesome defense was abandoned as soon as war whoops were heard from the woods. Defense from within the palisade also proved hopeless, and Washington surrendered on July 3, 1754, on honorable terms. There was, and is, dispute over whether Washington understood the clause in the French surrender terms by which he acknowledged assassinating Jumonville. Aside from two hostages who were supposed to ensure the return of prisoners taken in the Jumonville incident, the Virginians were released. The “conquest” of a pathetic little “fort” was seen by the British as an act of war.

The Virginians, who had long been geographically insulated from intercolonial war, had instigated a conflict they could not sustain alone. South Carolinians resented Virginian attempts to recruit Creek and Catawba warriors; Pennsylvanians were opposed to the Virginian initiative that immediately put their own traders and frontier settlers at risk and alienated the Delaware friends of the Quaker-led colony. That summer, seven British colonies north of Virginia had legates at the Albany Conference, called to organize intercolonial defense and to placate disgruntled Six Nations allies, though it is best remembered for theoretical discussions of colonial unity that masked a failure to agree on defense quotas.

It was the British government that responded in support of Virginia, backing its most valued and populous North American colony. The duke of Newcastle was central to a British ministry that did not want war and believed, rightly, that the French felt the same. With the arrival of news of the fall of Fort Necessity and the French building of Fort Duquesne, British commitment escalated. What had been a promise of £13,000 and the use of three companies of regulars already in America grew into a more ambitious proposal, supported by William Augustus, duke of Cumberland (1721–63), favorite son of King

George II (1683–1760) and captain-general of the British army. By the end of 1754, two understrength Irish regiments had been sent to America commanded by Major General Edward Braddock (1695–1755) of Cumberland’s own elite regiment, the Coldstream Guards.

The French government was not ready for war and, with 10 times Britain’s army but only half its navy, would have preferred to fight in Europe. Nonetheless, France sent six regular regiments to reinforce Louisbourg and Canada in 1755. Despite the peace, a 19-vessel British naval squadron was instructed to intercept this troop convoy off Newfoundland; they captured only two unsuspecting French ships containing 10 companies of regulars.

BRADDOCK’S CAMPAIGN, 1755

The British government intended to use Braddock’s regulars and colonial support to counter four French “encroachments” on British-claimed territory along the disputed borderlands in North America. Braddock was to proceed against Fort Duquesne, then take Forts Niagara, St. Frédéric, and Beauséjour, with the possibility of a negotiated settlement between sieges. This ambitious and rather disparate strategy, designed for an undeclared war, would be imprinted upon subsequent British planning. Meeting with colonial governors in Alexandria, Virginia, in April 1755, Braddock learned of military preparations in New England, under Massachusetts governor William Shirley, that were impressive enough to warrant a change of plans; simultaneous attacks were to be made on all four targets. Four armies, each of different composition but each assigned to take one fort, set off on what could have been an experiment in methods of fighting and funding war in North America.

Braddock personally commanded the Fort Duquesne expedition in the face of major transport shortages, minimal Amerindian support, and mountainous terrain that should have prevented movement of his heavy artillery. However, his army moved efficiently over the 150 miles from Alexandria to Little Meadows. Braddock then led an advance force of 1,450 that marched without incident for three weeks, reaching the Monongahela River on July 8. The vanguards apparently lulled into overlooking routine precautions, failed to detect an approaching force of 783 French, Canadians, and Indians. The equally surprised company of *troupes de la marine*, recruited in France and officered by Canadians, blocked the 12-foot-wide forest roadway with effective conventional musketry. Braddock’s column either did not receive, or did not hear, the order to halt: infantry, artillery, and baggage train telescoped into each other in confusion. Amerindians and Canadians immediately used Amerindian tactics of “moving fire” along both flanks of the disrupted column. The British lost 977 wounded and killed, including Braddock, whereas their opponents sustained only 39 casualties. There is dispute over Braddock’s personal responsibility, but he came

Battle of the Wilderness (Braddock's assault on Fort Duquesne), July 9, 1755

to bear the opprobrium accompanying a stunning defeat, one that encouraged Amerindians to join the French.

William Shirley, the lawyer and politician who had prepared thoroughly for a New England campaign in Acadia and against Fort St. Frédéric, took personal charge of an attack on Fort Niagara instead. This campaign, launched from Albany by a governor of Massachusetts, met predictable political interference from New York's lieutenant governor James De Lancey (1703–60), whose connections were bypassed in awarding supply contracts. Because a second army, bound for Fort St. Frédéric, was also in Albany competing for supplies, cannon, wagons, whaleboats, workmen, and Six-Nation support, there were severe delays even before Shirley faced the tasks of navigating the Oswego River and building a fleet on Lake Ontario. The revived Shirley and Pepperrell regiments of British regulars recruited 2,500 colonists, joined by 500

New Jersey volunteers and 100 Iroquois, who all set out on this venture that stalled at Fort Oswego. Shirley, who became commander in chief after Braddock's death, was easily discredited by his political opponents.

The attack on Fort St. Frédéric was even more colonial, consisting of 3,500 volunteers who were paid, supplied, and ultimately controlled by colonial assemblies. William Johnson (1715–74), Irish pioneer, adopted Mohawk chief, and former fur trader, was in charge of a force supplemented by 300 members of the Six Nations. Although the force's composition might suggest irregular warfare, the conventional assignment was to cut a road and haul 16 heavy cannon to besiege a stone fort. By early September they were still 50 miles from their objective, but had built Fort Edward on the upper Hudson and had cut a 16-mile road to Lac St. Sacrament, which they prematurely renamed Lake George.

A force of 700 French regulars, 300 *troupes de la marine*, 1,300 Canadian militia, and 700 Amerindians had been sent in mid-August to stop Johnson. Newly arrived Jean-Armand, Baron de Dieskau (1701–67), who had fought with irregulars in Europe even before becoming a protégé of Maréchal de Saxe (1696–1750), led them boldly. With an advance force of Amerindians and selected regulars and militia, Dieskau intended to surprise still-unfinished Fort Edward, isolating Johnson's army from its supplies and its retreat route. However, the Caughnawaga Iroquois with him flatly refused to attack Fort Edward. Adapting his strategy effectively, Dieskau led his force along Johnson's new road to attack his camp at the other end. Learning that a contingent of Johnson's army was coming down that road, Dieskau agreed to an elaborate ambush that killed 90, including 40 Mohawk, and sent the survivors racing for Johnson's camp. Dieskau wanted his troops to give chase, but the Amerindians declined to attack a camp fortified with four functional cannon behind a barricade of overturned wagons and whaleboats. Foiled again, Dieskau organized what proved an impressive, though futile, display of conventional valor. His regular grenadiers, arranged in a narrow column, attempted a bayonet charge to take the guns. They failed against massive musket fire from barricaded British-American militia and cannon fire supervised well by Johnson's only regular officer, Captain William Eyre. However, the successful defenders were severely shaken and showed little interest in pursuing the defeated French. Johnson's army had won the Battle of Lake George and captured the injured Dieskau, but were shocked by the level of casualties on both sides and refused to proceed to Fort St. Frédéric. Instead, they built Fort William Henry, a substantial fort necessary to challenge French access to a road that could now lead French invaders south more rapidly than it had allowed its English builders to go north.

The most successful part of Braddock's general plan was the capture of Forts Beauséjour and Gaspereau, con-

trolling the isthmus of Chignecto as well as land access to Nova Scotia, and supporting the discontented among the 20,000 French Acadians who had been British subjects since 1714 but had never been required to take an unqualified oath of allegiance. British colonel Robert Monckton led 2,000 New England volunteers, raised by Governor Shirley of Massachusetts, and 270 British regulars from the Halifax garrison against stone Fort Beauséjour. Their flotilla landed without opposition and received traitorous assistance from within the garrison. The fort surrendered quickly; Fort Gaspereau capitulated without a shot being fired. This most successful part of the British offensive of 1755, and the only one that avoided wilderness marches, had been financed and led by the British, and manned largely by New England volunteers. Nova Scotia's lieutenant governor Charles Lawrence (1709–60) added a cruel sequel to this easy victory. With an army at his disposal he decided to impose an unconditional oath of allegiance on the Acadians; Monckton's forces supervised the expulsion of those who refused, constituting the majority of those Acadians who had not already fled to French protection.

The British offensive of 1755 had failed. Braddock's army had been slaughtered, and Shirley and Johnson had not even reached the forts they were to besiege. The success in Nova Scotia might have suggested that colonial governors organize colonial armies to be led and paid for by the British. Instead, planners focused on explanations offered for the failures. Their response was to send more regulars, and to empower the new commander in chief, the earl of Loudoun (1705–82), with authority to override colonial political interference. They sentenced Loudoun and the British colonial war effort to two more years of wrangling and failure.

VAUDREUIL'S OFFENSIVE, 1755–1757

In 1755, governorship of New France came to Pierre-François de Rigaud, marquis de Vaudreuil (1698–1778), a Canadian born to an earlier governor, an officer in the *troupes de la marine*, and the former wartime governor of undersupplied Louisiana. Although addicted to reporting the successes of both Amerindians and French regulars as accomplishments of the Canadians, Vaudreuil understood how to mesh these three military traditions effectively. He took the initiative despite New France's manpower disadvantage compared with the British North American colonies, which was in the neighborhood of 20 to 1. Vaudreuil used two methods: he supported Amerindian raids on the western frontiers of Pennsylvania and Virginia; and he captured major British colonial strongholds by a combination of guerrilla and regular warfare.

Fort Duquesne became the center from which dozens of raids were launched against the frontier settlements of the middle colonies. The French capitalized on Amerindian support that grew from the destruction of Brad-

dock's army, as warriors seized the opportunity to use the French in their own fight against encroaching British colonial settlement. The raids ensured that Virginia and Pennsylvania were preoccupied with building frontier forts, and contributing very little to attacks on French posts to their west or north. By 1758 Virginia was maintaining 27 wooden frontier forts, which could not prevent raids and which occasionally became targets themselves. Between 1755 and 1758 an estimated 2,000 British colonial settlers were killed in these raids, and even more were taken captive and adopted into Amerindian villages in the Ohio Valley. For Vaudreuil, a small investment in Canadian manpower and supplies supported raids that hobbled and distracted a richer opponent while strengthening Canada's Amerindian alliances.

Vaudreuil combined irregular and regular warfare against his primary objective of 1756, Fort Oswego, the Lake Ontario base from which the English had threatened Fort Niagara the previous year and from which they could easily attack Fort Frontenac. Fort Oswego had begun, in 1728, as a trading post at the mouth of a river; as Anglo-French rivalry escalated, so did fortification. During the winter of 1755–56, Canadian scouting parties took prisoners and burned supply boats. In March a force of Canadians, mission Amerindians, and selected French regulars trekked 200 miles to attack and destroy Fort Bull, a supply depot at the crucial portage between the Mohawk and Oswego Rivers. The isolation of Fort Oswego was reinforced by attacks on supply boats on the Oswego River in July. The next month Fort Oswego was besieged by 1,300 French regulars, 1,500 Canadian militia, 260 Amerindians and 137 *troupes de la marine*. Louis-Joseph de Montcalm (1712–59), the newly arrived commander of the French regulars, led an attack that he hoped would last long enough to draw British regulars away from Albany, where they were a direct threat to New France. Weakened by preliminary irregular attacks, Fort Oswego surrendered within hours of the first cannonade from Montcalm's guns. French forces took 1,520 men and 120 women and children prisoner, as was customary after a feeble defense. These prisoners proved particularly burdensome as Canada suffered another crop failure, delaying military operations the next year. Despite some tensions and the killing of at least 30 wounded prisoners by Amerindians after the surrender, the taking of Fort Oswego represented effective cooperation between Amerindian and European military methods.

Vaudreuil's target for 1757 was more challenging. Fort William Henry was a substantial two-year-old, corner-bastioned earthen fort at the south end of Lake George, only one-third as far from Albany's supplies and reinforcements as Fort Oswego had been. A major raid in March 1757 by 1,500 Canadians, Amerindians, and French regulars under Vaudreuil's brother, François-Pierre de Rigaud de Vaudreuil, burned boats and outbuildings but failed to

surprise or outmaneuver the garrison of 474 British regulars and colonial rangers. Interpreted variously then and since either as a successful spoiling raid or as a failed attempt to capture the fort, the raid contributed to the defensive posture of the British on that frontier in 1757. Canadian raids along the communications lines between Albany and Fort William Henry did not seriously disrupt supplies that spring.

Montcalm again led the summer attack with an army of nearly 8,000 regulars, *troupes de la marine*, Canadian militia, and mission Amerindians supplemented by 1,800 Amerindians recruited from the Great Lakes basin. Amerindian scouts completely defeated efforts by the fort's commander, Lieutenant Colonel George Monro, to gather information about the approaching force. A frustrated Monro sent 350 men in whaleboats to scout down Lake George late on July 23, but they were surprised at dawn off Sabbath Day Point by nearly 600 Amerindians whose canoe attack allowed only about 100 to escape. This destruction of whaleboats ensured that Montcalm's army would not be challenged on Lake George. Amerindians also prevented all British communication with the fort after the siege began. A well-conducted, European-style siege and defense ended with surrender of the fort on August 9.

Cooperation between regular and irregular warfare brought Canadian success, but it also brought an attack on prisoners of war the next day. Amerindians, deprived of promised loot because of generous surrender terms, attacked the column of 2,456 paroled prisoners and their dependents, killing at least 69. Amerindian disgust at what they saw as French collusion with the enemy, as well as the smallpox they carried back to their villages, ensured the end of this French advance into New York and reduced Amerindian support for New France thereafter.

Despite its successes, Vaudreuil's aggressive defense of New France ended in 1757. Montcalm, who advocated withdrawal from the Ohio, Lake Ontario, and Lake Champlain frontiers and concentration on defense of Quebec and Montreal, was increasingly influential and openly at odds with Vaudreuil. The British and British colonists, who had been constrained by political, administrative, and strategic tangles during these three "years of defeat," were about to put New France on the defensive.

PITT'S OFFENSIVE, 1758–1760

There was little strategic imagination in the British offensive that began in 1758; the targeting of Louisbourg, Fort Carillon, Fort Frontenac, and Fort Duquesne echoed the plan to reverse French "encroachments" in the undeclared war of 1755. The major difference was that three of four efforts failed in 1755, whereas three of four succeeded in 1758.

The resources available to British commanders were much larger in 1758, which cannot be said for their opponents. The relevant change in British politics was the

appointment of William Pitt (1708–78) as secretary of state for the southern department and, effectively, as prime minister. Arrogant, eloquent, and ambitious, Pitt was disliked by cabinet colleagues and by King George II, but he worked efficiently in the revitalized ministry. Pitt represented patriotic nationalism in power, and he charmed voters, government suppliers, and creditors into a massive war effort. He was not winning a European war in America, as he claimed, or the reverse; Pitt raised and spent enough to support both wars. Pitt's "subsidy plan" offered full reimbursement of all colonial assistance beyond levy money and pay for colonial troops. Soldiers, supplies, and transport became readily available from colonial sources anxious to earn sterling, while also winning a war.

British regulars, including about 10,000 recruits from America, constituted over half of the forces used in 1758, compared to one-seventh of the much smaller number employed in 1755. Regulars were retained over the winter for garrison duty and were ready for early spring campaigning, whereas colonial regiments were recruited for eight-month terms after annual legislative decisions, and were available only after spring planting. Colonial recruits into the regulars and colonial ranger units had a good reputation, and the latter became part of the regulars. Loudoun introduced light infantry units into all regular regiments, trained troops to counter ambushes, and organized an innovative army transport service that greatly assisted wilderness campaigning.

British naval resources also expanded markedly in those three years. British naval spending doubled to an unprecedented £4 million. The fleet included 98 ships-of-the-line to confront France's 72. British fleets carried British regulars, gunpowder, and supplies to America as well as offering tactical mobility and additional manpower, especially for amphibious operations at Louisbourg and later at Quebec. The British naval blockade of French European ports was never complete, but there were no major "escapes" of substantial relief squadrons bound for America after 1757. Between early 1758 and late 1759 the French navy lost nearly half of its fighting strength, and by 1760 there were only 50 French ships-of-the-line to counter 107 British.

Louisbourg was to be the showpiece of the 1758 British offensive, an amphibious campaign uncomplicated by wilderness treks. Loudoun had brought a force of nearly 15,000 for the task the year before, but withdrew when he discovered that a fleet comparable to his own, and equally cautious, was in Louisbourg harbor. The 1758 landing was challenged by well-prepared shore entrenchments and by heavy seas, but not by a French fleet. A boatload of resourceful infantrymen were able to land in a protective "neck of rocks." This minor weakness was exploited effectively by the British to gain control of the heights above, forcing defenders to retreat to the fort. Major General Jeffrey Amherst (1717–97) conducted a

careful, thorough, but unimaginative siege that indicated the kind of leadership he would provide as commander in chief in subsequent campaigns. Thirteen thousand British regulars besieged the French, who were outnumbered three to one but led ably by Governor Augustin de Drucour (1703–62). Louisbourg surrendered after resisting for nearly two months, which was long enough to ensure that the British force could not proceed to Quebec that year.

Although Major General James Abercromby (1706–81) had become British commander in chief in North America, his major responsibility was the attack of Fort Carillon (Ticonderoga); the 1758 Louisbourg and Fort Duquesne campaigns were run from London as independent commands, and the Fort Frontenac expedition was initially canceled. Montcalm, very short of Amerindian scouts, was defending a vulnerable Fort Carillon with 3,500 men, opposing Abercromby's nearly 15,000. Located to intercept waterborne traffic and to facilitate supply, the fort would have been untenable if cannon were mounted atop nearby Mount Defiance. Like Washington at Fort Necessity, Montcalm was not prepared to trust the fort's ability to defend his men, and he had elaborate entrenchments prepared to intercept attackers. Trenches were reinforced by logs and sandbags and screened by a massive *abattis*, a tangle of freshly cut trees effective in slowing and disrupting advancing troop formations.

Abercromby's attack of July 8, 1758, was precisely the type for which Montcalm had prepared. Abercromby, who is often considered criminally responsible for the resulting disaster, was in a hurry because of false information. French and Canadian prisoners had reported that Montcalm had 6,000 troops and that 3,000 more were expected to arrive soon with the talented and popular Chevalier François-Gaston Lévis (1719–87) at their head. Abercromby's scouts atop Mount Defiance, where there were as yet no cannon, added to the urgency by reporting that Montcalm's defenses were still incomplete but should be attacked quickly. The result was a poorly coordinated frontal assault on the entrenchments that continued long after it was clear that Abercromby's scouts had been wrong. The French were never seriously threatened in a battle that killed 464 attackers. Montcalm's victory against such impressive odds was also his victory over Vaudreuil. By the following February he would outrank Vaudreuil in military decisions, and would prepare Quebec for a defense like that of Fort Carillon.

Attempting to salvage something from this disaster, Abercromby authorized an expedition against Fort Frontenac. Lieutenant Colonel John Bradstreet (1714–74) took 3,500 American colonists in British pay on a surprise attack against a weakened Canadian outpost. The garrison of 70 surrendered on August 27, before the attackers had exhausted their 24-hour supply of ammunition for their cannons. Rather than a conquest, this success was a well-timed raid into enemy territory. The prisoners were

released after promising the release of an equivalent number of prisoners held in Canada. The fort was burned, as was the French Lake Ontario fleet based there, after which the victors left.

The 1758 British campaign against Fort Duquesne was to avenge Braddock, but it also had strategic significance for Virginia and Pennsylvania, which were drawn more fully into the war. Brigadier General John Forbes (1710–59) supervised the methodical construction of a defensible 193-mile road, complete with stockades and forts no more than 40 miles apart. The route, west from Raystown (Bedford), Pennsylvania, was shorter, less susceptible to flooding, and traversed country with more forage than was available along Braddock's road. Approximately 500 Cherokee and Catawba scouts initially accompanied the expedition, but left because progress seemed slow. Five thousand colonial militia and 1,840 regulars built Forbes's road, giving Pennsylvania ready access to the Ohio country. On September 14 an advance party of 800 regulars and Virginia militia attempted to raid near Fort Duquesne, but were discovered and driven off after heavy losses. Fort Duquesne's commander presumed that the English had been turned back, and reduced his forces to a winter footing. On November 24, when Forbes's army advanced to within a day's march of Fort Duquesne, it was evacuated and detonated. The English occupied the site of Fort Pitt (Pittsburgh) the next day.

A major diplomatic meeting at Easton, Pennsylvania, the previous month had been a promising omen for this campaign. Some 500 Amerindian leaders from 15 tribes met officials from Pennsylvania, New Jersey, and Forbes's army. In return for assurances that certain fraudulent land sales would be canceled and that English presence in the Ohio Valley would be temporary, the Amerindians agreed to withdraw support from the French. Six days before Forbes reaches his objective, the British flag replaced the French one flying over the major Amerindian town of Kuskuski.

The campaigns of 1758 demonstrate that fortune favors the biggest armies and navies. France was unable to reinforce a New France that had mobilized all adult males without mustering more than 16,000 militia, regulars, and *troupes de la marine*. Their opponents had increased their troops in the field to more than 44,000 in 1758. The shrinking of New France was obvious from the burned forts and lost Amerindian allies in the west. British conquest of Louisbourg was strategically more ominous as a base from which all Canadian maritime traffic could be challenged and an army launched against Quebec. As a pessimistic Montcalm predicted, New France would fall in one or two campaigns unless peace was made in Europe.

British imperial and colonial forces had, by 1759, fulfilled most of the initial military objectives developed four years earlier; now they were to mount a direct attack on the heart of New France reminiscent of the failed attempts of

1690 and 1711, and the plans of 1746. A seaborne attack on Quebec was to be coordinated with another army's advance up the Lake Champlain route to Montreal, thereby dividing the outnumbered defenders. The plan was pursued in 1759, but delayed by French resistance, by Amherst's caution, and by changing Amerindian strategies.

The attack on Fort Niagara illustrated all of these factors. Fort Niagara was very peripheral to the conquest of New France, especially if invaders used the traditional two-pronged approach. However, the Six Nations wisely reconsidered the formal neutrality most of them had observed throughout the conflict, and declared an interest in joining the recently successful British. New France had built Fort Niagara on Seneca territory, and the Seneca now led the Iroquois confederacy's opposition to that fort. If Amherst authorized something comparable to Forbes's elimination of Fort Duquesne, he would have Six Nations support. Early in May 1759 Amherst approved a siege of this increasingly isolated and vulnerable fort, an initiative that fitted with Amherst's thorough, dogged approach and offered the prospect of a third unencumbered route into New France, a route via the upper St. Lawrence River.

The Niagara campaign revealed Amerindian diplomatic dexterity. The French garrison at Fort Niagara, consisting of about 500 under the able leadership of engineer Captain Pierre Pouchot (1712–69), was surprised on July 7 by a besieging force of 2,000 British regulars and nearly 1,000 Iroquois. This surprise indicated that Six Nations informants had entirely abandoned New France. Six Nations legates were allowed to talk to the 30 Amerindians inside the fort, after which the Six Nations forces seemingly withdrew from the siege to establish a camp at nearby La Belle Famille. There they waited to intercept the reinforcements Pouchot expected from the Ohio. Some 600 French and Canadians arrived, together with nearly 1,000 Ohio Amerindians whom the Six Nations convinced to stay out of this white man's conflict. On July 24 the 600 French and Canadian reinforcements, including numerous legendary irregulars, were ambushed on their way to the fort by an equal number of British regulars and New York provincial soldiers screened behind a log barricade and *abattis*. Nearly 350 were killed or captured either in the ambush or in its aftermath, when Six Nations warriors joined in the pursuit of scalps and prisoners. Pouchot, learning what had happened to his only hope for relief from a throttling conventional siege, surrendered two days later. By the terms of surrender, the defeated became prisoners of war, except for the 30 Amerindians, who were freed. The Amerindians had suffered few losses in the process of withdrawing from the losing side, or in moving from neutrality to support of the British.

It was Amerindians turning hostile to the British who began distracting British forces in the Carolinas in 1759. Some 10,000 Cherokee hunters and farmers lived in 40 villages in the valleys of the southern Appalachians.

Although generally allied with the British, they were increasingly angered by South Carolina and Virginia frontiersmen encroaching on their lands. There were fatal skirmishes with Virginia militia in the summer of 1758, and subsequent murderous raids of revenge by both sides. In August of 1759 Governor William Lyttleton (1724–1808) of South Carolina halted arms and ammunition sales to the Cherokees. Attempts to force the Cherokee to surrender "murderers" escalated into a full-scale expedition by 1,500 men in the last three months of 1759. The expedition forced a group of Cherokee leaders to agree that the Carolinians could hold 22 Cherokee hostages in Fort Prince George until an equal number of unnamed Cherokee "murderers" were delivered. Although celebrated in Charleston, the expedition had done nothing but provoke the Cherokee and infect the garrison of this isolated fort with smallpox. An elaborate Cherokee ruse killed the garrison commander, leading to retaliatory killing of all the Cherokee hostages. Continuing raids on South Carolina frontiers prompted Lyttleton to seek help from Virginia and from General Amherst. Amherst sent 1,300 regulars from New York to Charleston in the spring of 1760. They burned five evacuated Cherokee towns and fought an inconclusive battle near Etchoe (near modern Otto, North Carolina) before claiming success and hurrying back to the war in the north. The unbowed Cherokee responded with the successful siege of Fort Loudoun, 200 hilly miles inside Cherokee territory. Major James Grant (1720–1806) led 1,400 regulars and an equal number of provincial volunteers, rangers, and Amerindian guides in the 1761 expedition that burned 20 Cherokee towns, destroying crops and orchards as well. Harassed but still undefeated, the Cherokee negotiated a favorable peace that was ratified by the end of the year. Other Amerindians learned from the Cherokee war against British regulars, even though none had answered the Cherokee appeals for help. They were reacting cautiously in light of developments on another front, the British success in Canada.

The 1759 Battle of the Plains of Abraham is widely regarded as the decisive battle of the French and Indian War, though it was anticipated by the major British successes of 1758 and challenged by an effective French campaign early in 1760. A British fleet of 141 warships and transports delivered nearly 9,000 troops, under the command of General James Wolfe (1727–59), to Quebec by early June 1759. There they confronted 16,000 French regulars, Canadian militia, and Amerindian irregulars whom Montcalm had deployed to strengthen defenses. Montcalm's position was strong, because those attacking fortified positions expected to succeed only if they outnumbered defenders by at least three to one. Wolfe's first two months were spent in futile efforts to gain a military foothold anywhere near the fortress on the north shore of the St. Lawrence River. He also failed to lure defenders out of their entrenched positions, though 40 cannon pounded

the city mercilessly from the south shore, and farms were also being systematically destroyed. The invaders had accomplished very little by early September, except that British ships were escaping damage while passing the city, forcing Montcalm to deploy sizable forces to shadow them up the river.

An increasingly frustrated Wolfe accepted a risky plan suggested by his brigadiers. A night landing at Anse de Foulon, on the north shore above the city, was followed by scaling 150-foot cliffs, deceiving and overpowering French pickets, and assembling 4,400 men and two field cannon on the Plains of Abraham by daylight on September 13. Montcalm, assuming that the attackers were not yet established on the heights, acted with uncharacteristic haste. Without waiting for field cannon or for reinforcements that could have doubled his force, Montcalm led 4,500 regulars and militia who attacked in three columns. Six battalions of British regulars used disciplined musket volleys to halt the charge, then advanced with bayonets and broadswords. When the half-hour battle was over, the British controlled the field, though the French still held the city. Each side had casualties of 15 percent (658 English and 644 French), with Wolfe among the dead and Montcalm among the dying. Before succumbing four days later, Montcalm surrendered the city to the British.

Whatever is claimed for the Battle of the Plains of Abraham, the Franco-Canadian army had not surrendered or been separated from its local supply bases. A battle to regain Quebec, the Battle of Sainte-Foy on April 28, 1760, demonstrated the continuing strength of New France. Lévis was now commanding an army of nearly 7,000, half of them French regulars; Brigadier General James Murray (1725–94) led the British winter garrison at Quebec, consisting of fewer than 3,900 men. Murray, like Montcalm the previous year, ventured his forces out of their defenses. The battle was bloodier than its predecessor (1,104 English and 833 French casualties) and the victorious French captured the abandoned British field guns. However, Murray retreated back into the walled city and withstood a siege that suffered from a severe shortage of gunpowder. The British Royal Navy, having won decisive engagements over the French off Portugal's Lagos Bay in August 1759 and off Brittany's Quiberon Bay that November, not only prevented a modest French supply squadron from reaching Quebec but also arrived in strength in the second week of May 1760, forcing Lévis to abandon the siege.

Most Canadians and Amerindians considered the war as lost thereafter, but 2,000 French regulars and nearly 1,000 Canadian militia assembled to defend Montreal despite increasing shortage of provisions and supplies. Amherst's cautious, thorough, and logistically impressive *coup de grace* was delivered at Montreal in September. Three well-supplied British armies, totaling 17,000 men, arrived within 48 hours of each other: Murray's army

sailed unopposed up from Quebec; Lieutenant Colonel William Haviland (fl. 18th century) brought another down the now-defenseless Richelieu River; and Amherst led his army down the St. Lawrence, overrunning the last opposition. An infuriated Lévis still wanted to fight for more honorable terms but, on September 8, 1760, Vaudreuil wisely agreed to surrender the town and the colony. Although the century-long Anglo-French intercolonial struggle had featured various combinations of Amerindian and European military methods, it was concluded by a decisive contest dominated by the latest European military personnel, methods, and values.

Britain became much more interested in making peace in the two eventful years between the surrender at Montreal and its confirmation in the Peace of Paris. British king George II, who had been resistant to any peace that did not fulfill his ambitions for his native German principality of Hanover, died in 1760, making peace possible. William Pitt, who had insisted upon British retention of its rapidly increasing colonial conquests, did not gain the ear of 22-year-old George III (1738–1820), who joined his advisers and a war-weary English public in wanting peace and an end to the astronomical military spending. Meanwhile, British armies and navies continued to impound French imperial possessions in the West Indies, West Africa, and India.

Spain belatedly joined the French, only to provide additional targets, including Manila, captured in 1762. Some North American troops were involved in Britain's major success of 1762, the capture of Havana. Approximately 2,000 Americans volunteered to join an equal number of regulars from the North American command in a contingent that arrived to witness the storming of El Moro. They participated in the last few days of skirmishing and in two months of unhealthy garrison duty after the surrender.

France lost the war but won the peace. Recognizing that the French could not be forced to surrender Louisbourg, Pitt had it detonated. George III's negotiators were so anxious for peace that the continuing British victories were discounted. France retained fishing rights off Newfoundland, and the nearby islands of Saint-Pierre and Miquelon. There was debate, which has continued, about Britain's keeping Canada rather than the French West Indian sugar island of Guadeloupe. British West Indian sugar planters, not wishing for more competition in their monopoly of British markets, joined British North Americans in urging that the less profitable colony of Canada be kept. This was accomplished, together with a presumed British sovereignty over all Amerindian lands east of the Mississippi River, because French negotiators made concessions that protected France's major imperial commercial interests. Spain, too, did well at the peace; Britain returned Manila and exchanged Havana for the much less valuable colonies of East and West Florida. Having

humiliated France in war, Britain alienated its European allies in making a generous separate peace that did not limit France's interest in, or capacity for, revenge.

Amerindians were quicker than the colonials to react violently to the consequences of the Peace of Paris. Although Amerindian resistance to British colonial encroachment had been persistent, and a new Amerindian spiritual nativism had grown out of the Delaware dispersal of the 1730s, the rapid spread of intertribal Amerindian resistance after 1760 was attributable to the outcome of the French and Indian War. The negotiated boundaries between Amerindian and European settlement, restated in the Proclamation Line of 1763, were completely overrun by British colonial settlers and deerskin hunters after 1760. Renewed British colonial trade into the Ohio Valley focused on liquor, despite ineffective British bans that succeeded only in irritating traders and customers. British army administrators, assuming their recent victories made Amerindians into subjects rather than allies, suspended the entire system of annual presents. This false economy reduced Amerindian access to gunpowder and supplies while European hunters and settlers were reducing the deer populations that might have funded Amerindian trading. Suspending the presents that allowed chiefs most loyal to Britain to distribute supplies, and thereby enhance their own and British prestige, was a political and diplomatic blunder. The final Peace of Paris, in which France presumed to give Britain Amerindian lands that Britain presumed to take, was the trigger for two years of intense warfare erroneously called PONTIAC'S REBELLION of 1763–65.

Colonial British Americans initially received the Peace of Paris with rejoicing, as they had the accession of George III and news of British victories. Statues of the king and of William Pitt were erected by public subscription in Boston, New York, and other centers; names of new counties and towns on colonial frontiers celebrated British administrators and soldiers. The victory had been prayed for by a wide variety of Christian congregations in King George III's Protestant empire. Despite tensions between imperial and colonial politicians and soldiers, the war had integrated eastern North America into the British Empire as never before.

Expectations of both the British and the Americans proved too high, as did the costs of the war. British ministries expected grateful Americans to shoulder the costs of the 7,500 troops left to ensure French and Amerindian acceptance of the peace, particularly in the light of the mother country's unprecedented £157 million war debt and generous reimbursement for colonial war costs. Americans expected peace to bring lower taxes and more prosperity, not new imperial taxes and a postwar slump followed by a British credit squeeze. Although the elimination of the French and Spanish made British ministries confident that they could impose more on the colonists, the same situation made Americans willing to tolerate less.

French-Canadian Rebellion See PAPINEAU'S REBELLION.

French Civil War (1871)

PRINCIPAL COMBATANTS: French Communards vs. the Third French Republic

PRINCIPAL THEATER(S): Paris and other major French cities

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Communards rebelled against a French government humiliated by defeat in the Franco-Prussian War.

OUTCOME: The Communard rebellion was largely crushed during “Bloody Week,” May 21–28, 1871.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Communards, about 50,000; government forces, 130,000

CASUALTIES: Communards, 25,000 killed, 41,000 imprisoned; government, 879 killed, 6,775 wounded

TREATIES: None

This civil conflict was the direct result of France’s defeat in the FRANCO-PRUSSIAN WAR. The Battle of Sedan ended in a crushing French defeat and cut short the reign of Napoleon III (1808–73). In Paris, the Third French Republic was established, and Parisians resisted a Prussian siege until starvation forced their capitulation on January 28, 1871. The National Assembly, having evacuated to Bordeaux, negotiated the humiliating Treaty of Sedan with Prussia. Those legislators who had evacuated were primarily monarchist holdovers. The true republicans had remained in Paris, and it was these leaders who now repudiated the peace terms and proclaimed the Commune of Paris, a republic independent from the Third French Republic.

The Commune was proclaimed on March 18, 1871, and soon boasted a military strength exceeding 212,000, but in reality mustered no more than about 50,000. Against this army, which took to the streets of Paris in opposition to the new government led by Adolphe Thiers (1797–1877), were some 130,000 government troops under the command of the very able Marshal Patrice Mac-Mahon (1808–93).

The Communard army operated from behind barricades built mainly of the cobblestones of the Parisian streets. After desultory exchanges, Mac-Mahon decided to make a decisive move on May 21. With 70,000 troops, he stormed the barricades in a seven-day battle christened Bloody Week. The assault culminated in the capture of Communard headquarters at the Hôtel de Ville and the summary execution of thousands of Communards. In all, about 25,000 Parisians died, either in battle or by on-the-spot execution. Another 3,000 subsequently died in prison, and 270 were sentenced in court to execution. Some 7,500 revolutionaries were exiled.

The Paris Commune had been suppressed with unbridled brutality and decisiveness. Its destruction ensured the survival of the Third Republic and ended the Communards’ dream of a workers’ state.

French Conquest of Chad (1897–1914)

PRINCIPAL COMBATANTS: France (with Senegalese auxiliaries) vs. Rabah Zobeir and other Chadian nationalists

PRINCIPAL THEATER(S): Chad, Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Colonial conquest of Chad

OUTCOME: Chad became part of French Equatorial Africa.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

France (and Senegalese auxiliaries), fewer than 1,000; Chadian nationalists, 2,500+

CASUALTIES: France (and Senegalese auxiliaries), 74 killed, 181 wounded; Chadian nationalists, 200+ killed

TREATIES: Documents formalizing incorporation of Chad into the federation of French Equatorial Africa, 1910

France was one of the major powers participating in the European partition of Africa during the later years of the 19th century. After suppressing resistance in the Congo and Algeria, French colonial forces converged on Chad, which was ruled at the end of the 19th century by Rabah Zobeir (d. 1900).

During the 1890s, Zobeir led a force of Dazingers, black slave soldiers, in the conquest of the Bagarmi, a large region southeast of Lake Chad. French colonial forces clashed with the Dazingers periodically from 1897. Finally, in 1899, French columns converged on the area Zobeir controlled, advancing from the north, west, and south. In November, the southern column attacked a fort at Kouno, but was repulsed. The northern column, however, attacked Zobeir’s main fort at Kousseri on April 22, 1900, and captured it. Zobeir was taken prisoner and summarily beheaded; 200 of his Dazingers were killed in battle or executed.

Zobeir’s son, Fader Allah (fl. early 20th century), led 2,500 Dazingers in a defense of Gujba, but was overwhelmed by the French on August 23, 1901. This put the French in nominal control of Chad, and they supported the traditional Kanembu dynasty as a puppet government under a French protectorate. In 1910, Chad formally became part of the federation of French Equatorial Africa. Colonial troops continually battled resistance, but by 1914, when WORLD WAR I drew French military resources elsewhere, the entire area of present-day Chad had been “pacified” and was under relentlessly repressive French rule.

French Conquest of Mauritania (1908–1909)

PRINCIPAL COMBATANTS: France (with Sheikh Sidiya Bab of Traarza) vs. the Moors under Sheikh Ma Al-Ainine

PRINCIPAL THEATER(S): Mauritania, Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Colonial subjugation of Mauritania

OUTCOME: By skillfully exploiting divisions within Mauritania, the French prevailed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Agreement with Sheikh Sidiya Bab, c. 1908

Early in the European partition of Africa, the French won a mandate in 1814 to exploit coastal Mauritania. They adopted a divide-and-conquer approach to the local people, the Moors, who were inclined to dispute and disunity. French colonialists rapidly mastered the complex politics of the region and set about playing one faction against another. They focused on the two central religious leaders, Sheikh Sidiya Bab (fl. early 20th century) of Traarza and Sheikh Ma Al-Ainine (d. 1910). The French obtained the support of Sidiya Bab. Sheikh Ma Al-Ainine led the opposition against France, obtaining arms from Morocco as well as from France's rivals, Spain and Germany. Like the French, Ma Al-Ainine understood the inherent weakness and disunity of Mauritania, and he did his best to exploit it to muster a following. However, the French acted preemptively and aggressively, crushing Ma Al-Ainine's resistance during 1908–09. By 1909, French rule was securely established, with Sheikh Sidiya Bab operating as a puppet. The death of Ma Al-Ainine in 1910 brought an end to any major resistance to French rule, although sporadic outbreaks of violent opposition continued through 1934.

French Conquest of North Africa (1830–1847)

PRINCIPAL COMBATANTS: France vs. (principally) Abd el-Kader, emir of Mascara

PRINCIPAL THEATER(S): Algiers and Morocco

DECLARATION: 1829, France on Algiers

MAJOR ISSUES AND OBJECTIVES: Colonial conquest

OUTCOME: After a prolonged war, France conquered Algiers and thereby came to dominate North Africa.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

France, 220,000; Abd el-Kader, 60,000

CASUALTIES: France, 10,000 killed, 35,000 wounded; Abd el-Kader forces, unknown

TREATIES: Treaty of Tafna, June 1, 1837; Treaty of Tangier, September 10, 1844

During the early 19th century, French forces clashed with Algerian pirates. When Husein (r. 1818–30), the dey of Algiers, slapped the French consul in the face on April 30, 1827, the French initiated a naval blockade, which endured to August 3, 1829. On that day, war was triggered when a French ship, under a flag of truce, was fired upon. The French mounted an invasion during June and July of 1830, sending an army of 37,000 under Marshal Louis A. V. de Bourmont (1773–1846). The army overwhelmed defenses at Algiers on July 5, 1830, and ousted the dey. From here, Bourmont dispatched forces to take and occupy the principal ports as well as the major inland towns.

With the dey neutralized, Abd el-Kader (1808–1883), the emir of Mascara, emerged as the new military leader of what he deemed the Islamic opposition to a Christian invasion. From 1832 to 1837, el-Kader fought the French to a standstill through a consummately skillful campaign of guerrilla warfare and hit-and-run raids. One French general after another was sent to eradicate el-Kader and his forces, and each failed. At last, exhausted, France concluded the Treaty of Tafna on June 1, 1837, obtaining control of a handful of ports.

Although the Tafna treaty had generally restored peace, the French continued to conduct limited military operations. In October 1837, French troops under Marshal C. M. D. Damremont (d. 1837) stormed the walled city of Constantine, which had resisted siege for a year. Although Damremont was killed in the assault, his troops took the city. In response, Abd el-Kader deemed the treaty broken and, in December, mounted a campaign with a regular force of about 8,000 infantry and 2,000 cavalry, plus auxiliary cavalry (*gouma*) numbering about 50,000. Despite these numbers, fighting was indecisive through December 1840, when Marshal Thomas R. Bugeaud (1784–1849) arrived to build a regular French army of 59,000, which was later reinforced to a strength of almost a quarter million men, many of them native troops. Bugeaud's great strength was in his ability to organize indigenous forces into an effective and highly spirited army. It was Bugeaud who truly established the enduring French military presence in North Africa, which would last well into the 20th century.

The first major battle between the reinforced French armies and the forces of Abd el-Kader came on May 10, 1843, at Smala, when Duc Henri d'Aumale, leading a "flying column" of only 2,000 men surprised 40,000 men under el-Kader and drove them from the field. This initiated a series of French triumphs during 1843–44, which

drove the forces of el-Kader into Morocco. Here, the Moors were naturally sympathetic to his cause, but the judicious application of French naval bombardment of Tangier and Mogadir, combined with Bugeaud's assault by 6,000 infantry and 1,500 cavalry, discouraged the Moors. The French pursued el-Kader into Morocco.

On August 15, 1844, Bugeaud staged a brilliant attack on el-Kader's 45,000-man camp on the Isly River. The result was a back-and-forth struggle, but, ultimately, el-Kader's forces caved in. The Battle of Isly turned out to be the decisive encounter of the war. The Treaty of Tangier followed on September 10, 1844, by which the French agreed to withdraw from Morocco, but Abd el-Kader's power in Algiers was broken. Sporadic fighting continued until December 23, 1847, when el-Kader surrendered. With this, France was in complete control of Algiers and, from here, dominated all of North Africa.

French Indochina War (1858–1863)

PRINCIPAL COMBATANTS: France (with a Spanish alliance) vs. forces of Vietnamese king Tu Duc

PRINCIPAL THEATER(S): Vietnam (Indochina and Cochin China)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ostensibly, France invaded Vietnam to protect French missionaries and other nationals there, but the expedition quickly came to involve the acquisition of large amounts of territory.

OUTCOME: France acquired a large colonial stake in Indochina.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: France, 8,000; Vietnam, 32,000

CASUALTIES: Unknown, but in the hundreds for both sides; disease claimed many hundreds of French lives.

TREATIES: Tu Duc ratified a comprehensive treaty, April 1863

Under Napoleon III (1808–73), France began a campaign to expand its territorial holdings into Southeast Asia. On August 31, 1858, 2,500 French troops, augmented by Filipino reinforcements supplied by Spain, invaded Vietnam at Tourane (Da Nang). The force laid siege against the

citadel there, capturing it on September 12. However, Viet forces counterattacked and laid siege to the French garrison installed in the citadel. The siege lasted a year, by which time some 900 Frenchmen had died in battle or had succumbed to disease. In March 1860 the garrison was withdrawn.

In the meantime, on February 16, 1859, Admiral Rigault de Genouilly (1807–73) landed a contingent of French regulars and colonial troops (Algerian and Senegalese) to attack Saigon (Ho Chi Minh City). The invaders took the city, but were in turn blockaded by Viets. On April 23, 1859, a 700-man relief force was sent against the poorly armed Viets, who numbered perhaps 10,000. The Viets scattered—having incurred about 500 casualties—and the Saigon garrison was relieved, at least temporarily. Soon a new Vietnamese blockade was put in place, and 27 French warships and 3,500 infantry troops were sent to reinforce the garrison. Then on February 24, 1861, 8,000 French troops attacked some 32,000 Viets at Chi Hoa to permanently break the blockade.

The Battle of Chi Hoa did break the Viet blockade of Saigon, and it moved Emperor Tu Duc (1829–83) to sue for peace and agree to terms of French control in June 1862. He signed a formal treaty in 1863. Nevertheless, guerrilla action continued through about 1880.

French Indochina War (1873–1874)

PRINCIPAL COMBATANTS: French vs. Black Flag Pirates (northern Vietnamese and Chinese)

PRINCIPAL THEATER(S): Tonkin (northern Vietnam)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: France sought to expand its trade and colonial interests into northern Vietnam.

OUTCOME: France temporarily withdrew from the north, but consolidated its control in the south (Cochin China).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: No formal treaties

Within four years of the FRENCH INDOCHINA WAR (1858–1863), Vietnamese emperor Tu Duc (1829–83) ceded all

of Cochin China (southern Vietnam) to the French. Once firmly established at the reins of government, French authorities sent the explorer François Garnier (1839–73) to the northern capital, Hanoi, to settle a dispute involving local northern Vietnamese officials and a French trader, who was accused of smuggling and who was held prisoner in the Hanoi fortress. Garnier heard the case against the trader, then demanded his release. The Vietnamese officials refused, whereupon Garnier led an attack against the Hanoi fortress. It fell to him after a brief battle, and he used it as a base, from which he launched expeditions to take other cities in northern Vietnam.

The Vietnamese and Chinese formed the “Black Flag Pirates,” a well-trained and ruthless force that engaged Garnier and his men in battle toward the end of 1873. Garnier was killed, and his force defeated, leaving the pirates free to raid French shipping in the region. Worse, raiding parties destroyed French Christian towns throughout Tonkin (northern Vietnam), forcing the French to withdraw from the north. Eager to retain a foothold in Vietnam, France consolidated its hold on Cochin China and extorted from Tu Duc a promise not to persecute Christians and to recognize French suzerainty. Tu Duc also granted French traders free passage on the Red River, which became for them a principal trade route.

French Indochina War (1882–1885)

PRINCIPAL COMBATANTS: France vs. Vietnam (and China)

PRINCIPAL THEATER(S): Vietnam

DECLARATION: China on France, August 27, 1884

MAJOR ISSUES AND OBJECTIVES: France sought expansion in Vietnam, to include the northern and central regions, in addition to southern Vietnam, which France already controlled.

OUTCOME: France acquired a protectorate over northern and central Vietnam.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

France, 17,000; Vietnam and China, 30,000

CASUALTIES: France, 4,222 killed or wounded; Vietnam and China, 10,000+ killed or wounded

TREATIES: Treaty among France, China, and Vietnam, August 25, 1883; Treaty of Tientsin, June 9, 1885

France, which had invaded Vietnam in 1858–63 (see FRENCH INDOCHINA WAR [1858–63]) and 1873–74 (see FRENCH INDOCHINA WAR of [1873–74]), ostensibly to protect French missionaries (but also to acquire colonial territory), intervened a third time in 1881–82. Once again, the ostensible motive was to protect missionaries, but the war also resulted in further colonial expansion.

In 1881, China proclaimed its sovereignty over Annam (much of modern Vietnam). Chinese troops occupied the northern region, Tonkin, even as France dispatched troops to check persecution of missionaries and to acquire more territory in Indochina—encompassing Vietnam, Laos, and Cambodia. China objected to this.

A small French force of 480 men under Captain Henri Laurent Rivière landed at Tonkin on April 28, 1882, and captured the fortress at Hanoi, the coast of Nam Dinh, and the Hon Gay coal mine. Rivière advanced into the Red River delta region, where on May 19, 1883, he and 450 men were ambushed by the Black Flag Pirates. Rivière was killed, along with 49 of his men. Paris responded by ordering 3,000 reinforcements to Indochina, and on August 18 seven French naval vessels bombarded the citadel at Hue, which prompted the Vietnamese to sue for peace on August 25.

If the Vietnamese had been beaten into temporary submission, China remained deeply concerned that French colonialism was now on its southern border. During December 14–16, 1883, French river gunboats and 5,500 troops took preemptive action against combined Black Flag and Chinese forces—about 9,500 men—at Son Tay. The fortress fell to the French, and China opened negotiations with France, even as sporadic combat continued. Early in the summer of 1884, peace talks collapsed, and, on June 23, an 800-man French force was defeated by a vastly superior force of 8,000 Chinese near the border at Bac Le. On August 27, China declared war on France, and the French fleet responded with an attack on Foochow Harbor on the southern coast of China. Eleven Chinese warships were sunk in a one-sided battle. This was followed by a ground invasion, which resulted in the capture of Chinese forts in the Pescadores and on Taiwan.

While France waged a successful war on Chinese territory, French troops were hard pressed by Vietnamese and Chinese troops in Vietnam. From December 1884 to March 1885, Tuyen Quang in the Red River delta was besieged by Black Flag and Chinese forces, but held out until it was relieved. French troops also succeeded in taking Lang Son, near the Chinese border, albeit with heavy losses (200 killed or wounded) on February 13, 1885.

At Bang Bo, near Lang Son, on March 24, a massive force of 30,000 Chinese and Vietnamese attacked, prompting the evacuation of 3,700 French troops and many more French civilians throughout the area. This was a shocking setback and the worst defeat France would suffer in Southeast Asia until the FRENCH INDOCHINA WAR (1946–

1954). The defeat prompted France to conclude the Treaty of Tientsin on June 9, 1885, restoring the status quo ante-bellum—albeit Vietnamese and Chinese battle losses were far greater than those suffered by France: about 10,000 killed or wounded versus 4,222 Frenchmen. If disease is factored in, French losses about equaled those suffered by the Asians.

French Indochina War (1946–1954)

PRINCIPAL COMBATANTS: France (with some U.S. aid) vs. Viet Minh (communist forces of northern Vietnam)

PRINCIPAL THEATER(S): Vietnam

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ho Chi Minh, leader of the communist north, sought to end French colonial domination of Vietnam and to unite the country under communism.

OUTCOME: The French withdrew from Vietnam, which was divided into two independent republics, the communist Democratic Republic of Vietnam in the north, and the democratic Republic of Vietnam in the south.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the culminating battle of Dien Bien Phu—France, 15,709; Viet Minh, more than 100,000

CASUALTIES: At Dien Bien Phu: French, 1,726 dead; 1,694 missing; 1,161 deserted; 5,234 wounded; on May 8, 1954, the Viet Minh counted 11,721 prisoners, among whom were 4,436 wounded. (In addition to ground troops lost, many French aircraft and crews were also lost. Two U.S. civilian contract pilots were killed and one seriously wounded.) At Dien Bien Phu: Viet Minh, 8,000–12,000 dead; 15,000–20,000 wounded

TREATIES: Geneva Agreements, July 15, 1954

During the 19th century, France had established colonial hegemony in Laos, Cambodia, and Vietnam (see FRENCH INDOCHINA WAR [1858–1863], FRENCH INDOCHINA WAR [1873–1874], and FRENCH INDOCHINA WAR [1882–1885]). When France surrendered to Germany in 1940, setting up the Vichy government—which soon became a Nazi puppet—Germany's Pacific ally, Japan, permitted French colonial officials nominal authority in Indochina while assuming de facto control of these areas itself (see

WORLD WAR II). In 1945, with the liberation of France and the end of the Vichy government, the Japanese seized full control in French Indochina, eliminating the French police agencies and other armed authorities that had long kept in check indigenous nationalist groups seeking independence. In Vietnam, the largest and most powerful of these groups was the Viet Minh, which, under the leadership of Soviet-trained Ho Chi Minh (1840–1969), launched a guerrilla war against the Japanese forces of occupation and (with the aid of U.S. Office of Strategic Services [OSS] military teams) soon took control of the nation's northern regions.

After the conflict in Europe had ended, Allied forces turned their attention to Vietnam (and the rest of Southeast Asia), a theater they had largely neglected during most of the war. Nationalist Chinese troops moved into the Tonkin provinces of northern Vietnam, and the British, anxious to restore France to world power status as a means of countering the Soviet Union's rapidly expanding sphere of influence, secured southern Vietnam for the reentry of the French. Once French colonial authorities had returned, they set about ruthlessly suppressing all agitation for independence in that region. With the south secured, the French opened talks with Ho Chi Minh, firmly established as political leader of the north, but negotiations rapidly broke down, and a state of low-level guerrilla conflict developed.

The conflict escalated into genuine warfare during 1946, when Nationalist Chinese forces, which had occupied the north after World War II, were replaced by the French military. Nationalist China's Chiang Kai-shek (Jiang Jieshi; 1887–1975) had little affection for French imperialism, but he feared a Communist takeover in Vietnam and preferred French control of the region to that eventuality.

In November 1946, fire was exchanged between a French patrol boat and Vietnamese militia in Haiphong harbor. The French retaliated by bombarding Haiphong, killing some 6,000 civilians and prompting Ho Chi Minh permanently to break off talks with the French, retreat with his government into the hill country of Tonkin, and launch an all-out guerrilla war against the French.

At this point in history, many in the United States strongly sympathized with Ho Chi Minh's nationalism. Like President Franklin D. Roosevelt (1882–1945) before him, Harry S. Truman (1884–1972) was an anti-imperialist, but he also believed that, unfortunately, an independent Vietnam would most likely become a communist Vietnam. Nevertheless, Truman urged the French to reach a political solution in Vietnam and barred direct export of U.S. war materiel to French forces there—though he vacillated to the important extent of refusing to bar arms shipments to France itself, which, of course, could reship the materiel to its troops in Vietnam.

The fall of China to communism in 1949, together with the intensification of the COLD WAR in Europe by the

end of the decade, including the forcible induction of much of Eastern Europe into the Soviet camp, compelled the United States to accept French authority in Vietnam, even if doing so went against the American grain.

In 1949, France recognized a Vietnamese provisional government under Emperor Bao Dai (1913–97), for all practical purposes its puppet. The government of Bao Dai was recognized by the United States on February 7, 1950. In less than two weeks after this recognition, the French requested U.S. economic and military aid, threatening to abandon the nation to Ho Chi Minh if the aid were not forthcoming. Fearing losing both Vietnam to communism and French support of the newly formed North Atlantic Treaty Organization (NATO) in Europe, Congress immediately appropriated \$75 million. Shortly afterward, on June 25, 1950, Communist forces from North Korea invaded South Korea. In addition to prosecuting the KOREAN WAR, President Truman now stepped up aid to the French in Vietnam, sending eight C-47 transports directly to Saigon. On August 3, 1950, the first contingent of U.S. military advisers—the U.S. Military Assistance Advisory Group (MAAG)—arrived in Saigon.

By 1951, the Viet Minh united with Communist groups in Laos and Cambodia and became increasingly aggressive in its attacks against the French. This led to the increasing involvement of the United States, which, by 1952, was financing one-third of the French military effort in Vietnam. Ho Chi Minh's forces were not triumphing against those of the French; indeed, during 1950 through the end of 1953, the French enjoyed moderate overall success against the insurgents. But Ho understood that he did not need victories, merely sufficient perseverance to deny the French absolute victory. He waged a guerrilla war of attrition, steadily wearing down the French resolve. As the French lost heart, preserving Vietnam from communism became increasingly an American agenda.

In April 1953, the Viet Minh, under General Vo Nguyen Giap (b. 1912), staged a major offensive in western Tonkin, advancing into Laos and menacing Thailand. The French requested the loan of U.S. C-119 transports to airlift heavy equipment into Laos. President Dwight D. Eisenhower (1890–1969), wary of committing U.S. Air Force crews to a combat mission, ordered military crews to fly the aircraft to Nha Trang, where nonmilitary contract pilots took them over for the flight to Cat Bi Airfield near Haiphong.

At this time, General Henri Eugène Navarre (1895–1968), France's new commander of operations in Vietnam, presented a plan to defeat the Viet Minh by luring them into open battle and so reducing their numbers that they could only maintain a low level of guerrilla warfare, which could then be contained by indigenous Vietnamese troops. Additional cargo planes were loaned to the French, and in the fall of 1953, Navarre began operations on the strategically located plain of Dien Bien Phu in

northwest Tonkin, near Laos. French paratroopers fortified an airstrip there beginning on November 20, and on December 5 the U.S. Far East Air Forces flew more C-119 transports to Cat Bi, from which civilian contract pilots or French personnel flew them into the combat area. At this point, American military officials and the Eisenhower administration were becoming increasingly anxious that the Viet Minh now menaced Hanoi and Haiphong, from which Navarre had withdrawn forces to bolster Dien Bien Phu. At the same time, Giap was also massing Viet Minh forces around Dien Bien Phu. With the object of bolstering General Navarre's offensive operations, President Eisenhower authorized increased military aid—short of committing American personnel to combat—and U.S. B-26 bombers and reconnaissance aircraft were dispatched on loan to the French.

Because French air units were seriously undermanned, the fateful decision was made on January 31, 1954, to dispatch some 300 U.S. airmen to service aircraft at Tourane and at the Do Son Airfield near Haiphong. This, the first substantial commitment of U.S. airmen—indeed, of U.S. military personnel—to the VIETNAM WAR, was highly classified. President Eisenhower explained to the American public that he was committing to the aid of the French some airplane mechanics—who would not get touched by combat.

Despite American logistical support, it became daily more apparent that the French situation at Dien Bien Phu was hopeless. General Giap steadily forced the French to contract their defensive perimeter. Although President Eisenhower contemplated direct U.S. military intervention, mainly air support, he decided not to act without British approval as well as a demonstration of France's willingness to train and employ indigenous troops and ultimately to grant Vietnam its independence. In the meantime, on April 7, 1954, President Eisenhower presented to the American press a rationale for fighting communism in Vietnam: "You have a row of dominoes set up," he explained, "you knock over the first one, and what will happen to the last one is the certainty it will go over very quickly." The so-called domino theory would become a cornerstone of U.S. policy in the Vietnam War. For the present, however, American military advisers were not optimistic about the efficacy of committing U.S. combat forces in the region. The Americans believed that French colonialism had permanently alienated the indigenous people, who now lacked the will to resist a communist invasion from the north. Americans also feared that starting a war in Vietnam would mean beginning a war with Red China.

Beginning on March 13, 1954, the situation changed dramatically. General Giap launched a massive siege on Dien Bien Phu. On May 7, after 56 days of combat, the French stronghold fell to the forces of Ho Chi Minh. Dien Bien Phu was rapidly followed by additional Viet Minh

victories, which led the French to agree, in a Geneva peace conference in July, to divide Vietnam along the 17th parallel—the Democratic Republic of Vietnam, a communist government, in the north; the Republic of Vietnam, a democratic government, in the south. France withdrew from the nation entirely, and the stage was set for the much more destructive Vietnam War to come.

French Revolution (1789–1799)

PRINCIPAL COMBATANTS: France's ancien régime (later backed by most of Europe and Great Britain vs. revolutionaries among the nobility, bourgeoisie, and proletariat; the French Revolutionary Army (ultimately led by Napoleon Bonaparte).

PRINCIPAL THEATER(S): France; Egypt

DECLARATION: No formal declaration; however, the Declaration of the Rights of Man and the Citizen (August 26, 1789) may be considered the formal opening of the Revolution.

MAJOR ISSUES AND OBJECTIVES: Enfeebled by years of foreign war and nearly bankrupted by its participation in the American Revolution, France's ancien régime fell prey to a rising tide of unrest led principally by revolutionaries among the bourgeoisie. The Revolution, which quickly turned bloody at the hands of more radical factions and was forced by internal dissent to export its radicalism, created fear and loathing among the ruling houses in the rest of Europe, which united to crush it.

OUTCOME: Buoyed by a new kind of ideologically driven army of volunteers and recruits from the masses, Revolutionary France proved a destabilizing force in the Western world. Its foreign wars also created turmoil in an already volatile polity at home, which led to ever more repressive forms of government and to the rise of Napoleon Bonaparte, who set out to conquer the world.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

France: Hundreds of thousands of citizens and national guardsmen fought in the streets against Royalist forces; by August 1793 the Republic had conscripted an army of 650,000 (some estimates put the number at 1 million). Anti-French allies initially fielded 80,000 (42,000 Prussians, 30,000 Austrians, and the rest Hessians and Royalist émigrés); as the coalition grew, so did the numbers, into a few hundred thousand. All numbers increased during the French Revolutionary Wars.

CASUALTIES: France, 100,000 battle deaths; other nations, chiefly Austria, 100,000+ battle deaths

TREATIES: Most important was the Treaty of Campo Formio, October 17, 1797

END OF THE OLD REGIME

A decade before the close of the 18th century France was the most powerful nation on the continent of Europe, perhaps (Great Britain excepted) the world. It was certainly the most populous Occidental country. But France's political system was weaker than was apparent before French revolutionaries began openly to excoriate the ancien régime in front of revolution-minded assemblies and mobs. An absolute monarchy stitched together in the previous century by the crafty and capable Cardinal Richelieu (1585–1642) that had come to center around Louis XIV (1638–1715) at his new palace in Versailles, the kingdom was only as strong as the man at the top, a fact that became clear when the Sun King's successors—the lazy Louis XV (1710–74) and the dithering Louis XVI (1754–93)—enfeebled royal authority.

The cost of Louis XIV's absolute power had been the corruption of French society. He and Richelieu had bought off the old aristocracy, France's traditional check on royal authority, with wholesale grants of privilege, including exemption from taxes, the right to extract feudal tolls from the peasants, and control of the country's 13 provincial *parlements*, or appeals courts. To dissipate the strength of the aristocrats, the Sun King in his own day drove them toward penury by demanding their lavish and constant attendance at Versailles, and he created scores of new nobles ("nobility of the robe") from the upper echelon of his civil service. Over the course of a generation, however, these new aristocrats became—through intermarriage and natural drift—indistinguishable from the old "nobility of the sword." Both groups jealously guarded their privileges, creating a professional class of *feudistes* to unearth—or

invent—long forgotten seigniorial dues for the French peasantry. Without a strong monarch to keep them in line, by mid-century they had turned the *parlements* into vehicles for exercising the veto over royal decrees. Each *parlement* upheld its own province's various prerogatives, including the important right to levy local customs on interprovincial trade. So a few grew rich by, in effect, stifling the growth of a true national economy, and, given the power of the *parlements*, reform seemed unlikely if not impossible.

The entire economic and legal system was not simply corrupt but fecklessly inefficient, and the state's finances often tottered on ruin. Already a source of deep resentment for the country's growing bourgeoisie, the system was stretched intolerably by the foreign adventures and imperial wars typical of the 18th century's rival European ruling houses—the War of the GRAND ALLIANCE in Europe, the War of the SPANISH SUCCESSION, the War of the AUSTRIAN SUCCESSION, the SEVEN YEARS' WAR. The latest of these, playing itself out 3,000 miles from Paris across the Atlantic Ocean, was the AMERICAN REVOLUTION. There the French had helped British colonists achieve independence against the nation's archrival, England, only to provoke a fiscal crisis at home. Along with new war debts also came the liberal ideas of the Enlightenment for which the former colonists had been fighting, placing both new financial and new intellectual burdens on the French. When the French middle class and many of the country's forward-thinking aristocrats realized that the government against which the North Americans had fought was much less oppressive than their own, the political costs of the adventure became clear. By the 1780s, the French state was close to both economic and moral bankruptcy.

As the subversive corrosion seeped throughout the country beneath the glittering veneer of the ancien régime's society, Louis XVI and his celebrated but much-disliked, Austrian-born queen, Marie Antoinette (1755–93), ensconced in the sheltered Versailles palace 10 miles from Paris, desultorily worked to avoid the economic catastrophe they understood was coming but could not bring themselves to take seriously. In 1787, the French treasury minister, Charles-Alexandre de Calonne (1734–1802), an able enough man, proposed tax reforms aimed at the landed aristocracy. When the newer nobility resisted, Louis was forced to dismiss Calonne, but his successor managed to come up with no better a plan, and the next scheme also asked the aristocrats to share the fiscal burdens of state. This served to arouse the ire of the *parlements*. Spouting the Americanized language of liberty, they refused to recognize the new legislation, and the old aristocracy, supported by the Catholic Church, followed their lead. As the reforms became clogged in the *parlements*, the long-simmering conflict between king and nobility boiled into the open. Louis began dissolving the

provincial bodies, many of which reassembled in defiance of royal order.

An outright parliamentary revolt seemed close at hand. Lawyers, clerks, bailiffs, ushers, all those dependent for their livelihoods on the *parlements*, formed small armies and staged numerous riots, rallying in their wake still larger crowds of unhappy peasants and artisans. In 1788, with the treasury empty and half of all royal revenues vanishing into debt service, the reluctant Louis called together an Assembly of Notables, but to his chagrin these notables refused to listen to reason and declined to impose the taxes required to avert bankruptcy. Louis's hand was forced. Grudgingly he acceded to the *parlement's* demands and, in August 1788, summoned the old Estates General, a traditional body made up of the three officially recognized classes of the realm—the clergy, the nobility, and the commons—which had last met in 1614. Although the clergy and the nobility chose their representatives directly, the commoners' deputies had to be selected through a series of local and regional elections, so the Estates General did not meet until May 5, 1789. In between, France suffered the worst harvest of the century. When the deputies gathered in Paris, the population was near starvation, and there were food riots in the streets. Amid the atmosphere of instability throughout France, expectations for this most recent assemblage remained high.

THE REVOLUTION

From the start, the representatives of the commons, dominated by members of the hitherto silent middle class, or the bourgeoisie as the French called them, took control of the assembly. Even before they arrived they declared that, because they represented the largest "estate" in the nation, they would boycott all discussion until their third was allowed as many delegates as the other two combined. Back in December 1788, Louis, assuming that voting would be by estate rather than by individuals, had granted them double representation. Immediately upon arrival at Versailles, the recently elected representatives of the Third Estate, which now considered itself the voice of the nation as a whole, demanded that deputies vote jointly by head rather than separately by estate, assuring a numerical advantage over the clergy and nobility. When Louis vacillated, the Third Estate, swept away by a tide of liberal sentiment that included half the clergy and a fifth of the nobility present, proclaimed itself a National Assembly. Three days later, reformist deputies and their supporters gathered at a royal tennis court, swearing to secure a constitution. The king nominally recognized the assembly, and with some ill will commanded the remaining holdouts among the clergy and the aristocracy to join this "new" body. The Paris mob hailed Louis's action, chanting "Long live the king," but the king himself had no desire to become a constitutional monarch. He surrounded the

royal palace at Versailles with troops and ordered his forces in the provinces to march on Paris.

What had begun as a gambit by the aristocrats to protect their privileges had been turned by the bourgeoisie into an opportunity to acquire prerogatives of their own. Now, the revolt passed for a time into the hands of the Parisian lower class—workers and apprentices, tradesmen and small shopkeepers, all those who wore the long, loose trousers of the poor instead of the knee breeches of the wealthy, and who were not, in fact, truly represented in the National Assembly. Called *sansculottes*—literally “without knee breeches”—they formed an angry mob in response to Louis’s calling out the guard, and on July 14, 1789, stormed the despised Bastille prison in Paris—the symbol of French absolutism. As all semblance of royal authority over the city vanished, many among the king’s court fled, and a few were murdered. Paris belonged—briefly—to the workers, who formed revolutionary councils and a citizens’ militia, which the masses proclaimed the new National Guard and pledged to use in defense of the assembly. As news spread of the uprising in the capital, provincial towns followed suit, and even in the countryside, peasants laid down their tools to march on local manors and burn records of debts and feudal tolls, occasionally putting to the torch the country houses and their noble landlords as well. The fever spread to the army, and royal troops could no longer automatically be counted reliable.

Back in Versailles, responding to this uprising, the so-called Great Fear, nobles and clergy relinquished all privileges on August 4, 1789, and on August 26, the assembly—having dubbed itself anew the Constituent Assembly and taken on the charge of producing a new constitution—issued the seminal Declaration of the Rights of Man and the Citizen, followed by measures nationalizing church lands and outlawing monasticism. Declaring that “men are born and remain free and equal in rights” and that “the source of all sovereignty lies essentially in the Nation,” the assembly had reduced Louis from the king by divine right of France to the king by national will of the French people, a monarch with limited powers soon to be held in check by constitutional law. These were not new ideas. They had been around since the 17th century, and many of them had already found embodiment in the United States’s Declaration of Independence and its newly printed Constitution, but they did mark the passing of the ancien régime, much to the delight not only of French common folk but also of republican sympathizers around the world.

Writ large in the Declaration were the sacred rights to own property, a right the middle-class majority in the assembly warmly embraced. This right mollified many of the aristocrats as well, because they could keep their landed estates despite losing their feudal privileges. Most of the nobility willingly accepted the Declaration, while

those few who demurred slipped away into exile or began silently to plot a royal restoration. The urban poor, the *sansculottes* without property, nevertheless hailed the rights of man, and—at least for now—supported the assembly. But the king withheld his assent to the Declaration. He remained at Versailles, isolated from the turmoil in Paris, and grew truculent about signing a number of the new articles produced by the assembly in developing the constitution. Rumors began to spread of his contempt for the Revolution, especially one about his unpopular queen, Marie Antoinette. She had, at a banquet given by ultraroyalist officers (and, therefore, antirepublican conspirators), so it was unjustly said, responded to talk about the flour that was, as always in those days, in catastrophically short supply with a sarcastic comment on the hungry masses: “Let them eat cake.”

As a result, in October a Parisian demonstration demanding bread swelled into a protest march by a legion of housewives on Versailles. By morning, the grounds of the royal palace teemed with 20,000 angry citizens, some of whom stormed the residence (and a few of whom killed several guards). After the queen narrowly escaped their ire, the crowd demanded that the royal family return with them to the city, and when the National Guard failed to restore the mob to order, the king gave in to those demands. Surrounded by a mass of poor Parisians, escorted by guardsmen, accompanied by the king’s unarmed bodyguards, the royal family trundled off to its new home in the city’s Tuileries palace. Thus did the *sansculottes* warn the bourgeois deputies who held the fate of the Revolution in their hands that they, the Parisian proletariat, were the backbone of the Revolution, and they were neither under the control of the assembly nor to be easily ignored by it.

Inside the assembly, factions were developing. Already, for the first time in history, the terms “left” and “right” had entered the language to designate political positions based on the simple fact that those deputies sitting together to the left of the assembly president, who chaired the debates, were more radical than those grouped on his right. In the long, wrangling discussions, conducted with an energy unique in French history, all the delegates had to deal with the tense reality of the Revolution. Its leaders, the bourgeois property owners, needed the support of the propertyless urban proletariat who were its driving force, but if they gave away too much to the poor they endangered their own recent gains in social status. In addition, they had to be wary of the vast French peasantry, which—having achieved its own goals of land reform and the end of feudal obligations in the early weeks of the Revolution—had by now returned to its traditional conservatism and become a source of potential reaction and counterrevolution.

Outside the walls of the debating chambers the growing factions organized political debating societies, the most

prominent of which would soon be the Jacobin Club, so named for its original meeting place, the former monastery of the Dominicans of Saint James. Led by an impeccably dressed, incorruptible, but austere and rigid lawyer from Arras named Maximilien Robespierre (1758–94), the Jacobins saw themselves as an idealistic elite whose mandate was to save the Revolution from all corruption, and their clubs sprang up by the thousands throughout France, each owing allegiance to the original in Paris. Contributing mightily to the rancor and ferment surrounding the activities of the new political clubs was the explosion of a new free press, which the revolutionary assembly had made possible when it abolished censorship back in 1789. Amid the 600 or so newspapers that had sprung up in Paris in the two years since, there were even those that defended the king. And as left wing as the Jacobin journals were, they seemed almost moderate compared to such extreme sheets as Jean-Paul Marat's (1743–93) *L'Ami du Peuple* and Jacques-René Hébert's (1757–94) *Le Père Duchesne*. With their violent, sometimes obscene vilifications of endless if ill-defined enemies of the Revolution, such rags all but ensured the debate inside the assembly would grow more heated—and more deadly.

As the rhetoric and the emotional fervor escalated, the delegates somehow managed finally to produce the long-awaited National Constitution in September 1791, much influenced by the example of the United States and institutionalizing separation of powers, individual liberty, and civil equality. Meanwhile, they had reorganized the country's administration, introduced a modern educational system, and overhauled the judiciary, outlawing torture and establishing trial by jury under a clear hierarchy of courts and appeals presided over by independent judges with secure tenure. Communes, each with elected councils and a National Guard detachment, became the basic unit of government in a patchwork of local departments, and citizens were taxed progressively on land, personal property, and commercial income. Moderate and rational, derived in large part from the experience of other nations, including centuries-long rival Great Britain, the constitution the assembly produced was a perfect blueprint for a bourgeois state.

And being bourgeois, the assembly delegates had worried much about how the cash-strapped government would pay off the national debt and ease the financial crisis the Revolution had inherited from the ancien régime. In setting the country's finances in order, however, the delegates—the majority of them anticlerical—nationalized the Roman Catholic Church's huge landholdings and used them to back a kind of instant currency in certificates redeemable against the purchase of the recently seized lands. The church accepted these measures with some equanimity, especially because the state took over its burden of caring for the poor, but when the assembly took the next step and passed a Civil Constitution of the

Clergy, calling for bishops and parish priests to be elected by secular committees and denying to any clergy the right to conduct religious services if they refused to swear loyalty to the new constitution, outrage exploded. The pope suspended those priests who accepted the terms of the legislation, the strongly Catholic peasantry grew deeply discontented, and foreign powers such as Austria expressed their outrage.

Adding to this problem was the controversy over the French royal house. Now a constitutional rather than an absolute monarch, Louis nevertheless exercised executive control of the state, and—although deprived of a permanent veto over legislation—he was allowed, like England's king, to appoint his own ministers. True, things had changed—for one, the government he served now had a legislative assembly, which would be elected by popular vote under a franchise whose modest property requirement included most adult males who need not have been dangerous. But Louis and his family, frightened and confined at the Tuileries, were privy to the same rumors and violent attacks in the press suffered by the assembly. As the debates raged, the king and queen grew increasingly worried for their lives. Even before the new constitution came up for a vote, they donned disguises and decamped under cover of night for the French border. They were caught at Varennes, 140 miles from Paris. Marched back to the capital, they passed through streets thronged by silent and sullen crowds, and returned to the Tuileries little more than prisoners of the Revolution.

By then aristocratic royalist émigrés were fomenting antirevolutionary sentiment abroad. When the Revolution inspired an uprising in the Austrian Netherlands, Leopold II (1747–92), emperor of Austria, already upset by the anticlerical bent of the assembly in Paris and by the ill-treatment of his sister, Marie Antoinette, began plotting an armed response. Together, Leopold and the king of Prussia, Frederick William II (1744–97), issued a joint declaration calling on other European monarchs to help them restore Louis to the French throne. Meanwhile, the October 1791 elections had brought to office in France a left-wing majority dominated by a group of deputies from the Southwest, the Gironde, led by a café owner's son turned revolutionary pamphleteer, Jacques-Pierre Brissot de Warville (1754–93). Immediately following the election, the tension surrounding the Constituent Assembly seemed to abate, despite the irritant of a king in custody. With the growing potential for both an outside invasion and an internal revolt by the fifth-column aristocrats, many in the new Legislative Assembly argued for a preemptive attack as the best defense. Brissot himself thought a foreign war might help unite the nation behind the Revolution. Only Robespierre and his Jacobins spoke out strongly against war.

In truth, the French army was in disarray, with two-thirds of its old officer corps in exile. But the Girondists

argued that the ideas of the Revolution alone would sweep away all resistance to its troops. Managing at last to form a ministry in March 1791, they pressured Louis into a formal declaration of war against Austria the following month. The Revolutionary Army, whose ranks were filled with poorly trained troops, marched into the Austrian Netherlands only to panic at the first sight of the enemy and scurry home. That summer, Charles William Ferdinand (1735–1806), duke of Brunswick, led an army of Prussians, allied to Austria, into revolutionary France. A cautious general of the old school, Brunswick moved slowly but deliberately, and the hysterical French feared nothing could stop him. They had reason to worry. Under the strain of war, the delicate French economy had collapsed, and the dangerous, widespread discontent fostered by food shortages and rising prices led the assembly to declare a national emergency (*see* COALITION, WAR OF THE FIRST).

National Guard volunteers by the thousands swarmed into Paris from the provinces, joining the sansculottes to create an armed force beyond government control. Brunswick issued a proclamation threatening the mob with dire reprisals if it harmed the royal family, which—as is the wont of any revolutionary rabble when confronted by such a threat from any authority—the crowds read as a challenge. An armed mob of 20,000 sansculottes descended on the Tuileries, and radicals from the more militant districts of the city forced out the municipal authorities and took over the running of the capital. When the mob slaughtered the king's Swiss guard, Louis and his family fled to the assembly itself for protection. There, the royal family listened as the delegates debated the crisis through the night. At length, the assembly suspended the monarchy and handed over the king's powers to a Provisional Executive Council. The Girondists held onto control, though they found themselves saddled with the far left-wing leadership of Jacobin Georges-Jacques Danton (1759–94) as the council's new minister of justice.

A huge, pleasure-loving, foulmouthed man, Danton's fondness for food, females, and well-formed phrases put him in contrast to the aloof Robespierre, the most influential delegate among the street fighters outside. For now, Robespierre was content to work behind the scenes, whereas Danton had immediately to deal with the Revolution's greatest crisis so far. For as the delegates debated, Brunswick continued to advance, and the Paris mob turned, in fear and anger, to terrorism. Traitors, or so the Jacobins would have all believe, were everywhere. Extralegal mass roundups filled the jails of Paris and the provinces with suspects. Then, urged on by Jacobin rabble-rousers under the icily relentless leadership of Robespierre, "spontaneous" mobs broke into the jails and massacred more than 1,000 of these suspected royalist prisoners in Paris alone, and many more such prison murders occurred in the outlands.

Danton hastily mobilized new units of the National Guard following what became known as the "September Massacres" of 1792 and marched them off to the front. As they left, he rallied the country with memorable speeches and persuaded the Legislative Assembly, so inept throughout the crisis, to dissolve itself, and it did so unmourned. Another National Convention was summoned, this one to be elected by universal manhood suffrage, to write a new and entirely republican constitution. But, although the emergency had destroyed the government and the monarchy, its participants had not seen to the ending of the war. That came as the deputies departed Paris for home and the Revolutionary Army won its first victory at Valmy, scarcely 100 miles from the city limits. Little more than a skirmish, the battle nevertheless proved decisive when republican troops—the great bulk of them former royalist regulars—under General Charles-François du Périer Dumouriez (1739–1823), determinedly cannonaded Brunswick's army. A few hundred casualties later, Brunswick sounded a general retreat and gave the Revolution new life.

Back in Paris at the end of the month, the National Convention formally abolished the monarchy on September 22, 1792, and declared the day the first of Year 1 of Liberty, as if by legislating a new calendar—and new weights and measures and a new metric system—it had laid the foundations for true republicanism in France. Citizen Capet, as the revolutionaries took to calling Louis, and his wife, Marie Antoinette, thought differently, and the two had been covertly canvassing military support from fellow monarchs and French aristocrats who had fled the country. When their secret correspondence was found inside an iron closet hidden in a wall at the Tuileries, the radicals seized the opportunity and hauled him before the Convention to be tried for treason. Louis was more inept than he was guilty, but that was beside the point because the trial was planned as political theater rather than to render true or even legal justice. Surrounded by enemy armies, threatened by internal rumblings of discontent, the deputies, even had they wanted to vote for acquittal, would have been committing political—and perhaps literal—suicide. In the event, they voted almost unanimously to find Louis guilty and, thereby, to show foreigner and Frenchman alike that the Revolution would be defended. For many of them, however, regicide was another matter, and the Girondists virtually to a man argued for clemency. In another all-night debate, however, the more radical delegates persuaded a narrow majority to condemn their former king to the Revolution's new "humane" killing machine, the guillotine.

The king's execution on January 21, 1793, sparked royalist insurrections, notably in the Vendée, and a set off a wave of outraged protest from the governments of Europe. The Convention, however, was in no mood for conciliation, and the same month that saw Louis Capet's head roll witnessed Danton's call for the expansion of the Revolution

beyond French borders to the Alps, the Pyrenees, the Rhine, and the Mediterranean. The Revolutionary Army would now be swelled by conscripts, by “citizen soldiers,” who were expected to conquer the world with arms and an idea, as the French government in quick succession declared war on Britain, Holland, and Spain. Dumouriez, the hero of Valmy, deserted to the Austrians and their new British allies. The staunchly Catholic peasants of Vendée, spurred on by attempts to conscript their sons to defend a revolution that had outlawed priests and beheaded a king, stepped up their counterrevolt. Bordeaux, Nantes, Lyon, Marseille, and other provincial cities joined the insurrection as discontent boiled over into civil war.

The crisis put France on a war footing, which led to the infamous Reign of Terror at home. When the fighting had begun in Vendée in March, a revolutionary tribunal had been set up to sniff out traitors by a government that now saw treason in what a few months before would have passed for simple political opposition. By April full power had flowed into the hands of the newly created Committee of Public Safety. Led originally by Danton, the committee became a form of collective dictatorship, a ruthless organ of state determined to wage war against enemies within and enemies without, one that increasingly played a political role in the internal struggles for control of the revolutionary government. The Girondists were only the first to fall prey to the committee. Riding a wave of rioting and near-rebellion by the Parisian sansculottes, the Jacobins early in June forced the arrest of Brissot and his supporters, blaming the Girondists for both military defeat and economic failure. The Jacobin purge continued into July, forcing Danton and his minions—once considered left of the Jacobin mainstream—off the committee, which now came to be dominated by Robespierre and his extremist Montagnard wing of the Jacobins in the assembly.

In Jacobin hands the committee proved an extremely effective machine for winning wars. The Jacobins increased conscription to levies unheard of before, raising by August a force of some 650,000 men, many of whom—as usual during the Revolution—came from the ranks of the National Guard, bringing with them not only their bodies as fresh cannon fodder but the radical fervor of their political beliefs. At first disorganized and badly supplied, these true believers nevertheless far outnumbered those in the ranks of the small professional armies then invading France. Given the needed training, the necessary tools, and the right leader, they would make a mighty force indeed—and they were soon to receive all of these. Even now, their mass was pushing the foreigners and the émigré aristocrats back beyond French borders. In Toulon, for example, where royalist traitors to the Revolution had handed over the port town to the encroaching British, republican troops recaptured the site in December 1793. Leaders back in Paris, reading over official dispatches, noted that the republican success was being attributed in

large degree to an unknown Corsican artillery officer and strong Jacobin supporter by the name of Napoleon Buonaparte (1769–1821).

RISE OF NAPOLEON

Destined to become perhaps the most brilliant figure in military history, Napoleon Buonaparte was not so much a product of the French Revolution as its chief beneficiary. Born on August 5, 1769, in Ajaccio, Corsica, a politically turbulent island recently acquired by the French Crown from the Republic of Genoa, and given a typical military upbringing, his own ambitions were to establish a solid dynasty within France and to create a French-dominated empire in Europe. He spent the twilight years of the ancien régime on leisurely garrison duty reading the works of military theorist J. P. du Teil and Enlightenment philosophes Voltaire and Rousseau, steeping himself in both strategy and tactics of war and the liberal ideas sweeping France. Although he believed political change was imperative, as a career officer he seemed leery of radical social reform, and he always moved steadily to consolidate his personal power (*see* NAPOLEONIC WARS).

Joining the Jacobins early in his career in Grenoble, he made fiery speeches declaiming against nobles, monks, and bishops and, in 1791, put down a revolt against French revolutionary rule in his native Corsica. Thereafter, he rose by personal connection and opportune action. He came to the attention of the Paris revolutionaries through Maximilien Robespierre’s brother, Augustin (1764–99), via a pamphlet he wrote as a young artillery officer, which argued fervently for united action by all republicans rallied around the Jacobins. When the French artillery commander at the port of Toulon was wounded during an attack in August 1793, Napoleon stepped in to save the town from British occupation. Augustin Robespierre, who was political governor of Toulon, wrote to his brother Maximilien, by then the leading figure behind the current Reign of Terror, praising the “transcendent merit” of the young republican officer.

With such powerful backing, Napoleon quickly worked his way up the ranks of the Revolutionary Army, while the Revolutionary Tribunal quickly worked its way through French society. Two months earlier, in September 1793, the government had passed the Law of Suspects, which quickly packed French jails full of counterrevolutionaries, a term whose definition grew ever less discriminating as the Great Terror ran its course. Aristocrats and captured or returned émigrés made the first, most obvious targets for guillotining. They were followed to the scaffold by a number of republican generals who had committed the new crime of suffering defeat in battle. With great dignity, Marie Antoinette faced the same fate as had her late husband, Louis Capet, after she was convicted of treason in a trial more slanderous and more scandalously unfair than the king’s had been. If the deaths of these two were

tragic, at least in terms of revolutionary history, those of such figures as Madame du Barry (1743–93), the aging beauty who was once mistress to Louis's grandfather, who had to be dragged screaming to the scaffold, were sadly pathetic.

Although the executions of aristocrats garnered more press, first favorable within France and then damning in the foreign capitals of Europe, the highborn were really only a minority of the Terror's victims. Nearly 85 percent, to judge by spotty records, of the 35,000 executed during Robespierre's continuous purges were in all likelihood commoners. For one thing, the National Convention had sent its most trusted deputies, men like Augustin Robespierre, to the provinces, some of them traveling with portable guillotines. The same month Napoleon Bonaparte (originally Buonaparte) burst onto the scene, December 1793, the defeat of the rebellion in the Vendée gave birth to a terrible republican revenge. There were summary shootings and beheadings throughout the countryside, and in Nantes alone some 2,000 people were systematically drowned. And second, long before Robespierre responded in February 1794 to his brother's praise of Napoleon and had the young officer appointed commander of artillery in the French Army of Italy, the Revolution had begun to eat its own. The Girondist deputies were guillotined shortly after Marie Antoinette, and Robespierre immediately began redefining those who had brought him to power as counterrevolutionaries themselves. In March, a month after Napoleon was posted to Italy, where he began planning actions against the Hapsburg army of the Holy Roman Empire, the less radical Jacobins trundled to the scaffold, followed the next week by Danton and his minions.

By midsummer 1794, Napoleon's plans had resulted in gains against the enemy, and the ambitious young officer seemed set on a dazzling career. Around the same time, Robespierre's plans for the Festival of the Supreme Being also came to fruition. A bombastic extravaganza of ersatz classicism, nature worship, and extreme anticlerical, anti-Christian vilification, the silly ceremony would forever after provide an ironic counterpoint in histories of the period to the terror that raged even more fiercely than before. The same man, Maximilien Robespierre, who in June 1794 ritually ignited a huge papier-mâché monument to the enemies of happiness, designed by Jacques-Louis David, all-but-official artiste of the Revolution, and called forth from the ashes a scantily clad actress who, as Wisdom, invited all the participants to pay their homage to the Author of Nature, this same man insisted on a new law obliging the revolutionary tribunals to choose only between acquittal and death for those hapless souls dragged before them.

All sense had gone out of the thing, and justice had vanished from the land. It was not enough that Belgium had been recaptured from the allies and France had clearly passed through the period of its greatest danger, the

Jacobins still saw traitors everywhere. In June and July 1794 nearly 1,400 more enemies of the people were executed in Paris, more in two months than in all the previous year. The Revolution had become bloodthirsty, and Robespierre and his Montagnard faction of the Jacobins no longer truly controlled the beast they were riding. Given the mob's lust for violence and Robespierre's addiction to conspiracy theories, no one felt safe, not the convention's surviving deputies, not the members of the Committee of Public Safety itself. When on July 26, Robespierre spoke before the convention and demanded yet another purge of its deputies to eradicate even more enemies of the republic, the Terror turned on its master. The convention, its members clearly conscious they were voting to save their own necks, ordered the arrest of Citizen Robespierre.

Caught off guard, the Jacobin firebrand did not have time to mount an effective counteroffensive in the streets, where forces loyal to the convention managed to suppress the disorganized rioting of the Robespierre faithful. Robespierre himself was shot in the jaw, some said in a failed attempt at suicide. In great pain, he was hauled to the scaffold and relieved of his head, as were, within days, his entire faction. Now, for the first time since the execution of the king, the Paris guillotine fell idle. A few more extremists, such as the former public prosecutor and the more bloodthirsty of the deputies who had brought massacre to the provinces, felt its bite, but the Revolutionary Tribunal itself was gutted of its power and abolished, and the new regime came much to prefer the "dry guillotine" of exile. The Great Terror had burned itself out.

The news reached Nice in August 1794, and Napoleon—as a protégé of the Robespierres—was arrested and imprisoned on charges of conspiracy and treason. Lucky that his head did not roll along with those of other Jacobins, Napoleon found himself freed after the charges were dropped due to lack of evidence. But he was not restored to his command, his political backing had disappeared, and under the new Convention Assembly, whose members feared his intense ambitions and worried about his former relations with the Montagnards, his prospects looked bleak indeed. In March he turned down an offer to command the artillery in the Army of the West, a post fighting stubborn counterrevolution in the Vendée that seemed to hold no future for him. Instead, he gave up life in Italy, where he was trying on half-pay to conduct an affair with the daughter of a rich Marseille merchant, to go to Paris and attempt to justify himself. For months he tramped about the city from office to office, but his efforts brought no new command. At one point he considered offering his services as a mercenary to the sultan of Turkey.

Then, in October, his luck changed. The National Convention, on the eve of dispersing, submitted a new constitution—the Constitution of the Year III of the First Republic—to a referendum. Much less democratic than its 1793 predecessor, it withdrew the right of universal

manhood suffrage and allowed only the propertied classes the right to vote for a two-tiered assembly, elected annually, which in turn was to select five directors who would wield executive power. To the sansculottes and former Jacobins, whose clubs had been outlawed the year before, it was a betrayal. Since its inception, the convention had been plagued by outbreaks of rioting, even near rebellion, in the streets of Paris, and now the country's conservatives saw in the growing discontent over the new constitution the chance they had been waiting for. Hoping soon and surreptitiously to restore the monarchy, they instigated a revolt. Tremendous crowds, many among their number drawn from the more prosperous parts of Paris, gathered to protest the convention's transparent attempts to ensure itself a clear two-thirds majority in the assembly.

Vicomte Paul de Barras (1755–1829), entrusted with almost dictatorial powers by the convention, was in charge of the defense of the Tuileries palace, the site threatened by the mob. Unwilling to rely on the loyalty of the commander of the Army of the Interior, Barras—who had heard of Buonaparte's service at Toulon—appointed him second in command. Thus it was Napoleon who, rapidly assembling some artillery, coolly dispersed the insurrectionists with a “whiff of grapeshot,” leaving several hundred people dead and wounded and, thereby, saved the convention, the republic, and his own career. The massacre confirmed the Directory as the supreme authority in the land, and the Directory rewarded Napoleon with full command of the Army of the Interior. Now a hero of the Revolution, his future was assured.

As head of the Army of the Interior, Buonaparte was aware of every political development in France, and he became a trusted military adviser to the Directory. Meanwhile, he seemed to have acquired something other than a fresh start in his military career from Barras—the young commander had taken up with the politician's mistress. An attractive Creole named Josephine Tascher de La Pagerie (1763–1814), she was the widow of Alexandre de Beauharnais, a republican general guillotined during the Reign of Terror, mother of two children, and the source of many rumored affairs. She and Napoleon were to be married in March 1796. Informed of the upcoming nuptials, Barras—now one of the five members of the all-powerful Directory—not only voiced his approval but even spoke of an appointment coming to Napoleon as a wedding present. For months since gaining his general's rank, Buonaparte had been ferociously lobbying for an appropriate field command. Having proved his loyalty to the Directory by disposing of a communistic group led by François Babeuf (1760–97) and the Italian Filippo Buonarroti (1761–1837), whom Napoleon had known in Corsica, he was going to get his wish. Shortly before the wedding, his new orders arrived, and two days afterward Napoleon and a small trusted staff left to take command of the Revolution's war in Ital (see FRENCH REVOLUTIONARY WARS).

In northern Italy the demoralized, ill-equipped, badly outnumbered republican troops might be forgiven for receiving their new general with some skepticism. Not yet 27 and owing his appointment to Parisian politics rather than to proven military skill, this Corsican who had only recently decided to drop the un-French “u” from his surname seemed an unlikely candidate to turn the situation around. He transformed his motley troops into a crack band of veterans and the paucity of supplies into an excuse for rapid deployment. Unfettered by clumsy baggage trains, the Army of Italy moved quickly across the countryside, living off what they could forage or steal, and hitting the Austrians' extended line with a series of fast, concentrated blows. By April 1797, he had swept the Austrians from northern Italy and marched to within 75 miles of Vienna. On his own initiative, he negotiated the Treaty of Camp Formio in open disregard for regular diplomatic channels and his own legal authority. The Directory did not much like it, but this Napoleon Bonaparte had gotten the Holy Roman Empire to surrender a good deal of its Italian territory to a new French-dominated government he called the Cisalpine Republic and to let go its holdings in the Rhineland and the Netherlands as well.

Such successes abroad were in contrast to the Directory's continuing problems at home. In fact, this new government would only endure for little more than four uninspiring years. Associated more with extravagant women's fashions, flourishing decorative arts, and the spendthrift extravagance of gilded youths whose fathers had grown rich off the Terror than with forging the republic's destiny, the Directory was never truly popular. Subject throughout its tenure to unrest from both the Left and the Right, the hardships the Directory visited on the masses lacked even the sense of struggle and sacrifice that had helped the common folk endure the bleak years through which the Revolution had recently passed. The Directory's military efforts alone were almost always seemingly crowned with success, partly because France now had the most efficient system of conscription in Europe as well as one of history's best generals. In return, the army's help became indispensable to the Directory's survival, which introduced the generals to politics and made the coup d'état thenceforth a part of French political life.

In terms of foreign affairs, the return to grace of Charles-Maurice de Talleyrand-Périgord (1754–1838), was second in importance only to the rise of Napoleon. As a French statesman and diplomat, Talleyrand would become noted for his capacity for survival, not only holding high office during the French Revolution and the subsequent Napoleonic empire, but also at the restoration of the Bourbon monarchy and under King Louis-Philippe. From an impoverished but ancient aristocratic family, left clubfooted by a childhood accident, Talleyrand had under the ancien régime become a typical court cleric before rising to fame as the veritable “bishop of the Revolution” when he engi-

neered the adoption of the Civil Constitution of the Clergy that had proved so pernicious to the Revolution's success.

The first bishop to take the loyalty oath, for which he was excommunicated by the pope, Talleyrand was recognized for his skills as a clever negotiator and was posted as a minister to London in 1791, where he helped keep Britain neutral until the massacre of royalist prisoners alienated whatever sympathy the British had for revolutionary France. Denounced at home by the National Convention after the overthrow of the monarchy, Talleyrand was also attacked in Britain by counterrevolutionary émigrés who demanded his expulsion. When the British complied with these demands in January 1794, Talleyrand—hardly able to return to a France in the throes of the Terror—embarked for the United States.

After the fall of Robespierre, Talleyrand petitioned the National Convention to remove his name from the list of émigrés because, he pointed out, he had left France on an official passport. His request granted, Talleyrand returned to Paris in September 1796. There, with the help of his political connections in the Directory, he regained his standing as a diplomat and was named French foreign minister in the summer of 1797.

It was Talleyrand who confirmed Napoleon's conclusion of the Treaty of Campo Formio, and it was Talleyrand who, with Napoleon, would execute the government's grand strategy in the coming years of guaranteeing French security by creating a ring of satellite republics around the nation's borders in Italy, the Netherlands, and Switzerland. And it was Talleyrand who seconded Napoleon's proposal to strike at Britain by occupying Egypt and threatening its lucrative trade route to India.

Some members of the Directory, disturbed by Napoleon's high-handedness at Formio and by his increased meddling in political affairs, were glad to see their ambitious young general head off to the faraway Middle East. Napoleon had personally put down the first plot against the new regime in 1796, the so-called Conspiracy of Equals led by Babeuf. But he had also had a hand in the events following the French elections of 1797, during which the royalists' success at the polls had increased the number of conservatives in the five-man Directory to two. Uneasy with the results, Napoleon had advised opposition to them, and when the Directory attempted a coup d'état against the royalists in July and failed, its three republican members asked Bonaparte's aid to rectify the situation. Keeping himself aloof from the turmoil in Paris, Napoleon instead sent one of his subordinates, Pierre-François-Charles Augereau (1757–1816) to conduct purges of both the Directory and the assembly.

Although Augereau's successful coup of 18 Fructidor (September 4, 1797) eliminated the royalists and their friends from the government and enhanced Bonaparte's prestige, allowing him to conduct negotiations in Formio without political interference, it also set a dangerous

precedent. When the next year's election produced an assembly too republican for the Directors' taste, they used their military support to annul the results in more than 100 districts; in 1799 the Directory employed arrest and forced dismissal to maintain the status quo in the face of a similar election crisis. By then, although Britain was France's only surviving enemy and Napoleon was in Egypt, the Directory's rule was chronically unstable. When British prime minister William Pitt (1759–1806) organized and financed a new anti-French alliance, the Second Coalition, which included Naples, Austria, Russia, and the Ottoman Empire, many doubted the Directory's ability to wage war successfully against it, and some of the Directory's members—especially Emmanuel Sieyès (1748–1836)—were convinced that only military dictatorship could prevent a restoration of the monarchy. "I am looking for a saber," was the way Sieyès put it, and the Directory ordered the return of Napoleon.

Napoleon was delighted to be the sword. Although he had been victorious on land in Egypt, his fleet had been destroyed by the British, and his army was left sick and stranded in the shadow of the pyramids. Under the circumstances, it did not take much to make up his mind to return to France yet again to save the Republic. He was on his way to Paris even before he had received the Directory's recall, and once there he took advantage of the new circumstances to seize power. By the time he arrived on October 14, 1799, French victories in Switzerland and Holland had stayed the danger of invasion and the most recent counterrevolutionary risings at home had fizzled, so the Republic no longer needed saving. But Sieyès now had his sword, and he intended to use it. He and Napoleon plotted the coup from the end of October, and on the 18 Brumaire (November 9), they struck.

The five-man Directory was replaced by three consuls, including—as yet another reward for services rendered to the Revolution—General Bonaparte, along with two of the directors who had resigned, Sieyès and Pierre-Roger Ducos (1747–1816). When the Jacobins in the Assembly refused to accept the abrogation of the constitution, Bonaparte's troops drove them from their chambers. A few hours later, a handful of more tractable deputies murmured assent to the changes and gave a semblance of legality to the coup. But the bayonets remained, and the message was clear. Not just the Directory, but the Revolution was dead, and First Consul Napoleon Bonaparte was master of France.

French Revolution (July Revolution) (1830)

PRINCIPAL COMBATANTS: Forces loyal to Charles X vs. disaffected French citizens and military elements

PRINCIPAL THEATER(S): Paris

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The rebels sought to overthrow the hyperreactionary king of France and his prime minister.

OUTCOME: The king abdicated and was ultimately replaced by the even more inept Louis-Philippe.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Forces loyal to Charles X, 11,776; revolutionaries, unknown

CASUALTIES: Forces loyal to Charles X, 400 killed, 800 wounded; revolutionaries, 1,800 killed, 4,500 wounded

TREATIES: None

The so-called July Revolution was triggered by a single ill-judged action of King Charles X (1757–1836). An unpopular ruler, Charles was a reactionary who, in his determination to restore an absolute monarchy to France, alienated the growing French middle class. The king directed Premier Jules de Polignac (1780–1847) to form a new, ultraroyalist ministry. When the Chamber of Deputies protested, Charles X dissolved that body in 1829. The elections of 1830 produced even more opposition to the king and Polignac. Charles responded by dissolving the new chamber as well. With Polignac, he also published the “July Ordinances,” which sharply curbed freedom of the press and disenfranchised many Frenchmen. In response, Parisians rebelled on July 27, erecting and manning 4,054 barricades in the streets. In addition to civilians, some army units as well as former National Guard members joined the defense of the barricades.

On July 30, a desperate Charles caved in to the rebellion by annulling the July Ordinances and dismissing Polignac. The rebels arrested Polignac and sentenced him to life imprisonment; he was granted amnesty six years later. Charles abdicated in favor of one of his grandsons, then fled.

The people rejected Charles’s choice. The radical republicans among them supported the aged marquis de Lafayette (1757–1834) for president, while the monarchist rebels supported Louis-Philippe (1773–1850), duc d’Orléans, as the new king. Amid the dissension, all that could be agreed upon was a declaration that the throne was

vacant. Louis-Philippe was subsequently proclaimed king, and although he was popularly dubbed the “Citizen King,” he soon proved as reactionary as Charles X had been. The stage was set for the FRENCH REVOLUTION (1848).

French Revolution (February Revolution) (1848)

PRINCIPAL COMBATANTS: French liberals vs. the monarchy of Louis-Philippe

PRINCIPAL THEATER(S): Paris

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Liberal and radical elements sought to replace the monarchy with a republic.

OUTCOME: Louis-Philippe abdicated, and the Second Republic was established; however, the revolution soon turned moderate and then conservative.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown in this citizen action

CASUALTIES: Few

TREATIES: None

The year 1848 was one of turmoil in Europe, beginning with a “revolution” in France. At this time in France, suffrage was restricted to men who owned a certain amount of property. Discontent over the property qualification had simmered for years and had given rise to opposition parties and an organized protest movement to expand the franchise. On February 22, 1848, a mass protest banquet was arranged to demand universal manhood suffrage. François-Pierre-Guillaume Guizot (1787–1874), the French premier under King Louis-Philippe (1773–1850), was informed of the planned event and immediately issued a decree forbidding the banquet. Louis-Philippe had become increasingly unpopular, and, if anything, Guizot was even less loved. In response to Guizot’s provocative decree, Parisians gathered at the banquet hall and street fighting broke out. The violence reached its height on February 23, when troops clashed with demonstrators. Although some of the soldiers fired into the mob, others laid down their arms and joined the Parisians. Guizot resigned immediately, and Louis-Philippe abdicated on the 24th.

The Chamber of Deputies created a Committee of Public Safety headed by the renowned poet Alphonse de Lamartine (1790–1869), which quickly created the Second French Republic. The Revolution of 1848 was essentially local, chiefly confined to Paris, and although radical,

socialist, and even anarchist voices made themselves heard, most of the people of France preferred to take a moderate, even conservative course. Immediately after the proclamation of the Second Republic, bold steps were taken, including the writing of a democratic constitution, the creation of national workshops, and a right-to-work law. Although Parisian workers approved of this, most of the country protested, and the workshops were dissolved in June. This provoked a workers' rebellion, the so-called June Days of June 23–26, 1848, which soon dissolved. New elections were called, and despite everything that had happened, the expanded French electorate brought to the assembly an overwhelmingly monarchist slate of legislators. Prince Louis Napoleon (1808–73), an arch conservative, was elected president in December 1848, effectively bringing the revolution to an end. The Second Republic endured until 1852, when Louis Napoleon proclaimed himself Napoleon III, and the Second Empire was thereby created.

Although the Second French Republic was short-lived, the tumult in France inspired an Italian rebellion against the Austrian overlords in Italy (see ITALIAN REVOLUTION [1848–1849]). That same year, Hungary also rebelled against Austria (see HUNGARIAN REVOLUTION), to which it had been subject for some 150 years. When Austrian emperor Ferdinand I (1793–1875) responded by granting Hungary representation in the imperial government, the Czechs, also under Austrian rule, demanded a significant degree of independence. Revolutionary sentiment swept over Germany as well in 1848 (see GERMAN REVOLUTION), creating an abortive movement for unification of the disparate German states. Austria itself was swept by revolution (AUSTRIAN REVOLUTION).

French Revolutionary Wars (1792–1802)

PRINCIPAL COMBATANTS: Revolutionary France vs. (at various points) all the major European powers, including Great Britain and Russia

PRINCIPAL THEATER(S): From the Caribbean to the Indian Ocean, but concentrated primarily in Holland (the Low Countries), the Rhineland, and Lombardy

DECLARATION: Various of the allied nations declared against France.

MAJOR ISSUES AND OBJECTIVES: Suppression of the French Revolution's ideological threat to the older regimes of Europe

OUTCOME: Napoleon Bonaparte came to power as emperor and launched several wars of conquest.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

France mobilized more than 2 million men, its enemies, combined, mobilized perhaps half that number.

CASUALTIES: France, 295,000 killed; allies, 177,420 killed

TREATIES: Treaty of Campo Formio, October 7, 1797; Treaty of Amiens, March 27, 1802

The French Revolutionary Wars were fought between France and the other European powers in the wake of the FRENCH REVOLUTION, from 1792 to 1802. After the brief hiatus created by the Treaty of Amiens, the wars continued as the NAPOLEONIC WARS. Napoleon Bonaparte's (1769–1821) series of victories in the French Revolutionary Wars, which ended at Amiens, began with astounding successes in northern Italy and brought about the collapse of the First Coalition of European powers formed against the new republic (see COALITION, WAR OF THE FIRST).

In 1792, France's new National Assembly, pressed by the moderate republican Girondists, declared war on Austria's Emperor Francis II (1768–1835) for signing the Declaration of Pillnitz, which called for the restoration of France's ancien régime. The duke of Brunswick, Charles William Ferdinand (1735–1806), led the Austrians and their allied Prussian troops across the Rhine, threatening to destroy Paris if the revolutionaries harmed the royal family, who considered themselves more or less prisoners in their own country. The French resented the demands, and that resentment led them to abolish the monarchy, if not yet the monarch.

In the first year of the wars, revolutionary France defeated the invaders at Valmy and then pressed on to attack the Austrian Netherlands. There, too, the French army was victorious, defeating the Austrians at Jemappes and afterward overrunning today's Belgium. The successful French offensive pushed the Prussians back across the Rhine; in November 1792, a French army conquered Savoy and Nice, and flush with these early victories, the French began bold talk of exporting their revolution. The French constitutional convention offered aid to seekers of liberty everywhere, it opened the Scheldt estuary to French commerce, and—in 1793—it guillotined the erstwhile king, who the French had taken to calling Citizen Capet.

Alarmed by these events, the powers of Europe were provoked into forming the First Coalition against France—Britain, Holland, Spain, Austria, Prussia, and Russia. The allies enjoyed early victories at Neerwinden, Mainz, and Kaiserslautern, and they evicted the much demoralized French from the Austrian Netherlands. The French quickly regrouped, however, introducing mass mobilization to form a huge army made up of a new kind of trooper, the citizen soldier, and took the offensive. Once again, they drove the Prussians back, and in 1794, a Russia distracted by unrest in Poland withdrew from the coalition.

French success in Holland forced the Dutch to a peace, and the revolutionaries renamed their conquest the Batavian Republic. In 1795 Prussia and Spain followed Holland to the negotiating table. That year, too, the new five-man governing Directory, which had replaced the old convention, planted the young Bonaparte atop the Revolution's army in Italy. Jailed the year before as his Jacobin allies' heads rolled in the streets of Paris, a newly free Napoleon had not only saved the government from a Paris mob but also married up in the world to Josephine de Beauharnais (1763–1814). Now the once obscure Corsican artilleryman was confronting the troops of the Holy Roman Empire, whose Hapsburg monarch ruled northern Italy and the Netherlands and claimed allegiance from all the German states in between.

Rallying the troops under his new command, Napoleon took the offensive on April 12, 1796. In quick succession he defeated and separated the Austrian and the Sardinian armies, then marched on Turin. When the Sardinian king, Victor Amadeus III (1726–96), asked for an armistice and then sued for peace, Nice and Savoy, occupied by the French since 1792, were annexed to the republic. Bonaparte fought on against the Austrians, occupying Milan before he was held up at Mantua. While his army besieged the great fortress, he signed armistices with the duke of Parma, the duke of Modena, and ultimately with Pope Pius VI (r. 1775–99). He took an interest in the political organization of Italy, setting up a republican regime in Lombardy. In October 1796, he merged Modena and Reggio nell'Emilia with the papal states of Bologna and Ferrara to create the Cisalpine Republic. He even sent an expeditionary force to recover Corsica after the British had evacuated.

Meanwhile, Austrian armies had swept down four times from the Alps to relieve Mantua, and four times Bonaparte had routed them. With the last defeat at Rivoli in January 1797, Mantua itself capitulated, and Napoleon wasted no time in marching on Vienna. He had hied his army within about 60 miles of the Austrian capital before the House of Hapsburg sued for an armistice. With Austria standing alone against Napoleon in Italy, Francis II felt he had no choice but to come to terms with France, which he did in a preliminary peace signed on April 18, 1797, at Leoben. Back in Paris, royalist gains in the latest election occupied Napoleon's attention as he urged the Directory on to a coup in July, which failed. Bonaparte then dispatched one of his generals and several officers to mount another. This one, the coup d'état of 18 Fructidor (September 4, 1797) proved successful. Having eliminated the royalists' friends from the government and legislative councils, the young general saw his prestige rise again. Hailed as the savior of the Directory, to its dismay he then concluded the Treaty of Campo Formio as he thought best.

Essentially, in exchange for Dalmatia and Venetia, Francis II recognized all of the conquests of the French

Republic, including the long-cherished French dream of establishing hegemony over Italy. In addition, the treaty provided for a congress to be convened at Rastadt to determine the future of Germany.

With the Treaty of Campo Formio, Bonaparte began reshaping the map of Europe, a habit that would continue throughout his career. The Directory, disturbed by Napoleon's extralegal assumption of authority, let it be known that it was displeased because the treaty had ceded Venice to the Austrians but did not secure the left bank of the Rhine for France. On the other hand, Napoleon had not only reorganized parts of Europe, he had, like a good radical republican, spread the revolution to northern Italy, encouraging Jacobin propaganda in Venetia. Returning to Paris with a victory in hand after five years of war on the Continent, Bonaparte's popularity, despite the naysaying of the politicians, reached new heights. The glory was his, and a new figure was strutting across the stage of world history. Moreover, his consolidation of the northern Italian republics led many Italian patriots to hope for the formation in future of a single and indivisible "Italian Republic" modeled on the French. As would often be the case, out of Bonaparte's conquests was born a new nationalism.

The events culminating in Campo Formio isolated Great Britain, which had acted as the chief source of funds for the anti-French alliances. The nation was vulnerable to invasion, but the French fleet proved no match for the Royal Navy, which defeated it at the Glorious First of June (1794), and then dealt a decisive blow to the Spanish fleet off Cape St. Vincent (February 14, 1797) and to the Dutch fleet at Camperdown (October 11, 1797). Turning from its plans against England, the French Directory approved Napoleon's 1798 proposal to conquer Egypt. Despite a brilliant land campaign, Napoleon's gains were largely nullified by Admiral Horatio Nelson's (1758–1805) victory over the French fleet in the Battle of the Nile (August 1, 1798) and by the Turks' successful defense of Acre.

In the meantime, while Napoleon was fighting in Egypt, a Second Coalition, consisting of Britain, Austria, Russia, and Turkey, was formed against France (see COALITION, WAR OF THE SECOND). This, too, failed, and the French Republic was again victorious. On September 25, 1799, Russian armies were turned back at Zurich, leaving the Austrians exposed and forcing them to retire from the Rhine. A planned Anglo-Russian landing in Holland had to be aborted. Next, Napoleon returned from Egypt to defeat the Austrians at the spectacular Battle of Marengo (June 14, 1800), which followed his brilliant march across the Alps, an action that cut off the Austrian commander, Friedrich von Melas (1729–1806) from communication with Austria, leaving him vulnerable. This, coupled with another French victory at Hohenlinden (December 3, 1800), prompted the Austrians to make peace at Luneville on February 9, 1801. Britain, now isolated, struck out at the Danish fleet at Copenhagen (April 2, 1801) and also

destroyed Napoleon's Egyptian army at Alexandria (August 1801). However, aware of its exposure, Britain sued for peace at Amiens.

The Treaty of Amiens served as an entr'acte between the French Revolutionary Wars and the Napoleonic Wars. Though a general peace was reestablished in Europe, Napoleon Bonaparte's success in the French Revolutionary Wars had allowed him to maneuver politically at home into a position of near dictatorial powers, and Bonaparte's notion of international peace bore little resemblance to that of Great Britain. Already First Consul of the French Republic, Bonaparte's prestige was such that his friends—with a few hints from Napoleon—proposed to offer him a “token of national gratitude.” A referendum was mounted to answer the simple question: “Shall Napoleon Bonaparte be consul for life?” The vote was overwhelmingly yes, and Napoleon grasped the reins of state with the right to name his own successor.

If the Treaty of Amiens marked for the British the absolute limit beyond which they were never prepared to go, for Napoleon it marked the starting point of a new French ascendancy in the world. Future wars were inevitable.

French War (1635–1648)

PRINCIPAL COMBATANTS: France (with Swedish and Dutch allies) vs. Spain (with German, Austrian, Italian, Walloon, and Portuguese allies)

PRINCIPAL THEATER(S): Europe

DECLARATION: France on Spain, May 21, 1635

MAJOR ISSUES AND OBJECTIVES: France sought acquisition of the Rhineland.

OUTCOME: The French War effectively ended the Thirty Years' War with the Peace of Westphalia (1648), ending the Holy Roman Empire as a major political force.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the major battle, Rocroi: France, 22,000; Spain, 26,000. At Lens: France, 14,000; Spain-Austria, 15,000

CASUALTIES: At the major battle, Rocroi: France, 4,000 killed; Spain, 8,000 killed, 7,000 captured. At Lens: France, relatively light losses; Spain-Austria, almost 15,000 killed, wounded, or captured

TREATIES: Peace of Westphalia, October 24, 1648

The political maneuvering behind this conflict was the complex work of Louis XIII's (1601–43) ruthless chief minister, Cardinal Richelieu (1585–1642). He sought to acquire the Rhineland for France and therefore pledged financial and military aid to Protestant German princes who agreed to accept Catholicism. These princes were engaged in the THIRTY YEARS' WAR against the Holy Roman Empire, which was ruled by the Catholic Hapsburgs. Like the Protestant Germans, the Catholic Richelieu wanted to contain the power of the Holy Roman Empire and the Hapsburgs. However, in 1635, the Holy Roman Emperor made peace with Saxony and the other Lutheran states, and Spain, a Hapsburg ally, began a war against the Netherlands. Having sought to thwart Hapsburg power, Richelieu now found himself facing increased Hapsburg influence. In response, he allied France with Chancellor Axel Oxenstierna (1583–1654) of Sweden, leader of the Protestant forces, and with the Netherlands. Thus connected, Richelieu declared war on Spain on May 21, 1635.

Richelieu's forces were deployed widely: in Italy, in the Netherlands, and on the Rhine. This left France itself vulnerable to invasion by the Bavarian and Spanish armies in 1636. The French repulsed the invasion, which was followed by another, this time by the Spanish army alone, the following year. Again, the French succeeded in ejecting the invaders. In Italy and the Netherlands, however, French forces suffered defeats during 1638. The following year, France's Dutch allies scored a major victory against Spanish naval power at the Battle of the Downs.

During 1641–42, internal problems in France, Spain, and Portugal, in the form of popular uprisings, forced a hiatus in the war, but, following the deaths of Richelieu as well as Louis XIII—and the subsequent ascension of Cardinal Jules Mazarin (1602–61) as regent to the five-year-old Louis XIV (1638–1715)—the great French general Louis II de Condé (1621–86) took command. In the spring of 1643, General Francisco de Melo (d. 1664), commander of the Spanish army, crossed what is today the border of Belgium and France and laid siege against Rocroi, west of the Meuse River. Leading 22,000 men, Condé marched to the relief of Rocroi, confronting Melo's 26,000-man force just south of the city. The two sides deployed their cavalry on the flanks, their infantry in the center. On the right flank, Condé opened with a cavalry charge that routed the Spanish cavalry to his front; however, on the other flank, Melo's cavalry pushed back the French cavalry on that side. Condé's next move was a spectacular wheel directly through the massed Spanish infantry, cutting off the frontline troops.

This panicked the troops behind—mostly Italians, Germans, and Walloons—and Condé was able to break through to the rear of Melo's cavalry, which was thus caught between an ongoing frontal attack by Condé's cavalry and a rear attack by his infantry. The Spanish cavalry fled the field, leaving Melo's infantry completely encircled. The remaining Spanish force fought gallantly, but the situation was hopeless. By the end of the day, surrounded, the Spanish infantry had died almost to a man. The loss was extraordinary, with implications well beyond the particular battle and the particular war. The flower of the Spanish army, the best-trained infantry in Europe, had died—in a single stroke—and Spain would never recover from the loss. Spain was all but completely knocked out of the war.

In Germany, France's Swedish allies advanced from the north while the French advanced from the south, pushing north across the Rhine. Under this pressure, representatives of the Holy Roman Empire met with Swedish and French negotiators in extremely protracted talks even while fighting continued. On August 2, 1648, Archduke Leopold William (1610–90), brother of Holy Roman Emperor Ferdinand III (1608–57), led an Austrian-Spanish army of 15,000 men into northwestern France, toward Arras. Condé intercepted the advance at Lens, 11 miles northeast of Arras. Through deft maneuvering, Condé deceived Leopold William into thinking that he was in retreat, only to double back and hit the Spanish-Austrian force in its flank. Even though Condé commanded somewhat fewer numbers, his surprise attack was devastating—a “second Rocroi”—resulting in the loss of almost the entire Spanish-Austrian army and leading directly to Ferdinand III's capitulation at the Peace of Westphalia on October 24, 1648.

The Peace of Westphalia effectively brought the Thirty Years' War to an end. It created a compromise between Protestants and Catholics by ending the political and military power of the Holy Roman Empire and replacing it with a recognition of the sovereignty of the German states. In the process, the treaty established France as the major power in Europe, and it elevated its ally Sweden to the status of most powerful Baltic nation.

Fries's Rebellion (Hot Water War) (1799)

PRINCIPAL COMBATANTS: German farmers of Bucks, Northampton, and Montgomery counties in Pennsylvania vs. U.S. tax assessors, army regulars, and militia

PRINCIPAL THEATER(S): Eastern Pennsylvania

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Tax rebellion—Pennsylvanians protested a direct federal tax levied against real property, including land, buildings, and slaves

OUTCOME: Federal troops moved in to rescue the tax assessors and suppress the insurrection.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Insurrectionists, several hundred; federal troops, unknown

CASUALTIES: None, except some tax assessors were scalded by boiling water

TREATIES: No formal treaty

In July 1798 when the U.S. Congress needed funds to mount an anticipated war against France, it passed a direct federal tax on real property—land, buildings, and slaves. Most Americans resented the tax, but perhaps none more so than the German farmers of Bucks, Northampton, and Montgomery counties in Pennsylvania. When federal officials moved into eastern Pennsylvania to assess properties, they encountered resistance from angry citizens led by John Fries (c. 1750–1818). Reportedly, wives of the tax rebels, protecting their homes from the assessors, scalded the officials with boiling water, thus the name: the Hot Water War.

Fries amassed a following of several hundred farmers, and when he marched on Bethlehem, Pennsylvania, to force—without violence—the release of tax resisters arrested by federal marshals, President John Adams called out the regular army and militia to suppress the insurrectionists. Wholesale arrests of Fries's followers ensued. Fries was arrested and tried twice. Found guilty of treason and condemned to be hanged in both trials, he was pardoned by the president in an order of general amnesty for all the protesters.

Fronde, Wars of the (1648–1653)

PRINCIPAL COMBATANTS: The Fronde (a group of nobles in antiroyal opposition in the Parlement of Paris) vs. royalist forces led by Cardinal Mazarin, Queen Anne, and Louis XIV

PRINCIPAL THEATER(S): France, especially Paris

DECLARATION: No official declaration

MAJOR ISSUES AND OBJECTIVES: The Fronde sought to check the absolute power of the monarchy.

OUTCOME: Internal dissent within the Fronde caused the antiroyalist opposition to fragment and fail; Louis XIV emerged as a monarch with absolute power.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Variable; Condé commanded 8,000 at the capture of Charenton, February 8, 1649; this was probably the largest single contingent engaged.

CASUALTIES: 50,000 dead on both sides, mostly as a result of disease and privation

TREATIES: Peace of Rueil, April 1, 1649

Fronde was the name of a children's game played in the streets of Paris in defiance of civil authorities. The name was applied to forces in the Parlement of Paris that opposed the growing power of royal government. The Wars of the Fronde were, in effect, a series of civil wars that attempted to check the developing absolutism of the French monarchy. The failure of the opposition in these wars may be the origin of the absolutism that marked the long reign of Louis XIV (1638–1715).

The Fronde began in reaction to policies developed by Cardinal Richelieu (1585–1642) during the reign of Louis XIII (1624–42). Richelieu strengthened the monarchy at the expense of the prerogatives of the nobility, and he also compromised the authority of the judicial bodies, or parlements. In 1648, the Parlement of Paris refused to approve the royal government's revenue appropriations, thereby setting off the Fronde of the Parlement. This opposition body sought to apply constitutional limits on the monarchy by arrogating to itself the right to discuss and modify royal decrees. The Fronde issued 27 articles for reform, which Cardinal Mazarin (1602–61), regent to the infant Louis XIV, acceded to. Engaged at the time in war with Spain, Mazarin did not dare provoke dissension at home. However, when the Spanish war resulted in a French victory, Mazarin moved to arrest two of the most outspoken Fronde leaders on August 26. This touched off an uprising in Paris, which forced the release of the men.

The conflict escalated in January 1649, when the royalist forces blockaded Paris in an effort to compel the surrender of Parlement. The government backed down and negotiated the Peace of Rueil on April 1, 1649, by which the rebels secured amnesty and obtained royal concessions to Parlement. Thus ended the first phase of the Wars of the Fronde, the Fronde of the Parlement.

The second phase, the Fronde of the Princes, spanned January 1650 to September 1653 and ushered in a confusing period of shifting allegiances and intrigues, which had

less to do with creating a constitutional government than with individual attempts to grab personal power. About the only thing that united the aristocrat-rebels was mutual opposition to Mazarin.

One of the most prominent figures to emerge during the Fronde of the Princes was Louis II de Bourbon, prince de Condé, known as the Great Condé (1621–86), cousin of Louis XIV and a military genius. He had supported the royalists during the first phase of the wars, but when he failed to satisfy his political ambitions by these efforts, he turned against the Crown. His arrest on January 18, 1650, prompted his friends and allies to stage a series of provincial uprisings. These conflicts are sometimes collectively called the First War of the Princes. These were crushed by government forces before the end of 1650.

After the First War of the Princes ended in defeat for the rebels, partisans of the Great Condé united with the so-called Parisian party—or the Old Fronde—to secure the release of Condé and the dismissal of Mazarin. They succeeded in both by February 1651, and Condé emerged briefly as leader of the *Frondeurs*. However, this rebel group was badly splintered, and Queen Anne (1602–66), mother of Louis XIV, was masterful in her exploitation of the factionalism. She joined forces with the Old Fronde and brought an indictment on Condé in August 1651. This provoked Condé to lead the Second War of the Princes, which spanned September 1651 to September 1653.

The culminating event of the Second War of the Princes was Condé's entrance into Paris in April 1652. Spanish forces rushed to his aid, but he suffered near-defeat at the hands of royal troops outside the walls of the city in a battle of July 2, 1652. This debacle lost him the support of the Parisian bourgeoisie, and Condé was never able to secure the approval of the Parlement. Unable to garner support, Condé left Paris on October 13, ultimately seeking refuge in the Spanish Netherlands.

With Condé gone, Louis XIV entered Paris on October 21, 1652, followed by Mazarin on February 3, 1653. This marked the royalist victory in the Wars of the Fronde, which not only established Mazarin's power, but set up Louis XIV for a reign in which royal prerogative would stand supreme. The nobility and the Parlement failed to achieve leadership of the government, and the supremacy of the monarchy was not seriously challenged again until the FRENCH REVOLUTION (1789–1799).

G

Gabriel's Rebellion (1800)

PRINCIPAL COMBATANTS: African-American slaves of Virginia under Gabriel Prosser vs. the state's white citizens

PRINCIPAL THEATER(S): Richmond, Virginia, and environs

DECLARATION: No formal declaration.

MAJOR ISSUES AND OBJECTIVES: An attempt on the part of African-American slaves to win their freedom and to establish a black nation within the state of Virginia.

OUTCOME: The impending revolt was betrayed before it occurred, it was suppressed by Virginia officials, and the leaders of the movement were hanged.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Estimates of slave enlistments vary widely from 2,000 to 50,000. About 1,000 slaves gathered on the night of the planned assault. Contemporary papers report that the Virginia militia could have mustered no more than 500 soldiers.

CASUALTIES: Thirty-five leaders, including Prosser, were hanged.

TREATIES: No formal treaties

In 1800, Gabriel Prosser (d. 1800), a 24-year-old slave, planned a rebellion against the white slaveholders of Virginia. Prosser was a deeply religious man, as were most leaders of slave revolts, and he was inspired to act by the fight for freedom and the stirring words of equality he heard from his fellow Virginians, Thomas Jefferson (1743–1826) and George Washington (1732–99).

Prosser organized a three-pronged attack on Richmond. Assembling some six miles outside the city, one

column planned to approach from the right to secure the arsenal and seize guns; the left column aimed for the powder house; the central column, attacking Richmond from both ends, was to kill every white person, except Frenchmen, Methodists, and Quakers. With Richmond secured, Prosser planned rapid assaults on other Virginia cities. If the scheme succeeded, Prosser would proclaim himself king of Virginia. If it failed, his army was to take to the woods and instigate a guerrilla war.

As Prosser's followers—estimated at about 1,000—gathered on the night of August 30, they did not know that their plans had been revealed to white officials. In truth, it hardly mattered because a thunderstorm washed out roads and bridges, making it impossible for Prosser to reach Richmond. Before he could regroup, he and 34 others were arrested, convicted, and hanged.

Galeruis's Invasion of Italy *See* ROMAN CIVIL WAR (306–307).

Gallic Wars: Ariovistusian Campaign
(58 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. Germanic tribes under Ariovistus

506 Gallic Wars: Ariovistusian Campaign

PRINCIPAL THEATER(S): Central Gaul (eastern France)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Julius Caesar sought to drive out of Gaul a raiding tribe under Ariovistus.

OUTCOME: After a brief campaign of maneuver, Caesar fought a decisive battle that routed and purged the tribe.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Romans, 50,000; Ariovistus, 75,000

CASUALTIES: Numbers unknown, but very heavy among the followers of Ariovistus.

TREATIES: None

Following the GALLIC WARS: HELVETIAN CAMPAIGN in 58 B.C.E., Gaius Julius Caesar (100–44 B.C.E.) next faced a threat from Ariovistus (fl. 58 B.C.E.) leader of a Germanic tribe that had been raiding the Gauls of Aedui, Sequani, and Arverni (modern Alsace and Franche-Comté, France).

Roman conquest of Gaul, 58–52 B.C.E.

Caesar's force of 50,000 cautiously sparred with Ariovistus's 75,000 warriors in the country east of Vesontio (Besançon) until, on September 10, Caesar determined that the time and place were right for an attack. The battle came in the vicinity of modern Belfort, Mulhouse, or Cernay. Caesar moved swiftly and achieved total surprise. Seizing the initiative, he never relinquished it, and the Germans, despite their superior numbers, were routed. They retreated in disarray across the Rhine, with Caesar in pursuit.

This victory elicited from central Gaul general acknowledgment of Roman suzerainty. Caesar took his forces into winter quarters at Vesontio.

Gallic Wars: Helvetian Campaign (58 B.C.E.)

PRINCIPAL COMBATANTS: Rome (with Gallic auxiliaries) and Helvetian migrants

PRINCIPAL THEATER(S): Gaul, principally the Jura Mountain region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Julius Caesar sought to repel a Helvetian invasion of Gaul.

OUTCOME: The Helvetians were defeated and suffered great losses; they withdrew to their original homeland in the region of modern Switzerland.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Helvetians, 100,000; Caesar, 30,000 legionnaires, plus about 25,000 Gallic warriors

CASUALTIES: Including many noncombatant civilians, 130,000 Helvetians died as a result of the Battle of Bibracte; Roman losses were heavy (though much smaller), but not precisely known.

TREATIES: None

In 58 B.C.E., Gaius Julius Caesar (100–44 B.C.E.), Roman triumvir and consul, became proconsul and governor of Gaul, taking in Istria, Illyricum, Cisalpine Gaul (the Po Valley), and Transalpine Gaul (southern France). He was immediately confronted by a migration—or invasion—of Helvetians, the Gallic tribe centered in modern Switzerland. Out of a population of nearly 400,000, 100,000 Helvetians were warriors.

Caesar gathered and concentrated his regular forces and also recruited various Gallic tribes who feared invasion by the Helvetians. By early spring, Caesar had mounted an effective blocking force, which sent the Helvetians into the Jura Mountains, north of the Rhône River. In June of 58, Caesar, leading a force of 34,000, intercepted the Helvetians as they crossed the Arar River. Caesar led his men on a forced night march, then immediately into a surprise attack. This daring move decimated the Helvetian force of 30,000 men who were still on the east bank of the Arar. Those who made it across, however, continued their march west toward the Liger (Loire) River. Caesar did not pursue, but warily followed them.

At Bibracte (Mount Beuvray), in July, the Helvetians, now about 70,000 strong, wheeled about and attacked Caesar's contingent of 30,000 legionnaires and 24,000 Gauls (this included 4,000 Gallic cavalrymen). Caesar's outnumbered forces quickly seized the initiative from the Helvetians, who were driven back to their camp. There tens of thousands of Helvetian migrants, men, women, and children, lived, and by the time the attack was over, 130,000 had perished. Those Helvetians who survived the battle surrendered and, at Caesar's demand, returned to their original homes east of the Jura Mountains.

Gallic Wars: Belgian Campaign (57 B.C.E.)

PRINCIPAL COMBATANTS: Romans (with Gallic auxiliaries) vs. the Belgae, Nervii, and Aduatuci

PRINCIPAL THEATER(S): Belgica (modern Belgium and surrounding region)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Julius Caesar sought to preempt a massive Belgian invasion.

OUTCOME: The Romans prevailed, bringing all central Gaul under their control.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Belgae, 100,000; Romans, 40,000 legionnaires with 20,000 Gallic auxiliaries; Nervii, 75,000

CASUALTIES: At the Battle of the Sabis, Nervii losses were 60,000 (of 75,000 engaged); Roman losses are unknown, but were substantial

TREATIES: None

The Belgae were a Gallic-Germanic people living in northeastern Gaul (region of modern Belgium). Distressed by Gaius Julius Caesar's earlier triumphs in the area (see GALLIC WARS: ARIOVISTUSIAN CAMPAIGN and GALLIC WARS: HELVETIAN CAMPAIGN), they organized a vast coalition against the Roman legions, mustering some 300,000 warriors to overwhelm them. Timely intelligence alerted Caesar (100–44 B.C.E.) to the activities of the Belgae, and prompted him to act preemptively. In April 57 B.C.E., he led a force of 40,000 Roman legionnaires supplemented by 20,000 Gallic auxiliaries in an invasion of Belgica (Belgium). Taken by surprise, Galba (fl. 57–58 B.C.E.), king of Suessiones (Soissons), mustered some 75,000 to 100,000 warriors and met Caesar's advance at the Battle of the Axona (Aisne) River. Caesar defeated Galba, then continued his invasion. His victory prompted some of the tribes to submit to the Romans, but others, led by the Nervii, remained resistant.

In July 57, Caesar's invasion force reached the Sabis (Sambre) River. Uncharacteristically having failed to make proper reconnaissance, Caesar's forces were ambushed as they made camp on the Sabis. Some 75,000 Nervii attacked. So well-disciplined were the legionnaires, however, that, despite their surprise, they refused to panic and instead mounted an effective defense. After beating off successive attacks, the Romans assumed the offensive and inflicted some 60,000 casualties.

Caesar pressed on with the invasion and by the autumn of 57 had penetrated the country of the Aduatuci. In September he laid siege to Aduatuca, the tribal capital (Tongres). The Aduatuci surrendered, only to fall upon the Romans as they entered the town. Caesar successfully repelled these attacks, seized the initiative, and slaughtered the attackers. This demonstration brought most of Belgica to its knees in submission to Rome.

Gallic Wars: Morinian and Menapiian Campaign (56 B.C.E.)

PRINCIPAL COMBATANTS: Romans vs. Morini and Menapii tribes

PRINCIPAL THEATER(S): Belgica (modern Belgium and the Netherlands)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Julius Caesar sought to suppress these rebellious tribes.

OUTCOME: Generally very successful in bringing Belgica under Roman control, Caesar nevertheless failed to run the Morini and Menapii to ground.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After successfully completing a campaign against the Veneti in 56 B.C.E. (see GALLIC WARS: VENETI CAMPAIGN), Gaius Julius Caesar (100–44 B.C.E.) turned to the suppression of rebellious tribes in the northwestern region of Belgica. All yielded rapidly except for the Morini and Menapii tribes, which successfully evaded the onslaught of the Roman legions by hiding in the marsh regions of the sea-coast of the Low Countries or by making a break for the dense wilderness of the Ardennes. Caesar was never able to suppress these tribes, which were the sole holdouts against the Roman domination of all Gaul.

See also GALLIC WARS: HELVETIAN CAMPAIGN; GALLIC WARS: BELGIAN CAMPAIGN; GALLIC WARS: FIRST INVASION OF BRITAIN; GALLIC WARS: GERMANIC CAMPAIGN; GALLIC WARS: REVOLT OF THE GAULS; GALLIC WARS: SECOND INVASION OF BRITAIN; GALLIC WARS: REVOLT OF THE BELGAE; GALLIC WARS: REVOLT IN CENTRAL GAUL; GALLIC WARS: FINAL PACIFICATION OF GAUL.

Further reading: Julius Caesar, *The Gallic War*, trans. Carolyn Hammond (New York: Oxford University Press, 1996).

Gallic Wars: Veneti Campaign (56 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. the Veneti

PRINCIPAL THEATER(S): Armorica (Brittany), Aquitania, Normandy, and the Rhineland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Julius Caesar sought to suppress rebellion by the Veneti of Armorica.

OUTCOME: The rebellion was suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Veneti were the tribal people of Armorica (Brittany). During the winter of 56 B.C.E., they took several Roman ambassadors captive, and they committed numerous acts

of rebellion against Roman authority in the region. Come spring, Gaius Julius Caesar (100–44 B.C.E.) decided to act to suppress the Veneti. At the head of three legions, he marched into Armorica, north of the Loire River. He coordinated this advance with the operation of another legion, under General Decimus Brutus (85–43 B.C.E.), which manned a fleet stationed near the mouth of the Loire. Simultaneously, Marcus Licinius Crassus (d. 53 B.C.E.) led troops numbering somewhat more than legion strength in an invasion of Aquitania in northwestern Gaul. A smaller force, under Titus Labienus (100–45 B.C.E.), campaigned near the Rhine, while another force, led by Q. Titurius Sabinus (d. 54 B.C.E.), occupied the region of modern Normandy.

All of these forces worked to suppress the Veneti, systematically closing in on and laying siege to fortified towns. However, the major action took place at sea, in Quiberon Bay (the Gulf of Morbihan), where Roman galleys, though inferior to the ships of the Veneti, nevertheless outmaneuvered the larger vessels, enabling Roman legionnaires to slash the rigging of the Veneti ships by means of sickles lashed to long poles. This extraordinary tactic effectively disabled the Veneti fleet. Once the fleet was thus neutralized, the land campaign against the Veneti proceeded apace. Caesar was ruthless in visiting reprisals for the abuse inflicted on Roman ambassadors, and the Veneti, much abashed, acknowledged Roman suzerainty.

Galic Wars: First Invasion of Britain

(55 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. the Britons

PRINCIPAL THEATER(S): Britain, on the Dover coast

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: This was a preliminary, exploratory invasion of Britain.

OUTCOME: Julius Caesar overcame local resistance, concluded a truce with the Britons, then withdrew to Gaul.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rome, two legions; Britons, unknown

CASUALTIES: Unknown

TREATIES: Truce, 55 B.C.E.

Having secured Gaul by the summer of 55 B.C.E., Gaius Julius Caesar (100–44 B.C.E.) led two legions in an invasion of Britain, landing near Dubra (Dover) during August 55 B.C.E. The Britons resisted on the beaches, but Caesar bombarded the defenders with ship-mounted catapults. Softened up by this preinvasion bombardment, the Britons still fought hard, but were overcome quickly. A truce was concluded, and Caesar, having made his initial impression, withdrew to Gaul after occupying Britain for a mere three weeks.

See also GALLIC WARS: HELVETIAN CAMPAIGN; GALLIC WARS: BELGIAN CAMPAIGN; GALLIC WARS: VENETI CAMPAIGN; GALLIC WARS: GERMANIC CAMPAIGN; GALLIC WARS: REVOLT OF THE GAULS; GALLIC WARS: SECOND INVASION OF BRITAIN; GALLIC WARS: REVOLT OF THE BELGAE; GALLIC WARS: REVOLT IN CENTRAL GAUL; GALLIC WARS: FINAL PACIFICATION OF GAUL.

Further reading: Julius Caesar, *The Gallic War*, trans. Carolyn Hammond (New York: Oxford University Press, 1996).

Galic Wars: Germanic Campaign (55 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. the Usipetes and Tencteri tribes

PRINCIPAL THEATER(S): Gaul, between the Meuse and Rhine Rivers

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Julius Caesar sought to drive out Germanic invaders from Gaul—and to set a brutal example that would discourage future invasions.

OUTCOME: Caesar succeeded both in evicting (or killing) the Usipetes and Tencteri and in intimidating other tribes.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Roman strength was several legions; Usipetes and Tencteri fielded about 100,000 warriors.

CASUALTIES: Many of the 430,000 Usipetes and Tencteri in Gaul, men, women, and children, were slaughtered.

TREATIES: None

In 55 B.C.E., the Usipetes and Tencteri, Germanic tribes, invaded Gaul by crossing the Rhine River. Numbering some 430,000 and able to field at least 100,000 warriors, these people set up villages on the Meuse River near the modern city of Maastricht. Gaius Julius Caesar (100–44 B.C.E.) attempted to negotiate with the tribal leaders in May, hoping to persuade them to return to Germany. When Caesar discovered that they planned to attack during the negotiations, he resolved to act so vigorously against the invaders that no other German tribe would ever dare invade again.

Caesar embarked on the negotiations, but bested the Usipetes and Tencteri at their own game by making a

surprise attack during the talks, hitting the invaders between the Meuse and the Rhine. Not only did his legions destroy the invading army, they were turned loose against the women and children as well.

The massacre was condemned in Rome, but Caesar argued that it had been necessary, and he took his campaign of terror into Germany itself. In June 55 B.C.E., he crossed the Rhine near the site of present-day Bonn and built a spectacular bridge across the river. He marched his legions en masse across the span, a feat that, as he had planned, thoroughly intimidated the local tribes. After securing their allegiance and submission, Caesar returned to Gaul—and destroyed the bridge, lest it be used at some future time by Germanic invaders.

Gallic Wars: Revolt of the Gauls

(54–53 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. the Gauls (especially Nervii)

PRINCIPAL THEATER(S): Northeastern Gaul

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Gauls attempted an uprising against Roman domination.

OUTCOME: Led by Julius Caesar, the Romans defeated the Nervii and suppressed the Gallic uprisings.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Gauls, potentially 1,000,000; actually fielded, more than 60,000 Nervii; total Roman strength was no more than 50,000 men.

CASUALTIES: Unknown

TREATIES: None

By 54 B.C.E., all Gaul was ready to erupt into rebellion. Potentially, the Gauls could muster 1,000,000 (a contemporary claim, probably grossly inflated) warriors, whereas the Roman army of occupation amounted to no more than 50,000 men. However, the Gallic tribes never fully united.

The principal uprising against Rome was led by the Nervii chief Ambiorix (fl. 54–52 B.C.E.), who attacked Q. Titurius Sabinus (fl. 54 B.C.E.) near Aduatuca. Ambiorix offered Sabinus a safe conduct to rejoin the other legions,

but as soon as the legions were on the march, Ambiorix attacked and destroyed them. He moved next against the major camp of Quintus Cicero (c. 102–43 B.C.E.), near the modern town of Binche. Cicero's forces repulsed the attack, whereupon Ambiorix tried to entice him into open battle. Cicero steeled his nerves and continued to defend the camp. He managed to dispatch a messenger to Gaius Julius Caesar (100–44 B.C.E.), who marched to Cicero's relief with a small force of 7,000 men—all he could muster on short notice.

Ambiorix marched to meet Caesar with 60,000 men, while keeping Cicero under siege with a substantial force. Vastly outnumbered, Caesar lured Ambiorix into a careless attack. Caesar was then able to mount a swift counter-attack and drive Ambiorix from the field. Caesar went on to relieve Cicero and was soon joined by Titus Labienus (100–45 B.C.E.) and his forces. Thus united, the Romans established secure winter quarters.

Gallic Wars: Second Invasion of Britain

(54 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. Britons under Chief Cassivellaunus

PRINCIPAL THEATER(S): Southeastern Britain (region of London)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Julius Caesar sought the submission of the Britons.

OUTCOME: Caesar received the submission of the Britons, but he did not occupy the country at this time.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Romans, 22,000; Britons, unknown

CASUALTIES: Unknown

TREATIES: None

After making a preliminary invasion the year before (*see* GALLIC Wars: FIRST INVASION OF BRITAIN), Gaius Julius Caesar (100–44 B.C.E.) returned to Britain in strength—five legions (20,000 men) with 2,000 cavalry troopers. As before, he landed at Dubra (Dover), and this time was unopposed—although a severe Channel storm posed a serious threat to his force.

Chief Cassivellaunus (fl. 54 B.C.E.) mustered a defensive force to counter the invasion, but it was no match for the advancing legions. The legions crossed the Thames west of the site of modern London and were frequently harassed by Cassivellaunus, who wisely avoided a head-on attack. When it was clear to the British chief that the Romans were not about to be intimidated into leaving the island, he sued for peace in a conference near Verulamium (St. Albans). Caesar contented himself with Cassivellaunus's professions of submission and made no attempt to occupy the country he had at least nominally conquered.

Gallic Wars: Revolt of the Belgae (53 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. the Belgae
PRINCIPAL THEATER(S): Belgica (around Belgium)
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: Julius Caesar wanted to suppress rebellion in Belgica.
OUTCOME: A strong show of force succeeded in suppressing rebellion throughout the region.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Rome, 10 legions
CASUALTIES: Unknown
TREATIES: None

Gaius Julius Caesar (100–44 B.C.E.) had only narrowly suppressed a Gallic rebellion led by Ambiorix (fl. 54–52 B.C.E.) of the Nervii (*see* GALLIC WARS: REVOLT OF THE GAULS) from 54 to 52 B.C.E. but by 53 he had mustered 10 full legions and was prepared to seize the initiative. He marched into Belgica, and although he did not force the rebellious Belgae into a major open battle, his ceaseless pursuit of rebel groups effectively wore them down. Understanding that some German tribes had assisted Ambiorix, Caesar built a new bridge across the Rhine as a demonstration of the ease with which he could invade and devastate the region. The pursuit and this demonstration brought Belgica under control.

See also GALLIC WARS: HELVETIAN CAMPAIGN; GALLIC WARS: BELGIAN CAMPAIGN; GALLIC WARS: VENETI CAMPAIGN; GALLIC WARS: FIRST INVASION OF BRITAIN; GALLIC WARS: GERMANIC CAMPAIGN; GALLIC WARS: REVOLT IN

CENTRAL GAUL; GALLIC WARS: FINAL PACIFICATION OF GAUL.

Further reading: Julius Caesar, *The Gallic War*, trans. Carolyn Hammond (New York: Oxford University Press, 1996).

Gallic Wars: Revolt in Central Gaul

(53–52 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. the Gauls under Vercingetorix
PRINCIPAL THEATER(S): Central Gaul
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: Vercingetorix led the biggest rebellion against Roman rule in Gaul.
OUTCOME: Although dramatically outnumbered, Julius Caesar defeated Vercingetorix and thereby broke the back of rebellion in central Gaul.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Vercingetorix's forces, 95,000; Gallic relief force, 240,000; Roman legions, 55,000
CASUALTIES: Unknown
TREATIES: None

The remarkable Arverni chieftain Vercingetorix (d. 46 B.C.E.) led a sudden rebellion among the tribes of central Gaul, which Gaius Julius Caesar (100–44 B.C.E.) had considered fully secure. For the first time, the disparate Gallic tribes united, and, under Vercingetorix, warriors became a disciplined and effective army. As the uprising began, most of the Roman legions were in northern Gaul, and Caesar himself was in Italy. Caesar was back in Gaul by January. In February 52, he led a small force from southern Gaul, through the Cevennes Mountains, and around Vercingetorix. He was able to join the legions in the Loire region, then launched an attack against Cenabum (Orléans), where the rebellion had begun. Caesar recaptured the town.

Dispatching legions under Titus Labienus (100–45 B.C.E.) to hold northern Gaul, Caesar led an expedition into southern Gaul, the heart of Vercingetorix's power. Caesar recaptured town after town as Vercingetorix made a highly destructive fighting retreat, in which he enforced a scorched-earth policy that inflicted great hardship on the legions.

In March 52, the Roman legions, hungry and short of supplies, were outside of Vercingetorix's stronghold at Avaricum (Bourges). They laid siege to the town, which fell but Vercingetorix eluded capture. Caesar pressed his weary troops southward and laid siege to Gergovia (modern Gergovie), the capital of the Arverni. Vercingetorix fortified the capital extensively and, during April and May 52, withstood Caesar's siege. Impatient and critically short

of supplies, Caesar prematurely ordered an attack, which was repulsed with great loss of life. Caesar withdrew from Gergovia and joined Labienus in the north.

At this point, Caesar was forced to acknowledge that he had lost control of Gaul. He retreated to Province, his main base, to regroup with supplies and reinforcements. However, Vercingetorix, leading an army of 80,000 infantry and 15,000 cavalry, deployed his forces in the hill country along the Vingeanne, a tributary of the upper Saône. His object was to block Caesar and force him into battle.

In July, the Battle of the Vingeanne commenced. Vercingetorix hesitated, however, and thereby lost the initiative—which Caesar, as always, was quick to seize. Vercingetorix retreated, and Caesar pursued. The Arverni leader ensconced his forces in the fortified mountaintop town of Alesia (Alise-Ste-Reine), located on Mount Auxois. At this point, he had 90,000 men with which to oppose Caesar's 55,000, and he also enjoyed a superior position. As usual, Caesar did not let inferiority of numbers or position inhibit him. He attacked with great vigor, forcing the Gauls to hole up within the walls of Alesia. Then Caesar put his engineers to work building a giant siege-work wall, some 14 miles in circumference, around the town. After this great project had been completed, a tremendous Gallic force of 240,000 marched to the aid of Vercingetorix. This force laid siege to Caesar, even as he continued to hold Alesia under siege. Caesar, however, was fully prepared to withstand a long siege and had plenty of supplies. He allowed the relief force to make three attacks, all three times repulsing them and inflicting great losses. In the meantime, Vercingetorix and his followers were starving. When he tried to send women and children through the Roman lines, Caesar turned them back. At last Vercingetorix surrendered. This broke the back of the rebellion in central Gaul. The relief army dispersed. Vercingetorix was marched back to Rome, where he was there executed six years later.

Gallic Wars: Final Pacification of Gaul

(51 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. Gallic rebels

PRINCIPAL THEATER(S): Gaul

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A “mop-up” operation to ensure all pockets of rebellion had been crushed.

OUTCOME: The pacification was successful, and Gaul became a secure part of the Roman Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rome, about 55,000 men; no other figures known.

CASUALTIES: Few casualties in this campaign.

TREATIES: None

The defeat and execution of Vercingetorix (d. 46 B.C.E.), greatest of the Gallic chieftains (*see* GALLIC WARS: REVOLT IN CENTRAL GAUL), broke the back of rebellion in Gaul. However, Gaius Julius Caesar (100–44 B.C.E.) conducted an extensive “mop-up” operation, ensuring that he had thoroughly extinguished all pockets of persistent rebellion. This grand tour through Gaul was also intended to impress the people of that country with the might and majesty of the Roman legions, and in this Caesar was highly successful. Gaul was now securely in Roman hands and a key addition to the empire.

See also GALLIC WARS: HELVETIAN CAMPAIGN; GALLIC WARS: BELGIAN CAMPAIGN; GALLIC WARS: VENETI CAMPAIGN; GALLIC WARS: FIRST INVASION OF BRITAIN; GALLIC WARS: GERMANIC CAMPAIGN; GALLIC WARS: REVOLT OF THE BELGAE; GALLIC WARS: REVOLT OF THE GAULS; GALLIC WARS: REVOLT IN CENTRAL GAUL.

Further reading: Julius Caesar, *The Gallic War*, trans. Carolyn Hammond (New York: Oxford University Press, 1996).

Garibaldi's Invasion of Sicily (1860)

PRINCIPAL COMBATANTS: Giuseppe Garibaldi's “Thousand Redshirts” vs. forces of Naples

PRINCIPAL THEATER(S): Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The nationalist Garibaldi sought to wrest Sicily from Neapolitan control preparatory to the conquest of Naples and, ultimately, the unification of Italy as a single kingdom.

OUTCOME: Sicily fell to Garibaldi.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

The core of Garibaldi's force consisted of about 1,000 men, and 2,000 Sicilian guerrillas (the *Picciotti*) joined later; Neapolitan forces, 22,000.

CASUALTIES: Garibaldi lost 800 killed or wounded; the Neapolitans suffered 1,300 or more killed or wounded.

TREATIES: None

The Risorgimento, or reunification, of Italy spanned 1850 to 1870, and one of its military highlights was the liberation of Sicily from the Kingdom of Naples in 1860. This

was led by Giuseppe Garibaldi (1807–82) and covertly supported by Victor Emmanuel II (1820–78), king of Piedmont, and his brilliant prime minister, Count Camillo Cavour (1810–61).

Although a revolt broke out in Naples in April 1860, only to be suppressed in May, Garibaldi sailed for Sicily—at the time part of the kingdom of Naples—with “The Thousand,” a brigade of 1,000 Redshirt legionnaires loyal to him. The Thousand landed on May 11 and fought its first battle against Neapolitan forces on May 15 at Calatafami. For this encounter against 4,000 Neapolitan troops, Garibaldi’s 1,000 Redshirts were augmented by 2,000 Sicilian guerrillas, known as the *Picciotti*. Although still outnumbered, Garibaldi and the Sicilians defeated the Neapolitan forces, opening the way, during May 26–27, for an assault on Palermo, chief city of Sicily. Garibaldi led 750 Redshirts and 3,000 *Picciotti* against a garrison of 18,000. Despite the disparity in numbers, the city fell to Garibaldi, and he advanced to Milazzo. There, on June 20, he was victorious, although his forces suffered severe losses—755 killed or wounded—compared to 162 casualties among the Neapolitans. Nevertheless, it was the Neapolitans who surrendered and gave up the city to Garibaldi.

The fall of Palermo and Milazzo signaled the liberation of Sicily, and from this conquest, Garibaldi led forces across the Strait of Messina to Naples, which fell to him on September 7.

Further reading: Denis Mack Smith, *Cavour and Garibaldi, 1860: A Study in Political Conflict* (New York: Cambridge University Press, 1985); George MacAway Trevelyan, *Garibaldi and the Making of Italy* (London: Phoenix Press, 2002).

Gascon Nobles’ Revolt (1368)

PRINCIPAL COMBATANTS: Gascon nobles vs. Edward III

PRINCIPAL THEATER(S): Aquitaine

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The nobles sought relief from Edward’s irresponsible, oppressive, and economically burdensome government.

OUTCOME: Charles V (Charles the Wise) of France intervened, renewing the Hundred Years’ War, to the disadvantage of Edward.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Not applicable

CASUALTIES: Not applicable

TREATIES: The document in question was the Treaty of Brétigny, May 8, 1360; Charles V now deemed invalid clauses relating to Edward’s sovereignty over Aquitaine, thereby reigniting the Hundred Years’ War.

This action was an episode of the HUNDRED YEARS’ WAR and less a war in itself than an adroit diplomatic and strategic maneuver on the part of Charles V (Charles the Wise; 1338–80) of France.

Charles’s nominal vassal, Edward III (r. 1327–77), ruler of Aquitaine, was an irresponsible monarch who did not hesitate to live extravagantly at the expense of the Gascons while ruling the realm through oppressive policies and burdensome taxes. At length, the Gascon nobles rebelled by appealing to Charles to intercede in 1368. In response, Charles turned to the Treaty of Brétigny, which had been concluded on May 8, 1360, between France and England. Among other things, the treaty gave Edward III full sovereignty over Aquitaine in exchange for his renunciation of his claim to the French throne and a further renunciation of any claim to sovereignty over territories outside of those specified in the treaty. Charles now recognized that although the treaty had been in force for eight years, certain key clauses regarding each king’s renunciation of the other’s newly agreed-to territories had been relegated to a separate document, which never had been officially ratified. Charles now summoned the eldest son of his vassal, Edward the Black Prince (1330–76), to Paris, presumably to inform him that his father’s sovereignty over Aquitaine was invalid. As Charles had assumed, Edward refused to come. Charles then had a cause for resumption of the Hundred Years’ War—this time in a context disadvantageous to Edward, whose territories rose up in rebellion, giving the French, under Charles, a series of advances.

Gaston of Foix, Campaigns of (1511–1512)

PRINCIPAL COMBATANTS: France vs. papal-Spanish forces

PRINCIPAL THEATER(S): Northern Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of northern Italy

OUTCOME: The French achieved control of northern Italy, but the loss of the great French commander Gaston of Foix exposed France to later invasion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Gaston’s French forces, 23,000; papal-Spanish forces, 16,000 plus 5,000 garrison troops

CASUALTIES: France, 4,500 killed, 4,500 wounded; papal-Spanish forces, 9,000 killed, an unknown number wounded, many captured

TREATIES: None

Gaston of Foix (1489–1512), the duke of Nemours, joined in the Italian wars of Louis XII (1462–1515) with a

brilliant series of campaigns against Bologna, Brescia, and Ravenna.

Although France had taken Bologna on May 13, 1511, a combined papal-Spanish force under Raymond of Cardona (fl. 1512), the Neapolitan viceroy, laid siege to the city in an effort to retake it. Gaston led an army to the relief of the city, driving off Raymond's forces. This accomplished, he turned to the north and advanced against Brescia, which was in the hands of the Venetians. Outside the city, Gaston defeated the Venetian forces, then laid siege to Brescia itself, which he captured in February 1512.

The capture of Brescia put most of northern Italy under Gaston's control. He therefore marched south, to lay siege against the Spanish in Ravenna. Wary of the remarkable Gaston of Foix, however, the combined papal-Spanish army moved with great caution toward Ravenna, seeking to establish an impregnable defensive position. Raymond of Cardona's force consisted of some 16,000 men, and the Ravenna garrison numbered 5,000. Against these, Gaston fielded 23,000, including some 8,500 German mercenaries, the *landsknechts*.

The Battle of Ravenna was fought on April 11, 1512. It was fierce and bloody, and one of its early casualties included Gaston of Foix, killed in an otherwise unremarkable skirmish. Beyond this, French losses were heavy, with some 4,500 killed and an equal number wounded. But papal-Spanish losses were heavier still: 9,000 killed and an unknown number wounded. Pedro Navarro (c. 1460–1528), the brilliant Spanish military engineer and commander of Spanish infantry, was captured, and when Spain declined to ransom him, he switched his allegiance to France. Although this acquisition was highly valuable, the French forces never overcame the loss of Gaston of Foix, and France was subsequently invaded by the English and, separately, by the Swiss.

Gempei War (Taira-Minamoto War) (1180–1185)

PRINCIPAL COMBATANTS: Minamoto clan vs. Taira clan

PRINCIPAL THEATER(S): Japan

DECLARATION: Call to war, 1180

MAJOR ISSUES AND OBJECTIVES: Minamoto Yoritomo sought to establish the dominance of his clan over that of the ruling Tairas.

OUTCOME: Yoritomo succeeded in bringing Japan under the control of the Minamotos and, in the process, established the shoguns as great powers in Japanese government.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Variable, but unknown; some battles fielded as many as 30,000 men on a side.

CASUALTIES: Unknown

TREATIES: No treaty, but an imperial proclamation named Minamoto Yoritomo sei-i-tai-shogun for life in 1191.

Also called the Taira-Minamoto War, this was the concluding contest between the Taira and Minamoto clans, which resulted in the Minamoto clan's establishment of the Kamakura shogunate, the military dictatorship that dominated Japan from 1192 to 1333.

In May 1180, Prince Mochihito, son of retired Emperor Go-Shirakawa (1127–92), issued a proclamation urging the Minamoto clan to rise against the Taira. In September, Minamoto Yoritomo (1147–99) responded to the call by raising an army in the eastern Japanese province of Kwanto, to which he had been exiled after his father, leader of the Minamoto clan, had been killed. Yoritomo's forces killed the local Taira governor, but they were defeated at the Battle of Ishibashiyama by a Taira force under Oba Kagechika (fl. 1180). Despite this defeat, Yoritomo's army continued to grow, and various local Taira officials were killed throughout Japan. By the spring of 1181, Yoritomo had the support of most of the prominent families in the Kanto domain. For a time, Yoritomo contented himself with consolidating his hold on this domain rather than attempting to spread the rebellion beyond it, but within two years, his forces were powerful enough to drive the Taira entirely out of Kwanto. Then, in 1183, Yoritomo led an advance on the Taira capital of Kyoto. After taking the capital, Yoritomo advanced into the western domains, where the Taira were still firmly established. In a series of battles, Yoritomo wore the Taira down. The culminating battle, Dan-no-ura, took place at sea in April 1185, when Yoritomo's fleet virtually destroyed that of the Taira at the western end of the Inland Sea. In this battle, the infant Emperor Antoku (d. 1185), a grandson of Taira no Kiyomori (1118–81), was drowned, as were many of the leaders of the Taira clan. Those who survived were, for the most part, executed. The battle itself became the stuff of Japanese legend through such classic literary accounts as the *Gempei seisui-ki* (Record of the rise and fall of the Minamoto and Taira), largely because of the loss of Antoku, along with a great sword, one of the Imperial Treasures of Japan brought from heaven by the first Japanese emperor. The loss of this sword betokened the revolutionary change created by Yoritomo's victory.

The victory at Dan-no-ura put Yoritomo on the path to assume control of the entire empire. Yoritomo had not merely suppressed a rival warrior clan, but had, for the first time in Japanese history, created an effective alliance among regional powers. In the process, he also built a government, establishing policies and institutions that supplanted aristocratic rule. The Minamoto created new

government offices and appointed to them warriors whose loyalty to the Minamoto clan came before all else. In 1191, Yoritomo visited the new emperor in Kyoto, who certified Yoritomo's dominance of the empire by appointing him sei-i-tai-shogun ("barbarian-defeating generalissimo") for life. He thus became the first of the great shoguns, and this appointment marked the beginning of the great medieval courts of Japan and the power of the shoguns.

Genghis Khan's Conquest of Kara-Khitai (1217)

PRINCIPAL COMBATANTS: Genghis (Chinggis) Khan vs. the Kara-Khitai

PRINCIPAL THEATER(S): Kara-Khitai (in modern Kyrgyzstan, Central Asia)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: The Mongols defeated the Kara-Khitai forces of the usurper Kushluk, and Genghis Khan annexed the country.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Mongols, 20,000 men; Kara-Khitai, numbers unknown, but far superior

CASUALTIES: Unknown

TREATIES: None

Kushluk (fl. early 13th century), leader of the Naiman tribe, was defeated by Genghis Khan (c. 1162–1227) in the 1208 Battle of Irtysh. He fled the field and found refuge among the Kara-Khitai Tatars. During 1209–16, however, Kushluk, in concert with Mohammad Shah (r. 1098–1128) of Khwarazm, turned on his host and protector, the khan of Kara-Khitai, and carried out a coup d'état, which culminated in his usurpation of the Kara-Khitai

throne. From this position, Kushluk swore vengeance on Genghis Khan.

Genghis Khan knew that he had to check the threat posed by Kushluk, but he was also aware that his vast army was worn out by a decade of continual campaigning. Therefore, he detached the freshest troops, some 20,000 men, put them under the command of one of his ablest commanders, General Chepe (fl. early 13th century), then dispatched these forces to Kara-Khitai.

Outnumbered, Chepe understood that he had to employ what military tacticians call a "force multiplier," a means to compensate for his relatively small numbers. He therefore incited a rebellion among the Tatars. Once this was under way and the country thrown into chaos, Chepe attacked and defeated Kushluk's forces west of Kashgar. The treacherous usurper was captured and summarily executed, whereupon Genghis Khan annexed Kara-Khitai.

Genghis Khan's First War with the Xi Xia Empire (1205–1209)

PRINCIPAL COMBATANTS: Mongols vs. Xia Tanguts

PRINCIPAL THEATER(S): Western Xia empire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Genghis (Chinggis) Khan sought suzerainty over the Xi Xia (Hsi Hsia) Empire, in part to control Chinese-Western trade routes and in part as a base from which to continue westward conquest.

OUTCOME: The Mongols waged a successful war of attrition against the Xi Xia, compelling them to accept Mongol suzerainty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No surviving documents

Genghis Khan (c. 1162–1227) saw conquest of the Xi Xia, or Western Xia—a Chinese empire south of the Gobi Desert and west of Cathay, the empire of the Jin—as a means of controlling and profiting from the great caravan routes between China and the West. Although the Xi Xia were ruled by the Tanguts, a warrior people, the empire was poorly organized, weak, and ripe for conquest. Genghis Khan conducted the war as a series of massed, highly disciplined raids throughout the countryside dur-

ing 1205, 1207, and 1209. No great cities were attacked, but the Xi Xia were so thoroughly worn down by three terrible raids that they sued for peace after the third, in 1209, and accepted Mongol dominion over them.

Far from being the brutal and rapacious conqueror popular history frequently portrays, Genghis Khan combined diplomacy and what today would be termed “nation building” with military conquest. He was eager to come to terms with the Xi Xia, to acquire control of the empire, but to allow the people to live their lives and, indeed, to live them better than they had under the Jin. From this conquest, Genghis Khan was in an excellent position to press Mongol expansion westward.

Genghis Khan's Second War with the Xi Xia Empire (1226–1227)

PRINCIPAL COMBATANTS: Mongols vs. Tanguts of Xi Xia (Hsi Hsia)

PRINCIPAL THEATER(S): Xi Xia and Ning-Xia, imperial capital

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Genghis Khan sought vengeance against his rebellious vassal.

OUTCOME: Ning-Xia was destroyed and Tangut hegemony in Xi Xia ended.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Mongols 180,000; Xia Tanguts, 300,000+

CASUALTIES: Xia Tanguts, 300,000 killed; Mongol casualties unknown

TREATIES: None

The Mongols' second war against the Xi Xia, or Western Xia Empire, came about when the Tangut vassal ruling that realm decided to assert autonomy by refusing to render to Genghis Khan (c. 1162–1227) the service appropriate from a vassal (*see* GENGHIS KHAN'S FIRST WAR WITH THE XI XIA EMPIRE). Preparatory to launching his war against Persia (*see* MONGOL-PERSIAN WAR, FIRST), Genghis Khan called upon the Xi Xia for troops. Not only did the Tangut ruler of Xi Xia refuse to deliver the troops, he replied contemptuously that if Genghis Khan lacked sufficient numbers for conquest, he no longer had the right to rule.

In response to this act of rebellion, Genghis Khan invaded the Xia late in 1226, when the rivers were frozen,

allowing for rapid passage of the Mongol army. Some 180,000 Mongols met 300,000 Xi Xias on a frozen battlefield: the Yellow River. From the beginning, Genghis Khan was in control of the battle. He enticed the Xia Tangut to advance onto the river, then attacked the Xia Tangut cavalry with dismounted archers. This threw the Xia Tangut into a confused panic, which the Mongols exploited in a series of charges. Simultaneously, Genghis Khan's infantry seized the initiative by attacking the Xia Tangut infantry still waiting on the far bank of the Yellow River. The Mongol victors reported virtually 100 percent casualties among the Tangut Xias, perhaps 300,000 killed.

Following the victory at Yellow River, the Mongols attacked Ning-Xia, capital of the Xi Xia empire. During the siege, Genghis Khan dispatched raiding units to lay waste to the surrounding countryside. However, Genghis Khan died before Ning-Xia fell. His commanders continued the war and took the capital. They put the entire population of the city to death and killed the rebellious Tangut emperor. With the destruction of Ning-Xia, Tangut rule over the empire ended forever.

Genghis Khan's Unification of Mongolia (1190–1206)

PRINCIPAL COMBATANTS: Genghis Khan vs. rival warlords of Mongolia

PRINCIPAL THEATER(S): Mongolia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Consolidation of empire

OUTCOME: Genghis Khan consolidated fractious Mongol tribes into a large and remarkably homogeneous empire, which, in turn, served as the core of a much larger empire of conquest and diplomacy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Presumably no formal treaties

Temujin (c. 1162–1227), who would become known to history as Genghis Khan—Supreme Emperor—combined military conquest with brilliant diplomacy to bring together the disparate tribes of Mongolia into a large east-central Asian empire. By 1206, he had established the core of an empire that would become far vaster, all cen-

tered on the capital he created at Karakorum. From this nucleus, he would expand into China, India, Russia, and Europe.

Genghis Khan's War with the Jin Empire (1211–1215)

PRINCIPAL COMBATANTS: Genghis Khan vs. the Jin (Chin) Empire

PRINCIPAL THEATER(S): Northern China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: Genghis Khan compelled the Jin emperor to yield to the suzerainty of the Mongols.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Concession of the Jin emperor, 1215

For two years, during 1211 and 1212, Genghis Khan (c. 1162–1227) attacked the cities of northern China in vain. His forces were repeatedly frustrated by the well-developed fortifications of the Chinese cities, and the Mongols, accustomed to conducting warfare on the run, using lightning raids, had never developed siegecraft. Genghis Khan recognized the need to develop a siege train, and he did so, returning in 1213. His forces penetrated as far as the Great Wall by the end of the year.

From 1213 on, Genghis Khan led his armies deeper into Jin lands, defeating the Jin in the central region of their own territory, between the Great Wall and the Yellow River. Taking one city after the other, Genghis Khan laid siege to Beijing, which fell to him in 1215. He sacked the Jin capital, forcing the Jin emperor to acknowledge Mongol suzerainty over his realm.

In a procedure typical of Genghis Khan, the conqueror co-opted local authority by offering key leaders positions of power rather than simply eliminating them. In this case, Yeh-lu Chu'u-ta'ai (fl. 1215), a Khitan in the service of the Jin, became one of the Khan's most important administrators. As Genghis Khan had recognized the need to adapt by developing siegecraft, so now he saw that the Khitan official had expertise in administering sedentary populations, a skill the Mongols lacked.

German Civil Wars (938–941)

PRINCIPAL COMBATANTS: Otto I vs. his half brother Thankmur; Otto I vs. French-backed German nobles

PRINCIPAL THEATER(S): Germany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Germany

OUTCOME: Otto increased his central authority over Germany.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Carolingian Empire fell into decline immediately following the death of Charlemagne (742–814) and the ascension to power of his son, Louis I the Pious (768–840). A bad ruler and an even worse soldier, Louis faced increasingly bold Viking raiders just as his sons, squabbling over their inheritances, launched a civil war. For almost 50 years something approaching anarchy ruled Carolingian Europe as a result of this combination—continuous dynastic civil wars laced with frequent Viking raids. As the central authority of the Carolingian Empire fell into decline, the power of the nobility increased. In Germany more so than in France (where rulers would remain nominally Carolingian for another century), the nobles' growing power meant that old tribal organizations suddenly became independent duchies. And it opened the door to Europe for Muslim raiders from North Africa (*see* MAGYAR RAIDS IN FRANCE; MAGYAR RAIDS IN THE HOLY ROMAN EMPIRE; MAGYAR RAID INTO EUROPE, FIRST).

Central authority continued to decline in Germany until it was revived by the coming to power of a talented soldier, diplomat, and administrator named Henry the Fowler (r. 919–936) (Henry I). It was his son, Otto I the Great (912–973) who would decisively defeat the Muslims at the battle of Lechfield (*see* MAGYAR RAID, GREAT) and, in effect, create a new Holy Roman Empire. But before he faced the Magyars, Otto was forced to put down two rebellions in the early years of his reign.

The first was led by his half brother, Thankmur (fl. 10th century), and lasted less than a year during 938–939.

The second was more serious and lasted longer, from 939 to 941. A group of German nobles, led by Otto's younger brother Henry (fl. 10th century), launched a civil war once they had secured the backing of France's Louis IV (920–954). Otto won major victories in the 940 battle of Xanten and at the battle of Andernach in 941. These triumphs brought Lorraine under German control and enhanced Otto's power. Despite Henry's thwarted plot to murder his brother, Otto forgave him, although he severely punished his rebellious coconspirators. Henry remained loyal ever afterward and, in 947, Otto made him duke of Bavaria. Otto likewise bestowed the other German dukedoms on his relatives.

Secure at home, Otto invaded France the next year seeking revenge against Louis for supporting the German rebels. Louis quickly made peace and Otto withdrew.

Further reading: Geoffrey Barraclough, *The Origins of Modern Germany*, 3rd ed. (Oxford, England: B. Blackwell, 1988); Patrick J. Geary, *Before France and Germany; The Creation and Transformation of the Merovingian World* (New York: Oxford University Press, 1988).

German Civil War (1077–1106)

PRINCIPAL COMBATANTS: Henry IV of Germany vs. Pope Gregory VII; the Welf (Guelf) party vs. the Waiblingen; Henry IV vs. his son, Henry V

PRINCIPAL THEATER(S): Germany and Italy (primarily Rome)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Henry IV wanted absolute rule of Germany and desired to become Holy Roman Emperor; the papacy resisted his acquiring so much power.

OUTCOME: Although Henry IV ultimately prevailed, his death in 1106 put his rebellious son, Henry V, on the German throne; in contrast to his father, Henry V sought reconciliation with the papacy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No controlling treaties were concluded

The always fractious German states erupted into civil war in 1077. Henry IV (1050–1106) became German king in 1056, when he was only six years old. During his minority, Germany was ruled by regents, who elevated the episcopacy to great power. After attaining his majority, Henry, in 1065, attempted to regain control of the government by choosing bishops who would answer directly to him. In response to Henry's bid for power, Pope Gregory VII (c. 1020–1085) objected to Henry's advocacy of lay investiture of bishops and also to Henry's demand that he be

made the Holy Roman Emperor. For years, hostility increased between Henry and the papacy, until, in 1076, Henry convened a synod, which, at his bidding, proclaimed the deposition of Pope Gregory VII. Predictably, the pope responded by deposing the clergy of the synod and by excommunicating Henry IV. As part of the excommunication, the pope forbade Henry from exercising rule over his government.

The papal action moved Henry's nobles to the verge of rebellion against their king. In an ultimatum issued on February 22, 1077, they demanded that Henry secure papal absolution or they would abandon him. Immediately, Henry set out for the Diet at Augsburg. En route, he humbled himself before Gregory's representatives and thereby gained absolution. This, however, proved insufficient to move the Diet to reconsider its intention to reverse Henry's election. The Augsburg Diet deposed Henry IV and elected an antiking, their rival nominee for the throne.

The action of the Diet touched off a long civil war. The Welf party (known in Italy as the Guelfs) obtained papal support against Henry, whereas a majority of the German nobility honored their pledge to support Henry. These supporters formed a rival to the Welfs, the Waiblingen, named for a castle owned by Henry's family, the Hohenstaufens. (In Italy, the Waiblingen were known as the Ghibellines.)

In 1080, a council of the Waiblingen held at Brixton reaffirmed the original action of the synod that had deposed Pope Gregory VII and deposed him yet again. The council proclaimed an antipope, Guibert of Ravenna (1025–1100), who was called Clement III. Later that year, Henry IV led an army against the Welfs, but was defeated in his first engagement at the Battle of Thuringia. Strangely enough, this military defeat was negated by the death of the antiking and his replacement by a political unknown, whose presence actually diminished Welf power. Despite the military defeat, most Germans now believed that the death of the antiking was a sign of God's having elected Henry. Thus fortified by increased popular support, Henry was emboldened to expand the German civil war into an assault on Rome after Gregory defiantly demanded the new antiking's fealty.

After a long and costly struggle, Henry's army marched into Rome and occupied the city in 1084. Henry forcibly replaced Gregory with the antipope, Clement III, who, in turn, crowned Henry Holy Roman Emperor. No sooner was this done, however, than Pope Gregory's Norman adherents, under the leadership of Robert Guiscard (c. 1015–85), attacked the occupiers of Rome and drove them out. Rome, however, was then subject to the ravages of Robert's army, which sacked the city for three days after ejecting the forces of Henry. The sack of Rome turned Romans against Pope Gregory, who was forced into exile in Salerno. He died in 1085.

Thus, although he had again suffered a military defeat, Henry IV emerged triumphant. He returned to Germany, subdued another rival for the throne during 1086–87, returned to attack Rome in 1090–92, then found himself beset by his own sons. Backed by the successors of Pope Gregory, Henry's sons fought their father from 1092 to 1106. Henry IV was imprisoned by his son Henry (later Henry V, 1080–1125), who forced him to abdicate in 1105. The son now set about reconciling with the papacy, but Henry IV escaped from captivity, recruited a strong army, and defeated the forces of Henry V just outside of Visé, in modern Belgium. Having achieved military victory against a rival, Henry IV succumbed to illness and died, at Liège, in 1106. Thus Henry V assumed the German throne, and the civil war ended.

German Civil War (1197–1214)

PRINCIPAL COMBATANTS: Philip of Swabia (with aid from France) vs. Otto of Brunswick (with aid from England; later, Frederick (with papal support) vs. Otto of Brunswick; France vs. England (with aid from the Low Countries)

PRINCIPAL THEATER(S): Germany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the German throne and the imperial throne

OUTCOME: Frederick II was ultimately crowned, and Germany was more or less aligned with the pope; however, the long civil war had devastated the land.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At Bouvines, Philip II Augustus fielded 36,000 troops; Otto fielded 71,000.

CASUALTIES: Unknown

TREATIES: None

A conflict over the succession to the German and imperial throne following the death of Holy Roman Emperor Henry VI (1165–97) touched off a full-scale civil war with much outside involvement. The emperor-elect, Frederick II (1194–1250), was an infant. An additional contender, Philip of Swabia (c. 1176–1208), Henry's brother, was a member of the Waiblingen party (in Italy, known as the Ghibellines), whereas a third, Otto of Brunswick (c. 1175–

1218), was a member of the rival Welfs (Italian, Guelfs). The Waiblingen was the nationalist party, and the Welfs constituted the papal party; their cause was sponsored behind the scenes by the new pope, Innocent III (1160 or 1161–1216).

Young Frederick was crowned nothing more than king of Sicily while the forces of Philip and Otto battled it out in a war that ravaged Germany. In 1198, Philip managed to be crowned with the support of the southern Germans and the French. However, Otto contested the coronation and found allies among the archbishop of Cologne, the northern Germans, and the English.

To obtain the support of Pope Innocent III, in 1201 Otto pledged to the papacy Italian lands under his control. This prompted the archbishop of Cologne to crown Philip at Aachen in 1205. Thus legitimated, Philip mounted a major offensive against Otto in 1206 and defeated him, thereby gaining Innocent's recognition—in exchange for certain concessions. Three years later, however, Philip was assassinated, and Otto regained ascendancy. After buying off the German church by relinquishing royal control over it, Otto invaded Italy and forced the pope to crown him Holy Roman Emperor Otto IV in 1209. This accomplished, Otto instantly reneged on his agreement with the German church and invaded Sicily. The pope responded by stirring up a new rebellion against Otto and crowning King Frederick II of Germany.

On July 27, 1214, King Philip II (1165–1223) (Philip Augustus) of France led his forces against those of Otto, his Flemish allies, and an army led by King John I ("Lackland"; 1199–1216) of England at the Battle of Bouvines. The main forces were those of Philip II Augustus—some 36,000 troops—and Otto of Brunswick, who fielded 71,000. Despite this disparity in numbers, Philip brilliantly outgeneraled Otto. Otto attempted to cut Philip's lines of communication and supply. Philip responded by feigning panic, which enticed Otto to make a premature attack on ground favorable to the French cavalry. Although the first French assault was repulsed by Flemish and German pikemen, Philip directed his knights against the very center of Otto's army. While Philip smashed through here, his right flank drove off repeated German attacks. Now it was Otto's turn to panic—in earnest. He fled the field, whereupon Philip turned his attention to the right flank of Otto's remaining forces, which included a small English contingent under John I. These warriors performed heroically, but were overwhelmed.

The French victory broke up the coalition among Otto, the Low Countries, and, most important, England. For King John, one consequence of this defeat was discredit among the English barons, who forced him as a result to sign the Magna Carta in 1215 (see ENGLISH CIVIL WAR [1215–1217]). As for Frederick II, he was crowned anew in Aachen in 1215, then reinstated the

Speyer concessions—the commitments to the church that Otto had reneged on—and embraced the papacy.

Frederick's ascension hardly brought peace and stability to Germany. The war fragmented an already fractious land, and a more or less permanent state of civil insurrection followed.

German Civil War (1314–1325)

PRINCIPAL COMBATANTS: Duke Frederick III of Austria vs. Duke Louis IV of Bavaria

PRINCIPAL THEATER(S): Germany and Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the German and imperial thrones

OUTCOME: Louis IV was crowned (though he shared the throne with Frederick III), but at the expense of alienating the papacy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Under Holy Roman Emperor Henry VII (c. 1275–1313), the various princes of Germany, along with local church authorities, gained much power at the expense of the Holy Roman Empire and the papacy. Thus, many German princes felt entitled to even more when Henry died in 1313, and conflict developed over Henry's successor. Most of the princes supported the Hapsburg candidate, Duke Frederick III ("the Handsome") (1286–1330) of Austria. A significant minority favored the Wittelsbach candidate, Duke Louis IV of Bavaria (c. 1287–1347). In 1314, their respective supporters elected both men king of Germany, a fact that triggered a new civil war as both assumed the title of Holy Roman Emperor. Complicating matters was the fact that the papacy was vacant at the time, so that no supreme authority was available to adjudicate the election. Thus war seemed the only alternative.

After years of indecisive combat, in 1322 Louis IV achieved a decisive victory at the Battle of Mühldorf on the Inn River, some 45 miles east of Munich. Frederick was captured in the battle and imprisoned. Under duress, he acknowledged Louis as the rightful Holy Roman Emperor. The war quickly wound down, and by 1325 it

was over—yet the underlying issues were not fully resolved. Pope John XXII (d. 1334) vehemently opposed Louis and refused to acknowledge his right to rule. In response, Louis denied a need for papal sanction and relied instead on the approval of the electors and the people. In 1327–28, he led an invasion of Rome. He captured the city and installed Nicholas V (d. 1333) as antipope. John XXII fled to Avignon, which became the new seat of the papacy. Louis had to content himself with a lay coronation as Holy Roman Emperor and joint rule with Frederick, who became Frederick III. As for the antipope, his reign was brief. Excommunicated by John in 1329, he renounced his claim to the papacy the following year.

German Civil War (1400–1411)

PRINCIPAL COMBATANTS: King Wenceslaus IV vs. the German electors Rupert III, Sigismund, and Jobst

PRINCIPAL THEATER(S): Germany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Retention of the German throne and the imperial throne

OUTCOME: The conflict was a low-level civil war; an all-out war was averted by a scheme to mollify Wenceslaus and his supporters while allowing the electors their choice as German king and Holy Roman Emperor.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown; no formal armies involved

CASUALTIES: Unknown

TREATIES: None

Wenceslaus (1361–1419), son of the Holy Roman Emperor Charles IV (1316–78), was king of Bohemia and Germany as well as Holy Roman Emperor. Although he was an earnest lover of peace, who willingly convened frequent diets in Germany from 1378 to 1389 to please and placate the always fractious German nobles, he was a weak and generally incompetent ruler, given to bouts of drunkenness. Worse, he spent most of his time in Prague, neglecting his German realm, and his absence prompted the nobles to demand that Wenceslaus appoint a *Reichsverweser* (imperial governor) for Germany. This the king stubbornly refused to do.

In the absence of effective rule, wars between town leagues and princes brought anarchy over Germany, and in August 1400, after Wenceslaus declined to attend one of many meetings demanded by the nobles, the princes deposed him and elected Rupert III (1352–1410), the elector of the Palatine, as the new Holy Roman Emperor. On the face of it, this was a wise and necessary step, but Wenceslaus, for all his incompetence, was popular with the German people. Nor did Wenceslaus leave quietly, but insisted on his right to retain the throne.

For the next decade, a low-level civil conflict simmered, continually threatening to erupt into a full-scale civil war. Only the death of Rupert in 1410 averted a major conflict, and Wenceslaus offered himself as candidate for emperor. The electors, however, refused to elect him and instead elevated Jobst (1351–1411), margrave of Moravia. But Jobst died in 1411, again clearing the way for Wenceslaus to stand for election. This time, Wenceslaus's brother, Sigismund (1368–1437), king of Hungary, maneuvered to allow Wenceslaus to retain the title of king of Germany and to receive a royal pension while he, Sigismund, became the actual German ruler and Holy Roman Emperor. Thus Wenceslaus and the people were placated, and a major civil war was avoided. Nevertheless, the low-level conflict that had ensued drained the German treasury and created a troubled reign for Sigismund.

German Revolution (1848)

PRINCIPAL COMBATANTS: German nationalists vs. Prussia's King Frederick William IV

PRINCIPAL THEATER(S): Berlin and southwest Germany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: German liberals agitated for a constitutional monarchy ruling over a united Germany.

OUTCOME: Liberal reforms were short-lived, and the German nationalist movement collapsed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Citizen movement, numbers unknown

CASUALTIES: Unknown, but mostly light; the only serious casualties were in Berlin, during April 1848.

TREATIES: None

The year 1848 saw revolutions—most short-lived—in France, Italy, Hungary, and Bohemia, as well as Germany. All shared a common theme—a desire for liberal reform—except for the German revolution, which had more to do with creating a unified nation than with liberalizing existing government.

Like the other European revolutions, that in Germany was inspired by the FRENCH REVOLUTION (1848). It began as public demonstrations in favor of the establishment of a German national parliament. The demonstrations had an effect. In Baden, for example, liberal reform was introduced into government. The Hanseatic states transformed themselves into democratic republics during March 1848. Up to this point, the “revolution” was bloodless, but after the repressive Klemens von Metternich (1753–1859) was driven out of Austria during the AUSTRIAN REVOLUTION in March 1848, Berlin suddenly exploded into armed revolt. On March 13, garrison troops, including dragoons and the garde du corps, confronted a street mob, which they dispersed at rifle point. Three days later, as demonstrations continued and intensified, cavalry as well as infantry were called out. Demonstrators hurled stones, and the troops replied with shots, which dispersed the crowd. Still, the demonstrations continued throughout the rest of the week, the crowd hurling stones, the troops replying with gunfire.

At last, on March 18, King Frederick William IV (1795–1861), who had assumed the Prussian throne in 1840, made a series of sweeping concessions, yielding to a call for a German confederation and even agreeing to some constitutional reforms. He stopped just short of accepting rule over a unified Germany as a constitutional monarch.

On May 18, 1848, a National Assembly convened at Frankfurt, but was soon deeply divided over whether Austria was to be part of the newly contemplated German confederation. While the assembly debated, troops forcibly put down the radical agitation of German laborers, and the revolution began to lose steam. By the end of the year, the radicalism that had triggered the revolution had petered out, and the National Assembly drifted steadily to the right. When the assembly offered Frederick William rule over a unified Germany within the confines of a liberal—but hardly democratic—constitution, he rejected the offer as too great an incursion on his royal prerogatives. His counterproposal was a somewhat liberal-

ized, but still conservative plan for continued monarchy. This gave rise to abortive uprisings in the German southwest, which royal troops quickly put down.

By the beginning of 1849, a number of the king's liberal decrees of the previous year had been canceled. Austria once again emerged as a powerful rival to Prussian power and assumed leadership of the old German Confederacy Assembly. In effect, the pre-1848 status quo had been reasserted, and the drive for a democratic and united Germany would have to await the ascendancy of Otto von Bismarck (1815–98) and the FRANCO-PRUSSIAN WAR two decades later.

Germany's harsh suppression of its 1848 liberal revolutions led millions of Germans to emigrate during the next decade. When Bismarck came to power and introduced universal conscription into his brutal Prussian army, they were joined by young German draft dodgers and those from a number of religious sects whose beliefs forbade military service. For almost 40 years these millions of Germans scattered over Europe, nations adjacent to Europe, and North, Central, and South America. Wherever they went, these German intellectuals, revolutionaries, and true believers brought deeply held new doctrines and often startling new ideas whose unsettling impact was soon felt not merely in their adopted homelands but ultimately around the world.

Ghassanid-Lakhmid Wars (c. 500–583)

PRINCIPAL COMBATANTS: Ghassanids (allied with Byzantium) vs. Lakhmids (allied with Persia)

PRINCIPAL THEATER(S): Arabia (modern region of Syria, Jordan, and Israel)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ghassan and the Lakhmids were essentially client states of Byzantium and Persia, respectively, which promoted war between them as a means of gaining power and influence over Arabia.

OUTCOME: Neither dynasty proved enduringly dominant, and both ultimately succumbed to the Muslim conquest of Arabia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Byzantium (the Eastern Empire of Rome) vied with Sassanid Persia for influence and hegemony in Arabia and backed rival dynasties in Arabia. The Byzantines supported the Ghassanids, whereas the Persians backed the Lakhmids, encouraging and perpetuating years of continual warfare between the dynasties.

Concentrated around Al-Syrah in southern Iraq, the Lakhmid kingdom emerged late in the third century and became an increasingly influential Iranian vassal state, approaching the height of its power by the end of the fifth century under King al-Mundhir I (c. 418–462). At the start of the sixth century, King al-Mundhir III (503–554) began raiding Byzantine Syria, particularly the pro-Byzantine Ghassanid Arab kingdom.

The Ghassanids endured much loss at the hands of the Lakhmid raiders until a battle in 528, in which the Ghassanid leader al-Harith ibn Jabalah (r. 529–569) defeated the Lakhmid forces and soon afterward became Ghassanid king. About 550, the Lakhmids returned to the offensive with strong attacks against Ghassan as well as Byzantine Syria, but these ultimately failed.

Byzantium turned against its ally in 583 when orthodox Byzantine leaders responded to the Monophysitic heresy rampant in Ghassan (the belief that Christ's human and divine natures are one rather than two). To suppress the heresy, Byzantium sent troops to seal Ghassan's borders and made Ghassan a vassal. Two decades later, the Lakhmid dynasty effectively came to an end with the death of its last ruler. Persian Christians had opposed his adherence to the Nestorian heresy (the belief that Mary was not the mother of God). What was left of both Ghassan and the Lakhmid dynasties was swept away during the balance of the seventh century by the great Muslim conquest.

Knopf, 2003); Mark Whittow, *The Making of Byzantium, 600–1025* (Berkeley: University of California Press, 1996).

Ghost Dance Uprising (1890–1891)

PRINCIPAL COMBATANTS: Various Sioux factions vs. United States

PRINCIPAL THEATER(S): South Dakota

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: A religiously inspired Indian uprising against white domination

OUTCOME: Rebellion was suppressed, ending four centuries of warfare between whites and Indians in North America.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: For the United States, 5,000 at Pine Ridge Reservation; for the Sioux, 150 warriors, supporters of Sitting Bull, otherwise, totals unknown

CASUALTIES: At Wounded Knee, possibly 300–350 Indians; United States, 25 killed, 39 wounded, most a result of friendly fire

TREATIES: No formal treaty

By the opening of the last decade of the 19th century, the so-called Indian Wars of the American West were by and large concluded. The tribes, hostile, friendly, and indifferent, were confined on nearly 200 reservations, encompassing some 181,000 square miles of land. For the most part, life on these reservations was at best harsh and at worst debilitating and demoralizing. The great Hunkpapa Sioux chief Sitting Bull (1831–90), domiciled with his followers at the Standing Rock Reservation, South Dakota, persistently refused to cooperate with the agent in charge and struggled to maintain the identity of his people.

In the meantime, among the reservation Sioux, a prophet arose. Wovoka (c. 1856–1932) was the son of a Paiute shaman and had spent part of his youth with a white rancher's family, from whom he learned Christian teachings and traditions, which he combined with Native religion. Wovoka began to preach of the coming of a new world in which only Indians dwelled and in which buffalo—virtually exterminated by white hunters and the encroachment of white civilization—were again plentiful. Generations of slain Indians would come back to life in the new world. Wovoka enjoined all Indians to dance the Ghost Dance in order to propitiate the millennium. His was a message born of discontent and desperation, to be sure, but Wovoka did not counsel violence. Quite the opposite, he preached a Christian ethic of peace.

Wovoka's message spread through the western reservations like wildfire, and among the Teton Sioux, his call for nonviolence was suppressed. Wovoka's message became a call to rebellion. Short Bull (c. 1845–1904) and Kicking Bear (c. 1847–1923)—Teton apostles of the Ghost Dance religion—urged a campaign to obliterate the white man, and they even fashioned a “ghost shirt,” which, they said, afforded absolute protection against the whites' bullets.

But even in the absence of such bellicose posturings, the Ghost Dance itself was sufficient to alarm white authorities. The agent in charge of the Pine Ridge Reservation frantically telegraphed Washington, D.C., in November 1890: “Indians are dancing in the snow and are wild and crazy. We need protection and we need it now.” Accordingly, on November 20, 1890, cavalry and infantry

reinforcements arrived at Pine Ridge and at the Rosebud Reservation. This action served only to provoke the Sioux under Short Bull and Kicking Bear, and some 3,000 Indians gathered on a plateau at the northwest corner of Pine Ridge called the Stronghold. Sitting Bull, most venerated of all Sioux leaders, actively embraced the Ghost Dance doctrine at Standing Rock Reservation. James McLaughlin (1842–1923), the agent in charge there, decided to have Sitting Bull quietly arrested and removed from the reservation. To accomplish the arrest, McLaughlin wanted to use the reservation's own Indian policemen.

The skillful but vainglorious army commander in charge of western operations, Nelson A. Miles (1835–1925), thought that the arrest of Sitting Bull, which would signify the end of the Indian Wars once and for all, should not be quiet. Accordingly, Miles contacted the greatest showman the West has ever known: William F. Buffalo “Bill” Cody (1846–1917). Cody and Sitting Bull were, after all, friends, the Indian having formerly starred in Cody's Wild West Show. Cody would persuade Sitting Bull to step down—and, what is more, he would persuade him with a flourish.

McLaughlin, convinced that the publicity that would attend Miles's plan would provoke widespread rebellion, arranged for the commanding officer of nearby Fort Yates to detain Buffalo Bill at a local saloon when the showman arrived at Standing Rock on November 27, 1890, until he could secure orders cancelling Cody's mission. This he narrowly succeeded in doing just as Short Bull and Kicking Bear openly invited Sitting Bull to join them and their people at the Stronghold on the Pine Ridge Reservation.

McLaughlin dispatched 43 reservation policemen on December 15 to arrest Sitting Bull. A scuffle developed, and Sitting Bull was killed.

With many of the reservation Sioux clearly on the verge of violent resistance, General Miles ordered the arrest of another prominent chief, Big Foot (d. 1890) of the Miniconjou Sioux, who were living on the Cheyenne River. The tragic irony is that Big Foot had not only personally renounced the Ghost Dance religion, he was marching to Pine Ridge at the behest of Chief Red Cloud (c. 1822–1909), a Pine Ridge leader friendly to the whites, who had asked him to persuade the Stronghold party to surrender. Miles understood only that Big Foot was headed for the Stronghold, and that, he assumed, could mean only trouble.

Miles sent troops in a wide net across the prairies and badlands to intercept all Miniconjous. On December 28, 1890, a squadron of the Seventh Cavalry located the chief and about 350 Miniconjous near a stream called Wounded Knee Creek. During the night of the 28th, more troops moved into the area, so that by morning 500 soldiers, under Colonel James W. Forsyth, surrounded Big Foot's camp. Four Hotchkiss guns—small pieces of repeating artillery—were trained on the camp from the surrounding hills.

Forsyth's mission was to disarm the Indians and remove them from the "zone of military operations." His soldiers entered the camp and began a rough and provocative search for guns. Soon shots rang out—whether from the Indians or the soldiers is not known—and a full-scale massacre (the army persisted in calling it a battle) ensued. In less than an hour, Big Foot and 153 other Miniconjous are known to have been killed—most of them cut down by deadly fire from the Hotchkiss guns—but so many others staggered, limped, or crawled away that the exact death toll remains unknown. Probably 300 of the 350 who had been camped at Wounded Knee Creek ultimately perished. Most of the Seventh Cavalry's casualties—25 killed and 39 wounded—were the result of "friendly fire."

The Wounded Knee Massacre immediately provoked "hostile" and "friendly" Sioux factions to unite—though Chief Red Cloud continued to protest his people's participation—in a December 30 ambush of the Seventh Cavalry near the Pine Ridge Agency. The unit was rescued by the timely arrival of additional cavalry, and General Miles marshaled 3,500 troops (out of a total force of 5,000) around the outraged Sioux who had assembled 15 miles north of the Pine Ridge Agency along White Clay Creek. Despite the numerical superiority he enjoyed, Miles was wary of provoking further bloodshed. With great forbearance, he slowly closed in around the Indians, urging surrender and promising good treatment. On January 15, 1891, the Sioux at last surrendered, effectively bringing to a conclusion some four centuries of warfare between whites and Indians in North America.

Gladiator's Revolt See SERVILE WAR, THIRD.

Glencoe Massacre (1692)

PRINCIPAL COMBATANTS: MacDonald clan vs. English troops and the Campbell clan

PRINCIPAL THEATER(S): Glencoe Valley, Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: King William III of England moved to exterminate the rebellious MacDonald clan of Scotland.

OUTCOME: Most of the clan was slaughtered; news of the atrocity, however, destroyed the reputation of William III in Scotland.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

MacDonalds, number unknown; English, 80 troops

CASUALTIES: 38 MacDonalds were killed; probably an equal number later died of exposure.

TREATIES: None

Like many other English monarchs before him, King William III (1650–1702) was hard pressed to control Scotland. During 1689–90 he faced rebellion among the Highland Jacobites (see JACOBITE REBELLION [1689–1690]) and imposed upon the Scottish clan chiefs oaths of allegiance.

One clan leader, Maclain MacDonald (d. 1692) of Glencoe, refused to swear the oath. In response, William ordered the extirpation of the clan and dispatched troops commanded by Captain Robert Campbell (fl. 1692), a relative of Maclain MacDonald. Maclain MacDonald did not resist the troops, but received them hospitably. In the meantime, other royal soldiers sealed all approaches to the valley of Glencoe, and the visiting soldiers, aided by members of the Campbell clan, rivals to the MacDonalds, slaughtered the MacDonalds as they slept. They also burned their houses.

Unfortunately for King William, the slaughter was not total. Thirty-eight MacDonalds were slain, but others escaped, many succumbing to exposure, but some survived to broadcast news of the atrocity throughout Scotland, further hardening much of the country against William and English domination.

Glendower's Revolt (1402–1409)

PRINCIPAL COMBATANTS: Welsh rebels under Owen Glendower vs. England's King Henry IV

PRINCIPAL THEATER(S): Wales

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Glendower wanted to evict the English from Wales.

OUTCOME: Despite many early victories and potentially powerful allies, Glendower was ultimately defeated, and the rebellion collapsed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown
TREATIES: None

The Welsh had long protested and rebelled against onerous English taxation and inept administration. The situation came to a crisis during the tumultuous reign of King Henry IV (1367–1413) when a wealthy and powerful Welsh lord, Owen Glendower (c. 1354–1416), led a successful campaign against Henry’s garrisons throughout Wales, driving them out of the country.

Glendower was descended from the princes of Powys and had inherited a number of manor properties in northern Wales. As a youth, he was sent to London to study law, then served in the army of Henry Bolingbroke (1366–1413), who opposed King Richard II (1367–1400). After this adventure, Glendower returned to Wales to discover that oppressive English rule had badly hobbled the Welsh economy and stirred popular resentment.

In September 1400, a year after Bolingbroke usurped the English throne, Glendower engaged in a feud with his neighbor, Reynold, Lord Grey of Ruthin (1362–1440), which rapidly expanded. Proclaimed prince of Wales, Glendower found allies in the English Edmund de Mortimer (1367–1409) in 1402 and the rebellious Percys in 1403. After Glendower captured the castles of Aberystwyth and Harlech in 1404, he won recognition from France’s King Charles VI (1368–1422), who, eager for any opportunity to oppose the English, struck an alliance with the Welshman. Charles proved an unreliable ally. The troops he repeatedly promised Glendower never materialized, and, as a result, Glendower’s forces suffered defeat after defeat between 1405 through 1409. Aberystwyth and Harlech were soon retaken, and Glendower fled into the remote Welsh mountains, where he died some seven years after the end of the war.

Glorious Revolution (1688)

PRINCIPAL COMBATANTS: Supporters of William and Mary vs. James II

PRINCIPAL THEATER(S): Devonshire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: At the invitation of a delegation of Parliament, William and Mary came to England to replace James II.

OUTCOME: The revolution—the installation of new monarchs and a profound revision of the role of the

English Crown—was wholly successful and entirely peaceful.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

William and Mary were accompanied by a small Dutch force and gathered many more supporters; James II’s army deserted him.

CASUALTIES: None

TREATIES: None

The catalogue of the offenses of England’s King James II (1633–1701) is long: his reprisal against MONMOUTH’S REBELLION was disproportionately brutal, as was his attempt to force Catholicism upon the English; his general abridgment of rights, culminating in his proroguing (suspending) Parliament, brought the nation to the verge of civil war. Perhaps most outrageous of all was James’s total lack of political consciousness, an understanding that his rash tyrannies would produce a conspiracy to remove him from the throne. But this is precisely what happened. In 1688, seven prominent Whig and Tory leaders invited Mary (1662–94) and her husband, William of Orange (1650–1702), to come from Holland to replace James II on the English throne. The two monarchs landed at Torbay, Devonshire, with a small Dutch army and acquired many additional supporters as they marched to meet the forces of James II at Salisbury. The English king’s forces, under John Churchill (later, duke of Marlborough) deserted James, who fled, was intercepted at Kent, but then released and permitted to sail for France—ignominiously making his way across the Channel on a decrepit fishing smack, the only vessel immediately available.

William and Mary immediately assumed leadership of a provisional government while the Convention Parliament debated how power might be legally and permanently transferred to them. In 1689, the Convention Parliament finally ruled that the throne was indeed vacant, that James’s flight constituted abdication, and the Parliament further asserted its authority to appoint William and Mary legal sovereigns. It was the first time in English history that the Parliament had appointed a monarch.

The Glorious Revolution had done much more than replace an abusive king with more palatable rulers. The Convention Parliament enacted a “Declaration of Rights” and a “Bill of Rights,” which defined anew the relationship between monarch and subjects, and it explicitly barred future Catholic succession to the throne. The parliamentary acts ended the royal prerogative to suspend or abridge the law in any way, thereby subordinating the monarch to the law. The Crown was also explicitly forbidden to levy taxes or maintain a standing army in peacetime without parliamentary consent. Thus William and Mary came to power as England’s first monarchs fully answerable to a Parliament and a constitution. Parliament, in effect, became the supreme governing body of England.

Golden Horde Dynastic War (1359–1381)

PRINCIPAL COMBATANTS: Mamak and Urus, successors to Jöchi vs. Tamerlane (Timur) and Toktamish; Mamak vs. Dmitri Donskoi of Muscovy (Russia)

PRINCIPAL THEATER(S): Golden Horde (Kipchak Khanate, Mongol territory north and west of the Caspian Sea)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Golden Horde

OUTCOME: Thanks to his alliance with Tamerlane, Toktamish assumed rule over the Golden Horde.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Jöchi (d. 1227), son of the great Mongol ruler Genghis Khan (c. 1162–1227), was given the Mongol territory north and west of the Caspian Sea to rule. This territory and its subjects became the Kipchak Khanate, better known to history as the Golden Horde, because of its celebrated abundance and wealth.

In 1359, the last successor of Jöchi died, and with his death, the Golden Horde became the subject of violent dispute. Mamak and Urus (both fl. 14th century), two non-Mongols, ruled the Golden Horde (the Russian designation for the Ulus Juchi, the western part of the Mongol Empire) jointly for a time, but the conqueror Tamerlane (Timur) (1336–1405) pushed to obtain the throne for his ally and protégé Toktamish (d. 1398). Tamerlane high-handedly proclaimed Toktamish the khan of the Golden Horde in 1377. The proclamation notwithstanding, Mamak retained power, until he was defeated by Dmitri Donskoi (1363–89), prince of Muscovy (modern Russia). Donskoi led his Russian forces in a rebellion against the Mongols, who demanded tribute.

Hoping to exploit Mamak's defeat at the hands of the Russian, Toktamish attacked Mamak twice, but was twice defeated. Mamak died of natural causes, however, in 1380 and was followed, later that same year, by Urus. In this way, despite his military defeats, Toktamish came

to rule the Golden Horde. His first act was to return the Golden Horde to the Mongol fold and to launch attacks against Russia. Toktamish triumphed over the Russians and, flushed with victory, turned his back on his benefactor, Tamerlane. This triggered TAMERLANE'S FIRST WAR AGAINST TOKTAMISH, from 1385 to 1386 and TAMERLANE'S SECOND WAR AGAINST TOKTAMISH, from 1391 to 1395.

Golden Horde–Il-Khan Civil War (1261–1262)

PRINCIPAL COMBATANTS: Hülegü, il-Khan (Mongol) ruler of Persia vs. Berke, khan of the Golden Horde (Kipchak Khanate)

PRINCIPAL THEATER(S): Western region of the Mongol Empire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dominance over the two khanates

OUTCOME: The war was inconclusive, and the rival khanates remained bitter foes.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Alliance treaty between Golden Horde and Mamluk Turks, 1262

When Arik-Böke (fl. 1261–62) convened a *kuriltai*, a Great Assembly, in 1260, he provoked the MONGOL CIVIL WAR as well as the Golden Horde–Il-Khan Civil War. This second conflict broke out between Arik-Böke's brother Hülegü (r. 1256–65), who was the il-Khan (Mongol) ruler of Persia, and Berke, the khan of the Golden Horde, or Kipchak Khanate, the Mongol territory lying north and west of the Caspian Sea.

Hülegü attacked a protégé of Arik-Böke, which provoked Berke (fl. 1261–62), a Muslim enemy of Hülegü, to conclude a treaty with the Mamluk Turks, who were also enemies of the Il-Khan.

In 1262, Hülegü advanced northward and ambushed Berke's army in a devastating surprise attack. However, the tables suddenly turned when, while the troops crossed the frozen Terek River, the ice gave way beneath their feet, drowning much of Hülegü's army. Hülegü retreated with the survivors and quickly looked for a way to stop the war. He did so by marrying a Byzantine princess, thereby forming a powerful alliance with a traditional foe of the Mus-

lims. Although this alliance created a stand-off that stopped the fighting, the khanates of Hülegü and Berke remained bitter, simmering foes.

Gothic (Italian) War (534–554)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Goths

PRINCIPAL THEATER(S): Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Justinian I, emperor of the Eastern Roman (Byzantine) Empire, sought to wrest Italy from the Goths and thereby reunite the Eastern and Western Roman empires.

OUTCOME: Italy briefly came under Justinian's control, but at great cost to the Eastern Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At war's end: Byzantine Empire, 20,000; Goths, 15,000

CASUALTIES: Byzantine numbers unknown; Goth losses at the culminating Battle of Taginae were 6,000 killed out of a force of 15,000.

TREATIES: No document survives

The Ostrogoth king, Theodoric the Great (c. 454–526), conquered Italy by 493, but he failed to establish a strong dynasty. The Gothic rulers who followed him were inept leaders, and, as the Byzantine emperor Justinian I (483–565) saw it, Italy was ripe for conquest. With the taking of Italy, Justinian hoped to reunite the Western Roman and Eastern Roman (Byzantine) empires.

Justinian dispatched an army under his leading general, Belisarius (c. 505–565), to command an expedition to retake Italy from the Goths. From Constantinople, Belisarius's forces landed at Sicily, invaded it, then used it as a jumping-off point to the southern Italian mainland. By 536, Belisarius had taken Naples as well as Rome. At Rome, the Goths counterattacked with a year-long siege during 537–538, but the disciplined and resourceful Byzantine invaders withstood it until the Goths were forced to lift the siege and depart.

Belisarius continued his northward march up the Italian Peninsula, but he soon faced the chief problems of even highly successful invaders: supply and reinforcement. His often hungry troops were vulnerable to repeated hit-and-run attacks by the Goths. Nevertheless, Belisarius

scored a major victory at Ravenna in 539, capturing the Gothic king Vitiges, who was sent to Constantinople as a prisoner. Leaderless, the Gothic resistance collapsed, and, in 541, Belisarius heeded Justinian's order to return to Constantinople. For his part, Justinian was persuaded that Italy had been safely secured for the Byzantine Empire, and he did not want Belisarius and an army to remain in the region for fear that Belisarius would proclaim himself emperor of the West.

Yet no sooner had Belisarius withdrawn from Italy than the Goths mobilized under a new ruler, Totila (Baduila) (d. 552). Totila led Gothic forces in the reconquest of the cities and strongholds yielded to the Byzantines. Belisarius was dispatched to Italy again and led a series of five campaigns against the Goths, but without the success he had earlier enjoyed. Although he briefly retook Rome, it quickly fell again to the Goths. Justinian recalled Belisarius, and all of Italy, including even Sicily, was again in Goth hands.

In 552, Justinian sent Narses (c. 478–c. 573), an aged eunuch general, to lead a combined sea and land assault on Italy from the north via the Adriatic. The expedition marched across the Apennine range and, in July, engaged the Goths at the Battle of Taginae, an Apennine mountain village. Narses's archers proved his most destructive arm, and the general used them in superb coordination with his pikemen—the first time the bow and pike had been used effectively together.

From Taginae, Narses marched down the Italian Peninsula, methodically retaking the Goth strongholds. By the end of 552, Rome was again liberated from the Goths, and during 553, Justinian could again claim control of Italy. Constantinople did not retain that control for long.

Gothic-Sarmatian War (332–334)

PRINCIPAL COMBATANTS: Sarmatians and Byzantine Empire vs. Goths and allied Germanic tribes;

subsequently, Sarmatians vs. Byzantine Empire

PRINCIPAL THEATER(S): Dacia (approximately modern Romania)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Sarmatians secured the aid of the Byzantine Empire in resisting invasion by the Goths and their allies; when the Sarmatians betrayed the Byzantine alliance, the Byzantines withdrew aid and encouraged the Goths' conquest.

OUTCOME: The Sarmatians were destroyed as a people; some 300,000 were permitted to resettle within the Eastern Roman Empire; the Goths became *foederati* of the Byzantine Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents survive

Goths and other Germanic "barbarian" tribes made frequent incursions into the territory of the Sarmatians, a people living in Dacia (approximately the region of modern Romania). The Sarmatians shared with the Scythians, a closely related people, a heritage of horsemanship and skill at arms. By the fifth century B.C.E., they had also proved themselves superb administrators, coming to control—and to govern well—all the lands between the Ural Mountains and the Don River. By the fourth century B.C.E., they crossed the Don and conquered the Scythians, and during the first century C.E., the Sarmatians became a powerful threat to the Roman Empire.

Although closely allied with several Germanic tribes, the Sarmatians were themselves overwhelmed by the Goths during the third century C.E., and their territory was reduced to Dacia (Romania) and the lower Danube region. Even so contracted, the Sarmatians were continually harassed and menaced by the Goths and therefore reluctantly requested military aid from Constantine I the Great (c. 285–337), emperor of the Eastern Roman Empire (Byzantium). Constantine dispatched an army under the command of his son. Operating in concert with the Sarmatians, the force attacked the Goths and Gothic allies during 332–33. In the midst of this action, however, the Sarmatians turned against their Byzantine allies by making forays against the Roman Empire. Outraged by the betrayal, Constantine threw his support behind the Goths. He urged them to act even more aggressively against the Sarmatians, as he withdrew Roman aid. Without this aid, the Sarmatians were instantly overwhelmed by the Gothic hordes.

In a curious act of magnanimity, Constantine permitted some 300,000 Sarmatian refugees to resettle within the Eastern Roman Empire. As for the Goths, they responded to the Christianizing efforts of the Byzantine bishop Ulfilas, and embraced membership in the Byzantine federation. In exchange for their good behavior, the Goths received Byzantine subsidies.

Blackwell, 1996); John Julius Norwich, *Byzantium: The Early Centuries* (New York: Alfred A. Knopf, 2003).

Granada, Siege of (1491–1492)

PRINCIPAL COMBATANTS: Christian Castile vs. Muslim Granada

PRINCIPAL THEATER(S): Granada (the capital city of the Muslim kingdom of Granada)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Christian Castile sought to complete its conquest of Muslim Granada.

OUTCOME: Granada, the last stronghold of Muslim Spain, fell.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The siege of Granada may be seen as a phase of the SPANISH CHRISTIAN-MUSLIM WAR (1481–1492). As a result of that conflict, most of Moorish Granada, in southern Spain, had by 1491 fallen to an invasion of Christian Castilians. The capital city of Granada, however, held out against the invaders, refusing to yield to the suzerainty of King Ferdinand V (1452–1516) and Queen Isabella I (1451–1504) of Castile and Aragon. About to fall under siege, the Muslims of Granada appealed to Sultan Muhammad XI (d. 1538), known as Boabdil, to come to their aid.

In 1483, Boabdil had marched against the Castilians, but was captured in battle. To ransom himself, he signed the Pact of Córdoba, by which he pledged to deliver into Castilian hands the portion of his holdings that were under the control of Abd al-Zaghall (fl. late 15th century) in return for Castilian aid in recovering a part of his territory that had been lost by his father. Thus Boabdil was able to reoccupy the Alhambra.

Boabdil's concession did not satisfy the Castilian appetite for conquest, and when, early in 1491, the Spanish invaded al-Zaghall's remaining holdings in eastern Granada and the district of Almería, Boabdil abrogated the Pact of Córdoba and came to al-Zaghall's aid. However, al-Zaghall soon surrendered to the Castilians and accepted a kind of voluntary exile, leaving Boabdil holding only the town of Granada.

In April 1491, Castilian forces laid siege to Granada, which now contained not only the original defenders, but Boabdil's army as well. In the process of investing Granada, the Castilians established Santa Fe, a western outpost that severed Granada's communication with the outside world. From within the besieged city, numerous sorties were launched, each repulsed by Christian forces. With the situation clearly hopeless, Boabdil sued for peace. After brief negotiations, he surrendered on Jan-

uary 2, 1492. The day before, the magnificent Alhambra, palace of the Moorish rulers of Granada, had fallen to Castile.

Ferdinand and Isabella rode into Granada on January 6, 1492. They administered their conquest with great liberality, granting the Granadans freedom of worship and a significant measure of self-government. They also allowed Moors who wished to migrate to North Africa to do so freely and in safety. However, the significance of the conquest of Granada was great. Muslim rule had ended in Spain, and a triumphant Spain was ready to explore and conquer a new world.

Grand Alliance, War of the (Nine Years' War, War of the League of Augsburg) (1688–1697)

PRINCIPAL COMBATANTS: France vs. England, the Dutch Republic (United Provinces), Spain, the Spanish Netherlands, Austria, the Holy Roman Empire, the

Bishopric of Liège, Brandenburg-Prussia, Württemberg, Savoy-Piedmont, Bavaria, the Palatinate, Electorate of Cologne, Denmark; England vs. Ireland and Scotland

PRINCIPAL THEATER(S): The Spanish Netherlands, northeastern France, Duchy of Luxembourg, Bishopric of Liège, the Moselle valley, the Rhineland, Savoy-Piedmont, Dauphiné, Catalonia, Ireland

DECLARATION: Alliance declares war on France, 1689

MAJOR ISSUES AND OBJECTIVES: (1) The formation of an anti-French coalition aimed at restoring Europe to the frontiers agreed at the Peace of Westphalia in 1648 and the Peace of Nijmegen in 1678. (2) Savoy-Piedmont's need to free herself from French and Hapsburg/Spanish domination by regaining Pinerolo and Casale. (3) William of Orange's quest for international, particularly French, recognition of his entitlement to the throne of England.

OUTCOME: (1) France retained Strasbourg and Alsace but surrendered other territories gained since 1678. The Dutch were allowed to garrison selected fortresses in the Spanish Netherlands as a "barrier" against French aggression. (2) Savoy-Piedmont secured Pinerolo and neutralized Casale. (3) Louis XIV recognized William III as king of England.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

The military establishments of most participants reached their peak between 1693 and 1695. France: 300,000; England: 100,000; Dutch Republic: 130,000; Savoy-Piedmont: 20,000; Austria and Holy Roman Empire: 100,000; Spain: 40,000; Brandenburg-Prussia: 40,000; Denmark: 32,000

CASUALTIES: France: c. 200,000; Austria/Imperial forces: c. 120,000; Spain, Savoy, England, and the Dutch Republic: c. 250,000. The principal killer of both civilians and soldiers was disease, usually spread by the presence and movement of armies.

TREATIES: Treaty of Limerick (October 13, 1691); Treaty of Turin (June 29–July 5, 1696); Truce of Vigevano (October 7, 1696); Peace of Rijswijk (Ryswick) (September 20–October 30, 1696)

This conflict enjoys seven names, each indicative of a particular historical perspective: the War of the GRAND ALLIANCE, the War of the League of Augsburg, KING WILLIAM'S WAR, the War of the English Succession, the First World War, the Palatine War, and the Nine Years' War. The latter nomenclature is neutral and thus the most satisfactory.

It was contemporary with the AUSTRO-TURKISH WAR (1683–1699). Only the Holy Roman Emperor and some German states—Austria, Bavaria, Saxony—were actively involved in both.

CAUSES

Louis XIV (1638–1715) of France emerged from the Third DUTCH WAR (1672–78) as the most powerful monarch in western Europe. He immediately consolidated and extended his gains seeking defensible frontiers in the Spanish Netherlands, Alsace, and the Rhineland. Between 1678 and 1688, a decade of "peace," the French army numbered 140,000 men, allowing Louis to support aggressive diplomacy with armed force. By 1680 Louis's diplomats had reclaimed Franche-Comté, Alsace, Lorraine, Orange, Toul, Metz, and Verdun, while his troops occupied most of the duchy of Luxembourg and were blockading Luxembourg City. When, in 1682, the governor of Luxembourg tried to break the blockade, French units invaded Flanders, ruined the countryside, and occupied the territory around Courtrai. On September 30, 1681, the French army simultaneously seized Strasbourg and took possession of Casale in Montferrat. Spain declared war on France in 1683 but this only resulted in the loss of Courtrai in November and Luxembourg City on June 3, 1684, following a formal siege. Under cover of the siege of Luxembourg, Louis's Mediterranean fleet bombarded Genoa whose politics were pro-Hapsburg and anti-French (May 1684). No power could stand alone against France.

Western Europe was alarmed but concerted action was slow to develop. Leopold I (1640–1705), the Holy Roman Emperor, was distracted, first by a revolt in Hungary (see HAPSBURG CONQUEST OF HUNGARY; HAPSBURG-OTTOMAN WAR FOR HUNGARY), and then, in 1683, by the Turkish invasion of Austria and the subsequent siege of Vienna (see AUSTRO-TURKISH WAR [1683–1699]; VIENNA, SIEGE OF). At Regensburg, or Ratisbon, on August 15, 1684, a truce was concluded between Austria, Spain, and

France, which guaranteed the expanded borders of France for 20 years. Having largely secured his frontiers, Louis commenced the climactic of his campaign against the Huguenots by revoking the Edict of Nantes in 1685. Protestant refugees, living evidence of Louis's violence and intolerance, were welcomed into England, the Dutch Republic, Switzerland, and Brandenburg-Prussia.

During the four years following the Truce of Regensburg an anti-French confederation developed, largely through the initiative and leadership of the stadtholder of the United Provinces, William III of Orange (1650–1702). In 1685, a number of German states, of which the largest was Bavaria, formed the League of Augsburg to defend German soil. The persecution of the Huguenots and the Vaudois finally convinced the Republican Party in the United Provinces that Louis could not be trusted, particularly as the accession of the Catholic James II (1633–1701) of England in 1685 presaged an alliance between England and France that would endanger Dutch maritime commerce. Although the Dutch and Frederick William (1620–88), the Great Elector of Brandenburg-Prussia, did not join the league, they were supportive.

The balance of power was also shifting in central Europe. The Turks were beaten at Buda in 1686 and Mohács in 1687, and lost Belgrade in September 1688. Emperor Leopold could now reduce his military effort against the Turks and direct some of his forces, especially the German army of the Circles, toward the Rhine to protect the empire. Whereas Louis had accepted the Truce of Regensburg on the supposition that 20 years would provide ample opportunity to translate his seizures into permanent accretions through formal treaties, the retreat of the Turkish army undermined his assumptions. Instead of being coerced into confirming the truce, Leopold was about to lead a coalition of German princes dedicated to recapturing lands forfeited to France.

OUTBREAK

Affairs came to a head in the electorate of Cologne. Maximilian Heinrich (1621–88), the archbishop-elect, had been a French client since 1671. There were two contenders for his throne. The favorite was Cardinal Wilhelm Egon von Fürstenberg (1624–1704), one of Louis's advisers on German politics. When Maximilian Heinrich died on June 3, 1688, the succession of Fürstenberg, who had been accepted by the cathedral chapter as coadjutor in January 1688, seemed assured. The second candidate was Prince Joseph Clement (1671–1723) of Bavaria, a nephew of Maximilian II Emmanuel (1662–1726), elector of Bavaria, and a younger brother of Maximilian Heinrich. At the election, neither received the necessary two-thirds majority and the impasse was referred to Pope Innocent XI (1611–89). There was no prospect of Innocent, who had been insulted and ill-treated by Louis, finding in favor of Fürstenberg, and Joseph Clement was duly installed as archbishop-elect on August 26, 1688.

Rather than waiting to assess the impact of his defeat at Cologne, Louis, encouraged by his war minister, the marquis de Louvois, and aware of the mounting strength of his opponents beyond the Rhine, determined upon a preemptive strike against the Holy Roman Empire. When Brandenburg troops entered the city of Cologne in support of Joseph Clement, 16,000 French soldiers occupied the remainder of the electorate, including Bonn and Kaiserswerth. In return for a Dutch commitment to support Austrian claims to the Spanish succession, Emperor Leopold promptly joined the League of Augsburg.

On September 24, 1688, a French army under the dauphin and the duc de Duras, attended by the engineer, Sébastien Le Prestre de Vauban, invaded the Rhineland and besieged the imperial fortress of Philippsburg. Louis hoped for a short, sharp siege. Before they could mobilize, Leopold and the German princes would thus be presented with a *fait accompli* sufficient to persuade them to translate the Truce of Regensburg into a permanent settlement. If the worst occurred, and Louis was not pessimistic, the annexation of Philippsburg would at least complete the defense of France's eastern frontier.

THE RAVAGING OF THE PALATINATE

Aided by heavy rains, Philippsburg held out for two months. To make the Germans pay for the campaign, French detachments roamed the Rhineland extracting contributions and seizing supplies. The marquis de Boufflers surprised Kaiserslautern on October 2 and then attempted Coblenz. German reaction was swift. Frederick William of Brandenburg-Prussia, John George III of Saxony, Ernst Augustus of Hanover, and Karl of Hesse-Kassel agreed to mobilize their forces (the Concert of Magdeburg, October 15, 1688). From Hungary, the emperor recalled the Bavarian, Swabian, and Franconian troops and sent them, under the elector of Bavaria, to defend southern Germany. By the end of October, a German army of 20,000 men had concentrated at Frankfurt-am-Main and Boufflers had to withdraw before Coblenz. Louis's invasion of Germany also created an opportunity for William of Orange to invade England.

In attacking Philippsburg, Louis calculated that William of Orange would invade England only to become enmeshed in a civil war: simultaneously, the Turks would be encouraged to greater endeavors on the Danube. Instead, by the spring of 1689, France faced war with Spain and the Anglo-Dutch along her entire frontier from Dunkirk to Basel. The Rhineland would now become subsidiary to the main theater of war in the Spanish Netherlands. Louvois and Louis decided further to erode the military capability of the Rhineland through a campaign of devastation and destruction, the "ravaging of the Palatinate."

The resultant systematic destruction of towns, villages, fortresses, and supplies in the Palatinate, Trier, and

Württemberg was designed to create a cordon sanitaire through which the German armies could not operate toward the French border. Tübingen, Heilbronn, Heidelberg, Worms, Mainz, Mannheim, Eslingen, Oppenheim, Pforzheim, Kaiserslautern, Spiers, Coblenz, and Cochem were all partially or totally destroyed. French raiding parties reached as far into Germany as Nuremberg and Würzburg. This mixture of terror and crude economic warfare characterized the French conduct of the Nine Years' War. Catinat in Piedmont and the duc de Noailles and Marshal Vendôme in Catalonia used identical methods. In the case of the Palatinate, it was successful. Although the German princes did not come to the peace table, the Rhineland remained a secondary theater, and armies could undertake only limited operations.

ENGLAND

By the spring of 1688, the Catholic and francophile James II appeared to be sliding into a commitment to France. The Dutch calculated that it was imperative to secure England and her considerable resources. Exploiting internal disquiet, William of Orange, on behalf of the States-General, invaded England on November 15, 1688, during the opportunity created by the French siege of Philippsburg (see GLORIOUS REVOLUTION). King James fled to France, and William and his wife, Mary, were created joint sovereigns by the Convention Parliament. Louis quickly played James against the new regime in England. He was dispatched to Ireland, where the Catholics were already in revolt, entering Dublin on April 3, 1689 (see IRISH WAR). If William's energies could not be consumed by civil war in England, Louis was able to substitute Ireland.

THE GRAND ALLIANCE

The Dutch Republic declared war on France on March 9, 1689. This was followed by an offensive compact between the Dutch and the Holy Roman Emperor, the Grand Alliance, on May 12, which aimed to restore Europe to the boundaries that had been settled at the Peace of Westphalia in 1648 and the Peace of Nijmegen in 1678. Additionally, the Dutch agreed to support the imperial candidate to the Spanish succession (see SPANISH SUCCESSION, WAR OF THE). Spain and the Spanish Netherlands declared war on France on May 3, 1689. William, as king of England, declared war on May 17, 1689. England and Duke Charles V of Lorraine joined the Grand Alliance on December 19, 1689. The elector of Bavaria added his name to the Grand Alliance on May 4, 1690, and the duke of Savoy and the king of Spain declared war in June. The elector of Brandenburg was already allied with both the Dutch Republic and the emperor. Several states, including Denmark, Sweden, Hesse-Kassel, Württemberg, and Hanover, were prepared to rent troops to the Grand Alliance. Instead of a short war, France was faced by a coalition of the League of Augsburg, Spain, England, and the United Provinces.

THE NATURE OF THE WAR

All participants perceived that they were fighting defensively. However, the huge costs of waging war demanded the offensive so that armies could be maintained through contributions extracted from enemy lands. The imperative of making "war pay for war" involved the capture of territory resulting in positional campaigns, the extensive use of field fortifications or "lines," and the predominance of the siege. Constricting an opponent's freedom of maneuver through the consumption or destruction of material resources was a central strategic ploy.

Weaponry, tactical organization, the limitations imposed by logistics, and the rough equivalence of numbers between the allies and France rendered armies almost incapable of decisive action in battle. Destruction of an enemy's armed forces was not an objective because it was rarely possible. Politicians sought what their soldiers could deliver: the capture and retention of territory via the siege and fortification.

1689: THE SPREAD OF WAR

During a winter of raiding, all participants augmented their forces. The French withdrew from Germany and the bishopric of Liège having forced the prince-bishop, Jean-Louis d'Elderen (r. 1688–94), to declare his state neutral. Liège was obliged to abandon neutrality and join the Grand Alliance later in the year. The French formed two main armies: one to operate along the line of the Sambre River under the command of Marshal d'Humières and a second at Mainz directed by the duke de Duras. Although the allies were numerically superior, the French held the advantage of a central position, while the allies experienced difficulty in coordinating their campaigns. Not until 1691, when William III was able to leave England and Ireland, did the allied war effort benefit from some degree of synchronization.

The campaign opened in the Rhineland. The smaller of three German armies, commanded by the elector of Bavaria, held the "lines of Stollhofen" between the Black Forest and the Rhine, guarding central Germany against a French attack from Strasbourg and Kehl. The Army of the Middle Rhine consisted of 50,000 Austrians, Bavarians, Saxons, and Hessians around Frankfurt-am-Main, directed by Duke Charles V of Lorraine. Lorraine besieged Mainz on June 5: Marshal d'Huxelles resisted for 52 days. This was the major success in Germany in 1689. A victory at Herderbosch on March 11 by 40,000 Brandenburg and Hanoverian forces commanded by General Hans Adam von Schöning over the French under the marquis de Sourdis and the comte de Vertillac forced the French to evacuate most of the electorate of Cologne: Neuss fell on March 14, Siburg and Kempen on March 16, quickly followed by Zons and Soest on the Ruhr. The French hold on Cologne was reduced to Bonn, Rheinberg, and Kaiserswerth. This cleared the eastern flank of the Anglo-Dutch-Spanish army in the Spanish Netherlands, commanded by George

Friedrich von Waldeck, and reduced the danger of a French invasion of the United Provinces along the line of the Rhine River (see LOUIS XIV'S RHENISH INVASION). Kaiserswerth was bombarded on May 23 and then besieged (June 21–26), followed by the bombardment and siege of Bonn, which fell on October 10. The French, although they still held Philippsburg, had been pressed back to the Rhine, which they were to hold for the next seven years.

In Flanders, Waldeck resolved to cross the Sambre and invade France. Although Waldeck won the action at Walcourt on August 25, his invasion of France was effectively countered by d'Humières. Waldeck withdrew across the Sambre.

After James II's return to Ireland, his Catholic forces occupied most of the country, except Londonderry and Enniskillen in Ulster. Although he knew that the war would be decided in the Low Countries, William had to divert resources to the conflict in Ireland because the future of his throne depended upon its outcome. A French squadron under the comte de Château-Renault was surprised on May 11 by an allied squadron under Admiral Edward Herbert while landing supplies and reinforcements in Bantry Bay. Both sides claimed victory, but the allied ships withdrew. Londonderry withstood a low-intensity siege of 105 days (April 28–August 10) and, on August 23, Marshal Herman von Schomberg landed near Bangor with 14,000 allied troops but was unable to make strategic progress.

Scotland also rose in support of James II (see JACOBITE REBELLION [1689–1690]). A rebellion, led by John Claverhouse, viscount Dundee, beat a small Williamite army under General Hugh Mackay at Killiecrankie on July 27. Defeat at Dunkeld on August 21 marked the effective end of the Jacobite cause in Scotland.

In Catalonia, a peasant rising against Castilian rule, which had initially broken out in 1687, burst into life in the spring of 1689. In May, Marshal Noailles invaded Catalonia with 9,000 men and took the fortress of Camprodon in the face of extremely weak resistance. France could not spare enough troops to exploit this success, even though Barcelona was open to attack. At the end of June, Noailles withdrew into Roussillon, and the Spaniards advanced, then besieged and razed Camprodon before turning to suppress the peasant rising in their rear.

1690: SAVOY-PIEDMONT, BEACHY HEAD, THE BOYNE, AND FLEURUS

In 1690, a fifth theater of war opened. Savoy-Piedmont was sandwiched between France and Spanish Milan and dominated by the French fortresses of Pinerolo in the west and Casale in the east: Duke Victor Amadeus II (1666–1732), "could not afford to be honorable." France had treated him like a vassal since 1685. Forced by Louis to persecute his Protestant Vaudois subjects, from the spring of 1687 Victor Amadeus tried to move closer to

Spain and the emperor. The outbreak of war along the Rhine allowed him greater freedom of action. On June 3 he signed a treaty with Spain for military assistance from Milan and concluded a similar deal with the emperor on June 4. He then declared war on Louis XIV. In return for promising to restore to the Vaudois all the rights they had enjoyed before 1686, Victor Amadeus formally allied with England and the United Provinces on October 20, 1690.

Initially, France regarded northern Italy as a subsidiary theater. William, though, saw Piedmont as the one region where the allies could act effectively, invading southern France to capture Toulon and foment rebellion among the Huguenots of Dauphiné, the Cevennes, and Languedoc. Victor Amadeus was less ambitious; his objective was to rid himself of French influence, avoid domination by Spain and Austria, and regain the fortresses of Pinerolo and Casale.

During the first weeks of the war, French troops overran Savoy with the exception of the fortress of Montmélian. Savoyard hatred of the French and religious discord resulted in a brutal war: massacres, atrocities, and the burning of towns and villages were frequent. Throughout, the French suffered guerrilla attacks by an armed populace, both Catholic and Vaudois. In return, they took draconian reprisals. By 1696, Savoy and much of southern and western Piedmont had been devastated and ruined.

In June, Catinat's army was in Pinerolo and Victor Amadeus's forces were at Turin. By ravaging the countryside and threatening Saluzzo, Catinat sought to bring Victor Amadeus to battle. Faced with a threat to this important town, Victor Amadeus accepted battle on August 18 at the Abbey of Staffarda. Surprised and defeated, the allied army lost 5,000 men and had to withdraw to Carmagnola to await reinforcements. Catinat exploited his victory by levying contributions from much of southern Piedmont. Early in November, Catinat hurried northward to besiege and capture Susa on the River Dora Riparia, a vital fortress on his communications with Briançon in Dauphiné.

In the more northerly theaters, the prospects for France were promising. William and most of the British troops were tied down in Ireland while the emperor was making his major effort in Hungary. There was also an unexpected naval success for France. So many English and Dutch ships had already been lost to French privateers that merchants demanded greater protection. This could only be provided by denuding the Channel fleet. While Vice-Admiral Henry Killigrew's 24 warships were escorting merchantmen toward Cadiz, a French fleet under the comte de Tourville entered the English Channel, greatly outnumbering the combined Anglo-Dutch Fleet of Arthur Herbert, now earl of Torrington. Torrington, who wanted to evade battle until Killigrew could rejoin, was instructed to fight. On July 10, off Beachy Head, Torrington's English vessels failed to support the Dutch, and the allied fleet was defeated losing five ships.

As they withdrew to the Nore River in Ireland, Tourville ruled the Channel, but an outbreak of sickness restricted exploitation to burning the fishing village of Teignmouth.

Although Tourville stood across his communications with England, William III campaigned actively in Ireland. Landing at Carrickfergus on June 24 with enough reinforcements to augment the allied army to 40,000 men, William assumed command from Schomberg and advanced south toward Dublin. James II marched north with a smaller army, approximately c. 25,000, including 6,600 French infantry, and took position along the River Boyne, but was defeated on July 11. While the Jacobite army withdrew to Limerick, James left Ireland for France, command passing to the duke of Tyrconnel. Bad weather saved Limerick from capture. To improve communications with England and boost his own prestige, the earl of Marlborough launched an amphibious operation that captured Cork (August 29) and Kinsale (October 15).

Waldeck was again given command of the allied army in the Spanish Netherlands. D'Humières had been relegated to command of the French troops in the lines of the Lys and the Scheldt, and the chief French command in Flanders went to their most capable general, the duke of Luxembourg. Taking a central position, he rapidly combined with the corps of Boufflers to the east of the Meuse and advanced with 40,000 men against Waldeck's 30,000. At Fleurus, on July 1, in a battle that lasted all day, Waldeck was beaten, although both sides lost approximately 7,000 men. Intelligence that a German attack might materialize from Coblenz along the line of the Moselle River prevented Luxembourg from exploiting his victory.

The Turkish recapture of Belgrade in October forced the emperor to recall imperial troops from the Rhineland, while a further 6,000 left Germany for northern Italy. Another setback was the death of the duke of Lorraine: The less able elector of Bavaria was appointed in his stead. Fleurus allowed the French to reinforce their corps in the Rhineland to 40,000, against which the German armies were unable to take significant action.

1691: MONS AND LEUSE

William III provided reinforcements sufficient to increase the Piedmontese army to 20,000 men, but plans to invade France through Savoy had to be abandoned after Catinat's preemptive capture of Nice early in March. He then prepared to attack Turin, taking Avigliana as a preliminary, but his forces were inadequate and he turned southward. Carmagnola fell on June 9 and Catinat then besieged Cuneo, the key post in southern Piedmont. The arrival of imperial reinforcements under Prince Eugene of Savoy enabled Victor Amadeus to force Catinat to abandon the siege. Catinat assumed the defensive, although Victor Amadeus's plans for an invasion of France were obstructed by the Austrians. Sensing that he might not achieve his political objectives by military means, in October Victor

Amadeus sought a diplomatic contact with France. Giovanni Gropello (fl. late 11th century) was sent, during December, to open negotiations with the comte de Tessé, the commandant of Pinerolo. Nothing resulted from these overtures because Louis would offer nothing except recognition of the duke's neutrality.

In Catalonia, the French land forces were inactive as Noailles attempted to establish a supply base around Cardona. Instead, campaigning was pursued by the navy. Employing the bomb ketches that had proved so effective against Genoa, 36 French ships anchored off Barcelona on July 7 and bombarded the city on July 10, destroying over 300 houses. The fleet proceeded to Alicante on July 25 and fired 3,500 bombs into the town over a period of four days; 90 percent of the buildings were damaged. These terror attacks helped to unite Spain, including the Catalans, behind the leadership in Madrid, resulting in improved prospects for fighting effectively against France.

The Irish theater was brought to a conclusion during 1691. William III handed command to Godard van Reede, baron van Ginkel, later earl of Athlone. He emerged from winter quarters to secure a crossing of the Shannon River at Athlone (June 29–July 10) before defeating the Jacobite army under its French commander, the marquis de St. Ruth, at Aughrim on July 22. The Jacobite army withdrew into Limerick. With no prospects of further French assistance, the Jacobites signed the Treaty of Limerick (October 13), which ended the war on surprisingly generous terms.

On the Rhine, the German armies achieved little, epidemics of sickness affecting both the French and the imperial forces. Again, the main theater was the Spanish Netherlands. In an operation carefully planned by Louvois, the last before his death on August 16, the French surprised the Allies by besieging the fortress of Mons (March 15). William hurriedly concentrated an army at Halle, south of Brussels, but was unable to prevent the fall of the fortress on April 8. Having been outmaneuvered, William sought redemption through battle. Boufflers raided Liège in June, bombarding sections of the city and burning some of the suburbs, but he was unable to effect a siege. William left the field before the campaign was concluded, and Luxembourg took advantage by embarrassing the rear guard of the army, now under Waldeck, as it decamped from a position at Leuse on September 19.

1692: LA HOGUE, NAMUR, AND STEENKIRK

All participants were now feeling the economic strains of war. Antigovernment factions in England were disillusioned with both the cost and the unimpressive results of fighting the French in Flanders: An alternative was discovered by resurrecting the Elizabethan strategy of mounting amphibious "descents" upon the enemy coast. Employing infantry returned from Ireland, the initial target (January 1692) was Dunkirk, but secrecy was compromised and the operation canceled.

The major French objective for 1692 was the capture of the vital Sambre-Meuse fortress of Namur (May 29–July 1). To delay William from marching to its relief, Louis arranged a simultaneous invasion attempt upon the south coast of England using 12,000 Irish troops, released under the terms of the Treaty of Limerick, supported by an equal number of Frenchmen. An essential preliminary was the acquisition of naval supremacy in the English Channel. During a five-day battle between Capes La Hogue and Barfleur on the northern coast of the Cotentin Peninsula (May 29–June 3), Edward Russell's Anglo-Dutch warships shattered Tourville's fleet. The invasion was canceled.

The fall of Namur opened the line of the Sambre-Meuse to Luxembourg and threatened Liège. William sought to restore the situation through battle. By a night march from his position at Halle, William surprised Luxembourg in his camp at Enghien, but inadequate reconnaissance reduced the allied assault to a partial blow against the French right wing around the village of Steenkirk (August 3). Although only half the armies were engaged, the battle cost each side 8,000 casualties.

The imperial forces in the Rhineland numbered 47,000 but were slow to enter the field. Two limited offensives across the Rhine brought no enduring success, failing to capture Eberenburg, while a counterattack by Marshal de Lorge seized Pforzheim. Lorge then brushed aside a small corps on the borders of Württemberg and proceeded to levy contributions throughout the duchy.

Although his preference was either to recapture Pinerolo and Susa or to invade Savoy and relieve Montmélian, Victor Amadeus was persuaded by William III to mount an invasion of France: Catinat's army had been drained to provide troops for other theaters and was incapable of an offensive. In the spring, a small force was sent to blockade Casale, while the main allied army invaded Dauphiné. In July, they besieged and took Guillestre, Embrun, and Gap, ruining the countryside as they progressed. This, however, was the limit of the advance and all attempts to foment a rising among the Huguenots failed. The campaign was already languishing when Victor Amadeus contracted smallpox. The allied army recrossed the Alps in the autumn. During the winter, as Victor Amadeus slowly recovered, further diplomatic approaches were made to Tessé.

1693: LANDEN, LA MARSAGLIA, AND CHARLEROI

The year 1693 was decisive. French harvests between 1689 and 1691 had been indifferent; that of 1692 was poor; the harvest of 1693 failed completely throughout France and northern Italy. Faced with a dwindling tax base, Louis had to prioritize expenditure. Money was accordingly diverted from the navy to the army. The former switched from fleet actions to commerce raiding in conjunction with privateers. The resultant "guerre de

course" was to have a major impact on Anglo-Dutch commerce, more than 1,200 merchant ships being captured by the French between 1688 and 1695. The final, successful, French fleet action was the seizure, off Lagos, of 80 of the 400 merchantmen from the insufficiently escorted Smyrna fleet (June 27). Louis also decided to launch land offensives in Catalonia, Germany, and the Netherlands, as a prelude to dictating generous peace terms to the Grand Alliance. A concomitant diplomatic initiative arrested Swedish dalliance with the Grand Alliance before applying her good offices to open fissures among the German princes. Only the offer of an electoral title by Leopold persuaded Ernst August of Hanover not to desert the Grand Alliance, and concessions were also required to retain the wavering John George IV of Saxony. The major French diplomatic effort was directed toward Piedmont.

Victor Amadeus determined upon an offensive to capture Pinerolo. After sending minor forces under the Spanish general, the marquis de Legañez, to mask Casale, he advanced westward. Catinat left Tessé in command of the fortress and withdrew his field army to Fenestrelle to protect Tessé's communications with Susa. The attack on Pinerolo was halfhearted, more bombardment than siege, and ended with Victor Amadeus renewing his diplomatic overtures to Tessé through Gropello on September 22. As Victor Amadeus dithered, Louis prepared a counterattack. Reinforced with troops from Catalonia and the Rhine, Catinat advanced from the mountains above Pinerolo and was across Victor Amadeus's communications with Turin by September 29. Abandoning the bombardment, the allied army hastened eastward, encumbered by their siege train. At La Marsaglia on October 4, the outnumbered, fatigued, and out-generaled allied army lost 6,000 men. Although Cuneo and Turin lay open to attack, supply difficulties prevented Catinat from exploiting his victory. After levying contributions from as far south as Saluzzo, he retired into winter quarters.

His country exhausted and facing famine, Louis needed peace in Italy. With Savoy and Nice occupied, much of Piedmont devastated, and his army beaten at La Marsaglia, Victor Amadeus was receptive and talks reopened in October. Tessé was empowered to negotiate on the conclusion of a truce, followed by a junction of Franco-Savoyard forces to drive the imperial armies from Italy before declaring it a neutral zone. As a gesture of goodwill, Victor Amadeus promised to remain inactive for the campaign of 1694. By attempting to detach one member, Louis hoped to induce the collapse of the Grand Alliance and thus bring about a general settlement. Accordingly, he also made indirect contact with William III. Victor Amadeus maneuvered between both sides, pressing Louis to make peace on favorable terms but advertising the fact of these negotiations to persuade his allies to redouble their military efforts on his behalf.

Noailles besieged Rosas, the chief Catalan naval base, on May 28, using both his army and a fleet of 50 warships. It surrendered on June 9.

The comte de Lorge crossed the Rhine in May with 50,000 men and attacked Heidelberg, which was sacked for the second time in four years. He then advanced slowly into Franconia, but Ludwig of Baden occupied a strongly fortified blocking position at Ilzfeldt (July 26–August 28) through which Lorge and the dauphin could not penetrate.

Luxembourg commanded 68,000 men in the Netherlands supported by Boufflers with 48,000. William had 120,000. Luxembourg made light of this numerical inferiority by maneuvering so that William had to split his army into three corps to protect Flanders, Brussels, and Liège. Having achieved a local superiority of 66,000 to 50,000, Luxembourg trapped William in a confined and awkward position around the villages of Landen and Neerwinden, west of Maastricht, on July 29. Although the allied army lost only 12,000 compared to French casualties numbering 15,000, William withdrew from the field in some disorder and Luxembourg was able to exploit his victory by besieging and taking the Meuse fortress of Charleroi (October 11).

1694: HUY

The French victories of 1693 were insufficient to bring the Grand Alliance to negotiation. France was now so reduced in resources that she could not resume the offensive and depended upon diplomacy to disunite her opponents.

Following an ill-conceived and worse executed “descent” on Brest, which was repulsed on the beach of Camaret Bay (June 8), followed by the bombardment of Dieppe, St. Malo, and Le Havre, the powerful Anglo-Dutch navy was employed in a strategic role. On May 17, Noailles’s 26,000 men beat a Spanish army of 16,000 on the banks of the River Ter, French warships providing flanking fire and logistic support. Palamós was stormed on June 7 and Gerona on June 19, opening the route to Barcelona. The Anglo-Dutch fleet was ordered to the Mediterranean: 75 ships under Edward Russell anchored off Barcelona on August 8. The French ships immediately departed for the safety of Toulon, obliging Noailles to withdraw to the line of the Ter, harassed by the Catalan guerrillas, the *miquelets*, under their general, Blas Trinxeria. Seapower had proved decisive. Instead of returning to home waters, Russell was instructed to winter at Cadiz in readiness for operations off Catalonia in the spring. There was also the possibility that the allied fleet could assist the duke of Savoy in recapturing Nice, especially because Catinat’s army had been depleted to reinforce Noailles. The duke demurred, explaining that the season was too far advanced for such complex maneuvers. Either Victor Amadeus was abiding by his pledge to remain inac-

tive or, more probably, the devastated Piedmontese countryside could no longer support sustained operations, a situation exacerbated by an acute shortage of grain throughout northern Italy in the winter of 1694, occasioned by the failure of the harvest. Late in the year, imperial envoys proposed Casale as the target for the next year. This did not accord with Victor Amadeus’s aim of regaining Savoyard control over Casale, and he promptly renewed his negotiations with Tessé: Peace had to be secured.

In both Germany and the Netherlands, the French remained on the defensive. Lorge sallied across the Rhine early in June but an advance by Ludwig of Baden forced him to recross at Philippsburg on June 28 following a sharp engagement. Baden then occupied a series of fortified camps to deter the French from reentering Germany. Although he was able to protect Flanders, Luxembourg could not prevent William from seizing the small Meuse fortress of Huy (September 27), an essential preliminary to future operations against Namur.

1695: THE GREAT SIEGE OF NAMUR

Despite winter negotiations, William concluded that he had more to gain from weakening France through military action, while Louis trusted that Savoy-Piedmont could be detached from the Grand Alliance.

Taking advantage of the Anglo-Dutch fleet, the marquis de Castañaga unsuccessfully attacked Palamós (August 15–25). When the fleet departed from the Mediterranean in the autumn, the French were free to resume their advance toward Barcelona. Neither could the allied fleet affect events in Savoy-Piedmont. Victor Amadeus knew that the imperial forces intended to attack Casale. Concerned to restrict the extension of Austrian Hapsburg power in Milan, on March 15 the duke instructed Gropello to warn Tessé. Instead of letting the emperor conquer Casale, Gropello proposed that the garrison should surrender after a brief siege by the Piedmontese on condition that the fortifications were then dismantled and the fortress returned to its rightful owner, the duke of Mantua. On April 29, 1695, Louis consented and Victor Amadeus undertook to prevent his allies from attacking any other French possession during 1695.

The siege of Casale began on June 25 and, after token resistance, the French garrison surrendered on July 9. Despite the suspicions of his allies, Victor Amadeus avoided any further action and the rest of the summer was spent demolishing the fortifications, a task not completed until mid-September, by which time it was too late to begin further operations. On November 23, Gropello proposed to Tessé that Victor Amadeus would abandon his allies if France would cede Pinerolo. Although Louis was reluctant to give up territory, he grew more amenable to the proposal as he realized that the defection of Savoy-Piedmont might well shatter the Grand Alliance. In

February 1696 he instructed Tessé to draw up a settlement on these lines.

Luxembourg died in January 1695, to be succeeded by the less able duc de Villeroy. Villeroy has 115,000 men in the Spanish Netherlands but was outnumbered by William. The allies feinted toward Flanders, and attacked Fort Knokke (June 17–24) to commit Villeroy, before hurrying eastward to besiege Namur (July 8), which was defended by Boufflers with a garrison of 15,000 men. Villeroy was slow to march to relieve Namur, thinking that the fortress could endure almost indefinitely. He was shadowed by the prince de Vaudémont with a corps of 37,000 men whose rearguard action at Aarsele (July 14–15) was one of the tactical masterpieces of the war. Slowly, Villeroy edged toward Namur, bombarding Brussels en route (August 13–15) to draw William away from the Meuse River. Some 4,000 shells and red-hot shot were fired, destroying more than 2,000 buildings. Finally, Villeroy approached Namur but was held off by William's covering army. Boufflers surrendered on September 22. For William, this achievement greatly enhanced his own prestige and that of the Grand Alliance. Strategically, the recapture of Huy in 1694 and Namur in 1695 restored the allied position on the Meuse and secured communications between their armies in the Low Countries and those on the Rhine and the Moselle.

1696: EXHAUSTION AND STALEMATE

The campaign of 1696 was dominated by a monetary crisis in England and the defection of Savoy-Piedmont from the Grand Alliance. Without money to pay his troops in the Netherlands, William was unable to undertake significant operations. Without operations in the Netherlands to distract the French, there was no prospect of the imperial armies in the Rhineland functioning effectively. The sole operation of note was the raid on the French magazine at Givet (March 15–17) by Menno van Coehoorn. The destruction of 4 million rations may have forced the French to abandon an attempt to retake Namur. The raid on Givet possibly persuaded Louis that economic salvation might be found in the New World; as a result, in 1697, the baron de Pointis led a naval expedition that captured and looted Cartagena, Colombia.

Louis also attempted an invasion of England. The murder of William III by Jacobite assassins as he traveled to Windsor was to be the signal for a landing in Kent by 14,000 French soldiers under Boufflers and d'Harcourt. The discovery of the assassination plot on March 2 ended this scheme, which could not have succeeded because the Anglo-Dutch fleet retained command of the English Channel.

Determined to capture Pinerolo either through diplomacy or war, Victor Amadeus prepared to attack. He was preempted by Louis's offer of peace and on May 30 Tessé and Gropello signed a draft treaty. The final version of the Treaty of Turin was signed on June 29 and ratified by

Louis on July 6. France ceded Pinerolo, its fortifications demolished, plus its land corridor into Dauphiné, and would restore Savoyard territory seized during the war as soon as all allied forces had evacuated Italy. An immediate truce was to be declared, before the French and Savoyard armies combined to force Savoy's ex-allies to accept the neutralization of northern Italy. Victor Amadeus's daughter, Marie Adelaide, was to marry the duke of Burgundy.

On July 12, Catinat's army, suitably reinforced, advanced on Turin as if to attack, offering Victor Amadeus the pretext to sue for peace. He did so and dropped from the Grand Alliance. Early in August, the remaining allied forces left Turin and withdrew toward Lombardy. When the truce expired, the French and Savoyard armies marched into the Milanese and besieged Valenza. The Allies were forced to sue for peace. A truce was proclaimed at Vigevano on October 7, declaring Italy to be a neutral zone. During the next two months, the allied armies departed. Although Victor Amadeus had secured his war aims of capturing Pinerolo and neutralizing Casale, the price, both to his reputation and the economy of the duchy, was high.

1697: ATH, BRUSSELS, AND BARCELONA

Financially exhausted, England, the United Provinces, and Spain did not want another campaign. Peace had seemed within reach in 1696 when the defection of Savoy wrecked their expectations and encouraged France to further military effort. Catinat's 40,000 men were redeployed to reinforce the French armies in Catalonia and the Netherlands; success in either or both theaters would force the Grand Alliance to make peace on French terms. The allies did not enjoy such riches. The Savoyard army was forfeit while the Spanish troops that had fought for Savoy-Piedmont had to remain in northern Italy to police the truce and cover Milan.

The campaign in the Netherlands had not properly opened when the peace plenipotentiaries met in the Palace of Rijswijk on the outskirts of The Hague on May 6. Nevertheless, the French assumed the offensive, besieging Ath (May 7–June 5) "to make a noise" during the peace negotiations. Three French armies, under Villeroy, Boufflers, and Catinat, then threatened Brussels, but the allies retreated through the night of June 22–23 to take up a blocking position around Koekelberg near Anderlecht. Here the armies remained until the signature of peace.

In Catalonia, where the duke de Vendôme had succeeded Noailles, the French advanced during June and besieged Barcelona on June 12 with 25,000 troops and a sizable fleet. Barcelona fell on August 10. This convinced the king of Spain to make peace.

THE COLONIES

Although not affecting the campaigns in Europe, there was some fighting in the Americas and India. Protection of trade—sugar, tobacco, fishing, and precious metals—was

the major concern. The petty operations, which usually consisted of raids conducted by local militias, occasionally supported by troops from Europe, were not strategically significant.

The French seized St. Kitts on August 15, 1689, but it was recaptured on July 22, 1690. A British attempt to take Guadeloupe in April 1691 was unsuccessful. During 1695, the British attacked French bases on Hispaniola following raids on Jamaica. In 1697, the baron de Pointis and the marquis de Château-Renault brought a squadron into the Caribbean in search of the Spanish treasure fleet. Unable to locate the *flota*, they looted Cartagena, the entrepôt for the South American silver traffic. Also in 1697, a British squadron tried to regain control of Newfoundland but achieved little.

Whereas the war in the Caribbean was mostly conducted by Europeans and white settlers, in North America the Nine Years' War relied upon the native Indians: the Five Nations of the Iroquois were allied to the British and the Algonquian tribes to the French. Vicious frontier raiding was the characteristic military operation, except for the capture of Port Royal by Sir William Phips, the governor of New York, on May 21, 1690, and an unsuccessful attack on Quebec later in the same year.

In India, Admiral Duquesne-Guiton sailed in October 1690 into Madras harbor and bombarded the Anglo-Dutch fleet. Three years later, in September 1693, the Dutch besieged and captured the tiny French garrison at Pondicherry.

THE PEACE OF RIJSWIJK, 1697

Negotiations were formally conducted at Rijswijk, but proceedings were hastened by nine private conversations between the earl of Portland and Marshal Boufflers, beginning at Brucom, near Halle, on July 8. Peace was signed at Rijswijk on September 20, the emperor adding his signature on October 30 when he finally accepted that his allies would not support his request for the return of Strasbourg.

The peace settlement represented a substantial victory for the Grand Alliance. William III was recognized as king of England and Louis XIV undertook not to support actively the candidacy of James II's son. The forward defense of the United Provinces was formalized by permitting the Dutch to garrison a line of Spanish fortresses from Nieuport to Namur, including Charleroi, in the south of the Spanish Netherlands, the "Dutch Barrier." The territorial settlement largely obeyed the rule of status quo ante bellum. The French surrendered Philippsburg, Breisach, Freiburg-im-Breisgau, and Kehl, while their new fortresses at La Pile, Mont Royal, and Fort Louis were to be demolished. They retained, however, Alsace and Strasbourg. The duke of Lorraine was restored to his duchy. With an eye on the Spanish succession, Louis allowed Spain to regain Luxembourg, Chimay, Mons, Courtrai, Charleroi, Ath, and evacuated Barcelona and Catalonia. Dinant was

returned to the bishop of Liège. With the question of the Spanish succession unresolved, the Peace of Rijswijk was simply a truce in the long struggle between France and the Hapsburg-Dutch coalition.

Grattan Massacre (1854)

PRINCIPAL COMBATANTS: The United States vs. the Lakota People (also called the Teton Sioux, and consisting of the Brulé, Hunkpapa, Minneconjou, and Oglala tribes, among others)

PRINCIPAL THEATER(S): North Platte River, seven miles east of Fort Laramie, Wyoming

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: On August 18, 1854, High Forehead, member of a hunting party of various Lakota tribes, killed a cow belonging to a passing Mormon emigrant; when the Mormon complained to Fort Laramie, a sortie was dispatched to arrest the Sioux hunter.

OUTCOME: Brevet Second Lieutenant John L. Grattan and a small troop from the Sixth U.S. Infantry, plus their interpreter, were killed by Brulé Sioux soldiers after Grattan attacked when they refused to give up High Forehead. Subsequently labeled the "Grattan Massacre,"

the episode foreshadowed a generation of bloodletting on the northern plains.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

U.S. Army: 30; Sioux: unknown

CASUALTIES: United States, 31; Sioux, 1

TREATIES: None

For more than half a century before the Grattan Massacre, a mutually suspicious, but carefully guarded relationship existed between the expansionist United States and the Indian tribes of the northern Great Plains. Federal employees and soldiers, explorers, missionaries, and traders were welcomed across the region as long as they behaved decently. Tribal members and non-Indian hunters, sometimes together, harvested beaver pelts, buffalo hides, and other animal resources to the commercial advantages of white investors in the fur trade. The Indians exchanged some of the natural bounty of their hunting grounds and their labor for American- and European-manufactured goods that improved their military capabilities, made their lives more convenient or luxurious, and embellished their culture, its ceremonies and art.

But many on both sides grew increasingly fearful over the years that such occasional clashes as the ARIKARA WAR of 1823 might someday escalate into a more generalized war. In many ways, the clashes had structural roots in the changing economy and society of the Great Plains: Fur traders and professional hunters were so depleting the wildlife that they posed an essential threat to the traditions of tribal life; during the 1840s, overland travelers to the Pacific coast violated the boundaries of tribal lands without permission; and by mid-century, a significant number of emigrants were settling close enough to Indian communities to create many cross-cultural conflicts.

It was just about that time that strategists in the U.S. Army, increasingly worried about the potential for violence, changed the military's policies toward the northern plains. Since 1819, when the United States had established Forts Snelling and Atkinson, and 1825, when the Atkinson-O'Fallon Commission had made treaties with the Plains tribes during the Yellowstone Expedition, the army high command had reduced its forces north of Kansas to meet the military exigencies of the southern Great Plains. In 1848, however, federal troops had built Fort Kearney and, in 1849, the government had purchased Fort Laramie from traders. These moves were aimed at protecting the new migration of Mormons, California gold rush emigrants, and others traveling west from Omaha along the sides of the Platte River basin.

The Treaty of Fort Laramie in 1851 arranged safe passage for these overlanders. Its diplomatic mechanism was familiar to the region's tribal leaders. Treaties, like those produced by the Atkinson-O'Fallon Commission, traditionally recognized the territorial claims negotiated among

the tribes themselves for the privilege of passage or for hunting rights. The Fort Laramie treaty extended this intertribal diplomacy to cover non-Indians by offering annuities as tolls for travel across Sioux, Cheyenne, and Arapaho lands. For three years after the treaty was signed, tribal soldiers allowed non-Indians to migrate unmolested until a trivial misunderstanding provoked a bloody confrontation.

The 1851 Fort Laramie Treaty obliged the Plains Indian tribes to assemble each autumn to receive the food and trade goods they were paid for allowing travelers to pass through their territory. As Indians collected near Fort Laramie in August 1854, a member of a hunting party made up of Brulé Sioux and other Lakota soldiers killed a lame cow that belonged to a Mormon family traveling overland with a nearby wagon train. The cow's Mormon owner reported the "theft" to Fort Laramie and demanded restitution. Such incidents were not uncommon at these meetings of cultures, perhaps inherently volatile, among Indian hunters, the U.S. military, and American emigrants. They awaited only the right spark to make of them a crossroads to conflict, and, in this case, the spark proved to be Lieutenant John L. Grattan (1830–54).

A recent graduate of West Point, eager to prove his own mettle, Grattan asked for command of a sortie to the camp of Brulé chief Conquering Bear (sometimes translated as Brave Bear) to arrest the Sioux "thief." Post commander Captain Hugh B. Fleming reluctantly agreed to the expedition, but he warned the young West Pointer to exercise discretion and to avoid any violent engagement. Giving little heed to the warning, Grattan sallied forth on the day following the incident, August 19, with 27 privates and two NCOs, armed with a 12-pounder howitzer and a 12-pounder mountain gun.

On the march toward the Indian village, Grattan's interpreter, Auguste Lucien (d. 1854), got drunk, and upon the army's arrival at the camp, the interpreter began hurling insults at the Sioux as the parley got under way. Conquering Bear (d. 1854) calmly pointed out that the hunting party, in need of food, assumed the lame cow, of no use to others, was fair game. In addition, the party consisted of other tribal members, some Oglala and some Minneconjou Sioux, over which he had no direct authority. In fact, it had been one of them who put the ox out of its misery. Trying to forestall a confrontation, Conquering Bear offered amends to the Mormon family, but his offer was refused. When High Forehead (fl. 1854), the Minneconjou who had killed the cow, refused to surrender, the tension, never far from the surface, increased. Forty-five minutes after the parley had opened, the overconfident Grattan rashly ordered his troops to open fire on the village, fatally wounding Conquering Bear—as it turns out, the only Sioux to die that day.

Unfortunately for the thoughtless lieutenant and his command, Grattan had set his two artillery pieces too high

to be effective. The next shots caused no injury and little damage, but did incite the fury of the Brulé soldiers, who—joined by some of the Oglala—responded quickly and forcefully. Lucien was among the first to fall; so was Grattan. By nightfall, all the troops except Private John Cuddy (d. 1854) lay dead. Cuddy survived long enough to return to Fort Laramie, but he lapsed into a coma and died on August 21.

The news shocked and alarmed citizens throughout the United States, but despite their outrage, not all officials joined in the growing cry for revenge. To the contrary, the Bureau of Indian Affairs, after hearing reports from Fort Laramie, quickly concluded that the army had blundered. The War Department, on the other hand, demanded a response. When young Sioux warriors, buoyed by the victory over Grattan, began raiding along the major emigrant routes, Secretary of War Jefferson Davis (1808–89) decided that the “massacre”—the word was often used to describe Indian victories—had been deliberate. Action, Davis declared, had to be taken to “punish” the Sioux if future raids were to be avoided. He recalled the fiery-tempered but experienced Indian-fighter, Colonel William S. Harney (1800–89) home from leave in Paris to direct operations against the Sioux, which in turn led to the first serious confrontation between the Lakota and the U.S. Army at Blue Water Creek in early September 1855 (see UNITED STATES–SIOUX WAR [1854–1857]).

The Grattan Massacre initiated half a century of military conflict on the northern Great Plains.

Greco-Persian Wars (500–448 B.C.E.)

PRINCIPAL COMBATANTS: Persia vs. Greek city-states (mostly Athens, Sparta, and the Delian League)

PRINCIPAL THEATER(S): Greece and Asia Minor

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Persia began the war with the intention of punishing Athens; ultimately, its goal was to occupy European Greece.

OUTCOME: The Persian invasion was ultimately repulsed, and the Persians driven out of Europe and Asia Minor.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At Marathon: Persian, 15,000; Greek, 10,000; at Thermopylae: Persian, 100,000; Greek, 5,300

CASUALTIES: Totals unknown; naval losses among the Persians were particularly devastating.

TREATIES: Peace of Callias, 448

From about 500 to 493 B.C.E. Athens (with Eretria) helped Miletus and other Ionian city-states in their revolt against the Persian Empire (see IONIAN REVOLT). This incited Darius I (550–486 B.C.E.), king of Persia, to seek vengeance on the Athenians. In 492 B.C.E. he sent his son-in-law Mardonius with an army to invade European Greece. Mardonius enjoyed great success against Thrace and Macedonia, quickly subduing them, but then was forced to return to Asia when a massive storm wrecked most of his fleet. In 490, a second Persian expedition made the Aegean crossing under the leadership of Artaphrenes the Younger (fl. 490 B.C.E.) and Datis (fl. 490 B.C.E.), Darius's nephew, who, together, conquered Eretria in a week's time. Datis then led a 15,000-man force in a landing at Marathon, 24 miles northeast of Athens. Miltiades (d. 489 B.C.E.), the Greek general, mustered all the men he could—about 10,000 Athenian citizen-soldiers and another 1,000 Plataean troops. He decided to take the offensive—a bold move against a superior, and hitherto undefeated, force. On September 12, 490, Miltiades arranged his infantry (hoplites) in a long, thin line across the two-mile-wide Marathon plain. The line charged the Persian invaders, who readily beat back the Greek center. Miltiades, however, had augmented his flanks, and these now wheeled inward to envelop the Persian center. Datis was thereby routed and forced to retreat to his ships. Unable to attack strongly defended Athens, Datis returned to Asia in defeat.

Greek losses were a mere 192 men, whereas the Persians had lost 6,400.

It was 480 before Darius mounted another invasion. This time he sent a massive force of 100,000 men, led by his son Xerxes I (d. 465 B.C.E.), across the Hellespont (Dardanelles) on a boat bridge. The army marched through Thrace and Macedonia, then turned into Thessaly. There, at Thermopylae Pass, the narrow gateway into Boeotia—and Attica, the Athenian homeland—the vastly outnumbered Greeks established a strong defensive position, but with a mere 5,300 men. In one of the great heroic stands of all history, 300 Spartans, under Leonidas I (d. 480 B.C.E.), held off 100,000 Persians at the pass. They fought to the last man, but bought sufficient time in the three-day battle for the main body of 5,000 hoplites to escape.

Following Thermopylae, the Greeks yielded Attica to Xerxes, who sacked Athens. The Greek forces took up positions behind a great wall they built across the Isthmus of Corinth, and the Persians followed. The plan now was for the vast Persian fleet of some 600 galleys to attack the Greek position. In September 480, the Persian land forces watched as Xerxes' 600 vessels seemingly entrapped the 366 triremes (superior war galleys with three rows of oars) of the Greek fleet in the Saronic Gulf. Themistocles (c. 525–462 B.C.E.), the Greek commander, lured Xerxes' fleet into the dangerously narrow waters off Salamis, thereby depriving the unwieldy craft of maneuverability. With the enemy thus rendered vulnerable, the Spartan admiral Eurybiades (fl. 480 B.C.E.) led the Athenian triremes in a furious attack. Two hundred to three hundred Persian vessels were destroyed, whereas the Greeks lost perhaps 40 of their own. Xerxes was thus forced to break off the ground campaign, postponing further attacks until the next year—by which time the Greek city-states had been able to unite and pool their military resources. At the Battle of Cape Mycale, in 479, the already diminished Persian fleet was destroyed.

While the Persians suffered defeat at sea, the Greek land forces also managed to take the main Persian base at Plataea, southern Boeotia. This put an end to the immediate threat of a Persian invasion and prompted the Ionian states, with the aid and urging of Athens, to form the Delian League in 478. The Athenian general Cimon (c. 510–450 B.C.E.), son of Miltiades, led the forces of the Delian League in a counteroffensive that retook the cities of Thrace as well as those along the Aegean.

In 466, at the mouth of the Eurymedon River, in southern Asia Minor, Cimon's forces routed the reconstituted Persian fleet and scattered its land forces. This brought southern Asia Minor into the Delian League and ended the Persian threat of further invasion. Athens, however, continued to act against the Persians elsewhere, sending Pericles (c. 495–29 B.C.E.) to lead forces in aid of rebellions in Egypt. Pericles blockaded Memphis in 459, but was badly defeated by the Persians in 456 and besieged on an island in the Nile. In one of the greatest

feats of military engineering in all history, the Persian forces diverted the Nile's flow and were thereby able to attack and destroy the Greeks in 454. At this point, Cimon, who had fallen from power with the ascension of his rival Pericles, was recalled. In 450, he won a victory over the Persians at Salamis in Cyprus, thereby recovering most of Cyprus. In 449, however, Cimon died (either of illness or of battle wounds) during the siege of Citium, bringing the war to a close the following year. By the Peace of Callias, Persia pledged to stay out of the Aegean forever. The peace endured for 40 years.

Greco-Turkish War (Thirty Day's War) (1897)

PRINCIPAL COMBATANTS: Greece vs. the Ottoman Empire

PRINCIPAL THEATER(S): Crete and Thessaly

DECLARATION: Greece against Ottoman Empire

MAJOR ISSUES AND OBJECTIVES: Greece attempted to annex Crete.

OUTCOME: Greek forces were decisively defeated, but Crete was put under an international protectorate governed by Prince George of Greece.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Greece, 600 killed; Turkey, 1,300 killed

TREATIES: Armistice and treaty, 1897

The CRETAN UPRISING (1896) had pitted Islamic Ottomans against Orthodox Greeks on the Ottoman-ruled island of Crete. In response to Ottoman persecution of Orthodox Cretans, Greece commenced a war on April 17, 1897, to annex Crete. The Greeks launched two campaigns, one on Crete itself, the other in Thessaly. The Ottoman forces defended their positions vigorously, defeating the Greeks on Crete at the Battle of Vestinos on May 5 and at Pharsalus on May 6. The Turks forced the withdrawal of 9,000 Greek troops from the island. In Thessaly, the Greeks were fought to a standstill which persuaded them to sign an armistice on May 19, 1897. The war had lasted a month and is sometimes called the Thirty Days' War. Four months later, a final peace treaty was concluded.

Greece suffered a serious defeat and was compelled to pay an indemnity and to cede part of Thessaly to the Ottoman Empire. The Greek government also yielded a degree of its sovereignty to an international commission, appointed to supervise its economic affairs. Nevertheless,

the Ottomans were also compelled to withdraw militarily from Crete and to cede it to an internationally supervised protectorate under Prince George of Greece. The protectorate endured until the end of the First BALKAN WAR in 1913, when, by the Treaty of London, Crete was formally annexed to Greece.

Greco-Turkish War (1920–1922)

PRINCIPAL COMBATANTS: Greece vs. Turkey

PRINCIPAL THEATER(S): Smyrna, Thrace, and Anatolia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Greece wanted to expand its World War I acquisition, Smyrna, to include Turkish territory in Thrace and Anatolia.

OUTCOME: Greece was decisively defeated and compelled to renounce all Anatolian claims and to return Thrace to Turkey.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

About 50,000 on each side at any given time

CASUALTIES: Greece, 105,000 killed, wounded, or taken prisoner; Turkey, 13,000 killed, 35,000 wounded. Many noncombatant deaths on both sides

TREATIES: Treaty of Lausanne, July 24, 1923

After WORLD WAR I, the Allied Powers supported Greek occupation of Smyrna, which had been part of the German-allied Ottoman Empire. In the meantime, Mustafa Kemal (1881–1938) (later renowned as Kemal Atatürk) successfully led a revolution against the government of Sultan Muhammad VI (r. 1918–22) and set up a new provisional republican Turkish government at Ankara in 1920. For their part, the Greeks wanted to expand what the post–World War I Treaty of Sèvres had given them, Smyrna, to include Thrace and as much of Anatolia as they could manage to acquire. On June 22, 1920, the Greek army under Alexander I (1893–1920) began its advance inland, taking Alasehir on June 24. The advance paused here while Greeks and Turks negotiated at Constantinople (later Istanbul). Muhammad VI had agreed to certain concessions, which Kemal now refused to honor. The negotiations broke down, and the Greek offensive resumed on March 23, 1921.

At İnönü 150 miles west of Ankara, a Turkish force under Ismet Pasha (1884–1973) retarded the advance of 37,000 Greek troops. By August 24, 1921, however the Greeks had reached the Sakarya River, 70 miles outside Ankara, where they would fight the decisive battle of the war. The battle commenced on August 24, 1921, and pitted 50,000 Greeks against 44,000 Turks, who were subse-

quently reinforced by an additional 8,000. Although the Greeks initially succeeded in driving back the Turkish center, on September 10, Kemal led a small reserve force in an attack on the Greek left flank. Fearing envelopment, the Greeks disengaged and withdrew to Smyrna, having lost 3,897 killed and 19,000 wounded. An additional 15,000 had been captured or were missing in action. Turkish losses were 3,700 killed, 18,000 wounded, and 1,000 missing or taken prisoner.

Following their victory at the Sakarya, the Turks intensified their counteroffensive, beginning on August 18, 1922, laying siege to Smyrna. It fell to the Turks on September 9, and the Greek forces were expelled from the island.

The Treaty of Lausanne was concluded on July 24, 1923, by which Greek claims to Anatolia were vacated, and the Greeks were compelled to return Thrace to the Turks. The Turkish border in Europe was fixed at the Maritsa River. The Turkish triumph also propelled Mustafa Kemal to the presidency of the newly proclaimed Turkish republic.

Greek Civil War (1944–1949)

PRINCIPAL COMBATANTS: Greek Communists vs. Greek government forces

PRINCIPAL THEATER(S): Greece

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Greek communists wanted to overthrow the British- and American-supported democratic government.

OUTCOME: With British and then U.S. support, the government ultimately crushed the communist insurgency.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Greek government forces, 205,000,—with 40,000 British troops; Greek Communists, about 28,000 guerrillas, maximum

CASUALTIES: Government forces, 15,969 killed, 38,557 wounded, 2,001 missing; communist forces, 50,000 killed; total fatalities, including noncombatants, 158,000

TREATIES: None; cease-fire signed October 16, 1949

Early in WORLD WAR II, Greece was invaded and occupied by Nazi forces. During the occupation, an active partisan resistance was conducted, chiefly by the Communist National Liberation Front (EAM) and its military arm, the People's National Army of Liberation (ELAS). The British

drove the Germans out in September 1944, and liberated Greece was occupied by the British, who brought the former government of Greece, which now included the EAM, back into power. Certain elements of the ELAS resisted cooperation with the British-supported government and threatened armed insurrection. The British response was a proposal to disarm the ELAS, which elicited a Communist protest in the form of a general strike in Athens declared on December 2, 1944. The next day, police and the ELAS clashed in the streets, but after British prime minister Winston Churchill (1874–1965) visited, a truce was signed, and ELAS guerrillas withdrew from Athens. A further agreement was concluded on February 12, 1945, calling for the ELAS to surrender its weapons within two weeks. Despite the agreement, however, fighting continued. The Greek government was unstable, and Greece was embroiled in territorial disputes with Yugoslavia and Albania.

Marshal Tito (Josip Broz) (1892–1980), head of Communist Yugoslavia, supported the EAM-ELAS, as did Albania and Bulgaria. With this support, the Communist forces were able to retreat intact north into the mountains. There they received supplies directly from Yugoslavia and Albania. To counter this, Britain sent 40,000 troops to Greece and gave financial aid to the government, which soon became entirely dependent on the troops and the cash to maintain power. Devastated itself by the just-concluded war, however, Great Britain announced that it could not continue its support beyond March 31, 1947, the day of Greek elections. On February 21, 1947, Britain turned to the United States. It requested aid for Greece as well as Turkey. President Harry S. Truman (1884–1972) secured an appropriation from Congress of \$400 million for this purpose as part of the so-called Truman Doctrine—a policy of aiding the “free” nations of Europe to resist the incursion of Soviet-sponsored communism (see COLD WAR). The ELAS responded to the Truman Doctrine by announcing the formation of a Communist government, the “Free Greek Government,” and, with 20,000–30,000 guerrillas, it fought its way south, penetrating nearly to Athens.

As U.S. military and financial aid began to reach government forces, 40,000 loyalist troops were able to mount a major attack on the main Communist base in the Grammos Mountains during June 19–August 20, 1948. It was the biggest battle of the war, and it proved decisive. The rebels, under General “Markos” Vaphiades (1906–92), broke out of an encirclement by three columns of government troops, but, in doing so, they suffered catastrophic losses: 3,128 killed, 6,000 wounded, and 598 taken prisoner. (Government forces lost 801 killed, 5,000 wounded, and 31 missing.)

With the Communist rebels reeling, the government launched 50,000 troops against a force of 12,500 Communists in the Vitsi Mountains. In heavy fighting, the government did not succeed in dislodging the Communists, but did inflict heavy casualties.

With the onset of winter 1948–49, government troops concentrated on the Peloponnese, clearing it of some 4,000 rebels by the middle of March 1949. However, in Macedonia, it was the rebels who took the offensive. The town of Carpenisi was occupied on January 12, 1949, and it took government forces 16 days to recapture it. The government garrison at Florina came under attack from 4,000 communist troops on February 12, 1949. The siege was broken after four days of bitter combat.

The Communist offensive created heavy casualties on both sides, but Communist losses were heavier—and, in proportion to the numbers of men fielded, much more devastating. The rebel forces kept fighting, but had been greatly reduced, and in July 1949, Tito, responding to divisions within the Soviet sphere of influence, withdrew support for the Greek Communists after they announced their allegiance to Tito’s nemesis, Joseph Stalin (1879–1953). By August, the last of the Communist guerrillas had been captured, and the country was declared secure on August 28, 1949. The People’s National Army of Liberation (ELAS), principal Greek communist military force, formally surrendered on October 16, 1949.

Greek War See LAMIAN WAR.

Greek War of Independence (1821–1832)

PRINCIPAL COMBATANTS: Greek nationalists (later with British, Russian, and French allies) vs. Ottoman and Egyptian forces

PRINCIPAL THEATER(S): Greece and Balkans

DECLARATION: Declaration of independence, January 13, 1822

MAJOR ISSUES AND OBJECTIVES: Greek nationalists sought independence from the Ottoman Empire.

OUTCOME: With Anglo-Franco-Russo aid, the nationalists achieved autonomy, then independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Ottoman and Egyptian forces, 24,000; Greek and allied forces, 25,000

CASUALTIES: Greece, 15,000 killed; Ottoman and Egyptian forces, about 6,000 killed

TREATIES: Treaty of Adrianople, September 14, 1829; Treaty of London, August 30, 1832

Greece had long been under Ottoman rule when the “Hellenic movement”—in part driven by early 19th-century archaeological discoveries that reawakened a passion for classical Greek culture—nurtured a nationalist movement. Educated Greeks were attracted to cultural-political societies, the most prominent of which was the Philike Hetairia (Society of Friends), whereas the lower classes gravitated toward quasi-guerrilla bandit bands, known as the *klephts*.

The beginning of a war for independence was signaled by the so-called YPSILANTI REBELLIONS. The Ypsilantis were a prominent Greek family in Constantinople (and therefore known as Phanariots, Greeks of Constantinople) that had been exiled to Russia because of a dispute with the Sublime Porte, the Ottoman government. In Russia, Alexander Ypsilanti (1792–1832) became a general in the czar’s army, and in 1820, military leader of the Philike Hetairia. His ambition was to incorporate Greece in a pan-Balkan rebellion against Ottoman domination, and in March 1821 he led a “Sacred Battalion” in an invasion of Moldavia. He took its capital, Jassy (modern Iasi, Romania), then entered Bucharest. Ypsilanti received acclaim and support from the Phanariot governor of Moldavia and Greeks living in Wallachia, but the czar, responding to pressure from the Austrian minister Metternich, repudiated the action. Presumably acting at the czar’s urging, the Greek ecumenical patriarch excommunicated Ypsilanti. Worse, Romania failed to support Ypsilanti. Romania had its own agenda of independence, which included not only freedom from Ottoman oppression but from the oppression of Phanariot officials as well.

Lacking sufficient backing, Ypsilanti suffered a decisive defeat at the Battle of Dragasani, 90 miles west of Bucharest, on June 9, 1821. The general fled to Austria, only to be arrested by imperial order and imprisoned for the next six years. Alexander Ypsilanti’s brother, Demetrios (1793–1832), also fled, from Moldavia to Morea (Peloponnese). Here he assembled Greek rebels to begin the war of independence in earnest and on Hellenic territory.

On January 13, 1822, Demetrios Ypsilanti was instrumental in a declaration of independence at Epidaurus, Greece. He led rebel bands by land and sea against the Ottoman garrisons and ports of Morea. His men seized supplies from Ottoman ships there. The rebels took the major Ottoman fortress of Tripolitza and then Athens itself. The Turks responded, during 1822–23, by invading Greece, but their assault on the Greek fortress of Missolonghi (at the mouth of the Gulf of Corinth) failed, and the troops withdrew.

On Crete, however, the Turks made horrific inroads, killing the Orthodox residents there and then going on to devastate the island of Chios, actually enslaving some 100,000 Greeks. Yet Morea held out—until internecine quarreling among the Greeks sparked a civil war in the midst of the rebellion. In 1825, Ottoman sultan Mahmud II (1784–1839) secured military aid from Egypt, which

put under the leadership of Ibrahim Ali (1789–1848), son of the Egyptian pasha, an amphibious force aimed at Morea. The Greeks, debilitated by internal strife, were easily defeated, and the Turks soon retook Morea on February 24, 1825, then took Krommydi on April 19. Missolonghi, a key Greek stronghold, was besieged from May 7, 1825, to April 23, 1826. The Egyptians stormed the fortress, killing 500; in the course of the entire siege, 3,000 Greeks died. After the fall of Missolonghi, Athens was retaken on June 5, 1827.

Throughout western Europe, governments and individuals (including, most famously, the British poet George Gordon, Lord Byron [1788–1824]) rallied to the cause of Greek independence. For one thing, western Europe favored a weak Ottoman Empire, and, for another, people felt genuine outrage at the oppression of the “noble” Greeks by the “barbaric” Turks. Britain, Russia, and France agreed to mediate between the Turks and the Greeks, with the ultimate object of obtaining Greek autonomy, if not outright independence. The three nations also demanded the immediate withdrawal of Egyptian forces from Greece. The response of the Ottomans as well as the Egyptians was defiant. The Ottoman Porte rejected any armistice, and the Egyptians refused to evacuate Greek territory. Britain, Russia, and France then launched a naval expedition against the Turkish-Egyptian fleet at Navarino, destroying most of it on October 20, 1827. Navarino was the decisive battle of the war, and it was entirely the work of British, French, and Russian naval commanders and some 17,500 naval personnel from those nations. Not a single Greek was involved. The Turks lost three ships-of-the-line, 12 frigates, two fire-ships, and 45 smaller craft—a disaster for the Ottoman navy. Four thousand Turks, Egyptians, and Algerians died in the battle, whereas the allies lost 177 men killed in action. Navarino is especially significant in military history in that it was the last great sea battle between wooden ships.

After Navarino, French land forces aided the Greeks in expelling Ibrahim’s army.

At this point, Turkey and Russia came to blows in the RUSSO-TURKISH WAR (1828–29), which resulted in a series of Turkish defeats and ended with the Treaty of Adrianople, whereby the Ottoman Porte ceded sovereignty of Moldavia and Wallachia (the so-called Danubian Principalities) and granted Greece autonomous status. Full independence was recognized by the Porte in 1832 when the Treaty of London was signed.

Grenada, Invasion of (1983)

PRINCIPAL COMBATANTS: United States forces vs. Cuban and Grenadan forces

PRINCIPAL THEATER(S): Grenada, West Indies

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The United States wanted to remove the Cuban military presence in Grenada and to protect approximately 1,000 U.S. nationals resident in the country.

OUTCOME: U.S. objectives were achieved.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Two U.S. Marine amphibious units, two Army Ranger battalions, a brigade of the 82nd Airborne Division, special operations units, and major naval vessels vs. 500–600 Grenadian regulars, 2,000–2,500 organized militiamen, and about 800 Cuban military construction personnel

CASUALTIES: United States, 18 killed, 116 wounded; Grenada, 25 dead, 59 wounded; Cuba, 45 dead, 350 wounded

TREATIES: None

On October 25, 1983, President Ronald Reagan (b. 1911) authorized U.S. forces to invade the island nation of Grenada in the West Indies. Intelligence reports revealed that Cuban troops had been sent to the tiny country (population 110,100) at the request of its anti-American dictatorship. In keeping with the COLD WAR policy of containment of communism, President Reagan was determined to prevent a Cuban presence from being established in Grenada. More immediately, the military was assigned the task of protecting the approximately 1,000 American citizens there, most of whom were students at a local medical college.

The background of the invasion is this: In 1979, a Marxist-Leninist coup led by Maurice Bishop (1944–83) and his New Jewel movement overthrew the government of Grenada. The United States became alarmed when the new communist regime devoted inordinate resources to the construction of a 9,800-foot airstrip, a facility clearly intended for military purposes. The Bishop administration proved to be short-lived. He, together with others in his government, were killed in a 1983 coup that put Deputy Prime Minister Bernard Coard (b. 1944) and General Hudson Austin (b. 1939) in charge of the government. At this point, Sir Paul Scoon (b. 1935), Grenada's governor general, secretly communicated with the Organization of Eastern Caribbean States (OECS) for aid in restoring order. It was the OECS that, in turn, asked for U.S. military intervention.

The United States launched Operation Urgent Fury, which included a naval battle group centered on the aircraft carrier *Independence*, as well as the helicopter carrier *Guam*, two U.S. Marine amphibious units, two Army Ranger battalions, a brigade of the 82nd Airborne Division, and special operations units. These massive forces landed on Grenada on October 25, 1983, and found themselves facing no more than 500–600 Grenadan regulars, 2,000 to 2,500 poorly equipped and poorly organized militiamen, and about 800 Cuban military construction

personnel. The invaders quickly seized the airport and destroyed Radio Free Grenada, a key source of government communications. The U.S. nationals were safely evacuated, and Grenada was under complete U.S. military control by October 28.

The operation was highly successful in that it achieved its objectives, rescuing the U.S. nationals and evicting the Cubans. It was plagued, however, by poor intelligence and inadequate communication and coordination among the army, navy, and marines.

Guatemalan Revolution (1954)

PRINCIPAL COMBATANTS: U.S.-backed anticommunist rebels vs. Republic of Guatemala

PRINCIPAL THEATER(S): Guatemala

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: When a newly elected Guatemalan president began nationalizing fallow land leased to the United Fruit Company, the United States mounted a military coup.

OUTCOME: The president was ousted and replaced by a military junta that brutally repressed suspected communists and left-wing sympathizers.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

500 rebels; government troop strength unknown

CASUALTIES: About 100 killed on each side

TREATIES: None

Guatemala had been a “banana republic” since 1913, when the Boston-based United Fruit Company established the Tropical Radio and Telegraph Company in the impoverished Central American country, creating a monopoly of the little nation's communications system and placing a stranglehold on its infrastructure—a shining example of America's “dollar diplomacy.” Imperialism disguised as economic development, dollar diplomacy allowed the United States in the name of free trade and capital investment to promote its interests—and be spared the inconvenience, not to mention the political headaches, of setting up a colonial government—through the auspices of huge export firms doing business in Central America and the Caribbean.

In Guatemala dollar diplomacy worked like this: Guatemala's ruling elite were persuaded to grant United Fruit tax exemptions, vast acreages for its plantations, and the ownership of Guatemala's main port exchange in

return for help in building a railroad, since Queen Victoria's (1819–1901) heyday the sine qua non for any nation that wanted to count for something. Seduced by promises of further American investment, Guatemalan leaders turned over control of all the nation's railways to the company, whose merchant navy already dominated local shipping. Here also—and in other Latin American countries—United Fruit functioned as a shadow government.

Like the other big fruit companies—Standard Fruit and Steamship in Honduras, for example—United Fruit ruled its vast plantations with an iron fist. Company commissaries drove peasants into unredeemable debt, and thus peonage. When malaria weakened its much exploited workers, the company imported black workers from Jamaica and the West Indies—whose immune systems were supposedly resistant to the disease—to get the crop picked, imposing a U.S.-style racial segregation on those it forced to work together. True, the company built a number of hospitals, but that made sense if it wanted to keep its workers healthy enough to harvest its products. On the other hand, the company did not bother much with schools, building only a few and those mostly for show; it did not need many workers who could read, and consequently Guatemalan literacy rates remained shamefully low. Peasants owned tiny plots, whereas United Fruit kept hundreds of thousands of acres in reserve and uncultivated. By 1930, the company had made so much money that it easily absorbed 20 of its closest rivals, becoming Central America's biggest employer. In the absence of major investments of capital and because so much land was dedicated to agriculture, Guatemala could hardly industrialize, and it thus remained hostage to the constantly shifting world demand for its two cash crops, coffee and bananas—a predicament that continues to plague both Central and much of South America today.

When America began to develop its secret intelligence organizations after WORLD WAR I, their personnel—like many in the country's foreign service—tended to be agents of the dollar diplomats as well. It was the managing partner of the Wall Street law firm, Sullivan and Cromwell, who in 1936 put together the deal that gave its client, United Fruit, control of the International Railways of Central America (IRCA) and drew up the papers for a new 99-year lease in Guatemala signed by the Guatemalan caudillo (military leader) Jorge Ubico y Castañeda (1878–1946). Ubico was a man who so despised the Mayan rabble that constituted a majority of his subjects (and United Fruit's workers) that he had his initials stamped in every bullet fired by his soldiers to ensure that malcontents “would carry his personal emblem into eternity.” A 1944 revolution led by reform-minded army officers ousted Ubico and set up national elections, the second of which six years later brought to power Jacobo Arbenz Guzmán (1913–71).

Pledging “to convert Guatemala from a backwater country with a predominantly feudal economy into a

modern capitalist state,” President Arbenz planned to open a second port on the Gulf of Mexico, build a national highway to break IRCA's monopoly on transport, and generally compete with United Fruit. In 1952, he squeezed through a legislature corrupted by foreign bribes an agricultural reform bill and began expropriating uncultivated land leased by United Fruit. By 1954, he had nationalized some 400,000 acres—a seventh of the arable acreage in Guatemala—when United Fruit struck back with a vengeance.

In the U.S. Senate, Boston's Henry Cabot Lodge (1902–85) (dubbed “the senator from United Fruit”) and House Speaker John McCormack (1891–1980), also from Massachusetts, set off a drum roll in Congress demanding action to clean up the mess in Guatemala. Back in 1952 John Foster Dulles (1888–1959)—from the Wall Street firm of Sullivan and Cromwell—became the U.S. secretary of state, and his brother, Allen (1893–1969), head of the CIA, and now they arranged for the United States to meet with several Latin American nations in a Pan-America conference that condemned the growing influence of the communist movement in the Western Hemisphere.

Suddenly Arbenz found himself accused of consorting with communists and subverting the free world, and a CIA-backed coup was underway. Kermit Roosevelt, the United States's man in Teheran, who had helped engineer the fall from power of Iran's prime minister and the return of the shah earlier in the year, declined the Dulles brothers' invitation to participate, stating that the plan reeked of Nazi methodology. At any rate, the U.S. government claimed a Polish ship carrying communist-made arms had docked in Guatemala and then sent U.S. arms to Honduras and Nicaragua for “defensive” purposes. One of those purposes at least was the invasion launched from Honduras on June 18, 1954, of a 2,000-man anticommunist army under Lieutenant Colonel Carlos Castillo Armas (1914–57). Castillo Armas, encountering almost no resistance from Arbenz's army, quickly penetrated deep into Guatemala. Arbenz turned to the United Nations for help, and the Organization of American States began an investigation into the one-sided conflict, but before either could reach any conclusions Arbenz was ousted on June 28, 1954, and fled to Mexico City.

Castillo Armas occupied Guatemala City as head of a military junta that would now run the country. He brought back Ubico's head of security, a man adept at terror and torture. Suspected communists were treated as common criminals, which meant none too gently, and the hunt was on. Castillo Armas just missed capturing a young, contemplative left-winger named Che Guevara (1928–67), who left the country for glory elsewhere (*see* the CUBAN REVOLUTION). If the Dulles brothers took pause at overthrowing the democratically elected president of a sovereign power and replacing him with a brutal dictator, they never mentioned it. Their clients—the government they served, the old Wall Street law firm at which they

once had worked, the United Fruit board of directors for whom they reclaimed Guatemala—were pleased, and they felt covert action had been vindicated. They would use it again.

Guatemalan War (1885)

PRINCIPAL COMBATANTS: Guatemala vs. El Salvador (with Nicaraguan, Costa Rican, and Mexican support)

PRINCIPAL THEATER(S): El Salvador border region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Justo Rufino Barrios, dictator of Guatemala, sought to forge a single, unified Central American state, with himself as its president.

OUTCOME: In a single major battle, Barrios was killed and his army defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Guatemala, 7,000; Salvadoran and allied strength unknown

CASUALTIES: Guatemala, 800 killed; El Salvador, 200 killed

TREATIES: None

A liberal coup in 1871 ended the string of conservative regimes that had ruled Guatemala for years. Miguel García Granados (served 1871–73) assumed the presidency and was succeeded upon his retirement in 1873 by fellow revolutionary Justo Rufino Barrios (1835–85), who had been commander of the army during the Granados presidency. The military man approached the task of government as a dictator, diminishing the power of the church, but improving the Guatemalan economy by developing its coffee industry. Barrios favored a union of Central American states, which he effected in 1876. From a union of states, his ambitions escalated to the creation of a single united Central American republic—with himself as president and commander of the army. Honduras eagerly joined Guatemala in this enterprise, but El Salvador, Nicaragua, and Costa Rica rejected the proposal. Although Mexico was not encompassed by the proposal, its president, Porfirio Díaz (1830–1915), also objected to it, fearing the presence of a large republic on its border. Díaz dispatched troops along the border with Guatemala. Violence broke out when Barrios invaded El Salvador with 7,000 men. The invasion was quickly checked at the Battle of Chalchuapa, April 2, 1885, the only major armed

exchange of the Guatemalan War. Eight hundred Guatemalans, including Barrios, fell in this battle, and the Guatemalan plan to create a single Central American republic instantly collapsed.

Guerre Folle (“Mad War”) (1488–1491)

PRINCIPAL COMBATANTS: The first phase of the war was fought by rivals for the regency of French king Charles VIII; the second phase was fought between France and Brittany (with allies Austria, Aragon, and England).

PRINCIPAL THEATER(S): Brittany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The first phase of the war was a dispute over the regency of King Charles VIII of France; the second phase was a dispute over Anne of Brittany's marriage to King Maximilian of Austria.

OUTCOME: Anne of Brittany agreed to marry Charles VIII of France; France guaranteed Breton autonomy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: The Treaty of Sablé (1488) ended the first phase of the war; the Treaty of Laval (1491) ended the second.

During the minority of King Charles VIII (1470–98) of France, a dispute broke out among rival claimants to the regency. The young king's sister Anne of France (1460–1522) was opposed to the insurgent claims of Duke Louis (1462–1515) of Orléans, who had gained the support of Brittany's duke Francis II (1435–88). Anne of France dispatched troops, who defeated the forces of Louis and Francis II at the Battle of Saint-Aubin-du-Cormier in 1488. A settlement, the Treaty of Sablé, was drawn up, stipulating the evacuation of all foreign troops from Brittany and obliging Anne of Brittany (1477–1514), Duke Francis's heir, to secure royal permission before marrying.

After Francis died later in 1488, Anne—without the required permission—married Austria's King Maximilian (1459–1519) by proxy, thereby menacing Charles with Austrian encirclement. Accordingly, Charles petitioned Anne of Brittany to renounce the marriage in favor of marriage to himself. The petition touched off a conflict in which King Ferdinand II (1452–1516) of Aragon and King Henry VII (1457–1509) of England backed the Austrian monarch. France sent a large force to Rennes, prompting Maximilian and his allies to back down and agree to the Treaty of Laval, whereby Anne of Brittany agreed to marry Charles in exchange for a pledge of Breton autonomy.

“Güglers” War (1375–1376)

PRINCIPAL COMBATANTS: French-sponsored English and French mercenaries (*Güglers*) vs. Swiss citizens

PRINCIPAL THEATER(S): Aargau, Switzerland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Lord Enguerrand VII de Coucy claimed the Aargau by right of inheritance and therefore waged war against Leopold of Austria for possession of the territory.

OUTCOME: A combination of a scorched-earth policy and the skill and determination of Swiss citizen-soldiers defeated the *Güglers*.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 10,000 *Güglers* against an unknown number of Swiss citizen-soldiers

CASUALTIES: Unknown, but starvation was high among the *Güglers*.

TREATIES: None

This ugly conflict associated with the HUNDRED YEARS' WAR was named for the dress of the 10,000-man French and English mercenary army hired to prosecute the war. The troops wore cloaks with pointed hoods, called in Swiss-German *Güglers*.

By right of inheritance from his mother, Lord Enguerrand VII de Coucy (1340–97) (later count of Soissons) claimed the Swiss territory of Aargau, which was held by Duke Leopold III (1351–86) of Austria, Enguerrand's cousin. The French-financed Enguerrand's hiring of the *Gügler* mercenaries, who were augmented by French knights. This force swept through France and Alsace en route to Basel. By November 1375, they had crossed the Jura mountains and were in lower Aargau. At this point, the *Güglers* had laid waste to a swath of countryside, and they entered Aargau unopposed by Leopold, who refused to fight. Instead, he ordered a scorched-earth policy, pillaging and essentially destroying the region to ensure that the *Güglers* would have nothing—no booty and no food.

The hungry and enraged *Güglers* divided their force into three units, believing this to be the most effective way to fight the citizen armies that, in the absence of official aid from Leopold, had formed to oppose them. In fact, the citizen armies proved devastatingly effective against the starving *Güglers*. At the culminating Battle of Fraubrunnen on December 26, 1376, Bernese troops decisively defeated the *Güglers*, who began a long, costly retreat back through the Jura Mountains and into France—all the way pursued and harried by Swiss citizen forces.

York: Cambridge University Press, 1988); Anne Curry, *The Hundred Years War*, 2nd ed. (New York: Palgrave Macmillan, 2003); Robin Neillands, *The Hundred Years' War* (New York: Routledge, 2001); Jonathan Sumption, *The Hundred Years' War* (Boston: Faber and Faber, 1999).

Guinea-Bissauan War of Independence (1962–1974)

PRINCIPAL COMBATANTS: Guinean revolutionaries vs. Portugal

PRINCIPAL THEATER(S): Guinea-Bissau

DECLARATION: None; independence proclaimed, 1973

MAJOR ISSUES AND OBJECTIVES: The PAIGC party wanted to lead Guinea-Bissau to independence from Portugal.

OUTCOME: After a prolonged struggle, independence was achieved.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Revolutionaries, 6,200; Portuguese forces, 55,000

CASUALTIES: Revolutionaries, 2,000 military and 5,000 civilians killed; Portuguese forces, 1,000

TREATIES: Portuguese recognition of the Republic of Guinea-Bissau, 1974

Guinea-Bissau was an overseas province of Portugal and known as Portuguese Guinea. In 1956, the African Party for the Independence of Guinea and Cape Verde (PAIGC), founded by Amílcar Cabral (1924–73), attempted to negotiate independence for Guinea-Bissau and the Cape Verde Islands, which were also Portuguese possessions. When talks failed, the PAIGC worked vigorously at the grass roots to acquire support for a war of independence throughout the Guinean villages on the mainland of West Africa. By the end of 1962, guerrilla units had formed and were increasingly effective in their raids on Portuguese army outposts and police stations. Within months, many areas had been taken over by the guerrillas and completely cleared of Portuguese. The Portuguese garrisons were confined to the cities and their own bases. They dared not venture into the countryside. The Portuguese government sought to reclaim the country by attacking, mainly from the air, guerrilla forest bases. The 27,000 Portuguese garrison troops were substantially reinforced, more than doubled to 55,000.

During the Portuguese offensive, the guerrilla units also suffered from internal dissension, as tribal affiliations conflicted with political organization. A pervasive belief in witchcraft also undermined unified effort. At this point, Cabral realized that the war for independence in Guinea-Bissau had to be prosecuted in a twofold manner. It was a struggle against Portuguese imperialism but also against outmoded tribalism and superstition, which were incompatible with united resistance to colonial rule. Cabral worked vigorously through his commanders to gain

control of the situation, and, by the early 1970s, he had made significant progress. He did not aim to defeat the Portuguese militarily, but to wear down the will of the Portuguese government to continue the struggle. By 1973, most of Portuguese Guinea was solidly under Cabral's control and the PAIGC formally proclaimed the independence of the Republic of Guinea-Bissau.

Portugal refused to recognize the independence of its colony, and Amilcar Cabral was assassinated, apparently by PAIGC members who had been compromised by Portuguese agents. But the assassination did nothing to halt the independence movement, and a 1974 military coup in Portugal installed a new government willing to recognize the republic. Luis de Almeida Cabral (b. 1931), brother of the slain Amilcar Cabral, was elected president. The following year, Cape Verde Islands also achieved independence.

Gulf War See PERSIAN GULF WAR (1990–1991).

Gupta Dynasty, Conquests of the (320–467)

PRINCIPAL COMBATANTS: The Guptas and the Kushans (and others); the Guptas and the White Huns

PRINCIPAL THEATER(S): Northern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Guptas sought expansion and unification.

OUTCOME: The Gupta kingdom reached its height and greatest extent under Chandragupta II in the early 400s. With his death, repeated invasion rapidly reduced the kingdom, which effectively ceased to exist about 467.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Extremely variable

CASUALTIES: Unknown

TREATIES: No surviving documents

Chandragupta I (r. c. 320–c. 330) came to the throne of the Magadha kingdom through marriage. Once established, he took advantage of the weakness of the Kushan-held west by expanding his kingdom as far as Allahabad. When he assumed the throne on the death of his father, Samudragupta (335–80) pushed the boundaries of the kingdom eastward, to Assam, then extended it west, beyond Allahabad, to the Punjab borderlands. The entire Deccan paid him homage.

Samudragupta began a war with the Shakas in their capital at Ujjain, and his son, Chandragupta II (380–413), prosecuted the war to its conclusion, conquering all of the

Shaka kingdom, which covered the territory of modern Bombay state. At this point, the Gupta dominated all of northern India, save for the extreme northwestern corner. This proved to be the dynasty's Achilles' heel, for it admitted passage to invaders. By the fifth century, White Hun invasions had ravaged and sapped the Gupta kingdom, so that by about 467 it had been reduced to no more than a portion of Bengal. The dynasty ended completely by 499.

The Guptas had brought India to its classical height. Following the barbarian invasions, the former Gupta realm fragmented into a mass of small states, which devoted themselves to warring against one another.

Gurkha War (1814–1816)

PRINCIPAL COMBATANTS: Britain (British East India Company) vs. the Gurkhas

PRINCIPAL THEATER(S): Nepal (near the Indian border)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The East India Company and the Gurkhas disputed possession of a region bordering Nepal and India.

OUTCOME: The disputed territory came under East India Company control, and Nepal and the Gurkhas became British allies.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: British East India Company, 40,000; Gurkhas, 12,000

CASUALTIES: British forces, 3,000 killed or wounded; Gurkhas, 1,500 killed or wounded

TREATIES: Treaty of Sagauli, November 28, 1815

The Gurkhas, a tribe of the western Himalayas, conquered the Nepal valley by 1768. From this territory, they gradually built up a powerful realm with formidable military strength. Conflict between the Gurkhas and the English began in 1801, when the East India Company occupied the Gorakpur district, which bordered Gurkha country. The Gurkhas took Bhutwal, which was subsequently retaken by the East India Company. The dispute over Bhutwal simmered until 1814, when the British government warned the Raja of Nepal that troops would be dispatched to take possession of Bhutwal once and for all. In response, the Gurkhas evacuated—only to return once the British troops had been withdrawn during the rainy season. The territory was patrolled by a small police force, some of whom the Gurkhas killed. In response, the gover-

nor-general of British India, Warren, Lord Hastings (1732–1818), sent a letter to the raja of Nepal, accusing him of deliberately making war on the British government and warning him that troops would be sent into Nepal as soon as the cold weather set in.

When it began, the war went badly for the British. Three of the first four expeditions sent were defeated. The worst disaster came when 3,500 troops attempted to storm the small fort of Kalanga, a few miles north of Debra Dun. The first British attack was beaten back, and then the commanding general of the force was killed while rallying his men for a second attack. The British kept up the pressure for weeks, finally making a breach in the Gurkha line. However, the British were so thoroughly intimidated that, on November 27, 1814, they refused to advance on the fort, even though it was held by only 600 men. Instead of charging the fort, the British bombarded it, finally forcing the Gurkhas to abandon it three days later. Even after achieving this small victory, the intimidated British broke and ran under Gurkha attack at the end of the year.

Two additional expeditions against the eastern end of the Gurkha territory bogged down, and a major British baggage train was attacked and pillaged. Reinforcements were called for, bringing the number of troops massed against the Gurkhas to about 13,000. Even with these numbers, reports of the Gurkhas' fierce fighting capabilities discouraged any offensive action. Yet the fact was that the Gurkhas had neither the manpower nor the resources to withstand the full military might of the British East India Company for any length of time. All that was required was an injection of nerve and the will to mount a concerted campaign.

By early 1815, the East India Company had mustered almost 40,000 troops against perhaps 12,000 Gurkhas, and in the spring the now overwhelmingly superior British forces made headway. By April 1815, the main Gurkha military leader, Amar Singh (fl. 1815), was blockaded on a single mountain ridge. His troops were beginning to talk of surrender. While this was going on, an irregular force of British and Indian troops penetrated deep into Gurkha territory. On April 28, 1815, the Gurkhas hoisted a flag of truce and surrendered, agreeing to evacuate Almora and the whole province of Jumaon and to withdraw all their troops to the east of the Kali River. With this capitulation, Amar Singh's troops began to desert and go over to the British. On May 10, Amar Singh surrendered. All of the disputed territory was now under British hands. Negotiations between the East India Company and the Gurkhas dragged on until November 1815, when the Treaty of Sagauli was signed—however, the major Nepalese leader Nepal Durbar (fl. 1815) refused to ratify it.

Fighting was resumed early in 1816. A British force of 20,000 advanced on Khatmandu and, by strenuous and stealthy maneuvering, surprised the Gurkhas with an attack from behind. The Gurkhas, panic stricken, withdrew without giving battle. A few days later, in March, a representative of Nepal Durbar offered to ratify the 1815 treaty. A lasting peace was made. Nepal remained an independent kingdom, allied to the British, but never a vassal to them, and many Gurkhas voluntarily joined the British colonial military service, in which they became elite troops of great renown and tradition.

Further reading: David Bolt, *Gurkhas* (New York: White Lion Publishers, 1975); Byron Farwell, *The Gurkhas* (New York: Norton, 1990); Harold James and Denis Sheil-Small, *The Gurkhas* (Harrisburg, Pa.: Stackpole Books, 1966).

Guyanan Rebellion (1969)

PRINCIPAL COMBATANTS: Rebel guerrillas vs. Guyanan police and military forces

PRINCIPAL THEATER(S): Southwestern Guyana, on the Brazilian border

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The rebels were apparently sponsored by American owners of ranches in southwestern Guyana who wanted to establish an independent state in which they could operate without restrictions of any kind.

OUTCOME: The rebellion was quickly crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: A few fatalities

TREATIES: None

This brief conflict began on January 2, 1969, when guerrillas from Brazil invaded Guyana and took the border towns of Lethem and Annai. The Guyanan army and government police officers were quickly deployed to the region and drove the guerrillas back across the border. Casualties on both sides were light in this ultimately abortive rebellion, which was apparently backed by American nationals who owned extensive cattle ranches in the border region and wanted to create a separate state to allow them to operate without restriction or taxation.

H

Haitian Civil War (1805–1820)

PRINCIPAL COMBATANTS: Southern Haiti (“jaunes”) vs. northern Haiti (“noirs”) (with involvement of French and Spanish colonists in Santo Domingo)

PRINCIPAL THEATER(S): Haiti and Santo Domingo (modern Dominican Republic)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Henry Christophe (northern leader) vied with Alexandre Pétion (leader in the south) for control of Haiti.

OUTCOME: Jean-Pierre Boyer, successor to Pétion, prevailed, unifying all Haiti under his presidency after the suicide of Christophe.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Northerners (*noirs*), 30,000; Southerners (*jaunes*), 20,000

CASUALTIES: Unknown, but widespread among combatants and noncombatants alike.

TREATIES: None

Jean-Jacques Dessalines (1758–1806), who had crowned himself Emperor Jacques I of Haiti after the HAITIAN-FRENCH WAR of 1801–04, was a brutal and aggressive dictator. During February–March 1805, he led 30,000 Haitians in an invasion of neighboring Santo Domingo. When a French fleet showed itself off Santo Domingo, Dessalines retreated, ravaging the countryside along the way back to the Haitian frontier.

Dessalines’s depredations incited the mulattoes (*jaunes*) of the south to rebellion, and when Dessalines led an expedition to crush the uprising, he was killed on October 17, 1806. Henry Christophe (1767–1820) succeeded him, but by this time Haiti had fractured into a mostly black (*noir*)

north (soon to become the Kingdom of Haiti) and predominantly *jaune* south. In 1807, when Henry Christophe declared himself king, the forces loyal to him fought those of the Republic of Haiti under President Alexandre Pétion (1770–1818) sporadically over the next 13 years.

Christophe launched a major offensive in mid-1812, but it petered out indecisively. His forces continually harassed the republic from February 1807 to May 1819, successfully defeating a series of punitive expeditions. However, in 1819, Jean-Pierre Boyer (1776–1850) dispatched six regiments into the mountainous region of the Grand’ Anse (southern panhandle) to find the *noir* rebel leader known only as Goman (d. 1819). When Goman was cornered, he committed suicide by leaping off a cliff.

With the death of Goman, the last of the major organized *noir* resistance crumbled. In 1820, Henry Christophe, ill and despondent, killed himself, leaving Boyer to unify the nation.

Haitian-French War (1801–1804)

PRINCIPAL COMBATANTS: French vs. Haitian independence fighters

PRINCIPAL THEATER(S): Hispaniola, especially modern Haiti

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The French sought to wrest Hispaniola from the island's governor-general, François-Dominique-Toussaint Louverture.

OUTCOME: French forces withdrew, mainly because of casualties caused by tropical disease.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: French, 25,000; Haitian, variable—but always fewer than the French

CASUALTIES: Battle deaths unknown; the French succumbed to disease at a high rate. At least 5,000 French settlers were massacred during 1805.

TREATIES: None

As a result of the REVOLT OF TOUSSAINT LOUVERTURE, Toussaint Louverture (c. 1743–1803) became governor-general of Hispaniola and put the island's government under a new constitution. At this time, Napoleon Bonaparte (1769–1821) dispatched his brother-in-law, Charles Victor Leclerc (1772–1802), at the head of 25,000 French troops to wrest control of Hispaniola from Toussaint Louverture and reestablish slavery. The French force landed at Cap-Français (Cap-Haïtien, Haiti) on February 5, 1802, only to find that retreating black forces under Henry Christophe (1767–1820) (*see* HAITIAN CIVIL WAR) had put the port city to the torch. This was a prelude to worse. As they advanced inland, the French troops were attacked by guerrillas, who avoided open battle, but nevertheless took a heavy toll on the French. An even more destructive enemy proved to be yellow fever, which was endemic to the island. The French forces dwindled rapidly.

Despite all they suffered, the French scored a victory against a force of some 1,200 troops led by Jean-Jacques Dessalines (1758–1806) at the Battle of Crête-à-Pierrot. This apparently persuaded both Dessalines and Christophe to turn coat and defect to the French. With his leading commanders having gone to the other side, Toussaint Louverture accepted a French offer of amnesty and laid down his arms. He was summarily taken prisoner and sent back, in chains, to France. He died in a French prison about a year later. In the meantime Dessalines and Christophe cooperated with the French to put down those black and mulatto guerrillas who persisted in fighting, but, when they discovered Napoleon's intention to return slavery to the island, they deserted the French fold and joined the guerrillas. In March 1805, Dessalines ordered the massacre of every *blanc*—white person—remaining in Haiti. Beginning in the town of Jérémie, in southwest Haiti, Dessalines slaughtered some 1,400 white French men, women, and children. He

progressed east and executed 800 French whites in Port-au-Prince, then marched north to Le Cap, where, during late April, 2,000 whites were killed. Historians estimate that no fewer than 5,000 whites were massacred on Haiti at the behest of Dessalines, who wanted to ensure that no European army would ever dare invade again.

In the end, it was not only the desertion of Dessalines and Christophe, the ongoing resistance of guerrillas, and the massacre of 1805 that defeated the French army on Hispaniola. Another vanquisher was tropical disease, primarily yellow fever. Napoleon decided to cut his losses and withdraw forces from the Caribbean. Indeed, he decided to abandon the New World altogether and, in 1804, through his minister, Charles Maurice de Talleyrand-Périgord (1754–1838), negotiated the sale to the fledgling United States of its only other major piece of American real estate: the Louisiana territory.

Haitian Reconquest of Santo Domingo (1822)

PRINCIPAL COMBATANTS: Haiti vs. Spain

PRINCIPAL THEATER(S): Santo Domingo (Dominican Republic)

DECLARATION: Santo Domingan declaration of independence, November 30, 1821

MAJOR ISSUES AND OBJECTIVES: Haiti chose to interpret Santo Domingo's declaration of independence from Spain as submission to the government of Haiti and responded by driving the Spanish out of Santo Domingo and annexing the country.

OUTCOME: Haiti and Santo Domingo were united under the presidency of Jean-Pierre Boyer.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Santo Domingo (Dominican Republic) had been a Spanish colony when it was ceded to France and then conquered

by the Haitians in 1820 (see HAITIAN CIVIL WAR [1805–1820]). Through this, many Santo Domingans remained loyal to Spain until they began to suffer under the repressive rule of the ultraconservative Spanish monarch Ferdinand VII (1784–1833). On November 30, 1821, Santo Domingo declared itself independent from Spain and called itself the Dominican Republic. The people sent a representative to Simon Bolívar (1783–1830), the “Great Liberator” of South America, and asked for union with Great Colombia. Before this envoy reached Bolívar, however, Jean-Pierre Boyer (1776–1850) Haiti’s president, declared that Santo Domingo had not declared independence but, in breaking with Spain, had submitted to the government of Haiti. He dispatched an army into Santo Domingo, drove out the Spanish, and asserted his control of the entire island of Hispaniola—Haiti and Santo Domingo. Haiti occupied so-called Spanish Haiti until 1844, when the Dominicans rejected Haitian hegemony and again declared their own sovereignty.

Haitian Revolt (1858–1859)

PRINCIPAL COMBATANTS: Forces of self-proclaimed Haitian emperor Faustin I vs. mulatto rebels

PRINCIPAL THEATER(S): Haiti

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The mulattoes, having been betrayed by Faustin I, wanted to overthrow his repressive and corrupt regime.

OUTCOME: Faustin was overthrown in a brief but bloody revolt, his repressive regime replaced by anarchy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Jean-Pierre Boyer (1776–1850), who became president of Haiti as a result of the HAITIAN CIVIL WAR, ruled the nation as a fiefdom, his long administration steeped in corruption and maintained by terror and coercion. In 1843, his regime was overthrown by a coup, and in 1847, after a period of great instability, Faustin Élie Soulouque (c. 1785–1867), a former slave, assumed the presidency,

with the backing of mulatto leaders, who believed he would make a compliant puppet. In 1849, Soulouque turned on his backers and created around himself a cult of personality. Emboldened, he crowned himself Emperor Faustin I, instituting a regime even more brutally oppressive and corrupt than that of Boyer. While his people languished in poverty, Faustin assembled a court as lavish as many in Europe. He sought to extend his rule into the Dominican Republic, but was repeatedly defeated. In the meantime, opposition to him grew within Haiti, even as the United States, France, and Great Britain applied diplomatic and economic pressure to force his resignation. At last, Faustin I was overthrown in a revolt led by the mulattoes originally allied with him.

Although the revolt was violent, Faustin himself escaped into exile. One of the emperor’s former generals, Nicholas Fabre Geffrard (1806–79), took up the reins of government, declaring a republic and immediately achieving election as president. He made valiant attempts to institute badly needed reforms, but was repeatedly foiled by reactionaries, who finally succeeded in toppling his government in 1867, sending him into exile and returning the nation to violent chaos.

Haitian Revolt (1915)

PRINCIPAL COMBATANTS: U.S. Marines vs. Haitian antigovernment mobs (“Cacos”)

PRINCIPAL THEATER(S): Haiti

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The United States sought to protect U.S. interests in Haiti by establishing a protectorate over it.

OUTCOME: A U.S. protectorate was established.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 2,000 U.S. Marines; Caco numbers unknown

CASUALTIES: Relatively light

TREATIES: Treaty of September 16, 1915, establishing a U.S. protectorate

Throughout the 19th century, Haiti had suffered great instability under a series of corrupt and repressive regimes. Vilbrun Guillaume Sam (d. 1915) led a revolt against the

weak, chronically unstable government in 1915, assuming the title of president, briefly, until his assassination at the hands of a mob on July 28, 1915. In the wake of Sam's death, Haiti effectively lacked all government and was in a state of violent anarchy. President Woodrow Wilson (1856–1924), seeking to protect U.S. interests in the island nation, dispatched two companies of U.S. Marines in March 1915 to restore order and supervise election of a new president.

The first marine contingent advanced on Port-au-Prince, the Haitian capital, and restored order there. Reinforcements were called, and by late August 1915, approximately 2,000 marines were in country. The marines engaged in a number of small but intense battles, including fierce hand-to-hand combat in an abandoned French fort atop a 4,000-foot mountain, against insurgents known as the Cacos.

Once the Cacos had been suppressed, the Wilson administration backed the new government of President Philippe Sudre Dartiguenave (1863–1926), who signed a treaty agreeing to place Haiti under a U.S. protectorate. The marines remained in the country through 1934, supervising a U.S.-sponsored Haitian police corps. Although the marine presence and the protectorate status were blatant acts of American imperialism, they provided undeniable benefits to the war-weary and poverty-plagued nation. Throughout Haiti, a small contingent of marines supervised the building of an infrastructure of public works, roads, and utilities, and were reasonably effective at providing the people with physical protection—albeit at the expense of their sovereignty.

Haitian Revolt (1918–1920)

PRINCIPAL COMBATANTS: Haitian anti-U.S. rebels (including “Cacos”) vs. U.S. Marines and Haitian gendarmerie

PRINCIPAL THEATER(S): Haiti, principally Port-au-Prince

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The rebels wanted to end the U.S. protectorate of Haiti.

OUTCOME: The rebellion, though briefly fierce, was quickly crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rebels, 20,000–40,000; U.S. Marines, 1,500+; Haitian gendarmerie, 2,700

CASUALTIES: Cacos, 2,004 killed; Marines, 28 killed; gendarmerie, 70 killed

TREATIES: None

Since 1915, Haiti had been a protectorate of the United States, was occupied by a small force of U.S. Marines, and was policed by a U.S.-backed Haitian gendarmerie. In 1918, the marines supervised a plebiscite by which a new constitution was overwhelmingly adopted (the vote was suspect), even while the U.S. protectorate remained in effect. No new elections followed the adoption of the constitution, and the country continued to be governed by the president the United States had supported, Philippe Sudre Dartiguenave (1863–1926), and the government itself staffed by American bureaucrats. This situation created a considerable degree of resentment among many Haitians. Worse, the Haitian police began enforcing a *corvée*, or labor draft, inducting rural Haitians into a labor force for public works. The enforcement of the *corvée* triggered a revolt against the U.S. presence.

Rebel forces were large, numbering between 20,000 and 40,000, but were poorly organized and even more poorly equipped. They were driven, however, by an intense belief in the native religion of Haiti, Vodun (Voodoo), and their leaders supplied them with various powders and potions said to confer invulnerability upon them. Thus they attacked boldly and fiercely throughout the countryside, finally focusing on the capital city of Port-au-Prince. Marines and the Haitian gendarmerie, although outnumbered, readily defeated the poorly armed rebels.

The most serious threat came from about 5,000 rugged northern mountaineers known as the Cacos. They became very active in March 1919, and during the summer of that year two marines and a Haitian constable penetrated the camp of Caco leader Charlemagne Péralte (1886–1919), whom they assassinated. When a new Caco leader, Benoît Batrville (d. 1920), emerged, the First Marine Brigade, reinforced by the Eighth Marines, conducted a systematic campaign against the Cacos. By May 19, 1920, when a marine patrol killed Batrville, completely suppressing the rebellion, 2,004 Cacos had died, the marines had sustained 28 battle deaths, and 70 Haitian gendarmes were also killed.

The uprising caused the American protectorate, slated to last 10 years, from 1915 to 1925, to be extended to 1934.

der, Colo.: Westview Press, 1997); Rayford W. Logan, *Haiti and the Dominican Republic* (New York: Oxford University Press, 1968); David Nicholls, *From Dessalines to Duvalier: Race, Color, and National Independence in Haiti*, rev. ed. (New Brunswick, N.J.: Rutgers University Press, 1995).

Hamdanid Invasion of Anatolia

See BYZANTINE-MUSLIM WAR (960–976).

Hammurabi's Unification of Mesopotamia

(1787–1750 B.C.E.)

PRINCIPAL COMBATANTS: Babylon vs. surrounding kingdoms

PRINCIPAL THEATER(S): Mesopotamia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Imperial expansion and conquest

OUTCOME: Babylon expanded, Hammurabi consolidated his hold on a unified Mesopotamian empire, but also stretched his borders thin and rendered them vulnerable.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents survive

In Babylon, Hammurabi (d. 1750 B.C.E.) inherited a powerful kingdom with a formidable military. He resolved to use his armies to gain control of the Euphrates River, which would give him control of vast tracts of arable lands, since agriculture in the region was wholly dependent on irrigation. Of course, his strategy brought Babylon into conflict with Larsa, a kingdom downstream. In 1787 B.C.E., Hammurabi conquered the Larsan cities of Uruk (Erech) and Isin, reengaged Larsan forces again the following year, then, in 1784, abruptly shifted the direction of operations to the north and east. This was followed by nearly two decades of peace—but not the cessation of military activity. Hammurabi devoted these years to thoroughly fortifying key cities on his northern borders, especially during 1776–68.

Poised for war, Hammurabi spent the last 14 years of his reign fighting continual battles. In 1764, he broke up a coalition among Ashur, Eshnunna, and Elam, the chief powers east of the Tigris River. The coalition threatened to bar Babylon's access to the metal-producing areas of Iran. The next year, Hammurabi attacked Rim-Sin of Larsa, apparently using a spectacular military engineering tactic. Hammurabi seems to have dammed a main watercourse, then he either, at a critical moment, caused the waters to be suddenly released, creating a catastrophic

flood, or simply withheld the water from Larsa, forcing the people into submission when Hammurabi laid siege to the state.

In 1762, Hammurabi turned to the east and expanded his borders, then, the following year, he attacked his ally, Zimrilim (c. 1800–1750 B.C.E.), king of Mari. Likely, this treachery against an ally of long standing was motivated by a claim on precious water, although it is also possible that Hammurabi simply wanted to gain the advantage of acquiring Mari's strategically superb location at what was the crossroads of the Middle East's overland trade.

In 1759 B.C.E., Hammurabi led his armies east once again, where he fought against Eshnunna, destroying that kingdom by means of another damming operation. Although victory was achieved, the expansion of the Babylonian kingdom through Eshnunna removed a valuable buffer zone between Hammurabi's realm and the more aggressive people of the East. This necessitated a new program of fortification building to strengthen the kingdom's defenses. Hammurabi undertook this great work during his own physical decline. He died about 1750 B.C.E. having effectively expanded Babylon while simultaneously consolidating his power over it, yet, in extending his borders, he rendered the kingdom vulnerable to frontier incursions and, ultimately, full-scale invasion.

Hancock's Campaign (1867)

PRINCIPAL COMBATANTS: United States vs. Plains Indians

PRINCIPAL THEATER(S): Kansas and Nebraska

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Even as a government peace commission worked to end hostilities with Red Cloud's Sioux and their Cheyenne allies in the Dakotas, a frustrated U.S. Army set out to "punish" the bellicose tribes of the central and southern Great Plains.

OUTCOME: General Hancock's troops chased Indians throughout the area without ever engaging them in decisive battle, while the Indians used the pursuit as an excuse to terrorize Kansas; the army—forced on the defensive—withdrew in utter failure.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: United States—4,000 troops; Plains Indians—unknown
CASUALTIES: U.S. troops, under 100 killed and wounded; Indians, 100+ killed or wounded

TREATIES: Treaty of Medicine Lodge Creek, Kansas, 1867

In the wake of the FETTERMAN MASSACRE on December 21, 1866 (see BOZEMAN TRAIL, WAR FOR THE), General William Tecumseh Sherman (1820–91), newly in command

of the Division of the Missouri (which encompassed the Great Plains and included the U.S. Army's departments of the Missouri, Platte, Dakota, and Arkansas) telegraphed his commander Ulysses S. Grant (1822–85), who had just been promoted to the recently established rank of general of the armies of the United States: "We must act with vindictive earnestness against the Sioux, even to their extermination, men, women, and children."

Much of nonmilitary Washington, however, continued to favor conciliation. The government was then in the middle of a bureaucratic struggle over who would handle Indian affairs, the civil servants of the Indian Bureau or the officers of the U.S. military, a tussle that ultimately would result in Grant's "Peace Policy," when the Civil War hero became president two years later. President Grant would surprise and dismay many in the army by entering the lists on the side of the civilian "liberals," announcing a policy of what he called "conquest by kindness," under which Native American tribes were no longer to be considered sovereign nations, but wards of the state under civilian—not military—supervision; the Indians would be concentrated on reservations where they would be "civilized," that is, educated, Christianized, and taught to become self-supporting farmers.

Meanwhile, however, the army loudly wrangled with the Indian Bureau, which answered not to the War Department but to the Department of the Interior, over policy throughout 1866–67, particularly over the issue of arms sales. The army, understandably, protested against arming hostile Indians. The Indian Bureau argued that the Indians needed weapons in order to hunt; if they could not hunt, they could not feed themselves, and if they could not feed themselves, they would make war. The War Department sponsored a bill, introduced before the Senate on February 9, 1867, to transfer full authority over the Indians from the Department of the Interior to the Department of War. The bill came up against the report of a Senate investigative committee chaired by Wisconsin senator James R. Doolittle (1815–97), which frankly assessed the root causes of Indian-white warfare and recommended against the transfer of the Indian Bureau to the War Department, detailing military blunders and outrages (with a stress on the SAND CREEK MASSACRE) in the West. In light of the report, the War Department's bid for transfer of the Indian Bureau carried the House of Representatives but failed in the Senate, and another peace commission was sent into the field. Sherman had planned to send Colonel John Gibbon (1827–96) with a force of 2,000 cavalry and infantry to "punish" the Sioux and Cheyenne of the Powder River country; this campaign would have to be tabled until the peace commission had failed—as Sherman was certain it would.

The peace commission was not, however, calling on the tribes of the central and southern Plains—the Southern Cheyenne, the Southern Arapaho, Kiowa, and Oglala

and Southern Brulé Sioux—and Sherman did not have to wait to campaign against these groups. He dispatched General Winfield Scott Hancock (1824–86)—an impressive Civil War commander, though new to Indian fighting—to do the job.

The Indians of this region at this time were neither unambiguously hostile nor friendly. They tended to be fragmented, the older leaders favoring peace and accommodation, the younger warriors restless and spoiling for a fight. Menacing words and minor raiding activity were common, and Sherman ordered the hostility checked. On April 7, 1867, Hancock turned out 1,400 troopers of the Seventh Cavalry, the 37th Infantry, and the Fourth Artillery at Fort Larned, Kansas. He summoned a body of Cheyenne chiefs to the fort for a conference and to see for themselves the might of the U.S. Army. Bad weather delayed the meeting and resulted in a small turnout—two chiefs and 12 warriors—so Hancock decided to march a column of soldiers the next day to a combined Cheyenne and Sioux village on the Pawnee fork of the Arkansas River in order to deliver his stern message to more chiefs. Doubtless recalling the treachery of Sand Creek, the women and children of the village scattered for the hills as they saw the soldiers approaching. Although Hancock instructed his principal field officer, Lieutenant Colonel George Armstrong Custer (1839–76), commanding the Seventh Cavalry, to surround the village to prevent the men from escaping as well, by morning the lodges were all deserted. Hancock concluded that war had commenced. Responding to Custer's report that the Indians had given him the slip and burned a station on the Smoky Hill route, Hancock torched the Indian village, then marched to Fort Larned, where his campaign would come to an end in May.

In the meantime, he had sent Custer's cavalry out to chase Indians. At 25, Custer had attained the brevet rank of major general in the Civil War, earning a reputation as a brilliant, if erratic and egotistical, cavalry commander. The flamboyant, yellow-haired "boy general" was, like many other officers, reduced in rank at the conclusion of the war. He was determined to recover his former glory by fighting Indians and fighting them unrelentingly. Acting on Hancock's orders, he led his Seventh Cavalry in hot pursuit of the fleeing Cheyenne and Sioux. When Custer arrived at Fort Hays, Kansas, however, his cavalry was immobilized because forage—which was to have been stored there for him—had not arrived. While Custer waited, the Indians attacked, wreaking havoc on the local Kansas countryside. Ultimately Custer took to the field under orders from General Sherman.

From April through July, he and his men followed the chase through Kansas and Nebraska, always in vain, as the Indians terrorized the region. Though he engaged Indians several times, he was never able to fight a decisive battle, and Custer and the Seventh Cavalry, exhausted, had at last

to withdraw. What had begun as an offensive campaign became a series of desperate and futile attempts at defense—desperate and futile because 4,000 officers and men broadcast over 1,500 miles of major trails could hardly be expected to patrol the region effectively.

In July, Custer went to Fort Riley to see his wife and obtain supplies and was subsequently court-martialed for absenting himself from his command without leave and for abusing men and animals. He was sentenced to suspension from rank and pay for one year. Hancock's campaign and Custer's court-martial played right into the hands of the Indian Bureau. An Indian agent with Hancock, E. W. Wyncoop (1836–91), severely criticized Hancock's management of the campaign, and others blamed both Hancock and Custer for the Indian depredations that spread along the Kansas frontier that summer.

Hancock's campaign was yet another costly army failure and prompted a peace offensive on the southern and central Plains to complement the peace activities in the north. Commissioners negotiated two sets of treaties, at Medicine Lodge Creek, Kansas, in 1867, and at Fort Laramie the next year. The Medicine Lodge treaties established Cheyenne, Arapaho, Kiowa, Comanche, and Kiowa-Apache reservations in Indian Territory (present-day Oklahoma), and the Fort Laramie treaties gave to Red Cloud most of what he had fought for in the War for the Bozeman Trail, including the designation of the Powder River country as "unceded Indian territory."

Hannibal's Destruction of Himera

(409 B.C.E.)

PRINCIPAL COMBATANTS: Carthage vs. Syracuse

PRINCIPAL THEATER(S): Himera, on the north coast of Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Seeking revenge for the humiliating defeat in the Carthaginian-Syracusan War, a general named Hannibal besieged and captured the city-state of Himera.

OUTCOME: Carthage defeated Syracuse's opposition, looted Himera, and burned the city to the ground.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The Carthaginian general, Hamilcar Barcas (c. 270–28 B.C.E.) and his famous son Hannibal (247–183 B.C.E.), who won their glory during the PUNIC WARS, descended from a powerful family with a long history of military service to their North African homeland. Not only their family name, Barcas, but their first names as well, frequently appeared in the annals of Carthage's storied past. An earlier Hamilcar (fl. 480 B.C.E) attempted to conquer Sicily but was repulsed by Syracuse at the battle of Himera in 480 B.C.E, preserving the island's Greek city-states from Carthagian domination for the better part of another century (see *CARTHAGINIAN-SYRACUSAN WAR* [481–480 B.C.E]). Hamilcar died during the war, which so soundly shook Carthage that it adopted an isolationist policy until Hamilcar's grandson Hannibal (d. 406 B.C.E.) rose to military prominence two generations later. Seeking revenge for his grandfather's death and renewed glory for the Barcas and for Carthage, this ancestor and namesake of the Hannibal who would one day challenge Rome raised a large invasion force and in 409 laid siege to Himera, again facing the Syracusans. Only this time, the opposition of Syracuse proved futile. Hannibal and his troops entered the city-state, looted the denizens, and departed—after first reducing Himera to ruins.

Hannibal's Sack of Acragas (406 B.C.E.)

PRINCIPAL COMBATANTS: Carthage vs. Syracuse

PRINCIPAL THEATER(S): The south coast of Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Three years after destroying Himera, the first Hannibal returned with his soon-to-be-renowned nephew, Himilco, in the first salvo of a longer campaign called Himilco's War.

OUTCOME: The settlement of Acragas was severely defeated, but the first Hannibal was killed in the fighting.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Syracuse sent 35,000 men to relieve the besieged garrison.

CASUALTIES: Unknown

TREATIES: None

Three years after HANNIBAL'S DESTRUCTION OF HIMERA, the Carthaginian general (not the Hannibal [247–183 B.C.E.]

famous for his exploits in the Second PUNIC WAR) returned to Sicily to seek victories against the Syracusans. This early Hannibal (d. 406 B.C.E.) took with him on the expedition his soon-to-be-illustrious nephew, Himilco (d. 397 B.C.E.), and together they besieged Acragas, a settlement on the island's south coast. He defeated the city's garrison, which was commanded by the able Spartan Dexippus (d. 406 B.C.E.), who died in the battle. However, Hannibal himself succumbed to an epidemic that swept the Carthaginian camp before the siege was completed. It fell to Himilco to finish the triumph and to resist the onslaught of a 35,000-man Syracusan relief column, fighting a fierce battle outside the city's walls. The Syracusans nearly prevailed, but, on the verge of victory, fell to disputing among themselves, thus giving the advantage to Carthage.

The relief column defeated, Himilco turned his men loose on Acragas. Its brutal sacking was the first assault of many along Sicily's coast in what is now called HIMILCO'S WAR.

Hanoi Incident See FRENCH INDOCHINA WAR (1873–1874).

Hapsburg-Bohemian War (1274–1278)

PRINCIPAL COMBATANTS: Hapsburg emperor Rudolf I (and allies) vs. Bohemian king Ottokar II

PRINCIPAL THEATER(S): Austria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rudolf fought to make good his claim on Austria.

OUTCOME: Rudolf prevailed, establishing Hapsburg rule over Austria and the entire Danube valley.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The war was fought over a disputed claim to Austria. Both the Holy Roman Emperor Rudolf I (1218–91) of Hapsburg and Bohemia's King Ottokar II ("Ottokar the Great") (c. 1230–78) laid claim to it. In 1274, the Diet of Regensburg vacated Ottokar's claim to Austria, as well as his claims to Styria and Carniola. Thus sanctioned, Rudolf forged an alliance with a group of disaffected Bohemian nobles, then attacked Ottokar in Austria. After making additional agreements with Bavarian knights, Rudolf besieged Vienna, Ottokar's well-fortified stronghold. Unfortunately for Ottokar, his troops proved as disloyal as some of his

nobles, and they deserted Vienna. The Bavarian knights overran and captured a supply center at Klosterberg, which provisioned the siege forces for the long haul. Vienna, starving, had no choice but to surrender and to recognize Rudolf as king. Ottokar personally capitulated soon afterward, in 1275, and, in accordance with the Diet's ruling, renounced his claims to Austria, Styria, and Carniola, retaining only Bohemia and Moravia for his kingdom.

Humiliated, the Bohemian king was never reconciled to his defeat. He soon raised a new army, which led back to Vienna in 1278. There Rudolf, his force now augmented by Alsations and Swabians, as well as Hungarian units under Ladislav IV (1262–90), engaged him on August 26, 1278, at the Battle of Marchfield (Durnkrut), a plain north of the Danube from Vienna. Ottokar was not only defeated but killed. His son, Wenceslas II (1271–1305), aged seven, assumed the throne under a Hapsburg regency directed by Rudolf, and the Hapsburgs would rule Austria and the Danube valley through the end of WORLD WAR I in 1918.

Hapsburg Brothers' War (1601–1612)

PRINCIPAL COMBATANTS: Rudolf II, Holy Roman Emperor, vs. Matthias, governor of Austria

PRINCIPAL THEATER(S): Austria and Bohemia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The mentally unbalanced Rudolf invited forces under his cousin to raid and pillage Austria and Bohemia in a misguided effort to wrest them from his brother Matthias.

OUTCOME: Rudolf was ultimately forced to abdicate.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The war was the result of an internecine dispute within the Hapsburg family. The apparent insanity of the Holy Roman Emperor, Rudolf II (1552–1612), touched off a contest for control of various parts of the Hapsburg realm. In 1605, in an attempt to resolve the already violent dispute, a Hapsburg conference decided that Matthias (1557–1619), governor of Austria, would also assume

governance of Hungary, taking the reins from his brother Rudolf. Matthias understood that many in Hungary looked to Turkey for relief from Hapsburg religious persecution: the Catholic Hapsburgs promoted the Counter Reformation in Protestant Hungary. Matthias wanted to avert war with the Turks. He therefore ended the Hapsburg policy of support for the Counter Reformation. This, however, triggered a violent response from Rudolf, who was a zealous Catholic. To checkmate his brother, Matthias summarily proclaimed himself head of the Hapsburg family. Although Rudolf remained Holy Roman Emperor, Matthias now took control of Bohemia and Austria, in addition to Hungary. Rudolf resisted this, and the nobles of Bohemia sided with him.

An all-out war within the Hapsburg family seemed inevitable, but timely compromise staved it off—until Rudolf, increasingly unstable, called on his cousin, Leopold V (1586–1632) archduke of Austria and a Catholic archbishop, to lead an army through Austria and Bohemia, plundering as he marched. This expedition, which took place in 1611, prompted the Bohemian nobles to transfer their allegiance from Rudolf to Matthias. With the aid of the Bohemian nobles, Matthias forced Rudolf to abdicate the Bohemian throne. Rudolf was permitted to continue styling himself Holy Roman Emperor, but he had no real power, and, on his death in 1612, Matthias succeeded him in fact as Holy Roman Emperor.

Hapsburg Dynastic Wars (1439–1457)

PRINCIPAL COMBATANTS: Frederick V, duke of Inner Austria (later Holy Roman Emperor Frederick III) vs. Hungary's John Hunyadi and, separately, Ulrich of Cilli.

PRINCIPAL THEATER(S): Austria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Frederick, Hunyadi, and Ulrich each sought control of Ladislav, infant king of Bohemia and Hungary.

OUTCOME: After prolonged war alternating with compromise, Ladislav asserted his majority and ruled Hungary and Bohemia until his death, apparently by assassination.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Totals unknown. The biggest military operation, the siege of Wiener Neustadt, was carried out by 16,000 soldiers loyal to Ulrich of Cilli.

CASUALTIES: Unknown

TREATIES: None

Albert II (1397–1439), the first of the Hapsburg Holy Roman Emperors, also ruled Austria, Bohemia, and Hungary. A peacemaker and brilliant administrator, he convened the Diet of Nürnberg in 1438 at which he settled all feuds based on the right of private warfare and set up a system of arbitration. He also organized Germany into efficient “administrative circles.” Despite all of this, his death in 1439 following a long campaign against the Turks precipitated a crisis of succession. A son, Ladislav (1440–57), was born to him posthumously, but it was Albert's cousin, Frederick V, duke of Inner Austria, who became effective head of the Hapsburg family upon Albert's death. Frederick was guardian of the infant Ladislav, but he had not been designated regent. Nevertheless, he freely exploited his ward's claims to both the Hungarian and Bohemian thrones. Opposing Frederick was John Hunyadi (1387–1456), a Hungarian general who, for all intents and purposes, was the real ruler of Hungary. Hunyadi wanted to control Ladislav as a means of preserving his own power in Hungary. To this end, Hunyadi invaded Styria (part of Inner Austria) in 1446. Backed by his men, Hunyadi demanded that Ladislav be surrendered to him. Instead of relinquishing the boy to Hunyadi, Frederick put him in the care of an arbitrator, a Roman Catholic cardinal. Hunyadi was immediately distracted by an invitation to crusade against the Turks, which he did.

This did not end Frederick's troubles, however. No sooner had he dodged John Hunyadi than, in 1451, he faced an insurrection among many Austrian nobles, who demanded Ladislav. The insurrection was put down with little bloodshed by legal maneuvering that conferred on Frederick full regent powers in Austria. Almost simultaneously, Frederick resolved the dispute with Bohemia by naming George of Podebrad (1420–71) the boy's regent for Bohemia.

Physical possession of Ladislav still remained an issue, however, with dissident Austrians. In 1452, Ulrich of Cilli (d. 1456), the boy's cousin and the single most powerful man in Austria, led 16,000 troops in a siege against Frederick—now Holy Roman Emperor Frederick III—in his capital, Wiener Neustadt, Austria. Frederick had no choice but to surrender Ladislav to him, and the boy was taken to Vienna. The following year, 1453, Ulrich was deposed by a coup—yet Ladislav remained the presumptive monarch. The boy was crowned Ladislav V in 1453, then, two years later, claimed his majority in opposition to John Hunyadi and George of Podebrad. Ladislav assumed active rule of Bohemia and Hungary, only to die in 1457, probably the victim of murder by poisoning.

Following the death of Ladislav, Bohemia elected George of Podebrad as its king, and Hungary elected Matthias I Corvinus (1443–95).

Hapsburg-Ottoman War for Hungary (1662–1683)

PRINCIPAL COMBATANTS: Hapsburgs with Polish alliance vs. the Ottoman Turks

PRINCIPAL THEATER(S): Hungary

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Turks sought conquest of Hungary and the capture of Vienna.

OUTCOME: Hungary fell to the Turks; however, with Polish aid, the Hapsburgs lifted the siege of Vienna, and a new alliance was concluded against the Turks with the object of ejecting them once and for all from Hungary.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Hapsburgs, 45,000; Polish forces, 30,000; Turks, 200,000 men

CASUALTIES: Heavy among Turkish forces at the Battle of Vienna (1683); as many as 17,000 may have died on both sides during the war.

TREATIES: Peace of Vasavar, August 11, 1664; Peace of 1682

At the Battle of Nagyszollos, January 22, 1662, Janos Kemeny (d. 1662), prince of Transylvania, was defeated and killed by Turkish forces under Mehmed Kucuk (fl. 1662). This restored control of Transylvania to the Ottomans.

Following the victory in Transylvania, Turkish forces under the Grand Vizier Fazil Ahmed Koprulu Pasha (1635–76) invaded Hapsburg Hungary with 80,000 men. His object was to capture Vienna, but he failed to seize the initiative and, once delayed, found himself confronting stiff resistance from Hapsburg fortresses. Koprulu Pasha initiated peace negotiations with the Hapsburgs, but, in the meantime, attacked at the Raab River on August 1, 1664. Repulsed, the Turks retreated to Buda. For their part, the Hapsburgs declined to exploit the victory. They did not pursue, and, on August 11, 1664, the Peace of Vasavar was concluded.

The Peace of Vasavar did not please the Magyar nobility in Hungary, and during 1664–73, small-scale rebellions sporadically broke out against the Hapsburgs. The Magyars staged a full-scale revolt in 1678, calling on the Turks for aid. Pressure on the Hapsburgs was so great that, in 1682, they concluded a peace with Count Imre Thokoly (1656–1705), the leader of the Magyar revolt. Thokoly assumed de facto control of all Hungary, except for Transylvania. In the meantime, the Hapsburgs concluded an alliance with the Poles on March 31, 1683. This came just in time to resist a Turkish invasion of Austria by an army of some 200,000 men. Before this onslaught, the badly outnumbered Hapsburg forces—about 45,000 men—retreated, and on July 14, 1683, the Turks laid siege to Vienna.

The Vienna siege lasted into September, when Polish forces under John Sobieski arrived with an army of 30,000. Surprised, the Turks now faced a combined force of about 76,000 in the Battle of Vienna on September 12, 1683. The result was the defeat of the numerically superior Turks, who suffered heavy losses. However, once the siege was broken, Sobieski declined immediate pursuit. The delay extended into December, allowing the surviving portion of the Turkish army to escape intact.

The next year, the Treaty of Linz was concluded (March 31, 1684), creating a Holy League to continue to oppose the Turks and reclaim all Hungary (see AUSTRO-TURKISH WAR [1683–1699]; VIENNA, SIEGE OF [1683]).

Hapsburg-Valois War (1547–1559)

PRINCIPAL COMBATANTS: Hapsburg-ruled Spain (allied with Florence) vs. France

PRINCIPAL THEATER(S): Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: France wanted to achieve control of as much of Italy as possible, but was resisted by Hapsburg-ruled Spain.

OUTCOME: France was defeated in this and related wars and therefore relinquished most of its claims to Italian territory.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Hapsburgs and France each fielded no more than 50,000 men at any given time.

CASUALTIES: Hapsburgs, 28,050 killed or wounded; France, 42,400 killed or wounded

TREATIES: Treaty of Câteau-Cambrésis, April 3, 1559

Determined to assert French hegemony over the bulk of Europe, Henry II (1519–59) of France embarked on war against Holy Roman Emperor Charles V (1500–58), beginning in 1547. By April 1552, Henry had taken Lorraine, and when Charles attempted to take the fortress city of Metz during October–December 1552, he was repulsed. That same year, a French force invaded Tuscany, but imperial troops defeated the invaders at the Battle of Marciano on August 2, 1553. Survivors of the battle withdrew to Siena, where they were laid under siege until 1554, when they capitulated.

By 1556, Charles V, exhausted by war, abdicated the throne. His son, Philip II (1527–98), assumed the crown of Spain, and Charles's brother, Ferdinand, became Holy Roman Emperor. The war with France continued, but shifted from Italy to northern France and into Flanders.

Philip, with Duke Emmanuel Philibert of Savoy (1528–80), led an army of 50,000 into Picardy while most of the French army was still in Italy. A French force of some 26,000 troops was hastily raised, and an attempt was made to check the invasion at St. Quentin on August 10, 1557. However, as the French army crossed the Somme River, imperial forces attacked, and some 6,000 Frenchmen were killed. The imperial forces sustained no more than 500 casualties. Incredibly, however, the imperial commanders failed to exploit this tremendous triumph and withdrew into the Netherlands. This gave Henry II sufficient time to summon reinforcements from Italy.

On January 1, 1558, the duke of Guise (1519–63) led 25,000 men from Italy against an imperial-allied English force at Calais. The defeat of this English garrison forever ended Britain's occupation of this piece of the Continent. Then, on June 30, 1558, another French force—about 10,500 strong—invaded Spanish Flanders and pillaged Dunkirk before falling back on Calais. A Spanish force of 13,000 men routed the French invaders on July 13, virtually wiping out the entire French force. This catastrophe prompted France to sue for peace, which came in the form of the Treaty of Câteau-Cambrésis (April 3, 1559), by which France relinquished almost all of its Italian possessions.

Harsha's Conquests See CHALUKYAN WAR AGAINST HARSHA.

Hawaiian Wars (Unification of Hawaii) (1782–1810)

PRINCIPAL COMBATANTS: Forces of Kamehameha I vs. rival chieftains and the chiefs of Molokai, Lanai, Oahu, and Kauai

PRINCIPAL THEATER(S): Hawaiian Islands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Kamehameha I sought to unite all of the Hawaiian Islands under his rule.

OUTCOME: Through a combination of war and negotiation, Kamehameha I created the kingdom of Hawaii.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: The largest force consisted of 12,000 warriors led by Kamehameha.

CASUALTIES: Unknown, but particularly devastating among the defenders of Oahu.

TREATIES: None

Kamehameha I (c. 1758–1819) the Great inherited, with his cousin, Kiwalao (d. 1782), rule over the big island of Hawaii in 1782. Almost immediately, Kamehameha fell to disputing with Kiwalao and waged a war against him, killing him at the Battle of Mokuohai, fought later in 1782. Other rivals also emerged, all of whom Kamehameha subdued, even as he struck out from the island of Hawaii to gain control over the other islands in the Hawaiian chain, each of which was governed by other chieftains.

Maui fell to him in 1790, after a bloody invasion. By 1791, Kamehameha had acquired firearms from American and European traders and used these to attack chieftains from Oahu and Kauai after they had retaken Maui and attacked Hawaii. Using the bought weapons, Kamehameha defeated the armies from Oahu and Kauai to emerge as sole ruler of the big island. When a new rival, Keovu (d. 1791), emerged at this time, Kamehameha invited him to a parley—then assassinated him upon his arrival.

Having taken the big island, Kamehameha invaded the other islands beginning in 1795. With 12,000 warriors in 1,200 large war canoes, he invaded Molokai, Lanai, and Oahu. On Oahu, the invaders drove the defenders to a desperate stand at Nuuanu Pali, a 1,200-foot cliff near modern Honolulu. The defenders, to a man, fell to their deaths from this height—either pushed or having committed suicide. Their leader, Kalunikupule (d. 1795) was summarily executed.

After his victory at Oahu, only the islands of Kauai and Niihau remained to be taken. Kamehameha mounted a major expedition against them in 1800, but was caught

in a destructive storm. He and his surviving crews turned back. Four years passed before he made another attempt, but an epidemic swept his army, killing many warriors before the invasion could be launched. This mishap prompted Kamehameha to turn to negotiations with the leaders, who, in 1809, acknowledged Kamehameha as their king. By 1810, all of the Hawaiian chain was consolidated under Kamehameha's control.

Heiji War (1159–1185)

PRINCIPAL COMBATANTS: Taira vs. Minamoto warrior clans

PRINCIPAL THEATER(S): Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The rival clans sought control of the Japanese government.

OUTCOME: The Minamoto clan emerged as dominant, and the war heralded the emergence of feudal Japan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Heian period, 792–1192, brought a great measure of peace and stability to early Japan; however, during the later Heian period, certain leading families acquired large territories and hired private standing armies to defend their property. Soon, these armies displaced the standing forces of the Heian government. This situation produced a number of warrior clans, the two most important of which were the Taira, also called the Heike, and the Minamoto, also known as the Genji (see GEMPEI WAR). By the 1150s, the Minamoto controlled most of eastern Japan, whereas the Taira dominated the west.

As the power of the two great warrior clans grew, another clan, the Fujiwara, gained control of the emperor and, from 856 to 1086 the Fujiwara were effectively the principal executive authority in the government of Japan. In 1155, the succession to the throne fell vacant, and Go-Shirakawa (1127–92) was named emperor, an action that touched off a minor revolt known as the HOGEN WAR, which the Taira and Minamoto clans quarreled. Although the Hogen War itself was not of great military scope, it signaled a turning point in Japanese affairs, for power had clearly passed to the warrior clans. Go-Shirakawa (Shirakawa II) was succeeded by Nijo (1143–65), and, during his reign, the ambitious and shrewd yet morally bankrupt

Taira lord, Kiyomori (1118–81), insinuated himself at court and acquired great influence with the emperor. Seeking to control Kiyomori, the retired emperor Go-Shirakawa, with the help of a minor Minamoto lord, laid a military trap for him. The plot collapsed and created a great rift between the Taira and the retired emperor on the one hand and the Taira and Minamoto clans on the other.

In 1179, the head of the Taira, Shigemori (d. 1179), died and was succeeded by his brother Muenemori (1147–85). In contrast to Shigemori, who had been a forceful and successful leader, Muenemori was cowardly and inept in military and political matters. Go-Shirakawa recognized Muenemori's weakness and decided to take steps to reduce Taira power. He dismissed many influential Taira in the capital. Kiyomori stepped in, however, dismissed even more court officials, then marched on the capital and forced the new emperor, Takakura (1161–81), off the throne, installing in his place his own year-old grandson, Antoku (1178–85). The deposed emperor recruited the Minamoto—the Genji—to come to his aid, and the Heiji War became a full-scale civil war.

Kiyomori's seizure of the capital was virtually a military coup. It was opposed by Minamoto Yoritomo (1147–99), who, after coming to control all of eastern Japan, overran the capital in 1185, forced the Taira out of the city, and ended the Heiji War. In its aftermath, Minamoto Yoritomo set up an alternative military government in Kamakura, 30 miles south of Tokyo. The Kamakura military leaders ruled as shoguns—hereditary military governors—and their government eventually came to dominate the country. The Heiji War, therefore, inaugurated the long period of feudal Japan, run by a network of provincial generals and lords who served the shogun as his vassals.

Henry II's Campaigns in Wales (1157, 1165)

PRINCIPAL COMBATANTS: Norman England vs. Wales

PRINCIPAL THEATER(S): Wales

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Taking advantage of a chaotic period in English rule, the Welsh rebelled against

the Norman barons sent to control them; Henry II invaded to put down the rebellion.

OUTCOME: Henry received the homage of Wales despite failing to conquer the Welsh.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Following the NORMAN CONQUEST of 1066, Wales came under control of feudal barons and their retainers who owed fealty to the French-speaking English kings. Then, in 1157, the chaotic reign of England's King Stephen (c. 1097–1154) gave the Welsh the opportunity to rise against the “foreign” barons. The revolt was led by two Welsh nobles, Owain of Gwynedd (d. 1170), prince of the north, and Rhys ap Gruffydd (c. 1132–97), lord of the south.

England was hardly in shape to resist. The ambitious Henry Plantagenet (1133–89) had fast been adding titles to his name. Already duke of Normandy in 1150, he became count of Anjou upon the death of his father, Geoffrey (1113–51). The next year, he acquired lordship of Aquitaine by marrying the beautiful and talented Eleanor (1122–1204). Now he laid claim to the English throne as the grandson (through his mother) of Henry I (1069–1135). Faced by invasion, Stephen agreed in 1153 to accept Plantagenet as coadjutor and heir. When Stephen died the following year, Henry II became king over territories stretching from Scotland to the Pyrenees. His succession came virtually without opposition, except from those already fighting in Wales.

Now, in fact, Wales won back lands taken as a result of the Norman Conquest, defeating the invasion force mounted by the new king. Even though he failed to prevail on the battlefield, Henry persuaded Owain to give him his allegiance and began rebuilding the English fortresses in Wales. By 1165, Owain had again had enough of the overbearing English barons, and he incited a new rebellion, which led to yet another invasion. This time Henry and Owain fought to a draw in a campaign plagued by bad weather and short supplies on both sides. Henry had managed in general to drive the Welsh back from the English border, but the individual lords kept control of their own districts. As the Welsh looked on, once again the English began building new fortresses for their borderland barons.

Henry VII's First Invasion of Brittany (1488)

PRINCIPAL COMBATANTS: England vs. Brittany

PRINCIPAL THEATER(S): Brittany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Henry VII sought to assert English control of Brittany in order to secure his precarious hold on the English throne.

OUTCOME: An English invasion failed, and Brittany declared its allegiance to France.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Sablé, 1488

The Wars of the ROSES, from 1455 to 1485, made Henry VII (1457–1509) king of England. He was, however, keenly aware that his reign was vulnerable, and in an effort to protect his hold on the throne, he decided to invade Brittany. Although Brittany was, at the time, a duchy nominally controlled by England, it was weakly held and therefore in danger of falling to Charles VIII (1470–98) of France. To avert this, Henry VII appealed to English patriots to finance an invasion. The king loaded three warships with volunteers and invaded—only to be rapidly and readily repulsed.

In the wake of victory over the English, Francis II (1435–88), the duke of Brittany, shifted his allegiance from Henry to Charles. For his part, Charles, who wanted to marry the duke's daughter, Anne of Brittany (1477–1514), was eager to accept Francis's fealty. Defeated, Henry cut his losses by renewing a truce under the Treaty of Sablé.

See also HENRY VII'S SECOND INVASION OF BRITTANY.

Further reading: J. D. Mackie, *The Earlier Tudors, 1485–1558* (New York: Oxford University Press, 1994); Anthony Pickering, *Lancastrians to Tudors: England 1450–1509* (New York: Cambridge University Press, 2000).

Henry VII's Second Invasion of Brittany (1489–1492)

PRINCIPAL COMBATANTS: England vs. France

PRINCIPAL THEATER(S): Brittany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Henry VII of England sought to block the absorption of Brittany by France.

OUTCOME: King Charles VIII settled with Henry VII for a sum of money and a pension, in exchange for Henry's relinquishing all claims on Brittany.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** Treaty of Etaples, 1492

Almost immediately after Henry VII (1457–1509) of England signed the Treaty of Sablé with France and Brittany, ending HENRY VII'S FIRST INVASION OF BRITTANY in 1488, Francis II (1435–88), duke of Brittany, died. Charles VIII (1470–98) of France immediately laid claim to Brittany and to Anne of Brittany (1477–1514), Francis's daughter, whom he had wanted to marry. Henry responded by calling for a Breton regency. To Brittany, he offered his services as mediator. He also offered military aid to resist French conquest, and he strengthened his own position by an alliance with Spain, by which Catherine of Aragon (1485–1536) would marry his son, Arthur (d. 1502). But, even as Henry's troops were en route to Brittany, Anne of Brittany agreed to the marriage and agreed to yield Brittany to Charles, and Spain made a secret alliance with France.

Henry, seeking to salvage something from the situation, invaded France in 1490 and laid siege against Boulogne the following year. Charles VIII bought him off with 745,000 gold crowns and a pension, terms agreed to in the 1492 Treaty of Etaples, which ended the war. In exchange, Henry VII renounced all claims to Brittany, which became a French province.

Henry of Bolingbroke's Revolt (1399)

PRINCIPAL COMBATANTS: Followers of Henry of Bolingbroke vs. King Richard II of England

PRINCIPAL THEATER(S): Yorkshire and London

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Bolingbroke revolted when Richard withheld his inheritance from him; he then sought the throne.

OUTCOME: Bolingbroke prevailed, captured, and disposed of Richard II, and assumed the throne as Henry IV, first of the house of Lancaster to become king of England.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Few, if any—excluding Richard II himself

TREATIES: None

As a young king, England's Richard II (1367–1400) was controlled by his uncle, John of Gaunt (1340–99)—head

of the house of Lancaster and the country's regent. During the early years of Richard's reign, John of Gaunt's ambitious son, Henry of Bolingbroke (1367–1413), appeared content to remain in the background while his father ran the government. But when Gaunt led an expedition against Spain in 1386, Bolingbroke joined a group of young nobles opposed to the king called "the lords appellants," who from 1387 until 1389 forcibly isolated Richard from his closest associates and thereby dominated the kingdom. Richard had just taken back control of his government when Gaunt returned home.

The former regent managed—at least publicly—to effect reconciliation between the king and the lords appellants before charging off once more, this time on crusades into Lithuania in 1390 and Prussia in 1392. While he was gone, the still bitter King Richard used a dispute between Bolingbroke and another of the former lords appellants, Thomas Mowbray (1366–99), duke of Norfolk, to banish both men from his kingdom. Upon John of Gaunt's death in January 1399, the vindictive Richard seized all the Lancastrian estates, depriving the exiled Bolingbroke of his inheritance and giving him clear excuse to attack England. Bolingbroke invaded Yorkshire, sailing across the English Channel from France while Richard was absent on his second expedition against Ireland. Henry landed at Ravenspur at the mouth of the Humber River on July 4, 1399, and encountered no organized resistance. The northern barons flocked to his side, and, with them, Bolingbroke marched on London. By the time Richard returned to London, the revolt was too advanced to counter. The king felt he had no choice but to surrender. Bolingbroke imprisoned him in Pontefract Castle, where he died in 1400. It is believed that he was murdered outright or deliberately starved to death. Henry of Bolingbroke then usurped the throne using his descent from King Henry III (1207–72) to justify his rule as Henry IV, first of the Lancastrian monarchs.

Henry the Wrangler's Revolts (973–1002)

PRINCIPAL COMBATANTS: Bavaria and Bohemia vs. Germany

PRINCIPAL THEATER(S): Bavaria and Bohemia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Henry II, duke of Bavaria, and other German-speaking princes rebelled against the hegemony of Germany's Otto II.

OUTCOME: Henry's revolts were crushed, and he was forced into exile.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After the death of Otto I the Great (912–973), his son Otto II (955–983) ascended to the German throne in 973, and the German states of the Holy Roman Empire descended into five years of civil war. These were led by the duke of Bavaria, Henry II (973–1024), known as “Henry the Wrangler” (or “Henry the Quarrelsome”) and Boleslav of Bohemia. By 983, the rebellions had been suppressed by Otto, despite the distraction of the FRANCO-GERMAN WAR, fought from 978 to 980. Forced into exile, Henry left his son, also called Henry (973–1024), with Abraham, bishop of Friesling. When Otto II died, Otto III (980–1002) was a mere three years old, and during his minority Germany was ruled by his formidable mother, Theophano, who had to face a number of revolts led by Henry the Wrangler until 1002. Otto III would travel to Italy at age 13 and, in 996, he appointed a new pope, Gregory V (972–999), and had himself crowned emperor. When Otto died while suppressing another revolt in Rome in 1002 (see ARDOIN'S REVOLT), Henry the Wrangler's son ascended to the German throne as Henry II, Holy Roman Emperor.

Herero Uprising (1904–1908)

PRINCIPAL COMBATANTS: Herero (and allied tribes, especially the Hottentots) vs. Germany

PRINCIPAL THEATER(S): German Southwest Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Herero sought to eject German invaders.

OUTCOME: After a long and bitter struggle, three-quarters of the Herero were wiped out, and the remainder removed to other lands.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Disastrous among the Herero, who lost about 80 percent of their number, combatants and noncombatants alike.

TREATIES: None

The Herero are Bantu-speaking people of southwestern Africa, who currently inhabit parts of central Namibia and Botswana. They were never a large tribal group, but they

had long been powerful in disproportion to their numbers. From the 17th through the later 19th century, they held sway over the Central Highland north of Windhoek. Thus when the German colonial interests encroached on them during 1904–07, the Herero were quick to resist, and because their influence was so great in the region, the Herero uprising attracted other tribes as well, most notably the Hottentots.

German forces had a great deal of trouble suppressing the uprising, and the German government was forced to send significant numbers of troops to fight a guerrilla war of attrition. The Herero uprising inspired a similar uprising against the Portuguese in Angola.

The final suppression of the Herero, when it came, was brutal in the extreme. The Germans subjugated the tribe only by killing 80 percent of the members and compelling survivors to move to the arid sand veldt that is today called Hereroland.

Himilco's War (405 B.C.E.)

PRINCIPAL COMBATANTS: Carthage vs. Syracuse

PRINCIPAL THEATER(S): Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Carthage sought control of parts of Sicily.

OUTCOME: Syracuse, defeated, made major cessions to Carthage.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of 405 B.C.E., by which Syracuse relinquished about half of Sicily to Carthage

The Carthaginian general Himilco (d. 396 B.C.E.) invaded southern Sicily, where he fought an army led by Dionysius I (c. 430–367 B.C.E.), tyrant of Syracuse. Himilco defeated Dionysius at Gela and at Camarina (Santa Croce). Dionysius not only ceded these cities to Himilco, but concluded a treaty by which Syracuse relinquished to Carthage half of Sicily. It was the first time Syracuse had found it necessary to enter into a treaty with Carthage, against which it had long struggled.

In the First DIONYSIUS WAR, from 398 to 397 B.C.E., Dionysius reclaimed what he had lost, driving the Carthaginians out of Sicily and Himilco to suicide.

Hittite Conquest of Anatolia

(c. 1700–c. 1325 B.C.E.)

PRINCIPAL COMBATANTS: Hittites vs. Mitanni and, subsequently, Egypt

PRINCIPAL THEATER(S): Anatolia (modern Turkey), Syria, and Cilicia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Hittites craved expansion of their empire.

OUTCOME: Twice, during this long period, the Hittites succeeded in dominating Anatolia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

The earliest records of Hittite presence in Anatolia (Turkey) date from about 2000 B.C.E. Twice, during the period 1700 to 1325 B.C.E., they came to dominate the region. Under King Hattusilis, who ruled from about 1650 to 1620 B.C.E., and his successors, the Hittites created what is known as the Old Kingdom, extending their holdings throughout Anatolia and into Syria and Cilicia. In fighting to acquire Cilicia, which was taken, lost to the Mitanni, then retaken, Hattusilis was severely wounded and had to be taken home, where he eventually died of his wounds. Three sons ruled briefly in succession—all poorly—but his adoptive grandson, Mursilis (Murshilish) (c. 1620–1590 B.C.E.), resumed aggressive campaigning in northern Syria. During one of these campaigns, he subdued and destroyed the city of Aleppo. After this, he turned his attention to Babylon, where he defeated and deposed the powerful Amorite dynasty. Later, after defeating the Hurrians along the Euphrates River, Mursilis returned to the Hittite capital, Hattusas, where he was subsequently assassinated by conspirators in service to his brother-in-law, Hantilis.

Following the death of Mursilis, the Mitanni regained much of what they had lost to the Hittites. As a result of the HITTITE-HURRIAN WARS, from around 1620 to about 1325 B.C.E., the Mitanni established in northern Syria the Hani-gabat kingdom. However, about 1400 B.C.E., a new Hittite king, Suppiluliumas (c. 1375–c. 1335 B.C.E.), founded the Hittite New Kingdom and reigned as most powerful of the Hittite rulers, called by some scholars the “Charlemagne of the Near East.” Continually fighting the Mitanni in the

east, Suppiluliumas spread Hittite influence over much of Syria and throughout the Euphrates River valley. He rebuilt the Hittite capital at Hattusas and extended his kingdom to the proportions of a truly great empire.

Fearing by his neighbors, Suppiluliumas commanded the wary respect of even the powerful Egyptians, who cultivated an alliance. The widow of the pharaoh Tutankhamen (fl. 1333–1323 B.C.E.) invited Suppiluliumas to send one of his sons to be her new husband. By the time the young man arrived in Egypt, however, an anti-Hittite movement had been organized, and the unfortunate son was assassinated. Suppiluliumas launched a campaign against the Egyptians, but was soon dead himself, apparently having succumbed to plague, introduced into his homeland by Egyptian prisoners of war.

Hittite-Hurrian Wars (c. 1620–c. 1325 B.C.E.)

PRINCIPAL COMBATANTS: Hittites vs. Hurrian Mitanni (later with Assyrian allies); separately, Egypt vs. Hurrian Mitanni

PRINCIPAL THEATER(S): Anatolia (Turkey) and the region of modern Palestine and modern Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Hittites and Hurrians struggled to dominate Anatolia.

OUTCOME: Dominance seesawed between the Hittites and Hurrian Mitanni but ultimately fell to Assyria, which became the dominant force in the region by the end of these wars.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents survive

The Hittite-Hurrian Wars are especially significant for having included the earliest battle of which a record—however incomplete—exists: the Battle of MEGIDDO, 1469 or 1479 B.C.E.

The Hurrians and Hittites vied for centuries to control Anatolia, the territory of modern Turkey (see HITTITE CONQUEST OF ANATOLIA). The long series of wars between them began about 1620 B.C.E. when the Hittites fought the Arzawa, a kingdom on their southwest border. Because the Hittites devoted most of their military resources to this struggle, they left south and southeast Anatolia undefended, and the Hurrian kingdom of Mitanni invaded and

seized this region. In response, Hittite forces were rushed to the area and succeeded in ejecting the Hurrian Mitanni but, about 1600 B.C.E., were again involved in a pitched struggle for the city of Aleppo. After approximately five years of fighting, the Mitanni finally withdrew.

Some time after this victory, internal struggles within the Hittite kingdom weakened its military position, and the Hurrian Mitanni wrested Cilicia from the Hittites, establishing a kingdom called Kizzuwada about 1590 B.C.E. In a bold strategic move, the Mitanni also created the Hanigabat kingdom in the southeast, which effectively cut the Hittites off from northern Syria. This led to the Battle of Megiddo in 1469 or 1479 B.C.E., not between the Hurrian Mitanni and the Hittites, but between the forces of Egypt, under Pharaoh Thutmose III (fl. c. 1500–1447 B.C.E.), and Saustater (fl. 1500–1450 B.C.E.), the Mitanni king of the Syrian city of Kadesh. With the failure of the Hittites to contain Mitanni expansion, Thutmose feared losing influence in Syria and Palestine. He therefore led an army around the eastern end of the Mediterranean Sea to extinguish what he interpreted as a revolt in northern Palestine led by the king of Kadesh. The king's rebel army marched south to Megiddo, which overlooked the pass leading to the Plain of Esdraelon and was thus a strategically placed high-ground position, the gateway to all Mesopotamia. Deploying his army in three groups, Thutmose made a surprise attack on the Mitanni position at dawn and routed the opposing force, which withdrew behind Megiddo's walls. Had Thutmose proceeded against Megiddo immediately, the city would have quickly fallen. But his troops paused to loot the abandoned Mitanni camp, giving the defenders time to prepare strong defenses. As a result, Megiddo fell only after a seven-month siege. The Battle of Megiddo must have involved very large forces, for it was probably the site of the Armageddon battle described in the New Testament.

The Egyptian victory at Megiddo stopped the Mitanni expansion. The Hittite "Old Kingdom" still languished in decline, however, until the advent of a new leader, Suppiluliumas (c. 1375–c. 1335 B.C.E.), who founded the "New Kingdom" and brought the Hittites to renewed power and influence. He resolved to end the Hurrian presence in Syria altogether by mounting a massive invasion into Syria. With strategic aplomb, he invaded via an unexpected route, through the eastern valley of the Euphrates, which caught the Mitanni entirely unawares. They offered only feeble resistance and, by about 1370, yielded all territory north of Damascus and all of present-day Lebanon.

Seeking to halt the Hittite advance, the Mitanni struck an alliance with Assyria, a rival of the Hittites, but the Hittites checked this move by conquering the Mitanni city of Carchemish on the Euphrates in about 1340. This gave the Hittites a buffer state between them and Assyria. It would be years before the Mitanni-Assyrian alliance retook the region in 1325. After the area around Carchem-

ish had been retaken, the Hurrian Mitanni also reestablished Hanigabat as a subkingdom. By this time, however, both the Hurrians and the Hittites had greatly receded in importance relative to the Assyrians, who were rapidly becoming the dominant people in the region and were destined to possess all of Anatolia.

Further reading: Trevor Bryce, *The Kingdom of the Hittites* (New York: Oxford University Press, 1998); O. R. Gurney, *The Hittites* (New York: Penguin Books, 1990); J. G. Macqueen, *The Hittites and Their Contemporaries in Asia Minor* (London: Thames and Hudson, 1986).

Hogen War (1156)

PRINCIPAL COMBATANTS: Go-Shirakawa vs. Sutoku

PRINCIPAL THEATER(S): Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The dispute was over succession to the imperial throne.

OUTCOME: The supporters of Go-Shirakawa prevailed, and he assumed the Japanese throne; but the Fujiwara family was finished as effective rulers of Japan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

As the prelude to the larger HEIJI WAR, from 1159 to 1185, the Hogen War marked the end of the Fujiwara family's feudal control over the Japanese monarchy and sparked a period of prolonged fighting. The conflict centered around who in fact ran the imperial court, the retired emperor Sutoku (1119–64) or the reigning emperor Go-Shirakawa (Shirakawa II) (1127–92). In Japan of the Heian period (792–1192), it was customary for emperors to step down later in life, abdicating in favor of a son, then enter a monastery. There, they would live out the remainder of their lives in semiretirement, intervening in affairs of state only as necessary. Toba was one such retired emperor, who, displeased with the rule of his first son, Sutoku, compelled him to abdicate. Sutoku himself retired to a monastery.

After Toba died in 1156, trouble between the new emperor, his third son, Go-Shirakawa, and his first, Sutoku, was perhaps inevitable. Sutoku resolved to come out of retirement and resume what he considered his rightful place on the throne. This action sharply divided the imperial Fujiwara family between those who favored Go-Shirakawa and those who favored Sutoku. When the kampu (or chief counselor, a position controlled since 857 by the head of the Fujiwara family), backed Go-Shirakawa, Sutoku quickly called on the support of the warrior clan led by the shogun (military governor or, perhaps,

supreme general) Minamoto Tameyoshi (d. 1156). In response, those warriors led by rival shogun Taira Kiyomori, came to the aid of Go-Shirakawa's faction.

Go-Shirakawa and his partisans won the brief and violent struggle, forcing Sutoku back into exile and killing his chief supporters. Tameyoshi was executed, and the Minamoto clan declined in power as the Taira family took effective control of the government.

By the time Go-Shirakawa himself decided to respect the custom of retiring to a monastery after abdicating to a son, real power was no longer in the hands of the emperors, but in those of the shoguns.

Holy League, War of the (1510–1514)

PRINCIPAL COMBATANTS: Holy League (Italian states, Swiss cantons, Spain, and England) vs. France

PRINCIPAL THEATER(S): Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: With papal support, the Holy League sought to oust the French from Italy.

OUTCOME: The French were forced out of Italy, but the Holy League did not long survive the death of the pope who had created it, and the French, now allied with the Swiss, returned to Italy after the war.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the most important battle, Novara, the French fielded 10,000 men vs. an Italian-Swiss force of 13,000.

CASUALTIES: At Novara, at least 5,000 French troops and French-employed German mercenaries were killed or wounded; Holy League forces, 1,300 killed or wounded.

TREATIES: All the allies, unable to agree, made separate peace agreements with France.

When France threw its support behind Alfonso I (1486–1534) of Este against Pope Julius II (1443–1513), the pope organized a “Holy League” of Italian states, Swiss cantons, Spain, and England to field an army with the mission of pushing France out of Italy. In a vigorous campaign, the Holy League drove the French out of a number of Italian cities, including, most significantly, Milan, by the spring of 1512. Then, on June 6, 1513, a Swiss-Italian force engaged the French at Novara, 28 miles west of Milan. The French army, 10,000 men under Louis de La Trémoille (1460–1525), was surprised by an attack of the 13,000-man Swiss-Italian army, which included deadly pikemen. Although the attackers suffered heavy losses including 700 pikemen killed or wounded, they inflicted

at least 5,000 casualties on the French—a stunning casualty rate of 50 percent—which caused the desertion of German mercenaries fighting in the French ranks (those who surrendered to the Swiss were summarily executed) and forced the French to withdraw from Italy entirely. Yet the French surrendered to the Swiss, and not the Holy League, which, in fact, did not prove durable. With the death of Pope Julius II later in 1513, the league began to dissolve. The French and the Swiss would subsequently fight and then conclude an alliance that would give them control over much of Italy.

Holy Roman Empire—Papacy War (1081–1084)

PRINCIPAL COMBATANTS: Holy Roman Emperor Henry IV vs. Pope Gregory VII (with his ally, Robert Guiscard)

PRINCIPAL THEATER(S): Italy, especially Rome

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Henry IV wanted to depose Gregory VII and replace him with a pliant antipope, who would crown him Holy Roman Emperor.

OUTCOME: Henry IV deposed Gregory VII and did become Holy Roman Emperor, but he was forced out of Italy, and the supremacy of papal authority over the Holy Roman Empire in ecclesiastical matters was vindicated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

As a result of the ongoing GERMAN CIVIL WAR (1077–1106), the German king Henry IV (1050–1106) had been excommunicated by Pope Gregory VII (c. 1020–85). Despite having been defeated by forces of the Welfs (the papal party, known in Italy as Guelfs) in 1080, Henry invaded Italy the following year and laid siege against Rome. The city held out heroically, even after the fall of the Vatican and St. Peter's in 1083. Once established in the Vatican—Gregory VII fled to the castle of St. Angelo—Henry bribed key officials and thereby secured the surrender of Rome in 1084. Henry entered the city and installed the antipope Clement III (c. 1030–1100), who promptly named Henry IV Holy Roman Emperor.

At this point, Robert Guiscard (c. 1015–85), ruler of Apulia and Calabria, answered the pope's call for aid by leading a large army—mostly Norman, but including a motley assortment of men, even Muslim soldiers of fortune—against Rome. Overwhelmed, Henry's troops offered no resistance and returned to Germany. Unfortunately, Robert Guiscard's army did not merely liberate

Rome, but sacked it, causing much destruction. Pope Gregory VII was liberated, only to find himself effectively a prisoner of Robert Guiscard's men, who escorted him to exile in Salerno. There he was presumably to wait out the storm sweeping Rome in the aftermath of its sacking, but Gregory's health rapidly deteriorated, and he died in Salerno in 1085.

Although Gregory personally was a victim of the war, it ended as a victory for the power of the papacy over that of the Holy Roman Empire. In 1073, Gregory had issued a decree banning lay investiture—that is, the practice whereby lay rulers awarded churches to prelates. The 1081–84 war enforced this decree, thereby depriving the kings and princes of the Holy Roman Empire of important power over ecclesiastics, reserving that to the pope.

See also HOLY ROMAN EMPIRE—PAPACY WAR (1228–1241).

Further reading: H. E. J. Cowdrey, *Pope Gregory VII, 1073–1085* (New York: Oxford University Press, 1998).

Holy Roman Empire—Papacy War (1228–1241)

PRINCIPAL COMBATANTS: Holy Roman Emperor Frederick II vs. Pope Gregory IX (with the Lombard League)

PRINCIPAL THEATER(S): Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Holy Roman Empire and the papacy struggled for political supremacy.

OUTCOME: Largely undecided, although Frederick II made significant inroads into Italy

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Variable

CASUALTIES: Unknown

TREATIES: The Peace of San Germano, 1230, brought an uneasy truce, which was soon broken.

The GERMAN CIVIL WAR (1077–1106) and the HOLY ROMAN EMPIRE—PAPACY WAR (1081–1084) were part of an ongoing dispute between the papacy and the Holy Roman Empire, both of which struggled to consolidate dominance over European affairs. The Holy Roman Emperor Frederick II (1194–1250) had been raised under papal care and was crowned in 1220. The assumption of Pope Honorius III (d. 1227) was that here, at long last, was an emperor who would be compliant and submissive to the papal will. On the contrary, Frederick II vigorously asserted the rights and authority of lay rulers. In an effort to control Frederick II, Honorius III ordered him to lead a crusade to Jerusalem; instead, the emperor sent troops under the command of others. The pope then arranged a marriage between Frederick and Isabella (Yolande) of Brienne (1212–28), the heiress to the kingdom of Jerusalem in 1225, and then, two years later, compelled him to undertake the Sixth CRUSADE.

This time, Frederick went, but, falling ill, returned early—and was promptly excommunicated by Honorius's successor, Gregory IX (c. 1143–1241).

In 1228, Gregory offered Frederick restoration to grace if he would sail to the Holy Land again. Although Frederick fought valiantly and successfully, recovering Jerusalem and becoming its king, Gregory incited rebellion in his territories. When, on his return to Europe, Frederick warred against papal forces in order to regain Sicily, Gregory once again excommunicated him—only to come to a grudging accommodation in the Peace of San Germano in 1230.

The peace was an uneasy one. Although Sicily remained quiet, Frederick fought throughout Italy in an effort to unite it under his rule. He was victorious against papal-sponsored Lombard resistance in 1231, then boldly summoned the Diet of the Empire at Piacenza in 1236 to compel Italian cooperation with him. Following this, he annexed church lands, thereby bringing upon himself yet another excommunication decree.

During 1236–37, Frederick conquered the Veronese March (borderlands) and routed the Welf (called Guelf in Italy) forces of the Lombard League at the Battle of Cortenuova on November 27, 1237. From this triumph, he went on to smash Milan. The following year, however, Frederick failed to take Brescia after a long siege. The pope, in the meantime, issued yet another excommunication and allied himself, secretly, with Genoa and Venice. Frederick laid siege to Milan, which also failed, and then, in 1240, he opened an assault on Rome. This served to initiate peace negotiations, which Gregory cut short in 1241, summarily summoning a General Council. Frederick asserted himself by forcibly preventing the council delegates from assembling. The war ended, suddenly, without further resolution when Pope Gregory IX died later in 1241. The struggle would resume just three years later.

Further reading: David Abulafia, *Frederick II: A Medieval Emperor* (New York: Oxford University Press, 1992); Paul Wiegler, *The Infidel Emperor and His Struggles against the Pope: A Chronicle of the Thirteenth Century* (New York: E. P. Dutton, 1930).

Holy Roman Empire—Papacy War (1243–1250)

PRINCIPAL COMBATANTS: Holy Roman Emperor Frederick II vs. papal-sponsored rebels, and Pope Innocent IV

PRINCIPAL THEATER(S): Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: This war was a continuation of the seemingly endless struggle between the papacy and the Holy Roman Empire for control of the European (especially Italian) political sphere.

OUTCOME: The balance of victory seesawed between the belligerents, but, on balance, favored the Holy Roman Empire, pointing to a future in which the power of the papacy would be confined to matters of religion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The death of Pope Gregory IX (c. 1143–1241) brought an abrupt end to the HOLY ROMAN EMPIRE–PAPACY WAR 1228–41, which proved nothing more than an intermission in the ongoing conflict between the lay rulers of the Holy Roman Empire and the ecclesiastical authorities of the papacy. In 1241, a new pope, Celestine IV (d. 1241), was elected to replace Gregory, only to die himself just 17 days later. Frederick II (1194–1250), the Holy Roman Emperor, took advantage of the chaos within the papacy to subdue the Papal States that had not been subdued during the war just concluded, and he planned a major naval assault on the papal strongholds of Genoa and Venice. In the meantime, he also lobbied for election of a compliant pope. But Innocent IV (d. 1254), sophisticated, smooth, and ruthless, was anything but compliant.

While Frederick negotiated with Innocent, seeking to lift his excommunication, the pope laid siege to Viterbo, hitherto an independent Italian city, in 1243. At the same time, Innocent stirred up a rebellion against Frederick in Lombardy, and then, in 1244, marched his forces into Rome in an effort to awe the emperor. Frederick responded by essentially renouncing the agreement he and the pope had negotiated beginning in 1239. This escalated to a military threat that called Innocent's bluff in Rome, and the pope retreated first to Genoa and then to Lyon. Innocent convened an ecumenical council in Lyon in 1245. The delegates managed to evade all of Frederick's attempts to prevent their reaching Lyon, including his blockade of all Alpine passes. They endorsed Innocent's new excommunication of Frederick and his order that the emperor be deposed on charges of violating the peace, sacrilege, and heresy. In 1246, the pope called on the German princes to elect a new emperor, and they selected Henry Raspe (c. 1202–47), landgrave of Thuringia. Upon his death, the princes selected William (1228–56) of Holland. Meanwhile, the pope engineered a rebellion against the Holy Roman Empire in Sicily. For their part, the Germans continued to support Frederick and rebelled against his replacement.

Frederick, in the meantime, concentrated on defeating the pope in Italy. In 1245, he invaded and sacked Viterbo, attacked Piacenza, and, the following year, decisively defeated the Welfs (papal forces known in Italy as Guelfs) at Parma. His attempt to take that city by storm, however, resulted in a prolonged siege, which was lifted under counterattack in 1248. After this, the situation in Italy worsened for Frederick. He suffered massive defeat

in Tuscany, which he relinquished in 1249, then suffered the capture of his son in Sardinia. Yet the emperor refused to yield. Later in the year, he crushed a new rebellion in Sicily and retook Parma. The following year, 1250, the war suddenly ended with Frederick's death, much as the 1228–41 war had ended with the death of Gregory IX.

Although the war ended without full resolution of the struggle between the papacy and the Holy Roman Empire, Frederick's example pointed toward a future in which the role of the papacy would become increasingly limited to the ecclesiastical or spiritual realm, whereas the affairs of temporal politics would rest with lay rulers.

Honduran Civil War (1909–1911)

PRINCIPAL COMBATANTS: Conservatives led by Manuel Bonilla vs. liberals led by incumbent president Miguel R. Dávila

PRINCIPAL THEATER(S): Nicaragua

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Bonilla and the conservatives wanted to overthrow and replace the liberal Dávila, who had been placed in office by the dictator of Nicaragua.

OUTCOME: The war itself was inconclusive, but, following the armistice, Bonilla defeated Dávila in a peaceful election.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Armistice of February 8, 1911

This low-level conflict ensued after Nicaraguan dictator José Santos Zelaya (1853–1919) virtually installed Miguel R. Dávila (d. 1927) in the presidency of Honduras following Honduran defeat in the HONDURAN–NICARAGUAN WAR. The former Honduran president, Manuel Bonilla (1849–1913), led conservative supporters in a rebellion against the liberal Dávila, touching off an inconclusive civil war that was ended by mutual agreement to an armistice on February 8, 1911. New elections were called, and Bonilla was elected to replace Dávila.

Honduran Guerrilla War (1981–1990)

PRINCIPAL COMBATANTS: Communist guerrillas (supported by Nicaragua's Sandinistas) vs. Honduran government forces (aided by the United States)

PRINCIPAL THEATER(S): Honduras

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Leftist guerrillas sought to topple the right-wing Honduran government, which supported anti-Sandinista forces (or "contras") in El Salvador and Nicaragua.

OUTCOME: The war ended after Sandinista power diminished following the Nicaraguan elections of 1990.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Variable

CASUALTIES: In the thousands, principally civilian

TREATIES: None

The NICARAGUAN CIVIL WAR (1982–90) and the SALVADORAN CIVIL WAR produced large numbers of refugees, many of whom fled to Honduras. As a consequence of this influx, the Honduran government feared that Honduras would be exposed to attack by guerrillas from El Salvador and Nicaragua. The fears rapidly proved well founded as Cuban-trained guerrillas hit Honduran military and police installations and terrorized the Honduran capital of Tegucigalpa, even attacking the U.S. embassy there. The United States supplied large amounts of military hardware to Honduran government forces in an effort to combat the rebels.

In the meantime, the anti-Sandinista (the Sandinistas were the revolutionaries who had seized power in Nicaragua) Nicaraguan Democratic Force (FDN) formed within Honduras and, from bases there, launched raids into Nicaragua. This provoked the Sandinistas to invade Honduras to raid the FDN bases. In response, the United States provided helicopters and pilots to carry Honduran troops to the border regions to repel the invasion. The United States then sent 3,200 combat troops to assist the anti-Sandinista forces, which were collectively called *contras*. This, however, provoked left-wing violence within Honduras, as many objected to the American military presence in the country.

In actuality, the United States had a deeper and more extensive involvement in the Honduran war than was generally known at the time. The administration of Ronald Reagan (1911–2004) came into office in 1981, with two of its top priorities being an end to the war in El Salvador and aiding the contra guerrilla war against the Sandinistas in Nicaragua. Honduras, located between El Salvador and

Nicaragua and embroiled in a guerrilla warfare spawned by the conflicts of its neighbors, effectively became the base for all U.S. operations in Central America. The U.S. Central Intelligence Agency (CIA) supported covert operations, including the U.S.-trained Battalion 316, a secret Honduran army intelligence unit formed in 1982. Battalion 316 soon became notorious for committing human rights abuses. With U.S. support, the Honduran army suppressed the small Honduran guerrilla movement between 1980 and 1984, typically by the most brutal means available, including imprisonment and torture, in addition to outright murder.

By 1990, the Honduran war quickly wound down after the Sandinistas were defeated in the Nicaraguan elections. Revelations concerning the Reagan administration's illegal covert support of the contras prompted the U.S. Congress to eliminate much of the U.S. military presence in Central America at this time as well. Nevertheless, the end of the war did not bring an immediate end to the killing. Peasants seeking land reforms and threatening to seize land in default of government action were attacked and killed in 1991 after they began farming idle land. When this outrage was exposed, publicly contrite government officials pledged to bring an end to human rights abuses in Honduras and to introduce land reform.

Honduran-Nicaraguan War (1907)

PRINCIPAL COMBATANTS: Honduras vs. Nicaragua

PRINCIPAL THEATER(S): Honduras

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ostensibly, Nicaragua was responding to a Honduran violation of its sovereignty; however, the war was a product of Nicaragua president Zelaya's desire to gain control of his Central American neighbors toward the eventual end of uniting Central America under his rule.

OUTCOME: Honduras accepted the installation of Zelaya's handpicked candidate for Honduran president.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After José Santos Zelaya (1853–1919) became president of Nicaragua as a result of a liberal revolt in 1893, he not only assumed dictatorial authority within his own borders, but sought to unite other Central American countries under his leadership. Toward this end, he often interfered in the internal affairs of his neighbors. When, in 1903, the conservative Honduran politician Manuel Bonilla (1849–1913) led a successful coup against the liberal government Zelaya had supported in Honduras, Zelaya enthusiastically supported Honduran rebels who sought to topple Bonilla. When a 1906 revolt failed, Honduran troops pursued fleeing rebels across the border with Nicaragua. An indignant Zelaya demanded reparations from Honduras for having violated Nicaraguan sovereignty. Honduras refused, and, in response, Nicaraguan forces invaded. The resulting war is notable for the Battle of Namasigue, fought on Honduran territory on March 18, 1907, using (among other weapons) machine guns. It was the first use of this weapon in Central America.

The Nicaraguans prevailed at Namasigue and went on to overrun Tegucigalpa, the Honduran capital. Bonilla sought refuge in the United States, and Zelaya installed Miguel R. Dávila (d. 1927) as his handpicked president of a new liberal Honduran regime. This led to the HONDURAN CIVIL WAR.

Hottentot Uprising (1904–1907)

PRINCIPAL COMBATANTS: Germany vs. the “Hottentots” (including Herero, Ovambo, Nama, and Oorlam tribes)

PRINCIPAL THEATER(S): German Southwest Africa (Namibia)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Tribal resistance to German colonial incursions and outrages

OUTCOME: Resistance was ultimately crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Germany, 80,000; tribes, 100,000

CASUALTIES: Germany, 6,000; tribes, 30,000

TREATIES: None

Early in the 20th century, German settlers arrived in great numbers in southwest Africa, mainly to exploit copper and diamond mining. Beginning in 1904, a group of tribes, generally called Hottentots by the Germans, rose up in rebellion.

The first tribe to rebel was the Herero—and, in a single encounter, the Ovambo, who attacked Fort Namutoni near the Etosha Pan. The first phase of the war ended when General Lothar van Trotha (1848–1920) defeated the main force of Herero warriors at the Battle of Waterburg. The German victors took no prisoners, but instead drove the survivors of the battle into the Kalahari Desert, where most died. These in effect mass execution tactics were typical of the German approach to warfare in the region. Although the tribes came close to expelling the Germans from the region, the German response was vigorous and ruthless. Mass execution and confinement in squalid concentration camps were common. By the end of the war, the population of the Herero tribe was reduced by some 80 percent.

The later phases of the uprising were dominated by resistance from the Nama tribe. This uprising was crushed by 1907, and Nama survivors were confined to concentration camps, which were, in fact, death camps. Starvation, disease, and general privation killed two-thirds of the Nama confined.

Hukbalahap Rebellion (1946–1954)

PRINCIPAL COMBATANTS: “Huk” guerrillas vs. Japan (during its World War II occupation of the Philippines) and, after the war, the newly independent Filipino government

PRINCIPAL THEATER(S): Philippines**DECLARATION:** None**MAJOR ISSUES AND OBJECTIVES:** During World War II, the Huks resisted the Japanese occupiers of the islands; after the war, they sought to introduce a communist presence in the newly independent Philippine government.**OUTCOME:** Although the Huks were highly effective against the Japanese and, initially, against the postwar government, they were no match for U.S.-supplied weaponry and the reform government of Ramón Magsaysay.**APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:** Unknown**CASUALTIES:** Unknown**TREATIES:** None

Much of the resistance to the Japanese occupation of the Philippines during WORLD WAR II came from “Huks,” members of the Hukbalahap, translated as “People’s Anti-Japanese Army.” The origin of the Hukbalahap may be found in various communist and socialist grassroots political groups that flourished in the Philippines beginning in the 1930s. The Huks became a highly effective guerrilla force, responsible for the deaths of thousands of Japanese soldiers, as well as Filipinos who collaborated with the invaders.

The Huks came to control most of central Luzon by 1945 and created a functioning government that collected taxes and administered laws. Although some of those who collaborated with the Japanese had also secretly helped the guerrillas, many Huks—especially the rank-and-file who had remained in the hills—came out of the war bitterly against those who appeared to have benefited from the occupation. The differences between these two extreme groups would mark the politics of the postwar Philippines.

After the war, the Huks took part in the elections that followed Philippine independence on July 4, 1946, but managed to gain only a single seat in Congress. The newly constituted government refused to seat the Huk representative, however, and the Huks reactivated their guerrilla organization, this time in opposition to the new government. The guerrilla movement fed off a growing sense of social injustice among tenant farmers, especially in central Luzon. Soon, government forces proved virtually powerless against the sophisticated guerrilla organization, and in 1950 the Huks ventured out of their jungle encampments to make an assault on Manila. This time, however, government forces were ready, having identified the location of the Huk headquarters within the city. On the eve of the attack, government troops raided the headquarters and arrested all the principal Huk leaders. The attack was called off.

To forestall further Huk activity, the United States sent weapons and other military equipment to the government forces, which made them far more effective in combating

the guerrillas—although a low-level state of civil insurrection persisted through 1954. Even more effective against the Huks than U.S. weapons was the presidency of Ramón Magsaysay (1907–57), whose bold political and economic reforms, beginning in 1953, quickly eroded popular support for the communist movement. The last leader of the Huks surrendered in 1954.

Hundred Days' War (1815)

PRINCIPAL COMBATANTS: France vs. the allied countries of Great Britain, Austria, Russia, and Prussia**PRINCIPAL THEATER(S):** France**DECLARATION:** The allies declared Napoleon an international outlaw after he returned to France and reclaimed the throne.**MAJOR ISSUES AND OBJECTIVES:** Napoleon sought to regain rule of France.**OUTCOME:** Napoleon’s forces were defeated, and he died in exile.**APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:**

France, 188,000 troops in the field, 100,000 in garrisons; allies, 721,000

CASUALTIES: France, 43,000 killed or wounded; Allies, 11,400 killed or wounded**TREATIES:** Second Peace of Paris, November 20, 1815

While in exile on Elba, Napoleon (1769–1821)—brooding over his fate and unhappy with his treatment—became aware of France’s dissatisfaction over the restoration of the Bourbon dynasty, and he returned to France in 1815. Landing at Cannes on March 1, with a detachment of his guard, he was greeted by many not as a fallen emperor but as the embodiment of the spirit of the Revolution and the returning savior of the nation’s glory. As he crossed the Alps, the republican peasantry rallied round him, and near Grenoble, he won over the soldiers sent to arrest him. King Louis XVIII (1755–1824) fled in terror, and Napoleon marched into Paris on March 20, commencing the period known as the “Hundred Days.” Napoleon knew that his exhausted nation and greatly reduced army were in no condition to take on all of Europe. Accordingly, he proclaimed peaceful intentions. But the allies—Austria, Great Britain, Russia, and Prussia—meeting at the Congress of Vienna, declared him an outlaw, summarily prepared for renewed war, and made plans to invade France.

To rally the French masses to his cause, he probably should have allied himself once more with the Jacobins, but he was afraid to do so and alienate the bourgeoisie whose support was critical and whose predominance he himself had always assured. The bourgeoisie feared above everything a revival of the socialist experiments France had suffered at the hands of Jacobin radicals in 1793 and 1794. Thus, all Napoleon had to offer was a political regime not unlike that of Louis XVIII, except with himself at the top. Enthusiasm ebbed, and his latest adventure seemed a dead end. In these circumstances, Napoleon, as always, chose action. Rather than adopt a defensive posture, Napoleon determined that his only chance was to separate the Prussian and Anglo-Dutch armies in order to defeat them in detail in what is now Belgium.

He took the field at the head of a 125,000-man army and marched north. He captured Charleroi and, on June 16, 1815, defeated the Prussians, led by Field Marshall Gebhard von Blücher (1749–1819), at Ligny. That same day, the British under Sir Arthur Wellesley, Lord Wellington (1769–1852), defeated another French force at Quatre-Bras but in so doing was prevented from rushing to von Blücher's defense. Buoyed by his victory Napoleon attacked the combined forces of the Lord Wellington and von Blücher at Waterloo on June 18, 1815, and was utterly defeated in one of the most famous battles in history. The routed French fled, and the allies marched on to Paris unopposed.

Returning to Paris ahead of the enemy, Napoleon abdicated for the second time on June 23. He took flight to Aix, where he surrendered to the captain of the British warship *Bellerophon* and was exiled, as a prisoner of war, to the island of St. Helena, where he died on May 5, 1821.

Hundred Years' War (1337–1453)

PRINCIPAL COMBATANTS: England vs. France

PRINCIPAL THEATER(S): France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: King Edward III of England sought to press his claim to the throne of France; his successors, though they relinquished the

claim, wanted to preserve England's holdings in Guyenne (Guienne) and Calais.

OUTCOME: England was crippled by the cost of war that lasted for more than 100 years, while France became more unified and less feudal in nature.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Size of the armie varied over time, Edward probably had 10,000 men on his 1359 campaign; Henry V 15,000.

CASUALTIES: Unknown but they were enormous. Some estimate that the war and the plague reduced Europe's population by half.

TREATIES: Treaty of Brétigny (1360), Peace of Paris (1396), Treaty of Troyes (1420)

When Charles IV (1249–1328) died in 1328 with no male children, a crisis of succession was sparked in France. Before his death, Charles had made plans to forestall such a crisis by stipulating that Philip of Valois (1293–1350), his cousin, would be named king in the event that his wife, pregnant at the time of his death, gave birth to a girl. Philip indeed claimed the throne as Philip VI upon the death of Charles, but also entering the fray was Isabella (1292–1358), Charles's sister and the mother of Edward III (1312–77) of England. The French assembly, despite the closer line of descent of Isabella, recognized Philip's claim, sparking a period of war between France and England that lasted until 1453.

When Edward III succeeded to the English throne, he lacked the power to press his claim to France, but he did have control of Guienne, a long strip of coastline from La Rochelle to Bayonne and the Pyrenees. Vital to England for trade, this region had been held by England as feudatory to the king of France since 1259. England also held Ponthieu, whose major towns were Abbeville and Crécy. Not only was Edward III determined to hold Guyenne and Ponthieu, he was also intent on punishing Philip VI for giving refuge to David II (1324–71), king of Scotland, England's enemy to the north.

In 1337, Edward claimed the French throne, while Philip negated England's right to Guienne. The ensuing war occurred in four phases.

Between 1337 and 1360, Edward was victorious at several battles but at last had to renounce his claim to the French throne. At the Battle of Sluys, Edward won a major victory at sea. In the daylong fight, the English fleet of 150 ships gained command of the English Channel and sank or captured 166 out of the total 190 French ships. A truce between the warring nations lasted for about two years. At the Battle of Crécy, the English army defeated a French force nearly three times its size. The French made 15 or 16 separate attacks in their attempt to push Edward from the field, but by the end of the fighting on the night of August 26, 1346, France had lost 1,542 lords and knights and 10,000 to 20,000 men-at-arms, crossbowmen, and infantry. England lost two knights, and 40 men-at-arms and archers,

and an unknown but small number of Welsh infantrymen. Edward reached Calais on September 4, 1346, and laid siege on the city. After a year, the city was England's.

Over the next several years, England and France were unable to mount significant campaigns due to the ravages of the Black Death. But in 1355, Edward was once again ready to cross the Channel and lead his army in devastating raids across northern France. In the meantime, Edward's sons, John of Gaunt (1340–99) and Edward (1330–76), prince of Wales (known as the Black Prince) raided Brittany and Languedoc, respectively.

The war took a new turn with the capture of French king John II (1319–64) (who had been crowned at the death of Philip VI in 1350) at the Battle of Poitiers on September 19, 1356. In this battle, the Black Prince sent a small party to attack the French rear lines, and this proved too much for the French soldiers, whose ranks had been riddled by arrows from English longbows. Both John II and his son, the dauphin, later to be crowned as Charles V (1337–80), were captured and taken to England under a ransom of 3 million crowns.

Among those most affected by the uncontrolled sweep of the English army were French peasants, who could not work in the fields without posting a watchman and who had given up their homes for the relative safety of caves and forests. In 1358, the French peasants rose in rebellion, protesting the inability of the nobility to protect them against English depredations and the costly demands of the army for food and money. Known as the revolt of the *JACQUERIE* after the scornful nickname "Jacques" for French peasants, the revolt ended when Charles II (1332–87) of Navarre and other French nobles massacred the peasant mob near Meaux.

Meanwhile, Edward's raids continued right up to the gates of Paris. Edward rarely had trouble filling the ranks of his invading army because of the success of the raids. In fact, many Englishmen of less than noble status made fortunes from looting and pillaging northern France. On October 24, 1360, Edward negotiated the Treaty of Brétigny, by which English holdings in southwestern France, known as Aquitaine, were increased significantly and were to be held in full sovereignty, and France recognized English control of Calais and Ponthieu. Edward renounced his claim to the throne, and John II was ransomed.

The second phase of the war began with the death of John II. He was succeeded by Charles V (1337–80), and over the span of his reign (from 1360 to 1380) he defeated England and regained control of Aquitaine. John of Gaunt set out to reverse the tide of English losses, but defeats continued to mount up—at Poitiers, Poitou, and La Rochelle. By 1373, Aquitaine no longer existed. The French under Charles V made raids on English soil, penetrating as far as Rye, Lewes, Plymouth, Hastings, Winchelsea, and Gravesend. At the deaths of the Black Prince in 1376, Edward III of England in 1377, and

Charles V of France in 1380, the tide had turned in the war, which by 1380 had been raging for 43 years.

The following year, England was plagued with a peasant revolt similar to the *Jacquerie* in France. (See *ENGLISH PEASANT REVOLT*.) Spreading from Essex to Kent and then to all of England, the peasant rebels marched to London and beheaded Simon of Sudburg (d. 1381), archbishop of Canterbury and chancellor, and Sir Robert Hales, the treasurer. Eventually the rabble was dispersed, and King Richard II (1367–1400), in retaliation, reneged on his promises of relief to them.

Between 1386 and 1396, periods of truce were interspersed with periods of fighting. Then in 1396, the Peace of Paris was negotiated. Richard II of England and Charles VI (1380–1422) of France agreed to abide by a truce for the next 30 years. By the terms of the treaty, England retained control of Calais and part of Gascony between Bordeaux and Bayonne.

However, peace lasted only a short time. The French continued raiding the southern coast of England and providing aid to Scotland and Wales in their struggles with England. In the meantime, John the Fearless (1371–1419), duke of Burgundy, and Louis I (1372–1407), duke of Orléans, engaged in a power struggle that ultimately grew to a full-scale civil war in France. Then in April 1415, Henry V (1387–1422) of England declared war on Charles VI of France and set sail with an army of 12,000 men to Normandy in phase three of the war. After capturing Harfleur and winning a battle at Agincourt, Henry captured Rouen in 1419. The French government then signed the Treaty of Troyes in 1420. Control of northern France went to Henry V and the duke of Burgundy, and Henry became the heir of Charles VI. Married to Charles VI's daughter Catherine, Henry V spent much of his time consolidating his holdings in northern France. In 1422, he died, leaving nine-month-old Henry VI (1421–71) king of England and France. South of the Loire, however, the French recognized the dauphin, Charles VII (1403–61), as king, and a rival government was created in Bourges. Between 1423 and 1426, the English won battles at Cravant, Verneuil, and St. James, and by 1428, they had consolidated their control of northern France. In 1428, the English set out from Paris toward Orléans, where they laid siege against the town (see *ORLÉANS, SIEGE OF*). Jeanne d'Arc (1412–31) (Joan of Arc) as 17-year-old peasant girl from Champagne, came to the aid of the dauphin and convinced many in the French army that her divine mission was to expel the English from French soil. Jeanne was ultimately victorious at Orléans, and the dauphin was crowned Charles VII at Rheims on July 16, 1429. Captured by the Burgundians and turned over to the English, Jeanne was convicted of heresy and was burned at the stake on May 30, 1431. Though she had helped him become king, Charles VII did nothing to aid her.

The final phase of the war began when the English lost control of Paris in 1436, Normandy in 1449 and 1450,

and Guienne in 1451. Recovering to a degree, the English captured Bordeaux in 1452, but on October 19, 1453, Bordeaux fell to the French, and the Hundred Years' War came to a close.

By the end of the war, the government of England was bankrupt, and the Lancastrian dynasty was discredited. Civil war in the form of the Wars of the ROSES would soon follow in 1455. For the French, the Hundred Years' War brought national unity and the beginnings of a dismantling of feudalism.

Hungarian Civil War (1301–1308)

PRINCIPAL COMBATANTS: Aspirants to the Hungarian crown following the death of King Andrew III vs. last of the Árpád dynasty

PRINCIPAL THEATER(S): Hungary

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the Hungarian throne

OUTCOME: After much strife, Charles Robert of Naples was elected by the Hungarian diet as king.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Hungary's Árpád dynasty had come dangerously close to extinction when the death of Stephan V (1239–72) left the country in the hands of his Cuman widow Elizabeth, whose regency (1272–77) was bedeviled by a wild and unruly son and much civil unrest. Ladislav IV (1262–90), kidnapped by rebels as a child, grew up so nearly pagan that Pope Nicholas IV (d. 1292) called for a crusade against him when he reached his majority. When he was assassinated by Cuman tribesmen following years of upheaval and uncertainty, the Hungarian throne was left without a legitimate heir. Those in the female line—

including some of Europe's important houses in Bohemia, Bavaria, and Naples—quickly prepared to stake their claim.

Then one male of Árpád descent was discovered in Italy. Although some impugned his legitimacy, his supporters smuggled him into the country, where he assumed the throne as the surprisingly adept and wise Andrew III. However, when he died without male issue in 1301, the national dynasty did indeed become extinct. Though Hungary was now entitled to choose a successor, bloodlines remained a major concern. The maneuverings of those basing their hopes yet again on claims of descent from an Árpád in the female line touched off a war of succession.

Those fighting to seize the Hungarian throne were Bohemia's Wenceslaus III (1289–1306), Bavaria's Duke Otto III (d. 1312), and Naples's Charles Robert of Anjou (1288–1342), who was aided by his uncle, King Albert I (c. 1250–1308) of Germany, as well as Pope Boniface VIII (c. 1235–1303). Albert called upon Bohemia's King Wenceslaus II (1271–1305), father of Wenceslaus III, to renounce all claim to Hungary's crown of St. Stephen and to remove his son from the Hungarian throne—despite the fact that the Hungarian diet had elected Wenceslaus III in 1301. Wenceslaus II refused Albert's demand, whereupon Albert invaded Bohemia in 1304. However, he met stiff resistance from the armies of Wenceslaus II, which not only pushed Albert's forces back but were about to take the offensive and invade Austria when Wenceslaus II died. At this point, in 1305, Wenceslaus III, now king of Bohemia, relinquished the Hungarian throne to Duke Otto. Far from resolving the civil strife, this led to a period of intense disorder until the Hungarian diet elected Charles Robert as King Charles I in 1308; he was crowned in 1310. During the first 15 years of his reign, Charles I was engaged in continuous struggles to subdue the Hungarian nobles.

Hungarian Civil War (1439–1440)

PRINCIPAL COMBATANTS: Contenders for the Hungarian throne following the death of King Albert II

PRINCIPAL THEATER(S): Hungary

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the throne
OUTCOME: Backed by a powerful general, Ladislas III, whom the majority of nobles supported, became king.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: Unknown
TREATIES: None

When King Albert II (1397–1439), monarch of Hungary and Bohemia, died, he left a pregnant widow whose unborn son had a claim to the Hungarian throne. But his death sparked a war of succession, in part because the fatherless newborn came under the guardianship of Frederick III (1415–93), king of Germany and subsequently the Holy Roman Emperor. Frederick was despised by the Hungarian nobility, led by General John Hunyadi, hero of the HUNGARIAN-TURKISH WAR (1437–1438), and they turned instead to Poland's King Ladislas III (1387–1456). Civil war erupted, but Hunyadi's faction succeeded in placing the Polish pretender on the throne as Uladislas I in 1440. His reign would last for only a few years, and after his death at the battle of Varna in 1444 during the HUNGARIAN-TURKISH WAR (1444–1456), the now four-year-old son of Albert II, also known as Ladislas, was proclaimed Hungary's King Ladislas V (sometimes called Ladislas V Posthumous) (1440–57) with Hunyadi serving as regent.

Hungarian Civil War (1526–1529)

PRINCIPAL COMBATANTS: Forces of John Zápolya (with Ottoman aid) vs. forces of Frederick III of Germany
PRINCIPAL THEATER(S): Hungary
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: Ascension to the Hungarian throne
OUTCOME: With Ottoman aid, John Zápolya regained the throne.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown
TREATIES: None

In the wake of the HUNGARIAN-TURKISH WAR (1521–1526), John Zápolya (1487–1540) of Transylvania was elected king of Ottoman Hungary. However, Austria's Archduke Ferdinand (1503–64)—subsequently Holy Roman Emperor—asserted his claim to the throne as the brother-in-law of the preceding Hungarian king, Louis II (1506–26). He persuaded the Hungarian diet, which approved him king in 1527. Thus authorized, Ferdinand invaded Hungary, capturing Raab, Gran (Esztergom), and Buda. The decisive battle was fought at Tokay in 1527 and resulted in the defeat of Zápolya and his army.

At this juncture, John Zápolya appealed to the Ottoman sultan Süleyman I the Magnificent (1496–1566), who responded by invading Hungary. After recapturing Buda, Süleyman returned Zápolya to the throne in 1529, and the restored monarch accompanied the sultan on his campaign against Vienna in the AUSTRO-TURKISH WAR (1529–1533).

Hungarian Civil War (1540–1547)

PRINCIPAL COMBATANTS: Archduke Ferdinand of Austria vs. John II Sigismund (with Ottoman aid)
PRINCIPAL THEATER(S): Hungary
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: Succession to the Hungarian throne
OUTCOME: Hungary was partitioned among Austria's Ferdinand, Hungary's John II Sigismund, and the Ottoman Empire's Sultan Süleyman I the Magnificent.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: Unknown
TREATIES: Truce of 1547

The AUSTRO-TURKISH WAR (1537–1547) produced the secret Treaty of Nagyvárad, by which Hungary was partitioned: Austria's Archduke Ferdinand (1503–64) received Croatia, Slavonia, and western Hungary, whereas John Zápolya (1487–1540) retained the title of king of Hungary and the remainder of the country, including the capital, Buda. The secret treaty further stipulated that the title, throne, and Zápolya's lands would go to Ferdinand on

Zápolya's death. When John Zápolya died, however, it was his infant son who was named king as John II Sigismund (1540–71). Ferdinand invoked the secret treaty, claimed the kingdom, and laid siege to Buda, whereupon Zápolya's widow appealed to the Ottoman sultan Süleyman I (the Magnificent; 1496–1566) for help.

Süleyman did not want Austria to make any gains in Hungary and eagerly dispatched an army to seize Buda, as well as other cities. He set up a Turkish administration throughout the country while fighting raged through 1547. At that point, the demands of the TURKO-PERSIAN WAR (1526–1555) forced Süleyman to conclude a five-year truce, which gave Ferdinand control of Austrian Hungary in return for tribute paid to the Ottomans. John II Sigismund received Transylvania and neighboring areas, along with the title "prince." The Ottomans held southern and central Hungary.

Hungarian Civil War (1921)

PRINCIPAL COMBATANTS: Former Austro-Hungarian emperor Charles I vs. the government forces of Admiral Horthy

PRINCIPAL THEATER(S): Hungary

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Charles I wanted to regain the Hungarian throne.

OUTCOME: Charles was defeated and exiled; Austrian claims on the Hungarian throne were nullified.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The former Austro-Hungarian emperor Charles I (1887–1922) had fled to Switzerland in 1919 during KUN'S RED TERROR. In March 1921, he returned to Hungary in a bid to recover his throne and called on the current regent and de facto head of state, the aristocratic, anticommunist Admiral Nicholas Horthy de Nagybánya (1868–1957), to step down.

Popular opposition to Charles was intense, and even the monarchists challenged the legitimacy of his title to the throne. His attempts to return to power set the stage for the rise of Count István Bethlen (1874–1946), who

dominated Hungarian politics for the next 10 years. In effect, Charles's return split Hungary's main tradition-minded political parties between conservatives who favored a return to Hapsburg rule and radical right-wing nationalists who supported the election of a Hungarian king. Bethlen was a right-wing member of the parliament, but he was unaffiliated with a major party, and he took advantage of this rift. He persuaded the Christian National Union, a party opposed to Charles's restoration, to merge with the Smallholders' Party and form a new Party of Unity. When Bethlen emerged as the leader of this new party, Horthy was forced to appoint him prime minister.

In October 1921, frustrated by the resistance to his return, Charles led troops from Odenburg (Sopron), Hungary, and marched on Budapest. He was met by government forces, which pushed his army back and placed Charles under arrest. The former monarch was exiled to Madeira, and the Hungarian diet summarily and officially nullified all Austrian (Hapsburg) claims to the throne. In May 1922, the Party of Unity captured a large parliamentary majority. Later that year, Charles died in exile.

Hungarian Pagan Uprising (1046)

PRINCIPAL COMBATANTS: Hungarian pagans and others vs. Peter Orseolo, unpopular successor to the Hungarian throne

PRINCIPAL THEATER(S): Hungary

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the Hungarian throne

OUTCOME: Peter Orseolo was overthrown, and a quasi-pagan king was installed on the Hungarian throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The death of Hungary's King Stephen I (Saint Stephen) (c. 975–1038) left much of the work he began—Christianizing Hungary—unfinished. Even his own Árpád dynasty was not fully converted, and Stephen had exiled recalcitrant family members. Since his only son, Emeric, died before he did, Stephen had chosen Peter Orseolo (1011–46), son of the doge of Venice and a distant relative, as a safe Christian successor. Peter arrived in Hungary only to fall victim to various court plots against him. The nation rebelled against this designated but foreign successor, and he fled for his life in 1041 to the Holy Roman Emperor Henry III (1017–56).

Peter assembled an army of Henry's troops and returned to Hungary to reclaim his throne in 1044 from the "national" king, Samuel Aba, who had taken his place. However, many Hungarians regarded him as an interloper and Henry's vassal, who would bring about Hungary's domination by foreign powers. The church likewise disapproved of him. It was not difficult for two of the exiled Árpáds to find support for an invasion in 1046. Supported by Russian troops from Kiev, they also garnered pagan backing in the country and marched on Peter's palace. The mob massacred a delegation of bishops and Hungarian nobles, who supported their proposed overthrow of the hated king, then stormed the palace, captured Peter, blinded him, and cast him into prison, where he died of his wounds.

Andrew I (d. 1060), an Árpád, converted to Orthodox Christianity while he was in Russia. It was he who became the Hungarian king (1047), but he exploited the country's paganism to keep himself in power, maintaining only the merest show of Christianity in order to appease the converted nobility. During this period, he resisted domination by the Holy Roman Empire.

Hungarian Peasants' Revolt See DÓZSA'S REBELLION.

Hungarian Revolt (1956)

PRINCIPAL COMBATANTS: Hungarian freedom fighters and police vs. Soviet troops

PRINCIPAL THEATER(S): Hungary

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: On October 24, 1956, Hungary's prime minister Imre Nagy defied the USSR by announcing an end to one-party rule, thereby igniting the movement to remove Hungary from the Soviet sphere of influence established in Eastern Europe at the end of World War II, a movement the West came to call the Hungarian Revolution.

OUTCOME: Soviet troops and tanks invaded Hungary and crushed the revolution.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown number of Hungarian students, workers, and freedom fighters; 200,000 Soviet troops

CASUALTIES: Unknown but in the tens of thousands; nearly 250,000 fled the country; Soviet losses, 669 killed, 1,540 wounded, 51 missing

TREATIES: Agreement for continued Soviet control signed in 1957

The Treaty of Versailles that ended WORLD WAR I not only penalized Germany but dismembered the tottering Austro-Hungarian Empire, leaving Hungary a nation greatly shrunken. The Treaty of Trianon, which followed the Versailles document in 1920, stripped the empire of nearly three-quarters of its territory. Between 1920 and 1944, Admiral Nicholas Horthy de Nagybánya (1868–1957), the Magyar regent of Hungary, worked to regain the nation's former lands, securing from Germany some revision of its frontiers in exchange for an alliance in WORLD WAR II. The territorial gains were short-lived, and the alliance meant that Hungary was defeated with Germany and, like other eastern European nations, was overrun by a Soviet occupation force.

Following the war, an uneasy coalition government was formed for three years, after which, the communists established a one-party dictatorship under Mátyás Rákosi (1892–1971)—which they, of course, called the Hungarian Revolution. In Stalinist fashion, the party imposed forced collectivization of farms and a program of industrialization, both enforced by terror tactics and the secret police. Rákosi, however, was forced out after the death of Soviet premier Joseph Stalin (1879–1953) and replaced by Imre Nagy (1896–1958), who introduced more liberal policies. The "thaw" was short-lived: in 1955, Rákosi returned to oust Nagy and reintroduced unalloyed Stalinism. Because of his open criticism of Soviet influence in Hungary, Nagy was expelled from the Communist Party in early 1956.

But the brief breath of democracy had emboldened the Hungarian resistance to communism, and opposition to Rákosi mounted. On October 23, students, workers, and others began a march in Budapest. They protested the Hungarian government's draconian tactics, demanding free elections, economic reforms, the withdrawal of Soviet

troops stationed in Hungary since the war, and the reinstatement of Nagy. The police fired on a peaceful student demonstration; street fighting broke out and soon spread across the country. Most Hungarian soldiers joined the demonstrators, which left the government virtually helpless. Within a very few days, revolutionary elements had seized control of many important institutions and facilities, including the radio stations, and freed the imprisoned anticommunist leader Cardinal Josef Mindszenty (1892–1975). Soviet troops pulled back, withdrawing from Hungary, and Nagy (who had been reinstated as prime minister on October 24) announced an end to one-party rule—a second Hungarian “Revolution” in little more than a decade.

The pro-Western new democratic regime renounced the Warsaw Pact, a COLD WAR Soviet defense alliance with Hungary and other Eastern bloc countries, and asked the United Nations to grant it status as an internationally neutral country. Despite the United States’s stance on the “containment” of communism as expressed in the Truman Doctrine, the Eisenhower government declined to intervene in the anti-Soviet revolution, and—much to the shock of the Hungarians—announced that it would offer no aid to the new government. Accordingly, the Soviets, who had been quietly building up their forces on the border, attacked on November 4 with 200,000 troops and 2,800 tanks. Despite impassioned radio pleas to the United States and Nagy’s personal plea to the UN for aid, no help was forthcoming. Hungarian freedom fighters put up a valiant resistance, but within weeks, the revolution was destroyed, and Hungary, barely recovered from the devastation of the world war, was in shambles. Nagy fled, only to be seized later by the Soviet secret police, and the Soviets replaced him with János Kádár (1912–89) as premier. The Soviets killed tens of thousands of people and imprisoned more. Almost a quarter-million Hungarians fled the country. The Soviets legitimized their military occupation through signed agreements with Kádár, which they then used to justify communist control for decades.

The 1956 Hungarian Revolt was one of the earliest indications that the Soviet juggernaut was not unstoppable, but it also tested—and found wanting—the West’s resolve to act against a Soviet superpower armed with nuclear weapons. To many in the West, after 1956, the Iron Curtain seemed more impenetrable than ever. Indeed, a period of extreme repression followed the revolt. Yet Hungary’s willingness to stand up to the Soviets led the USSR to treat the country more cautiously than it did many of its other Eastern-bloc puppets and, by the late 1960s, the Hungarians had succeeded in establishing a more liberal regime under János Kádár, who over time transformed Hungary into the most economically and politically successful nation of the Soviet bloc. When the East European bloc began to crumble in the late 1980s, the Kádár regime was supplanted by the Reform Commu-

nists, who reintroduced multiparty government, which, in turn, ousted the Communist Party and replaced it with the Hungarian Democratic Forum in 1990.

Hungarian Revolution (1848–1849)

PRINCIPAL COMBATANTS: Hungarian nationalists vs. Russian-allied Austria

PRINCIPAL THEATER(S): Hungary

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Hungary wanted to achieve autonomy and, ultimately, full independence from Austrian rule.

OUTCOME: Initially, the revolution was successful, but counterattacks from Austrian and Russian forces crushed it, and a new, even more repressive regime was installed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Hapsburg forces, 370,000; Hungarian forces, 152,000; Russian forces, 360,000

CASUALTIES: Hapsburg forces, 16,600 killed or wounded, 14,200 prisoners, 41,000 dead of disease; Russian forces, 903 killed, 1,585 wounded, 13,554 dead of disease; Hungarian forces, an estimated 45,000 dead from all causes.

TREATIES: None

The tumultuous year 1848 saw revolution sweep through Europe. In Hungary, the great nationalist leader Louis (Lajos) Kossuth (1802–94) brought simmering Hungarian nationalism to a boil with his March 3, 1848, speech before the Hungarian Diet, denouncing life under the Austrian monarchy. He did not call for independence, but for a democratic constitution, under which Hungary would enjoy a significant degree of autonomy. In this, Kossuth was in sync with the AUSTRIAN REVOLUTION, which likewise demanded constitutional monarchy.

Kossuth rallied behind him a broad cross-section of the Hungarian people, including peasants, workers, students, and the Magyars, the Hungarian upper class. The Diet enacted the March Laws, which effectively set up an autonomous government for Hungary, still under Austrian auspices. The beleaguered Emperor Ferdinand (1793–1875) reluctantly accepted the March Laws.

The new imperial government, however, was beset by enemies—conservatives resented its land reforms and centrists in Vienna its threat to the integrity of the Hapsburg monarchy. They found common cause with many among the empire's disaffected nationalities, notably the Serbs and Romanians, but especially with the Croats, whose leader was a Croatian noble and a general in the Austrian army named Joseph Jellačić (1801–59). Jellačić rejected the Diet's authority and started a movement for Croatian independence. This, in turn, prompted independence movements in Serbia, Slovakia, Bohemia, and Romania. Alarmed by the imminent disintegration of the empire, Ferdinand withdrew his support for Hungarian premier Louis Batthyány (c. 1806–49), head of Hungary's independent government, and turned to Jellačić instead. He co-opted the rebel leader by naming him to command imperial forces set to invade Hungary. Batthyány and others immediately resigned in protest, leaving Kossuth in charge, and he rallied Hungarians to resist the invasion, which they did, improvising a national army. However, the Austrian forces continued their relentless advance through Hungary, prompting the Diet to remove Debrecen as city after city fell and Budapest was threatened. In January, Budapest did fall to the Austrian invaders, and Batthyány and others were arrested.

In the face of the Austrian advance, the outnumbered Hungarian force, commanded by a young soldier of genius named Arthur von Görgey (1818–1916), withdrew to positions in the mountains north of Budapest. In the meantime, Henry Dembinski (1791–1864), a Pole, led another Hungarian force in an attempt to liberate Budapest but met defeat at the Battle of Kápolna during February 26–27, 1849. The rebels had held firm through the 26th, but when the Austrians, under Prince Alfred Windischgrätz (1787–1862), counterattacked, the Hungarians fell back in disorder.

Next, Austria called on Russia for aid in suppressing the rebellion. A small Transylvanian force under Joseph Bem (1794–1850) held off the Austrians until the onslaught of the Russians in July 1849. By that time, however, General Görgey had reorganized his forces and, fighting a series of small actions, managed to push Windischgrätz out of Austria by April. This led to the proclamation of the independent republic of Hungary on April 13, 1849, with Kossuth as governor-president. However, a new Austrian invasion, this time bolstered by the Russians, swept through Hungary during June and July 1849, driving Görgey's forces into southeastern Hungary. The new government followed him there. But the Austro-Russian army kept the pressure on, and, on August 9, 1849, General Julius von Haynau (1786–1853) led an Austrian force that completed the defeat of Görgey at the Battle of Temesvár. Kossuth relinquished the reins of government to Görgey, then fled to the Ottoman Empire. Görgey surrendered to Russian forces two days afterward.

The repercussions against Hungary were vicious and iron-handed. At the direction of the emperor, Haynau ordered the execution of Batthyány and hundreds of others. Still more Hungarian leaders were imprisoned. All pretense of Hungarian nationalism was stripped away, as Austria installed a German-speaking bureaucracy to govern the recalcitrant province, the so-called Bach regime after Alexander Bach (1813–93), Austria's draconian minister of the interior.

Hungarian Revolution (1918)

PRINCIPAL COMBATANTS: Hungarian nationalists vs. Austro-Hungarian Empire

PRINCIPAL THEATER(S): Hungary

DECLARATION: No official declaration, but the rebellion was triggered by the establishment of a Hungarian national council on October 25, 1918

MAJOR ISSUES AND OBJECTIVES: Hungary sought to achieve its long-held goal of independence from the Austro-Hungarian Empire.

OUTCOME: With the collapse of the Austro-Hungarian Empire immediately following the end of World War I, Hungary successfully declared its independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None—although the Treaty of Versailles and other treaties relating to the end of World War I affirmed the dismantlement of the Austro-Hungarian Empire and the independence of Hungary

As WORLD WAR I ground to its end, Hungarian nationalists saw an opportunity to make a break for independence from the Austro-Hungarian Empire. In the early autumn of 1918, the Hungarian Diet defiantly recalled its troops from the front, and Count Michael Károlyi (1875–1955) created a national council, to replace the Diet altogether, on October 25, 1918. The public rallied to Károlyi in open demonstrations of rebellion, calling for an immediate end to Hungarian participation in the war, the dismissal of the

Austrian-sanctioned Diet, universal suffrage, and an end to the dual monarchy of Austria-Hungary. On October 31, Austrian emperor Charles I (1887–1922) named Károlyi Hungarian premier in an effort to appease the revolutionaries and restore order, and a genuine radical-socialist coalition came into power. However, as had occurred during the HUNGARIAN REVOLUTION (1848–1849), ethnic nationalism undermined the unity of the Hungarian revolution. Slovaks, Serbs, and Romanians threatened to withdraw from the Hungarian coalition. Károlyi acted quickly to restore unity by concluding a separate peace between Hungary and France. As part of the agreement, he withdrew Hungarian troops from the southeastern portion of the nation, allowing Serbs to occupy the south, Romanians to occupy Transylvania, and Bohemian troops to hold Slovakia. At this point, World War I ended, and, with its end, the Austro-Hungarian Empire collapsed, the emperor withdrawing from all state affairs. This left the way open for Hungary to declare its independence as a republic on November 16, 1918, just five days after the World War I armistice.

While the separation from Austria was popular, it proved disastrous for Károlyi and his government. Serb, Czech, and Romanian troops took control of various sections in two-thirds of the prostrate country, destroying any possibility of orderly political development or social reform. The government itself moved steadily to the left until, on March 21, 1919, it was replaced by a soviet republic controlled by the revolution-minded Béla Kun (1885–c. 1939).

Hungarian-Turkish War (1437–1438)

PRINCIPAL COMBATANTS: Hungary vs. the Ottoman Turks

PRINCIPAL THEATER(S): Belgrade area and Romania

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Hungary resisted an Ottoman invasion.

OUTCOME: The Ottomans were cleared from Hungary and Romania.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Ottoman invasion of Hungary was blocked by the Transylvanian leader John Hunyadi (1387–1456), who had overseen the highly effective fortification of Belgrade and then the relief of the siege of the Sememdría (Smederevo) fortress on the Danube. After breaking the siege here, Hunyadi went on the offensive and achieved great success in pushing the Turks out of Hungary. In recognition of his victories, he was named *bán*, military governor, of Severin, Wallachia (now part of Romania) and, from this post, continued to fight the Turks in the HUNGARIAN-TURKISH WAR (1441–1444).

Hungarian-Turkish War (1441–1444)

PRINCIPAL COMBATANTS: Hungarians vs. Ottoman Turks

PRINCIPAL THEATER(S): Balkan region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Hungarian forces sought to repel an Ottoman invasion.

OUTCOME: Hungarian forces were consistently and overwhelmingly successful against the invaders.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Szeged (Hungary), July 12, 1444

After having been ejected from Hungary in the HUNGARIAN-TURKISH WAR (1437–1438), the Ottomans invaded Hun-

gary again in 1441. John Hunyadi (1387–1456), who had successfully repelled the Ottomans during the last war, led an army of Slavs and Magyars (Hungarian gentry) against the new invasion, which had been mounted ostensibly to punish Hungary for having supported the claim of the “false Mustafa” to the Ottoman throne held by Murad II (c. 1403–51).

Hunyadi prevailed at the Battle of Semendria (Smederevo), site of an important Hungarian fortress, in 1441 and at the Battle of Herrmannstadt the following year. After the Ottomans were also defeated at Vassag and Nagyszeben, Pope Eugenius IV (1383–1447) persuaded King Ladislas III (1424–44) of Hungary and Poland that the time was ripe for a full-scale crusade against the Muslim Turks. Ladislas’s army drove the Ottomans from Semendria in 1442, and, the next year, Hunyadi defeated Turkish forces at Nish, Serbia, then captured Sofia. After this victory, Hunyadi united his army with that of King Ladislas and, together, they engaged the Ottomans at Snaim (Kustinitza), scoring a spectacular victory in 1443 that broke the Ottoman hold on the Balkans. Murad sued for peace and, at Szeged, Hungary, concluded a 10-year truce on July 12, 1444. By the terms of this treaty, Hungary acquired control over Serbia and Wallachia.

Almost immediately after signing the treaty, Murad II abdicated, and, within a few days, Hungary violated the “10-year” truce by starting the HUNGARIAN-TURKISH WAR (1444–1456).

Hungarian-Turkish War (1444–1456)

PRINCIPAL COMBATANTS: Hungary vs. the Ottoman Empire

PRINCIPAL THEATER(S): Balkans, especially Serbia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Encouraged by the pope, Hungary mounted a “crusade” against the Ottomans with the object of driving them out of the Balkans.

OUTCOME: For the present, the Ottoman forces withdrew to Constantinople, but the death of the Hungarians’ principal commander, John Hunyadi, prevented the

Hungarian forces from further capitalizing on their victory.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the Battle of Kosovo: Hungary, 24,000; Ottoman Empire, about 30,000

CASUALTIES: At Kosovo: Hungary, about 12,000 killed and wounded; Ottoman Empire, about 10,000 killed and wounded

TREATIES: None

Just 19 days after signing a treaty ending the HUNGARIAN-TURKISH WAR (1441–1444), Hungary exploited the disarray in Ottoman leadership caused by the sudden abdication of Sultan Murad II (c. 1403–51) by mounting an all-out attack against Turkey—in violation of the truce just concluded and slated to last 10 years. Encouraged by Pope Eugenius IV (1383–1447) (who wanted a new Crusade against Islam) King Ladislas III (1424–44) of Hungary and Poland formed an alliance with Venice and, with John Hunyadi (1387–1456) and Cardinal Julian Cesarini (1398–1444), led an army through Bulgaria to the Black Sea, where they destroyed most of the Turkish fleet, and then went on to capture Sunium, Pezech, and Kavanna. After this, the Hungarian-Venetian force laid siege to Varna, the Turks’ key Black Sea port. The plan was to meet here the ships of Venice, but they remained at Gallipoli and did not even attempt to prevent Murad, recalled to the throne in this crisis, from rushing back to Europe from Asia Minor. The sultan and his army arrived at Varna on November 10, 1444. Hunyadi engaged the force in a bold but desperate frontal assault, which Murad beat back. Then the sultan counterattacked, rapidly routing the Europeans and killing both Ladislas and Cesarini. Hunyadi managed to escape what became a general slaughter.

As a result of Varna, Murad reclaimed control of Serbia and Bosnia, and when Hunyadi led a new army of 24,000 men against him in 1448, the Hungarian commander was defeated in the two-day Battle of Kosovo, during October 16–17. Murad’s forces were considerably larger and well organized. On the first day, Murad used his Janissary infantry and spahi cavalry against Hunyadi’s center-positioned German mercenary infantry, armed with guns and pikes, and flank-positioned hussars (cavalry). (A unit of Wallachian troops had deserted him). Neither side carried the day, and both suffered heavy losses. On the second day, however, Murad’s heavily armored spahis broke through Hunyadi’s hussars, and the Hungarian-German force turned in retreat and withdrew from the field. Hunyadi had lost about half of his force, whereas Murad lost perhaps a third.

Hunyadi returned to raid the Turks in Serbia in 1449, causing considerable damage. Muhammad II (1430–81), Murad’s son and successor, terrorized Serbia in 1453, abducting 50,000 Serb Christians. The following year, Hunyadi invaded the region again and ultimately pushed the Ottomans out of Semendria (Smederevo) and back to

Kruševac. There Hunyadi met with Muhammad II to negotiate peace terms. None were forthcoming, and, in July 1456, Muhammad laid siege to Belgrade. After three weeks, however, the siege was lifted when Hunyadi broke through a naval blockade on the Danube, defeated the Ottoman forces, and secured the city.

Muhammad withdrew to Constantinople. On August 11, 1456, Hunyadi succumbed to an illness, probably cholera, which was epidemic in his camp. Without their commander, the Hungarian forces failed to pursue the Turks or otherwise exploit their hard-won victory.

Hungarian-Turkish War (1463–1483)

PRINCIPAL COMBATANTS: Hungary vs. the Ottoman Empire

PRINCIPAL THEATER(S): Bosnia and Herzegovina

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Hungarians (with some Venetian and papal support) sought to check Ottoman advances in Bosnia.

OUTCOME: The Hungarians reclaimed northern Bosnia, but the remainder of the country fell to the Ottomans, as did Herzegovina.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Under papal auspices, Hungary and Venice allied against the Ottoman Empire to counter Turkish conquests in Serbia after the Turks took Bosnia in the BOSNIAN-TURKISH WAR. Under King Matthias Corvinus (1440–90), Hungarian forces poured into Bosnia and scored several victories against the Ottomans, unseating them from a number of fortresses. An Ottoman army under Muhammad II (1429–81) besieged the town of Jajce, but Hungarian forces held the town and reclaimed much of northern Bosnia. The rest of the country remained firmly in Ottoman hands, although the Hungarians did score a signifi-

cant victory in taking the large Turkish fortress at Szabács, on the Sava River. With Muhammad's death in 1481, the war assumed the character of a low-level conflict, although the Ottomans made one more significant inroad in 1483, conquering Herzegovina, south of Bosnia.

Hungarian-Turkish War (1492–1494)

PRINCIPAL COMBATANTS: Hungary vs. the Ottoman Empire

PRINCIPAL THEATER(S): Region of Belgrade, Transylvania, Croatia, and southern Austria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Ottomans wanted to extend their dominion in Europe and were opposed by Holy Roman Emperor Maximilian I.

OUTCOME: Maximilian was unable to muster sufficient support from other European rulers to drive the Turks from the Balkans.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Bayazid II (1447–1513), the Ottoman sultan, made a surprise assault on Belgrade in 1492, but the Hungarian forces holding the city stood firm, and an army under Holy Roman Emperor Maximilian I (1459–1519) defeated the Ottoman invaders at the Battle of Villach, in Carinthia (the southern region of Austria). Bayazid did not withdraw from the region following his defeat, however, and instead invaded Transylvania, Croatia, Styria, and Carniola (the latter two in Austria). Overwhelmed, Maximilian appealed to the Christian rulers of other European states but was unable to raise a force sufficient to dislodge the Turks. Despite this, Bayazid did not mount a full-scale war in the Balkans and Austria, but contented himself with skirmishing against whatever low-level resistance he encountered.

Hungarian-Turkish War (1521–1526)

PRINCIPAL COMBATANTS: Hungary vs. the Ottoman Empire

PRINCIPAL THEATER(S): Hungary

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Süleyman I sought tribute from Hungary.

OUTCOME: Hungarian forces were disastrously defeated; Süleyman left a Transylvanian puppet to rule over Magyar Hungary.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Hungary, 20,000–30,000; Ottomans, 100,000–200,000

CASUALTIES: At Mohacs: Hungary, 10,000–15,000 killed; Ottoman losses were described as “heavy.” The Ottomans took 105,000 Hungarians captive.

TREATIES: None

When Vladislav II (1456–1516), king of Bohemia and—as Ladislav II—of Hungary, died, his nine-year-old son, Louis II (1506–26), was proclaimed king. The defenses of the kingdom grew weaker under Louis’s minority rule as the Hungarian magnates took advantage of his youth to disband the king’s standing army—known since the days of Matthias Corvinus (1440–90) as the dreaded Black Army (after its original commander “Black John” Haugwitz).

In 1521, the new Ottoman sultan, Süleyman I the Magnificent (c. 1496–1566) recognized the realm’s subsequent vulnerability and demanded tribute from the teenaged ruler of Bohemia and Hungary. Louis petulantly refused and deliberately insulted the Turkish ambassador. To these affronts, Süleyman responded with an invasion, thus renewing the chronic warfare between Hungary and the Ottoman Empire.

Hungary’s powerful magnates, suddenly aware of the renewed threat, voted to reestablish a standing army. None of the various factions, however, wanted to pay for its upkeep and kept trying to slough the burden onto the shoulders of their rivals. Thus nothing was done to raise the army, and most Hungarian forces were quickly demolished or captured, when the sultan advanced into Hungary in 1526. Belgrade fell to the Turks, who used it as an advanced base of operations into the north. In the meantime, Hungary called on an alliance with Persia and the Holy Roman Empire for help, but France threw its support behind the Ottomans—despite their being Muslims.

Süleyman’s forces were huge. He fielded 100,000 to 200,000 men against 20,000 to 30,000 Hungarians (with

some assistance from Sigismund I [1467–1548] of Poland) on the plain of Mohacs, along the Danube, on August 29, 1526. Louis foolishly unleashed a frontal assault against these massively superior forces, using a mixed force of knights and peasants, neither of which was well disciplined. The Turks, in contrast, were a highly trained force commanded with intelligence. They beat the Christians thoroughly on August 29, then swept them from the field on August 30. European losses numbered at 10,000 to 15,000 dead, including King Louis II (who drowned while fleeing), seven bishops, and many high nobles. Losses among the Ottomans were also heavy.

From Mohacs, Süleyman advanced to Buda, which he occupied unopposed, but, despite his stunning victory, the sultan soon withdrew to Turkey to attend to the TURKO-PERSIAN WAR (1526–1555). He took with him 105,000 Hungarian captives and appointed a Transylvanian, John Zápolya (1487–1540), to rule over the Magyars. This led to the HUNGARIAN CIVIL WAR (1526–1529).

Hungarian-Venetian War (1171)

PRINCIPAL COMBATANTS: Hungary vs. Venice

PRINCIPAL THEATER(S): Dalmatian coast

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Hungary attempted to take and hold various Venetian-held Dalmatian-coast seaports.

OUTCOME: The Hungarians were initially successful in taking the Dalmatian-coast seaports, but they were quickly recaptured by Venice.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Hungary’s aggressive King Stephen III (d. 1172) exploited the VENETIAN-BYZANTINE WAR to grab up Venetian-held towns along the Dalmatian coast during 1171. With Norman allies, Venice recaptured the seaports of Zara (Zadar) and Ragusa (Dubrovnik), ending the war. Later, in 1173, Hungarians under King Béla III (r. 1173–96) twice attempted to recover the lost Dalmatian territory and

met with limited success, retaking Zara and a few lesser objectives.

Hungarian-Venetian War (1357–1358)

PRINCIPAL COMBATANTS: Hungary vs. Venice

PRINCIPAL THEATER(S): Dalmatia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Hungary wanted to recover Dalmatian territories lost earlier to Venice.

OUTCOME: Hungary obtained the cession of most of Dalmatia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Zara, February 1358

Thanks to the efforts of King Louis I (1326–1382)—known as “Louis the Great” or Lajos Nagy—Hungary recovered some of its former power and prestige during 1357–58. Louis invaded Venetian-held Dalmatia and rapidly seized many towns, which he himself had lost to Venice in the HUNGARIAN-VENETIAN WAR (1342–1346). Venice, unable to mount a credible defense, ceded most of Dalmatia to Hungary in February 1358 by the Treaty of Zara (Zadar). This bolstered Hungary's prestige and put it in position to expand at the expense of the Turks in northern Bulgaria. Moreover, Casimir III (1310–70) named Louis as his successor to the Polish throne.

Hungarian-Venetian War (1378–1381)

PRINCIPAL COMBATANTS: Hungary (with Genoese allies) vs. Venice

PRINCIPAL THEATER(S): Dalmatian coast

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Having taken inland Dalmatia in the War of Chioggia, Hungary aimed at acquiring control of the coast as well.

OUTCOME: Venice ceded the Dalmatian coast to Hungary.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Turin, August 8, 1377

Hungary's King Louis I (1326–82) suffered defeat at the hands of Venice in the HUNGARIAN-VENETIAN WAR

(1342–1346) and was forced to yield some territory and cities. He fared much better in his second war against Venice, the HUNGARIAN-VENETIAN WAR (1357–1358), and managed to recover some Dalmatian coastal towns. Next, in the War of CHIOGGIA (1378–81), he succeeded in recovering inland Dalmatia. But this time, Louis also allied Hungary with Genoa (longtime rival of Venice) to capture those parts of the Dalmatian coast he had not taken in the 1357–58 war. The Genoese did not fare well in this war, but Hungary wrested control of the Balkans from the Ottoman Empire, which thereby put Louis I in a position of sufficient strength to force Venice to yield the Dalmatian seacoast by the 1381 Peace of Turin.

The final conquest of all Dalmatia, coupled with Hungary's hard-won dominion over the Balkans, made the Hungarian kingdom the most powerful in eastern Europe. Louis, king of Poland as well as Hungary since 1370, emerged as the most significant ruler of the region.

When, as a child, Ladislav V (Posthumous; 1440–570) was proclaimed king of Hungary by its ruling magnates, the great Hungarian general and hero John Hunyadi (1387–1456) was appointed his guardian and became, for

a while, the country's governor. Upon Hunyadi's death, however, Ladislav's powerful uncle, Ulrich of Cilli (d. 1456), well aware of the country's devotion to the general, had his eldest son assassinated and his younger son, Matthias Corvinus (1440–90), imprisoned in Prague. Ladislav died suddenly, unmarried and childless, the following year, and the Hungarian nobility proclaimed Matthias king at a Diet convened in 1458 in Buda and Pest. Matthias proved a most able monarch, not only quelling dissension within Hungary, but successfully defending against Ottoman incursions with the help of a 30,000-strong standing army, made up of mercenaries (most of them defeated Hussites) and known, after its commander "Black John" Haugwitz, as the Black Army.

The Hapsburgs, however, under Holy Roman Emperor Frederick III (1415–93) repeatedly contested Matthias's right to rule. At last, in 1477, when the marriage of Frederick's son Maximilian (1459–1519) to Mary of Burgundy (1457–82) dramatically enhanced the power of the House of Hapsburg, Frederick pushed harder for control of Hungary. In response, Matthias secured allies from among Frederick's enemies in Austria and Germany, and launched a series of highly destructive raids into Austria during 1477, 1479, and 1482. In 1485, Matthias laid siege to Vienna, which soon fell to him. Matthias occupied Vienna for the next five years—until his death in 1490. Only after the dynamic Hungarian king had died was Maximilian able to retake Vienna and, subsequently, other Austrian territory taken by Matthias. Maximilian became Holy Roman Emperor in 1490.

Hun Invasion of Gothic Empire (376)

PRINCIPAL COMBATANTS: The Huns vs. the Ostrogoths and Visigoths

PRINCIPAL THEATER(S): Gothic Empire (southeastern Europe)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: The Huns overran the Gothic realm, as the Goths sought refuge within the Roman Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: In the hundreds of thousands on both sides; the Gothic warrior class numbered more than 200,000.

CASUALTIES: As many as 1 million Gothic refugees were created by the invasion.

TREATIES: None, save a disarmament agreement between Rome and the Visigoths.

Ermanaric (d. c. 370–376), leader of the Ostrogoths, was killed (or committed suicide) during the onslaught of the Huns, who invaded the Gothic Empire by way of the Dnieper River. Withimer assumed leadership of the embattled Ostrogoths but soon fell in battle and was replaced by Alatheus and Saphrax, who could offer nothing more than leadership in an Ostrogoth flight across the Dniester.

In contrast to the Ostrogoth leaders, Athanaric (d. 381), leader of the Visigoths, was determined to take a stand against the Hun invasion. Unfortunately, the majority of his people emulated the Ostrogoths and fled toward the Danube, led by Fritigern and Alavius. Perhaps as many as 1 million Ostrogoths and Visigoths were displaced as refugees, including 200,000 warriors. With a minority following, Athanaric sought refuge in the forests of Carpathia and Transylvania.

The Visigoths appealed to Valens (c. 328–378), Roman emperor of the East, for refuge. The Roman agreed, on condition that the Visigoths disarm and further surrender their male children under military age as hostages. By the time the Ostrogoths arrived at the frontier of the Roman Empire and likewise appealed for refuge, the Romans refused. However, preoccupied with the influx of Visigoths, the Romans could not prevent the Ostrogoths from crossing the Danube.

Hun Raids: Hun Invasion of Thrace (409)

PRINCIPAL COMBATANTS: Huns vs. Eastern Roman Empire

PRINCIPAL THEATER(S): Thrace

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: The Eastern Roman forces repulsed the Hun invasion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

From 408 to 450, the Eastern Roman Empire (Byzantine Empire) was menaced by Hun incursions, invasions, and raids. One of the biggest was led by the Hun king Uldin against Thrace in 409. Anthemius (d. 472), the Praetorian prefect who, with his sister Pulcheria (399–453), had taken over the imperial government as regents for the infant Theodosius II (401–450) on the death of Arcadius (c. 377–408), led a defensive force against the Hun onslaught. Anthemius was able to repulse the Huns, who were driven back across the Danube.

Hun Raids: Eastern Empire's Italian Expedition (against John) (424–425)

PRINCIPAL COMBATANTS: Eastern Roman Empire vs. John, Hunnish usurper of the Western Roman throne

PRINCIPAL THEATER(S): Italy, principally Ravenna

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Overthrow of the usurper, and elevation of a Roman to the throne

OUTCOME: The usurper was deposed, and Valentinian enthroned as a puppet of his mother, Placidia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Constantius (d. 421), leading general of the Eastern Empire, died in 421, whereupon his widow, Placidia (c. 390–450), having become estranged from her brother Honorius (384–423), emperor of the West, fled to Constantinople and, with her son Valentinian III (419–455), found refuge in the court of Theodosius II (401–450), emperor of the East. Soon after this, Honorius died, and his vacant throne was usurped by his prime minister, John. Theodosius resolved to unseat the usurper and sent Ardaburius and Aspar (d. 471), father and son generals, at the head of an army to depose John at his court in Ravenna.

The fleet of Ardaburius was dispersed by a storm en route, and although the general survived, he was taken prisoner. Aspar, having taken the overland route, approached Ravenna and, with the help of agents and allies within the city, captured it in 425. Moving swiftly, Aspar's forces captured and killed John. Valentinian was enthroned in his place, and, through him, his mother Placidia ruled the Western Empire. Theodosius picked up Illyricum as a reward for his aid in overthrowing the usurper.

Hun Raids: Eastern Empire's African Expedition (431)

PRINCIPAL COMBATANTS: Rome and the Eastern Empire vs. the Vandals and Alans

PRINCIPAL THEATER(S): Northwestern Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The barbarians sought to conquer northwestern Africa.

OUTCOME: Under Gaiseric, the barbarians came to control most of northwestern Africa.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Vandals and Alans (barbarians), 50,000; Roman and East Roman forces were similar in number.

CASUALTIES: Unknown

TREATIES: None

During the Huns' attacks on Rome's eastern lands from 424 to 425 (*see* HUN RAIDS: EASTERN EMPIRE'S ITALIAN EXPEDITION [AGAINST JOHN]), Bonifacius, a Roman-barbarian general in service to the Eastern Empire, remained loyal to Valentinian III (419–455) and Placidia (c. 390–450) and opposed the uprising of John. For this, Placidia rewarded Bonifacius with the governorship of Africa. Bonifacius subsequently rebelled against the Eastern Empire and invited Gaiseric (Genseric, 390–477) and some 50,000 Vandals and Alans to invade Africa in 429. Within a short time, however, Bonifacius reconciled with Placidia and the Eastern Empire but now found that he

could not eject the barbarians in his midst. He requested military aid from Placidia, who, in turn, appealed to Theodosius II (401–450) and Pulcheria (399–453) to send a force to Africa.

In 431, a land and naval force was sent under the Roman general Aspar (d. 471) to reinforce the army of Bonifacius. Bonifacius assumed overall command of the combined Roman–East Roman force, which was quickly defeated by Gaiseric's barbarians. They resumed the siege of Hippo, which the African expedition had interrupted, and Aspar, apparently after a dispute with Bonifacius over command, withdrew his forces back to Constantinople. By 435, the Vandals were in control of all northwestern Africa, except for eastern Numidia (Tunisia).

Hun Raids: Attila's Eastern Conquests (433–441)

PRINCIPAL COMBATANTS: The Huns vs. Scythia, Media, and Persia

PRINCIPAL THEATER(S): Scythia, Media, and Persia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: The Huns came to control Scythia, Media, and Persia

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Between the Eastern Empire and the Huns, renewed 433

In 432, Theodosius II (401–450), emperor of the East, concluded a treaty with Ruas, king of the Huns, intended to prevent conflict between the Huns and the Byzantines. With the death of Ruas in 433, Attila (c. 406–453) and Bleda (d. 445), his nephew, jointly assumed the Hun throne. The pair renewed the treaty, and Attila and Bleda turned their attention to making conquests in Scythia, Media, and Persia, all beyond the bounds of the Eastern Empire.

Hun Raids: Attila's First Invasion of Eastern Empire (441–443)

PRINCIPAL COMBATANTS: The Huns vs. the Eastern Roman Empire

PRINCIPAL THEATER(S): The Balkans

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Hun raids were aimed chiefly at extracting massive tribute from the Eastern Empire.

OUTCOME: After defeating and nearly destroying the imperial army under General Aspar, Attila prevailed, extensively raiding the Balkan Peninsula and forcing a new and exorbitant tribute from Emperor Theodosius.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but catastrophic for imperial forces

TREATIES: Peace and tribute agreement, August 443

Attila (c. 406–453) violated the Hun treaty with the Eastern Empire (see HUN RAIDS: ATTILA'S EASTERN CONQUESTS) after the Vandal leader Gaiseric (Genseric, 390–477) bribed and cajoled him. Attila launched an invasion into Illyricum in 441. The Eastern Empire responded by suing for a truce, which was quickly concluded and endured for less than a year before Attila invaded Moesia and Thrace, then advanced to the walls of Constantinople itself.

Attila's forces pushed the imperial army, led by the Roman general Aspar (d. 471), into retreat to the Chersonese Peninsula. There, without room for maneuver, the Eastern army was all but completely destroyed. Aspar and a small number of others made their escape by sea.

In the absence of an opposing army, Attila raided the Balkan Peninsula fiercely. Only at Asemus (Osma, near Sistova) did the Huns encounter serious resistance. A local force repulsed them, forcing Attila to fall back with significant losses. This was hardly sufficient to counterbalance

the losses suffered by the Eastern Empire. In August 443, Theodosius II (401–450), the Eastern emperor, sued for peace, agreeing to a massive increase in tribute money paid to Attila.

Webb, *Attila, King of the Huns* (New York: F. Watts, 1965).

Hun Raids: Attila's Second Invasion of Eastern Empire (447)

PRINCIPAL COMBATANTS: The Huns vs. the Eastern Roman Empire

PRINCIPAL THEATER(S): Thrace and Greece

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: Attila extracted from the Eastern Empire three times the earlier tribute, together with an extensive cession of territory along the Danube.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of 447

In 445, Attila (c. 406–453) murdered Bleda (d. 445) to become the sole ruler of the Huns, who now commanded an empire of vast extent. Two years later, Attila led a new invasion of the Eastern Empire, despite the highly favorable peace terms that had been reached with Emperor Theodosius II (401–450) after his first invasion of the Eastern Empire (HUN RAIDS: ATTILA'S FIRST INVASION OF EASTERN EMPIRE, 441–443).

So feared were the Huns that, even as they advanced toward Thrace, there was panic in Constantinople. This was not without good reason: a recent earthquake had damaged the city's walls, making it that much more vulnerable to assault.

Theodosius dispatched an army to intercept the advance of the Huns. The Battle of the Utus was ultimately indecisive, but it did temporarily halt the Hun advance. Although the Eastern Roman army withdrew, the action put the Huns off their Constantinople-bound course and sent them toward Greece. Encountering the formidable fortifications of Thermopylae, a narrow pass, the Huns were halted.

At this juncture, Theodosius sued to renew the peace. The price he paid was catastrophically high: a tribute assessed at three times the earlier exorbitant amount, together with the cession of a 50-mile-wide swath of the

right bank of the Danube, from Singidunum (Belgrade) to Novae (Svistov, Bulgaria).

Maenchen-Helfen, *The World of the Huns* (Berkeley: University of California Press, 1973); E. A. Thompson, *The Huns* (Cambridge: Blackwell, 1996); Robert N. Webb, *Attila, King of the Huns* (New York: F. Watts, 1965).

Hun Raids: Attila's Invasion of Western Empire (450–452)

PRINCIPAL COMBATANTS: The Huns vs. the Western Roman Empire

PRINCIPAL THEATER(S): France and Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: Attila's failure to prevail at the Battle of Châlons forfeited his main opportunity to seize control of the Western Empire and thereby introduce Asian rule into Europe; his later withdrawal from Italy ended his western European invasion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Huns, perhaps as many as 500,000 or as few as 100,000 men; the armies of the Eastern Empire and its allies never numbered more than about half the troops the Huns fielded.

CASUALTIES: Unknown, but certainly heavy among the Huns as a result of the Battle of Châlons and, later, in Italy, as a result of epidemic disease.

TREATIES: None

It was at the behest of his ally, the Vandal leader Gaiseric (Genseric, 390–477), that Attila (c. 406–453) ventured into the Western Empire. Gaiseric needed a diversion against Theodoric (d. 534) of Toulouse, who was about to invade North Africa. Moreover, Attila wanted to avenge himself against the Western emperor, Valentinian III (419–455), who had rebuffed a suit for the hand of his sister, Honoria—and for half of the Western Empire.

Thus motivated, Attila was on the march in 450 and crossed the Rhine in 451 with the greatest army he had ever led—reportedly 500,000 warriors (modern historians believe the actual figure was no more than 100,000).

The Rhine crossing came just north of Moguntiacum (Mainz), which was in the territory of his allies, the Franks, and thus there was no resistance to his crossing. The front of the advance was vast, nearly 100 miles across. With this great scythe, Attila swept through the cities and towns of northern Gaul, sacking all save Paris (spared, it was said, through the intercession of St. Geneviève).

While ravaging the countryside, Attila repeatedly invited Theodoric to join him in a united campaign against Roman rule in Gaul.

The Roman general Aetius (d. 454) mustered a large army consisting of Gauls and Romans, with Franks, Burgundians, Germans, and Alans. Despite the diversity of those recruited, Aetius commanded no more than half the strength of Attila. Theodoric considered whether to join Attila, but, persuaded by the charisma and conviction of Aetius, he sided with Rome against the Huns.

Attila marched through Metz on April 7, 451, and swept through the valley of the Loire, then set up a siege of Orléans using about half of his army. The other half Attila deployed in a massive raid of northern France. Just as Orléans was about to surrender to the besiegers, Aetius and Theodoric attacked. However, after brief skirmishing, Attila suddenly broke off the siege, retreated, and called for the rest of his army. In the meantime, Aetius gave chase. Attila reunited his forces between Troyes and Châlons. He quickly set up a great redoubt near Méry-sur-Seine, digging into massive entrenchments. It was in this fortified position that Aetius found the Huns in June. A titanic battle—the Battle of Châlons—ensued. Aetius and Theodoric held out against Attila's massive assaults on the center and right. The allies mounted an offensive with their left against Attila's right. Theodoric fell, but Attila was forced to withdraw.

Attila assumed that Aetius would give chase, but his troops had taken heavy losses, and he did not attack. This is understandable, but it is unclear why Aetius also failed to blockade the Huns to cut them off and starve them into submission. The Roman general was not usually prone to such strategic lapses. Attila withdrew from Gaul, quietly and without further destruction to the countryside. Had he prevailed at the Battle of Châlons, Attila would have conquered the Western Empire, and it is quite possible that the subsequent course of European history would have been dominated by Asian peoples.

As it was, Attila returned to his home base in Pannonia (Hungary). He once again asked Valentinian for the hand of Honoria and was again refused. He launched a new foray into western Europe, this time by way of the Julian Alps into northeastern Italy. Attila laid waste to Aquileia and cleaned out Venetia, whose inhabitants (it is said) withdrew to the coastal islands and founded Venice. Padua was sacked, and the Mincio was devastated.

Aetius, rushing back from Gaul, reached Italy in time to take up positions at the Po River. Although Aetius's force was much smaller than Attila's, he managed to hold the Po crossings, probably because Attila had by this time decided to withdraw from Italy. He faced a rebellion in northeastern Illyricum, which needed attending to, and his army was swept by pestilential disease in Italy. The Catholic Church holds that a visit by Pope Leo I (c. 400–474) persuaded Attila—awed by his presence—to

quit Italy. This tradition is almost certainly apocryphal. Faced with a pressing emergency elsewhere and fearing destruction by disease, he withdrew—and died the following year.

Webb, *Attila, King of the Huns* (New York: F. Watts, 1965).

Hurrian Conquests (c. 1700–c. 1500 B.C.E.)

PRINCIPAL COMBATANTS: Hurrians vs. Hittites and Egyptians

PRINCIPAL THEATER(S): Mesopotamia, Anatolia, Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Hurrians expanded from their original migratory settlements between Lake Van and the Zagros Mountains in western Iran.

OUTCOME: By 1500 B.C.E., Hurrians had settled as far west as Anatolia and as far north as Syria.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Extremely variable

CASUALTIES: Unknown

TREATIES: No surviving documents

By about 1700 B.C.E., the Hurrians, whose origin lay in the Caucasus, had migrated into northern Mesopotamia and had become sufficiently well established to overthrow their Semitic overlords. They took over the region between Lake Van and the Zagros Mountains, then expanded west and south into eastern Anatolia (Turkey) and northern Syria. This expansion was complete by about 1500 B.C.E. Very little is known about the course of the wars that must have accompanied this expansion.

In Anatolia and Syria, the Hurrians established the kingdom of Mitanni, which frequently warred with Egypt and with the Hittites (see HITTITE CONQUEST OF ANATOLIA and HITTITE-HURRIAN WARS).

The greatest of the Hurrian kingdoms, Mitanni, declined during the two centuries following the period of these conquests. After 1350 B.C.E., Mitanni encompassed no more than Hanigabat, which was overrun by Assyria around 1245 B.C.E. The Mitanni and the Hurrians generally ceased to exist as an ethnically recognizable people by 1000 B.C.E.

See also ASSYRIAN-HURRIAN WARS.

York: Penguin Books, 1990); J. G. Macqueen, *The Hittites and Their Contemporaries in Asia Minor* (London: Thames and Hudson, 1986).

Hussite Civil War (1423–1434)

PRINCIPAL COMBATANTS: Utraquist Hussites vs. Taborite Hussites

PRINCIPAL THEATER(S): Bohemia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The radical Taborites wanted to suppress the moderate Utraquists to make a break with the Catholic Church and the ruling government of Bohemia.

OUTCOME: For most of the war, the Taborites prevailed until the Utraquists reached an accommodation with the church and thereby acquired allies among the Bohemian nobility.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: The Compactata of 1433 created the alliance that enabled the Utraquists to defeat the Taborites.

The Hussite Civil War was partly contemporaneous with the HUSSITE WARS from 1419 to 1436) that followed the martyrdom of the Bohemian religious reformer John Huss (1369–1415). Huss sought to reform the Catholic Church and, in particular, held that the pope was not divinely placed in authority, but was elected by the rule of men. Huss was burned as a heretic, but his followers were legion among the Bohemian knights and nobility, who not only published a protest against Huss's martyrdom but also offered protection to those persecuted for their faith. However, his followers became factionalized within a few years of death. The radical Taborites (named after their stronghold, Tabor, located south of Prague) were uncompromising in their demands for reforms, whereas the moderate Utraquists saw the possibility of coming to an accommodation with church and government in Bohemia. The Taborite leader John Ziska (c. 1360–1424) sought to suppress the Utraquists and defeated them at the battles of Horid and Strachov in 1423. In 1424, Taborite forces under Ziska were victorious at the Battle of Skalic and then the Battle of Malesov. Despite what amounted to a long truce, from 1424 to 1433, the Utraquists remained stubbornly active, and when Ziska died in 1424, his successor, Andrew Prokop (c. 1380–1434, also known as Prokop the Great), was unable to prevent their reemergence. In 1433, the civil war heated up again. The Utraquists agreed to the Compactata, a 1433 compromise with the Catholic Church that not only readmitted them into the church but created a military alliance with the Bohemian nobility. Thus allied, the Utraquists defeated the

Taborites at the Battle of Lipany on May 20, 1434, combat in which Prokop the Great was killed.

Further reading: Frabtsk Michalek Bartos, *The Hussite Revolution, 1424–1437* (Boulder, Colo., and New York: East European Monographs, distributed by Columbia University Press, 1986); Josef Kalvoda, *The Genesis of Czechoslovakia* (Boulder, Colo., and New York: East European Monographs, distributed by Columbia University Press, 1986).

Hussite Wars (1419–1436)

PRINCIPAL COMBATANTS: Hussite rebels vs. German (Holy Roman Empire) forces of King Sigismund

PRINCIPAL THEATER(S): Bohemia, Hungary, Austria, and Germany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Hussites wanted independence from the Holy Roman Empire and the Roman Catholic Church.

OUTCOME: Despite overwhelming military victories against Sigismund, the Hussites were ultimately undermined by the Hussite Civil War (1423–34) between the Taborite and Utraquist Hussite factions; this led to the destruction of the Bohemian military, and capitulation to Sigismund.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Hussites, 25,000; Sigismund's forces, 50,000

CASUALTIES: Hussite losses at Český-Brod, 18,000 killed; Sigismund's losses often ran between 30 and 50 percent of his forces, well into the tens of thousands.

TREATIES: The Compactata of 1433

John Huss (1369–1415), a Bohemian priest and religious reformer, sought to reform the Catholic Church, in the process attacking the doctrine that the papacy is divinely decreed. Huss argued that popes are elected by men, not placed in office by God. This, among other doctrines he proposed, earned Huss a trial for heresy and, ultimately, execution at the stake in 1415. By the time of his death, Huss had attracted many followers, the Hussites, who endured persecution that seemed only to strengthen their resolve to resist state-sponsored religious tyranny. In 1419, the Hussites rebelled against Catholics and German king Sigismund (1368–1437), who had inherited the Bohemian throne and who was believed to have condoned the execution of Huss.

Pope Martin V (1368–1431) proclaimed a crusade against the Hussite rebels, sanctioning Sigismund to send troops of the Holy Roman Empire to Prague. The Hussites rallied behind the dynamic leader John Ziska (c. 1360–1424), head of the radical Taborite Hussite faction.

Ziska closed the gates of the city and deployed his forces in trenches outside the walls of Prague on the commanding Hill of Witkov. Sigismund's forces attacked on July 14, 1420. With only 9,000 men under his command, Ziska repelled the invaders.

Following this repulse, Sigismund took personal command of the imperial troops, arriving in Bohemia late in 1421 leading a massive German army—estimated at tens of thousands of men—against a significantly smaller Hussite force of no more than 25,000 led by John Ziska. Ziska was, however, a natural military genius, who knew how to make the most of the resources he had. Not only were his men well trained, they were incredibly mobile. Ziska made use of mobile artillery—unheard of at the time—and he used his baggage wagons as mobile forts. When Sigismund confronted the Hussite army at Kutná Hora, 45 miles southeast of Prague, on January 6, 1422, he was stopped by a ring of wagon-forts. After pounding against these to no avail—and suffering heavy losses in the process—Sigismund suddenly found himself under heavy attack by a Hussite charge. Sigismund had no choice but to fall back. He withdrew 15 miles to the southeast, taking a stand at Nemecky-Brod. There, on January 10, 1422, Ziska attacked with about 11,000 troops against Sigismund's 23,000. When it was over, Sigismund had lost more than half of his army and was forced to flee to avoid capture.

While fighting Sigismund, Ziska was also embroiled in the HUSSITE CIVIL WAR (1423–34), and died in 1424. Andrew Prokop (c. 1380–1434) or Prokop the Great, replaced Ziska as leader of the Taborite Hussites, who, despite the death of Ziska, still wholly intimidated Sigismund's Germans. For two years, neither Sigismund nor the pope was able to form an army willing to confront the Hussites. Finally, in 1426, a large force of 50,000 Germans made a stand at Ústí nad Labem, only to be defeated by the smaller Hussite force, which inflicted some 15,000 casualties on the enemy, forcing the Germans to flee in panic. After this, the Hussites took the offensive, invading Hungary, Austria, and Germany, burning a swath of destruction along the way.

But the Hussite Civil War continued to take its toll. The moderate Utraquists, opposed to the radical Taborites, made an accommodation with the Catholic Church and struck up an alliance with conservative Bohemian nobles. The combined Utraquist-Bohemian army met Prokop the Great's Taborite force at Český-Brod on May 30, 1434, 19 miles east of Prague. Casualties on both sides included some 18,000 dead, including Prokop. With the Bohemian army thus shattered, the path was clear to ultimate surrender to Sigismund, which occurred two years later. In 1436, Bohemia recognized Sigismund as its king.

Hyksos Invasion of Egypt (c. 1674–1567 B.C.E.)

PRINCIPAL COMBATANTS: Hyksos vs. Egyptians

PRINCIPAL THEATER(S): Lower Egypt

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Hyksos invaded or infiltrated Egypt for the purpose of taking over leadership of its government.

OUTCOME: The Hyksos assumed power in Egypt as the concurrent 15th and 16th dynasties.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No surviving documents

The Hyksos were a Semitic people who invaded Egypt about 1700 B.C.E. and founded the 15th and 16th Egyptian

dynasties. They laid siege to Memphis around 1674 B.C.E., while ruling Egypt from a Nile delta capital they called Avaris.

Was the Hyksos invasion a full-scale war? Manetho (fl. c. 300 B.C.E.), an Egyptian historian, portrays the Hyksos progress into Egypt as nothing less. Using archaeological evidence, modern scholars have suggested that the “invasion” was more in the nature of a gradual infiltration, which led to a coup d’état in lower Egypt. After the coup—which may or may not have been particularly violent—the Hyksos apparently ruled Egypt peacefully. The lower kingdom they ruled directly, governing the upper kingdom through a series of vassals.

However the Hyksos came to power, their reign seems to have ended rather abruptly in 1567, when native Egyptian forces retook Memphis and expelled the Hyksos from it. Egyptian records make no mention of the Hyksos after 1567, and archaeologists have found no traces of this ethnic group after this year.

I

Iconoclastic War, First (726–731)

PRINCIPAL COMBATANTS: Forces of Leo III, Byzantine emperor opposed to holy icons, vs. Byzantine rebels who supported icon worship

PRINCIPAL THEATER(S): Greece and Ravenna, Italy

DECLARATION: No declaration, but the war was begun by Leo's proclamation of his opposition to the worship of holy icons.

MAJOR ISSUES AND OBJECTIVES: Leo III wanted to end icon worship in the Byzantine Empire.

OUTCOME: Inconclusive, except that parts of the Byzantine Empire slipped further from imperial control

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Byzantine emperor Leo III (c. 680–741) came to power by overthrowing, in March 717, Emperor Theodosius III (d. after 717). Leo's early reign was marked by continual resistance to Arab invasion, alternating with Byzantine counterinvasion into Arab territory. By the mid-720s, however, the Arab threat had been reduced, and Leo turned his attention to the realization of his own religious campaign. In the Eastern Roman Empire, the veneration of holy icons had become an overwhelmingly important part of religious ritual, growing into what Leo deemed spiritually and politically dangerous cult status. Supported by like-minded "Iconoclastic"—literally, "icon-destroying"—clergymen, Leo made public his opposition to the veneration of icons in 726. At first, he confined his

opposition to making speeches, but these speeches incited troops to destroy, in Constantinople, a particularly important icon depicting Christ. The act nearly provoked a popular revolt, when a mob killed the officer who had brought down the icon. Amid papal denunciation of the Iconoclasts, this incident triggered a revolt of the troops of the Theme of Hellas (Greece) in 727. The Greek sent a rebel fleet to Constantinople, one of the ship bearing a proposed anti-emperor. Leo's navy intercepted the fleet and destroyed it.

In 730, Leo ordered the destruction of all holy icons in the empire. When the head of the Eastern Orthodox Church, the patriarch of Constantinople, refused to comply, Leo deposed and replaced him. These actions created stiffening resistance throughout the Byzantine Empire, and, in 731, the populace of Ravenna, Italy, a Byzantine exarchate (or province), revolted, prompting Leo to dispatch a fleet to capture the rebellious city. A storm ravaged the fleet, however, and the defenders of Ravenna turned it back. Having failed to restore order by military means, Leo declared Calabria, Sicily, and Illyria to be under the control of the new Eastern Orthodox patriarch of Constantinople, thereby denying the Roman Catholic pope's authority in these places. With this, the First Iconoclastic War came to an uneasy end.

Iconoclastic War, Second (741–743)

PRINCIPAL COMBATANTS: Icon-worshipping rebels led by Artavasdos vs. Constantine V, Iconoclast Byzantine emperor

PRINCIPAL THEATER(S): Byzantium

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Artavasdos led a rebellion against the Iconoclast emperor Constantine V with the aim of installing himself on the Byzantine throne and restoring icon worship throughout the realm.

OUTCOME: Constantine V put down the rebellion and recovered the throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Constantine V (718–775), the successor of Byzantine emperor Leo III (c. 680–741), who had started the First ICONOCLASTIC WAR in 726, intensified the persecution of icon worshipers, thereby stirring elements of the empire to rebellion. When Constantine was off fighting the BYZANTINE-MUSLIM WAR (741–752), Artavasdos (fl. 740s), his brother-in-law, incited and led a military and religious revolt in favor of the icon worshipers. Against reduced imperial forces, the rebels scored a victory that emboldened Artavasdos to proclaim himself emperor. He immediately restored icon worship throughout the realm. His reign, however, was brief. At the battles of Sardes and Modrina, both fought in 743, imperial forces, personally led by Constantine, easily defeated the rebels. Constantine reclaimed the throne and, by way of punishment, blinded his brother-in-law. The iconoclastic movement resumed.

Knopf, 2003); Cyril A. Mango, ed., *Oxford History of Byzantium* (New York: Oxford University Press, 2002); Mark Whittow, *The Making of Byzantium, 600–1025* (Berkeley: University of California Press, 1996).

Illyrian War, First (229–228 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. Illyria

PRINCIPAL THEATER(S): Greece, mainly Corfu

DECLARATION: Roman Senate against Illyria, 229 B.C.E.

MAJOR ISSUES AND OBJECTIVES: Rome wanted to put an end to Illyrian piracy, which menaced Roman trade with Greece.

OUTCOME: The Illyrians were quickly—and almost bloodlessly—defeated at Corcyra (Corfu); they renounced territorial claims, and piracy was suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents survive

The Illyrians, who lived on the eastern shore of the Adriatic on the Balkan Peninsula, were a warlike people, who regularly sent pirate fleets to prey on Roman and Greek shipping. The Greeks generally ignored the Illyrians and did their best to avoid them. The Romans, however, sought to establish a trading relationship. In 230 B.C.E., a Roman trading fleet fell victim to Illyrian pirates, and when the Romans sent a delegation to negotiate with the queen of Illyria, Teuta (fl. 230s–220s B.C.E.), the ambassadors were not only treated with contempt at court, but were set upon and assassinated on their return trip. This provoked the Roman Senate to declare war.

Roman legions attacked the Illyrians while they were in the process of laying siege to a number of Greek city-states. At Corcyra (Corfu), Greece, the Romans attacked the Illyrians in 229 B.C.E. Awed by the Roman legion and fleet, the Illyrian besieging force surrendered with hardly a fight, and the haughty Queen Teuta capitulated the following year. She renounced territorial claims and agreed to pay a war indemnity to Rome. To ensure the longevity of its victory, Rome struck an alliance with Macedonia, which would serve as a buffer on Illyria's flank.

Further reading: M. Cary, *A History of the Greek World from 323 to 146 B.C.* (New York: Barnes and Noble, 1963); F. W. Walbank, *The Hellenistic World* (Cambridge, Mass.: Harvard University Press, 1993).

Illyrian War, Second (219 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. Illyria

PRINCIPAL THEATER(S): Dinale and Pharos, Illyria (on the Balkan Peninsula)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: When Illyria violated the peace imposed by Rome after the First Illyrian War, Roman legions swiftly attacked.

OUTCOME: The war ended in one week, and the Roman-imposed peace was reestablished.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents survive

Roman victory in the First ILLYRIAN WAR, from 229 to 228 B.C.E. resulted in a firm peace with the warlike Illyrians; however, Demetrius of Pharos (d. 214 B.C.E.), the new ruler of Illyria, violated the peace in 220 B.C.E. by invading various Roman-protected territories and by resuming the piracy that had long preyed upon Roman and Greek shipping. In 219, Roman legions laid siege to two major Illyrian fortress cities, Dinale and Pharos. Dinale was besieged for a week before it surrendered. Pharos, which was attacked by legions from two sides, held out for less than a day. Demetrius of Pharos fled the city before it fell; however, the Romans successfully reestablished the peace that had been won in the First Illyrian War.

Inca Revolt (1535–1536)

PRINCIPAL COMBATANTS: The Incas vs. the Spanish conquistadores

PRINCIPAL THEATER(S): Peru, especially Cuzco and vicinity

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Incas wanted to oust the Spanish invaders from their country.

OUTCOME: Ultimately, the rebellion was put down after the failure of the Inca siege of Spanish-held Cuzco.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Desiring, as many Spanish did, to emulate the success of Hernán Cortés (1485–1547) enjoyed in the SPANISH CONQUEST OF MEXICO (1519–21), the Spanish conquistador Francisco Pizarro (c. 1475–1541) successfully invaded the realm of the Peruvian Incas in 1531, having twice failed in the 1520s. He landed at Tumbez on the Pacific coast, just south of the equator, and from there marched to Cuzco, the Inca capital. Along the way, he avoided most armed clashes by exploiting an ongoing civil war among tribal factions allied to rival heirs to the chieftainship. Pizarro explained to each group he encountered that he was the enemy of the other. At Cajamarca, en route to Cuzco, Pizarro captured Atahualpa (c. 1500–33), one of the candidates for chief. While Pizarro's soldiers busied themselves plundering Inca treasure, Pizarro negotiated with

Atahualpa's rival, Manco Capac II (c. 1500–44), even as Atahualpa managed secretly to assemble a force to expel the Spanish. But before Atahualpa could muster his forces, Pizarro had him tried for usurpation, idolatry, and polygamy, found him guilty, and had him executed. With Atahualpa disposed of, the Spanish crowned Manco, as the more pliable puppet chief.

Yet Manco had an agenda of his own. When Pizarro and his lieutenant, Diego de Almagro (c. 1475–1538), were absent, Manco organized an Inca revolt. The resulting uprising resulted in the slaughter of a number of conquistadores, and the Incas laid siege to Spanish-held Cuzco, holding that city in thrall for 10 months. At length, however, the Spanish prevailed, breaking the siege. Once this happened, the Inca revolt abruptly folded, as the Indians went home to tend to their crops. The revolt collapsing around him, Manco Capac II fled to the hills with a band of loyal followers. There he decreed what was in effect an Incan government in exile and directed an ongoing campaign of raids against the Spanish. In 1544, some of his followers turned on him and assassinated him.

India, Mongol Invasion of See MONGOL INVASIONS OF INDIA.

Indian Civil War (1947–1948)

PRINCIPAL COMBATANTS: Hindus vs. Muslims

PRINCIPAL THEATER(S): India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The two religious groups each wanted to dominate newly independent India.

OUTCOME: The civil war was largely a fight between civilians and led to no definite conclusion but ended, uneasily, after the assassination of Gandhi.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Millions of civilians were involved in the rioting.

CASUALTIES: The “war” created some 7 million refugees, at least 1 million of whom perished in rioting.

TREATIES: None

Born in India, Mohandas Gandhi (1869–1948) studied law at Oxford and practiced at the bar in Bombay before taking a job with an Indian firm in South Africa. Appalled by the politics of apartheid, he perfected the techniques of his “progressive nonviolent noncooperation” in demon-

strations against the racist white government of South Africa. Returning to India in 1915, he became a labor organizer and a thorn in the side of the British colonial government as he used his peculiar style of political protest in a series of strikes, boycotts, and dramatic demonstrations to agitate constantly for India's independence.

Frequently imprisoned, Gandhi turned even that into an instrument of protest, resorting to widely publicized hunger strikes as part of his program of civil disobedience. Although Great Britain had begun to make some concessions by the 1930s, the British threw the troublesome leader back in jail during WORLD WAR II, and from 1942 to 1944 the world-famous prisoner demanded complete withdrawal of the British colonial forces from India, directing this "Quit India" movement from his cell.

The movement he fostered ultimately prevailed, because Great Britain, subtly but persistently pressed by the United States after the war to give up much of its empire, granted India's independence in 1947. Yet for Gandhi, this victory was tempered by what he took as his personal failure to unite India's Hindu majority with the new nation's many minorities, especially its large Muslim population.

Led by Muhammad Ali Jinnah (1876–1949) the Muslim League and the Hindu-dominated Congress went their separate ways over the issue of religion in the new state. Riots between Hindus and Muslims broke out, the worst of which was the "Great Calcutta Killing" of August 16–20, 1946, which spread throughout much of the subcontinent. To many, and especially the British, the only resolution seemed to be partition of the new nation into a predominantly Hindu India and a predominantly Muslim Pakistan.

The British sanctioned the partition which was set for August 14, 1947. Two days after it was effected, civil war broke out between the Hindus and Muslims in the Punjab. From there, fighting spread throughout the country. The nation suddenly experienced a mass movement of refugees unprecedented in history. Some 5.5 million people moved between Pakistan and India, Muslims one way, Hindus another. Another 1.25 million moved from eastern Pakistan into western Bengal, while 400,000 Hindus left Sind (in western Pakistan) and settled in India. The movement of refugees was accompanied by continual rioting, and deaths among the refugees amounted to perhaps 1 million persons. Britain offered to intervene militarily, but Indian prime minister Jawaharlal Nehru (1889–1964), whose country had so recently won its independence, refused to accept help from the former oppressor.

The civil war was made worse by the outbreak of the INDO-PAKISTANI WAR (1947–1948), which erupted over a dispute concerning the partition of Kashmir. Throughout the firestorm, Gandhi, father of Indian independence, who had accepted no office in new India, pleaded for

order. He walked barefoot through riot-torn Bengal and Bihar, trying by his simple presence to stop the slaughter. Then he returned to New Delhi, where he preached non-violence daily until he was assassinated on January 30, 1948 by an orthodox Hindu Brahmin fanatic, who felt that Gandhi had betrayed his allegiance to India. So venerated was Gandhi, that his murder—a martyr's death—did much to bring an end to the rioting and to unify the government of India, albeit as a nation separate from Pakistan.

Press, 1970); Rajan Mahan Ramakant, ed., *India's Partition: Preludes and Legacies* (Jaipur, India: Rawat Publications, 1998).

Indian Mutiny (1857–1859)

PRINCIPAL COMBATANTS: Indian rebel groups (initially led by the sepoys) vs. Great Britain (the East India Company government)

PRINCIPAL THEATER(S): India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Indian rebels sought to overthrow British colonial rule.

OUTCOME: The extremely brutal uprising was largely suppressed in 1858 and definitively ended in 1859.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 160,000 total, many of whom rebelled against the British; loyal British forces at any one place and time numbered about 30,000; rebel forces typically outnumbered the British but were less well equipped

CASUALTIES: Britain, 2,034 killed in battle, 8,987 died of disease and other causes; Indian, unknown

TREATIES: None

Also called the Sepoy Rebellion, the Great Mutiny, and the First Indian War of Independence, this was an uprising against the British colonial regime in India begun by Indian troops—called *sipahi*, anglicized to *sepoys*—in service to the British East India Company.

By the middle of the 19th century, the East India Company controlled the region of modern India, Pakistan, Bangladesh, Burma (Myanmar), and Ceylon (Sri Lanka). The Great Mogul emperor of India was now no more than a figurehead; the real government was contained within a British civil and military administration and the British-controlled army numbering 160,000 men, of whom only 24,000 were British. The rest were native troops in the British service. Over the years, friction developed between

the native troops and their East India Company employers. The British refused to respect Indian religious and cultural traditions. In an atmosphere of growing discontent there arose a rumor among the sepoys late in 1856 that the cartridges for the newly issued Lee-Enfield rifles were greased with the fat of cows and pigs. Cows are sacred to Hindus and must not be eaten, whereas pigs are regarded by Muslims as unclean—and must not be eaten. Prior to loading a rifle of the period, it was necessary to bite off the end of the paper cartridge; for the Hindu or Muslim soldier, doing so meant coming into contact with cow or pig and was, therefore, a grave pollution. In the Bengal army, some soldiers refused to use the new cartridges, but a full-scale mutiny broke out in Meerut, northeast of Delhi, where 85 men of the third light cavalry refused to use the cartridges on April 23, 1857. Convicted of mutiny, they were sentenced to imprisonment, publicly fettered, and ceremonially stripped of their military insignia. This served only to incite further rebellion. Members of the 11th and 20th infantry regiments revolted on May 10, freeing their imprisoned comrades—and many civilian prisoners as well. Following this, they rioted, killing 40 British officers and civilians in Meerut. From here, they marched to Delhi, where other Indian regiments joined the mutiny. In the city, the sepoys slaughtered many more British soldiers and civilians and restored to power the aged Mogul emperor, Muhammad Bahadur Shah (1775–1862).

News of the rebellion exploded throughout the subcontinent. Regiments throughout the Bengal army mutinied, and north and central India generally rose up against British rule. At first, the British were overwhelmed and at a loss for a response. In the Punjab, British commanders disarmed the sepoys and assembled a small army to advance on Delhi. The force took up a position outside the city. In Kolkata, the British contained the rebellion and managed to retain control of the Ganges River and communications lines as far upriver as Allahabad. In central India, several thousand British troops fought many pitched battles against the forces of local princes and Rani (Queen) Lakshmibai (c. 1830–58) of Jhansi, all of whom had joined the uprising.

In the central Ganges River valley, Oudh, recently annexed by the British, became an area of intense rebellion. On May 30, 1857, rebels besieged Europeans along with loyal Indians at the British Residency in Oudh's capital, Lucknow. Shortly after this, the British garrison at Cawnpore (Kanpur) came under siege through June 27, when the survivors negotiated with the rebel leader, Nana Sahib (c. 1821–c. 1858), for safe passage. Despite this, they were attacked while evacuating to boats on the Ganges River. Most of the British soldiers were killed. Some 200 British women and children, captured, were subsequently slain in prison. In retaliation, the British forces authorized a brutal pogrom of similar atrocities

directed against Indian combatants and noncombatants alike.

In the meantime, outside the walls of Delhi, inconclusive battles were fought until the British army was sufficiently reinforced to attack the city on September 15. After five days of bitter fighting, the British retook Delhi. On September 25, a relief column reached the Lucknow residency, but it was pinned down there through late November, when a second relief force arrived, broke the siege, and evacuated the survivors. When the British returned to Oudh in February 1858, it was with an army of more than 30,000 men, including Nepalese troops. Lucknow fell to the British on March 23, 1858, and the rebel forces in north India dispersed. The rebel fort at Jhansi capitulated in April, and the rani was subsequently killed in battle. With this, the mutiny, for all practical purposes, ended; however, sporadic fighting continued into the next year, as British forces engaged small rebel forces. Early in the year, rebel leader Nana Sahib's leading general, Tantia Topi (1819–59), was captured, and, with his execution in April 1859, the revolt was completely ended.

The consequences of the Indian Mutiny were profound. The British government officially abolished the Mogul Empire once and for all, exiling the aged emperor Muhammad Bahadur Shah to Burma. Equally significant was the assumption of British direct rule of India, ending the administration of the East India Company. British military recruiters now looked to the Punjab and Nepal for new native troops, for these regions had remained steadfastly loyal during the rebellion. Perhaps most far reaching was the general change in attitude of the British administration toward Indians. The relationship was now pervaded by distrust, and the policy of the British turned from exploitive paternalism to frank repression.

Indonesian-Malaysian War (1963–1966)

PRINCIPAL COMBATANTS: Indonesia vs. Malaysia

PRINCIPAL THEATER(S): Malaysia, especially Sabah and Sarawak (both in Borneo), and Singapore Harbor

DECLARATION: Indonesia against Malaysia, 1963

MAJOR ISSUES AND OBJECTIVES: Indonesia refused to recognize the Republic of Malaysia.

OUTCOME: Drained by internal dissension, Indonesia agreed to peace in 1966; Malaysia endured as an independent republic.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: During the period, 150,000–500,000 Indonesian communists were killed.

TREATIES: Treaty of Jakarta, August 11, 1966

Achmed Sukarno (1901–70), president (and dictator) of Indonesia, refused to recognize the newly proclaimed Federation of Malaysia (the union of Malaya, Sabah, Sarawak, and—until 1965—Singapore). Sukarno stirred his nation to war against Malaysia, which sought and received military aid from Great Britain when Indonesian guerrillas penetrated Sabah and Sarawak. Sukarno fought no set battles but waged a low-level guerrilla war, using paratroopers behind Malaysian lines and underwater demolition teams to mine the harbor of Singapore. During the war, dissension broke out at home, as communists staged a coup d'état (which failed) on September 30, 1965. General Suharto (b. 1921), Sukarno's general in chief, led Indonesian forces against the communist insurgents, then launched a nationwide purge of communists and leftists.

The purge, ostensibly in retaliation for the communist abduction and killing of six top Indonesian generals, was carried out by a combination of the Indonesian army and right-wing Muslim political groups. It was a slaughter, in which an estimated 150,000 to as many as 500,000 communists were killed (the most widely accepted figure puts the toll at between 200,000 and 250,000). Most of the deaths occurred within eight weeks after the September 30, 1965, coup attempt, but the killings continued well into 1966. The death toll on Indonesian-held Bali was at least 50,000 and, on east Java, 100,000. The leftist leader Dipoa Nusuntara Aidit (d. 1966) was killed, and those communists who were not executed or murdered were imprisoned in untold numbers. By 1976, there were still 70,000 political prisoners from this period being held.

Although the communist takeover was crushed, the effort monopolized Indonesian military resources, and Sukarno agreed to open peace negotiations with Malaysia at Bangkok. An armistice was concluded on June 1, 1966, followed by a formal treaty, signed at Djakarta, on August 11, 1966. Nor did Sukarno retain true power in Indonesia. On March 11, 1966, the army compelled him to relinquish much authority on army chief of staff Suharto.

Indonesian War in East Timor (1975–1999)

PRINCIPAL COMBATANTS: East Timorese rebels vs. Portugal, then various factions in East Timor and Indonesia

PRINCIPAL THEATER(S): East Timor

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Independence of East Timor, first from Portugal, then from Indonesia

OUTCOME: With United Nations intervention, independence was achieved (2002), but East Timor was left in ruins.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: More than 200,000 East Timorese died during the long struggle for independence from Indonesia. Almost 1 million became refugees in 1999.

TREATIES: Various UN agreements, the most important of which was concluded in 1999 among Portugal, Indonesia, and East Timor

East Timor, the eastern portion of Timor Island, in the Malay Archipelago, was settled by the Portuguese in 1520 and became a Portuguese colony in 1859. Through the 20th century, Portuguese rule on East Timor became a dictatorship, which was overthrown in 1974 in a bloodless military coup. In the absence of the Portuguese, rival political parties quickly formed, and, in 1975, a civil war broke out, triggered by military intelligence operations and a declaration of independence of FRETILIN (Revolutionary Front for the Independence of East Timor). Exploiting the disarray in East Timor, Indonesian forces invaded in 1975. The following year, East Timor was incorporated as Indonesia's 27th province. However, the United Nations refused to recognize Indonesia's claim on what it considered an independent nation. Through 1999, East Timor would be torn by violence between the independence-seeking factions and the Indonesian military presence in the region. Between 1975 and 1999, it is estimated that more than 200,000 East Timorese were killed.

During 1977–78, the Indonesian air force conducted heavy bombardment of East Timor. This was followed by years of essentially guerrilla warfare. In 1988, the European Union (EU) voted its support of East Timor's right to self-determination, and the United Nations followed suit in 1989. Nevertheless, Indonesia continued to assert its claim, and in 1991 more than 250 mourners and demonstrators were cut down by Indonesian army forces at the Santa Cruz Cemetery in East Timor's capital city of Dili.

600 Indonesian War of Independence

Although the Indonesian government launched a formal inquiry into the massacre, issuing a 1992 report condemning the military. The troops and officers involved were given light sentences whereas East Timorese protesters were sentenced to as much as 10 years imprisonment. The following year, 1993, FRETILIN leader Xanana Gusmão (b. 1946) was captured and sentenced to a 20-year term. His leadership role in the Revolutionary Front was assumed by Konis Santana.

Throughout the 1990s, the Indonesian military presence was increased in East Timor, and in 1997, the Indonesian army clamped down on pro-independence demonstrations that came in the wake of the announcements that internationally recognized independence leaders Bishop Carlos Belo (b. 1948) and José Ramos-Horta (b. 1949) were to be awarded jointly the Nobel Peace Prize. At this point, in 1998, the Catholic Church convened a conference of Timorese leaders in the town of Dare to avert clashes among factions fighting for independence and to map out a road to reconciliation with Portugal and Indonesia. At last, on May 5, 1999, an agreement was signed at the United Nations, among Portugal, Indonesia, and the Timorese leadership regarding a resolution to the East Timor crisis. On June 11, 1999, UNAMET (United Nations Mission in East Timor) was established to assist in the holding of a plebiscite on the question of East Timorese independence. On August 30, 1999, East Timor voted for independence. The results were announced on September 4, 1999: 78.5 percent of East Timorese favored complete independence from Indonesia.

Despite the UN-brokered agreements, Indonesia armed pro-Indonesian East Timorese militia forces, which brought a reign of terror on pro-independence supporters. The result was a chaotic, anarchic renewal of civil war, which killed thousands and left the capital city of Dili in ruins. It is estimated that 85 percent of the buildings in the country, including virtually all schools and nearly all businesses, were destroyed in the 1999 violence. Approximately 1 million East Timorese became refugees, fleeing to West Timor, other Indonesian islands, and Australia.

On September 20, 1999, a UN-sanctioned International Force for East Timor (INTERFET) entered East Timor to restore peace and order and to protect UNAMET, so that it could carry out its mandate to assist in enforcing East Timorese independence.

On October 25, 1999, a United Nations Transitional Administration in East Timor (UNTAET) was created to act as an interim government until an election could be held. At the start of 2002, East Timor was declared an independent nonself-governing territory under United Nations supervision, and in February the provisional government drafted a constitution, which was subsequently approved. In April, under the new constitution, Xanana Gusmão, who had been imprisoned in 1993, was elected East Timor's first president, and on May 20 the nation became fully independent.

Smith, *Peacekeeping in East Timor: The Path to Independence* (Boulder, Colo.: Lynne Rienner Publishers, 2003).

Indonesian War of Independence (1945–1949)

PRINCIPAL COMBATANTS: The Indonesian republicans vs. the Netherlands; also Indonesian Muslim fundamentalists and (separately) the People's Democratic Front (Indonesian communists) vs. Indonesian republicans

PRINCIPAL THEATER(S): Indonesia, especially Java

DECLARATION: Independence proclaimed, August 17, 1945

MAJOR ISSUES AND OBJECTIVES: Indonesian republicans wanted independence from Dutch colonial rule (and to suppress rival agitators for Muslim and for communist government).

OUTCOME: Independence was fully recognized in 1949.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: The Netherlands, 175,000; Indonesia, 160,000 plus 175,000 irregulars

CASUALTIES: The Netherlands, 2,526 military casualties, 22,000 civilian casualties; Indonesia, 80,000

TREATIES: Cheribon Agreement of 1946, followed by The Hague Accord, November 2, 1949

In the years between the two world wars, the Dutch East Indies witnessed the rise and rebuff of two challenges to colonial rule, a communist revolt and an Islamic nationalist movement. In 1927 a new challenge was mounted by a young engineer, fresh out of school, named Achmed Sukarno (1901–70), who founded a “general study club” in Bandung, which became the nucleus of the independence-minded Indonesian Nationalist Party (Partai Nasional Indonesia, or PNI). Arrested, tried, and imprisoned by the Dutch in 1929, Sukarno was ultimately exiled to southern Sumatra in 1933, but a reconstituted PNI under the leadership of Mohammad Hatta (1902–80) and Sutan Sjahrir (1909–66) continued to agitate for independence until the Japanese invaded and occupied the country in 1942.

Initially hailed by many Indonesian nationalists as liberators, the Japanese established themselves as vicious overlords, and the East Indies' dreams of independence vanished into the fog of WORLD WAR II. Then, in late 1944, as the war was clearly turning against it, Japan announced its intention to prepare the Indies for self-government. On the eve of the Japanese surrender, Teruchi Hisaichi (1879–1945), commander of Southeast Asia, summoned Sukarno and Hatta to Saigon, where he

promised them an immediate transfer of independence. Pressured by their own followers to act, Sukarno proclaimed independence—after confirming the news of the Japanese surrender—early on the morning of August 17, 1945. The proclamation sparked a series of uprisings that worried the British who arrived to accept the Japanese surrender. As the self-proclaimed government began to draft a constitution and install an ad hoc parliament called the Central Indonesian National Committee under President Sukarno, the Netherlands refused to recognize the independence of the East Indies. In conjunction with the British, Dutch troops landed at Batavia (Jakarta, Java) with the dual mission of disarming and repatriating Japanese soldiers still in the islands and restoring the status quo ante bellum (the way things were before the war), that is, a Dutch government in the East Indies.

The Dutch-British force soon found itself under attack by the Indonesian People's Army, which was concentrated in Bandung and Surabaya, Java. The violence was sufficient to prompt the Netherlands to enter into negotiations with the Indonesians, producing the Cherbong Agreement of 1946, whereby the Netherlands allowed the creation of a United States of Indonesia as a dominion under the Netherlands Crown. The agreement was signed, but soon sharp differences of interpretation broke out and were expressed in violence in Java and elsewhere. On July 20, 1947, Dutch troops (the British left in November 1946) cracked down with a "police action" of considerable brutality—and effectiveness.

The republicans—those who favored an independent Indonesian democracy—were forced to fight not only the Dutch but also Muslim extremists, who wanted to create a fundamentalist Islamic state. Into this melee was added the communist People's Democratic Front. The republican government was able to crush the communists at Madioen, Java, in September 1948, but failed in its resistance against the Dutch, who captured the rebel capital, Jogjakarta, during the same year and placed key republican leaders under arrest. In the villages, however, at the grass-roots, guerrilla resistance to Dutch occupation continued.

The Dutch eventually realized the impracticability of suppressing the republican movement. From August 23 to November 2, 1949, Dutch representatives met with Indonesians at The Hague and negotiated the transfer of full sovereignty to Sukarno's United States of Indonesia. Guerrilla warfare between Indonesian republicans and the Islamic fundamentalists continued, especially after 1950, when the nation officially became the Republic of Indonesia.

Indonesian Wars (1957–1962)

PRINCIPAL COMBATANTS: Indonesia vs. the Netherlands

PRINCIPAL THEATER(S): West New Guinea

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Indonesia wanted possession of Dutch-held West New Guinea (Irian Jaya)

OUTCOME: Negotiated peace included an orderly transfer of West New Guinea from Dutch authority, through the agency of the United Nations, and ultimately into Indonesian authority.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Indonesian-Dutch Agreement of August 15, 1962

In 1949, when Indonesia achieved full independence from the Netherlands (see *INDONESIAN WAR OF INDEPENDENCE*), Achmed Sukarno (1901–70) was named president for life. His rule was dictatorial and gave rise to a number of military revolts in 1957. Sukarno's response was swift and decisive. He used the army to crush these rebellions; in 1959, he dropped all pretense of democratic rule by dissolving the assembly and giving himself full dictatorial powers. He also aligned the government increasingly with the communists.

In the meantime, while bringing iron-fisted order to the new republic, Sukarno called on the United Nations to intervene in resolving the republic's dispute with the Netherlands over possession of West New Guinea, which was still under Dutch rule, but which Indonesia claimed as the state of Irian Jaya. When the UN failed to reach a solution to the crisis, Sukarno called a general strike against all Dutch-owned businesses in Indonesia, expelled Dutch nationals, and seized and nationalized many Dutch holdings. Immediately, some 40,000 Netherlanders fled the country, and the army was drawn into the management of their abandoned enterprises. As a result, military entrepreneurs would come to play an ever-increasing role in the economic affairs of Sukarno's Indonesia.

Meanwhile, under the pressure applied by Sukarno, the Netherlands opened talks with Indonesia concerning West New Guinea. When the negotiations broke down, the Dutch prepared defenses in West New Guinea. Indonesian paratroopers landed in 1962 and coordinated with indigenous guerrillas an offensive against the Dutch. The Dutch responded with stiff and effective resistance. The violence rapidly escalated, and, in a bid to forestall all-out war, both the United States and the United Nations sponsored new peace talks. Negotiations led to the

602 Indo-Pakistani War (1947–1948)

Indonesian-Dutch Agreement of August 15, 1962, by which the Netherlands agreed to transfer administration of West New Guinea to the United Nations, which would later transfer it to Indonesia. The final transfer occurred in 1963.

Indo-Pakistani War (1947–1948)

PRINCIPAL COMBATANTS: India vs. Pakistan

PRINCIPAL THEATER(S): Jammu and Kashmir

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: India and Pakistan disputed governance of Jammu and Kashmir.

OUTCOME: A 1948 cease-fire created a de facto partition of the region at the current battle line.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: India, 1,500 killed, 3,500 wounded, 1,000 missing; Azad Kashmir and Pakistan, 1,000 killed; Pathan tribesmen and Kashmir; civilians, 5,000 killed

TREATIES: United Nations cease-fire, April 1948

The **INDIAN CIVIL WAR** resulted, in part, in the partition of the Indian subcontinent into Hindu-dominated India and Muslim-dominated Pakistan; however, Jammu and Kashmir (commonly known as Kashmir) remained an independent kingdom bordering West Pakistan. Its situation was complicated by the fact that, while its population was chiefly Muslim, its maharaja was a Sikh named Hari Singh (r. 1925–48). He wished the nation to remain both independent and neutral, and while this was in essence acceptable to Kashmir's Hindu-Muslim national conference, the members wanted to bring democracy to the country first. Tensions exploded in October 1947 when the Pathan Muslims of Poonch rebelled against the Hindu landowners of Kashmir. On October 22, Pakistan sent troops into the region, brutally taking Muzaffarabad and Uri, burning a swath of destruction wherever they marched, and killing Hindu civilians. As the troops closed in on the Kashmiri capital of Srinagar, the Kashmiri ruler summarily ceded

Jammu and Kashmir to India on October 27, 1947, simultaneously pleading for Indian military aid. In response, Sikh troops entered the region and pushed the invaders back toward the Pakistani border. Pakistan prepared to send more troops to fight it out in Pakistan, but the British officers who commanded the Pakistani army in the field threatened to resign. Pakistan then withdrew its regular army and sent instead “volunteers” to defend what they now called *Azad Kashmir*—Free Kashmir. This incursion created a flood of Hindu refugees pouring out of Kashmir and greatly exacerbating the ongoing civil war in India.

As the war between Pakistan and India and the civil war in India both escalated out of control, the father of Indian independence, Mohandas Gandhi (1869–1948) embarked on a campaign to bring about Muslim-Hindu conciliation and harmony. In the midst of this, a Hindu extremist assassinated the great leader, on January 30, 1948, an action that suddenly brought a degree of unity to the warring factions. More fighting broke out in April 1948, but United Nations intervention brought a cease-fire after three weeks. The battle line as of April 1948 became a de facto border in the region between Pakistan and India as the two sides held to an uneasy armistice.

Indo-Pakistani War (1965)

PRINCIPAL COMBATANTS: India vs. Pakistan

PRINCIPAL THEATER(S): Rann of Kutch and Pakistan-India border region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: India feared that Pakistan's friendship with China would compromise the integrity of Kashmir's border with China.

OUTCOME: A cease-fire reestablished earlier battle lines, and India renewed its promise of a Kashmiri plebiscite.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: India, 900,000; Pakistan, 233,000

CASUALTIES: India, 3,712 killed, 7,638 wounded; Pakistan, 1,500 killed, 4,300 wounded

TREATIES: Conference at Tashkent, 1966

In 1958, General Muhammad Ayub Khan (1907–74), with substantial military backing from the United States, seized power in Pakistan. By the time India's powerful first prime minister, Jawaharlal Nehru (1889–1964), died and was

succeeded by the lackluster Lal Bahadur Shastri (1904–66), Ayub was ready to test India's frontier outposts in Kashmir. Since the INDO-PAKISTANI WAR (1947–1948), the Kashmir region had existed as a state divided between Pakistan and India. About a third of it was under Pakistani administration as *Azad Kashmir*—Free Kashmir—and about two-thirds was occupied by Indian forces—despite an Indian promise, never fulfilled, of a Kashmiri plebiscite. Always a flashpoint, Kashmir became a renewed cause of conflict when Ayub signed a treaty of friendship with China. As India saw it, this put in jeopardy the boundary between Kashmir and China. Fevered talks began between India and Pakistan, but predictably broke down, and a border war flared in the Rann of Kutch during April 9–30, 1965. Pakistan's American-supplied Patton tanks rolled to an easy victory over India's British Centurions, and the country's new prime minister quickly turned to the United Nations for succor. The United Nations engineered a cease-fire and both sides withdrew their troops.

Despite this mutual acceptance of the borders established in 1948, Pakistan believed that it had actually won the war and that India's army was weak. At least, those were the reasons Ayub's foreign minister, Zulfikar Ali Bhutto (1928–79), gave when he argued for another campaign in Kashmir during the summer of 1965. Pakistan launched "Operation Grand Slam"—aimed at cutting off Kashmir along its narrow south neck before India could respond with its ragtag tanks—in mid-August.

Now, the long-simmering dispute rapidly escalated into a major war on September 6, 1965, when India sent 900,000 troops across the border toward Lahore, Pakistan. The city was in range of the Indian tanks when the United Nations was able to broker a new cease-fire on September 27—but not before a large number of Pakistani tanks had been destroyed and a number of troops killed.

During the cease-fire, both sides withdrew to the battle lines established before August. The cease-fire also kept China out of the war, and it gave sufficient breathing space for mediation. The United States, Britain, and the Soviet Union met at a Tashkent conference sponsored by the Russians, which resulted in a pledge of cooperation and a new Indian promise of a Kashmiri plebiscite. Unfortunately, Indian prime minister Lal Bahadur Shastri died just after the conference. His successor, Indira Gandhi (1917–84), followed through on most of Shastri's promises, but not all of them. Most significantly, the plebiscite remained unimplemented. War would be renewed in 1971 (see INDO-PAKISTANI WAR, 1971).

Indo-Pakistani War (1971)

PRINCIPAL COMBATANTS: India vs. Pakistan

PRINCIPAL THEATER(S): West Pakistan and East Pakistan (Bangladesh)

DECLARATION: India on Pakistan, December 3, 1971

MAJOR ISSUES AND OBJECTIVES: India sought to establish the independence of Bangladesh from Pakistan.

OUTCOME: Bangladesh gained its independence, at great cost to Pakistan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: India, unknown; Pakistan, 90,000 POWs

TREATIES: Cease-fire of December 17, 1971

In December 1970 Pakistan held its first general elections since independence in 1947. President Muhammad Ayub Khan (1907–74), who seized power in a military coup in 1958, had resigned in 1968 and passed the reins of power on to General Agha Yahya Muhammad Khan (1917–77). When the Awami League, headed by East Pakistan's popular Bengali leader, Sheikh Mujib (Mujibur Rahman) (1920–75), won a majority of seats in the new assembly two years later, the West Pakistan general simply turned his back on his nation's first-time voters. He refused to honor the election or even to lift the martial law imposed back when Ayub initially seized power.

Negotiations between General Yahya and the duly elected Mujib failed to lead anywhere when the latter demanded virtual independence for East Pakistan. By March 1971, the talks had collapsed, and at the end of the month Yahya directed a massacre in Dhaka, in East Pakistan. During the slaughter, his military arrested Mujib and spirited him by air to West Pakistan. But the Pakistanis failed to silence Mujib before he called upon his followers in the east to rise up, seize power, and declare their independence as Bangladesh, which means "Land of the Bengalis."

These events sparked a massive surge of some 10 million refugees from East Pakistan—Bangladesh—into West Bengal, India, one of the most impoverished districts of one of the world's poorest nations. Over the next eight months the Indian government appealed to the world for assistance in coping with the refugee crisis but received little help. Worse, U.S. president Richard M. Nixon (1913–94) took a hard line against India and in favor of the U.S. client state, Pakistan. Nixon declared that the Pakistani civil war had resulted from Indian efforts to undermine and destabilize its neighbor. Accordingly, in the midst of the refugee crisis, Nixon cut off India's American credit.

Thus encouraged, Pakistan sent air force planes after the monsoon season to attack Indian airfields in Kashmir on December 3, 1971. This triggered a 12-day war in which India seized and held the initiative. Indian troops

invaded both West Pakistan and East Pakistan and marched virtually unopposed to the gates of Dhaka. On December 6, 1971, India recognized Bangladesh as a newly independent nation, then, on December 16, launched a combined ground and air assault on Dhaka. The city fell to Indian forces, and Pakistani troops surrendered in Bangladesh. Some 90,000 Pakistani soldiers became Indian prisoners of war, prompting Pakistan to agree to a general cease-fire on December 17, 1971. Mujib, released by the Pakistanis, flew home a hero to become the first prime minister of the People's Republic of Bangladesh in January 1972.

India was able to achieve a triumph so swift and stunning because of military and diplomatic backing from the Soviet Union, to which India had naturally turned, given the American infatuation with Pakistan. Under the 1971 Treaty of Peace, Friendship, and Cooperation, the USSR provided India with the firepower it deployed to win the war. Thus, not only did the victory give birth to Bangladesh, it made India the dominant power in South Asia, and caused its foreign policy—still officially non-aligned—to tilt more dramatically toward the Soviet Union.

Richard Nixon was not ready to give up so easily. He dispatched a nuclear-armed aircraft carrier from the Pacific Fleet, purportedly to help evacuate refugees from Dhaka, but in truth to stiffen the backs of the Pakistani military leaders. The war ended before the U.S. Navy could do much of anything, but India took notice. By 1972, India had launched its own nuclear program in response to this American nuclear saber rattling, making the entire world a much more dangerous place.

Although the United States extended aid to Pakistan, the nation was devastated by the brief war. With the loss of Bangladesh, Pakistan's population was halved, and its economy, never strong, was on the verge of total collapse. The United States held off recognizing Bangladesh until April 4, 1972, and Pakistan recognized its independence, grudgingly, two years later.

Ionian Revolt (c. 500–493 B.C.E.)

PRINCIPAL COMBATANTS: Persia vs, the Ionian city-states (with Athenian and Eretrian aid)

PRINCIPAL THEATER(S): Ionia (Asia Minor)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Ionians sought independence from oppressive rule by Persian-sponsored tyrants.

OUTCOME: After initial triumph, the rebellion was crushed and Ionia retaken by the Persians.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Greek city-states of Ionia (the region along the coast of Asia Minor in present-day Turkey) were, during the sixth century B.C.E., under the ruthless domination of Persia and under the immediate government of Persian puppet tyrants. About 500 B.C.E., the Ionian port city of Miletus rose up against the tyranny and was eagerly assisted by Athens and Eretria, Sparta demurring. The revolt in Miletus soon spread to other city-states in Ionia, which not only removed the Persian tyrants, but, in 498, drove Artaphernes (r. 513–493), the Persian satrap (governor of the region), out of his capital, Sardis. The rebels then sacked and destroyed the city.

The rebels, poorly organized, failed to capitalize on their victories. After ousting the satrap and destroying the capital, they dispersed, making it easy for fresh Persian forces to retake all of the Ionian city-states. The land battles ended by 499. At sea, the culminating battle took place in 494, when the Persians blockaded Miletus. Hoping to raise the blockade, a Greek fleet of 353 Lesbian, Samian, and Chian vessels attacked the Persian fleet off the island of Lade. From the beginning, it was a desperate effort, as the allied Greek fleet was significantly outnumbered. Worse, panic-stricken Samians and Lesbians deserted the attack at the last minute, leaving the remaining Greek ships vulnerable. The Greek fleet was destroyed, and the Persians landed at Miletus, sacking and destroying the city. With this, the Ionian revolt was crushed, leaving Artaphernes' brother and Persian king Darius (c. 558–486) free to punish Athens and Eretria for their complicity in the revolt (see GRECO-PERSIAN WARS).

Iranian Revolution (1979)

PRINCIPAL COMBATANTS: Iranian revolutionaries vs. the shah of Iran

PRINCIPAL THEATER(S): Iran

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A coalition of liberals and conservatives united under the Ayatollah Ruhollah Khomeini to overthrow the government of the shah of Iran.

OUTCOME: With the shah in self-imposed exile, the government fell and Khomeini established an Islamic republic in its place.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Millions of Iranian demonstrators; the shah's army declared neutrality and refused to fight

CASUALTIES: At least 10,000 opponents of the Khomeini regime were killed in rioting or executed by 1983.

TREATIES: None

Shah Muhammad Reza Pahlavi (1919–80) governed Iran as an autocrat and even a dictator, aligning himself with the Western democracies, but keeping order through a loyal corps of secret police. Liberal and intellectual elements in Iran bridled under his repressive rule; the most conservative, fundamentalist Islamic elements also objected to the shah, not necessarily because of his repressiveness, but for his pro-Western stance. In mutual opposition to the shah, the liberals and conservatives found common ground and rallied behind an elderly religious leader living in Parisian exile, Ayatollah Ruhollah Khomeini (1902–89). By the end of the 1970s, rioting had compelled the shah to seek refuge in Egypt in January 1979. He named a regency council to rule during his absence, a sign of weakness that the exiled Khomeini was quick to exploit. From Paris, Khomeini urged the overthrow of the government. Demonstrations assumed spectacular proportions, often massing more than 1 million marchers. When the army refused to fight the protesters, Khomeini returned to Iran, and by February 1979, the government had collapsed. In its place, Khomeini declared Iran to be an Islamic republic and ruled through a revolutionary council. A reign of terror ensued, in which thousands of “subversives” and “counterrevolutionaries” were paraded through show trials and led to imprisonment or execution.

As the ayatollah's regime grew increasingly repressive, dissidents risked their lives to protest. Women, who objected to being repressed by a return to Muslim fundamentalism, were in the forefront of the protests, as were ethnic groups such as the Kurds. Yet Khomeini pointed to the results of a popular referendum, which, he said, revealed that 99 percent of the people of Iran supported his revolution and reforms. Nevertheless, disorder and rebellion increased, prompting the revolutionary council to create the Army of the Guardians of the Islamic Revolution on May 6, 1979. This new force moved even more vigorously against dissidents, and the number of trials and executions increased. Iran became increasingly cut off

from the West—and also from the rest of the Islamic world in the Middle East.

Americans became instantly aware of the magnitude of the Iranian revolution on November 4, 1979, when Iranian “students” stormed the U.S. embassy at Tehran and took hostage the embassy staff, 66 people. The mass abduction had been triggered when President Jimmy Carter (b. 1924) allowed the shah, who had been diagnosed with cancer, to enter the United States for treatment. The president refused to yield to the terrorists' demands to surrender the shah to them; however, the shah left the United States voluntarily early in December. Fifty-three hostages remained in captivity; 13 African Americans and women had been released on November 19 and 20. President Carter authorized a U.S. Army Special Forces unit to attempt a rescue on April 24, 1980, but a combination of mechanical problems with helicopters and other equipment and human blunders caused the mission to be aborted. The failed mission did not result in harm to the hostages, but it was a great embarrassment to the United States, and it served to embolden the Iranians.

It was not until November 1980 that the Iranian parliament proposed conditions to secure the release of the hostages. Among these was a U.S. pledge not to interfere in Iranian affairs, an agreement to release Iranian assets frozen by presidential order in the United States, the lifting of all U.S. sanctions on Iran, and the return of the shah's property to the people of Iran. An agreement was signed in January 1981, but Khomeini, as a gesture of insult to President Carter, delayed the release of the hostages until January 20, the day Carter left office and Ronald Reagan (1911–2004) was inaugurated. President Reagan asked Carter to serve as a special envoy to greet the returning hostages at a U.S. air base in West Germany. They had been held captive for 444 days.

Iran-Iraq War (1980–1988)

PRINCIPAL COMBATANTS: Iraq vs. Iran

PRINCIPAL THEATER(S): Iraq and Iran

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: On September 21–22, 1980, Saddam Hussein launched Iraqi warplanes and troops on an invasion of Iran in an attempt to topple the regime of the Ayatollah Khomeini.

OUTCOME: Both sides claimed victory, but with the United States helping to tip the balance in Iraq's favor, Khomeini's forces suffered more damage, whereas Hussein came out of the war somewhat poorer but more inclined to exercise his muscle in the region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Iraq: 500,000 men; Iran: 2 million

CASUALTIES: Iran, 262,000 killed, 600,000 wounded, 45,000 captured; Iraq, 105,000 killed, 400,000 wounded, 70,000 captured

TREATIES: None

Iraq and Iran had long disputed control of a 120-mile-long tidal river, the Shatt al-Arab, which flows past the important Iraqi port of Basra and Iran's Persian Gulf port of Abadan. Following the IRANIAN REVOLUTION, which overthrew Shah Muhammad Reza Pahlavi (1919–80) and elevated the fundamentalist Shi'ite Ayatollah Ruhollah Khomeini (1902–89) to power, the dispute grew into a holy war of terror aimed against Iraq's president, Saddam Hussein (b. 1935). Members of the Iranian terrorist group Al Dawa ("the Call") targeted Hussein and also made an attempt on the life of Iraq's deputy premier. Iran backed civil disturbances in Baghdad, attacked Iraq's embassy in Rome, attempted to incite Iraq's Shi'ite minority to rebellion, and shelled Iraqi border towns, killing civilians. At last, during September 21–22, 1980, Saddam Hussein launched fighter planes and ground troops against Iran, hoping for a quick victory, which would bring an end to the Khomeini regime.

Initially, Iraq did deal Iran severe blows, sinking gunboats in the Shatt al-Arab and destroying airfields and oil refineries. But Khomeini, whose revolutionary nation was by no means unified behind him, saw the attacks as an opportunity to bring his people together against a common threat. Accordingly, Khomeini called for an all-out military response, including suicidal attacks on the more technologically advanced Iraqi forces, which were equipped with the latest Soviet-built tanks, missiles, and artillery as well as French-made fighter planes. The Iraqi military, however, with some 500,000 men under arms was vastly outnumbered by the Iranians, who mustered an ill-equipped army of 2 million.

The result was neither the quick victory Hussein had hoped for nor the overwhelming victory Khomeini had urged, but a long stalemate that evolved into one of the bloodiest, most extended, and most futile wars ever fought in this volatile region. Iraq threatened to disrupt oil shipments through the Strait of Hormuz in the Persian Gulf, and both the United Nations and an Islamic conference, including most of the important powers in the Middle East, tried but failed to put a stop to the war.

The Iraqis soon found themselves on the defensive, hunkered down behind fortifications of earthworks and

sandbagged bunkers stretching across a 300-mile front as Iran threw wave after wave against them, using everything from regular army troops to teen-aged Revolutionary Guards, inflicting heavy losses while incurring even heavier losses. A measure of Iran's fanaticism came in March 1984, when 10,000 children were roped together and sent into an Iraqi minefield ahead of assault troops. Iraq responded with chemical warfare, launching mustard gas shells against the children—something that had not been used (except by Iraq against rebellious Kurdish tribesmen) since WORLD WAR I. Two years later, Iraq used nerve gas as well as mustard gas against the Iranians.

Because neither side proved capable of mounting a decisive offensive, the war settled into a contest of attrition and great suffering. But it was precisely in the attrition that Saddam Hussein found his secret weapon: the willingness to endure substantial losses and take great punishment while exhausting the enemy. Both powers at length tried to cut the other's economic lifeline, which in the Middle East meant bombing oil shipments. Their attacks against various tankers plying the Gulf dangerously escalated the war of attrition, and the United States—already inclined to hold Iran responsible for much of the terrorism against Americans in the region—eventually tilted the political balance intentionally toward Iraq. Promising to keep the Persian Gulf open to international trade, the Americans made clear they intended to safeguard the main source of oil for Western Europe and Japan.

For now, Hussein's military was like some third-rate boxer, outclassed but able to take punishment until his opponent fell from sheer exhaustion. With some trepidation, the United States began selling military equipment to Iraq, hoping, like Hussein, that the Khomeini regime would fall. The quasi-alliance between the two countries was tested in May 1987 when an Iraqi fighter struck an American destroyer, the USS *Stark* with a French-made Exocet anti-ship missile. Although the United States officially accepted Iraq's explanation that the attack had been an accident, President Ronald Reagan (1911–2004) soon acted to "reflag" Kuwaiti oil tankers leaving the Gulf—temporarily giving them U.S. registry—to legitimate armed escorts.

In general, the result was a buildup of U.S. warships in the region. On April 14, 1988, one of the vessels, the USS *Samuel B. Roberts*, escorting a reflagged Kuwaiti tanker, struck an Iranian mine. In response, President Reagan authorized Operation Praying Mantis, a combined raid by army helicopters and marine commandos, supported by naval gunfire and air strikes, against Iranian oil facilities and military installations. The Iranians threw their small naval forces—four combat ships and a few patrol boats—against the U.S. fleet in the Gulf. Following a 10-hour battle, Iran lost three of its principal ships and suffered severe damage to the fourth.

Defeated at sea, Iran launched a missile attack against Baghdad, using 60 Soviet-made "Scud" medium-range ballistic missiles. Iraq retaliated by launching more than 200 Scuds in what came to be called the Battle of the Cities. The missile battles and the earlier naval losses were the prelude to a campaign the Iraqis called "Tawakalna Ala Allah," a final offensive in which Hussein laced his regular troops with 100,000 crack Republican Guards in an invasion of Iran. The invasion began on April 17, 1988, and the long and costly war was over within four months.

Officially, both sides claimed victory, but, in fact, Iran emerged from the conflict with its armed forces shattered and its people exhausted, whereas Iraq, despite the heavy losses it had incurred, was strengthened in its resolve to prevail at any cost. Tactically, Saddam Hussein had lost the war, yet, for all practical purposes, he had prevailed, and that taught him a style of international thuggery that would prompt him to invade Kuwait and touch off the PERSIAN GULF WAR, where the United States, determined to protect the region's oil, would itself fight Iraq.

Irish Convict Revolt See AUSTRALIAN IRISH CONVICT REVOLT (1804).

Irish Raids in Britain (395–405)

PRINCIPAL COMBATANTS: Irish raiders vs. Britain and Wales

PRINCIPAL THEATER(S): Roman Britain and Wales

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The raiders wanted goods and slaves.

OUTCOME: When northern Wales mounted an effective defense, the raiding ended.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Roman Britain was the target of raids by Saxons and Picts as well as from Ireland, under the leadership of Niall (d. 405) of the Nine Hostages. His bands attacked from Strathclyde into Wales, concentrating on the coast and abducting thousands of prisoners as slaves. Among the

captives was one Patricius, who was abducted about 400, pressed into service as a swineherd, subsequently escaped, then returned to Ireland as the missionary Saint Patrick (c. 389–c. 461).

Around 400, Gwynedd, the northernmost Welsh kingdom, mounted an effective defense against the Irish raiders and expelled them. This brought raiding to an end by 405.

Irish Rebellion, Great (1641–1649)

PRINCIPAL COMBATANTS: Irish rebels vs. England

PRINCIPAL THEATER(S): Ireland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Irish rebelled against English despotism.

OUTCOME: The war ended with an Irish victory over English forces, but, subsequently, Oliver Cromwell brutally suppressed the rebellion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At Rathmines, Irish rebels, 5,000; English and royalists, 19,000

CASUALTIES: At Rathmines, English and royalists, 4,000 killed or wounded, 2,000 captured; Irish casualties unknown

TREATIES: None

In 1641, 40 years after TYRONE'S REBELLION, the Irish rose once again in revolt, first in Ulster, then throughout the entire island. Some 3,000 English and Scottish settlers were killed in the initial uprising on the Plantation lands, though the Puritan-dominated English Parliament wildly inflated the figure in its propaganda to hundreds of thousands massacred by Catholic savages and refused to entrust King Charles I (1600–49) with an army to put down the rebellion. Fearing that Charles would not only make peace with the Irish, but use them against the Puritans in the First (Great) ENGLISH CIVIL WAR that broke out in 1642, Parliament recruited volunteers at large to quell the revolt, promising them Irish lands in return for their service. Parliament also sent Scottish troops into the country, which, by this time, had fallen almost entirely under the control of the rebels, who established a provisional government in Kilkenny. The English forces were at first commanded by James Butler (1610–88), duke of Ormonde and lord lieutenant of Ireland, whom King Charles ordered to negotiate an end to the rebellion. Both the Parliament in London and a newly constituted parliament in Dublin rejected the terms produced by the negotiations. In 1645, with Charles

in the clutches of an Oliver Cromwell (1599–1658)–dominated Parliament, Ormonde himself now was leading the rebellion as the head of the Confederacy, an alliance of all Royalists in Ireland. Some among the Irish chose not so to be led, such as Murrough O’Brien, baron of Inchiquin (d. 1551), who was an Irish Protestant stationed in Munster. He not only rejected the leadership of the Confederacy, but also laid waste to Munster for Parliament, which earned him the everlasting spite of his fellow Irishmen and the memorable if somber sobriquet “Murrough of the Burnings.” Some, however, such as Owen Roe O’Neill (1582–1649), were simply pure Irish Catholic rebels and disliked riding with their former enemies, the English overlords. O’Neill, the nephew of Hugh O’Neill, earl of Tyrone (1540–1616), and a veteran of the Spanish army, kept his Ulster followers from joining Ormonde. Then, in 1647, for no discernible reason, Baron Inchiquin switched sides and joined the duke of Ormonde.

A turning point came in 1649, when Colonel Michael Jones landed with 2,000 troops, expelled Ormonde from Dublin and defeated him and his Royalist-Catholic forces at the Battle of Rathmines on August 2. Ormonde’s power was broken, but there remained a number of rebel strongholds either in Confederate or Irish hands. It was to capture these and completely crush the rebellion that Oliver Cromwell set sail for Ireland on August 13, 1649 (see CROMWELL’S IRISH CAMPAIGN).

Irish Tithe War (1831)

PRINCIPAL COMBATANTS: The Irish “Catholic Association” vs. the British government in Ireland

PRINCIPAL THEATER(S): Ireland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Catholic Association sought relief from an Anglican tithe imposed on them.

OUTCOME: The tithe was partially rescinded.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: At least 22 protesters and 26 police officials were killed.

TREATIES: None

Irish Catholics bridled under the law that forced them to pay tithes to the Church of England. A group of them banded together in the Catholic Association, founded in 1823 by Daniel O’Connell (1775–1847), and began a campaign of resistance to the tax.

Using techniques of passive resistance, the Catholic Association succeeded in crippling the Anglican Church in Ireland. But the group’s protests turned violent in 1831. At Newtownforbes, Ireland, a dozen men protesting the impoundment of cattle were killed by British soldiers. At Carrickshook, Irish farmers used their farm implements to kill 18 police officers. At Castlepollard, police officers shot 10, and at Gortroche, a Catholic priest ordered his parishioners to fire on officials: eight died, and another 13 were wounded. The British army briefly redoubled its collection efforts but soon withdrew. At this, the Catholic Association returned to predominantly peaceful methods of resistance, and the so-called Tithe War came to an end following new legislation partially abolishing the tax in 1836.

Irish War (1689–1691)

PRINCIPAL COMBATANTS: Irish Jacobites (with French allies) vs. an Anglo-Dutch force in support of William and Mary

PRINCIPAL THEATER(S): Ireland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Irish Catholics aided James II in his bid to regain the English throne.

OUTCOME: The Jacobites were suppressed but granted amnesty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Anglo-Dutch army, 36,000; Irish-French army, 28,600

CASUALTIES: At Londonderry, Anglo-Dutch: 3,000 killed or wounded; Irish-French, 5,000 killed or wounded. At Newtown Butler, Irish-French, 2,000. At Boyne River, Anglo-Dutch, 500; Irish-French, 1,500. At Limerick, Anglo-Dutch, 2,000. At Aughrim, Anglo-Dutch, 1,600 Irish-French, 7,000.

TREATIES: Treaty of Limerick, October 3, 1691

When King James II (1633–1701) of England was forced off the throne in 1688 by the GLORIOUS REVOLUTION, he turned to the Irish for aid in regaining power. The Irish, having suffered at the hands of Oliver Cromwell (1599–1658) (see CROMWELL’S IRISH CAMPAIGN) from 1649 to 1650, were willing to help. In 1689, therefore, when James landed in Ireland with soldiers and cash supplied by France’s Louis XIV (1638–1715), he was acknowledged king by an Irish parliament convened in Dublin. The parliament confiscated

Protestant lands in Ireland, assembled an Irish-French army, and advanced on Londonderry, a predominantly Protestant town that had affirmed loyalty to King William III (1650–1702) and Queen Mary II (1662–94). The Irish-French army laid siege against Londonderry for 15 weeks, but the town held firm. Then, in 1690, William led an Anglo-Dutch army against James, landing at Carrickfergus and marching south with 35,000 troops to the Boyne River, which marked the battle line held by James's army. The Irish-French army was supported by the Irish Jacobite Patrick Sarsfield, Earl of Lucan (d. 1693).

On July 11, 1690, William sent a detachment under Duke Friedrich Herman von Schomberg (1615–90) to cross the Boyne three miles west of Drogheda. Simultaneously, he dispatched another detachment to cross the river upstream. James's army was flanked, and he was routed, losing more than 1,000 men. James fled the field to France, and William returned to England, leaving his army under the command of the Dutch-born general Godard van Reede, Heer van Ginkel (1644–1702/1703). After completing the conquest of Athlone, along the upper Shannon River, Ginkel marched west and, on July 12, 1691, engaged the rebel forces at Aughrim, about 30 miles east of Galway. The Irish-French forces were led by the Earl of Lucan and French general Charles Chalmont, marquis de Saint-Ruth. Although they fought valiantly, Ginkel out-generaled his rivals and managed to turn the rebel flank. After Saint-Ruth fell when Ginkel's forces stormed the defensive entrenchments, the rebels fled the field, making no attempt to fight a rearguard action and thereby incurring heavy losses numbering in the thousands. In fact, Aughrim was the bloodiest battle ever fought on Irish soil. One general, three major-generals, seven brigadiers, 22 colonels, 17 lieutenant-colonels, and over 7,000 others were killed, and so devastating were the losses that the Jacobite rebellion in Ireland was effectively finished (see JACOBITE REBELLION [1689–1690]).

Nevertheless, after the battle, Lucan kept some hope alive when he holed up in Limerick, headquarters of the Jacobite rebellion. Ginkel laid siege against Limerick, and, on October 3, 1691, the garrison there surrendered. In the so-called pacification of Limerick, King William, always a practitioner of toleration, allowed the Irish Jacobites to take an oath of allegiance to William and Mary or to leave the country—transportation to France was provided. On their own, however, the Protestant Irish parliament passed a series of anti-Catholic laws, which amounted to state-sanctioned persecution. Still, following the treaty of Limerick, which Lucan signed on October 3, 1691, a century of peace ensued in Ireland.

Iroquoian Beaver Wars *See* BEAVER WARS.

Iroquois-French Wars (1642–1696)

PRINCIPAL COMBATANTS: The Iroquois tribes vs. French settlers and traders

PRINCIPAL THEATER(S): Region of St. Lawrence and Ottawa rivers; Montreal area

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In part, Iroquois desire for vengeance against the French; in part, Iroquois strategy to eliminate trading competition

OUTCOME: Despite a 1701 treaty, fighting remained chronic.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Variable

CASUALTIES: Unknown

TREATIES: 1701 treaty with France, pledging Iroquois neutrality in French and English disputes

In 1609, the French explorer Samuel de Champlain (c. 1567–1635), in company with a Huron Indian war party, encountered, engaged, and killed some Iroquois Indians. This incident created bad blood between the Iroquois and the French, and after Champlain died in 1635, Iroquois raiders set about terrorizing French settlements along the St. Lawrence and Ottawa Rivers, including the Jesuit missions. The Hurons, allies of the French, were also targets of Iroquois aggression and were all but wiped out in the IROQUOIS-HURON WAR from 1648 to 1650.

After the Iroquois defeated the Hurons, they established bases of operation at various strategic points along the St. Lawrence and Ottawa Rivers. From these centers, they attacked the French by water as well as by land. Traditionally, most Indian tribes fought only in the warmer seasons and then only during the day. Remarkably, the Iroquois fought relentlessly and continuously, in all seasons, sometimes attacking by day, and sometimes by night. Reeling from ceaseless attack, the French repeatedly attempted to come to peace terms with the Iroquois. Brief truces were concluded but quickly broken. Moreover, Dutch traders at Fort Orange (Albany, New York), rivals of the French for the Indian trade, ensured that the Iroquois were well supplied with weapons and ammunition. The Dutch actively worked to perpetuate the war.

By the mid-17th century, the issue had gone far beyond mere vengeance for the deeds of Samuel de Champlain. The war between the Iroquois and the French was a struggle for control of the profitable beaver fur trade. The

610 Iroquois-Huron War

Iroquois objective was to monopolize the trade, diverting it from French outposts exclusively to the Dutch at Fort Orange (see BEAVER WARS, of which the Iroquois-French Wars may be seen as an aspect). At this point, the Iroquois had carried the war almost to Montreal, and it was not until 1666 that soldiers were sent from France to take the offensive.

The arrival of French regulars turned the tide of the war, pushing the Iroquois not only out of Canada but into their homelands, where they were repeatedly defeated. Within months, it was the Iroquois who sued for peace. The truce hammered out lasted nearly two decades, until French settlement began to expand westward. This aggravated chronic, violent rivalry with the English, who were allied with the Iroquois. A new French governor, the marquis de Denonville (d. 1710), arrived in 1685 and decided that the time was ripe for an offensive move against the Senecas, westernmost of the Iroquois tribes. The governor led a large force into western New York and destroyed four Seneca villages in 1687. Far from subduing the Senecas, however, this action moved them to vengeance. In 1689, Seneca warriors advanced down the St. Lawrence River in large numbers to attack the French-Canadian settlement of Lachine, which was all but destroyed, many of its inhabitants brutally massacred. From the site of this victory, Seneca war parties fanned out to terrorize the countryside as far as Montreal.

The Senecas returned repeatedly to attack Lachine. They also targeted other French forts, towns, and small settlements. When the comte de Frontenac (1620–1698) returned as governor of New France in 1689, he devoted himself to an organized campaign against the Iroquois generally and the Seneca in particular. Peace was restored in 1696, and, in 1701, the Iroquois signed a treaty with France, by which they pledged neutrality in the various colonial wars between the French and English, which culminated in the FRENCH AND INDIAN WAR. No treaty, however, could repair the damage the Iroquois-French Wars had done to Iroquois unity. Despite the Iroquois pledge to maintain a policy of neutrality, individual Iroquois tribes often violated these terms, siding with the English, in the empty hope of regaining the military and economic dominance they had formerly enjoyed in western New York and the Ohio country.

Iroquois-Huron War (1648–1650)

PRINCIPAL COMBATANTS: The English-allied Iroquois vs. the French-allied Huron

PRINCIPAL THEATER(S): Ontario, Canada

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Traditional enmity and competition for trade

OUTCOME: Great reduction of the Huron tribe

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Huron Indians, who, in the 17th century, inhabited present-day Ontario, Canada, were longtime trading partners with the French and traditional enemies of the Iroquois. In 1648, the Dutch traders at Fort Orange (Albany, New York), desiring to preempt French trade, began supplying the Iroquois—their chief trading partners—with guns and ammunition to enable them to mount a major invasion of Huron territory. The invasion was swift and destructive. Two French Jesuit missionaries, Jean de Brébeuf (1593–1649) and Gabriel Lalemant (1610–49), were tortured to death, and the Huron tribe was decimated, the survivors sent fleeing to various neighboring tribes in search of refuge.

The traditional battle tactics of the East Coast Indians employed short, violent attacks, followed by withdrawal. In this war, however, the Iroquois relentlessly pursued the Huron refugees, in the process also attacking and virtually wiping out the Tobaccos, who had given shelter to many Hurons. The Iroquois went on to destroy much of the so-called Neutral Nation in 1650.

Historians sometimes treat the Iroquois-Huron War as a phase of the BEAVER WARS.

Isaurian War (492–498)

PRINCIPAL COMBATANTS: Isauria vs. the Byzantine Empire

PRINCIPAL THEATER(S): Western Anatolia and Isauria (Turkey)

DECLARATION: Byzantine Empire on Isauria, 492

MAJOR ISSUES AND OBJECTIVES: Isauria rebelled against the removal of Isaurians from powerful imperial office.

OUTCOME: The Byzantine forces consistently proved victorious, but the Isaurians continued stubbornly to resist until virtually all of their strongholds had been captured or destroyed and the survivors forcibly relocated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** None

The Eastern Roman (Byzantine) emperor Zeno (426–491), a native of Isauria (south-central Turkey), appointed many kinsmen and other Isaurians to key positions in the empire. When Zeno died, Anastasius (c. 430–518), a powerful financial administrator (who would later perfect the Byzantine monetary system), was chosen by Zeno's widow, Aviadne (fl. fifth century), to succeed him. As Emperor Anastasius I, he summarily removed all of the Isaurian officials and expelled all Isaurian troops from the Byzantine capital city of Constantinople. In response to these actions, the Isaurians revolted, invading western Anatolia (encompassing much of modern Turkey). The emperor responded by declaring war on Isauria and sent his army, recruited mostly from among the Goths, to engage the Isaurians at the Battle of Cotyaeum in 493. The Isaurians were badly defeated in this battle and withdrew into the mountains of Isauria.

Although beaten and consistently outnumbered, the Isaurians refused to break off the war and continued to battle imperial forces. When, at last, all of the Isaurian strongholds had been captured or destroyed, Anastasius I resettled the survivors in Thrace, where they could be controlled and where they presented little threat to Anatolia.

Italian Revolts (1831–1834)

PRINCIPAL COMBATANTS: Italian republicans vs. papal and Austrian forces

PRINCIPAL THEATER(S): Modena, Parma, Romagna, the Marches, Umbria

DECLARATION: The declaration of Modena, 1831, triggered the series of revolts.

MAJOR ISSUES AND OBJECTIVES: A group of Italian states wanted to unite under a single republican government, independent from Austrian autocracy.

OUTCOME: The rebellion was crushed by Austrian intervention.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Prior to the arrival of Giuseppe Mazzini (1805–72) on the stage of Italian politics, liberal uprisings in the 19th century had been mostly the purview of the Carbonari, members of a secret political association first organized about 1811 with the goal of establishing a republic. By 1831, the hopes raised by the July 1830 revolution in Paris (see FRENCH REVOLUTION [1830]), had set afoot in Italy a conspiracy led by two Carbonari—Enrico Misley (1801–63) and Ciro Menotti (1758–1831). As a result, Mazzini advocated the union of the disparate Italian states under a republican government. In Modena, in 1831, an assembly declared the overthrow of the Austrian puppet government of Duke Francesco IV (1779–1846). This triggered similar declarations in Parma, Romagna, the Marches, and Umbria, all of which set up new provisional republican governments, then united to create a provincial government headquartered at Bologna. Bologna had been governed by a papal legate, who was forced to step down. The Vatican responded by asking for Austrian intervention. Austrian forces quickly put down the revolt, restoring all the autocrats to power.

The abject failure of the latest attempts to foment change left Italy's moderate liberal leaders, most of them Carbonari, disheartened and leery of Jacobin-style revolution. Not only were they ready to work with an absolute monarchy, they had come to deeply abhor those republicans and democrats who sought to achieve unification and social reform through force of arms.

Thus it fell to the young Genoese Mazzini, who had been exiled to France at the age of 25, to pick up the mantle of French liberalism. In distinction to the Carbonaria, Mazzini's organization—Giovane Italia (Young Italy)—advocated the union of disparate Italian states under a republican government.

Young Italy and Mazzini put their trust in the education and participation of the people, but the group had no radically egalitarian leanings. This new faction spread like wildfire, especially in upper Italy, absorbing Carbonari and old Jacobin alike.

In 1833 and 1834 came the earliest, quickly quelled, Mazzinian uprisings in Savoy and at Genoa, the latter organized by Giuseppe Garibaldi (1807–82), who afterward fled to France. By the end of 1834, the Austrian police had a list of some 2,000 members of Young Italy in Lombardy alone. Although the revolts failed, Mazzini, who had been living in exile in Switzerland, became as a result enough of a revolutionary celebrity to establish firm relationships with radicals in other countries. In 1836,

many of them joined him in founding Giovane Europa (Young Europe), after which he resettled in London.

See also ITALIAN REVOLUTION (1848–1849).

Further reading: Christopher Duggan, *A Concise History of Italy* (New York: Cambridge University Press, 1994); Raymond Grew, *A Sterner Plan for Italian Unity* (Princeton, N.J.: Princeton University Press, 1963).

Italian Revolution (1848–1849)

PRINCIPAL COMBATANTS: Italian nationalists vs. Austria and Austrian-dominated Italian rulers (with French and Spanish allies)

PRINCIPAL THEATER(S): Italy

DECLARATION: Sardinia against Austria, 1848

MAJOR ISSUES AND OBJECTIVES: Italian nationalists wanted to unify the states of Italy in independence from Austrian domination.

OUTCOME: Despite successes, the revolution was crushed by Austrian forces allied with those of France and Spain.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Republican fighters across Italy numbered in the 100,000s if rebellious city mobs are included, but well-armed patriots numbered in the 10,000s. The total for the Austrian army reached 70,000. In Rome, forces backing the Vatican totaled between in excess of 35,000 (15,000 Austrian, 7,000 French, 12,000 Neapolitan, 6,000 Spaniard, and 2,000 Tuscan soldiers fought there at some point) against 18,600 Republicans, including 5,000 of Garibaldi's Red Shirts. In Venice, 30,000 Austrians besieged 17,000 Civic Guards supported by a 4,000-man navy.

CASUALTIES: Varied across Italy. In the siege of Rome, Republicans lost 4,300-plus, the French around 2,000. In Venice, 900 defenders died in battle, but 8,000 fell sick, while the Austrians lost 1,200 in battle and 8,000 wounded, with like numbers (8,000) contracting cholera.

TREATIES: Austria and Piedmont, August 9, 1849

In a year of revolution throughout Europe (in France, Germany, and Hungary), Italians rose up under the leadership of King Charles Albert (1798–1849) of Sardinia, who proposed a *Risorgimento*, a movement that would not only liberate Italy from Austrian domination but unify the Italian states under a single government. Milan rebelled against Austrian government in the “FIVE DAYS” REVOLT of 1848, which inspired Charles Albert to declare war on Austria. This, in turn, triggered a revolt in Venice, with the proclamation of an independent republic under the leadership of Daniele Manin. In Piedmont, Count Camillo Cavour (1810–61) supported Sardinia's declaration of war, as did Pope Pius IX (1792–1878), and political leaders in Modena, Parma, Tuscany, and Naples. Charles Albert was thus able to assemble a large allied Italian army, which he fielded against

the smaller, 70,000-man Austrian army under Field Marshal Joseph Radetzky (1766–1858). Radetzky, however, was a brilliant commander, who deployed his forces in very strong defensive positions in a region bounded by Mantua, Verona, Peschiera, and Legnago. Frequently, he would take the offensive against Charles Albert, who proved to be an indecisive military commander. The Tuscans were quickly routed, and Radetzky seized the entire papal force, holding it hostage. These two defeats unnerved the united armies of Italy. Naples recalled its forces, leaving Piedmont to fend for itself. On July 24, 1848, Radetzky's force met the Piedmontese army at the Battle of Custoza, 11 miles southwest of Verona. The result was an overwhelming defeat for the outnumbered Italians, who were driven out of Lombardy altogether. This led to an armistice on August 9 and Austria's resumption of control over all of its lost territory, save Venice. Radetzky occupied Milan.

The armistice was displeasing to both sides, and the war resumed after a seven-month intermission after Charles Albert denounced the truce on March 12, 1849. In response, Radetzky seized the fortress of Mortara, which precipitated a battle at nearby Novara, 28 miles west of Milan, on March 23. Radetzky and his superbly trained Austrian regulars took and never relinquished the initiative, decisively defeating the ragtag Piedmontese force. A week after Novara, Radetzky's subordinate, Baron Julius von Haynau (1786–1853), defeated the Italians at Brescia, 54 miles northeast of Milan. This prompted Charles Albert to abdicate in favor of his son Victor Emmanuel II (1820–78) (who was destined later to become the first king of unified Italy). On August 9, 1849, Victor Emmanuel II concluded a treaty with Austria, agreeing to harsh terms imposed by the Austrians, including a punishing financial indemnity.

Elsewhere in Italy, disorder continued to reign—although the revolution as such had died. In the Kingdom of the Two Sicilies, King Ferdinand II (1810–59) ordered artillery fire against Messina and Palermo to suppress civil disorder there. In Rome, governed by a revolutionary tribunal, Pius IX asked to be reinstated, and Louis Napoleon (1808–73) dispatched a French army to restore order. Giuseppe Garibaldi (1807–82) led 5,000 Italian legionnaires—the celebrated Red Shirts—and forced the French to withdraw from Rome in April 1849, whereupon the Austrians, Neapolitans, and Spanish converged on Rome to aid the French. Garibaldi led the Roman resistance against the Neapolitans, driving them back and prompting the Spanish likewise to withdraw. But the continual reinforcement of the French finally compelled Garibaldi to withdraw. Rome fell in June, and the papal government was restored.

In the meantime, Manin held out against the siege in Venice from May to August 1849, but Radetzky's bombardment was relentless and his blockade impregnable. The people of Venice languished under starvation and disease (epidemic cholera). Two weeks after Victor Emmanuel II signed his treaty with Austria, Manin surrendered

Venice, and Italy's great war for independence came to an end, crushed not just by Austria but the combined forces of European aristocratic conservatism.

Italian Uprisings (1914)

PRINCIPAL COMBATANTS: Italian socialists vs. government troops

PRINCIPAL THEATER(S): Romagna and the Marches, Italy

DECLARATION: Romagna declared itself a republic in June 1914.

MAJOR ISSUES AND OBJECTIVES: Laborers and socialists agitated for a government more responsive to their needs.

OUTCOME: The rebellion was put down by a major show of force.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 100,000 Italian regulars were dispatched to restore order in the region.

CASUALTIES: Unknown

TREATIES: None

“Red Week” was a series of popular socialist uprisings beginning on June 7, 1914, in the Marches and Romagna (often referred to as “Red Romagna”) in response to the formation of a new, fairly conservative government by Premier Antonio Salandra (1853–1931). The demonstrators demanded higher wages, lower taxes, and an abandonment of militarism (as Europe drifted toward WORLD WAR I). Red Week saw the rise of such popular leaders as Benito Mussolini (1883–1945), who began his political career not as an anticommunist but as a radical socialist. Rioting was general, with a massive workers’ strike, destruction of private property, and vandalism of telegraph lines and railroad tracks. Romagna declared itself an independent republic, and the governments of Ferrara and Ravenna surrendered to the rebels. Order was restored by some 100,000 troops transported into the region. Italy’s determination to remain neutral after World War I began at the end of July (this despite Italian membership in the Triple Alliance with Germany and Austria) pacified some of the workers’ concerns.

Italian War between Charles V and Francis I, First (1521–1525)

PRINCIPAL COMBATANTS: French king Francis I and his Swiss and Venetian allies vs. the Holy Roman Emperor Charles V with his Spanish, English, Italian, and Papal allies

PRINCIPAL THEATER(S): Mostly Lombardy and northern Italy

DECLARATION: Francis I invaded Luxembourg and Navarre in May and June 1521.

MAJOR ISSUES AND OBJECTIVES: France tried to establish hegemony in Italy but found herself opposed by the Holy Roman Empire and the pope.

OUTCOME: French ambitions were stymied, and Charles V took Francis I prisoner, forcing him to renounce all claims to Italy and to surrender French territory to the Hapsburgs.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: France and allies, 41,000; Holy Roman Empire and allies, 20,000

CASUALTIES: At Bicocca, 3,000 Swiss killed; 200 Imperial forces killed

TREATIES: Treaty of Madrid, January 14, 1525

For the first half of the 16th century, the French tried repeatedly to gain ascendancy in Italy. For four decades, beginning with the accession of Charles V (1500–58) to the Hapsburg throne, the struggle for supremacy was not merely between the states of the Holy Roman Empire and France but also a personal feud between the emperor and Francis I (1494–1547). Usually, not only were the Hapsburgs—that is the Empire and Spain—allied against the French, but so too were the English and most of the Italian city-states. The Swiss, and an Italian city-state, seeing here or there an advantage, would occasionally line up behind the French. By 1521, Charles had managed to enlist the Vatican to his cause as well, and that year it moved to replace French rule in Milan with the pope’s ally and client, Francesco Maria Sforza (1491–1530).

On April 22, 1522, the 15,000-strong French army, led by Marshal Odet de Lautrec (d. 1528) and backed by some 8,000 Swiss and 10,000 Venetians, met the imperial forces—20,000 men (German, Spanish, and papal) led by a condottiere general named Prosper Colonna—at the decisive battle of Bicocca near Milan. Colonna had set up in a strong defensive position, and the Swiss troops, their pay in arrears and seeing the lay of the land, threatened to depart unless they got their back wages immediately. Instead, Lautrec wheedled them into one battle before they withdrew, thus giving himself little choice but to attack. Prudently planning to maximize the use of his

artillery, Lautrec could not control the impatient Swiss, who attacked without orders before he could get his guns into position. They were caught short at the Hapsburg entrenchments and cut to shreds by the Spanish harquebusiers: in half an hour, 3,000 Swiss lay dead and the charge had been repulsed. French heavy cavalry tried a diversionary strike, but the horsemen too were driven off. Lautrec retreated into Venetian territory, while the Allies celebrated a victory that cost them only a few hundred men.

The battle struck a massive blow at Swiss morale and was one of the earliest demonstrations of the effectiveness of gunpowder small arms. Although Italy was the main battleground for the war, some of the combat occurred in Navarre, in northern Spain, where back in 1521 an invading French army had lost to the Spaniards near Pamplona and was driven out. Also, in 1522 and 1523, the English, based in Calais, first under the earl of Surrey and then the duke of Suffolk, launched raids into Picardy. By 1523, the Venetians had had enough, and sued for peace, forcing the remnants of the French army to withdraw from Italy entirely back into France. There, they planned to invade Italy again, but were stymied when the treasonous Prince Charles of Bourbon (1490–1527), constable of France, fled to Germany to join Charles V.

In 1524, Francis did indeed launch another invasion of Italy to regain lost territory. At the Battle of Pavia on February 24, 1525, an Italian-Spanish-German army defeated the French in a two-hour pitched battle that could easily have gone the other way. Instead, Francis was captured and imprisoned in Madrid, where he signed a treaty giving up all his claims in Italy and surrendering Burgundy, Artois, and Flanders to Charles V. Despite the defeats here and in most of the future Hapsburg-Valois wars (see ITALIAN WAR BETWEEN CHARLES V AND FRANCIS I, SECOND; ITALIAN WAR BETWEEN CHARLES V AND FRANCIS I, THIRD; ITALIAN WAR BETWEEN CHARLES V AND FRANCIS I, FOURTH), the constant adversity France faced in these struggles helped to temper and hone the French national spirit, which had in effect been created by Joan of Arc (1421–31) during the HUNDRED YEARS' WAR. The surprise was not that the French lost, but that they came so close to winning so often.

Italian War between Charles V and Francis I, Second (1526–1530)

PRINCIPAL COMBATANTS: The League of Cognac (France, Milan, Venice, Florence, and the papacy) led by Francis I vs. Spanish and German mercenaries in the hire of Charles V.

PRINCIPAL THEATER(S): Italy

DECLARATION: Francis I repudiated the Treaty of Madrid on May 22, 1526.

MAJOR ISSUES AND OBJECTIVES: When the pope, alarmed by the Hapsburgs' growing power, joined Francis I in the League of Cognac, Holy Roman Emperor Charles V sent troops into Italy to destroy the new alliance.

OUTCOME: A draw in which Francis I and Charles V returned to the status quo, while most of the Italian city-states fell under the control of the Spanish Hapsburgs.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: In the sack of Rome, German and Spanish mercenaries, 22,000. At Naples, League of Cognac forces, 25,000

CASUALTIES: In the sack of Rome, 4,000 civilians killed. During the League's retreat from Naples, 18,000 killed.

TREATIES: Treaty of Cambrai and Treaty of Barcelona, both in 1529

On May 22, 1526, France repudiated the Treaty of Madrid, which had ended the First ITALIAN WAR BETWEEN CHARLES V AND FRANCIS I, because the French king Francis I (1494–1547) claimed he had been forced to sign it under duress (he was a captive of the Holy Roman Empire at the time). That same year, Pope Clement VII (1478–1534), alarmed by the increasing power of the Hapsburgs as a result of the recent war, withdrew papal support from Emperor Charles V (1500–58) and formed the League of Cognac with Francis. Also joining the league were Francesco Maria Sforza (1495–1535), an erstwhile ally whom Charles V had made ruler of Milan after ousting the French, and the rulers of Venice and Florence. Spanish and German mercenaries, led by the French turncoat Charles of Bourbon (1490–1527), then invaded Italy in 1526 to oppose the league.

The defending French forces and their allies had the worst of a war of attrition, and the Hapsburg mercenaries sacked Rome in early May 1527. When their leader, Charles of Bourbon, constable of France, was killed, the hired soldiers, starving and unpaid, committed horrible atrocities in the city, briefly imprisoning the pope himself. In 1528, a revolt in Genoa, led by Andrea Doria (1466–1560), cost the French their most important base in Italy, and a French army was decisively defeated at the Battle of Landriano. Despite a late rally led by the Vicomte Odet de Foix Lautrec (d. 1528), the disastrous defeats and Genoa's alliance with Charles V made the French anxious for peace. In 1529, Francis I and Charles V signed the

Treaty of Cambrai, known as the “Ladies’ Peace” because it was reached through the efforts of Charles’s aunt, Margaret of Austria (1480–1530), and Francis’s mother, Louise of Saray (1476–1531). Charles, as it turned out, was as anxious to sign as Francis, due to a growing threat from the Turks at his rear. The treaty restored the status quo, with Francis agreeing to pay a nominal indemnity and again renouncing his claims in Italy, whereas Charles withdrew his claim to Burgundy under the Treaty of Madrid.

As for the pope, Clement realized his long-term interest lay with Hapsburg Spain, and he signed the Treaty of Barcelona in 1529 in return for imperial help from Charles in fighting the still rebellious Florentine republic. Though suddenly abandoned by France in the unexpected “Ladies’ Peace,” Florence was led by an able soldier, Francesco Ferruccio (1489–1530), who continued to fight the empire’s forces under Philibert de Chalon, prince of Orange (d. 1530). Both leaders were killed at the Battle of Gavinana on August 2, 1530, and on August 12, Florence surrendered. As a result Alessandro de’ Medici (1510–37) became duke, and the independent Italian states—except for Milan and Genoa—came under Spanish control. Pope Clement crowned Charles king of Lombardy in 1530. Meanwhile, Francis was reorganizing his army. He established infantry legions, standing units of 6,000 mixed pikemen and harquebusiers, of Picardy, Languedoc, Normandy, and Champagne—clearly preparing for the next war.

Italian War between Charles V and Francis I, Third (1535–1538)

PRINCIPAL COMBATANTS: Charles V vs. Francis I

PRINCIPAL THEATER(S): Northwestern Italy and southeastern France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: When Charles V made his son Philip duke of Milan, Francis I invaded Italy to retake the city-state but fell short of his goal, seizing only Turin; Charles responded by invading France.

OUTCOME: A truce was declared before any major engagements, reestablishing the status quo, except that France remained in control of Turin.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Truce of Nice, 1538

Under the Treaty of Cambrai, which ended the Second ITALIAN WAR BETWEEN CHARLES V AND FRANCIS I, the Holy Roman Emperor Charles V (1500–58) was to take possession of Milan upon the death without issue of its ruler, Duke Francesco Maria Sforza (1495–1535). When the duke died in 1535, Charles made his son Philip (1527–98)—later King Philip II of Spain—the duke. Seeking to regain at least some control of Italy, a large French army unexpectedly invaded and captured Turin but was unable to reach Milan. In response, Charles V attempted two counterattacks against Francis I (1494–1547), personally leading one through Provence and sending the other through Picardy. The northern invasion bogged down, but Charles continued his march through southeastern France, advancing as far as Aix. But when he discovered that Francis was ensconced at Avignon and ready to fight, the emperor suddenly declined the challenge and withdrew. A temporary peace was patched up under the Truce of Nice, intended to restore the status quo for 10 years, although the status quo now meant that Francis retained his toehold in northwest Italy.

Cathleen and Hans Epstein (Westport, Conn.: Greenwood Press, 1975).

Italian War between Charles V and Francis I, Fourth (1542–1544)

PRINCIPAL COMBATANTS: Charles V, emperor of the Holy Roman Empire, Henry VIII, king of England vs. Francis I, king of France, Süleyman the Magnificent, sultan of the Ottoman Turks

PRINCIPAL THEATER(S): Northern Italy and much of France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: After Francis I, seeking to take advantage of Charles V's troubles with the Turks, allied with Ottoman Sultan Süleyman and attacked Nice, Charles joined Henry VII to invade France.

OUTCOME: After an inconclusive French victory at Ceresole and a poorly coordinated dual invasion by the Germans and the English, Charles and Francis signed a peace returning to the status quo ante bellum.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: imperial forces, 59,000; France, 45,000

CASUALTIES: At Ceresole, imperial forces, 6,000 killed, 3,200 wounded; France, 2,000 killed or wounded

TREATIES: Peace of Crépy, September 18, 1544

To the horror of many French and the astonishment of others throughout Europe, Francis I (1494–1547) took advantage of a number of setbacks for the Holy Roman Empire to ally himself with Charles V's (1500–58) enemy, Süleyman I the Magnificent (c. 1496–1566), sultan of the Ottoman Turks. For the first two years, the fighting—centered mostly in northern Italy and Roussillon—was inconclusive. A joint Franco-Turkish fleet under Ottoman admiral Khair el-Din sailed on Nice, bombarding, besieging, and sacking the imperial port in 1543. In September Charles invaded Picardy and besieged Landrecies in northern France. Francis approached with a large army the following month, and—after some futile maneuvering—both sides retired to winter quarters. Meanwhile, Charles had colluded with Henry VIII (1491–1547) of England to advance from Calais while Imperial forces invaded through Lorraine and Champagne (see ANGLO-FRENCH WAR [1542–1546]).

At Ceresole, south of Turin, the 20,000-strong imperial forces under the Spanish Marqués del Vasto met 15,000 French, Swiss, and Italian troops under Francis of Bourbon on April 14, 1544. After a prolonged harquebus skirmish and a long-range artillery duel, both infantries became locked in a sanguinary battle. The 7,000 imperial *landsknechts* (German mercenary soldiers) were almost completely destroyed by the combined efforts of the Swiss infantry and the French cavalry. At the same time, the French infantry was being overwhelmed by hardened Spanish and German veterans before Bourbon saved the day with an enveloping cavalry charge. In the less-than-complete French victory at the Battle of Ceresole, del Vasto was forced to retreat after losing more than 6,000 dead and 3,200 wounded, compared to French losses of some 2,000. The battle reaffirmed the lessons being learned in the Hapsburg-Valois conflicts: the infantry of the time—whether harquebusiers, *landsknechts*, or pikemen—could repulse any cavalry attack. But if an army deployed its cavalry against the flank of an enemy infantry already doing battle with its own infantry, the maneuver was likely to be decisive.

In general, because the English and imperial advances were slow and not well coordinated, the French could mass their forces and stop them. In May and August of 1544, for example, Charles's invasion of eastern France was delayed by the gallant defense at St. Dizier, which gave Francis time to recall his troops from Italy and reinforce them at home in defense of Paris. Thus, the imperial army halted after seizing Épernay, Château-Thierry, Soissons, and Meaux. Meanwhile, Henry's 40,000-man English army, including many foreign mercenaries, made a leisurely crossing to Calais in July, giving Francis more than adequate warning. Though Henry managed to capture Boulogne, he made no attempt to coordinate with Charles's Germans.

A discouraged Charles was more than eager to accept Francis's offers of peace, which left the English suddenly without allies. Henry returned home, leaving a garrison in Boulogne. The Peace of Crépy on September 18 reaffirmed the status quo. The French retained northwest Italy, but for the third time, Francis gave up all claims to Naples.

Italian War of Charles VIII (1494–1495)

PRINCIPAL COMBATANTS: France vs. Naples and the papal League of Venice

PRINCIPAL THEATER(S): Northern Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Charles VIII wanted to annex Naples as an Angevin possession.

OUTCOME: Pope Alexander VI's League of Venice defeated Charles, foiling his plan for annexation.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: France, 25,000

CASUALTIES: At Fornovo, France, 400 killed or wounded; League of Venice, 3,350 killed

TREATIES: None

In the last decade of the 15th century, Lodovico (“the Moor”) Sforza (1451–1508) usurped the duchy of Milan from his nephew, Gian Galeazzo (1469–1494), whom Lodovico had served as regent, setting in motion events that would soon bring to an end the independence of the Italians until the 19th century.

Years before Lodovico laid claim to Milan, the legitimate heir had married the granddaughter of Ferrante of Naples (1458–94), Isabella of Aragon, who in 1490 gave birth to a son. Thus, the direct interest of Naples in the disposition of the Milanese duchy left the new duke feeling vulnerable. As a result Sforza—ignoring the larger interests of Italy—invited the French king, Charles VIII (1470–98), to press his Angevin claim to Naples.

Charles was interested in the offer for reasons beyond the outstanding claims he had against both Naples and Milan—the latter of which both rulers chose conveniently to ignore. He apparently accepted the medieval notion that it was France’s mission to save Italy from its own corruption and purify Rome. From this renewed Italy, he dreamed of leading a crusade against the Turks. Accordingly, a French army augmented by Swiss mercenary troops and heavy artillery invaded Italy by way of the Alps in 1494.

The army toppled Pietro de’ Medici (1471–1503) in Florence, replacing his autocratic rule with a constitutional republic sponsored by the popular leader Girolamo Savonarola (1452–98), a powerful demagogue who preached hellfire and damnation as a result of God’s wrath against Italy, and thus the need for not only repentance but also democratic reforms. Savonarola had strongly denounced Pope Alexander VI (1492–1503) and called for the intervention of a foreign scourge of God to invade and chastise Italy and open a new age of righteousness.

Not surprisingly, the pope soon became one of Savonarola’s direst enemies. Nor is it surprising that he formed the League of Venice to oppose Charles, who was also plagued by disease among his troops as well as military reversals. He broke off his conquest of Naples and returned to France in 1495, barely escaping annihilation at the Battle of Fornovo (Taro) on July 6. Following Charles’s withdrawal, the pope awarded King Ferdinand II (1452–1516) of Aragon governance of Naples.

From Charles’s point of view, the war was costly and utterly futile. To the rest of Europe, however, it revealed just how vulnerable Italy was. The fragmented states refused to unite, even to defend the common good. It was a lesson that later French rulers headed well, and the independence of the Italian states was doomed.

Italian War of Independence (1848–1849)

See ITALIAN REVOLUTION.

Italian War of Independence (1859–1861)

PRINCIPAL COMBATANTS: Italian nationalists (mainly Piedmontese) with French allies vs. Austria and the Austrian-controlled Kingdom of the Two Sicilies

PRINCIPAL THEATER(S): Italy

DECLARATION: Austria against Piedmont, April 1859

MAJOR ISSUES AND OBJECTIVES: Piedmont sought to unite Italy under a single ruler, independent of Austria.

OUTCOME: Union and independence were achieved, except for Rome and Venetia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the biggest battle, Solferino: Franco-Piedmontese, 100,000; Austrian, 100,000

CASUALTIES: At Solferino: Franco-Piedmontese, 20,000 killed, wounded, and missing; Austrian losses were comparable

TREATIES: Peace of Zurich (France and Austria), 1859

Camillo Cavour (1810–61) had been a young Piedmontese politician who supported the ITALIAN REVOLUTION (1848–49). After the revolution, he became known as a moderate. Seeking to solve the problems of the Piedmont (a part of the Kingdom of Sardinia) and of Italy as a whole not so much by revolution as through international politics, he had by 1857 established a new monarchist-unionist party, the Italian National Society (Società Nazionale Italiana). Boasting revolutionary firebrands Daniele Manin (1804–57) and Giuseppe Garibaldi (1807–82) as president and vice president, respectively, the party appealed to the radicals although it was controlled by the more cautious Count Cavour, who as Piedmont’s prime minister struck an alliance on December 10, 1858, with Napoleon III (1808–73) of France specifically designed to expel Austria from the region. The arrangement with Napoleon called for the French to intervene should the Piedmont be invaded by Austria, which—as Cavour hoped—did indeed provoke just such an invasion. Austria declared war on the Piedmont in April 1859.

Austrian forces of some 50,000 men were met by a Franco-Piedmontese army and defeated at the Battle of Magenta on June 4. In chaotic combat, the losses to both sides were heavy, but the French-Piedmontese alliance pushed the Austrians back. For his victory, the French marshal Comte Marie-Edmé-Patrice de MacMahon (1808–93) was named duke of Magenta.

Following its defeat at Magenta, the Austrian army withdrew east across Lombardy, taking up a position at Solferino, five miles before the Mincio River. Here, the 100,000-man force was deployed in entrenchments on a series of hills, and Austrian emperor Franz Josef (1830–1916) arrived to assume personal command. The Franco-Piedmontese army, now also numbering about 100,000, had pursued the Austrians from Magenta. On June 24, 1859, these forces prepared to attack—led, like the Austrians, by the monarchs themselves, Napoleon III of France and Victor Emmanuel II (1820–78) of Piedmont, although field command was actually handled by the French generals.

The allies concentrated on the Austrian center, smashing through it after a full day of combat. Franz Josef ordered his troops to withdraw across the Mincio, having lost 20,000 killed, wounded, and missing. Losses among the Franco-Piedmontese forces were comparable, prompting Louis Napoleon to conclude a separate peace—the Treaty of Zurich—with Austria, which left the Piedmontese in the lurch. Austria ceded Lombardy to France, which, by way of compensating its ally, allowed Piedmont to annex it. France received Nice and Savoy. Austria retained Venetia, dominated by Venice.

Despite the loss of the French alliance, the Italians continued the fight. On April 15, 1860, Cavour held a plebiscite, by which Modena, Parma, Romagna, and Tuscany united with Piedmont. In this way, the Kingdom of Sardinia, of which Piedmont was a part, became the Kingdom of Italy—a union of most of northern and central Italy.

Italian democrats, however, refused to concede that the national revolution was complete—not with so many states in Italy still under the control of their old, traditional sovereigns. Sicily, where revolutionary opposition to the Bourbon government was endemic, ranked high on the radicals' list for democratic revival. Though a popular insurrection in Palermo in April 1860 had been quickly suppressed, revolutionaries had spread underground throughout the island's cities and countryside. In May 1860, Italian democrats from all over the peninsula—from Lombardy and Venetia, from all the old states—overcame the deep rifts that had divided them for a decade or more and, with the tacit approval of Cavour, lined up behind the great nationalist Giuseppe Garibaldi.

Garibaldi landed on May 11, 1861, with his “Thousand Red Shirts” at Marsala, Sicily, and led the Red Shirts and another 1,000 Sicilians against the Austrian puppet Francis II (1836–94), king of the Two Sicilies (Sicily and Naples), fighting the Neapolitan army at Calatafimi on May 15. After defeating Francis, the rebels took Palermo 12 days later. For his part, Cavour had not believed Garibaldi would succeed in the south. Now that he had, Cavour took steps to annex the Two Sicilies to the Kingdom of Italy. Garibaldi did not trust Cavour and quickly

seized Naples, only to be checked by the Bourbon army at the Liri River.

Cavour now invaded the Papal States, taking Umbria and the Marches after defeating papal forces at Castelfidardo on September 18, 1860. From this victory, he advanced to Naples, hoping that Garibaldi would relinquish his territory to him. Garibaldi did so after plebiscites indicated a popular desire to join the Kingdom of Italy. He bowed out, retiring to Caprera.

In February 1861, a provisional government was formed, which declared Victor Emmanuel II king of Italy, under a constitution. Venetia (occupied by Austria) and Rome (occupied by France) remained outside the new Kingdom of Italy. Upon Cavour's death later in 1861, Garibaldi emerged from retirement to lead an assault on Rome, but was now checked by the new Italian government, which was loath to precipitate a crisis with France. The war of independence was over, but Garibaldi did battle with government forces and was wounded at the Battle of Aspromonte on August 29, 1862. His forces defeated, he was captured and imprisoned, but subsequently pardoned.

Italian War of Louis XII (1499–1504)

PRINCIPAL COMBATANTS: France (with Venetian, Swiss, and Aragonese allies) vs. Lodovico Sforza, duke of Milan; subsequently, France vs. Aragon

PRINCIPAL THEATER(S): Milan and the Kingdom of the Two Sicilies

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: France wanted control of Milan and, subsequently, Sicily and Naples.

OUTCOME: Milan and Genoa fell to France, the Kingdom of the Two Sicilies to Aragon.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

France and allies, 22,000; Milan and Aragon, 15,000

CASUALTIES: French losses, 3,000–4,000 killed; other losses unknown

TREATIES: Treaty of Granada, 1500; Treaty of Blois, 1504

When Louis XII (1462–1515) succeeded Charles VIII (1470–98) as king of France in 1498, he determined to conclude an alliance with Venice and the Swiss to help him press his claim to the throne of Milan, which he had inherited from his grandmother Valentina Visconti (1366–1408). The duke of Milan, Lodovico Sforza

(1451–1508), quickly fled Milan to assemble an army of Swiss mercenaries to resist the French and their allies. But when he returned to the city, he found it occupied by Gian Giacomo Trivulzio (c. 1441–1518), condottiere (mercenary) in service to France. When Sforza's mercenaries confronted the condottiere at Novara in 1500, the Swiss refused to fight the other mercenary force, and Louis XII won virtually by default, becoming duke of Milan. Sforza was made a prisoner and taken to France.

After this victory, Louis, allied with Ferdinand II Ferdinand II (Ferdinand the Catholic; 1452–1516), king of Aragon, conquered Naples in 1501. Following this victory, Louis and Ferdinand quarreled. In 1500, the two had agreed by the Treaty of Granada that the Kingdom of the Two Sicilies (that is, Sicily and Naples) would be divided, which canceled Aragon's claim on the kingdom. After the joint victory, however, Ferdinand insisted on French recognition of the Two Sicilies under the Spanish Crown. Now Louis fought his Aragonese ally at the Battle of Cerignola on April 28, 1503. The French (and their Swiss mercenaries) were defeated largely by Spanish harquebusiers—musketeers—who, under the leadership of Gonzalo de Cordoba (1453–1515), known as the “Great Captain,” cut down the enemy's swordsmen. The rout was so swift and thorough that Louis's artillery was captured before it could even be put into action. As many as 4,000 French troops died. Naples was abandoned to Aragon on May 13 as the French retreated. Louis signed the Treaty of Blois on September 22, 1504, by which he acknowledged Spanish rule of the Two Sicilies. Genoa and Milan, however, came under French control.

Italo-Ethiopian War (1887–1889)

PRINCIPAL COMBATANTS: Italy vs. Eritrea and Ethiopia

PRINCIPAL THEATER(S): Eritrea

DECLARATION: Italy on Emperor Yohannes IV of Ethiopia, 1887

MAJOR ISSUES AND OBJECTIVES: Italy wanted to acquire control of Ethiopia and Eritrea.

OUTCOME: Italy believed it had acquired a protectorate over Ethiopia, a conclusion disputed by Emperor Menelik II, Yohannes's successor.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Italy, 20,000; Ethiopian and Eritrean forces, variable

CASUALTIES: At the Battle of Dogali, Italian losses were 500 killed; most other losses were the result of disease.

TREATIES: Treaty of Uccialli, May 2, 1889

Italy acquired a colonial foothold in Africa by establishing a colony at Assaf on the Eritrean coast in 1882. Massawa, also part of Eritrea, was added in 1885. Wanting to expand their African holdings, the Italians marched inland in 1887, seeking a foothold in Ethiopia. From their bases in Assaf and Massawa, Italy reached an agreement with the leader of the Shewa (who would go on to become the Ethiopian emperor Menelik II [1844–1913]) allowing penetration into the Eritrean interior. The advance, however, was opposed by Ethiopian forces under Emperor Yohannes IV (1831–89), who defeated the Italians at the brutal Battle of Dogali on January 26, 1887, killing 500 Italians. In response to this defeat, Italy invaded Eritrea with 20,000 men, who were established in garrisons. However, this proved an even greater disaster. Yohannes generally avoided battle with the Italians, instead allowing diseases endemic in the region to take their toll among the Italian troops. He understood that, confined to close quarters in garrisons, Europeans in Africa died like flies. The surviving Italian troops were recalled.

While the Italian garrison languished, Yohannes fought a Mahdist (messianic Muslim) invasion in the north and was killed at the Battle of Metemma on March 12, 1889. With the death of Yohannes, Menelik, the Shewa ally of the Italians, assumed the throne of Ethiopia and concluded the Treaty of Uccialli with Italy on May 2, 1889. The ambiguous wording of the document would give rise to the ITALO-ETHIOPIAN WAR (1895–1896): Italy interpreted the treaty as giving it a protectorate over Ethiopia, whereas Emperor Menelik II asserted Ethiopia's absolute sovereignty.

Italo-Ethiopian War (1895–1896)

PRINCIPAL COMBATANTS: Italy vs. Ethiopia

PRINCIPAL THEATER(S): Ethiopia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Italy wanted to enforce what it interpreted as its right to a protectorate over Ethiopia.

OUTCOME: Ethiopia decisively defeated Italy, which relinquished all claims except in Eritrea.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Italy, 20,000; Ethiopia, 80,000

CASUALTIES: Italian losses at the decisive Battle of Adwa were 6,500 killed and 2,500 taken prisoner

TREATIES: Treaty of Addis Ababa, October 26, 1896

This war flowed from a disputed reading of the Treaty of Uccialli, May 2, 1889, which was concluded at the end of

the ITALO-ETHIOPIAN WAR of 1887–89. Italy interpreted the treaty as awarding it a protectorate over Ethiopia, an interpretation rejected by Ethiopia's Emperor Menelik II (1844–1913), who asserted the absolute sovereignty of his victorious kingdom. With positions irreconcilable and Italians wanting to avenge their defeat in the earlier war, a force of 2,400 was deployed to invade the Ethiopian district of Tigre in 1895. Menelik responded with an army that defeated the Italians at the Battle of Menkele. This prompted Italy to send 20,000 men, who were met at the Battle of Adwa on March 1, 1896, by an Ethiopian force of 80,000. Approximately 6,500 Italians were killed and another 2,500 made prisoner. Following this humiliating defeat, Italy concluded the Treaty of Addis Ababa on October 26, 1896, by which Italy recognized Ethiopian independence but held the coastal colony of Eritrea. Subsequently, in 1900, Italy agreed to further reductions in its Eritrean holdings. The humiliations of 1896 and 1900 simmered among Italian imperialists for decades, motivating Benito Mussolini (1883–1945) to embark on the ITALO-ETHIOPIAN WAR (1935–1936).

Further reading: Harold G. Marcus, *The Life and Times of Menelik II, Ethiopia, 1844–1913* (Lawrenceville, N.J.: Red Sea Press, 1995).

Italo-Ethiopian War (1935–1936)

PRINCIPAL COMBATANTS: Italy vs. Ethiopia

PRINCIPAL THEATER(S): Ethiopia

DECLARATION: Italy invaded without declaration

MAJOR ISSUES AND OBJECTIVES: Italy wanted to annex Ethiopia, partly to avenge its humiliation in the Italo-Ethiopian War of 1895–1896.

OUTCOME: Ethiopia was ravaged and annexed to Italy's other African holdings.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Italian, 500,000; Ethiopian, 350,000 (but only one-quarter of these with any military training)

CASUALTIES: Italy: 4,359 killed (2,323 italians, 1,086 Eritreans, 507 Somalis, 453 Italian workingmen); Ethiopia: estimates reach 275,000 military and civilian dead (many from mass bombings and mustard gas attacks)

TREATIES: Formal annexation, 1936

Benito Mussolini (1883–1945), made dictator of Italy in 1922, sought to restore Italy to its ancient glory as the Roman Empire. More specifically, he wanted to avenge the humiliating loss of Ethiopia in the ITALO-ETHIOPIAN WAR (1895–1896). Through the manipulation of previous treaty documents, most notoriously the Treaty of Addis Ababa (October 26, 1896), Mussolini persuaded the League of Nations to recommend partition of Ethiopia by the Hoare-Laval Plan, which would have delivered most of

the country into Italian hands. The North African nation indignantly rejected this fraud, and, in December 1934, Italian and Ethiopian forces clashed at the Battle of Ualual in a disputed region of the border between Ethiopia and Italian Somaliland. Although Ethiopian emperor Haile Selassie I (1891–1975) wanted to avoid war with Italy and pulled his troops back 20 miles from the Eritrean border, Mussolini seized on the incident as a pretext for launching an invasion of Ethiopia on October 3, 1935. He did so without declaring war.

The invasion was led by Generals Rodolfo Graziani (1882–1955) and Pietro Badoglio (1871–1956), and brought to bear large forces with modern weapons, including intensive use of assault aircraft. The Ethiopians were poorly equipped and essentially defenseless against a modern army. The major Italian breakthrough came at the Battle of Lake Ashanga on April 9, 1936, which was followed by the fall of Addis Ababa, the Ethiopian capital, on May 5. Emperor Haile Selassie had fled on May 2 and, with great and moving dignity, appealed to the League of Nations for intervention. Italian forces executed the archbishop of the Ethiopian Coptic Church, murdered Coptic monks, and sacked Addis Ababa. But the emperor's pleas were in vain. Mussolini arranged it so that Italy's King Victor Emmanuel III (1869–1947) was now designated "emperor of Ethiopia," which was formally united with Eritrea and Italian Somaliland to form Italian East Africa.

Italy was destined to lose its Italian empire early in WORLD WAR II, when Ethiopia was liberated by British, Free French, and Ethiopian troops, and Haile Selassie was restored to power on May 5, 1941.

Italo-Turkish War (1911–1912)

PRINCIPAL COMBATANTS: Italy vs. Turkey

PRINCIPAL THEATER(S): Libya, Rhodes, and the Dodecanese Islands

DECLARATION: Italy against Turkey, September 29, 1911

MAJOR ISSUES AND OBJECTIVES: Italy wanted to establish a North African empire.

OUTCOME: Turkey ceded Libya, Rhodes, and the Dodecanese to Italy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Italy, 50,000; Turkey, far fewer, including native Arab troops

CASUALTIES: Italy, 4,000 killed, 6,000 wounded, 2,000 died from disease; Turkey, 14,000 killed or died from disease

TREATIES: Treaty of Ouchy, October 17, 1912

At the end of the 19th century, Italy felt itself woefully behind other nations in acquiring colonial holdings. With the Ottoman Empire crumbling, Italy targeted the Turkish provinces of Tripolitania and Cyrenaica (eastern Libya) in North Africa as prizes ripe for the picking. Italy began by sending merchants and immigrants into the region during the 1880s. By 1911, these areas had accumulated a substantial population of Italian nationals, and on September 28, 1911, the Italian government, claiming that its nationals were being abused, presented the Sublime Porte (the Ottoman government) with a 24-hour ultimatum, threatening immediate invasion. Receiving no satisfactory reply, Italy declared war and invaded North Africa the next day with 50,000 troops. Caught by surprise, the Turks could do little as Italian forces bombarded Tripoli with 10 battleships and cruisers for two days. A landing force occupied Tripoli on October 5, encountering little resistance.

Having declared itself neutral, Egypt refused passage to Ottoman troops, so that Turkey had to enlist the aid of Arabs, who occupied coastal regions and brought the war to a standstill in November 1911. Italy sought to break the stalemate with the naval bombardment of Beirut and Smyrna, then followed this by occupying Rhodes, Jos, and other islands of the Dodecanese. Italian vessels bombarded Turkish fortifications protecting the Dardanelles, which forced the closure of the straits. The toughest battle the Italians faced in Libya was not against the Turks, however, but against pro-Turkish Senussi tribal warriors, who

made a fierce attack on Tripoli during October 23–26, 1911, in an attempt to retake the Libyan capital. The Italian defenders lost 382 killed and 1,158 wounded in repulsing the attack. The tribesmen lost about 1,000 killed and wounded, but were forced to withdraw.

If the Italians faced fierce “primitive” opposition, they themselves employed some very modern weapons. In addition to naval bombardment, the Italians introduced into the land war the first armored fighting vehicle. The Bianchi, a wheeled armored car, fought in Libya in 1912 with good results. The Bianchi heralded the use of armored cars and tracked vehicles—tanks—in WORLD WAR I.

Despite the Senussi resistance, the Ottoman forces were simply overwhelmed. Moreover, the Sublime Porte was reeling in the aftershock of the recently concluded YOUNG TURKS’ REVOLT from 1908 to 1909. Therefore, the Ottoman government concluded the Treaty of Ouchy on October 17, 1912, by which the Turks ceded Libya, Rhodes, and the Dodecanese to Italy.

J

Jacobite Rebellion (1689–1690)

PRINCIPAL COMBATANTS: Scottish government forces (favoring William and Mary) vs. Jacobite rebels (favoring the restoration of James II)

PRINCIPAL THEATER(S): Scottish Highlands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Jacobites sought to restore James II to the English throne, which was occupied by William and Mary.

OUTCOME: The rebellion was crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Scottish government, 4,000; Jacobites, a lesser number

CASUALTIES: At Killiecrankie Pass, 2,000 government troops died in the single greatest loss of the war; throughout the rest of the war, losses among the Jacobites were heavy.

TREATIES: None

In 1688, the British Parliament invited William of Orange (1650–1702) to come from Holland and replace James II (1633–1701) as king of England. He did so in the GLORIOUS REVOLUTION of 1688, but a body of Tories and Stuarts rejected William and Mary II (1662–94) and were determined to restore James II to the throne. These Jacobites staged a rebellion in the Scottish Highlands, although James himself was off elsewhere, leading an army in the IRISH WAR (1689–91). Throughout most of Scotland, William and Mary had been accepted as Britain's new monarchs, and Scots authorities sent troops to suppress the Jacobites. At Killiecrankie Pass, in the Grampian Mountains, on July 27,

1689, 4,000 government troops under General Hugh Mackay (c. 1640–92) were ambushed by a smaller Jacobite force led by John Graham (c. 1649–89), viscount Dundee. Dundee's swift surprise attack killed half of Mackay's men, but the brilliant Dundee fell in the attack, rendering this a Pyrrhic victory because, leaderless, the Jacobites dispersed.

The Jacobites reformed and attacked at Dunkeld but were this time severely beaten and retreated into the hills. In 1690, the Battle of Cromdale also proved disastrous to the Jacobites. In the meantime, on July 1, James's forces were decisively defeated in Ireland at the Battle of the Boyne, and James fled to France, where he died in 1701 without again attempting to retake the English throne. Although William's forces had prevailed in Scotland, the new monarchs were never able to win the full loyalty of the Highlanders.

Jacobite Rebellion (1715–1716)

PRINCIPAL COMBATANTS: Jacobites (supporters of James Edward, the Old Pretender) vs. British supporters of King George I

PRINCIPAL THEATER(S): Scotland and northern England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dissatisfied with Hanoverian rule in Britain and the Union of England and Scotland, the Jacobites rallied to the cause of James Edward, the Old Pretender, seeking his elevation to the English throne as James III.

OUTCOME: The rebellion was crushed, its leaders executed or exiled.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Combined Scots and English Jacobite force, 12,000; government forces were larger

CASUALTIES: At Preston, rebels, 42; loyalists, 276. At Sheriffmuir, rebels, 150; loyalists 490. Overall estimate of fatalities, 3,000.

TREATIES: None

Popularly called “The Fifteen,” this revival of the effort to restore the Stuarts to the throne of England (see JACOBITE REBELLION [1689–1690]) began in response to the plea of James II’s (1633–1701) son James Edward (known as the “Old Pretender”; 1688–1766) for a clan uprising in Scotland a year after George I (1660–1727), the first of the House of Hanover to rule Great Britain, arrived in London. The Jacobites, who had unsuccessfully opposed the Union of Scotland and England in 1707 and then lost a vote to repeal the union in 1713, answered James Edward’s call. John Erskine (1675–1732), the earl of Mar, proclaimed James Edward James III of England and James VIII of Scotland, and denounced the union. Some 18 Scottish lords rallied behind the Pretender’s banner when it was raised by Mar, bringing with them 5,000 men. At that point government troops in Scotland numbered only about 1,500, so had Mar acted forcefully at the start of the rebellion it might have turned out differently. Instead, he marched on Perth, which his forces seized, but he did not continue on to Sterling, the next logical target. Instead he delayed as he waited for reinforcements. It was a blunder that gave the English time to rally and march north.

King George’s government was also afforded the time to concentrate on the Jacobite threat in England proper. Parliament granted the new king the right to imprison anyone he suspected of conspiring against him, and beginning in September 1715, he did so with alacrity. The first arrest was an officer in the Guards, accused of enlisting men for the Stuart cause, but soon six members of Parliament were also rounded up, including Sir William Wyndham (1687–1740), suspected of plotting a revolt in the West Country.

Another MP, Thomas Forster (c. 1675–1738), did indeed lead a rising in the north along with James Radcliffe (1689–1716), third earl of Derwentwater. Together they marched about 2,000 men south hoping to hook up with Mar but were intercepted on November 14 and defeated by the government on November 15, 1715, at the battle of Preston. Meanwhile, Mar—with some 10,000

troops—had engaged 3,500 soldiers under General John Campbell (1678–1743), second duke of Argyll, at Sheriffmuir on November 13 in an indecisive battle whose outcome was nevertheless enough, along with the defeat at Preston, to herald the collapse of the Jacobite challenge.

By the time James himself reached Scotland in December, Mar’s army had withered away even as Argyll’s was reinforced, including the arrival of a Dutch contingent. James abandoned his lost cause, leaving England never to return, and taking with him back to France the earl of Mar. “The Fifteen” collapsed, and Derwentwater, along with 29 others, was executed in 1716. Other Jacobite leaders were deported, peerages were forfeited, and clans were disarmed.

See also JACOBITE REBELLION (1745–1746).

Further reading: Leo Gooch, *The Desperate Faction?: The Jacobites of North-East England, 1688–1745* (Hull, England: University of Hull Press, 1995); Bruce Lenman, *The Jacobite Risings in Britain, 1689–1746* (London: Scottish Cultural Press, 1995).

Jacobite Rebellion (1745–1746)

PRINCIPAL COMBATANTS: Jacobites (supporters of the Young Pretender, Charles Edward Stuart, “Bonnie Prince Charlie”) vs. English government forces

PRINCIPAL THEATER(S): Scottish Highlands and northern England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Jacobites wanted to bring Charles Edward Stuart to the English throne.

OUTCOME: After scoring many victories against the English, the Jacobites were definitively crushed at the Battle of Culloden Moor, and the last Jacobite rebellion ended.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: English, 10,000; Jacobite, 8,000

CASUALTIES: At Culloden: English, 300 killed; Jacobite losses approached 8,000 at this battle

TREATIES: None

This renewal of Jacobite support for the restoration to the British throne of descendants of James II (1633–1701) (see JACOBITE REBELLION [1689–1690]) and JACOBITE REBELLION (1715–1716) was popularly called “The Forty-Five.” In 1745, Charles Edward Stuart (1720–88), son of the “Old Pretender,” James Edward Stuart (1688–1766), and grandson of King James II, came to Scotland with just seven followers, but, when his father was again proclaimed by the Jacobites King James III, “Bonnie Prince Charlie” or the “Young Pretender” (as Charles Edward was dubbed) drew to him a large following from among the Scottish clans, about 2,000 men. He led them

skillfully, this last feudal army to be raised in Europe, capturing Perth, then defeating two regiments of the Hanoverian king's troops at Coltbridge. General Sir John Cope (d. 1760) marched north from Stirling with a 4,000-troop-strong British army to intercept the Scottish forces. When he found them entrenched and apparently impregnable along the Corrieyairack Pass, he turned for Inverness, giving Charles leave to proceed on to Edinburgh, where he took the town but not the castle. Meanwhile, Cope sailed from Inverness to the Firth of Forth, landing his army to engage the Jacobites at Prestonpans on September 21, 1745. Although outnumbered, the Highlanders charged into Cope's command and routed the government forces. The royalists lost 1,000 as prisoners, and hundreds were killed or wounded.

After the victory at Prestonpans, Bonnie Prince Charlie invaded Lancashire, England, with an army now some 5,500 strong, including elements of Scots and Irish regiments under French command. To avoid a superior force at Newcastle, which included some 6,000 Dutch soldiers, Charles turned south, capturing Carlisle and Manchester. From there he raided Derby on December 4.

With British forces confused and ill-deployed, nothing—no army, at least—now stood between the Pretender to the throne and the throne itself in London. The 4,000 regulars deployed in the city were quickly mobilized to protect its northern approach at Finchley, but on December 6 Charles and his advisers—having recruited fewer to their cause than they'd hoped and cognizant that hostile and superior forces were perhaps a day's march away—decided to retreat to Scotland, a decision whose soundness would be debated down through the ages.

In any case, Charles returned to Scotland, with English forces in pursuit. On January 17, 1746, at Falkirk, the Jacobite army, now numbering about 8,000 men, suddenly turned on its pursuers, whose numbers were approximately equal. The Jacobites charged, breaking the English line and inflicting heavy casualties: 600 killed, 700 captured. The English also lost their baggage and artillery. Losses to the Jacobites were about 150 killed and wounded.

From Falkirk, the Jacobites marched north to occupy Inverness. The English army was reorganized under King George II's (1683–1760) son the duke of Cumberland (1721–65) (William Augustus), who skillfully deployed his 10,000 men, with artillery, at Culloden Moor on April 16, 1746. Thus positioned, he allowed the Highlanders to do what had served them so well in the past—charge—only, this time, the English defenses were so well prepared that each charge proved costly to the Jacobites, reducing their already outnumbered forces. Finally, Cumberland's cavalry charged and swept all before them. The Scots ran, only to be cut down. Cumberland, determined to put an end to the rebellion, had ordered that no quarter be given, and thus even the wounded were slain. Most of the Jaco-

bite force at Culloden was killed, whereas Cumberland—dubbed “the Butcher”—lost no more than 300 men. With this battle, “the Forty-Five” ended, but Bonnie Prince Charlie escaped. He hid in the Highlands until he eventually returned to France, where he died, a permanent exile.

Jacquerie (1358)

PRINCIPAL COMBATANTS: French peasant groups vs. French nobility

PRINCIPAL THEATER(S): Countryside near Paris

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Oppressed during the Hundred Years' War, a large group of French peasants sought vengeance on their overlords.

OUTCOME: The rebellion was quickly and cruelly crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Jacquerie was the name given to a French peasants' revolt, which took place during the HUNDRED YEARS' WAR. The name derives from the mocking sobriquet the French nobility bestowed upon the peasants, whom they sneeringly referred to as Jacques or Jacques Bonhommes, a common term of contempt during this period.

The Hundred Years' War was ruinous to many in Europe. But none suffered more than the French peasantry. They were beset by both the invading English soldiers and their own lords. Many lost their homes. Few could work their land, unless sentinels were present. Many retreated to caves and forests for shelter. The invaders robbed and raped or simply extorted money and food on pain of death. Turning to their own lords, the people were met with demands for crops and animals to pay ransoms, finance military actions, or recover losses incurred during the Black Death, which had become epidemic in the course of the war.

At last, on May 21, 1358, near Compiègne, north of Paris, peasants led by Guillaume Calé (d. 1358) rampaged throughout the countryside, putting castles to the torch and murdering whatever nobles they encountered. The

rebellion spread to Paris itself, then farmers joined urban rebels, who were led by Étienne Marcel (d. 1358). Whereas the peasants wanted revenge and justice, Marcel had a more focused political objective: the overthrow of King Charles V (1338–80).

Even with their forces combined, the revolt was short-lived. Charles II (1332–87) of Navarre, with others, organized an army against the peasants and the forces of Marcel. The Parisian rebels were defeated at Meaux by Gaston Phoebus of Foix (1331–91) and Jean III de Grailly (d. 1376–77) on June 9. Charles II himself defeated Calé at Clermont-en-Beavais the following day. Following these battles, Marcel was murdered, and Charles led a punitive expedition throughout the countryside, rounding up those identified as leaders, who were summarily executed or, indeed, slaughtered.

Jameson Raid (1895–1896)

PRINCIPAL COMBATANTS: “Renegade” Englishman L. Starr Jameson and 500 adventurers vs. the Boer commandos from the Republic of South Africa (Transvaal).

PRINCIPAL THEATER(S): The Transvaal south of Johannesburg.

DECLARATION: No formal declaration.

MAJOR ISSUES AND OBJECTIVES: Jameson, under instructions from Cecil Rhodes, planned to spark an uprising among those the Boers considered outsiders in Johannesburg. The idea was “unofficially” to destabilize the Boer republic, thus requiring Great Britain to intervene, reestablish order, and add the Boer lands once again to the British Empire. The Boers sought not only to defeat Jameson and prevent the uprising, but to receive assurances from the British government that it respected their autonomy.

OUTCOME: Jameson was captured, turned over to Britain, tried, convicted, and given a slap on the wrist. Rhodes was removed as prime minister of the Cape Colony. Suspicion of British intentions grew among the Boers, paving the way for the Boer War three years later.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Jameson's force, 494; Boers, 2,000–3,000.

CASUALTIES: Jameson's forces, 17 dead, 55 wounded, 35 missing; Boers, negligible.

TREATIES: None

In 1886, five years after the Boers—descendants of early Dutch settlers in South Africa—had won autonomy from the British in the First BOER WAR, a huge gold deposit was discovered a few miles south of Johannesburg. Overnight, a city of tents sprang up, housing the largest concentration of white men in Africa—several thousand Britons, Americans, Germans, and Scandinavians, whom the Boers dubbed derisively *Uitlanders*—“outsiders” in Afrikaans, the dialect of Dutch spoken in South Africa. The area was called the Witwatersrand, the Rand for short, and it was fast becoming the greatest source of gold in the world, exceeding the combined production of the United States, Russia, and Australia. The Transvaal Republic's president, S. J. Paul Kruger (1825–1904) viewed the *Uitlanders* askance from his clean and manicured capital in Pretoria. They seemed to him a godless lot—lawless, violent, and dirty. To make sure the Boers remained in control of these men, whom Kruger publicly referred to as “thieves and murderers,” he set up a five-year residency requirement for citizenship, then increased it to 14 years. The Boers discriminated against the miners, taxing them liberally, insisting their children attend Boer schools and learn to speak Afrikaans.

Talk of an armed uprising against the Boers began to spread, and in such talk, Cecil Rhodes's name always seemed to crop up.

Cecil John Rhodes (1853–1902) was the son of a stern vicar and a doting mother, the sixth of nine children, and he had come to Africa at age 20 in 1873 to help his brother grow cotton. He fell in love with the country when diamonds were discovered in the northern reaches of the Cape Colony, and he was lucky enough to stake a claim that made him rich. After buying himself an Oxford education, he had returned in 1881 to consolidate his mining interests and to fulfill his dream of establishing a federation of South African states within the British Empire. By 1890, his company, De Beers Consolidated Mines, Ltd., owned 90 percent of the world's production of diamonds, and he was prime minister of the Cape Colony. He was reported to have exclaimed one night, as he stared up at the African heavens, that he would annex the planets if he could. Now he was willing to settle for the Transvaal and the Orange Free State, the major obstacles to his plans for expanding the Cape Colony northward, creating a British federation of South African states, building a Cape Town-to-Cairo railway, and opening eastern Africa to Rhodesian colonizing.

The trouble was that one British prime minister, Benjamin Disraeli (1804–81), listening to the siren calls of imperialists like Rhodes, had already tried back in 1877 to annex the Boer lands and failed. Since the Treaty of Pretoria in 1881, the official position of the British government in London was that the Boer republic was independent in its internal affairs, though in matters of foreign policy it was supposed to seek approval of the Crown. Armed rebellion thus seemed the only decent alternative, and by 1895 Rhodes had launched a plot against the Transvaal government. He had seen to it that 4,000 rifles, three machine guns, and more than 200,000 rounds of ammunition had been smuggled into Johannesburg under loads of coal and in false-bottom oil tanks. In the spring, he entertained three Uitlander leaders on his wicker-bedecked veranda in Cape Town, conspiring against Kruger. British troops, of course, could not be used, at least officially, he told them, but he had recruited a private army to help out. It consisted of mercenaries who worked for the South Africa Company, of which he was chair, and he had already used them to good effect in Matabeleland. At their head would be a man he trusted, his best friend and factotum, Leander Starr Jameson (1853–1917)—known thereabouts as “Doctor Jim.”

Later Jameson would claim that all the thinking and planning about Africa came from Rhodes. At Rhodes's request, he had taken on and defeated the Matabele, capturing their king, then treating him for gout. Now, in October 1895, he was gathering men at Mafeking on the western border of Transvaal, about 140 miles from Johannesburg, declaring that anyone could take the Transvaal from the arrogant and stuffy Boers with half a dozen revolvers. And he had 494 men—including a number of British officers “on leave” from the regular army—as well as six machine guns, and the three pieces of artillery. Two months Jameson waited for word from the Uitlanders to launch his raid, but they procrastinated and fretted over such questions as whether the uprising could succeed, what would be their future relationship to the Cape Colony, how London might respond to such an undertaking. At length, they fixed December 28, 1895, as the date, then postponed it at the last moment indefinitely. Jameson, always impatient, announced he was through waiting. The next night he led his little band on its fantastical dash into the Transvaal.

It was military madness, a four-day opéra-bouffe performance in which Jameson's raiders slowly fought their way against the Boers—who dropped their plows and picked up their rifles—to within 14 miles of Johannesburg. There, at Krugersberg, exhausted from four nights without sleep, his ranks thinned—17 dead, 55 wounded, 35 missing—by hard-bitten, straight-shooting Boer commandos, surrounded, outnumbered nearly six to one, Jameson raised a white flag and let his men be rounded up like cattle. The Uitlander leaders in Johannesburg never showed their faces, and the half-baked uprising failed

without ever starting. The Boers turned Jameson and those left of his men over to the Cape government on the Natal border. From there, the whole bunch was shipped off to England for trial.

The British government immediately repudiated the raid and the colonial secretary promised to bring Jameson and five of his officers into the dock of the Old Bailey to answer charges they had infringed on the Foreign Enlistment Act. In the months before the trial, the defendants remained free, however, and Jameson became a celebrity. Margot Tennant, who would one day marry future Liberal prime minister H. H. Asquith, confessed that “Doctor Jim had personal magnetism and could do what he liked with my sex.” Even during the nine-day trial in July 1896, Jameson remained the toast of the town. The lord chief justice had to suppress pro-Jameson demonstrations in the courtroom, and the *Times* of London mused that Doctor Jim's only real crime was an “excess of zeal.” Nevertheless, he was convicted and sentenced to 15 months in a comfortable jail. His officers served less time and were stripped of their regular army commissions. Cecil Rhodes was forced to step down as the Cape Colony's prime minister because of the controversy. Jameson grew despondent and fell ill, whereupon Queen Victoria (1819–1901) pardoned him and sent him home. He had served four months of his sentence. Within a decade, the good doctor was himself prime minister of the Cape Colony. In 1911, King George V (1865–1936) made him a baronet. In 1912, Sir Leander Starr Jameson left Africa for good and settled in England.

Meanwhile, the Boers recognized a mere slap on the wrist when they saw one. Kruger and his minions, never the most trusting of men, felt utterly betrayed by the British. The ill will from Jameson's raid paved the way to open warfare between England and the Boers of the Transvaal and the Orange Free State.

Janissaries' Revolt (1621–1622)

PRINCIPAL COMBATANTS: Janissaries vs. Sultan Osman II
PRINCIPAL THEATER(S): Royal court, Constantinople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Janissaries overthrew a sultan they no longer considered competent.

OUTCOME: Osman II was assassinated, and the queen mother was installed to rule through her imbecile son, Mustafa I.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Osman II, the chief eunuch of the seraglio, and the grand vizier were assassinated.

TREATIES: None

The Janissary corps was formed by Ottoman sultan Murad I (1319–89) in the 14th century as a non-Turkish elite mercenary force, originally staffed by young Christian converts to Islam, drawn from the Ottoman Empire's Balkan provinces. Murad II (1403–51) restyled the Janissaries as a palace guard under his direct control in the 15th century. The idea was to create a militarily effective force that would be absolutely loyal to the sultan because it owed family or clan allegiance to no one else. By the end of the 16th century, however, the Janissaries became a major political force in Turkish court life and politics, with a deep allegiance only to themselves. The Ottoman rulers lived under continual threat of a Janissaries' revolt, especially in times of external peace, because these mercenaries were paid only during war. At the very heart of Ottoman government was a nest of vipers.

In 1618, it was the Janissary corps that deposed Sultan Mustafa I (1591–1639), who was mentally retarded, and replaced him with Osman II (1604–22), a teenager animated by dreams of conquest. His campaign against the Poles in 1621 produced Turkish losses so substantial that the troops eventually mutinied. At this, Osman simply returned to Constantinople and boasted of his "victory." The Janissaries—as yet unpaid—were outraged by the young sultan's false claim and threatened revolt. In response, Osman decided to eliminate the Janissaries once and for all. He set about creating a militia with the stated purpose of campaigning in Asia; secretly, however, Osman instructed them to march off, double back, then make a surprise attack on the Janissaries, killing all of them. In the climate of intrigue that was the Ottoman court, secrecy was nearly impossible, and word of the sultan's plot leaked out. The Janissaries made good on their threats and staged a revolt. In a panic, Osman promised to call off the militia, but this was to no avail. Unforgiving, the Janissaries seized the deposed sultan Mustafa I, killed the grand vizier and the chief eunuch of the seraglio, crowned the retarded Mustafa, and brought Osman back to their barracks. Here, they strangled the hapless monarch to death—the traditional mode of execution in Ottoman official circles. It was the first regicide in the history of the Ottoman Empire.

The revolt was not merely a spontaneous expression of anger, but had been planned in consultation with Valide (fl. 17th century), the queen mother. She approved of Osman's assassination and planned to rule, through Mustafa, as the power behind the throne. The Janissaries sent Valide Osman's ear as proof that the deed had been done.

However, as for Valide and Mustafa, the Janissaries did not long approve of their reign and backed instead the ascension of Murad IV (1609–40) in 1623. With that support, he did ascend the troubled Ottoman throne.

Janissaries' Revolt (1703)

PRINCIPAL COMBATANTS: Janissaries vs. Sultan Mustafa II

PRINCIPAL THEATER(S): Constantinople and Adrianople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Unpaid, the Janissaries rebelled against Mustafa II.

OUTCOME: Mustafa II was forced to abdicate in favor of Ahmed III.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Janissaries were an important military asset to the Ottoman sultans, but also a continual threat to them. The Janissary corps was paid only in time of war, and often Sultans reneged on that payment. When the Sublime Porte (Ottoman government) failed to pay in 1703, the Janissaries revolted for six weeks in an action that nearly escalated to full-scale civil war. The response of Sultan Mustafa II (1664–1704) was to go into hiding in Adrianople, where he assembled an army to confront the Janissaries. In the meantime, he refused all demands that he return to Constantinople, whereupon the Janissaries took possession of the Prophet's sacred standard, the chief symbol of authority, assumed the offensive, and sought Mustafa II out in his hiding place. Finding him, they compelled his abdication in favor of Ahmed III (1673–1736).

Raised to power by the Janissaries, Ahmed III was destined also to fall from power, likewise through their agency, in the JANISSARIES' REVOLT (1730).

See also JANISSARIES' REVOLT (1807–1808); JANISSARIES' REVOLT (1826). For an explanation of the Janissaries' role in the Ottoman military and politics, see JANISSARIES' REVOLT (1621–1622).

Janissaries' Revolt (1730)

PRINCIPAL COMBATANTS: Janissaries and Albanian rebels vs. Sultan Ahmed III and, subsequently, Sultan Mahmud I

PRINCIPAL THEATER(S): Constantinople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Janissaries wanted to unseat Sultan Ahmed III and then decided to support a general revolt against the Sublime Porte (Ottoman government).

OUTCOME: Ahmed was deposed and replaced by Mahmud I, who put down the rebellion by killing or exiling many of the rebels, thereby persuading the Janissaries to return to his service.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Albanian rebels, 12,000

CASUALTIES: In a single campaign, Mahmud I killed 7,000 rebels.

TREATIES: None

Sultan Ahmed III (1673–1736), who had been placed on the throne as a result of the JANISSARIES' REVOLT (1703), failed to call the Janissaries into action during the PERSIAN CIVIL WAR (1725–1730). Not committed to the war, the Janissaries were not paid—a situation that always produced great discontent, and that, inexplicably, the sultans never addressed. When the Persian Civil War prompted incursions into Ottoman territory, the TURKO-PERSIAN WAR of 1730–36 broke out. This time, Ahmed called on the Janissaries, who rebelled by delaying their deployment for two months while they supported a rebellion against the sultan by 12,000 Albanian troops. During this time, the Janissaries assassinated (by strangulation—traditional Ottoman mode of execution) the grand vizier, the admiral in chief, and other government and military officials. The life of the sultan they spared, but forced him to abdicate in favor of his nephew, Mahmud I (1696–1754).

Yet the installation of the new sultan did not quell the revolt. Mahmud did not act directly against the Janissaries, but instead moved against the rebels they supported. Ahmed invited the rebel leader, under a promise of safe

conduct, to meet with him and the Divan (his privy council). Treacherously, Mahmud took the leader prisoner, then had him strangled as he looked on. This accomplished, the sultan oversaw the systematic slaughter of the rebels, some 7,000 of them over the course of three bloody weeks, in a display of brutality that rapidly diminished the passion for rebellion among the Albanians and prompted the Janissaries to withdraw their support. By the time the sultan had finished disposing of rebels—through either execution or banishment—his empire's military assets had been reduced by 50,000 men; nevertheless, the remaining Janissaries were now prepared for service against the Persians.

See also JANISSARIES' REVOLT (1807–1808); JANISSARIES' REVOLT (1826). For an explanation of the Janissaries' role in the Ottoman military and politics, see JANISSARIES' REVOLT (1621–1622).

Further reading: Godfrey Goodwin, *The Janissaries* (London: I. B. Tauris, 1997); Lord Kinross, *The Ottoman Centuries: The Rise and Fall of the Turkish Empire* (New York: Morrow, 1977); Kemal H. Janissaries' Revolt (1807–1808)

PRINCIPAL COMBATANTS: Janissaries vs. Sultan Selim III and Mustafa IV

PRINCIPAL THEATER(S): Constantinople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Janissaries fought to preserve their position and livelihood.

OUTCOME: The Janissaries remained a terror to the sultans.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

In 1805, Sultan Selim III (1761–1808) decided to neutralize the always troublesome Janissaries once and for all by forming an army according to a “New Order,” based on Western-style (i.e., Napoleonic) regimental organization, discipline, weaponry, and uniforms. The Janissaries threatened revolt, however, and Selim withdrew the New Order decree, although reform of uniforms was still advanced. This alone was sufficient to prompt a rebellion, in 1807, among the Yamaks, the sultan's second-line or auxiliary troops. The Janissaries decided to join them, as did the grand mufti, who ruled that the Western-style uniforms were contrary to Muslim law because they were Christian garb. This ruling gave the rebels the moral basis from

which they promoted legal prosecution of the reformers in the sultan's government. Tried, they were all executed, and Selim III himself deposed.

Mustafa IV (1779–1808), a relative of Selim, agreed to ascend the throne, but soon found himself under attack by Selim's supporters. When they discovered that Mustafa had ordered Selim strangled, the Janissaries turned on Mustafa, dragged him from the throne, and strangled him. They now saw to the elevation of Mahmud II (1784–1839) to the throne. The new sultan judiciously appointed the leader of the Janissaries to the post of grand vizier. He now reintroduced Selim's New Order. This time, the Janissaries held off open revolt and made a show of acceptance. Once the grand vizier had been lulled into confidence that the reform had been accomplished, the Janissaries effected his arrest and execution. In this way, through intrigue and ruthless terror, the Janissaries staved off their demise.

See also JANISSARIES' REVOLT (1703); JANISSARIES' REVOLT (1730); JANISSARIES' REVOLT (1826). For an explanation of the Janissaries' role in the Ottoman military and politics, see JANISSARIES' REVOLT (1621–1622).

Janissaries' Revolt (1826)

PRINCIPAL COMBATANTS: Janissaries vs. Sultan Mahmud II

PRINCIPAL THEATER(S): Constantinople and the Turkish provinces

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mahmud II wanted to rid the government of the Janissary menace once and for all.

OUTCOME: The Janissaries were slain, virtually to a man.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Mahmud's forces, 14,000

CASUALTIES: Janissary losses, 4,000 killed in barracks; many more slain throughout the provinces

TREATIES: None

Like Sultan Selim III (1761–1808) before him [see JANISSARIES' REVOLT (1807–1808)], Mahmud II (1784–1839)—Mahmud the Reformer—wanted to neutralize the dangerous Janissary corps, which had repeatedly shown itself to be the greatest threat to the sultan within the empire. Moreover, in the GREEK WAR OF INDEPENDENCE from 1821 to 1832, the Janissaries had performed so poorly that Mahmud had had to call in Egyptian mercenaries. Nevertheless, Mahmud was all too aware that

“reforming” the Janissaries out of existence was a dangerous proposition, bound to incite them to rebellion. Accordingly, he proceeded carefully, ensuring himself of the support of the grand mufti, then improving his own personal army by building up a 14,000-man force equipped with the latest Western artillery, and finally decreeing a highly modified version of Selim's “New Order” military. The Janissaries would not be dismissed, but they would be separated and dispersed. Mahmud decreed that 150 from each Janissary battalion would be integrated into each division of the new corps he was creating under the New Order. This, Mahmud explained, was actually a revival of an *old* Ottoman military order, not a reformist innovation.

Despite Mahmud's assurances and deceptions, the Janissaries revolted. On June 14, 1826, they assembled in the Constantinople Hippodrome and demanded an audience. By way of response, Mahmud used his new artillery, firing against Janissaries with grapeshot, forcing them to retreat to their barracks. Once they were concentrated there, Mahmud opened up on them in earnest, subjecting the barracks to an intensive artillery bombardment. This action incited Turkish mobs to attack the hated Janissaries as well, and Mahmud did not interfere with them. Indeed, he allowed the rioters free rein. In the end, 4,000 Janissaries died in and around their barracks, and many more thousands who fled to the provinces fell victim to mob violence.

Having eliminated the Janissaries, Mahmud II decided to obliterate their legacy as well, outlawing even the use of the word *Janissary* and banning the Bektashi dervishes, the Janissaries' allies and abettors from the empire.

January Insurrection (1863–1864) See POLISH REBELLION

Japanese Civil War (672)

PRINCIPAL COMBATANTS: Prince Otomo vs. Prince Oama

PRINCIPAL THEATER(S): Omi province, Shiga prefecture, Japan

DECLARATION: None

630 Japanese Civil War (764–765)

MAJOR ISSUES AND OBJECTIVES: This was a contest for succession to the Japanese throne.

OUTCOME: Oama's forces defeated those of Otomo, and Oama ascended the throne as Emperor Temmu Tenno.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In Japan, the war is called *Jinshinno-ran*. It broke out over the issue of imperial succession following the death of Emperor Tenchi (626–671). Tenchi had struggled valiantly to centralize Japanese government, enhancing the authority of the emperor over that of the noble families. Throughout his reign, the Nakatomi and Soga families had done their utmost to block the aggrandizement of imperial authority. Tenchi had designated Prince Otomo as his successor. Obediently, Tenchi's other son, Oama (673–686), retired to a secluded life in a Buddhist monastery. Doubtless, he realized that he might be killed if he remained in court.

Upon Tenchi's death, the Nakatomi and Soga put Prince Otomo (fl. 672) on the throne. Oama returned from the monastery and raised an army to fight the supporters of Otomo in a single battle that took place just outside of Otomo's capital in Omi province, Shiga prefecture. Otomo was defeated in their Battle of Jinshin, and Oama's way to the throne was thereby cleared. He ruled as Emperor Temmu Tenno, establishing his capital at Asuka, Yamato Province, Nara prefecture, a location remote from the seats of the Nakatomis and Sogas.

Japanese Civil War (764–765)

PRINCIPAL COMBATANTS: Oshikatsu (Nakamoto), minister under Emperor Junnin, vs. Doko, favorite of the "retired" but still powerful empress, Koken (Shotoku)

PRINCIPAL THEATER(S): Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Japanese throne and government

OUTCOME: Oshikatsu and his adherents were defeated and killed; Koken reascended the Japanese throne (as Empress Shotoku), deposed Emperor Junnin, and made Doko prime minister.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 758, Empress Koken (718–770) retired to life as a nun, abdicating the Japanese throne in favor of Emperor Junnin (d. c. 766). However, as was often true in the case of "retired" Japanese monarchs, Koken retained considerable actual power. Moreover, she exercised this power not simply in her own right, but with the advice and under the influence of a Buddhist priest, Doko (d. 772), who was almost certainly her lover. Although the Japanese court was willing to accept the power arrangement between Koken and Junnin, the emperor's principal minister, Oshikatsu (Nakamaro) (d. 765), soon became jealous of the degree of power Doko was attaining. The conflict grew and developed into a civil war by 764.

After brief but intense fighting, Oshikatsu and most of his adherents were killed. Seeking to avert further warfare, Koken reascended the throne, now as Empress Shotoku, and moved quickly against Junnin, who was placed under arrest, then exiled to the island of Awaji. With the hapless emperor thus disposed of, Koken/Shotoku called Doko to court and appointed him prime minister. He was also anointed with a special title, *Ho-o*, a religious distinction roughly translated as "pope." This theoretically put him into position to assume the throne on the death of Koken in 770, but opposition was too strong, and Doko was banished.

Japanese Civil War (936–941)

PRINCIPAL COMBATANTS: In the west, Fujiwara Sumitomo vs. Kyoto government; separately, in the east, Masakado vs. a rival Taira chieftain

PRINCIPAL THEATER(S): Japan's western and eastern provinces

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of portions of Japan

OUTCOME: Sumitomo's rebellion was crushed by imperial forces; Masakado's rebellion was neutralized by other members of the Taira family.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The 903 revolt of Taira-no-Masakado (d. 903), a leader of the Kanto district, destabilized the Kyoto government and

encouraged various acts of disobedience, including piracy off the coast in the Inland Sea. In 936, the pirate attacks grew to unprecedented intensity, and the Kyoto court dispatched Sumitomo (d. 941), of the powerful Fujiwara family, to combat the pirates. He did this with great success but then led his followers in raids throughout the western provinces. When Sumitomo failed to obey the emperor's command to cease and desist, imperial troops were sent against him. Joining the imperial forces was the chief of a western military family, the Minamoto, and, together, the combined imperial and Minamoto forces crushed Sumitomo's rebellion and killed Sumitomo himself.

Although the defeat and death of Sumitomo brought peace in the western provinces, the eastern region of Kanto erupted into rebellion. There Masakado (d. 940), of the Taira family, having steadily expanded his territorial holdings, declared himself emperor of Kanto in 939. The following year, however, another Taira chief-tain vied for the new Kanto throne and deposed Masakado. With this, the eastern region also returned to peace.

Japanese Civil War (1331–1333)

PRINCIPAL COMBATANTS: Hojo shogunate vs. Emperor Daigo II (subsequently aided by Hojo defectors)

PRINCIPAL THEATER(S): Japan, especially Kamakura

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Japanese government

OUTCOME: The shogunate forced the exile of the emperor; he returned, raised an army, and ended the power of the Hojo shogunate.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

By the 14th century, Japanese government was sharply divided between the imperial court at Kyoto and the military, headquartered at the Bakufu in the Kamakura district. Although the emperor enjoyed high status, it was the Hojo shogunate—the military authority—that wielded the greater power. This situation—the emperor divine, yet with little secular power, the military all powerful—endured for a long while, but by the 14th century it began to show signs of eroding. In 1331, a crisis came when shogunate agents discovered that Emperor Daigo II (Go-Daigo; 1288–1339) was plotting to attack and destroy Kamakura. Once apprised of this, the shogunate acted quickly and dispatched an army to Kyoto, Daigo II offered resistance, but his forces were no match for those of the shogun. Quickly overwhelmed, he was taken prisoner, and he was exiled to the island of Oki the next year.

Doubtless because of his divine status, Daigo II escaped death, which was unfortunate for the shogunate, because, in 1333, he escaped from exile and rallied an army to the cause of his restoration. Warriors poured in, and at the Bakufu, many troops defected to the emperor. Ashikaga Takauji (1305–58), a general of the Minamoto family, long the chief supporters of the shogunate, turned his Bakufu army against the military and placed himself and his forces in the emperor's service. With another Bakufu defector, he launched an incendiary attack against Kamakura, burning the city down. This brought a sudden end to the rule of the Hojo shogunate—but it proved only a prelude to the JAPANESE CIVIL WARS (1336–1392).

Japanese Civil Wars (1336–1392)

PRINCIPAL COMBATANTS: Yoshino-based government vs. Kyoto-based government (south versus north)

PRINCIPAL THEATER(S): All Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Japan

OUTCOME: The struggle between northern and southern rivals brought utter chaos to Japan, nearly destroying the country's economy; with great patience, order was

restored by the ascendancy of the Ashikaga shogun Yoshimitsu.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: New treaties concluded with China and Korea by the 1390s

The Minamoto general Ashikaga Takauji (1305–58) had defected from the *bakufu*, or shogunate (military dictatorship), to aid Emperor Daigo II (Go-Daigo; 1288–1339) in overthrowing the Hojo-controlled regime and reestablishing Daigo on the imperial throne in the JAPANESE CIVIL WAR (1331–1333). In 1335, however, he changed sides again, their time against Daigo II, joining a new rebel movement in Kanto. These forces were opposed to both the Hojo shogunate and to the emperor. As commander of the rebel army, Ashikaga captured the Kyoto capital and took Daigo II prisoner. Although the ever-resourceful emperor subsequently escaped and took refuge in the mountains, Ashikaga Takauji set up a puppet on the throne, who compliantly named him shogun.

From exile, Daigo denounced Ashikaga Takauji and his puppet, and he rallied to himself the constituents of a rival court he set up in the south of Japan, at Yoshino. Now Kyoto and Yoshino became the poles around which a series of civil wars was generated. All of Japan erupted into combat, and the government was reduced to anarchy. The allegiances of the feudal lords shifted with the wind in a period dubbed the “Age of the Turncoats.” In the absence of strong central authority, the countryside was torn by general lawlessness and rapine. It was the nadir of medieval Japanese life.

At last, in 1367, Yoshimitsu (1358–95), the most charismatic and able of the Ashikaga shoguns, emerged as dominant among the warlords. Gradually, he was able to reestablish a central government. He resumed trading relations with Korea and China in an effort to restore Japan’s battered economy, and he launched numerous campaigns against pirates and other brigands. Having brought a significant measure of order back to the country, in 1392 he possessed sufficient credibility to persuade the ruler at Yoshino to abdicate in favor of the ruler at Kyoto. In return, the southern ruler was granted a large pension and official state status. Although low-level warfare and interclan feuding persisted, Japan generally began to recover.

Japanese Civil Wars (1450–1550)

PRINCIPAL COMBATANTS: Rival warlords (daimyo) of Japan

PRINCIPAL THEATER(S): All Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In a time of anarchy, rival warlords continually fought with one another to claim more territory and power.

OUTCOME: The war resolved no issue; it ended with the rise of the powerful daimyo Oda Nobunaga.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: None

The century between 1450 and 1550 is called in Japanese history the Warring States Period. During this time, civil war was continual, creating anarchy that spawned piracy and brigandage, as well as interclan feuding. Both of the traditional rivals for power, the imperial government and the shogunate (military dictatorship), lost control of the country. Rebels and warlords vied for pieces of territory, and the only semblance of stable government was to be found in and around the ancient imperial capital of Kyoto. Beyond this region, the force of government, whether imperial or shogunate, was hardly felt.

Amid the chaos, a new warrior class grew to prominence, the samurai. Instead of aligning themselves with either the shogunate or the emperor, the samurai gave their allegiance variously to local warlords, some of whom amassed sufficient power to become territorial rulers, or daimyo. Each daimyo created a private empire, wholly independent of central authority and maintained by means of a private army. Although chronic instability generally weakened the national economy, the existence of the private armies afforded the peasantry unprecedented opportunity for rising to power. Moreover, the samurai introduced their own rigid moral code, which probably represented what little order existed across the country during this long period. Nevertheless, with so many daimyo controlling so many private armies, strife was frequent. The daimyo continually warred against one another. These disputes often developed into interclan feuds. The spirit of war was so powerful in Japan during this period that rival Buddhist monasteries began feuding and warring with one another.

The Warring States Period came to an end with the rise of the powerful daimyo Oda Nobunaga (1534–82).

Japanese Civil War (1467–1477) *See* ONIN WAR.

Japanese Civil Wars (1560–1584)

PRINCIPAL COMBATANTS: Oda Nobunaga vs. rival daimyo; after Nobunaga's death, the fight was taken over by his able general Toyotomi Hideyoshi

PRINCIPAL THEATER(S): Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The unification of Japan under a single ruler

OUTCOME: After a long war, most of Japan was effectively unified under Hideyoshi.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Probably the largest army fielded at any one time was the 30,000 men Hideyoshi led against Kyoto.

CASUALTIES: Unknown

TREATIES: Treaty between Hideyoshi and his potential chief rival, Tokugawa Iyeyasu, 1584

Out of the chaos of the JAPANESE CIVIL WARS (1450–1550), 16-year-old Oda Nobunaga (1534–82) emerged as daimyo (warlord) of Owari, eastern Japan. The head of the Imagawa family Imagawa Yoshimoto (1519–60), daimyo to the north of Owari, decided to exploit Oda Nobunaga's inexperience by attempting what he believed would be an easy conquest. Nobunaga led a defense with extraordinary skill and defeated Imagawa, who was slain in battle.

The attack moved Nobunaga to further action. He concluded an alliance with Tokugawa (1542–1616) the daimyo of Mikawa, and another alliance with the daimyo of Kari. These alliances secured his position in the east. Thus emboldened, Nobunaga decided to move aggressively and, in 1562, advanced against the province of Mino to the west. After a two-year campaign, the province fell to him. He moved next to the south and invaded Ise. Here he met powerful resistance and was never able to conquer the territory completely. But the performance of his leading general, Toyotomi Hideyoshi (1536–98), was so brilliant that most of the provincial daimyos flocked to Nobunaga's side.

Ogimachi (1517–93), the emperor himself, recognized Oda Nobunaga's great power and influence when, in 1567, he asked him to come to the imperial capital, Kyoto, to quell the violence of an uprising triggered by a dispute over the succession of the shogun (military

overlord). Within a year Nobunaga had brought order to Kyoto and was named vice shogun. He used this position as a springboard to what amounted to control of all Japan. However, his rapid rise met with resistance. Those who had formerly allied with him feared that he would become a tyrant, and they rebelled against him. Of all the daimyos, only Iyeyasu and a few minor daimyos remained loyal.

Nobunaga and his small coterie of allies fought the other daimyos between 1570 and 1573. Although he faced superior numbers, Nobunaga emerged victorious and, flushed with victory, advanced against Kwanto in the northeast. He conquered this province, then also took the territory between Kwanto and the outlying vicinity to Kyoto. With this region secured, Nobunaga turned next against the Buddhist monasteries in the hills of Hiyesia above Kyoto, for these had been centers of resistance against him. Toward the militant monks Nobunaga was ruthless, massacring them and destroying their settlements.

Nobunaga himself fell to an assassin in 1582, while he was marching to fight alongside Hideyoshi on the island of Shikoku. A vassal, Akechi (fl. 16th century), wounded Nobunaga, who subsequently committed suicide. Akechi then proclaimed himself shogun. In the meantime, Hideyoshi made peace with his rivals on Shikoku and returned quickly to Kyoto at the head of 30,000 men. He swiftly avenged the death of his great ally, then assumed the office of *kwampaku*, effectively regent. This incited jealousy among the heirs of the slain Oda Nobunaga, who now rebelled against Hideyoshi. The alliance fragmented, but Hideyoshi combined adroit diplomacy with brilliance at arms to put down the rebellion and reunite the daimyo. By 1584, he had become the chief ruler of Japan. To secure this position, Hideyoshi concluded a treaty with a potential rival, Iyeyasu, and, thanks to a generous and conciliatory policy toward his many former enemies, Hideyoshi succeeded in forging a genuine unified nation out of what had been a collection of feuding warlord territories.

Japanese Civil War (1863–1868) *See* MEIJI RESTORATION.

Japanese Earlier Nine Years' War

(1051–1062)

PRINCIPAL COMBATANTS: Abe family vs. the governors of Mutsu and Dewa provinces as well as imperial-sanctioned troops led by Minamoto Yoriyoshi

PRINCIPAL THEATER(S): Northeastern Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of northeastern Japan and assertion of imperial control over the rebellious Abe clan

OUTCOME: After over a decade of struggle (of which only nine years was spent actually fighting), the Abe rebellion was suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The refusal of the Abe family, ruling clan of the portion of Mutsu Province bordering the Kitakami River in north-eastern Japan, to pay taxes owed to the province created enmity with other clans and warlords. When the Abe then began to expand their holdings, the governors of Mutsu Province and Dewa, the neighboring province, pooled their resources and marched against the Abe's army. The Abe forces were victorious, however, and pushed the governors' armies into retreat.

News of the warfare in the provinces reached the emperor, Go-Reizei (1045–68), who dispatched an army under Minamoto Yoriyoshi (988–1075) and his son Yoshiie (1039–1106) to Mutsu to deal once and for all with the upstart Abes. At the first battle, in 1056, Abe Yoritoki (d. 1056), the patriarch of the clan, was fatally wounded by an arrow, but his son Sadato (1019–62) immediately assumed command of the army, which was able to continue the fight. Under Sadato, the Abe forces defeated Minamoto at Kawasaki in 1058. The timely commencement of a snowstorm provided concealment for a small fraction of the defeated army to escape. Only after a hiatus of four years was Minamoto able to recruit a new army, augmented by a contingent from the Kiyohara family (based in Dewa), to mount a fresh attack on the Abes.

One Abe army, under Yoritoki's second son, Abe Muneto, quickly folded, but Abe Sadato continued to resist. He was twice defeated, yet refused to capitulate. At last, the Minamoto forces overran his base in Kuriyagawa, his fort was set ablaze, and Sadato was killed. A triumphant Minamoto delivered his severed head to the emperor. More than a decade after it began, after nine years of actual fighting, the war was over.

frey Mass, *Warrior Government in Early Medieval Japan* (New Haven, Conn.: Yale University Press, 1974); James Murdoch, *A History of Japan*, 3 vols. (New York: Routledge, 1996); George B. Samson, *A History of Japan*, 3 vols. (Palo Alto, Calif.: Stanford University Press, 1958–63).

Japanese Invasion of Korea (1592–1599)

PRINCIPAL COMBATANTS: Japan vs. Korea (with Chinese aid)

PRINCIPAL THEATER(S): Korea

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Japan sought conquest of Korea.

OUTCOME: Korea was occupied for a time, but Japan's failure to gain control of the sea made its triumph only temporary; ultimately, the Japanese invaders withdrew from the country they had devastated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Japan, 138,900 (plus 51,950 reserves); Korea, 70,000; China, 80,000

CASUALTIES: Unknown, but in the thousands

TREATIES: Truce of 1592; armistice of 1599

Toyotomi Hideyoshi (1536–98) emerged from the JAPANESE CIVIL WARS (1560–1584) as the leader of a unified Japan. Having achieved this titanic and seemingly impossible feat, he decided to move next on a great campaign of conquest to include Korea and China.

Hideyoshi assembled a vast army of 138,900 men, plus a reserve force of 51,950 more, to advance across the Straits of Tshushima and attack Pusan, principal port of southeast Korea. He would have to overcome the superb Korean navy, especially the fleet of Cholla Province, which included history's very first ironclad vessels, called "turtles." Driven by galley oars, they carried mounted iron rams as well as at least two cannon each. Archers on board were armed with incendiary arrows. Although the Japanese would later be known as a seafaring people, this was not the case in the late 16th century. Thus Korean admiral Yi Sun Sin (fl. late 16th century), with 45 formidable ships, won the first battle of the invasion, destroying 26 of 50 Japanese ships on May 7, 1592. Eighteen more Japanese vessels were sunk the next day.

Despite Yi's magnificent victories, a Japanese force was able to land at Pusan on May 24. A 5,000-man vanguard assaulted Pusan Castle, which was defended by about 10,000 Koreans; however, whereas the Japanese were armed with modern muskets, the Koreans had nothing but lances and bows. The castle fell, and the Japanese invaders reportedly collected the heads of 8,000 garrison members.

On May 25, 10,000 Japanese defeated 20,000 Koreans at Tong-Nae Castle, with the loss of 5,000 of the defenders and only 100 Japanese (plus 400 wounded). Following this, the Japanese began deploying their main forces; 39,500 men were sent in two columns to attack Seoul. They were met by a 70,000-man Korean army at Chung-Ju on June 7, but the outnumbered Japanese managed a flank attack, which killed some 3,000 Koreans and forced the surrender of the rest. Some 11,000 Japanese advanced northward to the city of Pyongyang. Here they encountered 5,000 Chinese, whom they swept aside on October 3, killing at least 3,000.

The Chinese disaster at Pyongyang prompted the Ming government to order full-scale intervention in Korea. Li Ju-Sung (fl. 16th century) led 51,000 Chinese against the Japanese. However, on February 25, 1593, the Chinese cavalry became mired in the mud at Pyokchegwan and were exposed to furious Japanese swordsmen. At this place, perhaps 70,000 Chinese and Korean troops faced 40,000 Japanese. At least 10,000 Chinese and Koreans fell before withdrawing.

Despite the overwhelming success of the Japanese on land, Admiral Yi gained mastery of the sea, virtually destroying the Japanese navy in the course of several battles. Hideyoshi, realizing that his army, however victorious, was now cut off for lack of ships, agreed to a cease-fire. During this period, from 1593 to 1596, negotiations ground on without result. At last, in March 1597, Hideyoshi resumed the war, deploying a new invasion of some 149,000 men in 500 ships. Admiral Yi was not present when the Japanese vessels surprised the Korean fleet in a night attack on July 16, 1597. Of 180 Korean ships, only 12 escaped destruction. The Japanese not only failed to rescue drowning crews, they beheaded the survivors they encountered.

A landing force swept ashore, took the fortress of Nam-won, and collected 3,726 Chinese heads. At this juncture, Admiral Yi returned to command, and with 12 capital ships he managed to force the Japanese fleet into the narrow waters of the Myongyang Strait. On September 16, 1597, he attacked and destroyed the Japanese flagship, then displayed the severed head of Admiral Kurushima Michifusa (d. 1597) on a Korean mast. The sight so demoralized the rest of the Japanese fleet that they fled in panic, crashing into a chain the Koreans had laid across the strait. More than 100 Japanese vessels foundered and were lost.

Yi's victory at sea halted the Japanese land advance 17 miles outside of Seoul. A Chinese army of 80,000 attacked the Japanese camp at Uru-san in January 1598. The Japanese held out until the arrival of Chinese reinforcements persuaded Hideyoshi to evacuate the Korean Peninsula.

Japanese Later Three Years' War (1083–1087)

PRINCIPAL COMBATANTS: Kiyowara clan vs. Mutsu Province (with aid from Fujiwara clan)

PRINCIPAL THEATER(S): Northern Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The provincial governor of Mutsu sought to suppress the perpetually warring Kiyowara clan.

OUTCOME: The Kiyowara were defeated and stability restored to Mutsu.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The ruling clan of Mutsu Province in northern Japan, the Kiyowara, splintered into various branches and factions, which habitually quarreled. Often, the fighting was violent, causing great hardship in the province. Minamoto Yoshiie (1039–1106), the provincial governor, repeatedly tried to quell the violence but ultimately decided that his military intervention was called for. In 1086, he led an assault on a winter fort harboring Iyehira and his Kiyowara faction. Minamoto Yoshiie laid a siege, but it failed as many of his men succumbed to the hardships of a harsh northern winter. Calling his men into retreat, Yoshiie regrouped and reinforced his army with troops from his younger brother and from the Fujiwara family, rivals to Kiyowara. The united forces chose a new target, the great Kiyowara fortress at Kanazawa. The defenders capitulated after an arduous four-month siege. However, the Kiyowara leaders made a break for it and were promptly killed. The war is called the "Three Years' War" because, although the period of hostility spanned a full four years, the actual fighting occupied only in three.

Javanese-Chinese-Dutch War (1740–1743)

PRINCIPAL COMBATANTS: Dutch East India Company vs. Chinese on Java; some Javanese sided with the Chinese, some with the Dutch

PRINCIPAL THEATER(S): Java

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dutch East India Company deportations of Chinese on Java incited a rebellion against the Dutch.

OUTCOME: The rebellion was put down and peace was restored between the Dutch and Chinese on Java.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Totals unknown, but in 1741, the Dutch post at Semarang was besieged by 23,500 Chinese and Javanese rebels.

CASUALTIES: About 10,000, on all sides died.

TREATIES: None

Chinese trade with Java was a long-established fact centuries before the Dutch entered the Javanese trade under the auspices of the Dutch East India Company. Chinese traders became integrated into the Dutch-Javanese trade after the Dutch East India Company established its headquarters at Batavia (Djakarta). The Chinese population in Batavia and vicinity grew, so that, by the mid-18th century, it greatly outnumbered Dutch residents. Dutch colonial administrators feared that the Chinese, many of whom were impoverished and unemployed, would rise in rebellion. To forestall this, officials began deporting Chinese to Ceylon (Sri Lanka) and the Cape of Good Hope (Cape Town, South Africa). This action served only to incite an uprising. In 1740, the Chinese of Batavia rebelled and, initially, were mowed down by well-armed Dutch East India Company military forces. However, Javanese dissidents, who had long resented the Dutch imperial presence, joined the Chinese cause, and the rebellion soon spread beyond Batavia to engulf all of Java. In 1741, the Dutch post at Semarang withstood a siege by 23,500 Chinese and Javanese rebels.

The impact on the Dutch was both military and economic, as the sugar industry came to a standstill. There was a real question as to whether the Javanese royal government, in the person of King Pakubuwono II (d. 1743), ruler of Mataram, would back the Chinese or the Dutch. At first, he sided with the Chinese, participating in the slaughter of the Dutch garrison at Kartosuro, but, realizing that the Dutch had far more resources than the Chinese, he changed allegiance and allied himself with the Dutch. In 1743, Pakubuwono ceded to the Dutch the northern coastal region of Java, which effectively hemmed in the Chinese. With this, the rebellion ended—as did the deportations. The war had reduced the Chinese population, but those who remained functioned peacefully as participants in the Javanese-Dutch trade.

Javanese War of Succession, First (1704–1707)

PRINCIPAL COMBATANTS: Javanese rebels vs. Dutch East India Company

PRINCIPAL THEATER(S): Java

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Javanese rebels sought independence from Dutch domination.

OUTCOME: The rebellion was crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Dutch East India Company was founded in 1602 and, in the course of the century, became a major economic and political power in Java, dominating the chief coastal city of Batavia (Djakarta) and often intruding itself into the affairs of local kings and sultans, as well as rulers throughout the East Indies (the Malay archipelago). This

incited several uprisings against the Dutch presence in the region. In turn, that presence destabilized Javanese government and issues of succession. The Dutch frequently took advantage of this instability to gain a stronger hold on Java.

In 1704, Surapati (d. 1707), a fugitive Balinese slave, rallied a band of natives against Dutch traders. Dutch East India Company forces attempted to capture him, which drove Surapati to seek refuge from King Amangkurat III (fl. 1703–08) of Mataram, the key central Javanese kingdom. Amangkurat harbored Surapati for a time, and then the former slave moved to northeastern Java, where he declared himself a king. In the meantime, the Dutch sought vengeance against Amangkurat for having sheltered the fugitive troublemaker, and they sponsored a rival to the throne, Pakubuwono I (d. 1719), Amangkurat's uncle. His followers united with Dutch East India Company troops to defeat Amangkurat in battle. The deposed king fled to the northeast, where he now sought refuge with Surapati.

But the Dutch were not through. They relentlessly pursued Amangkurat and ran him to ground in the northeast, along with Surapati. The fugitive slave was executed in 1708, and Amangkurat was exiled to Ceylon (Sri Lanka).

Javanese War of Succession, Second (1719–1723)

PRINCIPAL COMBATANTS: Dutch East India Company vs. Javanese leaders hostile to the company

PRINCIPAL THEATER(S): Java

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Dutch East India Company sought to ensure a friendly government in Java.

OUTCOME: Rivals were killed or exiled, and the company expanded its influence and control throughout most of Java.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

The Dutch employed more than 1,000 men on Java; Javanese numbers unknown

CASUALTIES: Unknown, but described as massive by historians

TREATIES: None

In the First JAVANESE WAR OF SUCCESSION, from 1704 to 1707, the forces of the Dutch East India Company had

placed on the throne of Mataram, most important of the Javanese kingdoms, King Pakubuwono I (d. 1719), who was compliant with the company's wishes. His death in 1719 brought a number of claimants to succession. The Dutch allied themselves to whatever they perceived as the winning side, then were determined to eliminate all rivals hostile to their presence and commercial prosperity. Accordingly, they conducted a campaign to find and kill or exile all potential rivals for power. In the course of this campaign, the Dutch East India Company expanded its control of Java.

Javanese War of Succession, Third (1746–1757)

PRINCIPAL COMBATANTS: Dutch East India Company vs. rivals to King Pakubuwono III

PRINCIPAL THEATER(S): Mataram, Java

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Dutch helped their puppet, Pakubuwono III, resist challenges by two rival claimants to the throne of Mataram.

OUTCOME: The kingdom was partitioned to satisfy all claimants to the throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Dutch numbers unknown; rebel forces, 13,000

CASUALTIES: Unknown

TREATIES: Gianti Agreement, 1755

Through the First JAVANESE WAR OF SUCCESSION, from 1704 to 1707, the Second JAVANESE WAR OF SUCCESSION, from 1719 to 1723, and the JAVANESE-CHINESE-DUTCH WAR, from 1740 to 1743, the central Javanese kingdom of Mataram had become a client or vassal realm of the Dutch East India Company, which supported rulers friendly to it and suppressed those who dared to oppose it. When King Pakubuwono III (fl. 1743–57) was assailed by rivals to the throne, mainly Mangkubumi (1717–92) in 1746, the company sided with the compliant king. War became chronic, and by 1747, the Dutch faced some 13,000 rebels. In 1751, the Dutch suffered a serious setback in a battle at the Bogowonto River. At last, in 1755, by the Gianti Agreement, the company agreed to allow the partition of Mataram. Pakubuwono continued to rule in the east, from his capital Surakarta, and Mangkubumi took over the western portion of the kingdom, ruling from Jogjakarta. This left sporadic guerrilla warfare raging against the Dutch through 1757 in the east. However, the Dutch

bided their time, understanding that warfare among the Javanese ultimately strengthened their position as a colonial power.

Java Revolt (1849)

PRINCIPAL COMBATANTS: Javanese vs. Netherlands Indies forces

PRINCIPAL THEATER(S): Java

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Suppression of anticolonial rebellion in Java

OUTCOME: Java came under the full control of the Dutch.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Dutch East India Company was granted virtual sovereignty over Java by the government of the Netherlands during the 17th century. Relations between the Javanese natives and the Dutch were often strained and violent during the centuries of colonial occupation. In 1849, a major revolt developed, to which the colonial authorities responded by sending a major Netherlands Indies military force to Bali in April. The Javanese military leader Gusti Ketut Jilantik was killed in a clash with these forces, and the Netherlands colonial government assumed control of Buleleng and the north coast of Bali.

In May, the Netherlands Indies forces advanced into southern Bali for the first time. They marched through Karangasem and Klungkung and put down resistance in these places. Forces under the raja of Lombok, allied to the Dutch, attacked and took Karangasem while the Netherlands Indies forces assumed full control in Palembang. By 1850, Dutch missionaries were beginning their work among Bataks of north Sumatra, and a great famine in central Java ended all hope of renewed resistance. The Dutch further consolidated their hold on Java in 1850 by purchasing the remaining Portuguese posts on Flores.

Stamford Raffles, *The History of Java* (New York: Oxford University Press, 1985).

Java War, Great (1815–1830)

PRINCIPAL COMBATANTS: Dutch East India Company forces vs. Javanese guerrillas led by Dipo Negoro

PRINCIPAL THEATER(S): Java

DECLARATION: Jihad proclaimed, 1815

MAJOR ISSUES AND OBJECTIVES: Dipo Negoro's rebels wanted to suppress Dutch economic and political domination of Java.

OUTCOME: The rebels were ultimately defeated, at great cost, but the Dutch did liberalize administration of Java.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Dutch forces, 100,000

CASUALTIES: Dutch losses may have been as high as 15,000 killed; Javanese losses, 200,000, including 20,000 battlefield deaths

TREATIES: None

The war is sometimes referred to as Dipo Negoro's War, after Prince Dipo Negoro (c. 1785–1855), the disgruntled eldest son of the king of Jogjakarta, who was passed over for succession to the throne when the Dutch East India Company, under Governor Johannes Bosch (fl. early 19th century), supported a younger and more compliant rival. Dipo Negoro recruited support for his war against the Dutch by appealing to indigenous Muslim property owners, who had lost land to Dutch policies of land reform and redistribution. Dipo Negoro further bolstered his cause by transforming it into a jihad, a Muslim holy war against the infidel Dutch. This cause came to the fore after the Dutch built a road beside a sacred tomb, an act of sacrilege. It united Muslim aristocrats and common folk alike.

Dipo Negoro led a low-level guerrilla war against the Dutch from 1815 to 1828, when the Dutch at last managed to force a major battle in the open. Better equipped than the prince's forces, the Dutch scored a significant victory, which gained them the momentum needed to support a major effort. The Dutch government financed the building of stronghold forts throughout the region, linked by good roads. Now forces could be concentrated quickly anywhere resistance was met. Although costly to maintain, the fortress network ended Dipo Negoro's effectiveness. In 1829, two of his chief lieutenants surrendered, and on March 28, 1830, the prince himself offered to negotiate. When he drew the line at relinquishing his title of protector of Islam, Dutch authorities violated their pledge of safe conduct, arrested Dipo Negoro, and exiled him to the Celebes. From the Javanese point of view, the war had not been fought entirely in vain, however. Having experienced heavy losses and having been forced to invest expensively in defense, the Dutch now deemed it prudent to bend in their administration of Java, and fairer economic and political policies were instituted.

Jenkins' Ear, War of (1739–c. 1743)

PRINCIPAL COMBATANTS: England and the English colony of Georgia vs. Spain and the Spanish colony of Florida

PRINCIPAL THEATER(S): Georgia and Florida

DECLARATION: Great Britain declared war on Spain, October 19, 1739.

MAJOR ISSUES AND OBJECTIVES: British outrage over an assault on a merchant captain by Spanish authorities seeking to regulate trade with Spanish colonies, set against European conflicts and alliances

OUTCOME: Inconclusive, an event in the War of the Austrian Succession (1740–48)

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: In Florida, Oglethorpe commanded 1,300 regulars and militia plus 500 Indian allies; Spanish forces, 1,100

CASUALTIES: At St. Augustine, Oglethorpe lost 122 men killed, 50 wounded, 20 captured; Spanish losses, 200 killed, wounded or captured

TREATIES: No treaty, one of a series of actions of the War of the Austrian Succession

As with KING WILLIAM'S WAR and QUEEN ANNE'S WAR, the causes of KING GEORGE'S WAR were rooted in European alliances and conflicts that profoundly affected the farthest-flung colonies of empire. The War of Jenkins' Ear was a kind of overture to King George's War, as the American theater of the War of the AUSTRIAN SUCCESSION was called. At the conclusion of Queen Anne's War (the European phase of which was the War of the SPANISH SUCCESSION) in 1713, Great Britain concluded a treaty with France's ally Spain. It included a provision called the "Asiento," a contract that permitted and regulated English trade in slavery and goods with the Spanish colonies.

English traders were quick to violate the regulatory provisions of the Asiento, thereby provoking Spanish officials to deal harshly with British merchant sailors in the West Indies. Robert Jenkins (fl. 1730s), captain of the merchant ship *Rebecca*, claimed that Spanish coast guards had cut off his ear while interrogating him. When word of this—and other incidents—reached Great Britain, outrage ignited open hostilities.

On October 19, 1739, Great Britain declared war on Spain, and in January 1740, James Oglethorpe (1696–

1785), the principal founder of the English colony of Georgia, invaded Spanish-held Florida. Spanish abuses of the Creek, Cherokee, and Chickasaw Indians in the region sent them into the English camp, and, with their aid, Oglethorpe captured Fort San Francisco de Pupo and Fort Picolata, both on the San Juan River. He next laid siege to Saint Augustine from May through July but was forced to break off at the approach of Spanish relief forces. Oglethorpe repelled a Spanish counterattack on Saint Simon's Island, Georgia, in the Battle of Bloody Marsh, June 9, 1742, but the Georgians' second attempt to capture Saint Augustine, in 1743, also failed. Oglethorpe then withdrew from Florida.

The War of Jenkins' Ear did not formally end but was swallowed up in the much larger conflict over the Austrian succession fought in Europe.

Jericho, Fall of (c. 8000 B.C.E.)

PRINCIPAL COMBATANTS: Israelites vs. Canaanites

PRINCIPAL THEATER(S): Canaan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest of Canaan

OUTCOME: Jericho fell, thereby opening the way for the Israelite conquest of all Canaan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown; according to the Old Testament, Jericho was virtually annihilated.

TREATIES: None

According to the Book of Joshua (Old Testament), Joshua became leader of the Israelite tribes after the death of Moses. Under Joshua, the Israelites conquered Canaan, and it was Joshua who distributed Canaan's lands to the 12 tribes of Israel.

Joshua was apparently a very able military leader, who sent spies into Canaan to assess the Canaanites' morale. Based on this intelligence, Joshua led the Israelites in an invasion across the Jordan River. The first obstacle to be overcome was the walled city of Jericho, which, even then, was one of the oldest known cities, having been established at least as early as 9000 B.C.E. Joshua's forces breached the walls of Jericho and took the city. This accomplished, the Israelites were able to capture other towns in the north and south until most of Palestine was brought under Israelite control.

As far as can be determined, following its destruction by the Israelites, Jericho was abandoned until Hiel the

Bethelite established himself there in the ninth century B.C.E. (as recorded in 1 Kings 16:34).

Jewish-Philistine Wars (1028–c. 1000 B.C.E.)

PRINCIPAL COMBATANTS: Israel vs. the Philistines

PRINCIPAL THEATER(S): Israel

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Israel sought to drive out the Philistine oppressors and overlords.

OUTCOME: Under King Saul, Israel enjoyed limited but significant success against the Philistines; under King David, the Philistines were entirely neutralized.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

Between 1080 and 1028 B.C.E., the Philistines rose, invaded, and came to dominate the territories of Israel. Under the reign of King Saul (fl. c. 1021–1000 B.C.E.), the Jews rebelled against their Philistine overlords. Saul had significant success against the Philistines; however, internal struggles and factionalism within Israel ultimately impeded the struggle, and Saul was never able to drive the Philistines completely out of Israel. Saul was killed at the important Battle of Mount Gilboa.

David (d. c. 962 B.C.E.) succeeded to the throne vacated on the death of Saul, and from 1010 to about 1000 B.C.E., he succeeded in neutralizing the Philistine threat. He did this by three means: prowess at arms, an ability to unite the always fractious Israelites, and the diplomatic daring to recruit soldiers from among the very Philistines he had defeated. This last step co-opted Philistine resistance and also provided Israel with an army to combat other external threats and to expand the kingdom.

Dothan, *People of the Sea: The Search for the Philistines* (New York: Macmillan, 1992); Carl S. Ehrlich, *The Philistia in Transition, A History from ca. 1000–730 BCE* (Boston: Brill Academic, 1996).

Jewish Revolt (168–143 B.C.E.) *See* MACCABEES, REVOLT OF THE.

Jewish Revolt (66–73)

PRINCIPAL COMBATANTS: Palestine vs. Rome

PRINCIPAL THEATER(S): Jerusalem and the deserts of Palestine

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A band of Jewish rebels sought to expel the Romans from Palestine.

OUTCOME: After much effort, the rebellion was crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: 3,600 Jerusalemites killed

TREATIES: None

Cestius Gallus (fl. first century), the governor of first-century Rome's Middle Eastern possessions, was a rash and inept administrator, easily antagonized by a band of Jewish zealots bent on expelling the Romans from Palestine. An explosive situation soon developed. It took only the additional ineptitude of Judea's Roman procurator, Gessius Florus (fl. first century), to light the fuse. As the result of a dispute in Caesarea, the capital of Judea, Florus imposed a heavy fine on the Temple at Jerusalem. When the Jews refused to pay the fine, Gessius Florus met with a Jewish delegation in Jerusalem. The Jews protested the procurator's looting of the land, whereupon Florus brought the meeting to an end by ordering the deaths of 3,600 Jerusalemites. Instead of cowering in fear, the Jews revolted against the Romans. The rebellion spread rapidly through Palestine as zealots took a series of Roman frontier fortresses, most notably Masada, in 66.

In response to the spreading conflict, Gallus led troops to Jerusalem, where he attacked the temple, but was beaten back. Retreating through the Jerusalem suburb of Bezetha, he lost 6,000 men, equipment, and a siege train to Jewish forces. News of the loss outraged the Roman emperor Nero (37–68), who dispatched an army under Titus Flavius Vespasian (9–79) to crush the revolt.

Vespasian was an able professional commander. He began his campaign systematically, in Galilee, where he laid siege to Jotapata, an important Jewish-held Galilean fortress. After a 47-day siege, Jotapata fell, and its commander, Joseph Ben Matthias (37–c. 95), became a Roman prisoner. Changing his name to Flavius Josephus, he wrote *The Jewish War*, an extraordinary eyewitness account of the rebellion.

After the fall of Jotapata, Vespasian sought an early end to the bloodshed through a peace conference but was rebuffed. His forces were met in battle at Tiberias, Gischala, and the fortress Gamala. Victorious in each, his troops laid waste to many rebel cities as they inexorably advanced on Jerusalem in 68. That city was already beset by civil strife; for the zealots had slaughtered not only Roman residents but many of the Jews who supported

them. However, Jerusalem was given a reprieve when Vespasian, who would become emperor, was obliged to withdraw from the field of battle and return to Rome following the murder of Nero.

Vespasian turned over command of the army to his son Titus (c. 40–81), who arrived from Rome and immediately carried out the siege of Jerusalem in the spring of 70. The city presented a formidable objective because it was enclosed by great walls. Titus breached the outer wall in the north and the west, then, using assault towers, his troops went to work on the inner wall. The city's defenders sent Titus a surrender offer, and the general called a halt to the siege. But it was only a ruse to buy time for the Jewish troops to withdraw into the upper city and the temple areas. Titus resumed the siege, broke through the inner wall, and invaded the city, only to find the immediate area deserted. Deciding that it would be costly to fight it out, Titus instead erected a siege wall around Jerusalem to starve out its defenders. Although a few Jews surrendered, the majority fought on with a fierceness born of desperation. Relentlessly, Titus took increasing numbers of captives, whom he crucified, sometimes 500 at a time, all in full sight of the remaining defenders.

Titus next moved against the Antonia fortress, which defended the temple. Day and night he battered the fortress with rams until it crumbled. At this, the zealots hunkered down in the fortified temple itself. To breach it, the Romans set fire to the gates, unintentionally igniting the entire temple. Once it fell to the Romans, soldiers looted its treasure.

The Jews were still in possession of the Upper City. Titus opened negotiations, but these soon broke down, whereupon the general ordered the burning of the lower city. He next attacked and breached the walls of the upper city. There he found no one left to fight—only the bodies of those who had died in the siege. Putting the rest of Jerusalem to the torch, the Romans took additional prisoners, whom they crucified or enslaved.

In the meantime, Roman forces marched through the desert to root out the rebels hidden in far-flung fortresses. The fortress at Herodium fell quickly. The fortress at Machaerus surrendered after the capture of its leader in 71. But Masada, taken back in 66, resisted capture. Its position was virtually unassailable, perched on a mountaintop 1,400 feet above the level of the Dead Sea and fitted out with two palaces and formidable fortifications, which had been built by Judea's king, Herod the Great (73–4 B.C.E.).

Masada was besieged in 72 (see MASADA, SIEGE OF). Defended by fewer than 1,000 men, led by Eleazar ben Yahir, women, and children against a Roman legion consisting of some 15,000 men, the fortress held out for almost two years. The Romans dug a siege wall, set up eight camps, and erected a massive ramp for a siege tower and battering ram. Yet they managed to make only a single

breach in Masada's stone wall, which was readily repaired with a wall of wood and earth. The Romans, however, set fire to the wooden wall and finally entered Masada, where they were stunned to find just two women and five children, holed up in a cave, still alive. When the situation was hopeless, the zealots had chosen mass suicide rather than capture and enslavement.

Jewish Revolt (115–117)

PRINCIPAL COMBATANTS: Jewish rebels vs. Roman imperial forces

PRINCIPAL THEATER(S): Primarily the Roman province of Cyrenaica; also Egypt, Cyprus, Asia Minor, Judea, and Mesopotamia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Jews sought relief from Roman repression.

OUTCOME: Despite isolated Jewish victories, the rebellion was ruthlessly crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The revolt began in the Roman province of Cyrenaica (eastern Libya), which was populated in large part by Greeks and Jews. The Jews, who had long felt themselves oppressed by the Greeks, now rebelled against the even more oppressive Romans. Zealots instigated a revolt in the city of Cyrene in 115 under the leadership of one Lukuas or Andreas (fl. second century). After Roman citizens were slain and buildings destroyed, the Roman emperor Trajan (53–117) dispatched forces to crush the rebellion and punish the Jews.

In the meantime, the revolt spread to Jews in Egypt, Cyprus, Asia Minor, Judea, and Mesopotamia. In each place, the Romans soon regained control. In Alexandria, the Jewish rebels enjoyed a measure of triumph, especially in the areas outside the city. In the Cypriot city of Salamis, Jewish rebels massacred all non-Jews and then sacked the city. Yet by 117, the rebellion was well under control—although sporadic outbreaks continued beyond the reign

of Trajan, and the prevailing spirit of rebellion and defiance prompted subsequent Roman emperors to appoint repressive governors throughout the region.

Johnson County War (1892)

PRINCIPAL COMBATANTS: Small ranchers and cowboys of Johnson County, Wyoming, vs. the cattle barons of the Wyoming Stock Growers' Association

PRINCIPAL THEATER(S): Johnson County, Wyoming

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Cattle barons blamed an outbreak of rustling on their former cowhands and other small ranchers, and when the courts refused to act, they took matters into their own hands.

OUTCOME: Inconclusive; no one was convicted of rustling, but neither were others convicted of vigilantism and murder; the "war" polarized politics in the state for generations.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 50 cattle barons and their hired guns; 200 cowboys and small ranchers

CASUALTIES: Two small ranchers

TREATIES: None

The Johnson County War (or "Invasion") in 1892 was one of the more infamous and one of the last of the major vigilante conflicts in the American West of the 19th century. The perpetrators of the incident were the owners of large cattle ranches, many of whom lived in Cheyenne, Wyoming, and left the day-to-day operations of their Wyoming ranches to managers. Most of the big ranchers were members of the Wyoming Stock Growers' Association, a private organization that had received quasi-governmental status through control over roundups and disposition of "mavericks."

By the 1890s, the cattle barons had become accustomed to using state action for their purposes, and they

were heard to complain constantly that the courts, particularly in Johnson County, were refusing to convict cattle thieves. They hired former Johnson County sheriff Frank M. Canton (1849–1927) to put a stop to the rustling by any means necessary. Canton—who was later implicated in the murders of two small ranchers who the cattlemen thought were rustlers—became a source of intimidation by the big ranchers against homesteaders in general. Still, the "problem" persisted, and the big operators planned a daring strike by a band of vigilantes they called "Regulators" and the people of Johnson County called "Invaders."

On April 5, 1892, a special train made up of six cars pulled out of the station at Cheyenne bound for Casper. Aboard were 19 cattlemen, 5 stock detectives, 22 Texas gunmen, 1 Idaho gunman, 2 newspaper reporters, and 4 observers. Leading the secret expedition were Frank Canton and cattleman Frank Wolcott. A good number of the Wyoming participants had been prominent in state affairs; five had been delegates to the state constitutional convention three years before. These invaders disembarked at Casper and set out on horses for Buffalo, county seat of Johnson County, some 100 miles to the north. They carried with them a "death list" of men they believed were rustlers or were sympathetic to rustling.

Forty-six miles short of their goal, the invaders came upon two of the men on their list. Nate Champion and Nick Ray were staying in a cabin on the KC ranch, near the present-day town of Kaycee. The invaders surrounded the cabin. Ray was shot and killed, but Champion was able to stand off the 50 gunmen for almost 12 hours. At 4 P.M., the invaders set fire to the cabin and shot Champion dead when he ran from the burning building. During the stand-off, Buffalo editor Jack Flagg and his son happened by in a buggy. They escaped capture and got word to the citizens of Buffalo. The invaders came within six miles of Buffalo but turned back when they were told the town had been warned. They took refuge in a barn at the TA Ranch, 13 miles south of Buffalo.

Led by Red Angus, county sheriff, about 200 Buffalo residents set out to intercept the invading force. On the morning of April 11, 1892, the invaders were surrounded. As they approached Buffalo, they had cut the telegraph lines and persuaded acting governor Amos Barber not to answer calls from Buffalo citizens for military intervention. Now, the invaders needed army protection. They managed to send word to Barber, who immediately sent messages to Washington, D.C., to Senators Francis E. Warren (1844–1924) and Joseph Maull Carey (1845–1924), both sympathetic to the invaders. Some claim that the senators roused President Benjamin Harrison (1833–1901) from bed to give an order to send troops. The cavalry, stationed at Fort McKinney near Buffalo, arrived in time to prevent further casualties.

Most of the invaders waited in the comfort of the officers' quarters at Fort D. A. Russell, where they were held pending trial. Following nine months of delays, the case

was dismissed because Johnson County could no longer afford the high costs of prosecution.

The inept invasion split the state politically for several years, most people taking the side of Johnson County against the wealthy few who supported the big ranchers. It left two generations of hard feelings, and traces of bitterness were said to remain a century later. In the immediate aftermath of the invasion, Cheyenne newspaperman Asa Mercer wrote an exposé, “Banditti of the Plains: The Crowning Infamy of the Ages,” condemning the invasion. Owen Wister (1860–1938), a friend of the invaders, canceled a vacation to the area in the summer of 1892, fearing involvement in the fallout, but the “war” became the inspiration for his novel *The Virginian*, as well as the novel and film *Shane* and the movie *Heaven’s Gate*.

Jokyu War (1221)

PRINCIPAL COMBATANTS: The Hojo vs. former emperor Toba II

PRINCIPAL THEATER(S): Kyoto, Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Toba wanted to overthrow the Hojo-controlled Bakufu (military government).

OUTCOME: The Hojo quickly crushed Toba’s rebellion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the Kamakura period, Japanese political life was a complicated and subtle web of officially constituted authority manipulated by unofficial powers. In 1192, the Bakufu, a military government, was established at Kamakura, ruled by a shogun, a military leader whose authority was hereditary. At this time, the role of emperor had degenerated to that of a mere puppet. Initially, the shoguns enjoyed the real power, but they, too, soon delinquesced to the level of mere instruments of the powerful Hojo family, led by a *shikken* (regent).

Early in the 12th century, Emperor Toba II (1180–1239) abdicated, realizing that, in the present state of Japanese government, he commanded more influence off the throne than on it. In 1221, Toba recruited the support of Japanese monasteries, which possessed great military strength. He led the monasteries against the Bakufu but soon found himself checked by the Hojo—supporters of the Bakufu—at a battle in Kyoto. This effectively crushed the rebellion, and Toba was banished.

To prevent further rebellion, the Hojo boldly installed two of their own military governors in Kyoto and simultaneously seized both the imperial court and the imperial succession. Those loyal to Toba forfeited their estates, which were redistributed to individuals and families friendly to the Hojo. Thus the brief Jokyu War firmly bolstered the feudal nature of Japanese society during this period and linked feudalism to a strong military establishment.

Jordanian Civil War (1970–1971)

PRINCIPAL COMBATANTS: Jordan vs. Palestinian guerrillas

PRINCIPAL THEATER(S): Jordan

DECLARATION: Martial law decree, September 16, 1970

MAJOR ISSUES AND OBJECTIVES: Jordan’s King Hussein wanted to purge Jordan of Palestinian terrorists.

OUTCOME: The Palestinians were suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Jordanians, 54,000; Palestinians, 20,000

CASUALTIES: Jordan army, 750 killed, 1,250 wounded. Total casualties for both sides are estimated at 3,440 killed and 10,840 wounded.

TREATIES: None

The Six-Day War between Egypt and Israel produced some 400,000 Palestinian refugees, who fled the West Bank when it was forfeited to victorious Israel (see ARAB-ISRAELI WAR [1967]). This vast influx of dispossessed Palestinians joined the even larger Palestinian population already resident in Jordan, which immediately became a base from which Palestinians conducted terrorist attacks on Israel. The most visible and militant of the Palestinian terrorist groups was the Palestine Liberation Organization (PLO), led by Yasser Arafat (b. 1929). In defiance of Jordan’s king Hussein (1935–99), Arafat asserted the PLO’s right to conduct war from Jordanian territory with the objective of reclaiming the West Bank as a Palestinian state. Hussein could not long tolerate the threat to his own reign and to the sovereignty of his nation.

In February, 200 were killed and 500 wounded in four days of fighting. This was followed on September 1 by a Palestinian-backed assassination attempt against the Jordanian king. The final straw came with “Black September,” a rash of PLO hijackings of commercial airliners during

September 6–9, 1970, which were flown to Amman, Jordan. Risking the alienation of other Arab states—who wanted to see the defeat of Israel and who therefore supported the PLO—Hussein declared martial law on September 16, 1970, and conducted a 10-day campaign against the Palestinians, containing the refugee camps, disarming guerrillas, and deporting key leaders. King Hussein deployed his Bedouin army of 52,000 and his 2,000-man, 40-plane air force against the outclassed forces—about 20,000 men—fielded by the Palestinians. Syria deployed two armored brigades on September 20, threatening out-and-out war, but Hussein did not back down. Some 300 Syrian tanks advanced across the border, only to be pushed back by September 23 with the loss of 60 vehicles. President Gamal Abdel Nasser (1918–70) of Egypt intervened and brokered a cease-fire on September 27.

Low-level guerrilla resistance continued throughout Jordan well into 1971; however, Amman was cleared of Palestinians by April, and, by July, PLO bases throughout Jordan had been destroyed. The PLO and other Palestinian guerrillas moved on to bases in Lebanon.

Juchen Mongol Conquest of the Liao (1114–1122)

PRINCIPAL COMBATANTS: Juchen Mongols vs. the Liao (Khitan) dynasty; China also attacked the Liao during this period

PRINCIPAL THEATER(S): Manchuria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest of southern Manchuria

OUTCOME: The Juchen Mongols not only took southern Manchuria but penetrated deep into China to establish the Jin (Chin) dynasty at Beijing.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

For many years, the Juchen Mongol tribes of northern Manchuria recognized the suzerainty of the Liao (Khitan) dynasty in southern Manchuria. Then, in 1114, the leader of the Juchen Mongols suddenly severed relations with the overlord of the Khitan tribe that had founded the Liao dynasty. This was the prelude to a Mongol attack on the Liao, which came swiftly and massively as thousands of Juchen tribesmen poured in from the north.

The Liao situation was made worse by an attack by the Chinese from the south; China sought to exploit an

opportunity to avenge the disloyalty of people who had been its former vassal.

Squeezed between two great forces, the Liao evacuated Manchuria by 1116. The Juchen Mongols held that territory and continued to pursue the Liao into Shanxi (Shansi) and Zhili (Chihli) in present-day China. By the end of the war, 1122, the Juchen Mongols had taken Beijing and established the Jin dynasty. Liao survivors settled in the west, where they founded Kara-Khitai in the valley of the Ili River. Their once great dynasty, however, was totally obliterated by 1125.

Juchen Mongol Invasion of the Song Empire (1125–1162)

PRINCIPAL COMBATANTS: Juchen Mongols (Jin [Chin] dynasty) vs. Song (Sung) dynasty and, subsequently, Southern Song

PRINCIPAL THEATER(S): China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of China

OUTCOME: In the early phases of the war, the Song were defeated and pushed to the south; subsequently, the Southern Song staged a successful counteroffensive campaign, which drove the Chin northward. A treaty was concluded, dividing rule of China between the two dynasties.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaties between Southern Song and Chin, dividing rule, 1141 and 1162

During the **JUCHEN MONGOL CONQUEST OF THE LIAO**, from 1114 to 1122, the Chinese Song dynasty had helped the Juchen Mongols take the territory of the Liao in southern Manchuria and Shanxi (Shansi). In 1125, however, the Juchen Mongols, who had established the Jin dynasty at Beijing, suddenly turned on the Song by invading Song

holdings north of the Yellow River. In 1126, the Juchen Mongols went on to cross the Yellow River and surround the Song capital of Kaifeng (K'ai-feng). After a year-long siege, that city fell, and the Song emperor, Huizong (Hui Tsung; 1082–1135), was captured, along with his family. All were sent into exile; however, one son, Gaozong (Kao Tsung; 1107–87), escaped and fled to Nanjing (Nanking). There he founded the Southern Song dynasty.

In 1129, the Juchen Mongols followed Gaozong. Crossing the Yangtze River, they attacked and captured Nanjing, Gaozong's capital city. The indefatigable Southern Song emperor fled again, this time to Hangzhou (Hangchow), and organized armies under General Yo Fei (Yue Fei; d. 1141). Coordinating a land assault with the Song Yangtze River fleet, Yo Fei scored a victory against the Juchen Mongols—the Jin—pushing them back north across the river. This marked a turning point in the war, as Southern Song forces pushed the Jin farther and farther north.

By the early 1140s, many within the Southern Song hierarchy, weary of war, called for a treaty with the Jin. Yo Fei was adamant that the war should continue, but in 1141, he was relieved of command, recalled, and then executed, whereupon the Song and Jin concluded a treaty dividing China along the watershed of the Yangtze valley and the Yellow River valley. For two decades, an uneasy peace, frequently punctuated by outbursts of violence, prevailed. At last, in 1161, Jin forces mounted an invasion of Southern Song territory, but were devastatingly rebuffed in a battle outside of Nanjing. Military historians believe that this battle was marked by the first use of explosives (gunpowder). Much abashed, the Jin concluded a new treaty with Gaozong and the Southern Song.

Jugurthine War (Numidian War) (112–106 B.C.E.)

PRINCIPAL COMBATANTS: Followers of Jugurtha vs. Roman and Roman-led African forces

PRINCIPAL THEATER(S): Numidia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Romans wanted to depose Jugurtha in favor of the son of the previous king of Numidia.

OUTCOME: Jugurtha was captured and removed from the Numidian throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

This conflict, sometimes called the Numidian War, is named for Jugurtha (c. 156–104), the king of Numidia from 118 to 105 B.C.E., who tried to free his North African kingdom from Rome. Jugurtha was an illegitimate grandson of Masinissa (d. 148 B.C.E.), the Numidian ruler who had first allied his country with the Romans, and the nephew of his successor, King Micipsa (d. 116 B.C.E.). As a young man, Jugurtha had become so popular among the Numidians that his uncle felt the need to send him away, and the king placed the youth in the service of Scipio Africanus the Younger (185/184–129 B.C.E.), when the Roman general led an expedition to besiege Spain. Once in Rome, Jugurtha managed to establish close relationships with several powerful Roman senators, who evidently persuaded Micipsa to adopt Jugurtha in 120.

Thus it was that, upon Micipsa's death, Jugurtha came to share rule over Numidia with Micipsa's two sons, Himpisal and Adherbal, the first of whom Jugurtha assassinated, prompting the second to flee to Rome in search of aid. Adherbal had reason to hope, since a change of government in his country required Roman approval, but Jugurtha knew Rome and the Romans better, bribing Roman officials through envoys and obtaining the Senate's authorization to divide Numidia east and west. Jugurtha took the vastly richer western half, saddling Adherbal with the east.

Hardly content to let matters rest there, in 112 Jugurtha attacked Adherbal's diminished kingdom, trusting his influence in Rome to smooth over any senatorial feathers he might ruffle in the process. But when he captured Adherbal's capital at Cirta, he overstepped the boundaries, killing not only his rival king but also a number of Roman businessmen.

Popular outrage at the death of Roman citizens swept the city, forcing the Senate to declare war on Numidia. Even then, however, Jugurtha's contacts helped. In 111, the Roman consul, Lucius Calpurnius Bestia, made a favorable settlement with Jugurtha, though the Senate summoned him to Rome to explain just how he had managed to obtain so generous a treaty. While in the capital, he had a potential rival for the throne assassinated, which led even the staunchest of his Roman friends to wash their hands of him.

In 109, the Roman general Quintus Caesilius Metellus (d. 99 B.C.E.) led a large African army in a sweep through Numidia, devastating much of the kingdom. Unable to defeat the invaders in open battle, Jugurtha resorted to

guerrilla warfare. To combat this, Rome dispatched an army under Gaius Marius (c. 155–86 B.C.E.), who picked up where Caesilius had left off, ravaging the kingdom. This, however, failed to extinguish the flame of resistance. Ultimately, the Jugurthine War was ended not by military victory, but through the treachery of Jugurtha's father-in-law, who delivered the ruler into Roman hands. Marius was thus able to leave Numidia and return to Rome with Jugurtha his prisoner.

Julian's First Campaign *See* ROMAN-PERSIAN WAR (337–363).

Jülich Succession, War of the (1609–1614)

PRINCIPAL COMBATANTS: Brandenburg and Palatinate-Neuberg (with Dutch and French support) vs. Austria (Holy Roman Empire); later, Brandenburg vs. Palatinate-Neuberg (with Catholic League support)

PRINCIPAL THEATER(S): Duchies of Jülich, Cleves, Mark, and Berg

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The parties contested succession to the duchies of Jülich, Cleves, Mark, and Berg.

OUTCOME: Rule of the duchies was divided between Brandenburg (Cleves and Mark) and Palatinate-Neuberg (Jülich and Berg).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Xanten, November 12, 1614

The death of Duke John William of Jülich (d. 1609) in 1609 precipitated a war for succession to his territories, the duchies of Jülich, Mark, Berg, and Cleves. Three rulers vied for succession: John Sigismund (1572–1619), the elector of Brandenburg (who claimed title by descent through the female line), Wolfgang William, the count of Palatinate-Neuberg (who made the same claim), and the elector of Saxony (who deemed the duchies his as an imperial fief). A fourth ruler, the Holy Roman Emperor, wanted to deliver the territories to Spain. A confusing conflict then began. The Brandenburg elector and the count of Palatinate-Neuberg agreed to rule the duchies jointly, but Austrian troops commanded by Leopold (1586–1633), the brother of the

Holy Roman Emperor, invaded and held the duchies during 1609–10. Dutch and German Protestant troops, allied with the French, invaded in 1610, and pushed the Austrians out, capturing Jülich's fortress on September 1, 1610.

Yet the conflict was not over. In 1613, the elector of Brandenburg and the count of Palatinate-Neuberg fell out, dissolving their agreement for joint rule. The count now appealed to Catholic forces for aid in evicting the Brandenburg elector, and the war began to develop into a religious conflict between Protestants and Catholics. However, before a new outbreak of fighting occurred, Brandenburg and Palatinate-Neuberg concluded the Treaty of Xanten on November 12, 1614, whereby Brandenburg received Cleves and Mark (as well as, separately, Ravensberg) and Palatinate-Neuberg received Jülich and Berg (and Ravenstein). Concerned not to alienate the Catholic League, the count of Palatinate-Neuberg pledged to foster a conversion to Catholicism throughout his realm. Sigismund, the Brandenburg elector, remained faithful to his Calvinist Protestantism but instituted general religious toleration throughout his possessions.

Justinian's First Persian War (524–532)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Sassanid Persia

PRINCIPAL THEATER(S): Mesopotamia, at the Persian frontier

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Byzantine emperor Justinian I wanted to end chronic Persian invasions of Byzantine territory.

OUTCOME: The invasions were halted when Persia concluded an "eternal" peace with the Byzantine Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At most, both sides fielded about 40,000 men each.

CASUALTIES: At Dara, Persian losses were 8,000 dead; Byzantine losses are unknown.

TREATIES: "Eternal" peace between Chosroes of Persia and Justinian I of the Byzantine Empire, 532

In the sixth century, Persians continually made incursions into Byzantine territory, and, during 524, they invaded Mesopotamia. Emperor Justinian I (483–565) sent forces to repulse them and, over the next few years, engaged in frontier skirmishes. At last, in 527, Justinian ordered the leading Byzantine general, Belisarius (c. 505–565), to lead a major campaign against the Persians to end the threat to Mesopotamia once and for all. In 528, as part of this campaign, Belisarius built a large fort at Dara, in northern Mesopotamia, and garrisoned it. The construction of the fort provoked Kavadh I (d. 531), Sassanid king of Persia, to mount a major invasion with a combined Persian-Arab army of 40,000 men. Belisarius sallied out of Dara to intercept the invasion, attacking frontally with his own troops and conducting flanking attacks using Hun cavalry. The Persian-Arab force was routed and fled the field, leaving some 8,000 dead behind.

Some authorities date the Battle of Dara at 528, some at 530. What is certain is that, in 531, Kavadh I resumed the offensive, striking Belisarius at Callinicum on the east bank of the Euphrates. This time, the Persians seized the initiative, and it was Belisarius who suffered a severe defeat, saving his army only by taking refuge on islands in the river. Although Belisarius lost, the fact that he had saved most of his army meant that Callinicum was a draw, and it prompted Chosroes (d. 579), son of Kavadh I—who died shortly after the Callinicum battle—to conclude peace with Byzantium. It was not destined to last long (see JUSTINIAN'S SECOND PERSIAN WAR).

Justinian's Second Persian War (539–561)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Persia

PRINCIPAL THEATER(S): Mesopotamia and Georgia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Justinian I defended the frontiers of his empire against renewed Persian invasion.

OUTCOME: Justinian paid Persia annual tribute money to maintain the peace.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace treaty and subsidy agreement, 561

Chosroes (d. 579), Sassanid king of Persia, concluded an "eternal" peace with Justinian I (483–565), Byzantine emperor, ending JUSTINIAN'S FIRST PERSIAN WAR (524–532), but renewed combat in 539 when he invaded Syria and sacked Antioch, a major city of the Eastern Empire. He held the city for a short time through 540. Chosroes resettled many Antiochan prisoners in a new town near his capital, Ctesiphon. In this way, he could ensure better control of the subject population. Chosroes went on to ravage Mesopotamia and Lazica (western Georgia), finally concluding an armistice with the hard-pressed Justinian I in 545. The Byzantine emperor judged it more expedient to pay Chosroes a hefty annual tribute than to fight him, but even this did not stop the combat, and the war continued at a low level of intensity through 561, when a major treaty was signed. In return for continuation of an annual subsidy, the Byzantines were permitted to maintain fortresses in the Caucasus.

K

Kaffir War, First (1779)

PRINCIPAL COMBATANTS: The Boers vs. the Xhosa tribespeople (derisively called Kaffirs)

PRINCIPAL THEATER(S): South Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of farming and pasturage lands

OUTCOME: The Boers succeeded in pushing the Xhosa beyond the Great Fish River; however, no formal boundary resolution was reached.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Kaffir was the disparaging name the Boers—the Dutch farmers of South Africa—gave to native Africans. During the last quarter of the 18th century, Boers began migrating from the coastal regions of the South African colony to inland territory 400 miles northeast of Cape Town. This brought them into conflict with the Xhosa, a Bantu tribe that worked the pastureland along the Great Fish River. Both sides made efforts to demarcate boundaries of settlement, but individual Boers continually violated the boundaries, and in 1779, perhaps motivated by vengeance after Boers killed some tribesmen, the Xhosa raided Boer herders. Cattle were appropriated or slaughtered, and several herdsmen were killed. In response, the Boers organized guerrilla-style raids against the Xhosa. Not only were people targeted, but cattle was stolen in large numbers—reportedly in excess of 5,000 head.

The Boer raids succeeded in driving the Xhosa across the Great Fish River, which served as a natural boundary to settlement, but hardly resolved the underlying conflicts. Boer-Xhosa violence became endemic, and a Second KAFFIR WAR in 1793 ultimately erupted.

See also AXE, WAR OF THE; KAFFIR WAR, THIRD; KAFFIR WAR, FOURTH; KAFFIR WAR, FIFTH; KAFFIR WAR, SIXTH; KAFFIR WAR, EIGHTH; KAFFIR WAR, NINTH.

Kaffir War, Second (1793)

PRINCIPAL COMBATANTS: The Boers vs. the Xhosa tribespeople (derisively called Kaffirs)

PRINCIPAL THEATER(S): South Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dispute over boundary between Boer and Xhosa farming lands

OUTCOME: The war was abortive; after indecisive raids on both sides, the Boer force disbanded over a dispute with its Dutch East India Company leader.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: A boundary treaty between the Boers and the Xhosa had been concluded before the war began but, unenforceable, was without practical effect.

After the First KAFFIR WAR in 1779, violence between the Xhosa tribe and the Boers (Dutch farmers in South Africa) continued. The Boers eventually solicited aid from the Dutch East India Company, the powerful colonizing force in the region. A company agent known to history only as Maynier (fl. 1793) was sent to the Xhosa to negotiate a resolution to the territorial dispute. Although an arrangement was agreed to, it had no practical effect, because the Dutch East India Company furnished no troops or police force to enforce the terms of the agreement. Both Xhosa tribespeople and Boers continued frequently to encroach on one another's territory.

In 1793, a severe drought swept South Africa. Desperate Boer farmers drove their herds into Kaffirland (Kaffir was the term Boers applied to all African natives) in search of pasturage. A farmer named Lindeque (fl. 1793) organized a group that sought more than pasturage. These renegade Boers, violating the Dutch East India Company agreement, began raiding Xhosa cattle. In response, the Xhosa invaded the Boer territory. Agent Maynier recruited a guerrilla force from among the Boers, but the planned general assault against the Xhosa failed to materialize when the guerrilla force disbanded; Maynier refused to demand that the Xhosa surrender a large number of cattle as reparation for Boer losses.

Knopf, 1993); J. B. Peires, *The House of Phalo: a History of the Xhosa People in the Days of Their Independence* (Berkeley: University of California Press, 1982); Leonard Thompson, *A History of South Africa*, 3rd ed. (New Haven, Conn.: Yale University Press, 2001).

Kaffir War, Third (1799–1801)

PRINCIPAL COMBATANTS: The Boers (with British aid) vs. the Xhosa in alliance with the Khosians (Kaffir was the Dutch generic term for native Africans.)

PRINCIPAL THEATER(S): South Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dispute over boundary between Boer and Xhosa farming lands

OUTCOME: British diplomatic intervention broke up the alliance between the Xhosa and Khosians, but military campaigning failed to expel the Xhosa from the disputed region; the war petered out, ending indecisively.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Amiens (between France and Britain), 1802, temporarily took Britain out of the chronic conflict between the Boers and the Xhosa.

In 1795, the Boers of Swellendam and Graaf-Reinet, both South African regions, declared independence, but it would not last long. The British, following the defeat of the Dutch by Napoleonic France (see COALITION, WAR OF THE FIRST), took over the Boer lands. They inherited not only the territory but also the chronic Boer territorial dispute with the Xhosa tribe. The Third Kaffir War would be the first involving the British and the British regular army. At issue, as always, was farmland and cattle pasturage.

In 1799, the Xhosa made common cause with the Khosian servants of the Boers, a people also known as the Hottentots and generally considered to be the first inhabitants of South Africa. These individuals deserted the Boers en masse, bringing with them guns and horses. Thus allied with the Khosians, the Xhosa raids against the Boers became both more destructive and more effective.

The British intervened with troops in May. They also acted diplomatically, by co-opting and undermining the alliance between the Xhosa and the Khosians. Territorial and other concessions to the Khosians succeeded in breaking the alliance, but the British goal of expelling the Xhosa from the disputed territories was not achieved. Nevertheless, by 1801, the war wound down on its own, and Britain temporarily washed its hands of the conflict by terms of the 1802 Treaty of Amiens (between France and Britain), which returned the Cape region to the Dutch.

See also AXE, WAR OF THE; HOTTENTOT UPRISING; KAFFIR WAR, FIRST; KAFFIR WAR, SECOND; KAFFIR WAR, FOURTH; KAFFIR WAR, FIFTH; KAFFIR WAR, SIXTH; KAFFIR WAR, EIGHTH; KAFFIR WAR, NINTH.

Knopf, 1993); J. B. Peires, *The House of Phalo: A History of the Xhosa People in the Days of Their Independence* (Berkeley: University of California Press, 1982); Leonard Thompson, *A History of South Africa*, 3rd ed. (New Haven, Conn.: Yale University Press, 2001).

Kaffir War, Fourth (1811–1812)

PRINCIPAL COMBATANTS: The Boers vs. the Xhosa; British authorities attempted to police both Boers and Xhosa, to enforce a border between them.

PRINCIPAL THEATER(S): South Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dispute over the boundary between Boer and Xhosa farming lands

OUTCOME: The underlying border issue remained unresolved; although the British built a string of forts to protect the border between the Boers and the Xhosa, they lacked sufficient troop strength to ensure an inviolate border.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Anglo-Boer-Khosian force, 2,000; Xhosa, 5,500

CASUALTIES: Boers, 15 killed; Xhosa, 500 killed

TREATIES: None

The peace brought by the Treaty of Amiens (*see* Third KAFFIR WAR) was short-lived, and alliances were realigned, such that Holland, formerly allied with Britain, now sided with France. In response, the British Royal Navy sailed into Cape Town harbor and retook control of the entire Cape region of South Africa. Against this background of European colonial conflict, the war between the Boers and Xhosa erupted anew, as “Kaffir” (the Boer term for any native African) refugees from colonial conflicts throughout the region poured into the Cape area in 1811. On December 27 of that year, Xhosa tribesmen massacred 15 Boers at a peace conference in the Zuurberg Mountains. A combined English, Boer, and Khosian (Hottentot) force of 2,000 was raised and pursued 5,500 Xhosa warriors across the Great Fish River by March 1812. Fought to a standstill, 500 Xhosa men were killed.

The British attempted to maintain strict borders between Xhosa and Boers, and they blamed the Boers unilaterally for violating the boundaries. The effort to enforce the borders was largely futile, however, since the British did not have the troop strength to police the region. After driving the Xhosa back across the Great Fish River, the British did establish a loose line of forts in an attempt to keep both sides separated.

Kaffir War, Fifth (1818–1820)

PRINCIPAL COMBATANTS: The Boers vs. the Xhosa; Great Britain vs. the Xhosa; Great Britain vs. the Boers

PRINCIPAL THEATER(S): South Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In an effort to settle the chronic land dispute between the Boers and the Xhosa tribe, the British colonial government created a wide neutral zone, on which it settled British farmers; this action only exacerbated, complicated, and enlarged the territorial dispute.

OUTCOME: The boundary remained unresolved, and hostilities in this region were compounded, involving Boers, Xhosa, and the British.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Xhosa, 10,000; Anglo-Boer force, 2,300

CASUALTIES: At Grahamstown, Britain, 3; Xhosa, 1,000

TREATIES: None

The stress of continual warfare (*see* KAFFIR WAR, FIRST, KAFFIR WAR, SECOND, KAFFIR WAR, THIRD, and KAFFIR WAR, FOURTH) eroded the internal unity of the Xhosa tribe. A power struggle developed between two rival chieftains, Ndlambi (fl. 1810s) and Gaika (fl. 1810s), resulting in a civil war beginning in October 1818. Ndlambi’s partisans defeated those of Gaika, slaughtering thousands, but the British Cape government, deciding that Gaika was more compliant with colonial policy, continued to back him. On Christmas 1818, Xhosa warriors crossed the Great Fish River, the boundary between white settlement and Xhosa lands. This gave British authorities a pretext for dispatching troops to attack partisans of Ndlambi. In response, Ndlambi launched an attack on Grahamstown, a Boer settlement. This, in turn, touched off the Fifth Kaffir War.

Violence raged without resolution for about one year, reaching a climax at Grahamstown on April 22, 1819, when 10,000 Xhosa attacked an Anglo-Boer force of 450 men plus 150 friendly Khosians (Hottentots). Thanks largely to British howitzers, the attack was repulsed. About 1,000 Xhosa warriors fell, whereas losses among the defenders were 3 killed and 5 wounded. An Anglo-Boer offensive followed in August 1820, with an army of 2,300, but as usual, the fighting petered out when both sides tired of it. This time, Lord Charles Somerset (fl. early 19th century), the British governor of the Cape Colony, was determined to bring permanent resolution to the chronic and costly conflict between the Boers and Xhosa. He declared not a mere border, but a neutral strip, closed to both sides, between the Great Fish River and the Keiskama River. The idea was to establish a no-man’s-land,

a wide buffer. It was, however, a misguided policy: instead of alienating one side or the other, it alienated both. The valuable pasturage, watered by the rivers in an arid land, was badly needed. To make matters worse, Somerset settled *British* farmers in the neutral zone. Immediately, both Xhosa and Boers fell upon the settlers, who quickly fled. The war ended without resolution, but with great bitterness—now very much a three-way affair, with the Xhosa, the Boers, and the British locked in mutual hostility.

Kaffir War, Sixth (1834–1835)

PRINCIPAL COMBATANTS: The Boers vs. the Xhosa (derisively called Kaffirs); British intervened against the Xhosa

PRINCIPAL THEATER(S): South Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dispute over the boundary between Boer and Xhosa farming lands
OUTCOME: In an effort to settle the border dispute, the British expelled the Xhosa, then opened their lands to Boer settlement; unable to defend the newly opened territory, the British abandoned the Boers, many of whom migrated northward in the Great Trek. Anglo-Boer relations worsened, as did British relations with the Xhosa.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

British forces, 2,000; Xhosa, 15,000

CASUALTIES: Boers and British, 200 killed; Xhosa, 2,000 killed

TREATIES: None

By the 1830s, in the Cape Colony of South Africa, the Boers, whose farmlands baked under prolonged drought, continually moved farther into Kaffirland (as they called the territory of the Xhosa tribe), thus provoking more Boer-Xhosa violence. The British government of the colony, hoping to maintain profitable trade (centered at the British settlement of Port Elizabeth) with both the Boers and the Xhosa, succeeded only in antagonizing both sides and, if anything, intensifying the chronic conflict.

In 1834, Sir Benjamin D'Urban (1777–1849), British governor of the colony, decided to act against the Xhosa by expelling them from the disputed region. This accomplished, he curried favor with the Boers by declaring the Xhosa lands open to settlement. In response, on December 21, 1834, 15,000 Xhosa warriors invaded the Cape Colony along a front 100 miles wide, killing dozens of whites. About 1,200 British troops counterattacked in February 1835, pushing a few thousand Xhosa out of the Fish River bush and killing 100. In April, 2,000 British troops attacked again, forcing the Xhosa into the Amatola Mountains and capturing Chief Hintsa (d. 1835). When he was killed on May 12, 1835, in an escape attempt, the Xhosa resistance collapsed. However, D'Urban realized that he was powerless to defend in the future the lands he himself had opened. He therefore ordered the territory deannexed, leaving the Boer settlers isolated and abandoned, greatly exacerbating tensions with the British. Disgusted with British inconstancy, many Boers began the northern migration known as the Great Trek. As for British relations with the Xhosa, tribal resentment of the annexation would ultimately lead to the War of the AXE in 1846 (the Seventh Kaffir War) and the Eighth KAFFIR WAR in 1850.

(New Haven, Conn.: Yale University Press, 2001).

Kaffir War, Seventh See AXE, WAR OF THE (1846–1847).

Kaffir War, Eighth (1850–1853)

PRINCIPAL COMBATANTS: British colonial forces vs. the Xhosa tribe

PRINCIPAL THEATER(S): South Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Xhosa resented British annexation of Xhosa territory.

OUTCOME: The Xhosa uprising was defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: British colonials, 1,400 killed; Xhosa, 16,000 killed or captured

TREATIES: Peace of March 2, 1853

As a result of the Sixth **KAFFIR WAR**, from 1834 to 1835, and the War of the **AXE** (the Seventh Kaffir War), from 1846 to 1847, the British not only annexed all Xhosa tribal territory but sharply limited the power of the Xhosa chiefs.

British authorities dispatched a force of 650 men to arrest Sandile (fl. 1850s), a Xhosa chief. At Boma Pass, on December 24, 1850, the force was ambushed and 23 British soldiers killed. A second British patrol was ambushed on the same day, with the loss of 15 troops. Then, on Christmas day, Xhosa warriors raided a British settlement, killing 46 civilians.

On December 29, the Xhosa struck again, 1,000 warriors attacking a British patrol of 150 just outside of Fort Hare. The patrol retreated into the fort, but lost 24 killed and 18 wounded. Then some 5,000 warriors attacked the fort on January 21, 1851. The garrison of 1,000 (mostly militia) repulsed the attack, inflicting perhaps 100 casualties on the Xhosa. Simultaneously, rebels of the Khoikhoi tribe attacked other forts and settlements, taking Fort Armstrong and the Khoikhoi Kat River Settlement.

By early 1851, some 20,000 warriors of several Bantu tribes were in rebellion. The British were outnumbered about 2 to 1, but, reinforced by the end of the year, British forces assumed the offensive and penetrated deep into Xhosa country in the Waterkloof region. They destroyed vast herds, some 80,000 head of cattle, the principal source of tribal wealth as well as sustenance, and they captured or killed about 16,000 warriors.

British losses were 1,400 killed or dead from disease. In addition, on February 26, 1852, the steamer *Birkenhead* foundered on rocks off Cape Agulhus with the loss of 445 Royal Navy sailors and army reinforcements. A peace was concluded on March 2, 1853.

Kaffir War, Ninth (1877–1878)

PRINCIPAL COMBATANTS: Great Britain colonials vs. the Xhosa tribe

PRINCIPAL THEATER(S): South Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Xhosa made a last-ditch effort to recover lands lost in previous wars.

OUTCOME: The British swiftly suppressed this latest rebellion, then cracked down harder than before, seizing and annexing all remaining Xhosa lands.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: British colonials, 193 killed; Xhosa, 3,680 killed

TREATIES: None

The Xhosa defeat in the Eighth **KAFFIR WAR** in 1853 had been total and terrible, driving the already desperate tribe to even greater desperation. At the behest of Chief Sarili (fl. 1870s) and as they had done in preparation for the 1850–53 war, the Xhosa destroyed their own crops and cattle in 1856, persuaded that such a sacrifice would propitiate the spirits of their ancestors and bring them aid in combating the British. The result of this destruction was increased starvation and the deaths of as many as 55,000 Xhosa.

By the 1870s, the self-destruction had ceased, and the Xhosa, though badly depleted, began gearing up again for war. An uprising exploded in August 1877 but was quickly suppressed by June 1878. Chief Sandile (d. 1878) was killed, as was Chief Siyolo (d. 1878), and the Xhosa's remaining lands were annexed by the British, who reduced the proud tribe to total economic dependency. The Xhosa became a conquered people.

Kalmar, War of (1611–1613)

PRINCIPAL COMBATANTS: Sweden vs. the Kingdom of Denmark and Norway

PRINCIPAL THEATER(S): Finnmark and southern Swedish coast

DECLARATION: Mutual, 1611

MAJOR ISSUES AND OBJECTIVES: The two sides fought for possession of the Finnmark region.

OUTCOME: Denmark and Norway gained control of Finnmark.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Knäred, 1613

Sweden's king Charles IX (1550–1611) attempted to wield absolute control over the Finnmark portion of the Scandi-

navian peninsula, the far northern region that offered a bounty in fisheries and fur trapping. Charles coupled this with various other attempts to curtail Danish trade in the Gulf of Riga and the eastern Baltic generally. In response, King Christian IV (1577–1648) of Denmark and Norway dispatched a fleet to defend trade in the Öresund (Danish Sound), then invited negotiation with Charles. The Swedish king refused to attempt peaceful resolution of Swedish-Danish border difficulties, and both nations declared war.

The Danes opened up with an offensive through Västergötland while the Norwegians laid siege against the Swedish port of Kalmar. Charles and his son Gustavus Adolphus (1594–1632) led a relief force to Kalmar, but the Danes then reinforced the assault, and the Swedes fell back to Visby, relinquishing Kalmar to the Danes by the summer of 1611. Incredibly, the frustrated Charles, defeated in battle, challenged Christian to a duel as a means of settling the fate of Kalmar. The king of Denmark and Norway wisely declined, then attacked the Swedes at Visby, but withdrew after a three-day drawn battle.

Charles IX died late in 1611, leaving the war to his son Gustavus II. He fared no better than his father, however, losing Finnmark and the port of Älvsborg in southeastern Sweden in May 1612. Exhausted, Gustavus II concluded the Peace of Knäred early in 1613, yielding to Danish-Norwegian control Finnmark but reclaiming Älvsborg in exchange for an annual tribute. Kalmar was also returned to Sweden.

Kalmar Civil War (1520–1523)

PRINCIPAL COMBATANTS: Swedish rebels vs. the Kalmar Union

PRINCIPAL THEATER(S): Sweden

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Sweden wanted to end oppression by the Kalmar Union monarch Christian II.

OUTCOME: Led by Gustavus Eriksson Vasa, the rebellion deposed Christian II, drove the Danes out of Sweden, and put Gustavus on the throne of an independent Sweden.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Christian II ordered the execution of nearly 100 Swedish nobles.

TREATIES: None

By virtue of the Kalmar Union (1397), King Christian II (1481–1559) was king of Denmark, Sweden, and Norway. A Swedish rival presented himself, however, in Sten Sture the Younger (c. 1493–1520), regent to the Swedish throne. Christian led a Danish army in an invasion of Sweden in 1520 and was met in battle at Bogesund by Sten Sture. The regent was fatally wounded in the battle, whereupon his widow encouraged the Stockholm garrison to resist a siege, which the garrison did for five months before surrendering on November 4, 1520. Christian II was crowned in Stockholm the next day, on November 5, 1520, and, three days later, convened a “spiritual court” to justify, on religious grounds, a general purge of all opponents. The purge was nothing less than a massacre (later dubbed the Stockholm Massacre or the Bath of Blood) of nearly 100 Swedish noblemen. This provoked a rebellion, beginning among the peasants of the central Swedish province of Dalecarlia, led by a fugitive noble, Gustavus Eriksson Vasa (1496–1560).

Beginning with his peasant army, Vasa gradually conquered Danish-held areas. With each triumph, he attracted more recruits. He progressed through Uppsala and enjoyed such success that the Swedish Diet officially proclaimed Vasa liberator and administrator in August 1521. Thus sanctioned, he laid siege against Stockholm, which fell to him on June 20, 1523, whereupon Christian left the throne and was driven out of Sweden as well as Denmark. Vasa assumed the Swedish throne as Gustavus I later in 1523, thereby dissolving the Kalmar Union and rendering Sweden independent. In 1524, Frederick I (c. 1471–1533), successor to Christian in Denmark, met with Gustavus peacefully to settle lingering boundary differences between Denmark and Sweden. (The Kalmar Civil War is also known as the Swedish Civil War of 1520–23.)

Kalmar War with Holstein (1409–1435)

PRINCIPAL COMBATANTS: Kalmar Union vs. Holstein (with the Hanseatic League)

PRINCIPAL THEATER(S): Holstein, Öresund, and Copenhagen and vicinity

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Erik VII, king of the Kalmar Union, wanted possession of Schleswig; the count of Holstein resisted.

OUTCOME: After a very long war, Erik returned Schleswig to Holstein.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

654 Kalmar War with the Hanseatic League

CASUALTIES: Unknown

TREATIES: 1435 agreement returning Schleswig to the count of Holstein

The Kalmar Union was a combination of the three crowns of Denmark, Sweden, and Norway, which, in 1409 was ruled by Erik of Pomerania as Erik VII (1382–1459). In this year, challenging the count of Holstein's possession of the duchy of Schleswig, Erik seized it, prompting Holstein to the desperate stratagem of opening the ports of Schleswig to the Victualling Brothers, a notorious band of pirates. These men successfully pushed Erik's invading force out of Schleswig. Although Erik suffered further reverses during 1416–18, he regained Fehman Island, which emboldened him to oppose the powerful Hanseatic League. In 1422, he issued an edict permitting only Danes to practice trades and crafts, effectively shutting out Hanseatic League members, whereupon the league allied itself with Holstein in the KALMAR WAR WITH THE HANSEATIC LEAGUE from 1422 to 1435.

Erik now turned his attention to the defense of Pomerania, which he feared would be invaded by the Swedes of Kalmar. Leaving his army to hold Flensburg, he led his navy in the defeat of the Hanseatic League's fleet in the Öresund. He sought to capitalize on this victory by levying in 1428 a heavy toll on ships sailing through the Öresund. This served only to provoke new opposition from the Hanseatic League and Holstein, which besieged the Danish capital of Copenhagen. Copenhagen resisted and withstood the siege, but Flensburg finally fell to Holstein and the league in 1431. Desultory fighting continued for another four years before Erik finally concluded a treaty with Holstein and with the Hanseatic League, by which Schleswig was returned to Holstein. Thus a quarter century of warfare netted Erik nothing at all.

Further reading: Byron J. Nordstrom, *The History of Sweden* (Westport, Conn.: Greenwood Press, 2002); Franklin D. Scott, *Sweden, the Nation's History* (Carbondale: Southern Illinois University Press, 1988).

Kalmar War with the Hanseatic League (1422–1435)

PRINCIPAL COMBATANTS: Erik VII (Kalmar Union) vs. Hanseatic League (with Holstein)

PRINCIPAL THEATER(S): Baltic Sea and Flensburg

DECLARATION: Hanseatic League on King Erik VII of the Kalmar Union

MAJOR ISSUES AND OBJECTIVES: The Hanseatic League wanted to break Erik's attempts to monopolize trade with Norway and extort exorbitant taxes on league vessels.

OUTCOME: Erik was defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: 1435 agreement returning Schleswig to the count of Holstein

While Danish King Erik VII (1382–1459), ruler of the Kalmar Union (the three crowns of Denmark, Sweden, and Norway), warred—from 1409 to 1435—with Holstein over possession of Schleswig (see KALMAR WAR WITH HOLSTEIN), Holstein's ally, the Hanseatic League declared war on Erik. Erik had levied exorbitant tolls on ships navigating the Öresund (Danish Sound) and had blocked non-Danish trade to Norway. The mercantile Hanseatic League sought to wrest control of the Öresund from Erik by retaking Flensburg, the Baltic port Erik had seized in the war with Holstein. An amphibious assault by the Hanseatic League failed to capture Copenhagen in 1428, but the Battle of Stralsund, on the Baltic, nearly destroyed the Swedish fleet. With the fleet greatly diminished, Erik could no longer effectively defend Flensburg, which surrendered to the Hanseatic League in 1431. Both the war with Holstein and the war against the Hanseatic League dragged on after this in a desultory manner until 1435, when Erik, realizing the futility of the struggle, concluded peace with both Holstein and the league. Holstein regained Schleswig, and the vessels of the Hanseatic League freely traversed the Öresund and traded with Norway. As in the war with Holstein, Erik had gained absolutely nothing in what amounted to a quarter century of war.

Kampuchean Civil War (1978–1998)

PRINCIPAL COMBATANTS: Khmer Rouge vs. Vietnam-supported anti-Khmer Rouge forces

PRINCIPAL THEATER(S): Kampuchea (Cambodia)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Pol Pot's Khmer Rouge sought to retain its rule over Kampuchea.

OUTCOME: The Khmer Rouge gradually disintegrated under the combined pressure of several anti-Khmer Rouge forces, which formed a coalition government.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Anti-Khmer Rouge forces (Vietnamese occupiers), 140,000; Khmer Rouge, 40,000

CASUALTIES: Combat casualties pale in comparison to the deaths related to Pol Pot's "cultural revolution": about 2 million.

TREATIES: Paris Peace Agreement, October 23, 1991

Born on May 19, 1928, in Cambodia, Pol Pot (1928–98) became a follower of Vietnam's Ho Chi Minh (c. 1890–1969) and joined Ho's Indochinese Communist Party during World War II. Pol Pot assumed leadership of the Khmer Rouge guerrilla movement, which overthrew the U.S.-backed Cambodian government of Lon Nol (1913–85) in 1975 (see CAMBODIAN CIVIL WAR). Pol Pot then became prime minister of Democratic Kampuchea, the new regime's name for Cambodia, in April 1976. Under Pol Pot, the Khmer Rouge sought to implement a radical form of Mao Zedong's (1893–1976) ideal of agrarian communism. Pol Pot's regime appropriated land and sought to refashion society, not only through education and indoctrination, but, more directly, by the mass murder of approximately 2 million Cambodians.

While his Khmer Rouge forces turned the nation into "killing fields," Kampuchea also fended off border attacks from Vietnam. The Vietnamese urged Kampuchean rebels to step up efforts to overthrow the Pol Pot regime. Finally, in 1978, an army of 200,000 Vietnamese troops invaded Kampuchea, taking the capital city of Phnom Penh on January 9, 1979. The Vietnamese installed Heng Samrin (b. 1931), a dissident member of the Khmer Rouge, as president of occupied Kampuchea, but Pol Pot continued to lead a Khmer Rouge guerrilla campaign against the new government and the Vietnamese invaders.

In 1982, three Khmer forces united to oust the Vietnamese invaders and overturn the Vietnamese-bolstered government. Prince Norodom Sihanouk (b. 1922), exiled former ruler of Cambodia, formed a coalition government-in-exile that included the Khmer Rouge and which received United Nations recognition. The government stood ready to replace the Vietnamese-supported regime whenever that proved militarily feasible. In 1984, however, Vietnamese forces campaigned vigorously against Khmer camps along the Thai-Kampuchean border but continued to encounter stiff resistance from the guerrillas. The Vietnamese secured Soviet aid in fighting the guerrillas, but by the late 1980s, the Soviets counseled the Vietnamese to begin withdrawing from Kampuchea. The Khmer Rouge, by the late 1980s about 40,000 strong, attempted to regain territory as the Vietnamese pulled out, but with no success. At last, in 1989, the regime in Phnom Penh restored the country's original name, Cambodia, and, on October 23, 1991, the four Khmer factions, those siding with Sihanouk, the Kampuchean People's National Liberation Front, the Khmer Rouge, and the Phnom Penh government, signed a peace accord in Paris. The United Nations supervised the disarming of at least some of the Khmer factions and repatriated approximately 375,000 refugees who had fled to Thailand. Later in 1991, Prince Sihanouk returned from exile to Phnom Penh as an elected president, replacing Heng Samrin.

All was far from well, however. Almost immediately, in 1992, Khmer Rouge rebels attacked the United Nations forces. Prince Sihanouk failed to introduce unity into the

Phnom Penh government, which was torn by dissension. Nevertheless, Khmer Rouge forces suffered severe defeats in Pailin and Phnom Malai, relinquishing bases there in 1996. The Khmer Rouge was falling apart, its constituents fleeing into the jungle.

Yet while the threat from the Khmer Rouge decreased, internal strife in Phnom Penh rapidly escalated. Rival prime ministers, Prince Norodom Ranariddh—Sihanouk's son—and Hun Sen (b. 1951), each sought to recruit dispersed Khmer Rouge rebels to bolster their positions. In July 1997, fighting developed in the capital, and Hun Sen ousted Ranariddh, who barely escaped with his life. His father, President Sihanouk, was soon forced to leave the country as well—though not for political reasons so much as medical ones: he had cancer.

With Ranariddh out of the way, Hun Sen had little use now for the Khmer Rouge, whose disintegration became more rapid. Those who were left in the organization turned against Pol Pot, whom they replaced with Ta Mok (b. 1918). In 1997, the Khmer Rouge remnants tried Pol Pot in absentia and sentenced him to house arrest for life. As the Khmer Rouge continued to disintegrate, Pol Pot met his death on April 15, 1998, either at the hands of the Khmer Rouge or from illness. He had never been officially brought to trial for genocide. In December, the last of the Khmer Rouge surrendered to the government and voluntarily disarmed. Ta Mok was placed under arrest in 1999 and held in prison, where he remained for years awaiting trial by a United Nations tribunal on war crimes.

Kampuchean-Thai Border War (1977–1995)

PRINCIPAL COMBATANTS: Kampuchea (including occupying Vietnamese forces) vs. Thailand

PRINCIPAL THEATER(S): Thai-Kampuchean borderlands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Thailand sought to defend its border against incursions by various Cambodian factions and Vietnamese occupying forces.

OUTCOME: Thanks in part to United Nations intervention, the border war wound down without ultimate resolution.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Variable on all sides; the United Nations effectively policed the borderlands with about 16,000 peacekeepers.

CASUALTIES: Unknown; approximately 375,000

Kampuchean refugees crossed the Thai border.

TREATIES: None

The reign of terror of Pol Pot (1928–98) and the KAMPUCHEAN CIVIL WAR from 1978 to 1998 created hundreds of thousands of Kampuchean (Cambodian) refugees beginning in 1975. Pol Pot's radical and fierce Khmer Rouge frequently attacked the Thai border near Aranyaprathet, and Thailand responded by closing its borders and using aircraft and artillery to repel the enemy attacks. During 1979–80, Vietnamese forces occupying Kampuchea also invaded Thai borderlands in an effort to find Khmer Rouge guerrillas, who reportedly infiltrated the refugee camps and hid in them. Thailand found itself fighting Khmer Rouge and Vietnamese forces in addition to rebel Thai communists, antigovernment Meo tribesmen, Thai Muslim separatists, opium dealers, and others who used the general conflict to achieve their ends. Ultimately, Thailand did provide support to the Khmer Rouge in the hope that it would bring a Kampuchean government friendlier to it than alternative regimes. Besides, by appeasing the Khmer Rouge, Thai officials sought to deprive their own communist rebels of an ally and reduce the number of enemy threats they had to face. Nevertheless, Thailand suffered the moral censure of the international community for supporting so vicious a regime. The United Nations intervened, and by 1992, the intervention was having a positive effect. Approximately 375,000 Cambodian refugees were being repatriated, and the situation along the Thai-Cambodian border steadily improved, so that, by 1995, the war gradually came to an end.

Kansas-Missouri Border Wars (Wakarusa War; the Sack of Lawrence; "Bleeding Kansas"; Pottawatomie Massacre) (1855–1860)

PRINCIPAL COMBATANTS: Antislavery factions, mostly in Kansas, vs. proslavery factions, mostly in Missouri

PRINCIPAL THEATER(S): Kansas-Missouri border regions

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Kansas-Nebraska Act had made slavery a local option, and settlers on both sides of the issue fought to make sure that Kansas entered the union expressing their point of view.

OUTCOME: Kansas was not accepted into the Union until 1861, and the border wars continued to the eve of the American Civil War, fought over the same issues.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: In Kansas, 55 killed between 1855 and 1858; at the Sack of Lawrence, 183 killed

TREATIES: None

In 1854, the U.S. Congress passed the Kansas-Nebraska Act, throwing the decision of whether to allow slavery in the territories seeking statehood back to the respective territories. Leaving the question of slavery up to the "popular sovereignty" of the settlers ensured that violence would erupt in the territories sooner or later.

The act spawned the Republican Party and led U.S. senator David R. Atchison (1807–86) of Missouri, who had already broken with his hoary and respected former fellow senator Thomas Hart Benton (1782–1852) over slavery, to swear that he would let the territory "sink in hell" before allowing it to be organized as a Free-Soil state. Nebraskans, clearly, would opt for freedom, but Kansas was up for grabs. Abolitionists in the North organized the Emigrant Aid Society and financed free settlers in Kansas. New England authors like William Cullen Bryant (1794–1878) and John Greenleaf Whittier (1807–92) mounted one of history's great propaganda campaigns, quickly aided by newspaperman Horace Greeley (1811–72) and correspondents sent by eastern newspapers to report on the Kansas "situation."

In response, fearing and hating the "Yankee slave-stealers" and egged on by Atchison, thousands of proslavery Missourians, mainly from the tobacco- and hemp-growing western counties, flooded into Kansas to vote illegally and then return home to their farms. Overwhelming the Kansas settlers, the majority of whom were probably Free-Soilers, the Missouri emigres elected a territorial legislature that immediately legalized slavery and won official recognition from the federal government. Free Soilers poured in from around the country to settle the land, formed their own legislature, set their capital up at Lawrence, and petitioned Congress for admission to the Union as a free state. When an antislavery man was murdered in November 1855, open warfare broke out along the Kansas-Missouri border.

At first it was called the Wakarusa War because a series of clashes between pro- and antislavery factions occurred along the Wakarusa River near Lawrence from November 26, 1855, to December 7, 1855, in which a few casualties occurred. Atchison resigned his seat in the Senate to lead the fight, organized a posse of Missourians, and—under the ruse of answering a U.S. marshal's summons—raided Lawrence. Popularly dubbed "border ruffians," the posse set fire to a hotel and a few houses, chopped up a printing press, arrested several free-state leaders, and killed three others in the process. A monomaniacal abolitionist named John Brown (1800–59) retali-

ated by murdering five pro-slavery settlers on the Pottawatomie Creek, none of whom had been involved in the violence against free-state settlers, then mutilating their bodies. Ideologically motivated assassination had begun. The Sack of Lawrence and the Pottawatomie Massacre threw Kansas into chaos.

John Brown became a hero in the North, which had grown to despise pro-slavery Missourians, like those Brown butchered, as subhumans. Missourians on the other hand considered Free Soilers foreign foes and hypocrites, who had come to Kansas for no other purpose than to steal and hide runaway slaves from Missouri.

By the time the federal government could join up with the governments of Missouri and Kansas to bring the guerrilla fighting (and the house and crop burnings, the cattle theft, the tarring and feathering, the torture, the murder, the continuing mutilation of the slain) in “Bleeding Kansas” more or less to an end, more than 200 people were dead and \$2 million worth of property had been destroyed. In the fall of 1856, John Geary (1819–73), a former mayor of San Francisco, now governor of Kansas, nationalized both the pro-slavery and free-state militias, deploying them along with federal troops to stop the fighting.

But the ideological war continued in the pro-slavery-dominated legislature, which overrode Geary’s veto and set up a constitutional convention. The convention phrased a referendum on the constitution so that a vote “yes” and a vote “no” both approved slavery. The Lecompton Constitution, as it was called, passed in 1857, not only making slavery legal but making it permanent: the constitution forbade future voters from outlawing human bondage. Free Soilers boycotted the vote; pro-slavers submitted the document to Congress in an application for statehood. President James Buchanan (1791–1868) accepted it, but Senator Stephan Douglas (1813–61), leading the opposition, denounced the document as a travesty, and Congress refused to allow Kansas into the Union as a slave state.

The fighting started all over again, erupting into civil war, which lasted until federal troops again intervened and restored order in 1860, on the eve of that larger UNITED STATES CIVIL WAR that the Kansas border wars had done so much to encourage.

Kappel Wars (1529 and 1531)

PRINCIPAL COMBATANTS: Zurich Protestant reformers vs. Catholic cantons of the Christian Union

PRINCIPAL THEATER(S): Border between Zurich and Zug

DECLARATION: Christian Union on Zurich, 1529 and 1531

MAJOR ISSUES AND OBJECTIVES: Zurich Protestant reformers wanted to convert more Swiss cantons to Protestantism; five Catholic cantons, the Christian Union, resisted.

OUTCOME: Zurich was compelled to recognize Catholic rights in the Christian Union cantons.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: First Peace of Kappel, June 26, 1529; Second Peace of Kappel, October 1531

In the 16th century, Zurich was a Protestant city driven by the religious reformer Huldreich Zwingli (1484–1531) to proselytize its neighboring Swiss cities and cantons. When it imposed a trade embargo on those cantons still loyal to the pope, five cantons—Uri, Schwyz, Lucerne, Unterwalden, and Zug—formed the Christian Union to oppose Zurich. This led to low-level battles during 1529, quickly quelled by an armistice (First Peace of Kappel) concluded at Kappel, a monastery on the border between Zurich and Zug. A key condition of the armistice was the severance of ties between Austria and the Christian Union.

Just three years after the armistice was agreed to, the Christian Union declared war on Zurich because it believed that a non-Union Catholic canton, Thurgau, was being forced into Protestantism. The declaration and offensive came so quickly that the war was concluded in a single battle, at Kappel. The hastily assembled and badly outnumbered Protestant army charged the Catholic forces on October 11, 1531, only to be crushed. Among the casualties was Huldreich Zwingli. By the Second Peace of Kappel, Zurich agreed to recognize and respect the rights of Catholics within the cantons of the Christian Union. The peace endured.

Karmathian Revolt (899–906)

PRINCIPAL COMBATANTS: Karmathians vs. Caliph al-Mu’tadid

PRINCIPAL THEATER(S): Mesopotamia and Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Shi'ite Karmathians rebelled against the orthodox Islam thrust upon them by the caliph.

OUTCOME: The Karmathians overran large areas but were eventually suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Karmathians (Qarmatians) of lower Mesopotamia, members of the Ismailite Shi'ite sect, rebelled against the orthodox rule imposed on them by Caliph al-Mu'tadid (d. 902). In response to the rebellion, the caliph sent an army to suppress the rebels. Not only did this effort at suppression fail, but the Karmathians, under Abu Sa'id al-Djanabi (d. 913) invaded territory throughout Mesopotamia, penetrating as far as Syria. Many major cities fell to the Karmathians, including Basra, near the Persian Gulf (in modern Iraq). With great difficulty, the Karmathians were driven out of most of the areas they had overrun and, by 906, were totally cleared out of Syria, only to return to invade Iraq several times in 930.

Kett's Rebellion (1549)

PRINCIPAL COMBATANTS: England's landed nobles vs. English peasants

PRINCIPAL THEATER(S): Norfolk County

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: England's peasants rebelled against the enclosure laws that drove them off their farms.

OUTCOME: The revolt was suppressed, and its leaders were executed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Peasants, under Robert Kett, about 16,000; John Dudley, earl of Warwick, 1,400 German landsknechts

CASUALTIES: Peasants, 3,500; nobles, 40 killed

TREATIES: No formal treaty

When England's landed nobles passed the enclosure acts, families were thrown off their farms so the nobles could make more money grazing livestock. The peasants, having no place to go, staged a revolt in July 1549 during a routine feast in the town of Wymondham. Robert Kett (d. 1549), a

tanner or a small landowner, led the peasant forces to Norwich, the town seat of Norfolk County. Kett formed a camp on nearby Mousehold Heath and took time to introduce a system of discipline and justice among his 16,000 followers. When he received a royal offer of amnesty, he refused it and, on August 1, led his forces in an attack on Norwich, which they captured. For most of a month, Kett and the rebels destroyed enclosing fences and hedges surrounding nobles' lands and plundered their property.

On August 27, Kett faced John Dudley (1502–53), earl of Warwick, and his forces of well-trained soldiers. Dudley's troops, better disciplined and skilled, quickly defeated the rebels. Kett was hanged, and the rebellion was over.

Kharijite Rebellion (934–947)

PRINCIPAL COMBATANTS: Kharijites vs. Fatimids

PRINCIPAL THEATER(S): Central North Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Political and religious rebellion against the prevailing dynasty

OUTCOME: After a long guerrilla struggle, the Kharijite opposition was defeated by the Fatimids under Caliph al-Mansur.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Kharijites, a heretical and politically rebellious Muslim sect, which had been instrumental in the overthrow of the Omayyad dynasty in Morocco (see KHARIJITE REVOLT) in 742, rose up in 934 against the Fatimid dynasty in central North Africa. Under the leadership of Abu Yazid Makhlad, the Kharijites conducted a war of raiding and guerrilla action, which spanned 13 years until, at last, a combination of persistence and attrition suppressed them. The Fatimid victors were led by Caliph al-Mansur (d. 953).

Kharijite Revolt (741–742)

PRINCIPAL COMBATANTS: Kharijites and Berbers vs. Omayyads

PRINCIPAL THEATER(S): Morocco

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rebellion against Omayyad control of Morocco

OUTCOME: The Omayyads were ousted from Morocco and went into a general decline, heralding their overthrow by the Abbasids in 750.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Kharijites, a heretical Muslim sect, united briefly with Berbers in armed rebellion against the Omayyad dynasty, which controlled Morocco. The Omayyad forces were driven out of the country, and, thanks to continual Kharijite pressure, the Omayyads nearly lost control of their other provinces in North Africa. The Omayyad caliphate entered a period of sharp decline, which culminated in 747 with the outbreak of the Abbasid rebellion and, by 750, the overthrow of the Omayyads by the Abbasids.

Khazar-Muslim Caucasus War (727–733)

PRINCIPAL COMBATANTS: Khazars vs. Muslims (under Caliph Hisham)

PRINCIPAL THEATER(S): Caucasus region, especially Georgia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Muslim religious expansion and conquest

OUTCOME: At first driven from the region, the Muslims returned in greater force, overcame the Khazars, and reestablished control of Georgia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

During the eighth century, Muslim forces swept into the Caucasus, where they enjoyed initial military success and were able to establish themselves north of the Daryal Pass. However, the Khazar warriors of this region counter-attacked, driving the Muslim forces back into Mesopotamia. Recovering from their retreat, the Muslims regrouped and reinforced their numbers, then renewed the attack, this time overwhelming the Khazars. The Muslims retook Georgia and pushed the limit of their northern frontier to the Caucasus. Derbent became an advanced Muslim outpost, which kept the Khazars in check.

Khmer-Cham War (1050–1051)

PRINCIPAL COMBATANTS: Khmer vs. Cham forces (with Cham-allied Khmer rebels)

PRINCIPAL THEATER(S): Champa (central Vietnam) and the southern portions of the Khmer Empire (Cambodia)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Cham kings wanted to conquer the Khmer Empire.

OUTCOME: Cham military action incited a southern Khmer rebellion; however, the rebellion was crushed, and the Khmer Empire remained intact.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The kingdom of Champa (central Vietnam) and the southern portions of the Khmer Empire (Cambodia and portions of Laos) were torn by civil disorder during the 11th century. Then, in 1050, Jaya Paramesvarman (d. 1060), the Cham king, and his son Yuvaraja Mahasenapati (d. c. 1092) succeeded in putting down a revolt in Panduranga, a Champan province. After this, Yuvaraja's forces went on to triumph over the Khmers, taking the city of Sambhupura, demolishing the temples there, and donating loot and prisoners to the Mi-son temples. In the south, the Khmers rebelled in 1051, led by a Khmer vassal king or a Cham chieftain and supported by the Chams. The result of the rebellion was that the southern Khmer Empire fell into Cham hands.

A series of Khmer expeditions were sent against the rebel forces, which withstood all such assaults until late in 1051, when they were finally defeated and fled to Champa. The Khmers donated their booty to an Isvaran temple at Rajatirtha.

Khmer-Cham War (1144–1150)

PRINCIPAL COMBATANTS: Khmer Empire vs. Champa

PRINCIPAL THEATER(S): Champa (central Vietnam)

660 Khmer-Cham War (1167–1190)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Khmer emperor wanted to conquer Champa.

OUTCOME: Defiant leaders in southern Champa defeated Khmer forces.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

When Dai Viet, also called Annam (northern Vietnam), concluded a peace with the kingdom of Champa (central Vietnam), Champa declined an alliance with the Khmer Empire to invade Dai Viet. King Suryavarman II (d. c. 1150) of the Khmer Empire (Cambodia and parts of Laos) then decided to invade Champa. His forces took the Cham capital of Vijaya (Binh Dinh), toppling King Jaya Indravarman III (d. c. 1145) and installing himself as ruler.

In defiance of this conquest, the Chams of Panduranga installed their own king, Rudravarman (d. 1147), and, following his death, his son Jaya Harivarman I (d. 1166–67). Suryavarman dispatched Khmer and Vijayan troops under Senapati Sankara (fl. 12th century), his greatest general, to put an end to defiance in Panduranga. In a stunning military display, Jaya Harivarman met this army at Chaklyang in the Phanrang Valley (in southern Vietnam) and annihilated it. Reeling from the blow, Suryavarman assembled a second army, which was fielded in 1148 and likewise destroyed, at Kayev in the Virapura plain.

Despite these defeats, Suryavarman made his brother-in-law Harideva (d. c. 1149) king of Champa, sending a Khmer army for his protection. In response, Jaya Harivarman pushed north, captured Vijaya and then destroyed this third Khmer force at Mahisa, killing Harideva and all of his chiefs. Jaya Harivarman was crowned king at Vijaya. In 1150, Suryavarman sent a fourth army into Champa. It met the same fate as the others.

Khmer-Cham War (1167–1190)

PRINCIPAL COMBATANTS: Khmer Empire vs. Champa

PRINCIPAL THEATER(S): Champa (central Vietnam) and Khmer Empire (Cambodia and Laos)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Champa invaded the Khmer Empire principally to obtain treasure; after suffering defeat, Khmer forces mounted a counteroffensive with the object of conquering Champa.

OUTCOME: In the first phase of the war, the Khmers suffered devastating defeat; the second phase ended, however, in the subjugation of Champa by the Khmer Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Extremely variable

CASUALTIES: Unknown

TREATIES: None

After he ascended the Cham throne, Jaya Indravarman IV (fl. 1170s) invaded the neighboring Khmer Empire (Cambodia and Laos), partly from motives of traditional enmity and partly to loot its vast stores of treasure. In a battle of 1171, the Chams won victory, in part, by using horses against the Khmers rather than the traditional elephants. The horses were a significant tactical innovation, providing greater speed and mobility and allowing the Chams to outmaneuver their enemy. The Chams emphasized shock tactics, which required speed and surprise. Unfortunately for Jaya Indravarman, he could not obtain horses in China's Kwangtung and Hunan provinces to use in a full-scale invasion of Khmer. In 1177, however, he attacked successfully by sea, sailing a fleet up the Tonle Sap (central Cambodia's "Great Lake") and the Siemreab River to take the undefended Khmer capital of Angkor. Jaya Indravarman burned the wooden city and ravaged its sacred temple (Angkor Wat), stripping it of treasure. He then ordered the death of the Khmer rebel king Tribhuvanadityavarman (fl. 1166–77).

The Khmers were rallied by King Jayavarman VII (c. 1120–c. 1215). In alliance with Thai forces and exiled Chams, the Khmers fought back, winning a significant sea victory in 1181. Jayavarman retook Angkor, rebuilding it as Angkor Thom, north of the old city. By 1190, he mounted an invasion deep into Champa, laying waste to much of its territory and destroying its capital city of Vijaya (Binh Dinh). Champa, defeated and conquered, was divided into two states, which were vassals of the Khmer Empire.

Further reading: Lawrence Palmer Briggs, *The Ancient Khmer Empire* (Philadelphia: American Philosophical Society, 1951); D. G. E. Hall, *A History of South-East Asia*, 4th ed. (New York: St. Martin's Press, 1981).

Khmer-Cham War (1191–1203)

PRINCIPAL COMBATANTS: Khmer Empire vs. Champa

PRINCIPAL THEATER(S): Champa (central Vietnam)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Champa rebelled against conquest by the Khmer Empire.

OUTCOME: Although Champa briefly regained independence, by the end of the war the nation had been reconquered by the Khmers.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** None

The lengthy KHMER-CHAM WAR (1167–90) resulted in the conquest of Champa by the Khmer Empire. Within a year after the conclusion of this war, however, in 1191, the Chams rebelled. In short order, one of the two Khmer puppets, Prince In (d. after 1203), was overthrown by a Cham prince, who was subsequently crowned King Jaya Indravarman V (d. c. 1192). Jaya Indravarman next marched against and defeated the Khmer puppet ruling the other half of Champa, and Champa was once again reunited under the new king.

The Khmers sent two invasion forces to reconquer Champa, but both were defeated. In 1203, a third expedition, under King Jayavarman VII (c. 1120–c. 1215), recruited the support of Cham rebels opposed to Jaya Indravarman. The use of indigenous troops turned the tide, clearing the way for a successful invasion, which placed a new puppet on Champa's throne, Ong Dhanapati-grama (fl. 1220s). Propped up by the continual presence of a Khmer army, Ong presided over what was effectively a Khmer province for the next two decades. It is not known what reward or benefit the Cham rebels received from their arrangement.

Further reading: Lawrence Palmer Briggs, *The Ancient Khmer Empire* (Philadelphia: American Philosophical Society, 1951); D. G. E. Hall, *A History of South-East Asia*, 4th ed. (New York: St. Martin's Press, 1981).

Khmer Invasion of Champa *See* VIETNAMESE-KHMER WAR.

Khmer-Thai Wars (c. 1352–1444)

PRINCIPAL COMBATANTS: Khmer Empire vs. Ayutthayan Thai invaders

PRINCIPAL THEATER(S): Khmer Empire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Thais of the Ayutthaya region wanted to conquer the neighboring Khmers.

OUTCOME: Most of the Khmer Empire fell to the Thais.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Extremely variable

CASUALTIES: Unknown**TREATIES:** None

The Thai kingdom of Ayutthaya (south-central Thailand), which had been established by Rama Thibodi I

(1312–69) about 1350, first invaded the Khmer Empire (Cambodia and Laos) about 1352. The initial forces were led by King Rama Thibodi's son Prince Ramesuen (d. 1395), who was governor of Lop Buri Province. Ramesuen was not an able tactician and blundered by splitting his forces, committing to battle only a portion of them, approximately 5,000 troops. This force was crushed by an army of the Khmer crown prince, and it looked as if the invasion would die aborning. At this juncture, however, another Thai prince, Boromoraja I (d. 1388), governor of Sup'an, was dispatched to bolster the faltering invasion. His arrival surprised the Khmers, whose will and capacity to resist suddenly collapsed, and Boromoraja quickly annexed the Khorat and Chanthaburi districts (eastern Thailand).

Ayutthayan Thai invaders were apparently in possession of the Khmer capital of Angkor in 1369 and 1389. It is believed that the occupying forces kept the Khmers weak by threatening to demolish the complex irrigation system and loosing flood waters on the people. Added to this physical threat was continual pressure from the Thais as well as the Chams, which included meddling in Khmer royal politics. All of these factors weakened the Khmer Empire, leading to internal dissension and dynastic squabbling. Thus the position of the Thai occupiers was strengthened.

During 1430–31, Ayutthayan Thai forces led by Boromoraja II (d. 1448) laid siege to Angkor for seven months, at last traducing a pair of Buddhist monks and some Khmer officials, who admitted the invading force into the city. (These turncoats became full-time agents of the Thais following the death of the Khmer king, Dharmasoka in about 1444.) The invaders sacked Angkor and were then driven out in 1432, only to return the following year, when they completely destroyed the Khmer capital. The Khmer court evacuated to Phnom Penh, which became the new capital of a much-reduced kingdom.

Khorasan Rebellion (806–809)

PRINCIPAL COMBATANTS: Khorasan rebels vs. government of Khorasan

PRINCIPAL THEATER(S): Khorasan, Persia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Originally, the rebels agitated for the removal of a despotic governor, but the rebellion escalated to a war for independence.

OUTCOME: The rebels proclaimed an independent kingdom in Transoxiana.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

When Harun al-Rashid (766–809), caliph of the Abbasid Empire, received complaints of the despotic rule of the governor of Khorasan, Persia, Ali Ibn Isa ben Mahan (fl. early 800s) the caliph made a journey to investigate personally. Despot or not, the governor was a wise politician, who lavished many gifts on al-Rashid, whose investigation turned up no evidence of malfeasance. Persuaded that all was well, the caliph confirmed the governor in his office and left Khorasan. Having received no satisfaction, Rafi ben Laith (fl. c. 805–810) led a rebellion against the governor, defeating his army in Transoxiana in 806. Alarmed, the governor fled the province, and the caliph promised the rebels that he would install a new governor who would satisfy the rebels' demands. But, at this point, the momentum of the rebellion would not be halted, and Rafi ben Laith proclaimed an independent Muslim province within Transoxiana. The caliph felt he had no choice but to lead an army in person to end the rebellion once and for all. He set off in 809, only to die en route. Leaderless, his troops elected to return to Baghdad without engaging the rebels.

Khurram's Rebellion See SHAH JAHAN'S REVOLT (1622–1626).

Khurramites' Revolt (816–838)

PRINCIPAL COMBATANTS: Khurramite rebels (with Byzantine allies) vs. Islamic Persia and Mesopotamia

PRINCIPAL THEATER(S): Mainly Azerbaijan

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: The Khurramites wanted to destroy Islam.

OUTCOME: After initial successes, the Khurramites were defeated in a war of attrition, and their leader was captured and executed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Khurramites were a proto-communist sect, which occupied Azerbaijan on the southwest shore of the Caspian Sea. They advocated the breakup and redistribution of the immense estates. Even more radical was their call for the abolition of Islam. About 816, they began launching attacks on Muslims and Muslim military forces in Persia and in Mesopotamia in fulfillment of a self-proclaimed mission of destroying Islam.

The Khurramites fought with great skill and zeal, and they were aided by the Byzantines, who were at the time engaged in the BYZANTINE-MUSLIM WAR (830–841). Against the forces of Caliph Allah al-Ma'mun (785–833), the Khurramites enjoyed great success. He struck against them four times, and, four times, was defeated, in part because the Khurramites received Byzantine aid. The ascension of a new caliph, Abu Ishak al-Mu'tasim (d. 842), brought a renewed determination to crush the Khurramites as well as their Byzantine allies. Al-Mu'tasim dispatched a large force under the governor of Media, al-Afshin (fl. 830s), to prosecute a vigorous campaign against the rebels. Al-Afshin was unable to force the Khurramites into open battle, but his untiring pursuit of them wore them down. At last, in 838, the remaining Khurramites were defeated in battle, and their leader, Babak al-Khorrami (d. 838), was captured and killed.

Kickapoo Uprising (1820s–1833)

PRINCIPAL COMBATANTS: Kickapoo Indians vs. the United States

PRINCIPAL THEATER(S): Illinois Territory

DECLARATION: Informal; Illinois settlers petitioned for U.S. troops to stop Indian attacks on settlers (1824)

MAJOR ISSUES AND OBJECTIVES: Kickapoo refusal to vacate lands claimed by white settlers

OUTCOME: Kickapoo ceded lands and moved to present-day Kansas.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown, most Indian actions were accomplished by small bands of guerrillas.

CASUALTIES: Unknown

TREATIES: Treaty of Castor Hill, 1832

At the start of the 19th century, the Kickapoo Indians lived in central Illinois and in Indiana, principally along the Illinois and Wabash rivers. The easternmost band of this

tribe established its major settlement on the Vermilion River and were therefore called the Vermilion band. Another tribal group, called the Prairie band, lived farther south in Illinois, along the Sangamon River. Both bands ceded some territory to the United States in 1809, but both sided with the British during the WAR OF 1812.

In 1819, through the Treaty of Edwardsville (Illinois), the majority of the Kickapoos ceded the remainder of their Illinois lands to the federal government and moved west to Missouri. Two factions, one led by Mecina and the other by Kennekuk (d. 1852), refused to move with the majority, and throughout the early 1820s, their warriors conducted guerrilla actions against white settlers, destroying or stealing property. In 1824, settlers petitioned for federal troops, and, after enduring months of military pressure from these soldiers as well as state militiamen, Mecina's faction crossed the Mississippi River into Missouri.

Kennekuk, also known as the Kickapoo Prophet, preached total withdrawal from contact with whites and a return to "pure" Indian ways. Although his followers harassed settlers, Kennekuk's tactics resembled passive resistance more than the kind of guerrilla warfare Mecina had waged. Furthermore, while advocating total avoidance of whites, Kennekuk maintained an ongoing dialogue with federal authorities for more than a decade, repeatedly vowing to move west in peace, but always finding the means to delay that removal.

Beginning in 1831 some of Kennekuk's warriors left his band to join forces with the Sauk and Fox under their charismatic leader, Black Hawk (1767–1838), in BLACK HAWK'S WAR. Still more deserted Kennekuk in 1832, when he signed the Treaty of Castor Hill, formally exchanging his band's land for a tract along the Missouri River in Kansas. Those followers remaining with him moved to their assigned homeland in 1833.

King George's War (1739–1748)

PRINCIPAL COMBATANTS: British North America and its Indian allies (mostly Iroquois) vs. French North America and its Indian allies (mostly Huron and Abenaki)

PRINCIPAL THEATER(S): Nova Scotia, New England, New York, and the Ohio country, with related violence in the Southeast, the American theater of the War of the Austrian Succession

DECLARATION: October 19, 1739, Great Britain declares war on Spain; France, becoming Spain's ally, declares war on Great Britain, March 15, 1744

MAJOR ISSUES AND OBJECTIVES: Struggle between England and France for control of North America

OUTCOME: Inconclusive; the conflict, which ended in 1748, was largely a rehearsal for the French and Indian War

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Most engagements involved fewer than 100 troops; at Louisbourg, Pepperell commanded militia of 4,200 troops

CASUALTIES: Americans, 500 killed in combat, 1,100 succumbed to disease or exposure; French forces, 350 battle deaths

TREATIES: Treaty of Aix-la-Chapelle, October 18, 1748

King George's War, the American phase of what was fought in Europe as the War of the AUSTRIAN SUCCESSION, had its origin in a conflict known as the War of JENKINS' EAR, essentially a trade dispute between British and Spanish colonial interests.

On October 19, 1739, Great Britain declared war on Spain, and Georgia's founder-governor, James Oglethorpe (1696–1785), launched a series of invasions into Spanish Florida. In the meantime, on the continent of Europe, France, Spain, Bavaria, Saxony, and Prussia faced off against Maria Theresa's (1717–80) Austria and her ally Great Britain. With the signing of the Second Family Compact on October 25, 1743, France joined Spain in its fight against England, declaring war on March 15, 1744.

In America, Virginia and Maryland authorities negotiated the cession of much of the Ohio country from the Iroquois from June 16 to July 7, 1744. Within three months of the treaty, Virginia began granting petitions for western lands totaling 300,000 acres. This was sufficient to provoke the French, whose traders were already working much of the Ohio country, to armed conflict with the English settlers.

Fort Saint-Frédéric in northeastern New York became a staging area for repeated French raids into lower New York and New England. The war heated up after the unsuccessful French assault on Annapolis Royal (Port Royal, Nova Scotia) in 1744, which was followed by the only major "formal" battle in what was otherwise a guerrilla war, the British siege of Louisbourg on Cape Breton Island, Nova Scotia.

On June 16, 1745, after a siege of 49 days, the fort fell to William Pepperell (1696–1759), who commanded 4,200 Massachusetts militiamen. It was an important strategic prize, guarding as it did the approach to the St. Lawrence River. The victory at Louisbourg was in part due to a Cape Cod Indian, probably a Mashpee Wampanoag, who crawled in at one of the fort's embrasures, opened the gate, and simply admitted the English troops.

Throughout King George's War, the French and English vied for alliance with the Indians, whom they employed in guerrilla operations and raids. New York's governor George Clinton (c. 1686–1761) armed Indians

for an invasion of Canada, and William Johnson (1715–75), a wealthy landowner very influential among the Mohawks, organized an Indian strike against Montreal in June 1747. Unfortunately for the English, the disparate colonial and Indian forces failed to coalesce into a single effective force. An assault on Fort Saint-Frédéric failed miserably, and the planned attack on Montreal was shelved. Johnson did, however, manage to organize small Mohawk raids against French supply lines.

If anything, the French were more effective at using their Indian allies, who terrorized the outlying settlements of New England with lightning raids, killing many, carrying others into a captivity that sometimes meant hideous torture and slow death.

While western Massachusetts reeled under French-inspired Indian assaults, a combination of French provincials and Abenaki Indians raided remote settlements in Maine beginning in August 1745. The military low point for the English came November 28–29, 1745, when the French, with Indian allies, burned Fort Saratoga, New York.

Throughout 1746, Abenakis and others unrelentingly raided New England's towns. Most of the war's engagements involved small numbers of combatants, usually fewer than a hundred, and engagements were frequently not so much battles as murders.

Only in Nova Scotia was the fighting on a grander, more European scale. Not only had Pepperell taken Louisbourg in 1745, but in 1746 a French fleet attempted a grand assault against Port Royal, but was foiled by the hazardous fogbound coast of Nova Scotia. In 1747, a large French land force did capture the English fort at Grand Pre.

In a significant sense, King George's War was a prelude to the FRENCH AND INDIAN WAR, as the English and French learned the value of Indian allies. In the Northeast, the Mohawks were allied with the English, whereas the other Iroquois tribes struggled to remain neutral—though they leaned toward the English. The English also worked to secure the cooperation of the western tribes of the Ohio country, especially the Shawnee, Wyandots, and Miamis. In the South, the English found support from the Chickasaws and Cherokees, who were themselves at war with the French-allied Creeks and Choctaws. (See the CHICKASAW RESISTANCE, the FOX RESISTANCE, and the NATCHEZ REVOLT.)

The French commanded the loyalty of the large Huron tribe as well as other Algonquian Indian groups.

King George's War and the Indian resistances associated with it were costly and resolved virtually nothing, except to create certain European-Indian alliances. The peace brought by the Treaty of Aix-la-Chapelle on October 18, 1748—which ended the War of the Austrian Succession in Europe and, therefore, King George's War in America—was little more than a truce in the violence that preceded the French and Indian War.

King Philip's War (Second Puritan Conquest) (1675–1676)

PRINCIPAL COMBATANTS: Colonists of Massachusetts Bay, Connecticut, Rhode Island, and Plymouth (with various Indian allies) vs. Wampanoag, Narragansett, Nipmuck, and lesser New England Indian tribes

PRINCIPAL THEATER(S): Southern and northern New England

MAJOR ISSUES AND OBJECTIVES: Colonial demands for Indian sale of lands and submission in social, religious, and political matters created the atmosphere in which the killing of an Indian looter by an outraged farmer triggered an almost senselessly destructive war that might be best considered as one of colonial conquest.

OUTCOME: Although suffering crippling losses, the colonists virtually wiped out the Wampanoag tribe, greatly diminished the Narragansetts and Nipmucks, and thoroughly intimidated New England's lesser tribes; in proportion to New England's population, the war was the costliest in American history and of immense significance to future relations with the Indians; the war also gave the New England colonies their first taste of union when they, under what in effect was a mutual defense pact, created the United Colonies of New England.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Colonists, more than 2,500 (fluctuated greatly and included unorganized militia and varying numbers of Indian allies; largest force officially raised by the United Colonies [Plymouth, Massachusetts Bay, Rhode Island, Connecticut], 1,000); Indian, c. 2,300 (number of warriors based on an estimate of Wampanoag, Narragansett, and Nipmuck combined population of 6,900; in any given engagement, Indians generally fielded a larger force than the colonists)

CASUALTIES: Colonists, at least 600 killed, including many noncombatants; devastation of New England settlements (1,200 houses burned, 8,000 cattle killed); Indians, more than 3,000 killed, including many old men, women, and children; many captives sold into slavery; other survivors dispossessed of land and dispersed into New York and Canada

TREATIES: Taunton Agreement (April 10, 1671); Hutchinson's treaty with the Narragansetts (July 15, 1675); second Narragansett treaty (October 18 or 19, 1675); treaty with the "North Indians" (July 2–3, 1676); no formal treaty ended the war

So far as colonial chroniclers were concerned, the cause of the terrible conflict they called King Philip's War was simple to the point of tautology. King Philip (d. 1676), haughty chief of the Wampanoag Indians, betrayed the traditional friendship between his tribe and the English by waging war against New England's settlers with the object of either annihilating them or driving them out of the country.

In fact, the causes of King Philip's War, as with most white-Indian conflicts, were both more complex and more basic. Colonial land hunger and a rising population, combined with a racism sanctioned by Puritan religious doctrine, met head-on with Philip's growing resentment of English insults to his sovereignty and encroachments on his power. Indians were important to the colonists not only as a kind of spiritual crop waiting to be harvested, but as sources of trade. They were also the means by which the surprisingly heterogeneous New England colonies might each legitimate a stake in America. New England colonial charters, granted as they were to religious and political dissidents, were chronically shaky. With the restoration of Charles II (1630–85) to the English throne, the Massachusetts charter, which had been secure under the Puritan reign of Oliver Cromwell (1599–1658), and that of Rhode Island, which had been granted by Cromwell's government, were most directly threatened. To bolster their sovereignty in the New World, the colonies sought to associate themselves with those whose possession of the soil was acknowledged as a primitive right: the Indians. Colonial governments sought to purchase land from them and, even more important, to establish a protectorate over them. This led to complicated and, ultimately, strained relations between Indians and whites. Two major tribes, the Wampanoags and the Narragansetts, desired the benefits of trade with the English and vied with one another for colonial favor. At the same time, both tribes struggled to maintain some autonomy and retain land. As English pressure to sell more land increased, along with demands for greater and greater submission to colonial authority in matters of politics and religion, the rival tribes began to come together. Culturally, politically, and spiritually, the stage was set for conflict in New England.

Massasoit (d. 1661), chief of the Wampanoags and longtime friend of the English (it was through his aid that the Pilgrims survived their first terrible winter in the New World), died at the age of 81. His son Wamsutta (d. 1664), whom the English called Alexander, succeeded him as the tribe's principal sachem and continued the tradition of friendship with the English. However, under Wamsutta, the Wampanoags were now dividing their loyalty between two English colonies, Rhode Island and Plymouth. Both were perpetually engaged in competition for the purchase of Indian lands, and both sought to establish a protectorate over the Wampanoags. The Plymouth Colony's Major (later governor) Josiah Winslow (c. 1629–80)

seized Alexander at gunpoint and took him to Duxbury to answer conspiracy charges and—more particularly—to demonstrate his loyalty to Plymouth by selling land to that colony rather than to Rhode Island. During his captivity, Alexander contracted a fever and died. His 24-year-old brother, Metacom (Metacomet), whom the English called Philip, succeeded him as sachem and, like a number of other Wampanoags, suspected that Winslow had not merely brutalized Wamsutta but had poisoned him.

On August 6, 1664, Philip was summoned to Plymouth Town to answer charges of plotting against the colony. Although he denied the accusations, he did agree to sign a document pledging to seek permission from the colony before concluding any sale or exchange of land, and relations between colonists and Indians remained relatively peaceful until 1665, when a land dispute between Massachusetts and the Narragansetts threatened to erupt into war. A royal commission succeeded in assuaging hostilities only temporarily.

Seeing an opportunity for exploiting the breach between the English and a rival tribe, Philip warned New York colonial authorities that the Narragansetts were plotting war against them. The Narragansett chief, Ninigret, in turn accused Philip of hostile designs, and the next year (1667) Philip was summoned to Plymouth to answer these charges. Proud, even haughty, Philip resented this and other calls to answer to colonial authority. Over the succeeding two years, his animosity toward the English was further aggravated by a dispute over land in the area of Wenthams, Massachusetts. And although Ninigret was himself accused in 1669 of combining with the French to stage a rebellion against the English colonies, this failed to vindicate Philip. On the contrary, the accusation served only to make the colonists more wary of Indian "treachery" generally. Early in 1671, Philip, outraged that the new Plymouth settlement of Swansea flagrantly encroached on his land, staged an armed display for the benefit of the town's citizens. On April 10, 1671, he was summoned to Taunton to acknowledge and apologize for such "plotting" and to agree to surrender his people's arms.

After signing the Taunton document, Philip cannily attempted to foment dissension between Plymouth and Massachusetts by suggesting that this retroactive pledge of submission to Plymouth posed a threat to the validity of land titles Massachusetts had earlier secured from the Wampanoags. Despite its political sophistication, Philip's strategy backfired, serving only to bring the two colonies closer together, and by the end of September he was summoned to Plymouth, where he stood trial for failure to abide by the Taunton agreement. Fined £100, the sachem was further humiliated by a requirement that he henceforth obtain colonial permission in all matters involving the purchase or sale of land; he was also forbidden to wage war against other Indians without authority from the colonial government.

For three years, Philip quietly forged anti-English alliances with the Nipmuck Indians and with his tribe's former rivals, the Narragansetts. Then, in January 1675, came another revelation of Wampanoag designs against the English. John Sassamon (d. 1675) (or Saussaman), a Christianized "Praying Indian" who had been Philip's private secretary, alerted the English to the sachem's plotting. On January 29, Sassamon's body was found on the ice of a frozen pond. The death was at first ruled an accident, but later three Wampanoags were convicted of murder. After the noose around the neck of one of the convicted men broke, he—vainly seeking a reprieve—accused Philip himself of complicity in the murder as part of yet another plot against the English.

Haled into court yet again, Philip won release for lack of evidence. On June 11, just three days after the executions, word of Wampanoags arming near Swansea and Plymouth Town reached authorities. They also heard of scattered incidents of cattle killing and looting houses in outlying settlements. Already, settlers were beginning to desert some towns: Swansea, adjacent to Wampanoag country, was the first to be partially abandoned, and Indians began appropriating property left behind. An outraged settler shot a looter—the first blood of the war.

In an uneasy and mistrustful alliance, in which the colonies jockeyed for possible territorial gains that might be tied to defeating the Indians, Massachusetts, Plymouth, and Rhode Island joined forces in a mutual defense pact that would soon develop into a loose-knit league they called the United Colonies of New England. The three colonies mobilized an army, which was mustered during June 21–23 at Miles's Garrison, opposite Philip's base of operations at Mount Hope Neck, Rhode Island—but not before Wampanoags had raided Swansea, on the Sabbath, attacking townsfolk on their way to church. The town was attacked again—and half burned—a few days later, as worshippers returned from church.

Four days later, Rhode Island militia captain Benjamin Church (1639–1718) and his troops fell under attack near beleaguered Swansea at Miles's Bridge, which led into Mount Hope Neck. Church was appalled by the poor showing of the English forces in this first military engagement of the war. During the next year and a half, he would frequently find himself in the minority as he repeatedly counseled—usually in vain—aggressive strategies of attack that called for abandoning formal European battle tactics and fighting the Indians on their own terms. The hastily mustered army proved ineffectual again and again. Wampanoags staged lightning raids in the vicinity of Rehoboth and Taunton on June 29. The next day, troops from Massachusetts, Plymouth, and Rhode Island pursued Philip, but he and his forces handily evaded them by escaping to the swamps of Pocasset country.

Connecticut joined in the New England league's war effort on July 1 when it sent troops to aid Massachusetts,

Plymouth, and Rhode Island, but Philip was negotiating an alliance of his own at this time, with the Pocasset squaw-sachem Weetamoo. To forestall the spread of such alliances, a Massachusetts army marched out of Mount Hope Neck and into Narragansett country on the mainland east of present-day Newport around the Great Swamp, to "overawe" that Rhode Island tribe with English might and thereby negotiate a promise of neutrality.

Back in Rhode Island, Benjamin Church, recognizing that feeble diplomacy with Narragansetts and intercolonial strife were siphoning energy from the real menace at hand, pursued Philip in the swamp. In Captain Almy's "pease field," the 20-man party was set upon by 300 Indians for six hours, until they were rescued by an English river sloop.

By mid-July, much of New England was awash in blood, as Wampanoags were joined by Narragansetts and the Nipmucks of eastern and central Massachusetts. Discouraged by their army's performance against the Indians in close combat—and over Church's vigorous objections—colonial authorities soon broke off pursuit of Philip and instead built a fort to besiege him in the swamp, intending to starve the enemy out. This strategic error only prolonged the war. With the English occupied in fort building, Philip was able to escape from the Pocasset swamp on July 29 and make for Nipmuck country to the northeast. Captain Daniel Henshaw, with Plymouth troops and Mohegan allies, pursued but was forced to break off the attack due to exhaustion and a shortage of supplies. Philip once again escaped.

Colonial diplomacy was even less successful. Captains Hutchinson and Thomas Wheeler set out for Brookfield (Quabaog) at the beginning of August, attempting once again to treat with the Nipmucks, but were ambushed. Hutchinson was fatally wounded, and Wheeler shot through the arm. Eight other men were also killed, and the Nipmucks pinned down the remainder of the company for 48 hours.

By the end of August, the theater of war had broadened into the upper Connecticut Valley, Merrimac Valley, New Hampshire, and Maine. After refusing an English demand to surrender their arms, a party of Indians attempted to slip away from the English, who pursued them from Hatfield to Hopewell Swamp, south of Deerfield, Massachusetts. The battle of August 24–25 ended in an Indian retreat, but the colonials found it fruitless to pursue their enemy, as fierce rearguard action resulted in nine English deaths, and the Indians were able to escape north.

In the vicinity of Hadley, Massachusetts, colonists demanded that the local Indians surrender their arms as "Proof of their Fidelity." After some stalling, the Indians slipped away from their village on the night of August 25. Realizing that the Hadley Indians had absconded to join

Philip, the colonists marshaled their troops in pursuit of them and skirmished at Sugar Loaf Hill, 10 miles above Hatfield, killing "about 26" Indians and suffering the loss of nine or 10 English.

A week later, Hadley was raided and Deerfield mostly destroyed. This was followed almost immediately by a devastating attack against Northfield (Squakeag). Massachusetts dispatched 36 men to relieve the garrison there, but they were ambushed and about 20 of them were slain.

Having already endured months of bloodshed, the United Colonies officially declared war on September 9, levying an army of 1,000, which, however, was not actually mustered until November and December.

The litany of raid upon raid continued. On September 18, following one of many days of "Public Humiliation" proclaimed in Boston, Lothrop, commanding 80 men, had the grim duty of escorting evacuees, their goods, and provisions out of beleaguered Deerfield. He was ambushed and killed with all but seven or eight of his men.

Repeated attempts at negotiating peace—or even a truce—failed. A hopeful conference at Wickford, Rhode Island, between the English and Narragansetts broke down on September 22. Worse, previously friendly Indians now turned on the colonists. Springfield, Massachusetts, having enjoyed cordial relations with the Indians for some 40 years, maintained no garrisons. On October 4–5, it was raided, and 32 houses—about half the town—were destroyed. On October 18 or 19 700 Indians attacked Hatfield, Massachusetts, but were driven off.

At this time, the Narragansetts at last concluded a new treaty in Boston. Nevertheless, on November 2, Connecticut's colonial council resolved that the best way to prevent war with the Narragansetts was a preemptory strike against them. Plymouth and Massachusetts were in agreement on this, and the army of the United Colonies, called for in September, was at last mustering in November and into December. Assembled at Dedham, Massachusetts; Taunton, Plymouth; and New London, Connecticut, the army united at Wickford, Rhode Island, where, under the command of Plymouth governor Josiah Winslow (1629–80), it awaited provisioning during December 12–18. The army's objective was a Narragansett stronghold near Petenquanscut (Pettiquemscot), Rhode Island. But the sudden fall on December 16 of the garrison house there, which was to have served as a base of operations, foiled this strategy, and Winslow marched his 1,000-man army, including a company under the redoubtable Benjamin Church, into a snowstorm on December 18 to assault another Narragansett fort—stronghold of the sachem Canonchet (d. 1676) (whom the English called *Canonicus*)—in a frozen swamp at Kingston, Rhode Island.

They reached the Indian fort the following day, having suffered terribly in the intense cold. Worse, the stronghold proved formidable beyond expectation, and the attack was

poorly coordinated, as two companies, noting an incomplete palisade at one corner, stormed the fortification prematurely, before the arrival of the main company. Two captains were slain, and the few troops who did make it into the fort were quickly driven out. Benjamin Church led 30 soldiers in another assault and was hit by three bullets. Wounded in the hip and thigh, the frontiersman's only regret was that one shot had pierced and wounded a pair of borrowed mittens. In fierce battle, 80 of Winslow's army perished, including 14 company commanders, and about 600 Narragansetts—half of them women and children—died. Over the protests of the wounded Church, who pointed out that the battered English would need the shelter of the Indians' wigwams for the bitter winter night, the colonials put the encampment to the torch.

Bereft of many of its commanders, its supplies depleted, the army retreated to Wickford, declining to pursue the surviving Narragansetts, who escaped to Nipmuck country. The Great Swamp Fight inflicted heavy losses on the Narragansetts and cut them off from their sources of supply; however, it also served to strengthen desperate anti-English alliances among the Wampanoags, Nipmucks, and Narragansetts.

With the new year, Philip attempted to extend his alliances beyond New England, taking many of his people to Mohawk country near Albany, New York, in search of ammunition and provisions in addition to friends. Unfortunately for Philip, New York governor Edmund Andros (1637–1714) had reached the Mohawks first, persuading them not only to spurn the alliance but to attack Philip, who was compelled to flee back to New England. The alliance Andros established effectively blocked the grand Indian confederacy all colonists feared, but New England forces were not prepared to take immediate advantage of Philip's rebuff; despite the lopsided casualty figures from the Great Swamp Fight, Winslow's army, crippled by their losses (especially at the command level) and a lack of provisions, was immobilized for more than a month, until the end of January, when an Indian raid on Pawtucket, Rhode Island, prompted Winslow to take his newly reinforced but still inadequately provisioned force on a so-called Hungry March into the country of the Nipmucks. The expedition was aborted a week after it had begun, due to wholesale desertion from the ranks.

With the principal English force in disarray, the Indians rallied and renewed their offensive. On February 10, 1676, Lancaster, Massachusetts, was raided a second time, and Mary Rowlandson, wife of the settlement's minister, was captured from Rowlandson Garrison when its defenders were killed or taken prisoner. Mary Rowlandson's account of her ordeal, published in 1682, would become a colonial "best-seller."

On February 21, in another crushing English defeat, 200–300 Indians overcame a 160-man militia force at Medfield, Massachusetts, about 20 miles from Boston,

burning half the town and killing 20 persons. Early in March, a colonial cavalry troop pursued Philip near Northampton, but, as usual, he evaded capture as his allies managed a second raid on Pawtucket, which resulted in the burning of a dozen houses.

The colonies reeled under blow after blow. On March 12, Clark's Garrison, Plymouth, was raided and destroyed. The next day, Groton, Massachusetts, was abandoned after a raid. On the day after that, following an attack on Northampton, colonial authorities, reacting to crisis with a siege mentality, began to draw up plans to erect a palisade around Boston, leaving the outlying towns exposed.

In mid-March, Warwick, near Providence, Rhode Island, having been attacked several times, was at last all but deserted. Indians burned it to the ground, killing the sole remaining inhabitant. On March 26, they fell upon worshipers on their way to church at Longmeadow, Massachusetts. On the same day, the town of Marlborough was badly mauled, though colonials gave chase to the retreating Indians and defeated their rear guard. In Connecticut, Simsbury was abandoned and burned. A force of about 50 colonists and 20 friendly Indians near Rehoboth, a Rhode Island settlement bordering Philip's territory, was ambushed as it pursued Philip's warriors. Although the Indians turned their pursuers back, the battle had cost them 140 dead.

The early spring of 1676 marked the low point of the colonists's fortunes. One measure of their desperation was the unorthodox surprise nighttime attack soldiers and citizens of Sudbury, Massachusetts, staged against Indians camped near the town. Despite this minor victory, the Indian raiding continued unabated. On the morning after the colonists' sortie, March 28, 30 barns and 40 houses were burned in Rehoboth, and on the day after that, Providence, Rhode Island, was destroyed. Although Connecticut soldiers operating in western Rhode Island succeeded in capturing the important Narragansett sachem and war leader Canonchet, whom they subsequently executed, by the middle of the month the English area of settlement had greatly contracted. Despite emergency laws forbidding the evacuation of towns without official permission, the outlying settlements around Boston were largely abandoned.

On April 21, Indians repaid Sudbury for its earlier attack on them, hurling as many as 800 or 900 warriors against the town. Militia from Sudbury and surrounding settlements responded and, in a fierce, daylong battle, repelled the attack. Following this engagement, colonial forces at last began to take the offensive, sweeping through eastern Massachusetts by the end of April. On May 1, Indian hostiles at last agreed to negotiate ransom terms for English captives. Yet, as colonial forces prevailed in eastern Massachusetts, Philip's warriors attacked the Plymouth town of Bridgewater on May 6 and launched a

desperate general offensive against that colony, raiding Plymouth Town on May 11.

In western Massachusetts, a force of 150 mounted men, attacked an Indian encampment at the Falls of the Connecticut above Deerfield, Massachusetts, on May 19. It was not so much a battle as it was a massacre: The soldiers poked their muskets into the wigwams and shot the Indians—including many women and children—as they slept. While the enemy was routed, the army failed to pursue, and the surviving Indians turned a retreat into a counterattack, killing about 40 men. Yet the loss of many warriors (reportedly more than 100) and supplies made this a Pyrrhic victory for the Indians.

The colonists became more aggressive in attack and pursuit, responding to reports of hostiles fishing in the Pawtucket River near Rehoboth, winning a skirmish there and another on June 2, against Philip in western Massachusetts. Early in the same month, Benjamin Church was authorized to build a new army on behalf of the United Colonies, using white and Indian soldiers. Still, Philip fought on, launching a massive assault against Hadley, Massachusetts. Early on the morning of June 12, 700 Indians descended on the town, which was defended by Connecticut forces, 500 strong (consisting of colonists and friendly Indians: Pequots and Mohegans), in addition to a garrison force. Positioned behind the town's palisades and equipped with some artillery pieces, the colonial army successfully repelled the attackers.

At Nipsachuck, Rhode Island, on July 2, colonists dealt the Narragansetts two crushing blows when they attacked a band of 34 men and 137 women and children, killing all of the men and 92 of the women and children. On the next day, at Warwick, they slew 18 and 22 women and children, taking 27 prisoners as well. At this time, too, war with the so-called North Indians—the Abenakis, Sokokis, and Pennacooks—came to an end when the Pennacook sachem Wannalancet signed a treaty, bringing peace to Maine.

While Benjamin Church prevailed in skirmishes at Middleborough and Monponsett on July 11 and, a week later, skirmished with Philip's men in and around Taunton, Major William Bradford (159–1657) was pursuing Philip himself, narrowly failing to run the Indian leader to ground on July 16.

Church received a second colonial commission on July 24, calling for a larger army of 200 men, of which 140 were to be friendly Indians. The new army set out on July 30 in pursuit of the elusive Philip.

Closing on their quarry, Church's troops killed Philip's uncle on July 31 and the next day captured the sachem's wife and son. Philip himself, however, managed to escape. Nevertheless, the Indians had become demoralized. In August, a deserter from Philip's camp approached Church, offering to lead him and his men to Philip's camp. Church deployed his men around Philip's

camp after midnight on August 12 and moved in at first light.

Philip took to his feet, as an English soldier fired and missed. The marksmanship of an English-allied Indian called Alderman was better. Benjamin Church ordered the sachem's body butchered, awarding the head and one hand to Alderman. The remainder of the corpse was quartered and hung on four trees, customary practice in an execution for treason.

With Philip's death, the war had all but come to an end. On September 11, Church captured and executed Annawon, Philip's "chief captain." Sporadic skirmishes occurred through October, but the last sizable band of Indians surrendered on August 28. According to eye-witness accounts, many Indians were left demoralized and abject in their submission to the English. Others, however, had fled to Canada, New York, and the Delaware and Susquehanna valleys, where they would meditate a revenge that exploded in a long series of raids and guerrilla actions culminating in the FRENCH AND INDIAN WAR. As New York's Governor Edmund Andros laconically observed of King Philip's War, "the advantages thereby were none, the disadvantages very great."

King Philip's War was a catastrophe for New England's colonists and Indians alike. In the course of 1675–76, half of the region's towns were badly damaged and 12 destroyed utterly, requiring the work of a generation to rebuild them. The fragile colonial economy suffered devastating blows, both as a result of the direct cost of the war—approximately £100,000—and because of the disruption of the fur trade with the Indians and the virtual cessation of coastal fishing and the seaborne West Indies trade. Not only did the war siphon off the manpower customarily devoted to these industries, many men never returned to their peacetime occupations, for 1 in 16 colonists of military age died. Many others—men, women, children—were also killed, captured, or starved. In proportion to New England's population of 30,000, King Philip's War was the costliest in American history. As for the Indians, at least 3,000 perished, and many of those who did not die were deported and sold into slavery.

King William's War (1688–1697)

PRINCIPAL COMBATANTS: French and Abenaki Indians vs. English and Iroquois (mostly Mohawk) Indians

PRINCIPAL THEATER(S): New England

DECLARATION: North American theater of the War of the Grand Alliance

MAJOR ISSUES AND OBJECTIVES: Control of North American trade and territory

OUTCOME: Inconclusive

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

England raised up to 1,000 troops during the war; French forces organized into small bands of swift-moving, efficient guerrilla warriors

CASUALTIES: English and Iroquois: 1250; French and Abenaki: 400

TREATIES: Treaty of Ryswick, September 1697.

When England's William III (1650–1702) joined the League of Augsburg and the Netherlands on May 12, 1689, to form the Grand Alliance in opposition to Louis XIV's (1638–1717) invasion of the Rhenish Palatinate (September 25, 1688), war broke out not only in Europe, but in North America as well. In Europe, the eight-year-long conflict was fought as the War of the GRAND ALLIANCE; known variously as the War of the League of Augsburg and the Nine Years' War, in America, it was called King William's War and pitted the French and Abenaki Indians (of Maine) against the English and their Iroquois allies.

England and France were bitter trade rivals in North America. After the English took New York from the Dutch in 1664, the Iroquois turned to the colony's new masters, rather than the French, for trade. French settlers and traders were fearful of the English-Iroquois alliance, and northern New Englanders felt menaced by the French-allied Abenakis, who were closely allied with the Malecites, Penobscots, Pennacooks, and Micmacs.

Sir Edmund Andros (1637–1714), governor of Britain's northern colonies from New Jersey to Maine, made a peremptory strike against the trading post of Jean Vincent de l'Abadie (fl. 17th century), baron de Saint Castin, in April 1688, a year before open war broke out. Designed to drive the French out of territory claimed by the English, the raid served only to outrage the Abenakis, who were related to Baron Castin through marriage. The English further provoked the French when settlers at Saco, Maine, took 16 Indians captive in retaliation for their having killed some cattle. This action brought a series of bloody Abenaki raids.

By the late summer of 1688, English settlers began building forts in northern New England, but abandoned the one in North Yarmouth, Maine, when news of the approach of the Indians reached them. At this, the Abenakis unleashed terrifying raids throughout northern

New England. Governor Andros built more forts, at Pemaquid and present-day Brunswick, Maine, and mustered 1,000 troops in the area, but they did not pursue the Indians into their winter hiding places. In the spring, Andros unleashed his army, only to be deposed as royal governor when the Protestant revolt in England dethroned James II (1633–1701)—who had appointed Andros—and replaced him with William III.

In the meantime, Louis XIV dispatched Louis de Buade (1622–98), comte de Frontenac, to America as governor of New France in 1689. Frontenac had been governor earlier, from 1672 to 1682, and was tremendously unpopular, but, despite this and his advanced age (he was nearly 70), he was, in the king's view, the best man for accomplishing not just the defense of Canada, but the invasion of New York.

Frontenac planned to march via Lakes Champlain and George into Albany, forge an alliance with the Iroquois, and take New York City.

It quickly became apparent to the governor, however, that these plans were wildly optimistic. Quebec had been badly shaken by Iroquois raids, particularly one that had taken place on the night of July 25–26, 1689, at Lachine, 10 miles upstream from Montreal, prompting the abandonment of a key Lake Ontario fort.

Unable to carry out a major offensive, Frontenac decided on a strategy of what he called *la petite guerre*—small war, a term that evolved into “guerrilla warfare.” He used the Abenaki and allied tribes to terrorize the English throughout Maine and New Hampshire, and the raiding campaign intensified during the summer of 1689. The English withdrew from their outposts east of Falmouth (present-day Portland, Maine). Authorities at Boston raised an army of 600 men, but, as would prove the case in later North American Indian conflicts, conventional military forces were largely ineffective in fighting a wilderness guerrilla war.

As winter approached, Frontenac sent a small force of Indians and Canadians to make a three-pronged assault into New York, New Hampshire, and Maine. On the night of February 8, 1690, Schenectady was ravaged. On March 27, 1690, the attack fell on Salmon Falls, New Hampshire. In May, it was Fort Loyal (Falmouth, Maine), the defenders of which, promised safe conduct out of the fort, fell in massacre.

Reeling under these blows, the English and their Mohawk allies decided to seize the initiative with an invasion of Canada that would coordinate two land forces from New York and New England with a naval force sailing up the Saint Lawrence River. Sir William Phips (1651–95) led 14 ships in a successful assault against Port Royal, Acadia (Annapolis Royal, Nova Scotia) on May 11, 1690, but failed to get the invasion proper under way, and, during the balance of 1690, French forces evicted the English from their Hudson Bay outpost at the mouth of the Severn River. In 1691, they even retook Port Royal.

Although the English suffered many reverses, their Iroquois allies fared worse, suffering the destruction of many villages and the loss of many lives. Yet *la petite guerre* produced no decisive victories for the French, and by the end of 1691, the French-allied Abenakis were exhausted enough to conclude a peace treaty on November 29, 1691.

After a brief interval, the treaty was broken as the Abenakis resumed raiding, attacking York, Maine, on February 5, 1692; Wells, Maine, and Deerfield, Massachusetts, were attacked in June.

In January 1693, Frontenac mounted a large assault against Mohawk villages, capturing 300 Mohawks, most of them women, children, and old men. And so the pattern of raid and counterraid continued, month after month, through the fall of 1697. In September of that year, the Treaty of Ryswick ended the War of the League of Augsburg and also wound down the combat in North America—although the frontier was by no means pacified. During 1698 and 1699, the Iroquois and western tribes (mainly the Ojibwa) did frequent battle. Ojibwa tradition tells of a massive combat on the shores of Lake Erie, fought sometime during this period and resulting in a severe Iroquois defeat.

Kiowa War (1874)

PRINCIPAL COMBATANTS: Kiowa, Comanche, and Cheyenne Indians vs. the United States

PRINCIPAL THEATER(S): Texas and Kansas plains

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Pursuant to national policy, the army wanted to round up and confine the Indians to reservations.

OUTCOME: During late 1874 and into 1875, a few thousand Indians surrendered and were consigned to reservations.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: United States, 1,500; Indians actively engaged, about 1,000

CASUALTIES: Unknown

TREATIES: None

In the spring of 1874, Kiowa Indians, along with Comanches and Cheyennes, launched extensive raids in Texas and Kansas. On June 27, Comanches and Cheyennes attacked a white hunter village at Adobe Walls in the Texas Panhandle. On July 12, the Kiowa chief Lone

Wolf (c. 1820–79) led an ambush of Texas Rangers in the Lost Valley. Lesser raids preyed upon ranchers and travelers throughout Texas and Kansas. In response to such Indian “depredations,” General William Tecumseh Sherman (1820–91), commander in chief of the U.S. Army’s western forces, obtained government authority to invade the reservations. Sherman telegraphed his chief field commander, Philip Sheridan (1831–88), on July 20 to begin an offensive. Sheridan and his lieutenants, General John Pope (1822–92) (commanding forces in Kansas, New Mexico, and parts of Colorado and parts of Indian Territory) and General Christopher C. Augur (1821–85) (commanding Texas and part of Indian Territory) planned a campaign in which their forces would converge on the Staked Plains region of the Panhandle. Forces would close in from Fort Sill in Indian Territory (Oklahoma), from Texas, from New Mexico, and from Kansas.

One of Pope’s best field commanders, Colonel Nelson A. Miles (1839–1925), led eight troops of the Sixth Cavalry and four companies of the Fifth Infantry south from the Canadian River into Indian Territory. A force of 774 troopers engaged 200 Cheyennes—soon reinforced to a strength of perhaps 600—as they approached the Staked Plains escarpment on August 30. Miles led his attack from one hill to the next, alternating assaults with Gatling guns and howitzers with infantry and cavalry charges. Combat was a five-hour running battle over about 12 miles of rugged territory. At last, the Indians made their stand along the slopes of Tule Canyon. By this time, however, both sides were exhausted—and Miles knew that he lacked provisions to press the attack further. He reluctantly withdrew to resupply his troops, destroying abandoned Indian villages along the way.

In Plains warfare, the climate was typically an enemy more formidable than either Indian or bluecoat. In 1874, the region was plagued by drought, which ended suddenly on September 7 with a rash of torrential rains. Miles, still in search of supplies, joined his men to another 225 soldiers of the Eighth Cavalry commanded by Major William R. Price. Together, they slogged north through all-but-impassable mud, looking to intercept an army supply train. On September 9, however, about 250 Kiowa and Comanche warriors under Lone Wolf, Satanta (c. 1807–78), and Big Tree (c. 1850–1929) intercepted the supply train first. They held it under siege for three days until Price arrived to drive them off. Miles, still hampered by a lack of supplies, was unable to pursue.

In the meantime, approaching from the southeast was Colonel Ranald S. Mackenzie’s (1840–89) Fourth Cavalry. His column was attacked during the night of September 26 by 250 Comanches near Tule Canyon. The Indians’ purpose was to stampede the cavalry’s ponies, but Mackenzie had taken the precaution not only of hobbling the animals, but surrounding them with a special guard. When they found they were unable to stampede the ponies, the Indians began shooting at the troopers.

Mackenzie retaliated in the morning. His 21 officers and 450 men drove the Indians off, then, acting on intelligence provided by Indian scouts, rode on to Palo Duro Canyon. Here he surprised a combined Kiowa-Comanche-Cheyenne village, totally routing the warriors. Three Indians died in the battle, but Mackenzie also destroyed the Indians’ store of provisions and appropriated 1,434 horses. He took 400 mounts for his men, then slaughtered the rest.

In October, troops under the command of Colonel George P. Buell destroyed more Indian villages, and Miles and Price pursued Cheyennes under Chief Gray Beard. The Indians evaded their pursuers, but Miles and Price destroyed the village from which they had fled.

The Kiowa War of 1874 ended for the reason that most white-Indian conflicts ended: exhaustion on both sides—and extreme hunger and privation on the side of the Indians. Late in the fall and early in the winter, as the weather on the Plains turned brutal, hungry Kiowas and Cheyennes straggled into Forts Sill and Darlington to surrender and submit to confinement on the reservation. The last group, 407 Kwahadi Comanches, reported to Fort Sill on June 2, 1875. This effectively brought to an end warfare on the southern plains.

Wunder, *The Kiowas* (New York: Chelsea House, 1989).

Knights' War (1522–1523)

PRINCIPAL COMBATANTS: German imperial knights vs. Catholic princes

PRINCIPAL THEATER(S): Germany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A bid to secularize ecclesiastical lands and to enhance the Lutheran Reformation

OUTCOME: The revolt against the Catholic princes was crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Knights, 15,000; princes’ numbers unknown

CASUALTIES: Unknown

TREATIES: None

The Knights’ War took place in Germany during the period of the Lutheran Reformation, which triggered profound social as well as theological upheaval. The forces of Protestantism tended always to undercut the authority of the nobility.

Two imperial knights, Franz von Sickingen (1481–1523) and Ulrich von Hutten (1488–1523), partisans of the Reformation, embarked on war to secularize noble and ecclesiastical land holdings and to preserve the free status of imperial knights. They formed a league of imperial knights and, with them, laid siege to the Catholic stronghold of Trier on August 13, 1522. Not only did the siege fail to take Trier, it provoked a retaliation in which the Catholic princes of Trier, Hesse, and the Palatinate laid siege to Sickingen in his castle at Landstuhl. He surrendered on May 6, 1523, and succumbed the next day to wounds received during the siege. His colleague, Ulrich van Hutten, fled to Zurich, where he was given refuge by the Swiss Protestant leader Huldreich Zwingli (1484–1531). However, Hutten died soon after securing refuge and did not return to the fight. Although the Protestants raised an impressive force of 15,000, the Knights' War resulted in a victory for the Catholic nobility. The next social rebellion sparked by the Reformation flared up just one year later as the PEASANTS' WAR.

Korean War (1950–1953)

PRINCIPAL COMBATANTS: United States (nominally allied with 13 other UN member nations) and South Korea (Republic of Korea) vs. North Korea (Democratic People's Republic of Korea) (with assistance from the People's Republic of China)

PRINCIPAL THEATER(S): North and South Korea

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Korea

OUTCOME: An armistice left the nation divided along the 38th parallel into a communist North and a democratic South.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: United States, 440,000; North Korea, 100,000; China, 300,000

CASUALTIES: United States, 33,629 killed, 103,284 wounded, 10,218 missing or prisoners; Chinese and

North Korean losses not known, but many times greater than U.S. losses

TREATIES: Cease-fire, July 27, 1953

The northern and southern regions of Korea had an ancient heritage of conflict with one another, and all of Korea had often been invaded by China or Japan. In 1910, Japan annexed Korea in violation of international agreements. The United States raised no objection to this until after the December 7, 1941, Japanese attack on Pearl Harbor, Hawaii. The liberation of Korea then became one of the United States's stated war aims in WORLD WAR II. Following the Potsdam Conference during July 27–August 2, 1945, Soviet premier Joseph Stalin (1879–1953) announced his intention to establish, with the Western Allies, a trusteeship for Korea. When the Japanese surrendered on August 14, 1945, the United States proposed that the Soviets receive Japan's surrender in Korea north of the 38th parallel, while the United States accept surrender south of this line. The United States understood that the partition of Korea was a temporary expedient until the nation could be restored to a full peacetime footing, but the Soviets seized on it to divide Korea and bring the northern portion into the communist sphere. The Soviets fortified the dividing line between North and South, the 38th parallel, and the United States requested that the United Nations intervene to bring about Korean unification. With Soviet support, however, North Korean communists barred the United Nations from conducting elections north of the 38th parallel. South of the parallel, the elections proceeded on May 10, 1948, creating the Republic of Korea (ROK) under President Syngman Rhee (1875–1965). The Soviets established a rival government in North Korea on May 25, 1948: the People's Democratic Republic of Korea (DRK), under the leadership of Kim Il-sung (1912–94), a Soviet-trained Korean communist.

UNITED STATES BEGINS

MILITARY SUPPORT OF SOUTH KOREA

U.S. policy was to arm South Korea for defense, without giving the appearance of sponsoring South Korean aggression. After training an ROK army of 65,000, a coast guard of 4,000, and a police force of 35,000, and supplying defensive arms, the United States completed its military withdrawal from Korea on June 29, 1949, leaving behind only a 500-man U.S. Korean Military Advisory Group (KMAG).

NORTH KOREA INVADES

The North Korean People's Army (NKPA), numbering about 100,000 troops and supplemented by a small air force of 132 combat aircraft, crossed the 38th parallel at 4 o'clock on the morning of June 25, 1950. Brushing aside the inferior South Korean forces, the principal invading

force headed toward Seoul, the South Korean capital, about 35 miles below the parallel, while smaller forces moved down the center of the Korean Peninsula and along the east coast. The NKPA took Seoul, and U.S. president Harry Truman (1884–1972) ordered General Douglas MacArthur (1880–1964), commander of the U.S. Far East Command, to begin supplying the ROK with equipment and ammunition. In addition, Truman ordered the U.S. Seventh Fleet to proceed toward Korea, but then redeployed most of it to Taiwan, to forestall a Communist Chinese attack on this Nationalist Chinese stronghold. On June 30, Truman gave MacArthur permission to use all available U.S. forces to aid the ROK. These included units of the Eighth Army as well as the 29th Regimental Combat Team and modest naval and air forces in the region.

In the midst of the invasion, the Soviets signed a treaty of friendship, alliance, and mutual assistance with the People's Republic of China and boycotted all UN organizations and committees on which Nationalist China participated. The Soviet boycott meant that it was not present to veto the UN Security Council resolution authorizing military action against North Korea. Backed by UN sanctions, President Truman named Douglas MacArthur commander of U.S. and UN forces. On July 24, MacArthur created the United Nations Command (UNC). Although various UN member nations would participate in the Korean War, the United States bore the brunt of the battle.

U.S. ground forces began arriving in Korea just six days after the June 25 invasion. By this time, the NKPA had crossed the Han River south of Seoul and was still on the move. By July 3, Kimp'o Airfield and the port of Inchon were in communist hands. Concluding that the North Koreans' principal objective was the port of Pusan, MacArthur deployed "Task Force Smith" just above Pusan on July 5, but by July 13, the NKPA had pushed ROK and U.S. forces to Taejon, in south-central South Korea. While fighting delaying actions, MacArthur rushed to build up forces in Japan. Two divisions were moved to South Korea on July 18 to reinforce the defenders of Taejon, but the city was lost to the NKPA on July 20.

MacArthur refused to be disheartened by the defeats the U.S.-UN forces suffered. He understood that the rapid advance of the NKPA had stretched its lines of communication and supply beyond their limit. Moreover, although U.S. ground troops were badly outnumbered at this point, the U.S. Air Force quickly established air superiority and began interdicting the supply lines. A naval blockade was also proving effective in cutting off NKPA supplies.

BATTLE OF PUSAN

Lieutenant General Walton H. Walker (1889–1951), commander of the U.S. Eighth Army, took a make-or-break stand along a line north and west of Pusan, the 140-mile-long "Pusan perimeter," extending in an arc from the Korea Strait to the Sea of Japan. With skill and determina-

tion, Walker's troops effectively held the perimeter, buying MacArthur the time he needed to build up forces sufficient for an offensive thrust.

INCHON LANDING

MacArthur wanted to attack the NKPA from its rear, trapping it between the attacking force and the Eighth Army at Pusan. To get a large force north of the NKPA position, MacArthur planned and executed a daring landing at Inchon, a site exposed to hazardous tides and offering difficult terrain. On September 15, 1950, MacArthur committed a large force to the Inchon landing, which proved the most brilliant military operation of MacArthur's career. Within two weeks of the landing, Seoul was once again in ROK hands, and the NKPA lines were severed. During September 16–23, the U.S. Eighth Army fought its way out of the Pusan perimeter, forcing the NKPA to withdraw. The Eighth Army pursued and met up with the landing force on September 26. Although more than 30,000 North Korean troops probably made it back to the 38th parallel, the Inchon landing and the associated breakout from Pusan neutralized the NKPA as a fighting force in South Korea. South Korea had been cleared of invaders.

OFFENSIVE INTO NORTH KOREA

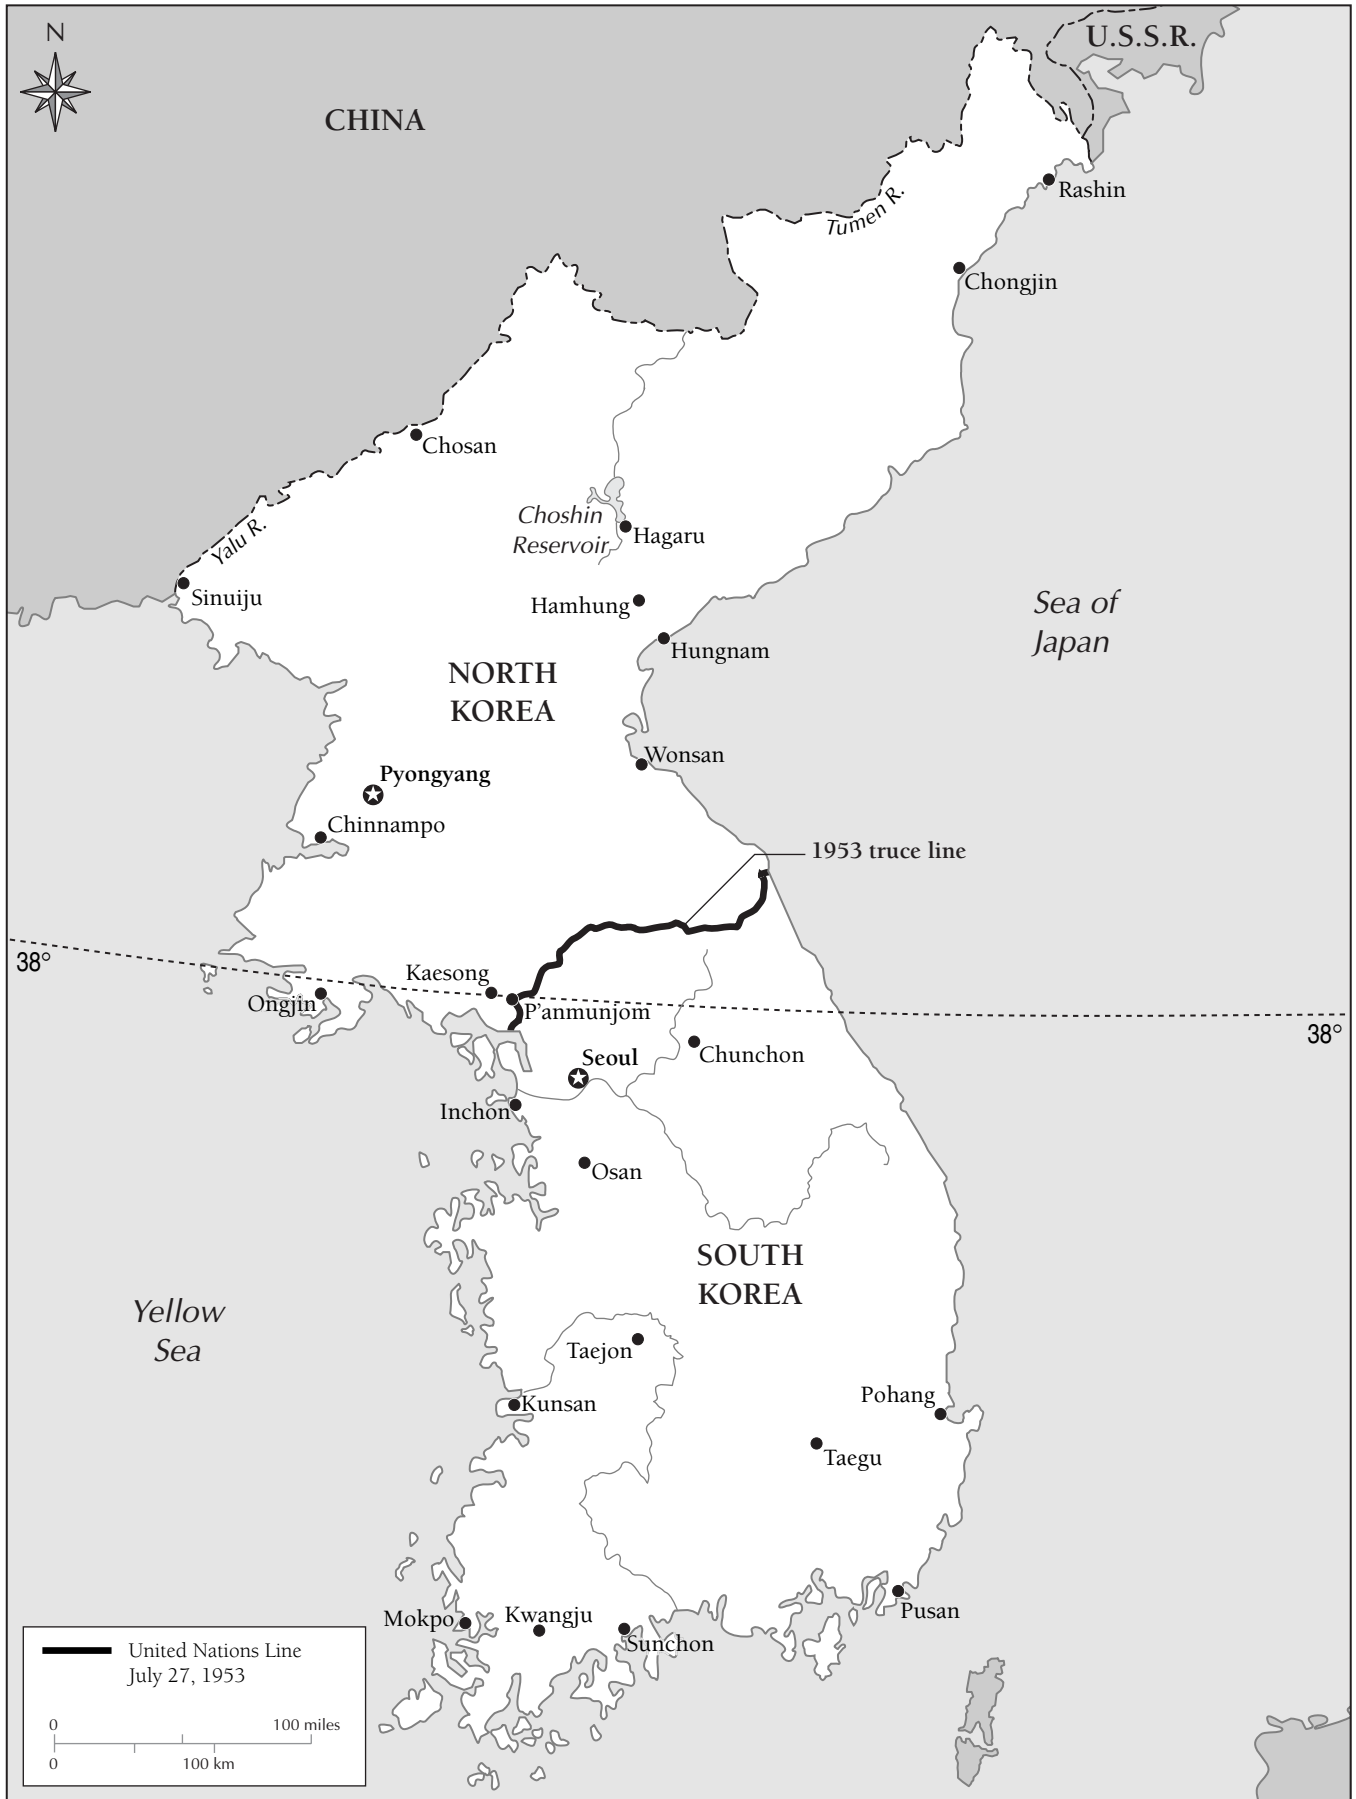

On September 27, President Truman ordered General MacArthur to pursue NKPA across the 38th parallel, warning him to steer clear of the Yalu River (the border with Manchuria) and the Tumen River (the border with the U.S.S.R.). MacArthur was authorized to use South Korean troops exclusively; Truman did not want combat between U.S. and Chinese or Soviet troops.

Two ROK corps crossed the 38th parallel on October 1, and, on October 9, General Walker led Eighth Army's I Corps across as well. By the 19th, I Corps had cleared Pyongyang, the North Korean capital and, by October 24, I Corps was just 50 miles outside of Manchuria. ROK forces were also now positioned close to the Chinese border.

Although China threatened to intervene, Truman authorized the advance to continue. On October 26, MacArthur determined that Communist Chinese troops had entered the fight, but even as the Chinese presence grew, MacArthur continued to believe that Chinese operations were strictly defensive. He ordered the advance to continue, and on November 24, U.S. forces reached the Yalu River, North Korea's border with China.

CHINESE INTERVENTION

On the night of November 25, 1950, Chinese forces attacked the Eighth Army hard on its center and right. Two days later, larger Chinese forces overran units of X Corps on its left flank. By November 28, UN positions were caving in as some 300,000 Chinese troops entered North Korea. General Walker withdrew his troops to

United Nations line established at the 38th parallel, dividing North and South Korea at the time of the armistice

prevent envelopment. By December 15, UN forces had withdrawn all the way to the 38th parallel and were now establishing a defensive line across the breadth of the Korean peninsula. A great airlift evacuated X Corps from North Korea. During the evacuation, Walker was killed in an automobile accident, and Lieutenant General Matthew B. Ridgway (1895–1993) replaced him as commander of the Eighth Army.

THE RELIEF OF MACARTHUR

After China's intervention, MacArthur sought permission to attack China directly, especially the airfields in Manchuria. The administration demurred and ordered MacArthur to contain and limit the war, keeping UN forces within Korea. If this became untenable, MacArthur was to evacuate the Korean Peninsula. In response, MacArthur continued to press for a major blockade and attack against China.

While MacArthur and the Truman administration argued, Ridgway prepared an all-out defense north of Seoul. Despite his preparations, a Chinese attack on New Year's Eve drove the Eighth Army into withdrawal toward Seoul. Seoul fell on January 4, 1951, but the Chinese failed to pursue the Eighth Army south of the capital and soon halted the advance. Ridgway recognized that, once again, logistical problems had stalled the Chinese, and he began a slow, methodical offensive (dubbed "Meatgrinder" by troops) on January 25, 1951. Meatgrinder regained Seoul by the middle of March, and, by the 21st, UN troops were back at the 38th parallel.

At the 38th parallel, the UN forces halted. It was decided that holding South Korea below the 38th parallel was an acceptable outcome of the war. When Truman informed MacArthur that negotiations were to open with the Chinese and North Koreans on the basis of currently held positions, the general declared that, if the United Nations would expand the conflict to North Korea's coastal areas and interior strongholds, the Chinese would realize that they were at serious risk of suffering military defeat. Then, on April 5, 1951, Representative Joseph W. Martin (1884–1968) (R-Fla.) read into the *Congressional Record* a letter from MacArthur stating the necessity of opening up a second front against China itself, one using Nationalist Chinese troops. This letter constituted gross—and dangerous—insubordination, and prompted President Truman to relieve MacArthur of command on April 11.

A NEW CHINESE OFFENSIVE

Matthew Ridgway, appointed to replace MacArthur as supreme commander of UN forces, turned over the Eighth Army to Lieutenant General James A. Van Fleet (1892–1992). The Eighth bore the brunt of a massive spring offensive, which inflicted some 7,000 casualties, but cost the communist forces more than 10 times that number. The first phase of the offensive was over by the end of April, but a second phase was launched on May 14,

against the right flank of X Corps. Van Fleet had anticipated just such an attack, however, and so was able to blunt it, inflicting, in the course of a week, some 90,000 casualties.

GUERRILLA PHASE

After the failure of the spring offensive, the communists began to employ hit-and-run attacks by small units instead of deploying massive assaults. The rest of the Korean War became a guerrilla conflict. Van Fleet took the offensive on May 22, 1951, but was soon ordered to halt and hold just north of the 38th parallel.

PEACE NEGOTIATIONS

With the opposing sides arrayed near the 38th parallel, cease-fire negotiations commenced. The talks began at the end of June 1951, but it took until July 26 to even establish an agenda. Breakdowns were frequent, and the talks dragged on for two years, during which combat continued. At length, both sides agreed to an armistice along a demarcation line and demilitarized zone. The truce would be impartially supervised, and arrangements would be made for the return of prisoners of war. UN negotiators wanted prisoners to decide for themselves whether or not they would return home; the communists, fearing mass defection to the South, held out for mandatory repatriation. To break the negotiation stalemate, General Mark Clark (1896–1984), who succeeded Ridgway as UN commander in May 1952, intensified bombing raids on North Korea. It was not until April 1953 that a compromise on the POW issue was reached. At this point, only Syngman Rhee, the president of South Korea, remained dissatisfied with the armistice terms. For him, nothing short of Korean unification (under his leadership) would suffice. He attempted to sabotage the peace process by ordering the immediate release of 25,000 North Korean prisoners who wanted to live in the South. To regain Rhee's cooperation, the United States promised him a mutual security pact and long-term economic aid. However, the armistice signed on July 27, 1953, did not include South Korea. Nevertheless, the shooting war was ended. Korea remained—and remains—divided.

Kornilov's Revolt (1917)

PRINCIPAL COMBATANTS: Cossack counterrevolutionary forces vs. the provisional Russian government

PRINCIPAL THEATER(S): Petrograd (St. Petersburg), Russia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conservative military elements (led by Lavr G. Kornilov) wanted to impose order on Russia through dictatorship following the February Revolution.

OUTCOME: The counterrevolution was quickly suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Following the FEBRUARY REVOLUTION, which toppled Czar Nicholas II (1868–1918), Russia was adrift in anarchy. Conservative Russian generals, supported by Alexander F. Kerensky (1881–1970), head of the postrevolutionary provisional government, plotted to create a military dictatorship to restore order. However, it soon became apparent that General Lavr G. Kornilov (1870–1918), Kerensky's commander in chief of the army, had ambitions to become sole—and permanent—dictator. Recognizing this, Kerensky denounced Kornilov as a traitor and dismissed him as commander in chief. Kornilov, in turn, sent his loyal Cossack troops to invade Petrograd (subsequently Leningrad and today St. Petersburg). His plan was to reform the soviet (the revolutionary council) to remodel the provisional government along right-wing lines.

Following the incursion of the Cossacks, Kerensky withdrew his support from the military and turned instead to his own left-wing adversaries, the Bolshevik-led workers. In the end, force of persuasion rather than force of arms prevailed. The Cossacks were persuaded to defect, and Kornilov's counterrevolution collapsed, after five days, on September 14, 1917.

General Kornilov was arrested and imprisoned. He escaped from Petrograd following the October Revolution that brought the Bolsheviks to power to participate in the White Russian resistance to government by the soviets (see RUSSIAN CIVIL WAR [1917–1922]).

Kościusko's Uprising See POLISH REBELLION (1794).

Kronstadt Rebellion (1921)

PRINCIPAL COMBATANTS: Sailors of the Kronstadt Naval Base vs. Bolshevik government troops

PRINCIPAL THEATER(S): Kronstadt Naval Base outside of Petrograd (St. Petersburg), Russia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The sailors demanded an end to Communist Party dictatorship and called for famine relief, as well as other measures.

OUTCOME: The rebellion was quickly and brutally crushed, although it succeeded in spurring reform.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Kronstadt sailors and allies, 27,000; Bolshevik forces, 45,000

CASUALTIES: Kronstadt forces, 600 killed, 1,000 wounded; Bolshevik forces, 1,912 killed or missing, 1,208 wounded. After the rebellion, 2,103 Kronstadt mutineers were executed, and 6,459 were imprisoned, most of whom died within one year.

TREATIES: None

This brief but bloody uprising came about during the winter of 1921, when the fledgling Soviet Union was stricken by economic disaster and famine brought on in large part by the RUSSIAN CIVIL WAR (1917–1921). One of several major internal uprisings spawned by the Civil War, the Kronstadt Rebellion would have an immense impact on Communist Party policy, influencing it to undertake major economic liberalization.

When the hard-strapped Bolshevik government failed to distribute emergency food supplies to the Russian cities that winter, then imposed repressive laws and strict labor regulations, the sailors at the Kronstadt Naval Base rose up in support of striking workers. The sailors had supported the Bolsheviks in 1917, and their cooperation had been crucial to the success of the October Revolution. During the Civil War, however, they had grown disenchanted with the Bolshevik government, its inability to meet the needs of the population, and its harsh measures against the workers in whose name it ruled. With the striking workers, the sailors formed a Provisional Revolutionary Committee and angrily called for an end to the hegemony of the Communist Party in favor of the full empowerment of the soviets (district councils)—soviets without Bolsheviks. Moreover, they demanded the release of non-Bolshevik political prisoners and a full slate of political freedoms and human rights.

Vladimir I. Lenin (1870–1924), leader of the Bolshevik government, dispatched Leon Trotsky (1879–1940) and Mikhail N. Tukhachevsky (1893–1937) with Red Army soldiers across the ice from Petrograd (Leningrad) to quell the rebellion. Overwhelmed by superior forces, the revolt collapsed. Trotsky ruthlessly shot many of the sailors; others were imprisoned.

The rebellion, so harshly crushed, nevertheless provoked reform. Lenin retreated from strict Marxist communism, allowing a measure of free enterprise and distributing emergency food supplies in an effort to avert the

nation's total collapse, in the New Economic Policy of March 1921.

Kun's Red Terror (1919)

PRINCIPAL COMBATANTS: Hungarian Communists (led by Béla Kun) vs. counterrevolutionaries (led by Admiral Nicholas Horthy) and Romanian invaders

PRINCIPAL THEATER(S): Hungary

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Hungarian government

OUTCOME: The short-lived Hungarian republic was overthrown by Béla Kun's Communists, who were in turn overthrown by a combination of Romanian invaders and Hungarian counterrevolutionaries led by Admiral Nicholas Horthy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The HUNGARIAN REVOLUTION (1918) gave Hungary independence from the failing Austro-Hungarian Empire and established a republic. However, Soviet Russia, under Vladimir I. Lenin (1870–1924), anxious to spread communism to the newly independent nations of eastern Europe, dispatched Béla Kun (1885–c. 1939) to Hungary to establish a communist party there. The party was created on December 20, 1918, and Kun and his followers did not have long to wait for a moment of instability to exploit. On March 21, 1919, Hungarian president Michael Károlyi (1875–1955) suddenly resigned to protest demands by the Allies of WORLD WAR I for more territorial concessions from Hungary. Károlyi's resignation gave Kun the opportunity he needed, and, immediately, a coalition government was created for Hungary, incorporating communists and social democrats, with Kun as head of state. In short order, Kun terminated the coalition by forcing the social democrats out, and he set up a communist dictatorship.

Kun embarked on an ambitious military program. He created a Hungarian Red Army, with which he invaded Czechoslovakia and reconquered Slovakia from that country. On the domestic front, Kun used his army to force nationalization of Hungary's great estates. When he did not redistribute this land to the peasants, as promised, they turned against Kun. In the meantime,

Kun's increasing use of terror and strong-arm tactics to accelerate the nationalization of land and industry turned the bourgeoisie against him as well. As if this weren't bad enough, the Allies compelled Kun to return Slovakia to the Czechs.

Beleaguered on all sides, Kun fended off a counterrevolutionary attempt at a coup d'état during mid-1919. No sooner had he succeeded in this, however, than he had to deal with a Romanian invasion. In April, the Romanian army invaded Hungary in a preemptive strike intended to forestall a Hungarian attempt to reconquer Transylvania. Kun defended, but his forces were repulsed. By the summer, Kun's Red Army mutinied, refusing to resist Romanian troops who were now closing in on Budapest, the Hungarian capital. On August 1, 1919, Kun fled to Vienna.

The Romanians occupied Budapest on August 5. The invaders sacked the city, causing significant destruction and loss of life before withdrawing on November 14, 1919. Into the vacuum created by this devastation stepped the counterrevolutionary leader Admiral Nicholas Horthy de Nagybánya (1868–1957). He rode into Budapest and was named head of state and regent in a restored monarchy independent of Austria.

Kurdish Resistance against Iraq (1984–2003)

PRINCIPAL COMBATANTS: The Kurds vs. Turkey; Kurds vs. Iraq; Kurds vs. Iran; Kurdistan Democratic Party (KDP) (sometimes allied with Saddam Hussein's Iraq) vs.

Patriotic Union of Kurdistan (PUK); KDP (with Turkish assistance) vs. Kurdistan Workers Party (PKK)

PRINCIPAL THEATER(S): Kurdistan region of Turkey, Iran, and Iraq

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Kurdish nationalism and control of the Kurdish nationalist movement

OUTCOME: Unresolved; fighting remains chronic in war marked by genocide and mass displacement of refugees.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Kurdish losses as a result of Turkish counterinsurgency, 20,000 plus displacement of some 2 million refugees; 180,000 Kurds killed by Iraqi forces in 1988 Al-Afan campaign

TREATIES: KDP-PUK cease-fire, October 23, 1996

The Kurds occupy territory encompassed by northern Iraq, eastern Turkey, and Iran, an area denominated Kurdistan, but one that never in modern times existed as an independent state. Since at least the 1920s, the Kurds have attempted, variously, to create an independent nation of Kurdistan or, at least, to gain some measure of autonomy within the nations in which they live. The problems with Kurdish nationalism are twofold: most nations, including those of the West, believe that the creation of a Kurdish state would further destabilize an already volatile region, and, in any case, the Kurds are far from politically homogeneous; it is very difficult to turn a collection of rival clans into a nation. Yet all of this does not alter the fact that the Kurds are chronically mistreated, persecuted, and, especially in the case of Iraqi policy, even subject to a campaign of genocide.

The current chronic state of warfare began in 1984, with the creation in the Turkish-Iraqi border region of the Kurdistan Workers Party (PKK), which was a terrorist organization dedicated to identifying and killing Kurds deemed loyal to the Turkish government. Turkey dispatched troops to Kurdistan in a long campaign of counterinsurgency. The result was a cumulative casualty count in excess of 20,000 among the Kurds. Turkish military action also displaced some 2 million, creating a long-term refugee problem of staggering proportions.

Warfare in Kurdistan is chronic guerrilla action on the part of the Kurds, punctuated by major killing campaigns, most notoriously by Iraq, but also by Turkey and Iran. Under Iraqi dictator Saddam Hussein (b. 1935), mass executions have taken place, as have mass exterminations. The 1988 Al-Afan operation included poison gas attacks and mass executions responsible for the deaths of at least 180,000 Kurds.

Despite the ruthless campaigns mounted against them, the Kurds succeeded in making important territorial gains at the expense of Iraq, in the wake of the PERSIAN GULF WAR, in 1990 and 1991. Guerrillas from the Kurdistan Democratic Party (KDP) and the Patriotic Union of Kurdistan (PUK) ejected Iraqi forces from northern Kurdistan, which became a haven for over 1 million Kurdish refugees. The Persian Gulf War coalition forces guarded an area near the Turkish border to ensure the safety of the refugees, but when the troops left, Saddam Hussein ordered a new attack. It, too, was repulsed.

Under great pressure, Saddam Hussein permitted the Kurds to elect a Kurdish assembly, which was done in April 1992, but within two years fighting between KDP and PUK rivals destroyed the possibility of Kurdish national unity. An attempt to reconcile the rival factions resulted in the establishment of a Kurdish parliament at the Hague in April 1995, but by the early autumn of the next year, the KDP had allied itself with Saddam Hussein in an effort to eliminate the PUK once and for all. KDP forces pushed PUK guerrillas out of Arbīl and Sulaymaniyah, then out of Dokan as well. The KDP conquest was short-lived, however, as, within a month, during October, PUK forces, bolstered by Iran, reconquered most of the lost territory.

Against the backdrop of this internecine fighting, the United States brokered peace talks, which resulted in a cease-fire agreement between the KDP and PUK on October 23, 1996. Within a year, the truce was shattered. Compounding the violence was an invasion of northern Iraq by Turkish and KDP forces to attack Kurdistan Workers Party (PKK) rebels. The PKK was badly beaten, and Turkey rewarded its ally, KDP, by making territorial cessions to it.

Turkish officials sought a definitive end to the PKK rebellion by capturing Abdullah Ocalan (b. c. 1947), a major PKK leader. However, his capture touched off major violent protests on February 16, 1999, and Kurdish-sponsored terrorism in 21 European cities. At the end of 2001, Iraq was in a perpetual stand-off with the Kurds, and Turkey, having claimed victory over Ocalan and the PKK, continues to resist international pressure to grant the Kurds increased political rights. How the downfall of the regime of Saddam Hussein as a result of the UNITED STATES–IRAQ WAR will affect the Kurds had yet to be seen by early 2004.

Kurdistan Insurrection (1922–1924)

PRINCIPAL COMBATANTS: The Kurds vs. Great Britain (with Arab allies)

PRINCIPAL THEATER(S): Kurdistan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Independence for the Kurds; protecting the flow of oil for Great Britain

OUTCOME: The Kurds gained considerable autonomy

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Unknown

In 1909, a British soldier of fortune named William Knox D'Arcy (1849–1917) created the Anglo-Persian Oil Company, which became known as British Petroleum, and launched an economic transformation of the ancient Middle East by the industrialized West, whose political and social effects are still being felt today. When the Middle East collapsed politically, virtually as a whole, during WORLD WAR I, Britain in effect nationalized its Persian oil interests by buying a majority share in the company in 1914 to ensure cheap and ample fuel for its Royal Navy. Thus, in 1922, when the Kurds, a traditional and semi-

independent mountain people living in the border region of Iraq, Turkey, and Iran, rebelled against the British and their Arab allies in the region, Great Britain's major concern was to continue the flow of oil from the rich Mosul oil field. The British ultimately suppressed the rebellion, but in the kind of patchwork compromise (sowing the seeds of future conflict) that the Arabs at least were coming to recognize, Britain granted the Kurds considerable autonomy.

Lamian War (323–322 B.C.E.)

PRINCIPAL COMBATANTS: Athens (and Aetolian League) vs. Macedonia

PRINCIPAL THEATER(S): Macedonia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: This was a revolt following the death of Alexander the Great of Macedon; Athenians and other Greek city-states objected to Alexander's recall of the Greek exiles and to the riotous behavior of Alexander's returning troops.

OUTCOME: Athens, overextended and deserted by the other Greek city-states, was defeated on sea and land, and was forced to pay a ruinous indemnity and make other concessions.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Athens and Aetolian League, 30,000; Macedonian numbers unknown but, when reinforced, greater than 30,000

CASUALTIES: Unknown

TREATIES: No documents survive

Also called the Greek War, the Lamian War was a general revolt in Greece that came in the aftermath of the death of Alexander the Great (356–323 B.C.E.) of Macedon. The revolt was triggered by Alexander's decree recalling the exiles to Athens and was aggravated by the disorderly conduct and criminal actions of troops returning from Alex-

ander's campaigns of conquest. Two focal points of the rebellion were Athens and Taenarum, a place where mercenary troops sold their services; however, the war's name derives from an Athenian siege against Lamia, the Greek city in which the Macedonian regent, Antipater (397–319 B.C.E.), was headquartered.

In October 323, Athens and the Aetolian League fielded 30,000 men and seized Thermopylae, also managing to keep Antipater's army bottled up at Lamia; however, after the Aetolian League deserted the cause, the Athenians lost a major sea battle in 323 B.C.E., then suffered defeat on land, at the Battle of Crannon, Macedonia, in September 322. This left Athens no choice but to surrender unconditionally. The cost to Athens was heavy: some of its most important leaders were executed, and the great orator-philosopher Demosthenes (c. 385–322 B.C.E.) committed suicide. Athens was saddled with a crippling indemnity and lost its democratic status, becoming an oligarchy. Piraeus, its principal port, was relinquished to Macedonian occupation.

Laotian Civil War (1954–1973)

PRINCIPAL COMBATANTS: The Laotian neutralist government, right-wing parties, and the communist Pathet Lao vs. each other in various combinations

PRINCIPAL THEATER(S): Laos, especially the Plain of Jars region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Laotian government

OUTCOME: A coalition was formed among the neutralists, rightists, and Pathet Lao communists; this put the Pathet Lao in a position to take over the government entirely, after neighboring Vietnam was unified as a communist state in 1975.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Cease-fire of 1961 and of 1973

The Geneva Conference of 1954 recognized Laotian independence from France and acknowledged the new nation's neutrality. The anti-French, leftist Pathet Lao soon gained control of the two northern provinces of Laos and received support from communists in Vietnam. In exchange for this support, the Pathet Lao allowed North Vietnamese communist troops to infiltrate Laos and use it for a supply and staging area in the VIETNAMESE CIVIL WAR (1955–1965) that was escalating into the VIETNAM WAR. In cooperation with the Pathet Lao, the infiltrators attacked Laotian government forces in an effort to overthrow the government and replace it with a communist regime.

Under great pressure from the communists, Prince Souvanna Phouma (1901–84), Laotian premier, attempted to form a coalition government by admitting Pathet Lao leaders into positions of authority. This, however, alienated the right wing of his government, and Souvanna Phouma was ousted. In the wake of his ouster, the pro-Western right wing, drawing economic and military support from the United States, launched a campaign against the Pathet Lao. Most of the fighting, between the Laotian army and the Pathet Lao, was concentrated on the Plain of Jars in north-central Laos.

During the conflict, Souvanna Phouma resurfaced and, in 1960, led a successful coup d'état. He proclaimed

himself a middle-of-the-road leader who wanted to restore Laos to the status defined for it by the Geneva Conference. Before the year was out, however, Souvanna found himself locked in a struggle with the Pathet Lao and the right wing. He stepped down and fled to temporary self-imposed exile in Cambodia.

In Souvanna's absence, in 1961, Prince Souphanouvong (1909–95), a Pathet Lao leader, concluded a cease-fire with the remnant of the Laotian government, and, by 1962, a volatile coalition was forged among the left, right, and middle. Not only did each have representation in the government, each also maintained its own private army. Souvanna Phouma returned as the nominal head of state, but in 1964 the political right-wing used the army to oust him from office. When Souvanna agreed to give the right wingers a bigger slice of government representation, he was restored. This, predictably, brought protests and violence from the Pathet Lao, which, supported by the North Vietnamese, broke away from the coalition government and waged an all-out military campaign on the Plain of Jars. From this point forward, the Pathet Lao gradually gained ground—despite U.S. military support for the government of Souvanna Phouma.

By 1973, the Pathet Lao controlled much of the east, north, and south, and the Souvanna government concluded a cease-fire and formed a new coalition in which the Pathet Lao played a prominent role. Souvanna remained premier, with Prince Souphanouvong, the highest-ranking member of the Pathet Lao, as president. The coalition was doomed, however, by the victory of the communist forces in South Vietnam in 1975. Once this neighbor had become a thoroughly communist state, the Pathet Lao felt emboldened to take over Laos.

Laotian Guerrilla War (1977–1990)

PRINCIPAL COMBATANTS: Pathet Lao (supported by Vietnam) vs. groups favoring royalist restoration (supported by China); Pathet Lao government vs. Thailand in border dispute

PRINCIPAL THEATER(S): Laos

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The communist Pathet Lao sought to suppress a movement for the restoration of the monarchy; simultaneously, the Pathet Lao fought a border war with Thailand.

OUTCOME: Once half of the Vietnamese troops occupying Laos withdrew, China ended its military support for the anti-Pathet Lao rebels, and the war quickly wound down. Improved relations with China, Thailand, and other neighbors bolstered the Pathet Lao government and brought a significant degree of stability to the country.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: Formal cease-fire, 1990, but no definitive treaty

Having come to power as a result of the LAOTIAN CIVIL WAR, the Pathet Lao abolished the traditional monarchy of Laos and formally established the People's Democratic Republic, a communist dictatorship. This sent many Laotians fleeing the country, mostly to Thailand. Others, most prominently the Meo tribesmen, loyal supporters of the monarchy, began a guerrilla war against the Pathet Lao government. Because the Pathet Lao supported (and was in turn supported by) communist Vietnam, China, which was locked in enmity against Vietnam, sided with and aided the Meo as well as the Hmong tribespeople—despite their advocacy of the monarchy and opposition to the communist government.

Amid a continual flow of refugees out of Laos and a low-level guerrilla war, the Pathet Lao government weakened, and in 1982, China supported the creation of a Royal Lao Democratic Government, a breakaway government that took control of the southern portion of the country. The Royal Lao forces, already allied with China, planned also to form an alliance with anti-Vietnamese forces in Cambodia. Their immediate objective was to eject some 45,000 Vietnamese troops occupying Laos.

During 1984–88, while guerrilla warfare raged within Laos, Thailand and Laos frequently engaged in combat over a disputed border. The Pathet Lao, barely holding its own against internal rebels, accused Thailand of supporting the Laotian right wing and of giving its members shelter along the border. Then, in 1988, some 20,000 Vietnamese troops were withdrawn from Laos. This was sufficient to allow China to declare a victory and depart the field; it withdrew its military support of the anti-Pathet Lao royalists. The Pathet Lao gained the ascendancy now, buoyed in no small measure by vastly improved trade relations with China as well as with Thailand and Vietnam. With economic strength, the Pathet Lao became increasingly popular and, therefore, difficult to oppose. The anti-Pathet Lao rebels gradually withdrew, and a formal cease-fire between Laos and Thailand was also concluded in 1990. By the following year, Thailand withdrew its troops from the border region. Free to focus on the remaining rebels, the Pathet Lao quickly suppressed remaining pockets of rebellion. With stability restored to Laos, some 60,000 refugees returned from camps in Thailand.

Latin Empire–Byzantine Empire War, First (1204–1222)

PRINCIPAL COMBATANTS: Latin Empire vs. Nicaean Empire

PRINCIPAL THEATER(S): Asia Minor

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The belligerents fought over succession to the Byzantine Empire.

OUTCOME: The weak Latin Empire was repeatedly defeated, its territory ultimately reduced to the city of Constantinople itself.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: Armistice of 1206; Armistice of 1214; Armistice of 1222

When the Byzantine Empire collapsed as a result of the disastrous Fourth CRUSADE, the so-called Latin Empire (also known as Romania) was proclaimed under Emperor Baldwin II (1171–1205). The new empire was more an aspiration than an accomplished fact, however, and external threats as well as internal dissension kept it weak. A Bulgarian-Cuman army soundly defeated the forces of the Latin Empire at the Battle of Adrianople in 1205, forcing the withdrawal of the empire's forces and resulting in the capture of Baldwin. The following year, Henry of Flanders (c. 1174–1216) ascended the Latin throne and resolved to reoccupy Asia Minor. He was beaten back by a Nicaean army, and Nicaea forced on him a two-year armistice. In desperation, Henry made a secret pact with the Seljuk Turks, who waged war against Nicaea beginning in 1209. Despite this alliance, the weak army of the Latin Empire was repeatedly bested in battle, so that, by 1214, the Latin

Empire was forced to renounce attempts to conquer Nicaean territory.

When Henry of Flanders died in 1216, the decline of the short-lived Latin Empire accelerated. Three years later, the southern Slavs claimed Nicaea as proper heir to the Byzantine Empire and recognized it as the center of the Greek Orthodox Church. By 1222, the so-called Latin Empire was nothing more than the city of Constantinople, Nicaea having conquered Seleucia from the Latins that year. More enduring was the widening of the gulf between the Christian churches of the East and West. This alienated Greece from the West and killed any hope of Greek reunion with what had been the Byzantine Empire. The Latin Empire had no chance to become a western bulwark against eastern invasion, and thus Europe lay exposed and vulnerable.

Latin Empire—Byzantine Empire War, Second (1224–1237)

PRINCIPAL COMBATANTS: Nicaea vs. Latin Empire and Bulgaria

PRINCIPAL THEATER(S): Asia Minor

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: As with the First Latin Empire—Byzantine Empire War, the objective was control of the Byzantine Empire.

OUTCOME: After a protracted struggle, Nicaea gained control of Bulgaria and the Latin Empire

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The greatly reduced Latin Empire renewed its contest with Nicaea over control of the waning Byzantine Empire in 1224. Nicaea's John III (d. 1254) struck an alliance with Ivan II (d. 1241) of Bulgaria and, together, the allies conquered territory in Asia Minor and among the Aegean islands. John failed, however, to take Constantinople from the Latins. This induced Ivan II to switch allegiance from Nicaea to the Latin Empire. Despite the loss of his ally, however, John III continued to acquire territory in Asia Minor, although he was forced to relinquish Thrace to Epirus.

In the meantime, Ivan II ruled as regent (to Baldwin II [1217–73]) of the Latin Empire until John of Brienne (1170–1237) joined Baldwin as coemperor in 1231. His regency voided, Ivan now declared war on the Latin Empire and attacked Constantinople in 1235 and again in 1236. This proved foolhardy, since the city was such a formidable objective. Both attempts were repulsed. Taking advantage of these defeats, John III attacked Ivan, managing to dominate both Bulgaria and the Latin Empire.

Latin Empire—Byzantine Empire War, Third (1261–1267)

PRINCIPAL COMBATANTS: Restored Byzantine Empire vs. (variously) Latin Empire, Nicaea, Naples and Sicily, Epirus, Genoa, and Bulgaria

PRINCIPAL THEATER(S): Italy and the Peloponnese

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Michael VIII Palaeologus sought to restore the Byzantine Empire.

OUTCOME: The empire was largely restored under Michael.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty with Genoa, 1261; alliance with Venice, 1263

Following the First LATIN EMPIRE—BYZANTINE EMPIRE WAR, and Second LATIN EMPIRE—BYZANTINE EMPIRE WAR, the Latin Empire, never very strong and always wracked by internal dissension, began its final collapse. Michael VIII Palaeologus (1225–82), having usurped the Nicaean throne, now led an army against Constantinople, which had withstood attacks in the First and Second Latin Empire—Byzantine Empire wars, and took the city in 1259. With their last stronghold gone, the Latins yielded to the restoration of the Byzantine Empire. However, the war Michael had started continued now against Charles I (1227–85) of Naples and Sicily, as Michael, in 1261, was proclaimed Byzantine emperor. Michael also faced enemies on the Peloponnese, which he defeated in 1261, and opposition from Genoa, with which he concluded a treaty the same year. A year later, however, Bulgaria rebelled

against the renewed Byzantine Empire, and Michael responded with a vigorous campaign that crushed the incipient revolt.

In 1263, its treaty with the empire notwithstanding, Genoa renewed war against the Byzantines, but Michael engaged the enemy on the sea and defeated the Genoese fleet, then struck an alliance with Venice, which effectively checked further aggression from Genoa.

In 1264, Michael moved against Epirus, and scored a victory there, but also lost a major battle against the Latin principality of Achaea at Makry-Plagi. A serious tactical loss, the defeat at Makry-Plagi turned out to be a relatively insignificant strategic setback, for, over the next three years, Michael led a slow but steady campaign against remaining pockets of resistance. Additionally, he conducted a skillful diplomatic offensive. The combination of military momentum and good diplomacy restored the Byzantine Empire and brought it a degree of stability it had not known for many years.

Latin War (340–338 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. Latin rebels

PRINCIPAL THEATER(S): Latium (central Italy)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rebellious members of the Latin confederation attempted to end Rome's domination of the league.

OUTCOME: After initial victories, the rebellious cities were put down and compelled to acknowledge Rome as the leader of the confederation.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Revised Latin confederation agreement, 338 B.C.E.

By the fourth century B.C.E., the city-state of Rome came to dominate Latium—central Italy—binding to itself in a loose confederation the other cities in the region. As was common among such confederations, conflict developed over domination of the league. A number of cities, allying

themselves with the Campanians, challenged Roman domination of the confederation beginning in 340 B.C.E.

The first major battle occurred at Vesuvius in 339, when the Roman general Publius Decius Mus (d. 339 B.C.E.) made a suicidal attack against the rebel forces to permit the major Roman army of Titus Manlius Imperatorius Torquatus (fl. mid-fourth century B.C.E.) to withdraw intact. Regrouping, Manlius was able to mount a massive counterattack at the Battle of Trifanum, near the mouth of the Liri River, in 338, achieving a victory so decisive that the Latin rebels were compelled to conclude a revised alliance with Rome, whereby Rome was explicitly acknowledged as the leader of a confederation bound by military alliance and—in a key move toward empire—exchanging citizenship rights among the members of the confederation. Effectively, Rome annexed all of Latium.

Latvian War of Independence (1919–1920)

PRINCIPAL COMBATANTS: Latvian republicans (with German allies) vs. Soviet invaders

PRINCIPAL THEATER(S): Latvia, especially Riga and vicinity

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Latvia, having gained independence from Germany, resisted Soviet attempts at domination.

OUTCOME: Latvia obtained Soviet recognition of its independence by the Treaty of Riga (abrogated in 1940).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Riga, August 11, 1920

After the armistice ending WORLD WAR I, Latvia, which had been under German control, declared independence under Prime Minister Karlis Ulmanis (1877–1940). Within weeks, however, during January 1919, Bolshevik forces from Russia invaded Latvia and occupied Riga, its capital city. Ulmanis was ousted, and a Soviet government set up in his place.

Latvian nationalists won the approval of the WORLD WAR I Allies (principally France, Britain, Italy, and the United States) to secure the aid of German troops in combating the invasion. By March, combined Latvian-German forces had expelled the Soviets from Riga but not entirely from Latvia. Now, however, in defiance of the Treaty of Versailles, the Germans refused to evacuate Latvia and remained in control of Riga. Latvian forces were ultimately able to push the Germans out by the end of 1919, but in

the process, the Soviets were once again able to advance on Riga. With the aid of the Allied nations, they were at last permanently evicted in January 1920. The Soviets signed an armistice with the Latvians, then concluded the Treaty of Riga on August 11, 1920, recognizing Latvian independence; however, positioned as it was within the jaws of Germany to the west and Soviet Russia to the east, the nation was doomed to reconquest by one great power or the other. In WORLD WAR II, Latvia would become a dismal battlefield.

Lava Beds War See MODOC WAR.

League of Augsburg, War of the See GRAND ALLIANCE, WAR OF THE.

League of Cambrai, War of the (1508–1510)

PRINCIPAL COMBATANTS: League of Cambrai (Holy Roman Empire, France, Aragon) vs. Venice

PRINCIPAL THEATER(S): Northern Italy

DECLARATION: League of Cambrai created December 10, 1508

MAJOR ISSUES AND OBJECTIVES: The pope wanted to regain control of cities of the Romagna seized by Venice.

OUTCOME: Venice relinquished its mainland satellite cities.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Variable; at the culminating Battle of Agnadello, France fielded 30,000 men against approximately the same number of Venetians.

CASUALTIES: At Agnadello, Venetian casualties were reported “in the thousands.”

TREATIES: No treaty ended the war; the creation of the League of Cambrai (December 10, 1508) was the basis of the war.

The Romagna region of northern Italy was titled to the papacy. When Venice seized the region, Pope Julius II (1443–1513), on December 10, 1508, created the League of Cambrai, consisting of the Holy Roman Empire, France, and Aragon—all traditional enemies of Venice—to wage war. The pope authorized the monarchs of the league kingdoms, Holy Roman Emperor Maximilian I (1459–1519), French king Louis XII (1462–1515), and Aragon King Ferdinand II (1452–1516), to divide among themselves the mainland territories of Venice and to bring any papal lands back to the papacy.

The league’s first targets were Perugia and the chief city of the Romagna, Bologna. After taking these, Louis’s French army of 30,000 attacked a Venetian army (of comparable size) at Agnadello in Cremona on May 14, 1509. The Venetians were soundly defeated, suffering several thousand casualties. The French also captured their artillery. As a result of this decisive battle, the mainland satellite cities of Venice were lost and divided, as the pope had ordered, among the league members and the papacy. However, Venice refused to surrender unconditionally, and when Emperor Maximilian lost control of Padua and the pope had second thoughts about allowing so many foreign monarchs to control Italy, the League of Cambrai dissolved. Venice would eventually regain control of its mainland cities, but it would never recover the extent of power it enjoyed before the League of Cambrai’s war.

Lebanese Civil War (1958)

PRINCIPAL COMBATANTS: Christian (Maronite) Lebanese vs. Lebanese Muslims

PRINCIPAL THEATER(S): Lebanon, especially Beirut

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Camille Chamoun, Lebanon’s Christian (Maronite) president, developed close ties with the West, a policy that alienated Lebanese Muslims, who favored closer ties with neighboring Arab nations. Muslim groups rebelled against Chamoun.

OUTCOME: U.S. and UN intervention ended the war, with the Christian (Maronite) party still in power.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: U.S. troop strength in Lebanon, 14,000; others variable

CASUALTIES: Mostly civilian

TREATIES: None

Camille Chamoun (1900–87), candidate of the Christian (Maronite) party, was elected to the presidency of Lebanon in 1952 and quickly developed close ties with the West, especially the United States. This policy alienated many Lebanese Muslims, about 50 percent of the population, who favored closer ties with neighboring Arab

nations and were hostile to the West. Unrest grew and, during May 9–13, 1958, Muslim groups rebelled against Chamoun. Riots erupted in Tripoli and in the Lebanese capital, Beirut. The riots were apparently orchestrated—or at least supported—by the United Arab Republic (UAR) (the union of Egypt and Syria, formed in January 1958), which also endorsed the activity of Kamal Jumblatt (1918–77), a Druse chieftain who led the most militant aspects of the revolt and who had already defeated Lebanese army forces in several encounters.

Chamoun refused to resign and instead appealed to U.S. president Dwight D. Eisenhower (1890–1969) for military aid. In 1957, Eisenhower had promulgated the so-called Eisenhower Doctrine, which held that the independence of the nations of the Middle East was vital to United States interests and the peace of the world. As the Eisenhower administration saw it, Soviet backing of the United Arab Republic jeopardized the security of Jordan, Turkey, and Iraq, as well as Lebanon—all nations friendly to the West. When Iraqi army officers allied with the UAR overthrew Iraq's King Faisal II (1935–58) in 1957, Egypt and Iraq acted to destabilize Jordan and Lebanon, arming and supporting rebels in these nations. In 1957, the Eisenhower government authorized U.S. Marines and a full army brigade to join a British regiment in Jordan to protect the government of King Hussein (1935–99). At this time, it was also decided to prepare for intervention in Lebanon, and three U.S. Marine battalions were made ready. The army prepared for a massive airlift, if required. Thus the U.S. military was poised to answer Chamoun's appeal for assistance.

On July 15, 1958, marines began to land at Khalde Beach in Lebanon. On July 16, these initial forces were joined by marines airlifted from Europe. On July 19, army troops arrived. The response of the Lebanese was mixed as U.S. soldiers marched into Beirut. Little resistance was encountered, and some even greeted the Americans as friends. Wisely, U.S. commanders established a clear relationship with Lebanese officers. Within a short time, U.S. and Lebanese forces were integrated and working well together to patrol the explosive areas of Beirut.

On July 15, when the first contingent of marines landed, President Eisenhower called on the United Nations to intervene in Lebanon with a multinational peacekeeping force. The Soviet Union vetoed the resolution of intervention, whereupon Eisenhower dispatched Deputy Undersecretary of State Robert D. Murphy (1895–1978) to Lebanon to mediate among the warring factions. In the meantime, the U.S. presence had enabled the establishment of a cease-fire, which, however, was tenuous at best. Sniper incidents were common. Occasionally, skirmishes developed. Despite this, U.S. forces worked with the Lebanese army to create a 20-mile defensive perimeter around Beirut. The principal object of this was to prevent Syrian or Syrian-backed guerrillas from attack-

ing the capital and ousting Chamoun. The U.S. intervention bought time for Murphy to negotiate an agreement to hold new elections. Another Maronite Christian, General Faud Chehab (1902–73), was elected, and, after his inauguration on September 23, 1958, U.S. troops withdrew. At its peak, U.S. troops strength in Lebanon approached 14,000.

Lebanese Civil War (1975–1992)

PRINCIPAL COMBATANTS: Christian (Maronite) Lebanese (many of the Christian Phalange Party) vs. Lebanese Muslims and Lebanon-based Palestinian refugees, members of the Palestine Liberation Organization (PLO), Palestine Liberation Army (PLA); Syrian military intervention (Arab Deterrent Force, ADF); Israeli military intervention; military intervention by Multinational Force (MNF), consisting of U.S., French, Italian, and British troops

PRINCIPAL THEATER(S): Lebanon, especially Beirut

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Long-standing strife between Christian and Muslim factions; war triggered by reprisals for failed attempt to assassinate the Christian president in 1975

OUTCOME: The civil war came to a tentative end after the "Taif Agreement" created Christian-Muslim representation in Lebanese government.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Arab Deterrent Force (1977), 30,000 men, including 27,000 Syrian troops; Israel Defense Forces (IDF) (1978), 25,000

CASUALTIES: Lebanon (1977), 44,000 dead, 180,000 wounded, mostly civilian, 200,000 refugees; MNF casualties in October 23, 1983, barracks bombing, 298; Lebanese civilian casualties in 1990 Beirut shellings, 900 dead, more than 3,000 wounded

TREATIES: Shtawrah Accord (Syria and Lebanon), July–August 1977; accord for Israeli withdrawal from Lebanon, May 17, 1983; Saudi-brokered cease-fire, September 26, 1983; "Taif Agreement," November 4, 1989 (Christian-Muslim representation in government)

In the second half of the 20th century, Lebanon was divided more or less evenly between Christians and Muslims. The National Pact of 1943 had established the dominant political role of the Christian Phalange Party in the central government. Periodically, this had been a source of violent

discontent among the Muslim factions. Further destabilizing the situation in Lebanon was the presence of Palestinian refugees as well as bases from which the Palestine Liberation Organization (PLO) operated against Israel.

On April 13, 1975, gunmen killed four Phalangists during an attempt on the life of Phalange leader Pierre Gemayel (1905–84). Apparently believing that the would-be assassins were Palestinian, Phalangist forces retaliated later that day with an attack against a bus carrying Palestinians through a Christian neighborhood; 26 passengers died. It was these two incidents that triggered a long, extremely destructive civil war.

On April 14, fighting became widespread and intense, with Phalangists engaging Palestinian militiamen, believed by many to have been from the PLO. Much of the violence was disorganized, consisting mainly of random killings in the streets of Beirut. The government quickly proved incapable of responding decisively or effectively. Civil war did not mobilize the government but paralyzed it. Government leaders were unable to agree on whether or not to use the army to stop the killing. Yet when the militant Druse chieftain Kamal Jumblatt (1918–77) tried to cut off the Phalangists politically, other Christian sects rallied to the Phalangist cause. In May, Prime Minister Rashid al-Sulh (served 1992) and his cabinet resigned, and a new government was formed under Rashid Karami (1921–87). Although there were many calls for his resignation, President Sulayman Franjijah (served 1970–76) refused to step down, and the war intensified and spread throughout Lebanon. In places with mixed sectarian populations, individuals sought the safety of regions where their sect was dominant, thereby further polarizing the country.

The civil war rapidly became chaotic and complex. Opposing militias exchanged fire in a pattern of attack followed by retaliation. Much of the violence was directed against noncombatant civilians. Nor was the civil war a relatively simple matter of Christian versus Muslim. The factions within both groups were many. Generally, however, those in favor of maintaining the status quo came to be known as the Lebanese Front. These groups included primarily the Maronite Christian militias of the Gemayel and other clans. Less well organized was the Lebanese National Movement, largely led by Kamal Jumblatt. This was a loose agglomeration of leftist groups and guerrillas from PLO factions.

By the end of 1975, the first year of the war, no side had made decisive military gains; however, it was clear that the Lebanese Front had performed poorly against the disorganized Lebanese National Movement. This fact alone eroded the national government. Beginning in 1976, Syria attempted diplomatic intervention, organizing a cease-fire and setting up the High Military Committee, through which it negotiated with all sides—albeit with little success at first.

In January 1976, the Lebanese Front began a siege of Tall Zatar, a Palestinian refugee camp in East Beirut. The Lebanese Front also overran and destroyed Karantina, a Muslim quarter in East Beirut. These provocative actions brought the main forces of the PLO, the Palestine Liberation Army (PLA), into the war. Combined PLA and Lebanese National Movement forces took the town of Ad Damur, a Shamun Christian stronghold south of Beirut.

In the midst of these actions, Syria's diplomacy made a breakthrough. On February 14, 1976, Syria was instrumental in hammering out a 17-point reform program called the Constitutional Document. Hopes were high—then soon dashed as, in March, the Lebanese army fell apart. Dissident Muslim troops, led by Lieutenant Ahmad Khatib (fl. 1970s), mutinied, creating the Lebanese Arab Army, which joined the Lebanese National Movement. The Lebanese Arab Army penetrated Christian-controlled Beirut, then attacked the presidential palace, forcing President Franjijah to flee to Mount Lebanon.

Against this backdrop, in May 1976, the Chamber of Deputies elected Elias Sarkis (1924–85) to take over as president when Franjijah's term expired in September. Because Sarkis had strong backing from Syria, he was unacceptable to Jumblatt. So the war continued, as the Lebanese National Movement successfully attacked Mount Lebanon and other Christian-controlled areas. Fearing that Jumblatt would prevail and create a state hostile to Syria, Syrian president Hafiz al-Assad (1930–2000) sent troops against Lebanese National Movement forces. Not only did the Syrians encounter far stiffer resistance than they had anticipated, the decision to side with the Christians provoked anti-Syrian outrage from much of the Arab world. Feeling increased pressure, Assad resolved to act even more strongly. In July, he launched a massive drive against Lebanese National Movement strongholds. Well-organized and relentless, the drive very nearly succeeded in neutralizing the opposition within two weeks. However, Syrian leaders chose to stop short of crushing the rebellion. Instead, they participated in an Arab peace conference held in Riyadh, Saudi Arabia, on October 16, 1976. The conference, followed by an Arab League meeting in Cairo also in October 1976, resulted in a formal end to the Lebanese Civil War. Although full-scale warfare did stop, the conference failed to address the causes that underlay the conflict.

By virtue of the Cairo agreement, Syrian troops occupied Lebanon as the main constituents of the Arab Deterrent Force. In January 1977 the ADF consisted of 30,000 men, of whom 27,000 were Syrian. The war, up to this point, had cost the Lebanese about 44,000 dead and approximately 180,000 wounded. Untold thousands became refugees, and Beirut, long celebrated as one of the great cities of the Middle East, was in ruins. By agreement, the city had been divided into Muslim and Christian sectors, separated by the "Green Line."

In December 1976, Prime Minister Salim al Huss (b. 1935) directed the reorganization of the army, most of whose members had deserted during the civil war to join one of the various factions. According to the Cairo Agreement, Lebanese military units were to be stationed in southern Lebanon; instead, the region south of the Litani River was left in the hands of the Palestinians. This meant that relations with Syria would remain a major cause for concern. Worse, by late 1977, as a result of the Egyptian-Israeli peace negotiations and Syria's consequent rapprochement with the PLO, Lebanese-Syrian relations cooled, then began to disintegrate after fighting broke out between the ADF and the Lebanese army in East Beirut in February 1978, followed by a massive ADF bombardment of Christian sectors of Beirut in July. Lebanese president Sarkis resigned in protest but was persuaded to reconsider. Syrian bombardments of East Beirut ended in October 1978 as a result of a UN Security Council cease-fire resolution that indirectly implicated Syria as a party to the Lebanese Civil War. At this point, Syria threatened to withdraw its forces from Lebanon. This forced President Sarkis to come to terms with President Assad in a conference at Damascus in May 1979. The two heads of state agreed that Syrian troops would "remain in Lebanon as long as the Arab interests so require."

Late in 1980 and into the spring of 1981, the ADF moved against the Phalange Party militia, headed by Bashir Gemayel (1947–82), near Zahlah, a short distance from Beirut. For Israel, the Phalange was an ally, and that nation responded with armed intervention, immediately shooting down two Syrian helicopters over Lebanon. Syria responded by bringing surface-to-air missiles into Lebanon, threatening to expand the war. The United States and Lebanon's Arab neighbors mediated the crisis and widespread regional war was averted.

Yet the civil war in Lebanon remained a potentially regional conflict. Especially complex and dangerous were Lebanese relations with the Palestinians. During the early part of the civil war, Lebanese refugees migrated to southern Lebanon, which remained relatively peaceful. After the Palestinians left the area to fight elsewhere, Christian militias, led by Lebanese army officers supported by Israel, took control of a large part of the south. Christian control of southern Lebanon created a buffer zone between the Lebanon-based Palestinians and Israel. The Syrians wanted to eliminate all Israeli influence from the south, while the Israelis wanted direct contact with the population of southern Lebanon and wished to keep both the Syrians and the Palestinians out of the area. Fighting in the south, between the Christian militia under Major Saad Haddad (b. 1936) and the Palestinians, began in 1977 and gradually escalated. Soon war engulfed the south, making refugees of about 200,000 people.

In July and August 1977, Syria and the Lebanese crafted the Shtawrah Accord, calling for the Palestinians to

withdraw 15 kilometers from the Israeli border, with this area to be occupied by the Lebanese army. The ADF was assigned to protect the southern coast. However, at this point, Israel Defense Forces (IDF) invaded southern Lebanon in retaliation for a March 11, 1978, Palestinian guerrilla attack on an Israeli bus near Tel Aviv, in which several people were killed. More than 25,000 IDF troops occupied positions as far north as the Litani River and remained in Lebanon for three months. The UN called on Israel to withdraw, and the United Nations Interim Force in Lebanon was sent to replace the Israelis, who withdrew in stages. When Israel withdrew from southern Lebanon in June, Haddad's South Lebanon Army (SLA) took over most of the areas Israel had previously controlled.

Throughout the Sarkis administration, shifts occurred in domestic politics as Prime Minister Huss, a moderate Sunni Muslim, was unable to form a national unity government. In October 1980, Shafiq al Wazzan (1925–99), another moderate Sunni, became prime minister, but he found even greater difficulty, as more than half of the Chamber of Deputies refused to endorse his cabinet. As for the Lebanese army, it remained incapable of maintaining control over the country.

Against the background of a weak central government, the Shia grew in importance, and in 1980 clashes broke out in the south between Amal—the Shia army—and al Fatah, the military arm of the PLO. The Christians were also having internal problems, with serious disputes arising within the leadership of the Lebanese Front.

In July 1980, Bashir Gemayel and his Phalangist militia defeated the Tigers, the militia of the National Liberals under Camille Chamoun (1900–87) and his son Dani (d. 1990). This victory thrust Gemayel into a position of national prominence. In the meantime, in 1981, Israel reduced its support of the Lebanese Front in compliance with conditions set by the Lebanese National Movement and by Syria. The result, however, was a deterioration in Lebanese security during late 1981 and the first half of 1982. In West Beirut, Tripoli, and southern Lebanon, violence was widespread, particularly automobile bombings directed against foreign diplomats. In April 1982, terrorists attacked Muslim and Christian religious leaders, and it had become clear that neither the Lebanese National Movement, the PLO, nor Syria (through the ADF) was able to control the situation. Popular disillusionment paved the way for the ascension to power of more moderate and conservative Sunni and Shia leaders. The Phalange Party also gained support during this period.

At this juncture, Israel again invaded Lebanon on June 6, 1982, in retaliation for the assassination attempt on the Israeli ambassador to London. The object of the Israelis was to remove PLO forces from the country. Israeli forces moved quickly through south Lebanon, encircling west Beirut by mid-June and beginning a three-month

siege of Palestinian and Syrian forces in the city. Throughout this period, Israel kept up the pressure with air, naval, and artillery bombardments of west Beirut. At last, in August, an agreement was reached for the evacuation of Syrian troops and PLO fighters from Beirut. The agreement also provided for the deployment of a three-nation Multinational Force (MNF) during the period of the evacuation, and by late August, U.S. Marines, as well as French and Italian units, had arrived in Beirut. When the evacuation ended, these units left, the U.S. Marines departing on September 10.

In a period of relative calm, then, Bashir Gemayel was elected president in August, succeeding Elias Sarkis. On September 14 he was assassinated, and on September 15, Israeli troops entered west Beirut. During the next three days, Lebanese militiamen massacred hundreds of Palestinian civilians in the Sabra and Shatila refugee camps in west Beirut. Bashir Gemayel's brother, Amin (b. 1942), was elected president by a unanimous vote of the parliament. He took office September 23, 1982, and MNF forces returned to Beirut at the end of September to signify their support for the government. In February 1983, a small British contingent joined the U.S., French, and Italian MNF troops in Beirut.

President Gemayel and his government placed primary emphasis on the withdrawal of Israeli, Syrian, and Palestinian forces from Lebanon, and in late 1982, Lebanese-Israeli negotiations commenced with U.S. participation. On May 17, 1983, an agreement was concluded, providing for Israeli withdrawal. But Syria declined to discuss the withdrawal of its troops. While negotiations were thus stalled, a series of terrorist attacks in 1983 and 1984 were aimed at U.S. interests. On April 18, 1983, the U.S. embassy in west Beirut was bombed, with the loss of 63 lives. The U.S. and French MNF headquarters in Beirut were hit on October 23, 1983, with the loss of 298 lives. Eight more U.S. nationals lost their lives in the bombing of the U.S. embassy annex in east Beirut on September 20, 1984.

Druse and Christian forces had clashed during 1982–83, and when Israeli forces withdrew from the Shuf region at the beginning of September 1983, the Druse, backed by Syria, attacked the Christian Lebanese Forces (LF) militia as well as the Lebanese army. The United States and Saudi Arabia brokered a cease-fire on September 26, 1983, which left the Druse in control of most of the Shuf region. By February 1984, the Lebanese army had all but collapsed after many of its Muslim and Druse units defected to opposition militias. With the departure of the U.S. Marines imminent, the Gemayel government was pressured by Syria and its Muslim Lebanese allies to abandon the May 17 accord. At last, on March 5, 1984, the government announced that it was canceling its unimplemented agreement with Israel. The U.S. Marines left shortly afterward. Reconciliation talks at Lausanne under

Syrian auspices failed soon after this. Although a new "government of national unity" under Prime Minister Rashid Karami was declared in April 1984, it made no real progress toward solving Lebanon's internal political and economic crises.

May 1985 saw the beginning of the "camps war," which would flare up twice more in 1986: Palestinians living in refugee camps in Beirut, Tyre, and Sidon fought the Shi'ite Amal militia. Faced with this renewed violence, Syria, late in 1985, negotiated a "tripartite accord" on political reform among the leaders of various Lebanese factions. Gemayel opposed the accord, and the leader of the Lebanese Front was overthrown in January 1986. Syria sought to unseat Gemayel by inducing the Muslim government ministers to cease dealing with him. The government was paralyzed, and the Lebanese economy, once one of the strongest in the Middle East, deteriorated rapidly. On June 1, Prime Minister Karami was assassinated, and Salim al-Huss was appointed acting prime minister. With the end of President Gemayel's term of office approaching, the Lebanese factions could not agree on a successor. Thus, when he left office on September 23, 1988, Gemayel appointed General Michel Aoun (b. 1935) as interim president while Salim al-Huss continued to act as *de facto* prime minister. Lebanon was thus divided between a Muslim government in west Beirut and a Christian government in east Beirut.

Fresh violence erupted in February 1989, when General Aoun attempted to close illegal ports run by the Lebanese Front. After several days of intense fighting in east Beirut, Aoun's army units concluded a tenuous truce with the Lebanese Front. The following month, however, Aoun's attempt to close illegal militia ports in predominantly Muslim parts of Lebanon triggered six months of shelling of east Beirut by Muslim and Syrian forces and, in return, shelling of west Beirut and the Shuf by the Christian units of the army and the Lebanese Front. At least 1,000 died in the prolonged attack. Many thousands were injured.

With Lebanon in tatters, the Arab League in January 1989 appointed a committee on Lebanon, led by the Kuwaiti foreign minister. At the Casablanca Arab summit in May, the Arab League created a higher committee on Lebanon, composed of Saudi king Fahd (b. 1923), Algerian president Chadli Bendjedid (b. 1929), and Moroccan king Hassan II (1929–99). After much effort, the committee arranged for a seven-point cease-fire in September, followed by a meeting of Lebanese parliamentarians in Taif, Saudi Arabia. After a month of discussions, the deputies agreed on a charter of national reconciliation, the "Taif Agreement." The document was approved on November 4, and René Moawad (d. 1989), a Maronite Christian deputy from Zghorta in north Lebanon, was elected president on November 5. However, General Aoun issued a decree in early November dissolving parliament and

rejecting ratification of the Taif Agreement, as well as throwing out the election of Moawad.

On November 22, 1989, President Moawad was assassinated, the victim of a bomb. Parliament quickly elected Elias Hraoui (b. 1926), a Maronite Christian deputy from Zahleh in the Beqaa Valley, to replace him. The new president named Salim al-Huss prime minister. Once again, Aoun refused to recognize Hraoui. When Hraoui replaced Aoun as army commander in early December, Aoun's forces attacked positions of the Lebanese Front in east Beirut during late January 1990. Heavy fighting took place in east Beirut, resulting in the deaths of more than 900 people and the injury of more than 3,000. In August 1990, the National Assembly approved, and President Hraoui signed into law constitutional amendments embodying the political reform aspects of the Taif Agreement, which divided representation equally between Christians and Muslims. This was followed in October 1990 by a joint Lebanese-Syrian military operation against General Aoun, who surrendered and took refuge in the French embassy. On December 24, 1990, Omar Karami (served 1990–92) was appointed Lebanon's prime minister. Aoun remained in the French embassy until August 27, 1991, when a "special pardon" was issued, allowing him to leave Lebanon safely and take up residence in exile in France.

For the most part, the civil war had ended. During 1991 and 1992, the government made progress in reasserting control over Lebanese territory. All militias, except for Hezbollah, were dissolved in May 1991, and the armed forces moved against armed Palestinian elements in Sidon in July 1991. In May 1992 the last of the Western hostages taken during the mid-1980s by Islamic extremists was released.

Leisler's Rebellion (1689–1691)

PRINCIPAL COMBATANTS: Anti-Catholic rebels led by Jacob Leisler vs. British colonial authorities

PRINCIPAL THEATER(S): New York City

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Leisler led merchants and farmers against Catholics in the British colonial administration.

OUTCOME: Leisler remained in power for more than two years before he was arrested as a traitor and executed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Great Britain's American colonies were beset by a rash of anti-Catholic activity following the ascension of the Protestant monarchs William (1650–1702) and Mary (1662–94) to the British throne in 1688. Throughout the colonies, there was rebellion against Governor Edmund Andros (1637–1714), and royal colonial officials suspected of being Catholics were attacked and sometimes removed from office. In New York City, a band of artisans and merchants, led by Jacob Leisler (c. 1640–91), stormed and seized Fort James in May 1689. Lieutenant Governor Francis Nicholson fled the next month, and in December Leisler proclaimed himself lieutenant governor. Leisler garnered widespread support from nearby farmers, city residents, and, most important, the local militia.

The official colonial government refused to recognize Leisler until 1690, when fear of an impending Indian attack prompted them to acknowledge his authority to secure the services of the militia. The period of official recognition was short-lived, however. In March 1691 a new royal governor, Henry Sloughter (d. 1691), arrived in New York from England, and with him came Major Richard Ingoldesby (fl. early 1690s) with a small force of soldiers. Sloughter demanded the surrender of Fort James. Leisler at first refused, then, on March 30, 1691, did surrender, only to be arrested and tried as a traitor. Convicted, he was hanged in New York City on May 16, 1691. Parliament subsequently—and posthumously—reversed the conviction.

Although the movement Leisler led was essentially anti-Catholic, it was also, in effect, antiaristocratic. Leisler's faction remained powerful in the affairs of New York through the next generation.

Lelantine War (c. 670 B.C.E.)

PRINCIPAL COMBATANTS: The Greek city-state of Khalkís (with allies Corinth, Samos, and the Thessalian League) vs. Eretria (with allies Aegina, Miletus, and perhaps Megara)

PRINCIPAL THEATER(S): Boeotia

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: Dominance in trade and possession of trading outposts

OUTCOME: Khalkís triumphed, but Eretria eventually became the politically and economically more powerful of the two city-states.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None recorded

Little is recorded about this major conflict, the most important war among the Greek states following the TROJAN WAR.

It is known that the conflict was sparked by rivalry over trade and the possession of colonial trading posts. The Boeotian city of Khalkís fought Eretria on the Lelantine Plain, the no-man's land that separated them. Khalkís commanded the support of Corinth, Samos, and the Thessalian League, while Eretria had Aegina, Miletus, and possibly Megara on its side.

Combat took place not only on land, but at sea, the decisive battle occurring on the Lelantine Plain. There Thessalian cavalry defeated the Eretrians, yet, despite this triumph, it was Eretria that eventually became the more important and prosperous city. Thus the war, while major in its time, had little enduring effect.

Lepidus, Revolt of (78–77 B.C.E.)

PRINCIPAL COMBATANTS: Marcus Aemilius Lepidus vs. Rome

PRINCIPAL THEATER(S): Northern Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Lepidus sought relief for the poor and disenfranchised.

OUTCOME: The rebellion was crushed, and Lepidus fled.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

As a Roman senator, Marcus Aemilius Lepidus (d. c. 77 B.C.E.) espoused the cause of the poor and downtrodden, acting politically to improve their situation. Elected consul in 78, he called for renewed distribution of cheap grain, recall of exiles, and restoration of lands confiscated by the former dictator, Sulla (d. 78 B.C.E.). Frustrated because his efforts came to little, he threw his support behind the people of Etruria (in west-central Italy) when they rebelled. He personally raised an army in northern Italy and marched on Rome, only to be repelled by the superior forces of Quintus Lutatius Catulus (d. 60 B.C.E.) and Pompey the Great (106–48 B.C.E.) at the Battle of Milvian Bridge.

Lepidus and a band of his closest followers evaded capture, taking refuge on Sardinia. There Lepidus soon died, perhaps later in 77 B.C.E. In the meantime, those of

his followers who remained active in northern Italy were soon routed by Pompey's army.

Libyan-Egyptian War (1977)

PRINCIPAL COMBATANTS: Libya vs. Egypt

PRINCIPAL THEATER(S): Border region of the two nations

DECLARATION: July 21, 1977, Libya against Egypt

MAJOR ISSUES AND OBJECTIVES: Issues and objectives are unclear; war tension escalated following Libyan assertions that Egypt sought to seize Libyan oil fields.

OUTCOME: Both sides suffered significant loss of materiel in this indecisive war.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Egypt, 380,000; Libya, 30,000

CASUALTIES: Libya claimed losses of 27 killed and 9 missing, though it is likely that casualties were much higher.

TREATIES: Cease-fire agreement, July 24, 1977

This brief—four-day—but costly border war developed in an atmosphere of escalating friction between Libya and Egypt. During the spring of 1977, mobs in Libya and in Egypt attacked each other's consulates. Following this, Libya's dictator, Colonel Muammar al-Qaddafi (b. 1943), accused Egypt of attempting to provoke a war as a pretext for seizing the Libyan oil fields. Insulted, Egyptian president Anwar Sadat (1918–81) denied the charges. At last, in June 1977, Qaddafi expelled nearly a quarter-million Egyptians residing in Libya, setting July 1 as the deadline for their departure. On July 21, 1977, Libya's seventh armored division crossed the Egyptian border at the town of Salum. Egypt responded vigorously, beating back the incursion and destroying 40 Libyan tanks.

Both sides deployed tanks and aircraft in several desert battles along the border, Egypt making air strikes deep into Libyan territory, concentrating on air bases and destroying many Libyan fighter aircraft before they could get off the ground. Egypt, however, also suffered significant losses of materiel, but admitted losing only two planes.

Immediately after hostilities broke out, Algeria's president, Houari Boumédiène (1927–1978), offered his services as a mediator, and both sides agreed to a cease-fire on July 24, 1977.

Lithuanian War of Independence

(1918–1920)

PRINCIPAL COMBATANTS: Lithuania (with German alliance) vs. Soviet Russia; Lithuania (with Polish alliance) vs. Soviet Russia; Lithuania vs. Poland

PRINCIPAL THEATER(S): Lithuania

DECLARATION: Independence declared, February 16, 1918

MAJOR ISSUES AND OBJECTIVES: Lithuania sought independence from Russia, then from partial Polish occupation.

OUTCOME: Independence was achieved by 1922.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Lithuania fielded as many as 41,000 men, Poland 50,000; strength of other combatants unknown.

CASUALTIES: Unknown

TREATIES: Treaty of Moscow, July 12, 1920

The independence of Lithuania was a product of the BOL-SHEVIK REVOLUTION and WORLD WAR I. The nation declared its independence from Russia on February 16, 1918, after the czar was deposed. The new Soviet government took steps to regain Lithuania, invading almost immediately after the declaration of independence; however, Germany found it advantageous to recognize Lithuanian independence and quickly drove the Soviets out. With Germany's defeat in World War I, on November 11, 1918, its troops were withdrawn from Lithuania, and the Soviets returned, capturing the Lithuanian capital of Vilna (Vilnius) in January 1919. Polish forces intervened on the side of Lithuania and pushed the Soviets out of the capital (see RUSSO-POLISH WAR [1919–1920]).

The post–World War I deliberations of the victorious Allies established a border between Lithuania and Poland in December 1919, assigning Vilna to Lithuania; however, the Soviets continued to fight Lithuania for possession of the region until the Treaty of Moscow of July 12, 1920, by which the Soviets recognized Lithuanian independence. Shortly after this, Lithuania's Polish allies turned against Lithuania in a surprise attack on Vilna. A division of 20,000 Belarusian volunteers from the Polish army seized the capital on October 9, 1920. The Poles established a provisional government and conducted a plebiscite on January 8, 1922. When a majority of Vilna's populace voted for union with Poland, Lithuania broke off all relations with its former ally, and Lithuania was recognized as an independent republic in 1922. A 41,000-man Lithuanian army attempted to retake Vilna, but was repulsed by Polish forces now grown to some 50,000. After tortured arbitration, Vilna was awarded to Poland on March 15,

1923. As for Lithuania, it remained an independent republic until it was annexed by the Soviet Union in 1940.

Little Turtle's War (1787–1795)

PRINCIPAL COMBATANTS: Shawnee, Miami, Ottawa, and other Indians vs. United States

PRINCIPAL THEATER(S): Ohio country, mainly present-day Ohio and Indiana

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Shawnee and Miami refusal to cede lands to the United States

OUTCOME: A “permanent boundary” for white settlement was established in contested territory; the Indians received compensation for their lands; the British vacated the Old Northwest (region bounded by Ohio River, Mississippi River, and the Great Lakes)

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

For the United States, under General Josiah Harmar, 1,216 federal troops and 1,100 militia, under Arthur St. Clair, 2,300 federal troops; under General Anthony Wayne, 4,400. For the Indians, small groups of guerrillas armed by British instigators, and 1,200 against General Anthony Wayne's troops

CASUALTIES: Indian losses unknown; U.S. army and militia losses exceeded 1,000 killed.

TREATIES: Treaty of Greenville, January 1795

At the conclusion of the AMERICAN REVOLUTION, the fledgling United States regarded the Indians of the Ohio country—especially the Shawnee—as a conquered people because their allies, the British, had been defeated. The fact was, however, that the Shawnee and other Ohio tribes consistently defeated the Americans during the conflict and were not, therefore, willing to negotiate land treaties as if they had lost the war. Shawnee representatives repeatedly refused to attend treaty conferences until January 1786, when 300 Shawnees came to Fort Finney on the banks of the Ohio and declared to American commissioners that they would relinquish no land. The frontier leader George Rogers Clark (1752–1818) threatened war, and, with his people suffering the effects of a bad winter and wartime destruction of crops and shelter, Chief Kekewepellethe (fl. late 18th century) (known to the Americans as Tame Hawk) backed down and agreed to cede the entire Miami Valley. Other Shawnee bands and the Miami tribe were quick to repudiate the cession, and, led by the war chiefs Blue Jacket (d. c. 1805) (Shawnee) and Little Turtle (1752–1812) (Miami), stepped up a campaign of lightning

raids that had never really ceased, even with the end of the Revolution.

The Revolution had also failed to drive British traders out of the Ohio country, and these men now capitalized on the conflict with the Shawnee by supplying them with arms. During the fall of 1786, Clark raised a 2,000-man militia in Kentucky and marched toward the Wabash Valley to engage the Shawnee, Miami, and Ottawa, who were meeting with British agents. But Clark, now aged and ravaged by heavy drinking, proved a far less effective leader than he had been during the Revolution. Within three weeks, his command simply disintegrated without having engaged the enemy. Eight hundred other militiamen, under Colonel Benjamin Logan (1742–1802), attacked Shawnee villages on the Miami River, killing mostly women, children, and old men. In October, Logan's forces destroyed Mackachack, a village actually friendly to the whites. These inept and tragic attacks served only to harden Shawnee hatred of the Americans, and, with other tribes in the region, they vowed all-out war on whites in the Ohio country.

Logan's raid had destroyed large stores of corn, sending the Shawnee, during the summer of 1787, from the Miami River region to Kekionga, near present-day Fort Wayne, Indiana. Here they became closely coordinated with the Miami, Ottawa, Chippewa, Kickapoo, and Potawatomi, launching many devastating raids.

Yet white settlers continued to flood into the region, and in 1790, the federal government assigned 1,216 federal troops, augmented by a 1,100-man militia, to General Josiah Harmar (1753–1813), to police federal lands. Harmar was cautioned to avoid triggering a major Indian conflict, but that is precisely what he did.

Harmar led about 1,500 men, mostly raw militia forces, to Kekionga on October 15, 1790. His army burned the abandoned villages—as Little Turtle and Blue Jacket watched and waited.

On October 19, Little Turtle and his Miami warriors ambushed a small mounted advance party, which panicked, fled, and collided with a detachment of infantry sent to reinforce them. The infantry also fled, so that a mere 30 regulars and nine militiamen were left to fight. Harmar had no choice but to withdraw back to Kekionga, where Blue Jacket and his Shawnee sprang a trap that resulted in a total rout and a stunning defeat for the army. Harmar was saved from complete annihilation by a total lunar eclipse that prompted the Ottawa warriors, who took it as a bad omen, to break off the pursuit—despite Blue Jacket's protests.

After Harmar was defeated, the Shawnee and their allies ravaged the countryside with unorthodox winter raids. At the height of the violence in 1791, the British, who had done much to provoke the warfare to begin with, suddenly turned peacemakers, apparently realizing that the relentless raiding would soon bring a massive Ameri-

can military response that would not only drive out the Indians, but themselves as well.

Yet the negotiations came to nothing, and the federal government assembled a force of 2,300 men—half of them short-term enlistees—under Arthur St. Clair (c. 1736–1818), governor of the federal territory. On October 4, 1791, the punitive expedition got under way, but, with the onset of winter, suffered mass desertions. The desertions prompted St. Clair to advance with 1,400 troops to seek out Little Turtle, Blue Jacket, and their warriors. They marched for a month without a single encounter, making camp on November 3, 1791, on a plateau above the upper Wabash River. At dawn of the next day, the Indians rushed the vulnerable position, killing 623 soldiers and 24 civilian teamsters as well as wounding 271 soldiers. In proportion to the number of men fielded that day, it stands as the worst defeat the U.S. Army has ever suffered.

In 1792, Congress authorized a larger army and hired Iroquois agents to present an American peace proposal—a restriction on white settlement—to the Shawnee and their allies during the summer of 1792. The Shawnee angrily rejected the proposal, and George Washington (1732–99) chose a former Revolutionary Army commander, “Mad Anthony” Wayne (1745–96), to raise an army, which he carefully trained. After another peace commission failed in the summer of 1793, Wayne advanced westward with his forces, but suffered serious delays brought about by inept and corrupt supply agents.

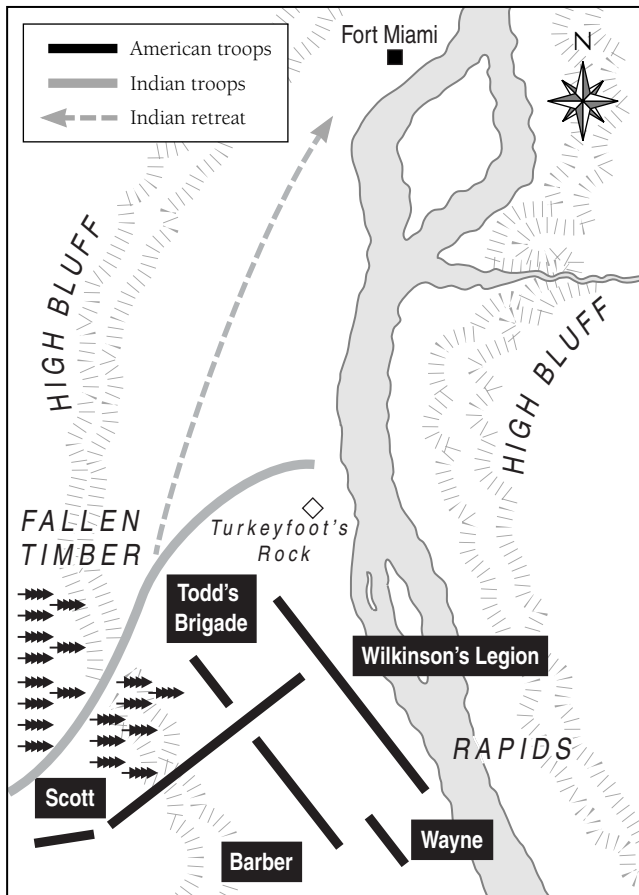

When Wayne failed to attack by May 1794, Little Turtle and Blue Jacket decided to strike the first blow. Twelve hundred warriors under Blue Jacket and Tecumseh (c. 1768–1813) (who within the decade would emerge as a great military and political leader in his own right—see *TECUMSEH'S UPRISING; WAR OF 1812*) set out from the Maumee River to blockade Fort Recovery near the present Ohio-Indiana state line. On June 30, they ambushed a pack train and its military escorts, completely routing them. When the Indians advanced on the fort itself, however, they were turned back by artillery fire.

Fortunately for the American forces, the Shawnee coalition began to fall into dispute, and the alliance with the British likewise faltered. Wayne advanced his troops and built a new fort, Fort Defiance, in the midst of abandoned Indian villages.

Seeing the renewed strength of the Americans, Little Turtle counseled negotiating for peace, but Blue Jacket and Tecumseh refused to yield. Overall command of the forces now passed to Blue Jacket, with Little Turtle relegated to leading only the 250-man Miami contingent.

Blue Jacket decided to intercept Wayne's army at a place called Fallen Timbers, opposite the rapids of the Maumee River.

Informed of Blue Jacket's position by his scouts, Wayne cached unnecessary equipment at a fortification he called Fort Deposit on August 17. He waited until August

Battle of Fallen Timbers, August 20, 1794

20 before advancing against Blue Jacket. The delay may have been a brilliant stroke of strategy, or perhaps just plain good luck. In either case, it exploited the warriors' custom of fasting before battle. Blue Jacket's men, expecting engagement on the 18th, had advanced without rations on the 17th. By August 20, they had gone without food for three days, and some warriors strayed to forage. Others were weak from hunger. The result was a rout—this time for the Indians.

Fleeing the Battle of Fallen Timbers, Blue Jacket and his surviving warriors were rebuffed by the commandant of a nearby British fort. On August 23, Wayne set about destroying all Indian towns in his path, and, in an act of defiance and contempt, he built Fort Wayne at Kekionga, chief village of the Miamis.

In January 1795, Blue Jacket came to Fort Greenville to negotiate a treaty with Anthony Wayne. The Treaty of Greenville established a "permanent" boundary of white settlement and instituted a program of compensation for Indian territory lost. The British at last agreed to vacate the Old Northwest. And peace reigned in the turbulent Old Northwest until the outbreak of the War of 1812.

Livonian War (1558–1583)

PRINCIPAL COMBATANTS: Russia vs. Livonian Knights;

Russia vs. Poland, Lithuania, Sweden, and Denmark

PRINCIPAL THEATER(S): Livonia (modern Estonia and most of modern Latvia)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Russia sought possession of Livonia to acquire a Baltic Sea port.

OUTCOME: After a long war, in which many civilians fell prey to Russian atrocities, Czar Ivan IV renounced all claims to Livonia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Russia, 30,000; Poland, 40,000; Sweden, 17,000; other combatant numbers unknown

CASUALTIES: Unknown; civilian losses were very high—perhaps 60,000 at Novgorod

TREATIES: Between Russia and Poland, 1582; Russia and Sweden, 1583

In the 16th century, Livonia encompassed present-day Estonia and most of Latvia and was ruled by the Livonian Knights. In 1558, Russia's aptly named Czar Ivan IV (the Terrible; 1530–84), seeking at all costs an ice-free Baltic Sea port, invaded Livonia with a large force. In a long campaign, Ivan's forces defeated the knights at Narva, Dorpat (Tartu), and elsewhere. By 1561, aware that their situation in Livonia was hopeless, the knights divided Livonia among Poland, Lithuania, Sweden, and Denmark—anything to keep it out of Ivan's hands. Denmark acquired Kurland, and Poland and Lithuania took the rest.

Remarkably, the Russian forces made initial headway against what were now four great adversaries, and the czar's forces committed many atrocities upon the Livonian populace. Most infamous among the atrocities was the slaughter perpetrated not against Livonia, but Russian-held Novgorod. In January 1570, suspicious that the Novgorod citizens had conspired with the Poles, Czar Ivan unleashed 15,000 soldiers against the city. They killed as many as 65,000 people.

Two events began to turn the tide against the Russians. Ivan was faced with an internal rebellion, the BOYARS' REVOLT, and Lithuania, in 1569, formed an effective political union with Poland, thereby allowing the armies of the two kingdoms to work together. For his part, Ivan persuaded Denmark to bow out of the war, but Poland (with Lithuania) commenced a determined offensive under its new king, Stephen Báthory (1533–86), beginning in 1576. The capture of Polotsk in 1579 was a major Polish victory. From here, Stephen marched to

Pskov, sweeping the Russian forces before him. On September 6, 1581, 17,000 Swedes stormed the Russian fortress of Narva and slaughtered the garrison. Although the Poles were unable to capture Pskov during a siege spanning September–November 1581, Czar Ivan yielded to unremitting Polish pressure, concluding a peace in 1582. He renounced all claims to Livonia. This led to peace with the Swedes in 1583 and the loss, to Russia, of towns on the Gulf of Finland.

Lombard Conquest of Central Danube Valley (c. 500–565)

PRINCIPAL COMBATANTS: The Lombards vs. the Heruli and, separately, vs. the Gepidae

PRINCIPAL THEATER(S): Central Danube valley

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of territory in and around Pannonia and Noricum

OUTCOME: The Heruli were defeated, but a state of chronic conflict developed between the Lombards and the Gepidae; however, the Lombards came substantially to control the central Danube valley.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None, save an informal agreement between the Lombards and the Roman emperor Justinian granting approval of Lombard settlement south of the Danube

The Lombards, or Langobardi, related to the Suevi, occupied the area north of Pannonia and Noricum following the Barbarian incursions in these regions. This occupation touched off a conflict with the Heruli, led by Rodulf (d. 508). A Lombard army under Tato defeated Rodulf's Heruli by 508.

With the Heruli neutralized, the Lombards fanned out into the central Danube Valley, pushing north of the river and engaging the Gepidae in a series of sharp wars over territory. The collapse of the Ostrogoth kingdom left Pannonia and Noricum wide open, but the Lombards as well as the Gepidae vied for territory. The Roman emperor Justinian I (483–565) exploited the conflict by skillfully playing one tribe off against the other, ultimately approving Lombard expansion south of the Danube. By 565, this put the Lombards in control of most of the central Danube Valley.

Further reading: Neil Christie, *Lombards* (London: Blackwell, 1998).

Lombard Invasion of Italy (568–585)

PRINCIPAL COMBATANTS: The Lombards vs. Rome (and, later, the Franks)

PRINCIPAL THEATER(S): Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Lombards sought conquest of Italy.

OUTCOME: The Lombards defeated imperial forces and gained control of Italy, except for some coastal cities; however, the Lombards failed to install a central government in the region conquered.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Lombards, about 50,000 warriors, plus 20,000 Saxon allies; Roman imperial strength unknown; Frankish strength unknown

CASUALTIES: Unknown

TREATIES: Alliance between Eastern Empire and Franks against the Lombards, 585

In 568, the Lombards—the entire tribe—advanced into Italy, spearheaded by some 50,000 Lombard warriors and 20,000 Saxon auxiliaries. The Lombard general Alboin (d. 572) led the invasion force over the Julian Alps and, in 569, defeated Roman imperial forces under Longinus in northeast Italy, near Ravenna. This victory achieved, the Lombards quickly overran the Po valley. Milan fell to the invaders in short order, but the capture of Pavia required a three-year siege. The city fell in 572.

In this way, northern Italy became Lombardy, and the Lombards established their capital at Pavia. Thus ensconced, the Lombards were able to drive most of the imperial forces out of Italy, except for large coastal cities, which remained under the control of Constantinople.

In 573, Alboin's wife, Rosamond (fl. c. 570), murdered him, thereby creating a power vacuum among the Lombards. This notwithstanding, the momentum of conquest was hardly diminished. The Lombards continued to expand throughout Italy. Under King Childebert II (r. 570–596), the Franks entered the fray against the Lombards in 585. The Byzantine emperor subsidized Frankish operations, but the imperial forces refused to coordinate their efforts with his, and Childebert soon withdrew, leaving the essentially leaderless Lombards in control of Italy—which was tantamount to creating a state of anarchy there.

Lombard League, Wars of the (1167–1183)

PRINCIPAL COMBATANTS: Holy Roman Empire (under Frederick I Barbarossa) vs. the papacy and the Lombard League

PRINCIPAL THEATER(S): Northern Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Frederick sought to dominate both the papacy and the cities of northern Italy; the Lombard League was formed to resist.

OUTCOME: The Lombard League proved extraordinarily successful in resisting five German invasions of Italy led by Frederick I Barbarossa.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Venice, 1177; Peace of Constance, 1183

The Middle Ages witnessed many power struggles between the papacy and the Holy Roman Emperors. The popes jealously guarded their authority to invest abbots and bishops. These offices were highly lucrative, and Holy Roman Emperor Frederick I Barbarossa (c. 1125–90) sought to wrest the power of investiture from the papal grasp. By awarding the offices, a leader purchased loyalty and allegiance, and Frederick was eager to assert his control over as many church officials as possible. Between 1154 and 1186, Frederick led six military campaigns into Italy, hoping to seize control of the papacy. One early campaign forced Pope Alexander III (c. 1105–81) to flee to Avignon, France, in 1162, and between 1159 and 1178, Frederick saw to the elevation of three antipopes.

While Frederick sought to dominate the papacy, he also attempted to subjugate the cities of northern Italy. This prompted Milan, Mantua, Venice, Padua, Lodi, and Brescia to band together as the Lombard League during Frederick's fourth Italian campaign. The league successfully resisted Frederick's invading Germans, who had been weakened by a malaria epidemic. Frederick held Rome for a time, but the sickness, combined with the military prowess of the Lombard League, forced the German army to withdraw from Italy.

Seizing the opportunity, Pope Alexander III formed an alliance with the Lombard League, excommunicated Frederick, and backed the league in the construction of a great fortress at Alessandria, which defended the northern mountain passes against further invasion. Indeed, Frederick's fifth invasion of Italy was disastrously costly to him. His defeat at the Battle of Legnano, northwest of Milan, on May 29, 1176, decimated his knights. The leagues infantry, common pikemen, proved far superior to the noble armored warriors. It was the first triumph of infantry over

cavalry in the Middle Ages, and it foreshadowed the doom of the knight and the rise of the bourgeoisie. Frederick himself barely escaped with his life, fleeing from Italy in disguise.

Frederick's defeat at Legnano prompted him to sue for peace. The Treaty of Venice of 1177 brought peace between him and the pope. That same year, Frederick made a separate truce with the Lombard League, which was finalized in 1183 as the Peace of Constance. By this treaty, the Lombard League cities were granted a high degree of autonomy, although they acknowledged the limited suzerainty of Frederick I Barbarossa.

The Peace of Constance did not stop Frederick from conducting a sixth Italian campaign during 1184–86. This bypassed the league cities and established imperial control of Milan and much of central Italy.

Lord Dunmore's War (1774)

PRINCIPAL COMBATANTS: Shawnee with Mingo, Wyandot, and Delaware allies vs. colonial Virginia

PRINCIPAL THEATER(S): Ohio River valley

DECLARATION: Lord Dunmore declares war on June 10, 1774

MAJOR ISSUES AND OBJECTIVES: Indian resistance to white treaty violations and usurpation of lands

OUTCOME: Indecisive

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: For colonial Virginia, 3,000; Shawnee and allies, 700

CASUALTIES: Colonial troops, about 500; Indians, more than 100

TREATIES: Truce concluded October 26, 1774

John Murray (1732–1809), fourth earl of Dunmore and the royal governor of colonial Virginia, commissioned a survey party under Michael Cresap (1742–75) and John

Floyd in April 1773 to survey Kentucky land prior to issuing patents to settlers. The next month, Captain Thomas Bullitt (fl. 1770s) informed the Shawnee chief Black Fish (fl. 1770s) that land reserved for the Shawnee by the Fort Stanwix treaty of 1768 would now be opened to settlement by whites. Black Fish warned Bullitt that he would attack anyone who crossed the river into Kentucky. Accordingly, he sent warriors to observe the surveying party, and when some of them did cross the river on May 29, 1773, a Shawnee named Peshewa—Wild Cat—went down to them, unarmed, to warn them back. He was immediately killed. In retaliation, the Shawnee attacked the surveyors, killing several, and sending one back to Wheeling (West Virginia) to warn the other whites not to cross the Ohio River.

Dunmore concluded that the Shawnee were conspiring with fur traders (who wanted to prevent agricultural settlement of the region) and Pennsylvanians (who disputed Virginia's claim to the Ohio country), and he unofficially declared war.

Chief Cornstalk (c. 1720–77), another prominent Shawnee, realized that warfare with the whites was a losing proposition and traveled to Fort Pitt—at the time renamed Fort Dunmore—near present-day Pittsburgh—to negotiate a peaceful resolution to the conflict. Tragically, angry frontiersmen attacked Cornstalk, his brother Silverheels (d. 1773), and another Indian as they returned from the fort. Silverheels was fatally wounded, and all hope of peace was ended.

Cornstalk sought alliance with the Miami, Wyandot, Ottawa, and Delaware, all of whom declined. The Mingo—Iroquois who had migrated to southern Ohio—wanted to remain neutral as well, but were driven to war when the family of one of their principal chiefs, known to the whites as John Logan (and to the Indians as Tah-gah-jute) (c. 1725–89), was slaughtered by some of Cresap's men (see CRESAP'S WAR). Faced with a widespread Indian uprising, Lord Dunmore officially declared war on June 10, 1774. He raised a militia force, which was mobilized by September.

At the head of 1,500 men, Dunmore was supposed to march to Fort Pitt (or Fort Dunmore), travel in boats down the Ohio to its juncture with the Kanawha River, and rendezvous with Colonel Andrew Lewis (1720–81), who was supposed to have recruited an additional 1,500 militiamen. The combined force would cross the Ohio and destroy the Shawnee villages.

A blustering man, Dunmore was in truth a timid commander. Fearing ambush, he abandoned his plan to rendezvous with Lewis on the Ohio and instead proceeded via an arduous overland route to the Scioto River. Lewis, with approximately 1,000 men, had reached Point Pleasant, the appointed rendezvous, on October 6, and, three days later, was told of the change in plan and ordered to cross the Ohio and meet Dunmore near Scioto.

All of the clumsy maneuvering was closely observed by Shawnee scouts. Cornstalk mustered approximately 700 warriors: Shawnees and Mingos (including John Logan), as well as some Wyandots and Delawares. He intended to attack Lewis just as he was about to leave Point Pleasant to unite with Dunmore. However, a foraging party from Lewis's camp discovered the Indians lying in wait and alerted Lewis, who sent troops to attempt an ambush. Although the stratagem failed, Lewis had gained the time to erect a crude defensive cover from fallen trees.

The battle was fiercely fought on October 10. Lewis was able to defend his position, but at the cost of almost one-fourth of his men. Indian casualties numbered more than 100.

No one involved in the bloody engagement claimed victory. Cornstalk berated the poor performance of his Mingo, Delaware, and Wyandot allies, and even his own Shawnee now urged him to seek peace. Cornstalk, who wanted to avoid war in the first place, now judged that, with hostilities commenced, it was foolhardy and disgraceful to seek a truce. But, with his warriors dispirited, he had no choice. Meanwhile, Lord Dunmore's army was near mutiny, his men believing their commander to be incompetent and a coward. For his part, Lewis defied Dunmore's order to halt his advance on the Shawnee towns and was stopped by Dunmore at the point of a sword only a half mile from the villages.

Although parties on both sides clamored for a further fight, a truce was concluded on October 26, 1774.

Louis XIV's Rhenish Invasion (1688–1689)

PRINCIPAL COMBATANTS: France vs. the Holy Roman Empire and German princes

PRINCIPAL THEATER(S): German Rhineland

DECLARATION: France against the Holy Roman Empire, 1688

MAJOR ISSUES AND OBJECTIVES: France's Louis XIV sought more complete control of the Rhineland and Rhine River navigation.

OUTCOME: France retained Alsace and Strasbourg, but relinquished control over the other Rhenish cities, including, most significantly, Cologne

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Ryswick, 1697

During the reign of Louis XIV (1638–1715), the great Rhenish city of Cologne (Köln) was a virtual satellite of France. The French king treasured control of the city because it dominated the lower Rhine and thereby gave France a great advantage in trade and military matters. The king's continued control of Cologne depended in large part on maintaining a pliable archbishop in power there. In 1688, Louis's candidate for archbishop of Cologne, Wilhelm Fürstenberg (fl. late 17th century) was summarily rejected by Pope Innocent XI (1611–89). Louis responded by declaring war against the Holy Roman Empire, most of whose troops were engaged in a struggle against the Turks.

Louis believed that a rapid invasion of the Rhine region would force the Holy Roman Empire to withdraw its candidate for archbishop. The French king also sought to resolve certain claims to territory in the Palatinate, and he wanted to neutralize imperial fortifications at Philipsburg.

The invasion went remarkably well—at first. Louis's invading armies met with little resistance and seized the Palatinate, Trier, Mainz, and Cologne. From here, they staged a sweeping and gratuitously violent invasion of Franconia and Swabia. This moved the Holy Roman Emperor and the German princes to conclude hasty truces with the Turks and to rush to the defense of the homeland.

Through a united and coordinated counteroffensive, the Germans liberated Franconia and installed a garrison at Frankfurt. Heidelberg was targeted for attack, but, as the German allies advanced, the French withdrew and relinquished the city—razing Mannheim, Worms, Speyer, and other cities and towns as they retreated.

At this point, the Rhenish invasion dissolved into the far greater conflict that was the War of the GRAND ALLIANCE, from 1688 to 1697. The invasion of the Rhineland was over by 1689, but a definitive settlement of the War of the Grand Alliance did not come until the Treaty of Ryswick of 1697, which gave Louis Alsace and Strasbourg, but forced him to relinquish the other Rhine cities, including Cologne.

Lovewell's War (1725)

PRINCIPAL COMBATANTS: Colonial scalp hunters vs. local Osippee or Pigwacket Indians

PRINCIPAL THEATER(S): New Hampshire and southern Maine

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Scalp hunters sought to collect a bounty offered on Indian scalps.

OUTCOME: At least 11 Indians were slain; 17 scalp hunters were killed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

At least 87 scalp hunters; in the final “battle” of the “war,” 34 scalp hunters were attacked by about 80 Indians.

CASUALTIES: 17 scalp hunters; at least 11 Indians.

TREATIES: None

The venal and ruthless expedition of John Lovewell (1691–1725) entered colonial history and lore as a private “war” against local Indians and earned Lovewell the epithet “King of the Scalp Hunters.” During the Third ABE-NAKI WAR, the colony of Massachusetts offered a bounty of £100 for Indian scalps late in 1724. Seeking his fortune, a farmer named John Lovewell (1691–1725) organized 87 other colonists during February 1725 in an Indian-killing expedition up the Merrimack River near Lake Winnepesaukee. When his party came upon 10 sleeping Osippee or Pigwacket Indians, Lovewell ordered an attack and “harvested” 10 scalps.

In the spring, Lovewell assembled a smaller, 34-man force, which traveled into southern Maine. There they were set upon by approximately 80 Indians near present-day Fryeburg on May 9, 1725, after one of their number (apparently the troop's chaplain) had killed and scalped an Indian earlier in the day. The Indians killed Lovewell and 16 others. The rest of the party escaped death only because the Indians withdrew when their Sachem (medicine man) was shot.

Lübeck's War (1531–1535)

PRINCIPAL COMBATANTS: German city-state of Lübeck (and Hanseatic allies, plus Danish rebels) vs. Sweden and Denmark

PRINCIPAL THEATER(S): Malmö, Sweden; Copenhagen, Denmark

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Lübeck wanted to assert its absolute monopoly on the Baltic trade.

OUTCOME: Despite initial victories, Lübeck was defeated and lost its monopoly.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Hamburg, 1536

Lübeck, a north German trading city prominent in the mercantile association known as the Hanseatic League, sought to maintain its trading hegemony in the Baltic region and, therefore, incited a brief war against the Swedes and Danes.

The burgomaster (mayor) of Lübeck, Jürgen Wullenwever (c. 1488–1537), ordered the confiscation of a Swedish ship in Lübeck's port as restitution, he said, for insufficient payment of a war debt incurred by the brother-in-law of Sweden's King Gustavus I (1496–1560). Gustavus responded to this rash act by embargoing all of Lübeck's ships in Swedish ports, whereupon Lübeck and its other Hanseatic allies, aided by anti-government Danish rebels, declared war on both Sweden and Denmark and quickly captured the cities of Malmö and Copenhagen.

Lübeck and its allies were not powerful enough to sustain their victories. Traditional rivals, the Danes and Sweden made common cause and united against Lübeck, readily pushing back the invaders. Lübeck concluded the Treaty of Hamburg with the two nations in 1536 and lost its monopoly on trade in the Baltic. The treaty declared the war debt settled and, in return, allowed favorable toll exemptions for Lübeck's trading vessels. As to Wullenwever, he fled Lübeck, only to suffer imprisonment, torture, and execution in 1537 at the hands of Danish authorities.

Lübeck's War (1563–1570) See DANISH-SWEDISH WAR (1563–1570).

Lubomirski's Rebellion (1665–1667)

PRINCIPAL COMBATANTS: Pro-Russian Polish rebels vs. Royal Polish forces

PRINCIPAL THEATER(S): Poland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Lubomirski wanted to promote Russian domination of Poland.

OUTCOME: Lubomirski's Rebellion weakened Poland, already pressed by war with Russia, forcing it to cede much territory to Russia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Rebels, 40,000; Royal forces, 60,000

CASUALTIES: Unknown

TREATIES: The conflict influenced the Treaty of Andrusovo, which ended the Russo-Polish War of 1658–67.

George Lubomirski (1616–67), a Polish nobleman, took part in the ongoing RUSSO-POLISH WAR (1658–1667). Marshaling the support of fellow nobles, he tried to block a royal election in order to place Poland firmly in Russia's political orbit. As a result of this action, the Polish parliament (Sejm) convicted Lubomirski of treason in 1664 and sentenced him to exile. Instead of going off quietly, Lubomirski and his followers harried the Sejm for the next two years, then withdrew to form their own confederation, mustering a military force of some 40,000 men.

When his army was ready, Lubomirski attacked the royal army—some 60,000 men—at Lake Goplo on July 13, 1667, emerging victorious against the numerically superior force. His triumph prompted the abdication of Poland's king John II Casimir (1609–72) in 1668, whereupon Lubomirski withdrew into Austrian Silesia.

Fighting a war within a war, Lubomirski weakened Poland sufficiently to force it to accept the Treaty of Andrusovo, by which the nation ceded most of its eastern lands to Russia.

Luccan-Florentine War (1320–1323)

PRINCIPAL COMBATANTS: Ghibellines of Lucca, Italy, vs. Guelfs of Florence, Italy

PRINCIPAL THEATER(S): Florentine territories in Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ghibellines (loyal to the Holy Roman Emperor) wanted to destroy the power and influence of the Guelfs (loyal to the pope).

OUTCOME: Florence lost much territory, which, however, was recovered shortly after the war.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In April 1320, Castruccio Castracani (1281–1328), ruler of Lucca in central Italy and leader of the Ghibelline political party, made war on the rival Guelfs of Florence, a political faction loyal to the pope, as opposed to the Holy Roman Emperor, to whom the Ghibellines owed their allegiance. (*Guelf* comes from German *Welf*, the name of a pro-papal

dynasty of Bavarian dukes; *Ghibelline* from *Waiblingen*, the name of the castle of the Welf's opponents.)

Castracani's Luccan army attacked and ravaged Florentine territory until its advance was halted by the arrival of Florentine reinforcements. At this, Castracani allied his own forces with those of Pistoia, another central Italian city. The augmented Luccan forces now laid waste to the countryside within 10 miles of Florence itself during mid-June 1323.

Faced with crisis, Florence scrambled to raise a new army, but Lucca added Milan to its allies, and the combined Luccan-Milanese army dealt the Florentines a decisive blow at the Battle of Altopascio in 1325. Castracani stripped the Florentine lands of treasure to pay war debts and once again menaced the city itself.

Florence looked to other Guelf supporters for aid. However, Castracani was now in control of almost all of Tuscany. A conflict between Castracani and the papacy brought hostilities to a temporary standstill, and before he could resume the war, Castracani died. He had been a brilliant tactician, but an indifferent administrator, who left behind no adequate government for Tuscany. This meant that most of the territory he had taken from Florence was easily reconquered.

Lusitanian War (147–139 B.C.E.)

PRINCIPAL COMBATANTS: Lusitanian rebels vs. Rome

PRINCIPAL THEATER(S): Iberian Peninsula

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Lusitani wanted independence from Rome.

OUTCOME: Despite victories, the resistance to Rome collapsed after the assassination of the Lusitani's leader.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None recorded

The Lusitani comprised a group of Celtic tribes who lived in present-day central Portugal and western Spain. After

they were defeated by the Romans during the CELT-IBERIAN WARS in 150 B.C.E., the Roman proconsul on the Iberian Peninsula presided over the massacre of thousands of the unruly Lusitanians—even after he had concluded a treaty of peace with them. A survivor of the massacre, a shepherd named Viriathus (d. 139 B.C.E.), formed a guerrilla army that soon proved extremely effective against the vastly superior Roman forces.

In the end, Viriathus and his cause were in part undone by his own decency. Having trapped an entire Roman army in 139 B.C.E., he refrained from destroying it, but instead concluded a peace and sent it packing. Soon after this, a Lusitanian in the pay of the Romans assassinated Viriathus, and the Roman forces returned, easily crushing the leaderless resistance.

Ly Bon's Rebellion (541–547)

PRINCIPAL COMBATANTS: Nam Viet people vs. Chinese conquerors of Nam Viet

PRINCIPAL THEATER(S): Nam Viet (northern Vietnam)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The subjugated Nam Viet wanted to retake their nation from the Chinese.

OUTCOME: Briefly successful, the rebellion was ultimately crushed and its principal leader killed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Oppressed by their Chinese overlord, the people of Nam Viet or Annam (northern Vietnam) rebelled in 541, led by the Chinese-descended Ly Bon (d. 547). Ly Bon succeeded in pushing the Chinese out of Nam Viet. Neighboring Champa, to the south, sought to exploit the turmoil in Nam Viet by invading in 543. Ly Bon managed to defeat Cham forces as well. Ly Bon declared himself king of Nam Viet, but the Chinese renewed their efforts to retake the country, and Ly Bon was defeated and killed by the Chinese victors in 547.

Further reading: D. G. E. Hall, *A History of South-East Asia*, 4th ed. (New York: St. Martin's Press, 1981); Mary Somers Heidhues, *Southeast Asia: A Concise History* (London and New York: Thames and Hudson, 2001).

M

Macbeth's Wars (1040–1057)

PRINCIPAL COMBATANTS: Macbeth vs. Duncan I (followed by various rebels, followed by Malcolm [Malcolm III], with English assistance)

PRINCIPAL THEATER(S): Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Scottish throne

OUTCOME: Macbeth attained and held the throne until he was killed in battle by Malcolm (Malcolm III) in 1057.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents survive; may have been formal treaty between Malcolm and the English.

Macbeth (d. 1057), the Scottish warlord and king whose life was the basis for Shakespeare's play, was most likely a grandson of King Kenneth II (r. 971–995). Macbeth married Gruoch (fl. mid-11th century), a descendant of King Kenneth III (r. 997–1005), then, about 1031, succeeded his father, Findlaech (d. 1020), as *mormaer* (chief) of Moray in northern Scotland. In one of the dynastic conflicts common in Scotland, Macbeth killed his cousin, King Duncan I (c. 1010–40), in combat near Elgin on August 14, 1040. This was a killing in battle—not, as Shakespeare portrays it, a murder in Macbeth's castle as an unsuspecting Duncan slept.

Established on the Scottish throne, Macbeth continued to wage war against rebels and other claimants to the Crown. He defeated a rebel army in 1045 near Dunkeld (Tayside), and in 1046 he warded off a coup d'état by Siward

(d. 1055), earl of Northumbria, who sought to unseat him in favor of Malcolm (r. 1058–93), eldest son of Duncan I.

In 1050, Macbeth embarked on a pilgrimage to Rome. This may have been unwise, because in 1054 Siward had gained sufficient power to force Macbeth to cede a portion of southern Scotland to Malcolm. Malcolm then mounted a resistance against Macbeth, whom he killed in battle in 1057. Malcolm had allied himself with the English and faced one rival after Macbeth's death. Partisans of Macbeth installed his stepson, Lulach (d. 1058), as king. Lulach was assassinated on March 17, 1058, leaving Malcolm to rule Scotland as Malcolm III Canmore.

Maccabees, Revolt of the (168–143 B.C.E.)

PRINCIPAL COMBATANTS: Maccabees (powerful Jewish family) vs. Syrian overlords

PRINCIPAL THEATER(S): Judea (southern Palestine)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Jewish independence from Syrian rule.

OUTCOME: After a long period of guerrilla warfare, Judea achieved a short-lived virtual independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 168 B.C.E., the Seleucid king of Syria, Antiochus IV Epiphanes (d. 163 B.C.E.), desecrated the Temple of Jerusalem and decreed that the Jews were to accept his pagan religion. Mattathias (d. 166 B.C.E.), a Jewish priest who was a member of the Maccabee family, resisted, in the process slaying a Syrian soldier. Knowing the fate that awaited him for this act, he and his sons fled to the mountains, where they became the nucleus of a guerrilla movement directed against the Syrians.

Following the death of Mattathias in 166 B.C.E., his son Judas Maccabeus (d. 161 B.C.E.) became the leader of the rebellion and quickly defeated two superior Syrian armies sent against him. In 165, Judas reconquered Jerusalem. He rededicated the desecrated temple (an event Jews commemorate to this day in Hanukkah). Four years after this, in 161, Judas was killed in battle with a third Syrian army sent against him.

His brother Jonathan (d. 143 B.C.E.) assumed command and took a new, diplomatic course, making treaties with Rome and Syria. He was, however, killed in 143 B.C.E. when he accepted a Syrian general's invitation to a peace parley, only to be made captive and slain along with many of his troops.

The last brother of Judas Maccabeus, Simon (d. 135 B.C.E.), constructed a chain of forts throughout Judea (southern Palestine). Recognizing his formidable presence, the king of Syria acknowledged Simon as a high priest and designated him as high governor. This brought an interval of peace and virtual independence to Judea, which, however, lasted only until Simon's death in 135. With the last of the Maccabeus brothers gone, Judea was once again torn by Seleucid invasion and internal conflict.

Macdonald Rebellion (1411)

PRINCIPAL COMBATANTS: Macdonald clan (allied with the Macleans) vs. forces of the regent of Scottish king James I

PRINCIPAL THEATER(S): Region near Aberdeen, Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Macdonalds and the forces of the regent contested control of the earldom of Ross.

OUTCOME: A draw.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None; a de facto peace ensued.

This was a war of a single significant battle. After the English captured and imprisoned the Scottish king James I

(1394–1437) in 1406, the Scottish barons amassed a great deal of power during the nearly two decades of his captivity. The Macdonalds of the northwest styled themselves the “kings of the Isles” and ruled as virtual sovereigns. The duke of Rothesay (d. 1406), nephew of James's regent, Robert Stewart, duke of Albany (1341–1420), challenged the clan over control of the earldom of Ross. Donald Macdonald (fl. early 15th century), in alliance with the Maclean clan, attacked the regent's forces at Aberdeen in 1411. The Macdonald-Maclean army was led by a Maclean, Red Hector of the Battles (d. 1411), and fought a brutal engagement known as the Battle of Red Harlaw. The result of the battle was essentially a draw. However, Red Hector was killed, and the Macdonald-Maclean army withdrew. The precipitating dispute was neither resolved nor forgotten, but it was tolerated, and a long period of peace followed.

See also OG'S REBELLION.

Further reading: Peter Somerset Fry and Fiona Somerset Fry, *The History of Scotland* (New York: Barnes and Noble, 1995); Rosalind Mitchison, *A History of Scotland* (New York: Routledge, 2002).

Macedonian Insurrection (1902–1903)

PRINCIPAL COMBATANTS: Bulgarian terrorists vs. Ottoman Empire; rival factions within Macedonia itself

PRINCIPAL THEATER(S): Macedonia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Bulgarian terrorists wanted to position Bulgaria for control of Macedonia.

OUTCOME: Indecisive; violence in Macedonia continued after the end of the insurrection, leading to the First Balkan War.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Bulgarian forces, 27,000; Ottoman forces, 351,000

CASUALTIES: Bulgar forces, 994 killed; Ottoman forces, 5,328 killed; Bulgarian civilian casualties, 4,700 killed.

TREATIES: None; however, the insurrection yielded an ineffectual agreement (brokered by Austria and Russia) with the Ottoman Empire concerning Macedonia.

The Macedonian Insurrection was an early symptom of the strife that beset the Balkans at the turn of the 20th century and that would eventually trigger WORLD WAR I. Bulgaria, Greece, and Serbia each laid claim to Macedonia—which was controlled by the Ottoman Empire—and in 1899 Bulgaria established what it called a Macedonian Commission, ostensibly to resolve the conflict, but, in fact, to bolster the Bulgarian claim. The aim of the commission was to make Macedonia nominally autonomous, yet controlled—by leave of the Ottoman Empire—by a Bulgarian “inspector.” In order to coerce acceptance of the scheme, the Bulgarians conducted a program of covert ter-

rorism through revolutionary bands called *komitadji*, who raided Macedonia.

The activity of the *komitadji* brought about a civil insurrection within the country, but it was the *komitadji*'s murder of a Romanian professor (who challenged the authority of the commission) and their capture of a female American missionary that prompted intervention from the outside. Together, Austria and Russia proposed political reform of the Macedonian administrative districts of Salonika (Thessaloniki), Monastir (Bitola), and Kosovo in 1903 in an attempt to mollify Bulgaria. The Ottomans approved the reforms, which, however, were never implemented: Escalating internal violence exploded into the First BALKAN WAR, which resulted in the formal division of Macedonia among the three rival claimants to it.

Macedonian War, First (215–205 B.C.E.)

PRINCIPAL COMBATANTS: Macedonians vs. Romans
PRINCIPAL THEATER(S): Northern frontiers of Macedon
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: Philip V of Macedon wanted to expand his empire.
OUTCOME: Indecisive, except to spawn further warfare.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: Unknown
TREATIES: Peace of Phoenice, 205 B.C.E.

King Philip V (238–179 B.C.E.) of Macedon was a warlike and restless monarch ambitious to extend his empire at any cost. He exploited the Second PUNIC WAR, in which the forces of Rome were preoccupied with fighting Carthage, to attack the diminished Roman forces in the east, the region known as Illyria. However, the Romans could not decisively defeat the Macedonians, nor could Philip wear down the Romans, and the result was warfare that consumed a decade, producing little result.

Philip took a new tack. Allying himself with Hannibal of Carthage (247–c. 183–181 B.C.E.), he invaded the Greek city-states. Rome, characteristically neutral in the affairs of these states, saw Philip's incursions as an opportunity to expand the Roman sphere of influence. Rome concluded the Peace of Phoenice, which was generous to Philip. However, within five years of the end of the First Macedonian War, the Second MACEDONIAN WAR began.

Lazenby, *Hannibal's War: A Military History of the Second Punic War* (Warminster, England: Aris and Phillips, 1978); Colin Wells, *The Roman Empire*, 2nd ed. (Cambridge, Mass.: Harvard University Press, 1995).

Macedonian War, Second (200–196 B.C.E.)

PRINCIPAL COMBATANTS: Macedon vs. Rome
PRINCIPAL THEATER(S): Greece
DECLARATION: Rome against Macedon, 200 B.C.E.
MAJOR ISSUES AND OBJECTIVES: Philip V of Macedon wanted to extend his empire into the Greek states.
OUTCOME: Rome defeated Macedon, which agreed to an indemnity.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Each side fielded about 20,000 men.
CASUALTIES: At Cynoscephalae, the decisive battle of the war, Macedonian losses were 10,000 killed; Roman losses were much lower.
TREATIES: Indemnity agreement

The First MACEDONIAN WAR ended at the northern frontiers of Macedon. Although the Peace of Phoenice offered many favorable terms to Macedon, much was left unsettled, and, in 200 B.C.E., Philip V (238–179 B.C.E.) of Macedon turned southward, intending to make inroads into the Greek city-states. He menaced Rhodes and Pergamum first, then attacked other city-states. Rome demanded Philip's pledge to make no further hostile moves. He refused and, seeing gains to be made in defeating Philip in Greece, Rome engaged him. The climactic battle of the Second Macedonian War came in 197 B.C.E., when Rome's legions soundly beat Philip at Cynoscephalae. Titus Quintius Flaminius (c. 227–174 B.C.E.) led 20,000 Roman legionaries and met the Macedonian force on the heights of Cynoscephalae, in southwestern Thessaly. It was a hard-fought battle, but Philip took by far the worst of it. Half his 20,000 men were killed. Rome's losses, while substantial, did not approach this magnitude. As a result of his defeat, Philip withdrew from Greece and further agreed to render a large indemnity to Rome, which then proclaimed itself the liberator and protector of the Greek states, asserting a benevolent dominance over them.

Philip's son Perseus (c. 212–166 B.C.E.) succeeded him as Macedon's king in 179. Instead of invading Greece, he made alliances among the Greek states. Fearing this

kind of influence as well, Rome initiated the Third MACEDONIAN WAR.

See also MACEDONIAN WAR, FOURTH.

Lazenby, *Hannibal's War: A Military History of the Second Punic War* (Warminster, England: Aris and Phillips, 1978); Colin Wells, *The Roman Empire*, 2nd ed. (Cambridge, Mass.: Harvard University Press, 1995).

Macedonian War, Third (172–167 B.C.E.)

PRINCIPAL COMBATANTS: Macedon vs. Rome

PRINCIPAL THEATER(S): Southeastern Macedonia

DECLARATION:

MAJOR ISSUES AND OBJECTIVES: Rome wanted to stop Macedon's meddling in Greek politics.

OUTCOME: Macedon was defeated; Rome divided Macedonia into republics.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Macedonian losses at Pydna (168 B.C.E.) were 20,000 killed and 11,000 made prisoner; in contrast, Rome lost about 100 killed.

TREATIES: None

After Perseus (c. 212–166 B.C.E.), who had inherited the Macedonian throne from his father Philip V in 179 B.C.E., began to meddle in Greek affairs by making alliances with various Greek city-states, Rome sent an army to attack his forces at Pydna in southeastern Macedonia. Fought on June 22, 168 B.C.E., this battle proved decisive, the Macedonians lost 20,000 killed and 11,000 taken as prisoners; Roman losses amounted to no more than 100 killed. The following year, Perseus was dethroned and made captive.

To ensure that Macedon would never again threaten the stability of the Roman world, the victors divided it into four republics. However, this only succeeded in causing internal conflict, as the republics soon fell to disputing with one another. In a climate of discontent and confusion, a pretender to the throne attempted to reestablish the Macedonian monarchy in 152 B.C.E., an action that ignited the Fourth MACEDONIAN WAR.

Lazenby, *Hannibal's War: A Military History of the Second*

Punic War (Warminster, England: Aris and Phillips, 1978); Colin Wells, *The Roman Empire*, 2nd ed. (Cambridge, Mass.: Harvard University Press, 1995).

Macedonian War, Fourth (151–146 B.C.E.)

PRINCIPAL COMBATANTS: Macedon vs. Rome

PRINCIPAL THEATER(S): Macedonia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: When a pretender to the throne vowed to reunify Macedon, the Romans decided to subjugate it fully.

OUTCOME: The Macedonian army was no match for the Romans, who conquered Macedon and annexed it.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Following the Roman partition of Macedon into four republics, a pretender to the throne arose, calling for the reunification of the nation under his leadership. This provoked Rome to dispatch forces to fight the Macedonians for a fourth time, and, once again, Rome easily triumphed over the Macedonian army. The war included no battles of military significance; the Macedonians were simply demoralized by the Roman Legions and melted away before them.

Having tried and failed to render Macedon docile by dividing it into four republics, Rome now annexed the country to itself. This was the first major step in the long expansion of the Roman Empire.

Mackenzie's Rebellion (1837)

PRINCIPAL COMBATANTS: William Mackenzie vs. British authorities in Canada

PRINCIPAL THEATER(S): Toronto and Navy Island, Canada

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mackenzie wanted to overthrow the government of Upper Canada (Ontario) to establish a separate republican government.

OUTCOME: Mackenzie failed and fled to the United States.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Mackenzie led about 800 followers, who were initially opposed by 300 government troops; eventually, some 2,000 British troops opposed about 1,000 rebels.

CASUALTIES: Rebels, 132 killed; government troops, 50 killed or wounded

TREATIES: None

This short-lived rebellion was instigated by William Lyon Mackenzie (1795–1861), a Canadian journalist, who was a passionate advocate of creating a new, republican government for Upper Canada (that is, Ontario). To this end, he called for the overthrow of the British-dominated Family Compact, which ruled the country.

Mackenzie was able to muster some 800 followers, mostly French Canadians, who tried to establish a provisional government at Toronto. When this failed, they fled to Navy Island, a small piece of land in the Niagara River. On the island, Mackenzie proclaimed a government and holed up, supplied from sources in the United States by the U.S.-registered steamer *Caroline*. A group of Canadians loyal to the Upper Canada government crossed the river and burned the *Caroline*, forcing Mackenzie to decamp from Navy Island and seek refuge in the United States. There he was arrested, tried, and convicted of violating the neutrality laws. He served an 11-month prison term. When, in 1849, the Canadian government declared a general amnesty, Mackenzie returned to his country.

Madagascar Revolt (1947–1948)

PRINCIPAL COMBATANTS: Madagascar nationalist rebels (MDRM) vs. French colonial authorities

PRINCIPAL THEATER(S): Eastern Madagascar

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The MDRM wanted to win independence for Madagascar.

OUTCOME: The 1947–48 uprising was quelled at a high cost in civilian lives; independence came a decade later.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Rebels, 4,500; French garrison forces, 6,500; later, 18,000 colonial troops (mostly North African and Senegalese forces) were deployed; final rebel strength unknown.

CASUALTIES: Rebels, 5,772 killed in action; French and French colonials, about 1,000 killed. Native civilian deaths are estimated at 70,000.

TREATIES: None

In the reshuffling of colonies and possessions following WORLD WAR II, Madagascar became a French “overseas territory” in 1946. This immediately spurred creation of the Mouvement Démocratique de la Rénovation Malagache (MDRM), a political party dedicated to achieving independence. Beginning in 1947, 4,500 Madagascar tribesmen associated with MDRM staged an armed rebellion on the eastern end of the island, which threatened to overwhelm the 6,500 French regulars garrisoning Madagascar. Reinforced by 18,000 colonials, however, the troops put down the uprising, but at great cost. Rebel combat deaths numbered 5,772, and civilian casualties mounted, reaching approximately 70,000 by 1948. Total French and French colonial military losses were about 1,000 killed.

After the 1947 uprising, the MDRM was outlawed, but the rebellion continued at a lower level of intensity as a guerrilla war through 1948, when it wound down without any official treaty or armistice. It was not until 1958 that the French government decided to allow the native population of Madagascar to determine its own direction. The vote was not for independence, but autonomy within the French Community. This led to the creation of the Malagasy Republic in 1958, which became fully independent in two years. Since 1975, the nation has been known as Madagascar.

Madagascar Wars with France (1883–1885, 1894–1899)

PRINCIPAL COMBATANTS: Hovas vs. French forces

PRINCIPAL THEATER(S): Madagascar

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Hova resisted French attempts first to assert a protectorate over part of Madagascar and then to colonize the entire country.

OUTCOME: France ultimately made Madagascar a colony.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: French expeditionary force, 15,431 (plus 7,715 native porters)

CASUALTIES: Unknown

TREATIES: Treaties at issue include tribal-French agreements of 1840 and French-Hova treaties of 1868 and 1895

In 1868 France relinquished control of the main island of Madagascar to the Hova, the chief native Madagascan group. In 1882, however, France asserted a protectorate over northwestern Madagascar, citing treaties concluded in 1840 among individual chieftains. When the Hova

refused to accept the protectorate, French warships were dispatched to bombard the coastal towns of Majunga and Tamatave. In June 1883 French land forces took and occupied Tamatave, which they used as a base from which they recruited a native army to prosecute the war against the Hova more effectively and cheaply. During the next two years there were no set battles, but, rather, continual low-level combat. At last, in 1885, the Hova recognized the French protectorate in the northwest. Diégo-Suarez, a French settlement at the very northern end of Madagascar, was also recognized, and a French "resident," was permitted to serve in Tananarive, the native capital.

Peace did not long endure. The French sought to assert more control, and on June 16, 1894, the Hova mounted an uprising. By 1895, Hova attacks against the French had become so frequent that a force of 15,431 regulars and 7,715 native porters was landed at Majunga, then advanced inland to Tananarive. Using artillery, the troops bombarded Tananarive until it surrendered on September 30, 1895. The Hova were compelled to give up all but a semblance of sovereignty, the Hova queen, Ruha Valona III (r. 1883–96) becoming a figurehead under French government.

The following year, France declared all of Madagascar its colony and dispatched Joseph S. Gallieni (1849–1916)—who would prove the savior of Paris in the opening weeks of WORLD WAR I—as its governor-general. After removing the queen, even as a figurehead, in 1896, Gallieni conducted a long campaign to put down the widespread rebellion that had broken out after colonization was announced, and it was 1899 before the interior was pacified. Gallieni refused to acknowledge Hova supremacy among the tribes and decreed that all residents of Madagascar would be accorded equal treatment under French law.

"Mad Mullah," Holy Wars of the (1899–1920)

PRINCIPAL COMBATANTS: Muslim dervishes led by Muhammad bin Abd Allah Hasan (the "Mad Mullah") vs. British colonial forces (with Ethiopian and Italian allies)

PRINCIPAL THEATER(S): Somaliland (Somalia)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Mad Mullah waged a jihad (holy war) to expel all infidels from the region.

OUTCOME: For more than 20 years, the mullah waged a costly war of terror against the interior of Somaliland, but was finally driven out by a combined air and ground attack, with amphibious support.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

The British rarely had more than 8,000 men in the region; the mullah's followers reached as many as 15,000.

CASUALTIES: Military losses include about 500 killed among the dervishes, 300 among the British, and 200 among the Ethiopians; civilian losses were heavy among the mullah's followers and among the tribes of the interior; it is estimated that one-third of the male population in noncoastal Somaliland was killed.

TREATIES: Illig, or Pestalozza Agreement, March 1905

In 1870 Egypt acquired from the Ottoman Empire possession of the Somali coast from Berbera to Seylac. In 1884 problems in the Sudan prompted the Egyptian government to evacuate the Somali colony, and in 1885 Britain concluded treaties with six of the eight Somali tribes living in the region, thereby adding 58,000 square miles to Britain's African empire. In 1899, however, Muhammad bin Abd Allah Hasan (1864–1920), called the "Mad Mullah" because he claimed supernatural powers, declared a jihad, or holy war, to expel the British and other foreigners from what was then known as Somaliland (Somalia). In April 1899, the Mad Mullah, an adherent of a puritanical Islamic sect, attacked Burao, a native settlement 80 miles from Berbera, recruiting or forcibly impressing a number of men into service, mostly dervishes, so that he had raised a force of about 3,000. Next came an attack on the Habr Yunis tribe in August, which enabled him to return to Burao with a total force of 6,000 men. He then lay low for almost a year, but in August 1900, fell upon the Aidegalla tribe and, in September, the Habr Awal tribe.

The British would mount four campaigns, consisting of British regulars and Ethiopian mercenaries, between 1901 and 1904 against the Mad Mullah. The first was launched in April 1901, using some 1,500 locally recruited men. In a campaign that lasted through July, some 1,200 dervishes—the mullah's followers—were killed and wounded and another 800 taken prisoner. This was sufficient to bring about an interval of peace until October 1901, when the mullah renewed his attacks, menacing and pressing into his service most of the Dolbahanta tribe. The British launched a second expeditionary force in June 1902, pitting about 2,000 men against an estimated force of 15,000 dervishes. The culminating Battle of Erigo, in October 1902, resulted in 1,400 dervish casualties, but the mullah was able to retreat with most of his force intact. The British added more troops to their forces and fielded about 3,600 men, to which was added an Abyssinian (Ethiopian) force of 5,000. The advance of these troops sent the mullah into retreat. On April 17, 1903, at Gumburu, however, the mullah, with 1,400 dervishes, attacked a British-led reconnaissance force of 200, slaughtering most of it, including all officers. Of the 46 survivors, 41 were wounded.

To the British and Abyssinian forces arrayed against the mullah were added Italian troops from Italian Somaliland, but even these combined forces—about 8,000 troops—failed to destroy the mullah's power. However, by 1905, the mullah and his followers agreed to settle in Italian Somaliland, concluding in March 1905 the Illig or Pestalozza Agreement with the Italian government, declaring peace with both the British and the Italians. For the next two years, the mullah presided over a small theocracy.

By 1907, the mullah had reestablished himself on the British side and had resumed raiding and looting, killing perhaps a third of the male population in the region. In 1909, the British government decided to withdraw entirely from the interior, effectively abandoning it to the Mad Mullah, who had some 10,000 troops at this time, while concentrating colonial control over three coast towns only. Friendly Somali tribes in the interior were given arms and ammunition to fend for themselves.

Amid increasing mayhem, in 1912, the British formed the Somali Camel Constabulary, 150 strong, to maintain order among friendly tribes near Berbera. At first, the constabulary proved highly effective, but in 1913 the small force was attacked by some 2,000 dervishes at Dulmadoba. The attackers lost between 200 and 600 men, but half the Camel Constabulary were casualties, including the commandant. Following this defeat, the Camel Constabulary was increased to 500 and an Indian contingent of 400 was added to it. Headway was made against the mullah, but the demands of WORLD WAR I drew off troops for service elsewhere, and the Turks and Germans supported the mullah's efforts, to keep the remaining British forces on the defensive throughout the war.

Early in 1920, with World War I concluded, the British launched a new offensive against the Mad Mullah, using Royal Air Force planes, the Somaliland Camel Corps (700 men), a King's African Rifles Contingent (700 men), 400 men of the Indian army, and three warships *Odin*, *Clio*, and *Arc Royal*. On January 21, 1920, the mullah's headquarters at Medishe, near Jidali, was bombed from the air. The bombardment continued over the next three days and was followed by ground assaults. At this, the Mad Mullah fled to Ethiopia, where he succumbed to disease. Only with his death did the long jihad finally end.

Madura Revolt (1334–1335)

PRINCIPAL COMBATANTS: Delhi sultanate vs. Gulbarga sultanate

PRINCIPAL THEATER(S): Madura, India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Delhi-appointed governor of Madura declared an independent sultanate.

OUTCOME: Because Delhi's troops had to be recalled to other service, the rebellion continued unchecked.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Muhammad Tughluq (r. 1325–51), sultan of Delhi, whose territories encompassed many Hindu kingdoms, endured many revolts until he established a system of provincial governors. One of these, Jalal-ud-Din Ahsan Shah (fl. mid-14th century) the governor of Madura, proved rebellious himself in 1334 and declared an independent sultanate around the capital city of Gulbarga. The sultan dispatched troops from Delhi, but had to recall them in 1335 to quell rebellions in Lahore and in Delhi itself. This allowed the governor to continue his revolt, which gave rise, in turn, to other rebellions.

Magyar Raid, Great (954–955)

PRINCIPAL COMBATANTS: Magyars vs. primarily Germans under Otto I (allied with Conrad of Lorraine)

PRINCIPAL THEATER(S): Bavaria and Franconia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Acquisition of German and Frankish territory.

OUTCOME: The Magyars were ultimately defeated, repulsed, and driven from Germany.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Magyars, 50,000–100,000; Germans, 10,000 (plus allies)

CASUALTIES: Numbers unknown, but heavy on all sides

708 Magyar Raid into Europe, First

TREATIES: Alliance between Magyars and Conrad of Lorraine, then between Otto I and Conrad of Lorraine

In 954, the Magyars mounted their greatest raid ever, sending between 50,000 and 100,000 warriors into Bavaria and Franconia. The devastation was swift, and Conrad of Lorraine, in revolt against the German king Otto I (912–973), made a hasty alliance with the invaders to aid their Rhine crossing at Worms. Conrad also made it easy for the invaders to enter Lorraine. From here, the Magyars crossed the Meuse River to raid northeastern France. They swept through Rheims, then Châlons, and penetrated Burgundy. From Burgundy, they advanced through the Great St. Bernard Pass into Italy, visiting devastation upon parts of Lombardy before crossing the Carnic Alps and into the Drava Valley and the valley of the Danube.

Having terrorized a wide swath of western Europe, the Magyars turned on Bavaria in 955. A force of 50,000 invaded the kingdom and laid siege to Augsburg, where they were met by Otto I leading an army of 10,000. The Magyars lifted their siege and turned instead to battle with Otto. The Battle of Lechfeld, in August, began very badly for the German king. The Magyars wheeled about and surprised the Germans, driving more than 3,000 men from the field. This done, the Magyars took the German camp. Otto, however, secured the aid of his erstwhile foe, Conrad of Lorraine, and was ultimately able to drive out the invaders. Worse for the Magyars, Otto inflicted heavy losses on them and also captured their camp and treasure. He assumed the offensive and harried the fleeing Magyars over a three-day period. Conrad fell in battle. The Great Magyar Raid was at an end, and the Magyars never raided Germany again.

Magyar Raid into Europe, First (862)

PRINCIPAL COMBATANTS: The Magyars vs. the Franks; separately, the Magyars vs. the Pechenegs and Bulgars
PRINCIPAL THEATER(S): Middle Danube Valley region
DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Menaced by the Pechenegs and Bulgars in their Don Basin homeland, the Magyars sought new territory.

OUTCOME: Ultimately, the Magyars came to occupy the middle Danube Valley region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the ninth century, the Magyars (related to the Finns and the Turks) occupied the lower Don Basin as vassals of the Khazar Turks. By the middle of the century, the Magyars had penetrated to the frontiers of the Frankish kingdom in the middle Danube Valley, and they began a series of raids against the frontier Franks. The first Magyar raid west of the Danube took place in 862, when they pushed into Frankish Ostmark.

The raids were attempts to probe for new territory, because the Magyars were menaced in their Don Basin homeland by the Pechenegs and Bulgars. During 862–889, the period of the Magyar western raids, the Magyars were ejected from the Don Basin and resettled in Moldavia. The Magyars would settle permanently in the middle Danube region after 895, when they met defeat at the hands of the Pechenegs.

See also MAGYAR RAID, GREAT; MAGYAR RAIDS IN FRANCE; MAGYAR RAIDS IN THE HOLY ROMAN EMPIRE.

Further reading: Paul Ignotus, *Hungary* (New York: Praeger, 1972); Dominic G. Kosáry, *A History of Hungary* (New York: Arno Press, 1971); C. A. Macartney, *The Magyars in the Ninth Century* (reprint, New York: Cambridge University Press, 1968); Miklos Molnar, *A Concise History of Hungary* (New York: Cambridge University Press, 2001); Denis Sinor, *History of Hungary* (Westport, Conn.: Greenwood Press, 1976).

Magyar Raids in France (907–954)

PRINCIPAL COMBATANTS: Magyars vs. the French

PRINCIPAL THEATER(S): France and northern Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The raiders sought wealth.

OUTCOME: Large parts of France were devastated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Magyar Raids in France were largely contemporaneous with the MAGYAR RAIDS IN THE HOLY ROMAN EMPIRE from about 894 to 955. Magyar (Hungarian) warriors crossed into

Alsace and Burgundy from Germany, staging raids for many years. Burgundy felt the brunt of this activity during 917 to 919, and King Charles III's (879–929) inability to organize the French barons into an effective resistance allowed the Magyars to advance through the kingdom almost at will. In 926, Rheims was menaced, and Burgundy was again overrun in 936–937. King Raoul of Burgundy (d. 936) mounted a defense, which failed and ended in the king's death.

Raiding was chronic, but some of the worst occurred in Aquitaine in 951. The culminating raid—the so-called Great Magyar Raid—came in 954, when warriors ravaged Cambrai, Laon, and Rheims, then swept through northeastern France, down through Burgundy, and into Italy by way of the Great St. Bernard Pass.

Magyar Raids in the Holy Roman Empire

(c. 894–955)

PRINCIPAL COMBATANTS: The Magyar warriors vs. the Holy Roman Empire

PRINCIPAL THEATER(S): Germany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Magyars sought riches and conquest.

OUTCOME: After enduring more than five decades of raids, the forces of the Holy Roman Empire, under Otto I, finally evicted the Magyars from Germany.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At Lechfeld, Magyars: 50,000; Holy Roman Empire, 10,000

CASUALTIES: Unknown

TREATIES: None

The Magyars, seven tribes under a leader named Árpád (c. 840–907), staged a massive western movement from their homes in the northern Caucasus beginning about 889. They swept through Frankish Pannonia—encompassing chiefly eastern Austria and western Hungary—between 894 and 896, raided mercilessly, and seized control of the region by 900. This area became their base of operations for more than five decades of raids into western Europe (see MAGYAR RAIDS IN FRANCE).

The Magyars hit Moravia in 906, overwhelming a Bavarian force at the Battle of Ennsburg, which allowed

them to occupy the Hungarian Great Plain. The raiders penetrated as far north as Bremen and as far south as Otranto, then pressed west to Orléans and as far east as Constantinople. Within the Holy Roman Empire, Saxony and Thuringia were scourged during 908 and Bavaria in 909–910.

Germany's King Henry I (c. 876–936)—Henry the Fowler—fought effectively against the Magyars during 919–936. In 924, Henry captured a major Magyar chieftain and was able to use him to extort a nine-year truce. During this time, Henry fortified Saxon towns and built up his army, so that in 933, he felt ready to break the truce and take the offensive against the Magyars. He attacked at Riade, seizing their camp and sending them into retreat. A quasi civil war attending the ascension of Otto I (912–973) to the Holy Roman throne weakened the German offensive after 936, but Holy Roman troops were still able to conduct an effective defense in Thuringia, Saxony, and Bavaria during 948–949.

The culminating battle of the Magyar raids was the Battle of Lechfeld, south of Augsburg, Bavaria, in 955. Approximately 50,000 Magyars laid siege to Augsburg in August. Ulric (890–973; canonized St. Ulric in 993), the bishop of Augsburg, led a heroic delaying action against the attackers, which bought sufficient time for the arrival of Otto I at the head of a 10,000-man force. Given the lopsided numbers, the battle predictably began badly for Otto, who suffered a loss of at least a third of his army. However, the timely arrival of Duke Conrad the Red of Lorraine, with reinforcements, turned the tide. The Magyars broke and ran, with Otto in hot pursuit. They retreated far to the east and never menaced the Holy Roman Empire again.

Mahabat Khan's Insurrection (1626–1627)

PRINCIPAL COMBATANTS: Forces of Jahangir, Nur Jahan vs. Mahabat Khan

PRINCIPAL THEATER(S): Punjab, India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the Mogul throne

OUTCOME: Mahabat Khan succeeded to the throne as Shah Jahan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** None

Mahabat Khan (d. 1634) was a general in service to the Mogul emperor Jahangir (1569–1627). Though Mahabat Khan put down the rebellion of the emperor's son Khurram (1592–1666) in 1626 and secured Jahangir on his throne, the general accepted the contrite prince as the emperor's heir (as did Jahangir himself). But Empress Nur Jahan (d. 1645), the favorite among Jahangir's harem, had other ideas about the succession, which she wished to control. She was wary of the general's growing popularity and saw him as a future rival for power behind the throne.

Accordingly, Nur Jahan persuaded Jahangir to appoint Mahabat Khan governor of Bengal, far from the royal court. No sooner did he leave for Bengal than she trumped up charges of treason against him and persuaded Jahangir to order his return to Lahore for trial. Mahabat Khan refused to return and instead sought an audience with the emperor at the royal court in the Punjab. When Jahangir refused to see him, Mahabat Khan took him prisoner. During this exchange, Nur Jahan escaped with her entourage, and Jahangir, too, managed to eventually break free of Mahabat Khan. For his part, the general fled to Khurram's friendly camp in the Deccan. There, however, he was persuaded to return to Jahangir and seek forgiveness or, at least, clemency.

Jahangir died suddenly, before Mahabat Khan returned, and the general thus avoided the wrath of the Mogul emperor. Meanwhile, Nur Jahan's candidate for the throne had been caught pilfering the royal treasury. She was discredited, and he severely punished (he was blinded for his thieving). She was easily shunted aside as the powerful Mahabat Khan threw his support behind Prince Khurram, who became emperor under this throne name: Shah Jahan.

Mahdist War See **SUDANESE WAR (1881–1885)**.

Mahmud of Ghazna, Conquests of (c. 1000–1030)

PRINCIPAL COMBATANTS: Ghazna vs. India

PRINCIPAL THEATER(S): Kashmir, the Punjab, and the region of modern Iran

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mahmud desired imperial conquest, in part to acquire treasure, in part to disseminate Islam and suppress Hinduism.

OUTCOME: Over a 30-year period, Mahmud conquered all of the territory he sought.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: In major invasions, Mahmud commanded about 15,000 men. At each of the two major battles of Peshawar, Indian forces numbered about 30,000.

CASUALTIES: Unknown

TREATIES: None

Driven by a combination of Islamic zeal to conquer Hinduism and a desire for treasure, Mahmud (971–1030), ruler of Ghazna (Afghanistan and part of Iran), launched 17 invasions into India between 1000 and 1030. He razed Hindu temples throughout Kashmir and the Punjab, as well as the area encompassed by modern Iran. These vast regions he subjugated and extracted from them great hoards of treasure, which he used to finance a grandiose building program in his capital city.

Three of his Indian raids were major wars. In 1001, he led 10,000 cavalymen against some 40,000 Indians at the Battle of Peshawar, achieving a signal victory, which resulted in the death of the Indian commander, Rajah Jaipal of Lahore (d. 1001). In 1108, an Indian force of 30,000 attacked him in a second Battle of Peshawar, compelling his retreat. Mahmud was able to regroup, however, and counterattack, defeating the superior Indian forces. This led to the formal Ghaznian annexation of the Punjab. Finally, in 1024, Mahmud invaded Kathiawar, on the southern coast of the subcontinent. He and his army rode into Somnath and there looted and destroyed a magnificent Hindu temple.

By the time of his death in 1030, Mahmud of Ghazna had conducted a total of 17 raids into the Indian Peninsula and came to rule Kashmir, the Punjab, and all of Iran. He was a dictator of unsparing temperament, yet although he looted many Hindu monuments, he never compelled the populace of the conquered territories to renounce their religion and convert to Islam.

Maillotin Uprising (1382)

PRINCIPAL COMBATANTS: Parisian tax protesters vs. tax collectors, money lenders, and the government of King Charles VI of France

PRINCIPAL THEATER(S): Paris

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Oppressed by ruinous taxes levied to finance the ongoing Hundred Years' War, the "Maillots" may have sought a repeal of the taxes but they also sought to express their outrage through violence.

OUTCOME: The uprising was quelled when the ringleaders had been apprehended, tried, and executed; however, the uprising also brought about the repeal of the most outrageous of the taxes.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

This uprising of oppressed Parisians, suffering under the privations of the HUNDRED YEARS' WAR, was named for the typical weapon the rioters carried, the *maillot* (a leaden mallet or maul). The "Maillots" turned their wrath against tax collectors and money lenders, whom they hunted down, assaulted, and often killed. During this period in France, Christians were barred from the trade of money lending, which was thus restricted to Jews. Therefore, the uprising took on the character of an anti-Semitic pogrom.

The Maillots refused to negotiate with King Charles VI (1368–1422) and his counselors, and the uprising continued until the ringleaders of the revolt were identified, arrested, tried, and executed. Not content with merely quelling the uprising, Charles VI sought to head off further violence by abolishing the most oppressive of the taxes that had sparked the revolt to begin with.

Maji Maji Uprising (1905–1907)

PRINCIPAL COMBATANTS: Native people of German East Africa (Tanzania) vs. German colonialists (with African auxiliary troops)

PRINCIPAL THEATER(S): German East Africa

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Native Africans protested their subjugation at the hands of German colonialists.

OUTCOME: The native uprising was quelled.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Native forces, 20,000; 500 Germans led thousands of colonial troops.

CASUALTIES: For the Native Africans, 75,000–120,000 killed; Germans, 2,507 killed; African colonials, 4,703 killed

TREATIES: No formal treaty

In July 1905, Abdullah Mapanda (d. 1907) and Kinjikitile Ngwale (d. 1905) led 20,000 native East African rebels in an uprising against the harsh rule of the Germans. They were fortified with *maji-maji*, a potion they believed rendered them impervious to German bullets. The first major assault fell on a colonial *boma* (fort) at Kilosa on August 16. The garrison of 13 askaris (native troops in the German service) was slaughtered.

The attack on Kilosa triggered a vigorous and unrelentingly brutal response from colonial governor Adolf Graf von Gotzen (served 1901–06), who led 500 German regulars bolstered by thousands of colonial troops from Africa, as well as New Guinea and Papua (before 1945 a separate territory), and Melanesia. These forces engaged in a rampage of slaughter that killed between 75,000 and 120,000 natives out of a total population of some 2 million. Some were killed outright, others tortured to death, and still others starved after their crops were destroyed. Losses among German and colonial troops were also heavy, many succumbing to disease and exposure.

The rebellion was put down, although fighting continued sporadically through 1918, when, as a result of WORLD WAR I, Germany lost all of its colonies, including East Africa.

Malacca, Siege of (1640–1641)

PRINCIPAL COMBATANTS: The Dutch (with Achinese allies) vs. the Portuguese

PRINCIPAL THEATER(S): The fortress at Malacca

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Dutch and Portuguese vied for control of the important trading center of the western Malay Peninsula.

OUTCOME: The fortress fell to a prolonged siege, resulting in the Dutch usurpation of the spice trade.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Portuguese-Asian garrison, 3,760; Dutch-Achinese attackers, at least 6,000

CASUALTIES: A total of 7,000 died, more from starvation and disease than from combat

TREATIES: None

Malacca occupied the west coast of the Malay peninsula and was a prize over which Portuguese and Dutch trading interests struggled for years. In 1511, the Portuguese captured Malacca and built a formidable fortress there, A Famosa, with walls 32 feet high and 24 feet thick. The native Achinese resented the presence of the Portuguese and allied themselves with the Dutch in an effort to oust them. In June 1640, a combined Achinese and Dutch fleet blockaded the fortress, and in August ground forces besieged it, cutting off the garrison of 260 Portuguese and some 3,000 locals. Receiving no relief from other Portuguese colonies, the fortress surrendered in January 1641, after some 7,000 had died on both sides, and the Dutch gained mastery of the great spice trade.

Malay Jungle Wars (1948–1960)

PRINCIPAL COMBATANTS: Communist and Red Chinese guerrillas vs. Great Britain and Malay Federation

PRINCIPAL THEATER(S): Malay Federation

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The guerrillas wanted an end to British rule and the installation of a communist government.

OUTCOME: Guerrilla activity was effectively suppressed by 1957, except along the Malay-Thai border, where it persisted through 1960.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Guerrillas, 7,000; Anglo-Malay regulars, 55,000; police, 80,000; Malay Home Guard, 50,000

CASUALTIES: Guerrillas, 6,710 killed, 2,820 wounded, 1,290 captured; Anglo-Malay forces, 2,384 killed, 2,400 wounded; civilian losses, 2,473 killed, 810 abducted and possibly killed

TREATIES: None

The Federation of Malaya was established in 1948 under the mandate supervision of a British high commissioner. Almost immediately after the establishment of the federation, Communist irregulars—many of them Chinese and North Vietnamese—began a widespread guerrilla war against the government, staging raids on government facilities, police stations, and military installations. British and Malay forces swept the country for guerrillas and, by 1949, had succeeded in rounding up or killing hundreds. Within two years, however, the rebels renewed their activities, this time concentrating on rubber plantations, a mainstay of the Malay economy. Plantation workers were killed and rubber trees were destroyed. Sir Herald Briggs

(1891–1989), the British high commissioner, instituted strict controls on food in areas believed to harbor large numbers of guerrillas; this tactic effectively starved out many of the insurgents.

Under the Marxist leader Chin Peng (b. 1922), the guerrillas were organized into the Malayan People's Anti-British Army, reaching a peak strength of 7,000, and later redesignated the Malayan Race Liberation Army (MRLA)—a tiny fraction of Malaya's 5.5 million population. Despite its small size and the absence of popular support, the MRLA fought for a dozen years, against an Anglo-Malayan army of 55,000 (which included troops from the British Commonwealth), a local police force of 84,000, and the Malay Home Guard, a force of 50,000.

In 1957, the Malay Federation became an autonomous state in the British Commonwealth, a step that took the wind out of the insurgents' sails. Activity died down. A substantial number of guerrillas even accepted a government offer of amnesty and gave themselves up. Others moved to Sumatra. Nevertheless, a small number of rebels remained active along the Malay border with Thailand and were the focus of intensive government operations, which defeated the last of them in 1960.

Malvinas War, Islas *See* FALKLAND ISLANDS WAR.

Mamluk-Ottoman War (1485–1491)

PRINCIPAL COMBATANTS: Mamluks vs. Ottoman Turks

PRINCIPAL THEATER(S): Cappadocia (portion of modern Turkey)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mamluks sought control of Lesser Armenia.

OUTCOME: Mostly indecisive; peace was reached after minor territorial cessions were made to the Mamluks.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents survive

Sporadic warfare erupted over possession of a Cappadocian Turkoman territory ruled by the Duldakir dynasty, which had the backing of the Egyptian-based military rulers, the Mamluks. In this region, the Mamluks supported Turkoman nomads in rebellion against the Ottoman Turks and declared sovereignty over Lesser Armenia.

Each year, from 1485 to 1491, the Ottomans campaigned against the Mamluks in the region, and each campaign ended indecisively—although the Mamluks scored a minor triumph in 1488. At last, the Mamluks and Ottomans entered into peace negotiations in 1491. The Ottomans bought Mamluk compliance with a relatively modest territorial concession.

Little, *History and Historiography of the Mamluks* (Burlington, Vt.: Ashgate Publishing, 1986); Stanford J. Shaw and E. K. Shaw, *History of the Ottoman Empire and Modern Turkey*, 2 vols. (New York: Cambridge University Press, 1976–1977).

Mamluk-Persian-Ottoman War (1514–1517)

PRINCIPAL COMBATANTS: Mamluks vs. Ottoman Turks; Ottoman Turks vs. Persians

PRINCIPAL THEATER(S): Syria and Egypt

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ottoman sultan Selim I sought to conquer Mamluk Syria and Egypt, and to put down Shi'ite Persians

OUTCOME: The Mamluk realms fell to Selim; the Persian conflict ended indecisively.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Mamluks, 7,000 killed; Persians, 2,000 killed; Ottomans, 9,000 killed

TREATIES: None

The Persian-Ottoman phase of this conflict is treated in the TURKO-PERSIAN WAR (1514–1516). As a result of that conflict, the Ottoman forces of Selim I (1467–1520) encroached into Syria, a Mamluk territory, prompting the Mamluk sultan of Egypt, Kansu al-Gauri (d. 1516), to counterattack by invading the Ottoman Empire from Aleppo. Kansu was met by the forces of Selim at Marj-Dabik, 10 miles north of Aleppo, on August 24, 1516, and was severely defeated. The Ottoman army included 8,000 tunissanes, 3,000 Saphis, 15,000 timariot feudal levies, and some 15,000 irregular auxiliaries; the Mamluks had about 28,000 men. The aged Kansu died of a cerebral hemorrhage during the battle, an event that precipitated the total surrender of the Mamluks, who withdrew from Syria, abandoning it to the Ottomans.

Victorious, Selim now pressed his advantages. His armies captured Damascus, Beirut, Gaza, and Jerusalem. To hold these places, Selim immediately installed Ottoman governors, allowed the princes of Lebanon to continue ruling as his vassals, and offered peace to Tuman Bey (d. 1517), the new sultan of Egypt, in exchange for his acceptance of Ottoman overlordship. Tuman Bey rejected Selim's offer, whereupon Selim advanced against Cairo, defeated the army of the sultan at the Battle of Reydaniyya (Ridanieh) on January 22, 1517, then took Cairo. Six thousand Ottomans died in battle, as did 7,000 Mamluks. Operating from the capital city, Selim soon subdued all of Egypt. Having fled, Tuman Bey tried to mount a guerilla-style resistance, but was captured and summarily executed.

In the aftermath of the Battle of Reydaniyya and the occupation of Cairo, some 50,000 Mamluks may have been slain; however, after this orgy of violence, Selim I made no further reprisals against those who had been loyal to Tuman Bey and even appointed leading Mamluks to positions of high office in his administration of Egypt.

Mamluk Revolt See CRUSADE, SEVENTH (1248–1254).

Manchu Conquest of China: Manchu-Ming War (1618–1628)

PRINCIPAL COMBATANTS: Manchus vs. Mings (with Korean alliance)

PRINCIPAL THEATER(S): China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Manchus sought the overthrow of the Ming dynasty.

OUTCOME: Although the Mings suffered many reversals, and the Koreans were badly defeated, the Manchus were unable to overthrow the Mings; however, the Ming dynasty was undermined by the conflict and went into precipitous collapse later in the century.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Manchu, 170,000; Ming, numbers unknown; Ming-allied Koreans, 20,000

CASUALTIES: Unknown

TREATIES: Presumably, formal agreements were made between the Mings and the Koreans.

The Manchu state emerged in China during 1600–1615, and by 1618, when war broke out between the Manchus and Mings, the Manchu army consisted of Manchus, Mongols, and Chinese: approximately 170,000 men. Led by Nurhachi (1559–1626), also known as Tian Ming (T'ien Ming), part of this force overran and captured a Ming stronghold at Fushun (Fu-shan) in 1618. A counter-attack was launched against the captured position and was repulsed. To help put down what it regarded as a Manchu revolt, the Ming recruited 20,000 Koreans. Despite the augmented force, the Mings suffered a defeat at Shenyang. The city surrendered to the Manchus, who used Ming turncoats to destroy a bridge and thereby trap the Ming army in the city in 1621.

The advance of the Manchus was finally arrested in 1623 when, near the Great Wall, the Ming governor Yuan Chonghuan (Yuan Ch'unghuan; fl. 17th century) used artillery borrowed from Jesuit missionaries to fire on the Manchus. This turned them west, toward Mongolia.

The Manchu leader Nurhachi died in 1626 and was succeeded by his son Abahai (1592–1643, also known as Taizong [T'ai Tsung]). In 1627 he led an invasion into Korea to neutralize this important Ming ally. Abahai invaded during the winter, crossing the frozen Yalu River. His forces succeeded in defeating the Koreans and, this done, he turned back to Ming China. In 1628, however, the renewed Manchu invasion was again repulsed. As before, the victorious Ming general was Yuan Chonghuan, and, also as before, the key weapon was European artillery. The Manchus turned their attention to northern China (see MANCHU CONQUEST OF CHINA: MANCHU RAIDS ON NORTH CHINA).

duction to Chinese History and Culture (Stanford, Calif.: Stanford University Press, 1975); J. A. Roberts, *A Concise History of China* (Cambridge, Mass.: Harvard University Press, 1999); Jonathan D. Spence and John E. Wills, Jr., *From Ming to Ch'ing: Conquest, Region and Continuity in Seventeenth-Century China* (New Haven, Conn.: Yale University Press, 1981).

Manchu Conquest of China: Manchu Invasion of Korea (1627)

PRINCIPAL COMBATANTS: Manchus vs. Koreans

PRINCIPAL THEATER(S): Korea

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Manchus wanted dominion over Korea, in part to end the Korean-Ming alliance.

OUTCOME: After a swift invasion, Korea fell to Manchu vassalage.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Agreement to vassalage and tribute

This invasion resulted more in the conclusion of a vassalage agreement than in an outright conquest. Until forces of the Manchus (Qing [Ch'ing] dynasty) descended upon the Korean Peninsula in 1627, the Koreans had supported the Ming dynasty in China and had supplied military aid to check the advance of the Manchus from the north of Manchuria. Once the Manchus had invaded their country, however, the Koreans found they were no match for the magnificent Manchu army. A stout resistance was offered, but the territory was quickly conquered. In exchange for a change of allegiance from the Ming to the Manchu, the payment of a modest tribute, and an agreement to submit to Manchu vassalage, the Koreans were left essentially to rule themselves—but had been neutralized as Ming allies.

Manchu Conquest of China: Manchu Raids on North China (1629–1634)

PRINCIPAL COMBATANTS: Manchus vs. Mings

PRINCIPAL THEATER(S): Northern China and Shansi Province

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Manchus wanted to overthrow the Ming dynasty.

OUTCOME: The raids into northern China significantly weakened the already faltering Ming.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Repulsed by the Ming at the conclusion of the MANCHU CONQUEST OF CHINA: MANCHU-MING WAR in 1628, the Manchus turned to the north and launched an invasion into northern China by way of the Chengde Pass. Ming forces repulsed them here; however, the Manchu then descended upon Shanxi (Shansi) province in two sets of raids, during 1632 and 1634, causing considerable destruction.

Recognizing the power and effectiveness of artillery, which had repulsed him twice during the Manchu-Ming War (1618–28), the Manchu leader Abahai (1592–1643) began developing artillery weapons and artillery units of his own. These he began to use against the Ming in open battle, and while the raids into northern China did not culminate in the overthrow of the Ming, they did weaken the dynasty, which went into steep decline before mid-century.

Manchu Conquest of China: Manchu Conquest of Inner Mongolia (1633)

PRINCIPAL COMBATANTS: Manchus vs. Mongol army

PRINCIPAL THEATER(S): Inner Mongolia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest of Inner Mongolia, with the object of further weakening the Ming hold on China.

OUTCOME: The Manchus were able to coax massive troop defections from the Mongol ranks and thereby overrun the country.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but generally light

TREATIES: None

While in the north (*see* MANCHU CONQUEST OF CHINA: MANCHU RAIDS ON NORTH CHINA), a portion of the Manchu invading force was detached and sent into Inner Mongolia. Working with Mongolian defectors (a large group of soldiers who rebelled against harsh conditions in the Mongol army) the Manchu forces systematically overran the country, absorbing more and more Mongol troops into their ranks. By the end of the year, the Mongol army had been thoroughly compromised, and the Manchus were in control of Inner Mongolia.

Manchu Conquest of China: Chinese (Ming) Civil Wars (1635–1644)

PRINCIPAL COMBATANTS: Li Zicheng (Li Tzu-ch'eng) (and other warlords, including Manchus and leaders of independent factions) vs. the Ming dynasty

PRINCIPAL THEATER(S): Throughout China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: General rebellion against Ming rule

OUTCOME: The Ming dynasty was overthrown.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Li Zicheng commanded as many as 300,000 men; although Ming forces were of commensurate size, they were led with disastrous ineffectiveness.

CASUALTIES: Unknown, but doubtless extremely heavy among the Ming defenders of Beijing (Peking)

TREATIES: None

The CHINESE CIVIL WAR of 1621–44 may be seen, in part, as a function of Manchu efforts to overthrow the Ming dynasty. As a result of relentless Manchu military campaigning (see MANCHU CONQUEST OF CHINA: MANCHU-MING WAR; MANCHU CONQUEST OF CHINA: MANCHU RAIDS ON NORTH CHINA, and MANCHU CONQUEST OF CHINA: MANCHU CONQUEST OF INNER MONGOLIA), the Ming dynasty entered a period of steep decline during 1635–44, coinciding with the culmination of the Chinese Civil War of this period.

Rebellion was widespread throughout China, as the Ming rulers reeled under the Manchu onslaught and fell victim to the devastating effects of famine and flood as well as intense political intrigue. Many throughout China were bereft of their homes, and warlords, some independent, some in the service of the Manchu, recruited legions of the homeless and desperate in a struggle against the Mings.

The warlord Li Zicheng (1606–45) made an unsuccessful attempt to capture the provincial capital of Sichuan (Szechwan) in 1637. Defeated but not beaten, he marched into Shanxi (Shansi), defeated the Ming presence there, then, in 1640, did the same in Henan (Hunan). By 1642, both Shanxi and Henan were under his control. Declaring himself emperor, he mustered an army of 300,000 and marched against Beijing, the imperial capital. The capital was defended by forces of ample size; however, two Ming armies were commanded by bitter rivals, who refused to cooperate and coordinate their defense. The result was disastrous defeat. Li Zicheng's army entered the city in triumph, the last of the Ming emperors committed suicide, and the warlord briefly assumed the throne.

Manchu Conquest of China: Manchu Establish Qing Dynasty (1636)

PRINCIPAL COMBATANTS: Manchus vs. Mings

PRINCIPAL THEATER(S): China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Consolidation of power, proclamation of a new Qing (Ch'ing) dynasty.

OUTCOME: The culmination of wars on several fronts, the establishment of the Qing dynasty ensured the ultimate success of the Manchus.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Following or concurrently with the MANCHU CONQUEST OF CHINA: MANCHU-MING WAR, from 1618 to 1628, the MANCHU CONQUEST OF CHINA: MANCHU RAIDS ON NORTH CHINA, from 1629 to 1634, the MANCHU CONQUEST OF CHINA: MANCHU CONQUEST OF INNER Mongolia in 1633, MANCHU CONQUEST OF CHINA: CHINESE (MING) CIVIL WARS, from 1635 to 1644, and the MANCHU CONQUEST OF CHINA: MANCHU CONQUEST OF KOREA, from 1636 to 1637, and at the start of Manchu consolidation of positions in the Amur Basin (during 1636–44), Abahai (1592–1643), dynamic leader of the Manchus, proclaimed a new imperial dynasty, the Qing, at Shenyang. Abahai took the title of Chongde (Ch'ung-te).

Wills, Jr., *From Ming to Ch'ing: Conquest, Region and Continuity in Seventeenth-Century China* (New Haven, Conn.: Yale University Press, 1981).

Manchu Conquest of China: Manchu Conquest of Korea (1636–1637)

PRINCIPAL COMBATANTS: Manchus vs. Koreans

PRINCIPAL THEATER(S): Korea

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Manchus sought to compel Korean renunciation of the Mings.

OUTCOME: The renunciation was secured.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Manchus, 100,000; Koreans, numbers unknown

CASUALTIES: Unknown

TREATIES: None

Allied to the Mings (see MANCHU CONQUEST OF CHINA: MANCHU-MING WAR), the Koreans failed to render tribute to the Manchus during the decline of the Ming dynasty. Moreover, the Koreans, for the most part, refused to coop-

erate with the Manchus in campaigns against the Mings. For these reasons, Abahai, the Manchu leader, invaded Korea with a force of 100,000. This was sufficient to overawe the Koreans, whose rulers agreed to a formal renunciation of the Ming dynasty.

Manchu Conquest of China: Li Zicheng's Rebellion and Fall of the Ming (1644)

PRINCIPAL COMBATANTS: Manchus vs. Li Zicheng (Li Tzu-ch'eng) and, separately, the Ming

PRINCIPAL THEATER(S): Beijing (Peking), China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A desperate Ming general called for Manchu aid to eject rebels from Beijing; this effectively invited Manchu occupation of the capital.

OUTCOME: Victorious over the rebels, the Manchus occupied Beijing, thereby completing the overthrow of the Ming dynasty and its replacement by the Qing (Ch'ing).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Numbers not known, but the Manchu force was very large and significantly outnumbered the forces under Li Zicheng.

CASUALTIES: Unknown

TREATIES: None

The Manchus had steadily eroded the power of the Ming dynasty through the MANCHU CONQUEST OF CHINA: MANCHU-MING WAR, MANCHU CONQUEST OF CHINA: MANCHU RAIDS ON NORTH CHINA, MANCHU CONQUEST OF CHINA: MANCHU CONQUEST OF INNER MONGOLIA, MANCHU CONQUEST OF CHINA: CHINESE (MING) CIVIL WARS, and the MANCHU CONQUEST OF CHINA: MANCHU CONQUEST OF KOREA, and in 1636, proclaimed the Qing dynasty (see MANCHU CONQUEST OF CHINA: MANCHU ESTABLISH QING DYNASTY). The Ming were ripe to fall, and on May 26, 1644, Li Zicheng (1606–45), a rebel leader and social bandit, overran and occupied Beijing. In desperation, the Ming general Wu Sangui (Wu San-kuei; d. 1678) called on the Manchus for aid in overthrowing Li and his rebel regime. The Manchus rushed in with a large army and, in a momentous battle fought a short distance to the south of the Great Wall, the Manchus defeated Li Zicheng. The Manchus now occupied Beijing, thereby bringing about the final collapse of the Ming dynasty and its replacement by the Qing.

Wills, Jr., *From Ming to Ch'ing: Conquest, Region and Continuity in Seventeenth-Century China* (New Haven, Conn.: Yale University Press, 1981).

Manchu Conquest of China: Manchu-Ming War for Yangtze Valley (1644–1645)

PRINCIPAL COMBATANTS: Manchus vs. Mings (under Prince Fu)

PRINCIPAL THEATER(S): Yangzhou (Yangchow) and Nanjing (Nanking) area

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Prince Fu sought to resist the final Manchu takeover.

OUTCOME: After a bloody battle and subsequent massacre, Nanjing fell to the Manchus and Fu fled the field.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Virtually all of the Ming army in and around Yangzhou and Nanjing was slaughtered; civilian casualties were extremely high.

TREATIES: None

The Manchu occupation of Beijing (Peking) in Li Zicheng's Li Tzu-ch'eng's (1606–45) 1644 rebellion (see MANCHU CONQUEST OF CHINA: LI ZICHENG'S REBELLION AND FALL OF THE MING), for all practical purposes,

brought about the final collapse of the Ming dynasty and its displacement by the Qing (Ch'ing) dynasty; however, the Ming prince Fu (r. 1644–45) set up a Ming government in exile at Nanjing, boldly defying Manchu invaders.

The Manchu prince Dorgon (1611–46) led an army against Fu in a week-long battle that centered around Yangzhou. The Ming army was defeated, and the Manchus followed their victory with a general massacre, not only of the defeated army, but of the civilian inhabitants of the Yangzhou area. This rapidly brought about the surrender of Nanjing. Fu fled and became lost to history. The Manchu—as the Qing—now faced sporadic, though stiff, resistance from members of the Ming royal family (cousins of those who had been in the direct line of succession). Although often destructive, this opposition never posed a serious threat of reestablishing the Ming dynasty.

Wills, Jr., *From Ming to Ch'ing: Conquest, Region and Continuity in Seventeenth-Century China* (New Haven, Conn.: Yale University Press, 1981).

Manchu Conquest of China: Manchu Conquest of Fujian (1645–1647)

PRINCIPAL COMBATANTS: Manchus vs. Mings

PRINCIPAL THEATER(S): Fujian (Fukien) Province

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Manchus exploited dissension and disunity among remaining members of the Ming royal family to conquer Fujian.

OUTCOME: Guangzhou (Kwangchow) and Fujian fell to the Manchus.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** None

As a direct result of the fall of Beijing (Peking) in the 1644 MANCHU CONQUEST OF CHINA: LI ZICHENG'S [LI TZU-CH'ENG'S] REBELLION AND FALL OF THE MING, the Ming dynasty was effectively crushed; however, resistance persisted at Nanjing and Yangzhou (see MANCHU CONQUEST OF CHINA: MANCHU-MING WAR FOR YANGTZE VALLEY). This was brutally crushed, but sporadic Ming resistance continued among rival claimants to the Ming throne. Recognizing that the internal disputes among these claimants rendered the remaining Ming useless as a force of resistance, the Manchus exploited the dissension by campaigning through Fujian Province. In 1647, the Manchus were in possession of Guangzhou, and Ming resistance in the province had been completely neutralized, leaving only significant pockets of Ming opposition in Sichuan (Szechwan), Shaanxi (Shensi), and Shanxi (Shansi).

Manchu Conquest of China: Gui Wang's Campaigns (1648–1651)

PRINCIPAL COMBATANTS: Manchus vs. Ming forces under Prince Gui (Kuei Wang)

PRINCIPAL THEATER(S): Southern China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Gui, the last Ming prince, sought to maintain control of southern China.

OUTCOME: Prince Gui was defeated by Manchu forces under Prince Dorgon and forced to retreat to the mountains of the southwest.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: More than 100,000 died in Guangzhou.

TREATIES: None

The last prince of the Mings, Gui (d. 1662), attracted a significant following of Ming diehards following the otherwise virtually total collapse of the dynasty. Prince Gui was a fine military leader, who was able to seize control of much of southern China, albeit briefly. Dorgon (1611–46), who had assumed leadership of the Manchus following the death of his brother Abahai (1592–1643), countered Gui by consolidating the Manchu hold on the Yangtze Valley. From this vast base, Dorgon was able to conduct a systematic campaign to retake southern China, mounting a siege of Canton, the most important Ming-held city in the south. In 1651, after eight months, some 100,000 Cantonese had died. Gui was driven out of the region and took refuge in the mountains of the southwest. There he took control, again briefly, over Guizhou (Kweichow) and Yunnan (see MANCHU CONQUEST OF CHINA: MANCHU CONQUEST OF SOUTHWEST CHINA).

See also MANCHU CONQUEST OF CHINA: MANCHU INVASION OF KOREA; MANCHU CONQUEST OF CHINA: MANCHU-MING WAR; MANCHU CONQUEST OF CHINA: MANCHU RAIDS ON NORTH CHINA; MANCHU CONQUEST OF CHINA: MANCHU CONQUEST OF INNER MONGOLIA; MANCHU CONQUEST OF CHINA: MANCHU ESTABLISH QING DYNASTY; MANCHU CONQUEST OF CHINA: CHINESE (MING) CIVIL WARS; MANCHU CONQUEST OF CHINA: LI ZICHENG'S REBELLION AND FALL OF THE MING; MANCHU CONQUEST OF CHINA: MANCHU CONQUEST OF KOREA; MANCHU CONQUEST OF CHINA: MANCHU-MING WAR FOR YANGTZE VALLEY; MANCHU CONQUEST OF CHINA: MANCHU CONQUEST OF FUJIAN; MANCHU CONQUEST OF CHINA: MANCHU-MING PIRATE WAR; MANCHU CONQUEST OF CHINA: REVOLT OF THE THREE VICEROYS; MANCHU CONQUEST OF CHINA: ANNEXATION OF TAIWAN; MANCHU CONQUEST OF TIBET.

Manchu Conquest of China: Manchu Conquest of Southwest China (1651–1659)

PRINCIPAL COMBATANTS: Manchus vs. Mings under Prince Gui (Kuei Wang)

PRINCIPAL THEATER(S): Mountains of southwest China (Guizhou [Kweichow] and Yunnan region)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Kuei Wang sought to retain control of this region.

OUTCOME: Through an arduous campaign, the Manchus wrested the mountainous southwest from Kuei Wang.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Following his defeat in most of southern China, Gui Wang (d. 1662), last of the Ming princes, retreated to the mountains of the southwest, where he continued to control Guizhou and Yunnan (see MANCHU CONQUEST OF CHINA: GUI WANG'S CAMPAIGNS). In the southwestern mountains, Gui Wang enjoyed the advantage of rugged terrain that made for effective defensive positions and was extremely difficult on any attacker. Nevertheless, through application of a long, patient, systematic, and persistent campaign, the Manchus gained control of the region. As for Gui Wang, he evaded capture, dying from natural causes in 1662.

Manchu Conquest of China: Manchu-Ming Pirate War (1652–1662)

PRINCIPAL COMBATANTS: Manchus vs. (separately) Dutch and Ming-allied pirates under Koxinga

PRINCIPAL THEATER(S): Nanjing and nearby coastal provinces

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The pirates sought and obtained control of a large coastal region.

OUTCOME: The pirates prevailed wherever they struck, but the death of their leader, Koxinga, in 1662, brought the pirate menace to an end.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Following the collapse of the Mings in 1659, a pirate family in the employ of the Mings continued to wage war against the Manchus. The most famous of the pirate leaders was Zheng Chenggong (Cheg Ch'eng-kung; 1624–62), known to the Europeans (whom the pirates also fought) as Koxinga.

Koxinga's harassment of the Manchus was constant and effective. In 1653, he captured Xiamen and, three years later, Chongming Island. This put him in position to mount a successful assault on Nanjing in 1657.

While he kept the Manchus occupied, Koxinga also attacked the European presence in China, most dramatically at Taiwan, which he attacked with a fleet of 900 ships in 1661. After he held Fort Zelanda (at Anping) under siege from 1661 to 1662, the Dutch surrendered, and the Manchus—or Qing—had to evacuate six coastal provinces. The Qing leaders withdrew settlers 10 miles inland and provided a guarded barrier for their defense.

Ultimately, it was the death of the charismatic Koxinga, not Manchu military might, that ended the pirate scourge in 1662.

Manchu Conquest of China: Revolt of the Three Viceroys (1674–1681)

PRINCIPAL COMBATANTS: Manchus (Qing, Ch'ing) vs. rebellious viceroys of Yunnan, Jiangxi (Kiangsi), and Fujian (Fukien) Provinces

PRINCIPAL THEATER(S): Yunnan, Jiangxi, and Fujian Provinces

DECLARATION: None, but the revolt was precipitated by an imperial Qing decree of 1673, ordering the removal of three provincial viceroys

MAJOR ISSUES AND OBJECTIVES: The viceroys resisted an imperial Qing order for their removal.

OUTCOME: The rebel viceroys held a vast territory for several years, but patient and persistent application of military force finally quelled the rebellion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 1673, the Qing emperor Kangxi (K'ang-hsi; 1654–1722), concerned over the consolidation of power among three of his provincial viceroys or governors, at Yunnan, Jiangxi, and Fujian, ordered their removal. The viceroy of Yunnan, Wu Sangui (Wu San-kuei; 1612–78), formerly a Ming general, resisted removal and took a stand in Sichuan Guizhou, Hunan, and Guangxi Zhuangzu, tenaciously holding these provinces. He was joined in his resistance by the viceroys of Jiangxi and Fujian. Through continual application of military pressure, however, the rebellion was quelled by 1681, Qing control reestablished, and the removal of the viceroys finally effected.

Manchu Conquest of China: Annexation of Taiwan (1683)

PRINCIPAL COMBATANTS: Manchus vs. Taiwanese

PRINCIPAL THEATER(S): Taiwan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Annexation of Taiwan

OUTCOME: Faced with the overwhelming power of the Manchus, the ruler of Taiwan yielded to them and accepted annexation of the island.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Formal annexation documentation, 1683; this was a political settlement.

Following the Manchu wars of conquest and the successful suppression of rebels between 1674 and 1681 in the Revolt of the Three Viceroys (see MANCHU CONQUEST OF CHINA: REVOLT OF THE THREE VICEROYS), Zheng Keshuang (Cheng K'o shuang; 1670–1707 B.C.E.) son and successor to Zheng Jin (Cheng Chin; d. 1681) (fl. mid 17th century), surrendered Taiwan to the Manchus without offering significant resistance.

Manchu Conquest of Tibet (1720)

PRINCIPAL COMBATANTS: Manchus vs. Dzungar Mongols

PRINCIPAL THEATER(S): Tibet

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Tibet

OUTCOME: The Manchus took control of Tibet from the Dzungars, installing a garrison as well as a pliable Dalai Lama.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Three Chinese armies, presumably a total of about 30,000; Mongol numbers unknown

CASUALTIES: Unknown

TREATIES: None

The Manchu (Qing or Ch'ing) ruler Kanxi (K'ang-hsi; 1645–1722) dispatched two armies to invade Tibet. One advanced from Gansu, and the other from Sichuan. The invasion came swiftly and with much violence. The armies converged against the Dzungars, destroying many, and driving out of the region those who survived.

While this operation was under way, a third Manchu army invaded Junggar and captured Urumqi and Turfan. The Mongol forces resisted in large part with European-supplied muskets—the first time they made use of this weapon. Nevertheless, the weapon was new to them, and they did not use it with tactical effectiveness. The Manchu

forces were larger and better equipped, and they overwhelmed the Mongols here as well.

The Manchus installed a new Dalai Lama, Kelzang Gyatso (1708–57), popular with the Tibetans and yet compliant with Manchu wishes. This puppet ruler was supplemented by a Manchu garrison installed at Lhasa, and thus Manchu control of Tibet was established and consolidated.

Mandingo-French War, First (1885–1886)

PRINCIPAL COMBATANTS: France vs. the Mandingo tribes

PRINCIPAL THEATER(S): Ivory Coast, Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The French sought control of the Ivory Coast; the Mandingo resisted.

OUTCOME: The Mandingo were defeated, and the French asserted control over the country, but the principal Mandingo leader, Almamy Samory Touré, evaded capture and organized a new resistance.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

French and French colonial forces, about 2,000; Mandingo, 40,000

CASUALTIES: Unknown

TREATIES: None

Led by Chief Almamy Samory Touré (d. 1900), the Mandingo tribes of the Ivory Coast, West Africa, resisted French colonial forces, especially in the interior portions of the country. Samory was a natural military leader, who deployed his forces effectively, dividing them into corps, divisions, and companies. A major battle in 1886 resulted in the defeat of the Mandingo, but Almamy Samory Touré escaped, and the Mandingo accepted the Niger River as an absolute frontier. Although the French asserted control of the Ivory Coast, Samory resurfaced in 1894 to continue resistance in the SECOND MANDINGO-FRENCH WAR the following year.

Lewis, *The Race to Fashoda: Colonialism and African Resistance* (New York: Weidenfeld and Nicolson, 1987); Rodney Steel, *History of West Africa* (New York: Facts On File, 2003).

Mandingo-French War, Second (1894–1895)

PRINCIPAL COMBATANTS: France (with some British aid) vs. the Mandingo tribes

PRINCIPAL THEATER(S): Ivory Coast, Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The French sought control of the Ivory Coast; the Mandingo resisted and maintained control of the country's interior.

OUTCOME: Several French campaigns were launched into the interior; all failed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

After their victory in the First MANDINGO-FRENCH WAR, France declared a protectorate over the Ivory Coast; however, renewed resistance led by the Mandingo chief Almamy Samory Touré (d. 1900) kept French colonists out of the country's interior.

The French, sometimes with British assistance, fought 13 major battles and participated in many guerrilla actions, but the war ended inconclusively—although Samory had lost ground. It was not until the Third MANDINGO-FRENCH WAR in 1898 that Samory was captured and the Mandingo resistance definitively ended.

Mandingo-French War, Third (1898)

PRINCIPAL COMBATANTS: France vs. the Mandingo tribes

PRINCIPAL THEATER(S): Ivory Coast, Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: This was the third French effort to wrest control of the Ivory Coast interior from the Mandingo under Chief Almamy Samory.

OUTCOME: With the capture of Almamy Samory, the Mandingo resistance collapsed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

France, unknown; Mandingo, 28,000 combatants, 120,000 noncombatant followers

CASUALTIES: Total Mandingo casualties (all three wars), 50,000 dead; French and French colonial losses unknown

TREATIES: None

Twice before, French colonial forces had attempted to extend into the interior their control over the Ivory Coast. The First MANDINGO-FRENCH WAR resulted in a French victory over the Mandingo, but it did not put a permanent end to their resistance because their leader, Chief Almamy Samory Touré (d. 1900), remained at large and was able to organize an effective guerrilla campaign in the Second MANDINGO-FRENCH WAR. After repeated failures in this second war, a new French military campaign was mounted into the Ivory Coast interior. When the Mandingo fortress town of Sikasso fell to a French siege, Samory lost his chief logistical support. He agreed to negotiate with the French, who violated his flag of truce, and captured him on September 29, 1898. Samory was exiled to Gabon, a decapitating blow to the Mandingo, who relinquished control of the interior to the French. Samory Touré died in exile on June 21, 1900.

Maniaces, Revolt of (1043)

PRINCIPAL COMBATANTS: Forces of General George Maniaces vs. the Byzantine Empire

PRINCIPAL THEATER(S): Vicinity of Constantinople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Maniaces revolted against the usurping emperor Constantine IX Monomachus

OUTCOME: The revolt ended abruptly when Maniaces fell victim to “friendly fire.”

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

George Maniaces (d. 1043) was an exceedingly capable Byzantine general who was twice unjustly accused of treason. Emperor Michael V Calaphates (d. post 1042) saw to his release from prison after Maniaces was convicted the first time, and, by way of compensation for his wrongful imprisonment, gave him the Italian provinces to rule. In 1043, Maniaces was campaigning against Muslim invaders in his Italian realm when he was again accused of treason, this time by the new emperor, Constantine IX Monomachus (c. 1000–55), who demanded his return to Constantinople. Maniaces, who was loyal to Michael V Calaphates, the emperor whom Constantine IX Monomachus had deposed, refused to return. Instead he raised a rebellion, was proclaimed emperor by his troops, and launched a battle against the forces of the empire. The revolt disintegrated when Maniaces was felled by an arrow accidentally discharged by one of his own men.

Mantuan Succession, War of the (1628–1631)

PRINCIPAL COMBATANTS: Houses of Savoy and Gonzaga vs. the Holy Roman Empire, and, separately, Duke Charles of Nevers and France

PRINCIPAL THEATER(S): Mantua and Montferrat

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The parties each sought possession of Mantua and Montferrat.

OUTCOME: With French military support, the duke of Nevers made good his claim to both Mantua and Montferrat.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Cherasco, April 26, 1631

This war may be seen as a phase of the THIRTY YEARS' WAR. The house of Savoy conferred the duchy of Montferrat on the Mantua-based House of Gonzaga, subject to the further will of the Holy Roman Emperor Ferdinand II (1578–1637). Montferrat fell to a female Gonzaga heir, Maria Gonzaga whereas possession of Mantua went to the French duke of Nevers, Frederico (1573–1637). He married off his son, Charles de Rethel (d. 1665), to the Gonzaga heiress, Maria, in order to secure both Montferrat and Mantua. At this point, the house of Savoy sought to reclaim Montferrat while, simultaneously, a Gonzaga relative laid claim to Mantua. While this conflict developed, Ferdinand II sent an army across the Alps to take Mantua and Milan. His forces sacked Mantua in 1630, forcing Savoy to agree to divide Montferrat with him. At this juncture, King Louis XIII (1601–43) of France sent an army in aid of the duke of Nevers, thereby rescuing Mantua from total destruction by the Holy Roman Emperor's army.

The following year, a French army under Cardinal Richelieu (1585–1642) conquered both Mantua and Montferrat for the duke of Nevers.

Maratha-Mogul War (1647–1665)

PRINCIPAL COMBATANTS: The Marathas vs. the Moguls

PRINCIPAL THEATER(S): India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Hindu Marathas sought to create an empire at the expense of the Muslim Moguls.

OUTCOME: The Moguls prevailed at the Battle of Purandhar, forcing the surrender of the Maratha prince.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Marathas, 60,000; Mogul numbers unknown

CASUALTIES: Unknown

TREATIES: Treaty of Purandhar, 1665

The Marathas were a Hindu warrior people with whom the Hindu prince Shivaji Bhonsle (1627–80) identified himself. When, aged 19, he inherited his family's lands in 1647, Shivaji decided to found a Hindu empire free from Mogul oppression and tyranny. Operating from the Western Ghats near Pune, he launched an offensive against Bijapur (a Muslim state) and, after conquering it, constructed a series of hilltop fortifications. He proceeded systematically to acquire territory and by 1653 dominated the region from Goa to the Bhima River and was poised to take much of the Deccan. He called his new empire Maharashtra and, from it, he launched raids against various Mogul holdings. In the meantime, he built a navy to counter any interference from European traders.

In 1664, Shivaji Bhonsle attacked Surat, site of a major English trading facility on the Gulf of Khambhat. This roused the Mogul emperor, Aurangzeb (1618–1707), to action. He sent a force under the able commander Jai Singh (fl. 17th century) to Bijapur. Forming an alliance with Adil Shah (d. 1672), the Muslim sultan there, he mounted an attack in 1665 against Purandhar, a principal Maratha fort. Defeated, Shivaji surrendered most of his forts and consented to send his son, Sambhaji (1657–89) as a political hostage to Agra, the former Mogul capital and still a key city. A short time later, Shivaji decided to go to Agra himself, but, finding that he was to be treated as a prisoner, not a political hostage, he escaped—in 1670—and prepared a new war against the Moguls (see MARATHA-MOGUL WAR [1670–80]).

Maratha-Mogul War (1670–1680)

PRINCIPAL COMBATANTS: Marathas vs. Moguls

PRINCIPAL THEATER(S): India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Maratha ruler Shivaji Bhonsle resumed his war of conquest against the Moguls.

OUTCOME: Shivaji acquired a vast realm at Mogul expense.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

After escaping Mogul captivity, Shivaji Bhonsle (1627–80), founder of the Maratha kingdom of Maharashtra (see MARATHA-MOGUL WAR [1647–1665]) resumed war

against the Moguls. He quickly recaptured the 23 forts and associated territories ceded by the Treaty of Purandhar. Surat was sacked, and Khandesh and Berar invaded.

The Muslim leader Jai Singh (fl. 17th century) received Mogul reinforcements and, with these, counterattacked. By 1672, the Mogul army had been increased under a new general, Bahadur Khan (fl. 17th century), and made significant advances against Shivaji. Shivaji outmaneuvered the Moguls, however, and captured large portions of Bijapur after the death of the local sultan, Adil Shah (d. 1672). Within two years, Shivaji acquired enough territory at Mogul expense to prompt him to assume the magnificent title of *chatrapati*, Lord of the Universe.

Bijapur, parts of which Shivaji now controlled, was an independent Muslim state vulnerable to attack by the Moguls. If the Moguls seized Bijapur, they could easily use it as a base from which to mount attacks against Maharashtra. To forestall this, Shivaji invaded the Carnatic region and forged an alliance with the Golconda and conquered the Jinji. Thus greatly strengthened, he was in a position to compel Bijapur to cede territories. In return for these cessions, Shivaji pledged to fight side by side with Bijapur to defeat the Moguls. By 1680, the Maratha territories stretched from the Narmada River to Goa and, eastward, to Nagpur in central India. Shivaji's death in 1680 brought only a year's intermission in the fighting, which resumed in 1681 as the MARATHA-MOGUL WAR (1681–1705).

Maratha-Mogul War (1681–1705)

PRINCIPAL COMBATANTS: Marathas vs. Moguls

PRINCIPAL THEATER(S): Deccan region of India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Marathas and Moguls contested for possession of the Deccan.

OUTCOME: War was chronic during this period until, aged and infirm, the Mogul emperor Aurangzeb left the Deccan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Maratha numbers unknown; the Mogul camp became a mobile city of 500,000, many of these capable of combat

CASUALTIES: In the hundreds of thousands

TREATIES: None

The MARATHA-MOGUL WAR (1670–80) ended with the death of the founder of Maharashtra, Shivaji Bhonsle (1627–80), but a new war began in 1681 with the ascension to the Maratha throne of Shivaji's son, Sambhaji (1657–89). It was not a straightforward continuation of the earlier conflict, however. As a result of defeat in the

MARATHA-MOGUL WAR (1647–1665), Shivaji had sent Sambhaji to Agra, seat of the Mogul court, as a hostage. Raised among the Moguls, Sambhaji defected for a time to the Mogul side. At the same time, Akbar (d. 1704), son of the Mogul emperor Aurangzeb (1618–1707), defected to the Hindu Rajputs. Akbar prevailed upon Sambhaji to unite with him in an assault upon Agra.

To counter Akbar and Sambhaji, Aurangzeb and his court moved from Agra in 1681 to create a large “temporary” tent city (it actually endured for 24 years) in the Deccan. From this mobile base, housing some 500,000 people, Aurangzeb led successful attacks against Bijapur (in 1686) and Golconda (in 1687) while the Marathas in turn raided him. In 1689, without intending to do so, Aurangzeb captured Sambhaji and other Maratha leaders and put them all to death. Raja Ram (d. 1700), Sambhaji’s brother, took up the war, and when he died in 1700, his widow, Tarabai (fl. 17th century), continued to lead the battle in what had become a civil war among the disrupted and divided Marathas and against Aurangzeb, who occupied and left one Maratha fortress town after another, after each was retaken by the Marathas.

Warfare was chronic in the Deccan until 1705, when Aurangzeb, aged and infirm, abandoned the region and settled in Ahmadnagar to the north. His death two years later ensured the absolute end of a war that, in its final years, from about 1700 to 1705, killed perhaps as many as 100,000 annually.

Maratha War, First (1775–1782)

PRINCIPAL COMBATANTS: British East India Company vs. the Maratha Confederacy

PRINCIPAL THEATER(S): Bombay region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The British East India Company exploited Maratha disunity to make territorial gains.

OUTCOME: The British East India Company acquired an island off Bombay and effectively neutralized the Maratha Confederacy for 20 years, providing an opportunity for the company to gain control of more territory.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: British, 6,000; Maratha, 56,000

CASUALTIES: British, 864 killed; Maratha losses unknown

TREATIES: Treaty of Sabai, May 7, 1782

The Maratha Confederacy was born of the disintegration of Maharashtra, the kingdom founded by Shivaji Bhonsle

(1627–80) about 1647 and that had survived chronic warfare with the Moguls through the beginning of the 18th century (see MARATHA-MOGUL WAR [1647–1665], MARATHA-MOGUL WAR [1670–1680], MARATHA-MOGUL WAR [1681–1705]). The confederacy was hardly a kingdom or nation, but merely a loose union of five clans with a capital city at Poona. Leadership authority was ostensibly vested in a *peshwa* (chief) headquartered at Poona, but he never enjoyed uncontested power. The British East India Company exploited the factionalism among the clans of the Maratha Confederacy to acquire control of Indian territories. In 1775, the company backed Narayan Rao (fl. late 18th century), a former *peshwa*, in his bid for power, promising him troops in exchange for treasure and territory. An early assault on Poona in 1775 failed, as did a campaign in the Deccan in January 1779. On the 12th, 2,600 British troops attacked the Maratha capital at Poona, losing 352 killed or wounded before negotiating a withdrawal from Maratha territory. Despite this negotiated withdrawal, on February 15, 1780, a contingent of 6,000 British soldiers stormed the fortress of Ahmadabad. At the cost of 106 British casualties, the Maratha garrison was dislodged. This victory marked a turning point in the war. On August 3, 1780, the cliff-top fortress of Gwalior was breached by 2,000 Anglo-Indian troops and captured without loss. Although this checkmated the Marathas, the war continued, indecisively, for two more years until it was concluded by the Treaty of Sabai on May 7, 1782. The Maratha defeat in 1780 also ended their participation in the First MYSORE WAR.

As a result of the First Maratha War, the British East India Company acquired an island near Bombay and rendered the Maratha Confederacy neutral for the next two decades, during which the British made many more territorial gains, thereby laying the foundation for what would become British domination of the subcontinent.

See also MARATHA WAR, SECOND; MARATHA WAR, THIRD.

Maratha War, Second (1803–1805)

PRINCIPAL COMBATANTS: British East India Company vs. the Sinhai clan of the Maratha Confederacy

PRINCIPAL THEATER(S): Central India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The British East India Company sought to establish its dominance in central India.

OUTCOME: The British East India Company gained control of Poona and much of central India.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Anglo-British forces, 50,000; Maratha forces, 85,000

CASUALTIES: Anglo-British, 9,209 killed or wounded; Maratha, about 42,000 killed or wounded

TREATIES: Treaty of Bassein, 1802: basis of the war

The victory of the British East India Company against the Maratha Confederacy in the First MARATHA WAR and the conquest of the Mysore in the Fourth MYSORE WAR allowed the British East India Company to focus once again on confederacy in a campaign to acquire control of southern India. Advantageously for the British, the confederacy, after two decades of military inactivity, was no more unified than it had been at the time of the First Maratha War. The *peshwa* (head) of the Maratha Confederacy at this time was Baji Rao II (1775–1851), who was, however, opposed by the Sindhais (one of the confederacy's constituent clans). In 1802, the British had concluded the Treaty of Bassein with Baji Rao, promising defensive aid.

When the Sindhais captured Poona in 1803 and deposed Baji Rao II, the British demanded his restoration. This touched off a war of far greater proportions and cost than the First Maratha War.

The Marathas fielded two armies, approximately 85,000 men. British resources consisted of 50,000 Anglo-British troops.

The British began in earnest in August 1803, when forces under General Arthur Wellesley, the future duke of Wellington (1769–1852), took Ahmadnagar (August 11). On September 23, however, the Marathas counterattacked. Although Wellesley held his position, total Anglo-Indian casualties of 1,584 were among the heaviest sustained in any Indian battle up to that time.

Wellesley was again victorious on November 29, 1803, at Argaum, when his 11,000 Anglo-Indian troops routed 40,000, inflicting some 5,000 casualties. The following month, another Anglo-Indian force laid siege to the fort at Gawilghur from December 12 to December 15, ultimately storming it, then slaughtering 3,000 of the fort's 4,000 defenders—at a cost of only 14 killed and 112 wounded among the attackers.

While these victories were being won in the south, another British force was fighting a brilliant campaign on the north Indian plain. The Maratha fortress of Aligarh fell on September 4, 1803, and, on September 11, near Delhi, the British fielded 4,500 men against a Maratha force of 14,000, inflicting more than 3,000 casualties at a cost of 478 killed or wounded. From here, the Anglo-Indian army marched on Agra, site of the Taj Mahal. Agra was besieged during October 4–18, before finally falling.

At Laswari, on November 1, the British were again victorious, pounding at 9,000 Maratha infantry, who refused to yield until 7,000 of their number had fallen.

The Sindhais Marathas formally surrendered on December 20, but Jaswant Rao Holkar of Indore (d. 1811) remained defiant. British forces pursued him—he had

come to lead some 60,000 cavalry and 15,000 infantry—for months before he suddenly attacked during August 24–29, 1804, at Mokundra Pass. Half of the British regular force of 3,000 was killed, and Holkar laid siege to Delhi for nine days. A British army broke the siege, then pursued Holkar without mercy, running some of his forces to ground at Farrukhabad on November 17, 1804. Three thousand Maratha cavalymen died in what has been described as a mass execution rather than a battle.

In the meantime, the main armies fought at Dig (Deeg) on November 13, and Holkar was defeated with heavy losses. His stronghold at Dig was besieged from December 10 to December 24, and, with its loss, Holkar ceased to be a threat. Nevertheless, the fortress town of Bhurtpore continued to side with Holkar, and on January 1, 1805, the Anglo-Indian forces laid down siege lines. The defenders held out with fanatical desperation against four major attacks, which cost the Anglo-Indians 3,205 casualties. The city never really fell, but, on April 17, its defenders agreed to withdraw support from Holkar.

Holkar himself was pursued into the Punjab during October 1805. He surrendered in December, thereby ending the war.

Maratha War, Third (1817–1818)

PRINCIPAL COMBATANTS: British East India Company vs. the Pindari bandits and Peshwa Baji Rao

PRINCIPAL THEATER(S): Central India

DECLARATION: Maratha leaders against Britain, November 6, 1817

MAJOR ISSUES AND OBJECTIVES: The British puppet peshwa, Baji Rao, attempted to assert real authority over the Maratha Confederacy.

OUTCOME: The British East India Company put down Baji Rao's bid for power, defeated the Pindari, and established control of all Maratha lands.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Anglo-Indians, 20,000; Marathas, 200,000

CASUALTIES: Anglo-Indians, 2,000 killed; Marathas, more than 5,000 killed or wounded

TREATIES: None

The Third Maratha War was triggered by the raids of the Pindaris, a piratical outlaw gang, mostly consisting of Marathas. This group was secretly backed by the most important Maratha leaders, Jaswant Rao Holkar of Indore (d. 1811) and Peshwa Baji Rao (1775–1851). On Novem-

ber 6, 1817, Baji Rao declared his backing publicly and thereby began a new war against the British.

In response to what they took as a declaration of war, two British armies were deployed, the Army of the Deccan and the Grand Army, together totaling 20,000 troops. By this time, the Marathas could muster 200,000. As was the case in the first two Maratha wars, however, the British forces were better equipped and much more skillfully led. On November 5, 1817, a force of 2,800 men drove off Baji Rao's force of 26,000 at Kirkee, inflicting 500 Maratha casualties while incurring only 86 killed or wounded. More decisive was the Battle of Mahidpur on December 21, 1817, when 5,500 Anglo-Indian infantrymen used bayonets to charge 30,000 Maratha cavalry and 5,000 infantry under Holkar. The vastly superior Maratha force was driven from its fortifications, and its losses exceeded 3,000 killed or wounded. Anglo-Indian losses were 174 killed, 621 wounded.

British-led sepoy fought smaller actions against Pindaris at Sitabaldi on November 24, 1817, and then at Nagpur on December 16. The key Maratha citadel there fell on December 24. On January 1, 1818, a mere 1,000 Anglo-Indian troops held off 25,000 Maratha attackers at Korygaom long enough for the arrival of reinforcements to drive the attackers off.

On May 10, 1818, an army of 4,000 Anglo-Indians dispersed the remnant of Baji Rao's army, just 7,500 men, at the Battle of Sholapur. The Marathas suffered losses of more than 1,000 killed, whereas British casualties totaled 102 killed or wounded. Baji Rao surrendered on June 2, bringing an end to Maratha political and military power.

Marathon Campaign (490 B.C.E.)

PRINCIPAL COMBATANTS: Athens vs. Persia

PRINCIPAL THEATER(S): Plain of Marathon, Greece

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Persia sought to punish Athens for its role in the Ionian Revolt, 500–493 B.C.E., and to capture the Plain of Marathon.

OUTCOME: Through a combination of patience and skilled deployment of forces, the Athenian general Miltiades separated the Persian land forces from the Persian fleet and repulsed the invasion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Persians, 50,000; Athenians, 20,000

CASUALTIES: Unknown

TREATIES: None

The Marathon Campaign was a Persian expedition to punish Athens for the part it had played in the IONIAN REVOLT, from 500–493 B.C.E. In 492, the Persians dispatched an invasion fleet, which, however, was wrecked in a storm. Two years later, in 490, a second fleet was sent, this one carrying about 50,000 soldiers across the Aegean Sea. The invaders sacked Eretria, reembarked on their vessels, and landed at the Plain of Marathon. This was territory that the pro-Persian Athenian Alcmeonid faction planned to restore to Persia. However, led by Miltiades (d. 489 B.C.E.), an Athenian citizen army staked out the plain, but continually evaded battle. At length, the impatient Persians attacked Athens by sea and with a cavalry force. This was a tactical blunder that exposed the Persians to attack by the waiting Athenians. Miltiades led his forces to a stunning victory.

A soldier, Phidippides (d. 490 B.C.E.), ran from Marathon to Athens to announce the victory—and thus “marathon” has become synonymous with a long-distance run. Phidippides collapsed and died after his effort; it was said that his heart burst. As for the Persian fleet, it withdrew when it heard of the defeat of the land forces.

Marches, Rebellion of the (1322)

PRINCIPAL COMBATANTS: Edward II vs. rebels from the Marches

PRINCIPAL THEATER(S): The Marches (English-Welsh borderlands)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Edward II sought to restore his chamberlain, Hugh le Despenser, to control of Glamorgan after he had been ousted by Marcher rebels.

OUTCOME: The rebellion was crushed and Despenser restored.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Marches is the borderland between England and Wales, long a region of contention between the two countries. On July 7, 1307, it fell under the suzerainty of King Edward II (1284–1327) who ascended the English throne upon the death of his father, Edward I (1239–1307) (“Longshanks”). There was little love lost between the old

king and his son, whose reign proved disastrous. Edward II inherited some of his problems from Longshanks, most significantly a substantial national debt and a war with Scotland (see SCOTTISH WAR [1314–1328]), but many of them were of his own making. Surrounded by a ruling nobility related to his family by blood and fealty, Edward had shunned his peers and fallen in love with Piers Gaveston (1284–1312), son of a Gascon knight. Trying to break off their sexual affair, Edward Longshanks had exiled Gaveston, but the newly crowned Edward II immediately recalled him, bestowing on him the highest honors he could manage—the earldom of Cornwall and marriage to the king's niece. This was but one of several acts by which Edward awarded England's highest offices to his father's most prominent opponents. He recalled both Archbishop Winchelsey (d. 1313) and Bishop Bek of Durham, whom Longshanks had also exiled, and he dismissed and put on trial his father's much-trusted treasurer, Walter Langton (d. 1321).

These actions earned Edward the hatred of the English barons, who in 1311 formed a 21-member committee that drafted a document called the Ordinances, which again banished Gaveston and restricted Edward's control over finances and appointments. Though Edward apparently accepted these demands and sent Gaveston abroad, he soon arranged for his lover's return. The barons, led by Edward's enigmatic cousin Thomas, second earl of Lancaster (c. 1278–1322), responded by seizing Gaveston and, in June 1312, executing him. There was little Edward could do. Robert I the Bruce (1274–1329), attempting to rid Scotland of the yoke of English rule, won a major victory at Bannockburn on June 14, 1314 (see BRUCE'S REVOLT), which left the king at the mercy of the barons. Thomas's political agenda seemed little more than the enforcement of the Ordinances, but it served to block further action by others. By 1315, Lancaster had made himself the real master of England, and in 1316 a parliament held at Lincoln named him chief councillor.

Thomas soon proved incompetent at government and, by 1318, a group of moderate barons rose to assume the role of arbitrators between Lancaster and Edward, while Edward himself had found two new favorites—Hugh le Despenser (the Elder) (1262–1326), earl of Winchester, and his son and namesake, Sir Hugh le Despenser (the Younger) (d. 1326). The latter married into the Clare family and thereby gained control of Glamorgan on the Welsh border. When the king supported the younger Despenser's territorial ambitions in Wales, Lancaster and the Marcher lords banished both Despensers at Parliament in 1321. Edward then took up arms on their behalf, and the two exiles returned. Edward II attacked the lords of the Marches at the Battle of Boroughbridge in March 1322. In a brilliant tactical innovation, Edward dismounted his cavalry and used them, on foot, together with archers to decimate the rebel cavalry.

In this brief civil war, Edward was totally victorious. He had waited 11 years to annul the Ordinances and avenge Gaveston. Now, he had Lancaster executed for treason after his and the lords of the Marches' ignominious defeat at Boroughbridge. In death, the hardly popular Lancaster began to attract a martyr's sympathy and many rumors spread of miracles at his tomb, but Edward proved adamant. He executed a large number of Lancaster's followers in a horrific bloodbath. In the same year the Ordinances were repealed in Parliament at York, and in the Statute of York was announced, returning the kingdom to the constitutional practices of the past.

Edward's reliance on the Despensers, however, soon aroused the resentment of his queen, Isabella (1292–1358), who became the mistress of Roger Mortimer (c. 1287–1330), an exiled baron opposed to Edward. In 1326 the couple invaded England, executed the Despensers, and deposed Edward in favor of his son, King Edward III (1312–77). They imprisoned Edward II, who died in September 1327, most likely murdered.

Mariposa War (1850–1851)

PRINCIPAL COMBATANTS: Miwok and Yokut Indians vs. California miners

PRINCIPAL THEATER(S): Sierra Nevada foothills and San Joaquin Valley of California

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Miwok and Yokut attempted to drive white miners from the Indians' homeland.

OUTCOME: Indecisive

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Miners, unknown; Indians, Approximately 350

CASUALTIES: Unknown, but certainly minimal

TREATIES: None

This brief conflict began in 1850, when the Miwok and Yokut Indians, living in the foothills of the Sierra Nevada and in the San Joaquin Valley in California, retaliated against the gold miners who had invaded their country. Led by Chief Tenaya (fl. 1850s), warriors attacked isolated prospectors and burned several trading posts belonging to an entrepreneur named James D. Savage (1822–52). Savage responded by raising a local militia—which he dubbed the Mariposa Battalion, after Mariposa County—and by launching a campaign against the Miwoks and Yokuts in 1851.

Tenaya, with approximately 350 warriors, simply evaded Savage's first campaign, but a second foray resulted in the capture of the chief and many of the warriors, which ended the Mariposa War.

Marjorian's Barbarian Campaigns

(457–461)

PRINCIPAL COMBATANTS: Marjorian's Roman forces vs. the Vandals and Duke Ricimer

PRINCIPAL THEATER(S): Italy, Gaul, and Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Marjorian sought to reconstitute the Western Empire of Rome and then to defeat the Vandals in their African homeland.

OUTCOME: Although Marjorian achieved his reunification objective, treachery destroyed his African invasion plans, and a revolt in Italy prompted his abdication.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Ricimer (d. 472), a Swabian-Visigothic duke, drove the Vandals out of Italy and became the major power there. He placed the Roman general Marjorianus—Emperor Marjorian (d. 461)—on the throne, with the intention that he serve as a puppet; however, Marjorian soon took matters of state in his own hands and began a series of vigorous campaigns against the Vandals. When a Vandal force raided near the mouth of the Liris River (the Garigliano), Marjorian easily defeated it. This victory made him ambitious to end the Vandal threat once and for all by taking action against the seat of Vandal power in Africa. However, before he could conduct a successful campaign against the Vandals in their homeland, Marjorian believed that he must reunite the Western Empire. Therefore, in

458, he invaded Gaul. Near Toulouse, he engaged the forces of Visigoth king Theodoric II (d. 466). Marjorian wisely concluded a generous peace with Theodoric, which renewed Roman sway over Gaul as well as Spain during 458–460.

With the Western Empire effectively made whole again, Marjorian set about building an invasion force at Cartagena, Spain, to attack Africa. The Vandal chieftain, Gaiseric (c. 390–477), was a jump ahead of Marjorian, however. Through the judicious application of bribery, he was able to persuade key Romans in Cartagena to turn traitor. Thanks to these “moles,” Gaiseric was able to sail a Vandal fleet against the fleet of Marjorian just before it was about to embark in 461. The Roman fleet was virtually destroyed.

Marjorian refused to accept defeat and immediately began rebuilding the fleet. At this point, however, Ricimer, exploiting Marjorian's preoccupation with his African expedition, incited a revolt in Italy. Appalled by what he deemed the ingratitude and disloyalty of the Roman people, Marjorian abdicated. Ricimer, bent on ensuring that Marjorian would not return to rise again, had him assassinated. Ricimer emerged as the uncrowned emperor of Italy—and the Western Empire never regained anything approaching its past glory.

Maroons' Rebellion (1795)

PRINCIPAL COMBATANTS: Maroons (former Jamaican black slaves) vs. Great Britain

PRINCIPAL THEATER(S): Jamaica

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The judicial beating of two Maroons triggered a brief, bloody general uprising.

OUTCOME: The uprising was quickly put down.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Maroons, 300; British troops, 1,500

CASUALTIES: Unknown

TREATIES: Partly at issue was a 1739 treaty between the British and the Maroons, granting the Maroons certain rights.

Freed or escaped black slaves in Jamaica were known as Maroons (from the Spanish *murrano*, meaning wild boar

and suggesting an untamed beast) and lived in the woods and mountains. British colonial authorities and British settlers continually harried the Maroons, but in 1739 a treaty was concluded between the British authorities and Maroon leaders granting Maroons territory and autonomy. Under the treaty, the situation was relatively peaceful until 1795, when two Maroons were beaten by British authorities for stealing swine. Other Maroons regarded this as an outrage and rose up in rebellion in July.

The uprising was quick and bloody, and 1,500 British regulars pursued about 300 rebels deep into the woods, using bloodhounds imported from Cuba. Captured, some of the Maroons surrendered. Those who refused to be pacified were packed off to Halifax in the British colony of Nova Scotia. Confined there for a time, they were subsequently, in 1800, transported to Sierra Leone, Africa. As for the rebellion, not only had it been definitively extinguished, but the Maroons remaining in Jamaica agreed to assist British authorities in putting down any future rebellions on the island. In exchange for this pledge, colonial authorities agreed to adopt a hands-off policy with regard to Maroon affairs.

Marsic War See SOCIAL WAR (91–88 B.C.E.).

Maryland and Virginia's War with the Susquehannocks (1675–1676)

PRINCIPAL COMBATANTS: Maryland and Virginia colonists vs. Susquehannock and allied Indians

PRINCIPAL THEATER(S): Maryland and Virginia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Animosities between settlers and Indians led to violence and calls for revenge, which the colonial governments heeded in part to better control trade relations with various tribes, which in turn sparked a violent dispute between eastern (and mostly aristocratic) and western (and mostly “peasant”) colonial factions.

OUTCOME: Inconclusive; many Susquehannock, however, agreed the year after the war ended to move from the Delaware Valley out of reach of the Marylanders

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Colonists, about 1,000; Indian numbers unknown

CASUALTIES: Fewer than 50, total

TREATIES: No official settlement, though the Treaty of Shackamaxon in 1677 set the terms for the move westward of the majority of the Susquehannock

A conflict between the settlers of Maryland and the Iroquois Confederation ignited in 1660, when a party of Oneida—members of the Iroquois Five Nations—killed five Piscataway Indians “for being friends” with Maryland and the Susquehannock. In response, Maryland, either deliberately or through ignorance, failed to distinguish the Oneida from the rest of the Iroquois Confederation and declared war on the entire Five Nations.

The Piscataway were, in effect, a “client” tribe of Maryland, a favored trading partner that was politically dominated by the colony. Since the Five Nations were closely allied with Maryland’s chief trading rival, the Dutch, probably war was declared not only to defend the Piscataway, but to gain an advantage over the Dutch and, if possible, to drive them from the Delaware Valley. The Susquehannock were interested in securing all the assistance they could in fighting the ongoing BEAVER WARS against the Iroquois.

Within a very few years, Maryland’s perception of which allies were the most valuable shifted, and the colony sought a separate peace with the Iroquois. In 1674, colonists came to terms with the Seneca, an important Iroquois tribe, who were thereby left free to push the Susquehannock south to the Potomac. Tensions now ran high between Maryland and its betrayed ally, the Susquehannock Indians.

In July–August 1675, a group of Maryland Nanticoke (also called Doeg) Indians fell into a dispute with a wealthy Virginia planter named Thomas Mathew (fl. 1670s), who had apparently neglected to pay them for some goods traded. Taking matters into their own hands, the Nanticoke seized some of Mathew’s hogs. In retaliation, a gang of Mathew’s men killed some of the Indians and recovered the hogs. The Nanticoke now took vengeance by killing three Virginians. At this point, George Brent (fl. 1670s–1680s) and George Mason (fl. 1670s), captains of the local militia, gathered 30 Virginians and crossed into Maryland to confront the Nanticoke. Brent’s party surrounded an Indian cabin, called for a talk, and when the Indians emerged, Brent seized one chief, accused him of murder, then shot him when he attempted to escape. A general melee broke out, in which another 10 Nanticoke were killed.

During the confrontation, Mason’s detachment had surrounded another cabin nearby. The Indians who had been sleeping inside the cabin were awakened by Brent’s gunfire, ran out of the cabin, and were cut down by Mason’s men. Fourteen were killed before Mason realized that he was firing not on Nanticoke but on Susquehannock.

The incident was more than enough to ignite full-scale war between the Nanticoke, Susquehannock, and allied tribes on the one hand and Maryland and Virginia on the other.

Governor William Berkeley (1606–77) of Virginia dispatched Colonel John Washington (1632–77) (great-

grandfather of the first president of the United States) and Major Isaac Allerton (fl. 1670s) to investigate the causes of the Indian raids. Only if the investigation determined that there was just cause for a war would the militia be deployed. Washington and Allerton, however, overstepped their commission and immediately raised a militia force. Late in September 1675, 1,000 Virginians and Marylanders surrounded the place the Maryland Assembly had designated as the home village of the Susquehannock, at the junction of the Piscataway Creek and the Potomac. A parley was called for, and five chiefs emerged, only to be treacherously slain.

For the next six weeks, the militiamen besieged the Susquehannock town, until the warriors managed to slip out with their women and children. They killed 10 sleeping guards in the process, and they resumed a regime of raiding the white settlements. After 36 settlers had been killed, the Susquehannocks sent a message to Governor Berkeley, declaring that with (approximately) 10 common Englishmen killed for each of their chiefs slain, the score, as it were, was even, and they were willing to make peace.

Berkeley scornfully rejected the offer, yet had little desire to prolong the war. He proposed building a chain of defensive fortifications around the settled parts of the colony and fighting a war of attrition until the Indians gave up. The proposal inflamed the settlers of Virginia's frontier, who would be exposed to the full force of the Indians' wrath. Feeling oppressed and neglected by the central colonial government, the settlers of the outlying areas lined up behind a charismatic braggart named Nathaniel Bacon (1647–76) in what came to be called BACON'S REBELLION. The "rebellion" served to spread and intensify Indian hostilities, and the Indian war became inextricably bound up with Bacon's Rebellion.

In the meantime, while Berkeley was fighting to regain possession of his colony from the likes of Bacon, Governor Edmund Andros (1637–1714) of New York, seeking to forestall the kind of disaster that had beset New England, which was embroiled in the tragic and costly KING PHILIP'S WAR, offered the Susquehannock refuge within his colony. Some accepted, whereas others continued to raid Maryland settlers, and still others—probably the majority of the tribe—now actively sought peace with Maryland authorities. The colony's Indian "clients"—the Piscataway and Mattawoman—demanded that the war continue until the Susquehannock were effectively neutralized. A peace conference convened in early August 1676 was quickly transformed into a strategy meeting for renewing war against the Susquehannock.

At this point Governor Andros, fearing that the entire eastern seaboard would erupt into an Indian war, threatened to take the Susquehannock permanently under his colony's jurisdiction. This temporarily ended hostilities, and Bacon's death in October 1676 (from dysentery) further cooled the situation. The Maryland and Virginia

Indian war of 1675–76 ended without any official settlement, though in March 1677, a treaty conference was held at Shackamaxon (today part of Philadelphia) in which many of the Susquehannock consented to removal from the Delaware Valley and beyond the reach of Maryland. However, some 26 Susquehannock families remained in the Delaware Valley by accepting adoption into the Delaware tribe.

Well into the 1680s Maryland as well as Virginia persisted in sporadic conflicts against the Iroquois, who made extensive use of adopted Susquehannocks to conduct raids against the colonies.

Further reading: Alan Axelrod, *Chronicle of the Indian Wars: From Colonial Times to Wounded Knee* (New York: Prentice Hall General Reference, 1993); Francis Jennings, *The Ambiguous Iroquois Empire: The Covenant Chain of Indian Tribes with English Colonies* (New York: W. W. Norton, 1984).

Maryland's Religious War (1644–1646, 1654)

PRINCIPAL COMBATANTS: Royalists vs. pro-Parliament colonists; later, Proprietary forces vs. Puritans

PRINCIPAL THEATER(S): Maryland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Against the background of civil war in England, Royalist factions vied with Parliamentary factions to gain control of Maryland.

OUTCOME: The second Lord Baltimore, proprietor of the colony, regained control of the colony.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

By the early 1640s, the English colony of Maryland was beginning to feel the effects of the First ENGLISH CIVIL WAR. Governor Leonard Calvert (1606–47) returned to England and appointed Giles Brent as governor in his stead. Shortly after this, Richard Ingle (fl. 1640s), a pro-Cromwell sea captain from London, arrived in Maryland and led a two-year campaign of sporadic raids throughout the colony known as "the plundering time." Ingle was finally captured, and was tried four times by juries that refused to reach verdicts. He escaped, and continued to ply Maryland waters, both for legal and illegal purposes.

In the meantime, in the fall of 1644, Calvert returned to Maryland, then traveled to Virginia with letters of marque against Parliamentary supporters; he set about recruiting privateers and troops to counter Ingle in Maryland. In 1645, Ingle, however, obtained his own letters of marque against royalists, and, with a growing band of supporters,

intensified his Maryland raids, plundering settlements and manors. He took Jesuit missionaries captive, and he also made prisoners of several important political leaders, including the temporary governor, whom he shipped off to England. With Parliamentary forces gaining the upper hand in England, Maryland was thrown into chaos. Calvert was still in Virginia, the temporary governor was now a prisoner in England, and a new government and governor, Giles Brent (served 1643–44), were hurriedly established by the colonial council in an attempt to restore order.

Calvert returned during spring 1647, but died suddenly in June. Just before his death, he appointed Thomas Greene (served 1647–49), a staunch Catholic royalist, as governor. In mid-1648, however, Cecil Calvert (1605–75), the second Lord Baltimore (who had inherited Maryland from his father and who became first lord proprietor of the colony), shifted toward a pro-Parliament stance in an effort to preserve his colonial rights. Although he himself was a Catholic, Baltimore demoted Greene to a position on the council and replaced him with William Stone (served 1649–52), a Protestant friendly to the Cromwellian cause. By this time, the entire council was heavily Protestant, which restored peace to the colony.

New religious strife developed in 1654, however, when Puritan colonists clashed with other Maryland settlers. Lord Baltimore dispatched Governor Stone with a small army to engage an inferior Puritan force near present-day Annapolis on the Severn River. Although outnumbered, Puritan forces won the day at the Battle of the Severn, March 25, 1654, and the second Lord Baltimore was unable to regain complete control of his colony until the Restoration under Charles II (1630–85) in 1660.

Further reading: Morris L. Radoff, ed., *The Old Line State: A History of Maryland* (Annapolis: Maryland State Archives, 1971); Vera Foster Rollo, *The Proprietorship of Maryland: A Documented Account* (Annapolis: Maryland Historical Society, 1988).

Maryland's War with the Susquehannocks (1643–1652)

PRINCIPAL COMBATANTS: Susquehannock Indians vs. colonial Maryland

PRINCIPAL THEATER(S): Maryland

DECLARATION: Maryland declared war on September 23, 1642.

MAJOR ISSUES AND OBJECTIVES: Unknown

OUTCOME: Cessation of hostilities

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: 15 militiamen captured, two tortured

TREATIES: Susquehannock sue for peace, 1652

The reasons for the colony of Maryland's declaration of war on the Susquehannock Indians on September 23, 1642, are unknown. Perhaps it was to halt the intrusion of Susquehannock into territory occupied by Maryland's "client" Indians, the Piscataway (also called Conoy), Patuxent, and Yoamacoe. Whatever the cause, Maryland militiamen mobilized between July 1643 and June 1644, but their first outing seems to have involved nothing that could be called a battle, because the Susquehannock simply fled from the militia's guns. A second expedition resulted in a setback for the Marylanders, because the colony's trading rival New Sweden armed the Indians. About 15 militiamen were captured and two of them were tortured to death. The few records of the Susquehannock victory that exist note the Marylanders fled the field so hastily they abandoned arms, including two artillery weapons—precious commodities in the colonies. But in general, as is frequently true of Indian-colonial conflicts, especially those involving alliances between Indians and one "Christian" colony fighting against another "Christian" colony, no detailed information about this war was ever recorded. It does seem, however, that a relatively inactive state of war existed between the colony and the Susquehannocks from 1643 or 1644 to 1652, when the Susquehannocks, now entangled in the BEAVER WARS against the Iroquois, sued for peace with Maryland and negotiated a treaty. Indeed, within a decade of the treaty, Maryland enlisted the Susquehannocks as allies in combat against the Iroquois.

Masada, Siege of (72–73)

PRINCIPAL COMBATANTS: Roman Legion X Fretensis vs. Jewish zealots defending Masada

PRINCIPAL THEATER(S): Masada, outside of Jerusalem
Declaration: None

MAJOR ISSUES AND OBJECTIVES: The Romans sought to end Jewish resistance in Judea; Masada sheltered the last holdouts.

OUTCOME: After a two-year siege, the Romans finally breached the fortress wall; all but seven defenders (two women and five children) had committed suicide.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Romans, 15,000; defenders of Masada, 1,000

CASUALTIES: The defenders committed mass suicide—approximately 1,000 died.

TREATIES: None

Following Roman victory at the siege of Jerusalem in 70, Jewish rebels held out in desert fortresses. The Romans made a sweep of these positions, conquering both Herodium and Machaerus by 71. A third fortress, Masada, occupied the entire 18-acre top of an isolated mesa towering some 1,424 feet above the southwest coast of the Dead Sea. There, Herod the Great (r. 37–4 B.C.E.), king of Judea, had constructed a renowned royal citadel of two ornate palaces (one multilevelled), heavily reinforced walls, commanding defensive towers, and cisterns holding almost 200,000 gallons of water fed by a system of aqueducts.

Following Herod's death in 4 B.C.E., Roman legions seized and held the fortress, but, during the JEWISH REVOLT (66–73), the legions lost Masada to Jewish Zealots in 66 C.E. Approximately 1,000 men, women, and children of this Jewish sect, staunchly opposed to domination by Rome, now occupied a fortress whose steep mountain slopes made it virtually unassailable. Against these defenders, the Romans mounted a siege force of some 15,000 (Legion X Fretensis). Despite their overwhelming advantage of numbers, the besieging force hammered away at Masada for two years, without success building elaborate siege engines and employing a massive battering ram. Finally, the besiegers constructed a sloping ramp of earth and stones to bring their soldiers within reach of the stronghold, which fell only after the Romans used the ram to create a breach in the defenders' walls. When the Zealots quickly repaired the breach with wood, the Romans set fire to the repairs and stormed the fortress. The Zealots, however, preferred death to enslavement, and when the Romans entered, they found that the defenders, led by Eleazar ben Jair (d. April 15, 73 C.E.), had taken their own lives. Two women and five children—hidden in a water conduit—survived to tell the story.

In the 20th century, following the creation of a Jewish homeland in Israel, Masada became an icon of Jewish nationalism, and it is now one of Israel's most popular tourist attractions.

Welch, *Masada and the World of the New Testament* (Provo, Utah: Brigham Young University Press, 1997).

Masaniello's Insurrection (1647)

PRINCIPAL COMBATANTS: Neapolitan rebels vs. Spain

PRINCIPAL THEATER(S): Naples and vicinity

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The rebellion began as a protest against excessive taxation and expanded to a rebellion of the lower classes against the nobles.

OUTCOME: The people of Naples ultimately invited reinstatement of Spanish rule.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: At least 10,000 were killed in the insurrection.

TREATIES: None

Tommaso Aniello (d. 1647), called Masaniello, was a Neapolitan fisherman who, financed by a lawyer named Giulio Genoino (fl. 17th century) led a rebellion against a tax on fruit levied to finance tribute payments Naples owed Spain. Masaniello's rebels were all of the lower classes, and their insurrection began, on July 7, 1647, with the burning of the customs house and an attack on the Spanish viceroy, who fled the city. The rebels rampaged through Naples, killing members of the nobility at random.

The violence was halted after the viceroy, Antonio Alvarez de Toledo (fl. 17th century), agreed to pardon the rebels, to grant citizens' rights to the Neapolitans, and to rescind the hated tax. However, after these concessions were made Masaniello attempted to provoke his followers into resuming their violence—apparently for the sake of murdering more of the nobility. Although Giulio Genoino put Masaniello into protective custody, the fisherman was assassinated on July 16, 1647, perhaps by agents of the viceroy, the nobles, or even by disillusioned followers.

No sooner was Masaniello dead than the viceroy abrogated his agreement, thereby triggering a new round of rebellion. A Spanish fleet bombarded Naples in an effort to beat it into order, and Spanish troops attempted an invasion of the city, but were beaten back. The Neapolitans proclaimed a republic, but Spain renewed military pressure and, finally, in 1648, the rebels admitted the return of Spanish rule. Spanish authorities rounded up the rebel leaders, whom they subsequently executed.

Mascates, War of the (1711)

PRINCIPAL COMBATANTS: Pernambuco sugar planters vs. Mascates

PRINCIPAL THEATER(S): Pernambuco, eastern Brazil

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The war resulted from conflict between upper-class planters and lower-class Mascates (peddlers)

OUTCOME: The district governor mediated a peace settlement, which included a no-fault general amnesty. Nothing was gained by either side.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Planters, 30 killed; Mascates, 25 killed

TREATIES: Mediated settlement, 1711

The sugar planters of the wealthy town of Olina, in Pernambuco, Brazil, scorned the poorer inhabitants—sailors and traders—of neighboring Recife as *Mascates*, peddlers. On June 18, 1711, the Mascates rose against the planters, who responded by laying siege against Recife for three months. The Mascates had control of the town's many cannon and continually bombarded the siege lines. The conflict ended when Portuguese authorities intervened with a promise of amnesty for both sides, neither of which gained anything by the conflict.

Matanza, La (“The Slaughter”) See SALVADORAN REVOLT (1931–1932).

Mau Mau Uprising (1952–1956)

PRINCIPAL COMBATANTS: Great Britain vs. Kenya's Mau Mau rebels

PRINCIPAL THEATER(S): British East Africa (Kenya)

DECLARATION: State of emergency declared October 20, 1952

MAJOR ISSUES AND OBJECTIVES: The Mau Mau used terror in an effort to wrest control of the country from the British.

OUTCOME: The uprising was put down, but it served to inspire many other independence movements throughout Africa.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: British, 50,000; Mau Mau and others, unknown

CASUALTIES: Casualties among settlers were high (military losses included 590 killed and 1,500 wounded), but, among the Mau Mau, losses were much higher: 11,503 Mau Mau were killed.

TREATIES: None

By the 1950s, movements were well under way throughout Africa to oust white European colonial governments and settlers. In British East Africa (Kenya), the Mau Mau,

concentrated around Nairobi, were a secret terrorist organization made up of Kikuyu tribesmen led by Jomo Kenyatta (1898–1978) and determined to restore the country to native African control. From October 20, 1952, to October 1956, Mau Mau bands marauded throughout the so-called “white highlands,” destroying plantations and slaughtering white settlers. The Mau Mau also turned terrorism against other natives, compelling many black Africans to join their ranks or suffer death. The worst incident occurred on March 26, 1953, when 1,000 Mau Mau attacked the “loyal” (friendly to whites) village of Cari, killing 97 and mutilating 37 more.

On October 20, 1952, British authorities declared a state of emergency and sent thousands of regular troops into the field. Ringleaders and assumed ringleaders were targeted for arrest. Despite this action, however, the Mau Mau movement was so well established that, even without key leaders, such as Kenyatta, who was jailed in 1953, the terror continued and even intensified. The British responded by building large concentration camps into which Mau Maus and suspected Mau Maus were thrown. Certain villages were surrounded by contingents of armed guards. Under such pressure, many of the Mau Mau fled into the forests and hills, and waged a guerrilla war from there. However, the British troops proved effective at flushing the terrorists out.

In 1956, the Mau Mau mastermind Dedan Kimathi (d. 1957) was captured, which brought a rapid diminution of Mau Mau activity. He was executed on February 18 of the following year. Although the uprising had been put down, the world was made acutely aware of the injustices of long-established European colonialism in Africa. The great African independence movements of the late 1950s and early 1960s were built on the foundation of the Mau Mau movement.

Mauretania, French Conquest of See FRENCH CONQUEST OF MAURETANIA.

Mauryan Empire, Conquests of the (323–180 B.C.E.)

PRINCIPAL COMBATANTS: The Mauryan Empire vs. various kingdoms of India and Hellenic forces

PRINCIPAL THEATER(S): India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The rulers of the Mauryan Empire sought to unify India and repel advances by the Hellenic armies.

OUTCOME: Under the first three rulers of the Mauryan dynasty, the empire expanded its borders and held invaders from the west at bay.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

In 323 B.C.E., Chandragupta Maurya (r. 323–298 B.C.E.) seized control of the Magadhan throne in present-day India. This clan had grown from being one of 16 competing political factions in 600 B.C.E. to being the dominant group in the fifth century B.C.E. The Magadha Empire had its capital in Pataliputra (or Patna) and controlled trade along the Ganges River. When Chandragupta Maurya came to the throne, he seized land east of the Indus River and south to the Narmada (or Narbada) River. Ejecting the Macedonians from northwestern India, he was determined to close the avenues of invasion through the mountain passes of present-day Afghanistan. In 305 B.C.E., he defeated the army of Seleucus Nicator (c. 358–280 B.C.E.) of Macedonia. By terms of the treaty between the two powers, Seleucus ceded the provinces east of the Indus River and large areas of Arachosia and Gedrosia west of the river to Chandragupta in exchange for 500 war elephants.

Chandragupta's son, Bindusara (fl. 298–273 B.C.E.), inherited an enormous military force from his father including a secret service and office of naval affairs. During his reign from 297 to 274 B.C.E., he further broadened the reach of the Mauryan Empire through his conquest of the Deccan (central India).

Asoka (fl. 269–232 B.C.E.), the grandson of Chandragupta, conquered the Kalinga kingdom along the eastern coast of India as far as the Godavari River. With these conquests, the Mauryan Empire included all of the subcontinent, except its southern tip, plus Nepal and a large part of Afghanistan. After taking Kalinga, Asoka became a Buddhist, pursued a policy of peace, and ably ruled his vast empire. When he died in 232 B.C.E., the Mauryan Empire became vulnerable to invaders from Bactria, Scythia, and Parthia. Indo-Hellenic forces captured the capital of Pataliputra, and by 180 B.C.E., the empire ceased to exist.

The Magadha Empire managed to survive, however, and reemerged as a considerable force under Chandragupta I (r. c. 320–c. 330 C.E.; no relation to Chandragupta Maurya) in about 320 C.E.

Maximian's Revolt (310)

PRINCIPAL COMBATANTS: Maximian vs. Constantine

PRINCIPAL THEATER(S): Gaul (Roman Empire)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Maximian wished to overthrow Constantine and reassume his former role as emperor.

OUTCOME: Maximian was defeated and forced to commit suicide.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Diocletian (245–313), emperor of the West, and Maximian (d. 310), emperor of the East, abdicated their thrones in 305 and were succeeded as augusti by, respectively, Constantius (r. 293–306) in the West and Galerius (r. 305–311) in the East. Two new caesars were appointed, Flavius Valerius Severus (r. 305–311) and Galerius Valerius Maximinus Daia (r. 305–313), in preference to Constantius's son Flavius Valerius Aurelius Constantinus (Constantine, r. 306–337) and Marcus Aurelius Valerius Maxentius (r. 306–312), the son of Maximian. This breach of succession triggered the ROMAN CIVIL WAR (306–307).

In the meantime, Rome was continually menaced by barbarians, and Constantine, now junior augustus, set off on a campaign against the Franks in Gaul. Maximian exploited his absence by staging a revolt in Constantine's court at Arelate (modern Arles, France) with the object of becoming sole emperor. To Maximian's consternation, however, Constantine returned swiftly to Arelate and was able to drive Maximian and his partisans out of the city to Marseille. There Constantine captured Maximian. Given a choice between degradation and an honorable suicide, Maximian chose the latter.

Mayan Revolt (1546)

PRINCIPAL COMBATANTS: Spanish conquistadores vs. Mayan Indians

PRINCIPAL THEATER(S): Honduras

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest of the Mayans
OUTCOME: After years of effective resistance, the Mayans were conquered by intense application of utmost brutality and violence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but nearly genocide among the Mayans

TREATIES: None

The Spanish conquistador Hernán Cortés (1485–1547) subjugated the Aztec Empire in 1521, then from 1522 to 1539, he led expeditions south, into southern Mexico and northern Central America, penetrating as far as El Salvador. In Central America, especially Honduras, he encountered extremely fierce resistance from the Mayans (1524–26), whom he failed to subjugate. It was left to the military successor of Cortés, Francisco de Montejo (c. 1484–c. 1550), to lead a series of larger expeditions into Honduras during 1539. These suppressed Mayan resistance by the most brutal and violent of means, even to the point of genocide.

Mecca, Sack of (930)

PRINCIPAL COMBATANTS: Karmathian raiders vs. the Muslims of Arabia

PRINCIPAL THEATER(S): Mecca, Saudi Arabia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Bent on plunder, the Karmathians sacked Mecca and stole the Black Stone, one of its more sacred objects.

OUTCOME: The Black Stone was held by the Karmathians for 10 years.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Karmathians (see KARMATHIAN REVOLT) were Muslim heretics who lived in northeast Arabia. In the early decades of the eighth century they frequently invaded Mesopotamia and raided Baghdad. One such raid occurred in 930 when they sacked Mecca, Islam's holy city, and made off with the Black Stone from the Kaaba (the Muslim shrine in Mecca). The Karmathians held onto the sacred treasure for a decade before the Fatimids, the ruling dynasty in North Africa, forced them to return it.

Morony, *Iraq after the Muslim Conquest* (Princeton, N.J.: Princeton University Press, 1984).

Mecca-Medina War (624–630)

PRINCIPAL COMBATANTS: Followers of Muhammad vs. Qurayshite pagans

PRINCIPAL THEATER(S): Medina and Mecca

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Muhammad fought a jihad (holy war), to establish Islam throughout the Arab world.

OUTCOME: Mecca fell to Muhammad, who established it as the holy city of Islam.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Muhammad, 3,000; Qurayshites, 10,000

CASUALTIES: Unknown

TREATIES: Treaty of al-Hudaybiyah, 629

An oasis on the old caravan trade route linking the Mediterranean world with the Middle East, Africa, and South Asia, ancient Mecca had gradually developed by Roman and Byzantine times into an important trade and religious center. Ptolemy called it Macoraba, and—according to Islamic tradition—Abraham and Ishmael, his son by Hagar, built the Kaaba as the house of God. The Kaaba, a cube-shaped stone building destroyed and rebuilt many times, was the goal of pilgrimages to Mecca before the coming of Islam. The city itself was controlled during biblical times by a series of Yemeni tribes, and under the pagan Quraysh, the town became something of a city-state, with commercial ties not only to the rest of Arabia, but to Ethiopia and to Europe as well. A desert entrepôt for trade, pilgrimage, and poetry festivals, Mecca grew historically significant with the birth there of Muhammad (570–632), the founding prophet of Islam.

In the summer of 621, 12 men from Medina—another desert oasis, this one in the Hejaz region of modern Saudi Arabia—who were visiting Mecca for the annual pilgrimage to the Kaaba (which, of course, was then still a pagan

shrine), fell under the sway of the new prophet who was denouncing the pagan Arab religion of the native Qurayshites. To Muhammad they secretly professed themselves Muslims before returning home to preach the new faith. Consequently, at the pilgrimage in June 622 a representative party of 75 people from Medina, including two women, not only professed Islam but also took an oath to defend the Prophet as they would their own kin in what became known as the two Pledges of al-'Aqaba. Muhammad urged many among his growing number of followers in Mecca to make their way in small groups to Medina. About 70 did so. Meanwhile, before Muhammad could leave to join them, the Meccans plotted his murder, at which point Muhammad slipped away and traveled to Medina by a devious route, a flight that became known in Latin as the Hegira and marks the beginning of the Muslim calendar—July 16, 622, in the Gregorian system. Muhammad reached Medina safely on September 24, 622.

Medina was a different kind of town from Mecca. Like Mecca, it was an oasis, one where date palms flourished and cereals grew, but here the Jews had become prominent in the centuries following their expulsion from Palestine by the Roman emperor Hadrian about 135 C.E. Several Jewish clans, who had settled among the original Arabs, had developed Medina's agriculture, and they still had the best lands. Here, too, the predominant Yemeni tribe had adopted the Jewish religion around 400 C.E. Later Arab immigrants belonging to the tribes of al-Aws and al-Khazraj, had also become well established in Medina. These eight or so clans, however, had fallen into serious feuds, and these feuds had produced much bloodshed only a few years past. Peace had never been fully restored. Prepared by their close contact with the Jews, many among the Arabs were perhaps looking for a messianic religious leader who would deliver them from oppression and establish a kingdom in which justice prevailed, as well as someone to act as an arbiter among their feuding kin. Little surprise that Muhammad's following continued to grow as he plotted his revenge against Mecca.

Soon he had planned out a military campaign against the Qurayshites. In March 624, he led 300 warriors in an ambush of a 1,000-person Meccan caravan en route from Syria, which traveled under the religious auspices of Mecca's Umayyad leader, Abu Sufyan (563–651), whose extended clan at first rejected Islam. Muhammad's violation of the religious sanctity of the pilgrimage awakened Mecca to the dangers posed by him and his followers.

The next year, the Qurayshites counterattacked Muhammad and his followers at the Hill of Uhud, outside of Mecca. This was followed by an attack on Medina by 10,000 Meccans under Abu Sufyan in 627. With a mere 3,000 men, however, Muhammad successfully defended Medina, and Abu Sufyan agreed to the Treaty of al-Hudaybiyah. This allowed Muhammad and his faithful to make a sacred pilgrimage to Mecca in 629. When a faction of Mec-

cans violated the treaty by attacking the pilgrims in November 629, Muhammad mounted an assault on Mecca in January 630. Meeting no resistance, his army destroyed a large number of pagan idols in the city. Muhammad remained, and his preaching, not the force of his arms, won over to Islam a large portion of the city. He was subsequently invited to establish Mecca as the holy city of Islam.

Median-Lyidian War (590–585 B.C.E.)

PRINCIPAL COMBATANTS: Media vs. Lydia

PRINCIPAL THEATER(S): Western Anatolia (Asian Turkey)

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: The kingdoms contested possession of western Anatolia.

OUTCOME: A draw resulting in a boundary agreement

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None recorded; although peace was achieved through a boundary settlement and royal marriage.

Following the collapse of the Assyrian Empire after the fall of Nineveh, the former Assyrian territories were divided between Babylonia and Media. The division precipitated the decline of Lydia, which had been the great power in western Anatolia (the Asian portion of Turkey). The Median-Lyidian War was a first major step in the decline.

Media's King Cyaxares (d. 585) attempted to invade and acquire the Anatolian territory of Urartu (Armenia), which Lydia's King Alyattes (c. 619–560) also claimed. By 590, Median forces had advanced to the eastern boundary of Lydia at the Halys (Kizil Irnak) River. There, the Lydians checked the advance, holding the Medians at the river for the next five years.

Nothing specific is known about these battles, but Babylonia and Cilicia ultimately mediated the dispute, and the two kingdoms, their resources exhausted in futile combat, agreed on the Kizil Irnak (Halys River) as the boundary between them. The Greek historian Herodotus (c. 484–c. 425) records that the daughter of Alyattes married Cyaxares' son, thereby preserving the peace until the PERSIAN-LYDIAN WAR of 547–46 B.C.E., which brought about the final collapse of Lydia.

Median-Persian Revolt (550–549 B.C.E.)

PRINCIPAL COMBATANTS: Persia (Anshan) vs. the Medes

PRINCIPAL THEATER(S): Anshan

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: Cyrus II the Great wanted independence from the Median Empire.

OUTCOME: Cyrus achieved his objective and founded the Persian Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None recorded

Cyrus II the Great (c. 600–529), who ruled the Median (Persian) kingdom of Anshan, rebelled against his grandfather Astyages (fl. 584–549), king of the Medes and, therefore, overlord of the Persians during 584–550.

Cyrus's father was a Persian named Cambyses I (fl. 600–559), and his mother was a Median princess. Cyrus, who founded the Achaemenid dynasty, did not at first seek independence for Persia, but merely the reform of a waning kingdom. However, Cyrus seized upon Persian discontent with Astyages, a cruel and inept ruler, to organize rebellious Medians into an army. During 550, Cyrus led his rebel army in a series of indecisive battles. However, the following year, Astyages' own army mutinied, which gave Cyrus the advantage he needed to defeat the unpopular ruler. Taking Astyages captive, Cyrus made Anshan the core of a revived Persian Empire. He spared the conquered ruler's life, an act of generosity that would lead to the PERSIAN-LYDIAN WAR.

Megiddo, First Battle of (c. 1469 B.C.E.)

PRINCIPAL COMBATANTS: Egypt vs. the Mitanni kingdom and a Syrian-Palestinian coalition

PRINCIPAL THEATER(S): Megiddo, on the frontier of Mesopotamia

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: Egypt wanted to revive and expand its empire.

OUTCOME: The battle resulted in the collapse of the Syrian-Palestinian coalition and the subjugation of much of southwestern Asia to Egypt.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Megiddo, a fortress city strategically situated at the gateway to Mesopotamia, was the scene of many battles and for that reason was prophesied as the site of the Battle of Armageddon (in Hebrew "Hill of Megiddo"), when the forces of good and evil would contend at the end of the world.

The First Battle of Megiddo followed the decline of Egyptian influence in Syria and Palestine after the expansion of the Mitanni kingdom during the HURRIAN CONQUESTS. Egypt's King Thutmose III (fl. c. 1500–1447 B.C.E.), in an effort to restore Egyptian power, undertook a series of campaigns in the Near East during the 1470s. He managed to regain control of Palestine, and his forces invaded northern Syria. Apparently, however, his advance was checked by a coalition of some 330 Syrian and Palestinian princes under the leadership King Kadesh (fl. 1460s B.C.E.) of the Mitanni.

It was about 1469 B.C.E., near the northern Palestinian fortress city of Megiddo, which effectively guarded entry into Mesopotamia, that the coalition forces engaged the Egyptians. The Egyptians divided their forces into three contingents and surprised the fortress defenders at dawn. The princes' army withdrew into Megiddo, leaving their encampment for the Egyptians to loot. Thutmose then directed a seven-month siege of the city, which ultimately collapsed.

The victory at Megiddo not only revived Egyptian power but established an Egyptian empire in southwestern Asia. Except for the Mitanni king himself, the princes of the coalition subjugated themselves to Egypt, and the mighty kingdoms of Babylonia and Assyria, as well as the Hittites, agreed to pay Egypt tribute. Having gained so much, Thutmose invaded southeastern Mitanni, but failed to conquer the kingdom at this time.

See also MEGIDDO, SECOND BATTLE OF.

Megiddo, Second Battle of (609 B.C.E.)

PRINCIPAL COMBATANTS: Egypt vs. Judah

PRINCIPAL THEATER(S): Megiddo, at the frontier of Judah

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Refused passage across Judah to aid his Syrian allies, King Necho of Egypt engaged Judah's army.

OUTCOME: Outnumbered, the army of Judah was defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Despite Megiddo's conquest by the Egyptians in the First Battle of MEGIDDO, over the centuries, the ancient Palestinian strategic crossroads fell to the Israelites, along with many other sites in the area. Following the Fall of NINEVEH in 612 B.C.E., Assyria's ally Egypt resolved to help the Assyrians retake their lost capital at Harran. Egypt's King Necho II (fl. c. 609–593 B.C.E.) asked leave from the kingdom of Judah to cross its territory in order to come to Syria's aid. Judah refused permission, but sent only a small force against Necho's large army. The two forces clashed at Megiddo, where Judah's troops were vanquished, and the nation's king, Josiah, was killed in the battle by an arrow.

Following his victory, King Necho advanced to his Syrian allies, but his efforts to aid in the retaking of Harran failed. Necho returned to Palestine, where he successfully defended his kingdom against Babylonian incursions.

Meiji Restoration (1863–1868)

PRINCIPAL COMBATANTS: Tokugawa shogunate vs. forces of the western daimyo (warlords) in support of the Meiji emperor

PRINCIPAL THEATER(S): Edo (Tokyo) and Kyoto, Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The daimyo of Japan's western provinces, long opposed to the rule of the shoguns, rebelled against the shogun and threw their support behind the new Meiji emperor to end shogun rule and restore Japanese imperial authority.

OUTCOME: The shogun was maneuvered out of power, and the Meiji emperor restored as full head of the Japanese state.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Losses among the Meiji and daimyo forces were light (numbers unknown), but in July 1868, some 3,000 diehard adherents of the Tokugawa shogunate were exterminated.

TREATIES: None

After the early 17th century, the role of the Japanese emperor was reduced to that of a figurehead, with the real governing power lodged in the Tokugawa shogun, a

hereditary military ruler. The shogun ruled from Edo (Tokyo), whereas the emperor was ensconced in the ancient city of Kyoto. This dual system of governance was forever altered by the opening of Japan to western trade in the mid-19th century.

At first, the feudal lords of western Japan, the daimyo, were hostile to western traders, but they came to see trade as a positive force and as an opportunity to overthrow the rule of the shoguns. The daimyo advised foreign traders to deal not with the shogun, but with the emperor. This put the shogun at odds with the traders. Nevertheless, when a contingent of Dutch, British, and French trading vessels arrived in November 1865 with armed naval escort, the shogun, fearing naval assault, agreed to persuade the emperor to conclude a trade treaty, which he did.

In 1866, the western province of Choshu rebelled against the shogun, who persuaded the emperor, Komei (d. 1867), to mount a military campaign against the province. The emperor agreed, and the so-called Summer War commenced, but the emperor broke off the campaign as soon as the shogun died in September 1866. Early the next year, the emperor also died and was succeeded by his young son Mutsuhito (1852–1912). Later in the year, the daimyo of the western provinces prevailed upon the new shogun, Yoshinoba (1837–1913), to resign, pointing out to him that the continued existence of the shogunate with imperial rule was tearing the nation apart. Led to believe that he would be given a prominent position in the new imperial government, the shogun resigned in November 1867 and traveled to Kyoto. In fact, the retired shogun was frozen out of power.

At the start of 1868, the daimyo of the western provinces, freed from domination by the shogun, invaded Kyoto and took control of the imperial capital from the Tokugawan troops stationed there. The retired shogun took his troops back to Edo, only to realize that he was greatly outnumbered by the army now prepared to support the emperor. Therefore, he surrendered Edo and retired permanently. Some 3,000 diehard adherents of the shogunate held out on nearby Venno Hill. On July 4, 1868, they were exterminated to a man.

Despite sporadic resistance to the restoration of the full authority of Mutsuhito—now renamed Meiji—in the north, the “revolution” was, for all practical purposes, concluded by the fall of 1868.

Coinciding with the beginning of the Meiji Restoration was the SHIMONOSEKI WAR, which involved the Western powers France, Britain, the United States, and the Netherlands.

Memel Insurrection (1923)

PRINCIPAL COMBATANTS: Memel insurrectionists vs. France

PRINCIPAL THEATER(S): Memel (Klaipeda), Lithuania

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Governance of the city and district of Memel was disputed between post–World War I Allied authorities and the Lithuanian government.

OUTCOME: The French garrison was driven out of Memel, and the Allies compromised with the Lithuanian government in the creation of Memel as an autonomous district within Lithuania.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

French garrison strength was under 1,000 men; number of insurrectionists much greater.

CASUALTIES: Light

TREATIES: Memel Statute, May 8, 1924

Memel (Klaipeda, Lithuania) was a predominantly German-speaking city in western Lithuania. By the terms of the Treaty of Versailles ending WORLD WAR I, Memel had been governed as a mandate of the Allied powers since 1919. Lithuania asked to be given control of Memel, but the Allies demurred, and established a French garrison to administer the local government. On January 11, 1923, a Lithuanian-backed insurrection took place against the garrison, which withdrew under fire. In the garrison's absence, the Lithuanian government took control of the city and district. Seeking a compromise, Allied authorities declared Memel an autonomous region within Lithuania, a situation the Lithuanian government accepted by the Memel Statute of May 8, 1924.

Menander's Wars of Expansion (c. 150–c. 140 B.C.E.)

PRINCIPAL COMBATANTS: Menander's Greek army vs. the kingdoms in northern India

PRINCIPAL THEATER(S): Northern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Under pressure from the north and northwest from the Scythians and Parthians,

Menander, ruler of Bactria, turned east and conquered the northern portion of present-day India.

OUTCOME: Menander gained control of northern India as far as Pataliputra, but by 100 B.C.E., the Greek kingdom disappeared from India.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

During the second century B.C.E., the kingdom of Bactria was in nearly perpetual strife. Euthydemus (fl. early second century B.C.E.) expanded his control to the southwest into Gandhara (northern Afghanistan) and the Punjab. His son Demetrius (fl. mid second century B.C.E.) then conquered the northern half of the Indus Valley. In 175 B.C.E., Eucratides seized control of Bactria itself while Demetrius was away on campaign. During the ensuing civil war, Eucratides captured most of Gandhara and the western Punjab from Demetrius and his successors. After the assassination of Eucratides (c. 162 B.C.E.), one of Demetrius's descendants, Menander (fl. mid second century B.C.E.), was victorious over the descendants of Eucratides, who managed to retain land in the western Punjab and Kabul Valley. Menander then faced invasions by the Scythians and the Parthians, and his control was reduced to southern Bactria, Gandhara, and parts of Arachosia and the Punjab. Pressed from the north and northwest by the Scythians and Parthians, Menander turned his sights east and made conquests in northern India as far as Pataliputra. He had a great influence on India and became known in Indian history as Milinda. The Greek kingdoms declined over the next century as the Hindus and the barbarians pushed the Hellenes out of the region. In about 100 B.C.E., they disappeared from India, and in about 40 B.C.E., they were pushed by the Scythians out of Gandhara.

Walbank, *The Hellenistic World* (Cambridge, Mass.: Harvard University Press, 1993).

Mercenaries, Revolt of See CARTHAGINIAN CIVIL WAR.

Messenian War, First (c. 736–716 B.C.E.)

PRINCIPAL COMBATANTS: Spartans vs. Messenians

PRINCIPAL THEATER(S): Mount Ithome region, Peloponnese

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: The Spartans wanted to conquer the Messenians to gain access to their fertile lands.

OUTCOME: After two decades of war, the conquest was successful.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None recorded, but the Messenians were compelled to yield to Sparta half of all crops produced.

The Dorians of northern Greece invaded the Peloponnese between 1100 and 950 B.C.E. They conquered the eastern areas of the peninsula, settling in the valley of Lacedaemon, where they made Sparta their capital. The people they conquered, called helots, were enslaved. Next, the Spartans attacked and subjugated the Laconians, after which, beginning about 736, they commenced their two-decade war against the Messenians, also resident in the Peloponnese.

Messenian resistance was concentrated at Mount Ithome, which guarded passage to the fertile plain of Stenyclarus. Under their king (according to legend), Theopompus (fl. 700s B.C.E.), the Spartans finally prevailed against the Messenians by 716. They extorted from the vanquished people half of all their produce, and they subjected the Messenians to general humiliation.

See also MESSENIAN WAR, SECOND; MESSENIAN WAR, THIRD.

Messenian War, Second (c. 650–630 B.C.E.)

PRINCIPAL COMBATANTS: Spartans vs. Messenian rebels

PRINCIPAL THEATER(S): Messenia

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: The Messenians wanted to throw off the Spartan yoke.

OUTCOME: Despite early victories, the Messenians were ultimately defeated and enslaved.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Messenians were conquered by the Spartans in the First MESSENIAN WAR. About 650 B.C.E., growing increasingly restive under Spartan rule, they rebelled, rallying around the semilegendary leader Aristomenes (fl. seventh century). The war that ensued was both long and costly, driving the Spartans close to bankruptcy. In 630, at the Battle of Mount Eira, a weakened Spartan army was defeated. This catastrophe elevated Lycurgus (fl. seventh century) to leadership among the Spartans. He directed vast social reforms, which included conscription of all males into military service—a move designed to avoid another economic disaster in warfare. Indeed, under Lycurgus, Sparta became the first recorded civilization devoted primarily to war.

The strategy proved effective. The vast citizen-manned Spartan army crushed the Messenians, reducing them to the status of slaves, or helots.

G. Forrest, *A History of Sparta: 950–192 B.C.* (New York: W. W. Norton, 1978); L. H. Jeffery, *Archaic Greece: The City-States, c. 700–500 B.C.* (New York: St. Martin's Press, 1976).

Messenian War, Third (c. 464–455 B.C.E.)

PRINCIPAL COMBATANTS: Sparta vs. Messenian helots of Laconia

PRINCIPAL THEATER(S): Peloponnese, especially Mount Ithome

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The helots wanted freedom from Spartan domination.

OUTCOME: The helots held out against the Spartans for years; those who survived the war were freed, but exiled.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The third war between the Spartans and Messenians was a slave revolt, the Messenians having been reduced to helots (slaves) by the conquering Spartans. When a major earthquake rocked Sparta in 464, the helots of Laconia took the opportunity to stage a rebellion. However, led by the semi-legendary king Archidamus (fl. 476–427 B.C.E.), the Spartans suppressed them.

Still, the Messenians did not give up. They dug in at Mount Ithome in 463 and brilliantly resisted all Spartan attempts at siege. Following this, Sparta turned to Athens

for help, securing 40,000 hoplite (Greek infantry) reinforcements. These soldiers immediately proved undependable, however, because many in their ranks were antagonistic toward Sparta. (Perceived as treachery, this situation ignited the FIRST PELOPONNESEAN WAR between Sparta and Athens.) Despite the failure of the Athenian reinforcements, Messenian resistance could not long endure. In 455 B.C.E., the Mount Ithome stronghold collapsed. The Spartans, having no wish to attempt to subjugate the Ithome rebels, freed those who had survived the long siege, albeit exiling them from the Peloponnese. These exiles fled to Athens, where they joined the Peloponnesian wars.

Messiah War See GHOST DANCE UPRISING (1890–1891).

Messinan Rebellion (1674–1679)

PRINCIPAL COMBATANTS: Anti-Spanish rebels (with French support) vs. Spain

PRINCIPAL THEATER(S): Messina, Sicily, and adjacent waters

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The rebellion began with a dispute over the authority of the Spanish viceroy and grew into a full-scale rebellion against Spanish control of all Sicily.

OUTCOME: Although French aid allowed the Messinans to achieve victory, the withdrawal of French support brought about the abject subjugation of Messina.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but heavy as a result of postwar Spanish reprisals.

TREATIES: None

During the 17th century, Messina, Sicily, was controlled by Spain and governed locally by a Spanish viceroy. The contentious citizens of Messina frequently challenged the authority of the Spanish government, and, in 1674, one such challenge erupted into a riot between the viceroy's local supporters, called the Merli (aristocrats), and his opponents, the Malvezzi (democrats). The disturbance led

to the removal of the viceroy, and Sicily offered governance not only of Messina but of the entire island to King Louis XIV (1638–1715) of France in return for his support in their opposition to Spain. Louis agreed, was named king of Sicily, and dispatched a fleet to take and occupy Messina in 1676. This marked the commencement of a three-year naval war between France and Dutch-allied Spain on the sea. Although the French prevailed against the Dutch and the Spanish, the expenses of this war and the ongoing Third DUTCH WAR, created a crisis in France. Louis XIV precipitously withdrew the French fleet from Messina, leaving the city's rebels vulnerable to Spanish reprisals. Many were, in fact, executed. As a result of the rebellion, Messina was reduced from a major city to a backwater. Its population was reduced by half, and Spain enforced upon it a great degree of tyranny.

Mexican-American War See UNITED STATES–MEXICAN WAR.

Mexican Civil War (1857–1860) See REFORM, WAR OF THE.

Mexican Civil War (1871–1877)

PRINCIPAL COMBATANTS: Rebels led by Porfirio Díaz vs. government of Mexico

PRINCIPAL THEATER(S): Tlaxcala and Mexico City

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Díaz sought to topple the government and gain election as president.

OUTCOME: After two unsuccessful attempts at rebellion, Díaz defeated government forces in 1876 and was elected president the following year.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Rebels, 16,000; government strength unknown

CASUALTIES: Rebels, 1,000+ killed; government forces, 1,900 killed, 800 wounded, 3,000 taken prisoner

TREATIES: None

Three candidates competed for election as president of Mexico in 1871, the incumbent Benito Juárez (1806–72), Sebastián Lerdo de Tejada (1825–89), and Porfirio Díaz (1830–1915). Juárez was reelected and appointed Lerdo as chief justice of the supreme court. Excluded from government, Díaz organized a rebellion, which was quickly put down. Díaz took refuge among mountain Indians until the death of Juárez in 1872 and the ascension to the

presidency of Lerdo, who proclaimed an amnesty for all those who had participated in the 1871 revolt.

Díaz unsuccessfully opposed Lerdo in the election of 1876, then led a revolt against Lerdo. Government forces defeated Díaz's rebels, who withdrew across the border into the United States, where they regrouped and resupplied. While this army, led by General Manuel Gonzalez (1833–93), recrossed the border, Díaz traveled to Veracruz by way of Cuba, then advanced to Oaxaca, where he assumed command of another army. Gonzalez's army came down from the north while Díaz attacked from Oaxaca, and the two forces converged on government troops in the province of Tlaxcala at the battle of Tecocac, November 16, 1876. The government forces were defeated with disastrous losses, and, Díaz advanced on the capital. Before his advance, Lerdo fled into exile, and Díaz was elected president in 1877. He became a ruthless dictator and was himself overthrown in the MEXICAN CIVIL WAR (1911).

Mexican Civil War (1911)

PRINCIPAL COMBATANTS: Federal forces of Porfirio Díaz vs. forces of Francisco I. Madero, Pascual Orozco, and Francisco Pancho Villa

PRINCIPAL THEATER(S): Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Madero both led and triggered revolutionary opposition to the dictatorship of Porfirio Díaz.

OUTCOME: Díaz was overthrown, but the 1911 war ushered in a long period of violent civil unrest.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Federals, 70,000; Rebel forces, about 20,000

CASUALTIES: Military deaths were under 1,000 total, but civilians suffered more extensive losses.

TREATIES: Treaty of Ciudad Juárez, 1911

Elected president of Mexico in 1877, Porfirio Díaz (1830–1915) had come to power on the heels of a civil war of his own making (see MEXICAN CIVIL WAR [1871–1877]). Thereafter, despite the pretense of national elections, Díaz served as Mexico's absolute ruler (with one brief interruption from 1880 to 1884) until 1911. Then, in the presidential election of 1910 the long-corrupt dictator was faced with a real challenge from the popular liberal

candidate. Francisco I. Madero (1873–1913) was a frail but wealthy *hacendado* (rancher) and U.S.-educated lawyer from the northern state of Coahuila, who loudly promoted Díaz's ouster and announced his own Plan of San Luis Potosí, which called for liberal democracy in Mexico. President Díaz, in turn, had Madero arrested during the election and proclaimed himself the victor. On November 20, 1910, an outright rebellion, supported by the exiled Madero, broke out against the Díaz dictatorship.

Among those who rallied to Madero's cause was a band of some 500 peasants and outlaws led by a famous bandito leader named Doroteo Arango but known to his followers—and soon to history—as Francisco “Pancho” Villa (1877–1923). By December, when the rebellion spread to the south, into Morelos, Emiliano Zapata (1880–1919), hero of Mexico's poorest, including its Indians, joined the rebellion. Declaring himself to be fighting for “Land and Liberty,” Zapata promised to transform this political uprising into a social revolution. By March Zapata had 3,000 troops in the south, and Madero's forces were growing stronger in the north as the venal, demoralized, and barely competent Federales lost control of extended areas of the country. Madero returned from his exile in Texas, crossing the Rio Grande to lead 500 devoted Mexican revolutionaries in an attack on Casas Grande on March 6, 1911. Although Madero suffered a minor wound and his troops met defeat, the revolution itself continued, especially in Chihuahua, where Pascual Orozco (1882–1915) and Pancho Villa led their troops in fights that grew ever bloodier, and where both sides committed atrocities.

In May 1911, they captured Ciudad Juárez, a victory that immediately revived the revolutionary opposition to Díaz throughout the country. Mexico City was wracked by anti-Díaz demonstrations, and the beleaguered dictator signed the Treaty of Ciudad Juárez, which called for his immediate resignation, after which Madero was elected to the presidency. His election, however, did not stem the tide of revolution. Ultimately Madero's revolution proved too conservative for those like Zapata, who dreamed of land for the landless and bread for the starving, and too moderate for those like Orozco, looking for the kind of spoils Mexico's civil upheavals had afforded its victors in the past. The first to break ranks was Zapata.

Realizing Madero's democracy was good for the bourgeoisie but hardly helped the poor peasantry of Morelos, Zapata resumed his social revolution on August 30, 1911. An unhappy Madero reluctantly sent the Indian general Victoriano Huerta (1854–1916) against his old ally. But Huerta had little luck finding, much less defeating Zapata's guerrillas. In November Zapata proclaimed his revolutionary agenda for Mexico in the Plan of Ayala, which included a vast program for the redistribution of land. Recruits flocked to his cause and before the year was out, Zapata's troops had captured Cuernavaca. Throughout

Madero's presidency and beyond, Zapata continued his agrarian rebellion, while further north the revolution's leaders lusted instead for spoils, plotting Madero's overthrow even as they touted liberal ideals. Madero had easily suppressed an attempted coup by former allies of the Díaz regime on December 13, 1911, and he put down a November rebellion in the north almost as easily, but afterward he felt it prudent to enlarge the Federal army from 30,000 to 70,000.

The most formidable of the northern revolts was led by the greedy Orozco, backed by the large landowners who had been the principal mainstays of Díaz. These aristocrats felt threatened even by Madero's very modest social reforms, and they funded Orozco's rebel army, whose troops marched under a red flag and were soon dubbed Colorados or Red Flaggers. They quickly overran Chihuahua and, by March 1912, had soundly defeated Madero's Federales. In response Madero once more sent out the hard-drinking General Huerta, this time to fight the Colorados. He soon not only checked Orozco's advance, but completely defeated him. Chasing the rebel leader across the border into the United States, Huerta mopped up the rebellion by October.

If Madero hoped for some relief, he was bound for disappointment. Almost immediately, Huerta began to show signs of megalomania (at one point he pretty much insanely threatened to execute Pancho Villa for insubordination). The thoroughly puffed up Huerta was soon scheming with the U.S. ambassador to free former Díaz supporters from prison and stage a coup, which cost Madero the presidency and his life in 1913. For the next 20 years, Mexico would be plagued by revolution and civil war.

Mexico 1910–1920* (New York: 1969); Enrique Krause, *Mexico: Biography of Power, A History of Modern Mexico, 1810–1996* (New York: HarperCollins, 1998); Stanley R. Ross, *Francisco I. Madero, Apostle of Mexican Democracy* (New York: AMS Press, 1970); Paul Vanderwood, *Disorder and Progress: Bandits, Police, and Mexican Development*, rev. ed. (Wilmington, Del.: SR Books, 1992).

Mexican Civil War (1920)

PRINCIPAL COMBATANTS: Rebels vs. Mexican federal government

PRINCIPAL THEATER(S): Mexico (especially Sonora, Veracruz, Mexico City)

DECLARATION: Creation of Sonora as a separate republic

MAJOR ISSUES AND OBJECTIVES: At issue was the succession to the presidency.

OUTCOME: The incumbent, Carranza, was driven out of office, and succeeded by the rebel leaders, Huerta and Obregón.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Rebel forces, 25,000; federal forces, 10,000

CASUALTIES: Light; however, Carranza was assassinated.

TREATIES: None

In 1920, Venustiano Carranza (1859–1920), president of Mexico, chose Ignacio Bonillas (fl. 1915–20) as his successor. Álvaro Obregón (1880–1928), minister of war in Carranza's cabinet and a man who had worked faithfully to put Carranza in office, felt betrayed by the anointing of Bonillas. He organized a revolt with Adolfo de la Huerta (1881–1955), former revolutionary and military officer, now governor of Sonora, and General Plutarco Elías Calles (1877–1945), commander of the Sonoran army. Together, they agitated for Carranza's resignation. During this campaign to oust Carranza, a general strike swept Sonora, and Carranza dispatched federal troops to break it. Huerta responded by declaring Sonora a sovereign republic, and Calles and Obregón recruited an army to oppose Carranza. Even Obregón, who had first made Carranza's ascendancy possible by his victories over Francisco "Pancho" Villa (1877–1923), deserted his president. As this popular revolt mounted, Carranza discovered that the government troops would not oppose the rebel army. With his allies and his generals deserting him left and right, he fled Mexico City with 10,000 followers on several trains. They headed toward Veracruz with gold looted from the Mexican treasury. Near Guadalupe, Carranza's lead train was destroyed by a dynamite-filled boxcar and 200 people were killed. As some 20,000 rebels began surrounding the trains, Carranza abandoned the rail lines and fled into the mountains of Puebla with a mere 100 loyalists. On May 14, he was murdered in his sleep by his own bodyguard. Obregón and his army marched into Mexico City unopposed, and Huerta was named provisional president until an election later in the year brought Obregón into office.

Norton, 1993); Enrique Krause, *Mexico: Biography of Power, A History of Modern Mexico, 1810–1996* (New York: HarperCollins, 1998); Paul Vanderwood, *Disorder and Progress: Bandits, Police, and Mexican Development*, rev. ed. (Wilmington, Del.: SR Books, 1992).

Mexican-French War (1861–1867)

PRINCIPAL COMBATANTS: France and Mexican conservative forces vs. forces loyal to Mexican president Juárez; U.S. forces were available, but never engaged

PRINCIPAL THEATER(S): Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: France deposed President Benito Juárez and installed and supported Austrian archduke Maximilian as emperor.

OUTCOME: After France withdrew its support for Maximilian, he was deposed and executed, and Juárez was reinstated as president.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: French forces, 40,000, augmented by Mexican conservative forces; Liberal forces, 20,000 at any one time; U.S. forces (never engaged) 50,000

CASUALTIES: France, 6,654 killed; Mexican conservatives, 5,671 killed, 2,159 wounded, 4,379 prisoners; Juárez's forces, 31,962 killed (including 11,000 executed), 8,304 wounded, 33,281 prisoners

TREATIES: None

When President Benito Juárez (1806–72) sought to bring economic relief to impoverished Mexico by declaring a moratorium on the payment of foreign debts, he opened the door to European imperialism, providing an excuse for Britain, France, and Spain to send a military force to Mexico, ostensibly to compel the payment of the debt. The joint army landed at Veracruz on December 17, 1861, and advanced to Orizaba. Acting in good faith, however, the British and Spanish contingents withdrew after Juárez persuaded diplomats that the debts would be paid in good time. Emperor Napoleon III (1808–73) of France, however, seized the opportunity to effectively render Mexico a puppet with the intention of creating a new French empire in the New World.

Napoleon III sent an army of 7,500 men under General Charles Ferdinand Latrille de Lorencez (1814–92) against Mexico City, which was defeated at the Battle of Puebla on May 5, 1862, by 12,000 men under General Ignacio Zaragoza (1829–62). (The victory is celebrated today as the Mexican national holiday of Cinco de Mayo.) French casualties were in excess of 400, whereas the Mexicans lost 215 killed and wounded.

After Puebla, Lorencez was relieved and replaced by General Élie Forey (1804–72), who arrived in September 1862 with an additional 30,000 troops. On February 17, 1863, the greatly enlarged French army, augmented by Mexican conservative forces, advanced from Orizaba for a new assault on Puebla, which was defended by a much smaller garrison under General Jesús Gonzales Ortega (1824–81). Under continual guerrilla attack, the French were not able to begin the assault on Puebla until May 4. On May 8, Ignacio Comonfort (1812–63) led a Mexican

column to the relief of Puebla, but was ambushed and routed by a French force under General Achille Bazaine (1811–88). Comonfort died in this battle. The situation now hopeless for the Puebla defenders, Ortega surrendered on May 17.

The French army now advanced to Mexico City, marching into the capital on June 7. President Juárez fled the capital and set up a headquarters and government in exile near the Texas border. On June 12, 1863, Archduke Maximilian (1832–67) of Austria was enthroned at the behest of Napoleon III as emperor of Mexico. Although the French emperor intended that Maximilian would govern as his puppet, the new emperor took his office seriously and was determined to govern as his own man and for the benefit of the Mexican people. This notwithstanding, the liberal majority of the Mexican people were opposed to the foreign ruler in their midst, and a guerrilla war commenced.

Throughout the war in Mexico, the ongoing UNITED STATES CIVIL WAR prevented that country's involvement. When the war ended in 1865, however, President Andrew Johnson invoked the Monroe Doctrine, by which the United States had proclaimed its standing position that any act of European aggression against a nation in the Americas would be regarded as an act against the United States itself. General Philip Sheridan (1831–88) was dispatched with 50,000 troops to the Rio Grande, the border with Mexico. A diplomatic standoff developed and, at last, on February 5, 1867, Napoleon III withdrew his troops and support from Maximilian—who, in any case, had proved a disappointment in his failure to bend entirely to the French emperor's will.

With the French forces gone, Maximilian was supported only by conservative Mexicans, but stubbornly refused to abdicate. Juárez dispatched liberal forces under Mariano Escobedo (1827–1902) to attack Maximilian and his forces at Querétaro, which was besieged for 71 days. On May 14, Maximilian was betrayed by one of his own men into surrender. Despite protests and appeals from the international community, he was court-martialed, sentenced to death, and executed on June 19, 1867. With that, the war ended.

Mexican Insurrections (1926–1929)

PRINCIPAL COMBATANTS: Mexican government vs. supporters of the Catholic Church (*cristeros*)

PRINCIPAL THEATER(S): Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: President Calles (and successive puppets) enforced the harsh anticlerical provisions of Mexico's 1917 constitution, thereby provoking violent uprisings among supporters of the church.

OUTCOME: Sustained government pressure repeatedly suppressed Catholic violence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Mexican federal forces, 79,759; Agrarista militia, 25,000; Catholic rebels, 50,000

CASUALTIES: Federal forces and Agraristas, 45,000–60,000 killed; Catholic rebels, 25,000–40,000 killed

TREATIES: None

Mexico's constitution of 1917 included strong anticlerical measures, which went unenforced until the presidency of Plutarco Elías Calles (1877–1945), who entered office in 1924. When, two years later, the Mexican Roman Catholic Church made an official condemnation of the constitutional provisions, Calles responded harshly and provocatively. He closed Catholic schools, convents, and seminaries, and he ordered all priests to register with the government. Adding insult to injury, he condemned the Catholic Church in Mexico as treasonous. These actions incited Catholics all across Mexico to institute an economic boycott intended to bring the country to its knees. Purchases were cut to the barest of bare essentials. For their part, priests protested by ceasing to perform their offices, a move that created great unrest throughout the country. By the end of 1926, militant terrorist bands known as *cristeros* (for their battle cry, “Viva Cristo Rey!”—“Long Live Christ the King!”) rebelled against the government, raiding and bringing terror throughout all Mexico. Led by a journalist named Rene Capistran Garza, a general named Enrique Gorostieta, and a friar named José Reyes Vegas (whom many called “Pancho Villa in a Cassock”), the *cristeros* came from all over Mexico and every social class, though 60 percent of them were poor or working class, and most lived in the western states of Michoacan and Jalisco. But this, unlike many of Mexico's civil wars, was a religious, not class, conflict. Revolutionary leaders had simply moved the nation too radically away from the Catholic Church for the comfort of Mexico's people. Nevertheless the Catholic Church quickly disavowed the *cristeros*. That did not, however, stop the Calles government from nationalizing church property and deporting a number of clergymen and even nuns. Certain prominent Catholic leaders were tried for treason and executed. Although this served to exacerbate antigovernment activity, the Calles regime was willing and able to mobilize extensive forces against the *cristeros*, and the movement was generally suppressed by the end of 1927 and beginning of 1928.

The elections of 1928 brought Calles's ally Álvaro Obregón (1880–1928) into office. He was assassinated less than a month into his term and replaced by Emilio Portes Gil (1891–1978), who governed essentially as a puppet of Calles. The following year, Mexico was swept by a new wave of religiously motivated antigovernment activity, led by a group of conservative generals. Order was restored, and Calles continued to pull the strings, maneuvering into office Pascual Ortiz Rubio (1877–1963). Before the end of 1929, Ortiz Rubio faced a weak insurrection, but continued in office as Calles's anticlerical puppet.

Mexican Revolt (1914–1915)

PRINCIPAL COMBATANTS: Forces of Victoriano Huerta and Álvaro Obregón vs. Emiliano Zapata, Venustiano Carranza, and Francisco “Pancho” Villa. Later, Zapata and Villa vs. Carranza and Obregón.

PRINCIPAL THEATER(S): Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Mexican government

OUTCOME: Carranza and Obregón defeated Zapata and Villa, and Carranza became president of Mexico.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Huerta and Obregón, 70,000; Zapata, 25,000; Carranza, 22,000; Villa, 40,000

CASUALTIES: Estimates vary wildly; at least 6,000 troops died on all sides; civilian casualties were much heavier, with estimates reaching 1 million during the height of the conflict and its guerrilla aftermath.

TREATIES: None

The Mexican general Victoriano Huerta (1854–1916) overthrew Mexican president Francisco Madero (1873–1913) in a coup d'état of February 18, 1913. However, Huerta, a right-wing dictator, immediately found himself opposed by four distinct and separate forces: Emiliano Zapata (1880–1919), who controlled much of southern Mexico; Venustiano Carranza (1859–1920), who controlled the northeast; Francisco “Pancho” Villa (1877–1923), the popular leader of the north; and Álvaro Obregón (1880–1928), who held the northwest. These three opponents of Huerta controlled perhaps 75 percent of Mexico—but were in no way united.

By the spring of 1914, Huerta had been fought to a standstill within and outside of Mexico City and in Veracruz on the Gulf coast. For his part, U.S. president Woodrow Wilson (1856–1924) refused to acknowledge the legitimacy of the Huerta regime, which was clearly hostile to the United States. Wilson sent an occupying force to Veracruz on April 21, 1914. This, combined with Villa's taking of Zacatecas and Obregón's seizure of Guadalajara, forced Huerta from office. Both Villa and Obregón raced to fill the resulting power vacuum. Because Obregón reached Mexico City first, he took the opportunity to proclaim his newfound ally, Carranza, "First Chief" of Mexico. Late in the year, Obregón and Carranza hammered out the organization of a government.

They labored against a background of sheer anarchy. Then Villa and Zapata occupied Mexico City, while Obregón and Carranza took Veracruz. Together, Villa and Zapata held about two-thirds of Mexico. The United States, however, recognized the Carranza government, and eight other Western powers followed suit. Because Carranza controlled the Mexican-U.S. border region, he was able to procure arms from the United States. Well supplied, and with Obregón's able military leadership, Carranza retook Mexico City early in 1915. Villa headed for the hills. Although Obregón gave chase and ran Villa and his forces to ground at the town of Celaya, fighting a three-day battle in April 1915, Villa, though essentially defeated, withdrew into the countryside of the north. With Zapata, Villa waged a low-level guerrilla war against the Carranza government, which continued through 1920.

Mexican Revolt (1994–1998)

PRINCIPAL COMBATANTS: Popular Revolutionary Army (EPR) vs. Mexican government

PRINCIPAL THEATER(S): Southwestern Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The EPR called for a radically new constitution.

OUTCOME: Undecided; a low-level state of guerrilla warfare and general unrest is ongoing as of early 2002.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Almost 400 killed, mostly civilians.

TREATIES: None

Beginning in January 1994, Indian guerrillas, proclaiming themselves the political followers of Emiliano Zapata (1880–1919)—see MEXICAN REVOLT (1914–1915)—staged a 12-day uprising in the southern state of Chiapas. Before a truce ended the "Chiapas Rebellion," 145 people were killed.

The peace was tenuous, and sporadic fighting between the Zapatistas and right-wing paramilitary groups in the south continued through 1996, when Mexican president Ernesto Zedillo (b. 1951) was faced with a new and simultaneous revolt, that of the Popular Revolutionary Army (EPR). While attempting to reach a peaceful compromise with the Zapatistas, the Zedillo government was attacked by the EPR in August 1996. The attacks were distributed over six Mexican states, and succeeded only in triggering a major government military counteroffensive, which forced the EPR into the mountains.

Although violence substantially abated by 1998, the EPR has continued to conduct a low-level guerrilla war against government forces and has issued a continual stream of antigovernment propaganda. The object is ultimately to secure a new constitution for Mexico.

Mexican Revolts (1810–1815)

PRINCIPAL COMBATANTS: Mexican rebels (led and later inspired by Miguel Hidalgo y Costilla, parish priest of Dolores) vs. Spanish Mexico (Royalists)

PRINCIPAL THEATER(S): Mexico

DECLARATION: The September 16, 1810, *Grito de Dolores*

MAJOR ISSUES AND OBJECTIVES: Popular uprising against Spanish rule

OUTCOME: The initial uprising was crushed and its leader executed; however, the independence movement survived and sparked several other revolts, none of which succeeded before the revolution of 1821.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rebels, 80,000; Royalist forces, 35,000–80,000

CASUALTIES: Rebels, 15,450 killed; Royalists, 2,145 killed

TREATIES: None

For 300 years today's Mexico and the Mexican borderlands that would become the American Southwest—California, New Mexico, Arizona, and Texas—had belonged to Spain, the world's oldest western empire. In the late 18th

century, Spain had made various efforts to revitalize the northern provinces, setting up a buffer between itself and the United States in hopes of vitiating the “foreign” threat to its North American frontier. Spain’s real problems with its empire, however, proved to be internal rather than external. In 1808 Napoleon’s (1769–1821) invasion of Iberia had led to a destabilization of the mother country that ultimately cost Spain its holdings in the New World (see NAPOLEONIC WARS).

It was the liberals in the Cortes, Spain’s traditionally weak parliament, who led the resistance against the French; and it was these same liberals who promulgated reforms during the political chaos created by Napoleon’s invasion. They established a representative government under a liberal constitution in 1812 and set up provincial legislatures and town councils in both the mother country and throughout the empire. After Napoleon’s defeat and exile to Elba, the Spanish monarchy launched a restoration, dissolving the representative bodies or suspending their privileges, which in turn led to a revolt within Spain by the liberals and their supporters in the military. In the long run, though republican government was restored, the empire fell apart.

The republican movement that began in Spain took firm root in the colonies of the Western Hemisphere. Over the next decade the world witnessed the great Central and South American liberations. In Mexico, the upheavals were fed not only by the liberals’ desire for representative government but also by mestizo discontent with social conditions, and the mixture created a cycle of revolt and repression that lasted until Mexico’s war for independence became the climax of the New World revolutions. In 1810 a village priest named Miguel Hidalgo y Costillo (1753–1811) joined a group of liberal officers plotting against the Mexican viceroy, rallied 80,000 peasants—mestizos and Indians—into Mexico’s first revolutionary army and led them to glory, shouting “Death to the Spaniards!”

Hidalgo y Costilla, parish priest of Dolores, issued his *Grito de Dolores*, the “Cry of Dolores,” on September 16, 1810, calling for a revolt against Spanish rule over Mexico. The *Grito* also called for a policy of racial equality, the breakup of the great haciendas, and the redistribution of the land, which helps explain why Hidalgo y Costillo drew such a substantial following of Indians and mestizos. Led by the priest, they overran a number of towns, then began an advance on the capital, Mexico City. Royalist forces responded by attacking the advancing army at the Battle of Calderón Bridge, near Guadalajara, on January 18, 1811. Hidalgo y Costilla’s army was decimated, and the priest himself fled.

A charming but politically naive man, Father Hidalgo imagined peasant dissatisfaction with existing conditions to be aimed mostly at the Spanish-born among the elite (the so-called Gapuchines)—as was his own resentment—

rather than at the “white” upper classes in general. Apparently it never occurred to him that the Indians and mestizos might number among their enemies even the Mexican-born, those Creoles who controlled the military and provided most of the officers involved in the coming repressions as well as those leading the revolts. At any rate, after Hidalgo seized Guanajuato, his peasant army slaughtered every ethnic European in the city, Gapuchine and Creole alike. Perhaps deranged by the grisly results of his liberation movement, the priest completely lost control of his followers. Captured by royalist troops in Chihuahua in 1811, Hidalgo was beheaded. His skull remained displayed on a post outside Guanajuato for 10 years.

Nevertheless, his example, together with the *Grito de Dolores*, planted the seed of anti-Spanish revolt. Texas, for example, was embroiled in the Hidalgo revolt from the beginning. More than any other of the empire’s borderlands, Texas had continued to suffer under attacks by the Comanche and the Apache, and—late in the 18th century—Spain had consolidated settlement there by ordering its citizens to abandon the missions, presidios, and villages of eastern Texas. In 1779, however, many of those Nacogdoches settlers, unhappy with their new homes around San Antonio de Bexar and the constant Comanche raids to which they were subjected, returned to the area. Enough of them had remained in San Antonio, however, for it to become a Spanish settlement as opposed to a mere cluster of churches, and in 1793, Spain secularized the Alamo mission, distributed its lands, and turned the buildings over to the area’s military garrison. By the beginning of the 19th century, only about 3,000 Spaniards, including soldiers and converted Indians, lived in all of Texas, mostly in the scattered eastern settlements, but also around San Antonio and especially along the Rio Grande, where life was dominated by cattle and ranches, run by rancheros to whom the king had granted huge *mercedes* (ranch lands), and manned by mestizo and Indian vaqueros.

It was against the Tejano elite that a militia officer named Juan Bautista de las Casas (d. 1811) in 1811 led a successful uprising fueled by the resentments of poor soldiers and civilians. Answering Hidalgo’s call for independence, Bautista unseated the royalist government in San Antonio, only to be captured and executed in a counter-coup commanded by local clergy and regular army officers. One of Bautista’s supporters—Bernardo Gutierrez de Lara (1774–1841)—escaped the repression to travel to Washington, where he pleaded with Secretary of State James Monroe (1758–1831) for aid in carrying out a revolution in Texas.

Monroe had his own problems: the James Madison (1751–1836) administration was just then staggering under the early defeats of the WAR OF 1812. Monroe did, however, manage to come up with a little money and a few American officers to help Gutierrez raise a motley army of

American mercenaries, Mexican rebels, Indian and mestizo peasants, and even some ethnic French pirates from Louisiana. In effect, Gutierrez had become a figurehead whose function was “to give a Mexican character to the army” of filibusters—soldiers of fortune, who took their name from the Dutch word *vrijbuitter*, who hired their muskets out to the highest bidder, and who were notorious for their dedication to debauchery as well as adventure. Gutierrez provided Madison and Monroe with “deniability” should Spain take umbrage at the coming attack on its sovereignty. Late in 1812, he launched an invasion of the province from the United States.

The Mexican revolutionaries and American soldiers of fortune captured Goliad and took San Antonio; they declared independence; they beheaded the Texas governor, a Spanish general, and 15 others; they began abusing the Mexican and Indian population of the province; and they fell to arguing over the future of Texas. By 1813, Gutierrez’s army had swelled to some 1,500 men—850 or so of them American Volunteers, as the freebooters called themselves—and the Spanish viceroy in Mexico City, Francisco Javier de Venegas (r. 1810–13) recognized it for precisely the army of invasion that it was. Not taking kindly to American depredations against Spanish subjects, nor to impudent Mexican revolutionaries, he sent an army under General Joaquin de Arredondo (1768–1837) north to evict the U.S. land pirates and crush the rebellion. Most of the freebooters had deserted Gutierrez’s cause by the time royalist forces caught up with them at the Medina River in August of 1814, where the Spanish troops all but annihilated the Americans. Of the 250 freebooters still alive after the battle, 150 of them were slaughtered in flight, “cut . . . in quarters, and suspended on poles and limbs of trees, like beef or pork for the packer. . . .” The republicans of San Antonio, too, suffered a bloody revenge at the hands of Arredondo. He executed 327 people in San Antonio alone.

There were other uprisings similar to Hidalgo’s, the most serious led by another priest, Father José María Morelos y Pavón (1768–1837). But though Morelos was an altogether more realistic and practical man than Hidalgo, and though he turned his followers against Spain and defined his objectives, his rebellion was put down as brutally by the loyal regular army, and he was captured and executed in 1815. Mexico finally won its independence from Spain not because revolution grew from the class dissatisfactions of the Mexican people, but because its Creole military commanders grew disenchanted with Spanish rule. Thus it was that, six years later, a senior Spanish commander, Agustín de Iturbide (1783–1824), fearing that the more liberal government which had come to power in Spain might deprive him and his fellow officers of their “rights” (and, of course, their privileges), simply switched sides, turned against the viceroy, and launched the MEXICAN REVOLUTION (1821).

Mexican Revolution (1821)

PRINCIPAL COMBATANTS: Mexican coalition for independence vs. Spain

PRINCIPAL THEATER(S): Mexico

DECLARATION: Plan of Iguala, February 24, 1821

MAJOR ISSUES AND OBJECTIVES: Mexican independence from Spain—to escape the effects of the new Spanish liberalism

OUTCOME: A strong coalition of rebels and conservatives easily won independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At least 16,000 pro-independence troops; most of the Spanish royalist forces deserted

CASUALTIES: Few in minor skirmishes during 1821, because Spanish royalists deserted and offered little resistance; however, viewed as the culmination of a struggle that began in 1810, the cost of independence was probably half a million Mexican lives.

TREATIES: Treaty of Córdoba, 1821

This is the war by which Mexico won independence from the Spanish Empire, and it is especially interesting in that, unlike most wars of independence, it was a conservative revolution. In 1820, liberal forces assumed leadership of the Spanish government and compelled King Ferdinand VII (1784–1833) to restore the liberal constitution of 1812 (see MEXICAN REVOLTS [1810–1815]). Mexico’s conservative element decided that the only way to avoid the great wave of liberalism that was sweeping Spain was to declare independence. This radical step was, in fact, a means of maintaining the status quo.

Thus, Mexico finally won its independence from Spain in 1821, not because the revolution stemmed from the class dissatisfactions of the Mexican people, but because its Creole military commanders grew disenchanted with Spanish rule. Men like Mexico’s senior Spanish commander, Agustín de Iturbide (1783–1824), fearing that the more liberal government that had come to power in Spain

might deprive him and his fellow officers of their “rights” (and, of course, their privileges), simply switched sides.

To begin the subversion of the Spanish colonial government in Mexico, Iturbide talked the Spanish viceroy, Juan Ruiz de Apodoca (1767–1835), into turning over to him command of the Spanish armies—in order, Iturbide said, to suppress the Mexican rebels led by Vicente Guerrero (1782–1831). With 2,500 Spanish colonial troops under his command, Iturbide did indeed march against Guerrero, not with the purpose of crushing him, however, but of coopting him. Reluctantly, after a few skirmishes, Guerrero was persuaded to join forces with Iturbide.

On February 24, 1821, Iturbide and Guerrero jointly issued the Plan of Iguala, which called for the establishment of an independent Mexican monarchy, the establishment of Roman Catholicism as the state religion, and the proclamation of racial equality for all Mexicans. Rallying to the plan were the rebels Nicolás Bravo (1787?–1854) and Guadalupe Victoria (1789–1843), as well as arch conservatives, such as Anastasio Bustamante (1780–1853). Bustamante had a large contingent under his control, some 6,000 armed men, and he eagerly led them into the cause of independence. As Iturbide and his new allies led their forces in a sweep of Mexico, the remaining Spanish royal forces did not resist, but deserted. This left the new Spanish viceroy, Juan O’Donoju (1755–1821), little choice but to grant Mexico its independence, which was proclaimed in the Treaty of Córdoba of 1821.

Iturbide was proclaimed Emperor Agustín I by his troops, and, like Napoleon (1769–1821), he crowned himself—on May 19, 1822. The United States immediately recognized Mexico as a sovereign state, though Iturbide hardly lasted a year in power (see MEXICAN REVOLUTION [1823]).

Mexican Revolution (1823)

PRINCIPAL COMBATANTS: Mexican army vs. government of Agustín I, emperor of Mexico

PRINCIPAL THEATER(S): Mexico

DECLARATION: Plan de Casa Mata, February 1823

MAJOR ISSUES AND OBJECTIVES: Overthrow of the short-lived Mexican monarchy and creation of a Mexican republic

OUTCOME: Under the leadership of Antonio López de Santa Anna and Guadalupe Victoria, the Mexican army forced Agustín I to abdicate, and a republic was declared.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Essentially, the entire strength of the Mexican army

CASUALTIES: Few

TREATIES: None

As a result of the MEXICAN REVOLUTION of 1821, conservative Mexican leader Agustín de Iturbide (1783–1824) crowned himself Emperor Agustín I of an independent Mexican monarchy. Agustín ruled with the majesty of an Asian potentate, quickly causing a national financial crisis. The Spanish occupied a fortress on the island of San Juan de Ulloa, situated off Veracruz, and from here they blocked Agustín’s collection of duties. With this all-important stream of revenue choked off, he began a general program of confiscation to raise funds. His army did not approve, and, even worse, having gone months without pay, rebelled.

The uprising came when General Antonio López de Santa Anna (1794–1876) was ordered by Agustín to capture San Juan de Ulloa. Once he had command of the army, however, Santa Anna called for the overthrow of the monarchy and the establishment of an independent Mexican republic. In this he was joined by General Guadalupe Victoria (1789–1843), and the two of them jointly issued the Plan de Casa Mata in February 1823. This declaration called for the abolition of the empire and the adoption of a new constitution and congress for a new republic. The army immediately fell in behind the Plan de Casa Mata, and, confronted by a general mutiny, Agustín I abdicated in March 1823. He fled into European exile. Guadalupe Victoria became the first president of the independent republic of Mexico.

Mexican War See UNITED STATES-MEXICAN WAR (1846–1848).

Mexico, Spanish Conquest of See SPANISH CONQUEST OF MEXICO (1519–1521).

Miguelite Wars (War of the Two Brothers) (1828–1834)

PRINCIPAL COMBATANTS: Miguelites vs. Constitutionalists (with British, French, and Spanish allies)

PRINCIPAL THEATER(S): Portugal

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Pedro I of Brazil sought to oust his brother Dom Miguel from the Portuguese throne and reinstate a constitutional monarchy under his sister, Maria II.

OUTCOME: Once Pedro gathered international support, his forces were able to defeat the Miguelites and constitutional government was reinstated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Miguelites, 80,000; Constitutionalists, under 32,000 (including British, Spanish, and French troops)

CASUALTIES: More than 20,000 killed among all belligerents

TREATIES: Abdication of Dom Miguel, May 26, 1834

Europe was much destabilized by the FRENCH REVOLUTION (1789–1799) and the advent of Napoleon. Portugal struggled, especially in the wake of the PENINSULAR WAR. Its king John VI (1769–1826) had fled to Brazil after the French conquest in 1807, leaving in his wake a French-controlled regency overthrown by Portuguese liberals at Oporto on August 29, 1820 (see OPORTO, REVOLUTION AT). They invited John to return to Portugal as a constitutional monarch, and he did so reluctantly on July 4, 1821, leaving behind his eldest son Pedro I (1798–1834) as emperor of the newly independent Brazil. John's return touched off an unsuccessful revolt by his second son, Dom Miguel (1802–66), whose ambitions received the support of absolutist forces in Portugal when his brother ascended in Brazil. In any case, he failed in his attempt to restore the old system (see PORTUGUESE CIVIL WAR [1823–1824]) and went into exile in Vienna.

After King John died, the crown fell to Pedro, who—preferring to remain emperor in stable Brazil than to become king in unsteady Portugal—threw his support behind the liberals, issued a constitutional charter based on Britain's parliamentary system, and abdicated in favor of his young daughter, Maria da Gloria (1819–53). The exiled Dom Miguel once again tried to claim the throne and revive the absolute power of the Braganza dynasty,

thus sparking a new PORTUGUESE CIVIL WAR (1826–27). When the British intervened on behalf of the constitutionalists, Dom Miguel came to terms with them and ended his second insurrection on April 18, 1828. He was named regent for the new Queen Maria II, whom he married by proxy, and the British withdrew.

Hardly had the English ships set sail, however, before Dom Miguel violated those terms, removing liberal governors from office and replacing them with conservative aristocrats, dissolving the Cortes and replacing it with a puppet assembly, and having himself declared king of Portugal in May. The ship bearing Maria II from Brazil to Portugal was diverted to England, where the British could protect her against the ambitions of her uncle (and husband). Meanwhile, Maria's backers resisted Dom Miguel's coup, only to be defeated at the battle of Coimbra on June 24, 1828.

Dom Miguel was formally crowned on July 11, 1828. Waging war on the constitutionalists, his supporters rapidly gained control of the Portuguese mainland. Liberals took to the Azores, where they were reinforced by volunteers from Brazil, Britain, and France. On August 12, 1828, Maria's supporters defeated a Miguelite naval attack on the Azores at Praia Bay, and afterward they were able to buy a naval squadron in England. Thus, the Azores remained in constitutionalist hands, and a regency on behalf of Queen Maria II was established there in 1829. Back in Brazil, Pedro abdicated his throne in favor of his son and headed for Europe to join the rebel cause, raise an army, and retake Portugal for his daughter. Thus did the war become popularly known as the "War of the Two Brothers."

The British supported Pedro's landing in the Azores in April 1831, where, again with British aid, he assembled an expedition to take Oporto, which fell to him in February 1832. The Miguelites laid siege to Oporto for a year, but the city was relieved by a naval attack under the command of Sir Charles James Napier (1782–1853) (known as Carlo Ponza) off Cape St. Vincent on July 5, 1833. This opened an opportunity for the constitutionalist forces to take Lisbon on July 24, 1833. At this point, Spain joined the fray on the side of Pedro and the constitutionalists, because Dom Miguel was sheltering Don Carlos (1788–1855), the pretender to the Spanish throne. Spanish troops now invaded Portugal and advanced against the Miguelite headquarters at Coimbra to capture Don Carlos (see CARLIST WAR, FIRST).

The international imbroglio over Don Carlos helped prompt Spain and Britain to unite with Portugal and France and form the Quadruple Alliance, dedicated not only to preserving constitutionalism in Portugal, but throughout Europe by opposing the Holy Alliance of Austria, Prussia, and Russia. Backed by the Quadruple Alliance and especially with Spanish aid, the constitutional forces quickly took Viseu, Coimbra, and Tomar, achieving final victory over the Miguelites at the Battle of

Santarém on May 16, 1834. Promised amnesty, Dom Miguel formally surrendered on May 26 at Évora-Monte. He renounced the throne and lived out the rest of his life in Germany. Pedro reinstated the constitution of 1826 and installed Maria II as queen of Portugal.

Milanese Civil War (1447–1450)

PRINCIPAL COMBATANTS: Francesco Sforza vs. republic of Milan

PRINCIPAL THEATER(S): Milan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Sforza sought to overthrow the newly created republic of Milan and claim what he deemed his right to a dukedom over the city.

OUTCOME: Aided by Venice, Sforza defeated the republic and was proclaimed duke of Milan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

This civil war was associated with the VENETIAN-MILANESE WAR (1448–1454), in which Francesco Sforza (1401–66) seized Milan and Piacenza, then declared war on Venice. Sforza was the son-in-law of Filippo Maria Visconti (1402–47), the duke of Milan, who died without heirs. In this vacuum, a republic was established for Milan, but Sforza decided to seize the city for himself. In the course of his war with Venice, Sforza suddenly switched sides, allied himself with Venice against republican Milan. He laid siege to the city, which fell to him in 1450 and acknowledged him as duke. The short-lived republic came to an end.

Mithradatic War, First (88–84 B.C.E.)

PRINCIPAL COMBATANTS: Pontus (with Greek allies) vs. Rome

PRINCIPAL THEATER(S): Asia Minor

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome responded to the campaign of conquest led by the Pontic king Mithradates VI the Great by launching legions that defeated Greece and Pontus.

OUTCOME: Mithradates was forced back into Pontus and had to relinquish most of his conquests as well as render unto Rome a huge indemnity.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Mithradates VI the Great (c. 132–63 B.C.E.) embarked on a campaign to unite under his leadership as emperor the peoples surrounding his kingdom of Pontus. This led to friction with the Roman Empire, which exploded into war when Mithradates, seizing the major cities of Asia Minor, ordered the mass slaughter of many thousands of Romans.

Rome unleashed legions under Lucius Cornelius Sulla (138–78 B.C.E.)—who marched through Mithradates’ ally, Greece, and crushed its army in 85—and Gaius Flavius Fimbria (d. 84 B.C.E.), who attacked Mithradates’ forces directly. Although Fimbria fell in battle, by 84 B.C.E. the Romans had succeeded in driving Mithradates back within the confines of Pontus. Most of the territory Mithradates had claimed was forfeit, and Rome also imposed a huge indemnity on him.

Mithradatic War, Second (83–81 B.C.E.)

PRINCIPAL COMBATANTS: Pontus vs. Roman legion under Lucius Licinius Murena

PRINCIPAL THEATER(S): Asia Minor, the region of the Kizil Irmak River

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Lucius Licinius Murena wanted to conquer the Kizil Irmak River territory of Mithradates VI the Great, king of Pontus.

OUTCOME: Murena was defeated, and Mithradates formed an important alliance with Quintus Sertorius, another Roman general.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Lucius Licinius Murena (fl. 83–82 B.C.E.), a power-hungry, glory-seeking Roman general, invaded territory held by Mithradates VI the Great (c. 132–63 B.C.E.) in the region of the Kizil Irmak River. Having lost most of his empire in the First MITHRADATIC WAR, from 88 to 84 B.C.E. Mithradates defended what remained with great vigor. He defeated Murena by 81. The war also propelled Mithradates into the arms of a sympathetic Roman general, Quintus Sertorius, with whom he joined forces in 75, thereby precipitating the Third MITHRADATIC WAR, from 75 to 65 B.C.E.

Further reading: John Boardman, Jasper Griffin, and Oswyn Murray, eds., *The Oxford History of the Roman World* (New York: Oxford University Press, 1991); B. C. McGing, *The Foreign Policy of Mithradates VI Eupator, King of Pontus* (Leiden, Netherlands: E. J. Brill, 1986); Colin Wells, *The Roman Empire*, 2nd ed. (Cambridge, Mass.: Harvard University Press, 1995).

Mithradatic War, Third (75–65 B.C.E.)

PRINCIPAL COMBATANTS: Pontus vs. Rome

PRINCIPAL THEATER(S): Asia Minor

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rome sought definitively to crush Mithradates and wrest Pontus from him.

OUTCOME: Mithradates was defeated, and Pontus fell to Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents have been identified.

Together, the Roman general Quintus Sertorius (d. 72 B.C.E.) (see MITHRADATIC WAR, SECOND) and Mithradates VI the Great (c. 632–63 B.C.E.), king of Pontus, schemed to attack Rome, Sertorius from the west, and Mithradates from the east. The assassination of Sertorius brought a sudden end to the menace from the west, and General Lucius Licinius Lucullus (c. 110–56 B.C.E.) was dispatched with an army to see to the defeat of Mithradates in the east.

The Romans trounced the Pontic forces in a series of battles, at Cyzicus, Cabira, Tigranocerta, and Artaxata, then attacked Mithradates in Pontus itself. Mithradates left his own country, but, by this time, the legions under Lucullus were worn out. They threatened mutiny, which left the general no choice but to withdraw. Despite having won all the battles, Rome therefore fell short of winning the war.

Pompey the Great (106–48 B.C.E.) replaced Lucullus as commander of the Roman forces and brought about an end to the war by definitively defeating Mithradates at the Battle of Lycus in 66 B.C.E. Mithradates sought refuge in the Crimea, where, in profound disgrace, he commanded a slave to put an end to his life. When his son-in-law and ally, Tigranes (c. 140–55 B.C.E.), king of Armenia, was defeated and captured soon after (see ROMAN-ARMENIAN WAR [72–66 B.C.E.]), he was compelled to relinquish to Rome all that he and his father-in-law had once ruled.

Mitre's Rebellion (1874)

PRINCIPAL COMBATANTS: Liberal forces of presidential candidate Bartolomé Mitre vs. government forces of Domingo Faustino Sarmiento

PRINCIPAL THEATER(S): Argentina, principally Buenos Aires

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Claiming election fraud, Mitre rebelled against the government.

OUTCOME: Mitre's liberal uprising was quickly crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but light

TREATIES: None

Argentine president Bartolomé Mitre (1821–1906) lost his reelection bid to Domingo Faustino Sarmiento (1811–88) in 1868 and again in 1874. Mitre claimed that the second election was fraudulent and led a liberal rebellion against Sarmiento's handpicked successor, Nicolás Avellaneda (1836–85). Sarmiento's candidate had the strong backing of the military, however, and federal troops crushed the rebellion in Buenos Aires on November 6, 1874. Avellaneda's presidency continued Argentina's conservative, military-backed government through the end of the 19th century.

Mixton Rebellion (1541)

PRINCIPAL COMBATANTS: The Zuni, Tewa, and Tiwa Indians vs. colonial forces of Spain
PRINCIPAL THEATER(S): Central New Mexico and Arizona
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: A pueblo rebelled against Spanish conquest.
OUTCOME: The rebellion was quickly put down, and the Indians were driven out of the pueblos—but they left behind little for the Spanish to enjoy.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: Unknown
TREATIES: None

As early as the first voyage of Columbus in 1492, Indians told Spaniards tales of villages laden with gold, known as the “Seven Cities of Cibola.” In search of these fabled cities, Francisco Vázquez de Coronado (c. 1510–54) set out in February 1540 to explore the unknown region north of the Rio Grande. During July 1540, Coronado and his troops encountered the Zuni pueblo of Hawikuh in central New Mexico. When the conquistador imperiously demanded the surrender of the pueblo, he was attacked, but, after an hour of combat, Hawikuh fell to him. Although he did not find gold in Hawikuh, Coronado occupied it and the surrounding Zuni territory, pillaging, food and anything else of value. After Coronado himself had moved on, the men he left behind to garrison the Tewa pueblos began to molest the women there. In 1541, an Indian named Texamatli (d. 1541) led a rebellion against the garrison conquistadores at a town called Mixton. The governor of New Spain, Niño de Guzmán (d. 1550), responded to this uprising by attacking several pueblos. Those Indians who were not killed in battle were burned at the stake. This demonstration of cruelty was utterly foreign to the traditions of the peaceful people of pueblo country. Tewas and Tiwas abandoned their villages to the Spaniards, but practiced a kind of scorched-earth policy, in which they took with them or destroyed virtually all of their possessions, leaving to the conquerors towns that were empty shells.

Modoc War (Lava Beds War) (1872–1873)

PRINCIPAL COMBATANTS: Modoc Indians vs. United States
PRINCIPAL THEATER(S): Lava beds of northern California in the vicinity of the Lost River
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: Modoc resistance to removal to a reservation
OUTCOME: The Modocs capitulated when their leader, Captain Jack, was captured and hanged
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Federal—from 60 to 225 troops and 100 militia for various engagements; Modoc—few, tribe’s population about 400
CASUALTIES: Federal—recorded 41 killed, including General Edward R. S. Canby, 52 wounded; Modoc—unknown
TREATIES: None

The Modoc Indians were a small tribe of perhaps 400 individuals living in the rugged Lost River valley of northern California and southern Oregon. During the 1850s, they periodically terrorized travelers along the Applegate Trail, but by the 1860s, under the leadership of Kintpuash (1837–73)—whom the whites called Captain Jack—they sought accommodation and trade with the whites. However, they were unwilling to accept “removal” to a reservation, particularly one they had to share with the Klamath Indians, who were hostile to them. To escape removal, Captain Jack and his followers settled on the Lost River, near Tule Lake, living meagerly by trade with white neighbors.

By the end of the 1860s, increasing numbers of white settlers were moving into the area, and pressure mounted for the Indians’ removal. On November 29, 1872, Captain James Jackson (fl. 1870s), heading up a cavalry troop, was sent to Captain Jack’s camp to disarm the Indians. A scuffle broke out, shots were exchanged, and one Modoc was killed and another wounded, while two troopers died and six suffered wounds. The army officially dignified the exchange as the Battle of Lost River.

In the meantime, a group of local ranchers took matters into their own hands by attacking a smaller group of Modocs, followers of a man the whites called Hooker Jim (c. 1825–1879). Two ranchers died in the assault and another was wounded, but, as Hooker Jim hurried to join

forces with Captain Jack, 14 more settlers, encountered along the way, were killed.

With a combined strength of 60, Captain Jack and Hooker Jim hid in the twisted, remote lava beds south of Tule Lake, which the Indians called the Land of Burnt-Out Fires, and the whites called Captain Jack's Stronghold. Army efforts to dislodge the Indians failed, and a peace commission was appointed by President Ulysses S. Grant (1822–85) to negotiate with the Modocs. On Good Friday, April 11, 1873, despite warnings from the Modoc wife of his interpreter, General E. R. S. Canby (1817–73) and the other three commissioners were attacked by Captain Jack and others. Canby and another commissioner were killed; two others escaped.

General William Tecumseh Sherman (1820–1891), general in chief of the army, dispatched two large infantry units under General John M. Schofield (1831–1906) to hunt down Captain Jack and other Modocs.

On April 26 Modoc warriors surprised a reconnoitering party, killing all five of the party's officers and 20 enlisted men, as well as wounding another 16.

The Modoc victories took a toll on personnel as well as morale, but the Indians could not sustain the effort. By the middle of May, their food and water dwindling, the Modocs dispersed. On May 28, a cavalry detachment located Captain Jack, his family, and a number of followers. They did not surrender until June 3. With three other Modocs, Captain Jack was convicted of murder and hanged.

Mogul-Afghan War (1565–1581)

PRINCIPAL COMBATANTS: Hindustan vs. Kabul (part of Afghanistan)

PRINCIPAL THEATER(S): Northern India and Afghanistan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Akbar, Mogul emperor of Hindustan, needed to put down rebellious relatives in neighboring Kabul

OUTCOME: All rebellions were quelled; ultimately, Kabul was annexed to the Mogul Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Mogul forces, 50,000; Kabul numbers unknown

CASUALTIES: Unknown

TREATIES: None

Nations governed by Islamic rulers lacked a system of primogeniture, whereby the oldest son in a family inherits all property and titles. Characteristically, therefore, the question of succession following the death of a ruler was open

to dispute, and it provided fertile ground for many wars. In India, Muslims usually resolved the problem of succession in one of two ways. Either the kingdom in question was divided among the rivals or one contender would do battle with the others.

When Akbar (1542–1605), Mogul emperor of Hindustan (the Ganges plain in north India), chose to divide the kingdom, he gave control of Kabul to his half brother, Mirza Hakim (d. 1585). However, in 1565, the Uzbek nobles attacked Kabul, and Mirza Hakim fled to India to ask Akbar's aid. Akbar agreed and led an army to the defense of his brother-in-law. But a disloyal Mogul faction prevailed upon Mirza Hakim to rebel against Akbar. Fortunately for Akbar, Mirza Hakim had little stomach for a fight when the imperial Mogul army showed up. He quickly backed down, and Akbar made peace with him, only to be required to put down other rebellions among relatives and tributaries in the **Second MOGUL WAR AGAINST GUJARAT**.

Mirza Hakim led another rebellion in 1581. On February 8, Akbar invaded Afghanistan with 50,000 cavalry and 500 elephants. On August 9, he entered Kabul and defeated Mirza Hakim. Akbar then installed his half sister as governor of Mirza Hakim's lands. Mirza Hakim retained nominal title to Kabul, but he had no real power. When he died in July 1585, Kabul was formally annexed to the Mogul Empire.

Mogul Civil War (1600–1605)

PRINCIPAL COMBATANTS: Mogul emperor Akbar vs. his son Salim

PRINCIPAL THEATER(S): Hindustan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The war began as a dispute between father and son, then progressed to a

minor civil war between supporters of Akbar's son and a rival contender for the throne.

OUTCOME: In the first phase of the conflict, father and son reconciled, but the reconciliation was ambivalent, leaving the country ripe for renewed civil conflict in the later phase of the war.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Akbar: unknown; Salim: 30,000

CASUALTIES: Unknown

TREATIES: None

Late in the reign of Akbar (1542–1605), Mogul emperor of Hindustan (the Ganges plain in north India), his oldest son, Salim (later reigned as Jahangir [1569–1627]), arrogantly governed Allahabad as if he were an independent monarch. This enraged Akbar, who took various opportunities to vent hostility against his son. This seemed only to feed Salim's arrogance. He formed an army and traveled with it throughout India during 1600–02, calling himself emperor and flouting his aging father's authority. At last, in 1602, the situation seemed to come to a crisis when Salim advanced on Agra, his father's capital, at the head of 30,000 troops. Akbar convinced his son not to fight, however.

Upon withdrawing from the abortive Agra confrontation, Salim hatched a scheme to use his troops to assassinate the man he saw as his arch-rival, Akbar's chief adviser. Although the adviser was warned of the scheme, he decided to face down Salim. That proved a grave mistake; for he was taken prisoner and beheaded, the severed head, on Salim's orders, cast into an outhouse.

Still, Akbar restrained himself and did not retaliate. At this point, he judged his son to be a drunk who lacked self-control. For his part, Salim expressed regret and renewed obedience by presenting his father with a gift of 350 elephants, symbolic of disarmament. In return, Akbar proclaimed Salim crown prince, personally placing the royal turban on Salim's head. Then, however, Akbar ordered his son placed under house arrest, in order to break him of his alcohol and opium addictions. The combined actions shocked Akbar's court, who favored the ascension of Khusrau (d. 1622), Salim's son, as crown prince. A riotous fight between followers of Salim and followers of Khusrau broke out during an elephant joust in 1605. With the fight rapidly escalating into a minor war, Akbar directed Salim's 13-year-old son Khurram (1592–1666)—later to rule as Shah Jahan—to stop the combat.

At his death later in the year, Akbar asserted that Salim, unstable and infirm, was his chosen successor. This left the Moguls ripe for renewed conflict in the **MOGUL CIVIL WAR (1607)**.

Mogul Civil War (1607)

PRINCIPAL COMBATANTS: Khusrau vs. his father, Jahangir

PRINCIPAL THEATER(S): Lahore (Pakistan)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Khusrau wanted a territory to rule and attempted to seize Lahore.

OUTCOME: Khusrau's rebellion was crushed, but it gave rise to years of civil strife.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Akbar: Unknown; Salim: 30,000

CASUALTIES: Unknown

TREATIES: None

Jahangir (1569–1627) succeeded his father, Akbar (1542–1605), to the Mogul throne in 1605 after rebelling against his father in the **MOGUL CIVIL WAR OF 1600–1605**. His own reign was destined to be plagued by civil conflict.

Jahangir was successful in restraining his eldest son Khusrau (d. 1622) briefly, but Khusrau fled the royal court in 1607, quickly assembled a moblike army, and besieged Lahore, to coerce his father into giving him a territory of his own. However, Jahangir's forces quickly defeated Khusrau's rabble, and Khusrau was seized, clapped into irons, and disgraced. His titles and status as crown prince were taken from him and conferred on his brother Khurram (1592–1666), who later ruled as Shah Jahan. Seeking to make an example of the rebels, Jahangir beheaded and impaled them by the hundreds. As to Khusrau, he was bound in golden chains for a year. On his release, he called for the death of his father, who retaliated by putting out one of his eyes and imprisoning him through 1622, when Khurram, who had risen against Jahangir in **SHAH JAHAN'S REVOLT**, ordered this rival strangled to death.

Mogul Civil War (1657–1659)

PRINCIPAL COMBATANTS: The sons of Shah Jahan, Aurangzeb, Dara Shikoh, Shuja, and Murad, vs. one another; Aurangzeb vs. his father, Shah Jahan

PRINCIPAL THEATER(S): Northern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The sons contended for succession to their father's throne; Aurangzeb, who triumphed over his brothers, then decided to overthrow his father.

OUTCOME: Aurangzeb emerged as the new Mogul emperor.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Variable, but, at most Dara commanded 120,000 men; Aurangzeb, 90,000; Shuja, 45,000; Murad, 10,000; numbers for Shah Jahan unknown.

CASUALTIES: Dara Shikoh lost 10,000 killed at the Battle of Samugarh (May 29, 1658).

TREATIES: None

This civil war may properly be called a war of succession. Acting in the service of his father, Shah Jahan (1592–1666), Aurangzeb (1618–1707) proved a brilliant military commander by the age of 16 during the so-called Wars of AURANGZEB. Yet, while he was off fighting, it was his eldest brother, Dara Shikoh (1615–59), whom Shah Jahan was grooming to succeed him on the throne. In part, this was because Dara Shikoh was Shah Jahan's favorite, and in part the treatment was to keep him under control, to forestall a rebellion against the father.

Dara nevertheless grew restive. Seeing in his brother Aurangzeb as a powerful rival, he undercut Aurangzeb's victories against Golconda and Bijapur (1656–57) by substituting indemnities for conquest and annexation. Following this, Dara assumed the reins of government and summarily cut off all contact with Aurangzeb and his other brothers. His act triggered a war of succession.

Shuja (d. c. 1658) and Murad (d. 1661), two of Dara's brothers, each proclaimed himself emperor and assembled armies to march against Agra, the Mogul capital. Shuja was quickly defeated in a battle on February 24, 1658, and was chased to Bengal. Murad, however, allied himself with Aurangzeb. Together, they defeated an imperial force at Dharmat (April 25, 1658) and a force under Dara at Samugarh, near Agra, on May 29, 1658. This proved one of the most decisive battles in Indian history. Dara Shikoh lost 10,000 men, including nine major Rajput lords and 19 high Mogul nobles. Dara fled after this loss, but was captured at Deodari and summarily executed, strangled by Aurangzeb's slaves on August 30, 1659. In the meantime, Aurangzeb engineered the imprisonment and execution of Murad, then directed the ambush and murder of Shuja in Bengal. With his rivals disposed of, Aurangzeb easily overthrew his father, Shah Jahan, whom he imprisoned for the rest of his life in his own Agra fortress. Aurangzeb proclaimed himself emperor on June 26, 1658.

Mogul Civil War (1707–1708)

PRINCIPAL COMBATANTS: Emperor Bahadur vs. (variously) his brothers, the Rajputs, Maratha, and Sikh rebels

PRINCIPAL THEATER(S): India's Deccan region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Bahadur sought to quell rebellion and rivalry for the throne.

OUTCOME: Bahadur triumphed over his brothers and other rebels, but his campaign against the Sikhs proved inconclusive.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Bahadur, 2,000 killed; his brothers probably lost an equal number; other losses unknown

TREATIES: None

At his death, the Mogul emperor Aurangzeb (1618–1707) wanted to divide his kingdom among his sons to avoid the war of succession that customarily followed the death of a Mogul ruler. Despite this, three of his sons violently contended for sole power. Princes Azam (d. 1707) and Kambakhsh (d. 1708), of India's Deccan region, were outraged after their elder brother Muazzam (1643–1712), governor of Kabul (Afghanistan), assumed the Mogul throne in 1707 as Bahadur Shah I. Azam attacked forces under Bahadur and was defeated and slain in 1708. Later that same year, his brother Kambakhsh died in battle.

Bahadur was free of his rivals, but he still needed to solidify his position in an ever-fractional empire. He mollified the Rajputs by releasing Ajit Singh (1678–c. 1720), a crown prisoner since the RAJPUT REBELLION AGAINST AURANGZEB in 1679. He allowed Ajit Singh to rule Marwar (Jodhpur). Bahadur also subverted the Marathas by freeing Shahu (d. 1749), their former ruler, who commenced a civil war against those who had executed his father Sambhaji in 1689 during the MARATHA-MOGUL WAR (1681–1705).

At last, only the Sikhs remained to oppose Bahadur. The emperor launched an assault on Lahore (Pakistan) against the Sikhs in 1710, but the outcome was inconclusive. Although the rebels retreated into the mountains, they remained a threat, and when Bahadur died in 1712, the MOGUL CIVIL WAR (1712–1720) ensued.

See also MOGUL CIVIL WAR (1657–1659).

Mogul Civil War (1712–1720)

PRINCIPAL COMBATANTS: Jahandar Shah vs. Farrukh-Siyar; Farrukh-Siyar vs. the Sayyid brothers; Sayyid brothers vs. Muhammad Shah

PRINCIPAL THEATER(S): Northern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Competition for the Mogul throne

OUTCOME: A succession of rulers assumed the throne; the principal result of the civil war was the decline of the Mogul Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After the Mogul emperor Bahadur Shah I (1643–1712) died, India's Mogul Empire was thrown into a bitter struggle over succession, which weakened the empire's resources and helped bring about its decline.

The eldest of Bahadur's four sons assumed the throne as Jahandar Shah (d. 1713). He immediately proved an incompetent ruler and was challenged by a relative, Farrukh-Siyar (d. 1719). Farrukh-Siyar allied himself with the Sayyid brothers—Husayn Ali (d. 1720) and Abdullah (d. c. 1721)—to carry out a coup d'état in 1713. At Farrukh-Siyar's direction, Jahandar Shah was strangled and Farrukh-Siyar installed in his place. With the help of the Sayyids, whose puppet he was, Farrukh-Siyar crushed the rebellious Rajput leader Ajit Singh (1678–c. 1720), as well as a powerful Sikh leader, Sanda Singh Bahadur (1670–1716).

Farrukh-Siyar surprised his Sayyid masters by rebelling against them in 1719. The ruthless brothers engineered his overthrow, took him captive, blinded him, and finally murdered him. However, neither of the Sayyids was in the royal line of succession. They therefore installed two new puppets in succession, a pair of weak and ailing underage boys, who lasted only from February to November 1719. Finally they brought to the throne a grandson of Bahadur Shah I, Muhammad Shah (1702–48).

By 1720 the Moguls were in full decline as the warlike Hindu Marathas extended their influence deeply into Hindustan. Muhammad Shah conspired against Husayn Ali, whom he or his henchmen poisoned. Shortly afterward, Muhammad fought Abdullah at the Battle of Hasanpur, near Delhi. Muhammad was victorious and imprisoned Abdullah, thereby bringing Sayyid control of the Mogul Empire to an end. However, the Mogul Empire itself was

tottering. For all practical purposes, it fell in 1764, when the Emperor Shah Alam II (1728–1806) allied himself with the British East India Company, which had established a firm foothold in India (see SEVEN YEARS' WAR), displacing French colonial power there. The alliance was one-sided; Shah Alam II effectively became a British vassal.

(New York: Oxford University Press, 1981); Douglas E. Streusand, *Formation of the Mughal Empire* (New York: Oxford University Press, 1999).

Mogul Conquest of Rajasthan (1561–1595)

PRINCIPAL COMBATANTS: Mogul Empire vs. the kingdoms of Rajasthan

PRINCIPAL THEATER(S): Rajasthan, India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Mogul emperor Akbar wanted to expand the Mogul Empire by dominating the Rajasthan kingdoms.

OUTCOME: All but a few of the Rajasthan kingdoms surrendered.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Moguls, about 60,000; Rajasthan, about 50,000

CASUALTIES: The siege of Chetor (1567–68) cost the Moguls 30,000 killed; in turn, the Moguls slaughtered 28,000 Rajputs there.

TREATIES: None

The Mogul emperor Humayun (1508–56) had spent so much time away from India during the Early MOGUL WARS AGAINST THE SUR DYNASTY (1535–1536), that the Hindu princes of central and western India, unsupervised, had become virtually autonomous. They formed a loosely structured alliance known as Rajasthan (or Rajputana) and, thus unified, created a threat to the Mogul hegemony.

It fell to Humayun's son and successor, Akbar (1542–1605), to deal with the problem of Rajasthan. In 1561, he launched a military campaign to conquer the central kingdom of Malwa, north of the Deccan. The following year, he established, through marriage, an alliance with the ruler of Amber (Jaipur). In this way, Akbar gained control of Jodhpur, Bhatha (Rewa), and a large portion of the Punjab and western Rajasthan by 1564. Next, between 1567 and 1570, Akbar accumulated control over all of Rajasthan by subduing its system of defensive fortresses, beginning with Chitor. This, the most formidable of the Rajasthan fortresses, took two years to capture (1567–68) and cost Akbar perhaps 30,000 of his men. When, at long last, it became apparent to Chitor's defenders that they were doomed, they performed the ritual of *jauhar*—burn-

ing their woman to death in preparation for a suicidal battle. This completed, the garrison of 8,000 sortied out against Akbar and was cut down to a man. After the fall of the fortress, Chitor was sacked with the loss of some 20,000 inhabitants. Ranthambhor, another fortress, also required a long siege, conducted from 1568 to 1569.

Following these brutal victories, Akbar, in 1570, called the Rajput rulers to a conference. Four Rajasthan kingdoms readily acknowledged his sovereignty. Another four soon followed. The only holdout was the western Mewar kingdom, which set up a kind of government in exile on an island in an artificial lake at Udaipur. Remarkably, Mewar managed to remain independent for the balance of Akbar's rule, even as he continued to enlarge the Mogul Empire by annexing Kashmir (1586), taking Sind (1590), annexing Orissa to Bengal (1592–94), and subduing Baluchistan (1595).

Mogul-Persian War (1622–1623)

PRINCIPAL COMBATANTS: Mogul Empire vs. Persia
PRINCIPAL THEATER(S): Region around the fortress-city of Kandahar, Afghanistan
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: The Persians wanted to take Kandahar from the Moguls; the Moguls wanted to recover it.
OUTCOME: The city was taken, and the Moguls failed to retake it.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: Unknown
TREATIES: None

Abbas I the Great (1557–c. 1628), shah of Persia, wanted to capture the strategically situated fortress-city of Kandahar, which was held by the Moguls. He made an assault against it in 1605–06, but was pushed back by forces under the Mogul emperor Jahangir (1569–1627). In 1622, Abbas led another army against Kandahar, taking it after a

siege of 45 days. Immediately, Jahangir planned a campaign to recover the fortress-city, ordering his son Khurram (1592–1666)—who subsequently ruled as Shah Jahan—to take an army from the Deccan into Kabul (Afghanistan) and make the assault. However, Khurram delayed his departure, and his father accused him of being in revolt. This prompted him to lead an army against his father in the so-called **SHAH JAHAN'S REVOLT**. Weakened by this action, the Mogul imperial forces were unable to retake Kandahar when they finally reached it in 1623, but the city would become a constant bone of contention between Persia and the Mogul Empire.

Mogul-Persian War (1638)

PRINCIPAL COMBATANTS: Mogul Empire vs. Persians
PRINCIPAL THEATER(S): Kandahar in Kabul (Afghanistan)
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: Mogul emperor Shah Jahan wanted to retake Kandahar, lost earlier.
OUTCOME: The fortress-city was retaken, not through force of arms, but by bribery. Shah Jahan's grander plan, to recapture Samarkand, was aborted.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: Unknown
TREATIES: None

The strategic fortress-city of Kandahar had been lost by the Moguls during the **MOGUL-PERSIAN WAR (1622–1623)**. In 1638, the Mogul emperor Shah Jahan (1592–1666) wanted to retake it as a step in a campaign to recover his ancestral Timurid homeland of Samarkand. Shah Jahan bribed the Persian governor of Kandahar, thereby obtaining the city's surrender without laying siege to it. Next, Shah Jahan refortified Kandahar and the surrounding area.

Shah Jahan did not succeed in his grand plan of taking Samarkand. Moreover, in the next war with Persia, the **MOGUL-PERSIAN WAR (1649–53)**, Shah Jahan once again lost Kandahar to the Persians—this time permanently, although the Persian occupation continued to raise the ire of the Moguls.

Further reading: David Morgan, *Medieval Persia, 1040–1797* (New York: Longman, 1988); Douglas E. Streusand, *Formation of the Mughal Empire* (New York: Oxford University Press, 1999).

Mogul-Persian War (1648–1653)

PRINCIPAL COMBATANTS: Mogul Empire vs. Persia

PRINCIPAL THEATER(S): Kandahar, Afghanistan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Moguls wanted to retake the strategically critical fortress-city of Kandahar.

OUTCOME: The Moguls repeatedly failed to retake the city.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Moguls, 60,000 (under Aurangzeb) and 70,000 (under Dara Shikoh); Persian numbers were greater.

CASUALTIES: Dara's assault on August 21, 1653, resulted in 1,000 Moguls killed and 1,000 wounded; Persian losses unknown.

TREATIES: None

In 1639 Persia invaded the Mogul Empire, capturing the Afghan city of Bamian and threatening the previously contested fortress-city of Kandahar to the south. Shah Jahan (1592–1666), the Mogul emperor, redoubled the fortifications at the strategically critical Kandahar, but for years no further Persian attack came.

In the meantime, Shah Jahan sent his son Murad (d. 1661) to invade Uzbek-controlled Badakhshan in 1646. He was soundly defeated, an event that prompted the Persians finally to mobilize against Kandahar. Preoccupied on other fronts, Shah Jahan delayed dispatching troops to the fortress-city until 1649, by which time Kandahar had fallen to the combined armies of the Persians and Uzbek Turks. The following year, Shah Jahan's son Aurangzeb (1618–1707) led an attack on Kandahar, but failed to retake it. Aurangzeb withdrew from the area, and, in 1652, returned with a larger army of 60,000 men. After two months of fighting, the still-superior Persian forces drove the Moguls into a second retreat. In disgrace, Aurangzeb turned over command of the armies to his oldest brother, Dara Shikoh (1615–59). Augmented to 70,000 men, that army conducted a five-month siege, but also failed to retake the fortress-city. Dara withdrew, having suffered 1,000 killed and an equal number wounded. Kandahar remained in Persian hands.

Mogul-Sikh War (1675–1708)

PRINCIPAL COMBATANTS: Mogul Empire vs. Sikh rebels

PRINCIPAL THEATER(S): Northern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Sikhs wanted freedom from religious persecution.

OUTCOME: The Sikhs fought a long defensive war, but were finally subdued.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Sikhs of northern India, who combined elements of the Muslim as well as Hindu religions, were favored by the Muslim Mogul emperor Akbar (1542–1605), but were disliked by orthodox Muslims as well as Hindus. In 1606, a Sikh guru named Arjun (1563–1606) was tortured to death by order of the orthodox Muslim Mogul emperor Jahangir (1569–1627) on charges that Arjun had supported the rebellion of the emperor's son Khusrau (d. 1622) in the **MOGUL CIVIL WAR (1607)**. The seventh guru, Har Rai (1630–61)—Arjun had been the fifth—threw Sikh support behind the liberal Muslim prince Dara Shikoh (1615–59) against his brother, the new Mogul emperor Aurangzeb (1618–1707). In retaliation, Aurangzeb forced Dara to send his son as a hostage to the Mogul court.

Such incidents steadily heightened the enmity between the Sikhs and the Moguls. At last, the ninth guru, Tegh Bahadur (c. 1621–75) staged a revolt in the Punjab. It proved short-lived, and the guru was taken captive to Delhi, the Mogul capital, where he was beheaded. The execution prompted Tegh Bahadur's son and the 10th guru, Gobind Rai Singh (1666–1708), to assemble a large Sikh army of the Khalsa ("pure"), with which they conducted a defensive war in the Punjab against far superior Mogul forces. Although this army held out for more than three decades, no major battles were fought, and Sikh resistance finally ended when the guru was assassinated in 1708.

Streusand, *Formation of the Mughal Empire* (New York: Oxford University Press, 1999).

Mogul-Sikh War (1709–1716)

PRINCIPAL COMBATANTS: Mogul Empire vs. Sikh rebels

PRINCIPAL THEATER(S): Punjab region of India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Sikhs wanted independence from the Moguls.

OUTCOME: In the course of the war, the Sikhs made many gains, but the resistance collapsed when the Sikh's principal leader was captured and killed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Extremely variable

CASUALTIES: Unknown

TREATIES: None

Bahadur Shah I (1643–1712), Mogul emperor of India, secured an alliance with the Sikh followers of Guru Gobind Rai Singh (1666–1708) against the rival Marathas. Following Gobind's death in 1708, the Sikhs under Banda Singh Bahadur (1670–1716) turned on the Mogul garrisons that had been established in their country—the Punjab—and seized the fort at Sirhind in 1710. After this, the Sikhs were virtual rulers of the region, as only the city of Lahore (Pakistan) remained under Mogul control.

Banda conducted a guerrilla war against the Moguls, raiding from hillside strongholds. When Bahadur Shah died in 1712, Banda was able to retake Sadhaura and Longarh, and when the Mogul Empire was weakened by the MOGUL CIVIL WAR (1712–1720), which followed Bahadur's death, Banda and the Sikhs made further inroads. However, Bahadur Shah's successor, Farrukh-Siyar (d. 1719), defeated the wily Banda in battle. Taken captive, he was transported to Delhi, where he was publicly humiliated and tortured to death in June 1716.

Mogul War against Gujarat, First (1535–1536)

PRINCIPAL COMBATANTS: Mogul India vs. Gujarat

PRINCIPAL THEATER(S): Region near Delhi, west coast of India, and Kabul (Afghanistan)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Moguls attempted to consolidate their territorial gains in India.

OUTCOME: Bahadur, the Gujarat sultan, was temporarily defeated, only to resume his opposition to the Moguls.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

After the death of Babur (1483–1530), first Mogul emperor of India, his son Humayun (1518–56) assumed the throne. He proved a grossly incompetent ruler at a time when great vigor was called for. Although Babur had acquired a vast realm, stretching across north India from the Amu Dar'ya (oxus) to the Brahmaputra River, the Moguls at this stage were little more than military occupiers. (See BABUR'S CONQUEST OF BIHAR AND BENGAL; BABUR'S INVASION OF NORTHERN INDIA; BABUR'S LAHORE CAMPAIGN; BABUR'S RAIDS ON PUNJAB.) Babur's gains had yet to be forged into a genuine empire. Humayun began his reign in 1530 by failing to subdue the Hindu principality of Kalinjar in Bundelkhand, south of Delhi. Next, he provoked war with the Sur (Afghan) dynasty's Sher Khan (1486–1545), governor of Bihar. In this conflict, Humayun failed to take Sher Khan's key fortress at Chunar. Then Humayun moved south and west to invade Malwa and Gujarat (1535).

This time, Humayun seemed to be on the way to victory. He captured the forts of Mandu and Champaner and pushed Sultan Bahadur (d. c. 1536) of Gujarat all the way down India's west coast, where he secured refuge among the Portuguese. In the meantime, however, Sher Khan proclaimed independence and invaded Bengal in 1536. Worse, Humayun returned to Delhi without leaving behind occupation forces. Bahadur simply reentered his lands, resumed control of them, and continued to oppose Mogul authority.

See also MOGUL WAR AGAINST GUJARAT, SECOND (1572–1573).

Further reading: Barbara Daly Metcalf and Thomas R. Metcalf, *Concise History of India* (New York: Cambridge University Press, 2002); Vincent A. Smith, *The Oxford History India*, 4th ed. (New York: Oxford University Press, 1981); Douglas E. Streusand, *Formation of the Mughal Empire* (New York: Oxford University Press, 1999).

Mogul War against Gujarat, Second (1572–1573)

PRINCIPAL COMBATANTS: Mogul Hindustan vs. Gujarat (with Portuguese aid)

PRINCIPAL THEATER(S): Gujarat

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Moguls wanted to crush Gujarat resistance to their authority in India.

OUTCOME: The Mogul emperor Akbar succeeded in subduing Gujarat opposition.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Moguls, 20,000; Gujarat rebels, 20,000

CASUALTIES: Unknown

TREATIES: Treaty between Akbar and Portuguese colonists of Diu, 1573

Akbar (1542–1605), Mogul emperor of Hindustan, successfully completed the MOGUL CONQUEST OF RAJASTHAN, then advanced west, toward the kingdom of Gujarat, which had long opposed Muslim authority. Gujarat was defended by a complex of fortresses and fortress-cities, each of which required the mounting of a siege to capture it.

First to fall was Ahmadabad in November 1572. In December, Akbar subdued the fortress at Cambay and scored a victory against usurpers at Sarnal. Following these triumphs, Akbar retired to the court city of Fatehpur Sikri, which he had commissioned to be built to replace the traditional capitals, Agra and Delhi. Insurgents returned to plague Akbar by laying siege to Ahmadabad in 1573. They had counted on the monsoon to prevent Akbar from defending Ahmadabad, but Akbar led his troops through monsoon conditions across more than 500 miles in 11 days. Akbar retook Ahmadabad on September 2, 1573, captured the insurgent leaders and took many other prisoners from among the 20,000 rebels there. The Portuguese, who had supported Gujarat (they occupied the Gujarat island of Diu), concluded a hasty peace with Akbar.

Mogul Wars against the Sur Dynasty, Early (1535–1536)

PRINCIPAL COMBATANTS: Moguls (with Persian allies) under Humayun vs. Surs under Sher Khan

PRINCIPAL THEATER(S): Punjab and Bengal, India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Sher Khan and Humayun were locked in a struggle over the Indian throne.

OUTCOME: Sher Khan overthrew Humayun, who later was able to win back his throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Sher Khan (1486–1545) became Sur (Afghan) governor of Bihar after he participated in Babur's (1483–1530) Mogul conquest of India. (See BABUR'S CONQUEST OF BIHAR AND BENGAL; BABUR'S INVASION OF NORTHERN INDIA; BABUR'S LAHORE CAMPAIGN; BABUR'S RAIDS ON PUNJAB.) When Babur's successor, the Emperor Humayun (1508–56), failed to seize the Bihari fortress of Chunar in 1532, Sher Khan became his rival for power. Humayun left Delhi in 1535 to fight the FIRST MOGUL WAR AGAINST GUJARAT, and Sher

Khan took the opportunity to invade Bengal. At this, Humayun broke off his campaign in Gujarat and marched his army east through the monsoon, reaching Bengal in 1537.

Humayun engaged Sher Khan, only to be called away yet again, this time to combat a revolt in Delhi by younger brothers. In a ruthless masterstroke of strategy, Sher Khan positioned his forces between Humayun and Delhi. The emperor's troops, weakened by the hardships of the monsoon, were slaughtered at the Battle of Chausa in 1539. Humayun himself managed narrowly to escape by floating across the Ganges on inflated animal skins used to carry water. He fled to Agra, where he pardoned his brothers, naming one of them, Kamran (d. 1557), ruler of Kabul and Kandahar. After this, Humayun fled west, where he lost another battle, at Kanauj in 1540, this time nearly drowning in the sacred river before escaping with his defeated troops to Lahore (Pakistan).

In the meantime, Sher Khan established himself as emperor. Wanting to leave no loose ends, Sher Khan pressed the pursuit of Humayun, first into Sind, then east to Rajasthan, then back to Sind and Kandahar. There Humayun's own brother refused to give him refuge, and he fled to Persia. There he unsuccessfully offered to bribe the shah with the 240-carat Koh-i-noor ("mountain of light") diamond in exchange for an army.

It was 1547 before Humayun was able to raise an army and begin the return to Delhi. That journey consumed seven years of fighting in Kamran before he crossed into India in 1554. By this time, however, the mighty Sur armies were embroiled in a three-way war of succession, so that Humayun's combined Mogul-Persian forces were able to defeat the fragmented Sur armies, first in the Punjab and then at Rohtas (Rohtak) in 1555.

The long-suffering Humayun went to Delhi and Agra and reclaimed his throne, only to fall to his death down a flight of stone steps the following year while in a drunken stupor.

See also MOGUL WARS AGAINST THE SUR DYNASTY, LATER (1556–1557; 1575–1576).

Further reading: Barbara Daly Metcalf and Thomas R. Metcalf, *Concise History of India* (New York: Cambridge University Press, 2002); Vincent A. Smith, *The Oxford History India*, 4th ed. (New York: Oxford University Press, 1981); Douglas E. Streusand, *Formation of the Mughal Empire* (New York: Oxford University Press, 1999).

Mogul Wars against the Sur Dynasty, Later (1556–1557; 1575–1576)

PRINCIPAL COMBATANTS: Moguls vs. Surs

PRINCIPAL THEATER(S): India, principally Punjab and Bengal

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Moguls and Surs contended for control of India.

OUTCOME: The Surs were defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Moguls, 20,000; Surs, 180,000

CASUALTIES: Precise numbers unknown, but, following the Battle of Tukra (Tukuroi), March 3, 1575, the Moguls beheaded their prisoners, creating 80 towers of severed skulls.

TREATIES: None

Akbar (1542–1605), son of the Mogul emperor Humayun (1508–56), inherited the troubled Mogul Indian throne at age 13. The young ruler was faced with the ongoing threat from the Sur dynasty, as well as opposition from the Hindu Rajput rulers (see the **MOGUL CONQUEST OF RAJASTHAN**), the rivalry of his brother, opposition from Gujarat (see **Second MOGUL WAR AGAINST GUJARAT**), and a rebellious son.

Humayun's 1555 victory at Rohtas (Rohtak) in the **Early MOGUL WARS AGAINST THE SUR DYNASTY (1535–1536)** had not entirely eliminated the Sur rivals for the throne. Sikander Sur (d. 1558) was vying for control of the Punjab, and Hemu (d. 1556), Hindu prime minister of Sur-dominated Bihar and Bengal, seized Delhi and Agra, establishing himself as the Rajah Vikramaditya. Akbar attended to this threat first, but soon found himself losing the second Battle of Panipat. Some 1,500 Hindu elephants were charging for the coup de grâce when, suddenly, Hemu was felled by an arrow that penetrated his eye. His army broke and ran, and the wounded Hemu was taken captive and executed.

With Delhi and Agra retaken, Akbar returned to the west, where he met Sikander Sur at the Battle of Sirhind (1557) and defeated him. At the defeat, a final Sur pretender, Daud Khan (d. 1576), fled to Orissa. Akbar determined that he could leave the weakly supported man alone for the time being. Years later, in 1574, during the course of Akbar's conquest of Bihar, Daud invaded Bengal with an army of 40,000 cavalry, 140,000 infantry, and 3,600 elephants. By vastly superior tactics, this massive force was defeated by 20,000 Mogul horsemen at the Battle of Tukra on March 3, 1575. While relatively few Sur warriors were killed in the battle, many were made prisoner. These unfortunate men were beheaded, the victors creating 80 towers of their severed skulls.

Daud attacked again at Rajmahal on July 12, 1576, but was defeated, captured, and executed. His death brought an end to Sur opposition to the Moguls in India.

Mohawk-Mahican War (1626–1628)

PRINCIPAL COMBATANTS: Iroquoian Mohawks vs. Algonquian Mahicans

PRINCIPAL THEATER(S): Vicinity of Albany, New York

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: The Mohawks sought first to break the Mahican monopoly on the Dutch beaver trade, then to take control of it themselves

OUTCOME: The Dutch reached trading arrangements with both tribes

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The Indian policy of Dutch colonists in America vacillated between aggression and cruelty on the one hand and timid defensiveness on the other. The Dutch initially enjoyed friendlier relations with the Indians than did the Spanish or English because, unlike the Spanish, they did not come to conquer, and, unlike the English, they were less interested in settling than in trading.

Henry Hudson (d. 1611), an Englishman sailing for the Dutch, discovered the river that bears his name in 1609. Five years after this, Fort Nassau, a trading post, was built on Castle Island near Albany, the country of the Mahican Indians, with whom they struck a trade agreement in 1618. Fort Nassau was flooded out and abandoned in 1617, but the Dutch West Indies Company, formed in 1621, built Fort Orange on the site of Albany in 1624. The first Indian conflict came two years later, when the Mohawks launched a war against the Mahicans. The Dutch sent a small force under Daniel van Krieckebecck (d. 1624) to help their trading partners, but were defeated, with the loss of three men in addition to van Krieckebecck. The Dutch withdrew and concluded a treaty with the Mohawks.

Four years later, in 1628, Mohawk warriors once again hit the Mahicans, but they did not press their advantage. The Mohawks seemed less intent on annihilating the Mahicans than on taking control of the lucrative Dutch trade, much desired by all the beaver-hunting Indians (see **BEAVER WARS**). After 1628, the two tribes apparently reached an accord, because both conducted a profitable trade with the Fort Orangers.

Mongol-Burmese War (1277–1287)

PRINCIPAL COMBATANTS: Mongols vs. Burmese Pagans

PRINCIPAL THEATER(S): Borderlands of Burma (Myanmar) and Mongolia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The king of Pagan in Burma resisted Mongol demands for vassalage and tribute.

OUTCOME: The Pagan king ultimately accepted Mongol suzerainty over his kingdom.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Numbers unknown; but, at their greatest extent, Burmese forces outnumbered Mongol forces 3 to 1.

CASUALTIES: Unknown

TREATIES: No documents survive

The Mongol dynastic founder Kublai Khan (1216–94) attempted to force vassalage on the king of Pagan, Narathihapate (d. 1287). The king not only refused, but, as an insult to Kublai Khan, executed the emissary who bore the demand. Taking the initiative, Narathihapate then led an offensive against Kublai Khan in the Yunnan region of China. Narathihapate's elephant-mounted troops terrified the Mongol cavalry at the Battle of Ngasaunggyan in 1277, but commanders were able to avoid a panicked rout by ordering archers to dismount. On foot, the archers were able to disperse the Burmese elephants. That accomplished, they remounted and quickly counterattacked against the vastly superior Burmese forces, which outnumbered them 3 to 1. The counterattack was so vigorous that the Burmese withdrew. (The battle was described in detail by the European traveler Marco Polo [1254–1324], who witnessed it.)

In 1283, the Mongols staged a counteroffensive against the Burmese after turning away another border raid. After defeating the raiders at Bhamo, Yesin Timur (1267–1307), grandson of Kublai Khan, continued to advance through the Irrawaddy Valley and took Narathihapate's capital of Pagan. Narathihapate himself had escaped south to Bassein. Yesin Timur set up a Mongol puppet government—a circumstance that ultimately persuaded Narathihapate to accept Mongol suzerainty over his kingdom; however, his son, objecting to this capitulation, murdered Narathihapate in 1287. War would erupt anew in 1299 (MONGOL-BURMESE WAR OF 1299–1300).

Phayre, *History of Burma* (London: Susil Gupta, 1967); J. J. Saunders, *History of the Mongol Conquests* (Philadelphia: University of Pennsylvania Press, 2001).

Mongol-Burmese War (1299–1300)

PRINCIPAL COMBATANTS: Shan (Mongolian Thai people of northeast Burma) vs. Mongols

PRINCIPAL THEATER(S): Pagan, kingdom in Burma (Myanmar)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mongols sought to reassert control of Pagan after the Shan overthrew the Mongol puppet government established in 1287.

OUTCOME: The Mongol force withdrew from Pagan, control of which remained with the Shan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: 500 Mongols were killed at the Battle of Myinsaing, 1300

TREATIES: None

Mongol triumph in the MONGOL-BURMESE WAR (1277–1287) resulted in the establishment of a puppet government in the Burmese kingdom of Pagan. In 1299, the Shans of northeast Burma overthrew this government, prompting the Mongols to dispatch a small army to reestablish control. Shan forces resisted from within their fortified city of Myinsaing, killing 500 of the Mongol invaders, checking their advance, but failing to drive them out. The leader of the Shan believed that the Mongols would now send a much larger force and sought to forestall this by bribing the Mongol commander to withdraw. The Mongol commander accepted the bribe and withdrew to the Yunnan province of China. His deed did not go unpunished, however, as Mongol leaders later executed the corrupt commander; the Shan nevertheless remained in control of Pagan, because the Mongols never sent another army to mount a new attack.

Phayre, *History of Burma* (London: Susil Gupta, 1967); J. J. Saunders, *History of the Mongol Conquests* (Philadelphia: University of Pennsylvania Press, 2001).

Mongol-Chinese War (1356–1368)

PRINCIPAL COMBATANTS: Chinese (primarily under Zhu Yuanchang [Chu Yüan-chang]) vs. the Mongol overlords

PRINCIPAL THEATER(S): China, especially Yangtzi (Yangtse or Chang) River valley

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Chinese sought to overthrow their Mongol overlords.

OUTCOME: Amid a weakening Mongol administration, Zhu Yuanchang evicted the Mongols and established the Ming dynasty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** None; the Mongols, though defeated, refused to surrender

The Yuan dynasty, established in China by Kublai Khan (1216–94), was inherently flawed. Kublai Khan failed to respect Chinese culture and highhandedly appointed Muslim officials to high office, thereby offending the indigenous Chinese officials, the mandarins. He generally relegated the Chinese to a status inferior to the Mongols. Far from subjugating the Chinese, this approach provoked a number of revolts, which Kublai Khan quickly crushed. Over the years, however, the quality of the Yuan emperors declined, and the Mongols became less involved in administering China. By the 1350s, the rebellions became more numerous and intense, especially in the Yangtzi River valley. Local warlords usurped authority, and one of them, Zhu Yuanchang (1328–98), proclaimed himself emperor, establishing a capital at Nanjing (Nanking). From this base, Zhu Yuanchang invaded Beijing (Peking) in 1368, which easily fell to him. He drove the Mongols out of Beijing and the surrounding territory, pushing them to Shangdu (Shang-tu) and, ultimately, to Outer Mongolia. Zhu Yuanchang founded the Ming dynasty, although the dispossessed Mongols persisted in calling themselves the rulers of China.

Mongol Civil War (1260–1264)

PRINCIPAL COMBATANTS: Forces of Kublai Khan vs. forces of Arik-Böke, his brother and rival

PRINCIPAL THEATER(S): Mongolia, especially vicinity of Karakorum

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: This was a civil war fought between rival factions.

OUTCOME: The faction led by Kublai Khan prevailed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No document survives

Mangu Khan (c. 1207–59) ruled the Mongols in harmony with his brother Kublai Khan (1216–94). When Mangu died in 1259, however, a younger brother, Arik-Böke (d. 1255), assumed leadership of the “Old Mongol” faction, to oppose Kublai Khan’s Chinese-influenced, modern faction. Their respective factions elected both Kublai Khan and Arik-Böke to supreme leadership of the Mongols, and this ignited civil war.

One aspect of the war was the GOLDEN HORDE–IL-KHAN CIVIL WAR, which pitted another of Kublai Khan’s brothers, Hülegü (d. 1265), against Berke (d. 1266), the leader of the Golden Horde. Another aspect of the war directly involved Kublai Khan against Arik-Böke. In 1260, Kublai Khan marched an army toward Arik-Böke’s capital at Karakorum, sending Arik-Böke into retreat. The following year, the two armies engaged, but fought to a draw. Nevertheless, Arik-Böke attempted to retake Karakorum. Failing in this, he lost a succession of lesser engagements before he finally surrendered to Kublai Khan in 1264. Kublai Khan did not exact personal vengeance on his brother, but released him. It was enough that his forces had been defeated, and, indeed, Arik-Böke was finished as a political power.

Mongol Conquest of the Abbasid Caliphate (1255–1260)

PRINCIPAL COMBATANTS: Mongols vs. the Abbasid Caliphate and Egypt

PRINCIPAL THEATER(S): Mesopotamia (Iraq) and Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Mongols sought the conquest of Mesopotamia, Syria, and, ultimately, Egypt

OUTCOME: The Abbasid Caliphate fell, and the Mongols conquered Mesopotamia and Syria, but failed to hold Syria and also failed to conquer Egypt.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Maximum Mongol strength, 400,000

CASUALTIES: Mongol casualties approached 10,000; other casualties unknown. Many civilian losses in the sack of Baghdad

TREATIES: None

Preparatory to an assault on Egypt, the Mongol khakhan (supreme ruler) Mangu Khan (c. 1207–59) assigned the conquest of the Abbasid caliphate to his brother Hülegü (d. 1265), who had founded the Il-Khan dynasty, which bordered the caliphate. Hülegü advanced from the Oxus (Amu Dar'ya) River to within a few miles of the Nile. Simultaneously, Hülegü's general, Ked-Buka (d. 1260), led a massive Mongol force out of Samarqand in 1256 and attacked the Assassins, a secret Muslim terrorist sect, destroying their power and putting Ked-Buka's army in position to take Baghdad, capital of the caliphate. With brilliant execution of a careful plan, Ked-Buka was able to surround Baghdad and assault it from three sides. The capital fell in 1258, after a yearlong siege, and Hülegü entered it, sacked it, seized the caliph, Al Mustasim (d. 1258), and ordered him trampled to death by horses.

Having captured the Abbasid capital and having killed its caliph, Hülegü invaded the rest of Mesopotamia (Iraq) with a vast army of 400,000. In 1259, he expanded the attack to Syria, and in 1260 the cities of Aleppo, Damascus, Gaza, and Sidon fell to him. These major conquests put Hülegü in position to take Egypt, but Hülegü had to abandon these plans when Mangu Khan died. With a power vacuum back home, Hülegü had no choice but to return. He left Ked-Buka and a garrison of 10,000 soldiers in charge of the conquered territory. This, of course, left him vulnerable to Egyptian attack, which came in 1260. Ked-Buka was killed and his 10,000-man force defeated. An Egyptian army went on to retake Syria.

Mongol Conquest of the Jin Empire

(1231–1234)

PRINCIPAL COMBATANTS: Mongols vs. Jin dynasty

PRINCIPAL THEATER(S): Northern China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mongol conquest

OUTCOME: The Jin (Chin) dynasty fell to the conquest.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

About 80,000 Mongols; numbers of other combatants unknown

CASUALTIES: Unknown

TREATIES: None

The Mongol conquest of the Jin in northern China was the prelude to the MONGOL CONQUEST OF THE SONG [Sung] EMPIRE and the MONGOL INVASION OF EUROPE. It was led by the son of Genghis Khan (c. 1167–1227), Ögedei (d.

1241), who became khakhan (supreme ruler) of the Mongols after the death of his father.

With his brother Tolui (d. 1232) and his leading commander, Sübedei (d. c. 1258), Ögedei advanced into Henan (Honan) Province, Jin territory. Like his father, Ögedei was a master of military strategy and had developed a plan whereby he and Sübedei advanced from the north and Tolui from the south. Tolui fended off Jin opposition and forced the Jin to withdraw into their capital, Kaifeng. Although Tolui died in battle, he had driven the Jin warriors precisely where Ögedei and Sübedei wanted them. Sübedei now led a siege against Kaifeng, constructing a great wall around the capital, by which the Jin were starved into submission. Seeing the collapse of the Jin to be imminent, Song warriors joined the Mongols in their siege. The Jin emperor Ai Zong (Ai Tsung; r. 1224–34), managed to slip through the siege lines, but, believing his situation hopeless, hanged himself. Ögedei's intervention forestalled wholesale destruction of the fallen Jin capital, much of which was preserved.

Hucker, *China's Imperial Past: An Introduction to Chinese History and Culture* (Stanford: Stanford University Press, 1975); David Morgan, *The Mongols* (New York: Oxford University Press, 1986); J. A. Roberts, *A Concise History of China* (Cambridge, Mass.: Harvard University Press, 1999); J. J. Saunders, *History of the Mongol Conquests* (Philadelphia: University of Pennsylvania Press, 2001).

Mongol Conquest of the Song Empire

(1234–1279)

PRINCIPAL COMBATANTS: Mongols vs. Song (Sung) dynasty

PRINCIPAL THEATER(S): China and Southeast Asia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mongol conquest

OUTCOME: After sporadic and protracted warfare against stubborn resistance, the Mongols conquered the Song and founded the Yuan dynasty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Kublai Khan fielded an army of 100,000; other numbers unknown

CASUALTIES: Often heavy. Kublai Khan lost 60,000 of his army of 100,000; Song losses were heavy, as Song warriors typically fought to the death.

TREATIES: None

Immediately after the MONGOL CONQUEST OF THE JIN [Chin] EMPIRE in 1231, 1233, and 1234, Ögedei (d. 1241), khakhan (supreme ruler) of the Mongols, commenced a war against the Song dynasty. In contrast to the conquest

of the Jin, war against the Song proved long and arduous—in no small part because the Mongol program of conquest at this point was so ambitious, encompassing the Middle East and Europe, as well as China, that Mongol resources were spread thin.

Warfare against the Song was chronic and indecisive for the first 20 years of campaigning, but was stepped up in intensity under Kublai Khan (1216–94) in the 1250s. Sübedei (d. c. 1258), serving as his chief commander, led a series of sieges, and, in 1252, Kublai Khan himself led an army of 100,000 through Tibet into Yunnan, defeating a Song army there before advancing through modern Laos, where he attacked the Song army from the south. He advanced northward and engaged a large Song army in 1254. Losses to the Song in men and territory were great, but so were losses to Kublai Khan's army, which, by 1254, had dwindled to 20,000.

After Kublai Khan had fought his running war of attrition, his brother, Mangu Khan (c. 1207–59), defeated the Song in a series of speedy victories between 1257 and 1259, when he succumbed to disease. Mangu Khan's death brought a long intermission in the war, which allowed the Song to regroup and, to a large extent, revive. It was not until 1268 that Sübedei's grandson Bayan (1237–95) resumed in earnest the conquest of the Song in a series of devastating victories culminating in the fall of Hangzhou (Hangchow), the Song capital. So determined was Song resistance, however, that the fighting continued even after Hangzhou had been taken. In 1279, a small Song force evacuated the boy emperor in a fleet that rode in the bay of Canton. Mongol vessels attacked, sinking the emperor's ship and drowning him. This at long last ended Song resistance.

The fall of the Song dynasty was the culmination of Mongol efforts to unite all China under its rule. Kublai Khan established the Yüan dynasty in place of the Jin and Song.

Mongol Dynastic Wars See GOLDEN HORDE DYNASTIC WAR.

Mongol Invasion of Annam and Champa See VIETNAMESE-MONGOL WAR (1257–1288).

Mongol Invasion of Europe (1237–1242)

PRINCIPAL COMBATANTS: Mongols vs. Poles and Hungarians

PRINCIPAL THEATER(S): Poland, Hungary, Austria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mongol conquest

OUTCOME: The Mongols swept through Poland and Hungary, bringing great destruction, but they withdrew on the death of the khakhan Ögedei.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Mongols, 150,000; at the Battle of Wahlstadt, Poland fielded 40,000; at the Battle of Mohi, Hungary fielded 70,000

CASUALTIES: Totals unknown; at the Battle of Mohi, Hungary suffered 40,000 casualties out of an army of 70,000

TREATIES: None

The Mongol invasion of Europe was part of a vast program of conquest including the MONGOL CONQUEST OF THE ABBASID CALIPHATE, the MONGOL CONQUEST OF THE JIN [Chin] EMPIRE, and the MONGOL CONQUEST OF THE SONG [Song] EMPIRE. The movement west of some 150,000 Mongol troops commenced in 1237 and began with the conquest of Russian principalities (Second MONGOL INVASION OF RUSSIA). By 1240, the Mongol army, under the remarkable commander Sübedei (d. c. 1258), was in Poland. Lublin, Sandomierz, Boleslav, Chmielnik, and Kraków were either captured or destroyed. The culminating battle came on April 9, 1241, at Wahlstadt, where Henry I of Silesia (1168–1241) led 40,000 troops, including a contingent of Teutonic Knights, in a defensive counterattack against the Mongols. The European troops were heterogeneous, poorly disciplined, and indifferently led. The Mongols, in contrast, were highly trained, highly motivated, and brilliantly led by commanders bred on strategy and tactics. When Sübedei noted that Henry had divided his forces into four units, he employed a so-called suicide tactic (*mangudai*), using a small advance force as a lure to draw the enemy out to attack. The small force would hold the enemy in place, absorbing its blows, until the hidden wings of the Mongol army would close upon the attacker like the jaws of a giant trap. This is precisely what happened at Wahlstadt. Not only was an army of 40,000 routed and decimated, Europe's finest warriors, the Teutonic Knights, were all but wiped out. As for Henry of Silesia, although he fled, Mongol patrols tracked him down, and he was beheaded. This act was intended to intimidate the citizens of nearby Liegnitz into instant capitulation; however, shown Henry's severed head, they resolved instead to resist. The Mongols destroyed the city, albeit incurring heavy losses themselves.

From the bloody triumph of Wahlstadt, the Mongols advanced into Hungary via the Carpathian Mountains, Galicia, Moldavia, Transylvania, and Saxony. Thus the Hungarians were surrounded by hostiles on four sides. Hungary's King Béla IV (1206–70) foolishly sent the bulk of his army (the most formidable in Europe) to the north, near Pest (Budapest), where he thought the main attack would come. At Mohi on the Sajo River, on April 11, 1241, Béla divided his 70,000 men, making a probing attack with an advance unit against a small Mongol detachment. Sübeidei, always the master of tactics, hid his main force and, at night, struck the main part of Béla's force, which was sleeping in camp. Surprise was total and resulted in the loss of 40,000 Hungarians, more than half of Béla's army. Thoroughly demoralized after the Battle of Mohi, the rest of the army fled, as did Béla, leaving Pest open to the Mongols. On December 25, 1241, they invaded the city and burned it. From here they raided into Austria (1242) and, doubtless, would have continued their westward advance had word of the death of the khakhan (supreme ruler) Ögedei (d. 1241) not prompted them to return to Asia. Thus the Mongol army returned home undefeated.

Mongol Invasion of Japan, First (1274)

PRINCIPAL COMBATANTS: Mongol (with Korean allies) vs. Japan

PRINCIPAL THEATER(S): Kyushu, Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mongol conquest

OUTCOME: A storm forced an end to the Mongol and Korean amphibious invasion, and the forces withdrew to Korea.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Mongol invasions of Japan, 1274 and 1281

Having conquered Korea in 1241 (MONGOL INVASION OF KOREA), the Mongols decided to use the country as a platform from which to launch an invasion of Japan. When the Japanese refused a surrender demand, a combined Mongol-Korean fleet landed at Kakata in Kyushu. Although the Mongols possessed military superiority over the Japanese, a storm wrecked some of the landing fleet, delaying the operation and buying the Japanese time to mass more defenders. Under this pressure, the Mongols and Koreans aborted the invasion and withdrew to Korea.

See also MONGOL INVASION OF JAPAN, SECOND (1281).

Further reading: John W. Hall, *Japan; From Prehistory to Modern Times* (Tokyo: C. E. Tuttle Co., 1971); David Morgan, *The Mongols* (New York: Oxford University Press, 1986); James Murdoch, *A History of Japan*, 3 vols. (New York: Routledge, 1996); George B. Samson, *A History of Japan*, 3 vols. (Palo Alto, Calif.: Stanford University Press, 1958–63); J. J. Saunders, *History of the Mongol Conquests* (Philadelphia: University of Pennsylvania Press, 2001).

Mongol Invasion of Japan, Second (1281)

PRINCIPAL COMBATANTS: Mongols (with Korean allies) vs. Japan

PRINCIPAL THEATER(S): Kyushu, Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mongol conquest

OUTCOME: The Mongols were unable to breach strong Japanese fortifications and, at sea, were defeated by a combination of a Japanese fleet and a terrible storm or kamikaze (“divine wind”).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Mongols, 150,000; Japanese forces were lesser

CASUALTIES: Most of the Mongol army was destroyed.

TREATIES: None

Kublai Khan (1216–94) delayed a second invasion attempt against Japan long after the failure of the first attempt (see MONGOL INVASION OF JAPAN, FIRST) and was provoked to the second foray only after Japan not only rejected Mongol demands for submission but also killed Mongol envoys. In 1281, Kublai Khan assembled a Mongol-Korean fleet of 4,500 vessels carrying 150,000 invasion troops. As in the earlier attempt, the invaders seized outlying islands and, from these, mounted an invasion at Kyushu. This time, however, they met intense resistance. Taking a lesson from the first invasion attempt, the Japanese built strong fortifications on Kyushu. These held the Mongol army at bay while a Japanese fleet battled the Mongol armada at sea.

About two months into the operation, disaster struck the Mongol fleet, which was mostly wrecked in a storm (the Japanese believed this to have been a “divine wind, [or *kamikaze*]), leaving the beleaguered attackers on land without supplies. The Japanese counterattacked, wiping

out most of the Mongol-Korean army. Japan was never menaced by the Mongols again.

Mongol Invasion of Korea (1231–1241)

PRINCIPAL COMBATANTS: Mongols vs. Korea

PRINCIPAL THEATER(S): Korea

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mongol conquest

OUTCOME: The initial conquest was swift, but subsequent rebellions brought a long period of raiding and suppression of rebel forces.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

When a Mongol envoy conveyed the demand of the khakhan (supreme ruler), Ögedei (d. 1241), that Korea must submit to Mongol suzerainty, the messenger was, by way of response, murdered. Ögedei ordered his leading general, Sübedei (d. c. 1258), to invade. Within less than a year, a Mongol puppet was installed on the Korean throne, but a rebellion in 1232 sent him fleeing. When Ögedei ordered the puppet king to report to him at Karakorum, he refused and, in 1235, Ögedei dispatched a force to punish him by subjugating Korea anew. Over the next six years, the Mongols methodically raided Korea and suppressed all opposition. At last, the king submitted entirely to the Mongols, who reinstated him.

Further reading: John W. Hall, *Japan; From Prehistory to Modern Times* (Tokyo: C. E. Tuttle Co., 1971); David Morgan, *The Mongols* (New York: Oxford University Press, 1986); J. J. Saunders, *History of the Mongol Conquests* (Philadelphia: University of Pennsylvania Press, 2001).

Mongol Invasion of Russia, First (1221–1223)

PRINCIPAL COMBATANTS: Mongols vs. Khivans, Alans, Cherkess, Kipchak Turks, and Russian princes

PRINCIPAL THEATER(S): Uzbekistan, Georgia, Caucasus, and Crimea

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mongol conquest

OUTCOME: The theater of the war was conquered by the Mongols and became the Kipchak Khanate.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the Battle of the Kalka River, the Kipchaks and Russian princes fielded 80,000 men against an inferior number of Mongols.

CASUALTIES: The Battle of Kalka River resulted in the loss of most of the Kipchak-Russian army of 80,000.

TREATIES: None

The Mongols' first invasion of Russia was incidental to a punitive pursuit of the shah of Khwarazm (Khiva), who had fled after the Mongols destroyed Bukhara in central Uzbekistan. The shah was run to ground near the Caspian Sea and found dead there in 1221. With two Mongol armies now in the area, however, the Mongol commanders set about raiding through Azerbaijan and Georgia. In Georgia, Tiflis (Tbilisi) fell to the Mongols before the end of the year. The raiders then destroyed Margaha and Hamadan, and in 1222 raided the steppes north of the Caucasus. Here they were confronted by allied Alan, Cherkess, and Kipchak tribes. The Kipchaks were rapidly defeated, but the others united with the Russian princes at the Kalka River. Here, in 1223, the Kipchak-Russian force, approximately 80,000 men, attacked the smaller Mongol army under Sübedei (d. c. 1258). Despite their inferiority of numbers, the Mongols were far better trained,

equipped, and led. Sübedei used a fast-moving circling tactic, pouring fire from his archers into the Kipchak-Russian ranks, almost entirely destroying the enemy.

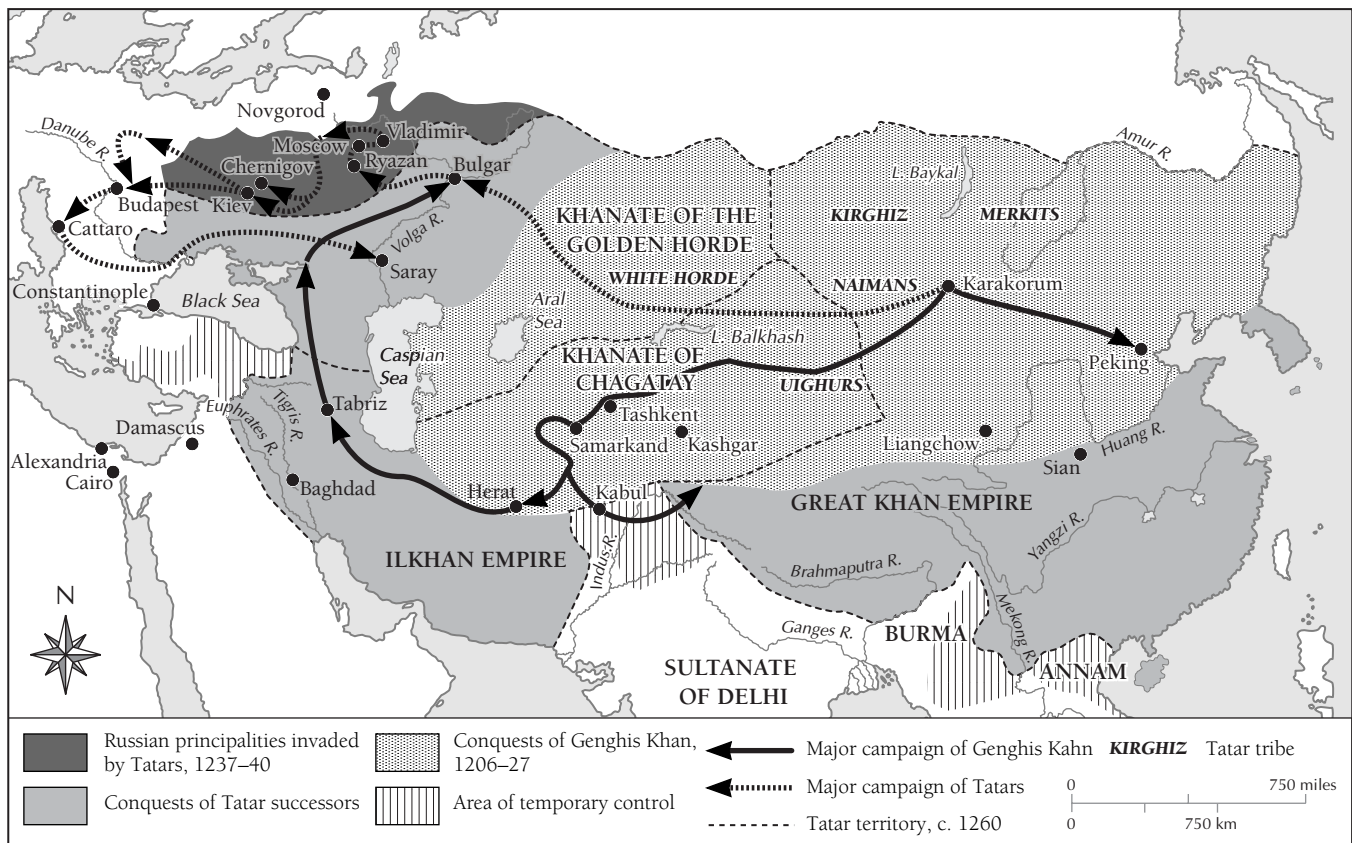

From the Battle of the Kalka River, the Mongols captured the Genoese port of Sudak on the Crimean Peninsula, then marched up the Volga River, where they harassed Bulgars and Kangli Turks. After this, the Mongols returned to Persia. The Mongol emperor Genghis Khan (c. 1167–1227) gave the conquered Russian territory to his eldest son, Jöchi (d. 1227), and, after the Second MONGOL INVASION OF RUSSIA in 1236, it became known as the Kipchak Khanate.

Mongol Invasion of Russia, Second (1236–1240)

PRINCIPAL COMBATANTS: Mongols vs. Russians

PRINCIPAL THEATER(S): Western and central Russia

Mongol invasions of Russia, 13th century

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mongol conquest

OUTCOME: By 1240, the Kipchak Khanate (central Russia) was firmly in the hands of the Golden Horde, as was Kievan Russia (Ukraine).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but heavy among the conquerors and conquered alike

TREATIES: None

The First MONGOL INVASION OF RUSSIA made great inroads into Russian territory and staked out the Kipchak Khanate, but it did not deliver the territory wholly into the hands of what became known as the Golden Horde of Batu Khan. Therefore, in 1236, Mongol forces assembled in Great Bulgaria, near the Volga River, and, after ravaging Great Bulgaria, advanced into European Russia.

Mangu Khan (c. 1207–59) subdued Great Hungary in 1236, defeating the Bashkirs and Kipchaks, then advanced into Hungary proper by 1241. In the meantime, Batu Khan (d. 1256) destroyed the Russian cities of Riazan and Kilomna in 1237, conquered most of central Russia in 1238—the realm of Prince Vladimir falling to him—then went on toward Novgorod. Like many other conquerors after him, Batu Khan was defeated not by an opposing army, but by the elements. His troops survived the bitter winter, only to become bogged down in a vast muddy thaw. Unable to make further headway, Batu Khan withdrew and was idle throughout 1239. In 1240, he renewed the invasion, ravaging Kievan Russia (Ukraine) along the Dnieper River. He destroyed Kiev itself, then established complete control of the area.

Hoskin, *Russia and Russians: A History* (Cambridge, Mass.: Harvard University Press, 2001); David Morgan, *The Mongols* (New York: Oxford University Press, 1986); J. J. Saunders, *History of the Mongol Conquests* (Philadelphia: University of Pennsylvania Press, 2001).

Mongol Invasion of Syria (1299–1300)

PRINCIPAL COMBATANTS: Mongols vs. Syrians

PRINCIPAL THEATER(S): Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Essentially a massive hit-and-run raid rather than an occupation

OUTCOME: The invasion was successful, but the Mongols either failed or chose not to occupy the region on a permanent basis.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the great age of Mongol expansion, the two centuries spanning 1200 to 1400, Mongol forces under Il-Khan Mahmud Ghazan (r. 1294–1303) attacked and captured Damascus and used this Syrian capital as a base from which they overran all Syria. However, Mahmud Ghazan failed to establish a permanent presence in the region and, no sooner had he completed his conquest, than he withdrew from Syria—which, however, would be subject to periodic Mongol raids.

Further reading: David Morgan, *The Mongols* (New York: Oxford University Press, 1986); J. J. Saunders, *History of the Mongol Conquests* (Philadelphia: University of Pennsylvania Press, 2001).

Mongol Invasions of India (1221–1398)

PRINCIPAL COMBATANTS: Mongols vs. India

PRINCIPAL THEATER(S): India, chiefly the Punjab

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mongol conquest

OUTCOME: The Mongol raids during this period were disorganized and random.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the Battle of the Indus, Mongol forces numbered 40,000 against Indian forces of 30,000.

CASUALTIES: At the Battle of the Indus, Indian losses were much more than half of the 30,000-man force.

TREATIES: None

Generally, Mongol invasions were major campaigns guided by detailed plans and carefully formulated strategies. In contrast to this, however, the first invasion of India was almost accidental. It came about when the son of the Khwarazm shah, Jalal-ad-Din (or Jalal al-Din; d. 1231), escaped Mongol captivity and fled to Khorasan, where he mobilized resistance, then fled to Afghanistan and organized resistance there as well. From there he took refuge in the Hindu Kush Mountains.

Genghis Khan (c. 1167–1227) led a Mongol army in the Battle of Bamian, laying waste that city, then pressed his pursuit of Jalal-ad-Din into India. He ran his quarry to ground at the Indus River. Genghis Khan commanded about 40,000 troops against Jalal-ad-Din's 30,000. The Muslim forces had the river at their backs, but were protected on the right flank by a bend in the river and, on the left, by a mountain ridge. Genghis Khan perceived that the weaker position was the enemy's left, and he dispatched specially trained mountain cavalry to attack it. Rolling up Jalal-ad-Din's flank, Genghis Khan was able to envelop him completely. Most of the 30,000-man

force was wiped out, although Jalal-ad-Din himself escaped.

After the Indus River battle, Genghis Khan decided to focus his attention on gaining control of Khorasan, so he withdrew from India. The next invasion came in 1241 and was not followed by another until 1292. Another hiatus came until 1299. From this time until 1308, Mongols frequently raided in and about Lahore and throughout the Punjab. After 1308, the Mongols refrained from invasion except for a brief raid on Delhi in 1329. It was not until TAMERLANE'S INVASION OF INDIA in 1398 that the Mongols made a concerted effort to gain control of the region.

Mongol-Persian War, First (1218–1221)

PRINCIPAL COMBATANTS: Mongols vs. Persia, especially Khwarazm (Khiva)

PRINCIPAL THEATER(S): Persia

DECLARATION: Genghis Khan against Khwarazm

MAJOR ISSUES AND OBJECTIVES: The invasion began as retribution for the killing of Mongol trade emissaries.

OUTCOME: Much of Persia was subjugated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Mongol, 200,000; other numbers unknown, but much smaller in any single engagement

CASUALTIES: Unknown

TREATIES: None

The war began after Genghis Khan (1167–1227) sent military aid to Muslim Turks suppressing an uprising in Kara-Khitai. The Mongol mission liberated Kara-Khitai, from which Genghis Khan decided to send a peaceful trading mission into neighboring Khwarazm, one of the three realms that at the time made up Persia (the other two were Transoxiana and Khorasan). Muhammad (r. 1200–20), the shah of Khwarazm, seized the caravan and executed the Mongol emissaries, whereupon Genghis Khan demanded reparation. When no reparation was forthcoming, the Mongol leader declared war.

Genghis Khan sent a 200,000-man army into Persia, destroying all cities that failed to surrender. The population of each resisting city was killed, except for artisans and engineers, who were recruited into the Mongol number. Those cities Genghis Khan destroyed were permitted to rebuild, once they acknowledged Genghis Khan's suzerainty.

In the face of this destruction, the Khwarazmian shah fled. The Mongols gave chase, sacking along the way Bukhara and the capital city of Samarkand in 1220. By timely surrender, Herat and Merv, major centers of trade, wisely avoided destruction. The war continued through 1221 as one of many MONGOL INVASIONS OF INDIA, but Muhammad Khwarazm Shah had been permanently deposed.

See also MONGOL-PERSIAN WAR, SECOND (1230–1243).

Further reading: David Morgan, *Medieval Persia, 1040–1797* (New York: Longman, 1988) and *The Mongols* (New York: Oxford University Press, 1986); J. J. Saunders, *History of the Mongol Conquests* (Philadelphia: University of Pennsylvania Press, 2001).

Mongol-Persian War, Second (1230–1243)

PRINCIPAL COMBATANTS: Mongols vs. Persia

PRINCIPAL THEATER(S): Persia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mongol conquest

OUTCOME: Persia and the surrounding region fell to the Mongols.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Having escaped the general slaughter of the 1221 Battle of the Indus River during the first of the MONGOL INVASIONS OF INDIA, Jalal-ad-Din (or Jalal al-Din; d. 1231), son of the shah of Khwarazm, fled to Delhi, where he married the daughter of the local sultan. With his father-in-law's aid, he advanced across the Indus in 1224, raided Lahore and the Punjab, both controlled by the Mongols, and captured Tabriz and Tiflis (Tbilisi) in 1225 and Armenia in 1227, where he defeated a small Mongol army. In 1230, the Mongol khakhan (supreme ruler) Ögedei (d. 1241) assembled a major Mongol army to destroy the forces of Jalal-ad-Din. He was surrounded at Diyarbakir in 1231, but eluded capture; however, Syria, Syrian Mesopotamia, and Anatolia (Turkey) fell to the Mongols, along with Persia.

See also MONGOL-PERSIAN WAR, FIRST.

Further reading: David Morgan, *Medieval Persia, 1040–1797* (New York: Longman, 1988) and *The Mongols* (New York: Oxford University Press, 1986); J. J. Saunders, *History of the Mongol Conquests* (Philadelphia: University of Pennsylvania Press, 2001).

Mongol Revolts (1755–1760)

PRINCIPAL COMBATANTS: China vs. Mongol tribes

PRINCIPAL THEATER(S): Eastern Turkistan and western Mongolia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Chinese acted to suppress rebellion among the Mongols.

OUTCOME: The Mongols were suppressed, and their territory became an autonomous region under Chinese suzerainty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Mongol tribes, especially the Dzungars, in eastern Turkistan and western Mongolia frequently rebelled against the government of the Chinese emperor Qianlong (Ch'ien-lung; 1711–99). The Chinese general Zhaohui (Chao-hui; 1708–64) led an expedition to crush the rebellions and, in 1757, defeated the Dzungars and other Mongol tribes. Eastern Turkistan and western Mongolia became the Xinjiang Uighur (Sinkiang Uygur) Autonomous Region under the suzerainty of China.

Monks, War of the (1465)

PRINCIPAL COMBATANTS: Tendai warrior monks vs. Shin warrior monks

PRINCIPAL THEATER(S): In and about Kyoto, Japan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Religious rivalry

OUTCOME: Inconclusive

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

This was a conflict between rival warrior monks: the Tendai, based on a hill in northeast Kyoto called the Hiesan, and the Shin, within Kyoto proper. The Tendai invaded the city and burned down the Shins' Hongwanji Temple. The violence sparked an uprising outside the city as well; other sects began to fight with one another. Despite quick expansion, the war soon petered out, albeit without resolution.

The War of the Monks was a manifestation of the anarchy that prevailed during this period, in which neither emperor nor shoguns (military overlords) had effective power and authority.

Monmouth's Rebellion (1685)

PRINCIPAL COMBATANTS: England vs. the duke of Monmouth

PRINCIPAL THEATER(S): Somersetshire, England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Monmouth sought to succeed Charles II to the throne.

OUTCOME: The rebellion was crushed, Monmouth beheaded, and the other rebels punished.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Monmouth's army, 9,000; royalist forces, 2,700

CASUALTIES: Monmouth's army, 1,384 killed in action, 1,000 made prisoner, of whom 200 were executed and 800 transported to Barbados exile; royalists, 400 killed or wounded

TREATIES: None

James Scot (1649–85), duke of Monmouth, was proposed by the first earl of Shaftesbury as the heir to the throne of Charles II (1630–85) in preference to the Catholic duke of York, James (subsequently King James II [1633–1701]). When Monmouth attracted many supporters, he was threatened and had to flee for his life to Holland. He returned to England after the death of Charles II, where he proclaimed himself king and raised an army of 9,000 supporters. The duke of York, having ascended the throne as James II, sent an army under Louis de Durfort, the second earl of Feversham (1641–1709) to intercept Monmouth's force. Colonel John Churchill (1650–1722), commanding the Household Cavalry, defeated Monmouth, largely with artillery fire, at the Battle of Sedgemoor, in Somersetshire, on July 6, 1685. Monmouth's force was decimated, and although Monmouth himself escaped death in battle, he was soon captured and beheaded. Of 1,000 of Monmouth's men taken prisoner, 200 were hanged and the rest shipped off to Barbados by judgment of Chief Justice George Jeffreys (c. 1645–89) in what came to be called the Bloody Assizes.

Morant Bay Rebellion (1865)

PRINCIPAL COMBATANTS: Great Britain vs. native Jamaican rebels

PRINCIPAL THEATER(S): Morant Bay

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The protestors wanted access to government lands.

OUTCOME: The rebellion was put down harshly, and the British government, to avoid full-scale rebellion, acted to mitigate the effect of the action.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Rebels, 2,000; government numbers unknown

CASUALTIES: Fifteen were killed and 31 wounded in the initial action, the Morant Bay courthouse arson; three more whites were slain in subsequent action; 439 rebels were executed and 600 more flogged.

TREATIES: None

After hard-pressed Jamaicans were refused permission to use government lands for planting, mobs in St. Ann and St. Thomas parishes set fire to the courthouse at Morant Bay on October 10, 1865, while the parish council was in session. The chief magistrate and 14 other whites were killed (it is not known how many black Jamaicans died). In response, Jamaica's British governor Edward John Eyre (1815–1901) imposed martial law and dispatched troops to suppress the "rebellion." George William Gordon (d. 1865), a prominent black merchant, was executed as a

ringleader, producing outrage throughout the island. In a successful effort to forestall a greater rebellion, the Jamaican assembly voted itself out of existence, the Crown recalled Governor Eyre, and Parliament created Jamaica as a crown colony under a royal governor. However, government troops burned some 1,000 native huts, executed 439 rebels, and sentenced another 600 to flogging. Eyre, brought up on government charges for his brutality in suppressing the uprising, was acquitted.

Morgan's Raids on Panama (1668–1671)

PRINCIPAL COMBATANTS: Morgan's buccaneers vs. Spanish colonial forces

PRINCIPAL THEATER(S): Panama

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Morgan was hired by the British Crown to harass the Spanish along the Spanish Main.

OUTCOME: Morgan's raids in Panama disrupted Spanish interests there and netted Morgan a personal fortune.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Morgan's raiders numbered about 2,000. Panama was defended by fewer than 3,000 Spanish troops.

CASUALTIES: 406 buccaneers killed or wounded; 782 Spanish troops killed or wounded

TREATIES: None

Henry Morgan (c. 1635–88), a Welsh mariner, was hired by the English Crown to harass vessels on the so-called Spanish Main—the South American coastal region between Panama and the Orinoco River. On July 10, 1668, Morgan led a fleet of a dozen ships manned by 460 pirates, who captured the port town of Porto Bello on the Caribbean side of the Panamanian isthmus. One hundred thirty men of the Spanish garrison were killed before the survivors surrendered.

The following year, Morgan sailed again, but his 200-gun flagship, *Oxford*, exploded, with the loss of 200 men. It was December 16, 1670, before he made a new assault, with 37 ships manned by about 2,000 "buccaneers." They raided the rich Spanish fortress-city of Panama in January 1671. In February the city's defenses were breached and the city sacked.

Morgan withdrew on February 24 with a vast hoard of treasure and 600 prisoners, ripe for lucrative ransom. Although Morgan deserted some of his men and sailed off, he was knighted in 1673 and returned to Jamaica the following year as its deputy royal governor.

Moriscos, Revolt of the (1568–1571)

PRINCIPAL COMBATANTS: Spanish vs. Moriscos rebels

PRINCIPAL THEATER(S): Andalusia, Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Crown wanted to suppress all Muslim practice within Spain.

OUTCOME: The rebellion was crushed in Andalusia and the surviving Moriscos dispersed throughout Spain.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Spain, 5,000; Moriscos, 30,000

CASUALTIES: Spain, 1,550 killed or wounded; Moriscos, 21,000 killed

TREATIES: None

The Moriscos were Spanish Muslims who had been forcibly baptized by order of the Spanish Crown. In Andalusia, the Moriscos defiantly continued to speak and write in Arabic and to wear Muslim dress. To enforce religious conformity, King Philip II (1527–98) decreed harsh measures of subjugation, thereby provoking an armed rebellion at Alpujarras beginning on December 25, 1568. The initial attack was repulsed, but the violence spread to Granada, which was badly damaged by the Moriscos, and the rebels soon controlled the Alpujarras region.

In January 1569, 5,000 Spanish troops slaughtered large numbers of Moriscos at the Battle of Alfajarali Pass, but by August, the Moriscos had recruited some 30,000 troops and the revolt continued. At last, in 1571, Don Juan (John of Austria, 1547–78) led a substantial force against the Moriscos. His first assault failed, but a second attack on the Moriscos stronghold of Galera, on February 10, resulted in the deaths of 2,500 rebels. Further action prompted some Moriscos to surrender and others to disperse throughout Spain, where they persisted in clinging to Muslim practices and dress until they were deported from Spain by royal order in 1609. They were resettled mainly in North Africa.

Mormon War *See* UTAH WAR (MORMON WAR) (1857–1858).

Moroccan Civil War (1645–1668)

PRINCIPAL COMBATANTS: Hassani Berbers vs. Sa'ad dynasty

PRINCIPAL THEATER(S): Morocco

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Hassani sought to overthrow the Sa'ad dynasty and establish their own.

OUTCOME: The Hassani dynasty was proclaimed in 1649, but the civil war continued until the fall of Marrakesh in 1668.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the reign of Sultan Zidan (1608–28) the Sa'ad dynasty, rulers of Morocco, entered a sharp decline. This led to a long period of civil war, from about 1645 to 1668, waged chiefly by the Hassani Berbers, who lived on the desert's edge. In 1649, the civil war reached a climax when Muhammad XIV (fl. 17th century) captured Fez and established the Hassani dynasty. However, this did not bring an end to rebellion and civil war throughout Morocco. Hassani forces continually fought resistance and did not complete the conquest of the country until 1668, when Marrakesh at last fell to them. It was then under Mulay al-Rashid, as Rashid II (r. 1668–72), that final consolidation of Morocco was achieved, from 1668 to 1672.

Moroccan Insurrection *See* RIF WAR (1919–1926).

Moroccan War (1907–1912)

PRINCIPAL COMBATANTS: Morocco vs. France and Spain; Germany vs. France

PRINCIPAL THEATER(S): Morocco

DECLARATION: None—although the war may be traced to the Algeciras Convention of April 7, 1906

MAJOR ISSUES AND OBJECTIVES: Control of Morocco

OUTCOME: France was granted a protectorate over Morocco

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Morocco, 15,000; France, 32,000; numbers for other belligerents unknown

CASUALTIES: Morocco, more than 3,000 killed; France, 1,424 killed or wounded; casualties for other belligerents unknown

TREATIES: Algeciras Convention, April 7, 1906; Treaty of Fez, March 30, 1912

In Algeciras, Spain, on April 7, 1906, Germany, Austria-Hungary, Belgium, Spain, France, Great Britain, Italy, Morocco, Netherlands, Portugal, Russia, Sweden, and the United States concluded the Algeciras Convention, which affirmed the territorial integrity of Morocco even as it authorized France and Spain to police the country. The convention had come about after Germany challenged the impending partition of Morocco by France and Spain.

North Africa, in the early 20th century, became an arena for European power politics. In 1898 the French had unsuccessfully attempted to gain control of the Egyptian Sudan, and now, through agreements with Spain, Italy, and Britain, France sought to strengthen its hold on Saharan Africa by converting the Sultanate of Morocco to a French protectorate. Kaiser Wilhelm II (1859–1941) of Germany moved to preempt this by intervening personally with the sultan of Morocco, Abd al-Aziz IV (1878–1943) in 1905. Wilhelm believed his call on the sultan would persuade Britain to back down from its recently concluded Entente Cordiale with France. The diplomatically inept kaiser had miscalculated, and his overtures to the sultan succeeded only in drawing Britain and France closer together.

Finding himself caught in a European squeeze, the sultan of Morocco requested an international conference at Algeciras, Spain, during January 16–April 7, 1906, to resolve peacefully what was developing into an explosive crisis. The convention concluded the following: Affirmation of the independence of Morocco (which pleased Germany) and the award to France of control over much of “independent” Morocco, including regulation of the Moroccan police and finances (which was contrary to the German interest). France and Spain were permitted to establish within Morocco a paramilitary police force, and France was authorized to create a substantially French-controlled state bank.

In 1907, Moroccans rose up against foreigners in Casablanca. This brought a violent and overwhelming response from French troops, who killed thousands of Moroccans and occupied Casablanca. Yet native Moroccan dissent and resistance only increased. Abd al-Hafiz (1875–1937), brother of Sultan Abd al-Aziz IV, deposed the sultan on grounds that he had sold out Morocco and failed in his stewardship of Islam. In 1909, the brother was proclaimed sultan, but he found himself engulfed in the momentum of the ongoing uprising—and called on the French and Spanish for military aid in restoring order.

On the Moroccan coast, Rif tribespeople attacked the Spanish troops, who were defeated at the Battle of Melilla in 1909. When the Rif attacked Fez, the French responded with a major force and occupied the city.

Wilhelm II, never pleased with the Algeciras Convention and now alarmed by French military actions in Morocco, sent in 1911 the German gunboat *Panther* to Agadir. Emergency negotiations between France and Germany averted war when the kaiser backed down and formally recognized French rights in Morocco. The kaiser was allowed to save face by obtaining from France the cession of a small area of the Congo.

On March 30, 1912, the sultan of Morocco concluded with France the Treaty of Fez, by which France was granted a full protectorate over Morocco.

Moroccan Wars in West Africa (1591–1618)

PRINCIPAL COMBATANTS: Morocco (with a largely mercenary army of Spanish and Portuguese troops) vs. Songhai Empire and other West African peoples

PRINCIPAL THEATER(S): West Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Colonial conquest

OUTCOME: Morocco overran, devastated, and colonized West Africa, only to withdraw when colonization proved costly and insufficiently profitable.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Moroccan forces, 4,000 against Songhai; Songhai opposition numbers unknown

CASUALTIES: Numbers unknown, but heavy among the Songhai

TREATIES: None

In 1591, a Moroccan army, consisting mainly of Spanish and Portuguese mercenary troops, about 4,000 strong and equipped with European firearms, invaded the Songhai Empire in West Africa. The Songhai warriors had never experienced European weapons before and were quickly overwhelmed. The mercenaries overran and sacked Timbuktu (Tombouctou) and they destroyed Gao, the Songhai capital. This devastation ended the Songhai Empire.

From Songhai, the Moroccans fanned out over the central Niger Valley, and when the university at Timbuktu threatened to become a center of religious and political opposition, the Moroccans destroyed it. In the end, the Moroccan military triumph was total, but the cost of maintaining colonial dominion in West Africa grew prohibitive, and Sultan Zidan (d. 1606) of Morocco withdrew all of his forces in 1618. Many Moroccan colonists remained, and some prospered whereas others perished in

the power vacuum that was left by the precipitous withdrawal of the conquerors.

Fage and Roland Oliver, eds., *The Cambridge History of West Africa*, 8 vols. (New York: Cambridge University Press, 1975–1980); Rodney Steel, *History of West Africa* (New York: Facts On File, 2003).

Moro Wars (1901–1913)

PRINCIPAL COMBATANTS: Moros of southern Philippines vs. the United States

PRINCIPAL THEATER(S): Luzon and other southern Philippine islands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Moros resisted U.S. occupation and administration, largely on religious and cultural grounds.

OUTCOME: Moro resistance was eventually suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 1,200 U.S. troops; 5,000 Moros

CASUALTIES: U.S. casualties light, fewer than 100 battle deaths total; 600 Moros died in the fall of Bud Dajo, 1906

TREATIES: None

The principal United States effort in the suppression of the PHILIPPINE INSURRECTION (1899–1902) was in the northern Philippines, especially on Luzon. The southern islands were largely neglected, and it was here that resistance to the U.S. presence grew early in the 20th century. In 1899, Brigadier General John C. Bates (1842–1919) had negotiated an agreement with the sultan of Sulu, nominal leader of the Moros, an Islamic people living on Mindanao and the Sulu Archipelago, by which the sultan recognized U.S. sovereignty. In return, the United States agreed to provide protection for the sultan's subjects, grant him sovereignty in criminal cases, respect Islamic religious customs, and even permit slavery in the area. But the sultan's control of the Moros, a people with a strong warrior tradition, was tenuous at best, and their resistance to the Americans took on the intensity of a religious war.

In November 1901, Captain John J. Pershing (1860–1948) led two troops of the 15th Cavalry and three infantry companies to Mindanao with the purpose of persuading the Moros to cooperate with the U.S. government. With great diplomatic skill, Pershing won over those Moros living on the north shore of Lake Lanao. Those on the southern shore, however, frequently skirmished with U.S. troops as well as with a U.S.-sanctioned native Moros constabulary. Brigadier General George Davis (fl. late 19th and early 20th centuries) sent 1,200 U.S. troops to take the Moro stronghold at Pandapatan, which was neutral-

ized at the cost of 60 Americans killed and many more wounded. At this site, the army established Camp Vicars, with Pershing in command. From this base, between June 1902 and May 1903, Pershing launched a new diplomatic campaign, but failed to cajole cooperation from the Moros. Pershing then conducted a series of restrained but highly effective military expeditions, which also included diplomatic elements.

By the summer of 1903, when Pershing returned to the United States, the most acute Moros violence had been quelled—but flare-ups were chronic, and the new military governor of the Moro province, Major General Leonard Wood (1860–1927), entirely lacked Pershing's understanding, skill, and tolerance in dealing with the Moro people. He was determined to beat them into absolute submission to U.S. authority, and he was especially zealous in his effort to eliminate slavery in the province. Wood's approach provoked a guerrilla war, fought from Moro strongholds called *cottas*. In October 1905, a major guerrilla leader, Dato Ali (d. 1905), was targeted by Wood, who sent Captain Frank R. McCoy (fl. early 20th century) with 115 men against his cotta. McCoy's command ambushed and killed Dato Ali on October 22. Even this victory, however, did not end the Moro resistance. At the end of 1905, a large contingent of Moros took up positions at Bud Dajo, a crater atop a 2,100-foot-high extinct volcano, which proved to be a formidable natural fortress. The existence of this stronghold became a great embarrassment to U.S. authority in the province, and, on March 5, 1906, Colonel Joseph W. Duncan (fl. early 20th century) attacked the position in force. Bud Dajo fell on March 8, 18 of Duncan's troops having died, along with some 600 Moros.

The reduction of Bud Dajo brought relative peace to the Moro province for the next three years, but it did nothing to salve Moro resentment against American dominion. Pershing, now a general, returned to the Philippines in 1909 and was assigned to the Mindanao region. He was distressed by attitudes there, which he considered dangerous, and, as he had done years earlier, he embarked on a campaign of building trust and relationships. He resolved to bring enduring peace to the Moro province by disarming the tribe. He issued a disarmament order on September 8, 1911, setting a deadline of December 1. In October, however, the Moros reacted violently and, on December 3 and 5, Pershing dispatched troops to put down an incipient rebellion. The Moros sent word that they wished to negotiate peace, but they used the ensuing armistice to begin the reoccupation of Bud Dajo on December 14. Pershing responded by surrounding the stronghold on December 22. Bud Dajo was evacuated within two days, and, once again, Moro resistance died down, but did not completely end. In January 1913, following two more major skirmishes, more than 5,000 Moros, including women and children, holed up on Bud

Bagsak, another extinct volcano. Pershing had no desire to precipitate the slaughter of families and so attempted to persuade the Moros to evacuate. When they would not, on June 11, 1913, Pershing launched a coordinated land and amphibious assault on Bud Bagsak. Moro guerrillas had established well-defended cottas at Langusan, Pujagan, Matunkup, Puyacabao, Bunga, and at Bagsak, but, one by one, these fell to the assault. On June 15, Bud Bagsak was captured, and the Moro Wars quickly ended.

Mountain Meadows Massacre (1857)

PRINCIPAL COMBATANTS: Utah Indians, Mormons vs. California-bound emigrants of the Francher Company

PRINCIPAL THEATER(S): Southern Utah

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Utah Indians and a group of Mormons attacked anti-Mormon emigrants who had threatened to annihilate the Mormons.

OUTCOME: Following a federal investigation, Brigham Young punished those involved, but failed to stem the tide of anti-Mormon sentiment in the West.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 50 Mormon militiamen; 200 Utah; 100 Francher Company emigrants

CASUALTIES: 82 emigrants

TREATIES: None

In September 1857, Utah Indians and local Mormon settlers ambushed and killed 100 California-bound emigrants, known as the Francher Company, in a remote area of southern Utah. There were several interrelated factors that precipitated the incident, called the Mountain Meadows Massacre. First, the doomed emigrant company, composed entirely of non-Mormons, arrived in Utah at an extremely tense time. In 1857, during what became known as the UTAH WAR (or Mormon War), the Mormons anticipated armed conflict with the federal government and U.S. Army troops then traveling into the region. Second, the Francher Company's members were from Missouri and Arkansas and made no secret of their intense dislike for Mormons. Some emigrants actually bragged of direct involvement in earlier anti-Mormon violence in Missouri and Illinois. In response, the Mormons refused to trade with the emigrants or sell them badly needed food and supplies.

Further aggravating the situation was a third factor stemming from ongoing difficulties with the Indians of southern Utah. The Indians, after years of tense relations and some armed conflict with Mormon settlers, had finally established a reasonably good relationship with their new neighbors. In this relationship, the Indians believed (or wanted to believe) that the Mormons had given them tacit approval to raid and steal from non-Mormon emigrant companies passing through the region. To make matters worse, the Indians accused the Francher Company itself of killing their livestock and poisoning their wells.

Thus, when the Francher Company reached southern Utah, the situation had become critical, particularly after local Mormons refused to sell the emigrants food. The angry emigrants retaliated by destroying Mormon property and vowing to return to Utah with an armed force to wipe "every damn Mormon off the earth." The alarmed Mormons, in conjunction with their Indian allies, decided to take a drastic course of action. On September 11, 1857, at Mountain Meadows, 50 Mormon militiamen and 200 local Indians surrounded and killed all the Francher Company members, except for 18 small children.

When news of the massacre first reached church leader Brigham Young (1801–77) in Salt Lake City, he did not believe that local Mormons were involved and initially viewed the incident as an Indian affair. Young sought to cover up details of direct Mormon involvement, in particular that of John D. Lee (1812–77), the primary local Mormon leader involved; however, under national public pressure, Young finally excommunicated him.

Mormon involvement in the Mountain Meadows Massacre contributed to a negative image of the entire Latter-day Saints movement. That image persisted among many non-Mormon Americans for years to come.

Mozambican Civil and Guerrilla Wars (1976–1996)

PRINCIPAL COMBATANTS: The Front for the Liberation of Mozambique (FRELIMO) ruling party vs. the Mozambican National Resistance Organization (RENAMO) and other anti-Marxist factions (with support from South Africa); FRELIMO guerrillas also raided neighboring Rhodesia (Zimbabwe)

PRINCIPAL THEATER(S): Mozambique

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Mozambican government

OUTCOME: The brutal civil war brought general ruin to Mozambique and was resolved mainly through exhaustion on all sides; the Marxist regime was ended, and a democratic government installed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: FRELIMO, 40,000 (supported by 30,000 troops from neighboring countries); RENAMO, 15,000

CASUALTIES: At least 500,000 died on all sides, and at least 2 million refugees were created by the conflict, combined with drought, disease, and starvation.

TREATIES: Cease-fire, October 4, 1992

As a result of the MOZAMBIKAN WAR OF INDEPENDENCE, which ended in 1974, the African country of Mozambique had won its independence from Portugal. The success of that revolution was due largely to the leadership of the Front for the Liberation of Mozambique (FRELIMO). FRELIMO not only led the revolution, but, afterward, installed a Marxist government and outlawed all competing political parties.

Within two years of FRELIMO's ascendancy, Mozambique was in political and economic chaos. Skilled workers, especially whites, had fled the country. Food and all manner of imported goods were at critical shortages due to an inept and ruinous nationalization of commerce and industry and the collectivization of agriculture. The result was universal discontent and outrage. Rebellion was frequent and corruption rampant. The government dealt summarily and brutally with any offenders it caught. Many were packed into "reeducation camps," which quickly became overcrowded, squalid concentration camps.

During this period of intense internal conflict, guerrilla forces from Mozambique began a war of incursion and raids into neighboring Rhodesia, which, at the time, was still ruled by a white colonial government. The border between the two nations was closed from 1976 until 1980, when Rhodesia became independent as Zimbabwe. During this period, border clashes were routine.

In the meantime, FRELIMO found itself under siege by an array of anti-Marxist factions, the most important of which was the Mozambican National Resistance (MNR), which sought to undermine the regime by concentrating its attacks on what was left of the nation's infrastructure. Roads, railroads, and, most important of all, oil pipelines were sabotaged.

From South Africa (at the time ruled by a white government), troops invaded southern Mozambique, from which the African National Congress (ANC), a South African nationalist organization, mounted raids into South Africa.

Under pressure from all quarters, Samora Moisés Machel (b. 1933), president of Mozambique, assumed direct command of his country's military in 1983. He intensified campaigns against the various rebel factions

within Mozambique, and in 1984 made what was to him a distasteful agreement with South Africa. In exchange for Mozambique's pledge to expel the ANC, the South African government promised to withdraw its support for the MNR. In fact, support was officially withdrawn, but the government continued to funnel covert aid to the right-wing movement.

In 1986, Joaquim Chissanó (b. 1929) replaced Machel as president of Mozambique and presided over a wholly defensive war against multiplying numbers of anti-Marxist rebel factions. Always companions of war in poor nations, starvation and disease swept Mozambique by the late 1980s, killing thousands. Nearly 2 million refugees fled the more ravaged areas, creating a hopeless situation.

In 1989, Afonso Dhlakama (b. 1954), leader of the MNR, opened talks with representatives of the Roman Catholic clergy to formulate a peace plan that might begin to heal the desperate nation. The clergy brokered talks between the MNR and other rebel factions and President Chissanó; Zimbabwe's president, Robert Mugabe (b. 1924), served as moderator of the rancorous talks. At last, in 1990, FRELIMO turned its back on Marxism, deeming it a failure. The party acceded to most of the MNR demands, and a new democratic constitution was adopted.

On paper, at least, Mozambique became a free-market democracy, in which all political parties were welcome and civil rights assured. In fact, dissident MNR rebels continued their program of sabotage of the infrastructure, but when a formal cease-fire was hammered out on October 4, 1992, the fighting stopped. By this time, disease, starvation, and a killing drought had sapped even the guerrillas' will and ability to fight. The nation was in extremis, having lost at least 500,000 in battles and massacres as well as to disease and famine created or exacerbated by the war. UN peacekeeping forces arrived, oversaw the disarmament of all parties, and arranged multiparty, free elections. Chissanó won reelection in October 1994, and, amid international aid and reconstruction work, most of Mozambique's 2 million refugees had returned by 1995.

Mozambican War of Independence

(1962–1974)

PRINCIPAL COMBATANTS: Portugal vs. Mozambican rebels

PRINCIPAL THEATER(S): Mozambique (Portuguese East Africa)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mozambican independence from Portugal

OUTCOME: After unremitting pressure, Portugal, its own government transformed by a coup d'état, granted Mozambique its independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Portuguese forces, about 40,000 troops; FRELIMO, 10,000

CASUALTIES: Unknown

TREATIES: Cease-fire, 1974; independence granted, 1974

Mozambique was a longtime colony of Portugal, known as Portuguese East Africa, and was caught up in the general movement, during the 1960s, for the independence of all European African colonies. In 1962, the leaders of many nationalist factions met in Dar es Salaam the capital of Tankanyika (Tanzania in 1964) in an effort to create a united front. The result was the Front for the Liberation of Mozambique (FRELIMO).

FRELIMO's leader, Eduardo Mondlane (d. 1969), took a core group of several hundred guerrillas into Algeria for training in guerrilla warfare tactics. In the meantime, other rebels began a war of resistance against the Portuguese military in Mozambique. This conflict remained at a relatively low level until 1964, when Mondlane's specially trained guerrillas were committed to battle. The FRELIMO squads soon overwhelmed the Portuguese patrols in Mozambique's two northern provinces, and Portuguese authorities rushed reinforcements to the south in an effort to hold the line there. The guerrillas kept up the pressure, however, and Portugal found that its defensive war was a costly drain on its national resources. Portuguese agents were dispatched to Dar es Salaam to assassinate Mondlane. He was murdered in 1969, but command of FRELIMO was quickly taken up by another guerrilla leader, Samora Moisés Machel (b. 1933). Unlike Mondlane, Machel was a committed Marxist, and from this point forward, FRELIMO became a Marxist rebel movement.

Machel attacked the Portuguese with renewed resolve. Although he was outnumbered 4 to 1, he more than held his own against the Portuguese. Then, in 1974, a military coup d'état toppled the Lisbon government, and the new Portuguese regime was prepared to negotiate. In 1974, during a cease-fire, Mozambique was offered limited independence. Machel held out for full independence, and the new Portuguese regime, seeking to avoid further drain on its resources, agreed.

The war ended, but white colonial rebels attempted to undermine the settlement by seizing the government in a coup in 1975. FRELIMO—now aided by Portuguese troops—suppressed the white rebels, and Machel became the first president of independent Mozambique. Within a year, the new nation, which Machel immediately transformed into a Marxist dictatorship, was torn by the MOZAMBIKAN CIVIL AND GUERRILLA WARS (1976–1992).

Muhammad of Ghur, Conquests of (1175–1206)

PRINCIPAL COMBATANTS: Forces of Ghur (led by Muhammad) vs. Ghaznavid India and other Indian kingdoms

PRINCIPAL THEATER(S): India and Pakistan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: Muhammad built a vast Ghurid empire in India, established Islam in India, and created the basis of what would become the Mogul Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No documents identified; existence of formal treaties unlikely

Muhammad of Ghur (Mu'izz-ud-Din Muhammad ibn Sam, d. 1206) was the greatest of the Ghurid leaders and one of the principal founders of Islamic rule in India. He operated in conjunction with his brother, Ghiyas-ud-Din Muhammad (fl. late 12th century) and began his military career by participating in the Ghurid conquest of Khorosan in 1173. In that same year, he led his army in the successful conquest of Ghazni.

From 1175 until he died in 1206, Muhammad of Ghur conducted a dozen campaigns of conquest in India.

In 1179, he attacked and defeated the Ghaznavid garrison of Peshawar. Sind fell to his armies in 1182, and three years later the Ghaznavid principality of Sialkor (Kashmir) also fell under his domination. The key city of Lahore was captured in 1186, and the entire Punjab region came under the control of Ghur the following year. This completed his conquest of what had been the Ghaznavid Empire in India. (Driven from India, the Ghaznavids fled east to Bihar and Bengal, where Muhammad's forces conquered them by 1200.)

In 1191, Muhammad of Ghur suffered his only reversal in India. The Rajput rulers, among them the western Chalukyas, attacked his forces at the Battle of Taraori near Thanesar along the Sarsuti River. The next year, however, he redressed this defeat by returning to the same battlefield and destroying the Rajput army.

In 1193, Muhammad of Ghur overran and conquered Delhi, took Kannauj, and, in 1194, sacked Benares (Varanasi). The great fortress at Gwalior fell to him in 1195,

and Bihar succumbed in 1197. In 1198, Muhammad led an invasion of Bengal; a by-product of the campaign was the disruption of Indian Buddhism.

In each region he conquered, Muhammad of Ghur set up a brutally oppressive government. He was well aware that Muslims were a minority in India, and he was determined to suppress the Hindu majority by whatever means were necessary. Perhaps inevitably, Muhammad of Ghur was assassinated, in 1206. His chief lieutenant, a former slave named Qutb-ud-Din Ayyub (d. 1210), assumed control of the Ghurid empire, establishing what would come to be called the “slave dynasty” and the Delhi sultanate, which, together, endured for almost 90 years—from 1206 to 1290. This was the forerunner of the great Mogul Empire.

Muqanna, Revolt of (775–778)

PRINCIPAL COMBATANTS: Shi'ite followers of Muqanna vs. the Abbasid caliph

PRINCIPAL THEATER(S): Khorasan, Persia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Religious dispute over the basis of power of the caliphate

OUTCOME: The rebellion was put down, but the underlying controversy remained unresolved.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Muqanna, the so-called Veiled Prophet, was Hashim ibn Hakim (d. 779), a Shi'ite who was also animated by Zoroastrian and Manichaeic beliefs, who led a revolt of Shi'ites who challenged the basis on which the Abbasid caliph claimed authority: descent from Abbas (d. 653), the prophet Muhammad's (570–632) uncle. The Shi'ites claimed the power to govern derived from Ali (c. 600–661), husband of Fatima (606–632), Muhammad's daughter.

Muqanna led his followers in a three-year revolt, which ended in his defeat at the hands of Abbasid caliph, Muhammad al-Mahdi (742–786) in 778. Muqanna retired to his stronghold at Sanam and, the following year, committed suicide. With this, the revolt was suppressed, but the religious controversy remained unresolved and persists today.

Murrel's Uprising (1835)

PRINCIPAL COMBATANTS: Rebel slaves vs. U.S. authorities

PRINCIPAL THEATER(S): Mississippi and Tennessee

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Abortive slave uprising designed to create a criminal empire.

OUTCOME: With the arrest of the leader of the uprising, the revolt failed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: 45 participants in the uprising were hanged.

TREATIES: None

This abortive rebellion was planned by a Tennessee plantation owner, John A. Murrel (1794–1844). The leader of a horse-stealing and slave-stealing gang working in Tennessee and elsewhere in the South, Murrel conceived a scheme to organize a large-scale slave revolt with the object of creating a crime empire in the southern states. He planned a coordinated uprising among slaves in Nashville, Memphis, Natchez, New Orleans, and other southern cities to commence on July 4, 1835. When authorities discovered his scheme, however, Murrel was arrested. The rebellion fell apart, but uprisings did occur in some places. Thirty blacks and 15 whites were apprehended in Mississippi and Tennessee. Tried and convicted of conspiracy, all were hanged. Murrel, the instigator of it all, had been arrested, so did not participate in any of the action; therefore, he was sentenced to a prison term of 10 years. Released after having served a portion of his sentence, he was broken in health and died very shortly after he left prison.

Muscovite Conquest of Novgorod (1471–1479)

PRINCIPAL COMBATANTS: Muscovy under Ivan III (with aid from Tver and Pskov) vs. Novgorod (with Polish aid)

PRINCIPAL THEATER(S): Novgorod

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest of Novgorod

OUTCOME: Novgorod fell to Ivan III.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: Alliances between Novgorod and Lithuania and between Novgorod and Poland; alliances between Muscovy and Tver and Pskov

In the Middle Ages, Muscovy was the core of what would become the Russian Empire. Ivan III (the Great; 1440–1505), grand prince of Muscovy, took up the mantle of his father, Basil II (1415–62), and was committed to the aggrandizement of Muscovy. He set his sights on Novgorod, a key trading city, which controlled vast territories in the Russian north. Not only was Novgorod an attractive prize, it had for years competed with Moscow for trade and power in the region. In addition, there was a profound religious conflict between the two principalities. Novgorod championed Roman Catholicism, whereas Moscow was the seat of Orthodox Christianity.

In 1471, Novgorod struck an alliance with Poland. Realizing that this portended an invasion, Ivan III seized the initiative and preemptively declared war on Novgorod. He put his troops on the march immediately, but his first two major victories did not come until 1475, at the Battle of the Shelon River and the Battle of the Shilenga River. Novgorod was betrayed by Poland, which reneged on its promises of military aid. Fearing annihilation, Novgorod surrendered to Ivan III, paying him a massive indemnity of 15,000 rubles and conceding to him the right to nominate an archbishop for the city. Moreover, Novgorod agreed to forswear any alliance with Lithuania, which would have posed both a military and an economic threat to Muscovy.

As much as Ivan III had gained in his war against Novgorod, he demanded more, namely, the title of “lord” of Novgorod. This was too much for some of the citizens of Novgorod, who staged a rebellion in 1477 and attempted to take over the city. Ivan III secured military aid from the cities of Pskov and Tver, which furnished large armies to march against Novgorod. The Novgorodians sued for peace and asked for negotiation. Ivan III refused and forced the city into unconditional surrender after the resignation of its leader in January 1478. Ivan confiscated all monastery estates under Novgorod control and imprisoned many Novgorod boyars (aristocrats). Although Novgorod secured Polish aid in 1479 for another uprising, it was quickly crushed—and Ivan acted against the city with a brutality so decisive that no further rebellion was possible.

Muslim Civil War (657–661)

PRINCIPAL COMBATANTS: Mu’awiyah (and supporters) vs. the caliphate line of Ali

PRINCIPAL THEATER(S): Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Mu’awiyah sought the caliphate of the Muslim Empire.

OUTCOME: Mu’awiyah prevailed over the line of Ali ibn Abi Talib, thereby creating the Umayyad caliphate and bringing about the division of the Muslim world into two major sects, the Shi’ites and the Sunnis.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: None

The war was fought over a dispute as to the identity of the true Muslim caliph. Mu’awiyah (c. 602–680), Syrian governor, had reason to believe that the fourth caliph, Ali ibn Abi Talib (c. 600–661) had participated in the murder of his predecessor, Uthman ibn Affan (d. 656), who was Mu’awiyah’s cousin. Mu’awiyah led an uprising against Ali ibn Abi Talib, to which Ali responded by invading Syria. Ali’s forces clashed with Mu’awiyah’s in a protracted battle at Siffin in 657. After three months of combat, the two sides called a truce and opened negotiations to determine the true caliph. During this period, Mu’awiyah unilaterally proclaimed himself caliph in Jerusalem in 660, and, in 661, Ali was assassinated by a member of the Kharijite sect. This sect, which developed during the negotiations between Mu’awiyah and Ali ibn Abi Talib, believed that piety and worth, not right of inheritance, should determine who would become caliph. Under pressure from the Kharijites and Mu’awiyah, al-Hassan (628–673), Ali’s eldest son, renounced the caliphate in 661. Thus Mu’awiyah became the first Umayyad caliph. He established Damascus as the capital of the Muslim world. However, Mu’awiyah’s ascension had a profound effect on Muslim life, dividing the faith between two major sects: the Shi’ites, who support the divine right of the line of Ali, and the Sunnis, who support the Umayyad line.

Muslim Civil War (680–692)

PRINCIPAL COMBATANTS: Umayyad clan vs. Ali clan

PRINCIPAL THEATER(S): Syria and Mesopotamia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The clans disputed the right to rule as caliph.

OUTCOME: Abd al-Malik ascended the throne and eliminated his chief rival.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Mu'awiyah (c. 602–680), who came to power as a result of the MUSLIM CIVIL WAR (657–661), died in 680, leaving the succession to the caliphate unsettled. His son Yazid I (c. 645–683) ascended the throne, but was opposed by factions in Mesopotamia (Iraq) and Syria. The Kufan clan supported Husayn ibn Ali (629–680), who was a son of Ali ibn Abi Talib (c. 600–661), the caliph Mu'awiyah had opposed. Thus the war was a conflict between the Umayyad clan (partisans of Yazid I) and the Ali clan (partisans of Husayn).

Husayn set out from Mecca to meet the forces of Yazid, but Husayn was killed after the Kufans deserted him at the Battle of Kerbela in 680. Abdallah ibn Zubayr (d. 692) successfully led an army of Meccans and Medinans in opposing the invasion of Yazid's army in 682. Yazid died the following year, leaving Zubayr to be recognized as caliph of most of the Muslim Empire, Arabia, Mesopotamia, and Egypt.

Zubayr's caliphate proved short-lived. Marwan ibn al-Hakam (623–685) fought Zubayr's forces to defeat at the Battle of Marj Rahit, just outside Damascus, in 684. Al-Hakam became caliph, but presided over a deeply divided realm. His son, Abd al-Malik (646–705), who succeeded him after his death in 692, attempted to bring unity by leading a siege against Mecca, the capital from which Zubayr ruled as a rival caliph. Al-Malik's Syrian forces killed Zubayr, leaving Al-Malik the sole caliph.

Muslim Civil War (743–747)

PRINCIPAL COMBATANTS: Marwan II vs. various rebel groups

PRINCIPAL THEATER(S): Arab empire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Marwan II sought to eliminate rebellion from his caliphate.

OUTCOME: All of the major rebel groups were put down, except for the Abbasids.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After the death of Abd al-Malik (646–705) in 705, the Arab empire was ruled by successively less effective caliphs, and during 743–744, three weak rulers rose and fell in succession, unable to command the support of the people. The typically stormy empire was rocked by rebellion during this period until the ascension in 744 of Marwan II (d. 750), last of the Umayyad caliphs. Marwan II made liberal use of military force to put down rebellions in Arabia, Syria, Persia (Iran), and Mesopotamia (Iraq), but one group, the Abbasids, centered in Khorasan, Persia, remained undefeated and went on to oppose the Umayyad clan in the ABBASID REBELLION of 747–750.

Muslim Civil War (809–813)

PRINCIPAL COMBATANTS: Allah al-Ma'mun vs. his brother, Muhammad al-Amin

PRINCIPAL THEATER(S): Khorosan, Persia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Allah al-Ma'mun sought to assume sole rule over the Arab Empire.

OUTCOME: Allah al-Ma'mun defeated his brother's forces, then imprisoned his brother, who was subsequently killed; al-Ma'mun thus became sole caliph.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The **ABBASID REBELLION** of 747–750 ushered in the Abbasid caliphate over the Arab Empire, and in 802 Caliph Harun al-Rashid (766–809) declared that his two sons would jointly inherit the throne, Muhammad al-Amin (785–813) succeeding him as caliph and Allah al-Ma'mun (785–833) as ruler of Khorosan and the eastern portion of the empire. After al-Rashid died, however, al-Ma'mun rebelled, seeking to seize the entire empire from his brother. He was backed by Persian forces under Tahir ibn Husain (d. 822), who defeated al-Amin's army in Khorosan, advanced into Mesopotamia, acquired most of al-Amin's holdings, then laid siege to Baghdad in 809. After two years under siege, the capital fell. In 812, al-Amin surrendered and was made a prisoner. He attempted to escape in 813, but was killed.

The death of al-Amin left al-Ma'mun sole caliph, but the bitter warfare between the brothers had brought permanent unrest to Mesopotamia, Syria, and Egypt.

Muslim Civil War (861–870)

PRINCIPAL COMBATANTS: Turkish interests in the caliphate vs. various rebel groups

PRINCIPAL THEATER(S): Arab Empire, especially Uzbekistan, Persia, Arabia, Egypt, and Mesopotamia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Turks sought to dominate the caliphate, creating disorder and rebellion in the process.

OUTCOME: After years of misrule, the Turks withdrew their interest in the caliphate.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the mid-ninth century, Turks were included in the government of the Arab caliphate, an action that led to disorder. During the period of the civil war of 861–870, Turks installed their own puppet caliphs, who were disposed of—either deposed or assassinated—when they ceased to do Turkish bidding. Without a strong central government, the far-flung empire was swept by revolt and rebellion. Transoxiana (Uzbekistan), Persia (Iran), Arabia, and Egypt all saw rebellion, and in 869, the **ZANJ REBELLION**, a revolt among black slaves in Mesopotamia (Iraq), lasted 15 years.

At last, in 870, unwilling to continue financing chronic warfare, the Turks suddenly broke off their involvement in the caliphate. They left al-Mo'tamid (d. 892) on the throne, and the Arab Empire in economic and political shambles.

Muslim Civil War (936–944)

PRINCIPAL COMBATANTS: Abbasid forces under Muhammad ibn-Ra'iq vs. Hamdanids and Ikshidids

PRINCIPAL THEATER(S): Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Abbasid caliph employed ibn-Ra'iq to restore the Arab Empire.

OUTCOME: Syria was restored, except for two cities; the war ended in an uneasy truce.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of 944

Turkish misrule during the MUSLIM CIVIL WAR (861–870) left the Arabian caliphate greatly weakened and reduced. What had once been a vast empire had been cut down to the province of Baghdad. In an effort to restore the empire, Abbasid caliph Ahmad ar-Radi (d. 940) appointed Muhammad ibn-Ra'iq (d. 942) to command an army and serve essentially as dictator over the realm. The idea was to give ibn-Ra'iq sufficient power to restore order and control.

Ibn-Ra'iq first confronted the Hamdanids in Syria, then repulsed an invasion by the Egyptian Ikshidids. In this way, Syria was returned to the caliph's fold. However, the Hamdanids returned to capture Aleppo and Hims in northern Syria after the death of ibn-Ra'iq. At this point, in 944, the caliph concluded a truce with the Hamdanids.

Muslim Civil War (945–948)

PRINCIPAL COMBATANTS: Hamdanids vs. Ikshidids vs., separately, Byzantines

PRINCIPAL THEATER(S): Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Hamdanids had to resist invasion both from the Ikshidids and the Byzantines.

OUTCOME: Although the Hamdanids successfully resisted the Byzantine invasion to retain northern Syria, the drain on military resources caused the Hamdanids to relinquish the southern and central regions to the Ikshidids.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After a truce ended the MUSLIM CIVIL WAR (936–944), a new war erupted the next year when Sayf al-Dawla (d. 967), in Syria, led the Hamdanids against invading Ikshidids from Egypt. The Hamdanids held Aleppo, in northwestern Syria, and, from this base, were at first highly successful in repelling Ikshidid incursions; however, when the Byzantines invaded the north, Hamdanid forces became too widely dispersed, and the Hamdanids were com-

elled to relinquish central and southern Syria to the Ikshidids by 948. Al-Dawla was able to retain northern Syria against the Byzantines.

Muslim Civil War (976–977)

PRINCIPAL COMBATANTS: Hamdanids, and Karmathians vs. Fatimids

PRINCIPAL THEATER(S): Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Hamdanids and Karmathians sought to seize control of central and southern Syria from the Fatimids.

OUTCOME: Despite initial Hamdanid-Karmathian success, the Fatimids ultimately retained control of central and southern Syria.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Muslim Fatimids, who claimed direct descent from Fatima (c. 606–632), daughter of the prophet Muhammad (570–632), invaded southern and central Syria in 969 and seized control of the region from the Ikshidids. In an effort to eject the Fatimids from the region, the Hamdanids, based in northern Syria, allied with the Karmathians, who had already been victorious against the Fatimids in Egypt, and mounted an offensive in 976. The Fatimids fled, but returned in 977 and scored a decisive victory against the allied Hamdanids and Karmathians at the Battle of Ramleh. Once again, southern and central Syria were in Fatimid hands.

Muslim Civil War (1102–1108)

PRINCIPAL COMBATANTS: Rival Muslim groups, principally Seljuks led by Kilij Arslan I, vs. Seljuks led by Ridwan.

PRINCIPAL THEATER(S): Central and southern Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In an era of instability brought about by the First Crusade, rivals sought dominance of large portions of Syria.

OUTCOME: Ridwan took the principal city of northern Mesopotamia (Iraq), Mosul, but failed in his bids to subdue other rivals throughout the region, especially in rural areas.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The incursions of the Crusaders not only posed an external threat to the Arab world, but brought about internal warfare as well. The Seljuk Turks, who held most of urban central and southern Syria, were pitted against other Muslim groups, which controlled the rural districts in the region. Dissent among the Seljuks was bitter.

Mosul, the major city of northern Mesopotamia, fell to the Seljuk warrior leader Kilij Arslan I (d. 1108) in 1102. Attacked by another Seljuk leader, Ridwan (d. 1117), Kilij fought the Battle of the Khabur River against him in 1108 and was killed. Ridwan took over Mosul and, from this city, attempted to conquer more territory and defeat other Muslim groups as well as rival Turks. He made little progress, and the region remained fragmented under repeated European onslaught.

Muslim Conquest of the Deccan See DELHI SULTANATE RAIDS IN SOUTH INDIA (1307–1313).

Muslim Conquest of Persia (634–651)

PRINCIPAL COMBATANTS: Muslim Arabs vs. Sassanid Persians

PRINCIPAL THEATER(S): Persia (Iran and Iraq)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Muslims sought to conquer Persia.

OUTCOME: After a long struggle, the Sassanids were defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At al-Qadisiyah, the Persians fielded 50,000 men, the Arabs 30,000.

CASUALTIES: Persian casualties at the Battle of Nhavand (641) were reported in excess of 100,000; Arab casualties were far less.

TREATIES: None

After the death of the Muslim prophet Muhammad (570–632), Islam began an era of expansion outside Arabia. Muslim armies swept into Mesopotamia, then through Palestine and Syria into Byzantine Damascus, where they stalled for a six-month siege. They were also stymied at first by the Sassanids when they attempted to invade the Persian Empire. At the Battle of the Bridge, in 634, the Sassanid army dealt the Muslims a severe defeat, sending Muhammad's army in retreat to Hira. However, Muhammad counterattacked at Buwayb in 635, near Kufah (Iraq). This checked the Persian advance, while a new Muslim army of 30,000 men under Caliph Omar (c. 581–644) defeated the superior Persian army (50,000 troops) at al-Qadisiyah in 637. This was followed later the same year by the capture of Ctesiphon, the Persians' winter headquarters. In December 637, the Arabs enjoyed another triumph, at the Battle of Jalula, north of Ctesiphon. These victories brought central Persia under Muslim control.

The Islamic forces continued to consolidate their gains over the rest of the decade. In 641, a major victory at Nahavand devastated Persian forces. A small Muslim force lured a much larger Persian army into pursuit, then fell upon this army when it was trapped between two narrow mountain passes. Persian casualties were catastrophic, reportedly in excess of 100,000 men. Despite continued resistance through 651, Sassanid control of Persia disintegrated. Yazdegerd III (d. 651), last Sassanid king of Persia, took refuge in Merv and was assassinated there in 651. This brought the Muslim conquest of Persia to an end.

Muslim Conquest of Sind (708–712)

PRINCIPAL COMBATANTS: Muslim Arabs vs. Baluchistan and Sind

PRINCIPAL THEATER(S): Northern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: Sind was subdued and used as a base from which further conquests were launched.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Following the death of Muhammad the Prophet (570–632) his heirs expanded Islam far beyond Arabia, sweeping through Byzantine-held territories and the Sassanids' Persian Empire. Muslim invaders arrive in northern India about 650 and, between this time and 707, overran and conquered Baluchistan, a desert region in modern western Pakistan. This was followed by the Arab invasion of Sind, led by Muhammed ibn Kasim, who subdued the region by 712. From the bases they established in Sind, the Muslims mounted raids into Rajputana and Gujarat. Although Rajputana largely yielded, Gujarat resisted and prevailed, repulsing the Arab invaders.
